HEALTH INSURANCE FOR THE AGED UNDER SOCIAL SECURITY

Statement
by
Abraham Ribicoff
Secretary of Health, Education, and Welfare
Before the Committee on Ways and Means
U. S. House of Representatives
Monday, July 24, 1961
10:00 a.m., EDT

I appreciate the opportunity to appear before this Committee in support of health insurance for the aged under the social security program--H.R. 4222, introduced by Representative Cecil R. King. It is my firm belief that this bill, if enacted, is destined to become as significant as any piece of domestic legislation produced by the 87th Congress.

You have the opportunity to equal the landmark action taken by the 74th Congress, which passed the Social Security Act in 1935. They sought to promote freedom from fear--the fear of economic insecurity. To a large extent they succeeded.

Today the later years of millions of Americans are plagued anew by fear. With lifespan lengthened, with medical science breaking into undreamed realms of discovery, the Nation's aged now face another aspect of insecurity--how to meet the mounting costs of medical care.

Gentlemen, let me set forth my position clearly:

1. The high costs of medical care for the aged are going to be paid for in this country. The issue is not whether to pay these costs. The only issue is how to pay them.

2. The alternatives to health insurance that have been suggested are not adequate, not fair to the elderly who need the care and not fair to the public which pays for it.

Private insurance plus public assistance cannot do the complete job. If the medical assistance for the aged program, enacted by Congress last year, is expanded to cover a major share of the costs, the drain on State treasuries will be fantastic. If the issue is left to collective bargaining, the pressures on employers to absorb the total costs will be overwhelming. If hospitals have to collect from those who can pay the costs for those who cannot, the burden on middle-income hospital patients will be unconscionable.

3. The facts will show that paying for hospital costs under the social security system is the conservative answer, the practical answer, the fair answer.

Let me begin by discussing the need.

The Need For Action

In his Special Message to the Congress on Health and Hospital Care, the President described the need of the aged for insurance against health care costs. You may recall that he said: "Those among us who are over 65--16 million today in the United States--go to the hospital more often and stay longer than their younger neighbors. Their physical activity is limited by six times as much disability as the rest of the population. Their annual medical bill is twice that of persons under 65--but their annual income is only half as high."

The President went on to say: "Twenty-six years ago this Nation adopted the principle that every member of the labor force and his family should be insured against the haunting fear of loss of income caused by retirement, death, or unemployment. To that we have added insurance against the economic loss caused by disability. But there remains a significant gap that denies to all but those with the highest incomes a full measure of security--the high cost of ill health in old age."

The statistics to demonstrate the need are legion, and I want the Committee to have them. I am submitting, in addition to my statement, two supplementary documents for the information of the Committee. One of these, a report entitled "Health Insurance for Aged Persons," contains a comprehensive discussion of the financial circumstances and the health status of the aged and the need for a program of health insurance and also presents in detail the specifications for the provisions of the President's proposal and the reasons underlying the specifications. The second document, an actuarial report prepared by the Chief Actuary of the Social Security Administration,

presents detailed estimates of both the short-range and long-range costs of the proposal, the assumptions underlying the estimates, and other pertinent actuarial material.

But before talking statistics let me say a few words about people--some of the many men and women who have taken pen in hand to tell the President of the United States what it means to face sky-high medical costs.

The President recently received a letter from a man in North Carolina who said: "I am writing you for some information about medical bills for the old aged. I don't know whether any of them has been passed yet. Mr. Kennedy, my wife is 72 years old and I am 74. We only get $51.00 a month social security between us both. I own a small house of my own so we don't get any old aged pension. My wife had to have an operation the other day and bill is so big we just can't pay it. The welfare doesn't want to help. So, I just don't know what to do."

A woman in Georgia has written to the President: "I went to the hospital last February. Stayed a week and one day. It cost me $172. I have no hospital insurance and do not get enough money from Social Security to pay on insurance."

A man in Oklahoma wrote to me: "I am past 70 years old and am retired and drawing social security. It costs my wife and me $275.00 a year to carry hospital insurance and what we fear most is that the policies might be cancelled if we have to use them. Something should be done about this. I am in favor of the social security plan which you advocated on TV a few days ago."

These and many other letters bring out very clearly, I think, how older people live in fear of the costs that illness brings. This threat is very real for most of the aged; it is not only the very poor or those with very expensive illnesses who can suffer financial disaster as a result of health care costs.

Let me describe the case of a couple in Connecticut, who were among those interviewed in a survey of old-age and survivors insurance beneficiaries made in 1957, at the time I was Governor. This couple--let's call them Mr. and Mrs. Day--were getting along pretty well in their later years. Mr. Day had retired from his job as a general laborer in a factory in 1952 at the age of 74. He had worked hard, and he and his wife had saved what they could and had a small house paid for. The house needed some repairs, but they didn't feel that they could spend the money to put it in good condition.

Mr. Day's social security benefit was about $80 a month, and his wife's benefit was $40. They rented part of their house, bringing their total income to about $2,300 a year. We all know that a couple, even when they own their own home, can't splurge much on $2,300 a year, but this couple was getting along. The financial picture of this retired couple, incidentally, is just about the average.

Then Mr. Day had a stroke and had to go to the hospital for 11 days. The hospital bill was $405--not at all unusual as cases of hospitalization go. Out-of-hospital costs were $26.

This couple didn't have any health insurance. They had had health insurance when Mr. Day was working, but their protection ended when he retired. By the time they finished paying the hospital bill and the $26 for the doctor, their savings were pretty well wiped out by this one illness. They now have practically nothing to meet future emergencies with. What happens if Mr. Day has another stroke or Mrs. Day gets sick?

Here is the case of another elderly couple who was questioned in the 1957 survey. This couple was living in New York. They were receiving $113.90 a month in social security benefits for the husband and wife. The man was also getting a pension of $65 a month from his employer, making their total annual income about $2,150. They had about $1,000 in savings at the beginning of the survey year. They were living in modest circumstances, but they were getting along.

Then the man had to have a serious operation. His care cost $1,263, including a hospital bill of $738. In addition, the wife had health-care expenses amounting to $330. They managed to meet all their medical and hospital bills, but it took all their savings. At the end of the year they had no assets left, and the man was still in poor health. A couple like this probably will have to seek assistance to get future medical care.

The fear of future illness is something that people in this situation live with every day, and what they fear happens to many of them time and again.

Now a few facts that show the general situation of the aged.

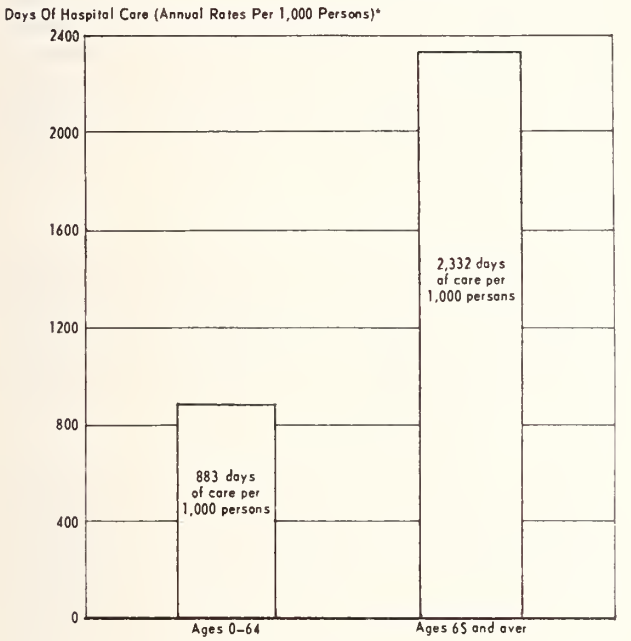
Nine out of 10 of the people who live to be 65 go to the hospital at least once between age 65 and death.

Among couples, in about half of the cases the husband and the wife will each have at least two

hospital stays between age 65 and death--at least four hospital stays for half of the couples after age 65.

When an aged person goes to the hospital he is likely to stay longer than a younger person because he is more likely to have serious and long-lasting disease. People over 65 are in hospitals, on the average, over 2-1/2 times as much as younger people. I have here a chart that illustrates this point.

DAYS OF HOSPITAL CARE

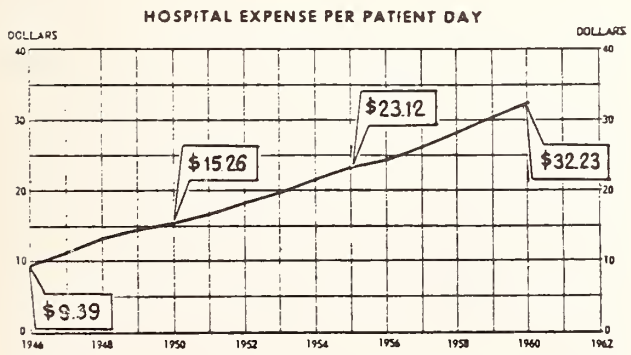


* Data are for the Middle Atlantic States, 1957.

SOURCE: Public Health Service, U S National Health Survey

In recent years these problems have been aggravated by rising hospital costs. The costs have more than tripled in the last 15 years as shown on the second chart.

HOSPITAL EXPENSE PER PATIENT DAY



SOURCE: American Hospital Association

The financial impact of repeated hospital stays becomes apparent when we consider that the median yearly income for a widow is about $1,000, and for an aged couple is less than $2,500. About 1/3 of the aged have no assets that can readily be turned into cash, and about half have less than $500. Much of the health insurance available to the aged provides very limited protection and that only at high cost to them, and less than half of the aged have any hospitalization insurance at all. This is not surprising, since it is impossible for most retired people to pay currently the high premiums that, considering the high incidence of illness among older people, would be necessary to provide adequate coverage.

Is it not true, though, as some people are asking, that whether people can pay for it or not everyone in this country gets the hospital care he ought to have? I doubt very much that this is true. I believe it is true that very few, if any, who are absolutely in need of urgent care are turned away from our hospitals because of inability to pay. But what about those who are too proud to accept what they look on as charity or going on relief, who will dangerously postpone seeking care because they fear cancellation of their insurance or do not want to dip into their small savings or to burden the limited resources of their children? Who can say with confidence that needed hospital care has not been foregone, that terminal illness and premature death have not been caused by the unwillingness of our older people to seek the care they need?

We know that hospital use by older people goes up when an assured source of financing is provided on terms that older people find acceptable. Insured older people do use more hospital care than the uninsured. Financial barriers do stand in the way of adequate care.

The Present Role of Government

The need must be met. But by whom? In proposing that the Federal Government play a part, we are not suggesting anything new. The Government is already involved in meeting the cost of personal medical care, for the aged as well as for other groups, and on a large scale. We are simply proposing a more logical, a more equitable, a more efficient, and a more fiscally responsible approach to medical-care problems with which the Government is already involved and has been for quite some time.

In 1959, total expenditures for personal health and medical care in this country amounted to $22.5 billion. Almost 22 percent of this total--about $4.9 billion--was paid from public funds. Federal expenditures amounted to almost $2 bil-

lion, or about 40 percent of the total public spending for personal health and medical care.

The 1960 legislation providing for increased Federal grants for direct payments to providers of medical care under old-age assistance and for medical assistance for the aged will, of course, increase public expenditures for health care. If all States were to put into effect medical assistance programs for the aged comparable with the average program now in effect or under study in the States, and if health insurance for the aged is not provided under social security, the annual cost, Federal and State, for this category alone would be more than $650 million. If the State programs were to provide better benefits in the future than the average now provided, the cost of medical assistance for the aged, in the absence of a health insurance program for the aged under social security, could run to as much as $1 billion a year or even more, with the Federal Government paying somewhat more than half a billion dollars. Make no mistake about it; the Federal Government is already in medical care, and on a large scale.

It is in this medical-care business because there were problems that had to be met. Action had to be taken. The program of medical assistance for the aged was and is urgently needed. In fact, we believe that still further action is needed: use of the social security approach to insure against the costs of hospital care for older people.

The Social Insurance Method

Provisions for health insurance benefits for the aged are a necessary part of income protection in retirement. Without such benefits the social security program cannot adequately provide basic security for the aged. For most older people old-age, survivors, and disability insurance cash benefits are barely large enough to keep them housed, clothed, and fed, and half of the beneficiaries do not have any significant additional regular income. The benefits are not large enough to meet the costs of expensive illnesses or to pay large health insurance premiums during retirement. The only way to remove the threat to the financial independence of older people posed by the high cost of illness is through providing the aged with basic health insurance protection in addition to their monthly cash benefits. And this can be assured only through the social insurance method.

Basically the problem is that the larger medical-care needs of the aged as a group result in higher average costs than those incurred by younger people. To cover these costs higher premiums must be charged, and this at a time when, because they have retired, people's incomes are lower than in earlier years, and there is no employer to share the cost. We cannot expect them to finance the higher-than-average medical costs that they have at this time of their lives out of their lower-than-average financial resources. The best solution for a problem of this sort is an arrangement, like that for present social security benefits, under which people pay while they are working toward the cost of the protection that they will need to have in retirement, so that no further payment after retirement is required.

The method of providing paid-up health insurance protection for retirement has not been followed on any large scale in private insurance, nor is it likely that it will be. The social insurance method, then, is the only practical way of enabling most people to pay during their working years toward meeting the health costs they will face in old age.

Moreover, the social insurance approach affords the best assurance of keeping program costs under control, for there is a direct and known relationship between increases in benefits and increases in taxes, and the State and Federal Governments are relieved of a considerable burden on general revenues.

I have mentioned that if we do not have health insurance for the aged under social security and if the State assistance programs were to provide better medical benefits than the ones in effect in the present initial programs, the cost of medical assistance for the aged could run as high as $1 billion a year or even more. With almost one-half of this coming from the States, the States would have to spend something like 3 times the $146 million they paid toward vendor payments for medical care under old-age assistance in 1960. Such a volume of expenditure, by some of the States, is almost impossible to envisage, but the need is there, and pressures to meet it will be great. Far better, surely, to look to meeting the major part of the costs through health insurance for the aged.

The social insurance approach, on a national basis, makes possible provision of basic protection for the aged regardless of where they may happen to live. As you know, the State programs of medical assistance for the aged can, depending on State action, be very narrow, both in eligibility, and in benefits, or on the other hand can provide virtually comprehensive medical care to a substantial portion of the aged. New York, for example, has enacted a comprehensive program, providing a broad range of medical services and a relatively liberal definition of medical indigence. Unmarried aged people with annual incomes of

$1,800 or less and couples with incomes totaling $2,600 or less are eligible. Kentucky's program, on the other hand, is limited to individuals with an annual income of $1,200 or less and couples with annual incomes of $1,800 or less, and it provides payments only for 6 days of hospital care for acute emergency and life-endangering illness.

Variations such as these and the fact that most States have no program at all raise the very serious question of whether this country can long tolerate a situation in which health care is available to many of its aged citizens in New York and Massachusetts but not to people similarly situated in Kentucky or North Carolina. There is nothing fair or equitable in a situation of this sort. The problem is nationwide, and it should be dealt with nationally.

The social insurance approach would provide health insurance protection for the aged without limiting the patient's choice of doctor or hospital. In fact it makes possible greater freedom of choice than now exists, since the most important limitation for those who have not been able to pay--the financial barrier--would be removed. The only limitations on the patient's choice, for any beneficiary, would be what they are today for those who are able to pay: namely, that a hospital may be unable or unwilling to accept a patient and that one's physician may not happen to have hospital privileges at the hospital of one's choice. Thus, contrary to the argument of those who say that the plan would limit the patient's freedom of choice of doctor or hospital, it would in fact broaden freedom of choice for many and limit it for none.

Finally, the social insurance approach means that those who qualify under it can be protected without having to undergo a means test. Requiring older people who have always been financially independent to undergo a means test, with its investigation of their personal circumstances, when serious illness strikes, denies them dignity and self-respect in their days of retirement.

We have, then, in the social insurance approach these advantages: It is the only way in which people generally can pay during their working years toward meeting their health costs in retirement; it is sound and fiscally responsible; it makes possible provision of basic protection for the aged regardless of where they live; it preserves and increases freedom of choice of doctor and hospital; and it does all this in a way that is consistent with the dignity of the individual.

The Cost of the President's Proposal

When the administration bill was introduced in February, it provided for full financing of the estimated long-range cost of the program--0.60 percent of taxable payroll. This cost would have been met by an increase in the tax rate of 1/4 of 1 percent each for employers and employees and by 3/8 of 1 percent for self-employed persons, effective in 1963, together with the net gain to the program from an increase in the taxable earnings base from $4,800 to $5,000 a year effective in 1962.

Since the introduction of the bill, the Chief Actuary of the Social Security Administration, in accordance with his usual procedure, has reevaluated the cost estimates. The estimate of the cost of the hospital services has been fully confirmed in this reevaluation. There is a great deal of information on hospital use under insurance programs, and our assumptions on use of hospitals under the President's proposal seem very safe.

For nursing-home and home health-care services, the Chief Actuary is now using assumptions that are more conservative than those he originally used. In the original estimates a moderate increase in the use of these services had been assumed. In the course of his reevaluation, he decided to allow for a substantial increase in the use of the kinds of nursing-home and home health services that would be covered under the bill. A change of this magnitude may not occur, but we propose to provide sufficient funds to make possible payment for increased use of the services, if the change does occur, without further increases in the contribution rate.

Based on the new assumptions on use of services, the long-range cost of the program is now estimated by the Chief Actuary at 0.66 percent of payroll rather than 0.60 percent. In accordance with the long-established practice of fully covering the cost of any new benefits that are added to the program, I am recommending that the financing provisions of the proposal be changed so as to keep the program on a sound financial basis.

Specifically, I recommend that the taxable earnings base be increased to $5,200 instead of to $5,000 in order to fully meet the cost of the benefits provided in the bill. Although our most recent estimates indicate that, even with the previously recommended financing provisions, the income earmarked for health insurance benefits would have exceeded the outgo in every year until after 1980, we believe the prudent and advisable course is to make provision now for the additional income that would be required over the very long run.

Incidentally, an increase to $5,200 would not only be desirable to provide the necessary financing but at the same time, since raising the maximum wage base also raises the benefit amount payable at the maximum, it would improve the benefit structure of the social insurance program. As was brought out in this Committee when the recent social security amendments were under consideration, the maximum wage base is now out of date in view of the increase in wages since 1958, the last time the maximum was raised. And the recent increase in the minimum benefit amount from $33 to $40 is an additional reason for raising the earnings base.

It is important, as this Committee has always recognized, in a program in which benefits are related to prior earnings, to maintain a reasonable spread between the minimum and the maximum benefit. If the minimum benefit becomes too high in relation to the maximum benefit the wage-related character of the program is weakened. The increase in the minimum benefit to $40 reduced the spread of benefits from $94 to $87. Since the maximum benefit amount payable under the $5,200 earnings base would be $134, the spread between the minimum and the maximum benefit would be restored to $94.

How Would the President's Plan Work?

President Kennedy proposes a fiscally responsible method of financing hospital care and certain related health services for the aged in a way that protects the dignity of the individual. There are differences in the method of collecting the funds and in the population groups affected, but what the plan would do would be very much like what Blue Cross plans have been doing for many years: it would pay hospital bills without interfering with hospital operations.

The People Who Would Be Protected

About 95 percent of today's workers will have this protection when they reach age 65. Only 5 percent of all present workers would not be protected under the plan, and they would be largely Federal employees, who will be protected under their own system, self-employed physicians, and those State and local government employees who are not brought under social security. At a given point in time there are always also some irregularly employed farm and household workers and low-income self-employed who are excluded from coverage, but most of these people will acquire protection over a working lifetime.

Even among those already retired, the great majority will be protected immediately under the plan. At the beginning of 1963, the first full calendar year in which the plan would be in operation, of the 17-3/4 million people who will then be age 65 and over, 14-1/4 million would have health insurance protection--13-3/4 million as old-age, survivors, and disability insurance beneficiaries and 1/2 million as railroad retirement annuitants. Among those not protected immediately by the new plan are people who have protection under other programs--retired Federal employees, veterans eligible for care under the special program for that group, and people in institutions.

This pattern of immediate protection for those who had worked under the program in the past, with growth in the proportion protected in the future until ultimately practically all are protected, is the tradition that has been followed from the beginning of the program. When cash benefits for the aged were first payable in 1940, benefits were made immediately available for those who, though already old, had demonstrated attachment to covered work after the program started in 1937.

When cash disability benefits were first paid in 1957 to people age 50 and over, those already disabled who were between the ages of 50 and 64 and who previously had worked substantial periods in covered jobs were made eligible for benefits. In this way the work-related character of the benefits was established and maintained, while at the same time the provisions were given immediate effect to the extent that it seemed practical to do so within the framework of a work-related program. At the same time, both at the very beginning of the program and with its extension to the additional risk of disability, assistance programs, put into operation before the insurance provisions, have been relied on to meet the needs of those who had not earned eligibility under social insurance.

We propose that this time-tested pattern be followed for health insurance benefits, with 80 percent of the aged protected immediately, with 95 percent or better to be protected in the long run, and with medical assistance for the aged becoming increasingly available to those not protected by social insurance.

The Benefits Provided

The proposed legislation would provide for the payment, through the social security program, of certain health costs for people who are aged 65 or older and entitled to old-age, survivors, and disability insurance or railroad retirement benefits. A person would have the health insurance protection at age 65 even though his monthly cash

benefits are being withheld because of earnings from work. In general, the following health services would be paid for under the proposed program:

(1) Inpatient hospital services, including bed, board, drugs, and other supplies and services of the kind customarily furnished by the hospital.

(2) Followup skilled nursing-home services provided to a patient after his transfer from a hospital, including bed, board, nursing services, drugs, and other services and supplies which are customarily provided by skilled nursing homes.

(3) Home health services furnished by or through a public or nonprofit agency under a plan prescribed by a physician, including nursing care, physical, occupational, and speech therapy, medical supplies (other than drugs) and appliances for temporary use, and certain part-time or intermittent homemaker services.

(4) Outpatient hospital diagnostic services of the kind customarily furnished by or through the hospital to its outpatients for diagnostic study.

Hospital and home health services that are furnished on and after October 1, 1962, and skilled nursing-home services furnished on and after July 1, 1963, could be paid for under the program.

In essence what this program adds up to is payment of the cost of hospital care and of economical substitutes for hospital care.

There are two reasons why the proposal focuses on hospital services. First, the hospital is the center of modern medical care, and hospitalization is required in a large proportion of major illnesses. Second, hospital care is very expensive; people who need hospital services generally face a heavy financial burden. Medical expenses for older people who are hospitalized are about 5 times as great as the medical bills of older people who are not hospitalized.

The chief reason why certain services other than hospital inpatient services are covered is to promote economical use of the latter. Thus, the efforts of the health professions to reserve hospital beds for the care of the acutely ill who need the intensive care that only a hospital can furnish would be reinforced by the proposal. The provision for payment of the cost of skilled nursing-home care after a hospital stay, for example, would relieve the hospitals of the problem of caring for patients in the post-acute stage of illness. Pressure for hospital care of such patients could be expected to develop if only hospital care were covered by the proposal. Similarly, because the plan would pay the costs of outpatient hospital diagnostic tests, there would be no incentive to get inpatient care where not required for diagnosis. In addition, of course, payment of the costs of out patient diagnostic services would promote early detection of disease. Payment of the cost of home health services, too, would encourage the use of these less expensive services, where medically appropriate, rather than those of a hospital.

We recognize that there is a great need for an increase in the number of physicians, medical schools, community health facilities, and skilled nursing homes to fully meet the health needs of our growing population. The administration has recommended to the Congress legislative proposals to accomplish these objectives. The proposed Health Professions Educational Act of 1961 (H.R. 4999) and the proposed Community Health Services and Facilities Act of 1961 (H.R. 4998) are part of a total program to improve the health and well-being of the American people. Enactment of these programs is of great importance to the success of the proposed insurance program. On the other hand, passage of the insurance program will do much, in and of itself, to encourage the development of new facilities and services and thus to assure the success of these Federal-State programs. This is because adequate operating funds from patient income must be reasonably assured before a building project can be undertaken, before standards can be raised, or before new service programs can be put into effect. Social insurance financing would help to furnish these operating funds by its payment of the full reasonable costs of the covered services they will provide.

In short, these several programs would work in a coordinated way to increase the availability to the aged of the health services and facilities they need.

The bill would not cover all health services. Much would be left for coverage under private insurance contracts and other voluntary arrangements. As is true of the basic protection provided by the cash benefits, the health insurance protection could be supplemented by the individual as he saw the need to do so and could afford it.

Physicians' services would not be covered except for services in the fields of pathology, radiology, physical medicine, anesthesiology, and ser-

vices rendered by interns and residents-in-training, and those services would be covered only when they are provided as part of the hospital's services. Hospitals enter into various kinds of arrangements with doctors specializing in pathology, radiology, physical medicine, and anesthesiology. Some hospitals employ these specialists as salaried staff members; others arrange for these services by contracting with individuals or partnerships. In order to provide payments for these services for beneficiaries wherever provided by the hospitals, the administration proposal would provide payments to a hospital for the services in question whether the specialist is on salary or provides services for the hospital under some other kind of arrangement. Service provided by the patient's private doctor would not be covered, nor would services furnished by mental, tuberculosis, and, in general, Federal hospitals.

For both inpatient hospital service and nursing-home services, there is a limitation on the number of days of care that could be paid for in a period of illness--a maximum of 90 days for hospital care and a maximum of 180 days for skilled nursing-home care. (This "two-for-one" provision is designed to provide an incentive to use nursing-home facilities, where medically appropriate, rather than hospitals.) In addition there is an overall limitation of 150 "units of service" which may be paid for in a single period of illness. A "unit of service" is defined as 1 day of inpatient hospital care or 2 days of skilled nursing-home care--again a two-for-one ratio. If someone eligible for benefits under the plan should go into the hospital and stay for 70 days, for example, and then require followup skilled nursing-home care, he would be eligible for payment for the cost of up to 160 days of such care.

A period of illness is so defined in the bill that a new period could not begin unless there had been a lapse of 90 days during which the individual was neither an inpatient in a hospital nor a patient in a skilled nursing home.

For home health services an annual maximum of 240 visits is provided. Home health services involve periodic visits to the patient's home by therapists, nurses, and other professional personnel. The limitation placed on the payment of the costs of home health services is written in terms of "visits" rather than "days" so that the amount of home health services covered would be unaffected by whether a variety of services is offered on the same day or different days. A larger amount of service is covered in this area than in hospital and nursing-home care because home health services are far lower in cost than are hospital and nursing-home services.

The proposed health insurance program would not provide "first-dollar" coverage. There is no coverage of a "deductible" amount of $10 for each of the first 9 days of inpatient hospital care in a benefit period, and the minimum deductible amount is $20. Also, there is a deductible amount of $20 for each hospital outpatient diagnostic study.

The inclusion of the various deductible provisions in the proposal results in a substantial reduction (about 0.2 percent of payroll) in benefit costs, thus making it possible to provide a broader range of benefits and greater protection against the cost of catastrophic illness. It is expected that most aged beneficiaries would be able to budget for, or have modest resources available to meet, these small costs to which the deductibles apply.

Administration of the Program

Overall responsibility for administration of the program for social security beneficiaries would rest with the Secretary of Health, Education, and Welfare. State agencies would be used, however, to carry out those services they are best equipped to perform. The bill, for example, authorizes the Secretary to enter into agreements with the States to have them conduct any activities that may be needed to determine whether a provider meets the conditions for participation in the plan. The States could also be reimbursed under such agreements for making available consultative services to help providers to meet these conditions. This help would be in the nature of technical advice on request and would make available to institutions desiring assistance the benefit of State and community professional experience.

Conditions of participation could, of course, be readily met by institutions that fulfill the standards established by accreditation bodies. The Secretary could accept accreditation of a hospital or other facility by a recognized national organization as prima facie evidence that the institution had met some or all of the conditions for participation in the program. The help of State agencies would be used for the most part to determine whether unaccredited hospitals and nursing homes are eligible to participate.

Provision would be made for the establishment of an Advisory Council, which would advise the Secretary on matters of general policy in connection with administration. The Council would also advise the Secretary in the formulation of of regulations. There would be 14 members of the Council, none of whom could otherwise be in the employ of the U.S. Government and at least 4 of whom would have to be persons who are out-

standing in fields pertaining to hospitals and health activities.

The proposal would be carried out through the use of the administrative machinery now used for the old-age, survivors, and disability insurance provisions. This would make it possible to administer the plan with operating costs of about 3 percent of benefit costs, because the administrative machinery for collecting taxes, keeping records, processing claims, and many of the other functions that would have to be performed is already in existence and operating smoothly in the administration of the present program.

Summary and Conclusion

To summarize: Older people have low incomes and high health costs. We believe that many refrain from seeking care they need because they cannot pay for it or are unwilling to ask for help. Others, who do seek care, are made destitute by the cost of the care they get.

With the cost of health care rising and the number of older persons increasing rapidly, the need for protection against the cost of health care for the aged is an urgent and pressing one. The only satisfactory way of providing the aged with adequate health insurance protection is through a system under which the cost of the health insurance will be paid by people during their working years, together with their employers. The social security program is the only practical mechanism which follows this approach and through which in the future practically everyone in every State in the United States can secure basic protection.

Gentlemen, I have given you only a few statistics today. Many more facts and figures could be cited. But statistics cannot measure the anxiety and suffering of elderly people who see their small savings, their homes. their security about to be swept away by the near certainty of expensive illness.

Behind the facts and figures are human beings--average Americans--facing retirement on low income, knowing that in the days ahead there are almost certain to be large hospital bills. Many can just make it day by day on social security supplemented by minimum income from other sources, barely meeting the costs of rent and food and shelter. What they worry about is what happens if they get sick? Will their children be able to help? Will they have to sell their homes, draw the last dollar from the bank, for the first time in their lives apply for relief and go through the humiliation of a test of need, ask help from friends?

Even if medical care on a means-test basis were adequate and available for all needy, it would not be the answer. They, just as you and I, want protection before disaster strikes--not relief after they have lost everything. Growing old has its inevitable sadness; must we add the cruelty of fear and insecurity?

A quarter of a century ago we faced a problem much like the one we face now. We chose, as our basic solution then, a system of social insurance, under which the people, with their employers, would build their own old-age security while working by paying social security contributions into special funds from which payments would be made to them when they were no longer working. Now, after 25 years, few would question the wisdom of that decision.

I hope we will choose the social security approach again today as the Nation's primary answer to the problem of how to meet the costs of medical care for the aged.

HEALTH INSURANCE FOR AGED PERSONS

REPORT

Submitted To The

COMMITTEE ON WAYS AND MEANS
HOUSE OF REPRESENTATIVES

By The

SECRETARY OF HEALTH, EDUCATION, AND WELFARE

Appendix. Medical assistance for the aged: Selected characteristics of State plans.

HEALTH INSURANCE FOR AGED PERSONS

INTRODUCTION

Rapid growth in our aged population has been accompanied by increasing concern about their problems. One of these is the problem of medical care: How can higher-than-average needs be financed for a group with lower-than-average financial resources?

Medical care has become a matter of national concern in the United States--not because sickness and disease are more prevalent but because of the very successes of modern medicine. Modern medical services are not only more effective, they are also very much more costly than the best services available as recently as the early decades of this century. The medical profession will have to work out the future pattern of medical practice. Society as a whole, however, has a proper concern with the methods of paying for medical services. The method of paying for care is of particular consequence for the aged. And the problem is by no means limited to low-income groups: Many middle-income families with too much money to expect free care may find themselves with too little to pay for what they need.

Because no one knows when he will be taken seriously ill, the cost of medical care is a threat to the security and independence of the aged. Every aged person knows--and fears--that some day before he dies he will face serious illness. Most have too little set aside to finance an expensive illness. And it is understandable that those who have savings hesitate to use them all up; they know only too well how likely it is that they will have further illness. Aged persons, like others, dislike turning to public assistance; many old persons go without care rather than subject themselves to a means test.

With medical service a basic necessity, and an individual's need for it highly variable and unpredictable, some socially organized method of paying for services is indicated. One method is that of insurance, which permits individuals to budget ahead for at least some medical expenditures.

Aged persons now find it difficult to obtain adequate health insurance protection. As a group they have more need of medical services than younger persons. Because they use more than others, the average medical cost and hence the current insurance premium needed for aged persons is between two and three times as high as for younger persons.

Up until quite recently, most persons over 65 could not buy health insurance. At present, less than half of all persons aged 65 and over have some type of health insurance. While the extent of insurance protection has increased in recent years, voluntary action alone cannot meet the full need. Some who need the insurance most, because they already have expensive health problems, will find they are not accepted as insurable risks. Others, who would be considered good risks, will find the premium cost more than can be spared out of an income already stretched thin by everyday necessities.

How, in terms acceptable to our social goals and political organization, should medical care for the aged be financed? Much care for the aged and for other low-income groups is already supported out of public funds, that is, from taxes paid largely by the working population. If the aged are to have adequate medical care, society as a whole must continue to help carry the costs of this group in our population. Society does have a choice as to the terms on which the care should be available and how the tax funds should be collected. This problem cannot be met satisfactorily through sole reliance on a program of assistance varying from State to State and with the funds coming from general revenues. What is required is a national program, financed through social insurance contributions, with the same benefits available throughout the Nation.

* * *

This report first summarizes the evidences of the problem of medical care for the aged. It describes the means now available to deal with the problem--primarily voluntary insurance and public assistance programs. It then takes up in some detail the Administration's proposal to provide protection against the costs of hospital and skilled nursing home services, home health services, and outpatient hospital diagnostic services through social insurance. It describes the provisions as to coverage and benefits, the costs and the financing, and how the program might be administered.

PART I

MEDICAL CARE FOR THE AGED:
THE NEED AND PRESENT PROVISIONS FOR MEETING THAT NEED

The growth of the aged population of the United States, both in absolute numbers and in relation to the total population, has led to increasing concern about their special problems. In the 10 years from 1950 to 1960 the number aged 65 and over in the United States increased more than 4 million, or 35 percent, nearly twice the rate of increase in the total population. The total number of persons in this age group in the United States, Puerto Rico, and the Virgin Islands now exceeds 17 million, and by 1970 will probably exceed 20 million.

The sharp drop in income associated with withdrawal from the labor market has been of first concern. Monthly benefits under the old-age, survivors, and disability insurance system provide substantial protection against loss of earnings, making it possible for the great majority of beneficiaries to meet day-to-day living expenses, at least at a minimal level. Heavy medical costs are now the most serious impediment to security in old age. For this reason, increasing attention has been directed toward methods of financing the medical services needed by older persons.

THE NEED FOR FINANCING MEDICAL CARE

HEALTH CHARACTERISTICS 1/

Millions of older persons are reasonably healthy, but many more millions suffer from disease and disability. Health of course affects every aspect of a person's life--his participation in society and his financial status--and is in turn largely dependent on his ability to obtain appropriate care.

1/ Unless otherwise indicated, the data in this section are drawn from U.S. Public Health Service Publication No. 584-C4, Older Persons, Selected Health Characteristics, United States, July 1957-June 1959, and other National Health Survey reports.

Persons 65 and over are twice as likely as younger persons to have one or more chronic conditions, six times as likely to have their activity restricted and thirteen times as likely to be limited in their mobility. Specifically, according to the National Health Survey, 77 percent of all persons 65 and over not in insitutions had one or more chronic conditions or impairments and 42 percent were limited in their activity (table 1). Indeed, one in seven of the aged was completely unable to engage in his usual activities of working or keeping house and another two in seven were partially restricted in their activity. Some persons can get around by themselves even though chronic conditions limit their ability to work or keep house. Nevertheless, 18 percent of those 65 or older reported their mobility was limited: More than 4 percent were confined to the house and 14 percent were limited or needed help in getting around outside the house.

The older the individual, the greater the likelihood of chronic conditions. Thus, of all persons 75 and over not in institutions 55 percent had some chronic limitation of activity, with nearly one-fourth unable to work or keep house, and almost one-third restricted in their activity. Some 30 percent were confined to the house or limited in getting around outdoors.

The fact that the National Health Survey does not include persons in nursing homes, homes for the aged and long-stay hospitals and other institutions--now estimated to number more than half a million--means that the health situation of older persons is actually more unfavorable than data from that survey indicate, particularly in comparison with younger persons.

Older persons tend to maintain their independent living arrangements as long as possible. These may have to be adjusted to their physical conditions, however. The National Health Survey shows that among aged persons who are not married, those whose mobility is limited are much more likely than others to live with children or other relatives--about two-thirds as compared with half of those with no restriction on mobility.

Days of Disability

Reported limitations on activity and mobility give a qualitative measure of the extent of chronic disability in the population. Information is also available from the National Health Survey on the number of days of disability resulting from both acute and chronic conditions.

Persons 65 and over reported an average of 43 days during the year when their usual activities were restricted because of illness or injury--$2\frac{1}{2}$ times as many as younger persons (table 2). On 14 of these days they were confined to bed for all or most of the day. Persons under 65 years of age were confined to bed only half as often.

Table 1.--Percentage distribution according to chronic limitation of mobility and activity, for persons 65 and older by age, sex, family status, family income, and for younger persons by age, July 1957-June 1959

(Noninstitutional population of the United States)

Prevalence of Chronic Conditions

As already indicated, 77 percent of the persons 65 and over in the noninstitutional population had one or more chronic conditions, compared to 38 percent among younger persons. Twenty-six percent of the 65 and over group reported one chronic condition, 20 percent had two, and 31 percent had three or more such conditions.

Arthritis, rheumatism, heart disease, and high blood pressure cause much of the disability in later life. The prevalence of these and other selected chronic diseases and impairments among persons 65 and over not in institutions is shown in table 3 in rank order, together with the proportion medically attended.

The percentage of cases that had never been seen by a physician was negligible or small in most diagnostic categories. However, a substantial proportion of those with chronic conditions were reported as not under care at the time of interview.

Table 3.--Prevalence of selected chronic conditions among persons 65 and older and percent medically attended, June 1957-June 1959

Selected conditions	Rate per 1,000 persons	Medically attended		Never medically attended
		Under care	Not under care	
		Percent

Incidence of Acute Conditions

With the increased emphasis on chronic conditions among older persons during recent years, there has been a tendency to underestimate the importance for this age group of illness and disability due to acute conditions--that is, which had lasted less than three months but involved either medical attention or one or more days of restricted activity. While the annual rate of incidence of acute conditions among persons 65 years and older is slightly lower than for other adults in the population, according to National Health Survey data it is by no means negligible.

Roughly three-fifths of the acute conditions reported by persons 65 and over for the July 1957-June 1959 period involved the respiratory system. Nearly half the others were a result of injuries. This constituted a rate of 228 older persons injured annually per 1,000 aged population. About two-thirds of the older persons were injured in accidents occurring in the home. About 85 percent of the bed-disability days reported were associated with fractures, dislocations, sprains, strains, contusions, and superficial injuries.

Use of Medical Services

Aged persons require and utilize many health services. They consult a physician about 6.8 times per year, on the average, compared to a rate of 4.8 for persons under 65. The rate for older persons would probably be considerably greater if all sought and received as much care as they need. The fact that they do not is suggested by the fact that those living as members of families whose income was less than $2,000 had on the average 6.5 physician visits per year, while persons in this age group in families with income of $7,000 or more consulted a physician on the average 8.7 times per year. This difference is in contrast to the fact that persons with family incomes of less than $2,000 were more likely to have chronic conditions and limitations on their activities. Within each of the activity limitation categories, the rate of physician visits was higher as the amount of family income increased.

There is little change with age (comparing 10-year age groups from 45 to 75 and over) in the use of physicians' services by persons with no limitation of activity or mobility. For persons with limitations, however, there was a decrease with age. For those with major limitation of mobility, the average annual number of physician visits dropped sharply, from 35 per person for the 45 to 54 age group to 18 for the 75 and over.

Older persons visited a dentist 0.8 times per person per year, compared with 1.5 visits per person per year in the total population. (Approximately one-third of all visits made by persons 65 years and older were for denture work.) Similar to the pattern for physician visits, the rate of dental visits for persons 65 years and older was progressively higher the larger the family income.

Hospital Utilization

Summary data on use of general hospitals.--Aged people go to the hospital more often and stay longer than younger persons. According to National Health Survey data for the period July 1958-June 1960, there

are 14.6 discharges per year per 100 persons 65 and older living at the time of interview and not in institutions. 2/

Hospital stays of persons 65 and over averaged 14.9 days (compared to 14.7 days shown by the 1957-58 survey). The stays and the total days of hospitalization during the year for aged persons living at time of interview were distributed as follows by length of stay:

Length of stay	Number of discharges	Number of days
Total	100.0	100.0
1 day	4.1	0.3
2-5 days	22.6	5.3
6-14 days	44.1	28.3
15-30 days	19.4	28.2
31 days or more	8.8	37.9
Unknown	1.1	----

Some persons are of course hospitalized more than once during a year, so that the number of discharges per person is larger than the number hospitalized.

The National Health Survey found the following differences for persons over and under 65 discharged from short-stay general hospitals in 1958-60:

	Persons 65 and over	Persons under 65
Discharges per 100 persons	14.6	11.2
Average length of stay in days	14.9	7.6
Aggregate days per 100 persons	218.0	85.0

2/ This is substantially more than the 12.1 discharges per 100 aged persons shown by the first National Health Survey report on use of short-term general hospitals in the period July 1957-June 1958. Most of the difference is attributable to improved methods of data collection, the remainder to the fact that the data relate to a later period when utilization was somewhat higher. The July 1958-June 1960 reports are not yet published. The earlier figures are from U.S. Public Health Service Publication No. 584-B7, Hospitalization: Patients Discharged from Short-Stay Hospitals, July 1957-June 1958. See also U.S. Public Health Service Publication No. 584-D4, Reporting of Hospitalization in the Health Interview Survey (May 1961).

A national survey of old-age and survivors insurance beneficiaries conducted in late 1957 found somewhat more days of general hospital care per year than the National Health Survey for persons 65 and over--236 as compared with 218 per 100 aged persons. The difference stems in part from the fact that the National Health Survey includes aged persons in the labor force, who are less likely than the retired to be hospitalized, and in part from the fact that it is restricted to the noninstitutional population, whereas the beneficiary survey includes time spent in a general hospital by persons who were otherwise in an institution.

One in nine of all aged beneficiaries was hospitalized during the course of a year. They are distributed as follows by number of days spent in a short-stay general hospital (regardless of number of hospital episodes within the year):

Days in hospital during year	Percent of beneficiaries hospitalized
Total	100.0
1-30 days	81.9
31-60 days	12.4
61-90 days	3.2
91 days and over	2.5

About every fifth aged beneficiary who spent any time in a general hospital during the year had more than one hospital stay. In other words, there were 14 stays per 100 beneficiaries; and there were 21.2 days of care per hospitalized beneficiary.

Corresponding data from other surveys conducted in 1956 and 1957 appear in the Report Submitted to the Committee on Ways and Means on April 3, 1959, Hospitalization Insurance for OASDI Beneficiaries.

Factors affecting time spent in short-stay hospitals.--Age and sex affect the amount of time spent in hospitals. Household surveys show that aged men are usually admitted more frequently and stay longer in hospitals than aged women. The differences found are much greater in some surveys than in others and, perhaps because of sampling variations, are not consistent for all age and other subgroups. In general, the amount of time spent in the hospital for every 100 persons in the population increases with age. The latest data from the National Health Survey are summarized in table 4.

Table 4.--Number of patients discharged per 100 persons and average length of stay for persons 65 and over, by sex and age, July 1958-June 1960
(Noninstitutional population of the United States)

Sex and age	Discharges per 100 aged persons per year	Average length of stay in days
Total 65 and over...	14.6	14.9
Men.....	16.5	15.9
Women.....	13.0	14.0
65-74.....	14.1	14.4
75 and over.....	15.4	15.8

SOURCE: National Health Survey, unpublished data.

The earlier data from the National Health Survey show some correlation between hospital utilization and amount of family income, but it is not clear to what extent this reflects the fact that aged persons needing hospitalization are more likely to share a home with relatives. The Bureau of Old-Age and Survivors Insurance survey data indicate that the probability of a beneficiary entering a hospital during the year bears no systematic relationship to his income (or, in the case of married beneficiaries, to the income of the couple). At each income level, however, those beneficiaries with some health insurance tend to have a higher hospital admission rate than beneficiaries with no insurance.

Persons who have health insurance enter hospitals more frequently, but have shorter average stays than those who are uninsured. The following data from the National Health Survey for July-December 1959 show that regardless of sex or age older persons with health insurance are much more likely than other aged persons to have one or more short-stay hospital episodes in a year: 3/

Sex and age	Percent with one or more hospital episodes	
	Insured	Not insured
Total 65 and over	13.7	8.3
Men 65-74	13.3	9.7
75 and over	15.5	9.1
Women 65-74	12.5	7.8
75 and over	17.0	6.5

3/ U.S. Public Health Service Publication No. 584-B25, Interim Report on Health Insurance, United States, July-December 1959.

Matching information on length of stay, while not available from the National Health Survey, is provided by the 1957 survey of OASI beneficiaries. The frequency of hospital visits among the insured and uninsured OASI beneficiaries covered in that survey is in line with that found in the National Health Survey, as shown by the following figures:

	Insured	Not insured
Persons hospitalized during year per 100 persons	14.2	8.8
Average days of care per person hospitalized	17.4	25.7
Total days hospital care per 100 persons	248.0	226.0

The average stay is less for the insured because persons with insurance are more likely to go to the hospital early in the course of an illness or for essentially diagnostic purposes and thus stay a relatively short time. The uninsured group includes a larger proportion of "impaired risks" who cannot purchase insurance, of older persons with more serious medical needs, and probably of persons who--because of fear of the costs--postpone getting medical and hospital care until the need is overwhelming.

Utilization in last year of life.--Household surveys considerably understate the hospital utilization of aged persons because they generally exclude the hospitalization experience during the survey year of persons who had died prior to the interview. The mortality rate of the 65 and over group is of course high.

A special National Health Survey report, Hospital Utilization in the Last Year of Life,[4/] based on data from surveys in the Middle Atlantic States, shows that the inclusion of hospitalization received by decedents during the survey year results in a substantial increase in the total volume of hospitalization reported, especially for persons 65 and over.

In this region the days of care used by persons who died during 1957 would increase by about 40 percent the total estimated hospital days used by all the aged in the year, computed solely on the basis of the reported experience of persons alive at date of interview. However, inasmuch as the current statistics on hospital utilization by the population alive at date of interview are higher than formerly reported--as a consequence of the improved collection procedures now followed by the National Health Survey--the days used by decedents would raise the estimated days used by all the aged (derived from the experience of survivors) by no more than a third and possibly by as little as a fourth.

4/ U.S. Public Health Service Publication No. 584-D3 (January 1961).

The 1957 survey of OASI beneficiaries also gives some indication of the heavy volume of hospitalization which may characterize a person's last illness. Although no data were obtained for nonmarried beneficiaries dying during the survey year, data were obtained for the small number of persons in the sample who died leaving a spouse drawing a retired worker's benefit. Among the couples where a spouse (usually the wife) had died, three times as many had one or both members hospitalized during the year as among those where both partners survived the year. (The average known medical cost for the year was 2 1/3 times as high for the couples with one member dying as when both lived through the entire year.)

Long-stay institutions.--In addition to their high rate of general hospital use, aged persons are heavy users of nursing homes and other long-stay institutions. But relatively little is known about admission rates and length of stay in the chronic-care facilities because most household surveys exclude persons in institutions, as did the National Health Survey.

The 1957 survey of OASI beneficiaries, however, did include beneficiaries in institutions. It found that only one-fifth as many spent time in a long-stay institution during the year as in a general hospital, but the average stay in such facilities was much longer. In the aggregate, for aged beneficiaries there were close to two days in a long-stay institution for every one day in a general hospital.

Kind of institution	Number in institution per 1,000 beneficiaries	Aggregate days per 1,000 beneficiaries
General hospital	111	2,360
Long-stay institution	23	4,480
Nursing home	13	2,760
Other	10	1,720

It is not known for how many of the beneficiaries in nursing homes the care was primarily residential and custodial, and for how many it was skilled nursing and medical care. But it is known that nearly a third of those reporting nursing home care also spent some time in a general hospital--outside the nursing home--during the year.

FINANCIAL RESOURCES

Money Income

As earnings decline or cease altogether, most persons 65 and over must get along on reduced resources. Just exactly how many have low incomes varies not only with the definition of "low" but also with the system of measurement, that is, the definition of the income unit and

the method of its allocation among family members. One cause of confusion is that income statistics for the aged population are seldom available in the form that would be most useful, that is, separately for couples who keep house by themselves, for persons widowed, divorced or never married who live alone, and for the aged individuals and couples who live with relatives. But no matter what study is cited or how it treats income, it is likely to show that at least half of all persons 65 and over have less than $1,000 cash income for a year.

Income statistics from the Bureau of the Census for aged persons, and for families with an aged head, are collected annually and are the most comprehensive. Data which have just become available for 1960 show 52 percent of the persons 65 and over not in institutions had cash incomes below $1,000 in that year (table 5).

Income data for persons have the limitation that they do not indicate how many persons depend on the income. In the case of the married, some of the income attributed to the husband may go for support of his wife, who may be under 65. Similarly, wives dependent on their husbands will be shown as having little or no income. However, less than one-fifth of all persons 65 and over are married women, and many older married couples have less than $2,000 between them. Therefore, even if the reported income data were adjusted to reflect an equal sharing by husband and wife, the proportion of persons 65 and over having less than $1,000 would be very little less than the 52 percent shown.

Data for older families are likewise not favorable: in 1959 (when 55 percent of the aged persons had less than $1,000), half the families with head 65 and over had less than $2,830 and one-fourth had less than $1,620, according to the Census Bureau. These incomes were for the support of 2.6 members, on the average--about two-fifths of them under 65. Often, a younger relative contributes a substantial share of the family's income.

Of the aged persons living alone or with nonrelatives (3.6 million in 1959), half had less than $1,010 and four-fifths had less than $2,000.

There were in addition 2.3 million aged persons living in the home of a younger relative who are counted in the figures for "persons," but who are not identified in the family income analysis. The typical aged person in this group is very likely not financially independent, and has a lower income than a person who lives in his own household as the head of the household or the spouse.

Data collected in a special survey for the Health Information Foundation by the National Opinion Research Council illustrate this point. 5/

5/ Ethel Shanas, Meeting Medical Care Costs Among the Aging, Health Information Foundation, Research Series 17 (1960); see table 6 in section on "Medical Care Expenditures" for summary.

Table 5.--Percentage distribution of persons aged 65 and over, by total money income, and by sex, 1960
(Noninstitutional population of the United States)

Money income class	Total 1/	Men	Women
Total	100.0	100.0	100.0
Less than $1,000	52.7	27.1	73.9
Zero	14.5	3.6	23.6
$ 1-499	11.7	5.5	16.8
500-999	26.5	18.0	33.5
$1,000-1,999	23.7	32.0	16.8
$1,000-1,499	15.3	20.1	11.2
1,500-1,999	8.4	11.9	5.6
$2,000-2,999	10.2	17.3	4.5
$3,000-4,999	7.2	11.8	3.4
$5,000-or more	6.3	11.8	1.7
Median income for:			
All persons	$ 950	$1,620	$ 640
Income recipients	1,150	1,690	820
Year-round, full-time workers	NA	4,120	2,840

1/ The distributions for men and women were combined using population figures estimated in the Division of Program Research by updating the Decennial Census counts after adjustment to exclude institutional inmates (estimated at 540,000). The Census Bureau has not yet released estimates for aged persons in the noninstitutional population as of spring 1961, when the income data were collected.

SOURCE: Distributions of men and women with income from U.S. Bureau of the Census, Current Population Report, Consumer Income, Series P-60, No. 36 (June 9, 1961); percent with zero income made available in advance of publication.

They show that among nonmarried persons 65 and over median money incomes in 1956 were about $200 higher for persons living alone or with nonrelatives than for those sharing a home with relatives.

	Median income	
	Men	Women
Living with relatives	$1,139	$750
Living alone or with nonrelatives	1,339	972

The differential might well be greater were it not for a slight underrepresentation in the study of those in the oldest age groups. It would certainly be greater if aged persons in institutions were included with those sharing a home with relatives.

It is especially important to take into account the number of persons supported by the family income when comparisons are made between families at different stages in the life cycle. When median family income as reported by the Census for 1958, for example, was divided by mean family size in that year, the income of families with head 65 and over was only 58 percent as much as that of families with head 55 to 64 and 81 percent as much as that for very young families (head 25 to 34 years). When account is taken also of the large number of children in younger families (treating those under 13 as equivalent in need to half an adult and older children as adults) the relative position of the aged is even more unfavorable, as shown by the following figures:

	Median income per family in 1958		
Age of head	Total	Per capita	Per equivalent adult
65 and over	$2,666	$1,030	$1,070
55-64	5,153	1,780	1,840
45-54	5,738	1,550	1,740
35-44	5,704	1,300	1,630
25-34	5,207	1,270	1,680

Other Financial Resources

Older persons are more likely than younger persons to have some savings, but in general those with the smallest incomes are the least likely to have other resources to fall back on. Moreover, most of the savings of the aged are tied up in their homes or in life insurance, rather than in a form readily convertible to cash.

According to the 1960 Survey of Consumer Finances, "spending units" in the oldest age group (head 65 and over) were distributed as follows in early 1960 by amount of liquid assets in bank accounts or savings bonds: 6/

Liquid asset holdings	Percent
Total	100
Zero	30
$ 1- 199	6
200- 999	14
1,000-1,999	10
2,000 or more	40

Relatively few of the aged hold any marketable securities, and they usually are the ones who have other liquid assets also. Only one in fourteen of the aged spending units reported owning corporate stock. Three years earlier, when this question was last studied by the Federal Reserve Board, only one in nine had corporate stocks or bonds and virtually all of these stockholders were among the group that had over $2,000 in other liquid assets.

Having savings, as one might expect, is related to income. The 1959 survey for the Federal Reserve Board, in relating assets to current income, found that when money income of the aged spending units was less than $3,000, 47 percent had less than $200 in liquid assets and 44 percent had assets of $500 or more. By contrast, when income was $3,000 to $5,000, 21 percent of the units had less than $200 in liquid assets and 70 percent had assets of $500 or more.

The 1960 Survey of Consumer Finances shows explicitly that relatively few of the aged have more than one type of asset other than equity in a home. The distribution by number and pattern of their holdings was as follows for spending units with head 65 and over. (See chart on following page.)

6/ Survey Research Center, Institute for Social Research, University of Michigan, 1961. These and subsequent data for aged spending units exclude about one-fourth of all aged persons--those who were members of units headed by younger persons, who are not in general financially independent, and those in large lodging houses and institutions.

Pattern of holding	Percent
None	13
One only	30
Liquid assets	15
Equity in home or farm	13
One other	1
Two only	34
Liquid assets and equity	26
Two others	8
Three only	19
Liquid assets, equity and stock	7
Liquid assets, equity and other real estate	11
Three others	1
Four or five	4
Total	100

This is important because, aside from their own utility as a resource to fall back on, some assets can be income-producing and thus in themselves raise total money income. When beneficiary couples were classified by the amount of their OASI benefit, among those at the minimum, only one in four had as much as $75 in income from assets during the year. Among those near the maximum, on the other hand, more than one in two had at least $75 in asset income for the year.

Life insurance is a fairly common form of saving, although less so among the aged than among younger families. The policies of the aged have a relatively low face value, however, and some of them have no cash surrender value. The proceeds are therefore more likely to go toward burial costs or some of the bills outstanding after a terminal illness, than to meet costs of current medical care.

Among OASI beneficiaries studied in the fall of 1957, 71 percent of the married couples and half of the other aged beneficiaries carried some life insurance. The median face value was $1,850 for the policies carried by couples and less than half as much for nonmarried beneficiaries. More than two-thirds of all the beneficiaries held policies with a face value of less than $1,000 per person ($2,000 for a couple) or had no insurance at all.

Homeownership

Equity in a home is the most common "saving" of the aged and represents the major portion of their net worth. Like other forms of

saving, the advantage of homeownership is more common among those with higher incomes.

In early 1959, 62 percent of the nonfarm "spending units" headed by a person 65 and over owned their homes. Of these homes, 83 percent were clear of mortgage debt.

Among aged spending units with liquid assets of less than $200 half lived in rented quarters or with relatives. Among aged spending units with liquid assets of $200 or more on the other hand, more than two-thirds owned their home.

Among OASI beneficiaries just about two out of three of those married and one out of three of the nonmarried studied in 1957 owned a nonfarm home. Most of these homes were mortgage free, but the equity was relatively modest: the median amount about $8,000 for couples and widows and about $6,000 for single retired workers. Nearly eight out of ten of the beneficiary couples with income of $5,000 or more, but fewer than two out of three with less than $1,200, owned their homes.

While homeownership can mean lower out-of-pocket costs, it does not mean living without significant housing costs. Data from the 1957 beneficiary survey indicate that urban couples keeping house alone in a paid-up home averaged only about 30 percent less for taxes, upkeep and utilities than the average outlay for rent, heat and other utilities by couples renting their living quarters.

Noncash Income

Many aged persons have noncash resources which enable them to enjoy better living than their money resources alone could make possible. Such "nonmoney" income, however, does not necessarily release an equivalent number of dollars for purchasing goods and services, such as health care.

According to the 1957 survey of OASI beneficiaries, four out of five couples and three out of five nonmarried beneficiaries had noncash income of one or more of the following types: an owned home or rent-free housing, food home-grown or obtained without cost, or medical care for which the beneficiary did not pay.7/ Others received some support from the children or relatives with whom they lived.

7/ This assumes that homeownership yields noncash income in the long run, although about one-fifth of the homeowners reported current housing expenses for the survey year that exceeded the estimated rental value of the home. Roughly every third homeowner reported noncash income from another source, usually food, because homeowners are more likely than renters to have garden space.

A fourth of all beneficiary couples and a tenth of all other aged beneficiaries raised some food. Such food makes for a better and more interesting diet, but the net saving in family food expenditures is likely to be considerably less than dollar for dollar.

Measures of Need

When it is said that the aged as a group have relatively low incomes, this implies some standard of how much they really need. Certainly for many, with the children grown and the home paid for, wants in many aspects of daily living are lessened. "Need" is admittedly a relative term: It will vary with considerations such as homeownership, the state of health, and perhaps the extent to which children and other relatives can be counted on for help in an emergency. The needs as well as the financial resources of the aged are in some measure a function of where they live. Those in cities, for example, have higher income on the average and are more likely to be drawing OASI benefits than those who spent their lives on farms or at other work only recently brought under the program. On the other hand, in large cities people are less likely to have the advantage of an owned home and home-grown food which can help make a small income go farther, and often must pay higher prices, particularly for housing.

One measure of need might be the recent Bureau of Labor Statistics budget for a retired couple, in reasonably good health, keeping house alone in a rented dwelling in one of 20 large cities. The cost in late 1959 ranges from $2,390 to $3,110 or from $2,640 to $3,370, depending on whether one adheres to a concept adopted earlier by the Social Security Administration, or applies the somewhat higher food and transportation standard conforming to that used for a city worker's family budget. Only a minority of the aged live in the circumstances to which this "modest but adequate" budget applies, however: Just over half of all persons aged 65 and over are currently married and living with a spouse; less than two-thirds live in a community classified as urban, and most elderly couples own their own homes, usually mortgage-free; and not all of them keep house by themselves.

Currently, income data from the Bureau of the Census are available only for families with an aged head and not for aged couples living alone. Such families include an average of 2.6 persons. On the basis, however, of a special Census income tabulation for 1956 for both types of families, the median income of all elderly couples living alone in urban areas might be estimated at roughly $2,600-$2,800 in 1959. Thus the cost of maintaining an elderly couple, in reasonably good health for their age and living alone in a rented dwelling in a large city--ranging from $2,390 in Houston to $3,110 in Chicago in autumn 1959--may have been beyond the reach of more than half of them. Lowering the budget to a range of $2,200 to

$2,800 to allow for the estimated amount of housing costs that many of the couples would save as homeowners would reduce the number for whom the budget standard would be more than income could provide, but this number would still be considerable. Furthermore relatively few with incomes below the budget level would have sufficient cash savings or assets readily convertible to cash to make up the deficit.

An important but difficult task is adapting the budget-for-two to represent the needs of one elderly person. While there is no generally accepted procedure, there is likely to be agreement that the least suitable estimate is a simple division by two. For housing, the cost for a single individual is probably little less than for two. If keeping house is impractical, as may be true for an elderly man living alone, the budget will have to allow for eating most meals out and sending out the laundry.

The Bureau of Labor Statistics has developed a scale based on the relation between food expenditures and income throughout the entire range of income which suggests that one person 65 or over would need 59 percent as much income as an elderly couple living at the same standard. Further study will most likely show that when incomes are low and consumption is already close to the marginal level, this ratio is too low. However, even the 59 percent ratio brings estimated costs for an elderly individual considerably above average means. On this basis, a "modest but adequate" standard for an elderly person living alone would take from $1,410 to $1,835 in the 20 cities studied. The median income for individuals aged 65 or over living alone (or with nonrelatives) in cities was $1,140 in 1959.

MEDICAL CARE EXPENDITURES

Although opinions differ as to the standard against which to measure resources of the aged, it is generally agreed that their lower-than-average income is accompanied by higher-than-average medical care needs. It is well-known also that the aged, like other predominantly low-income groups, are likely to find the financing of their medical needs a heavy burden. Sometimes they forego necessary medical care entirely or defer it much longer than is desirable. In other instances they get the care they need, but must rely on others to help pay for it.

Total Medical Care Expenditures Per Capita

Personal expenditures.--According to a study conducted for the Health Information Foundation, per capita gross private medical care expenditures by (or for) persons aged 65 and over are at least twice as large as those by (or for) persons under 65 (table 6). This leaves out the heavy costs for terminal illness of persons who had lived alone, and

the cost of care in nursing homes, mental or tuberculosis hospitals and other institutions (much of which is publicly financed) which are particularly important for the aged, and also the value of care provided at no charge to those individuals who cannot pay.

Table 6.--Private expenditures for medical care per person, by age, 1957-58

	Persons 65 and over	Persons under 65
Total	$177	$86
Physicians	55	29
Hospitals	49	19
Drugs	42	18
Dentists	10	14
Other	21	6

SOURCE: Odin Anderson, et al., Family Expenditure Patterns for Personal Health Services, Health Information Foundation Research Series 14 (1960).

If allowance were made for the amounts spent by private individuals for medical care of the aged in nursing homes and other institutions, and for medical expenses incurred in their last illness by the aged living alone, the private medical care expenditures for persons 65 and over would probably have averaged $187 instead of $177 in 1957-58.

Public and private expenditures.--Aggregate annual public expenditures in the fiscal year 1958 for medical care for the aged are estimated at about $650 million exclusive of care in tuberculosis and mental hospitals, and at about $940 million inclusive of such care. Philanthropic expenditures for medical care for the aged are estimated at $150 million. The total medical care expenditures for persons 65 and over in 1957-58 would therefore have been about $240 per capita, omitting care in tuberculosis and mental hospitals, or $260 including such institutional care for aged persons. At present prices the per capita average for all care probably exceeds $290, or a total of almost $5 billion.

Hospital care is estimated to account for about two-fifths of the total.

Wide variation in expenditures.--The erratic incidence of illness is one of the factors that aggravates the medical burden. Average medical cost figures conceal wide variations in expenditures and give no indication of the very heavy burden that may come to the individual whose illness requires hospitalization. A hospital stay usually means total medical bills for the year are relatively high. No one can foresee whether or just when he will have to enter a hospital, which makes individual budgeting unsuitable as a means for meeting the cost of hospitalization.

Hospital Stays and Medical Bills

The impact of hospitalization on aged persons is well illustrated by data from the 1957 survey of OASI beneficiaries. They are presented for married couples and for other aged beneficiaries separately, rather than for individuals as in the case of disability and utilization data, because for married persons medical costs should be related to the resources of the couple.

At least one member in every fifth aged couple entitled to benefits spent some time in a hospital during the year, according to the 1957 survey of beneficiaries. For half the couples with a hospitalized illness (excluding those reporting free service or other unknown costs), the total medical bills incurred amounted to over $700, more than the cost of a modest food budget for the year, compared with $150 for couples with neither member hospitalized (table 7).

Table 7.--Percentage distribution of aged OASI beneficiaries, hospitalized and not hospitalized by amount of medical costs incurred during year, 1957

Medical costs incurred in year	OASI couples		Nonmarried beneficiaries	
	Hospitalized 1/	Not hospitalized	Hospitalized 1/	Not hospitalized
Under $100.....	1	39	2	60
$ 100-199.....	4	21	9	18
200-399.....	13	23	15	12
400-599.....	17	7	10	2
600-999.....	16	3	14	1
1000 or more.....	28	1	22	1
Unknown 2/.....	20	5	28	6
Median.....	$700	$150	$600	$80

1/ Includes persons who received care in nursing homes or chronic care institutions as well as in short-stay general hospitals, because their medical-cost experience tends to be similar.

2/ In most cases, includes some "free" care, i.e., no bills rendered to anyone, or vendor paid directly by public assistance or other agency.

SOURCE: 1957 Survey of OASI Beneficiaries.

Nonmarried beneficiaries, who tend to be older, use more hospital and other institutional care than the married. One in seven of those interviewed in late 1957 spent some time in a hospital, nursing home or other institution during the previous 12 months. Median medical costs amounted to $600 for all such beneficiaries, to $500 counting only those who spent some time in a short-term general hospital.

The effect of hospitalization on the size of the total medical bill can be demonstrated more directly in another way. Among those couples with one or both the members hospitalized and able to report their total medical costs, the costs associated with such episodes averaged 64 percent of their total medical bills for the year--41 percent representing charges made by a general hospital, 4 percent charges of chronic care institutions, and 19 percent the fees for the surgeon and inhospital doctor's care. For nonmarried beneficiaries the costs associated with hospital and nursing home care made up 77 percent of total medical costs, an even greater portion than for beneficiary couples.

Means of Meeting Medical Bills

Persons who are hospitalized--and therefore have relatively large medical costs--naturally have more difficulty than others in meeting their total medical bills for the year.

According to the 1957 beneficiary survey, more than two-fifths of the couples and roughly three-fifths of the nonmarried beneficiaries who spent some time in a general hospital did not meet the year's medical costs out of their own income, assets and health insurance. The longer the hospital stay, the larger the proportion that could not stretch their resources.

Medical debts were incurred--or increased--by 21 percent of the couples and 12 percent of the nonmarried beneficiaries with a hospital episode during the year. (For all the aged, whether or not hospitalized, the proportions were very much smaller--6 percent and 3 percent, respectively.) And this does not count the cases where a doctor, for example, may reduce his fees because he knows that the patient cannot pay. Moreover, a considerable number of the beneficiaries who had more unpaid medical bills at the end than at the beginning of the year got help from outside as well.

Fifteen percent of the couples and 29 percent of the nonmarried beneficiaries relied for at least part of their medical care on public assistance agencies, hospitals, or other public and private health and welfare agencies. Less than half as many of the nonhospitalized beneficiaries had to turn to welfare agencies.

The number receiving help from relatives in one form or another was at least as large. When beneficiaries were asked how they met their medical bills, 15 percent of the couples and 26 percent of the nonmarried with one or more hospital episodes reported that relatives helped pay for them. (Less than half as many of the other beneficiaries had to turn to relatives.) Some additional beneficiaries with hospital bills in effect received as much or more help with their medical costs from relatives who helped support them either sharing their home or by paying other regular living expenses.

The Role of Hospital Insurance

Were it not for health insurance--despite the limitations discussed below of many policies held by the aged--many more would have had to turn to relatives or welfare agencies, or both, to meet their pressing medical needs.

Data just becoming available from the National Health Survey reveal that for half the hospital stays of aged persons, health insurance paid no part of the bill. On the other hand, insurance paid some part of the hospital costs for three-fourths of the stays of younger persons.

Even when insurance is available, it is of course less effective for long than for short stays (table 8). Thus, three-fourths or more of the hospital bill was paid by insurance for three-fifths of the episodes lasting less than a month, but for less than half the episodes of a month or longer.

The actual proportion of hospital bills paid in some part by insurance is probably smaller than shown, because terminal illness cases are excluded, and those at the older ages, who are most likely to die, are least likely to have any insurance. It is not feasible, however, to try to quantify the effect of this exclusion on the findings as they relate to length of stay.

Table 8.--Percentage distribution of short-stay hospital discharges according to proportion of bill paid by insurance, by length of stay, July 1958-June 1960 (Civilian noninstitutional population of the United States)

Age and length of stay	Total discharges	Proportion of bill paid by insurance			
		None of bill	Any part of bill		
			Less than 1/2	1/2 to 3/4	3/4 or more
65 and over	100.0	48.8	9.0	11.9	30.3
1-5 days	100.0	48.9	10.1	11.5	29.4
6-14 days	100.0	46.4	8.6	11.9	33.1
15-30 days	100.0	49.8	9.2	11.0	30.0
31 days or more	100.0	54.7	8.1	15.8	21.4
Under 65	100.0	30.0	4.9	11.2	53.8

PRESENT PROVISIONS FOR FINANCING MEDICAL CARE FOR THE AGED

VOLUNTARY HEALTH INSURANCE

During the past few years the private insurance industry has made an intensive and commendable effort to develop health insurance policies for older persons. Until quite recently persons aged 65 and over who were not still at work and members of an employed group, had limited opportunity to purchase health insurance. An increasing proportion of the persons now reaching age 65 are able to carry over into retirement health insurance coverage which they obtained in their younger years, although frequently with more limited protection or higher premiums or

both. Blue Cross, Blue Shield and many commercial insurance companies have developed special "Senior Citizen Certificates" or group policies that can be purchased by persons aged 65 and over in most circumstances, although coverage of pre-existing conditions may be limited.

There has now been enough experience with private health insurance for the aged to indicate that it can provide useful supplementary protection but also to demonstrate why private insurance alone cannot and should not be expected to meet the basic health care costs of the aged. The essential factors have already been discussed. The larger medical care needs of the aged as a group must result in higher average costs--in insurance terms, higher premiums. These costs are beyond the ability to pay of large numbers of older persons. The younger members of society must in one way or another pay part of these costs if older people are to have adequate medical care.

Private insurance has been able to effectuate some cost-sharing. The community-rated premiums of Blue Cross plans average hospital costs for all participants. Coverage of many persons past age 65 has been achieved, however, only by the development of special policies with their own (higher) premium rates. Perhaps three-fourths of all private health insurance coverage is written under employee benefit plans. In many such plans, the employer carries or shares in the cost. For those retired employees who are continued under a group plan with no change in premiums or benefits or with the employer paying a substantial part of the cost of their benefits, the aged person's health costs are shared by other age groups. But the number of pensioners in this situation is very small and such arrangements cannot be expected to apply to the great majority of retired persons, because of worker mobility, limited vesting, and the fact that in general it is only the larger firms that have such plans.

A compulsory social insurance program offers the only feasible basis for a broad spreading of the costs of health protection for the great majority of older persons.

Aged Persons Having Some Kind of Health Insurance

No more than half of all persons aged 65 and over have any kind of health insurance. The National Health Survey found that in the last half of 1959, 46 percent of those 65 and over, as compared with 67 percent in the population as a whole, had some form of health insurance.8/ Other estimates confirm these general magnitudes.

8/ U.S. Public Health Service Publication No. 584-B26, Health Statistics: Interim Report on Health Insurance, United States, July-December 1959, (December 1960).

Estimates prepared by the Health Insurance Council on total health insurance enrollment are somewhat higher than those derived from household surveys. For January 1960, the Health Insurance Council estimated that 73 percent of the total population (rather than 67 percent) were covered. The Council's estimates are built up from reports from individual companies' plans and may well make too little allowance for multiple policy holding. On the other hand, household interview surveys may miss some individuals. Special studies are now under way that will provide a better basis for estimating the extent of multiple policy holding. In any event, information for separate age groups is available only from household interview surveys.

Perhaps as important as the numbers of aged persons with health insurance are the characteristics of those having and those not having such protection. In general, health insurance is much more likely to be owned by aged persons still in the labor force, by those closest to age 65, by those with relatively higher incomes and by those in the best health. These factors are, of course, closely related to one another.

Income and coverage.--According to the National Health Survey, when the total family income of the person 65 or over (including both his own income and that of all other family members) was under $2,000 only 33 percent of the aged had hospitalization insurance. When the family income was $4,000 or more, 59 percent had hospitalization insurance.

The survey of OASI beneficiaries in 1957 showed a similar relationship. The median income of OASI beneficiaries with no hospitalization insurance was 30 percent lower than that of those with insurance.

Age and coverage.--According to the National Health Survey, among persons aged 65 to 74, 53 percent had protection against hospital costs; among persons aged 75 or over, 32 percent had protection against hospital costs.

Work status and coverage.--Aged persons still in the labor force are more likely than those fully retired to have some health insurance because employment means higher income, the less expensive group coverage is more likely to be available to those employed, and part of the premium is frequently paid by the employer. Among the relatively few aged reporting themselves as usually working, nearly two out of three (64 percent) had some hospital insurance; but among those not usually working, less than half (42 percent) had hospital insurance in the latter part of 1959.

Health status and coverage.--Aged persons in relatively poorer health--at least by their own designation--are less likely to have hospital insurance.

Of those reporting themselves in the National Health Survey as having no chronic conditions, or only conditions that did not curtail activity, 53 percent had hospital insurance; of those reporting themselves unable to carry on their major activity, only 30 percent had hospital insurance.

Reasons for not having insurance.--A study conducted by the National Opinion Research Center for the Health Information Foundation found that in 1957 about half the aged persons without health insurance would have liked to be covered, just over one-quarter had not thought about it, and just under a quarter didn't want it.9/ Among those who wanted coverage, 68 percent couldn't afford it and 32 percent had been refused insurance or had it canceled.

About one-sixth (16 percent) of the aged surveyed in the HIF-NORC study had formerly been covered by health insurance but were not covered at the time of the survey. Among the reasons given for not continuing health insurance were:

Could no longer afford it (31 percent)
Retired or gave up working (26 percent)
Dissatisfied with policy's coverage (24 percent)
Other reasons:
- Company discontinued plan
- Did not feel need
- Job change without the policy's carrying over

A similar picture emerges from the responses of OASI beneficiaries to the question as to why they do not have health insurance. According to the 1957 beneficiary survey, 68 percent of the aged beneficiaries who did not have hospitalization insurance had never had such insurance. Thirty percent had been insured at one time, but the policy was dropped before the survey year. For 2 percent the insurance status before the survey year was unknown.

9/ "Voluntary Health Insurance Among the Aged," Progress in Health Services, Health Information Foundation (January 1959).

The reasons given for not having insurance were as follows:

	Percent
Aged beneficiaries never insured	100
Could not afford	41
Never thought about it	30
Not interested	18
Refused by insurance company	9
Other reason	2
Insured at one time, policy dropped	100
Could not afford	39
Group policy could not be converted at retirement	29
Not interested	14
Canceled by insurance company or terminated at death of husband	13
Other reason	5

Characteristics and Costs of Health Insurance

Of the aged who have hospitalization insurance, according to the National Health Survey,

43 percent are covered by Blue Cross or Blue Shield,
7 percent have a "Blue" plan and some other insurance,
49 percent are insured through a commercial insurer or an independent plan,
1 percent are of unknown type

At present, there are some 1,200 insuring organizations actively in the health field in the United States, including 737 insurance companies, 78 Blue Cross plans, 68 Blue Shield plans, and over 300 other plans. Most of these provide benefits for the aged through some means, if only through carrying persons past the age of 65 within groups primarily composed of younger persons.

Many aged persons, however, are not able to buy health insurance even if they could afford it. Persons in poor health or with a record of substantial need of care may either be unable to purchase insurance or have their policies canceled. As of early 1961, only about half the Blue Cross plans accepted initial nongroup enrollment from persons over 65, either through nongroup certificates with no age limit or through senior certificates (table 9).

Table 9.--Age limits on initial nongroup enrollment in Blue Cross hospitalization plans, early 1961

Age limits	Blue Cross plans	
	Number	Percent
Total 1/	78	100.0
"Senior" certificates offered.....	21	26.9
No age limit.....	16	20.5
70 years.....	2	2.6
66 years.....	2	2.6
65 years.....	24	30.8
65/60 years 2/.....	1	1.3
60 years.....	10	12.8
No nongroup enrollment.....	2	2.6

1/ Does not include Puerto Rican Blue Cross Plan.

2/ Two certificates offered, one with a 60-year limit, one with a 65-year limit.

Insurance policies generally available to the aged tend to provide more limited protection as well as to have higher premiums than policies for younger persons. Seventeen of the 21 Blue Cross Senior Certificates provide for no more than 30 or 31 days of benefits and many provide limited allowances ($7 to $10 a day) toward the cost of room and board, or provide for a deductible or coinsurance. All but four of these plans require that a health statement be completed by the individual applying for coverage. Coverage of hospitalization for pre-existing conditions varies from immediate coverage in six plans to exclusion for life in four; other plans provide benefits after waiting periods of six to twenty-four months. The annual premium cost of the Senior Certificates ranges from about $40 to about $66 per person. The most usual Blue Shield Senior Certificates with maximum surgical fee schedules of $200 to $300 and reimbursement for inhospital physician visits at $3 to $8 a day for 21 to 60 days cost from about $20 to $40 a year for an individual and $24 to $64 for a couple.

Commercial health insurance policies sold to aged persons include wide variations in benefits and premium costs. One of the most widely advertised and widely available plans is the 65 Plus Plan of the Continental Casualty Company. This plan is open for membership on a Statewide basis in 48 States during periodic enrollment periods. It has a 6-months waiting period for pre-existing conditions, but no limitations because of physical conditions. The policies can be canceled and premiums adjusted only on a Statewide basis. The policy provides up to $10 a day for room and board costs for a maximum of 31 days, up to $100 for miscellaneous hospital extras, and the cost of surgery up to a maximum of $200. The annual premium is $78.

Aged persons in normal health can purchase individual health insurance policies that are guaranteed renewable for life. Policies providing room and board payments of $10 a day for 30 to 60 days, up to $50 or $100 for hospital extras and surgical expenses with a maximum of $200 to $300, were available in early 1961 at premiums for a man aged 65 ranging from $80 to $92 a year.

Paid-up-at-retirement policies.--There has been considerable discussion of paid-up-at-retirement policies. Such a policy guarantees that a specified set of health insurance benefits will be available to the policyholder during the remainder of his life. The benefits are on a cash indemnity basis (a specified number of dollars for up to a specified number of days of care, plus an allowance for hospital extras). It would be very difficult for an insurance company to estimate the future cost of a service benefit (guaranteeing up to a specified number of days of care). This is a very new approach and very little of this type of coverage has been sold. If the policy is not purchased until the date of retirement, the initial costs are high ($700 to $1,300 per individual). Similarly, even if purchased prior to retirement, the annual payments required for persons already approaching retirement would be substantial.

If the costs were spread over the full working life of the individual, the annual payments would be small, and might be coupled with current health insurance premium payments throughout his working life. However, assuming the insurance were acquired through the place of employment, there is a practical barrier to this approach in that few persons spend their entire working life with one employer. Aside from the uncertainty as to whether they will still be with the same employer when they retire, there are other factors that could make workers reluctant to participate in purchasing this form of insurance. They may anticipate that their existing health insurance coverage will continue after retirement or they may fear that a specified set of cash indemnity health benefits may prove inadequate if the trend of rising medical costs continues.

Extent of Protection for Those Having Insurance

It will be evident from this description of generally available hospital insurance policies that even those aged persons who have health insurance may have to pay directly a considerable share of any hospital bill they incur.

The National Health Survey, as noted above, found that in half of all hospital stays by aged persons none of the hospital bill was met by insurance. Where insurance paid part of the bill, it covered less than half the total in 18 percent of those cases, between one-half and three-quarters of the bill in 23 percent and three-fourths or more in 59 percent of those cases.

For persons under 65, on the other hand, in only 30 percent of the cases did insurance meet no part of the bill. And it covered three-fourths or more of the total bill for 77 percent of those cases in which there were any insurance payments.

There are no comparable figures on the proportion of all medical expenditures covered by insurance for different age groups. For the population as a whole, insurance payments in 1959 covered 25 percent of all private medical care expenditures and 58 percent of private expenditures for hospital care.

PUBLIC PROGRAMS

Publicly administered general hospitals in many localities provide care at no charge, or at charges related to income, for persons who cannot afford to pay in full. Some medical care programs--notably those under public assistance and those for veterans' nonservice-connected disabilities--are open only to the needy. Others--notably those for veterans' service-connected disabilities, or for military personnel and their families--provide for all in special population groups without regard to income or ability to pay.

Traditionally, nongovernmental hospitals also provide some free medical care to the needy. Increasingly, these hospitals are being paid for their services to the needy through public programs and public grants. But in many of our poorer States, much of the burden of the care of the aged rests on the hospitals themselves. Such care may be financed from endowment income and philanthropic sources. Often the cost of free or part-pay care is defrayed by higher charges to paying patients.

In privately-controlled general hospitals, about a fifth of all patients are aged 65 or over. But in general hospitals of State and local governments, which more often than private institutions provide care free or at reduced charges to those not able to pay in full, every fourth patient is at least 65 years of age. In Veterans Administration general hospitals, one out of five patients is at least aged 65.

The most important source of public funds for medical care of aged persons is now the public assistance programs.

Public Assistance Medical Care

From the beginning of the Federal-State old-age assistance program established under the 1935 Social Security Act, costs of medical care could be included in monthly cash payments of old-age assistance recipients. The payments were subject to Federal and State maximums, however, which very much limited the care made available in most States.

In 1950, the Social Security Act was amended to permit Federal matching of payments for medical care made directly to suppliers. However, these vendor payments had to be within existing maximums on Federal participation in individual cash payments. In 1956, old-age assistance was again broadened by establishing separate Federal matching for medical care payments over and above the cash assistance payment. In 1958, the effective ceiling on Federal matching was increased.

The 1960 amendments to the Social Security Act provided two extensions of medical care for the aged under the public assistance program: (1) increased Federal matching of medical care payments under old-age assistance, and (2) a new program of medical assistance for the aged, designed to provide help with medical bills for the so-called medically indigent. The 1961 amendments, signed by the President on June 30, included a slight additional liberalization of the Federal matching provisions for vendor medical payments under old-age assistance.

Public Assistance Medical Care: Old-Age Assistance

Fifty-four jurisdictions administer old-age assistance (OAA) programs, including the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, and Guam. Forty-three of the States 10/ provided some medical care to old-age assistance recipients through vendor payments in September 1960. But these States varied widely in the content of their medical care provisions. Some State programs included a wide range of medical services, covering virtually the entire gamut of needed types of medical care, while in other State programs medical care provisions were extremely limited in scope. However, there was undoubtedly some room for improvement of medical care content and coverage in nearly all State old-age assistance programs.

10/ The word "State" in Part I of this document applies equally to the 50 States, the District of Columbia, Guam, Puerto Rico, and the Virgin Islands.

Changes in medical care under old-age assistance since September 1960.--The 1960 amendments have resulted in increases in the medical care provided through vendor payments under old-age assistance in a substantial number of States. According to information received by the Bureau of Public Assistance by May 31, 1961, of the 43 States providing vendor payments in September 1960, 23 11/ had taken steps by that time to improve the content or coverage of their medical care provisions through old-age assistance vendor payments.

During this period, three States reduced medical services provided through old-age assistance vendor payments. Two, Massachusetts and New York, moved many cases formerly receiving medical care under old-age assistance to the new medical assistance for the aged program, under which the recipients will continue to receive the same care as formerly. The third State, Colorado, has been forced, by a State constitutional limitation on funds expended for the purpose, to reduce medical care paid for through old-age assistance vendor payments.

Of the 11 States which made no vendor payments for costs of medical care in old-age assistance before October 1960, five 12/ have either begun to make vendor payments or are planning to do so sometime in 1961.

Changes in vendor payments: September 1960 - April 1961.--The above information is based on the States' descriptions of medical care provided through vendor payments under State old-age assistance plans. Their expansion of medical care services may involve the addition of a great deal, a moderate amount, or very little in the way of an actual increase in services rendered. In some States, expansion is only in the planning stage and may not actually materialize. In some States, the additional provision represents only a change in payment method, as when States have begun making vendor payments for services that were previously provided through money payments to recipients (the change in payment method being made because it brings increased Federal participation in the assistance payments). However, this change of method may mean a great deal to the

12/ Alabama, Kentucky, Mississippi, Puerto Rico, and South Dakota.

recipient because it may affect his money payment and the kind and quality of medical care provided. Since many States have maximums or other provisions limiting the money payment, the removal of the special cost of medical care from the money payment permits more leeway in meeting the recipient's subsistence needs, insofar as State or local funds are available. In addition, the cost of a particular medical service paid in the recipient's behalf frequently is greater than could be allowed in the State's money payment.

A much more definite indication of the impact of the 1960 legislation on old-age assistance vendor payments may be obtained by comparing average vendor payments for States in September 1960 with the averages for April 1961, the latest month for which data are available, and by comparing average money payments for the same months.

In September 1960, the average vendor payment under old-age assistance for all States combined was $10.75 per recipient. In April 1961, it was $11.06 (table 10). Specific program changes in Massachusetts and New York partly explain the fact that the national average did not rise more than 31 cents. In Massachusetts, more than 15,000 old-age assistance nursing home and other institutional cases were transferred to the State's new program, medical assistance for the aged, between September and April. This resulted in a reduction in the average old-age assistance vendor payment in the State from $45.86 in September to $17.10 in April (the only very large drop occurring in any State during the period). In New York, 16,000 cases were transferred from old-age assistance to medical assistance for the aged in March and April, and the average old-age assistance vendor payment dropped from $33.45 in September to $28.95 in April. Excluding Massachusetts and New York, the remaining 52 States had average vendor payments of $8.66 in September and $10.34 in April, or an increase of $1.68 in the average vendor payment over the 7-month period.

The number of States with changes in average vendor payments of specified amounts is shown in table 11. It is possible that some of the changes in State averages represent random month-to-month fluctuation; however, this is certainly not true for the States whose average vendor payments increased by a sizeable amount over the 7-month period.

Increases in average vendor payments have come to some extent at the expense of decreases in average money payments. Under the revised formula for Federal participation in old-age assistance, it was to the advantage of some States that formerly had low average vendor payments to begin paying for additional types of medical care through vendor payments rather than through money payments to recipients. For example, in some States nursing home care was formerly paid for through money payments. It is now covered through vendor payments, and the shift in payment method has brought a drop in average old-age assistance money payments together with the increase in average vendor payments. Among the 27 States in which the vendor payment averages had increased more than $1.00 by April, 9 States decreased their money payment averages by more than $1.00, while in 7 the money payment average increased by more than $1.00 (table 11).

More than $1	27	9	3	5	3	7
No vendor payment, September or April	9	1	2	4		2

States with relatively high average vendor payments do not necessarily provide comprehensive and high-quality medical care for old-age assistance recipients, nor do all States with low averages have inadequate medical care programs. There are a number of variables other than the scope and quality of care received by recipients which influence the level of average vendor payments--variations in costs of medical care, availability of medical personnel and facilities, access of recipients to other medical care programs, provision of medical care through money payments to recipients, etc. But,

for most States, the amount of the average vendor payment does tend to reflect the relative adequacy of medical care available to old-age assistance recipients; the increases in average vendor payments since October 1, 1960, perhaps furnish a rough gauge of the improvements in medical care for the recipients since that date; and the large number of States still remaining with relatively low average vendor payments may roughly indicate the improvements still needed in medical care provisions for recipients of old-age assistance.

Public Assistance Medical Care: Medical Assistance for the Aged

The 1960 amendments provided for a new program of medical assistance to aged people who do not qualify for old-age assistance but who cannot meet the cost of needed medical care. The program must be administered by the same State agency that administers old-age assistance.

The States have considerable latitude in deciding the scope of medical assistance for the aged with regard to both the definition of persons eligible and the kind and extent of services provided. However, if a State decides to have such a program, it may not set an age limit of more than 65 years, a citizenship requirement which excludes any citizen of the United States, or a durational residence requirement. Nor may it impose a lien against the property of any individual prior to his death on account of medical assistance properly paid in his behalf nor require recovery from his estate until after the death of the surviving spouse, if any.

In addition, there must be a provision that no enrollment fee, premium, or similar charge will be imposed as a condition of eligibility by the agency which administers medical assistance for the aged. There is specific provision in the statute for Federal financial participation in State expenditures "for insurance premiums for medical or any other type of remedial care or the cost thereof" paid as medical assistance in behalf of eligible individuals.

In defining the content of medical care to be provided by a State for medical assistance for the aged, the Federal Act requires that there be some institutional and some noninstitutional care. The Federal Government participates, according to a specified formula, in amounts paid in behalf of eligible recipients, that is, payments to suppliers of medical or remedial care. The program does not include amounts paid directly to recipients.

Program development.--The medical assistance for the aged program was in operation in 10 States 13/ by the end of June 1961. An additional nine States 14/ have adopted legislation and expect to have a program in operation by November 1, 1961; while four others 15/ have legislation with later effective dates. As of mid-July legislation was in process in seven States.16/ It appears unlikely that the remaining 24 States will implement the legislation in 1961 or early 1962.

The major provisions of the medical assistance for the aged programs in effect or enacted in each of the 17 States for which such information was available as of the end of June 1961 are shown in the Appendix. A summary analysis of the provisions in the 10 State programs that were in operation prior to July 1 is presented in the material which follows.

Financial eligibility: income.--In determining the group who will be eligible, some States have set a maximum on the income and assets medical assistance for the aged recipients may hold, and a person who possesses more than these value amounts is ineligible. Other States say, in effect, "A certain level of income and resources is necessary for subsistence; any amount beyond this level will be evaluated to determine its availability to meet medical need. If the amount available is still not enough to pay for the person's necessary medical care, he is eligible for medical assistance for the aged."

Among the seven States using the system of maximums on income and assets, the lowest maximum on income for a single recipient with no dependents is $1,080; the highest is $1,500. Varying allowances are made for dependents.

Financial eligibility: assets.--All 10 States with a medical assistance for the aged program in operation before July 1961 exempt the real property used as a home in determining eligibility. They take into account the resource value of other real estate, although most States do not require its liquidation. Most of the States exempt a life-insurance policy with a small cash-surrender value. Medical insurance policies and similar resources designed to meet medical need are also considered as assets to be taken into account in determining the amount to be paid from medical assistance for the aged funds.

13/ Kentucky, Maryland, Massachusetts, Michigan, New York, Oklahoma, Washington, West Virginia, Puerto Rico, and Virgin Islands.

14/ Arkansas, Idaho, Maine, New Hampshire, North Dakota, Oregon, South Carolina, Tennessee, and Utah.

15/ California, Connecticut, Hawaii, and Louisiana.

16/ Bills had passed both houses of the legislature in Illinois and Vermont, and one house in Alabama and Wisconsin; bills had been introduced but not passed in New Jersey, Ohio, and Pennsylvania.

A small reserve of cash or "resources convertible to cash" is specifically permitted in 8 of the 10 States. The amount permitted a single person ranged from $300 in one State (Maryland) to $5,000 in another (West Virginia). However, the State with the $300 limit permits "liquid resources" reserve of $2,500 if it "represents the only resource for regular living expenses."

Types of medical care covered.--All 10 States operating medical assistance for the aged prior to July 1961 provide for inpatient hospital care. The length of the hospital stay to be paid for ranges from 6 days (Kentucky) to as many as are necessary, as determined by the physician's statement and a review by the staff giving medical supervision to the State's program. Several States limit hospital care to acute, life-endangering, or traumatic conditions requiring hospital care; all others provide it as recommended by the physician. Nursing home care is provided by 6 of the 10 States. In West Virginia such care is restricted to posthospital care.

Physicians' services in home and office is the type of noninstitutional care most frequently specified. Nine of the 10 States provide for such services. Some States limit the services to acute conditions or treatment necessary to prevent the recipient's need for hospital care. Among the States that do not provide for a full range of noninstitutional services, the most frequently covered services, in addition to those of the physician, are dental services to relieve pain or treat acute infections, and prescribed drugs. In some States, the latter are limited to those drugs needed for the treatment of acute or life-endangering conditions.

Of the 10 jurisdictions now operating medical assistance for the aged, 5 (Massachusetts, New York, Puerto Rico, Washington, and West Virginia) provide medical care services covering the basic types of medical care needs (hospital, nursing home care, physicians' services, prescribed drugs). In the other 5 States, one or more of these services is not included.

Persons receiving care.--Payments of almost $6 million were made on behalf of 28,000 recipients of medical assistance for the aged in April 1961, in seven States (table 12). Of the remaining States with programs in operation prior to July, Puerto Rico and the Virgin Islands have not reported and the Maryland program did not begin until June.

The term "recipients" means the number of persons for whom bills from suppliers of medical care were paid in the reporting month. The bills generally represent services provided in a preceding month. The count of recipients, therefore, does not necessarily reflect the number of persons actually receiving medical care services during the month covered by the report.

Table 12.--Medical assistance for the aged: recipients and payments for recipients, by State, April 1961 1/

State	Number of recipients	Payments for recipients	
		Total amount	Average
Total.....	27,998	$5,890,726	$210.40
Kentucky.....	14	508	(2/)
Massachusetts.....	14,722	3,024,301 3/	205.43
Michigan.....	3,585	1,113,873	310.70
New York.....	5,589 1/	1,418,463 1/	253.80 1/
Oklahoma.....	190	42,302	222.64
Washington.....	281	56,276	200.27
West Virginia.....	3,617	235,003	64.97

1/ Figures underlined represent program under State plan not yet approved by the Social Security Administration. All data subject to revision.

2/ Average payment not computed on base of fewer than 50 recipients.

3/ Excludes $93,740 in money payments not subject to Federal participation.

Persons whose cases were opened for medical assistance for the aged, October 1960-April 1961.--Practices in opening cases vary among the 10 States. In three (Kentucky, Virgin Islands, and West Virginia) persons may apply in advance of their need for medical care. When their eligibility is established, they are given identification cards for use when medical care becomes necessary. At the time medical care is needed, their eligibility is reviewed. When a year has elapsed, continuing eligibility for medical care assistance is redetermined for all opened cases.

The general practice in the other seven States is to determine eligibility at the time the need for medical care is made known. Financial eligibility is directly related to the kind and cost of the medical care needed.

These variations in practice are reflected in reports on the number of cases opened. Also reflected in these reports are the practices of the States with respect to the transfer of cases from other assistance programs to medical assistance for the aged.

Reports on the number of cases opened have been received from 8 of the 10 States (table 13). Of the 62,414 persons whose cases had been opened in these 8 States since the initiation of the program, 96 percent were in Massachusetts, Michigan, New York, and West Virginia. In New York and Massachusetts, almost all the cases were transfers from old-age assistance; in Michigan, about one-fourth of the cases formerly received old-age assistance. In contrast, none of the West Virginia cases represented transfers from any public assistance program.

Program costs for medical assistance for the aged.--Program costs for medical assistance for the aged have been increasing rapidly, as would be expected with a new program. For the month of May 1961, they were $8 million, an increase of $2 million over April, and $4 million over March expenditures. The average monthly expenditures per recipient since the program's inception have ranged around $200.

As with any new and growing program, estimating future costs or costs under a fully developed program are difficult. The President's budget for fiscal year 1962 includes $60 million for the Federal cost of benefits under the program, based upon an estimated total program cost of $116 million. These estimates appear low in the light of data developed by a recent survey of State action to implement medical programs for the aged, conducted by the Senate Special Committee on Aging. Twenty States and two territories estimated their costs for a year's operation of a medical assistance for the aged program, based on the situation as of March 31, 1961. The 22 jurisdictions include all those with programs in operation, all except 3 of those which anticipate programs by early 1962, and 3 which do not anticipate an operating program by that time. The expected total cost for 1 year's services, as estimated by the 22 jurisdictions, is $331 million. Of this $172.3 million would be Federal funds, $98.5 million State funds, and $60.2 million local funds.

There is no satisfactory way to project from these data costs for the program of medical assistance for the aged if all States were to participate. However, assuming similar benefit levels and eligibility requirements in the remaining States, the cost might be about $650 to $700 million, of which about $360 to $390 million would probably be required from Federal funds. This assumes medical care prices at the present level. With the probable increase in these prices and with a general expansion of the program toward comprehensive benefits and lowered eligibility requirements, the cost would become substantially greater.

Table 13.--Cases opened for MAA by type of previous assistance, discontinued or continued, October 1960-April 1961

State	Total cases opened	Specified type of assistance									Other or no assistance
		Discontinued					Continued

PART II

THE ADMINISTRATION PLAN OF HEALTH INSURANCE FOR THE AGED

THE ESSENCE OF THE PLAN

The social security benefits to which 95 percent of the aged will, in the long run, be entitled cannot offer an adequate basis for their security so long as they must continue to fear that the costs of serious illness in old age may reduce them to destitution. Normal budgeting from cash benefits and other income resources cannot remove this threat to the independence of those who will become old in the future, as well as those who are already aged. The only way to remove this threat is through providing the aged with, in addition to a basic monthly cash benefit, basic insurance protection against large health costs.

Adequate health insurance protection can be paid for by the aged only if they make contributions during their working years for their protection in old age. Such a spreading of cost over a long period of time for this purpose is not feasible under private insurance except on a very limited basis. A requirement that private insurance premiums be paid over a working lifetime means that no one could obtain protection until several decades have gone by and, when the lifetime of payments have been made, the best plans for adequate paid-up health benefits may be insufficient if medical costs have risen greatly. Another system for helping the aged acquire insurance is through community rating. However, community rating has weakened the competitive position of plans using it and experience rating is increasingly replacing community rates.

Social security contributions are paid during entire working lifetimes, vary with earnings levels and are shared by employers and employees. Such an arrangement for prepaying the costs of health insurance is not available under private programs. Under private programs low income groups have considerable difficulty in prepaying the cost of their old-age protection and employer practices in sharing costs differ widely.

The social insurance mechanism offers a truly conservative approach to meeting basic costs of illness in old age. The scope of the health insurance protection provided would be clearly defined and limited by law, the long-run cost of making health insurance payments would be actuarially calculated, and revenue sufficient to finance these benefit payments would be provided. Through such means the States, whose finances are already hard pressed, would be spared a burden on their general revenues. Furthermore, use of the existing OASDI administrative machinery would make it possible to carry out the Administration's plan with operating costs of about 3 percent of benefit costs because the necessary tax-gathering, record-keeping, claims-processing and much of the other administrative machinery is already in existence and operating smoothly in carrying out the existing OASDI program.

THE ROLES OF OTHER PROGRAMS

Neither private insurance nor public assistance can serve as the primary means of protecting the aged against the expenses of a costly illness. However, both would play an important role in complementing the basic health insurance protection that would be afforded the aged under the Administration plan. Many of the aged who now have some insurance against the cost of health care would no doubt carry supplemental protection. Also, some aged people who are now without any protection because they know they cannot safeguard themselves against financial catastrophe resulting from illness would obtain additional coverage from private sources when real security becomes a possibility. As the basic cash benefits under social insurance have been so successfully complemented by pensions and annuities under private plans, so we would expect basic social security health insurance to be complemented by private health insurance.

If the proposed program is enacted public assistance would serve as a backstop--filling in for the smaller and smaller group of aged persons who cannot qualify for social insurance protection or whose benefits do not fit their needs. This of course is the accepted role of public assistance in the area of income maintenance. In fact, enactment of the proposal would enable the States, without taking on too great a burden, to move in the direction of more meaningful and effective medical assistance programs for the persons who would still need State help in meeting their health costs. Just as during the last decade improvements in the OASDI program have enabled the public assistance programs to do a better job in supplementing the basic social insurance program, it is expected that enactment of the health insurance program would relieve the States of part of their present financial burden and enable them to provide more adequate programs of medical assistance for the aged.

THE RELATION OF SOCIAL INSURANCE TO MEDICAL PRACTICE

The main premise behind the proposal that health insurance for the aged be provided as a basic part of the social insurance system is that the aged require an improvement in the method through which they pay for their health care. The only way of providing this improvement involves the use of payment over the working lifetime for basic protection in old age and such payment is feasible for the great majority of the population only under social insurance.

No part of the plan proposes to interfere with the practice of medicine. The Administration's plan has been drawn with care to avoid Federal interference. What is proposed is a means of financing hospital care and certain related or alternative services. Aside from the difference in the method of collecting contributions and the population group affected, what is proposed is very much like what Blue Cross plans have been doing for many years, paying hospital bills without interfering in hospital operation.

The proposal would not limit the patient's freedom of choice of doctor or hospital but, on the contrary, would remove economic barriers that can restrict the exercise of that freedom.

THE SPECIFICATIONS OF THE PLAN

On February 9, 1961, the President sent to the Congress a Special Message on Health and Hospital Care which contained a proposal to provide persons aged 65 and over with health insurance protection through the OASDI program and the railroad retirement system. Two bills (H.R. 4222, King, California, and S. 909, Anderson, New Mexico) to carry out the President's recommendation were subsequently introduced on behalf of the Administration. 1/

1/ Cosponsors of S. 909 are Senators Douglas (Illinois), Hartke (Indiana), McCarthy (Minnesota), Humphrey (Minnesota), Jackson (Washington), Long (Hawaii), Randolph (West Virginia), Engle (California), Magnuson (Washington), Pell (Rhode Island), Burdick (North Dakota), Mrs. Neuberger (Oregon), Morse (Oregon), Long (Missouri), Moss (Utah), and Pastore (Rhode Island). Eight bills identical to H.R. 4222 have been sponsored by Congressmen Dingell (Michigan), Karsten (Missouri), Machrowicz (Michigan), Green (Pennsylvania), Ullman (Oregon), McFall (California), Pucinski (Illinois), O'Neill (Massachusetts), and Santangelo (New York). Twelve additional bills which would use the old-age and survivors insurance approach have been introduced in the Congress.

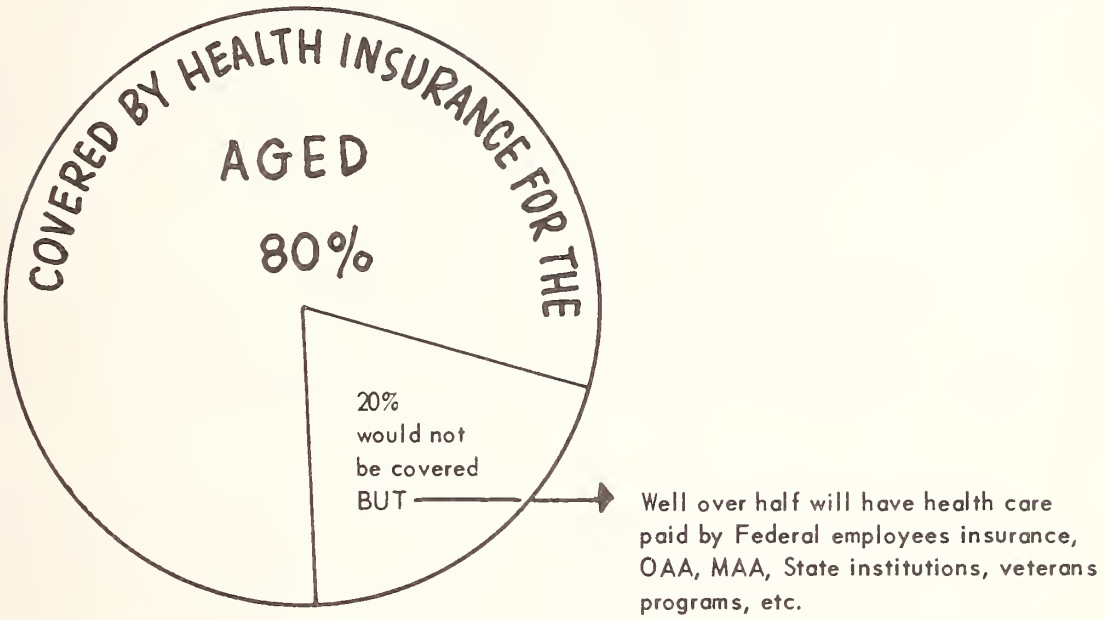
ELIGIBILITY

Under the Administration plan, health insurance protection would be provided under the OASDI program for all persons who are aged 65 and over and entitled to monthly old-age or survivors insurance benefits. The same health insurance protection as that provided for old-age and survivors insurance beneficiaries would be provided at age 65 for persons entitled to an annuity under the Railroad Retirement Act. Under the proposal, an individual would be eligible for health insurance protection at age 65 even though his monthly cash benefits are being withheld because of earnings from work.

Part I of this report spells out in detail the fact that after age 65 serious illness is more frequent, health care costs are higher, and income is lower. Furthermore, age 65 is generally the point at which persons begin experiencing the greatest difficulty in obtaining adequate health insurance.

Since eligibility for health insurance benefits would be based on entitlement to old-age and survivors insurance or railroad retirement benefits as well as age, persons who have not worked in covered employment and self-employment long enough to be insured would not qualify. In 1963, the first full calendar year in which the proposed program would be in effect, the total population aged 65 and over is expected to be about 17 3/4 million. Of these, 14 1/4 million--about 80 percent of the aged--would be eligible for benefits under the proposed legislation as a result of their entitlement to old-age and survivors insurance benefits (13 3/4 million) or to an annuity under the Railroad Retirement Act (1/2 million). Furthermore, a high proportion of those aged persons who could not qualify for health insurance benefits will be recipients under other public programs which provide help in meeting the costs of health care. One-quarter million aged persons will be beneficiaries under Federal Government staff retirement systems and will be eligible for health benefits under special plans. More than half of the remaining 3 1/4 million aged would be eligible for care in Veterans Administration hospitals or for such payment of medical costs as the public assistance programs provide. Others will be receiving care in State and local mental or tuberculosis hospitals and in other public institutions.

IN 1963, 14-1/4 OUT OF THE APPROXIMATELY 17-3/4 MILLION AGED WOULD HAVE HEALTH INSURANCE UNDER THE PROPOSAL



With about nine out of ten persons in paid employment covered by OASDI since the mid-1950's, the percentage of persons protected at retirement age will increase as the program grows to maturity. The percentage of the people in the aged population who would have health insurance protection will be 80 percent in 1963 and will eventually reach 95 percent.

This pattern of immediate protection for those who had worked under the program in the past, with growth in the proportion protected in the future until ultimately practically all are protected, is the tradition that has been followed from the beginning of the program. When cash benefits for the aged were first payable in 1940, benefits were made immediately available for those who, though already old, had

demonstrated attachment to covered work after the program started in 1937. When disability insurance benefits were first paid in 1957 to people aged 50 and over, those already disabled who were between the ages of 50 and 64 and who previously had worked substantial periods in covered employment and self-employment were made eligible for benefits. In this way the work-related character of the benefits was established and maintained while at the same time the provisions were given immediate effect to the extent that it seemed practical to do so within the framework of a work-related program. At the same time, both at the very beginning of the program and with its extension to the additional risk of disability, public assistance programs have been relied on to meet the needs of those who had not earned eligibility under social insurance. Under the Administration plan, this pattern would be followed.

SCOPE OF PROTECTION

The Administration plan would provide payments for inpatient hospital services, follow-up skilled nursing home services, certain organized home health care services and hospital outpatient diagnostic services. The chart on the next page lists the specific kinds of health care for which payments could be made and those which would not be covered.

Under the plan, health insurance payments would generally cover any hospital services and supplies of the kind ordinarily furnished by the hospital and which are necessary in the care and treatment of its patients. Thus, as hospitals acquire new plant and equipment, adopt new health practices and improve their services and techniques, the additional operating costs resulting from such changes would be included in the proportionate share of hospital costs that would be covered under the present proposal.

Inpatient hospital services are appropriate for coverage under the proposed health insurance program because of the great financial strain placed on persons who must go to the hospital. Medical expenses for aged persons who are hospitalized are about five times greater than the medical bills of aged people who are not hospitalized. Also, of course, hospitalization is a common occurrence among the aged. It is estimated that nine out of every ten persons who reach age 65 will be hospitalized at least once before they die; two out of three will be hospitalized two or more times. As Part I of this report shows, hospital costs contribute greatly to the size of the inordinately high health bills the aged hospital patient must face.

The Administration plan would provide payments for skilled nursing home care in cases where a hospital inpatient is transferred to a skilled nursing home to receive skilled nursing care needed in connection with

HEALTH SERVICES AND SUPPLIES THAT COULD BE PAID FOR UNDER THE ADMINISTRATION PLAN FOR HEALTH INSURANCE FOR THE AGED (H.R. 4222 AND S. 909)

	Inpatient hospital benefits	Skilled nursing home benefits	Outpatient hospital diagnostic benefits	Home health benefits
Room and board	Coverage limited to bed and board in a 2-4 bed room or in more expensive accommodations where medically required		Not applicable	Not covered
General duty nursing services	Covered (Benefits would not cover private duty nursing)			Coverage limited to part-time or intermittent nursing care
Physicians' services	Not covered except where furnished by an intern or resident-in-training in the course of an approved teaching program, or where the services are in the field of pathology, radiology, anesthesiology, and physical medicine and are rendered through the hospital. Part or all of the services of physicians included under hospital services may be covered if generally furnished by nursing homes.			Not covered
Physical, occupational, and speech therapy	Covered		Not applicable	Covered
Medical social services	Covered		Not applicable	Covered
Drugs	Covered		Not applicable	Not covered
Other services and supplies necessary to the health of the patient	Covered if the hospital customarily furnishes them to its patients	Covered if generally provided by skilled nursing homes	Covered if customarily furnished by the hospital to outpatients for the purpose of diagnostic study	To the extent permitted by regulations, part-time or intermittent homemaker services and such other services which are not specifically excluded as may be permitted by regulation

a condition for which he was hospitalized. The requirement that the nursing home patient have been transferred from a hospital would tend to restrict nursing home benefits to persons who are in the post-acute stage of an illness which nevertheless requires skilled, although less intensive, care than that provided by hospitals. In addition to the kinds of services specifically listed in the bill, payment could also be made for such other services as are generally provided by skilled nursing facilities.

Health insurance payments would be made for visiting nurse services and for other related home health services only when furnished by a public or nonprofit agency in accordance with a plan for the patient's care that is established and periodically reviewed by a physician. Since the nature and extent of the care a patient would receive would be planned by a physician, medical supervision and control over the utilization of home health services would be assured.

In the case of outpatient hospital diagnostic services, payment could generally be made for tests and related services which are customarily furnished by a hospital to its outpatients for the purpose of diagnostic study.

The Administration plan provides payments for the specified combination of services in order to promote the economical use of hospital inpatient services. In doing so, the proposed legislation would support the efforts of the health professions to use hospital beds for the care of the acutely ill who need the intensive care that only a hospital can furnish. For example, the availability of protection against the costs of outpatient hospital diagnostic tests would avoid providing an incentive to use inpatient hospital services in order to obtain coverage of the cost of diagnostic services. The availability of this protection would also give support to preventive medicine by meeting part of the costs of procedures that are essential in the early detection of disease. Similarly, the availability of health insurance payments for skilled nursing home care and home health services would encourage the use of these less expensive services rather than hospital care where the alternatives are medically appropriate.

While the plan would by no means provide protection against all of a beneficiary's health costs, it can be expected that once what might be described as the basic health insurance needs are met under OASDI, many beneficiaries could afford to make their coverage more nearly complete by purchasing supplemental protection (against the costs of physicians' services, drugs, etc.) from nonprofit and commercial insurance carriers.

INCLUDED AND EXCLUDED SERVICES

Under the Administration plan, payment for health services would be limited to those which are essential elements of services provided by hospitals. Since the primary purpose of the proposal is to provide health insurance protection against hospital expenses, and a major reason for the coverage of other services is to provide economical substitutes for hospitalization, the proposed legislation is framed to permit payment for skilled nursing home, home health, or outpatient diagnostic services only to the extent that they could be paid for if furnished to a hospital inpatient. Thus the outer limits on what the proposed program would pay for are set by the general scope of inpatient hospital services for which payment could be made. Generally, services covered outside the hospital are more limited than those in the hospital. Following is a description of the various health services for which payment would be made under the proposal:

Room and Board

Payments would be made for room and board in hospital and skilled nursing home accommodations. Generally speaking, accomodations for which payment would be made would consist of rooms containing from two to four beds. Payments could also be made for more expensive accommodations where their use is medically required. Where private accommodations are furnished at the patient's request, health insurance benefits would cover the semiprivate room rate and the hospital would bill the patient for the difference between the private and the semiprivate rate.

Nursing Services

Payments would cover all hospital nursing costs, but not private duty nursing. The nursing services provided by hospitals and skilled nursing homes which would participate in the program should almost always adequately meet the nursing needs of their patients.

Payments for home health services would only cover part-time or intermittent nursing care such as that provided by visiting nurses. Where more or less continuing skilled nursing care is needed, an institutional setting is more economical and generally more suitable.

Physicians' Services

The cost of a physician's services would not be paid for under the proposal except for the services of hospital interns and residents-in-training, and for the professional component of ancillary hospital services described below under "Other Health Services."

The Administration plan would cover the cost of the services that interns and residents furnish while they are participants in teaching programs that are approved by the American Medical Association's Council on Medical Education and Hospitals (or any equivalent organization). This policy is in agreement with the generally accepted principle of hospital payment that third parties should contribute a fair share toward the hospital costs--in large part consisting of educational costs--of interns and residents.

Drugs

Under the proposal, payment could be made for drugs furnished to hospital and skilled nursing home patients for their use while inpatients. The Administration plan follows the practice of most Blue Cross plans and other insurers by providing payment for drugs which are listed in the United States Pharmacopoeia, National Formulary, and New and Non-Official Drugs. A hospital's drugs must meet the standards established by these drug listings in order for the hospital to be accredited by the Joint Commission on Accreditation.

The drugs prescribed for a patient as part of his home health care would not be paid for by health insurance benefits. The decision to exclude the cost of drugs from home health service payments is part of the more basic decision not to provide coverage of drug and other outpatient therapeutic costs under the program. Also, the coverage of all drugs would add greatly to the cost of the program and would present exceedingly difficult problems in preventing abuses. The payment for drugs for home health patients only might have the effect of providing drug payments for the aged generally and expose physicians to demands that they prescribe home health services for patients needing expensive drugs.

Supplies and Appliances

Under the proposal, payment would be made for supplies and appliances which are provided as part of the treatment provided in connection with covered health services. For example, the cost of the use of a wheelchair, crutches or prosthetic appliances could be paid for as part of hospital, nursing home or home health services but payments would not be provided for the patient's use of these items upon discharge from the institution or upon completion of the home health plan.

Medical Social Services

Health insurance payments would cover the cost of the medical social services customarily furnished in a hospital, as well as such services in a nursing home, or as part of a home health plan.

Other Health Services

Payment would be made for the various ancillary services customarily furnished as a part of hospital care, including various laboratory services and X-ray services and use of hospital equipment and personnel. Among the covered services also would be physical, occupational, and speech therapy. While these services are rendered in large part by laymen, payments for ancillary services would include the costs of services rendered by physicians in four specialty fields--anesthesiology, radiology, pathology and physiatry (physical medicine)--where the physician furnishes his services to an inpatient as an employee of the hospital or where he furnishes them under an arrangement with the hospital which governs the provisions of the services.

All hospitals must have at least minimal laboratory and X-ray services readily available, and the larger hospitals generally provide a wide range of services. The head of each of these departments is a physician, and except in some very small hospitals is ordinarily a specialist in the appropriate field. The pathologist or radiologist assumes over-all responsibility, performs personally some of the most difficult procedures and makes needed medical interpretations, but the greater volume of the work is done by nonmedical personnel who typically are salaried employees of the hospital. Arrangements between the hospitals and the specialists who head the departments vary widely. Sometimes the specialist is on salary from the hospital; more frequently, the hospital and the specialist have agreed on a percentage division of gross or net receipts for the services, with the hospital hiring and paying the nonmedical personnel, and the parties dividing in various ways the responsibility for equipment, supplies and other items. In some instances the specialist may operate the department as a concession, hiring and paying his lay assistants, with the hospital's percentage of gross or net representing little more than rental. Sometimes a firm of radiologists or pathologists assumes the responsibility of service to a hospital, the members of the firm rotating among several hospitals or between a hospital and a private clinic or office. Under all these percentage arrangements the charges to the patients are usually fixed by agreement between the hospital and the specialist. The billing is ordinarily done by the hospital; under percentage arrangements the hospital sometimes bills in the name of the specialist.

The Administration proposal provides for reimbursing hospitals for X-ray and laboratory services to inpatient beneficiaries and for diagnostic tests furnished to outpatient beneficiaries, whether these services are furnished directly by the hospital or under arrangements made by the hospital. This provision is intended to make available, and to pay the hospital for, the same radiology and pathology services that are regularly furnished to all other patients (under whatever the local arrangement may be) in the particular hospital, provided that the billing and collection are handled by the hospital.

The administration of anesthesia is carried out in part by anesthesiologists, in part by other physicians, and in part by nurse anesthetists who are hospital employees and who act under the supervision of the operating surgeons. Anesthesiology as a medical specialty is a recent development, and arrangements for providing the service vary widely. Many accredited hospitals, however, and some others assume responsibility for the availability of anesthesia service at all times, discharging this responsibility through an anesthesia department headed by one or more anesthesiologists who are either on salary or under contractual arrangements with the hospitals. The Administration proposal would provide payment for the services of nurse anesthetists, and also of those anesthesiologists who have assumed the responsibility for hospital service and who have agreed that the hospitals should bill, or collect the bills, for their services.

Physiatry services, unlike radiology, pathology and anesthesia services, are available in only a limited number of hospitals--generally, those that have undertaken to provide an organized program of rehabilitation. Where such a program exists the physiatrist is ordinarily either on salary or under contract with the hospital, and heads a department of physical medicine in which much of the service is rendered by lay technicians. Thus, in the typical situation where billing is handled by the hospital, the Administration proposal would cover the complete service, both professional and nonprofessional, rendered by such a department.

In addition, health services, including physical therapy, furnished by a skilled nursing home would be covered if they are of a type generally provided by such homes. Payment for home health services which are not specifically covered or excluded could only be made if specifically permitted by regulations prescribed by the Secretary of Health, Education, and Welfare.

LIMITATIONS ON PAYMENT

As the chart on the next page shows, the Administration's plan would place a number of limitations on the payment of health insurance benefits, primarily because of considerations of cost and priorities of need.

Duration of Benefits

The maximum number of days of inpatient hospital care for which payment could be made--90 days per benefit period--would cover the entire hospital stay of 95 percent or more of aged beneficiaries. Since some persons need an extended period of skilled nursing care after a period of the more intensive hospital treatment, a maximum of 180 days of skilled nursing home care is provided for each spell of illness. The proposal also places an over-all limitation of "150 units" on the duration of services covered during a benefit period: one "unit" is equal to a day of inpatient hospital services or two days of inpatient nursing home services. This "two-for-one" provision is designed to provide an incentive to use nursing home facilities rather than hospitals where medically appropriate. If the transfer from a hospital to a nursing home is as early as possible (and before he has used or received 90 days of hospital care), the patient would, of course, be eligible for hospital treatment (within the limits for a benefit period) while an inpatient in the nursing home or after his discharge.

The deductible provision and the other limitations on inpatient hospital and skilled nursing home payments are applied on a "benefit period" basis. In general, the "benefit period" would coincide with the beneficiary's episode of illness; that is, it would begin with the first day in which the patient receives inpatient hospital services for which health insurance payments could be made and would end after the close of a 90-day period during which he was neither an inpatient in a hospital nor a skilled nursing home. Blue Cross plans and commercial insurers generally relate their "benefit period" to an episode of illness in this manner.

Unlike the institutionalized patient, people receiving home health services do not receive health care on a full-time basis. Home health services involve periodic visits to the patient's home by therapists, nurses, and other professional personnel. The limitations placed on the payment of home health benefits is written in terms of "visits" rather than "days" so that the amount of home health service which is covered would be unaffected by whether a variety of services is offered on the same day or different days.

Under the proposal, as many as 240 home health visits could be paid for in a calendar year. The larger amount of service which may be covered is related to the fact that home health services are

LIMITATIONS ON HEALTH INSURANCE PAYMENT UNDER THE ADMINISTRATION PLAN

	Inpatient hospital services*	Skilled nursing home services*	Outpatient hospital diagnostic services	Home health services
Deductible	$10 per day for each of the first 9 days of hospitalization during a benefit period, with a minimum deductible amount of $20	None (but is covered only after hospitalization to which the deductible applies)	$20 per diagnostic study	None
Maximum duration of benefits	90 days per benefit period	180 days per benefit period	None	240 home health visits per calendar year
Over-all limitation on duration of benefits	150 units per benefit period: One "unit" is equal to (a) one day of inpatient hospital services, or (b) two days of skilled nursing home services		None	None

*The limitations on hospital and skilled nursing home payments are applied on a "benefit period" basis. An individual's benefit period would begin with the first day he receives covered inpatient hospital services and would end with the last day of the first 90-day period during which he was neither an inpatient in a hospital or a skilled nursing home. A new benefit period would begin when the individual next receives covered inpatient hospital services.

far lower in cost than is hospital and nursing home care. The over-all limitation of 150 units does not apply to home health services because that limit has no significant effect on the cost of those services and because of the difficulty beneficiaries would have in understanding how the over-all limitation applied to three kinds of health care in combination.

Deductible

Under the proposal, health insurance payments for inpatient hospital services would be subject to a deductible amount of $10 a day for each of the first nine days of a person's stay in a benefit period, with a minimum deductible amount of $20. The inclusion of a deductible provision in the proposal, which would apply only to inpatient and outpatient hospital services, results in a substantial reduction (about 0.2 percent of payroll) in benefit costs, thus making it possible to provide greater protection against the cost of catastrophic illness and a broader range of benefits. It is expected that most aged beneficiaries would be able to budget for, or have modest resources available to meet these small "first dollar" costs to which the deductibles apply. There is also a point of view which holds that the deductible might tend to discourage unnecessary hospital utilization.

A deductible amount of $20 is also applied against health insurance payments for outpatient diagnostic studies--primarily to reduce costs and to avoid processing a large volume of small claims. Thus the program provides protection against the cost of the more expensive procedures--not only the single expensive test but the series of tests whose costs add up to large amounts. Since the deductible amount applicable to outpatient diagnostic services is equal to the minimum deductible on inpatient care, there would be no financial incentive to use the hospital's more expensive inpatient facilities in cases where the required diagnostic study could be performed on an outpatient basis.

CONDITIONS FOR PARTICIPATION FOR PROVIDERS OF HEALTH SERVICES

One of the keys to determining the nature of the health services which would be paid for under the proposal is the type of institution which may participate in the health insurance program. Therefore, the question as to what, for purposes of the proposed program, is a hospital, a skilled nursing facility, or a home health agency is of considerable significance. There are no universally accepted definitions of the various health facilities. The type of institution providing health services on which there is closest agreement on definition is, of course,

the hospital. Even in the case of hospitals there is considerable variance in definition. For example, where the States count 8,000 institutions as meeting their various definitions of hospital, the American Hospital Association counts only 6,000 institutions as meeting the definition it applies. The definition of a health institution includes within it elements related to the quality and adequacy of the services which the institution provides. For example, one of the conditions an institution must meet to satisfy the American Hospital Association requirements for listing as a hospital--the same condition would have to be met before an institution could participate under the program--is provision of 24-hour nursing service rendered or supervised by registered professional nurses. This is one of the characteristics that differentiates a hospital from other institutions; in addition, of course, an institution which does not meet this condition cannot offer adequate services as a hospital.

The Administration bill therefore lists the conditions that an institution must meet in order to participate in the program. These conditions offer some assurance that participating institutions have the facilities necessary for the provision of adequate care. Also, the inclusion of these conditions is a precautionary measure designed to prevent the program from having the effect of undercutting the efforts of the various professional accrediting organizations sponsored by the medical and hospital professions, Blue Cross plans, and State agencies to improve the quality of care in hospitals and nursing homes. To provide payments to institutions for services of quality lower than are now generally acceptable might provide an incentive to create low quality institutions as well as an inducement for existing facilities to strive less hard to meet the requirements of other programs.

Under the bill, the Secretary would have authority to prescribe, in the case of any one type, or in the case of all types of participating providers of services, conditions in addition to those specifically listed where such additional conditions are found to be necessary in the interest of the health and safety of beneficiaries. This authority is proposed to be given to the Secretary because it would be inappropriate and unnecessary to include in a Federal law all of the precautions against fire hazards, contagion, etc., which should be required of institutions to make them safe. According to reports of State agencies, about 10 percent of the hospital beds and about 40 percent of the skilled nursing home beds are unacceptable because of "fire and health hazards." Payment for services in such institutions could seriously undermine the efforts of State health departments and professional groups to eliminate dangerous conditions in health care institutions.

The conditions could also be varied for different areas and classes of institutions and could, at the request of a State, be higher for institutions in that State than for those in other States. There would be uniform national minimum requirements. But in addition, in States where requirements are higher than the prescribed minimum, the program would at the request of a State follow the higher State requirements. If a State decided, for example, that all nursing homes within its jurisdiction should provide high health and safety standards and requested that the requirements under the program with respect to institutions within its boundaries conform to this level, the Secretary could cooperate to the full extent of his authority. This flexibility in the Federal program would give further support to the various States in their efforts to improve conditions in institutions. Furthermore, the States would apply either uniform requirements or the higher ones which they might recommend. In this way, the States would not only be responsible for areas of the program in which local conditions must be taken into account but also would have opportunity to coordinate their present efforts in the broad field of health care with their functions under the proposal.

The conditions in the Administration bill are framed so that medically supervised rehabilitation facilities can qualify as providers of services. Some rehabilitation facilities are for all intents and purposes hospitals, and in fact some are licensed as hospitals. Others are more like skilled nursing homes in the extent of their medical supervision, staffing, and scope of service. An institution of either type, which conducts a program of rehabilitating disabled people, could participate in the program by meeting the conditions specified in the bill for hospitals or nursing homes.

Under the bill, institutions providing care primarily for mental or tuberculosis patients are excluded from participation. The primary reason for this exclusion is that these institutions are, for the most part, supported by public funds. A similar exclusion exists in most other prepayment health insurance programs and in the program of medical assistance for the aged enacted last year.

Conditions for Hospitals

In addition to the health and safety requirements to be established by the Secretary, an institution, to meet the definition of a hospital, must (a) be primarily engaged in providing diagnostic and therapeutic services or rehabilitation services, (b) maintain adequate medical records, (c) have by-laws in effect for its medical staff,

(d) provide 24-hour nursing service rendered or supervised by registered professional nurses, (e) have a hospital utilization committee or meet alternative requirements to be provided in regulations, and (f) be licensed under the applicable local law.

These specified conditions provide a basic definition of a hospital and embody minimum requirements of safety, sanitation, and quality. As such, they are fully in accord with the established principles and objectives of professional hospital organizations. The requirement that there be by-laws for an organized medical staff--included at the specific suggestion of representatives of the American Hospital Association--is intended to assure that the hospital's staff of physicians be organized in a manner usual in most hospitals and required for accredited hospitals. Such a requirement will encourage the fullest contribution by medical staff to the operation of the hospital and to the quality of medical services by the individual staff members. One of the responsibilities which the health insurance proposal would place upon the medical staff, through the requirement that the hospital have a utilization committee, would be to consider the appropriateness of the utilization of hospital services.

The hospital utilization committee would review the admissions of patients to the hospital, the durations of stay therein and the medical services furnished to the patients. Provision for such a committee, as a self-governing unit of a hospital, has been recommended in many studies of health insurance in the United States. It is better, as is provided under the plan, to take precautions against over-utilization of services through self-screening and evaluation of practices by the professional staff of the hospital than through investigations by outside organizations. The idea of a utilization committee originated with hospitals and has received widespread recognition as a promising technique for encouraging the most efficient use of hospital services. It has been urged upon hospitals by State insurance commissioners, advocated by private study groups in New York and Indiana, and recommended by a State medical society which has actively participated in the formulation of such committees in hospitals within its State.

Conditions for Nursing Homes

To meet the definition of a "skilled nursing facility" an institution (or a distinct part of an institution) must (a) primarily provide skilled nursing care for patients requiring planned medical or nursing care, or rehabilitation services, (b) have medical policies established by a professional group (including

physicians) with a requirement that each patient be under a physician's care, (c) be under a physician's or registered professional nurse's supervision, (d) maintain adequate medical records, (e) provide 24-hour nursing service, (f) operate under a nursing facility utilization plan, and (g) be licensed under applicable local law. Nursing facilities must also meet such conditions essential to health and safety as may be prescribed by the Secretary. Some nursing homes are not engaged primarily in the furnishing of skilled nursing care for patients who require planned medical or nursing care. However, if a nursing or infirmary section were a "distinct" part of such a home and were primarily engaged in providing skilled nursing care, and met the other conditions for participation, this section of the home would be treated as a "skilled nursing facility."

As in the case of hospitals, these conditions describe the essential elements necessary for an institutional setting in which adequate skilled nursing services are provided. Generally institutions which provide skilled nursing services to patients who require continuing planned nursing care would be able to meet these conditions. While many existing nursing homes could not meet these conditions because they generally provide, exclusively or primarily, domiciliary or custodial care and not skilled nursing care, the provisions of the bill would encourage such homes to take the necessary steps to qualify.

Like the hospital utilization committee, a nursing facility utilization plan, required under the Administration's bill, is one which provides for review of need for admission, length of stay, and services furnished. The plan may be developed by the facility itself, or it may be developed through consultation between the facility or a group of such facilities, community agencies and the appropriate State agency. For example, a nursing home affiliated with a hospital might use the hospital's utilization committee to evaluate the nursing home's practices, or it might use a community-based utilization plan developed by a State health department for skilled nursing facilities. The nursing facility utilization plan would have to be approved by the public health authorities of the State in which the facility is located, but the Secretary could provide this approval if the State does not accept the responsibility. This approval procedure is required in the case of nursing homes because usually they do not have professional medical staffs which can take full responsibility for such activities. In many nursing homes full direction of operation is in the hands of the owner-operator who may not be professionally qualified.

The requirement that a nursing facility have a utilization plan would, as in the case of hospitals, help to safeguard against the unnecessary use of covered services. The additional requirement that payment cannot be made for nursing home services unless the patient is transferred from a hospital would, of course, provide an added safeguard.

Conditions for Home Health Agencies

To meet the definition of a home health agency an organization must (a) be a public agency or nonprofit organization exempt from Federal taxation under Section 501 of the Internal Revenue Code of 1954, (b) be primarily engaged in providing skilled nursing or other therapeutic services, (c) have medical policies established by a professional group (including physicians), (d) maintain adequate medical records, and (e) be licensed under applicable local law. As in the case of hospitals and nursing homes, home health agencies would also have to meet any further conditions that the Secretary may find necessary in the interest of the health and safety of the patients.

The conditions for home health agencies are designed primarily to provide assurance that agencies participating in the program are basically suppliers of health services. The plan would cover agencies specifically established to provide a wide range of organized home health services. The provision of services under such agencies is now only in the initial stage of development. The services covered are based on the practices of the pioneer agencies now in existence. These agencies, while few and generally of recent origin, have established excellent records of operation so that it seems appropriate to expect that new providers of these services will adopt the pattern of organization found successful thus far. Home health service agencies which may participate include in addition approximately 1,000 agencies which now provide a more limited range of home health services, which include nursing or therapeutic services. These home health service agencies primarily provide visiting nurse services. More than half of the cities of 25,000 or more population have such care available at the present time.

CONDITIONS FOR PARTICIPATION

Hospital	Skilled nursing facility	Home health agency
1. Is primarily engaged in providing diagnostic and therapeutic services or rehabilitation services, by or under supervision of physicians or surgeons.	1. Is primarily engaged in providing skilled nursing care and related services or rehabilitation services.	1. Is a public agency or a private non-profit organization.
2. Maintains adequate medical records.	2. Has medical policies established by professional personnel including one or more physicians; policy must include requirement that every patient be under care of a physician.	2. Is primarily engaged in providing skilled nursing services or other therapeutic services.
3. Has medical staff by-laws.	3. Is under supervision of a physician or registered professional nurse who is responsible for execution of medical policies.	3. Has medical policies established by professional personnel including one or more physicians.
4. Provides 24-hour nursing services by or under supervision of registered professional nurses.	4. Maintains adequate medical records.	4. Maintains adequate medical records of services rendered.
5. Has a hospital utilization committee or (if such a committee is impractical) meets other requirements prescribed in regulations to accomplish similar purposes.	5. Provides 24-hour nursing services by or under supervision of registered professional nurses or licensed practical nurses.	5. Is licensed (if State or local law provides for licensing) or is a public institution (if licensing law does not apply to a public institution).
6. Is licensed (if State or local law provides for licensing) or is a public institution (if licensing law does not apply to a public institution).	6. Operates under a nursing facility utilization plan.	6. Meets other conditions the Secretary may find necessary in the interest of health and safety.
7. Meets other conditions the Secretary may find necessary in the interest of health and safety.	7. Is licensed (if State or local law provides for licensing) or is a public institution (if licensing law does not apply to a public institution).	7. Is not primarily for the care and treatment of tuberculosis or mentally ill patients.
8. Is not primarily for the care and treatment of tuberculosis or mentally ill patients.	8. Meets other conditions the Secretary may find necessary in the interest of health and safety.	
	9. Is not primarily for the care and treatment of tuberculosis or mentally ill patients.	

PAYMENT TO PROVIDERS

Under the bill, payments to providers of service would be made on the basis of the reasonable cost of services furnished. The bill authorizes the Secretary to develop a method or methods of determining costs and to provide for payment on a per diem, per unit, per capita, or other basis, as most appropriate under the circumstances. In the case of hospital services, the principles for reimbursing hospitals developed by the American Hospital Association provide a basis for determining how costs would be computed. However since the elements of cost are, to some extent, different for different types of providers of health services, a number of alternative methods of computing costs are permitted so that variations in practices may be taken into account. In computing reimbursement on a "reasonable cost" basis, the program would be following practices already well established and accepted by hospitals in their dealings with other Federal programs.

If a person gets services at his own request for which full payment cannot be made because the services are more expensive than those usually offered to other patients, the person would bear the additional cost involved. The purpose of this limitation is to exclude payment for luxury items.

No payment would be made to a Federal hospital, except for emergency services, unless it is providing services to the public generally as a community hospital--a rare situation but its exclusion would be a hardship to beneficiaries in the localities involved. Also, payment would not be made to any provider for services it is obligated to render at public expense under Federal law or contract. The purpose of this exclusion is to provide assurance that Federal hospitals would not be used to furnish care under the program as well as to avoid payment for services which are furnished under other Government programs to veterans, military personnel, etc.

Payment could be made to nonparticipating hospitals for emergency inpatient hospital services if the hospital agrees, with respect to the emergency services for which payment is provided, not to make any charges to the beneficiary for these services.

AGREEMENTS BY PROVIDERS

Any eligible provider may participate in the proposed program if it files an agreement not to charge any beneficiary for covered services and to make adequate provision for refund of erroneous charges. Of course, a provider could bill a beneficiary for the amount of the deductible, and for the portion of the charge for expensive accommodations or services supplied at the patient's request and not paid for under the proposal.

An agreement may be terminated by either the provider of service or the Secretary. The Secretary may terminate an agreement only if the provider (a) does not comply with the provisions of law or the agreement, (b) is no longer eligible to participate, or (c) fails to provide data to determine benefit eligibility or costs of services, or refuses access to records for verification.

A provider may be represented by an agent in negotiations with the Federal Government about the terms of participation. In developing this provision it was contemplated that providers of service might wish to use their associations--for example, Blue Cross or hospital associations--for this purpose.

STATES, PRIVATE ORGANIZATIONS AND HEALTH INSURANCE BENEFITS ADVISORY COUNCIL

The bill provides for considerable participation by professional experts outside the Federal Government in establishing administrative policy and in carrying out some of the administrative steps, where this is appropriate. The bill provides for an Advisory Council consisting of a chairman and 13 members appointed by the Secretary who are not otherwise employees of the Federal Government. The Advisory Council would advise the Secretary on matters of general policy in connection with administration of the plan. To assure representation of the health professions, four or more members of the Advisory Council would be persons outstanding in hospital or other health activities.

The bill also provides for use, by the Secretary, of State agencies to perform the important administrative function of determining which providers of services are eligible to participate in the program and to render consultative services to the providers to assist them in becoming eligible to participate. As indicated previously, the proposal also authorizes providers to use private organizations as agents to represent them in their dealings with the Government. More detailed discussion of the functions that these various State and private organizations would perform is included in a following section of this report.

FEDERAL SOCIAL INSURANCE TRUST FUND

The bill creates a Federal Social Insurance Trust Fund under title II of the Social Security Act, and establishes three accounts in the new trust fund--an OASI account, disability insurance account,

and a health insurance account. Thus, the financing of the social security program would be carried on through one fund with three separate accounts rather than two funds, as now, plus a provision for health insurance. Each account will be credited with its portion of the taxes collected and will be charged with the costs of the benefits payable from the account. Through this modified provision, all the safety involved in separation of the cost and income experience of the three parts of the program would be preserved but at the same time the funds could be invested--all in Government bonds--in combination.

RAILROAD RETIREMENT COORDINATION

Under the bill, beneficiaries of the railroad retirement system would be entitled to the same health insurance benefits as beneficiaries under the old-age and survivors insurance program. At age 65, annuitants and pensioners (and certain dependents of railroad workers who are not beneficiaries under the railroad program but who would be beneficiaries under the OASDI program if the worker's employment had been covered under the OASDI program instead of under the railroad program) would be eligible for health insurance benefits.

The bill provides a slightly different definition of providers of services to whom payment may be made in the case of the railroad retirement provisions from those for old-age and survivors insurance beneficiaries. In the case of old-age and survivors insurance beneficiaries services provided outside the United States would not be covered but for railroad retirement annuitants payments would be permitted for the costs of services furnished in Canadian hospitals. This provision takes into account the fact that some employment in Canada (in connection with railroads that have operations on both sides of the border) is covered under the Railroad Retirement Act. The other difference in railroad retirement cases is that services provided to railroad retirement annuitants by railroad hospitals having an agreement with the Railroad Retirement Board would be covered even though these hospitals might not have an agreement with the Secretary of Health, Education, and Welfare.

The bill prohibits duplication of payments for health services in cases where an eligible individual is covered under both the railroad retirement and OASDI programs; that is, one or the other program would make payment, but not both.

As part of the present coordination of the railroad retirement and OASDI programs, the Railroad Retirement Act provides for cost adjustments to place the social security trust funds in the position they would have been in if railroad employment had been covered under OASDI since 1937. The OASDI system in effect receives from the railroad retirement system the OASDI contributions with respect to railroad services and pays the additional OASDI benefits resulting from such service.

These same financial arrangements would apply to health insurance benefits. The railroad contributions for health insurance benefits would be transferred to the Federal Social Insurance Trust Fund. In some cases, payment of these benefits would be made directly by the OASDI system. In cases where the Railroad Retirement Board made payment of health insurance benefits, there would be a transfer from the Federal Social Insurance Trust Fund to the Railroad Retirement Account equal to the amount of the benefits. However, these arrangements would not apply to health insurance benefits provided in Canadian hospitals. The cost of such benefits would be borne by the Railroad Retirement Account.

THE COST AND FINANCING OF THE PLAN

In order to provide the same assurance as for other elements of the OASDI program that contributions provided for will meet the benefit costs, careful study has been given to estimating the costs of the proposed health insurance benefits.

The kind of extensive operating experience derived from the OASDI portion of the program is, of course, not available in the case of health insurance. Also, it is recognized that there is the possibility of variation in costs of health benefits as medical practices change in the future. The approach taken in estimating the costs of health benefits allows for the possibility of future changes which will result in considerably increased use of hospital and auxiliary facilities above that of the present aged population.

When the Administration bill was introduced in February 1961 the long-term level-premium cost had been estimated at 0.60 percent of payroll. The estimated cost of the program would have been met by the proposed increase in the tax rate of 1/4 of one percent each for employers and employees and by 3/8 of one percent for self-employed persons, effective in 1963, together with the net gain to the system resulting from the proposed increase in the taxable earnings base from $4,800 to $5,000 a year.

Since the introduction of the bill there has been opportunity to do a full re-evaluation of the cost estimates. The original estimates of the short-run costs generally and of the short-run as well as long-run cost of the hospital services for which payment would be made have been confirmed. Previous long-term estimates have been slightly revised as a result of a re-examination. The estimates for nursing home and home health services allow for a substantial increase in the use of these services that would be covered under the bill. A change of this magnitude may not occur but sufficient funds will be available to make payment for increased use of the services, if this change does occur, without further increases in the contribution rate.

Since the major cost of the proposal involves payment for hospital services, generally the revision is not of large magnitude. Furthermore, the upward revisions of nursing home and home health service costs are partially offset by a reduction in hospital utilization as the use of other services increases and by a slight reduction in costs associated with outpatient diagnostic services. The current estimates take into account the enactment of the Social Security Amendments of 1961 which make about 100,000 persons aged 65 and over eligible for benefits in 1962 as a result of the liberalization of the insured status requirements. This change has a slight effect on the short-term estimates, but no change on the long-term estimates because it will not affect significantly the size of the beneficiary rolls over the long run.

Shown below are the original and revised estimates of the level-premium costs on an intermediate cost basis of the various types of benefits (plus administrative expenses):

Type of benefit	Original estimate	Revised estimate
Hospitalization	.56%	.52%
Skilled nursing home	.01	.08
Home health	.01	.05
Outpatient hospital diagnostic	.02	.01
Total	.60	.66

The outgo for benefit payments and accompanying administrative expenses in the first 12 months of operation for each of the four types of benefits, taking into account the actual price and earnings-level situation (rather than the long-range assumptions in these respects), is shown in the following table for the revised cost estimates:

Type of benefit	Amount (millions)	Percent of payroll
Hospitalization	$1,015	.44%
Skilled nursing home	25	.01
Home health	10	.004
Outpatient hospital diagnostic	10	.004
Total	$1,060	.46%

As shown above, with a $5,000 earnings base, the cost of the health benefits is estimated at 0.66 percent of taxable payroll. Of this cost, .10 percent would be met by the net additional revenue to the entire system resulting from the increase in the earnings base from $4,800 to $5,000; the remaining cost of .56 percent would be only partially met by the increase of 0.5 percent in the contribution rate, leaving a deficit of 0.06 percent.

If the earnings base is increased to $5,200, the cost of the health benefits in terms of dollars is unchanged, but in relation to the larger taxable payroll it is decreased--from .66 percent to .65 percent. Of this .65 percent cost, .16 is met by the net additional revenue to the entire system resulting from the increase in the base from $4,800 to $5,200; the remaining cost of .49 percent is met fully by the 1/2 percent contribution rate increase (with .01 percent left over).

The figures below show the estimated progress of the Health Insurance Account by calendar years, according to the intermediate-cost estimate, into the long-range future. The cost of the health insurance proposal under the revised estimates could be fully financed by increasing the earnings base to $5,200, rather than $5,000 as in H.R. 4222, and retaining the same increase in contribution rate as provided for in the bill. It will be noted that even under the financing provisions in the original proposal and under the revised cost estimates the health insurance account would not be exhausted for almost 60 years--until the year 2017.

Estimated progress of Health Insurance Account under H.R. 4222
Revised intermediate cost estimate
(in millions)

Calendar year	Contributions allocated 1/	Benefit payments and administrative expenses	Interest on account 2/	Account at end of year
1962	$ 180	$ 152	--	$ 28
1963	1,150	1,062	$ 2	118
1964	1,365	1,098	8	393
1965	1,395	1,134	17	671
1970	1,548	1,361	61	1,974
1975	1,677	1,557	89	3,102
1980	1,805	1,803	113	3,872
1990	2,096	2,308	117	3,898
2000	2,436	2,640	77	2,515 3/

1/ Based on allocations of 0.60 percent of payroll derived from an increase in contributions of 0.5 percent of payroll and the net additional revenue from an increase in the earnings base to $5,000.

2/ Based on varying interest rate estimated to be earned by OASDI trust funds, ultimately leveling off at 3.02 percent on total assets (3.10 percent on invested assets).

3/ Fund exhausted in year 2017.

A full statement of the assumptions and methods used in estimating the cost of the Administration's proposal is included in "Actuarial Cost Estimates for Health Insurance Bill," Actuarial Study No. 52.

PROPOSED PLAN OF ADMINISTRATION

Basically, the benefits provided by the Administration health insurance proposal are service benefits to be secured by the individual from a provider of his choice and paid for through a third party payment mechanism. The essential pattern for administering such benefits is well established through a variety of third party payment programs--private, nonprofit, and governmental. The procedures that are required flow quite naturally from the basic relationships established--i.e., eligible individuals are provided with identification, qualified providers who wish to participate are identified, an agreed-upon basis of reimbursement is arrived at to cover the cost of services, and records of utilization are kept.

This section describes a proposed plan for carrying out the various functions involved in the health insurance proposal. This plan is, of course, tentative. It could readily accommodate modifications and procedural alternatives, as may be suggested by providers of service and interested groups and associations.

Administration of the health insurance proposal for old-age and survivors insurance beneficiaries would involve:

--assigning, to existing Federal and State organizations, responsibility for managing the program;
--providing information and explanations to providers of service on particulars in the health insurance bill;
--identifying providers of services meeting conditions of participation;
--developing policies and formulas for reimbursing providers;
--formulating systems and procedures for prompt payment of providers' bills;
--operating procedures for identifying beneficiaries and for keeping records of utilization.

MANAGEMENT OF THE HEALTH INSURANCE BENEFITS PROGRAM

Over-All Responsibility

As in the case of other benefits to which persons under the social security system can become entitled, over-all responsibility for administration of the health benefits would rest with the Secretary of Health, Education, and Welfare. Similar responsibility for railroad retirement annuitants rests with the Railroad Retirement Board. Agreements by hospitals and other providers with the Secretary would be made on behalf of both the Secretary and the Board.

An Advisory Council would be established to advise the Secretary on policy matters in connection with administration. The Secretary would also consult with appropriate State agencies, national and State associations of providers of services, and recognized national accrediting bodies. These efforts would be especially oriented to the development of policies, operational procedures and administrative arrangements of mutual satisfaction to all parties interested in the program. This consultation at the local and national level would also provide additional assurance that varying conditions and impacts of local and national significance are taken into account.

There are other programs, not directly related to the administration or financing of the proposed health insurance program for old-age and survivors insurance beneficiaries, in which the Secretary has major responsibilities for providing both financial and technical assistance to States, for example, in the construction and improvement of health facilities. Through coordinated consultative activities with State agencies, the Secretary would be able to exercise leadership in encouraging States to correlate their own activities in relation to providers of services under the health insurance program with activities related to planning for the development of community health facilities and services. This approach would provide an orderly way of seeing that new facilities and services are developed where most needed to assure a progressively more equitable availability of health insurance benefits for all eligible beneficiaries. Accordingly, certain important aspects of medical policy, including those pertinent to the direction and planning of activities carried out by State health agencies, would be handled by the Surgeon General, thus providing a focal point for medical policy and for professional advice in the Public Health Service.

Operating Responsibilities of the Bureau of Old-Age and Survivors Insurance

Within the framework of Social Security Administration responsibility for the health insurance program, administrative responsibility over systems, procedures, and the day-by-day execution of policies relating to beneficiaries and providers of services would be delegated to the Bureau of Old-Age and Survivors Insurance (BOASI). This Bureau has had extensive experience with large-scale claims operations applying to a general insured population and with State-Federal administration on a contractual basis. Additionally, it provides a reservoir of trained manpower and the facilities that can be readily used in and adapted to the needs of the health insurance program.

BOASI can make available for the operations of the health insurance program the facilities and manpower of a nation-wide network of approximately 600 district offices, 3,600 contact stations and a trained field staff of 15,000 claims and administrative personnel engaged in direct service to the public, readily accessible in all population centers. District offices and other Bureau offices are now being linked by a high-speed nation-wide telecommunications network to improve service in processing

old-age, survivors, and disability claims; this network will be fully operational by July 1962. Advance-type electronic computer operations have been installed in the seven BOASI payment centers which service claims on a nation-wide basis, to speed up the processing of claims information and to expedite payments. Thus, in terms of trained personnel, experience, facilities available to the public, automatic data processing equipment, and the high-speed communications network, the BOASI is well prepared to carry out the additional operating responsibilities of the magnitude inherent in the health insurance proposal.

The telecommunications network and the computer operations would be available and utilized fully in the health insurance operations. These facilities can readily be adapted to assure speedy and accurate processing of health insurance actions, issuance of identification cards to beneficiaries to be shown to providers of services as notice of the beneficiary's eligibility to health insurance benefits, and payment of provider bills.

The establishment and maintenance by BOASI of necessary records for the health insurance program offers major advantages. BOASI would keep controls on beneficiary eligibility and on utilization of health insurance benefits, despite interstate movement of beneficiaries--whether the movement results from change of residence, election to secure medical services away from home, or emergency circumstances while visiting or traveling in another State. The mobility of the beneficiary population is significant in that it affects recordkeeping, identification, and service to providers. Also, BOASI beneficiary rolls contain accounts for many beneficiaries who are not yet aged 65, and hence would not be immediately eligible for health insurance benefits; the Bureau's computers would identify these beneficiaries as they attain age 65 and become eligible for health insurance benefits, and would enable the Bureau to notify those beneficiaries promptly of their eligibility.

The operations of the health insurance program would follow the pattern established for title II claims. This decentralized configuration of operations would assure the ready availability and accessibility of Bureau staff to State agencies, to providers and their representatives, and to health insurance beneficiaries. Trained personnel knowledgeable in the health insurance program--like experts in other aspects of OASDI programs--would be available at selected field installations to deal with providers and beneficiaries on a face-to-face basis.

To assure effective administration, the local operations of the health insurance program would be integrated to the fullest extent feasible within the present framework, resources and facilities of BOASI. This would include:

--the taking of claims and the development of evidence to support entitlement to health insurance benefits would be handled in the 584 BOASI district offices as an added function to their regular claim activities under title II of the Social Security Act;
--similarly, the review of these claims and the certification of the claimant's entitlement to health insurance benefits would be handled in the Bureau's present payment centers;
--the establishment and maintenance of the beneficiary's record of entitlement to health insurance benefits and of the status of his entitlement to health benefits during a period of hospitalization (or other use of provider services) would be processed as part of the payment centers' data processing system, utilizing computer facilities;
--the national telecommunications network now being installed for regular Bureau claims operations would accommodate and accelerate the transmission of appropriate traffic relating to the health insurance benefits program.

Participating Roles, States and Private Organizations

Significant participating roles in the program are provided in the bill for State agencies and private organizations. These are over and beyond the consultative roles to the Federal Government, as mentioned above. These organizations would be utilized to the fullest extent consistent with the roles assigned to them by the legislation.

Role of States.--Under the Administration proposal the Secretary is authorized to use State agencies to perform certain administrative functions. The Secretary would expect to exercise this authority fully, and it is believed that all States would be willing and able to assume these responsibilities. State agencies would be used in:

a. determining whether and certifying to the Secretary that a provider meets conditions for participation in the health insurance program; and

b. rendering consultative services to providers to assist them in meeting the conditions for participation, in establishing and maintaining necessary fiscal records and in providing information necessary to derive operating costs so as to determine amounts to be paid for the provider's services.

In varying degrees, States have established standards for the types of providers of service described in the bill. These standards are based on the State's authority to license or supervise health facilities. Under the Administration proposal, licensure under applicable State (or local) law is a prerequisite for participation in the program by a provider of service. Some States, through programs or standards-setting authority that is additional to licensing authority, have established or may plan to make improvements in their standards for medical institutions. Although the proposed Federal program does not govern the question of what services a provider may offer to the general public, it should not, through its conditions of participation, detract from efforts on the part of a State to set higher requirements for health or safety, consistent with local experience and needs. Accordingly, State standard-setting activities are safeguarded by a provision that a State could recommend higher conditions of participation for providers of health insurance benefits within that State than in other States.

State agencies would be reimbursed for the costs of activities they perform in the health insurance benefits program. As in the cooperative arrangements with State agencies in the BOASI disability program, reimbursement to State agencies for health insurance benefits activities would meet the agency's related costs of administrative overhead as well as of staff.

What is contemplated is a Federal-State relationship under which each governmental entity performs those functions for which it is best equipped and most appropriately suited. State governments license health facilities and State public health authorities generally supervise these facilities. In addition, State programs purchase care from providers of health services. On the basis of experience and function, State agencies should assist the Federal Government in determining which providers of health services conform to prescribed conditions. Furthermore, where an institution or organization that has not yet qualified needs consultative services in order to determine what steps may be appropriately taken to permit qualification, such consultative services should be furnished by the State health or other appropriate State agency. Other types of consultative services closely related to conditions of the health benefits program or similarly related to State programs and requirements should logically be provided for or coordinated in the State agency. There may, of course, be situations where a State is unwilling or unable to perform some or all of these certifications and consultative services. In any such situation, the Secretary will have to make other provisions for these activities.

Role of Private Organizations.--Upon enactment of a health program of this type it is expected that organizations of providers would cooperate in facilitating the administration of the program. For example, State and national associations of providers would make known to the Secretary the needs and viewpoints of their members, and would

impart information on the program to their members. Moreover, the Secretary could secure existing data and information from these organizations or contract with them to produce necessary data which would facilitate program operations. For example, it is anticipated that accreditation bodies would provide data that would greatly simplify the identification of qualified providers of services and periodic information that would permit maintenance of up-to-date lists of eligible providers, thus reducing the need for inspection activities by State agencies. Similarly, for purposes of audit and cost analysis, it is expected that nonprofit--mainly Blue Cross--or other organizations regularly in this business, could make available cost information that would avoid duplication of Federal, State, and nongovernmental activity in the collection and analysis of fiscal information from providers.

It is also expected that some providers or groups of providers would elect to use an agent in their dealings with the Secretary. Such an arrangement is authorized in the Administration proposal. If a provider elects to use a private organization, such as a State or national hospital association, or Blue Cross, or similar nonprofit organizations, as its agent, the agent could represent the provider in negotiation of terms of participation. Also, where the agent has high-speed communication links with the providers, the possibility exists and needs to be explored whether the agent would serve as the focal point for transmitting and receiving messages as to a patient's eligibility for and utilization of health insurance benefits. Additionally, to the extent necessary, the agent could assist providers in completing the health insurance form for payment of provider bills. The provider's request for payment would be prepared on a standard health insurance form, tailored to the needs of the program and to the operating practices prevailing generally in participating institutions.

Selection of an agent would not bar the provider from a direct contact with the Secretary, when the provider so desires. Nor would the provider-agent relationship preclude direct contact by the Secretary when necessary for the audit of provider records or for other essential program purposes.

To some extent, the use of agents by providers might increase the total costs of the health insurance program in that they might result in additional operating costs for the provider. However, under some arrangements these added costs could be offset by: a smoother transmission of data between the Secretary and providers, easier communications between providers and the Secretary, accelerated agreements with providers, and adding the least possible administrative and operational burden on the providers of service.

Lead Time to Have Health Insurance Benefits Program Fully Operational

The effective dates in the Administration proposal are designed to provide a lead period of at least one year between enactment of the statute and the first month for which benefits would be payable. This one-year period would be sufficient for the "tooling up" necessary to get the program into effective operation.

"Tooling up" includes the development and implementation of policies and procedures for administering the program; arranging for operational participation of State agencies and private organizations; creation of and discussions with advisory boards; orientation of State and Federal employees in present jobs to new duties generated by the health insurance program; and recruitment, training, and housing of new personnel.

Additionally, this lead period would enable the BOASI to identify and register all persons eligible for benefits under the new program. This would be a two-pronged effort of:

--obtaining claims from all aged persons eligible for health insurance benefits who had not yet filed a claim for old-age and survivors insurance benefits, and
--preparing, recording, and issuing on or shortly before the effective date to each person then entitled to health insurance benefits (estimated at 14,000,000 beneficiaries) an identification card to serve as notice to providers of service of the entitlement of the card-holder.

IDENTIFYING PROVIDERS MEETING CONDITIONS OF PARTICIPATION

To assure a common understanding throughout the country of what hospitals, skilled nursing facilities and home health agencies are, for the purpose of this program, definitions are provided. These are broad in nature and reflect what is the current, generally-accepted understanding of the essential features that characterize each kind of institution.

Conditions of participation by hospitals can readily be met by institutions that fulfill the standards established by accreditation bodies. No special administrative problems are anticipated, therefore, in obtaining agreements by providers of service who are both accredited and licensed. The Secretary would have authority to find that accreditation by a recognized national accreditation body provides reasonable assurance that some or all of the conditions for participation in the program are met, and accreditation could accordingly be accepted as evidence of such qualification.

There are, however, some hospitals that lack accreditation--because of small size or for other reasons. There are also hospitals and nursing homes that may be exempt from licensure or be licensed under circumstances where it is not clear that the standards of licensure provide adequate assurance that the institution qualifies under the defined concepts of the program. Moreover, there is not yet a functioning national accreditation program in the nursing home field, and in many localities such homes may be licensed without meeting the conditions necessary for operation of a skilled nursing facility. For these reasons the program would operate under the general requirement that institutions or organizations wishing to participate must meet such additional conditions (beyond those specified by law) as the Secretary may find necessary in the interest of the health and safety of beneficiaries.

In establishing any such additional conditions the Secretary would be required to consult the Health Insurance Benefits Advisory Council, appropriate State agencies, and recognized national listing or accreditation bodies. Moreover, the Secretary would also be authorized in this regard to specify higher requirements for participation at the request of a State for a given area or a class of institution within the State. This feature of the program would make it possible for the Secretary to cooperate with the programs of national accrediting bodies and State licensing agencies by establishing more specific requirements as, with the passage of time, technical changes or other developments indicate a need in any area or with respect to any class of institutions.

Certifying Eligibility of Providers to Participate

In determining and certifying the eligibility of providers to participate in the program, State health agencies would be utilized and they would be paid for the cost of services they rendered to the Federal program. The Secretary would enter into agreements with appropriate agencies in those States willing to assume the responsibility of applying the conditions for provider participation and to provide the consultative services necessary to assist institutions to qualify. While, from a legal point of view, the Secretary would retain review authority and final decision-making responsibility, he would be authorized by law to accept as conclusive the findings of the contracting State agency.

This inspection and certification workload would be reduced greatly by the accrediting activities of the Joint Commission on Accreditation of Hospitals.

For unaccredited hospitals and nursing homes wishing to participate in the program, the actual amount of inspection in each State would depend upon the extent to which State licensure requirements are already as high as, or higher than, the conditions for participation in the health benefits program, and on the scope and extent of inspections that have been conducted by the State as prerequisites to licensing. In the case of skilled nursing homes other considerations could apply, for example, the extent to which the particular home has affiliation or receives medical supervision from an accredited hospital. Subject to these considerations, each participating State agency would inspect institutions or would certify to the Secretary those that meet the requirements for entering into an agreement to receive reimbursement for services rendered.

There may be some situations in which a provider meets substantially all of the conditions of participation. Depending on the nature and degree of the unsatisfied conditions (but not with respect to conditions specified by the law), the Secretary could authorize a certification valid only for a limited period, for example, one year, within which time the provider would be expected to upgrade services and facilities so as to satisfy completely all the required conditions. Failure to so comply would preclude renewal of the certification.

As part of a continuing operation, contracting State agencies would inspect new providers and nonparticipating institutions as they register a desire to participate. Also, State agencies would re-examine and re-evaluate the status of institutions previously denied certification, at the request of any such institution. Periodically, these contracting State agencies would, as necessary, reinspect and recertify to the Secretary the status of an institution previously certified.

REIMBURSEMENT POLICIES AND FORMULAS

Reimbursement formulas would not be developed until there has been full opportunity for consultation with experts in financial accounting and administration of hospitals, nursing homes and home health care services. In this effort, the Secretary would have the counsel of the Health Insurance Benefits Advisory Council and would also consult with other nationally representative professional organizations. Groups having direct experience with reimbursement practices and formulas include hospital associations, Blue Cross and other prepayment plans, State agencies and other Federal agencies administering similar programs. The Secretary would draw upon this considerable experience in applying standard cost-accounting principles to develop equitable reimbursement formulas.

Providers of services would be paid on the basis of reasonable cost incurred in furnishing health services to old-age and survivors insurance beneficiaries. The formula of payment, based on standard cost-accounting principles, would be established for specific application to particular types of service. The amount and method of

payment to all providers of services should be such as to reimburse them fairly and adequately for the services rendered. Adequate payment is necessary to permit them to maintain essential services, to support good patient care, and to encourage the development of the kind of service required to meet the needs of the community. The "reasonable cost" basis of reimbursement contemplates that the providers of services would be reimbursed the full cost incurred by them in providing quality care. On the other hand, "reasonable cost" would not require reimbursement for luxury services or for costs unreasonably out of line on account of factors unrelated to hospital care.

The reimbursement formula for inpatient hospital services could be expected to follow the general principles that have been formulated and published by the American Hospital Association in the Association's manual, "Principles of Payment for Hospital Care." Under this approach, reasonable variations of per diem costs will exist as between hospitals in the same city, between various sections of the country, and for providers offering various levels of service.

After the formulas have been developed and approved, a standard form (with implementing instructions) would be made available to each qualified provider of services wishing to participate in the program. For hospitals, for example, one possibility is that the form and procedure could be patterned, with appropriate modifications, after the governmental Joint Hospital Form 1 (Hospital Statement of Reimbursable Cost). This form is used by Children's Bureau, Office of Vocational Rehabilitation, Division of Indian Health (PHS), and the Veterans Administration in purchasing hospital care. Larger hospitals should not have any difficulty in executing such a form since practically all have had experience in completing Joint Hospital Form 1. Smaller hospitals would not necessarily be experienced with this form, but hospitals in many areas are familiar with this type of reimbursement pattern through Blue Cross and State program requirements. For outpatient diagnostic services, more information, or a different approach, may be required than is currently reflected by the principles of Joint Hospital Form 1.

For skilled nursing home facilities and home health agencies, separate procedures would be devised, perhaps quite different from those developed for hospitals. Experience in applying reimbursable cost formulas to nursing homes in general is rather limited. As a result, greater difficulty can be expected both in the formulation of reimbursement formulas and in the application of reimbursement principles to these homes than to hospitals. Quite extensive audit operations or consultative services on accounting and cost records may be needed for some nursing homes. This difficulty might be

offset by the availability of a longer lead time as proposed in the bill for nursing homes, i.e., nine months after the effective date for hospital benefits. However, the well organized nursing homes with established cost accounting systems (e.g., the larger nonprofit or the hospital-based nursing homes which more generally provide the kind of skilled nursing services encompassed in the bill) should not have difficulty in developing and furnishing cost data. Likewise, organized home health agencies, whether they be public agencies or private nonprofit organizations, should be able to furnish necessary cost data.

AGREEMENTS BY QUALIFIED PROVIDERS

As soon as possible in the lead period--i.e., the time between enactment and effective date--arrangements would be made for the distribution through private as well as governmental channels of the detailed information that hospitals and other providers would need to have. By utilizing the services of agents of providers, and the cooperative efforts of provider associations (e.g., American Hospital Association, local hospital councils), the initial contacts would be facilitated. Providers could also obtain assistance and information from participating State agencies.

The lead period in the bill should be adequate to permit timely consummation of agreements with qualified providers of services that want to participate in the program. The signing of agreements by providers is expected to be accelerated to the extent that groups of providers have previously arranged for a hospital association or other agent to represent them in establishing the terms for participation.

The agreements to be signed by the qualified provider and filed with the Secretary would indicate that in participating in the program, the provider will not charge any individual for services covered under the program and will make adequate provision for the refund of charges incorrectly collected from such individual. This agreement would permit the provider to bill a beneficiary for the amount of the deductible, and for the applicable part of the charge for expensive accommodations supplied at the beneficiary's request and not payable under the program.

ADMINISTRATIVE AND OPERATING PROCEDURES

Identification of Individuals Entitled to Health Insurance Benefits

Each person entitled to health insurance benefits would be issued an identification card by BOASI. Persons entitled under the Railroad Retirement Act would be issued their cards by the Railroad Retirement Board. These cards would be presented to hospitals and

other providers of services as evidence that the individual is entitled to health insurance benefits, just as hospitals now accept Blue Cross and other prepayment plan identification cards.

To identify eligible persons already on the benefit rolls, BOASI would screen, by electronic computer, the records of all of its beneficiaries to locate those meeting the age requirements. Each beneficiary would receive his identification card and informational literature before the effective date of the program. No action would need to be taken by these beneficiaries to establish entitlement to health insurance benefits and they would be so informed.

Beneficiaries who first file claims after the program's effective date would receive their identification card from the BOASI payment center simultaneously with their notification that their claim for benefits has been approved. Positive steps would be undertaken during the lead period to reach all eligible individuals who have not filed applications to establish their entitlement to old-age and survivors insurance benefits. These would number about 13 percent of the total number of persons eligible for protection under the health insurance proposal. BOASI offices would be staffed to accommodate this additional workload and to process these claims expeditiously so that each claimant's entitlement to health benefits could be established before he might need to use the benefits of the program. On a continuing basis after the effective date for benefits, BOASI would use its electronic computers to identify those OASDI beneficiaries under age 65, as they attain age 65, so as to issue cards promptly to this group also.

Establishing and Maintaining Beneficiary Records

In addition to establishing an initial record for each person entitled to health insurance benefits who has received his identification card, all data affecting status and utilization would be maintained by BOASI on a current basis. Any event affecting the beneficiary's continued right to benefits or change of address processed in regular computer updating operations for old-age and survivors insurance purposes would automatically also be used to update the health insurance benefit record.

When requests for verification of eligibility were received from a hospital or other providers of services, the current status could automatically be certified from a magnetic tape record. At the same time, the record would be updated to show the date of admission, hospital code, and other required identification or status information. Thereafter, when the provider's bill was subsequently processed for payment, the necessary utilization information would also be recorded on magnetic tape. That tape would then be used to update the master health insurance record, from which it would always be possible to tell promptly the status of an individual's account.

The maintenance and updating of utilization data on BOASI electronic equipment would make it possible to obtain by-product information for a variety of important statistical and administrative purposes.

The records would reflect not only health service utilization but also other data offering valuable information for analysis of program operations as well as for more general health studies by the Public Health Service, State agencies, and professional organizations.

Admission Procedures for Providers of Services

Methods could be worked out to the satisfaction of hospitals and other providers for notifying them of a patient's entitlement to health insurance benefits. Such procedures could closely parallel current Blue Cross and commercial insurance practices.

BOASI would explore the feasibility of supplying to each beneficiary, following each use of services, a statement of the service for which the program has made payment. If this system is adopted, then when a beneficiary requests health services from a hospital, skilled nursing home, or home health agency, he would present to the provider his identification card and the BOASI notice of prior services received. Otherwise, the identification card in itself would serve as notice of the beneficiary's eligibility. The provider of service would use the information from these documents and from the questions routinely asked during the admission interviews to complete a request that payment be made to the provider for the health services. The patient would sign a portion of the form unless, of course, he is incapable of doing so, and the provider would retain the form until it is time to submit a bill.

Upon admission to a hospital as an inpatient, a recommended procedure would be for the hospital to request BOASI to certify the inpatient's eligibility for payment for service. This request would be handled through the BOASI local district office and transmitted to the appropriate Bureau records office via the BOASI nationwide telecommunications network which will link all district offices with records centers. The reply, as previously noted, would be generated in a computer process and delivered promptly through the telecommunications network to the hospital. This BOASI certification would cover the number of days of care for which payment may be made as well as the amount of deductibles already paid in the benefit period. Where groups of hospitals and a Blue Cross organization wished to explore the possibilities,

it might be advantageous to them and to the Government, to link a local Blue Cross wire network into the BOASI telecommunications system. Several large Blue Cross plans have already installed, or have plans to install, wire communications between member hospitals and the Blue Cross offices. By tying in the Blue Cross office to the BOASI network, a hospital request for certification of a beneficiary's health insurance entitlement could be electronically handled from initiation of the request to receipt of the certification at the hospital.

In the case of outpatient diagnostic services, the hospital could generally rely on the beneficiary's identification card as evidence of entitlement without requesting certification of entitlement from BOASI. This difference in procedure between inpatient and outpatient cases would seem to be warranted by these considerations arising from the provisions of the proposed program:

--the diagnostic study would usually be completed before a certification could be transmitted to the hospital;
--there is no statutory limitation on the number of diagnostic studies;
--the cost per outpatient diagnostic study, especially with a $20 deductible, is comparatively small in contrast to inpatient costs;
--the deductible amount is fixed, being pegged to each study, rather than to a specified number of days, as in inpatient cases; and
--entitlement would be affected only by an event that terminated the individual's entitlement to monthly benefits under title II, such as divorce, or remarriage of widow to a nonbeneficiary, both rare occurrences for people over age 65.

Since transfer from a hospital to a skilled nursing home is a condition of skilled nursing home service benefits, the home would often know in advance when a patient is to be admitted. While these transfer arrangements are being made, the home could ask BOASI for information on the patient's eligibility and the number of days of skilled nursing home care available to the beneficiary. This request from the home would, as for hospital inpatient admissions, be handled through the BOASI local office, transmitted to the appropriate BOASI records office via the BOASI telecommunications network and the reply from BOASI would be transmitted promptly to the nursing home.

A home health agency could accept the beneficiary's health insurance benefits identification card as evidence of his entitlement to home health services. The agency could then obtain through the BOASI local office, a current record of the number of home health visits for which payment could be made in the current year.

Payment of Provider Bills

On the basis of consultation with representatives of hospitals and other interested parties, methods could readily be established for presentation, review and payment of provider bills, patterned on similar practices and procedures now followed by hospitals and prepayment plans. Procedures would assure prompt payment of bills and the least possible burden of paperwork on the provider.

Upon discharge of an eligible patient, or, at appropriate times in conjunction with its normal billing cycle, providers participating in the program, or their agents, would submit bills to the appropriate office for review and payment. After review to assure that the supporting documentation is complete and that there are no inconsistencies in the bills which need to be reconciled before payment can be made, the payment office would apply the appropriate reimbursement formula and deductible provisions to compute the amount due to the particular provider, and authorize the Treasury Disbursing Office to issue a check. If feasible, notice of payment of the bill, including a summary statement of the current status of his health benefits record, would be sent to the beneficiary; he would be asked to present this notice together with his identification card to a provider if he again required additional health services.

In an emergency admission to a nonparticipating hospital, the hospital would submit a bill, evidence of the emergency, and documentation establishing the identity and entitlement of the patient. Since generally no cost data would have been collected for nonparticipating hospitals, this bill which would be required to be on a cost basis would have to be examined and reviewed for general conformance to the level of reimbursement to similar hospitals in the same locality. In some instances, cost data used by Blue Cross or by a State program may be available for comparison purposes. Where the amount billed is beyond a reasonable tolerance limit, the nonparticipating hospital could be requested to supply sufficient information to support a finding that the amount billed is the reasonable cost for the services rendered.

Audit of Provider Records

At the time of agreement and periodically thereafter, accounting data would be obtained from providers in sufficient detail to permit a computation of average cost per unit--patient day, or other unit as required under the applicable reimbursement formula. Reimbursement on a cost basis requires assurance of

proper audits of the records of hospitals and other providers. Such audits would assure equity to both the purchaser of care and the providers of service and in general would contribute to sound management of the program. Audit data would also be used to determine the need for adjustment of reimbursement formulas and rates and would contribute to appraisal of reimbursement policies and procedures.

Many hospitals have their books audited annually by independent accounting firms. To a much lesser degree this auditing practice may be followed by some other types of providers. In some cases, audits of the records of providers of health services are being performed by nonprofit organizations (such as the Hospital Cost Analysis Service, Inc., in Maryland) and by State agencies.

Where independent auditing staffs perform an effective audit or cost analysis of provider records, the Secretary could contract to use the results in connection with the health benefits program. For providers having inadequate accounting systems or lacking outside audits, the Federal program would make arrangements to have audits performed.

Review and Reconsideration of Unfavorable Decisions

Applicants for health benefit services would be entitled to appeal unfavorable determinations in the same manner as now provided under the OASDI program. The applicant could, if found not entitled to benefits, obtain reconsideration by BOASI, hearing and appeal by the Office of Hearings and Appeals, and Federal court review. Beneficiary complaints concerning the content or quality of service, however, would not be subject to such review, but would be directed to the appropriate State agency, medical and hospital groups for their attention.

The procedures for resolving beneficiary appeals are statutorily provided for, as a concomitant to the beneficiary's statutory right to benefits. The rights of a provider under the program would be of an entirely different nature, and the procedures provided for beneficiaries would not be appropriate for providers. Instead, provisions for administrative review and resolution of provider complaints would be established.

Safeguards Against Overutilization of Services

Utilization of hospital and other health benefits would be safeguarded by the admission procedures of the providers of services, by the self-governing utilization mechanisms established by hospitals (and in the case of nursing homes, established by or for a nursing home and approved by public health authorities of the State) and by the opportunities afforded to State agencies and professional organizations for analysis and study of by-product statistical data reflecting utilization practices.

With respect to each kind of health services provided, arrangements could be made for certification by a physician that the service was required for defined reasons of medical treatment. The primary assurance of proper utilization, therefore, rests with the admitting physician as it does generally in other cases where third-party payment is involved in meeting the costs of a medical service. A great deal of reliance would be placed upon effective utilization reviews by appropriate utilization review groups which are essentially self-governing. In addition to the review of cases from the standpoint of admission, duration of stays and services furnished, there would become available with the passage of time statistical utilization data which could be made available to these utilization committees. Under the proposed legislation, the utilization committees would not be required to review all cases or to submit reports of individual cases to either the State agencies or to the Federal Government but they rather would be expected to have such organization and to maintain such evidence of self-review of the services they provide as to give assurance that determinations have been made by them with respect to the need for the services rendered by the institution. In the case of inpatient hospital services and skilled nursing home services involving extended stays there would be a further requirement that a determination has been made by the appropriate utilization mechanism that there is or was a need for such utilization in excess of a 30-day period.

While the proposed legislation does not specify what a "nursing facility utilization plan" shall encompass, recommended specifications would be provided after consultation with State agencies, appropriate advisory boards and representative associations of these providers. The broad definition in the bill includes the requirement that the plan be approved by the public health authorities of the State in which the facility is located, thus making it possible for States to establish plans based on community-wide professional consultation and in coordination with local health authorities.

Coordination with Railroad Retirement Board

The bill covers railroad retirement beneficiaries as well as old-age and survivors insurance beneficiaries. It provides that agreements by the providers of services or their agents will be entered into also on behalf of the Railroad Retirement Board. Coverage for railroad beneficiaries would include services secured in railroad hospitals which, otherwise, may not be participating under the program, and services in Canadian

hospitals, which for old-age and survivors insurance beneficiaries are excluded from the program. In the case of individuals who may be entitled to monthly benefits under both programs the limitations on number of days, units of care and the deductible provisions would be applied as if the individuals were covered under a single program.

The administration of present law requires close coordination between the Railroad Retirement Board and the BOASI in recordkeeping and claims processes. There has been continuing and extensive experience between these agencies in the kinds of coordination that would be required under a health benefits program. Where individuals are entitled under both programs, agreement would be reached on which organization will issue the identification card. Railroad hospitals and Canadian hospitals would send their requests for verification of eligibility direct to the Railroad Retirement Board. Hospitals in the United States, other than railroad hospitals which do not have an agreement with the Secretary, would accept either card and a common procedure would be established for requesting verification of eligibility. The Railroad Retirement Board could be linked with the BOASI wire communications system. Bills could be paid under uniform policies and procedures, and the trust funds of the two programs could be adjusted periodically through the financial interchange provisions of the Railroad Retirement Act.

APPENDIX

MEDICAL ASSISTANCE FOR THE AGED
Selected Characteristics of State Plans

Plans in effect prior to July 1, 1961:

Kentucky
Maryland
Massachusetts
Michigan
New York
Oklahoma
Puerto Rico
Virgin Islands
Washington
West Virginia

Plans (for which information is available) as proposed to go into effect before end of 1961:

Arkansas
Idaho
North Dakota
Oregon
South Carolina
Tennessee
Utah

Medical assistance for the aged: selected characteristics

Effective: January 1, 1961
(Revisions effective June 1, 1961)

Department of Economic Security

I. Financial eligibility

A. Income: Maximum annual gross income for single person, $1,200; for applicant and spouse, $1,800. (Special procedure for determining income from self-employment or farming operations.)

B. Assets:
1. Real property - homestead is exempt. Nonincome-producing real property other than the home is limited to $5,000. Real property which is producing income is taken into consideration from the standpoint of income derived.

2. Personal property - (defined as "cash on hand, money in the bank, stocks, bonds, and other resources that can be converted into liquid assets", excluding cash surrender value of life insurance) limited to $750 for single person, $1,000 for applicant and spouse. Cash surrender value of life insurance is limited to $3,000. Excluded from consideration as personal property is tangible personal property not listed above.

   Availability of health insurance is to be determined.

C. Financial eligibility: Exists for a 12-month period, subject to reinvestigation. Person is issued an identification card, which is to be reissued periodically.

II. Medical care provided

A. Institutional:

Hospitalization - for "acute, emergency, and life-endangering illness, ... requiring admission to the hospital;" available in hospitals licensed under the laws of the State which elect to participate in the plan, signifying such election by a written agreement. Limited to 6 days.

B. Noninstitutional:

1. Physicians' services - home and office calls limited to 2 visits per month per patient. ($3 office; $5 home.)

2. Dental services - for relief of pain and treatment of acute infections - up to a maximum of $16 per recipient per calendar month and limited to $48 per recipient per annum.

3. Drugs - according to established list and fee schedules.

Medical assistance for the aged: selected characteristics

Effective: June 1, 1961

Department of Public Welfare

I. Financial eligibility

A. Income: Regular income not to exceed
1. in 6 larger counties - single person, $1,140; applicant with 1 dependent, $1,560;
2. in 18 other counties - single person, $1,080; applicant with 1 dependent, $1,500. Income scale rises with number of persons dependent upon applicant. Income includes that of spouse living with applicant and of any other person claimed as a dependent. Scale for value of income-in-kind is provided.

B. Assets:
1. Real property - home is exempt; real property other than the home is included with the other resources convertible to cash.

2. Personal property - resources convertible to cash (savings, insurance, real property other than the home, etc.) may not exceed (1) $300 if it is in addition to the regular monthly income or (2) $2,500 cash value if it "represents the only resource for regular living expenses."

A person is ineligible who has any insurance or other benefit, the terms of which provide for payment for the medical care items included in the plan.

C. Financial eligibility: Determined on the basis of the certificate of the Department of Public Welfare, the Health Department issues a medical care card valid for one year. Reinvestigation and recertification are then made.

II. Medical care provided

A. Institutional:

Hospitalization - general hospital care.

B. Noninstitutional:

1. Physicians' services - in home, office, or clinic.

2. Special medical care clinics

3. Laboratory services

4. X-rays

5. Minor surgery - in private office facility or accident room.

6. Drugs and limited medical supplies - when prescribed by a physician.

7. Restorative dental care

8. Prescribed eyeglasses - for patients who have had a cataract operation.

Medical assistance for the aged:
selected characteristics

Effective: October 1, 1960

Department of Public Welfare

I. Financial eligibility

Group One: "For persons in licensed nursing homes, licensed chronic hospitals, and public medical institutions...or persons needing such care", with defined exceptions.

A. Income:

1. For persons having need of a place of residence apart from a licensed chronic hospital, nursing home, etc., there shall be excluded from consideration--
   a. $150 a month if unmarried, or if married and the applicant is the husband;
   b. $225 a month combined income of husband and wife, if married and the applicant is the wife.

   All other income is taken into consideration in determining need for medical assistance for the aged.

2. For person having no need of a place of residence apart from a licensed chronic hospital, nursing home, etc., the amount of income and resources...shall be determined by rule and regulation of the Department. The first $15 of any monthly income shall be retained by the recipient for personal needs.

B. Assets:

1. Real property - real estate used as a home does not disqualify; ownership of any interest in other real estate disqualifies.

2. Personal property - (includes bank deposits, securities, cash on hand, and similar assets; excludes cash surrender value of insurance) maximums are:

-continued-

II. Medical care provided

A. Institutional:

1. Hospitalization - in-patient hospital services.
2. Skilled nursing home services

B. Noninstitutional:

1. Physicians' services
2. Outpatient hospital or clinic services
3. Home health care services
4. Private duty nursing services
5. Physical therapy and related services
6. Dental services
7. Laboratory and X-ray services
8. Prescribed drugs
9. Eyeglasses, dentures, and prosthetic devices - as prescribed.
10. Diagnostic screening and preventive services
11. Any other medical or remedial care recognized under the law of the Commonwealth and in accordance with the Department medical plan

I. Financial eligibility	
a. $2,000 if person is unmarried, or is married and applicant is the husband; b. $3,000 if married and the applicant is the wife, includes the combined ownership of husband and wife. Group Two: The eligibility of other persons "whose income and resources are insufficient to meet the costs, of necessary medical services" shall be determined by the rules and regulations of the Department of Public Welfare.	

Medical assistance for the aged: selected characteristics

Effective: October 1, 1960

Department of Social Welfare

I. Financial eligibility

A. Income: Maximum annual income for single person (unmarried or not living with spouse) is $1,500; if married and living with spouse, not more than $2,000, including the annual income of the spouse. "Income" must include contributions which son, daughter, or estranged spouse should be making to applicant, according to agency standards or court determination, except that such contributions are not included in computing income during first 30 days of each separate period recipient is hospitalized.

B. Assets:

1. Real property - value of property used as a home is excluded. Value of other real property must be included in limits on marketable assets specified below.

2. Personal property, i.e., "liquid or marketable assets" - may be held with value of not more than $1,500 for single person, $2,000 for married applicant and spouse. Excluded in making this determination are: clothing and household effects; cash surrender value (not value of matured policies) of life insurance; and not to exceed $1,000 of fair market value of personal property used in earning income. All other property, real and personal, must be evaluated in determining eligibility under the $1,500 or $2,000 limitation specified.

II. Medical care provided

A. Institutional:

Hospitalization - inpatient care not to exceed services furnished under Blue Cross (M-75) as of September 1, 1960.

B. Noninstitutional:

Physicians' services - not to exceed those services furnished by Michigan Medical Service under Blue Shield plan as of September 1, 1960; may be in office, medical care facility, or in outpatient clinic of approved hospital (no home calls); limited to emergency treatment and specified tests.

Medical assistance for the aged:
selected characteristics

Effective: April 1, 1961

Department of Social Welfare

I. Financial eligibility

All income and resources shall be deemed available to meet costs of medical care except as indicated below:

A. Income:

1. In medical or nursing institutions for chronic care - up to $10 a month for personal care items; annual premiums for health insurance policy up to $150 for single recipient or $250 for married recipient if policy covers spouse; if married, up to $1800 a year for support of spouse, including any income of spouse.
2. Not in facility for chronic care - $1800 for single applicant; $2600 for married applicant living with spouse; health insurance policy premiums up to $150 per year for single recipient or $250 if married and policy includes spouse. (See reserves, below.)

B. Assets:

1. Real property - home is exempt; other real property not used as home must be utilized to apply to costs of care.
2. Personal property - clothing and household effects are exempt; may have life insurance with cash surrender value of not more than $500 for single person or for couple. Insurance in excess of this amount and nonessential personal property must be utilized.
3. Cash reserve for person not living in a medical facility may be permitted up to $900 for single person or $1300 for married couple. If value of non-home real estate, nonessential personal property, and excess insurance together with cash or liquid assets does not exceed this reserve limit, such resources need not be utilized to be applied to costs of care.

II. Medical care provided

A. Institutional:

1. Hospitalization - inpatient services.
2. Nursing home services

B. Noninstitutional: (not as extensive as provided for OAA)

1. Physicians' services - M.D. and doctors of osteopathy only; services of dentists, podiatrists, and optometrists are not included in the MAA program.
2. Nursing services
3. Outpatient hospital or clinical services
4. Drugs
5. Home health care
6. Prosthetic appliances
7. Physical therapy

Medical assistance for the aged: selected characteristics

Effective: October 1, 1960

Department of Public Welfare

I. Financial eligibility

A. Income: (as amended April 18, 1961) Maximum for single person, $1,500 annual income; for man and wife, $2,000 annual income.

B. Assets:

1. Real property - may have equity of $8,000 in home owned and occupied as home; equity above this amount is considered among "other resources". Home not occupied as such, or to which recipient or spouse has no feasible plans to return is no longer "considered an exemption".

2. Personal property -

   a. Insurance -- single person, cash value of first $1,000 face value; married, cash value of first $2,000 face value; married, living together and have separate policies, cash value of first $1,000 face value for each.

   b. Equity in tools with which he earns a living, up to $1,500.

   c. Equity in small business which he operates, up to $2,500, including building, ground, equipment, and invoice of stock.

   d. "Other resources" (cash, stocks, bonds, notes, mortgages, automobiles, excess of value of items listed in (a) and (b) above, excess equity of home, or property of any kind which can be made available for the use of recipient or spouse) limited to $700 for single person, $1,000 for married couple.

II. Medical care provided

A. Institutional:

1. Hospitalization - general hospital care for life-endangering or sight-endangering conditions as determined by the attending physician; not to exceed 21 days per single admission; provision for readmission for defined conditions within 10 days after date of discharge.

2. Nursing care in nursing home - up to 6 months in a 12-month period.

B. Noninstitutional:

1. Physicians' services - in home of patient approved for nursing care in own home; 2 visits per month.

2. Nursing care - in own home for "bedfast or chair fast patients...".

3. Diagnostic services - to determine need of nursing care and physician's services in patient's home.

4. Outpatient therapeutic radiology - prescribed while patient was in the hospital.

5. Ambulance - under defined conditions.

6. Blood banks - use of under specified limitations.

7. Services of dentists or oral surgeons - "for services performed in a licensed general hospital when a patient is admitted for life-endangering conditions involving fractures, infections, or tumors of the mouth."

Medical assistance for the aged: selected characteristics

Effective: October 1, 1960

Division of Public Welfare
Department of Health

I. Financial eligibility

A. Income: Individual annual income and available resources may not exceed maximum of $1,500.

B. Assets: (as amended April 5, 1961)

1. Real property - home where applicant resides is excluded from consideration. Value of other real property is taken into account.

2. Personal property - loan value of life insurance and any other available resources will be taken into account.

An applicant's "membership in such organizations as Blue Cross, Blue Shield, ... State retirement or compensation systems, purchase of health insurance of any appropriate type, his right to veterans' benefits, etc., shall make him ineligible for participation in this plan."

C. Financial eligibility: Certified to by the Division of Public Welfare upon evaluation of the applicant's statement concerning his "annual income and available resources and his status with regard to health insurance or membership in organizations which provide medical care or the payment thereof." Certification is for period of 1 year, subject to renewal on the basis of a new statement from the applicant. Identification card good for 1 year is issued.

II. Medical care provided

Care and services are provided through the Commonwealth and Municipal Government systems of medical care and hospital facilities, several private nonprofit medical institutions under contract. The content of medical care is the same as for old-age assistance.

A. Institutional:

1. Hospitalization - total hospital care, including physician's services and drugs and appliances as prescribed.

2. Nursing home services - where available.

B. Noninstitutional:

1. Outpatient hospital and dispensary services - including physician's and ancillary services, prescribed drugs and appliances.

2. Physical therapy and related services, dental care, laboratory and X-ray services, and preventive medical care services.

3. Diagnosis and treatment of tuberculosis and psychosis in medical institutions - with Federal matching claimed for 42 days after such diagnosis.

Medical assistance for the aged: selected characteristics

Effective: January 1, 1961

Insular Department of Social Welfare

I. Financial eligibility

A. Income: Current continuing gross income of $1,200 a year or less for individual; twice this amount for married couple living together.

B. Assets:

1. Real property - property owned and occupied as a home not considered.

2. Personal property - liquid assets which can be easily convertible are limited to not more than $1,200; including savings, government bonds, health insurance, government entitlement such as Veterans Medical Services, etc.

C. Financial eligibility: Determined by the Department of Social Welfare which certifies to the Department of Health that applicant is eligible for medical care. Applicant receives identification card which remains in effect as long as he is eligible, subject to annual or earlier reinvestigation.

II. Medical care provided

Medical care must be prescribed by a physician or dentist of the Department of Health. All care except home visits of physician will be given at facilities of the Department of Health.

A. Institutional:

Hospitalization - inpatient hospital care, surgical and laboratory services, private duty nursing when prescribed as "critically necessary".

B. Noninstitutional:

1. Home care - including home visits by private physicians.

2. Drugs

3. Prosthetic appliances - except glasses.

Medical assistance for the aged: selected characteristics

Effective: October 1, 1960

Department of Public Assistance

I. Financial eligibility

A. Income (of applicant and spouse): sufficient to meet maintenance requirements of applicant and his legal dependents but not sufficient to meet his medical expenses, wholly or in part. Such requirements are determined by old-age assistance standards (maximum on money payment per case, $275 a month, unless exception is made) and by considering certain pressing obligations of applicant and his legal dependents.

B. Assets:

1. Real property - home used by the applicant or his legal dependents, together with a reasonable amount of property surrounding and contiguous thereto is exempt from consideration as an available asset.

2. Personal property - all other resources and liquid assets (with exceptions listed below), including any combination, are considered to determine the extent to which they may be utilized for planning for payment of required medical care. Medical insurance in force and effect at the time of application and any potential compensation for injury must be utilized to the fullest extent.

   Exempt from consideration as personal property are: household furnishings and personal clothing, cash surrender value of life insurance not to exceed $500, one automobile owned by applicant or spouse "which is used and useful", and personal property "which is used and useful or...has great sentimental value."

II. Medical care provided

All medical care is limited to conditions currently endangering life or a medical condition which, if not immediately treated, would necessitate extended hospitalization and/or surgery. In specified emergencies exceptions to these limitations are permitted. The following services may be given, when authorized, by vendors participating in the program:

A. Institutional:

1. Hospitalization and related medical services - all needed while so hospitalized. Outpatient clinic care available at county hospitals or at others if "emergency presently endangering life."

2. Nursing home care

B. Noninstitutional:

1. Physicians' services - in home or office, for conditions such as heart, diabetes, and others which are subject to the general limitation given above.

2. Dental care - for relief of pain only.

3. Drugs and pharmaceutical supplies - subject to general limitation given above.

4. Ambulance - if other transportation cannot be used without hardship to the patient.

Medical assistance for the aged: selected characteristics

Effective: October 1, 1960

Department of Public Assistance

I. Financial eligibility

A. Income: For single individual, $1,500 or less per year; person married and living with spouse, combined income of both is $3,000 or less. Income includes contributions received from relatives.

B. Assets: (as amended January 30, 1961)

1. Real property - homestead or property on which applicant resides and other real property is excluded from liquid or marketable assets.

2. Personal property - or other liquid or marketable assets limited to value of $5,000 for single person or $7,500 for combined assets of husband and wife. Excluded are clothing, jewelry, and household effects; livestock, farm machinery, and other vehicles; and cash surrender value of life insurance (limit to be set).

   Membership in insurance plan and eligibility for payment of medical services from other agencies and organizations such as Veterans' Administration, Workmen's Compensation, United Mine Workers of America must be taken into account in determining whether MAA will assume all or part of the cost of medical services needed or received.

C. Financial eligibility: May be determined at a point before applicant needs medical services; continues in effect for maximum period of 1 year, subject to reinvestigation.

II. Medical care provided

Includes all the medical services available to recipients of old-age assistance as of October 5, 1960, including payment for drugs for specified chronic illnesses (such as diabetes, heart conditions, terminal cancer).

A. Institutional:

1. Hospitalization - for acute illnesses, immediate surgery, and diagnostic services; may be more extensive if medical service for other conditions will increase person's capacity for self-care or self-support. Limited to 30 days annually.

2. Nursing home care - after hospitalization or if such care would prevent need for hospital care; limited to acute conditions and must be prescribed by physician as part of the treatment for that condition.

B. Noninstitutional:

1. Physicians' services - for acute illnesses.

2. Drugs - for acute illnesses and specified chronic illnesses.

3. Ambulance services

4. Dental services - for emergency extractions and treatment.

Plans (for which information is available) as proposed to go into effect before end of 1961

Proposed plan for medical assistance for the aged: selected characteristics

To be effective July 1, 1961 — Not yet approved

I. Financial eligibility

A. Income: Cash income for single person, $1,200; for family $1,500.

B. Assets:

Real property - may have home or an equity in home not to exceed $7,500. Value of other real property must come under the maximum on all resources. All other real and personal property other than the home and household furnishings, may not exceed $2,500, including value of nonhome real estate, livestock, motor vehicle, tools, equipment, and cash surrender value of life insurance.

In addition to these, the applicant may hold as a cash reserve up to $300 for himself and an additional $300 for dependents; with a family maximum of $600.

II. Medical care to be provided

The same services are to be available to persons receiving MAA as for persons eligible for medical care under the other categories.

A. Institutional:

1. Hospitalization - including laboratory and full range of services and supplies considered to be necessary for hospital treatment limited to 30 days per year except for specified types of cases requiring longer hospital care.

2. Nursing home care - including physicians' services, 2 per month per patient, and prescribed drugs up to $5 per month per patient.

B. Noninstitutional:

1. Outpatient clinic services - including drugs and appliances prescribed by physicians giving the service; generally not to exceed 2 visits per month with certain exceptions.

2. Remedial eye care services - in office or in hospital.

3. Dental care

4. Transportation to receive medical care and domicilary care - for patients requiring such care - while receiving outpatient care and treatment at an approved clinic.

Medical assistance for the aged: selected characteristics

Effective: July 1, 1961 — Not yet approved

I. Financial eligibility

A. Income: From the applicant's figures, his ordinary expenses and obligations, including contractual payments, are deducted from available cash income; any excess is applied to the cost of needed medical care, plus each month, 1/12 of any savings and cash resources above the amount of $2,000 and less than $10,000.

B. Assets:

1. Real property - home property is exempt from consideration as a resource.

2. Personal property - a "popular priced" car, personal possessions, and cash value of life insurance not to exceed $1,000.

All other savings and cash assets may not exceed $10,000; with a designated proportion of any such assets in excess of $2,000 being considered available for application to the cost of needed medical care.

II. Medical care provided

A. Institutional:

1. Hospitalization - limited to 14 days for each admission for acute medical conditions, acute complications of chronic diseases, nonelective surgery, contagious diseases, or acute emergencies that are a threat to life. Diagnostic tests in the hospital are provided for up to $50 and necessary physicians' and surgeons' services.

2. Nursing home care - in approved and licensed nursing homes (service is removed from OAA medical services and placed in MAA, provisions made for amounts for personal needs of recipients without income to meet such needs).

B. Noninstitutional:

Practitioners' services - home or office calls limited to 2 per month; visit to patient in nursing home limited to 1 a month; includes M.D., D.O., chiropractors, podiatrists.

Proposed plan for medical assistance for the aged: selected characteristics

To be effective July 1, 1961 — Not yet formally submitted

I. Financial eligibility

Income and property limitations are expressed in terms of resources to be disregarded as available to meet the costs of medical care. Amounts in excess of the limitations are to be applied to medical expenses.

A. Income: For a single person, $1,200 per year; for a married couple, $1,800. Amounts in excess are considered available to meet medical expenses.

B. Assets:

1. Real property - home not considered available as a resource.
2. Personal property - not to exceed $2,500 for a single individual or for a married couple; and of this amount, not more than $500 for a single individual or $1,000 for a couple shall be in the form of cash or other liquid assets. Household goods and personal effects are exempt from consideration as resources.

   To be eligible for payment of medical costs, the individual shall have paid or obligated himself to pay $50 for medical services received in the 12 months prior to application.

   The applicant shall not have a child or other legally responsible relative of sufficient ability to provide support to the individual.

II. Medical care to be provided

"The scope of services to be provided ...is to be as broad as the Federal act permits." State has a comprehensive scope of services now in the categorical programs:

A. Institutional:

1. Hospitalization - all recommended by physician.
2. Nursing home care - as needed by the recipient up to negotiated rates based on type of care needed and provided.

B. Noninstitutional:

1. Physicians' services - home, office, nursing home; all licensed practitioners.
2. Prescribed drugs
3. Nursing care in own home, dental services, X-ray, laboratory, and many other services - as needed or as prescribed by licensed practitioner.

Proposed plan for medical assistance for the aged: selected characteristics

To be effective November 1, 1961 Not yet approved

I. Financial eligibility	II. Medical care to be provided
A. Income: Annual cash income for single recipient, less than $1,500; for married applicant, combined income of husband and wife is less than $2,000. Where it is not possible to determine the income of an absent spouse, the applicant is treated as a single person. B. Assets: 1. Real property - home used by applicant or legal dependents is exempt (real property other than the home is not mentioned). 2. Personal property - not to be considered as resources are: 1 automobile, household furnishings, personal property holdings used in earning a living, such as clothing, tools, machinery, and other goods and equipment necessary to the continuance of earning a livelihood. Also exempt is cash surrender value of life insurance held by the applicant, not to exceed $1,000. All other liquid assets shall be less than $1,500 for a single person or less than $2,000 for married couple. Private medical insurance policies may be utilized in payment of the "deductibles" and must be utilized to the fullest extent possible as an "offset" before MAA benefits are payable. MAA and partial benefits supplement each other.	A. Institutional: 1. Hospitalization - up to 9 days per year to be paid at the hospital's all-inclusive per diem rate; patient pays first $65 of hospital expense incurred during the nine days. 2. Nursing home care - posthospital cases, after at least 1 day of hospital care; up to 32 additional days of care. B. Noninstitutional: 1. Physicians' services - in office, home, or outpatient hospital, 8 visits per year after first 2 paid by patient. 2. X-ray and laboratory services - in physician's office or hospital outpatient facility, 8 "units of service" per year.

Proposed plan for medical assistance for the aged:
selected characteristics

To be effective July 1, 1961 — Not yet formally submitted

I. Financial eligibility	II. Medical care to be provided
Not yet reported.	A. Institutional: Hospitalization - for acute illness or injury, limited to 40 days hospital care per fiscal year. B. Noninstitutional: Outpatient care - limited to specified diagnostic tests. (State's present medical vendor payment provisions for OAA consist of hospital care with the same limitations as above and nursing home care following a period of hospitalization and limited to 90 days unless necessary to extend it for situations such as terminal cancer or severe burns.)

Proposed plan for medical assistance for the aged:
selected characteristics

To be effective July 1, 1961 — Not yet formally submitted

I. Financial eligibility	II. Medical care to be provided
A. Income: Annual income not to exceed $1,000 for single person, or $2,000 for a couple. B. Assets: 1. Real property - equity in all real property owned by applicant cannot exceed $5,000 and total real value of such property cannot exceed $7,000. 2. Personal property - not to exceed $1,000 for single person or $1,500 for a couple.	A. Institutional: Hospitalization - for acute illness or injury, limited to 10 days per year. B. Noninstitutional: Drugs - essential life-saving drugs for treatment of diabetes and cardiac conditions.

Medical assistance for the aged: selected characteristics

Effective: July 1, 1961 — Not yet approved

I. Financial eligibility	II. Medical care provided
A. Income: For 1 person, not to exceed $110 per month; for 2 persons, $170 per month; for 3 persons, $210 per month. B. Assets: 1. Real property - home not to be considered among resources. 2. Personal property - cash or liquid assets for 1 person not to exceed $1,000; for couple or family, $2,000; excluded from consideration are household goods and 1 automobile. Total of all real and personal property is not to exceed $10,000 in value.	A. Institutional: Hospitalization - not to exceed 30 days for any single admission; the recipient is to pay the first $50 of cost on each admission. B. Noninstitutional: Physicians' services - home, office, or hospital; no limit on the number of visits, but recipient must be responsible for first $20 of such services within each 90 day period; deductible applies to physicians' services or to outpatient care in hospital clinic.

ctuarial Cost Estimates for Health Insurance Benefits Bill

by ROBERT J. MYERS

Department of Health, Education, and Welfare

Social Security Administration · · · · Division of the Actuary

ACTUARIAL STUDY NO. 52

JULY 1961

TABLE OF CONTENTS

LIST OF TABLES

This study has been issued by the Division of the Actuary, under authority delegated by the Commissioner of Social Security. It is designed for the use of the staff of the Social Security Administration and for limited circulation to other persons in administration, insurance, and research concerned with the subject treated.

FOREWORD

Proposals to add health benefits for beneficiaries aged 65 and over to the OASDI program have created an interest in the data and methods used to develop actuarial cost estimates in this new area.

It is the policy of the Division of the Actuary to make its methods and procedures available to those interested. It is our hope that this Study will provide, in a condensed form, the information not readily available in other published reports.

Robert J. Myers
Chief Actuary
Social Security Administration

A. Introduction

This Study presents the long-range actuarial cost estimates for the Health Insurance Benefits Bill, H.R. 4222, introduced by Congressman King on February 13 (an identical bill, S. 909, was introduced by Senator Anderson on the same date). H.R. 4222 contains the recommendations for a health insurance program under the Old-Age, Survivors, and Disability Insurance system made by President Kennedy as part of his Message Transmitting Recommendations Relating to a Health Program (H. Doc. No. 85, 87th Cong., February 9, 1961).

This bill would provide a limited program of health benefits for all persons who are (1) aged 65 and over, and (2) "entitled" to monthly benefits under the OASDI system. The term "entitled" means that the individual meets all the statutory provisions governing eligibility for monthly benefits (old-age, dependent, or survivor) and has filed an application therefor (which may be concurrent with application for health benefits). The term thus includes not only beneficiaries in current-payment status, but also those who are not drawing monthly benefits because they are continuing their employment. The following health benefits would be provided:

(a) 90 days of semi-private hospital care within a "benefit period", with a deductible of $10 per day for the first 9 days (minimum deductible of $20).

(b) 180 days of skilled-nursing-home services within a "benefit period", when such services are furnished following transfer from a hospital and are necessary for continued treatment of a condition for which the individual was hospitalized.

(c) 240 home-health-service visits during a calendar year.

(d) Outpatient-hospital-diagnostic services in excess of a $20 deductible, for each diagnostic study.

There is an overall limit on hospitalization and nursing-home benefits in that during any "benefit period" only 150 "units of service" can be used, where such a "unit" consists of 1 day of hospitalization benefits or 2 days of nursing-home benefits. The term "benefit period" means the period beginning with the first day that an individual receives hospitalization benefits and ending with the last day of the first 90-day period thereafter during which he has not been a patient in a hospital or a skilled nursing home. The health benefits would first be available in October 1962, except for nursing-home benefits, which would first be available in July 1963.

These benefits (and the accompanying administrative expenses) would be financed, on a long-range basis, by (1) an increase in the combined employer-employee contribution rate of ½% (effective in 1963), with a corresponding increase of 3/8% in the rate for the self-employed, and (2) the

"gain" to the OASDI system resulting from increasing the maximum earnings base from $4800 to $5000 (effective in 1962). The gain from increasing the earnings base is estimated to be equivalent to the effect of a rise in the combined employer-employee contribution rate of .1% of payroll. This income would be channelled into the Health Insurance Account of the Federal Social Insurance Trust Fund, which would also include the existing OASI and DI Trust Funds as two separate accounts.

This Study sets forth in Section B the basic data utilized, the assumptions made, and the computation procedure. In Section C, the cost estimates are presented, along with discussion of changes made in them in the past year. Finally, Section D outlines the problems involved in making actuarial cost estimates for the proposal.

B. Data, Assumptions, and Procedures

The various cost factors involved for each of the types of benefits have been developed by the Division of the Actuary in collaboration with the Division of Program Research. These factors have been applied to the estimated numbers of OASDI eligibles, which are available from the long-range actuarial cost estimates for the system. The latter are summarized in the 21st Report of the Board of Trustees of the Federal Old-Age and Survivors Insurance Trust Fund and the Federal Disability Insurance Trust Fund, pages 27-32 and 37-44 (H.Doc. No. 60, 87th Congress, January 18, 1961). The general assumptions and procedures for these estimates are described in Actuarial Study No. 49.

Factors Affecting Hospitalization-Benefit Costs

The elements affecting costs in each year may be itemized as follows:

(1) Number of eligible beneficiaries and their age-sex composition;

(2) Rates of hospital admission;

(3) Average duration of hospitalization;

(4) Average daily per capita hospital charges; and

(5) Effect of maximum-duration and deductible provisions.

Hospitalization-benefit costs for various future years are obtained by multiplying the estimated number of eligibles by a factor representing the average annual per capita cost of hospitalization (after taking into account any maximum-duration and deductible provisions). This is done separately by sex and by age groups (65-69, 70-74, and 75 and over, in connection with the cost estimates for H.R. 4222) since duration of hospitalization varies significantly by age and sex. Likewise, the age-sex composition of the eligible group will vary over the years. The per capita hospitalization-cost factor is derived in relation to all eligibles in the age-sex group, including those who are not hospitalized.

The per capita hospitalization-cost factor consists of two elements, the average length (in days) of compensable hospitalization (considering all eligibles, and including the effect of any deductible, as well as any maximum-duration provisions) and the average daily cost of hospitalization (including both room and board, and all other hospital services, averaged out on a daily basis).

Average Length of Hospitalization

First, considering the element of average length of hospitalization, the basic procedure is to make the detailed calculations for a 60-day maximum provision and then to modify the overall results for differences in the provisions of the particular proposal. The basic data are presented in Table 1, which shows hospital utilization rates on both low-cost and high-cost bases. The "hospital utilization rate" is defined as the average number of hospital days experienced per person exposed to risk. In other words, they are the result obtained by multiplying the proportion of persons experiencing hospitalization by the average duration of hospitalization for those hospitalized.

The basic data are from the BOASI Survey of Beneficiaries, but with modifications to recognize that the availability of benefits will result in greater utilization than that reported in the Survey. In addition, the basic data have been corrected to allow for hospitalization of persons who died during the year, who of course would not be reported in the Survey.

The corrections for the availability of hospitalization benefits were made in the following manner (described in more detail on pages 77-78 of the Department's 1959 Hospitalization Report). For the high-cost estimate, the admission rate was assumed to be the same as the rate reported in the Survey for those with insurance (approximately 60% higher than the reported rate for those without insurance). The average duration of hospitalization was taken to be the same as that reported in the Survey for those with insurance and those without insurance combined (the average duration for the latter category was about 50% higher than for the former); this assumption is, of course, a "conservative" one.

For the low-cost estimate, the hospital utilization rate was obtained by weighting such rate for insured persons in the Survey by the proportion of insured persons and by weighting such rate for those in the Survey without insurance by the average hospital utilization rate for all persons in the Survey (about 5% higher than the actual experience for the uninsured group). Also, an adjustment of the hospital utilization rate was made for men aged 65-69 to reflect the fact that utilization is substantially lower among employed persons than among retired persons. In connection with the latter point, it should be noted that the beneficiary group surveyed consisted of retired persons; thus, making no such downward adjustment in the high-cost estimate added an element of conservatism. Operating in the other direction, however, is the factor that utilization of the proposed health benefits by persons with insurance in the past may be somewhat increased because of the greater protection available in many instances (where the deductible does not have an offsetting effect).

Table 1

HOSPITALIZATION UTILIZATION RATES FOR PERSONS AGED 65 AND OVER, 60-DAY MAXIMUM, AVERAGE DAYS PER PERSON PER YEAR

Age Group	Low-Cost Estimate			High-Cost Estimate		
	Before Correction for Decedents	Correction for Decedents	Corrected Rate	Before Correction for Decedents	Correction for Decedents	Corrected Rate
			Men			
65-69	1.59	.34	1.93	2.18	.43	2.61
70-74	1.66	.48	2.14	2.01	.60	2.61
75 & over	2.44	.93	3.37	3.46	1.17	4.63
			Women			
65-69	1.59	.20	1.79	1.73	.25	1.98
70-74	2.42	.31	2.73	2.65	.38	3.03
75 & over	2.53	.78	3.31	3.11	.97	4.08
			Total Persons			
Total[a/]	1.99	.47	2.46	2.43	.58	3.01

a/ Obtained by weighting the rates by age and sex by the estimated OASDI "eligible" population as of the beginning of 1960.

Note: The figures shown above for "corrected rates" are the same (except for one correction) as those in the table on page 101 of the Hospitalization Report of April 3, 1959, published by the House Ways and Means Committee.

The assumptions in the low-cost estimate produce costs only slightly above the Beneficiary Survey experience. This seems plausible for the near-future. For the long-range future, this low-cost assumption may be said to give recognition to the probable success of current efforts for progressive patient care, for reductions in hospitalization costs resulting from development of outpatient-hospital-diagnostic facilities, and for progressive cost-reducing trends in medical practice.

As yet unpublished hospital utilization data from the National Health Survey, for July 1958 to June 1960, have been used to develop utilization rates comparable with those obtained from the Beneficiary Survey data. In the aggregate, the hospital utilization rates derived from the NHS data confirm those developed from the Beneficiary Survey (used for the purposes of this Actuarial Study), being in fact somewhat lower.

The hospital utilization rates derived from the Beneficiary Survey, modified as described above to allow for the effect of benefits being available as a right, must be corrected in respect to hospitalization used by persons dying during the survey year, who would not have been included in the Survey. For both cost estimates, this correction was obtained for each age-sex group by applying to the estimated proportion dying in a year an assumed average number of days of hospitalization for decedents (8 days for the low-cost estimate and 10 days for the high-cost estimate). As indicated by Table 1, the relative size of this correction naturally varies considerably by age and sex. For both cost estimates, the correction amounts to about 24% of the rate derived from the Beneficiary Survey for all ages combined, but it is as little as about 15% for women aged 65-69 and as much as 35% for men aged 75 and over. The absolute amount of the correction for decedents averages .53 days for a cost estimate intermediate between the low-cost and high-cost ones.

Since the basic work was completed on these cost estimates, there has appeared a more extensive study on the general subject of correcting hospital utilization rates derived from surveys so as to allow for decedents ("Hospital Utilization in the Last Year of Life," Health Statistics from the U.S. National Health Survey, Series D, No. 3, January 1961). This report presented a preliminary study using data for the Middle Atlantic states (New Jersey, New York, and Pennsylvania) for 1957. On the whole, after modifications to obtain comparability, the results of this survey agreed reasonably well with the adjustments made in the cost estimates for the effect of the exclusion of decedents from the Beneficiary Survey.

The NHS report showed that for persons aged 65 and over, the unadjusted utilization rate was 1.67 days per person per year and that

the rate adjusted for decedents was 2.33 days[1/]. This is a difference of .66 days, or a relative increase of 39%. The absolute correction for decedents in the NHS report is somewhat higher than used in these cost estimates (.53 days on the basis of the current age-sex distribution of the eligibles). The correction based on NHS data, however, did not include the effect of a 60-day maximum, which of course would have the effect of reducing the absolute correction (in days) and also the unadjusted utilization rate. Furthermore, it was derived from a population that is somewhat older on the average than the present OASDI "entitled" population which includes those who are not current beneficiaries because of the retirement test).

The percentage increase due to this correction factor was higher in the NHS report than in these cost estimates (39% vs. 24%) both because of the foregoing two elements and because the increase was measured against a lower unadjusted rate, computed solely on the basis of reported experience of persons alive at date of interview (namely, 1.67 days in the NHS report as compared with our 2.21 days). Current NHS statistics on hospital utilization by the population alive at date of interview are higher than formerly reported--as a consequence of the improved data-collection procedures now followed. Accordingly, when measured against this higher base, the days used by decedents would raise the estimated days used by all the aged (derived from the experience of survivors) by a significantly lower amount than 39%, especially after further adjustment for a 60-day limit and for age distribution.

As a further point of comparison between the NHS data and the assumptions in these cost estimates, the average number of days of hospitalization for decedents was 9.57 for the former, as against the assumption here of 8 days for the low-cost estimate and 10 days for the high-cost estimate.

A growing body of additional data on hospitalization experience of persons aged 65 and over, subdivided by health-insurance ownership and other relevant characteristics, is becoming available from the National Health Survey. In some respects these findings are at variance with those from the Beneficiary Survey, partly because of the later time period and differing population groups represented, and partly because of differences in survey techniques. Preliminary investigation indicates, however, that on balance the present cost estimates would be little changed if NHS data were substituted for corresponding Beneficiary Survey data.

1/ In Table 8 on page 11 of this report, the adjusted rate for persons aged 65 and over is shown as 2,373 per 1,000 persons. Actually, it should be 2,332 since it is derived by dividing the 5,021,000 nights of hospital care used by those alive (Table 6) plus the 1,976,000 nights used by those who died (Table 7) by the 3,000,000 persons in the exposure (Table 6).

The foregoing discussion has related to the derivation of hospital utilization rates on the basis of a 60-day maximum provision. It is assumed that such rates apply with equal accuracy whether the maximum relates to a calendar year, a benefit year, or a benefit period as defined in the proposal. Proceeding from those basic cost factors, modifications have been made for proposals considered from time to time in the past that have had different maximum-duration periods or that introduced deductible periods (whether expressed in terms of the first "n" days of hospitalization, a flat dollar deductible regardless of length of hospitalization, or a uniform dollar deductible for the first "n" days of hospitalization).

The relative effect on cost factors of increasing the maximum duration of benefits from 60 days to various other durations is as follows: 90 days - 9%; 120 days - 10½%; 180 days - 12%; and 360 days - 15%. Conversely, if the maximum duration is reduced from 60 days to 21 days, the cost will be lowered by 15%. These factors have been derived from consideration of data from the National Health Survey and from private insurance experiences.

In considering the effect of a deductible provision on hospitalization-cost factors, it is necessary to have what is termed a hospitalization continuance table applicable to the particular beneficiary group involved. Such a table was derived from data in the National Health Survey (Health Statistics, Series B, No. 7) and is shown in Table 2.

Average Daily Cost of Hospitalization

The second element in hospitalization-benefit cost factors is the average daily cost (including both room and board and other hospital costs). The Hospitalization Report derived a figure of $21 a day for persons aged 65 and over in 1956 (see pp. 79-80). This figure was used as the basis for the long-range actuarial cost estimates made for that Report, since all the actuarial cost estimates for the OASDI system made at that time used the 1956 general earnings level. The figure, however, was adjusted upward by 14% (to $24) to take into account the fact that, as of 1956, hospital charges had been increasing more rapidly than the general wage level and would probably do so for at least a few more years. The basis of this 14% increase was the assumption that over the next 4 or 5 years after 1956, hospital charges might increase at an average rate of about 6% (perhaps 7-8% in the beginning and lessening amounts thereafter) before an assumed leveling-off so as to have the same rate of increase as the general wage level. Thus, during this period, the "real increase" of hospital costs in relation to the general wage level might begin at 3-4% a year and then decline, so that a cumulative relative increase of 14% would precede the leveling-off at the end of the 4-5 year period.

Table 2

HOSPITALIZATION CONTINUANCE TABLE FOR AGED PERSONS FOR 60-DAY MAXIMUM BENEFIT

Waiting Period (days)	Proportion Hospitalized for		Days of Hospitalization for Those With		Hospitalization Excluded by Waiting Period	
	Exactly the Length of the Waiting Period	Length of the Waiting Period or a Shorter Time	Exactly the Length of the Waiting Period	Length of the Waiting Period or a Shorter Time	Days	Proportion
1	3.8%	3.8%	3.8	3.8	100.0	7.2%
3	6.6	17.5	19.8	37.8	285.3	20.6
5	6.0	29.8	30.0	93.0	444.0	32.0
7	5.6	41.2	39.2	167.0	578.6	41.7
10	4.5	56.0	45.0	299.4	739.4	53.3
14	3.1	70.9	43.4	483.8	891.2	64.3
20	1.2	81.5	24.0	664.3	1034.3	74.6
30	.6	89.6	18.0	866.4[a]	1178.4	85.0
60	.1	95.0	306.0[a]	1386.1[a]	[b]	[b]

[a] Including 60 days of hospitalization for the 5.0% who are hospitalized more than 60 days.
[b] Not meaningful (to have waiting period coincide with maximum benefit-period covered).

Source: Based on data from the National Health Survey (Health Statistics, Series B-7, December 1958, Table 14).

The actuarial cost estimates for the 1960 legislative proposals in regard to health benefits were modified to reflect the 1959 earnings level, but the hospitalization-benefit costs relative to payroll were left unchanged. Thus, in essence, the assumption was made that, from 1956 to 1959, hospitalization costs increased more rapidly than the change in covered earnings and would shortly "level off" (with equal relative increases thereafter).

The average hospital-per-diem cost of $21 for 1956, used in the Hospitalization Report, represented .851% of the average annual taxable wage of $2467 in that year (on a $4200 base). This ratio is important to consider when analysis is made of the current and projected future relationships.

The current cost estimates for monthly benefits of the OASDI system are based on the 1959 earnings level. The average hospital-per-diem cost for persons aged 65 and over in 1959 was about $26, which was .932% of the average annual taxable wage of $2790 in that year (on a $4800 base). This ratio is 10% higher than the 1956 ratio.

The preceding analysis indicates that during 1956-59, hospital costs rose 10% more than the general wage level. This is almost as much as the 14% "leveling off" factor previously assumed. Since this "leveling off" has not actually been achieved and apparently will not be achieved in the next few years, on the basis of current trends, it seems advisable to begin the cost-projection of hospitalization charges from the 1959 base. Accordingly, the procedure has been adopted in the present estimates for hospitalization benefits of providing for a 14% increase in the current (1959) average hospital-per-diem cost for persons aged 65 and over of $26--yielding a figure of $29.60--to allow for future "leveling off" of the ratio of hospitalization costs to the general wage level.

In other words, the adjustment factor used in the previous estimates has been applied to reflect the assumption that the "leveling off" period will be transferred and postponed until some time after the mid-1960's. If this were the only change made, the hospitalization-benefit costs as a percentage of payroll would remain unaffected. However, the costs have been adjusted upward by an additional 10% to reflect the experience during 1956-59, when the expected trend toward a "leveling off" did not occur.

Although the average hospital-per-diem cost for persons aged 65 and over for 1962 is estimated at about $32, this is not inconsistent with the lower long-range assumption because the per-diem cost figure used in the long-range estimates is relative to a lower general earnings level (1959) than that estimated to prevail in 1962.

An analytical study was made as to the reasonableness of assuming that after this 14% relative increase, there would be a leveling-off as between hospitalization costs and the general wage level. The data seemed

to indicate that in the years since World War II, hospital daily costs have been increasing in a linear manner (at a rate of about $1.60 per year), and that wage rates have been increasing geometrically. Accordingly, although in the recent past the difference between these two trends series has been about 3-4% per year, this seems to be declining somewhat, and in about 5-10 years (after 1959) there might be a "leveling-off," with the aggregate relative difference being from perhaps 10% to 14%.

Intermediate-Cost Estimates for Hospitalization Benefits

As indicated previously, low-cost and high-cost factors were developed for hospital utilization rates. An intermediate-cost estimate is necessary for purposes of determining the financing basis of this portion of the program. In order to arrive at such an estimate, the low-cost and high-cost factors were averaged and applied to the intermediate estimate of persons aged 65 and over who are entitled (or could become entitled upon application) to monthly cash benefits under the OASDI system. In considering the figures actually presented for the intermediate-cost estimate, it should be kept in mind that a considerable range of variation is possible. The spread from the intermediate-cost estimate to the high-cost estimate (or to the low-cost estimate) is approximately 15% due to the hospitalization element alone, and perhaps another 15% due to the range of variation inherent in the basic OASDI cost estimates.

Cost Estimates for Skilled-Nursing-Home Benefits

It is very difficult to make estimates for skilled-nursing-home benefits because currently such facilities are not uniformly available in adequate amount in all sections of the country, and even more so because there are a number of different concepts under which these benefits might be operative or be utilized by the medical profession. At the one extreme, such a benefit might be utilized almost entirely for very limited convalescent care and be applicable to only a relatively few cases. At the other extreme, the benefit might be utilized so broadly as to provide care that emphasizes the long-term domiciliary element far more than nursing care (naturally, both elements must be present, but much importance hinges on the relative predominance of one feature or the other). In fact, there is the question of whether hospitalization will occur that, under present circumstances, would not be considered necessary and proper, and whether nursing-home benefits will be provided following these hospital stays.

The bill provides that skilled-nursing-home benefits shall be available only upon transfer from a hospital and for further treatment of the condition that resulted in the hospitalization. It is not possible to know from this written definition exactly what the actual admitting and transferring practices may be. In the early years of operation, one limitation on the costs for this benefit will, of course, be the limited availability of qualifying facilities. In the long run, however, this cannot reasonably be regarded as a cost-control factor.

In the Department's 1959 Hospitalization Report, cost estimates were made for a strictly administered "recuperative care only" skilled-nursing-home benefit (and also for much broader provisions)--see pages 83-84. The original cost estimates for this very limited benefit were based on the experience of a few Blue Cross plans having such a benefit. The available data suggested that there might be annual utilization of 10 days of such care per 100 beneficiaries protected by this type of benefit. Since the average daily cost would be about $10, this would mean an aggregate average cost of $1 per year per person aged 65 and over entitled to monthly OASDI cash benefits.

Subsequent staff consideration of the skilled-nursing-home benefits under the proposal have led to a reconsideration of the cost of this benefit. Analysis has been made of the various elements involved in the cost of this type of benefit, namely:

(1) Present number of skilled nursing home beds;

(2) Number of such beds that are acceptable according to reasonable standards;

(3) Estimated needed beds;

(4) Proportion of beds occupied;

(5) Proportion of occupied beds used by aged persons;

(6) Proportion of the aged occupants of beds that consists of OASDI beneficiaries;

(7) Proportion of occupants with duration less than 6 months;

(8) Proportion of occupants who entered the nursing home by transfer from a hospital; and

(9) Average daily cost.

Use of the above data and analysis can produce a wide spread in the cost estimates--both short-range and long-range. In the first full year of operation, the cost would be relatively low because of lack of facilities (since many of the existing beds would not be improved sufficiently to meet the standards, and in many cases new facilities would not yet be constructed) and because of lack of knowledge of the benefits available. Accordingly, assuming generally wider coverage, the revised estimate of the cost in the first full year of operation is $25 million (as compared to the previous estimate of about $10 million). In the next few years of operation, the cost would rise steadily as existing facilities are improved and as new facilities are built to meet the demand (and in recognition of the money available from the benefits).

The long-range cost of these nursing-home benefits would be higher than the early-year costs for a number of reasons--an increase in the number of available beds to meet the demands, OASDI beneficiaries being a larger proportion of the total population aged 65 and over, and a greater utilization of the benefits available.

Consideration has been given to the various possibilities as to nursing-home benefit costs, and a new intermediate estimate has been developed. In making this higher estimate, it is recognized that part of the cost arising for the skilled-nursing-home benefits, when more widely utilized, will be an offset to the cost for hospitalization benefits. In the present estimates, it is assumed that this offset represents 25% of the cost of the skilled-nursing-home benefits.

Cost Estimates for Home-Health-Service Benefits

The original estimates for home-health-service benefits were based on an assumed annual cost of $1 per eligible beneficiary. This assumption was based on such limited experience with this benefit as was available, taking into account also the limited general availability of such services at present. For the foregoing reason, it is likely that this is the cost that will develop in the early years of operation of the program. In later years, however, it seems reasonable to assume that this type of service will become generally available throughout the country, since there will be the money to pay for it.

A recent study made by the Kansas Blue Cross and Blue Shield indicates that for persons aged 65 and over, the annual per capita cost was almost $6. Over the long-range for the country as a whole, it seems that this is a much better figure to use than the previous figure of $1.

If there are significant expenditures for home-health-service benefits, this should mean somewhat lower hospitalization and skilled-nursing-home benefit costs. In fact, in cases where a person would otherwise be in the hospital but is instead receiving the much less expensive home-health services, there would actually be a net savings in cost to the program, or in other words the program would cost less because of the inclusion of this type of benefit. It is believed, however, that any such savings will be more than offset by the home-health services being made available to people who would not otherwise be in hospitals or skilled nursing homes. Nonetheless, with the availability of these home-health services on an expanded national basis, there should be some offset taken against the hospitalization-benefit costs that would otherwise occur if there were no home-health-service benefits. This adjustment has been taken as 40% of the estimated cost for home-health-service benefits.

Cost Estimates for Outpatient-Hospital-Diagnostic-Services Benefits

The cost estimate for the outpatient-hospital-diagnostic-services benefits was first made on the basis that there would be no deductible.

Relatively little experience is available in regard to the cost of this benefit for a group consisting of persons aged 65 and over. Such Blue Cross and insurance company experience as there is seems to indicate that the annual cost per capita will be about $7.50 (spread over the total protected population and not merely among those who will use this benefit).

From a cost standpoint, the effect of a $20 deductible for each diagnostic study (note that it is not an annual deductible) will be significant. This deductible provision will reduce the aggregate cost by an estimated 80%, since most of the charges for these services will be relatively small amounts, such as $10 for an X-ray. The number of claims will also be reduced by about 80% by the deductible provision, and thus a considerable amount of the administrative costs otherwise involved in paying a large number of small claims will be eliminated. The relative magnitude of the reduction arising from a deductible tends to be verified by a study of the actual charges of hospital outpatients covered under group insurance policies (see "A Reinvestigation of Group Hospital Expense Experience" by S. W. Gingery in Transactions, Society of Actuaries, Vol. XII, 1961, which gives data on such claims by size intervals).

Estimated Administrative Expenses

It is assumed that the administrative expenses that will be chargeable to the Health Insurance Account for processing the health-benefit claims and for a pro-rata share of the cost of maintaining the earnings records and collecting the contributions will represent 5% of the benefit disbursements. This figure is comparable with the relative administrative costs of the most efficiently-run Blue Cross plans. The latter frequently have substantial administrative costs that would not arise in connection with health benefits under OASDI--such as those for selling individual enrollments, collection of health insurance contributions alone, and maintenance of the rolls of insured persons solely for purposes of health insurance. The administrative expenses for the proposed health benefits that are chargeable to the Health Insurance Account do not, of course, include the administrative expenses of the hospitals and other health agencies supplying the benefits, which are included as part of the benefit disbursements. Also not included are the record-keeping and tax-payment expenses incurred by employers in connection with the OASDI program.

C. Results of Cost Estimates

Long-range actuarial cost estimates made at about the time the bill was introduced indicated that the benefits provided (and the accompanying administrative expenses) would be exactly financed, on a long-range basis, by the two sources of revenue to the Health Insurance Account. These two sources are an increase of ½% in the combined employer-employee contribution rate (and a corresponding increase of 3/8% for the self-employed), effective in 1963, and the net "gain" to the OASDI system resulting from increasing the maximum annual earnings base from $4800 to $5000, effective in 1962. The latter "gain" is estimated to be equivalent, over the long run, to the effect of a rise in the combined employer-employee contribution rate of .1%. The bill provides that the equivalent of this level contribution rate is to be continuously appropriated to the Health Insurance Account.

As indicated in the previous section, the original estimates have been revised somewhat, as a result of the continuous process of study and investigation of all factors involved in the actuarial cost estimates. In particular, this reexamination was focused on the three "subsidiary" benefits (i.e., other than hospitalization benefits), which are less important cost-wise. The revised estimates for these benefits also include certain partially offsetting reductions in hospitalization-benefit costs, as discussed previously.

Furthermore, the estimates presented here take into account the enactment of the Social Security Amendments of 1961 (P.L. 87-64), which affect the health-benefits proposal because of the liberalization in the fully-insured status provisions of the OASDI system. This change makes about 100,000 additional beneficiaries aged 65 and over eligible in the first year of operation, and somewhat larger numbers in the next few years. Ultimately, however, there is no effect (because the maximum requirement of 40 quarters of coverage continues to apply in the same way that it did before the enactment of that legislation). Accordingly, the 1961 Amendments have a slight effect on estimated outgo for health benefits in the early years of operation, but no effect on costs in later years so that the effect on the level-premium cost is negligible.

The following table shows the original and revised estimates of the level-premium costs [2/] of the various types of benefits (plus administrative expenses):

Type of Benefit	Original Estimate	Revised Estimate
Hospitalization	.56%	.52%*
Skilled-Nursing-Home	.01	.08
Home-Health	.01	.05
Outpatient-Hospital-Diagnostic	.02	.01
Total	.60	.66

*After offset for reduced cost because of availability and use of skilled-nursing-home and home-health benefits.

As will be seen from these figures, the income of .60% of payroll on a level-premium basis would be just sufficient to finance the benefits on a long-range basis according to the original intermediate cost estimate, but would fall about 10% short relatively according to the revised figures.

The outgo for benefit payments and accompanying administrative expenses in the first 12 months of operation for each of the four types of benefits, taking into account the actual price and earnings-level situation (rather than the long-range assumptions in these respects), are shown in the following table for the revised cost estimates:

Type of Benefit	Amount (millions)	Percent of Payroll
Hospitalization	$1,015	.44%
Skilled-Nursing-Home	25	.01
Home-Health	10	.004
Outpatient-Hospital-Diagnostic	10	.004
Total	$1,060	.46%

2/ The level-premium cost is the average long-range cost, based on discounting at 3.02% interest, relative to effective taxable payroll (which is the total earnings of all covered workers reduced to take into account both the maximum taxable earnings base and the lower contribution rate for the self-employed as compared with the combined employer-employee rate so that, in effect, only 3/4 of the earnings of the self-employed within the maximum base are counted). For more details on this concept, see Section E of Actuarial Study No. 49. In this Study, the term "payroll" is used to denote the effective taxable payroll.

Next, there may be considered the additional income and outgo picture, by fiscal years, for the entire OASDI system, including the proposed health-benefits program. The following table gives these data for the next four fiscal years (in millions):

Fiscal Year	Additional Income to System: From ½% Rise in Tax Rate	Additional Income to System: From Earnings Base Change*	Additional Outgo of System
1962	--	$40	--
1963	$414	325	$660
1964	1,125	410	1,065
1965	1,156	420	1,100

* Includes additional income from change in earnings base applicable to the ½% rise in combined employer-employee rate.

In considering the above figures, it should be noted that the additional income from the earnings-base change is the total of such income and not merely that portion of it which is assigned to the Health Insurance Account as being the quivalent of an increase of .1% in the combined employer-employee contribution rate. Also, it should be noted that the outgo includes the relatively small amount of additional cash benefits that will arise from increasing the earnings base--practically nothing in 1962, about $2 million in 1963, about $5 million in 1964, and about $10 million in 1965 (in the future such amounts will grow steadily).

The estimated income and outgo of the Health Insurance Account for the next four fiscal years is as follows (in millions):

Fiscal Year	Allocation to Health Insurance Account: From ½% Rise in Tax Rate	Allocation to Health Insurance Account: From Earnings Base Change*	Allocation to Health Insurance Account: Total	Outgo from Health Insurance Account
1962	———	$40	$40	———
1963	$414	221	635	$658
1964	1,125	225	1,350	1,060
1965	1,156	231	1,387	1,090

*Includes additional income from change in earnings base applicable to the ½% rise in combined employer-employee rate.

Table 3 presents the estimated progress of the Health Insurance Account by calendar years, according to the intermediate-cost estimate, carried out into the long-range future. The early-year figures (1962-65) represent what is actually anticipated on the basis of expected future earnings levels and medical-care costs; by 1970 these are merged with the long-range cost estimates, which assume 1959 price and wage conditions.

Table 3

ESTIMATED PROGRESS OF HEALTH INSURANCE ACCOUNT UNDER H.R. 4222,
INTERMEDIATE-COST ESTIMATE
(in millions)

Calendar Year	Contributions Allocated	Benefit Payments and Administrative Expenses	Interest on Account[a]	Account at End of Year
1962	$180	$152	--	$28
1963	1,150	1,062	$2	118
1964	1,365	1,098	8	393
1965	1,395	1,134	17	671
1970	1,548	1,361	61	1,974
1975	1,677	1,557	89	3,102
1980	1,805	1,803	113	3,872
1990	2,096	2,308	117	3,898
2000	2,436	2,640	77	2,515[b]

a/ Based on varying interest rate estimated to be earned by OASDI Trust Funds, ultimately leveling off at 3.02% on total assets (3.10% on invested assets).

b/ Fund exhausted in year 2017.

The benefit cost in the early years (including also administrative expenses) is significantly lower than the level-premium cost and, conversely, higher eventually. This is the result of the relatively more rapid rise in the number of persons aged 65 and over entitled to monthly cash benefits than is the case for the covered-worker population. In the first full calendar year of operations, 1963, the cost is estimated at .46% of payroll, and by 1970 it is .53%. The average cost for the first 10 full calendar years of operation, 1963-72, is .50% of payroll. The cost as a percentage of payroll gradually rises after 1970; by 1980 it is .60%, and ultimately it rises to somewhat more than 3/4%.

The Account builds up slowly in the first few years because the benefits are made effective so rapidly and because the income has a certain lag due to the delay in collecting tax payments resulting from general legislative provisions. Thus, in both 1962 and 1963, income and outgo are virtually in balance--in fact, the former exceeds the latter by only about 10% relatively.

In the next few years after 1963, however, income to the Account is some 25% in excess of outgo so that a moderate fund builds up, and by 1965 it is almost $700 million. Income continues to exceed outgo in the following years since the covered population increases almost as rapidly as the beneficiary roll. In fact, it is not until about 20 years from now that outgo for benefits and administrative expenses is estimated to exceed the contributions allocated to this Account. It will, of course, be remembered that this is the intermediate-cost estimate and, accordingly, that high-cost experience would not show such favorable developments, while low-cost experience would show more favorable developments.

The Account is estimated to reach $2.0 billion by the end of 1970 and $3.9 billion in 1980. Thereafter, interest earnings continue to augment the growth of the Account so that it reaches a level of about $4.1 billion in 1985, but declines slowly thereafter (because the beneficiary roll eventually grows more rapidly than the covered population).

D. Problems Involved in Cost Estimates for Health Benefits

Long-range actuarial cost estimates, by their very nature, can present the general range of costs but cannot be a precise forecast of future experience. This fact has been taken into consideration in the cost estimates for the Old-Age, Survivors, and Disability Insurance program over the quarter century of its operation. From time to time the assumptions underlying the actuarial cost estimates have been revised to take into account later available data and indications of trends. The cost estimates for the proposed health benefits program are subject to similar revisions.

There is a somewhat greater relative range of probable costs for the proposed health benefits than for the OASDI monthly cash benefits portion of the program, which has been functioning for more than 20 years. Not only is there incomplete data available on some of the various cost aspects and factors underlying the proposed health benefits as they would be provided under a social insurance system, but also service benefits quite obviously do not have costs as readily determinable as cash benefits that are directly related to covered earnings. But it should be recognized that, similarly, when the present OASDI cash benefits program was inaugurated in 1935, little was known about many of the factors entering into the actuarial cost estimates. Then, as now, assumptions had to be made on the basis of the data available, using the best possible actuarial judgment.

From a cost standpoint, the major benefit in the bill is the provision of hospital care. A great amount of data is available in regard to hospitalization experience of aged persons. Principal sources include the 1957 Beneficiary Survey made by the Bureau of Old-Age and Survivors Insurance, the continuing investigations made by the National Health Survey of the Public Health Service, and the experience of various insuring organizations such as the Blue Cross and private insurance companies. Much of this information has previously been summarized in "Hospitalization Insurance for OASDI Beneficiaries," a Report Submitted to the Committee on Ways and Means of the House of Representatives by the Secretary of Health, Education, and Welfare on April 3, 1959. Nonetheless, precise estimates are not possible because of such unknowns as the extent of hospital utilization by persons who have not had insurance in the past, but who would have benefit coverage under the provisions of the bill.

Another major difficulty in making cost estimates for hospitalization benefits is the extent to which hospital costs will rise in the future. The long-range actuarial cost estimates for the OASDI system have always assumed that earnings would be level in the future--for reasons that are described in detail elsewhere (see Actuarial Study No. 49, page 8, and the Report of the Committee on Ways and Means of the House of Representatives on the Social Security Amendments of 1961, H.Rept. No. 216, 87th Cong., April 7, 1961, pp. 14-16). This assumption

means that benefit costs relative to payroll will not be affected by any rising-earnings trend that may develop, because the benefit structure (including the maximum earnings base that is creditable toward benefits and that is subject to contributions) is assumed to be adjusted to keep pace with the rising earnings.

When earnings levels have increased in the past (increasing both benefit outgo and tax income--the latter more than the former, because of the weighted benefit formula), this factor has been recognized in subsequent cost estimates. Any resulting net reduction in cost has been made available for the financing of the program, including proposed benefit liberalizations. Liberalizations financed entirely in this manner merely keep the system up to date.

In considering the hospitalization-benefit costs in conjunction with a level-earnings assumption for the future, it is sufficient for the purposes of long-range cost estimates merely to analyze possible future trends in hospitalization costs relative to earnings. Accordingly, any study of past experience of hospitalization costs should be made on this relative basis. The actual experience in recent years has indicated, in general, that hospitalization costs have risen much more rapidly than earnings, with the differential being in the neighborhood of 3% or 4% per year.

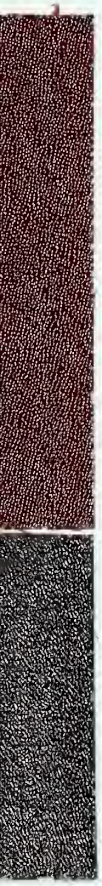
One of the uncertainties in cost estimates for hospitalization benefits, then, is how long and to what extent this tendency will continue in the future. Some factors to consider are the relatively low wages of hospital employees (which have been rapidly "catching up" with the general level of wages and obviously may be expected to "catch up" at some future date, rather than to increase indefinitely at a more rapid rate than wages generally) and the development of new medical techniques and procedures, with resultant increased expense. In connection with the latter factor, there are possible counterbalancing items in that the higher costs involved for more refined and extensive treatments may be offset by better general health conditions, the development of out-of-hospital facilities, shorter durations of hospitalization, and less expense for subsequent curative treatments as a result of preventive measures.

The other three benefits provided by the bill would have a far lower relative cost than the hospitalization benefit (assuming that the types of services provided by the different facilities remain approximately the same as at present). Accordingly, even relatively large variations in the cost estimates for these benefits would have much less effect on the overall costs of the proposal. Although these services (skilled-nursing-home care following hospitalization, outpatient-hospital-diagnosis, and home-health-visits) are now being extensively provided in a number of areas, comparatively little data is available in regard to their cost for aged persons, when provided in the manner set out by the bill.

In many instances, these three types of benefits are not currently available because of lack of facilities (or inadequate or insufficient facilities). This is especially true in regard to home-health services and outpatient-hospital-diagnostic services, and is to some extent the case as to skilled-nursing-home benefits. Accordingly, the early-year costs for these benefits will be relatively low. The long-range costs, however, are determined on the assumption that sufficient, adequate facilities will be available to supply the benefits provided.

Another important factor in connection with the actuarial analysis of proposals for various types of health benefits is their cost-inter-relationship. For example, if hospitalization benefits were provided, but skilled-nursing-home care were not, there would tend to be more utilization of the hospitalization benefits because an individual would be more likely to stay longer in a hospital (at little or no cost to him) rather than to enter a skilled-nursing home operating at lower cost, but with the full amount to be paid by him. Similarly, if there were no outpatient-hospital-diagnostic benefits provided in the bill, and if there were no deductible in the hospitalization benefits, there would be a financial incentive for an individual to enter a hospital (with resulting higher cost) to obtain these services without cost to him.

Likewise, the availability of home-health services can reduce hospitalization-benefit costs in certain cases. Otherwise, an individual might enter a hospital or stay in it longer if in doing so there were less cost to him personally than in obtaining home-health services. On the other hand, the home-health services when available will also undoubtedly be utilized by many persons who would not otherwise have been in hospitals. In the same way, the presence (or absence) of a deductible provision for one benefit can influence not only total cost, but also the costs of other types of benefit.



87TH CONGRESS } HOUSE OF REPRESENTATIVES { DOCUMENT
2d Session } { No. 347

HEALTH PROGRAM

MESSAGE

FROM

THE PRESIDENT OF THE UNITED STATES

RELATIVE TO

A HEALTH PROGRAM

FEBRUARY 27, 1962.—Referred to the Committee of the Whole House on the State of the Union and ordered to be printed

To the Congress of the United States:

The basic resource of a nation is its people. Its strength can be no greater than the health and vitality of its population. Preventable sickness, disability, and physical or mental incapacity are matters of both individual and national concern.

We can take justifiable pride in our achievements in the field of medicine. We stand among the select company of nations for whom fear of the great epidemic plagues is long past; our life expectancy has already reached the Biblical 3 score and 10; and, unlike so many less fortunate peoples of the world, we need not struggle for mere survival. But measured against our capacity and capability in the fields of health and medical care, measured against the scope of the problems that remain and the opportunities to be seized, this Nation still falls far short of its responsibility.

Many thousands needlessly suffer from infectious diseases for which preventive measures are available. We are still 10th among the nations of the world in our infant mortality rate. Prolonged and costly illness in later years robs too many of our older citizens of pride, purpose, and savings. In many communities the treatment of the mentally ill and the mentally retarded is totally inadequate. And there are increasingly severe shortages of skilled personnel in all the vital health professions.

Basically, health care is a responsibility of individuals and families, of communities and voluntary agencies, of local and State governments. But the Federal Government shares this responsibility by

providing leadership, guidance, and support in areas of national concern. And the Congress last year recognized this responsibility in important ways.

PROGRESS DURING 1961

Our States and communities have responded quickly and with impressive vigor to the invitation to cooperative action extended by the Community Health Services and Facilities Act passed by the Congress and signed into law only 4 months ago. As a result, better care for the chronically ill and the aged will soon be available in many parts of the Nation, both inside and outside the hospitals and other institutions in this program.

There is also visible progress in the effort to control water pollution, resulting from the expanded legislation passed by the Congress in 1961. Last year construction was begun on more waste treatment plants than ever before in our history—30 percent above the calendar year 1960 level.

There were, in addition, other important forward thrusts taken, with Federal help, in the protection of our Nation's health. Medical research advanced at an accelerated pace. We are now better equipped than ever before to evaluate and deal with radiation perils. The incidence of polio has been reduced to the lowest levels ever recorded. We have engaged our most talented doctors and scientists in an intensified search for the cause and cure of cancer, heart disease, mental illness, mental retardation, environmental health problems, and other serious health hazards.

But, of the four basic improvements in the Federal health program I recommended to the Congress last year, two urgent needs—health insurance for the aged and assistance to education for the health professions—have not yet been met. The passage of time has only served to increase their urgency; and I repeat those requests today, along with other needed improvements.

I. HEALTH INSURANCE FOR THE AGED

Our social insurance system today guards against nearly every major financial setback: retirement, death, disability, and unemployment. But it does not protect our older citizens against the hardships of prolonged and expensive illness. Under our social security system, a retired person receives cash benefits to help meet the basic cost of food, shelter, and clothing—benefits to which he is entitled by reason of the contributions he made during his working years. They permit him to live in dignity and with independence, but only if a serious illness does not overtake him.

For, compared to the rest of us, our older citizens go to the hospital more often, they have more days of illness, and their stays in the hospital are thus more costly. But both their income and the proportion of their hospital bill covered by private insurance are, in most cases, substantially lower than those of younger persons.

Private health insurance has made notable advances in recent years. But older people, who need it most but can afford it least, are still unable to pay the high premiums made necessary by their disproportionately heavy use of health care services and facilities, if eligibility requirements are to be low and the scope of benefits broad. Today,

only about half of our aged population has any health insurance of any kind, and most of these have insufficient coverage.

To be sure, welfare assistance, and Federal legislation to help the needy or "medically indigent," will provide health services in some instances, but this kind of help is not only less appealing, coupled as it is with a means test, it reaches very few of those who are not eligible for public assistance but are still not able to afford the care they need.

I therefore recommend again the enactment of a health insurance program for the elderly under the social security system. By this means the cost of health services in later years can be spread over the working years, and every worker can face the future with pride and confidence. This program, of course, would not interfere in any way with the freedom of choice of doctor, hospital, or nurse. It would not specify in any way the kind of medical or health care or treatment to be provided. But it would establish a means to pay for the following minimum levels of protection:

First. Inpatient hospital expenses for up to 90 days, in excess of $10 per day for the first 9 days (with a minimum payment by each person of $20), and full costs for the remaining 81 days.

Second. The cost of nursing home services up to 180 days immediately after discharge from a hospital. By providing nursing home care for twice as long as that in the hospital, the patient is encouraged to use the less expensive facilities when these will satisfy his requirements.

Third. The cost of hospital outpatient clinic diagnostic services in excess of $20. These benefits will reduce the need for hospital admissions and encourage early diagnosis.

Fourth. The cost of community visiting nurse services, and related home health services, for a limited number of visits. These will enable many older people to receive proper health care in their own homes.

It should be emphasized that we are discussing a gap in our self-financed, contributory social insurance system. These are all insurance benefits which will be available to everyone over 65 who is eligible for social security or railroad retirement benefits. They would be entirely self-financed by an increase in social security contributions of one-quarter of 1 percent each on employers and employees, and by an increase in the maximum earnings base from $4,800 a year to $5,200 a year. No burden on the general revenues is involved. I am not unmindful of the fact, however, that none of our social insurance systems is universal in its coverage, and that direct payments may be necessary to provide help to those not covered for health insurance by social security. But the two problems should not be confused—and those who have never made any contribution toward the system should not be regarded as in the same category as those who have—and because a minority lacks the protection of social security is no reason to deny additional self-financed benefits to the great majority which it covers.

II. HEALTH PROFESSIONS PERSONNEL

The Nation's health depends on the availability and efficient use of highly trained and skilled professional people. These people are in very short supply. Unless we take steps to train more physicians

and more dentists, the promise of modern medicine cannot be fully realized.

In an earlier message this year, I repeated my recommendation for Federal aid for the construction and expansion of schools of medicine, osteopathy, dentistry, and public health, and for helping talented but needy students pursue their professional education. I recommended: (1) A 10-year program of grants to plan and construct such professional schools in order to increase the Nation's training capacity; and (2) a program of Federal scholarship aid for talented students in need of financial assistance, plus cost-of-education payments to the schools.

The urgency of this proposal cannot be repeated too often. It takes time to construct new facilities and many years for doctors to be trained. A young man entering college this fall will not be ready to start his practice until 1972—and even later if he plans to enter a speciality. The costs of construction and operation are mounting. Only six schools of medicine have been opened in the last decade; and the number of graduates has risen only 15 percent. Over the same period, student applications to medical schools have declined sharply. Our ratio of active physicians to population is less today than it was 10 years ago, and growing worse, and in the next 10 years we shall need to expand existing medical and dental school facilities, and to construct 20 new medical and 20 new dental schools.

We must also provide financial help to talented but needy students. I have previously expressed concern over the fact that medicine is increasingly attracting only the sons and daughters of high income families—43 percent of the students in our Nation's medical schools in 1959 came from the 12 percent of the U.S. families with an annual income of $10,000 or more.

A survey has shown that 4 years in medical school cost each student of the 1959 graduating class an average of $11,600. More than half of them had to borrow substantial sums to complete their education, and one-third of the group had an average debt of $5,000. Many of these students still have from 1 to 7 years of additional professional training, at low stipends, still facing them. Obviously further loans and further debts are not the answer.

Also, modern health care is extremely complex. It demands the services of a skilled and diversified team of specialists and technical personnel.

But there are shortages in almost every category, and the shortages are particularly severe in nursing. Last year I authorized the Surgeon General of the Public Health Service to set up a consultant group on nursing, and a comprehensive study of this field is well underway. I expect to receive their report in the near future.

III. IMMUNIZATION

There is no longer any reason why American children should suffer from polio, diphtheria, whooping cough, or tetanus—diseases which can cause death or serious consequences throughout a lifetime, which can be prevented, but which still prevail in too many cases.

I am asking the American people to join in a nationwide vaccination program to stamp out these four diseases, encouraging all communities to immunize both children and adults, keep them immunized, and

plan for the routine immunization of children yet to be born. To assist the States and local communities in this effort over the next 3 years, I am proposing legislation authorizing a program of Federal assistance. This program would cover the full cost of vaccines for all children under 5 years of age. It would also assist in meeting the cost of organizing the vaccination drives begun during this period, and the cost of extra personnel needed for certain special tasks.

In addition, the legislation provides continuing authority to permit a similar attack on other infectious diseases which may become susceptible of practical eradication as a result of new vaccines or other preventive agents. Success in this effort will require the wholehearted assistance of the medical and public health professions, and a sustained nationwide health education effort.

IV. HEALTH RESEARCH

The development of these immunization techniques was made possible by medical research, just as it has made possible the new drugs, surgical techniques, and other treatments which have virtually conquered many of the leading killers of a generation ago—tuberculosis, pneumonia, rheumatic fever, and many others.

But conquest of the infectious diseases, by increasing our lifespan, has made us more vulnerable to cancer, heart disease, and other long-term illnesses. Today, two persons die from heart disease and cancer in the United States every minute. Last year, more than 1 million Americans fell victim to these merciless diseases.

They are not merely diseases of old age. Cancer leads all other diseases as the cause of death in children under age 15. Of the 10 million Americans who suffer from heart disease, more than half of them are in their most productive years, between 25 and 64.

Fortunately, medical research, supported to an increasing degree over the past 15 years by the Federal Government, is achieving exciting breakthroughs against both cancer and heart disease as well as on many other fronts. We can now save one out of every three victims of cancer, compared to only one out of four saved less than a decade ago. Our nationwide cancer chemotherapy program is saving many children and adults who would have been considered hopeless cases only a few years ago. And advances in heart surgery have restored to productive lives many thousands, while full prevention of many forms of heart disease seems increasingly within our reach.

We must, therefore, continue to stimulate this flow of inventive ideas by supporting medical research along a very broad front. I have proposed substantially increased funds for the National Institutes of Health for 1963, particularly for research project grants, and the training of specialists in mental health. Expenditures by the Institutes in 1963 are estimated to exceed $740 million, an increase of more than $100 million from the current year and a fourfold increase in the last 5 years. I am also renewing my recommendation that the current limitation on payment of indirect costs by the National Institutes of Health in connection with research grants to universities and other institutions be removed.

In keeping with the broadening horizons of medical research, I again recommend the establishment of a new Institute for Child Health and Human Development within the National Institutes of

Health. Legislation to create this new Institute was introduced in the last session of Congress.

We look to such an Institute for a full-scale attack on the unsolved afflictions of childhood. It would explore prenatal influences, mental retardation, the effect of nutrition on growth, and other basic facts needed to equip a child for a healthy, happy life. It would, in addition, stimulate imaginative research into the health problems of the whole person throughout his entire lifespan—from infancy to the health problems of aging.

As a parallel action I am requesting authorization for contracts and cooperative arrangements for research related to maternal and child health and crippled children's services. This legislation, introduced in the last session of Congress, would strengthen the programs of the Children's Bureau in these areas, and foster effective coordination between the research activities of this Bureau and those of the proposed new Institute.

I also recommend that the present Division of General Medical Sciences at the National Institutes of Health be given the status and title of an institute. This program supports fundamental research in biology and other sciences, and strengthens the research capabilities of universities and other institutions.

Last year, Congress enacted legislation temporarily extending and expanding the program of Federal matching grants for the construction of health research facilities. This program has been very successful and it should be further extended.

In these and other endeavors, including our new National Library of Medicine, we must take steps to accelerate the flow of scientific communication. The accumulation of knowledge is of little avail if it is not brought within reach of those who can use it. Faster and more complete communication from scientist to scientist is needed, so that their research efforts reinforce and complement each other; from researcher to practicing physician, so that new knowledge can save lives as swiftly as possible: and from the health professions to the public, so that people may act to protect their own health.

V. MENTAL HEALTH

While we have treated the physically ill with sympathy, our society has all too often rejected the mentally ill, consigning them to huge custodial institutions away from the heart of the medical community. But more recently, the signs of progress toward enlightened treatment have been increasing. The discovery and widespread use of tranquilizing drugs over the past 6 years has resulted in an unprecedented reduction of 32,000 patients in the census of our State mental hospitals. But one-half of our hospital beds are still occupied by the mentally ill; and hundreds of thousands of sufferers and their families are still virtually without hope for progress.

I want to take this opportunity to express my approval, and offer Federal cooperation, for the action of the Governors of the 50 States at a special national Governors' conference called last November. In accepting the challenge of the report of the Joint Commission on Mental Illness and Health, they pledged a greater State effort, both to transfer treatment of the majority of mental patients from isolated institutions to modern psychiatric facilities in the heart of the com-

munity, and to provide more intensive treatment for hospitalized patients in State institutions.

But this problem cuts across State lines. Since the enactment in 1946 of the National Mental Health Act, the Federal Government has provided substantial assistance for the support of psychiatric research, training of personnel, and community mental health programs. The Government is currently spending over $1 billion annually for mental health activities and benefits. The National Institute of Mental Health alone will use approximately $100 million this year. Approximately $350 million is budgeted by Federal agencies for the care of the mentally ill; over $500 million is spent annually in the form of pensions and compensation for veterans with neuropsychiatric disorders; and additional sums for similar benefits are paid by the social security and other Federal disability programs.

But far more needs to be done. Adequate care requires a supply of well-trained personnel, working both in and out of mental hospitals. In 1946, there were only 500 psychiatric outpatient clinics in the Nation. Today, there are more than 1,500. More than 500,000 people received treatment in these clinics last year. We are making progress, but the total effort is still far short of the need. It will require still further Federal, State, and local cooperation and assistance.

I have directed the Secretary of Health, Education, and Welfare, the Secretary of Labor, and the Administrator of Veterans' Affairs, with the assistance of the Council of Economic Advisers and the Bureau of the Budget, to review the recommendations of the Joint Commission on Mental Illness and Health and to develop appropriate courses of action for the Federal Government. They have been instructed to consider such questions as the desirable alinement of responsibility among Federal, State, and local agencies and private groups; the channels through which Federal activities should be directed; the rate of expansion possible in the light of trained manpower availabilities; and the balance which should be maintained between institutional and noninstitutional programs.

Meanwhile, we must continue our vigorous support of research to learn more about the causes and treatment of mental illness. We must train many more mental health personnel. We must continue to strengthen treatment programs for Federal beneficiaries through our many existing Federal institutions, including St. Elizabeths Hospital. And I have recommended added funds for the National Institute of Mental Health to increase its program for the training of professional mental health workers and physicians.

VI. MENTAL RETARDATION

The nature and extent of mental retardation is often misunderstood. It is frequently confused with mental illness. While mental illness disables after a period of normal development, mental retardation is usually either present at birth or underway during childhood. It is not a disease but a symptom of a disease, an injury, or some obscure failure of development. It refers to a lack of intellectual ability, resulting from arrested mental development, and manifesting itself in poor learning, inadequate social adjustment, and delayed achievement. Its causes are many and obscure. We are encouraged with each new discovery, but present knowledge of this condition is still so frag-

mentary that its prevention and cure will require continued and persistent research over an extended period of time. The present limitations of knowledge make diagnosis extremely difficult, particularly since it involves the very young. And a major obstacle to progress is the lack of personnel trained in the special skills required to work effectively with the mentally retarded.

Thus, in spite of the progress made in recent years, mental retardation remains one of our most serious health and education problems. Approximately 5 million people in the United States are mentally retarded; and each year more than 126,000 more babies are born who will suffer from this tragic affliction.

I have asked the Panel on Mental Retardation which I appointed last year to appraise the adequacies of existing programs and the possibilities for greater utilization of current knowledge. It will review and make recommendations with regard to (1) the personnel necessary to develop and apply new knowledge; (2) promising avenues of investigation, and the means to support and encourage research along these lines; and (3) improvement and extension of present programs of treatment, education, and rehabilitation.

I expect the Panel's report before the end of this year; and we should then be ready for the next phase of the attack upon this problem. I am confident that the work of this Panel will help us chart the path toward our ultimate goal of preventing this tragic condition.

VII. TOWARD A MORE HEALTHY ENVIRONMENT

There is an increasing gap in our knowledge of the impact upon our health of the many new chemical compounds and physical and biological factors introduced daily into our environment. Every year 400 to 500 new chemicals come into use. Many of them will improve the public health. Others, regardless of every safeguard, present potential hazards. Each year there are 2 million new cases of intestinal disease. Hepatitis is at an alltime high. We need to apply additional protection against every new hazard resulting from contamination of the air we breathe or the water we drink.

As I already mentioned, the water pollution control legislation passed by the Congress last year has permitted us to step up our efforts to purify our water. We should make a similarly accelerated effort in parallel fields. I am therefore recommending:

1. Legislation to strengthen the Federal effort to prevent air pollution, a growing and serious problem in many areas. Fresh air cannot be piped into the cities, nor can it be stored for future use. Our only protection is to prevent pollution.

Under the existing Air Pollution Act, the Federal Government is conducting badly needed research on the biological effects of air pollution; developing improved methods for identifying, measuring, analyzing, and controlling pollution; and working with State and local officials to accelerate necessary control programs.

I recommend that the Congress enact legislation to provide—

(a) authority for an adequate research program on the causes, effects, and control of air pollution,

(b) project grants and technical assistance to State and local air pollution control agencies to assist in the development and initiation or improvement of programs to safeguard the quality of air, and

(c) authority to conduct studies and hold public conferences concerning any air pollution problem of interstate nature or of significance to communities in different parts of the Nation.

Legislation along these lines has already passed the Senate, and I urge final favorable action in this Congress.

2. In order to provide a central focal point for nationwide activities in the control of air pollution, water pollution, radiation hazards, and occupational hazards, I recommend the establishment of a National Environmental Health Center. This center will serve as the base laboratory for research and training activities, and as headquarters for Public Health Service personnel concerned with health hazards in the environment. It will facilitate regular and frequent collaboration between Public Health Service scientists and those with whom they should consult in other Federal agencies. The center will serve also to encourage closer cooperation with industrial research and control groups, with universities and private foundations, and with State and local agencies.

3. Finally, I have recommended an increase in the appropriations for the study and control of water and air pollution and for research into protection against radiation peril.

VIII. ENCOURAGEMENT OF GROUP PRACTICE

Akin to the problem of increasing our overall supply of professional and technical health personnel is the problem of making more effective use of the personnel we already have. Experience in many communities has proven the value of group medical and dental practice, where general practitioners and medical specialists voluntarily join to pool their professional skills, to use common facilities and personnel, and to offer comprehensive health services to their patients. Group practice offers great promise of improving the quality of medical care, of achieving significant economies and conveniences to physician and patient alike, and of facilitating a wider and better distribution of the available supply of scarce personnel.

A major obstacle to the development of group practice, however, particularly in our smaller communities, is a lack of the specialized facilities needed. I therefore recommend legislation which will authorize a 5-year program of Federal loans for construction and equipment of group practice medical and dental facilities, with priority being given to facilities in smaller communities and to those sponsored by nonprofit or cooperative organizations.

IX. HEALTH OF DOMESTIC AGRICULTURAL MIGRANT WORKERS

Domestic agricultural migrants and their families, numbering almost 1 million persons, have unmet health needs far greater than those of the general population. Their poor health not only affects their own lives and opportunities, but it is a threat to the members of the permanent communities through which they migrate. The poverty of these migrants, their lack of health knowledge, and their physical isolation and mobility, all tend to limit their access to community health services. To help improve their health conditions, I recommend, in addition to expanding the special Public Health Service activities directed to them, the enactment of legislation to encourage the States to provide facilities and services for migrant workers.

X. PUBLIC HEALTH SERVICE REORGANIZATION

Changes in recent years have greatly increased the responsibilities of the Public Health Service. Some major organizational changes are necessary in order to help this agency carry out its vital tasks more effectively. I will shortly forward to the Congress a proposal which will make these reorganizational changes possible. It will permit more effective administration of community health programs and those dealing with the health hazards of the environment.

Other Health Goals

The struggle for improved health is never ending. While we are pressing new attacks in sectors of past neglect and present urgency, we must continue to advance along the entire front.

Health facilities construction.—I have asked the Secretary of Health, Education, and Welfare to review the program of federally aided medical facility construction, to evaluate its accomplishments and future course. Through the Federal support provided by this very successful program, general medical care facilities have been constructed in most of the areas of greatest need. There are, however, large and urgent unmet requirements for facilities to provide long-term care, especially for the elderly, and short-term mental care at the community level. In addition, a growing number of existing urban hospitals require modernization so that they may continue to serve the needs of the people dependent upon them.

Health of merchant seamen.—Over the past several years funds for the operation of the Public Health Service hospitals have been substantially increased to improve the quality of medical care for merchant seamen and other beneficiaries. A start has also been made on enabling these hospitals to conduct medical research. I have directed the Secretary of Health, Education, and Welfare to develop a plan for providing more readily accessible hospital care for seamen and for improving the physical facilities of those Public Health Service hospitals which are needed to provide such care.

Physical fitness.—The foundation of good health is laid in early life. Yet large numbers do not receive necessary health care as infants and schoolchildren. The alarming rate of correctible health defects among selective service registrants highlights the problem. In all 50 States there has been a gratifying response to my call of last year for vigorous programs for the physical development of our youth. Pilot projects stimulated by the President's Council on Youth Fitness proved that basic programs, within the reach of every school, can produce dramatic results. Our children must have an opportunity for physical development as well as for intellectual growth. Our increased national emphasis on physical fitness, based on daily vigorous activity and sound nutritional and health practices, should and will be continued.

International health.—Finally, it is imperative that we help fufill the health needs and expectations of less-developed nations, who look to us as a source of hope and strength in fighting their staggering problems of disease and hunger. Mutual efforts toward attaining better health will help create mutual understanding. Our foreign assistance program must make maximum use of the medical and other health resources, skills, and experience of our Nation in helping these

nations advance their own knowledge and skill. We should, in addition, explore every possibility for scientific exchange and collaboration between our medical scientists and those of other nations—programs which are of benefit to all who participate and to all mankind.

Conclusion

Good health is a prerequisite to the enjoyment of "pursuit of happiness." Whenever the miracles of modern medicine are beyond the reach of any group of Americans, for whatever reason—economic, geographic, occupational, or other—we must find a way to meet their needs and fulfill their hopes. For one true measure of a nation is its success in fulfilling the promise of a better life for each of its members. Let this be the measure of our Nation.

John F. Kennedy.

United States of America

Congressional Record

PROCEEDINGS AND DEBATES OF THE 87th CONGRESS, SECOND SESSION

Response of Cecil R. King to Testimony of American Medical Association

SPEECH
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 5, 1962

Mr. KING of California. Mr. Speaker, no one is more aware than a Member of the Congress of the right enjoyed by all Americans to oppose legislation they believe will be disadvantageous to their own interests or the best interests of our country; however, I believe we would also agree that opposition to any proposal should be based on fact or at least on reasonable assumption.

I am submitting today for inclusion in the RECORD my response to the American Medical Association's testimony before the Committee on Ways and Means on my bill, H.R. 4222, to provide health insurance for the aged under the social security insurance system. But first I would like to place the AMA's criticisms of the proposal in proper perspective—in the perspective of some of the many other humanitarian programs the AMA has bitterly criticized and vigorously opposed through the years, in order that each Member may determine for himself just how unenlightened and incompatible with the obvious need of the people of our country the AMA's opposition continues to be.

It is a revealing anomaly that the hierarchy of the American Medical Association, after having, through their powerfully effective tactics over the years, deprived the members they represent and their dependents of the privilege of being covered under social security, despite the desires of many, if not the majority, of their members for coverage, still has the effrontery to dictate from the sidelines the rules of the game for all others, and especially when one realizes that traditionally doctors and their families enjoy the professional courtesy of free medical services.

In opposing the health-insurance-for-the-aged bill, the AMA emphasizes its support of voluntary methods and grant-in-aid programs for the indigent and medically indigent. The AMA has in the past, however, strongly opposed such programs. It seems that the AMA supports voluntary and grant-in-aid programs only since these have become so widely accepted that opposition is obviously futile, and only when they can be offered as alternatives to a current proposal that the AMA opposes.

The American Medical Association has a long history of opposition to Government programs that advance public welfare, and it is apparent that it has not raised the level of its tactics in opposing the King-Anderson bill in spite of its resounding lack of success in opposing a number of such forward-looking measures over the years, such as:

First. The social security program: In 1939 it was denounced by the AMA as "a definite step toward either communism or totalitarianism," and in 1949 they continued to express their opposition stating "so-called social security is in fact a compulsory socialistic tax which has not provided satisfactory insurance protection for individuals where it has been tried but, instead, has served as the entering wedge for establishment of a socialistic form of government control over the lives and fortunes of the people."

Second. Opposition to extension of social security benefits to the permanently and totally disabled at age 50. The American Medical Association testified "To initiate a Federal disability program would represent another step toward wholesale nationalization of medical care and the socialization of the practice of medicine" and cited this program, which is in its sixth year of successful operation, as constituting "a serious threat to American medicine" and at "incalculable cost to the public." The incalculable cost to the public which the AMA foresaw has been so moderate that the Congress in 1960 found it possible to eliminate the eligibility limitation at age 50 and provide for those eligible at any age without an increase in social security taxes.

Third. Opposition to elimination of the means test in the crippled children's program, declaring it to be "a socialistic regulation."

Fourth. Early opposition to voluntary health insurance. In December 1949 the Journal of the American Hospital Association commented editorially that "it is a sad fact that through the 1930's and early 1940's, the American Medical Association did not believe in voluntary sickness insurance, did almost everything possible to prevent its development."

Fifth. Labeling of old-age and unemployment insurance as representing "a weakening of national caliber, a definite step toward either communism or totalitarianism."

Sixth. Opposition to Federal grants for maternal and child welfare programs.

There were even medical opponents to the Red Cross blood bank plan, stating:

> The allotment of blood and its products by the American Red Cross should ultimately lead to the effect of having the Red Cross practice medicine. The transition from this arrangement to State medicine could become an imminent danger

The AMA now enthusiastically endorses Kerr-Mills legislation which authorizes Federal-State programs of medical assistance for the aged financed through grants-in-aid. However, it opposed Federal grants-in-aid in the health field when they were first established. The House of Delegates of the AMA on more than one occasion adopted resolutions which disapproved the Sheppard-Towner Act, the original grants-in-aid program granting Federal funds to State health agencies to reduce the death rate among mothers and children. AMA opposition was not against this act alone but against any such grant program. A 1930 resolution said in part:

> The House of Delegates of the American Medical Association condemns as unsound in policy, wasteful and extravagant, unproductive of results and tending to promote Communism, the Federal subsidy system established by the Sheppard-Towner Maternity and Infancy Act and protests against the revival of that system in any form (Digest of Official Actions, 1846–1958, American Medical Association, p. 92).

The house of delegates also denounced the Sheppard-Towner Act as:

> A form of bureaucratic interference with the sacred rights of the American home (96 CONGRESSIONAL RECORD 13914).

In like manner, the AMA, which now sings the praises of voluntary health insurance, adopted a resolution in 1933 condemning voluntary and compulsory insurance or tax supported programs as

equally bad. Their resolution said in part:

The organization of groups around hospitals or otherwise, supported by a voluntary or compulsory insurance or taxation, as recommended by the majority report of the Committee on the Costs of Medical Care would be inimical to the best interests of all concerned. (Digest of Official Actions, p. 314.)

Moreover, the AMA has not only opposed voluntary prepaid health insurance plans, but has disciplined physicians who participated in now well-accepted plans it did not approve. An authoritative Yale Law Journal article published in 1954 carefully documents disciplinary measures that have been used against such physicians—including the withholding or withdrawing of medical society membership and the denial of hospital staff privileges—63 Yale Law Journal, 988–996, May 1934. Such actions have not ceased.

In 1934 the house of delegates of the AMA adopted a principle intended to prevent the public from organizing voluntary plans for health insurance. To be approved the voluntary plan—not just the practice of medical care under the plan—had to be controlled by the medical profession, and restraints were imposed on physicians affiliating with nonapproved plans. Such physicians were faced with expulsion from medical societies and with exclusion from hospital privileges. Group Health Association, a nonprofit prepaid medical plan in Washington, D.C., had to fight its case in the courts for 6 years before the U.S. Supreme Court unanimously upheld a lower court conviction of the AMA and its local medical society for violation of the antitrust laws because of such actions against physicians—317 U.S. 519. AMA opposition to voluntary prepaid medical plans also resulted in State legislation which barred the establishment of medical service prepayment plans except when approved by medical associations. In many States this has made the establishment of new group-practice prepayment arrangements impossible.

Mr. Speaker, while I am referring to the States, I would like to remind the House that a resolution was adopted by the Governors' conference on June 29, 1960, urging the enactment of legislation providing a health insurance plan for the aged under the framework of the old-age and survivors and disability insurance system. This resolution was endorsed by the Governors of 30 States—Alabama, Alaska, Arizona, Arkansas, California, Colorado, Connecticut, Florida, Kansas, Kentucky, Maine, Massachusetts, Michigan, Minnesota, Missouri, Montana, Nebraska, Nevada, New Jersey, New Mexico, New York, Ohio, Oklahoma, Rhode Island, South Dakota, Tennessee, Texas, Vermont, Washington, and Wisconsin. Hearings before the Committee on Finance, U.S. Senate, on H.R. 12580, 86th Congress, 2d session, page 161. The Governors of two additional States—Illinois and Indiana—indicated their support of this approach in 1961. See hearings before the Committee on Ways and Means, House of Representatives, on H.R. 4222, 87th Congress, 1st session, volume 4, page 1795.

The AMA's history of past opposition to voluntary health insurance and to grants-in-aid for health purposes is the proper setting in which to consider the association's present opposition to health insurance for the aged.

On August 2, 1961, representatives of the AMA testified before the Committee on Ways and Means in opposition to H.R. 4222, the bill which would provide health insurance for aged beneficiaries under the social security and railroad retirement programs. At that time the committee had no opportunity before the oral testimony was presented to examine the more than 100 pages of testimony that the AMA submitted for the record. I have since explored the contents of the material submitted for the record. Closer examination has borne out my earlier reaction to the AMA testimony—it is filled with gross misrepresentations. It is difficult to believe these documents are advanced in the name of American medicine. They substitute debating tricks for a serious discussion of serious issues. They are the exact opposite of what one has the right to expect of a scientifically oriented profession. And all of this is even more shocking when we realize that it is done in an effort to malign a proposal which would have virtually no effect on physicians or medical practices. I am impelled to reply in detail.

It is not my purpose in this response to detract in any way from the great achievements of American medicine in the area of health care. I have the greatest respect for the individual doctor who practices his great profession for the relief of human suffering. My purpose is to show that the AMA's interpretations of legislative language, statistics, the nature of social insurance, and many other aspects of the problem of financing health care for the aged are completely erroneous and designed to mislead. My purpose is to show that the AMA has not been objective or honest in its presentation. I am sure that the ordinary doctor who will follow this testimony and my comments through will turn with revulsion from this performance of the association which speaks in his name.

For these reasons I have prepared a section-by-section rebuttal of the statement submitted on behalf of the AMA by Dr. Leonard W. Larson, president. References are to pages in the original statement—in the printed hearings this statement appears on pages 1315–1404, with the original page numbers below the text.

COMMENTS ON THE STATEMENT SUBMITTED FOR THE RECORD BY THE AMERICAN MEDICAL ASSOCIATION

COMMENTS ON SECTION I—DESCRIPTION OF AMA AND ITS POSITION ON H.R. 4222, 87TH CONGRESS

The specific points mentioned by the AMA in this general presentation of its position are expanded in other sections of the statement and I will deal with each point in commenting on the following sections. The only item I will discuss here is the AMA's objection to levying social security taxes for health insurance for the aged on the ground that the aged, with few exceptions—Federal employees, wards of the governments, members of the uniformed services, and veterans disabled in service—have no special claim on the Federal Government unless they have satisfied a means test. (Page 2.)

This single statement presents a striking illustration of the basic difference between the AMA and most of the rest of us, for this statement indicates that in the view of the AMA old-age, survivors, and disability insurance is undesirable. The AMA takes the position that Government should not act to promote the general welfare of the people of this country except in cases where the individual is subjected to a means test and can prove that he can no longer pay his own way. Following this theory, the AMA would oppose not only the old-age, survivors, and disability insurance program but virtually all other Government-established benefit programs that assist the people in this country without first subjecting them to a means test. Thus, such programs as unemployment compensation and workmen's compensation would be unjustifiable if the AMA theory of Government were followed. Similarly, the FHA home loan program, the Federal deposit insurance program, and many more would have to be abandoned, or modified beyond recognition. Our Nation would indeed be in a sorry plight if we were to accept the pronouncement of Dr. Annis, at the beginning of his testimony, that the AMA's position is representative of what Americans want, and if we were to wipe such legislation off the statute books.

COMMENTS ON SECTION II—SPECIFIC OBJECTIONS TO H.R. 4222

In section II of the statement, the American Medical Association alleges that the bill provides "blanket authorization for the Federal Government to control the providers of services." (Page 5.) The "proof" of the allegation is that the Secretary would be permitted to do what is "specifically provided" in the law. This exercise in logic—in which a statutory limitation to do only what is "specifically provided" becomes a "blanket authorization" to exercise power without limit—illustrates clearly the AMA's approach to the problem: the approach of a calculated attempt to distort the meaning of the bill. In an effort to support this distortion, reference is made to the provision in H.R. 4222 which states that the Secretary of Health, Education, and Welfare would be empowered to set "such other conditions of participation—as the Secretary may find necessary in the interest of health and safety of individuals who are furnished services by or in such institution." (Page 5.) This provision, the AMA says, "provides the means by which Federal officials can regiment and control all providers of the services covered." (Page 5.)

How strange this argument. I cannot believe that the individual doctors this association claims to represent have the same feelings about the conditions in the bill—the conditions that preclude participation by institutions that are

firetraps or present other serious hazards to the safety or health of their patients. I cannot believe that the witnesses who testified here representing the American Medical Association are unfamiliar with the valuable and fully accepted activities of the Government in regard to the Food and Drug Act, water pollution safeguards, and the many other areas in which the health of our citizens is safeguarded. These witnesses do not cite a single instance of regimentation, or even an attempt at regimentation, of the health professions, in all of the Government's protection of the public health. What reason is there to assume that the Government would now quite suddenly adopt arbitrary methods? In attacking the eligibility conditions in the bill, I can only believe that the AMA is deliberately trying to frighten the uninitiated and the uninformed. My conviction is borne out by the testimony presented to this committee by the representatives of the American Hospital Association—the association of the very same providers of service about which the AMA expresses such grave concern.

Dr. Frank S. Groner, the president of the American Hospital Association, was questioned by me about this very same provision in the bill. My question, and Mr. Groner's response, is part of the record of these hearings. Because the AMA chooses to ignore facts and play on fears in order to gain its ends, I want to repeat that question and answer. I asked Mr. Groner the following: "Your organization in previous testimony before this committee has stated that reasonable criteria are necessary to determine the eligibility of hospitals to participate. Are the criteria in this bill reasonable?"

Mr. Groner's response—the response of the Amercan Hospital Association—was a clear and unequivocal "Yes, sir." Later, when I asked Mr. Groner if there were any changes that he would suggest in any of the provisions in the bill, he did not suggest one single change in the conditions that providers must meet in order to participate. This demonstrates beyond a shadow of a doubt what the conditions of eligibility really constitute, namely, a description of those components of institutional and home health care which are essential to the safety and well-being of our older people. These conditions have not only been thoroughly reviewed and approved by distinguished representatives of the American Hospital Association, but the association stands squarely behind the inclusion of these eligibility conditions in any legislation that may be enacted The hospitals, which, unlike the doctors, are major providers of service under the bill, would hardly encourage the retention of these standards if, in fact, the standards could be used—as the AMA charges—as the means by which Federal officials can regiment and control all providers of the services covered.

Let me say where these conditions came from and why they are so easily accepted by the American Hospital Association. Every condition save two is part of the requirements an institution must meet even to be considered a hospital by the American Hospital Association. The remaining two are: First, the health and safety requirement, which must be met for accreditation according to standards set jointly by representatives of the American Hospital Association, American Medical Association, American College of Surgeons, and the American College of Physicians; and second, the utilization committee requirement, which the American Hospital Association has proposed for inclusion as part of these accreditation requirements.

The AMA asserts that, "it is axiomatic that the Federal Government tends to control what it subsidizes." (Page 5.) It subsidizes the building of hospitals and nursing homes under the Hill-Burton program. Does it already control hospitals and nursing homes? Perhaps the AMA should have fought harder than it did against the Hill-Burton and similar programs if the axiom is an axiom, not a conundrum to test how many are smart enough to find the error of logic.

The AMA also bases its allegations that the program would result in regimentation and Federal control on the fact that payment for services would be on the basis of reasonable costs. (Page 9.) Yet, this is the basis which the American Hospital Association, in its "Principles of Reimbursement for Hospital Care," proposes and which has proved successful in application by Blue Cross and a multitude of State and Federal Government programs. Provision for reimbursement by Government on the basis of reasonable cost has never had any such effects as the AMA says it would have in this instance.

The AMA also attaches implications of Government control to the requirements that hospitals maintain "adequate medical records" and establish bylaws for their medical staff. (Page 10.) The AMA implies that the Secretary might misuse authority by requiring medical records to be too "adequate." The AMA knows that medical records are required for accreditation because a medical history is essential for proper treatment of the patient. The AMA also knows that clearcut guides have been developed for purposes of accreditation as to what constitute adequate medical records. The AMA knows that the Secretary would have authority under the bill to accept accreditation of an institution as evidence that the requirements are met and that Secretary Ribicoff has said, in his testimony before this committee, that he would do so. Instead of recognizing these facts, the AMA analogizes medical records to business records. (Page 11.) Either its experts are feigning ignorance in this matter to mislead, or the experts on medical care did not participate in writing this statement but some other kind of expert in some field foreign to medicine was employed for the purpose.

The existence of bylaws for the medical staff is a requirement the American Hospital Association uses to determine whether an institution is a hospital—it must have a medical staff which is organized under bylaws so that there is some expectation that the medical staff will participate in running the hospital. I presume that objection to this provision must have resulted from the fact that this section of the paper was written by someone ignorant of the background—not by a competent physician or hospital expert.

The AMA further suggests that it is wrong to require nursing homes to provide 24-hour nursing service because some nursing homes would be excluded from participation under the bill. (Page 12.) But this can hardly be regarded as a reasonable suggestion. After all, the point of the bill is protection against health costs and it is the provision of nursing services that distinguished nursing homes from domiciliary care. Housing is intended to be taken care of by the cash benefit. If every institution—including a hotel—could be considered a nursing home, the H.R. 4222 costs might be as high as the AMA says. The intention is to cover only health care costs when the care is provided by facilities able to render health care services. In some places such institutions are in short supply, but paying boarding home bills instead will not remedy the scarcity. Other administration proposals such as H.R. 4999, Health Professions Educational Act of 1961, and H.R. 4998, Community Health Services Act of 1961, will help to remedy this scarcity as will the payments under H.R. 4222 towards the operating costs of the needed facilities. The AMA by its very description of the scarcity of proper health facilities rebuts its own allegations that without this bill the aged are getting the care they need.

All this talk of arbitrary control by Government is just scare technique. The Government needs the willing agreement and cooperation of the hospitals in the plan. The Government is prepared to deal responsibly and fairly with them. It is nonsense to think that the Government could deal arbitrarily with the providers of services, ignore their just demands, and ignore the advice of the statutory advisory council provided in the bill.

Section II of the AMA statement also criticizes the assertion that only a relatively few physicians would be affected by the bill. To support their contention that this assertion is not correct, the AMA says that the bill "involves the services, and the provision of services of at least 50,000 physicians." (Page 6.)

This figure is grossly misleading. The AMA statement itself recognizes that the vast majority—almost 38,000—of the 50,000 "physicians" referred to are interns, few of whom are licensed as physicians, and residents-in-training. Interns are salaried employees of hospitals completing a necessary part of their professional education without which they are not fully prepared to assume the responsibilities of a physician. Residents-in-training are also salaried employees who are training for the practice of specialties and subspecialties, including general practice.

The practice that would be followed under the administration bill would be to pay the hospital, in which the intern

632084—83231

is finishing his education, the reasonable cost of the services which the hospital undertakes to provide, including the services of the intern. This is fully in accord with the "Principles of Payment for Hospital Care," developed and approved by the American Hospital Association as a guide to hospitals and to agencies which contract to purchase hospital care. The pertinent principle reads as follows:

In determining "full cost," a reasonable amount for medical, nursing and other education not reimbursed through tuition, scholarships, grants, or other community contributions is a legitimate inclusion in the interest of continuing to upgrade quality of service to the community. The community should assist ultimately in the support of such educational programs.

Under the bill, the cost incurred in providing services to aged beneficiaries would also include the cost of ancillary services such as diagnostic X-ray, laboratory tests and anesthesia, which to an extent involve the services of licensed physicians. These services are covered only if furnished through hospitals as part of the hospital services.

The AMA claims to be apprehensive about the consequences that might ensue if hospitals are paid on a "reasonable cost" basis. (Page 9.) Is it not strange, however, that the AMA is more worried than the organization representing those whose pocketbooks are affected by the method of payment? It is true that the American Hospital Association has expressed mild reservations about the shades of interpretation which might be placed on the word "reasonable." Unlike the AMA, however, in the course of testimony before this committee, they said they believe that this is something which can be worked out without difficulty to the mutual satisfaction of hospitals and Government.

This section of the AMA statement also indulges in an extraordinary exhibition of self-contradiction—all on the same page. It says in one paragraph that the provision in the bill which limits nursing home benefits to conditions for which people have been hospitalized and provides the benefits only after admission from a hospital "will result in a vastly increased demand for—hospital facilities. This portion of the bill is not a deterrent to overuse of hospitals, but an engraved invitation to overuse them. It is an invitation that would be accepted by large numbers of people whose health care does not require hospitalization." (Page 8.) Only six paragraphs later, in criticizing the requirement that hospitals and nursing homes have the utilization committees which would provide a group review of experience by physicians in a given hospital in order to prevent overutilization, the statement says:

The physician is best qualified to judge how ill his patient is, what treatment should be prescribed, whether or not he should be admitted to a hospital, when he is well enough to go home. Is it wise to subject his judgment to the critical review of a group? (Page 8.)

Thus, on the one hand, they say that physicians—who are the only ones who can get an individual into a hospital—would be unable to prevent unnecessary hospital admissions in order to qualify for nursing home benefits, and, on the other hand, they say there would be no need to review the physician's decision when he does admit patients to the hospital. I leave it to the AMA to choose the horn of the dilemma it prefers. If the AMA expects an increase in unnecessary hospital utilization it must subscribe to the view that physicians are either collaborating with their patients in unethical practices or are unable to make proper medical judgments. The AMA cannot gainsay the fact that hospital admissions are controlled by physicians. Indeed, the AMA insists that the right to admit patients remains, the prerogative of the physician. If, however, the AMA rejects the thesis that physicians are responsible for unnecessary utilization, on the grounds that physicians are subjected to pressure from their patients, it cannot reasonably object to a professional and impartial group of physicians established by the hospital, reviewing cases in order to determine whether patients are—for whatever reason—overutilizing services.

The AMA's criticism of hospital utilization committees—which, incidentally, have been recommended by two State medical associations and are operating without appearance of difficulty in many hospitals—appears at this time after we have been informed by the American Hospital Association that it has recommended the Joint Commission on Accreditation of Hospitals require a hospital to have a utilization committee in order to be accredited. (Page 8.) The AMA objects to the requirement of a utilization committee because it does not consider it wise to subject a doctor's judgment on use of services to the review of his peers; this, despite the fact that many services are already subject to review. The AMA seems to forget for the moment that it has long subscribed to the view that it is desirable for hospitals to have committees, such as medical records committees and tissue committees, to review the medical practices of physicians. In fact, as a member organization of the Joint Commission of Accreditation, the AMA supports the requirements for accreditation, one of which is that hospitals carry on, through medical staff committees, "constant analysis and review of the clinical work done in hospitals."

A similar illogic is applied to the deductible. The AMA considers the deductible as it applies, first, to the wealthy, and second, to the indigent—as though all the aged were in these two groups. (Page 7.) They forget that the great majority of the aged fall in neither group. The wealthy, who incidentally are very few in number, get tremendous help with hospital bills by reason of income tax treatment—favored by the AMA—of medical expenses. The indigent—a group continuously growing smaller in size, I hope—will get help from old-age assistance and medical assistance for the aged. It is the great middle group, that can afford to pay a $90 bill out of their limited resources but cannot afford hundreds or thousands of dollars to pay on huge hospital bills, for whom this bill is primarily intended. The bill would provide protection for these people against the possibility of having their savings wiped out and becoming dependent. The AMA keeps saying it wishes to help those who need help, but until the recent past the legislative provisions it has favored were aimed to help most the wealthiest through tax savings. For example, the AMA has endorsed proposals to allow tax exemption for all drugs and medicines purchased by persons aged 65 and over, and proposals to provide additional exemptions for aged persons who pay medical care expenses amounting to 25 percent or more of their gross income. Since, however, more than 80 percent of the aged do not now pay income tax, these proposals would benefit only those persons with considerably higher income than the average aged person. Are the wealthy the ones the AMA thinks need help?

The AMA seems very fond of the false dilemma. On the one hand you have this, on the other hand, that, and both are bad. Since they do not talk of other alternatives, the listener is supposed to feel that all paths lead to ruin. I have already said how they refer on the one hand to the wealthy and on the other to the indigent and ignore the great mass of ordinary persons in between. Another example is their statement that the Government has two choices: First, it will either be so budget conscious it will lower the quality of care; or second, the program will be faced with runaway costs. (Page 9.) They wish to avoid consideration of the possibility that the program will operate well—with an eye for assuring that high quality of care is encouraged and at the same time that money is not wasted. Utilization committees and payment made on a cost basis, as H.R. 4222 provides, will mean that costs are in keeping with the necessary services provided. Apparently the AMA can imagine no instance in which people—nonphysicians, that is, merely do what is reasonable; everything must be extreme.

COMMENTS ON SECTION III—PROPOSED LEGISLATION BASED ON FIVE FALSE PREMISES

The "five false premises" stated by the American Medical Association as the basis for the proposal for health insurance benefits for the aged under social security are indeed misstatements, but they are the AMA's misstatements. This is the old debating trick of the straw man—define your opponents' position falsely and then prove it is wrong. The first three premises in the American Medical Association's statement actually are false; but they have never been offered as either factual or philosophical reasons supporting the proposal for health insurance benefits. The last two premises which the AMA label false, I believe to be true. They actually reflect—although somewhat less than precisely—considerations in favor of the proposal. I shall give specific comments on each of the so-called

"false premises" and on the discussion presented by the AMA on them.

The AMA statement offers as false premise No. 1: "The sociological problems of older people can be solved through legislation." (Page 14.)

I am not aware of suggestions by any proponents of my bill that the sociological problems of older people can in general be solved through legislation nor that the health insurance proposal is in any way intended to solve all problems of aged persons. The AMA discussion seems to argue that since it is not possible to solve all sociological problems of the aged through legislation, no legislation to relieve problems of aged persons is justified. Such an argument leads to no realistic conclusion; if its efficacy in solving all problems were a test of soundness of any specific course of action, one could not, of course, find any course of action that would meet the test of soundness. Such a test would even make a case against the practice of modern medicine, since it does not appear that, with all its almost miraculous advances, medical science has been able to solve all sociological problems of the aged. The proposed health insurance benefits under OASI have not been proposed as a total solution for even the financing of medical care of aged persons but have been advanced rather as a part of the solution to the problem of providing a method of financing needed health care of the aged. Many other problems will of course remain. This way of debating is hardly to be taken seriously. It is sheer demagoguery, and unworthy of the association which claims to speak for American medicine.

The AMA statement offers as false premise No. 2: "Most, if not all of the aged, are in poor health." (Page 16.)

Here again, the premise as stated by the AMA is of course not a valid statement of the position of the bill's proponents. There is no contention that all, or most, aged persons are in poor health. If that were the case, the costs of health care would hardly be insurable. Just as the need for fire insurance does not rest on the premise that all or most owners of properties experience fires, so does the need for protection against the costs of hospitalization not depend on universal and continued experience of hospitalized illness. Rather, it is based on the fact, accepted by the AMA, that "the aged receive approximately twice as much hospitalization as those under 65" (page 18), together with the contrast in incomes of younger and aged persons; these are what demonstrate a special need for such coverage as is provided under H.R. 4222.

Furthermore, the prevalence of all kinds of chronic illness is not a fact that one would use to demonstrate the need for the health insurance benefits. The bill is directed toward meeting the costs of only those chronic conditions which require the specific types of health care outlined in the bill. Statements that the aged are generally in good health or are "a great deal healthier than they are frequently pictured to be" (page 18) would seem to support the official cost estimates and the feasibility of financing health insurance benefits as proposed in my bill rather than the statements of others, including the AMA, that costs will be many times the estimates of the Department of Health, Education, and Welfare and that utilization of hospitals and nursing homes will increase astronomically if the proposal is enacted.

On the other hand, even assuming that the overwhelming proportion of the aged were in excellent health, the inevitability of death at some age obviously suggests the likelihood of terminal illness unless aged persons were in all cases to die suddenly in the midst of good health. The high rate of hospitalization in the year of death, coupled with the overall high hospitalization rates for aged people—twice the rates of younger persons—seems adequate evidence that the great majority of the aged are not so fortunate as to escape serious illness and sizable health care costs during all of their later years. What kind of nonsense is this the AMA is trying to foist off on people?

The statement offers as the third false premise: Most, if not all of the aged, are verging on bankruptcy.

Contrary to the AMA's allegation, proponents of my bill have made no such statement, and the health insurance proposal does not rest on any such premise. It rests, rather, on the well-established fact that most of the aged are not in a position financially to meet the heavy costs that a long period of hospitalization usually entails. The AMA attempts to cover up this fact with vague statements that "some" of the aged are "comfortable" or "well-to-do" or "wealthy." (Page 19.) Of course, some of them are. The great majority, however, are in very modest circumstances and quite unable to meet a large hospital bill.

In attempting to cast doubt on the validity of data from the U.S. Bureau of the Census showing the low incomes of most aged people, the AMA argues that it is not meaningful to say that "60 percent of our aged have incomes of $1,000 a year or less" (page 19) because this 60 percent includes dependents, many of whom have no individual income of their own. This argument will not bear analysis. Let me note, by the way, that the AMA figure is an erroneous one; current data show 52 percent with incomes of $1,000 or less.

I agree with the AMA that "facts are of little significance until they are examined and interpreted by reason" (page 19) and I would therefore like to quote the analysis and interpretation of these income data from the report on "Health Insurance for Aged Persons," submitted to the Committee by the Department of Health, Education, and Welfare:

> Income statistics from the Bureau of the Census for aged persons, and for families with an aged head, are collected annually and are the most comprehensive. Data which have just become available for 1960 show 52 percent of the persons 65 and over not in institutions had cash incomes below $1,000 in that year.
>
> Income data for persons have the limitation that they do not indicate how many persons depend on the income. In the case of the married, some may be under 65. Similarly, wives dependent on their husbands will be shown as having little or no income. However, less than one-fifth of all persons 65 and over are married women, and many older married couples have less than $2,000 between them. Therefore, even if the reported income data were adjusted to reflect an equal sharing by husband and wife, the proportion of persons 65 and over having less than $1,000, would be very little less than the 52 percent shown.

A national survey of aged beneficiaries under old-age and survivors insurance in 1957 showed that half the aged married couples had an annual income of less than $2,250—that is, less than $1,125 per person—half the nonmarried retired worker beneficiaries had incomes of less than $1,140, and half the aged widow beneficiaries had incomes of less than $880. It is accurate and not in any way misleading to say that half of these aged beneficiaries had per capita annual incomes of less than $1,100. This figure is consistent with the Census Bureau figures for the entire aged population—including of course those without income from old-age and survivors insurance benefits—which show that about half the aged have incomes of less than $1,000.

In the light of these figures showing the low incomes of the aged, it is hardly relevant for the AMA to stress the well-known fact that "the aged are not a homogeneous group from a financial standpoint." (Page 20.) Neither is it pertinent to a consideration of the proposed health insurance program merely to give, as the AMA does, the number of aged persons receiving income from various sources, rather than the amounts of such income. It is positively misleading for the AMA in giving figures purporting to show "the Nation's present tax support for the elderly" (page 20) to say that "about $650 million is paid out annually under the Railroad Retirement Act." Payments made under a contributory insurance program such as the railroad retirement system are certainly not a measure of "tax support." (Page 20.)

The AMA suggests that the aged who are unable to pay large medical bills should look to their children or relatives for help. The sons and sons-in-law, the daughters, the nephews, and nieces of old people do in fact often provide such help. Too often, however, this burden is borne at the expense of the education and welfare of the third generation. In many instances the relatives are themselves totally unable to meet the heavy costs involved. Few people would consider an appeal to relatives to be an acceptable alternative to a health insurance program.

The AMA quotes figures on the net worth and assets of beneficiary couples under old-age and survivors insurance as shown by a survey in 1957. (Page 21.) It fails to say that of all the aged beneficiaries surveyed, nonmarried as well as married, half had a net worth of less than $4,920, and that the chief asset of most beneficiaries was their equity in

their home, an asset which old people very wisely hesitate to convert into cash. While most beneficiaries had some liquid assets, half of them had less than $610, an amount which would not go far in meeting the costs of a long illness.

For statistics to bolster its position against the health insurance program, the AMA resorts to a small study made in three lower middle income parishes located in three large cities. (Page 22.) It would have been more helpful to the committee if the AMA had referred to a national cross-section study of the aged sponsored by the Health Information Foundation: "Financial Resources of the Aged"—Health Information Foundation, Research Series 10. A report from that study states that one-fifth of all older people had no financial resources. Furthermore, when the aged without any resources were combined with those whose only assets were homes they owned, the cash value of their life insurance or the help of children, it was found that two-fifths of all older people would have no ready resources from which to meet a medical bill.

The data from the Health Information Foundation study are confirmed by the 1960 Survey of Consumer Finance, which showed that 30 percent of all spending units headed by aged persons have no liquid assets and that an additional 6 percent had less than $200 in liquid assets. These facts, based on national samples rather than a small local study, present a more reliable picture of the situation of the aged than that portrayed by the AMA.

As false premise No. 4 the AMA statement offers:

> The problem of the aged in financing their health costs will get worse before it gets better. A permanent program is essential to its solution. (Page 22.)

Here the premise they claim to be false is true—there is every reason to believe that the problem faced by the aged in financing health costs will, in the absence of Federal action, get worse. Although the costs of health care increasing more rapidly than costs of all consumer items and substantially more rapidly than the income of aged persons—cannot be predicted with precision into the distant future, it would seem highly unrealistic to assume any immediate sharp reversal of the upward trend in such costs that has continued over decades. The official cost estimates for my bill, incidentally, assume such substantial further increases in costs.

Unless income and resources increase in direct ratio to any increases in medical care costs, it is obvious that the aged will face an increase in the difficulty of financing needed health care. It is quite likely that the financial resources of aged persons will increase somewhat as time goes on. Allowing for increases in monthly OASI benefits, in earned income, and in the limited amounts paid by private health insurance, and assuming increases in all of these amounts in the future, we are still left with the question of how these resources could grow at a rate equal to or faster than the justifiable costs of health care we must expect as medical science continues its phenomenal progress toward improving health and increasing longevity for all of us.

The AMA statement, in discussing the future sources of income of the aged, quotes some current figures on income from these sources and suggests that they are already substantial. Of course, billions of dollars sounds like a great deal of money, but the present total income to the aged from private pension plans quoted by the AMA—$1 billion annually—does not sound so impressive when divided among total present aged persons—a per capita figure of less than $60 per year. The same situation appears with regard to the $4.3 to $8.3 billion estimated as total annual income of the aged from private investments (page 23), which would provide a per capita figure of about $250 to $490. It would seem a mathematical certainty that not all our aged citizens can be receiving very substantial income from these sources.

The AMA statement offers as the fifth false premise: Voluntary health insurance and prepayment plans, private effort, and existing law will not do the job that needs doing. (Page 25.) Again, the statement they claim to be false is true; these mechanisms alone will not do the entire job. I shall comment in some detail in following sections on the effectiveness of the three mechanisms cited in meeting the problem.

COMMENTS ON SECTION IV—PHILOSOPHICAL ARGUMENTS AGAINST THE BILL

One had best ignore the title of this section of the AMA statement. The alleged arguments are not relevant to H.R. 4222. They are arguments against socialized medicine and against Federal encroachment on individual freedom. The whole philosophy of my bill and the implementing provisions are in direct opposition to these evils. And to label the AMA arguments "philosophical" completely ignores the noble root of this word.

It has already been shown that the assertions made in the previous section of the AMA statement are incorrect, except for the recognition that our aging population poses a very real problem. Even this one exception is developed by the AMA to the point of an incorrect conclusion. The AMA concludes that since some of the problems of the aged are not susceptible to legislative solution, legislation can be of no help in solving any of the problems. (Page 26.) This is a very strange conclusion indeed. Hardly anyone would deny that the Congress has already enacted legislation that makes significant inroads on the problems of the aged. And even the AMA apparently sees some merit in certain legislative approaches to the problem, for it now endorses medical care paid for by Federal funds granted through the assistance program.

The core of the principal "philosophical" argument that the AMA tries to make against H.R. 4222 is that this bill is a part of some master plan that somebody [unnamed] or some group or groups [unnamed] has devised with the aim of setting up a socialized system of medicine in the United States. (Page 27.) It little matters what villains the AMA has in mind, for this bill is no more a part of a plan to establish socialized medicine than were the disability benefit provisions of the law, which the Congress wisely enacted in spite of the cries of wolf that were heard far and wide from AMA representatives.

To charge that H.R. 4222 represents socialized medicine or is the forerunner of socialized medicine or that it is in any way like socialized medicine is not only ridiculous but also irresponsible. Here are the facts. Under socialized medicine, doctors work for the Government and the Government owns the medical facilities and furnishes the services. The proposed program would not furnish any medical services but would only help people finance the costs of their health care. There are specific guarantees that the Government would in no way control, regulate, or interfere with the practice of medicine.

In an apparent attempt to win some adherents the AMA professes not to oppose social security. (Page 27.) They say that "the medical profession has not and does not oppose the principle of social security." It is hard to see anything but opposition to the principle of social security in the many statements made over the years by AMA presidents, by other spokesmen, and in editorials in the Journal of the AMA. Thus, for instance, it is hard to see anything but opposition to the principle of social security in such a statement as that made in 1939 by Dr. Morris Fishbein, published in the Journal of the AMA and referred to by Dr. Fishbein as made at the request of the AMA's Board of Trustees. In this statement Dr. Fishbein said "all forms of security, compulsory security, even against old age and unemployment, represent a beginning invasion by the States into the personal life of the individual, represent a taking away of individual responsibility, a weakening of national caliber, a definite step toward either communism or totalitarianism." But the AMA has certainly made clear on many occasions that its attitude is: If we have to have a social security program, let us do our best to restrict it to the barest "floor of protection" possible.

In the present statement the AMA spokesmen take us back to 1917 for a quote from Samuel Gompers. (Page 30.) The AMA calls "a wise and timely warning" the quotation indicating Samuel Gompers was opposed to "compulsory social insurance." Our present social security system is a compulsory social insurance system; the medical profession, the AMA says, does not oppose the principle of our social security system. Now where does that leave the AMA—is it with Mr. Gompers or not with him? It is characteristic of much of the AMA testimony that we find—as here—that they favor something on one page and are against it several pages later.

A highly significant indication of how the AMA regards the social security program is a statement by Dr. Annis that appears on page 3 of his testimony. Speaking of the aged, Dr. Annis warns that H.R. 4222 would place them in a

broad category labeled: "These are people who can't take care of themselves. These are people who must be cared for by the Federal Government at the expense of the rest of the population." This statement clearly shows the AMA's attitude toward the whole social security program. The rest of the population of course understands that there is no stigma attached to social security benefits. There is no means test. Rich and poor are treated the same. If social security beneficiaries are labeled at all they are labeled as people who have taken care of themselves by having worked and having contributed to the program.

With reference to the AMA charge (page 29) that the Federal Government is seeking, through H.R. 4222, to encroach on individual freedom, let me make clear that this bill preserves individual freedom not only for physicians but also for hospital administrators, for nursing home proprietors and managers, for the aged who would benefit from this bill, and for the individual members of what we call the public. Moreover, my bill would make individual freedom a reality for many who, because they don't have the means to meet the cost of needed health care, cannot now enjoy their freedom in old age.

There is nothing in the bill that would in any way interfere with the established practices of providing health care. Health care would remain—as it is now—a matter determined by the patient, his physician, and the hospital or other provider of services. The Government would provide no care and offer no services; it would establish only the means of paying for the health care of the aged.

The medical profession would continue to be responsible for the quality of the care available to the people of the United States; the providers of service would still be responsible for determining what services they would make available. The process by which they would be paid for the services furnished would be much the same as that now used by Blue Cross and other large insurers of health service costs. The program would follow practices already well established and accepted by the hospitals in their relationships with Blue Cross, the States, and other Federal programs.

I gladly give credit to the medical profession for its great contribution to improvements in medicine and health care that today help us to live longer and more comfortable lives than ever before. Even though I believe that other groups should be mentioned for their significant contributions to this process. I would take no credit from the physicians of this country; they have my highest respect and my deepest gratitude. It is preposterous, however, to suggest that provisions that would enable our people to prepay, through the accepted social security system, some of the costs of the health care that they will need in old age might impede, or in some way interfere with, the efficiency of the medical profession. The physician in this country is a well-trained, highly skilled, humane expert in medical care. He does not, I believe, profess to be an expert in economics or insurance, though the AMA representatives pose as such experts. He does not look upon himself as a Solomon whose business is to advise people how they should go about paying their medical bills, though the AMA does. He does not always share the views of the AMA; however, because he may fear AMA sanctions he sometimes is constrained to ask, when writing to his Representative in the Congress, that his position favoring H.R. 4222 not be made public. This bill, let me repeat, has nothing to do with the practice of medicine; it simply affords a means for helping people to pay for the cost of certain medical services in old age.

Furthermore, this bill is, contrary to the AMA's charges (page 29) in keeping with the purpose of the social security system and with the basic principles of this system. While the insurance provided by social security has been in the form of monthly cash benefits there is nothing in the nature of this system or in its history that would make the payments provided under my bill inconsistent or incompatible with the objectives, the principles, and the philosophy of social security in this country. H.R. 4222 would provide for payments to be made to hospitals and certain other medical facilities—but not to physicians—for specified and limited medical services received by social security beneficiaries. The bill would authorize neither the Federal Government nor any other level of government to furnish health services to anybody. No one would be required to accept health services by reason of this bill—and the AMA persists in spreading the contrary impression. The charge that this bill is contrary to the principles of the social security system is not only false but also strange coming from the AMA—strange because available evidence indicates that the AMA knows little about the principles of the social insurance system and cares less.

The charge is also made that my bill is paternalistic—that it implements a "Government knows best" kind of thinking. (Page 30.) Nonsense. I am convinced that the people are capable of deciding how to spend their money and know how to do it without AMA advice. That is why they are for this bill. I am confident that the people know that my bill would give them valuable protection, and the correspondence that I have received indicates that they know better than the AMA what is good for them.

If the AMA seeks to substantiate its charges of impending Federal encroachment, it should in all fairness approach this task, however impossible, by dealing with the provisions of my bill rather than talking about what could happen under some other plan that has not been proposed, and talking about that other imaginary plan as if it were that proposed in my bill. Under H.R. 4222 the Federal Government could not "regiment doctors, nurses, patients, hospitals, nursing homes, and any other element of our health care system" and the AMA knows the Government could not, even though the AMA statement deftly leads one to infer the opposite. (Page 30.)

COMMENTS ON SECTION V—EFFECT OF BILL IMMEDIATELY AND POTENTIALLY ON THE QUALITY OF MEDICAL CARE

In section V of the statement, the AMA has said repeatedly that a Federal health insurance program "would lower the quality of medical care available to older people." According to the AMA, the program would do this by substituting a concern with costs for a concern with quality. The Government, in its search for methods to reconcile the need for care with the need for cost controls would "decide for the patient what services should be provided and by whom." (Page 33.) As a result, the AMA says, the Federal insurance program would produce a series of catastrophes: "The disruption of the doctor-patient relationship, delays in admissions to hospitals, time wasted in the overcrowded offices of doctors, the regimentation of medical practice," and impairment of medical research. (Page 32.)

In vain do we look for any concrete evidence, beyond bald unsupported statements about medical care in other countries, to corroborate the AMA's assertions, or for any consistent logic which demonstrates that a Government plan must have results which its counterparts outside of Government—Blue Cross for example—have not produced.

The facts of the case are quite different, and when carefully examined they demonstrate that the charges of "regimentation" and "deterioration of quality" are baseless. Under this bill, there is no compulsion imposed on any provider of service to participate in the program. The conditions of participation which are provided in the bill are based upon requirements formulated and recommended by professional bodies concerned with the quality of care. Freedom of choice of physician and hospital by patients is guaranteed. There are provisions designed to assist the physician in resisting pressures which may be exercised to secure unnecessary care; for example, the utilization committee. And the bill provides, through the Advisory Council, for the effective expression of all shades of opinion on the administration and future development of the program.

The AMA's argument, as developed in section V, is largely incoherent. An attempt is made to sneak in certain false premises and to then present a series of conclusions as if they were derived from sound premises and factual data.

The AMA asserts, for example, that a high quality of care can be obtained only when the needs of the patient are placed first, "and financing is placed second." (Page 33.) This truism is followed by the statement that at present medical care is aimed at "treatment of the illness." We are then exhorted to contrast this with a system under which "Government pays for care directly," because under this system emphasis is "shifted from quality to cost." (Page 33.) This extraordinary set of assertions is supposed to prove something. Yet, all that has actually been said is

that quality care can be furnished only if we treat the patient and he pays for it. But if the cost is paid for through insurance we presumably stop "treatment of the illness."

We are treated elsewhere in this document to similarly empty statements; "under H.R. 4222—the dollar approach instead of the medical care approach is stressed." (Page 34.) Is not an insurance program supposed to deal with the financial aspects of care? Moreover, is it not possible to couple concern for costs with a concern for standards, as in fact H.R. 4222 does? But the AMA is not really interested in looking at the merits of the case, nor in being logically consistent, for it later predicts with horror that "Government would be preoccupied with efforts to regulate quality." (Page 36.)

COMMENTS ON SECTION VI—COST ESTIMATES FOR H.R. 4222

After admitting its lack of statistical and actuarial competence, the AMA proceeds to demonstrate another of its lacks—its ignorance of the provisions of my bill. The AMA apparently does not know that the social security tax increases being proposed by the administration would cover, in addition to the health insurance costs, the costs of higher benefits for workers who earn over $4,800 a year that would be paid because of the proposed increase in the social security earnings base from $4,800 to $5,200. In effect, the employee contribution for health insurance protection alone would be $16.90 a year at the maximum—as opposed to the AMA statement indicating that the cost would be $25.

I have asked Robert J. Myers, Chief Actuary of the Social Security Administration, to prepare a brief statement on the AMA's attempt to diagnose the financing of my bill. His statement appears in the record of the hearings on H.R. 4222, beginning on page 1469.

Memorandum dated August 3, 1961, is included in the RECORD immediately following these comments.

COMMENTS ON SECTION VII—EFFECT OF H.R. 4222 ON THE SOCIAL SECURITY SYSTEM

I believe my 19 years of experience as a Member of the House of Representatives and my years as a member of the Committee on Ways and Means make me somewhat of an expert in detecting the misleading statements about our social insurance system that are included in section VII of the AMA statement. The old-age, survivors, and disability insurance program is far too important to allow the attempts of the AMA to discredit it, to go unchallenged. I intend to challenge some of the misleading and erroneous statements that the AMA has made about the program.

The AMA testimony implies that the financial soundness of the old-age, survivors, and disability insurance program is open to question. This of course is not true. The program has operated successfully for 26 years and has proved to be an effective method of protecting the families of America against the poverty that would otherwise be the common result of the old age, disability, or death of the breadwinner. The Congress under both political parties has been careful to assure the soundness of the program. Whenever liberalizations have been adopted by the Congress, the Congress has made sure that there were adequate provisions for meeting the cost of those liberalizations. It is because the public has confidence in the intention of the Congress to keep the program sound that increases in the tax rates provided for have been accepted.

The AMA has tried to give the impression that the old-age, and survivors insurance program is not financially sound because it is not fully funded. (Page 52.) This is a complete misrepresentation of the nature of a social insurance program. In a compulsory Government program of social insurance it is not necessary to accumulate the full reserves that are needed in a private insurance company. Compulsory social insurance is assured of continuing income. Thus, a social insurance program is financially sound if future income will support future disbursements. On this basis the system is in actuarial balance since it is expected, on the basis of the best available estimates, to have enough income from contributions based on the tax schedule now in the law and from interest earned on investments to support it now and over the long-range future.

The AMA says that if the Government suspended social security taxation the system would collapse. This is like saying that if a workman is never paid any more wages, he will not be able to meet his obligations. In other words, in assessing the financial soundness of the system the AMA considers only its future obligations and ignores its future income. Considered on this basis, not only the social security system, but the U.S. Government itself and practically every American family are financially "busted."

The basic soundness of this program has been reaffirmed on several occasions by distinguished groups which have made a careful examination of the financing of the program. Such a study was made in 1958 by the Advisory Council on Social Security Financing, which included, among others, outstanding economists, representatives of the insurance industry, and leading employers. The Council stated in its major findings:

> The Council finds that the present method of financing the old-age, survivors, and disability insurance program is sound, practical, and appropriate for the program. It is our judgment, based on the best available cost estimates, that the contribution schedule enacted into law in the last session of Congress makes adequate provision for financing the program on a sound actuarial basis.

The AMA has also criticized the social security program because present beneficiaries have not contributed enough to pay for the benefits they are getting. (Page 53.) There is nothing irregular or unsound about this situation. As a matter of fact, it reflects a wise and practical decision by the Congress to make the program effective for people who were already old when their jobs were first covered by social security. In the future, of course, when all covered workers have had an opportunity to contribute substantially to the program, retirement benefits will be paid only to people who have contributed for at least 10 years and full-rate benefits will be paid only to those who have contributed over their working lifetime.

In a social insurance program it is proper to give full protection to those who retire before they had the opportunity to contribute more than a small part of the value of the benefits they will receive. It is proper to insure that no one who, by acquiring the specified number of social security credits through his past work, has demonstrated that he was part of the covered labor force will be denied social security benefits. Indeed, the only alternative is to leave the urgent problems of dependency untouched for decades. And of course, the method of giving full protection at once to meet an existing problem is not peculiar to social insurance. Similar treatment is usually given under private pension plans to workers who are already nearing retirement when the plans are set up. The costs of doing so are generally borne by employer contributions, just as under social security the cost of full protection for people nearing retirement age at the beginning of the program can be thought of as being met from the employer tax.

The AMA says that extending health insurance protection to people now receiving old-age and survivors insurance benefits would junk the contributory principle inherent in the social security system. (Page 54.) I am glad to see that the AMA does admit that there is at least one good principle inherent in our social insurance system, but I must take issue with their allegation that H.R. 4222 would violate that principle. By extending protection immediately to the 14¼ million aged who will be eligible when the major provisions of the program become effective, the new health insurance program would follow the precedent established in 1939 and reaffirmed time and again through subsequent legislation. As the program has been expanded and improved over the years, immediate protection has been provided for people who had worked under the program in the past. For example, in 1957 when cash disability benefits were made available to people age 50 and over, those who were already disabled and who had had substantial work in covered employment in the past were able to get benefits immediately. They were not required to make a contribution to the disability insurance trust fund.

The AMA would have us believe that the old-age, survivors, and disability insurance program has been expanded beyond the role that was originally intended for it. (Page 53.) They would have us believe that its role is to provide a floor of protection, which the AMA equates with subsistence-level benefits. Whether old-age, survivors, and disability insurance is a floor depends on your definition of the term, but it is quite clear that there was never any intention to keep benefits paid under the program at subsistence levels or below. If we go

back to the original bill that created the program in 1935 we find that the Committee on Ways and Means spoke of benefits "in amounts which will insure not merely subsistence but some of the comforts of life," and the Committee on Finance of the Senate spoke of benefits "which will provide something more than merely reasonable subsistence." Personally, I do not believe that the program has yet reached these fine goals. Present benefit levels, in my opinion, are far too low, not too high.

The AMA contends that use of the term "insurance" to refer to old-age, survivors, and disability insurance has misled the public as to the real nature of the program. (Page 51.) They would even invoke the sanction of the Supreme Court to support their position by implying that the Court has denied that the program is insurance. (Page 52.) If we look at the Court's opinion in the case the AMA has referred to, we find that, far from supporting the AMA contention, the Court has said:

> The social security system may be accurately described as a form of social insurance, enacted pursuant to Congress' power to spend money in aid of the general welfare.

It is the use of the insurance principles of sharing the cost and spreading the risk rather than the fact that a contract exists that makes a particular program "insurance." The old-age, survivors, and disability insurance program is income insurance. The risk insured against is loss of family income occasioned by the disability, old age, or death of the family breadwinner. Thus, although the right to benefits under the program is based on the provisions of the Social Security Act rather than on a contract, it is clearly an insurance system. The fact that rights under the program are statutory, not contractual, has been used by some critics to infer that social insurance is somehow inferior to private insurance. In reality, the fact that Congress can change the law is an advantage rather than a disadvantage. As we all know, the protection offered the American people under the old-age, survivors, and disability insurance program has grown with the growth and expansion of the American economy, and will continue to be adjusted to changing conditions.

The AMA goes on to imply that enactment of H.R. 4222 would create a tax load that future generations of workers would be unwilling or unable to bear. (Page 54.) There is no reason whatever to expect that this will happen. In the first place, coverage of the group now on the beneficiary rolls will have very little cost impact since the cost will be spread over future generations of workers as well as those now in the labor force. In fact, to exclude from protection under the bill all those now on the beneficiary rolls and all those who did not have a significant amount of covered employment after the time the proposed plan went into effect would reduce costs by only about 0.06 percent of covered payroll.

Another support offered by the AMA for its prediction that future generations will not be willing to pay their social security taxes is the statement, currently being circulated both by the AMA and by some people in the insurance industry, that younger workers are "subsidizing" with their social security taxes the payment of benefits for people who are now retired, and that these younger workers will not get their money's worth in protection for themselves and their families. Such statements are not correct. Even workers who will be covered by the program over a whole working lifetime and who will be paying contributions at the maximum rate, that is, the rate scheduled to go into effect in 1968, will be getting insurance protection whose value is at least equal to the value of their contributions. The reason this is possible relates to the fact that the employer contributions paid under the program are not earmarked for any particular employees or groups of employees. Because of the availability of these employer contributions, the value of the protection received by those who become beneficiaries in the early years of the program can exceed the value of the protection received by those and the equal amounts paid by their employers without there being any overcharge of workers who are now young.

COMMENTS ON SECTION VIII—EFFECT OF H.R. 4222 ON PRIVATE, VOLUNTARY EFFORTS

The AMA here advances the preposterous argument that H.R. 4222 will damage or destroy such varied activities as community meals-on-wheels programs, construction of hospitals through philanthropic grants, community chest activities, and voluntary efforts to build chronic disease centers, retirement villages, church homes for the aged, and nursing homes.

It is true of course that if the bill is enacted, individuals and voluntary organizations will be relieved, to a large extent, of one burden they now carry: If the bill is enacted, many thousands of older Americans will no longer have to seek charity from voluntary organizations when they become ill. I know that both the charitable organizations and the aged will look upon this as a blessing. It is as absurd to argue that narrowing this area of need will be disastrous to voluntary charitable organizations as it is to argue that the discovery of penicillin has damaged the medical profession because people with infectious diseases now require less medical care, or to argue that the patient has been disadvantaged because penicillin has robbed him of the need to undergo intensive medical care over an extended period of time.

Just as the efficiencies of modern medicine have enabled physicians to devote more time and energy to the field of chronic illness and other fields that heretofore received too little attention, the enactment of my bill would enable charity organizations to devote their energies and resources to meet more completely the varied needs of the community. For example, voluntary hospitals, or nursing homes that are constantly in financial difficulty because they must accept older people who cannot pay for the care they receive would be relieved of this problem. The funds that are released would be available for improving the services these hospitals and nursing homes give to their patients; or the funds would be available to reduce the rates that now have to be charged to paying patients.

If H.R. 4222 is enacted, community chests and other large and small voluntary organizations that contribute to support hospitals and nursing homes will of course benefit in the same way. These organizations will then be able to devote more of their resources and energies to building retirement villages, meals-on-wheels programs, and a myriad of other needed services.

COMMENTS ON SECTION IX—WHAT THE MEDICAL PROFESSION IS DOING

The AMA has described in detail the efforts that many American doctors and medical organizations are voluntarily making to meet the health problems of older Americans. I was impressed primarily with the wide range of activities that physicians carry on in order to advance science, promote better public understanding of the problems of aging, and encourage better medical, public health and rehabilitation services for aged people. I think it is also important to point out, however, that the bill would not alter or in any way affect these activities of physicians.

I would like to add that whatever progress has been made in improving the medical and vocational services available to older people has been due not only to the efforts of physicians but also to the efforts of Americans in many different occupations who have joined in bringing to bear their energies, their different skills, and their money to common purposes. Also, it is fair to point out that the Federal Government has played an important and active part in these achievements.

The AMA rightly emphasizes that there still remains a great need for additional hospitals, nursing homes and other community health facilities. Enactment of the community health services and facilities bill—H.R. 4998 and S. 1097—would supplement the Hill-Burton program to make possible Federal support for the development of a balanced network of services throughout the land, including hospital, nonprofit nursing home, home nursing, and organized home care programs. H.R. 4222 would assist in this effort by enabling the aged to pay for the health care they receive. It is common knowledge that providing free care and below-cost care for the aged has placed a considerable financial strain on hospitals that has impeded improvements in hospital care. Obviously, the inability of aged people to pay for needed health care has also hampered the development of facilities designed to meet the health needs of old age. The current low level of care in nursing homes is a good example of the quality of the health care the aged now get through present financing arrangements. When provision is made so that the aged are able to finance the care they need, facilities will be constructed to provide that care.

The recent exposé in Baltimore of the deplorable conditions in homes licensed by the State health department to provide care for the aged is a striking case in point. I want to insert for the record an article from the Baltimore Sun for July 15, 1961, which describes the situation in some detail. Suffice it for me to say that Baltimore is not a unique city in this respect, and that the existence in great numbers of overcrowded, dilapidated, unsanitary nursing homes throughout the United States is a matter that ought to concern and disturb us all.

Article from the Baltimore Sun, July 15, 1961:

FIFTEEN IN CARE HOME FOUND UNDER LOCK—23 OF 27 IN ROSLYN AVENUE PLACE TAKEN TO CITY HOSPITALS

State health authorities closed a northwest Baltimore care home late yesterday after discovering 15 elderly patients were being kept behind a padlocked door on the third floor.

Miss Esther Lazarus, director of the city's Department of Public Welfare, said 27 patients were found in the house in the 2300 block Roslyn Avenue although it had originally been licensed for only 11 persons.

Twenty-two patients—all welfare recipients—were transferred to the city hospitals on an emergency basis by a fleet of municipal ambulances.

SAYS PERMIT HAD EXPIRED

Miss Lazarus said she was told the home, operated by Mrs. Ethel Camphor, had been unlicensed since her State permit had reportedly expired last month.

The welfare director said State officials reported that the home's operator had told them the third floor was being used as her living quarters.

The discoveries were made when officials of the State Department of Health inspected the house preliminary to relicensing the premises, she continued. The Health Department is charged with regulating care and nursing homes.

When the inspectors arrived at the Roslyn Avenue house yesterday morning, Miss Lazarus related, Mrs. Camphor was not at home.

VOICES HEARD OVERHEAD

They found 12 men and women on the first two floors of the racially integrated home—one above the legal limit, she continued.

The attention of the inspectors was attracted to the third floor when voices were heard coming from the area, Miss Lazarus said.

When they ascended the stairs to the third floor, they found the door at the head of the staircase padlocked, it was stated.

No key was available, according to reports reaching the welfare director.

It was later learned that the group of patients were being housed here.

Mrs. Camphor did not return until about 2 p.m., Miss Lazarus said, and during the entire period, the patients were not fed.

Health officials decided to close down the premises and the welfare department made arrangements for its 22 clients to be taken to the City Hospitals Infirmary.

RELATIVES CALLED

The other five were taken away by hastily summoned relatives.

While the patients were considered ambulatory, some of them had to be carried into the waiting ambulances on litters and in chairs. Others were helped by policemen and ambulance attendants.

Their belongings, packed into paper sacks and cardboard boxes, were placed in the ambulances, too.

Mrs. Camphor declined to make a public statement about the incident.

COMMENTS ON SECTION X—WELFARE PROGRAMS—PUBLIC AND PRIVATE

The tenor of this section is that the programs now providing assistance to some of the needy people who cannot meet the costs of their medical care have been ignored by the advocates of the social insurance approach; (page 65) that these programs represent a satisfactory method of dealing with the problems the aged have in meeting these costs; (pages 65 through 67) that setting up a health insurance program under social security would conflict with, and perhaps even destroy these programs, substituting for them an inferior one; and that the public has a greater voice in other programs than in a Federal one. None of these things is the case. (Pages 67 and 68.)

The supporters of my bill have not ignored the existence of public and private welfare programs that now help to meet the costs of medical care of some of the needy aged. In the absence of a social insurance program these programs serve an essential function; and even when health insurance is added to social security they will continue to exist and perform an important function.

There is no conflict between these programs and health insurance under social security, just as there is now no conflict between old-age assistance and old-age and survivors insurance. In fact the effectiveness of old-age and survivors insurance in preventing poverty among the aged has enabled public and private welfare programs to deal much more adequately with the declining residual need than would have been possible if the welfare programs were mistakenly relied upon to do the whole job. Similarly, when hospital insurance for the aged is added to the social insurance program, the Federal-State assistance programs and the other public and private welfare programs mentioned in the statement of the AMA (pages 65 and 66), will be able to meet the cost of residual medical needs much more adequately than they are able to meet these needs at present.

The AMA speaks of "fixing a master-pattern of health services for the aged throughout the entire Nation" as if this were a bad thing. (Page 68.) I do not believe that it is a bad thing to provide basic protection against hospital costs for the aged person no matter where he lives. This is what my bill would do. What we have at present is a situation where a person in Massachusetts or New York who needs hospital care for a given condition and for a given period of time can get assistance while a person in Kentucky, Tennessee, or Mississippi with exactly the same need cannot get assistance. This may seem a desirable situation to the AMA because it reflects the income and resources of the States but it does not seem so to the residents of Kentucky, Tennessee, and Mississippi who need the care but cannot pay for it. A Federal program can reflect fully the needs of local communities through local offices, consultation with the States, and use of State officials to perform appropriate parts of the administration of the program. Under H.R. 4222 all these things would be done. One of the advantages of the Federal program is that it would not be bound by the limited resources of the low-income States.

The AMA makes much of the idea that State and local assistance programs "represent the natural development and the natural implementation of the community's responsibility for its members." (Page 67.) The implication must be that in some way a national social insurance program like we have today is unnatural. How the AMA reaches this conclusion is beyond me. It is natural and highly desirable that the mind of man devise better solutions to his problems as time goes on. There is practically universal agreement that so far as income maintenance is concerned social insurance is the preferred approach over public assistance; surely it was natural, then, to turn to the insurance approach. So, too, it is quite natural for our people to prefer social insurance against the costs of medical care in old age to the inferior method of assistance, which requires people to exhaust their resources and declare themselves unable to meet their own needs before they can get help.

The AMA says it has no desire to "pauperize" the aged. (Page 65.) Of course it does not desire to do so and would not do so. Nevertheless, the end result of the program it advocates would be that many older people would be pauperized. Any program relying on a means test—any program that, as the AMA advocates, helps only those who establish inability to care for themselves—is by definition a program that requires older people to exhaust their resources before they can get help. If exhaustion of resources is not pauperizing people, what is it?

The AMA makes the preposterous suggestion that the only reason why people prefer insurance to assistance is "propaganda for the Federal approach." (Page 67.) I find it hard to deal with this suggestion seriously. Does the AMA really believe that the only reason why people do not want to subject themselves to an examination of their and their children's income, resources and other personal circumstances—that the only reason why they do not want to declare themselves incapable of meeting their own needs—is that they have been propagandized into this attitude? Of course the AMA does not believe this. The fact of the matter is that a means test approach to any problem requires the division of people into two groups—one labeled "successful" and the other "unsuccessful." It is innately distasteful to any man who has supported himself and his family throughout his entire working life to have to come, hat in hand, to the welfare agency in his old age and say: "I have failed. I cannot pay my bills. Please give me help." This is the reason why the American people overwhelmingly prefer the insurance approach, and why the present complex of assistance programs, helpful and necessary as it may be, is not a satisfactory approach to the problem.

The provision of health insurance benefits at age 65 is attacked by the

AMA because it might encourage people to defer treatment until age 65. (Page 67.) Social insurance proponents do not argue that the protection provided under the program will cover all problems. Because it does not try to cover all problems, social insurance can concentrate on the problems of the aged, among whom the need for protection is most acute. But is the AMA concerned because medical assistance for the aged and old-age assistance are available only after 65, and is it concerned because such help as the States offer to persons below age 65, for whom there are no Federal grant-in-aid programs, is even more woefully inadequate than the help offered to the aged?

COMMENTS ON SECTION XI—ADVANCEMENTS OF PRIVATE INSURANCE AND PREPAYMENT MECHANISMS

In the AMA statement, the supporters of H.R. 4222 are accused of being opposed to the development of private health insurance for the aged. (Pages 73 and 74.) Nothing could be further from the truth. And the allegation—presumably attributed to me and to the supporters of my bill—that 49 million people cannot afford health insurance is something I never head of before. (Page 73.) I accept the AMA's proof that this allegation, which I presume was originated by the AMA, has no base. I have watched with interest the growth of health insurance for the younger population and hoped that their coverage would be paralleled by comparable coverage for the aged, which would have helped solve their health care cost problems. However, this has not occurred—less than 50 percent of the aged have any kind of insurance and much of it is completely inadequate for their health care needs.

Now, it should be made clear that I do not criticize the Blue Cross plans nor the insurance companies for this. On the other hand, I applaud their commendable efforts and ingenuity and I admire, along with the AMA, the noteworthy recent efforts of the Connecticut insurance companies and the Pennsylvania Medical Society to provide adequate insurance for the aged.

The AMA statement completely avoids any discussion of the underlying problems which have prevented the provision of adequate health protection to the aged. These problems were outlined by Dr. Basil C. MacLean, recently retired president of the Blue Cross Association—the organization which has, let me point out, done most to meet the insurance needs of the aged—who said:

> A lifetime's experience has led me at last to conclude that the costs of care of the aged cannot be met, unaided, by the mechanisms of insurance or prepayment as they exist today. The aged simply cannot afford to buy from any of these the scope of care that is required, nor do the stern competitive realities permit any carrier, whether nonprofit or commercial, to provide benefits which are adequate at a price which is feasible for any but a small proportion of the aged.

The difficulties mentioned here are obvious when we realize that the total health care expenses of an average aged person amount to one-fourth or one-fifth of his income. Private and nonprofit health insurance carriers are struggling with the dilemma of providing adequate insurance for the aged without passing the heavy financial burden to their younger subscribers or charging higher rates for the aged than they can afford to pay. The dilemma has not been solved. It is certainly not solved by selling insurance with inadequate benefits.

The AMA, after "adjusting" the figure on aged people without health insurance to take out the people on public assistance, proudly announces that "We can safely conclude that 70 percent of the aged who are in the market for voluntary insurance now have it." (Page 70.) Since illness and high-health-care costs are major reasons for applying for assistance and many of these people would not be on assistance if they had health insurance, it is remarkable that the AMA chooses to count those on assistance as "not in the market." They, like all the low-and-moderate-income aged, are "not in the market" for adequate commercial insurance in the same sense that they are not in the market for automobiles—they cannot afford them. This kind of measurement is appropriate for market research purposes but not for the purpose of determining the need for health insurance for the aged.

Furthermore, it is not enough to provide figures on how many aged persons are covered; it is important to note the characteristics of people who do not have insurance, a subject which the AMA statement avoids. According to the National Health Survey, in 1959 health insurance coverage was carried by only 33 percent of the aged in families with less than $2,000 yearly income, by only 42 percent of the retired aged, and by only 30 percent of the aged unable to work or keep house due to chronic conditions. Thus, extension of insurance coverage to the aged who are not insured becomes increasingly difficult to achieve because they are more likely to be persons in the low-income and poor health-risk groups who cannot afford insurance and are poor prospects from a commercial insurance point of view.

In view of these facts, I am not impressed with the AMA figures on the number of insurance plans offering health insurance to the aged or on the number of workers with insurance that could continue into retirement. (Page 71.) It would be more significant if the AMA would provide data on the premium costs of adequate insurance for the aged and the number of aged persons who could afford to pay these costs.

I have several times referred to the inadequacy of insurance for the aged, a subject on which the AMA statement does not provide the facts, and I would like to offer some specific information about this matter. The Department of Health, Education, and Welfare has provided me with the following information which is based on the Health Insurance Institute's 1960 report on "Health Insurance Plans and Policies of Insurance Companies Available to Americans 65 Years of Age and Older."

A. INDIVIDUAL AND FAMILY HOSPITAL-SURGICAL EXPENSE PLANS GUARANTEED RENEWABLE FOR LIFE

Many such policies are offered, all requiring applicant to be of normal health. Examples are:

Company	Daily room and board payments	Maximum days covered	Miscellaneous extras	Maximum surgical schedule	Annual premium at age 65 (male)
The Travelers Insurance Co	$10	50	Up to $100 for 8-day stay or more.	$200	$86.52
	15	50	Up to $150 for 8-day stay or more.	300	118.67
Aetna Life Insurance Co	10	60	$100	300	92.99
Metropolitan Life Insurance Co	10	31	$50	200	80.67
	15	31	$75	300	121.00
Prudential Insurance Co	8	35	$60	250	73.32
	16	35	$120	250	122.66

B. SENIOR CITIZENS HOSPITAL-SURGICAL GROUP PLANS

These are open for membership on a statewide basis during periodic enrollment periods. All have a 6-month waiting period for preexisting conditions, but no limitations because of physical condition. They can be canceled and premiums can be adjusted only on a statewide basis.

	Daily room and board	Maximum days covered	Miscellaneous extras	Maximum surgical schedule	Annual premium at age 65
65-plus plan, Continental Casualty	Up to $10 a day	31	Up to $100	$200	$78
65 plan, Fireman's Fund Insurance Group.	do	31	do	$200	$78
Senior security plan, Mutual of Omaha	do	60	80 percent of charges above $100 to $1,000 maximum.	$225	$102

It is instructive to compare the premiums of the policies with broader coverage—though all are quite limited—to the median income of an aged person, namely, about $1,000. Such policies do not provide payment for nursing home care, home health services, outpatient diagnostic procedures, physician home and office visits, drugs, dental care nor eyeglasses; the payments provided for hospital room and board are far below the usual charges to the patient, and

those for miscellaneous extras would rarely cover all the charges for operating room, recovery room, laboratory, and special diagnostic services; but the premiums run as high as $122 for an individual, which would amount to over 12 percent of income for aged persons with average income.

Even Blue Cross often does not provide coverage for some of the aged subscribers equal to that which it offers to the younger members. Senior certificates typically provide for no more than 31 days of hospital benefits and many provide limited allowances—$7 to $10 a day—toward the cost of room and board, or provide for a deductible or for coinsurance. In most cases there is an exclusion or limitation on hospitalization coverage for preexisting conditions.

The AMA statement says that the passage of H.R. 4222 "would unquestionably undermine private health insurance." I think the AMA is unquestionably wrong on this point. The proposed health insurance benefits would not cover the younger group who number nine-tenths of the population; nor would they cover all the health care costs of the aged. Many aged persons will want to buy insurance protection against the costs of drugs, medical appliances, and physicians' services and will in fact be encouraged to do so by reason of having the basic coverage of health service costs under the bill.

In a speech before the last annual meeting of the Health Insurance Association, Frederic M. Peirce, president of General American Life, although opposed to the administration's bill, stated that such a program would not end private health insurance. He pointed to the growth of life insurance since enactment of the Social Security Act, and went on to say, "It is a record which provides a fitting analogy and a sound precedent upon which to base the expectation that the health insurance business will continue to grow and prosper despite the advent of Government-provided health insurance, if that unwelcome development should come to pass." Many other spokesmen for commercial health insurance agree with Mr. Peirce. Why should the allegations of the AMA then, that health insurance would be undermined, be given credence?

I was amused by the AMA's fumbling attempt to discredit a statement taken, out of context, from a report submitted to the Committee on Ways and Means by the Department of Health, Education, and Welfare in 1959. The statement excerpted from the report is:

> Relatively few—14 percent of the couples and 9 percent of the nonmarried beneficiaries—had any of their [total medical care] expenses covered by insurance. (Page 73.)

The AMA would have us believe that the small proportion of the aged with medical expenses covered by insurance is proof that the aged are healthy. This must be the case, they imply, since "one must use medical care to receive a health insurance benefit." (Page 74.) This is a fantastic extreme of misinterpretation. The part of the report from which the AMA lifted its quote had reference to "beneficiary groups incurring medical costs." The report brought out that of those incurring costs relatively few had any of their costs covered by insurance. Far from saying that few of the aged received medical care or had medical expenses, the report brought out that actually only 3 percent of the aged couple beneficiaries and only 8 percent of the nonmarried aged beneficiaries in the survey had no medical expenses during the survey year.

The AMA statement places much emphasis on the multiplicity of plans and "the wide variety of choice in the selection of a health plan." (Page 74.) Let me point out that, with the small incomes of aged people, choice is limited to what can be afforded. The services covered under the bill are basic ones. With the coverage of these basic costs, then aged people will really be able to choose among the additional benefits available under private health insurance.

COMMENTS ON SECTION XII—KERR-MILLS IMPLEMENTATION AND REASONS WHY WE PREFER THIS APPROACH

The AMA makes the point that doctors have given freely of themselves and of their skills to the needy without recompense. (Page 76.) The association also states that they have worked toward the provision of high quality care for the needy. I, for one, would not want to question these statements. I have no doubt that doctors have done both of these things, and done them to the very best of their capacities and abilities.

However, I do question that these worthy actions support the conclusion that the medical-assistance-for-the-aged program provides the most effective answer to the problem that exists. The problem is that so many of the aged cannot afford the expenses of proper medical care, and lacking the means, many do not seek the necessary care. As long as the method the AMA supports is that of giving help to those who must prove their financial need, there is going to be a strong deterrent to seeking timely medical care. I am not going to say that a pauperized person will be refused medical attention when he finally seeks it or that a doctor will intentionally give perfunctory treatment to such a person. But this is a far cry from a system of prepaid medical care where a person feels free to seek services at the time the need first shows itself; free of the strong deterrent of having to subject himself and his family to the scrutinies and personal investigations into the details of life—examinations into how and what they buy and how their children live and spend their money, and often even investigations at their homes to determine whether their statements should not be questioned.

Then, let us not overlook the fact that whether a person qualifies under medical assistance for the aged depends upon whether he meets the State definition of "need." In other words what a person can get under medical assistance for the aged depends upon what the State sets as the requirements of "'medical indigence," and what, even after the person meets these requirements, the State can afford to provide for him in the way of medical services. The whole point is that one does not know what, if anything, will be done. Some States will be in a position to do very little and then for only those who have very little. I do not see how this kind of program can match a system of prepayment for assured protection against the costs of specified types of services.

The AMA obviously fails to see the distinction in approach between an individual needs test and the provision of health benefits under the old-age, survivors, and disability insurance program. It claims that the old-age, survivors, and disability insurance approach automatically labels all those over age 65 as "medically indigent" and is therefore demeaning of the whole group. (Page 83.) By making this comparison I think the AMA has clearly demonstrated that it does not understand how requiring a person to seek assistance as one who cannot meet his expenses differs from claiming a benefit of a planned contributory program made available to all members of the group without loss of dignity to any member.

This point is not one that lends itself to parrying with words—it is a point where we are dealing with human feelings and we must accept the facts. The plain fact is that the old-age, survivors, and disability insurance program does result in people retaining their dignity—the means test does not have that strength. The plain fact is that old-age, survivors, and disability insurance has been accepted as the preferred approach.

The AMA admits that the medical-assistance-for-the-aged programs "have not yet been fully implemented," and offers as an explanation the "laudable fiscal caution" exercised by States that have established limited programs because of a lack of information on the cost of such programs. (Pages 79 and 80.) The misinformation of the AMA's hard-sell advertisement, published in a large number of newspapers on April 19, 1961, which said about the Kerr-Mills program of medical assistance for the aged, "it is now being put into operation in 46 States"—actually, even as of mid-August only 14 States had programs in effect—has now been replaced by a newer soft-sell approach—one presenting somewhat less in the way of outright misinformation. However, it is common knowledge that the reason that so many States have no programs is not because of some abstract laudable fiscal caution but because State and local taxes in many parts of the country have reached the outer limits of practicability and painful searches for new tax sources have met with frustration. It is not surprising that States, wishing to compete with their neighbors for new business, are unable—not that they are unwilling—to embark on a brand new welfare program when in State after State existing State and local services are starved for adequate support.

In explaining why States without any medical-assistance-for-the-aged program have not acted, the AMA statement refers to a "campaign of active disparagement of medical assistance for the

aged, hampering its implementation. The very people who support H.R. 4222 have been most active in this campaign." (Page 80.) It is strange that laudable fiscal caution is used to explain the severe limitation found in some of the handful of existing medical-assistance-for-the-aged programs but not to explain why the majority of States have taken no action. In any case, I will take this opportunity to point out that I as well as the other advocates of H.R. 4222 have for many years worked hard to bring adequate public assistance to the needy aged. I might add that organized medicine did nothing to help to create the assistance programs, including the vendor payment program for medical care under old-age assistance. I also know the California Medical Association opposed the start of the vendor payment program under old-age assistance there, and called the program socialized medicine, until it seemed good tactics to support public assistance as part of an attempt to defeat what they feel is a greater evil—the King bill. I am delighted at the AMA's change of heart and their support of medical assistance for the aged, in spite of their motives. I am disgusted, however, at their allegations that people who have always supported public assistance have changed their minds. I believe that medical assistance for the aged and H.R. 4222 are both necessary, as do all the supporters of H.R. 4222 I am acquainted with. Thus, nothing could be farther from the truth than the impression given by the AMA that those recommending enactment of H.R. 4222 are in favor of destroying the medical-assistance-for-the-aged programs. (Page 79.) H.R. 4222 and medical assistance for the aged are not alternatives, as the AMA suggests, any more than the existing public assistance and social insurance programs are alternatives.

One of the most startling contradictions in the entire AMA testimony appears on page 79 of the statement. Previously, the AMA has declared that its official policy is to give full support to the Kerr-Mills program and the passage of State legislation to put that program into effect. (Page 77.) Now, two pages later, we are astonished to find the AMA saying: "Most important, it must be realized that in the opinion of some States the law is not required and thus they have wisely not implemented it." Is this the way that the AMA gives full support to the development of the Kerr-Mills program? Is the AMA now suggesting that in some of the States without such a program older persons should not even have help through the Kerr-Mills legislation? Or that in some States no aged persons outside of those receiving old-age assistance have a problem of meeting health care costs? One must wonder whether the AMA really is sincere in its professed support of the Kerr-Mills legislation or is merely using that legislation to attempt to confuse the issue and thus delay enactment of H.R. 4222.

One reason the AMA gives for the lack of State action to implement medical-assistance-for-the-aged programs is that:

> Some State legislatures * * * have been reluctant to devote State funds to medical assistance for the aged on the grounds that it might be superseded [by H.R. 4222.] (Page 80.)

It should be obvious that there is a need for medical assistance for the aged that is separate and apart from the need for H.R. 4222. If such were not the case, the States might be expected to abandon cash payments under their existing public assistance programs because of the existing OASDI program. On the contrary, at least one State, West Virginia, adopted a fuller medical-assistance-for-the-aged program—as a temporary expedient in anticipation of Federal health insurance legislation—than it really could afford to carry on a continuing basis, counting on passage of the insurance program to reduce the assistance program to manageable proportions. It is not unlikely that the expectation that H.R. 4222 will be enacted has led some other States to go further than they will be able to finance if H.R. 4222 is not enacted. If H.R. 4222 is not enacted, these States may well have to cut back on medical assistance for the aged.

It is the AMA, not the sponsors of H.R. 4222, who are the Johnny-come-latelies in supporting medical assistance. The sponsors of H.R. 4222 recognize that the medical-assistance-for-the-aged plans will do a more effective job if they have the basic provisions of H.R. 4222 on which to build. Freed from the terrible financial burden of coping with the whole problem through public assistance, the States will be able to concentrate on supplementing the basic plan to take care of special needs where such are found to exist. While the AMA does not understand why State revenues are overburdened and why social security financing is practical, any of us who know of the practical limits to sources of State revenues understand the impossible choices faced by the States in allocating available funds which fall far short of meeting the total needs for education, mental hospitals, highways, assistance to the indigent aged, and now medical assistance to the medically indigent aged. (Page 81.) The full programs the medical-assistance-for-the-aged legislation is capable of producing would cost the State at least three times the $137 million the States paid toward vendor payments for medical care under old-age assistance in fiscal year 1960 even if they continue to exercise what the AMA calls laudable fiscal caution. Obviously, the hard-pressed States will be able to meet the needs of the medically indigent aged only after the biggest part of the job is done through social insurance. Even the present cautious steps taken by some States will prove too much for a great many States, particularly the ones with lowest income, to take. In evaluating the potential of the medical-assistance-for-the-aged programs, it should also be borne in mind that future new tax money that may become available in the States for welfare programs will not necesarily be channeled into medical assistance for the aged. Other unmet welfare needs may often have higher priority. Even the long-established cash old-age assistance programs of a number of States do not cover what the States themselves have determined to be the recipients' needs. In a survey of 49 States conducted for the 1960 Advisory Council on Public Assistance, it was found that the old-age assistance payments made by 36 States failed to meet the State's own standards of needs for the aged on the rolls, and these standards are in many cases very low. The assistance payments made under the State's aid-to-dependent-children programs were reported to fall much shorter of need than those for the aged.

The AMA speaks of past improvements in medical assistance for the aged and predicts further improvements. (Page 79.) Yet it does not tell of the experience of West Virginia, which I have mentioned above, where the State was not able to sustain its original program because a program such as H.R. 4222 was not enacted. To assure that with their limited resources States will provide truly adequate medical assistance to the aged who need it, the primary role in financing basic health care for the aged must be assigned to social security.

COMMENTS ON THE SUMMARY

The AMA concludes its statement with a reiteration of many of the irrelevancies and gross misrepresentations that I have already commented on—ranging from the untenable contention that the aged are in "reasonably" good financial circumstances to a statement that the problem the aged have in financing medical care can only be solved by some undefined "adjustment by society."

In appraising the accusations made by the AMA concerning the loss of freedom they predict will occur if H.R. 4222 is enacted, I believe we should also inquire into the view of life that produced their statements. The fact is that the representatives of organized medicine have become quite isolated from the general stream of American thinking and the desires and aspirations of the American people. Listen to Dr. Garland, who testified before this committee on behalf of the American College of Radiology, when he equates work as an employee with slavery: "Most radiologists," he says, "desire to be free, not employees of hospitals." I believe that the great majority of American workers would not accept this equation of slavery and work as an employee. I am certain that this and similar pronouncements lead Americans to rightfully feel that when organized medicine speaks from its lofty position on matters not related to health services, it does not speak for the American people. I believe—and I am sure that the American people will agree—that the AMA has a view alien to that of the majority when it tells us that everyone gets the health care he needs; that there is no humiliation or loss of dignity when an individual applies for charity; and that the aged are financially well off. Also, the AMA does not speak for the American people when it urges that a plan that would enable the American people to pay for their health care in old age should be dismissed be-

632084—83231

cause the aged can get charity. Such statements do not reflect the experiences of the American people or their desire to remain free and independent—free even if they have been wage earners. Americans want to be able to make provisions against the costs of the health care they will need when they become old. They do not want to rely on charity.

MEMORANDUM

AUGUST 3, 1961.

ROBERT J. MYERS.

Subject: Comments on cost estimates section of statement of American Medical Association on H.R. 4222.

This memorandum will present certain factual comments on "Section VI: Cost Estimates for H.R. 4222," in the statement of the American Medical Association before the House Ways and Means Committee on H.R. 4222 on August 2.

In the fifth full paragraph on page 43, there is the criticism that, as late as July, we were still developing the cost estimates for each of the separate four types of benefits even though the total cost estimate had long ago been established. There is the implication that we decided in advance what the cost would be and then tried to figure out how to arrive at this figure by adjusting the cost estimates for each of the components. This is not the case. In actual fact, there was no change in the original estimate for the hospitalization benefits that was developed in early 1961. The only question was the early-year costs for the three minor benefits. Because of the limited facilities initially available to provide these minor benefits and therefore the resulting low-early-year costs, it was certain that any revisions of estimates therefor would have little effect on the total estimate. Thus, as shown on page 16 in Actuarial Study No. 52, the three minor benefits amount to less than 5 percent of the total first-year cost—as was also the case in the original estimates, although the distribution by type of benefit was considerably different.

In the last paragraph on page 44, it is pointed out that in the estimates of the first-year costs, the proportion of the total expenditures for the nursing-home benefit is relatively small, being only $25 million, or less than 2½ percent of total disbursements—all this being despite the argument that these nursing-home benefits are provided to promote the economical use of hospital facilities. The statement does not take into account the long-range cost estimates, under which the nursing-home benefits account for 12 percent of the total cost (since in these estimates it is assumed that there will be increasing availability of such nursing-home facilities).

In the third full paragraph on page 45, it is stated that we have estimated the cost of nursing-home benefits for the first year of operation as somewhere between $25 and $255 million. The source from which these figures were taken (namely, the Wall Street Journal article) did not adequately understand the significance of the upper figure, which, in essence, was developed under high-cost assumptions for what the situation would be currently if the program had been in effect for many years and if adequate acceptable facilities had been developed. As indicated previously, the higher potential costs that may result from the development of adequate facilities are recognized in the long-range cost estimates.

In the last paragraph on page 45, there are given figures (which are considerably higher than those quoted above) for general-nursing-home benefits. It should be clearly recognized that the latter figures are for general custodial care and do not relate to the skilled-nursing-home-care benefits provided under the bill for persons transferred from a hospital for continued treatment of the conditions for which the individuals were hospitalized.

In the last paragraph on page 46, it is stated that our cost estimates allow for nursing-home benefits to be less than 3 percent of the total benefit cost. As I indicated previously, this is only for the first year of operation, and a much higher proportion of the cost is represented by the nursing-home benefits over the long run.

In the third full paragraph on page 47, there is presented an often-used argument that the actual cost of the British National Health Service in the first year of operation was nearly 3 times what it had been estimated to cost. The facts of the situation are as follows. The original estimate for the net cost to the Government was made in 1942 (£110 million). The actual experience for the first full fiscal year of operation (April 1949 to March 1950) was £305 million. The latter figure, however, is not comparable with the original estimate for a number of reasons—changes in the size of the population protected; changes in the price level; and the inclusion of certain features in the final plan that were not contemplated initially (such as dental and ophthalmic services and the provision of a staff retirement plan). Also, it may be noted that although the cost of the national health service in terms of pounds rose by almost 70 percent in the first decade of operation, the real increase—after account is taken of rises in the price level and in the population—was only about 5 to 10 percent. Furthermore, if the costs are expressed in terms of gross national product, they have been stable over the entire decade (at a little less than 4 percent).

In the third paragraph on page 48, it is pointed out that the cost of the health benefits will rise over the years as the beneficiary roll grows. For one thing, partially offsetting this trend is the estimated growth in the covered population paying contributions to support the system. More important, however, is the fact that the financing arrangements of the bill recognize this trend in the number of beneficiaries, since the proposal is financed on a level basis that is considerably in excess of the anticipated early-year costs. As a minor point, this paragraph contains two factual errors. It is stated that the beneficiary roll increases by 300,000 aged persons per year, whereas the correct figure is about 700,000. Also, it is stated that in 1970 there will be 20 million persons aged 65 and over who will be entitled to the health benefits; actually, this figure represents the total aged population of the country at that time, whereas it is estimated that the total eligibles will number only 18 million.

In the last two paragraphs on page 48, general criticism of our cost estimates is made—namely, to the effect that they have generally been too low. I do not believe that this is the case since there are a number of instances when costs have been overestimated, as well as cases where they have been underestimated. This is particularly true when costs are considered relative to taxable payroll rather than in dollars; the former comparison is the more significant one since the financing of the program is based on a percentage tax rate. An example is given in the statement with the intention of proving the gross understatement in the cost estimates. This allegation is worthy of considerable analysis.

The statement points out that one of our studies, made in 1958, gives an intermediate-cost estimate for the disability insurance program of $548 million in benefit expenditures in 1965—as against actual 1960 disbursements of $568 million. It would indeed be a serious situation if the actual figure for 1960 were already larger than the intermediate estimate for 1965. Such is not the case, however, because the two figures cited are not comparable.

The 1965 estimate is taken from Actuarial Study No. 48 and relates to the 1956 act. On the other hand, the actual 1960 figure represents the resulting experience after the liberalizations in the 1958 act—provision of dependents benefits; liberalization of insured-status provisions; elimination of the provision providing for offsetting of other Federal disability benefits and State workmen's compensation benefits; and general 7-percent increase in the benefit level (and also for December 1960, the effect of eliminating the age-50 requirement). The effect of the addition of dependents benefits can readily be eliminated from the actual 1960 experience; $79 million was paid in such benefits, leaving $489 million payable in benefits to disabled workers. The combined effect of the 7 percent benefit increase, the liberalized insured-status provisions, and the elimination of the offset provision is a relative increase in cost of about 25 percent. Thus, the original estimate of $548 million for 1965 should be increased by 25 percent to $685 million, before it is compared with the 1960 figure of $489 million in benefits for disabled workers (i.e., exclusive of dependents benefits).

The original estimate for 1960 (shown in table 15 of Actuarial Study No. 48) was $350 million for the intermediate-cost estimate. When this figure is adjusted upward by 25 percent to reflect the liberalizations in the 1958 amendments, it becomes $438 million. Thus, the actual benefit experience of $489 million was about 10 percent above the original estimate. Even this does not take into account the fact that the original estimate was based on 1956 earnings levels, while the actual benefits paid resulted from the higher earnings that arose. These higher earnings also resulted in higher contribution income in 1960 than was originally estimated—namely, an actual figure of $1,010 million, as against the original estimate of about $925 million. In other words, about $85 million more in income was received than initially estimated, versus about $50 million more in actual benefit payments than originally estimated (after adjustment for changes in the law in 1958).

INTRODUCTORY NOTE

This comparison of the major health insurance proposals for older persons which have been introduced thus far in the 87th Congress has been prepared by the Staff of the Special Committee on Aging. The basic provisions of the various bills have been charted without editorial comment. However, because I believe it is essential to safeguard the user against misinterpretation, I am prefacing the chart with a few words of explanation.

Some of these proposals, although financed through the Federal Government, offer the beneficiary the option of choosing among private health insurance plans—indeed one proposal relates exclusively to private insurance. The fact that a legislative proposal spells out a package of health benefits to be obtained through private insurance does not mean that such benefits are actually available, nor does it mean that the benefits specified could be made available for anything like the premium amount provided through the proposed plan. Language that says the private plan must have an "actuarial value" equal to that of the Government plan does not mean that the individual would pay no more in premiums than the cost of the Government plan.

It is obvious that commercial insurers cannot offer equivalent benefits at a lower cost than that of a Government plan even if they were to forego all profits—a very unlikely possibility. Yet so long as an option is provided, the sales pressure which insurance companies could bring to bear on those older people who constitute the better risks might be such that many individuals unskilled in the complex art of understanding insurance policies would contract for coverage costing more than equal protection under the Government plan. By the same token, such an approach would also tend to leave the poorer, more expensive risks to burden the Government plan. It is essential that a social insurance health plan be based on community rating, as Blue Cross and Blue Shield were supposed to be on their initiation. The entire group of older people to be insured, the good and the bad risks together, must be in the one plan if it is to be soundly financed.

Moreover, option provisions would mean that social insurance contributions would be used to pay profits to private insurance companies, thus spending dollars which buy no protection.

Terms also can be confusing. For example, "guaranteed renewable" means only that premiums or benefits may not be modified for an individual, but is no guarantee against rising premiums for all those covered by the policy. Options for private insurance must be carefully scrutinized with respect to such provisions as lifetime maximums and exclusions of preexisting conditions.

Another such example is the use of the phrase "free choice" to characterize proposals offering options for private insurance. Such options invariably result in higher costs, or less protection for the same costs. "Free choice" when it means the right to choose one's own doctor is meaningful and most important. "Free choice" when it means merely the right to choose among insurance carriers offering less protection or charging higher premiums than the Government plan lacks all meaning and represents only a misleading slogan.

Three basic questions should be kept in mind in assessing these various proposals. Is not our Social Security system the one mechanism through which people can provide for themselves, on a group basis and at a price they can afford to pay, hospital insurance for their later years which is paid up prior to old age? Is not this the method through which our older population can be relieved of the intolerable burden of rising and unpredictable health costs or of ever higher insurance premiums against these costs? Will not the utilization of this social insurance method to help meet the necessarily higher health costs of older people provide both stimulus and opportunity for private profit and nonprofit insurance plans to devise more acceptable and less expensive programs to meet the health costs not covered by the legislation or of younger groups in the population?

PAT MCNAMARA,
Chairman, Special Committee on Aging.

COMPARISON OF HEALTH INSURANCE

Administration bill Anderson (S. 909), King (H.R. 4222)	*McNamara (S. 65)	*Holland (H.R. 94)[1]
The Method in Brief		
Through Social Security financing, provides health benefits at age 65 without further contribution. Benefits are specified and uniformly available for hospitalization, nursing homes, home health services, and outpatient diagnostic services.	Through Social Security financing, provides health benefits on retirement without further contributions; through general revenue financing, covers other retired aged. Benefits similar to King-Anderson, except no deductibles.	Through Social Security financing, provides health benefits for all persons eligible for OASDI benefits, including younger beneficiaries. Benefits similar to King-Anderson (except no deductibles) plus surgeon's fees.
Eligibility		
All persons 65 or over eligible for OASI or railroad retirement benefits regardless of current earnings. Eligibility automatic.	All "retired" men 65 or over and women 62 or over—i.e., who have total earnings of less than $2,400 a year or $100 in each of 3 months or who are 72 or over (other than railroad and Federal retirees)[2].	All persons eligible for OASDI benefits, including younger beneficiaries.
Includes 15 million—5 out of 6—aged in 1964. Almost all aged eligible in future.	1962 coverage estimate 16.1 million (15 out of 16) including 13.2 million OASI beneficiaries, 1.5 million OAA recipients, and 1.4 million other retirees.	January 1962 coverage estimate approximately 17.5 million, of whom roughly 14.6 million are aged.

See footnotes at end of table, pp. 6 and 7.

PROPOSALS FOR OLDER PERSONS, 1961–62

Javits (S. 2664 as amended May 2, 1962)	Lindsay (H.R. 11253)	Bow (H.R. 10755)
The Method in Brief		
Uses Social Security financing, plus general revenue financing for uninsured aged who are subject to an income test unless past age 72. (Prior to amendment, all under 72 were subject to income test.) Beneficiary selects among (a) short-term benefits with no deductible, (b) longer-term benefits with deductibles or (c) payment of up to $100 toward premiums for approved private health insurance policy.	Uses Social Security financing and benefits, identical to King-Anderson, in combination with (1) a cash option for individuals having private insurance of specified requirements and (2) "Buying-in" for the Government plan benefits through a Kerr-Mills-type program for aged not eligible under Social Security.	Financed entirely from general revenues. Provides for an income tax credit (or certificate for purchasing insurance) of up to $125 a year for private medical insurance of specified types purchased by or on behalf of persons 65 and older.
Eligibility		
Persons 65 or over who are eligible for OASI benefits or who meet income test—i.e., have income of no more than $3,000 ($4,500 for a married couple)—or are age 72; but excludes anyone receiving "medical aid" under a federally supported assistance program.	Same as King-Anderson and in addition, would cover aged persons who meet State means tests and are brought in through State action.	Any person 65 and over who is a beneficiary of a qualified private insurance policy.
As amended, estimated to cover 16 million in mid-1963.[3]	Includes 15 million eligible for OASI or railroad retirement benefits in 1964 plus an unknown number who might be covered by States which "buy-in."	Potentially includes the total population 65 and over (17½ million as of 1963) but actually would be limited to those aged who are acceptable risks to private insurance carriers.

COMPARISON OF HEALTH INSURANCE

Administration bill Anderson (S. 909), King (H.R. 4222)	*McNamara (S. 65)	*Holland (H.R. 94) [1]
Benefits		
Hospitalization: Inpatient hospital services for up to *90* days per benefit period, with $10 per day deductible required for first 9 days, with a minimum deductible of $20. *Nursing Home:* Skilled nursing home services after transfer from a hospital, for up to *180* days per benefit period. *Maximum* on combination of hospital services and nursing home services: 150 units of service with one "unit" equalling 1 day of hospital service or 2 days of nursing home service. *Home Health Services:* Intermittent nursing care, therapy, and homemaker services for up to *240* visits a year. *Outpatient Hospital Diagnostic Services:* As required, but subject to $20 deductible for each diagnostic study. *Drugs:* All drugs used in hospital or nursing home.	*Hospitalization:* Inpatient hospital services for up to *90* days a year. *Nursing Home:* Skilled nursing home services after transfer from a hospital, for up to *180* days a year. *Home Health Services:* For up to *240* days a year. Includes therapy and homemaker services; medical social work, etc. *Maximum* on combination of hospital services, nursing home services and home health services: 90 units of service with 1 "unit" equalling 1 day of hospital service, 2 days of nursing home services or 2⅔ days of home health services. *Outpatient Diagnostic Services:* Necessary laboratory tests and X-rays in a hospital. *Drugs:* All drugs used in hospital; for outside hospital, a portion of such drugs when prescribed generically. Precise amount and kinds of coverage to be determined by Secretary of HEW, after study, and within actuarial limits. *Research:* Research and demonstration projects to improve quality and efficiency of health services.	*Hospitalization:* Inpatient hospital services for up to *60* days a year. *Nursing Home:* Skilled nursing home services after transfer from a hospital for up to *120* days minus the number of days of hospital services. *Surgical Services:* Full payment of fees for surgery provided in hospital, or for emergency or minor surgery in outpatient department of hospital or in doctor's office. *Drugs:* All drugs used in hospital.

See footnotes at end of table, pp. 6 and 7.

PROPOSALS FOR OLDER PERSONS, 1961–62

Javits (S. 2664 as amended May 2, 1962)	Lindsay (H.R. 11253)	Bow (H.R. 10755)
Benefits		
Eligible individuals may choose 1 of 3 options of which the first 2 are Government plans: (1) Preventive short-term illness benefits consisting, during the calendar year, of (a) 21 days of hospital care (except that the individual could request substitution of skilled nursing home services at a rate of 3 days for 1 day of hospital care); (b) physicians' services for 12 days; (c) up to $100 of ambulatory diagnostic laboratory or X-ray services; and (d) 24 days of organized home health care services; *OR* (2) Long-term and chronic illness benefits, providing payment of 80 percent of the cost in excess of $125 incurred by the beneficiary during the calendar year of (a) 120 days of hospital care; (b) surgical services provided in a hospital; (c) skilled nursing home services after transfer from a hospital; and (d) organized home health care services; *OR* (3) Payment to an insurance carrier of premiums up to $100 per year on a renewable private health insurance policy that provides benefits which the Secretary of HEW determines to be of a value not less than the value of benefits under options (1) or (2).	Eligible individuals have option between: (1) coverage under the "Government plan" which provides the same benefits as the King-Anderson bill; *OR* (2) monthly cash payment if covered by a qualified private health insurance policy or health benefits plan which has an actuarial value equal to that of the Government plan; (cash payment is to be $8 per month initially, but after 2 years of operation could be varied according to age to take account of adverse selection of risks against the Government plan). To qualify, a private health benefits plan must be "guaranteed renewable for life." A plan may qualify even though it has a range of benefits different from the Government plan so long as (a) its benefits in the categories covered by the Government plan have a value of at least 60 percent of the Government plan and (b) its benefits for all categories combined have an actuarial value at least equal to that of the Government plan. Beneficiary choosing option (2) may assign his cash payment to a carrier.	A tax credit (or certificate for purchasing insurance) up to $125 a year on a guaranteed renewable insurance policy, the minimum benefits of which are either of the following two options: (1) (a) Hospital room and board up to $12 per day, and up to $1,080 in a calendar year; (b) up to $120 in a calendar year for ancillary hospital charges; (c) convalescent hospital room and board up to $6 per day, and up to $186 in a calendar year, following confinement in a general hospital; and (d) surgical charges according to a fee schedule with a $300 maximum; *OR* (2) A plan with up to 25 percent coinsurance and subject to a deductible and lifetime maximum (either a deductible of not more than $100 in a calendar year with a lifetime maximum of not less than $5,000, or a deductible of not more than $200 in a calendar year with a lifetime maximum of not less than $10,000) which provides more extensive benefits of the type under option (1) plus physicians' and nurses' fees and drugs and related requirements.

COMPARISON OF HEALTH INSURANCE

Administration bill Anderson (S. 909), King (H.R. 4222)	*McNamara (S. 65)	*Holland (H.R. 94)[1]
Financing		
Increase of ¼ of 1 percent in social security tax for employees and employers (⅜ percent for self-employed) and increase in amount of earnings taxable from $4,800 to $5,000.[4]	(a) For Social Security eligibles, increase of ¼ of 1 percent in social security tax for employees and employers (⅜ percent for self-employed); additional increase of ⅛ of 1 percent in 1971. (b) General revenue financing of benefits for uninsured.[5]	Increase of ¼ of 1 percent in social security tax for employees and employers; ⅜ percent for self-employed.
Costs (First year)		
$1¼ billion.	$1.1 billion.	$1.4 billion.
Administration		
Under established Federal OASDI system, with States and accrediting bodies used in determining eligibility of providers to participate, etc. Providers could use nonprofit agents to represent them.	Generally same as King-Anderson. Secretary of HEW may use public agencies and nonprofit organizations for appropriate tasks.	Generally same as King-Anderson. Secretary of HEW may use nonprofit organizations for appropriate tasks.

*These bills were introduced early in 1961 before the most recent amendments to the Social Security Act. The estimates of the number of Social Security eligibles and of costs have not been revised to reflect these amendments; they are shown as originally developed in order to coincide with the financing provided in the bill.

[1] H.R. 94 is the same as the Forand bill (H.R. 4700) of the 86th Cong.

[2] The bill provides that Congress should take action as soon as possible to make available to railroad retirement and civil service annuitants a program under which they can obtain the same type of services as those made available to OASI beneficiaries.

[3] Prior to the amendment which eliminated the income test for persons eligible for OASI benefits, the sponsor's summary of the bill stated: "Out of an estimated 16 million persons 65 and over, 12.3 million would be eligible. Excluded are 2.2 million on old-age assistance; over 1 million have earnings over $3,000; and more than ½ million are covered under other Federal programs." The sponsor's estimate of costs based on the estimate of 12.3 million eligibles was $1¼ billion.

PROPOSALS FOR OLDER PERSONS, 1961–62

Javits (S. 2664 as amended May 2, 1962)	Lindsay (H.R. 11253)	Bow (H.R. 10755)
Financing		
(a) For Social Security eligibles, increase of ¼ of 1 percent in social security tax for employees and employers in 1963 (⅜ percent for self-employed); additional increase of ⅛ of 1 percent in 1972. (b) General revenue financing of benefits for uninsured.	(a) Same as King-Anderson for Social Security eligibles; (b) General revenues of States and Federal Government for uninsured; Federal share—55 to 85 percent of expenditures in State.	Financed from general revenues.
Costs (First year)		
As amended, estimated at $1.6 billion.[3]	Amount by which cost would exceed King-Anderson would depend on effect of option. Cost of buying in for uninsured could exceed cost of present Kerr-Mills programs.	If all qualify, total cost about $2.1 billion in 1963. Allowing for savings in public assistance funds and offset of medical deductions on tax returns, net cost could exceed $1¾ billion.
Administration		
States make payments for health services. Other functions Federal except as may be delegated to States.	Generally same as King-Anderson. State insurance commissioners would determine whether private insurance plans qualified under the option for cash payments toward premiums, and State agencies would determine if uninsured meet means tests.	Treasury Department would administer.

In relation to the estimates for the bill as originally introduced, however, it should be noted that the population 65 and over will be about 17½ million (not 16 million) in mid-1963 when the proposal would be effective. The amendment was not accompanied by the sponsor's estimate of coverage and costs. An estimate by the Department of Health, Education, and Welfare places the number of eligibles under the amended bill at about 16 million, and the annual rate of benefit outgo at about $1.6 billion, assuming no old-age assistance recipients eligible (estimates would be higher to the extent that States took advantage of this program rather than providing "medical aid" under the assistance programs).

[4] Administration has recommended increasing the taxable earnings base to $5,200 instead of $5,000. The tax resulting from the increase in earnings would also finance an increase in monthly benefits to the earners involved.

[5] Estimates developed at the time the bill was introduced indicated a cost for the noninsured of $290 million, part of which is already being spent; approximately $265 million in Federal funds is now expended for OAA, MAA, and other Federal medical programs for aged; net new cost estimated at about $25 million.

LIST OF HEALTH INSURANCE BILLS

Other health insurance bills introduced in the House of Representatives of the 87th Congress through May 10, 1962, are listed here, classified according to the Legislative Calendar of the Committee on Ways and Means:

Health insurance benefits for social security beneficiaries through OASI	Federal grants to States to provide health insurance for aged with limited incomes	Credit against income tax for medical care insurance premiums
H.R. 195—Ashley. 676—Gilbert. 1765—Dulski. 2407—Dingell. 2443—Roberts. 2518—Rabaut. 2762—Gilbert. 3448—Kowalski. 4111—Halpern. 4168—St. Germain. 4222—King. 4309—Dingell. 4313—Karsten. 4314—Machrowicz. 4315—Green (Pennsylvania). 4316—Ullman. 4447—McFall. 4534—Pucinski. 4921—O'Neill. 7793—Santangelo. 11390—Bennett (Michigan). 11641—Daniels.	H.R. 4731—Curtis (Massachusetts). H.R. 4766—Stafford. Calendar No. 1549

87TH CONGRESS
2D SESSION

H. R. 10606

IN THE SENATE OF THE UNITED STATES

JUNE 29, 1962

Ordered to lie on the table and to be printed

AMENDMENTS

Intended to be proposed by Mr. ANDERSON (for himself, Mr. HUMPHREY, Mr. DOUGLAS, Mr. JAVITS, Mr. MAGNUSON, Mr. PELL, Mr. HARTKE, Mr. CASE, Mr. BURDICK, Mr. MCCARTHY, Mr. MORSE, Mrs. NEUBERGER, Mr. ENGLE, Mr. MOSS, Mr. PASTORE, Mr. KUCHEL, Mr. LONG of Hawaii, Mr. JACKSON, Mr. LONG of Missouri, Mr. KEATING, Mr. COOPER, Mr. HART, Mr. RANDOLPH, Mr. METCALF, Mr. MCGEE, and Mr. CLARK) to the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes, viz:

On page 1, line 4, strike out "Public Welfare Amendments of 1962" and insert in lieu thereof "Public Welfare and Health Insurance Amendments of 1962".

On page 100, line 16, strike out "II" and insert in lieu thereof "III".

On page 100, line 18, strike out "201" and insert in lieu thereof "301".

On page 100, line 23, strike out "202" and insert in lieu thereof "302".

On page 100, betwen lines 15 and 16, insert the following:

"TITLE II—HEALTH BENEFITS

"FINDINGS AND DECLARATION OF PURPOSE

"SEC. 200. (a) The Congress hereby finds that (1) the heavy costs of hospital care and related health care are a grave threat to the security of aged individuals, (2) most of them are not able to qualify for and to afford private insurance adequately protecting them against such costs, (3) many of them are accordingly forced to apply for private or public aid, accentuating the financial difficulties of hospitals and private or public welfare agencies and the burdens on the general revenues, and (4) it is in the interest of the general welfare for financial burdens resulting from hospital services and related services required by these individuals to be met primarily through social insurance.

"(b) The purposes of this Act are (1) to provide aged individuals entitled to benefits under the old-age, survivors, and disability insurance system or the railroad retirement

system with basic protection against the costs of inpatient hospital services, and to provide, in addition, as an alternative to inpatient hospital care, protection against the costs of certain skilled nursing facility services, home health services, and outpatient hospital diagnostic services; to utilize social insurance for financing the protection so provided; to encourage, and make it possible for, such individuals to purchase protection against other health costs by providing in such basic social insurance protection a set of benefits which can easily be supplemented by a State, private insurance, or other methods; to assure adequate and prompt payment on behalf of these individuals to the providers of these services; and to do these things in a manner consistent with the dignity and self-respect of each individual, without interfering in any way with the free choice of physicians or other health personnel or facilities by the individual, and without the exercise of any Federal supervision or control over the practice of medicine by any doctor or over the manner in which medical services are provided by any hospital; and (2) to provide such basic protection, financed from general revenues, to those persons who are now age 65 or over or who will reach age 65 within the next several years and who are not eligible for benefits under the old-age, survivors, and disability insurance or railroad retirement systems.

"(c) It is hereby declared to be the policy of the Con-

gress that skilled nursing facility services for which payment may be made under this Act shall be utilized in lieu of inpatient hospital services where skilled nursing facility services would suffice in meeting the medical needs of the patient, and that home health services for which payment may be made under this Act shall be utilized in lieu of inpatient hospital or skilled nursing facility services where home health services would suffice.

"PART A—HEALTH INSURANCE BENEFITS FOR THE AGED

"BENEFITS

"Sec. 201. The Social Security Act is amended by adding after title XVI the following new title:

"'TITLE XVII—HEALTH INSURANCE BENEFITS FOR THE AGED

"'PROHIBITION AGAINST INTERFERENCE

"'SEC. 1701. (a) Nothing in this title shall be construed to authorize any Federal officer or employee to exercise any supervision or control over the practice of medicine or the manner in which medical services are provided, or over the selection, tenure, or compensation of any officer or employee of any hospital, skilled nursing facility, or home health agency; or to exercise any supervision or control over the administration or operation of any such hospital, facility, or agency.

"'(b) Nothing contained in this title shall be con-

strued to preclude any State from providing, or any individual from purchasing or otherwise securing, protection against the cost of health or medical care services in addition to those for which payment may be made under this title.

"'FREE CHOICE BY PATIENT

"'SEC. 1702. Any individual entitled to have payment made under this title for services furnished him may obtain inpatient hospital services, skilled nursing facility services, home health services, or outpatient hospital diagnostic services from any provider of services with which an agreement is in effect under this title and which undertakes to provide him such services.

"'DESCRIPTION OF SERVICES

"'SEC. 1703. For purposes of this title—

"'Inpatient Hospital Services

"'(a) The term "inpatient hospital services" means the following items and services furnished to an inpatient in a hospital and (except as provided in paragraph (3)) by such hospital—

"'(1) bed and board (subject, however, to the limitations in section 1709(c) and (d) on the amount which is payable with respect to certain accommodations),

"'(2) such nursing services and other related services, such use of hospital facilities, and such medical

social services as are customarily furnished by such hospital for the care and treatment of inpatients, and such drugs, biologicals, supplies, appliances, and equipment, for use in such hospital, as are customarily furnished by such hospital for the care and treatment of inpatients, and

"'(3) such other diagnostic or therapeutic items or services, furnished by the hospital or by others under arrangements with them made by the hospital, as are customarily furnished to inpatients either by such hospital or by others under such arrangements;

excluding, however—

"'(4) medical or surgical services provided by a physician, resident, or intern, except services provided in the field of pathology, radiology, physiatry, or anesthesiology, and except services provided in the hospital by an intern or a resident-in-training under a teaching program approved by the Council on Medical Education and Hospitals of the American Medical Association (or, in the case of an osteopathic hospital, approved by a recognized body approved for the purpose by the Secretary), and

"'(5) the services of a private-duty nurse.

"'Skilled Nursing Facility Services

"'(b) The term "skilled nursing facility services" means the following items and services furnished to an inpatient in a skilled nursing facility, after transfer from a hospital in which he was an inpatient, and (except as provided in paragraph (3)) by such skilled nursing facility—

"'(1) nursing care provided by or under the supervision of a registered professional nurse,

"'(2) bed and board in connection with the furnishing of such nursing care (subject, however, to the limitations in section 1709 (c) and (d) on the amount which is payable with respect to certain accommodations),

"'(3) physical, occupational, or speech therapy furnished by the skilled nursing facility or by others under arrangements with them made by the facility,

"'(4) medical social services,

"'(5) drugs, biologicals, supplies, appliances, and equipment which are furnished for use in such skilled nursing facility,

"'(6) medical services provided by an intern or resident-in-training of the hospital, with which the facility is affiliated or under common control, under a teach-

ing program of such hospital approved as provided in subsection (a) (4), and

"'(7) such other services necessary to the health of the patient as are generally provided by skilled nursing facilities;

excluding, however, any item or service if it would not be included under subsection (a) if furnished to an inpatient in a hospital.

"'HOME HEALTH SERVICES

"'(c) The term "home health services" means the following items and services, which are furnished to an individual, who is under the care of a physician, by a home health agency or by others under arrangements with them made by such agency, under a plan (for furnishing such items and services to such individual) established and periodically reviewed by a physician, which items and services are provided in a place of residence used as such individual's home—

"'(1) part-time or intermittent nursing care provided by or under the supervision of a registered professional nurse,

"'(2) physical, occupational, or speech therapy,

"'(3) medical social services,

"'(4) to the extent permitted in regulations, part-time or intermittent services of a home health aid,

"'(5) medical supplies (other than drugs and biologicals), and the use of medical appliances, while under such a plan, and

"'(6) in the case of a home health agency which is affiliated or under common control with a hospital, medical services provided by an intern or resident-in-training of such hospital, under a teaching program of such hospital approved as provided in subsection (a)(4);

excluding, however, any item or service if it would not be included under subsection (a) if furnished to an inpatient in a hospital.

"'Outpatient Hospital Diagnostic Services

"'(d) The term "outpatient hospital diagnostic services" means diagnostic services—

"'(1) which are furnished to an individual as an outpatient by a hospital or by others under arrangements with them made by a hospital, and

"'which are customarily furnished by such hospital (or by others under such arrangements) to its outpatients for the purpose of diagnostic study;

excluding, however—

"'(3) any item or service if it would not be included under subsection (a) if furnished to an inpatient in a hospital; and

"'(4) any service furnished under such arrangements unless (A) furnished in the hospital or in other facilities operated by or under the supervision of the hospital, and (B) in the case of professional services, furnished by or under the responsibility of members of the hospital medical staff acting as such members.

"'Drugs and Biologicals

"'(e) The term "drugs" and the term "biologicals", except for purposes of subsection (c) (5) of this section, include only such drugs and biologicals, respectively, as are included in the United States Pharmacopoeia, National Formulary, New and Non-Official Drugs, or Accepted Dental Remedies, or are approved by the pharmacy and drug therapeutics committee (or equivalent committee) of the medical staff of the hospital furnishing such drugs or biologicals (or of the hospital with which the skilled nursing facility furnishing such drugs or biologicals is affiliated or is under common control).

"'Arrangements for Certain Services

"'(f) As used in this section, the term "arrangements" is limited to arrangements under which receipt of payment by the hospital, skilled nursing facility, or home health agency (whether in its own right or as agent), as the case may be, with respect to services for which an individual is entitled to have payment made under this title, discharges the liability of such individual or any other person to pay for the services.

"'DEDUCTIBLE; DURATION OF SERVICES

"'Deductible

"'SEC. 1704. (a) (1) Payment for inpatient hospital services furnished an individual during any benefit period shall be reduced by a deduction equal to $20, or if greater, $10 multiplied by the number of days, not exceeding nine, for which he received such services in such period.

"'(2) Payment for outpatient hospital diagnostic services furnished an individual during any thirty-day period shall be reduced by a deduction equal to $20. For purposes of the preceding sentence, a thirty-day period for any individual is a period of thirty consecutive days beginning with the first day (not included in a previous such period) on which he is entitled to benefits under this title and on which outpatient hospital diagnostic services are furnished him.

" 'Duration of Services

" '(b) Payment under this title for services furnished any individual during a benefit period may not be made for—

" '(1) inpatient hospital services furnished to him during such period after such services have been furnished to him for ninety days during such period; or

" '(2) skilled nursing facility services furnished to him during such period after such services have been furnished to him for one hundred and eighty days during such period.

Payment under this title for inpatient hospital services or skilled nursing facility services furnished an individual during a benefit period may also not be made for any such services after one hundred and fifty units of services have been furnished to him in such period; and, for purposes of this sentence—

" '(3) a "unit of service" shall be equal to one day of inpatient hospital services or two days of skilled nursing facility services, and

" '(4) there shall not be counted any inpatient hospital services furnished in a benefit period for any days in excess of ninety days or any skilled nursing facility services furnished in a benefit period for any days in excess of one hundred and eighty.

For purposes of the preceding provisions of this subsection, inpatient hospital services or skilled nursing facility services shall be counted only if payment is or would, except for this subsection and except for the failure to comply with the procedural and other requirements of or under section 1709 (a) (1), be made with respect to such services under this title. Payment under this title for home health services furnished an individual during a calendar year may not be made for any such services after such services have been furnished him during two hundred and forty visits in such year.

"'Benefit Period

"'(c) For the purposes of this section, a "benefit period" with respect to any individual means a period of consecutive days—

"'(1) beginning with the first day (not included in a previous benefit period) (A) on which such individual is furnished inpatient hospital services or skilled nursing facility services and (B) which occurs in a month for which he is entitled to health insurance benefits under this title, and

"'(2) ending with the last day of the first ninety-day period thereafter during each day of which he is neither an inpatient in a hospital nor an inpatient in a skilled nursing facility.

"'Day

"'(d) For the purposes of this section, a "day" on or for which inpatient hospital services or skilled nursing facility services are furnished shall have the meaning customarily assigned to it by the hospital or skilled nursing facility furnishing such services, but in no event shall it be less than twenty-four hours (except the day on which such individual is admitted to, or discharged from, such hospital or such skilled nursing facility).

"'ENTITLEMENT TO BENEFITS

"'SEC. 1705. (a) Every individual who—

"'(1) has attained the age of sixty-five, and

"'(2) is entitled to monthly insurance benefits under section 202,

shall be entitled to health insurance benefits for each month for which he is entitled to such benefits under section 202, beginning with the first month with respect to which he meets the conditions specified in paragraphs (1) and (2). Notwithstanding the preceding provisions of this subsection, no payments may be made under this title for inpatient hospital services, outpatient hospital diagnostic services, or home health services furnished an individual prior to January 1, 1964, or for skilled nursing facility services furnished him prior to July 1, 1964.

"'(b) For the purposes of this section—

"'(1) entitlement of an individual to health insurance benefits under this title for a month shall consist of entitlement to have payment made under, and subject to the limitations in, this title on his behalf for inpatient hospital services, skilled nursing facility services, home health services, and outpatient hospital diagnostic services furnished him in the United States (as defined in section 210(i)) during such month; and

"'(2) an individual shall be deemed entitled to monthly insurance benefits under section 202 for the month in which he died if he would have been entitled to such benefits for such month had he died in the next month.

"'DEFINITIONS OF PROVIDERS OF SERVICES

"'SEC. 1706. For purposes of this title—

"'Hospital

"'(a) The term "hospital" (except for purposes of section 1704(c)(2), section 1709(f), paragraph (6) of this subsection, and so much of section 1703(b) as precedes paragraph (1) thereof) means an institution which—

"'(1) is primarily engaged in providing, by or under the supervision of physicians or surgeons, to inpatients (A) diagnostic services and therapeutic serv-

ices for surgical or medical diagnosis, treatment, and care of injured, disabled, or sick persons, or (B) rehabilitation facilities and services for the rehabilitation of injured, disabled, or sick persons,

"'(2) maintains clinical records on all patients,

"'(3) has bylaws in effect with respect to its staff of physicians,

"'(4) continuously provides twenty-four-hour nursing service rendered or supervised by a registered professional nurse,

"'(5) has in effect a hospital utilization review plan which meets the requirements of subsection (e),

"'(6) in the case of an institution in any State in which State or applicable local law provides for the licensing of hospitals, (A) is licensed pursuant to such law or (B) is approved, by the agency of such State responsible for licensing hospitals, as meeting the standards established for such licensing, and

"'(7) meets such other of the requirements prescribed for the accreditation of hospitals by the Joint Commission on the Accreditation of Hospitals, as the Secretary finds necessary in the interest of the health and safety of individuals who are furnished services by or in the institution.

For purposes of section 1704 (c) (2), such term includes any

institution which meets the requirements of paragraph (1) of this subsection. For purposes of section 1709(f) (including determination of whether an individual received inpatient hospital services for purposes of such section 1709(f)), and so much of section 1703(b) as precedes paragraph (1) thereof, such term includes any institution which meets the requirements of paragraphs (1), (2), (4), and (6) of this subsection. Notwithstanding the preceding provisions of this subsection, such term shall not, except for purposes of section 1704(c)(2), include any institution which is primarily for the care and treatment of tuberculosis or mentally ill patients.

"'Skilled Nursing Facility

"'(b) The term "skilled nursing facility" means (except for purposes of section 1704(c)(2)) an institution (or a distinct part of an institution) which is affiliated or under common control with a hospital having an agreement in effect under section 1710 and which—

"'(1) is primarily engaged in providing to inpatients (A) skilled nursing care and related services for patients who require planned medical or nursing care or (B) rehabilitation services,

"'(2) has policies, which are established by a group of professional personnel (associated with the fa-

cility), including one or more physicians and one or more registered professional nurses, to govern the skilled nursing care and related medical or other services it provides and which include a requirement that every patient must be under the care of a physician,

"'(3) has a physician, a registered professional nurse, or a medical staff responsible for the execution of such policies,

"'(4) maintains clinical records on all patients,

"'(5) continuously provides twenty-four-hour nursing service rendered or supervised by a registered professional nurse,

"'(6) operates under a utilization review plan, which has been made applicable to it under subsection (g), of the hospital with which it is affiliated or under common control,

"'(7) in the case of an institution in any State in which State or applicable local law provides for the licensing of institutions of this nature, (A) is licensed pursuant to such law, or (B) is approved, by the agency of such State responsible for licensing institutions of this nature, as meeting standards established for such licensing; and

"'(8) meets such other conditions of participation under this section as the Secretary may find necessary

in the interest of the health and safety of individuals who are furnished services by or in such institution; except that such term shall not (other than for purposes of section 1704(c)(2)) include any institution which is primarily for the care and treatment of tuberculosis or mentally ill patients. For purposes of section 1704(c)(2), such term includes any institution which meets the requirements of paragraph (1) of this subsection.

"'Home Health Agency

"'(c) The term "home health agency" means an agency which—

"'(1) is a public agency, or a private nonprofit organization exempt from Federal income taxation under section 501 of the Internal Revenue Code of 1954,

"'(2) is primarily engaged in providing skilled nursing services or other therapeutic services,

"'(3) has policies, established by a group of professional personnel (associated with the agency), including one or more physicians and one or more registered professional nurses, to govern the service (referred to in paragraph (2)) which it provides,

"'(4) maintains clinical records on all patients,

"'(5) in the case of an agency in any State in which State or local law provides for the licensing of agencies of this nature, (A) is licensed pursuant to

such law, or (B) is approved, by the agency of such State responsible for licensing agencies of this nature, as meeting standards established for such licensing, and

"'(6) meets such other conditions of participation as the Secretary may find necessary in the interest of the health and safety of individuals who are furnished services by such agency;

except that such terms shall not include any agency which is primarily for the care and treatment of tuberculosis or mentally ill patients.

"'Physician

"'(d) The term "physician" means an individual (including a physician within the meaning of section 1101(a)(7)) legally authorized to practice surgery or medicine by the State in which he performs the functions referred to in this title.

"'Utilization Review

"'(e) A utilization review plan of a hospital shall be deemed sufficient if it is applicable to services furnished by the institution to individuals entitled to benefits under this title and if it provides—

"'(1) for the review, on a sample or other basis, of admissions to the institution, the duration of stays therein, and the professional services furnished (A) with respect to the medical necessity of the services, and

(B) for the purpose of promoting the most efficient use of available health facilities and services;

"'(2) for such review to be made by either (A) a hospital staff committee composed of two or more physicians, with or without participation of other professional personnel, or (B) a group outside the hospital which is similarly composed;

"'(3) for such review, in each case in which inpatient hospital services are furnished to such individuals during a continuous period, as of the twenty-first day, and as of such subsequent days as may be specified in regulations, with such review to be made as promptly after such twenty-first or subsequent specified day as possible, and in no event later than one week following such day;

"'(4) for prompt notification to the institution, the individual, and his attending physician of any decision of the physician members of such committee or group that any further stay therein is not medically necessary.

The provisions of clause (A) of paragraph (2) shall not apply to any hospital where, because of the small size of the institution or for such other reason or reasons as may be included in regulations, it is impracticable for the institution to have a properly functioning staff committee for the purposes of this subsection.

" 'Provider of Services

" '(f) The term "provider of services" means a hospital, skilled nursing facility, or home health agency.

" 'Skilled Nursing Facilities Affiliated or Under Common Control With Hospitals

" '(g) A hospital and a skilled nursing facility shall be deemed to be affiliated or under common control if, by reason of a written agreement between them or by reason of a written undertaking by a person or body which controls both of them, there is reasonable assurance that—

" '(1) the facility will be operated under standards, with respect to—

" '(A) skilled nursing and related health services (other than physicians' services),

" '(B) a system of clinical records, and

" '(C) appropriate methods and procedures for the dispensing and administering of drugs and biologicals,

which are developed jointly by or are agreed to by the two institutions;

" '(2) timely transfer of patients will be effected between the hospital and the skilled nursing facility whenever such transfer is medically appropriate, and provision is made for the transfer or the joint use (to the

extent practicable) of clinical records of the two institutions; and

"'(3) the utilization review plan of the hospital will be extended to include review of admissions to, duration of stays in, and the professional services furnished in the skilled nursing facility and including review of such individual cases (and at such intervals) as may be specified in this title or in regulations thereunder, and with notice to the facility, the individual, and his attending physician in case of a finding that further skilled nursing facility services are not medically necessary.

"'USE OF STATE AGENCIES AND OTHER ORGANIZATIONS TO DEVELOP CONDITIONS OF PARTICIPATION FOR PROVIDERS OF SERVICE

"'SEC. 1707. In carrying out his functions, relating to determination of conditions of participation by providers of services, under section 1706(a)(7), section 1706(b)(8), or section 1706(c)(6), the Secretary shall consult with the Health Insurance Benefits Advisory Council established by section 1712, appropriate State agencies, and recognized national listing or accrediting bodies. Such conditions prescribed under any of such sections may be varied for different areas or different classes of institutions or agencies and may, at the request of a State, provide (subject to the limitation

provided in section 1706(a)(7)) higher requirements for such State than for other States.

"'USE OF STATE AGENCIES AND OTHERS ORGANIZATIONS TO DETERMINE COMPLIANCE BY PROVIDERS OF SERVICES WITH CONDITIONS OF PARTICIPATION

"'SEC. 1708. (a) The Secretary may, pursuant to agreement, utilize the services of State health agencies or other appropriate State agencies for the purposes of (1) determining whether an institution is a hospital or skilled nursing facility, or whether an agency is a home health agency, or (2) providing consultative services to institutions or agencies to assist them (A) to qualify as hospitals, skilled nursing facilities, or home health agencies, (B) to establish and maintain fiscal records necessary for purposes of this title, and (C) to provide information which may be necessary to permit determination under this title as to whether payments are due and the amounts thereof. To the extent that the Secretary finds it appropriate, an institution or agency which such a State agency certifies is a hospital, skilled nursing facility, or home health agency may be treated as such by the Secretary. The Secretary shall pay any such State agency, in advance or by way of reimbursement, as may be provided in the agreement with it (and may make adjustments in such payments on account of overpayments or underpayments previously made), for the reasonable cost of

performing the functions specified in the first sentence of this subsection, and for the fair share of the costs attributable to the planning and other efforts directed toward coordination of activities in carrying out its agreement and other activities related to the provision of services similar to those for which payment may be made under this title, or related to the facilities and personnel required for the provision of such services, or related to improving the quality of such services.

"'(b) (1) An institution shall be deemed to meet the conditions of participation under section 1706(a) (except paragraph (5) thereof) if such institution is accredited as a hospital by the Joint Commission on the Accreditation of Hospitals. If such Commission hereafter required a utilization review plan, or imposes another requirement which serves substantially the same purpose, as a condition for accreditation of a hospital, the Secretary is authorized to find that all institutions so accredited by the Commission comply also with section 1706(a) (5).

"'(2) If the Secretary finds that accreditation of an institution by a national accreditation body, other than the Joint Commission on the Accreditation of Hospitals, provides reasonable assurance that any or all of the conditions of section 1706(a), (b), or (c), as the case may be, are met, he may, to the extent he deems it appropriate, treat such insti-

tution as meeting the condition or conditions with respect to which he made such finding.

"'CONDITIONS OF AND LIMITATIONS ON PAYMENT FOR SERVICES

"'Requirement of Requests and Certifications

"'SEC. 1709. (a) Except as provided in subsection (f), payment for services furnished an individual may be made only to eligible providers of services and only if—

"'(1) written request, signed by such individual except in cases in which the Secretary finds it impractical for the individual to do so, is filed for such payment in such form, in such manner, within such time, and by such person or persons as the Secretary may by regulation prescribe;

"'(2) a physician certifies (and recertifies, where such services are furnished over a period of time, in such cases and with such frequency, appropriate to the case involved, as may be provided in regulations) that—

"'(A) in the case of inpatient hospital services, such services are or were required for such individual's medical treatment, or such services are or were required for inpatient diagnostic study;

"'(B) in the case of outpatient hospital diagnostic services, such services are or were required for diagnostic study;

"'(C) in the case of skilled nursing facility services, such services are or were required because the individual needed skilled nursing care on a continuing basis for any of the conditions with respect to which he was receiving inpatient hospital services prior to transfer to the skilled nursing facility or for a condition requiring such care which arose after such transfer and while he was still in the facility for treatment of the condition or conditions for which he was receiving such inpatient hospital services;

"'(D) in the case of home health services, such services are or were required because the individual needed skilled nursing care on an intermittent basis or because he needed physical or speech therapy; a plan for furnishing such services to such individual has been established and is periodically reviewed by a physician; and such services are or were furnished while the individual was under the care of a physician;

"'(3) with respect to inpatient hospital services or skilled nursing facility services furnished such individual after the twenty-first day of a continuous period of such services, there was not in effect, at the time of admission of such individual to the hospital, a decision under section 1710(e) (based on a finding that timely utili-

zation review of long-stay cases is not being made in such hospital or facility) ;

"'(4) with respect to inpatient hospital services or skilled nursing facility services furnished such individual during a continuous period, a finding has not been made pursuant to the system of utilization review that further inpatient hospital services or further skilled nursing facility services, as the case may be, are not medically necessary; except that, if such a finding has been made, payment may be made for such services furnished in such period before the fourth day after the day on which the hospital or skilled nursing facility, as the case may be, received notice of such finding.

"'Determination of Costs of Services

"'(b) The amount paid to any provider of services with respect to services for which payment may be made under this title shall be the reasonable cost of such services, as determined in accordance with regulations establishing the method or methods to be used in determining such costs for various types or classes of institutions, services, and agencies. In prescribing such regulations, the Secretary shall consider, among other things, the principles generally applied by national organizations (which have developed such principles) in computing the amount of payment, to be made

by persons other than the recipients of services, to providers of services on account of services furnished to such recipients by such providers. Such regulations may provide for payment on a per diem, per unit, per capita, or other basis, may provide for using different methods in different circumstances, and may provide for the use of estimates of costs of particular items or services.

"'Amount of Payment for More Expensive Services

"'(c) (1) In case the bed and board furnished as part of inpatient hospital services or skilled nursing facility services is in accommodations more expensive than two-, three-, or four-bed accommodations and the use of such more expensive accommodations rather than such two-, three-, or four-bed accommodations was not at the request of the patient, payment with respect to such services may not exceed an amount equal to the reasonable cost of such services if furnished in such two-, three-, or four-bed accommodations unless the more expensive accommodations were required for medical reasons.

"'(2) Where a provider of services with which an agreement under this title is in effect furnishes to an individual, at his request, items or services which are in excess of or more expensive than the items or services with respect to which payment may be made under this title, the Secre-

tary shall pay to such provider of services only the equivalent of the reasonable cost of the items or services with respect to which payment under this title may be made.

"'Amount of Payment Where Less Expensive Services Furnished

"'(d) In case the bed and board furnished as part of inpatient hospital services or skilled nursing facility services in accommodations other than, but not more expensive than, two–, three–, or four-bed accommodations and the use of such other accommodations rather than two–, three–, or four-bed accommodations was neither at the request of the patient nor for a reason which the Secretary determines is consistent with the purposes of this title, the amount of the payment with respect to such services under this title shall be the reasonable cost of such services minus the difference beween the charge customarily made by the hospital or skilled nursing facility for such services in two-, three-, or four-bed accommodations and the charge customarily made by it for such services in the accommodations furnished.

"'No Payments to Federal Providers of Services

"'(e) No payment may be made under this title (except under subsection (f) of this section) to any Federal provider of services, except a provider of services which the Secretary determines, in accordance with regulations, is providing services to the public generally as a community

institution or agency; and no such payment may be made to any provider of services for any item or service which such provider is obligated by a law of, or a contract with, the United States to render at public expense.

"'Payment for Emergency Inpatient Hospital Services

"'(f) Payments shall also be made to any hospital for inpatient hospital services or outpatient hospital diagnostic services furnished, by the hospital or under arrangements (as defined in section 1703(e)) with it, to an individual entitled to health insurance benefits under this title even though such hospital does not have an agreement in effect under this title if (A) such services were emergency services and (B) the Secretary would be required to make such payment if the hospital had such an agreement in effect and otherwise met the conditions of payment hereunder. Such payment shall be made only in amounts determined as provided in subsection (b) and then only if such hospital agrees to comply, with respect to the emergency services provided, with the provisions of section 1710(a).

"'Payment for Services Prior to Notification of Noneligibility

"'(g) Notwithstanding that an individual is not entitled to have payment made under this title for inpatient hospital services, skilled nursing facility services, home health services, or outpatient hospital diagnostic services fur-

nished by any provider of services, payment shall be made to such provider of services (unless such provider elects not to receive such payment or, if payment has already been made, refunds such payment within the time specified by the Secretary) for such services which are furnished to the individual prior to notification from the Secretary of his lack of entitlement if such payments are not otherwise precluded under this title and if such provider complies with the rules established hereunder with respect to such payments, has acted in good faith and without knowledge of such lack of entitlement, and has acted reasonably in assuming entitlement existed.

"'AGREEMENTS WITH PROVIDERS OF SERVICES

"'SEC. 1710. (a) Any provider of services shall be eligible for payments under this title if it files with the Secretary an agreement not to charge any individual or any other person for items or services for which such individual is entitled to have payment made under this title (or for which he would be so entitled if such provider had complied with the procedural and other requirements under or pursuant to this title or for which such provider is paid pursuant to the provisions of section 1709(g)), and to make adequate provision for return (or other disposition, in accordance with regulations) of any moneys incorrectly collected from such individual or other person, except that such

provider of services may charge such individual or other person the amount of any deduction imposed pursuant to section 1704 (a) with respect to such services (not in excess of the amount customarily charged for such services by such provider) and, where the provider of services has furnished, at the request of such individual, items or services which are in excess of or more expensive than the items or services with respect to which payment may be made under this title, such provider may also charge such individual or other person for such more expensive items or services but not more than the difference between the amount customarily charged by it for the items or services furnished at such request and the amount customarily charged by it for the items or services with respect to which payment may be made under this title.

"'(b) An agreement with the Secretary under this section may be terminated—

"'(1) by the provider of services at such time and upon such notice to the Secretary and the public as may be provided in regulations, except that the time such agreement is thereby required by the Secretary to continue in effect after such notice may not exceed six months after such notice, or

"'(2) by the Secretary at such time and upon such

notice to the provider of services and the public as may be specified in regulations, but only after the Secretary has determined, and has given such provider notification thereof, (A) that such provider of services is not complying substantially with the provisions of such agreement, or with the provisions of this title and regulations thereunder, or (B) that such provider no longer substantially meets the applicable provisions of section 1706, or (C) that such provider of services has failed to provide such information as the Secretary finds necessary to determine whether payments are or were due under this title and the amounts thereof, or has refused to permit such examination of its fiscal and other records by or on behalf of the Secretary as may be necessary to verify such information.

Any termination shall be applicable—

"'(3) in the case of inpatient hospital services or skilled nursing facility services, with respect to such services furnished to any individual who is admitted to the hospital or skilled nursing facility furnishing such services on or after the effective date of such termination,

"'(4) (A) with respect to home health services furnished to an individual under a plan therefor established on or after the effective date of such termination, or (B) if such plan is established before such effective

date, with respect to such services furnished to such individual after the calendar year in which such termination is effective, and

"'(5) with respect to outpatient hospital diagnostic services furnished on or after the effective date of such termination.

"'(c) Nothing in this title shall preclude any provider of services or any group or groups of such providers from being represented by an individual, association, or organization authorized by such provider or providers of services to act on their behalf in negotiating with respect to their participation under this title and the terms, methods, and amounts of payments for services to be provided thereunder.

"'(d) Where an agreement filed under this title by a provider of services has been terminated by the Secretary, such provider may not file another agreement under this title unless the Secretary finds that the reason for the termination has been removed and there is reasonable assurance that it will not recur.

"'(e) If the Secretary finds that timely review in accordance with section 1706(e) of long-stay cases in a hospital or skilled nursing facility is not being made with reasonable regularity, he may, in lieu of terminating his agreement with such hospital or facility, decide that, with respect to any individual admitted to such hospital or skilled nursing

facility after a date specified by him, no payment shall be made for inpatient hospital services or skilled nursing facility services after the twenty-first day of a continuous period of such services. Such decision may be made only after such notice to the hospital, or (in the case of a skilled nursing facility) to the hospital and the facility, and to the public as may be prescribed by regulations, and its effectiveness shall be rescinded when the Secretary finds that the reason therefor has been removed and there is reasonable assurance that it will not recur.

"'PAYMENT TO PROVIDERS OF SERVICES

"'SEC. 1711. The Secretary shall periodically determine the amount which should be paid to each provider of services under this title with respect to the services furnished by it, and the provider shall be paid, at such time or times as the Secretary believes appropriate and prior to audit or settlement by the General Accounting Office, from the Federal Health Insurance Trust Fund the amounts so determined; except that such amounts may be reduced or increased, as the case may be, by any sum by which the Secretary finds that the amount paid to such provider of services for any prior period was greater or less than the amount which should have been paid to it for such period.

"'HEALTH INSURANCE BENEFITS ADVISORY COUNCIL

"'SEC. 1712. For the purpose of advising the Secretary on matters of general policy in the administration of this title and in the formulation of regulations under this title, there is hereby created a Health Insurance Benefits Advisory Council which shall consist of fourteen persons, not otherwise in the employ of the United States, appointed by the Secretary without regard to the civil service laws. The Secretary shall from time to time appoint one of the members to serve as Chairman. Not less than four of the appointed members shall be persons who are outstanding in the fields pertaining to hospitals and health activities. Each appointed member shall hold office for a term of four years, except that any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term, and except that the terms of office of the members first taking office shall expire, as designated by the Secretary at the time of appointment, three at the end of the first year, four at the end of the second year, three at the end of the third year, and four at the end of the fourth year

after the date of appointment. An appointed member shall not be eligible to serve continuously for more than two terms. The Secretary may, at the request of the Council, appoint such special advisory or technical committees as may be useful in carrying out its functions. Appointed members of the Advisory Council and members of its advisory or technical committees, while attending meetings or conferences thereof or otherwise serving on business of the Advisory Council or of such a committee or committees, shall receive compensation at rates fixed by the Secretary, but not exceeding $100 per day, and while so serving away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5 of the Administrative Expenses Act of 1946 (5 U.S.C. 73b–2) for persons in the Government service employed intermittently. The Advisory Council shall meet as frequently as the Secretary deems necessary. Upon request of four or more members, it shall be the duty of the Secretary to call a meeting of the Advisory Council.

"'REVIEW OF DETERMINATIONS

"'SEC. 1713. Any individual dissatisfied with any determination made by the Secretary that he is not entitled to health insurance benefits under this title or that he is not entitled to have payment made under this title with respect

to any class of services furnished him, shall be entitled to a hearing thereon by the Secretary to the same extent as is provided in section 205 (b) with respect to decisions of the Secretary, and to judicial review of the Secretary's final decision after such hearing as is provided in section 205 (g).

"'OVERPAYMENTS TO INDIVIDUALS

"'SEC. 1714. (a) Any payment under this title to any provider of services with respect to inpatient hospital services, skilled nursing facility services, home health services, or outpatient hospital diagnostic services, furnished any individual shall be regarded as a payment to such individual.

"'(b) Where—

"'(1) more than the correct amount is paid under this title to a provider of services for services furnished an individual and the Secretary determines that, within such period as he may specify, the excess over the correct amount cannot be recouped from such provider of services, or

"'(2) any payment has been made under section 1709 (g) to a provider of services for services furnished an individual,

proper adjustments shall be made, under regulations prescribed by the Secretary, by decreasing subsequent payments—

"'(3) to which such individual is entitled under title II, or

"'(4) if such individual dies before such adjustment has been completed, to which any other individual is entitled under title II with respect to the wages and self-employment income which were the basis of benefits of such deceased individual under such title.

"'(c) There shall be no adjustment as provided in subsection (b) (nor shall there be recovery) in any case where the incorrect payment has been made (including payments under section 1709(g)) for services furnished to an individual who is without fault and where such adjustment (or recovery) would defeat the purposes of title II or would be against equity and good conscience.

"'(d) No certifying or disbursing officer shall be held liable for any amount certified or paid by him to any provider of services where the adjustment or recovery of such amount is waived under subsection (c) or where adjustment under subsection (b) is not completed prior to the death of all persons against whose benefits such adjustment is authorized.

"'USE OF PRIVATE ORGANIZATIONS TO FACILITATE PAYMENT TO PROVIDERS OF SERVICE

"'SEC. 1715. (a) The Secretary is authorized to enter into an agreement with any organization, which has been designated by any group of providers of services, or by an association of such providers on behalf of its members, to receive payments under section 1711 on behalf of such providers, providing for the determination by such organization (subject to such review by the Secretary as may be provided for in the agreement) of the amount of payments required pursuant to this title to be made to such providers, and for making such payments. The Secretary shall not enter into an agreement with any organization under this section unless he finds it consistent with effective and efficient administration of this title.

"'(b) To the extent that the Secretary finds that performance of any of the following functions by an organization with which he has entered into an agreement under subsection (a) will be advantageous and will promote the efficient administration of this title, he may also include in

the agreement provision that the organization shall (with respect to providers of services which are to receive payments through the organization)

"'(1) serve as a center for, and communicate to providers, any information or instructions furnished to it by the Secretary, and serve as a channel of communication from providers to the Secretary;

"'(2) make such audits of the records of provider as may be necessary to insure that proper payments are made under this title;

"'(3) assist in the application of safeguards against unnecessary utilization of services furnished by providers to individuals entitled to have payment made under section 1711;

"'(4) perform such other duties as are necessary to carry out the functions specified in subsection (a) and this subsection.

"'(c) An agreement with any organization under this section may contain such terms and conditions as the Secretary finds necessary or appropriate, and may provide for advances of funds to the organization for the making of payments by it under subsection (a) and shall provide for payment of the reasonable cost of administration of the organization as determined by the Secretary to be necessary

and proper for carrying out the functions covered by the agreement.

"'(d) If the designation of an organization as provided in this section is made by an association of providers of services, it shall not be binding on members of the association which notify the Secretary of their election to that effect. Any provider may, upon such notice as may be specified in the agreement with an organization, withdraw his designation to receive payments through such organization and any provider who has not designated an organization may elect to receive payments from an organization which has entered into agreement with the Secretary under this section, if the Secretary and the organization agree to it.

"'(e) An agreement with the Secretary under this section may be terminated—

"'(1) by the organization entering into such agreement at such time and upon such notice to the Secretary, to the public, and to the providers as may be provided in regulations, or

"'(2) by the Secretary at such time and upon such notice to the organization, and to the providers which have designated it for purposes of this section, as may be provided in regulations, but only if he finds, after reasonable notice and opportunity for hearing to the

organization, that (A) the organization has failed substantially to carry out the agreement, or (B) the continuation of some or all of the functions provided for in the agreement with the organization is disadvantageous or is inconsistent with efficient administration of this title.

"'(f) An agreement with an organization under this subsection may require any of its officers or employees certifying payments or disbursing funds pursuant to the agreement, or otherwise participating in carrying out the agreement, to give surety bond to the United States in such amount as the Secretary may deem appropriate, and may provide for the payment of the charges for such bond from the Federal Health Insurance Trust Fund.

"'(g) (1) No individual designated pursuant to an agreement under this section as a certifying officer shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to any payments certified by him under this section.

"'(2) No disbursing officer shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to any payment by him under this section if it was based upon a voucher signed by a certifying officer designated as provided in paragraph (1) of this subsection.

"'OPTION TO BENEFICIARIES TO CONTINUE PRIVATE HEALTH INSURANCE PROTECTION

"'SEC. 1716. (a) In lieu of paying a provider of services under an agreement under this title, payments may be made to an eligible carrier under an approved plan with respect to services which are furnished by such provider of services to any individual entitled to health insurance benefits (hereinafter in this section referred to as an "eligible individual") and for which payment would otherwise be made under the preceding provisions of this title (hereinafter in this section referred to as "reimbursable health services"), if such individual elects to have payment for such services made to such carrier.

"'(b) (1) An individual may make an election under subsection (a) with respect to the plan of an eligible carrier only if he was covered by a plan of such carrier (or an affiliate thereof), providing or paying for the costs of inpatient hospital services, skilled nursing facility services, home health services, and outpatient hospital diagnostic services which are subject to no greater limitations and deductibles than are provided in section 1704, and providing or paying for the costs of some additional health services, continuously during whichever of the following periods is the shorter—

"'(A) a period of not less than five years ending

with the close of the month in which such individual becomes entitled to health insurance benefits, or

"'(B) (i) if the month in which such individual becomes entitled to health insurance benefits is January, February, or March of 1964, a period of not less than ninety days ending with the close of the month before such month, or (ii) if the month in which he becomes so entitled is April 1964 or a subsequent month, the period beginning January 1, 1964, and ending with the close of the month before such month in which he becomes so entitled.

"'(2) An election may be made under subsection (a) in such manner and within such period after an individual becomes entitled to health insurance benefits, but in no event more than three months after the month in which he becomes so entitled, as the Secretary may prescribe; and an individual shall be permitted only one such election. An election so made may be revoked at such time or times and in such manner as may be so prescribed.

"'(c) To be approved with respect to any eligible individual, a plan must—

"'(1) include (A) provision of all reimbursable health services or payment to providers of services for the cost of all reimbursable health services furnished by them (as provided in subsection (d) (3)), and (B)

provision of or payment for the cost of some additional health services; and

"'(2) provide for adequate notice to the Secretary and to such individual of termination of such individual's coverage under such plan.

"'(d) A carrier shall be eligible for purposes of this section if it—

"'(1) (A) is exempt from income tax under section 501(c) of the Internal Revenue Code of 1954, and is licensed in the State with respect to which it requests approval hereunder to provide or pay for the costs of reimbursable health services, or

"'(B) (i) is licensed in the fifty States and the District of Columbia to issue health insurance and, in the most recent year for which data are available, has made health insurance benefit payments aggregating at least 1 percent of all such payments in the fifty States and the District of Columbia, or (ii) is determined by the Secretary to be national in scope, or

"'(C) is licensed to issue health insurance in the State with respect to which it requests approval hereunder and, in the most recent year for which data are available, has made health insurance benefit payments aggregating at least 10 percent of such payments in such State, or

"'(D) in the case of a carrier which is not included in subparagraph (A), (B), or (C), is licensed to issue group health insurance in the State with respect to which it requests approval hereunder (but in such case it shall be eligible only with respect to such group health insurance);

"'(2) agrees to provide the Secretary, on request, such reports as may reasonably be necessary to enable him to determine the amounts due, under any plan with respect to which an election has been made under this section, on account of reimbursable health services and the administrative expenses of the carrier in connection therewith, and to permit such access by the Secretary to the records on which such reports are based as may be necessary to enable him to determine the accuracy of such reports; and

"'(3) agrees to make payments for reimbursable health services to providers of services in the same amounts, under the same conditions, and subject to the same limitations as are applicable in the case of such services for which payments are made under the preceding sections of this title.

"'(e) An eligible carrier shall be paid from time to time amounts equal to the payments made or the costs of services provided by it under approved plans for reim-

bursable health services and, in addition, such amounts as the Secretary finds to be the administrative costs of such carrier reasonably necessary to the provision of or payment for the cost of reimbursable health services under an approved plan for eligible individuals.

"'REGULATIONS

"'SEC. 1717. When used in this title, the term "regulations" means, unless the context otherwise requires, regulations prescribed by the Secretary.

"'APPLICATION OF CERTAIN PROVISIONS OF TITLE II

"'SEC. 1718. The provisions of sections 206, 208, and 216(j), and of subsections (a), (d), (e), (f), and (h) of section 205 shall also apply with respect to this title to the same extent as they are applicable with respect to title II.

"'DESIGNATION OF ORGANIZATION OR PUBLICATION BY NAME

"'SEC. 1719. Designation in this title, by name, of any nongovernmental organization or publication shall not be affected by change of name of such organization or publication, and shall apply to any successor organization or publication which the Secretary finds serves the purpose for which such designation is made.'

"FEDERAL HEALTH INSURANCE TRUST FUND

"SEC. 202. (a) Section 201 of the Social Security Act is amended by redesignating subsections (c), (d), (e),

(f), (g), and (h) as subsections (d), (e), (f), (g), (h), and (i), respectively, and by adding after subsection (b) the following new subsection:

"'(c) There is hereby created on the books of the Treasury of the United States a trust fund to be known as the "Federal Health Insurance Trust Fund". The Federal Health Insurance Trust Fund shall consist of such amounts as may be appropriated to, or deposited in, such fund as provided in this section. There is hereby appropriated to the Federal Health Insurance Trust Fund for the fiscal year ending June 30, 1963, and for each fiscal year thereafter, out of any moneys in the Treasury not otherwise appropriated, amounts equivalent to 100 per centum of—

"'(1) (A) 0.18 of 1 per centum of the wages (as defined in section 3121 of the Internal Revenue Code of 1954) paid after December 31, 1962, and before January 1, 1964, and reported to the Secretary of the Treasury or his delegate pursuant to subtitle F of the Internal Revenue Code of 1954, which wages shall be certified by the Secretary of Health, Education, and Welfare on the basis of the records of wages established and maintained by such Secretary in accordance with such reports; and

"'(B) 0.68 of 1 per centum of the wages (as defined in section 3121 of the Internal Revenue Code of

1954) paid after December 31, 1963, and reported to the Secretary of the Treasury or his delegate pursuant to subtitle F of the Internal Revenue Code of 1954, which wages shall be certified by the Secretary of Health, Education, and Welfare on the basis of the records of wages established and maintained by such Secretary in accordance with such reports; and

"'(2) (A) 0.135 of 1 per centum of the amount of self-employment income (as defined in section 1402 of the Internal Revenue Code of 1954) reported to the Secretary of the Treasury or his delegate on tax returns under subtitle F of the Internal Revenue Code of 1954 for any taxable year beginning after December 31, 1962, and before January 1, 1964, which self-employment income shall be certified by the Secretary of Health, Education, and Welfare on the basis of the records of self-employment income established and maintained by the Secretary of Health, Education, and Welfare in accordance with such returns; and

"'(B) 0.51 of 1 per centum of the amount of self-employment income (as defined in section 1402 of the Internal Revenue Code of 1954) reported to the Secretary of the Treasury or his delegate on tax returns under subtitle F of the Internal Revenue Code of 1954 for any taxable year beginning after December 31, 1963,

which self-employment income shall be certified by the Secretary of Health, Education, and Welfare on the basis of the records of self-employment income established and maintained by the Secretary of Health, Education, and Welfare in accordance with such returns.'

"(b) The first sentence of the subsection of such section 201 herein redesignated as subsection (d) is amended by striking out 'and the Federal Disability Insurance Trust Fund' and inserting in lieu thereof ', the Federal Disability Insurance Trust Fund, and the Federal Health Insurance Trust Fund'.

"(c) Paragraph (1) of the subsection of such section 201 herein redesignated as subsection (h) is amended by striking out 'titles II and VIII' and 'this title' wherever they appear and inserting in lieu thereof 'this title and title XVII'.

"(d) The last sentence of paragraph (2) of such subsection is amended by striking out 'and clause (1) of subsection (b)' and inserting in lieu thereof ', clause (1) of subsection (b), and clause (1) of subsection (c)'.

"(e) The subsection of such section herein redesignated as subsection (i) is amended by adding at the end thereof the following new sentence: 'Payments required to be made under title XVII shall be made only from the Federal Health Insurance Trust Fund.'

"(f) Section 218(h)(1) of such Act is amended by striking out 'and (b)(1)' and inserting in lieu thereof ', (b)(1), and (c)(1)'.

"(g) Section 221(e) of such Act is amended—

"(A) by striking out 'Trust Funds' wherever that appears and inserting in lieu thereof 'Trust Funds (except the Federal Health Insurance Trust Fund)':

"(B) by striking out 'subsection (g) of section 201' and inserting in lieu thereof 'subsection (h) of section 201'; and

"(C) by inserting 'under this title' before the period at the end thereof.

"(h) Section 1106(b) of such Act is amended by striking out 'and the Federal Disability Insurance Trust Fund' and inserting in lieu thereof ', the Federal Disability Insurance Trust Fund, and the Federal Health Insurance Trust Fund'.

"INCREASE IN EARNINGS BASE

"Definition of Wages

"SEC. 203. (a)(1) Paragraph (3) of section 209(a) of the Social Security Act is amended by inserting 'and prior to 1963' after '1958'.

"(2) Such section 209(a) is further amended by adding at the end thereof the following new paragraph:

"'(4) That part of remuneration which, after re-

muneration (other than remuneration referred to in the succeeding subsections of this section) equal to $5,200 with respect to employment has been paid to an individual during any calendar year after 1962, is paid to such individual during such calendar year;'.

"Definition of Self-employment Income

"(b) (1) Subparagraph (C) of section 211 (b) (1) of such Act is amended by inserting 'and prior to 1963' after '1958'; and by striking out '; or' and inserting in lieu thereof '; and'.

"(2) Such section 211 (b) (1) is further amended by adding at the end thereof the following new subparagraph:

"'(D) For any taxable year ending after 1962, (i) $5,200, minus (ii) the amount of wages paid to such individual during the taxable year; or'.

"Definitions of Quarter and Quarter of Coverage

"(c) (1) Clause (ii) of section 213 (a) (2) of such Act is amended by striking out '1958' and inserting in lieu thereof '1958 and before 1963, or $5,200 in the case of a calendar year after 1962'.

"(2) Clause (iii) of section 213 (a) (2) of such Act is amended by striking out '1958' and inserting in lieu thereof '1958 and before 1963, or $5,200 in the case of a taxable year ending after 1962'.

"Table for Determining Primary Insurance Amount

"(d) (1) The table in section 215(a) of such Act is amended by striking out all the figures in columns II, III, IV, and V beginning with the line which reads

"'101.50	102.30	315	319	109	254.00'

and down through the line which reads

		"'399	400	127	254.00'

and inserting in lieu thereof the following:

"'101.50	102.30	315	319	109	255.20
102.40	103.20	320	323	110	258.40
103.30	104.20	324	328	111	262.40
104.30	105.10	329	333	112	266.40
105.20	106.00	334	337	113	268.00
106.10	107.00	338	342	114	268.00
107.10	107.90	343	347	115	268.00
108.00	108.50	348	351	116	268.00
		352	356	117	268.00
		357	361	118	268.00
		362	365	119	268.00
		366	370	120	268.00
		371	375	121	268.00
		376	379	122	268.00
		380	384	123	268.00
		385	389	124	268.00
		390	393	125	268.00
		394	398	126	268.00
		399	403	127	268.00
		404	407	128	268.00
		408	412	129	268.00
		413	417	130	268.00
		418	421	131	268.00
		422	426	132	268.00
		427	431	133	268.00
		432	433	134	268.00

"(2) The amendment made by paragraph (1) shall be applicable with respect to monthly insurance benefits under title II of such Act for months after December 1962 and with respect to lump-sum death payments in the case of deaths after December 1962.

"Average Monthly Wage

"(e) Paragraph (1) of section 215(e) of such Act is amended by striking out 'and the excess over $4,800 in the

case of any calendar year after 1958' and inserting in lieu thereof 'the excess over $4,800 in the case of any calendar year after 1958 and before 1963, and the excess over $5,200 in the case of a calendar year after 1962'.

"TECHNICAL AMENDMENTS

"Suspension in Case of Aliens

"SEC. 204. (a) Subsection (t) of section 202 of such Act is amended by adding at the end thereof the following new paragraph:

"'(9) No payments shall be made under title XVII with respect to services furnished to an individual in any month for which the prohibition in paragraph (1) against payment of benefits to him is applicable (or would be if he were entitled to any such benefits).'

"Persons Convicted of Subversive Activities

"(b) Subsection (u) of such section is amended by striking out 'and' before the phrase 'in determining the amount of any such benefit payable to such individual for any such month,' and inserting after such phrase 'and in determining whether such individual is entitled to health insurance benefits under title XVII for any such month,'.

"Advisory Council on Social Security Financing

"(c) (1) Subsection (a) of section 116 of the Social Security Amendments of 1956 is amended by striking out

'and of the Federal Disability Insurance Trust Fund' and inserting in lieu thereof ', of the Federal Disability Insurance Trust Fund, and of the Federal Health Insurance Trust Fund'. Such subsection is further amended by inserting before the period at the end thereof 'and the health insurance benefits program'.

"(2) Subsection (d) of such section is amended by striking out 'and the Federal Disability Insurance Trust Fund' and inserting in lieu thereof ', the Federal Disability Insurance Trust Fund, and the Federal Health Insurance Trust Fund'.

"(3) Subsection (f) of such section is amended by striking out ', the adequacy of benefits under the program, and all other aspects of the program' and inserting in lieu thereof 'and the health insurance benefits program, the adequacy of benefits under the program, and all other aspects of the program'.

"PART B—AMENDMENTS TO THE INTERNAL REVENUE CODE OF 1954

"CHANGES IN TAX SCHEDULES

"Self-Employment Income Tax

"SEC. 211. (a) Section 1401 of the Internal Revenue Code of 1954 (relating to the rate of tax on self-employment income) is amended to read as follows:

"'SEC. 1401. RATE OF TAX.

"'In addition to other taxes, there shall be imposed for each taxable year, on the self-employment income of every individual, a tax as follows—

"'(1) in the case of any taxable year beginning after December 31, 1962, and before January 1, 1964, the tax shall be equal to 5.4 percent of the amount of the self-employment income for such taxable year;

"'(2) in the case of any taxable year beginning after December 31, 1963, and before January 1, 1966, the tax shall be equal to 5.8 percent of the amount of the self-employment income for such taxable year;

"'(3) in the case of any taxable year beginning after December 31, 1965, and before January 1, 1968, the tax shall be equal to 6.6 percent of the amount of the self-employment income for such taxable year; and

"'(4) in the case of any taxable year beginning after December 31, 1967, the tax shall be equal to 7.3 percent of the amount of the self-employment income for such taxable year.'

"Tax on Employees

"(b) Section 3101 of such Code (relating to rate of tax on employees under the Federal Insurance Contributions Act) is amended to read as follows:

"'SEC. 3101. RATE OF TAX.

"'In addition to other taxes, there is hereby imposed on the income of every individual a tax equal to the following percentages of the wages (as defined in section 3121(a)) received by him with respect to employment (as defined in section 3121(b))—

"'(1) with respect to wages received during the calendar year 1963, the rate shall be $3\frac{5}{8}$ percent;

"'(2) with respect to wages received during the calendar years 1964 and 1965, the rate shall be $3\frac{7}{8}$ percent;

"'(3) with respect to wages received during the calendar years 1966 and 1967, the rate shall be $4\frac{3}{8}$ percent; and

"'(4) with respect to wages received after December 31, 1967, the rate shall be $4\frac{7}{8}$ percent.'

"Tax on Employers

"(c) Section 3111 of such Code (relating to rate of tax on employers under the Federal Insurance Contributions Act) is amended to read as follows:

"'SEC. 3111. RATE OF TAX.

"'In addition to other taxes, there is hereby imposed on every employer an excise tax, with respect to having individuals in his employ, equal to the following percentages of

the wages (as defined in section 3121 (a)) paid by him with respect to employment (as defined in section 3121 (b))—

"'(1) with respect to wages paid during the calendar year 1963, the rate shall be $3\frac{5}{8}$ percent;

"'(2) with respect to wages paid during the calendar years 1964 and 1965, the rate shall be $3\frac{7}{8}$ percent;

"'(3) with respect to wages paid during the calendar years 1966 and 1967, the rate shall be $4\frac{3}{8}$ percent; and

"'(4) with respect to wages paid after December 31, 1967, the rate shall be $4\frac{7}{8}$ percent.'

"Effective Dates

"(d) The amendment made by subsection (a) shall apply with respect to taxable years beginning after December 31, 1962. The amendments made by subsections (b) and (c) shall apply with respect to remuneration paid after December 31, 1962.

"INCREASE IN TAX BASE

"Definition of Self-Employment Income

SEC. 212. (a) (1) Subparagraph (C) of section 1402 (b) (1) of the Internal Revenue Code of 1954 is amended by adding 'and before 1963' after '1958'; and by striking out 'or' and inserting in lieu thereof 'and'.

"(2) Such section 1402 (b) (1) is further amended by adding at the end thereof the following new subparagraph:

"'(D) for any taxable year ending after 1962, (i) $5,200, minus (ii) the amount of the wages paid to such individual during the taxable year; or'.

"Definition of Wages

"(b) Section 3121(a)(1) of such Code is amended by striking out '$4,800' wherever it appears and inserting in lieu thereof '$5,200'.

"Federal Service

"(c) Section 3122 of such Code is amended by striking out '$4,800' and inserting in lieu thereof '$5,200'.

"Returns in the Case of Governmental Employees in Guam and American Samoa

"(d) Section 3125 of such Code is amended by striking out '$4,800' wherever it appears and inserting in lieu thereof '$5,200'.

"Special Refunds of Employment Taxes

"(e)(1) Section 6413(c)(1) of such Code is amended—

"(A) by inserting 'and prior to the calendar year 1963' after 'the calendar year 1958';

"(B) by inserting 'or (C) during any calendar year after the calendar year 1962, the wages received by him during such year exceed $5,200,' after 'exceed $4,800,'; and

"(C) by inserting before the period at the end thereof 'and before 1963, or which exceeds the tax with respect to the first $5,200 of such wages received in such calendar year after 1962'.

"(2) Section 6413 (c) (2) (A) of such Code is amended by striking out 'or $4,800 for any calendar year after 1958' and inserting in lieu thereof '$4,800 for the calendar year 1959, 1960, 1961, or 1962, or $5,200 for any calendar year after 1962'.

"Effective Date

"(f) The amendments made by subsections (b), (c), and (d) shall be applicable with respect to remuneration paid after 1962.

"TECHNICAL AMENDMENT

"SEC. 213. Section 3121 (l) (6) of the Internal Revenue Code of 1954 is amended by striking out 'and the Federal Disability Insurance Trust Fund,' and inserting in lieu thereof ', the Federal Disability Insurance Trust Fund, and the Federal Health Insurance Trust Fund,'. The amendment made by this section shall be effective January 1, 1963.

"PART C—RAILROAD RETIREMENT AMENDMENTS

"Health Insurance Benefits for the Aged

"SEC. 221. (a) The Railroad Retirement Act of 1937 is amended by adding after section 20 of such Act the following new section:

" 'Health Insurance Benefits for the Aged

" 'SEC. 21. (a) For the purposes of this section, and subject to the conditions hereinafter provided, the Board shall have the same authority to determine the rights of individuals described in subsection (b) of this section to have payments made on their behalf for health insurance benefits consisting of inpatient hospital services, skilled nursing facility services, home health services, and outpatient hospital diagnostic services within the meaning of title XVII of the Social Security Act as the Secretary of Health, Education, and Welfare has under such title XVII with respect to individuals to whom such title applies. The rights of individuals described in subsection (b) of this section to have payment made on their behalf for the services referred to in the next preceding sentence shall be the same as those of individuals to whom title XVII of the Social Security Act applies and this section shall be administered by the Board as if the provisions of such title XVII were applicable, references to the Secretary of Health, Education, and Welfare were to the Board, references to the Federal Social Insurance Trust Fund were to the Railroad Retirement Account, references to the United States or a State included Canada or a subdivision thereof, and the provisions of sections 1707 and 1712 of such title XVII were not included in such title. For purposes of section 11, a determination with respect to the

rights of an individual under this section shall, except in the case of a provider of services, be considered to be a decision with respect to an annuity.

"'(b) Except as otherwise provided in this section, every individual who—

"'(A) has attained age sixty-five and

"'(B) (i) is entitled to an annuity, or (ii) would be entitled to an annuity had he ceased compensated service and, in the case of a spouse, had such spouse's husband or wife ceased compensated service, or (iii) had been awarded a pension under section 6, or (iv) bears a relationship to an employee which, by reason of section 3 (e), has been, or would be, taken into account in calculating the amount of an annuity of such employee or his survivor,

shall be entitled to have payment made for the services referred to in subsection (a), and in accordance with the provisions of such subsection. The payments for services herein provided for shall be made from the Railroad Retirement Account (in accordance with, and subject to, the conditions applicable under section 10 (b) in making payment of other benefits) to the hospital, skilled nursing facility, or home health agency providing such services, including such services provided in Canada to individuals to whom this subsection applies but only to the extent that the amount of

payments for services otherwise hereunder provided for an individual exceeds the amount payable for like services provided pursuant to the law in effect in the place in Canada where such services are furnished.

"'(c) No individual shall be entitled to have payment made for the same services, which are provided for in this section, under both this section and title XVII of the Social Security Act, and no individual shall be entitled to have payment made under both this section and such title XVII for more than ninety days of inpatient hospital services or more than one hundred and eighty days of skilled nursing facility services or more than one hundred and fifty units of such services during any benefit period, or more than two hundred and forty visits in any calendar year in which home health services are furnished. In any case in which an individual would, but for the preceding sentence, be entitled to have payment for such services made under both this section and such title XVII, payment for such services to which such individual is entitled shall be made in accordance with the procedures established pursuant to the next succeeding sentence, upon certification by the Board or by the Secretary of Health, Education, and Welfare. It shall be the duty of the Board and such Secretary with respect to such cases jointly to establish procedures designed to minimize duplications of requests for payment for services and determina-

tions and to assign administrative functions between them so as to promote the greatest facility, efficiency, and consistency of administration of this section and title XVII of the Social Security Act; and, subject to the provisions of this subsection to assure that the rights of individuals under this section or title XVII of the Social Security Act shall not be impaired or diminished by reason of the administration of this section and title XVII of the Social Security Act. The procedures so established may be included in regulations issued by the Board and by the Secretary of Health, Education, and Welfare to implement this section and such title XVII, respectively.

"'(d) Any agreement entered into by the Secretary of Health, Education, and Welfare pursuant to title XVII of the Social Security Act shall be entered into on behalf of both such Secretary and the Board. The preceding sentence shall not be construed to limit the authority of the Board to enter on its own behalf into any such agreement relating to services provided in Canada or in any facility devoted primarily to railroad employees.

"'(e) A request for payment for services filed under this section shall be deemed to be a request for payment for services filed as of the same time under title XVII of the Social Security Act, and a request for payment for services

filed under such title shall be deemed to be a request for payment for services filed as of the same time under this section.

"'(f) The Board and the Secretary of Health, Education, and Welfare shall furnish each other with such information, records, and documents as may be considered necessary to the administration of this section or title XVII of the Social Security Act.'

"Amendment Preserving Relationship Between Railroad Retirement and Old-Age, Survivors, Disability, and Health Insurance Systems

"(b) Section (1) (q) of such Act is amended by striking out '1961' and inserting in lieu thereof '1962'.

"Financial Interchange Between Railroad Retirement Account and Federal Health Insurance Trust Fund

"(c) (1) Section 5 (k) (2) of such Act is amended—

"(A) by striking out subparagraphs (A) and (B) and redesignating subparagraphs (C), (D), and (E) as subparagraphs (A), (B), and (C), respectively:

"(B) by striking out the second sentence and the last sentence of the subparagraph redesignated as subparagraph (A) by subparagraph (A) of this paragraph;

"(C) by adding at the end of the subparagraph redesignated as subparagraph (A) by subparagraph

(A) of this paragraph the following new subdivision:

"'(iii) At the close of the fiscal year ending June 30, 1963, and each fiscal year thereafter, the Board and the Secretary of Health, Education, and Welfare shall determine the amount, if any, which, if added to or subtracted from the Federal Health Insurance Trust Fund would place such fund in the same position in which it would have been if service as an employee after December 31, 1936, had been included in the term "employment" as defined in the Social Security Act and in the Federal Employment Contributions Act. Such determination shall be made no later than June 15 following the close of the fiscal year. If such amount is to be added to the Federal Health Insurance Trust Fund the Board shall, within ten days after the determination, certify such amount to the Secretary of the Treasury for transfer from the Retirement Account to the Federal Health Insurance Trust Fund; if such amount is to be subtracted from the Federal Health Insurance Trust Fund the Secretary of Health, Education, and Welfare shall, within ten days after the determination, certify such amount to the Secretary of the Treasury for transfer from the Federal Health Insurance Trust Fund to the Re-

tirement Account. The amount so certified shall further include interest (at the rate determined under subparagraph (B) for the fiscal year under consideration) payable from the close of such fiscal year until the date of certification.';

"(D) by striking out 'subparagraph (B) and (C)' where it appears in the subparagraph redesignated as subparagraph (B) by subparagraph (A) of this paragraph and inserting in lieu thereof 'subparagraph (A)'; and

"(E) by amending the subparagraph redesignated as subparagraph (C) by subparagraph (A) of this paragraph to read as follows:

"'(C) The Secretary of the Treasury is authorized and directed to transfer to the Federal Old-Age and Survivors Insurance Trust Fund, the Federal Disability Insurance Trust Fund, or the Federal Health Insurance Trust Fund from the Retirement Account or to the Retirement Account from the Federal Old-Age and Survivors Insurance Trust Fund, the Federal Disability Insurance Trust Fund, or the Federal Health Insurance Trust Fund, as the case may be, such amounts as, from time to time, may be determined by the Board and the Secretary of Health, Education, and Welfare pursuant to the provisions of subparagraph (A), and certified by

the Board or the Secretary of Health, Education, and Welfare for transfer from the Retirement Account or from the Federal Old-Age and Survivors Insurance Trust Fund, the Federal Disability Insurance Trust Fund, or the Federal Health Insurance Trust Fund.'

"(2) The amendments made by paragraph (1) of this subsection shall be effective January 1, 1963. Such amendments and the amendments made by section 202(a) shall not be construed to increase or diminish the sums to be transferred, under the provisions of section 5(k)(2) of the Railroad Retirement Act before their amendment by paragraph (1) of this subsection, between the Railroad Retirement Account and the Federal Old-Age and Survivors Insurance Trust Fund or the Federal Disability Insurance Trust Fund.

"Tax on Employees

"SEC. 222. (a) Section 3201 of the Railroad Retirement Tax Act is amended by striking out ': *Provided*' and inserting in lieu thereof the following: '. With respect to compensation paid for services rendered after the date with respect to which the rates of taxes imposed by section 3101 of the Federal Insurance Contributions Act are increased with respect to wages by section 220(b) of the Act which amended the Social Security Act by adding title XVII the rates of tax imposed by this section shall

be increased, with respect only to compensation paid for services rendered before January 1, 1965, by the number of percentage points (including fractional points) that the rates of taxes imposed by such section 3101 are so increased with respect to wages: *Provided'*.

"Tax on Employee Representatives

"(b) Section 3211 of the Railroad Retirement Tax Act is amended by striking ': *Provided*' and inserting in lieu thereof the following: '. With respect to compensation paid for services rendered after the date with respect to which the rates of taxes imposed by section 3101 of the Federal Insurance Contributions Act are increased with respect to wages by section 220(b) of the Act which amended the Social Security Act by adding title XVII the rates of tax imposed by this section shall be increased, with respect only to compensation paid for services rendered before January 1, 1965, by twice the number of percentage points (including fractional points) that the rates of taxes imposed by such section 3101 are so increased with respect to wages: *Provided'*.

"Tax on Employers

"(c) Section 3221 of the Railroad Retirement Tax Act is amended by inserting after '$400' the first time it appears the following: '. With respect to compensation paid for services rendered after the date with respect to which the rates of taxes imposed by section 3111 of the Federal

Insurance Contributions Act are increased with respect to wages by section 220(c) of the Act which amended the Social Security Act by adding title XVII the rates of tax imposed by this section shall be increased, with respect only to compensation paid for services rendered before January 1, 1965, by the number of percentage points (including fractional points) that the rates of taxes imposed by such section 3111 are so increased with respect to wages'.

"PART D—HEALTH INSURANCE BENEFITS FOR PRESENTLY UNINSURED INDIVIDUALS

"COVERAGE PROVISIONS

"SEC. 231. Anyone who—

"(1) has attained the age of 65,

"(2) (A) attained such age before 1967, or (B) has not less than 3 quarters of coverage (as defined in title II of the Social Security Act or section 5 (1) of the Railroad Retirement Act of 1937), whenever acquired, for each calendar year elapsing after 1964 and before the year in which he attained such age,

"(3) is not, and upon filing application therefor would not be, entitled to monthly insurance benefits under section 202 of the Social Security Act and does not meet the requirements set forth in subparagraph (B) of section 21 (b) of the Railroad Retirement Act of 1937, and

"(4) has filed an application under this section at such time, in such manner, and in accordance with such other requirements as may be prescribed in regulations of the Secretary,

shall (subject to the limitations in this part) be deemed, solely for purposes of section 1705 of the Social Security Act, to be entitled to monthly insurance benefits under such section 202 for each month, beginning with the first month in which he meets the requirements of this subsection and ending with the month in which he dies or, if earlier, the month before the month in which he becomes entitled to monthly insurance benefits under such section 202 or meets the requirements set forth in subparagraph (B) of section 21(b) of the Railroad Retirement Act of 1937.

"LIMITATIONS

"SEC. 232. (a) The provisions of section 231 shall apply only in the case of an individual who—

"(1) is a resident of the United States (as defined in section 210 of the Social Security Act), and

"(2) is a citizen of the United States or has resided in the United States (as so defined) continuously for not less than 10 years.

"(b) The provisions of section 231 shall not apply to any individual who—

"(1) is a member of any organization referred to in section 210(a)(17) of the Social Security Act,

"(2) has been convicted of any offense listed in section 202(u) of the Social Security Act,

"(3) is an employee of the United States, or

"(4) is eligible for the benefits of the Federal Employees Health Benefits Act of 1959 or the Retired Federal Employees Health Benefits Act.

"PAYMENTS TO TRUST FUND

"SEC. 233. There are hereby authorized to be appropriated to the Federal Health Insurance Trust Fund (established by section 201 of the Social Security Act) from time to time such sums as the Secretary deems necessary, on account of—

"(a) payments made from such Trust Fund under title XVII of such Act with respect to individuals who are entitled to health insurance benefits solely by reason of this part,

"(b) the additional administrative expenses resulting therefrom, and

"(c) any loss in interest to such Trust Fund resulting from the payment of such amounts,

in order to place such Trust Fund in the same position in which it would have been if sections 231 and 232 of this Act had not been enacted.

"PART E—MISCELLANEOUS PROVISIONS

"STUDIES AND RECOMMENDATIONS

"SEC. 241. The Secretary of Health, Education, and Welfare shall carry on studies and develop recommendations to be submitted from time to time to the Congress relating to (1) the adequacy of existing facilities for health care for purposes of the program established by this Act; (2) methods for encouraging the further development of efficient and economical forms of health care which are a constructive alternative to inpatient hospital care; (3) the feasibility of providing additional types of health insurance benefits within the financial resources provided by this Act; and (4) the effects of the deductibles upon beneficiaries, hospitals, and the financing of the program."

Calendar No. 1549

87TH CONGRESS
2D SESSION

H. R. 10606

AMENDMENTS

Intended to be proposed by Mr. ANDERSON (for himself, Mr. HUMPHREY, Mr. DOUGLAS, Mr. JAVITS, Mr. MAGNUSON, Mr. PELL, Mr. HARTKE, Mr. CASE, Mr. BURDICK, Mr. MCCARTHY, Mr. MORSE, Mrs. NEUBERGER, Mr. ENGLE, Mr. MOSS, Mr. PASTORE, Mr. KUCHEL, Mr. LONG of Hawaii, Mr. JACKSON, Mr. LONG of Missouri, Mr. KEATING, Mr. COOPER, Mr. HART, Mr. RANDOLPH, Mr. METCALF, Mr. MCGEE, and Mr. CLARK) to the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

JUNE 29, 1962

Ordered to lie on the table and to be printed

LEGISLATIVE PROGRAM—EXTENSION OF PUBLIC ASSISTANCE AND CHILD WELFARE SERVICES PROGRAM OF THE SOCIAL SECURITY ACT—THE MEDICARE AMENDMENT

Mr. HUMPHREY. Madam President, the Senator from New Mexico [Mr. ANDERSON] and the Senator from New York [Mr. JAVITS] wish to present this afternoon a revised health, hospital, and medical care program amendment. In order to accommodate these Senators I have discussed the question with the Senator from Georgia [Mr. TALMADGE], and I shall ask unanimous consent that we interrupt the proceedings on the Renegotiation Act for a limited period of time in order that there may be the presentation of the medicare amendment.

Madam President, first I ask unanimous consent to have laid down as the unfinished business on Monday, July 2, H.R. 10606, the proposed Social Security Act amendments, Calendar No. 1549.

Mr. JOHNSTON. Madam President——

The PRESIDING OFFICER. The bill will be stated by title.

Mr. SPARKMAN. Madam President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. SPARKMAN. Is the Senator making a unanimous-consent request?

Mr. HUMPHREY. Yes.

Mr. SPARKMAN. Madam President, reserving the right to object, and of course I do not intend to object, I should like to ask the acting majority leader one or two questions with reference to the expectation as to action on the bill.

I understand the Senator proposes to lay the bill before the Senate on Monday next. How much debate is there likely to be? When is it felt there will be a vote on the question?

Mr. HUMPHREY. The Senator from Minnesota claims no prophetic vision on this question or on any other. I am only proposing that we start the debate on Monday. I hope we may be able to move right along, because the subject is something which is well known to all; upon which there is, however, considerable controversy. It appears to me that when the Senator from New Mexico [Mr. ANDERSON] places his amendment before the Senate he might be able to give us some indication as to what he thinks would be the duration of the debate. We will, however, continue consideration of the so-called welfare bill.

Mr. SPARKMAN. The Senate will not be swinging back and forth between it and the space satellite bill?

Mr. HUMPHREY. No. The Senate will continue consideration of the welfare bill and the medicare amendment and any other amendments until action has been completed.

Mr. SPARKMAN. The Fourth of July is next Wednesday. It is not intended there will be a session that day?

Mr. HUMPHREY. There will be no session next Wednesday. I am happy to announce there will be no session tomorrow. There was some possibility of a session on Saturday, but there is no need for the session on Saturday since the conference report relating to the Sugar Act is as yet not completed. Furthermore, I have discussed the problem with the Acting Secretary of State, and it will not cause any great inconvenience if the Senate should not act on the conference report on the Sugar Act until Monday, or even next Tuesday. That is a privileged matter, however, and can be taken up for consideration at any time.

So there will be no session tomorrow, Saturday. The Senate will convene on Monday. At the proper time I shall move that the Senate meet at 12 o'clock on Monday.

My present request is that the unfinished business for Monday, July 2, be Calendar No. 1549, H.R. 10606, relating to proposed Social Security Act amendments.

Mr. SPARKMAN. May I ask the Senator if he can tell, this far ahead of time, what time it is contemplated the Senate will meet on Tuesday? Will that be at 12 o'clock?

Mr. HUMPHREY. There will be a session on Tuesday. There will be no session on Wednesday.

Mr. SPARKMAN. Will there be a session on Thursday?

Mr. HUMPHREY. There will be a session on Thursday. There will be a session on Friday. I hope every Senator will be here, but I doubt it. [Laughter.]

Mr. SPARKMAN. So do I. [Laughter.]

The PRESIDING OFFICER. Is there objection to the request of the Senator from Minnesota?

Mr. JOHNSTON. Madam President, I should like to ask a question before I agree to the unanimous-consent request. When will I have an opportunity to make a speech of about 10 minutes?

Mr. HUMPHREY. The Senator will have an opportunity to do that as soon as the Senate returns to consideration of the bill to extend the Renegotiation Act.

The rule of germaneness does not apply in the Senate. Because of the Senator's charm, ability, and the respect of his colleagues for him, he will have no difficulty in obtaining the floor.

Mr. JOHNSTON. I wished to present the statement as soon as I could today.

Mr. HUMPHREY. The acting majority leader will cooperate to the fullest extent.

Mr. CLARK. Madam President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. CLARK. Does the acting majority leader deplore the fact that there is no rule of germaneness in the Senate?

Mr. HUMPHREY. Not at this moment.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. HUMPHREY. Madam President, has unanimous consent been granted?

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. ANDERSON. Madam President, on behalf of myself, and Senators HUMPHREY, DOUGLAS, JAVITS, MAGNUSON, PELL, HARTKE, CASE, BURDICK, MCCARTHY, MORSE, NEUBERGER, ENGLE, MOSS, PASTORE, KUCHEL, LONG of Hawaii, JACKSON, LONG of Missouri, KEATING, COOPER, HART, RANDOLPH, METCALF, MCGEE, and CLARK, I submit amendments, intended to be proposed by us, jointly to the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act and for other purposes.

Madam President, because of the widespread interest in these amendments and the difficulty of following all of their provisions as they amend other sections of the Social Security Act, I ask unanimous consent that the table of contents which has been prepared may appear just ahead of the text of the amendments when the amendments are printed, or if that is not regarded as desirable, that the table of contents may be incorporated in the printed amendments at the appropriate places.

The PRESIDING OFFICER. Without objection, it is so ordered, and the amendments will be received, printed, and lie on the table.

Mr. ANDERSON. Madam President, I ask unanimous consent that at the conclusion of my address there may be printed in the RECORD a statement on significant improvements in the Anderson bill (S. 909) made by the Anderson amendments to the welfare bill (H.R. 10606).

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. ANDERSON. Madam President, at the outset let me say that I have enjoyed immensely the opportunities I have had for discussions in the past few days with members of the minority party. I mention particularly the distinguished Senator from New York [Mr. JAVITS], with whom I have had many discussions. I have found his assistance to be extremely valuable. I mention also the other Senator from New York [Mr. KEATING], with whom I have had an opportunity to discuss the subject; the distinguished Senator from Kentucky [Mr. COOPER], who has long been known for his position in this field; the Senator from New Jersey [Mr. CASE]; and the Senator from California [Mr. KUCHEL]. It has been a pleasant experience, because in a long experience in public life those Senators have made contributions to me which I have deeply appreciated, and by their public discussions they have made it possible for me to envision certain aspects of the bill which had not heretofore been considered.

Their assistance has made possible many features in the present bill. I pay tribute to them now as I have paid tribute to them many times in the past.

I point out also that twice upon the floor of the Senate the Senator from New York [Mr. JAVITS] has said that we would make every effort possible to arrive at some sort of harmonious arrangement under which he might join me as a cosponsor of the bill. We do not completely subscribe to everything in the same way. No Senator would wish it that way. But I point out that the Senator from New York [Mr. JAVITS] is a cosponsor on the bill. Therefore I think he has made good on the solemn promise which he made to the Senate on two different occasions, that every effort would be made to work on these questions in a proper and harmonious fashion.

Our proposed amendment to H.R. 10606 is a considerably improved version of S. 909.

It was developed after careful consideration of the comments, questions, and criticisms arising during discussion of the provisions of S. 909. I have studied other bills that have been introduced. I have welcomed suggestions from all who sincerely want a bill to be enacted.

We have revised S. 909 to make many improvements. Our proposed amendment is one which can be supported by all who agree, in principle, on the social security approach and by all who sincerely want a bill passed.

Unless favorable action is taken now, health insurance for the aged could become a major issue in the fall elections, and next year a bill will be passed. But the problem that confronts our aged people is so pressing that I hope we will not delay a solution another year.

The proposed amendment is a conscientious effort to meet the reasonable objections to S. 909, while at the same time preserving its essential points—health insurance benefits for aged social security beneficiaries and railroad retirement annuitants without a means test and financed through the contributory social security system.

THE SOCIAL SECURITY APPROACH IS ESSENTIAL

On these essential social security features, I cannot compromise. Our proposed amendment would utilize the social security financing mechanism, for through this mechanism the health insurance needs of our people in their later years can be met by payments made during their working years.

Health insurance will go far to make retirement protection under social security truly adequate in a way that increased cash monthly payments can never achieve. Health costs of the aged are not evenly distributed from month to month or even from year to year. A person over 65 may have no appreciable health costs for several years and then in a short time have health costs running into thousands of dollars. It is clearly not possible to increase the cash benefit under OASI sufficiently to cover such large expenses.

The health insurance payments to which the elderly would be entitled would be paid as a right earned through the social security system which they have helped support by their contributions during their working years. There would be no means test.

The amendment would follow the same threefold attack on dependency in old age as that carried out by the present social security program. First, basic health insurance protection against hospital costs and certain alternatives to hospitalization would be afforded the elderly through social security; second, the existence of a program of basic protection would encourage the development of additional, private protection which the individual could purchase by his own means; third, all the States would be placed in a far better financial position to provide adequate medical assistance to help the relatively small group whose special needs and circumstances make it impossible for them to meet health costs that exceed those covered in this bill.

The proposed program would be financed on the same financially sound basis as the present social security program. Its cost over the long-run future has been carefully calculated, and sufficient income to meet both short-term and long-run program obligations is provided for.

HEALTH BENEFITS FOR THOSE NOT INSURED UNDER SOCIAL SECURITY

It is estimated that by January 1964—the effective date of my proposed amendment—the total population age 65 and over in the United States will be 17.9 million. Of this number, over a quarter of a million, although not eligible for social security or railroad retirement protection, would have their health needs taken care of under various other governmental programs—including retired Federal employees who have governmental health insurance protection available to them. This leaves approximately 17½ million persons 65 and over, of which about 15 million would be eligi-

ble for health insurance under social security or railroad retirement. We have included in this amendment a provision for furnishing to these 2½ million aged people, from general revenues, the same health benefits as provided to those insured under the social security and railroad retirement programs.

The gross cost of the provision would be about $250 million in calendar year 1964, the year the health benefits program would go into effect. This cost would be offset by savings in Federal medical care expenditures in 1964 that except for the passage of my bill would be made under public assistance and the veterans' programs. These savings would be about $200 million, leaving a net cost to general revenues of about $50 million in 1964. The annual cost of the provision would drop sharply in following years and eventually wash out altogether.

IMPROVED ADMINISTRATIVE PROCEDURES

Since the introduction of S. 909 last year I have had the benefit of many helpful suggestions from physicians and hospital administrators all over the country pointing out ways in which the administrative features of the bill could be improved. I have also studied the sincere concerns expressed by some that the Federal procedures might impose difficult requirements or administrative burdens on hospitals. Our proposed amendment meets each of the specific criticisms that some provisions of S. 909 might possibly—though the possibility be remote—result in Government interference with the operation of hospitals or the practice of medicine.

SIGNIFICANT ADMINISTRATIVE ROLE FOR PRIVATE ORGANIZATIONS

Under our proposed amendment the Secretary of Health, Education, and Welfare would be given specific statutory authority to delegate some of the more sensitive administrative functions to Blue Cross or to other similar voluntary organizations that are experienced in dealing with hospitals and other providers of health services. Any group of hospitals—or group of other providers of health services—could designate a private organization of their own choice to receive their bills for services and to pay these bills. If advantageous, additional administrative functions could be included in the contract between the Government and the organization. These administrative functions would include reviewing hospital fiscal records as a part of the determination of the cost of services, and acting as a center for communicating and interpreting payment procedures to hospitals.

I should point out that representatives of the American Hospital Association appearing before the Committee on Ways and Means last summer urged an approach that would utilize the services of voluntary organizations if a bill of this type were to be enacted, and I am convinced from numerous conversations with individuals in the field of hospital administration that the provisions I am now outlining will prove to be eminently satisfactory to them. The principal advantage hospitals and other providers of services would find in this arrangement would be that policies and procedures of the Federal program would be applied by the same organization administering the private, voluntary benefit program with which most of them deal.

The role that Blue Cross plans and similar expert organizations could play in carrying out the provisions of my proposed amendment would have advantages that go beyond the benefits that would be derived from their experience in dealing with hospitals and the working relationships already established. With such organizations serving as intermediaries between the Government and providers of services, those who are concerned that the Government might try to intervene in hospital affairs would feel much more comfortable.

ROLE OF STATE AGENCIES

The Federal Government would use State agencies to determine whether hospitals which are not accredited by the Joint Commission on the Accreditation of Hospitals or skilled nursing facilities and other providers of health services are qualified to participate in the program. The conditions of participation for such providers are spelled out in my bill. State agencies would determine whether they are met. State health departments or other appropriate agencies designated by each State would also give professional consultation to providers of health services to assist them in meeting the conditions for participation and in establishing and maintaining necessary fiscal records and providing information necessary to derive operating costs which are the basis for payment for their services.

State governments are well fitted to perform these functions since they already license health facilities.

CONDITIONS FOR PARTICIPATION

Many people in the health field have applauded the intention—clearly reflected in S. 909—to be specific about any conditions that hospitals or other organizations would have to meet before they could participate in the proposed program. To make sure that the new program would not in any way undercut the efforts of the health profession and would not permit payment to substandard institutions, the participation requirements of S. 909 paralleled requirements of the health professions as they define and accredit institutions. A misunderstanding of the provision has produced the notion that the Government would impose additional requirements beyond those necessary for accreditation. The amendment we are offering makes very explicit that the requirements for participation may not go beyond the professionally set and professionally accepted standards established for hospitals, save for the requirement of a utilization review arrangement. The amendment even goes so far as to name the Joint Commission on the Accreditation of Hospitals and to require use of the Commission's provisions and findings; it provides that, with the one exception of the review arrangement, a hospital that is accredited by the Joint Commission would be conclusively presumed to meet the conditions for participation.

Our amendment would assure that participating nursing homes are of high quality by requiring that only nursing facilities affiliated with hospitals may participate.

FINANCING OF THE PROGRAM

The Chief Actuary of the Social Security Administration has assured me that the benefits of the proposal would be financed on a sound actuarial basis under the usual cost assumptions, which involve, among other things, level-earnings assumptions. The financing of both the cash benefits, including the higher ones that would result from raising the earnings base, and the new health benefits, would be accomplished by raising the maximum taxable earnings base to $5,200 per year and by an additional combined employer-employee tax of one-half percent. Whereas S. 909 provided for a separate Health Insurance Account to be maintained in the social security trust fund, our amendment would attach even more importance to separate accounting for health benefits by establishing a distinct and separate Health Insurance Trust Fund.

The proposed health benefits would be financed by an allocation to the Health Insurance Trust Fund from the total social security tax receipts—an allocation equal to what a combined employer-employee tax of .68 percent would yield. Part of this—.50 percent—comes from the increase in the scheduled contribution rates in all future years. The remainder comes from the net gain resulting in the cash-benefits portion of the system from raising the earnings base from $4,800 to $5,200. The health benefits of the proposal and those of the existing system as a whole would be on a sound actuarial basis under these proposed financial provisions.

SUMMARY

Our amendment would embody all of the great merit of the social security approach and at the same time provide meaningful assistance for the relatively few older people who are not now protected by the social insurance system. It has strong safeguards against any possibility that Government would exert control over providers of services and established medical practices. It would have the additional advantage of not requiring Government and the doctors to come to agreement on fees and other sensitive matters that are best left to the private sector. It represents the vast area of agreement that has been reached by those of us who sincerely seek a way by which much needed protection against the cost of serious illness can be provided for our senior citizens.

There is no justification for further delay; we must not wait longer to provide an effective program of protection for the Nation's elderly people.

EXHIBIT 1

SIGNIFICANT IMPROVEMENTS IN ANDERSON BILL (S. 909) MADE BY ANDERSON AMENDMENT TO WELFARE BILL (H.R. 10606)

1. BLANKETING IN PRESENT NONINSURED

(Pp. 69–72, secs. 231–233): A provision has been made under the amendments providing coverage for health benefits for all those who are presently aged and not protected by a Federal program. People who reach age 65 before 1967 and who do not meet the regular insured status requirements of the social security system would be deemed insured for health insurance purposes. Uninsured people who will reach age 65 in 1967 would be deemed to be insured for social security health benefits if they had earned as few as 6 quarters of coverage in covered work at any time. For people who reach age 65 in each of the succeeding years, the number of quarters of coverage needed to be insured for health insurance protection increases by three each year, thus, people reaching age 65 in 1968 would need 9 quarters of coverage, people reaching 65 in 1969 would need 12 quarters of coverage, and so on. By 1972, the special insured status requirements for health insurance would have caught up with the regular insured status requirements for other social security benefits for both men and women and will wash out. The cost of health insurance benefits for these individuals would be paid into the Federal Health Insurance Benefits Trust Fund from the general funds of the Treasury.

2. SEPARATE TRUST FUND PROVIDED

(P. 45, et seq.; sec. 202): The amendment establishes a new Federal Health Insurance Trust Fund, completely separate from the Federal Old-Age and Survivors Insurance Trust Fund and the Federal Disability Insurance Trust Fund, into which an amount equal to the taxes collected for health benefits would be deposited and from which health insurance benefit payments would be made.

3. USE OF VOLUNTARY ORGANIZATIONS SUCH AS BLUE CROSS PLANS

(P. 40, sec. 1715): A new provision has been added authorizing the Secretary to enter into agreements with an organization designated by any group or association of providers of services to perform certain administrative functions in connection with the program, including determination of the amount of payments due and making the payments. These provisions would make it possible for Blue Cross plans, the Kaiser plan or similar organizations, to participate substantially in the administration of the program.

4. USE OF STATE AGENCIES IN ADMINISTRATION

(P. 23, sec. 1708): The amendment provides for the use of State agencies to determine eligibility and to provide consultative services to providers of services and payment for such use including Federal sharing in the costs of planning and other activities directed at coordinating these services with other activities of the State related to health and medical services and the personnel and facilities required for this purpose.

5. SUPPLEMENTATION OF BENEFITS BY STATES AND PRIVATE INSURERS PROVIDED

(P. 4, sec. 1701(b)): The amendment contains a new provision disclaiming any intention to preclude supplementation of the basic protection provided by the bill through other health and medical care provided by States or through purchase from private carriers or otherwise.

The findings and declaration of purposes (p. 2, sec. 200(b)) also makes clear the intention to encourage and facilitate supplementation by States, private insurance, or other methods by providing, as does the present old-age, survivors, and disability insurance, a basic social insurance benefit.

6. ACCREDITATION OF HOSPITALS

(P. 24, sec. 1708(b)): Under the amendment accreditation of a hospital by the Joint Commission on Accreditation of Hospitals (AMA and AHA) would automatically make it eligible to participate if it had a satisfactory plan for utilization review by doctors on the hospital staff.

(Pp. 15–16, sec. 1706(a)(7)): Moreover, any health and safety requirements added by the Secretary to those spelled out in the bill could not exceed the requirements of the Joint Commission for Accreditation.

PUBLIC WELFARE AMENDMENTS OF 1962

Mr. MANSFIELD. Madam President, under the unanimous-consent agreement of Friday, June 29, I ask unanimous consent that the Chair lay before the Senate the unfinished business.

The PRESIDING OFFICER. The Chair lays before the Senate the unfinished business, which will be stated, by title.

The LEGISLATIVE CLERK. A bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

PUBLIC WELFARE AMENDMENTS OF 1962

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unfinished business be laid before the Senate for its consideration.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. KERR obtained the floor.

Mr. MANSFIELD. Mr. President, will the Senator from Oklahoma yield to me, so that I may suggest the absence of a quorum, with the understanding that he will not lose his right to the floor?

Mr. KERR. I yield to the majority leader with that understanding.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I move that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. KERR. Mr. President, I ask unanimous consent that Frederick B. Arner and Helen E. Livingston from the Education and Welfare Division, Legislative Reference Service, Congressional Library, who have been assigned to the Committee on Finance to work on the pending legislation, may be permitted to be present in the Chamber during the discussion of the bill, to assist me and other Senators.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KERR. Mr. President, the public welfare amendments bill which we have before us today represents, in my opinion, a significant milestone in the development of programs for the help and the care of needy people in this country. I regard it as one of the most constructive public welfare measures ever brought before this body.

It heralds a turning point in the programs which we have constructed over the last quarter of a century and more to assist the least fortunate of our fellow citizens—the men, women, and children who are ill or handicapped or aged or destitute for a great variety of causes.

Under this bill they can be given more than a grant of money to keep body and soul together. Financial assistance of course is now, and will remain, the first and most essential objective of public welfare. We are committed to the extent possible, to help see to it that no one be permitted to go hungry or unsheltered.

But in addition, through this bill, we will offer something else. We will extend hope—hope of a future in which children helped by public assistance will grow up to be self-supporting, responsible adults; hope for putting unskilled and deprived adults back to work through counseling and training; hope for reuniting families parted by desertion and despair; hope for assuring children freedom from neglect and abuse, and hope for the aged and the most severely handicapped of becoming less helpless and lonely than so many of them are today.

LOOKING TOWARD PREVENTION

There has been an increasing recognition in many quarters that money alone is not enough to transform economic dependency into personal independence. In many parts of the Nation, attempts have been made to provide other constructive services. This legislation places emphasis upon rehabilitation and the prevention of dependency, and this approach seems to me the most

practical and realistic step we can take at this time to relieve the welfare burden.

I believe that citizens everywhere want to see this great and useful program yield greater returns in stronger, more stable, and more productive lives.

The public welfare amendments of 1962 are a testimony to the belief of the Congress in the dignity of every individual, whatever his circumstances, and his right to an opportunity to develop to his fullest capacity.

The Committee on Finance, under the experienced and able leadership of the Senator from Virginia [Mr. BYRD], has given careful consideration to each aspect of this comprehensive measure. We have had the benefit of testimony from many sincere and respected persons connected with the operation of public and private welfare programs as well as those looking at public welfare from the outside. There is nearly unanimous agreement that the proposed legislation will help bring welfare programs up to date and make them more effective in answering the needs of people who, for various reasons, do not fit easily into our rapidly changing, complicated, modern society. I think that we are fortunate to have at the head of the Department of Health, Education, and Welfare in this period of shifting focus a man who has been willing and able to call attention to the urgent needs of these times. A tremendous amount of constructive work under his able leadership has gone into his proposals to the Congress. Secretary Ribicoff has clearly pointed out that additional emphasis must be given to rehabilitation and prevention efforts if we in Government are to fulfill our responsibilities to the recipients of public assistance and to the public at large.

I would like to discuss some of the things which distinguish this measure from previous legislative proposals in this important and complex field.

EXTENDING HELP THROUGH SERVICES

I am deeply concerned, as many other Members are, over the fact that so many persons depend upon public assistance today for their main or sole support. We have more than 6½ million individuals now receiving aid from the Federal-State programs. Many studies have shown why they are there. Stated simply, the major causes could be summed up as old age, severe physical handicap, and the breakup of family life.

For many of these present recipients of aid, there is no alternative to continuing support. Our best efforts at rehabilitation cannot put them into the labor force if they are old, infirm or seriously disabled. We can however, do much more to help a great many of them make better use of what capacities they do have.

There are today some 2¼ million persons over 65 receiving old-age assistance. I am pleased to see this number is declining as the old age and survivors' insurance program proves increasingly successful in meeting basic economic needs after retirement. The numbers of needy blind and disabled persons on assistance total only another half million, but for all of these groups of individuals, this bill encourages States to provide social services which will help them to be less isolated, to be more personally independent, and to maintain some place in family and community life.

Many will be encouraged to find in this bill a provision for increasing the money payments to these elderly and handicapped recipients. Average payments today amount to only $72 a month for the old people, $76 for the blind, and $71 for the disabled. These monthly assistance grants are in many cases inadequate.

The Finance Committee was very much aware of this problem and believes that the proposal which originated in the other body changing the formula which increases the Federal share of the welfare payment is justified. The $1 monthly increase in the Federal share voted last year has been made permament, and starting October 1 this will be augmented by another $4 a month from Federal funds, under this bill. Past experience has shown that increases of this nature have been passed on by the States directly to the recipients, and it is anticipated that the same result will occur this time. The effective starting date gives the States enough time to make the necessary changes in their payment plans.

The aid to dependent children program also will be strengthened financially by the provision for Federal sharing in the payment for both parents when both are living in the home. This will help reduce hardship in those homes where the father is disabled or unemployed. Up to now, the Feedral Government has recognized as a recipient only one adult relative in the child's home.

STRENGTHENING FAMILY LIFE

Although the rehabilitation services this bill encourages in all categories will be helpful to recipients in the three adult categories specifically mentioned above, these services may be expected to yield the most impressive results in the aid to dependent children program, under which more than 950,000 families with some 2,800,000 children are now receiving help.

Here we can see greater possibilities of helping some adult relatives—an incapacitated father, perhaps, or a mother who can make some safe and suitable arangement for the daytime care of her children—develop useful skills and obtain self-supporting work. And there is the strong prospect of strengthening family life through expert services which can break the alamring cycle of dependency.

Many of the children who are on our aid to dependent children program today are there because their fathers have deserted them. Some of these broken family ties can be mended, but it takes the time and effort of a skilled welfare worker to reunite the family or obtain some support from the absent father. I have been pleased to see that one of the administrative actions taken by Secretary Ribicoff several months ago directed the States to take more responsibility for this important activity. The developments already stimulated by that action will be strengthened by this legislation. There are other problems reflected in the caseload of the children's program, among them illegitimacy, which can be approached through services. This is a problem which can be more effectively attacked with what this legislation provides in the way of skilled services. This means guidance, counseling, referral to all possible community resources whether public or private, arrangements for vocational training or better housing, encouraging children to stay in school, and similar concentrated efforts.

INCREASED FEDERAL AID

The bill encourages States to provide rehabilitative services by substantially increasing the amount of Federal funds which will be available if the States provide the minimum social services specified by the Secretary. Some of the States have made some progress along this path. Others will be able to move ahead only with the additional financial help provided in the bill. When the new plan is in operation, the Federal Government will pay 75 percent of the administrative cost of the specified social services instead of half, as it does now. In addition, States may choose not to provide social services, and if they so decide, they will still receive Federal sharing, but at a reduced level, for administrative costs. However, I believe all States should and will move in the direction of providing such services.

This will be one of the most difficult and challenging fronts in the long battle against dependency. Experimental programs conducted by forward looking States and counties have demonstrated many times, however, that social services provided by skilled staff can make inroads on the problems which force so many families to look to the public for their support.

Most of these services will have to come from the staff of public welfare agencies, but it is also possible under this bill for a public welfare agency to purchase services from other appropriate State agencies, such as a health department or vocational rehabilitation service.

The volume of unmet need is so great, and the problems which public welfare faces are so complex, that every effort must be made to meet them, using all available staff without duplicating efforts. Under this bill, it will be possible for a public assistance recipient who is physically handicapped to receive the vocational rehabilitation he needs only through a vocational rehabilitation agency.

TRAINING MORE WELFARE WORKERS

Public assistance can do little to affect the broad social and economic forces which affect the welfare of so many of our people and often the size of welfare loads. But for those already dependent, social services—to the best of our knowledge today—should be able to reduce or even in some cases cure their handicapping conditions. The key will be highly skilled welfare workers. This means that much more must be done about training.

The size of the training problem in public welfare almost defeats the imagi-

nation. There is about one trained person for every 23,000 recipents in the entire program today. Yet the problems they are called upon to solve are among the most difficult society presents.

This bill will provide for direct Federal training activities in this field, such as those already undertaken in other fields including medical social service and mental health. The Federal Government will be able, if this bill is passed, to offer special courses of study, short-term seminars and experimental training by grants made directly or through contracts to institutions of higher learning. This will help find new and better methods of training to strengthen present day staff. The money also would make possible increased training facilities at colleges and universities to increase the number of fully trained people.

EXPANSION OF CHILD WELFARE SERVICES

Through provisions for steady expansion of the present program of child welfare services under title V, part 3, of the Social Security Act, the bill gives further emphasis to providing a wider range of constructive welfare services for children. Child welfare services would be gradually expanded so that they would become available in all areas of the country. The ceiling authorized for annual appropriation for grants for these services would be increased gradually for this purpose.

In 1963 and 1964, the additional money would be used to encourage the establishment and development of day care facilities and services. At the present time there are about 4 million children under 6, and another 5 million children between the ages of 6 and 11 years, whose mothers are working. Day care services and facilities are grossly inadequate throughout the country. Consequently, the bill would make available, for the first time, separate Federal child welfare funds for the provision of day care services and facilities under State child welfare plans. Day care would be provided only in those instances where it was determined to be in the interest of the child and of the mother and that a need for it exists. Priority would be given to low-income families, and to other groups and to geographical areas with the greatest relative needs for this type of care.

Another amendment would permit expanding training resources and enlarging the supply of trained child welfare personnel. The present law authorizes grants for research and demonstrations in the field of child welfare. The bill would add authorization for grants to institutions of higher learning for special projects for training, including traineeships, in child welfare. This provision complements the amendments in the bill which provide for expanding training programs for workers in the public assistance program. The success or failure of services to children is largely dependent on the competency and understanding of the workers providing these services. The training provisions of this bill are, therefore, of fundamental importance in achieving the redirection of public welfare programs which this bill contemplates to give greater emphasis to preventive and rehabilitative services.

MEETING THE SPECIAL NEEDS OF CHILDREN

Two provisions enacted by the Congress last year were temporary, but both have proven their value. This bill makes permanent the provision permitting Federal financial sharing in the cost of care for children who must be removed from unsuitable homes where they had been receiving aid to dependent children. This is a very small program. It is in use in 18 States and only some 1,200 children among those receiving aid to dependent children are living in foster families. But the provision makes it possible for States to offer this kind of help to those few children who are in home situations which threaten their wholesome development.

Another temporary provision recognized the plight of children in families where the father is unemployed. This made it possible for States which adopted the program to add unemployment to the eligibility factors for receiving aid to dependent children, along with the death, absence, or incapacity of the parent. This program would have ended June 30. The bill extends it for another 5 years. This program has proved to be a useful and effective resource in the 15 States where it is in operation. These include most of the areas where unemployment has been a particularly severe problem. More than 60,000 families are helped, and in two-thirds of the cases they could not be helped through general assistance or unemployment compensation. This new program already has shown its adaptability to current needs. In April this year, the caseload declined for the first time because work opportunities improved.

We all know that there are some cases in the children's program where the parent does not handle the money payment in such a way that it meets the essential needs of the child or children in the household. In these problem situations, which threaten a child's well-being and arouse criticism out of all proportion to their numbers, the States cannot at present provide anything except a money payment and still have Federal financial participation.

PROTECTIVE PAYMENT PLAN

The bill we are considering today offers States a new method for handling these troublesome situations without any financial penalty. It provides that in clearly determined cases where the funds are being misused, payment may be made on behalf of the child or children to an interested third party. The arrangements would be safeguarded as to numbers involved, and the rights of the recipients, and the protection of the child are carefully weighed. Of the many ways which have been broached for handling this vexing problem, this one offers the most hope of dealing sensibly with the issue without undermining basic human rights and the constructive objectives of the program.

There are other forward-looking aspects to this public welfare amendments bill which I would like to call to your attention. The proposed legislation attempts to encourage persons receiving assistance to obtain work or go back to work wherever possible. I have mentioned the social services which would pursue these possibilities in connection with other efforts to help dependent families. This bill also gives welfare departments another implement to use.

WORK AND TRAINING PROJECTS

A number of our States and localities already have community work relief projects, in which recipients of general assistance are employed to earn their assistance checks in whole or in part. The Federal Government does not, as you know, participate financially in the costs of general relief. However, since the extension of the aid-to-dependent-children program to include children of unemployed parents, employable adults are for the first time in the area of Federal-State responsibility. We must think of the unemployed parent's need to retain his job skills or to be retrained for employment which might be available if his own type of work offers no further opportunity.

Under this bill, Federal participation in aid-to-dependent-children payments would continue if the unemployed parent were assigned to a useful job in a community work and training project. Local and State resources would pay for materials, administration, and equipment. The program would be useful not only for the father who is out of work temporarily but also for some mothers who need experience or preparation for work.

The bill makes sure that the rights of the individuals involved are protected so that they are not forced to work under circumstances which would undermine their health or lower the community wage scales or leave children without care and protection.

As a further stimulant to recipients to find work to supplement—and ultimately to replace—the assistance check, the present Federal policy allows States to take into account the expenses incurred by the unemployed in earning other income. This might include bus fare, necessary articles of clothing, and similar items. In other words, the total earned income is not automatically deducted from the estimated budget need of the family for its essential food, clothing, and shelter. This is optional with the States. Some make the allowance and some do not. The bill requires all States to consider such expenses when the payment is being determined. In the particular case of the blind recipient, this bill would make it possible also to disregard—in determining the assistance payment—an additional sum which the recipient would require to complete an organized rehabilitation plan.

SUMMARY OF THE PRINCIPAL PROVISIONS OF THE BILL—PUBLIC ASSISTANCE

A. REHABILITATIVE SERVICES AND TRAINING IN THE PUBLIC ASSISTANCE PROGRAMS

A State, at its option, may now provide such services under all the public assistance programs except medical assistance for the aged. The Federal Government matches these expenditures on a 50–50 under the provision which governs administrative expenses.

Under the bill as passed by the House, States would be required to provide certain minimum services for applicants and recipients, which the Secretary would prescribe, to help them attain self-care—old-age assistance; self-support and self-care—the blind and the disabled; and to strengthen family life—aid to dependent children. There were no required services for medical assistance for the aged.

The committee's bill would leave the provision of such services optional with the States; but, if they are not provided by a State, the Federal matching of all administrative costs for that category of assistance—now 50 percent—would be reduced to 25 percent effective June 30, 1963.

The bill would authorize 75 percent Federal matching in all public assistance titles for certain services—including the minimum services—to be specified by the Secretary of Health, Education, and Welfare. These services—including the minimum services—could apply to applicants and recipients of assistance as well as to those likely to become or who have been recipients, on the request of such persons—within such periods as the Secretary may prescribe.

The 75-percent matching would also be available for training personnel who are employed, or who are preparing to work, in State or local welfare agencies.

Other services which the Secretary does not designate would be continued at 50-percent matching, as would all other administrative costs. Cost: HEW estimate, $40.8 million—cost figures for fiscal 1963—with over half going into the aid-to-dependent-children program.

B. INCREASE IN FEDERAL MATCHING FORMULA FOR THE AGED, BLIND, AND DISABLED

The committee bill, as does the House bill, increases the Federal matching share in the case of the programs for the aged, the blind, and the disabled to twenty-nine thirty-fifths of the first $35 of the average monthly payment per recipient; the maximum for matching would be raised to $70 on a permanent basis effective October 1, 1962. The bill passed by the House makes the same increase in the matching formula on a permanent basis effective July 1, 1962. The temporary provision now in effect which uses matching on four-fifths of the first $31, with a maximum of $66 through June 30, 1962, was extended through September 30, 1962. Without such an extension the formula would revert to four-fifths of the first $30 with a maximum of $65. The change does not affect the special provision for medical care in the old-age assistance program. Cost: HEW estimate, $105.5 million—cost figure for fiscal 1963—$140.6 million for first full year of operation.

C. CHANGES IN THE AID TO DEPENDENT CHILDREN (ADC) PROGRAM

First. Additional authority to States to prevent abuses in aid to dependent children payments: The committee bill would provide that, beginning October 1, 1962, and ending June 30, 1967, payments—limited in number to 5 percent of recipients—would be authorized to be made to third parties interested in the welfare of the child where it is determined that the parent is so incapable of managing funds that the child's welfare is affected. Certain safeguards and standards would be prescribed. The committee eliminated the provision of the House will which would have allowed the States to use voucher payments—payments directly to grocers, landlords, et cetera. Cost: HEW estimate, negligible—cost figure for fiscal 1963.

Second. Payments on the basis of the unemployment of the parent: This temporary provision of existing law, which is effective May 1, 1961, to June 30, 1962, would be extended for 5 years by the House bill and the committee bill and be expanded to cover both parents instead of one as in existing law. A provision would be added which would deny aid to a parent for refusal to accept retraining without good cause.

Under prior law, aid to dependent children payments could be made only on the basis of the death, disability, or absence of the parent. Cost: HEW estimate, $85 million—of which $12 million is attributable to the second parent provision.

Third. Payments on the basis of the disability of the parent: Federal matching would be expanded to cover payments for both parents of children who are needy because of the disability of the parent. At the present time the Federal Government matches for one adult recipient only. Cost: HEW estimate, $22 million.

Fourth. Community work and training programs: The bill would provide that beginning October 1, 1962, for a period of 5 years, Federal matching funds would be available in cases where payments are made under work programs which are a part of the aid-to-dependent-children program and meet certain standards. Under interpretation of existing law there can be no matching as to payments made for work by a welfare agency; such payments currently are financed wholly by State and local funds. Under an amendment added by the committee, payments to individuals under these programs would be excluded from gross income for Federal income tax purposes. Cost: HEW estimate, negligible—cost figures for fiscal 1963.

Fifth. Payments to children removed by court order into foster care: Under temporary existing law, which is effective May 1, 1961, to June 30, 1962, payments can be made to aid to dependent children removed by court order into foster home care. This provision would be made permanent under the House bill and the committee bill. Payments under prior law were limited to children living with specified relatives. The committee deleted the provision in the House bill which would have expanded the program to include children placed in private child care institutions as well as those receiving family home care as in existing law. The committee bill also includes an amendment which would allow States, for a 1-year period, under the foster care provisions of aid to dependent children program, to utilize the services of other public agencies in the placement and supervision of children in foster home care under agreements with the welfare agency. Cost: HEW estimate, $4.1 million—cost figures for fiscal 1963.

D. OTHER CHANGES IN PUBLIC ASSISTANCE PROGRAMS

First. Incentive for employment through consideration of expenses: The States would be required, in determining the amount of assistance to be provided for the needy aged, blind, disabled, and dependent children, to take into account necessary expenses that may reasonably be attributed to the earning of income. Under current administrative policy, the States may, at their option, consider such expenses.

Also, in determining need in the aid-to-dependent-children program, the States would be allowed to disregard certain earned or other income put aside for the child's future need—for example, such items as education or preparation for employment. Cost: HEW estimate, negligible—cost figures for fiscal 1963; $7 million a year after it goes into effect in July 1963.

Second. Optional single State plan for aged, blind, disabled, and medical assistance for the aged: States would be allowed to operate these programs under a single plan. States which select the single plan would become eligible for Federal matching for medical care for recipients of aid to the blind and to the disabled on the same basis as they are now available for recipients of old-age assistance—that is, up to $15 a month per recipient for vendor medical care. Such additional matching would not be available if States remained under their separate programs. Administration would be allowed, however, by separate existing blind agencies. Cost: HEW estimate, $7.4 million—cost figures for fiscal 1963; increases to $16 million in 1964 and subsequent years.

Third. Training of public assistance workers: Under the House bill, provisions of present law authorizing Federal grants to States to increase the number of adequately trained public welfare personnel to work in public assistance programs, which are due to expire June 30, 1963, would be made permanent, with dollar limitations on authorized appropriations for grants to States for training of public assistance workers—$3.5 million in fiscal 1963 and $5 million a year thereafter. Within the dollar limitations established by the House bill, the committee bill authorizes a program of direct Federal training and grant activity and of scholarships and stipends for persons preparing for employment in public welfare agencies. The committee bill would repeal existing provisions of law that authorize 100 percent Federal funds for expenditures made by States for training of staff. Cost: HEW estimate, negligible—cost figures for fiscal 1963.

Fourth. Assistance to repatriated American citizens: This provision of existing law, which was effective on June 30, 1961, and will expire on June 30, 1962, permits temporary assistance to citizens returning from foreign countries because of illness, destitution, or crisis. It would be extended for 2 years. Cost: HEW estimate, $400,000—cost figures for 1963.

Fifth. Demonstration projects: The bill would permit the Secretary of Health, Education, and Welfare to waive any State plan requirement which he deemed necessary—such as statewide applicability of plan—for pilot or demonstration projects designed to improve the public assistance programs and would provide alternative methods of financing such projects out of public assistance appropriations. Cost: HEW estimate, negligible—cost figures for fiscal 1963.

Sixth. Aid-to-the-blind programs, Missouri and Pennsylvania: The provision of the 1950 amendments, which granted an exemption to certain aid-to-the-blind programs—in effect at that time—from the income and resources test of Federal law, would be placed on a permanent basis. The temporary provision has been extended periodically and would, under existing law, expire in 1964.

Seventh. Other committee amendments: Two provisions were added by the committee which were not contained in the House bill. First, the reported bill increases the dollar limitation which is applicable to public assistance expenditures in Puerto Rico from the present $9,500,000 to $10,500,000, and in the Virgin Islands from the present $320,000 to $400,000. The House bill would have increased these figures to $9,800,000 and $330,000, respectively, to reflect other changes made by the bill. Second, the bill as reported also contains an amendment which provides that, in determining need for aid to the blind, a State shall, in addition to present exempted amounts—$85 a month in earnings plus one-half of the balance exempt such other amounts of income or resources as may be necessary to fulfill a State-approved rehabilitation plan for a blind individual. Such additional exemptions cannot last for more than 1 year.

CHILD WELFARE SERVICES

The authorization for child welfare services would be increased from the present $25 million per year to $30 million for 1963, $35 million in 1964, $40 million in 1965–66, $45 million in 1967–68, and $50 million in 1969 and thereafter. Of the amount between $25 and $35 million, there would be specific earmarking for day care of not more than $5 million in 1963 and not more than $10 million in subsequent years. The committee added an amendment which would permit Federal grants for research or demonstration projects in child welfare to be used for special projects for training personnel in this field. Cost: HEW estimate, $5 million—cost figures for 1963—increasing in subsequent years as noted above.

ADVISORY COUNCIL

The bill provides for an advisory council, to be appointed by the Secretary of Health, Education, and Welfare in 1964, to review the status of the public assistance and child welfare services programs and report their findings to the Secretary. The power to appoint other advisory committees contained in the House bill was somewhat limited in the bill reported by the committee.

CONCLUSION

It is a source of great pleasure to me to be able to commend this bill to you so wholeheartedly. I believe that it offers us great encouragement in our continual effort to make our public welfare programs more effective and more responsive to the needs of the day. We would not shun the responsibilities of public assistance. Many recipients are in need because of actions and decisions and forces of society as a whole, which are beyond individual control. The bill will help to make certain that assistance is provided in the way best calculated to strengthen individual and family life and to restore beneficiaries to a productive and independent economic status at the earliest possible time.

Mr. President, I ask unanimous consent that the committee amendments to the bill be agreed to en bloc and that the bill as amended be considered as original text for the purpose of amendment.

The PRESIDING OFFICER. Is there objection?

Mr. DIRKSEN. Mr. President, there is no objection. The distinguished Senator from Nebraska [Mr. CURTIS] is quite interested in having the bill considered as original text. I think that is in accordance with the request of the Senator from Oklahoma.

Mr. KERR. Yes.

The PRESIDING OFFICER. Without objection, the request of the Senator from Oklahoma is agreed to.

The committee amendments agreed to en bloc are as follows:

In the table of contents on page 1, in the line beginning with "(b)", to strike out "State plan provisions for services." and insert "Requirements for full Federal matching of State administrative expenditure."; on page 2, in the line beginning with "SEC. 107.", to strike out "Use of payments for benefit of child." and insert "Provision of care for child who is in unsuitable home."; in the line beginning "SEC. 109.", after the word "for", to strike out "spouse of relative with whom" and insert "both parents of", and in the next line, after the word "child", to strike out "is living"; in the line beginning with "SEC. 123.", to strike out "Training grants for public welfare personnel." and insert "Increase in adequately trained welfare personnel."; in the line after the one beginning with "SEC. 134.", to strike out "SEC. 135. Federal payments for foster care in child care institutions."; in the line beginning with "SEC. 136", to strike out "136" and insert "135"; on page 3, after the line beginning with "SEC. 153.", to insert "SEC. 154. Income and resources to be disregarded in determining need of individual for aid to the blind."; and, after the amendment just above stated, to insert "SEC. 155. Responsibility for placement and foster care of dependent children."

On page 4, line 7, after the word "to", to strike out "section 2(a)(10)" and insert "subsection (c)(1)"; in line 17, after the word "to", to strike out "section 2(a)(10)" and insert "subsection (c)(1)"; on page 5, line 22, after the word "political", to strike out "subdivision, and" and insert "subdivision: *Provided,* That no funds authorized under this title shall be available for services defined as vocational rehabilitation services under the Vocational Rehabilitation Act (i) which are available to individuals in need of them under programs for their rehabilitation carried on under a State plan approved under such Act, or (ii) which the State agency or agencies administering or supervising the administration of the State plan approved under such Act are able and willing to provide if reimbursed for the cost thereof pursuant to agreement under subparagraph (E), if provided by such staff, and"; on page 7, after line 2, to insert "except that services described in clause (ii) of subparagraph (D) hereof may be provided only pursuant to agreement with such State agency or agencies administering or supervising the administration of the State plan for vocational rehabilitation services so approved."; at the beginning of line 9, to strike out "except that any such services which are defined as vocational rehabilitation services under the Vocational Rehabilitation Act and which are available, from the State agency or agencies administering or supervising the administration of the State plan for vocational rehabilitation services, to individuals under programs for their rehabilitation carried on under such State plan, may be provided only by such State agency or agencies (in the manner described in subparagraph (E)) except to the extent agreed to by such State agency or agencies."; on page 8, line 4, after the word "Secretary", to insert "of the Treasury"; on page 9, after line 10, to insert "and"; on page 10, line 7, after the word "to", to strike out "section 402(a)(12)" and insert "subsection (c)(1)"; in line 21, after the word "to", to strike out "section 402(a)(12)" and insert "subsection (c)(1)"; on page 11, after line 13, to strike out "services provided (in accordance with the next sentence) to any child who is an applicant for or recipient of assistance under the plan or who requests such services and (within such period or periods as the Secretary may prescribe) has been or is likely to become an applicant for or recipient of such assistance, or so provided to any relative," and insert "services provided (in accordance with the next sentence) to any relative, specified in section 406(a), with whom any child (who, within such period or periods as the Secretary may prescribe, has been or is likely to become an applicant for or recipient of aid to families with dependent children) is living, or to such child, if such services are requested by such relative or for services so provided to any child who is an applicant for or recipient of such aid, or to any relative,"; on page 12, line 13, after the word "political", to strike out "subdivision, and" and insert "subdivision: *Provided,* That no funds authorized under this title shall be available for services defined as vocational rehabilitation services under the Vocational Rehabilitation Act (i) which are available to individuals in need of them under programs for their rehabilitation carried on under a State plan approved under such Act, or (ii) which the State agency or agencies administering or supervising the administration of the State plan approved under such Act are able and willing to provide if reimbursed for the cost thereof pursuant to agreement under subparagraph (E), if provided by such staff, and"; on page 13, after line 15, to insert "except that services described in clause (ii) of subparagraph (D) hereof may be provided only pursuant to agreement with such State agency or agencies administering or supervising the administration of the State plan for vocational rehabilitation services so approved."; after line 21, to strike out "except that any such services which are defined as vocational rehabilitation services under the Vocational Rehabilitation Act and which are available, from the State agency or agencies administering or supervising the administration of the State plan for vocational rehabilitation services, to individuals under programs for their rehabilitation carried on

under such State plan, may be provided only by such State agency or agencies (in the manner described in subparagraph (E)) except to the extent agreed to by such State agency or agencies."; on page 14, line 13, after the word "Act", to strike out "(as amended by section 132(b) of this Act)"; in line 24, after the word "to", to strike out "section 1002(a)(13)" and insert "subsection (c)(1)"; on page 15, line 9, after the word "to", to strike out "section 1002(a)(13)" and insert "subsection (c)(1)"; on page 16, line 12, after the word "political", to strike out "subdivision, and" and insert "subdivision: *Provided,* That no funds authorized under this title shall be available for services defined as vocational rehabilitation services under the Vocational Rehabilitation Act (i) which are available to individuals in need of them under programs for their rehabilitation carried on under a State plan approved under such Act, or (ii) which the State agency or agencies administering or supervising the administration of the State plan approved under such Act are able and willing to provide if reimbursed for the cost thereof pursuant to agreement under subparagraph (E), if provided by such staff, and"; on page 17, line 15, after the word "agencies", to insert "except that services described in clause (ii) of subparagraph (D) hereof may be provided only pursuant to agreement with such State agency or agencies administering or supervising the administration of the State plan for vocational rehabilitation services so approved."; at the beginning of line 21, to strike out "except that any such services which are defined as vocational rehabilitation services under the Vocational Rehabilitation Act and which are available, from the State agency or agencies administering or supervising the administration of the State plan for vocational rehabilitation services, to individuals under programs for their rehabilitation carried on under such State plan, may be provided only by such State agency or agencies (in the manner described in subparagraph (E)) except to the extent agreed to by such State agency or agencies."; on page 18, line 13, after the word "Act", to strike out "(as amended by section 132(c) of this Act)"; in line 24, after the word "to", to strike out "section 1402(a)(12)" and insert "subsection (c)(1)"; on page 19, line 9, after the word "to", to strike out "section 1402(a)(12)" and insert "subsection (c)(1)"; on page 20, line 14, after the word "political", to strike out "subdivision, and" and insert "subdivision: *Provided,* That no funds authorized under this title shall be available for services defined as vocational rehabilitation services under the Vocational Rehabilitation Act (i) which are available to individuals in need of them under programs for their rehabilitation carried on under a State plan approved under such Act, or (ii) which the State agency or agencies administering or supervising the administration of the State plan approved under such Act are able and willing to provide if reimbursed for the cost thereof pursuant to agreement under subparagraph (E), if provided by such staff, and"; on page 21, line 17, after the word "agencies", to insert "except that services described in clause (ii) of subparagraph (D) hereof may be provided only pursuant to agreement with such State agency or agencies administering or supervising the administration of the State plan for vocational rehabilitation services so approved."; after line 23, to strike out "except that any such services which are defined as vocational rehabilitation services under the Vocational Rehabilitation Act and which are available, from the State agency or agencies administering or supervising the administration of the State plan for vocational rehabilitation services, to individuals under programs for their rehabilitation carried on under such State plan, may be provided only by such State agency or agencies (in the manner described in subparagraph (E)) except to the extent agreed to by such State agency or agencies."; on page 22, after line 15, to strike out:

"STATE PLAN PROVISIONS FOR SERVICES

"(b)(1) Section 2(a) of such Act is amended by striking out paragraph (10)(C), by inserting 'and' after the semicolon at the end of paragraph (10)(A), by redesignating paragraphs (10) and (11) as paragraphs (11) and (12), respectively, and by inserting after paragraph (9) the following new paragraph:

"'(10) provide that the State agency shall make available to applicants for or recipients of old age assistance under the plan at least those services to help them attain or retain capability for self-care which are prescribed by the Secretary; and include a description of the steps taken to assure, in the provision of these and any other services which the State agency makes available to individuals under the plan, maximum utilization of other agencies providing similar or related services;'.

"(2) Section 402(a)(12) of such Act is amended to read as follow: '(12) provide that the State agency shall make available at least those services to maintain and strengthen family life for children, and to help relatives specified in section 406(a) with whom children (who are applicants for or recipients of aid to families with dependent children) are living to attain or retain capability for self-support or self-care, which are prescribed by the Secretary; and include a description of the steps taken to assure, in the provision of these and any other services which the State agency makes available to individuals under the plan, maximum utilization of other agencies providing similar or related services'.

"(3) Section 1002(a)(13) of such Act is amended to read as follows: '(13) provide that the State agency shall make available to applicants for or recipients of aid to the blind at least those services to help them attain or retain capability for self-support or self-care which are prescribed by the Secretary; and include a description of the steps taken to assure, in the provision of these and any other services which the State agency makes available to individuals under the plan, maximum utilization of other agencies providing similar or related services'.

"(4) Section 1402(a)(12) of such Act is amended to read as follows: '(12) provide that the State agency shall make available to applicants for or recipients of aid to the permanently and totally disabled at least those services to help them attain or retain capability for self-support or self-care which are prescribed by the Secretary; and include a description of the steps taken to assure, in the provision of these and any other services which the State agency makes available to individuals under the plan, maximum utilization of other agencies providing similar or related services'."

And, in lieu thereof, to insert:

"REQUIREMENTS FOR FULL FEDERAL MATCHING OF STATE ADMINISTRATIVE EXPENDITURES

"(b)(1)(A) Paragraph (4) of section 3(a) of such Act, as amended by subsection (a) of this section, is further amended by inserting, in the portion thereof which precedes subparagraph (A), 'whose State plan approved under section 2 meets the requirements of subsection (c)(1)' after 'any State', and by striking out the period at the end of such paragraph and inserting in lieu thereof '; and'.

"(B) Such section 3(a) is further amended by inserting at the end thereof the following new paragraph:

"'(5) in the case of any State whose State plan approved under section 2 does not meet the requirements of subsection (c)(1), an amount equal to one-fourth of the total of the sums expended during such quarter as found necessary by the Secretary for the proper and efficient administration of the State plan, including services referred to in paragraph (4) and provided in accordance with the provisions of such paragraph.'

"(C) Section 3 of such Act is further amended by adding at the end thereof the following new subsection:

"'(c)(1) In order for a State to qualify for payments under paragraph (4) of subsection (a), its State plan approved under section 2 must provide that the State agency shall make available to applicants for or recipients of old-age assistance under such State plan at least those services to help them attain or retain capability for self-care which are prescribed by the Secretary.

"'(2) In the case of any State whose State plan included a provision meeting the requirements of paragraph (1), but with respect to which the Secretary finds, after reasonable notice and opportunity for hearing to the State agency administering or supervising the administration of such plan, that—

"'(A) the provision has been so changed that it no longer complies with the requirements of paragraph (1), or

"'(B) in the administration of the plan there is a failure to comply substantially with such provision,

the Secretary shall notify such State agency that further payments will not be made to the State under paragraph (4) of subsection (a) until he is satisfied that there will no longer be any such failure to comply. Until the Secretary is so satisfied further payments with respect to the administration of such State plan shall not be made under paragraph (4) of subsection (a) but shall instead be made, subject to the other provisions of this title, under paragraph (5) of such subsection.'

"(2)(A) Paragraph (3) of section 403(a) of such Act, as amended by subsection (a) of this section, is further amended by inserting, in the portion thereof which precedes subparagraph (A), 'whose State plan approved under section 402 meets the requirements of subsection (c)(1)' after 'any State', and by striking out the period at the end of such paragraph and inserting in lieu thereof '; and'.

"(B) Such section 403(a) is further amended by inserting after paragraph (3) thereof the following new paragraph:

"'(4) in the case of any State whose State plan approved under section 402 does not meet the requirements of subsection (c)(1), an amount equal to one-fourth of the total of the sums expended during such quarter as found necessary by the Secretary for the proper and efficient administration of the State plan, including services referred to in paragraph (3) and provided in accordance with the provisions of such paragraph.'

"(C) Section 403 of such Act is further amended by adding at the end thereof the following new subsection:

"'(c) (1) In order for a State to qualify for payments under paragraph (3) of subsection (a), its State plan approved under section 402 must provide that the State agency shall make available at least those services to maintain and strengthen family life for children, and to help relatives specified in section 406(a) with whom children (who are applicants for or recipients of aid to families with dependent children) are living to attain or retain capability for self-support or self-care, which are prescribed by the Secretary.

"'(2) In the case of any State whose State plan included a provision meeting the requirements of paragraph (1), but with respect to which the Secretary finds, after reasonable notice and opportunity for hearing to

the State agency administering or supervising the administration of such plan, that—

"'(A) the provision has been so changed that it no longer complies with the requirements of paragraph (1), or

"'(B) in the administration of the plan there is a failure to comply substantially with such provision.

the Secretary shall notify such State agency that further payments will not be made to the State under paragraph (3) of subsection (a) until he is satisfied that there will no longer be any such failure to comply. Until the Secretary is so satisfied further payments with respect to the administration of such State plan shall not be made under paragraph (3) of subsection (a) but shall instead be made subject to the other provisions of this title, under paragraph (4) of such subsection.'

"(D) Section 408(d) of such Act is amended by inserting 'and (4)' after 'section 403(a)(3)'.

"(E) Section 409(b) of such Act (added by section 105 of this Act) is amended by inserting 'and (4)' after 'section 403(a)(3)'.

"(3)(A) Paragraph (3) of section 1003(a) of such Act, as amended by subsection (a) of this section, is further amended by inserting, in the portion thereof which precedes subparagraph (A), 'whose State plan approved under section 1002 meets the requirements of subsection (c)(1)' after 'any State', and by striking out the period at the end of such paragraph and inserting in lieu thereof '; and'.

"(B) Such section 1003(a) is further amended by inserting at the end thereof the following new paragraph:

"'(4) in the case of any State whose State plan approved under section 1002 does not meet the requirements of subsection (c)(1), an amount equal to one-fourth of the total of the sums expended during such quarter as found necessary by the Secretary for the proper and efficient administration of the State plan, including services referred to in paragraph (3) and provided in accordance with the provisions of such paragraph.'

"(C) Section 1003 of such Act is further amended by adding at the end thereof the following new subsection:

"'(c)(1) In order for a State to qualify for payments under paragraph (3) of subsection (a), its State plan approved under section 1002 must provide that the State agency shall make available to applicants for or recipients of aid to the blind at least those services to help them attain or retain capability for self-support or self-care which are prescribed by the Secretary.

"'(2) In the case of any State whose State plan included a provision meeting the requirements of paragraph (1), but with respect to which the Secretary finds, after reasonable notice and opportunity for hearing to the State agency administering or supervising the administration of such plan, that—

"'(A) the provision has been so changed that it no longer complies with the requirements of paragraph (1), or

"'(B) in the administration of the plan there is a failure to comply substantially with such provision.

the Secretary shall notify such State agency that further payments will not be made to the State under paragraph (3) of subsection (a) until he is satisfied that there will no longer be any such failure to comply. Until the Secretary is so satisfied further payments with respect to the administration of such State plan shall not be made under paragraph (3) of subsection (a) but shall instead be made, subject to the other provisions of this title, under paragraph (4) of such subsection.'

"(4)(A) Paragraph (3) of section 1403(a) of such Act, as amended by subsection (a) of this section, is further amended by inserting, in the portion thereof which precedes subparagraph (A), 'whose State plan approved under section 1402 meets the requirements of subsection (c)(1)' after 'any State', and by striking out the period at the end of such paragraph and inserting in lieu thereof '; and'.

"(B) Such section 1403(a) is further amended by inserting at the end thereof the following new paragraph:

"'(4) in the case of any State whose State plan approved under section 1402 does not meet the requirements of subsection (c)(1), an amount equal to one-fourth of the total of the sums expended during such quarter as found necessary by the Secretary for the proper and efficient administration of the State plan, including services referred to in paragraph (3) and provided in accordance with the provisions of such paragraph.'

"(C) Section 1403 of such Act is further amended by adding at the end thereof the following new subsection:

"'(c)(1) In order for a State to qualify for payments under paragraph (3) of subsection (a), its State plan approved under section 1402 must provide that the State agency shall make available to applicants for or recipients of aid to the permanently and totally disabled at least those services to help them attain or retain capability for self-support or self-care which are prescribed by the Secretary.

"(2) In the case of any State whose State plan included a provision meeting the requirements of paragraph (1), but with respect to which the Secretary finds, after reasonable notice and opportunity for hearing to the State agency administering or supervising the administration of such plan, that—

"'(A) the provision has been so changed that it no longer complies with the requirements of paragraph (1), or

"'(B) in the administration of the plan there is a failure to comply substantially with such provision.

the Secretary shall notify such State agency that further payments will not be made to the State under paragraph (3) of subsection (a) until he is satisfied that there will no longer be any such failure to comply. Until the Secretary is so satisfied further payments with respect to the administration of such State plan shall not be made under paragraph (3) of subsection (a) but shall instead be made, subject to the other provisions of this title, under paragraph (4) of such subsection.'"

On page 34, line 5, after the word "care", to insert "services (including the provision of such care)"; in line 17, after the word "care", to insert "services"; on page 35, line 7, after the word "exists", to insert a semicolon and "and, in cases in which the family is able to pay part or all of the costs of such care, for payment of such fees as may be reasonable in the light of such ability,"; on page 37, line 17, after the word "for", to strike out "the provision" and insert "use"; in line 18, after the word "part", to strike out "of" and insert "for"; in line 19, after the word "care", to insert "services, including the provision of day care"; on page 48, after line 11, to insert:

"(c)(1) Section 120 of the Internal Revenue Code of 1954 (26 U.S.C. 120) is amended to read as follows:

"'SEC. 120. PUBLIC ASSISTANCE FROM WORK AND TRAINING PROJECTS.

"'Gross income does not include payments of aid to families with dependent children (as defined in title IV of the Social Security Act) received by an individual under a State plan approved under section 402 of such Act even though received in the form of payments for work performed by him.'

"(2) Section 3401(a) of such Code (26 U.S.C. 3401(a)) is amended by striking out the period at the end of paragraph (13) and inserting in lieu thereof '; or' and by inserting after such paragraph the following new paragraph:

"'(14) if such remuneration is in the form of a payment of aid to families with dependent children (as defined in title IV of the Social Security Act) received by an individual under a State plan approved under section 402 of such Act.'

On page 49, line 11, after the word "paragraph", to strike out "(11) (as redesignated by section 101 (b) (1) of this Act)" and insert "(10)"; on page 50, after line 7, to strike out:

"SEC. 107. (a) Section 405 of the Social Security Act is amended to read as follows:

"'USE OF PAYMENTS FOR BENEFIT OF CHILD

"'SEC. 405. Whenever the State agency has reason to believe that any payments of aid to families with dependent children made with respect to a child are not being or may not be used in the best interests of the child, the State agency may provide for such counseling and guidance services with respect to the use of such payments and the management of other funds by the relative receiving such payments as it deems advisable in order to assure use of such payments in the best interests of such child, and may provide for advising such relative that continued failure to so use such payments will result in substitution therefor of protective payments as provided under section 406(b)(2), or in seeking appointment of a guardian or legal representative as provided in section 1111, or in other action authorized under State law which is deemed necessary to protect the interests of such child; and any such action taken by the State agency pursuant to such State law, other than denial of such payments with respect to such child while in the home of such relative, shall not serve as a basis for withholding funds from such State under section 404 and shall not prevent such payments with respect to such child from being considered aid to families with dependent children.'

On page 51, after line 8, to insert:

"PROVISION OF CARE FOR CHILD WHO IS IN UNSUITABLE HOME'

At the beginning of line 11, to strike out "(b)" and insert "SEC. 107."; in the same line, after the word "of", to strike out "such" and insert "the Social Security"; on page 52, line 3, after the word "another", to strike out "person" and insert "individual"; after line 15, to strike out:

"(B) meeting all of the need, as determined by the State, of individuals with respect to whom aid to families with dependent children is paid;" and, in lieu thereof, to insert:

"(B) making such payments only in cases in which such payments will, under the rules otherwise applicable under the State plan for determining need and the amount of aid to families with dependent children to be paid (and in conjunction with other income and resources), meet all the need of the individuals with respect to whom such payments are made;"

On page 53, line 21, after the word "below", to insert "the last"; in the same line, after the word "paragraph", to strike out "(3)" and insert "thereof"; on page 54, line 22, in the headline, after the word "for", to strike out "spouse of relative with whom" and insert "both parents of"; in line 23, in the headline, after the word "child", to strike out "is living"; on page 57, line 15, after the word "this", to strike out "Act" and insert "Act, but not more than ten such committees may exist at any time. The number of mem-

bers appointed to any such committee shall not exceed fifteen."; on page 58, line 18, after the word "the", where it appears the first time, to strike out "private"; on page 60, after line 7, to strike out:

"TRAINING GRANTS FOR PUBLIC WELFARE PERSONNEL

"SEC. 123. Section 705(a) of the Social Security Act is amended by striking out 'for the fiscal year ending June 30, 1958, the sum of $5,000,000, and for each of the five succeeding fiscal years such sums as the Congress may determine' and inserting in lieu thereof the following: 'for the fiscal year ending June 30, 1963, the sum of $3,500,000, and for each fiscal year thereafter the sum of $5,000,000'."

And, in lieu thereof, to insert:

"INCREASE IN ADEQUATELY TRAINED WELFARE PERSONNEL

"SEC. 123. (a) Section 705 of the Social Security Act is amended to read as follows:

"'TRAINING GRANTS FOR PUBLIC WELFARE PERSONNEL

"'SEC. 705. (a) In order to assist in increasing the effectiveness and efficiency of administration of public assistance programs by increasing the number of adequately trained public welfare personnel available for work in public assistance programs, there are authorized to be appropriated for the fiscal year ending June 30, 1963, the sum of $3,500,000 and for each fiscal year thereafter the sum of $5,000,000.

"'(b) Sums appropriated under subsection (a) shall be available to enable the Secretary to provide (1) directly or through grants to or contracts with public or nonprofit private institutions of higher learning, for training personnel who are employed or preparing for employment in the administration of public assistance programs, (2) directly or through grants to or contracts with public or nonprofit private agencies or institutions, for special courses of study or seminars of short duration (not in excess of one year) for training of such personnel, and (3) directly or through grants to or contracts with public or nonprofit private institutions of higher learning, for establishing and maintaining fellowships or traineeships for such personnel at such institutions, with such stipends and allowances as may be permitted by the Secretary.

"'(c) Payments under subsection (b) may be made in advance on the basis of estimates by the Secretary, or may be made by way of reimbursement, and adjustments may be made in future payments under this section to take account of overpayments or underpayments in amounts previously paid.

"'(d) The Secretary may, to the extent he finds such action to be necessary, prescribe requirements to assure that any individual will repay the amount of his fellowship or traineeship received under this section to the extent such individual fails to serve, for the period prescribed by the Secretary, with a State or political subdivision thereof, or with the Federal Government, in connection with administration of any State or local public assistance program. The Secretary may relieve any individual of his obligation to so repay, in whole or in part, whenever and to the extent that requirement of such repayment would, in his judgement, be inequitable or would be contrary to the purposes of any of the public welfare programs established by this Act.'

"(b)(1) Section 526(a) of such Act is amended by inserting before the period at the end thereof '; and for grants by the Secretary to public or other nonprofit institutions of higher learning for special projects for training personnel for work in the field of child welfare, including traineeships with such stipends and allowances as may be permited by the Secretary'.

"(2) The heading of section 526 of such Act is amended by inserting ', TRAINING,' after 'RESEARCH'."

On page 65, line 18, after the word "month", to insert "and"; on page 68, line 5, after the word "month", to insert "and"; on page 69, line 25, after the word "month", to insert "and"; on page 70, line 11, after "303", to insert "(d)"; after line 13, to insert:

"(e) Section 303(e) of the Social Security Amendments of 1961 (Public Law 87-64) is amended by striking out 'July 1, 1962' and inserting in lieu thereof 'October 1, 1962'."

On page 71, after line 5, to strike out:

"FEDERAL PAYMENTS FOR FOSTER CARE IN CHILD-CARE INSTITUTIONS

"SEC. 135. (a) Clause (3) of paragraph (a) of section 408 of the Social Security Act is amended by inserting 'or child-care institution' after 'foster family home'.

"(b) Paragraph (b) of such section is amended by striking out 'of this section in the foster family home of any individual' and inserting in lieu thereof the following: 'of this section—

"'(1) in the foster family home of any individual, whether the payment therefor is made to such individual or to a public or nonprofit private child-placement or child-care agency, or

"'(2) in a child-care insitution, whether the payment therefor is made to such institution or to a public or nonprofit private child-placement or child-care agency, but subject to limitations prescribed by the Secretary with a view to including as "aid to families with dependent children" in the case of such foster care in such institutions only those items which are included in such term in the case of foster care in the foster family home of an individual'.

"(c) Clauses (1) and (2) of paragraph (f) of such section are each amended by inserting 'or child-care institution after 'foster family home'.

"(d) The last sentence of such section is amended by inserting before the period at the end thereof the following: '; and the term "child-care institution" means a nonprofit private-care institution which is licensed by the State in which it is situated or has been approved, by the agency of such State responsible for licensing or approval of institutions of this type, as meeting the standards established for such licensing'."

On page 72, at the beginning of line 17, to change the section number from "136" to "135"; on page 76, after line 18, to strike out:

"(10) provide that the State agency shall make available to applicants for or recipients of aid to the aged, blind, or disabled under the plan at least those services to help them attain or retain capability for self-support or self-care which are prescribed by the Secretary; and include a description of the steps taken to assure, in the provision of these and any other services which the State agency makes available to individuals under the plan, maximum utilization of other agencies providing similar or related services;".

And, in lieu thereof, to insert:

"(10) provide a description of the services (if any) which the State agency makes available to applicants for or recipients of aid or assistance under the plan to help them attain self-support or self-care, including a description of the steps taken to assure, in the provision of such services, maximum utilization of other agencies providing similar or related services;".

On page 78, line 7, after the word "disregard", to insert "(A)"; in line 9, after the word "month", to insert "and (B) for a period not in excess of twelve months, such additional amounts of other income and resources, in the case of an individual who has a plan for achieving self-support approved by the State agency, as may be necessary for the fulfillment of such plan"; on page 80, line 5, after the word "separate", to insert "State"; on page 81, line 5, after the word "and", to insert "to which the sentence of section 1002(b) following paragraph (2) thereof is applicable"; on page 82, line 6, after the word "Secretary", to strike out "of the Treasury"; on page 85, in line 21, after the word "State", to insert "whose State plan approved under section 1602 meets the requirements of subsection (c)(1)"; on page 86, line 7, after the word "to", to strike out "section 1602(a)(10)" and insert "subsection (c)(1)"; in line 17, after the word "to", to strike out "section 1602(a)(10)" and insert "subsection (c)(1)"; on page 87, line 22, after the word "political", to strike out "subdivision, and" and insert "subdivision: *Provided*, That no funds authorized under this title shall be available for services defined as vocational rehabilitation services under the Vocational Rehabilitation Act (i) which are available to individuals in need of them under programs for their rehabilitation carried on under a State plan approved under such Act, or (ii) which the State agency or agencies administering or supervising the administration of the State plan approved under such Act are able and willing to provide if reimbursed for the cost thereof pursuant to agreement under subparagraph (E), if provided by such staff, and"; at the top of page 89, to insert "except that services described in clause (ii) of subparagraph (D) hereof may be provided only pursuant to agreement with such State agency or agencies administering or supervising the administration of the State plan for vocational rehabilitation services so approved."; after line 6, to strike out "except that any such services which are defined as vocational rehabilitation services under the Vocational Rehabilitation Act and which are available, from the State agency or agencies administering or supervising the administration of the State plan for vocational rehabilitation services, to individuals under programs for their rehabilitation carried on under such State plan, may be provided only by such State agency or agencies (in the manner described in subparagraph (E)) except to the extent agreed to by such State agency or agencies."; in line 21, after the word "the", to strike out "Secretary." and insert "Secretary; and"; after line 22, to insert:

"(5) in the case of any State whose State plan approved under section 1602 does not meet the requirements of subsection (c)(1), an amount equal to one-fourth of the total of the sums expended during such quarter as found necessary by the Secretary for the proper and efficient administration of the State plan, including services referred to in paragraph (4) and provided in accordance with the provisions of such paragraph."

On page 91, after line 15, to insert:

"(c)(1) In order for a State to qualify for payments under paragraph (4) of subsection (a), its State plan approved under section 1602 must provide that the State agency shall make available to applicants for or recipients of old-age assistance under such State plan at least those services to help them attain or retain capability for self-care which are prescribed by the Secretary.

"(2) In the case of any State whose State plan included a provision meeting the requirements of paragraph (1), but with respect to which the Secretary finds, after reasonable notice and opportunity for hearing to the State agency administering or supervising the administration of such plan, that—

"(A) the provision has been so changed that it no longer complies with the requirements of paragraph (1), or

"(B) in the administration of the plan there is a failure to comply substantially with such provision,

the Secretary shall notify such State agency that further payments will not be made to the State under paragraph (4) of subsection (a) until he is satisfied that there will no longer be any such failure to comply. Until the Secretary is so satisfied further payments

with respect to the administration of such State plan shall not be made under paragraph (4) of subsection (a) but shall instead be made, subject to the other provisions of this title, under paragraph (5) of such subsection."

On page 95, line 25, after "section 2(a)", to strike out "(11)" and insert "(10)"; on page 97, at the beginning of line 15, to strike out "$9,800,000" and insert "$10,500,000"; in line 19, after the word "exceed", to strike out "$330,000" and insert "$400,000"; at the top of page 99, to insert:

"INCOME AND RESOURCES TO BE DISREGARDED IN DETERMINING NEED OF INDIVIDUAL FOR AID TO THE BLIND

"SEC. 154. Effective July 1, 1963, so much of section 1002(a)(8) of the Social Security Act as follows the first semicolon therein is amended to read as follows: 'except that, in making such determination, the State agency shall disregard (A) the first $85 per month of earned income, plus one-half of earned income in excess of $85 per month, and (B) for a period not in excess of twelve months, such additional amounts of other income and resources, in the case of an individual who has a plan for achieving self-support approved by the State agency, as may be necessary for the fulfillment of such plan;'."

After line 13, to insert:

"RESPONSIBILITY FOR PLACEMENT AND FOSTER CARE OF DEPENDENT CHILDREN

"SEC. 155. (a) Clause (2) of section 408(a) of the Social Security Act is amended to read: '(2) whose placement and care are the responsibility of (A) the State or local agency administering the State plan approved under section 402, or (B) any other public agency with whom the State agency administering or supervising the administration of such State plan has made an agreement which is still in effect and which includes provision for assuring development of a plan, satisfactory to such State agency, for such child as provided in paragraph (f)(1) and such other provisions as may be necessary to assure accomplishment of the objectives of the State plan approved under section 402.'.

"(b) The amendment made by subsection (a) shall apply only for the period beginning July 1, 1962, and ending with the close of June 30, 1963. The Secretary shall submit to the President, for transmission to the Congress prior to March 1, 1963, a full report of the administration of the provisions of the amendment made by subsection (a), including the experiences of each of the States in arranging for foster care under the provisions of their respective State plans which are in accord with such amendment, together with his recommendations as to continuation of, and modifications in, such amendment."

At the beginning of line 24, to strike out "101 (b)"; on page 101, at the beginning of line 2, to insert "and 132 (d)"; in line 5, after "(d)", to strike out "132, 135,"; in line 10, after the word "sections", to strike out "107 (a) and"; in line 11, after "109", to insert "and 132 (other than subsection (d) and (e) thereof)"; in line 13, after the word "title", to strike out "IV" and insert "I, IV, X, or XIV"; in line 14, after the word "Act" to insert a comma and "as the case may be,"; in line 16, after "105", to insert "(other than subsection (c))"; after line 21, to insert:

"(f) The amendments made by section 101(b) shall be applicable in the case of expenditures, under a State plan approved under title I, IV, X, or XIV of the Social Security Act, as the case may be, made after June 30, 1963."

And, at the top of page 102, to insert:

"(g) The amendment made by section 105(c)(1) shall apply in the case of taxable years ending after September 30, 1962. The amendments made by section 105(c)(2) shall apply to remuneration paid after September 30, 1962."

The amendments were agreed to.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

Mr. KERR. Mr. President, I send to the desk a committee amendment. I ask unanimous consent that the reading of the amendment be dispensed with but that the amendment be printed in the RECORD.

The PRESIDING OFFICER. Without objection, the reading of the amendment will be dispensed with; and, without objection, the amendment will be printed in the RECORD.

The amendment is as follows:

On page 49, between lines 5 and 6, insert the following:

"(d) Expenditures (other than for medical or any other type of remedial care) made at any time during the period beginning July 1, 1961, and ending with the close of September 30, 1962, which would have been considered aid to dependent children or aid to families with dependent children, as the case may be, under a State plan approved under title IV of the Social Security Act except that they were made in the form of payments for work performed by a relative with whom a dependent child (as defined in section 406 or 407 of such Act) is living, shall be deemed to have been made under a State plan approved under title IV of the Social Security Act and to constitute aid to dependent children or aid to families with dependent children, as the case may be, if (1) such expenditures were made under conditions which meet the requirements set forth in section 409 of such Act (added by subsection (a) of this section), other than subparagraphs (D) and (F) of subsection (a)(1) thereof and other than the requirement that the State agency (administering or supervising the administration of such plan) be administering or supervising the administration of the program under which such work is performed, and (2) at the time such expenditures were made, such State plan met the requirements of paragraphs (1), (2), and (3) of section 407 of the Social Security Act. The costs of administration of any such State plan may include, with respect to expenditures described in the preceding sentence, only such costs as are permitted in accordance with the provisions of subsection (b) of such section 409."

On page 101, line 17, strike out "subsection (c)" and insert in lieu thereof "subsections (c) and (d)".

Mr. KERR. Mr. President, I have cleared the amendment with the majority leader, the minority leader, the chairman of the committee, the ranking Republican member of the committee, and the other Democratic members of the committee.

I ask unanimous consent to have printed at this point in the RECORD a brief explanation of the amendment.

There being no objection, the explanation was ordered to be printed in the RECORD, as follows:

EXPLANATION OF AMENDMENT

In this bill we have provided for community work and training programs as a part of the aid to dependent children program. Most of us agree that it is highly desirable that individuals who are unemployed and require assistance have an opportunity to retain their skills and acquire new skills through constructive work projects. This has become particularly important since May 1961 when we made temporary provision for aid to families in which a parent is unemployed. A number of States have operated work projects for years and attempted to accommodate these projects to the new program that we enacted last year—something which, in my judgment, is natural and commendable. However, in a few instances technical problems have arisen which create complications that may affect their right to Federal financial participation in some of their expenditures under the aid to dependent children programs. In view of the fact that these programs are wholly consistent with the spirit of the provisions in this bill which Congress has developed after careful consideration, it seems only fair that the efforts of the States that have been ahead of the Federal Government in this respect be recognized.

Accordingly, the amendment I am offering would make the community work and training provisions of H.R. 10606 effective back to July 1, 1961, the beginning of the quarter following our enactment of the provision for aid to families in which parents are unemployed. It would also not require, prior to October 1, 1962, that some of the rather technical provisions we have developed be in effect. Specifically, the provisions exempted would be those requiring protection of project workers by Workmen's Compensation or its equivalent, that additional expenses of a recipient of aid usually attributable, to such work will be considered, and provision that the program must be administered by, or under supervision of the State welfare agency.

Mr. KERR. Mr. President, I ask that the amendment be agreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Oklahoma.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. KERR. Mr. President, I yield the floor.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

The PRESIDING OFFICER. The bill is open to amendment.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MATCHING FUNDS ON ADMINISTRATION OF PUBLIC WELFARE

Mr. SYMINGTON. Mr. President, H.R. 10606—as an extension and improvement of public assistance and child welfare services programs—recognizes the need for more rehabilitation services to make it possible to remove more people from the welfare rolls.

And yet, in order to encourage the States to provide more of this type of service, particularly in the area of Aid to Dependent Children, the bill as passed by the House posed a very real problem to current assistance programs. As amended by the Senate Finance Committee, this problem was reduced.

Based on correspondence from Governor Dalton, of Missouri, and conferences with Missouri's director of welfare, however, my colleague, Senator LONG, and I believe further modification is needed.

This need is recognized by a number of other States. On June 23, the senior Senator from Massachusetts, Senator SALTONSTALL, proposed a series of five amendments, numbered "6–23–62–A."

Mr. President, I ask unanimous consent that the Saltonstall amendments be printed at this point in my remarks.

There being no objection, the amendments were ordered to be printed in the RECORD, as follows:

On page 25, line 5, strike out "one-fourth" and insert in lieu thereof "one-half".

On page 27, lines 5 and 6, strike out "one-fourth" and insert in lieu thereof "one-half".

On page 29, lines 12 and 13, strike out "one-fourth" and insert in lieu thereof "one-half".

On page 31, lines 10 and 11, strike out "one-fourth" and insert in lieu thereof "one-half".

On page 90, lines 1 and 2, strike out "one-fourth" and insert in lieu thereof "one-half".

Mr. SYMINGTON. By eliminating the penalty provisions, these amendments will preserve the long-established principle of matching the States on a dollar-for-dollar basis in the basic administrative costs of carrying out the public assistance programs for the aged, the blind, the disabled, aid for dependent children, and medical assistance for the aged.

At the same time, by retaining the House and Senate Finance Committee provision for 75 percent matching of special administrative services, these amendments would encourage the rehabilitation work so essential to the sound improvement of present welfare programs.

The Senate Finance Committee, building on the work of the House of Representatives, has reported a bill containing important changes in the existing programs. We have discussed this problem with the distinguished senior Senator from Oklahoma, who is handling this bill for the Senate Finance Committee, and who has told us he has no objection to the amendments in question.

The proposal to match States on a 75-percent additional administrative basis—if they meet with minimum service requirements in a particular welfare category—is important for the encouragement it will give to States like Missouri that have met administrative standards in the past. The additional Federal assistance will also focus attention on needed rehabilitation aspects of future welfare programs.

On the other hand, serious difficulties would be encountered by attempting to cut the long-established dollar-for-dollar matching formula on present administrative costs for failure to meet minimum rehabilitation service requirements.

Some State laws might be hard to change, and necessary State appropriations might be hard to obtain, particularly because of the widespread concern about minimum standards not yet set up by the Secretary of Health, Education, and Welfare.

Under the penalties provided by the House, failure of a State legislature to act, and consequent inability to comply, could be very serious. As stated, the Senate eased the penalty, but it could still mean penalties of as much as $2 million a year to Missouri on present programs.

Gov. John Dalton, of Missouri, with the support of the Missouri Legislature, is moving ahead in setting up pilot rehabilitative services in our welfare programs. He has assured us of his interest and intention to continue improving the services, but does not want the present necessary dollar-for-dollar administrative funds threatened for possible failure to institute new services.

The 75-percent matching would encourage States to improve their rehabilitative services. This in turn should help make welfare recipients self-supporting members of society, reduce the welfare rolls, and thereby reduce Federal and State expenditures.

If State governments do not meet additional minimum requirements, however, I do not believe they should be penalized on the long-established programs under which they have been meeting, and continue to meet, matching fund requirements.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point the following material: a telegram from Gov. John M. Dalton, dated June 14; a letter from Governor Dalton, dated June 20; a story from the St. Louis Post-Dispatch of June 24, entitled "Ribi-

coff To Get State Welfare Aid Cut Protest"; and a copy of telegram from Governor Dalton to the Honorable Abraham Ribicoff, Secretary of the Department of Health, Education, and Welfare.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

JEFFERSON CITY, MO., *June 14, 1962.*

Hon. STUART SYMINGTON,
U.S. Senate,
Washington, D.C.:

The Senate Finance Committee has approved H.R. 10606 and ordered it favorably reported to the Senate with several amendments. We are greatly concerned with one of these amendments, which potentially could cause heavy decreases in Federal funds for administration in the future in Missouri, and other States. For some 20 years Federal funds have paid 50 percent of the cost of administering the Federal-State public assistance programs. H.R. 10606, as passed by the House, provides that if a State furnishes certain welfare services, as designated by the Secretary of Health, Education, and Welfare, the Federal administrative percentage would be increased from 50 to 75 perecnt. The Senate Finance Committee continued this feature, but further provided that if the services designated by the Secretary were not made available to recipients by the State, the matching of administrative costs from Federal funds, now 50 percent, would be reduced to 25 percent. While Missouri is wholeheartedly in sympathy with the administration's welfare bill aimed at restoring welfare recipients to useful citizenship, strengthening family life and furthering self-help and self-support among recipients, we strongly protest any possibility of reducing the Federal matching of administrative funds to less than 50 percent, as now provided. It is quite conceivable that the Missouri Legislature will not see fit to appropriate State funds to make possible additional Welfare staff members to provide the services hoped for in H.R. 10606. Under such circumstances, and as the Senate amendment now stands, the State could lose as much as $2 million per year, now provided in Federal funds for administration. I strongly urge you to make every effort to see that H.R. 10606, if finally enacted into law, provides that Federal administrative matching funds furnished to States not be allowed to be set below the present 50-percent figure. The importance of this to our State, and I am quite sure to others, cannot be overestimated.

JOHN M. DALTON,
Governor.

EXECUTIVE OFFICE,
STATE OF MISSOURI,
Jefferson City, Mo., June 20, 1962.

Hon. STUART SYMINGTON,
Senate Office Building,
Washington, D.C.

DEAR SENATOR: Thank you for your recent letter and the material regarding H.R. 10606.

We have studied the committee's report and remain of the opinion that the provision which my telegrams concerned is potentially dangerous to the State of Missouri. I certainly am wholeheartedly in accord with the philosophy of rehabilitation of persons receiving welfare benefits. However, under this bill and the Finance Committee's amendment, we have no way of knowing at this time what services the Department of Health, Education, and Welfare might require the State to furnish in order to be entitled to the 75 percent matching funds. We have no way of knowing whether or not the State of Missouri will be in a position to furnish the services which would be required nor have we any assurance that the legislature would be cooperative in authorizing the necessary personnel. If Missouri were unable to furnish the services which the Department might require, the reduction in the Federal matching payments for administration to 25 percent might result in a loss to the State of Missouri of some $2 million per year in Federal matching funds.

In my opinion, the offering of 75 percent as matching funds for the rehabilitation services is a strong incentive to provide such services and I do not see the necessity or desirability of the coercive threat of reduction in administrative matching funds for failure to provide such services.

May I urge you to do what you can to see that this measure would provide in no event less than equal matching funds as are now provided. I do consider this of importance to the State of Missouri not only from a financial standpoint, but also from the standpoint of principle involved.

With best regards, I am,

Sincerely yours,

JOHN M. DALTON,
Governor.

[From the St. Louis Post-Dispatch, June 24, 1962]

RIBICOFF TO GET STATE WELFARE AID CUT PROTEST

(By Thomas W. Ottenad)

WASHINGTON, June 23.—Protests by Missouri officials against proposed changes in Federal welfare expenditures will be put before Secretary of Health, Education, and Welfare, Abraham A. Ribicoff, the Post-Dispatch was told today.

Ribicoff will be asked to approve an amendment that would eliminate from a pending Senate bill a provision cutting the Federal Government's share of the cost of administering State welfare programs from 50 to 25 percent under certain conditions. Missouri officials have said that the cutback might cost the State as much as $2 million a year in Federal funds now provided to help pay for administering State welfare programs.

Stanley R. Fike, administrative assistant to Senator STUART SYMINGTON, Democrat, of Missouri, said agreement on putting the matter before Ribicoff was obtained at a conference here yesterday.

OTHERS AT MEETING

In addition to Fike, participants in the meeting included Daniel Miles, administrative assistant to Senator EDWARD V. LONG, Democrat, of Missouri: Proctor N. Carter, director of the Missouri Division of Welfare; Elmore G. Carter, chief counsel of the division; Robert M. Ball, social security Commissioner; Charles E. Hawkins, legislative reference officer for the Social Security Administration, and experts from the Library of Congress.

Fike said Ball agreed to present to Ribicoff the request by Proctor Carter for an amendment that would eliminate the proposed reduction in Federal funds. The cut in Federal assistance would be made if States failed to provide certain minimum services designed to put more emphasis on rehabilitation of welfare recipients. Under terms of the pending bill, the nature of the services is to be spelled out later by Ribicoff.

Fike said that the Missouri officials endorsed the objective of upgrading welfare services. They said Missouri has started an experimental program to determine how strengthened services might best operate.

INCENTIVE CITED

The Missouri officials reportedly took the position that an incentive provided under the pending legislation was sufficient to encourage the State to provide improved minimum services. The incentive is a provision for the Federal Government to pay 75 percent, rather than 50 percent, of the administrative costs of new State services emphasizing rehabilitation.

Carter said the penalty provision was unnecessary, Fike stated. The Missouri official warned that Missouri and other States might have to cut back present welfare services as a result of the penalty clause if their legislatures are unwilling to underwrite the cost of new services.

Amending the proposed Senate bill would open the way to revising an even more stringent measure already passed by the House. The House bill provides that States failing to comply with the proposed new minimum standards could lose all, not just half, of Federal funds furnished for administration.

They could lose all Federal funds provided for direct payments to welfare recipients. This is a much larger sum than the administrative payments. In the year ended June 30, 1961, Missouri received $86,746,000 in Federal money for direct payments, compared with less than $4 million for administrative purposes.

Missouri officials, who at first were unaware of the nature of the penalty contained in the House bill, told Fike that this approach could endanger the State's entire welfare assistance program.

MISSOURIANS' ONLY HOPE

Because the House has completed action on its measure, the only hope for the Missourians is to try to have the Senate eliminate any penalty provision from its measure. This would throw the legislation into a conference of the House and Senate, where an attempt could be made to eradicate the House penalty clause.

If Ribicoff and his advisers agree to the request for eliminating the penalty provision, Fike said an amendment to carry out this change would be offered on the floor of the Senate. The bill, which has been approved by the Senate Finance Committee, is expected to be considered by the Senate some time next week.

If the Department of Health, Education, and Welfare will not agree to the change, Fike said, a decision on whether an amendment would be offered would have to be considered further. Originally the Kennedy administration favored the approach represented by the House bill. An agreement to place the matter before Ribicoff was arranged by Senators SYMINGTON and LONG as a result of a protest expressed last week by Gov. John M. Dalton, of Missouri, over possible effects of any cut in Federal funds.

JUNE 25, 1962.

Hon. ABRAHAM RIBICOFF,
Secretary of Health, Education, and Welfare,
Washington, D.C.:

I appreciate the meeting in Washington last Friday arranged by Missouri Senators SYMINGTON and LONG between officials of the Missouri Welfare Department and the Department of Health, Education, and Welfare at which time discussion was held on a proposed Senate Finance Committee amendment to H.R. 10606, which could, under certain conditions, result in greatly reduced Federal funds for administration of welfare programs by the States. We in Missouri are completely in accord with the new approach to welfare problems reflected in this legislation which was sponsored by your Department. We intend to do everything possible to further self-help, self-care and rehabilitation among recipients of welfare. However, we do not believe that any State should be put in the position of losing administrative money if such State did not furnish certain services to welfare recipients as designated by the Secretary of Health, Education, and Welfare. We believe the provision for an increase in Federal administrative matching

from 50 to 75 percent would be sufficient incentive to States to provide welfare services consistent with the funds made available by the various State Legislatures. It is conceivable in some instances that the Legislatures may not see eye to eye with the Federal department and might not for one reason or another furnish services designated as essential by the Secretary. For such States to have their Federal administrative allotments sliced in half as a consequence would be entirely wrong in our opinion. Potentially, Missouri could lose as much as $2 million a year in Federal allotments if our Legislature did not appropriate money to add workers to furnish services to welfare recipients.

We were unaware that the House-passed bill carried even more penalties on the States. Nonetheless we are at this point trying to change the bill in the Senate so that no State would receive less than 50 percent Federal funds for administration as now provided by law. I sincerely hope that the Department will favor the elimination of the penalty provision in H.R. 10606 and that the bill will be enacted into law with such change.

JOHN M. DALTON,
Governor of Missouri.

Mr. LONG of Missouri. Mr. President, my distinguished colleague, the senior Senator from Missouri, has just presented a clear, persuasive argument for continuing the 50 percent matching fund basis for administrative costs even though the State does not provide the rehabilitation services prescribed by the Secretary of Health, Education, and Welfare.

The aim of the rehabilitation provisions of this bill to restore welfare recipients to useful citizenship, to strengthen family life and to further self-help and self-support among recipients is certainly commendable, and these provisions should become law. However, I have grave misgivings as to this sword of Damocles which the bill would hang over the heads of the States to obtain compliance. In my opinion, the 75 percent matching fund provision approved by the House and Senate Committee is a sufficient incentive to induce States to meet the requirements prescribed by the Secretary.

As my colleague has pointed out, this entire matter has been discussed and considered at length and I hope the Senate will take the appropriate action.

Mr. KUCHEL. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. MUSKIE in the chair). Without objection, it is so ordered.

PUBLIC WELFARE AMENDMENTS OF 1962

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate return to the consideration of the unfinished business.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. JAVITS. Mr. President, I wish to address myself to the bill itself, which I favor, and to a particular amendment which I have submitted. It deals with the question of judicial review, to which the States would be entitled under the plan of welfare payments or aid to the States in connection with welfare payments, which the bill provides.

The basis of my observations relate to the testimony of Miles B. Amend, chairman of the New York Board of Social Welfare, which appears in the hearings beginning at page 425.

As I have said, Mr. Amend is chairman of the New York State Board of Social Welfare, which is a board composed of 15 private citizens appointed by the Governor of New York with the consent of the State senate, one from each of the 11 judicial districts of the State and 4 at large.

He describes the board as being very diversified in terms of economic, professional, and other interests in the State. He describes the board as the policymaking head of the Department of Social Welfare of the State of New York.

The board endorsed the provisions of H.R. 10606, the bill now before the Senate, but he made some basic points, which I believe are extremely important. One of them is the basis for the amendment which I have submitted.

The recommendations made by Mr. Amend are twofold. First, he believes that there should be Federal court review of any proposed deduction or other penalty which flowed from the Federal Government to State plans and programs. Second, he believes that the best plan for Federal administration was for the Federal Government to require law on the part of the State to conform to Federal requirements, but that it should not break it down into the detail of the State's plan, which, he said, really resulted in a proliferation of technical and administrative detail.

If the general law of the State were in consonance with the requirement of the Federal Government, then the attitude of the Social Welfare Board of New York was that was adequate. Obviously, that deals with the whole scheme of legislation and was really testimony relating to a prewar policy on the part of some men. Therefore, in the proposed amendment to the bill, I have

picked up only the problem of judicial review.

I have not called up my amendment because in a matter of this nature it is always best, if possible, to come to agreement with the department which is concerned. So we are making every effort to agree with the Department of Health, Education and Welfare on a judicial review amendment which will be satisfactory to them and satisfactory to us.

There is one question in that regard which is open and which, I think, can easily be resolved. My amendment expressly provides that payments to the State under the statute shall not be stopped while judicial review is pending, while an appeal is taken from the determination of the Secretary. I think the Department would prefer to keep silent on that score, so that, first, would leave it a matter of administration; and second, would leave it to the injunctive power of the courts, which would always have the power to intercede in the situation once a judicial review was sought.

My present thought is to accede to that idea; that is, to leave the matter unprovided for specifically by the bill, and therefore in the hands of the normal administrative process plus the injunctive power of the courts.

The other question comes as to the type of court which should have jurisdiction. Normally, we think of the circuit court of appeals as the review court for determinations made by the Secretary. There is some feeling that because there is not a circuit court of appeals in every State, there may be involved, since this is uniquely a State matter, an element of inconvenience to require State authorities and officials to proceed to another State than their own State in which to ask for judicial review. It is a fact, though, that every State has a U.S. district court; so it may be, if it is satisfactory to the Department, that that could be a solution.

I shall explore all these points of view and shall do my utmost to develop an amendment which will provide for a proper kind of judicial review, with proper accommodation to the Department and to the States. However, I have not called up my amendment for the reasons which I have stated; and I think it is useful to announce that the subject is under negotiation, as it were, for determination, because other Senators may have received from their State welfare authorities the same request that I have received from the welfare authorities of the State of New York. Therefore, I wish to extend, both on the floor of the Senate and through the Record, an invitation to other Senators having similar problems to cooperate with me in their resolution to cosponsor an amendment, as we finally agree on one, if we can agree on one, so that the whole question of judicial review, which interests not only my State, but other States, as well, may be determined at one and the same time. I hope that other Senators who are interested will communicate with me, so that we may resolve this unit question at one time by one amendment.

Mr. WILLIAMS of New Jersey. Mr. President, I call up my amendments designated "6–29–62—F." I ask that in lieu of a reading of the amendments, the amendments be printed at this point in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendments offered by Mr. WILLIAMS of New Jersey for himself and Mr. HUMPHREY, Mr. DOUGLAS, Mr. SMITH of Massachusetts, Mr. YARBOROUGH, Mr. CARROLL, Mr. HART, Mr. MORSE, Mr. JAVITS, Mr. BURDICK, Mr. MCCARTHY, Mr. METCALF, Mr. CLARK, Mr. HOLLAND, and Mr. SMATHERS are as follows:

On page 40, after line 5, insert the following:

"(e) Part 3 of title V of such Act (as amended by the preceding provisions of this section) is further amended by adding at the end thereof the following new section:

"'DAY-CARE FACILITIES FOR CHILDREN OF MIGRANT AGRICULTURAL WORKERS

"'SEC. 529. (a) For the purpose of enabling the United States, through the Secretary, to further cooperate with State public-welfare agencies which have included in their plans for child-welfare services provisions calling for the providing of day-care facilities for the children of migrant agricuitural workers, there is hereby authorized to be appropriated for the fiscal year ending June 30, 1963, and for each succeeding fiscal year through the fiscal year ending June 30, 1965, the sum of $750,000, which shall be used exclusively for the establishment and operation of such day-care facilities.

"'(b) On October 1, 1962, and thereafter at the beginning of each fiscal year (commencing with the fiscal year ending June 30, 1964) the Secretary shall allot the sums appropriated pursuant to subsection (a) to States as follows: He shall allot to each State the plan of whose child-welfare agency calls for the providing of such day-care facilities an amount which bears the same ratio to the amount appropriated pursuant to subsection (a) of such year as the total number of children of migrant agricultural workers who were in such State during the preceding fiscal year (as determined by the Secretary on the basis of the best data available to him) bears to the total number of such children who were in all such States for such preceding year (as so determined).

"'(c) From the sums appropriated pursuant to subsection (a) and the allotments available under subsection (b), the Secretary shall from time to time pay to each State the public-welfare agency of which includes in its plan for child-welfare services provisions calling for the providing of day-care facilities for the children of migrant agricultural workers an amount equal to the Federal share (as determined under section 524) of such portion of the total sum expended under such plan (including the cost of administration of the plan) as is attributable to the providing of such day-care facilities. Such amounts shall be payable in the manner provided by section 523(b).

"'(d) The amount of any allotment to a State under subsection (b) for any fiscal year which the State certifies to the Secretary will not be required for carrying out the provisions of its State plan relating to the providing of day-care facilities for the children of migrant workers shall be available for reallotment from time to time, on such dates as the Secretary may fix, to other States which the Secretary determines (1) have need in carrying out the provisions of their State plan which call for the providing of such facilities for sums in excess of those previously allotted to them under such subsection and (2) will be able to use such excess amounts during such fiscal year in carrying out such provisions. Any amount so reallotted to a State shall be deemed part of its allotment under subsection (b).

"'(e) In no case shall a State receive Federal financial assistance with respect to the same expenditure under this section and the preceding sections of this part.

"'(f) For purposes of this section—

"'(1) The term "migrant agricultural worker" means an individual (A) whose primary employment is agriculture, as defined in section 3(f) of the Fair Labor Standards Act of 1938 (29 U.S.C. 203(f)), on performing agricultural labor, as defined in section 3121(g) of the Internal Revenue Code of 1954 (26 U.S.C. 3121(f)), on a seasonal or other temporary basis, and (B) who establishes with his family for the purpose of such employment a temporary residence;

"'(2) The term "child" means a child who makes his home with his parent or the individual who stands in loco parentis to the child; and

"'(3) The term "day-care facility" includes (A) day-care centers whether provided directly by the State (or any political subdivision thereof) or indirectly through a purchase of care or other basis, and (B) individualized care provided through foster home services.

"'(g) No funds appropriated under the authority of subsection (a) shall be payable to any State which imposes, as a condition of eligibility for day-care facilities, any residence, requirement which excludes any otherwise eligible child physically present in the State.'"

Amend the table of contents so as to add, at the end of the matter describing the contents of section 102 of the bill, the following:

"(e) Day-care facilities for children of migrant agricultural workers."

Mr. WILLIAMS of New Jersey. Mr. President, these amendments relate to a program of day care for the children of migrant farm families.

During the past few years I have made field trips to numerous States and have seen and learned of conditions that are almost unbelievable. Children were locked in the family's quarters or playing unsupervised in roadways, near irrigation ditches, in the fields near heavy machinery and trucks, or in camp lots littered with junk, broken glass, and garbage. Parents were often far out of earshot, picking fruits, vegetables, and fibers.

The number of children who live under these conditions is not so small that their needs can be easily overlooked. An estimated 100,000 to 150,000 young children accompany their parents in the migratory stream each year. We have reason to believe that far more than half of these children, perhaps as many as 70,000, are under 6 years of age.

The concern for this problem goes back four decades. According to a report—"Children in Migrant Families," prepared by Children's Bureau of Social Security Administration, U.S. Department of Health, Education, and Welfare, December 1960, submitted to Committee on Appropriations, U.S. Senate—of the Children's Bureau of the Department of Health, Education, and Welfare, a church group in 1921 opened an experimental day-care center in Maryland which filled a gaping need.

This was a beginning, and it has been augmented over the years by the additional efforts of other church and private groups.

I observe in the Chamber the distinguished senior Senator from Florida [Mr. HOLLAND], who has shown great interest

in this program. I have seen in his State some of the examples of a truly great humane work by church people and others who have brought day care to the children of migrant farmworkers.

Nonetheless, as we view the condition today, the program still amounts to no more than a beginning. Forty-one years later, there are still parents in this great Nation of ours who have no where to leave their children except in a wide-open field or an unkept, unprotected, unsanitary camp. In the entire Nation, there are only 24 day-care centers, licensed by State agencies, which primarily serve children of migrant families. The combined aggregate capacity of all 24 centers would probably serve less than 1,000 children.

Many States have rightfully become alarmed at the lack of daily supervision and have established day-care centers for migratory children on a pilot project basis. Regrettably, however, the financial resources of most States have not been sufficient to provide the stimulation needed for the establishment of these projects on a more general basis.

For the States which will expand initial projects and for the States which will start day-care centers, this amendment to H.R. 10606 would authorize an appropriation of $750,000 to provide matching grants to such States. A provision of the amendment assures that the grants will be channeled into those States having a substantial impact of migratory seasonal farmworkers each year and that residence requirements will not bar otherwise eligible children from the States' day-care services. The amount of Federal grants would be determined by the matching formula in the child welfare services section of the Social Security Act.

I want to emphasize, moreover, that this amendment is not intended to deny migratory children any welfare services and benefits currently available under the Social Security Act, or any amendment thereto.

This amendment to H.R. 10606 has been given the support of numerous church and social organizations concerned with alleviating the problems faced by migratory children. The administration, too, has given its support to this amendment. The Department of Health, Education, and Welfare, considers this amendment necessary and supports it. This amendment merely incorporates the provisions of our day-care bill, S. 1131, which had the express support of every administrative agency reporting on the bill.

I have given considerable time to the study of providing day-care services to our Nation's migrant children and am convinced that the proposed day-care amendment to H.R. 10606 will be of momentous assistance to these children. The enactment of this migrant day-care provision will announce the beginning of a safe, sanitary, and happy life for many young children whose only "happiness" has been the mere absence of hardship. Providing these many small children with positive joy and companionship is as needed as it is deserved by these neglected migrant children.

Mr. President, this amendment has been prepared and offered with the cooperation of the distinguished Senator from Oklahoma [Mr. KERR], who is in charge of H.R. 10606. The program of providing migrant children with day-care services has been arranged so as to begin in October of this year. It would be a continuing program and would phase out at the end of fiscal year 1964, the beginning of fiscal year 1965.

Mr. KERR. Mr. President, will the Senator yield?

Mr. WILLIAMS of New Jersey. I yield.

Mr. KERR. I believe the Senator from New Jersey intended to say that the program would terminate at the end of fiscal year 1965.

Mr. WILLIAMS of New Jersey. At the end of fiscal year 1965.

Mr. KERR. June 30, 1965.

Mr. WILLIAMS of New Jersey. The Senator is correct.

Mr. HOLLAND. Mr. President, will the Senator from New Jersey yield?

Mr. WILLIAMS of New Jersey. I am happy to yield to the Senator from Florida.

Mr. HOLLAND. Do I correctly understand that the amendments now offered to the more general bill are the same as S. 1131?

Mr. WILLIAMS of New Jersey. That is correct; with the exception that its time of life has been limited. It will end on June 30, 1965.

Mr. HOLLAND. In other words, the Senator's proposal sets up the same machinery and puts it on a trial basis, so far as time is concerned?

Mr. WILLIAMS of New Jersey. That is correct.

Mr. HOLLAND. I wish to voice my appreciation of the long, persevering, and even determined efforts of the distinguished junior Senator from New Jersey in this field. Sometimes his efforts have led into fields where I could not follow him; but in this particular effort I think every Senator will find it possible to follow the Senator from New Jersey, because there is not a doubt in the world that day-care schools for the children of migratory workers in the various States which have established them, including Florida, have shown their very great value. There is not a doubt in the world that the young children of the day-workers who migrate from place to place in the pursuit of their livelihood in serving our seasonal agricultural industries need this kind of service.

I am glad to join with the Senator from New Jersey in this effort. I hope that the gracious act of the Senator from Oklahoma [Mr. KERR], who is handling the bill, in accepting the amendments, means that this program is now safely on the track to becoming law in the near future.

I thank the Senator.

Mr. WILLIAMS of New Jersey. I thank the Senator from Florida; and I wish to state that without his guidance, his counsel, and his cooperation, this measure and two or three others would not be as advanced as they are.

Mr. JAVITS. Mr. President, will the Senator from New Jersey yield?

Mr. WILLIAMS of New Jersey. I yield.

Mr. JAVITS. I am very glad to be a cosponsor of this amendment; and I wish to say that in the Finance Committee the leadership of the Senator from New Jersey has added greatly to the development of these provisions. I am a member of the subcommittee on which the Senator has done such great work in dealing with migratory labor; and the provisions of this amendment are most important in connection with our work in this field.

This is a most humanitarian measure, and I think the Senator from New Jersey is to be congratulated on having this amendment worked out in so wise a way, in connection with this most important field.

I thank the Senator from New Jersey.

Mr. WILLIAMS of New Jersey. Mr. President, I wish to state how helpful and cooperative the senior Senator from New York has been. I also wish to state that the chairman of the Finance Committee has been most cooperative, both this year and last year, in trying to find a way to bring this measure to the floor of the Senate.

Mr. JAVITS. I thank the Senator from New Jersey.

Mr. CURTIS. Mr. President, will the Senator from New Jersey yield?

Mr. WILLIAMS of New Jersey. I yield.

Mr. CURTIS. Will the Senator point out the language in regard to termination?

Mr. WILLIAMS of New Jersey. The termination language is in the copy which is at the desk. This was worked out within the last hour.

Mr. CURTIS. So it is not in the printed copy?

Mr. WILLIAMS of New Jersey. No, but it is in the official copy which is at the desk.

Mr. CURTIS. And the proposal will end at that time?

Mr. WILLIAMS of New Jersey. Yes, in June of 1965.

Mr. CURTIS. Is it anticipated that the need for it will be over then; or is this suggested as more or less of a temporary trial run, so that it can be looked at again at that time?

Mr. WILLIAMS of New Jersey. It is difficult to say how many States will avail themselves of the program. Of course, it is a relatively low matching program, and the States will have to put in considerable amounts of their own resources. After making those investments, probably they will wish to continue the program, because it really involves a small investment in order to take care of the many day-care needs of these migratory children. So I hope the States will continue this with their own programs.

Mr. CURTIS. Does the Senator from New Jersey anticipate that it will or will not be continued after 1965?

Mr. WILLIAMS of New Jersey. I would not wish to be dogmatic about the matter, either one way or the other; but I certainly hope the States will devote their resources to the program; and once they do, I hope they will continue the program.

Mr. CURTIS. I thank the Senator from New Jersey.

Mr. KERR. Mr. President, on the basis of the changes in the amendment of the Senator from New Jersey, I recommend that the amendment be adopted.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from New Jersey.

The amendment was agreed to.

Mr. MOSS. Mr. President, on behalf of the Senator from Indiana [Mr. HARTKE], I call up the amendment identified as "5–24–62—H" and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 55, between lines 2 and 3, it is proposed to insert the following:

(e) The increase in the Federal share of public assistance payments provided for in this section shall be paid to the States only upon the condition that the money payments received by recipients of old-age assistance, aid to the blind, and aid to the permanently and totally disabled shall be increased by the full amount of the increase in the Federal share.

Mr. MOSS. Mr. President, the Senator from Indiana [Mr. HARTKE] is unable to bring up this amendment, since he is absent from the city, on official business. The amendment provides that the increase in Federal matching funds for the aged, blind, and disabled which is provided for by section 132 of the bill must be passed on to recipients, rather than be absorbed by the States.

The bill as reported provides for an increase of about $4 per recipient, plus continuing the $1 increase given on a temporary basis last year. This is a most modest increase, and one to which our needy, aged, blind, and disabled are certainly entitled. The national average payments in these three categories now are hardly enough to provide a bare level of existence—$76.35 for the blind, $72.08 for the aged, and $71.33 for the disabled.

At this income level, if 50 percent of the total amount of aid were allocated for food, which is about average, a blind aid recipient receiving $76.35 per month would have $38.17 per month for food. This is approximately $1.27 per day. In this age of high prices and rising cost of living, how can a person eat three meals a day on $1.27?

As H.R. 10606 is presently written, the language which provides for the increase in Federal matching funds for the aged, blind and disabled, contains no guarantee that this additional money going to the States will be passed on to the aid recipient. The State could, if they wished, use the increase in some other way, such as to meet the increased costs of new cases which are coming on the rolls.

Let me quote from a publication of the U.S. Department of Health, Education, and Welfare, Social Security Administration, entitled "State and Local Financing of Public Assistance, 1935–55." The third paragraph on page 18 reads:

While Congress intended to benefit individual recipients by the three amendments, the Federal matching formula is related to total State and local expenditures and not to individual payments. Thus a specified increase in the Federal share does not necessarily mean that each recipient receives an increase in his assistance payment equal to the Federal increase. When the Federal share is increased, States use the additional funds in one or more ways. Some use the full amount of the increase to raise payments to recipients of the special types of public assistance. If State funds are limited and caseloads are increasing, however, a State may use only part of the money (or perhaps none of it) to raise assistance payments and use the rest (or all) to meet the costs of the growing assistance rolls. Furthermore if a State is already meeting need for the special types of public assistance in full, as defined in the State's assistance standards, it may see no need or justification for increasing assistance payments and may reduce State and local spending when the Federal share goes up. The State may prefer to transfer State and local funds to another program—where perhaps need is being met less nearly adequately than in the federally aided programs.

In other words, the Federal matching formula is related to total State and local expenditures, and does not assure in any way that the $4 increase we are authorizing here today, along with the $1 increase we are making permanent, will reach the relief recipient. If any State does not see any justification for raising assistance payments in any category, that State may simply reduce State and local spending, and fill in the Federal amount to keep benefits at the same level; or the State can use for some other assistance area the increase intended for the needy blind.

I feel that when Congress passes a bill to give the needy blind, or the needy disabled, or needy aged, an increase—regardless how small—and when all of the newspapers and other news media carry the story, the people who have been led to believe they will get that increase should have it, in this instance as soon after October 1 as possible. The fact that this is the congressional intent has been made very clear. The Senate Finance Committee report on this bill—H.R. 10606—says, on page 9:

The committee expects, and, on the basis of experience after prior increases of this type, believes that the additional funds that would be available will be used by States to improve payments to persons who are receiving assistance under the programs of old-age assistance, aid to the blind, and aid to the permanently and totally disabled.

I realize that there are differences between the States in the extent of their need, and that if this amendment were passed it would force some States to make changes they may not want to make in their procedures. But we are only talking about a pitifully small increase of $4 a month for each recipient, and there is not a single State where our aged and our blind and our disabled could not put this to urgent use in a dozen different ways. Also, may I point out that this amendment relates only to the Federal contribution to these programs—not to State funds. It simply states that the amount the recipient is now receiving must be increased by $4—plus the $1 temporary increase voted in 1961. We are not dictating to the State what disposition it must make of State funds in this respect. Nor are we trying to dictate to the State what assistance standards it shall set.

The amendment I am offering is merely an attempt to assure that the intent of the Congress shall be carried out—and within a reasonable time.

I understand that the time between the effective date of the amendments and the date by which States raise payments by the entire Federal addition has tended to increase with successive amendments. After the 1948 amendments were passed, most of the States had raised payments to include the entire Federal addition by the end of 1948. But that in the case of later amendments it has taken 3 years for the majority of the States to reach the new levels provided, and in a few States, the full increase has never been reached.

I know that it is argued that eventually the vast majority of the States pass on the increases to relief recipients—in one form or another—but I feel this amendment should be passed to inform the States that the Congress wishes to have the full amount of the increase passed on directly to the recipient, as expeditiously as possible within the bounds of State administrative processes and laws.

Mr. CURTIS. Mr. President, will the Senator yield for a moment?

Mr. MOSS. I am happy to yield.

Mr. CURTIS. Has the amendment to which the Senator is speaking been printed?

Mr. MOSS. It has been printed; yes.

Mr. CURTIS. What is the number of it?

Mr. MOSS. It is identified as "6–28–62—H."

Mr. CURTIS. No copies seem to be available.

Mr. MOSS. I sent my only copy to the desk when I started.

Mr. CURTIS. I thank the Senator.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

Does the Senator from Utah yield the floor?

Mr. MOSS. Yes; I yield the floor for a discussion on the amendment.

Mr. CURTIS. Mr. President, may I inquire if it is the intention of the distinguished Senator from Utah to ask for a vote on his amendment this afternoon?

Mr. MOSS. Yes; I had expected to ask for a vote—not necessarily a yea and nay vote.

Mr. KERR. Mr. President, will the Senator yield?

Mr. CURTIS. I yield.

Mr. KERR. I may say to the Senator from Nebraska that the Senator from Oklahoma opposes the amendment, and I shall discuss my reasons for my opposition at some length, if that is the question the Senator from Nebraska had in mind.

Mr. CURTIS. It is not my purpose to speak to the merits or demerits of the amendment at this time. I am concerned about the procedure. Tomorrow is a holiday. I believe all Senators had an understanding that there would be no votes today. If a vote is pressed for on

any amendment that is not acceptable to the Committee on Finance, I shall insist on a live quorum.

I yield the floor.

Mr. MILLER. Mr. President, will the distinguished Senator from Utah yield so I may ask a question or two about this amendment?

Mr. MOSS. Certainly; I shall be happy to answer the Senator.

Mr. MILLER. As I understand the amendment, it is designed to prevent the Congress from passing legislation which has as its objective the improvement of the status of our old age and blind recipients in the States and having that objective frustrated by a State making a determination that the increase voted by Congress will not be passed on to the individual recipient. Is that the objective?

Mr. MOSS. The Senator is correct; that is the objective. There have been instances at times in the past where there has been an increase in the Federal contribution which has never reached the recipient, and which has caused a great deal of distress and misunderstanding.

Mr. MILLER. How is that possible where we have matching funds of the States and Federal Government involved?

Mr. MOSS. The Federal money, as I understand, has to be matched by State money, but it does not have to be applied to a specific program. The State may have several programs—dependent children, blind, disabled, general welfare—so, rather than apply the matching funds to a given program, the funds may be diverted to another welfare program, for example.

Mr. MILLER. Let us take as an example an old-age recipient receiving $100 a month in my State of Iowa. Because of increases in the cost of living, Congress reaches a determination that $100 a month is not adequate; it adopts a provision for $105 a month, for example. So the Congress, in order to meet that problem, makes an appropriation and amends the law to see to it that that old-age recipient gets $105 a month.

Mr. KERR. Mr. President, will the Senator yield on that point?

Mr. MILLER. I yield.

Mr. KERR. I would remind the Senator that the amendment referred to by the Senator from Utah does not operate on that basis. The Federal Government does not determine the amounts that meet the needs of the beneficiaries in the several States. That determination is made by the individual States. The amendments to which the Senator has referred have not been in the form of increases in payments from, for example, $100 to $105. They have been in the form of increasing the amount of money which the Federal Government would provide to the States in the event the States matched those funds, and would be added to whatever amount a particular State might be paying to its beneficiaries. As I understand, such amounts vary from somewhere in the average amount of $30 or $40 a month to $100 a month. So the amendment would not be in the form which the Senator from Iowa indicated as the basis for his question.

Mr. MILLER. I thank the Senator from Oklahoma. The Senator inferred that that was the specific way of doing it. What I was trying to get at was the intention of Congress in this legislation. I assume that in working up this particular proposal the committee staffs had come to the conclusion that some additional benefits are needed by aged and blind recipients, and in order to reach a conclusion on how much should be appropriated, they have tried to hit upon some kind of a standard, and there is a determination on the part of the committee that benefits should be increased by $5 a person.

In the State of Iowa, for example, the payment might be increased from $100 to $105. In the State of Utah, which might have a lower base, it might mean an increase from $65 to $70. The intention of the specific proposed legislation is to improve the status of the recipients by an average of $5 per person.

With that as a background, as an objective, do I correctly understand that some of the States have frustrated that objective by working out an allocation formula of some kind which does not increase the payment from $65 to $70, perhaps, in the State of Utah, or from $100 to $105, perhaps, in the State of Iowa.

Is this the background for the amendment?

Mr. MOSS. Yes. That is the problem to which the amendment is directed.

As I pointed out in my discussion, although usually the increases have been passed on, there have been increasing periods of delay, sometimes requiring 3 years before there is an increase to the recipient. In some States the increase has never been effective when it has been granted by the Federal Government.

The amendment is designed for the simple purpose of requiring States which receive added amounts from the Federal Government to pass those amounts on, to get them to the recipients so that the recipients will have the benefits from them.

When the Congress makes the decision that there is a need for additional money, it does not wish to have the program short-circuited, to have the money sent elsewhere or used for a purpose other than giving aid to the recipient.

Mr. MILLER. May I ask the Senator whether he has any statistics in regard to the history of this type of legislation, on the basis of which he feels that the amendment is desirable?

Mr. MOSS. I quoted rather extensively from the report from the Department of Health, Education, and Welfare, which indicated that this had happened before. I quote now from a document called "State and Local Financing of Public Assistance, 1935–55." It is dated in August of 1956.

I begin reading on page 18, the second paragraph:

> The congressional intent in passing the 1946, 1948, and 1952 amendments was primarily to benefit recipients of the special types of public assistance rather than to decrease State and local spending for public assistance. Because of this intent and because of the effect the amendments had on Federal spending compared with State and local spending and fiscal effort, a closer look at public assistance in the period 1946–55 seems worth while in appraising the Federal and State-local financial roles.
>
> While Congress intended to benefit individual recipients by the three amendments, the Federal matching formula is related to total State and local expenditures and not to individual payments. Thus a specified increase in the Federal share does not necessarily mean that each recipient receives an increase in his assistance payment equal to the Federal increase. When the Federal share is increased, States use the additional funds in one or more ways. Some use the full amount of the increase to raise payments to recipients of the special types of public assistance. If State funds are limited and caseloads are increasing, however, a State may use only part of the money (or perhaps none of it) to raise assistance payments and use the rest (or all) to meet the costs of the growing assistance rolls. Furthermore if a State is already meeting need for the special types of public assistance in full, as defined in the State's assistance standards, it may see no need or justification for increasing assistance payments and may reduce State and local spending when the Federal share goes up. The State may prefer to transfer State and local funds to another program—for example, general assistance—where perhaps need is being met less nearly adequately than in the federally aided programs.

That is the basis for the amendment. The purpose is to prevent the increase from being cut off, as it were, between the Federal Government and the recipient.

Mr. MILLER. I thank the Senator from Utah. While I wish to hear both sides of the argument on this particular amendment, and I look forward to hearing the rebuttal by the distinguished Senator from Oklahoma, I want the Senator from Utah to know that I have observed this type of problem in previous years in my own State, and I am favorably inclined toward his amendment.

Mr. MOSS. I thank the Senator from Iowa.

Mr. CURTIS. Mr. President, will the distinguished Senator yield?

Mr. MOSS. I yield.

Mr. CURTIS. Is the amendment the Senator has offered an amendment to H.R. 10606?

Mr. MOSS. The Senator is correct.

Mr. CURTIS. I hold in my hand a print of that bill, Calendar No. 1549. Can the Senator inform the Senate as to where in the bill the amendment would appear?

Mr. MOSS. I am unable to indicate the exact location in the bill, since the amendment was printed before this particular printing of the bill was completed. It would have to be printed at an appropriate point. I do not have that information readily at hand. It is a general provision, however, and it would appear somewhere near the end of the bill.

Mr. CURTIS. The amendment refers to page 55. There are 102 pages in the bill.

Mr. MOSS. Unfortunately, I have given out all the printed copies of the amendment I had. I no longer have one at my desk.

Mr. CURTIS. I have one which I ask the page to take to the Senator.

Mr. MOSS. I thank the Senator.

Obviously, the reference to the line and the page does not coincide with the printing of the bill as it is now numbered and divided. This is a committee print. Many things have been stricken out, and new language has been written in.

Mr. CURTIS. Mr. President, will the distinguished Senator yield further?

Mr. MOSS. I yield.

Mr. CURTIS. The amendment says, "The increase in the Federal share of public assistance payments provided for in this section," and so on.

Is the Senator referring to the increases carried in this proposal now before the Senate or to all the increases which have been enacted by law in the past to the original section?

The intention is to include under the amendment the increases proposed by the bill which amount, as I understand, to $4 per person in the three categories of disabled, blind, and dependent children, and also the $1 increase which was temporarily granted last year but under the bill would be made permanent, resulting in a total of $5 per welfare recipient.

Mr. CURTIS. In other words, if the amendment is agreed to, it would apply to the increases included in the pending proposal and not to prior measures?

Mr. MOSS. The Senator is correct.

Mr. CURTIS. I thank the Senator.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Utah [Mr. Moss].

Mr. CURTIS. Mr. President, unless the amendment is acceptable to the Committee on Finance, it is my intention to insist upon a "live" quorum.

Mr. KERR. Mr. President, the amendment was considered by the committee at great length. As I understand, an amendment in one form or another which would achieve the object of the amendment of the Senator from Utah has been considered by the Committee on Finance many times. No such amendment has ever been adopted, for many reasons. The committee, both in connection with its own deliberation and based upon advice and information received from representatives of the Department of Health, Education, and Welfare, has found that it is very difficult to develop a workable provision because of complex administrative and fiscal problems involved. Various factors in individual State programs and circumstances make the effect of such requirement difficult to predict. Caseloads may be rising or declining. State and local funds may become more limited, or additional funds may become available.

The provision would require elaborate bookkeeping and auditing devices to determine whether the proportionate increases in money payments to recipients were properly made.

States claim Federal matching on estimates of future expenditures and cannot make those with exact accuracy. Thus, a State intending to meet the condition for receiving the increase in Federal funds could fail unless, to be safe, it raised money payments well above the amount needed to meet the condition.

The distinguished Senator from Utah made very clear that the increases provided by the Federal Government in past years have in effect, in most instances been passed on. The record of the Department of Health, Education, and Welfare indicates that increases to the extent of 95 percent have been passed on to the recipients either shortly after the increase was provided or within varying lengths of time. In all cases it was within a limited time.

I think the amendment in the form presented not only would be unworkable on the basis of any formula or specifications of administration thus far developed by the Department of Health, Education, and Welfare, but also could result in extreme discriminations and unjust results as between States.

For example, let us suppose a situation involving two States, one of which has recently gone through the process of increasing payments to its beneficiaries. Perhaps in that State local taxes have been increased in order to bring funds or revenue into the welfare fund out of which increases could be paid to the beneficiaries. Perhaps such State has recently passed through such an experience, and at the time of the passage of the bill it might be really straining its financial resources to carry out the provisions of an increase that had just been provided.

It might well be that another State had been lagging behind and had not provided, updated, or improved its program to move in order to more adequately meet the needs of the beneficiaries in that State.

Perhaps the first State could not take advantage of the proposed increase, having strained its financial resources in order to provide increases on the basis of matching funds already available. Under those provisions of the bill of that State, for the time being and until its resources or revenues increased or reached a more favorable posture, could be penalized, though it had already gone far beyond what many other States had been doing to meet the needs of its people.

At the same time, a State which had been slow in moving forward, but which had funds available, could take advantage of the proposal at very little, if any, cost to itself.

One of the basic principles of our assistance program is that it shall be participated in by the States on the basis of budgeted needs arrived at by the States which, as Senators know, are different in all of the States. I know of no two States that have exactly the same specifications and the same budgetary formula.

Therefore, as I see it, in the first place, the amendment would be unworkable. That has been the evidence submitted by the Department of Health, Education, and Welfare representatives before our committee every time the question has been brought before us. It would result in injustice as between the States. It would interfere with the operation of the programs by the States.

For those reasons the Senator from Oklahoma, stating a position consistent with that which the Committee on Finance has taken without exception, urges that the amendment be rejected.

Mr. MOSS. Because of the opposition on this question and the necessity of taking it to a vote, and because of the obvious fact that a considerable number of Senators are unable to be present today because of other commitments, although I am perfectly willing to discuss the amendment further, if there is further discussion, I announce that I intend to withdraw the amendment at this time and call it up again on Thursday, or whenever the Senate returns to the discussion of the bill, when it is possible to have a representative vote on it. If there is any further discussion I shall not withdraw it at this point, but I will withdraw it when the discussion has been completed.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. MOSS. I am glad to yield to the Senator from Iowa.

Mr. MILLER. Mr. President, I should like to ask the Senator from Utah a question. Earlier in the colloquy he read from the report with respect to the intention of Congress in connection with previous increases by Congress. Is there anything in the report of the Committee on Finance with respect to the bill or anything else in the legislative history regarding the bill that we can point to as evidencing the intention of the Congress that this additional money be passed on to the individuals we have been discussing, so that we can relate this amendment clearly to the intention of Congress?

Mr. MOSS. There is a statement in the committee report on the bill.

Mr. MILLER. Will the Senator please indicate the page number from which he is reading?

Mr. MOSS. This is at page 9 of the committee report. It reads:

> The committee expects and, on the basis of experience after prior increases of this type, believes that the additional Federal funds that would be available will be used by States to improve payments to persons who are receiving assistance under the programs of old-age assistance, aid to the blind, and aid to the permanently and totally disabled.

That language expresses the committee's hope and belief. However, this is still limited somewhat by the statement that it is expected that this will improve the payments to persons. The committee does not go so far as to say that the amount of the increase will be passed on.

Mr. MILLER. Of course this is what the Senator's amendment is designed to make sure of. Is that correct?

Mr. MOSS. To pin it down to the amount; yes.

Mr. MILLER. I thank the Senator.

Mr. MOSS. At this point I withdraw my amendment, but I give notice that I expect to call it up again when the debate is resumed on another day.

The PRESIDING OFFICER. Without objection, the Senator withdraws his amendment.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. McCARTHY. Mr. President, I call up my amendment designated "6–29–62—C," now at the desk.

Mr. DIRKSEN. Mr. President, will the Senator yield to me so that I may suggest the absence of a quorum?

Mr. McCARTHY. I yield.

Mr. DIRKSEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McCARTHY. Mr. President, I withdraw my amendment. I intend to offer it later.

The PRESIDING OFFICER. The amendment of the Senator from Minnesota is withdrawn.

Mr. McCARTHY. Mr. President, by way of explanation of the amendment which I intend to offer later in the course of the debate, I should like to make a brief statement. I intend to offer the amendment on behalf of myself, the senior Senator from Minnesota [Mr. HUMPHREY], the Senator from Illinois [Mr. DOUGLAS], the Senator from Michigan [Mr. HART], the Senators from New York [Mr. JAVITS and Mr. KEATING], and the Senator from Pennsylvania [Mr. SCOTT].

The Senator from Louisiana [Mr. LONG] announced his support of the amendment and agreed to cosponsor it. The Senator could not be reached until after the amendment was ordered to be printed and consequently, his name does not appear on the amendment.

The amendment, designated "6–29–62–C," if agreed to, would restore to the public welfare measure a provision which has been recommended by the administration and which has already been approved by the House of Representatives in its version of H.R. 10606.

The provision was eliminated by the Committee on Finance, although, so far as I know, I do not believe any witnesses appearing before the committee at hearings stated opposition to the proposal.

Under the aid-to-dependent-children program at the present time the Federal Government participates in an extensive program to assist children living in their own homes or in the home of a close relative. In April of this year more than 2.8 million children were receiving benefits under the program.

However, the State and local governments, along with voluntary agencies, provide almost the entire expense of maintaining children in foster family homes and child care institutions. The most recent data, that for 1960, showed that State and local public welfare agencies were providing funds for 157,989 children in foster family homes and for another 40,736 in child-care institutions. The cost of the foster care programs was $147 million, of which the States supplied about $76 million, the local communities about $70 million and the Federal Government only $1.5 million. About $81.7 million of these funds were used to support children in foster family homes supervised by public welfare agencies and another $65 million for children in foster family homes and child-care institutions which are supervised or administered by voluntary agencies. A majority of States have contracts with private nonprofit groups and use their services in meeting their child-care problems.

The statistical records on the efforts of voluntary agencies indicate that these groups also make an important contribution to the welfare of needy children. For 1961 it is estimated that there were 125,000 children receiving foster care in which the primary responsibility was that of private agencies. Of these some 83,000 were placed in foster family homes and about 42,000 in child-care institutions. Probably about half of these 125,000 children, who were the primary responsibility of voluntary agencies, also received some aid from public funds, but the cost of supporting about 60,000 children was carried by the voluntary agencies alone.

Last year the Congress adopted a temporary measure to provide Federal participation for a very small percentage of children in foster homes—for those children removed from their homes by court order and placed in a foster family home. This legislation gave the States an alternative to leaving children in unsuitable homes—but where they would be eligible for Federal aid-to-dependent-children payments—and permitted the States under limited circumstances to place them in foster family homes and still be eligible for payments. Both the bill approved by the House and the Finance Committee bill now propose to make this temporary measure a permanent provision.

However, in limiting the placement by the court to foster family homes the present act restricts the opportunity for the court to improve conditions for many unfortunate children, in that the changes made by the Committee on Finance would not permit any contribution by the Federal Government if by court order the child were placed in a child-care institution rather than in a foster family home.

In April of this year the present program of aid-to-dependent-children payments for children removed under court order provided for only 1,220 children in 13 States. Altogether 14 States have the program in effect and action has been authorized in an additional 5 States.

It is my understanding that the need is far greater and that a major impediment has been that foster family homes cannot supply all the needs of the children. The conditions which make it necessary to remove such children from unsuitable homes often result in needs for special pychiatric and medical care of the children. While foster family homes cannot ordinarily meet these needs, many child care institutions have such facilities and services.

Most of the child-care institutions at the present time are conducted by private nonprofit groups often associated with a religious denomination. In 1960 there were about 1,200 private child-care institutions in the United States; in addition about 125 institutions are under wholly public auspices.

A second factor which limits the courts under the present law is that of the difficulty—and apparently in many cases the impossibility—of finding foster family homes for children under these circumstances. These are the most underprivileged children and often have special problems. When they come from minority group families, the difficulty is increased because the general crowded housing of these groups cuts down on the opportunity for finding suitable foster homes. In effect, then, the present legislation puts the States and the courts under pressure not to act in attempting to find better living conditions for these underprivileged and unfortunate children. They cannot find foster family homes, and if they place the child in a child-care institution, it has to be at State expense without Federal participation. I should add, of course, that while this is a most difficult problem, it involves only a small percentage of children. The Children's Bureau has estimated that only about 1 percent of the aid to dependent children would require removal under court order for foster care.

Mr. President, I believe that in judging this recommendation of the Department of Health, Education, and Welfare, we should keep in mind two principles.

The first consideration is the welfare of the child. The evidence under the limited provision of last year and the statements of authorities indicate that limiting the program only to those children which are placed in foster family homes is too rigid. The small percentage of aid to dependent children who can be helped within the terms of this measure are among the most unfortunate in the Nation. Children in homes where parents suffer from poverty, sickness and unemployment have their own handicaps, but they retain the strength of family unity in spite of adversity. This provision relates to the unfortunate situation where the court finds the parent and the home unsuitable for the welfare of the child.

The issue is whether the Federal Government is going to place restrictions on programs which limit the courts from making a placement in the best interest of the child forcing it to remain in a home which has been determined as an unsuitable place.

This amendment—and the House approved provision—opens the way for the courts to make a determination in the best interest of the child.

I do not believe we should be less concerned about the welfare of these children who must be removed from an unsuitable home than we are about needy children who have the advantage of remaining with their own families. I do not believe we want to extend Federal participation to the child whose home is unsuitable only if he is placed in a foster family home and deny it when the court determines it is in his best interest to be transferred to a child-care institution.

A second principle involved is that of State rights. The public welfare programs are primarily the responsibility of the States and local communities. The Federal Government participates, but on the whole, the States develop the programs, supply the personnel, and make the primary and principal determinations as to how these children should be treated.

The States have traditionally used private child-care institutions to help meet their problems, and a majority of States today have contracts with private nonprofit child-care institutions to provide foster care. To adopt this amendment is not to give an open-end approval to the States, under which abuses could develop.

On the contrary, it authorizes action for a group who more than any other group under the social security program or welfare program come under close scrutiny and a most careful weighing of evidence.

It involves a court determination that the child should be removed from his unsuitable home. This is not a decision which judges make lightly.

I believe the Congress should approve minimum Federal standards which are placed in the law either to prevent misuse of Federal funds or to prevent discrimination against the needy. That is quite a different proposition from the restriction in the committee bill which excludes the most needy children from benefits which the court holds to be in their best interest.

I should like to read at this point an excerpt from the testimony of Mr. William R. MacDougall at the hearings on this bill conducted by the Committee on Finance. Mr. MacDougall is Secretary of the Welfare Committee of the National Association of County Officials and general counsel of the County Supervisors Association of California. He stated:

> We give the highest priority to Federal participation to aid needy children in foster home and institutions. Secretary Ribicoff himself has stated that Congress in enacting and amending our Social Security Act had repeatedly demonstrated its deep concern that no child, wherever he may live, shall go without food, clothing, shelter, or other essential needs.
>
> There is one glaring exception. Until last year all children in foster homes could truly be classified as American "forgotten children" with respect to Federal programs.
>
> Children in foster homes were not eligible for Federal participation under the aid-to-dependent-children program.
>
> In some States, children were being retained in unsuitable homes to qualify for Federal participation rather than being placed in a healthier atmosphere of a foster family because the local authorities were aware that there were not sufficient funds available to place the child in a foster home.
>
> We are pleased that H.R. 10606 would make permanent the change of last year, which provided for Federal participation for ADC payments to children in foster homes who had been placed there by a court order and were receiving ADC aid at the time they were moved to a foster home.
>
> We heartily endorse the new provision of H.R. 10606, which expands the program to include care in child-care institutions, as well as private foster homes.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. McCARTHY. I yield.

Mr. JAVITS. I believe that the Senator's amendment will materially benefit the people who are intended to be benefited by the pending measure, as well as the Nation generally. When the amendment is called up I hope to have the privilege of giving it all the support I possibly can.

Mr. McCARTHY. I thank the Senator from New York for his support. I hope the Senate will see fit to restore the House language. As I recall it was supported by every witness who testified about this provision and opposed by none. At the appropriate time when the amendment is offered, I will join the Senator from New York in making the case again in the Senate.

Mr. President, I wish to make an additional comment on some court decisions that relate to what might possibly be the only argument that could be made against the inclusion of these children in the pending bill.

The question of the right of States to place children in private agencies, even when conducted under the auspices of religious denominations, has been tested in court and the precedents uphold the right of the State to make such placements in the best interest of the child. The latest decision on the subject is that of *Schade* v. *Allegeny County Institution District* (126 A. 2d 911), decided by the Supreme Court of Pennsylvania in 1956. Here it was urged that reimbursement of sectarian orphanages violates the State constitution and the principles of the first amendment as applied to State action by the 14th amendment. The court stated:

> The appellant argues that the institution district's payments to the denominational or sectarian defendants tend toward governmental establishment of religion and, consequently, are violative of the 14th amendment. It is unnecessary to devote much time to this contention. The supreme court has, in principle, settled it adversely to the appellant's position. See *Everson* v. *Board of Education, supra,* where it was held that a State's use of public tax funds for the transportation of pupils to and from sectarian schools did not serve to promote the establishment of religion.

Another important decision on this subject is that of *Murrow Indian Orphans Home* v. *Childers* (171 P 2d 600, (1945)). This case involved the constitutionality of contracts between the State board of affairs for Oklahoma and a Baptist child-caring institution for the support of certain dependent orphans. The facts disclosed that the home is sectarian in character. After reviewing all of the pertinent legal authorities, the Supreme Court of Oklahoma declared:

> The legislature of the people have a discretion in this matter and may care for needy children through any scheme that seems appropriate to them, omitting, of course, to offend other constitutional provisions. Such a scheme may involve State given institutional care, or placement in the homes of private citizens, or contracting with eleemosynary institutions, or by grants of money, or combinations of these.

A quasi-official document was filed by the National Probation and Parole Association as an amicus curiae in the Pennsylvania case of Schade against Allegeny County Institution District. The brief indicates that a survey was made to determine the extent of the use of private sectarian facilities for the care of delinquent, neglected, and dependent children. On the basis of the returns of this questionnaire, the association asserted:

> It is clear that in the States represented, substantial use is made of private agencies in the placement of delinquent, neglected, and dependent children by juvenile courts and among these agencies a majority of the children are placed in sectarian or denominational agencies.

The brief also asserts:

> The overwhelming majority of the replies were to the effect that if the use of sectarian institutions were withdrawn from the facilities available to the juvenile courts, there would result a critical loss of much needed facilities.

A particularly interesting reply is that made by the court in Alameda County, Calif. The court stated:

> We would be virtually restricted to the use of State schools, which are geared to the handling of much more severely disturbed children than those customarily placed in private, sectarian institutions.

The juvenile authorities of Richmond, Va., replied in the following manner:

> If the use of sectarian institutions were withdrawn, our welfare department would have to locate more foster homes and the cost would be borne by the taxpayer.

Mr. JAVITS. Mr. President, as we shall be entering into the debate on the amendments to the pending bill which relate to medical care for our aging citizens probably on or close to Thursday, and as Members of the Senate may be studying the RECORD over the Fourth of July, I should like briefly to make some observations on what has been accomplished in the amendments offered by the Senator from New Mexico [Mr. ANDERSON] and myself and other Senators on this side of th eaisle as well as on the other side of the aisle in support of the amendments; and also to outline the area of our difference, as it still exists, though I hope very much that there will not be differences when we finally complete our work and are ready

in a final way to call up the amendments.

The group of Senators on this side of the aisle who have worked with me and the Senator from New Mexico and his colleagues, in an effort to merge our ideas on medical care for the aging, have made substantial gains, which will be of great benefit to the program.

One of the most gratifying things that the Senator from New Mexico said in presenting the amendments last Friday, was the fact that he felt there had been an affirmative contribution.

Let us first see what has been agreed upon, and then at what still remains open and subject to an agreement that we can attain.

First and very important, a real historical step forward has been taken in coverage. The Senator from New Mexico estimated that 2½ million of the uninsured people affected by the proposal not previously included would be included in the bill. These are the people over 65 who are not eligible for social security benefits. Very clearly all of those who are 65 on January 16, 1964, when this plan would take effect, will be blanketed in under the law, and would then be included, as the Senator from New Mexico described it, over a period of time up to 1971. All of these people would be blanketed into the social security system. With the incentive which will be given to get under the system, by the fact that greater benefits will be available, we have no doubt that for all practical purposes, estimating in the area of 85 percent to 90 percent, all of those over 65, whether or not now eligible for social security, and whether or not eligible for social security as time goes on up to the 1971 date—that a very large proportion will be blanketed in and included in the medical care benefits.

So for all substantial purposes, the overwhelming majority of those 65 and over not covered by the King-Anderson bill will come in under the benefits of the bill as it is now amended, following the discussions which we had in such an auspicious way with the Senator from New Mexico [Mr. ANDERSON]. That is the first point.

Mr. CURTIS. Mr. President, will the distinguished Senator from New York yield?

Mr. JAVITS. I yield to the Senator from Nebraska.

Mr. CURTIS. When will the act become effective?

Mr. JAVITS. January 1, 1964.

Mr. CURTIS. As I understand the amendment, all persons now eligible for title II benefits, which are the old age and survivor disability benefits, or who will become eligible by January 1, 1964, will be eligible for hospital benefits.

Mr. JAVITS. The Senator is correct.

Mr. CURTIS. They will be paid out of the social security fund, will they not?

Mr. JAVITS. No; they will be paid out of the special medical trust fund. That was the next point to which I wished to speak.

Mr. CURTIS. How much will persons already eligible, or who will become eligible by 1964, have paid into that trust fund?

Mr. JAVITS. Of course, persons who are eligible on January 1, 1964, will have paid whatever their social security tax was in the intervening year and a half.

Mr. CURTIS. When will the tax go into effect?

Mr. JAVITS. The tax will become effective a little earlier. I do not have the precise figures before me.

Mr. CURTIS. How much will persons who are now retired and who are eligible for social security have paid into the hospital benefits trust fund?

Mr. JAVITS. Those persons who are now retired and are not working, in the sense of still paying social security tax, will not have paid anything.

Mr. CURTIS. Why will their benefits be paid out of the social security fund, and the benefits of the 3 million aged who are not eligible for benefits not be paid from the fund, but directly from general revenues?

Mr. JAVITS. The reason is that the payers of social security will be paying into the fund, so the fund will have taxation money arising out of social security payments, although not paid by those who will be getting the benefits.

The Senator from Nebraska may recall that this was one of the great problems I had with the idea of social security financing, and why I called it regressive. But I pointed out the other day—and I am very glad to do so again at this moment—that I have felt, and I have ascertained to my own satisfaction over the course of the last 2 years, in round figures, that the younger people, those under 65, who would be paying, as it were, for those over 65, who have not paid anything on this particular account, are willing, from my observation, to do so, and want to do so. It seems to me there is a very strong sentiment—not unanimous, by any means; but this is my own judgment, and all of us in public life have to have some instinct about these matters—to pay the social security tax for health benefits, and even to begin to pay it now, although the health benefits for most social security payors will be long deferred.

So the answer to the Senator from Nebraska is: Yes. What the Senator has said is perfectly true. The beneficiaries will not have paid. But I feel—and I am speaking unilaterally—that those who will be paying into the trust fund will be willing to do so in the expectation of the future benefits that will flow to them.

Mr. CURTIS. But there will be two classes who will receive benefits. The first will receive benefits from the social security taxes paid by present workers, and one group will be paid from the general revenues. Why the distinction?

Mr. JAVITS. The distinction is that these are persons who are covered by the King-Anderson bill now, and those who are not eligible for social security are being brought in on a basis upon which they will gradually be blanketed into the system by the amendment which we prepared with the Senator from New Mexico. There is no distinction now. There was a distinction before. There is a distinction in the method of financing.

I have pointed out that those who are paying social security taxes, although they are not paying them for the benefits they will get right now, are nonetheless entirely willing to pay in order to receive that benefit conferred upon those who are members of the system, as it were.

Mr. CURTIS. Why are they willing to pay it for the members of the system who pay nothing, and not be willing to pay it for other aged who pay nothing?

Mr. JAVITS. I think there is some justification, because those persons are themselves persons who have paid into the system as a result of helping to build up the system.

Mr. CURTIS. In what way?

Mr. JAVITS. They have made their own social security payments before they reached the age 65. Hence, they are members of the system.

Mr. CURTIS. They are members of a very exclusive club, I agree, because a man who retired at age 65 5 years ago had a life expectancy of 12 years. His wife had a life expectancy of 14 years. I daresay that in the average case, where he has paid the maximum all through the years, in about a year he and his wife have drawn out everything they put into the fund.

Now a new fund will be started, to which he will not contribute but from which he will draw benefits; and there are other aged who have never received any social security benefits, who will now receive benefits. I agree to that part, but they will have financing from the General Treasury. They will be dependent upon appropriations. Is not that correct?

Mr. JAVITS. That is correct.

Mr. CURTIS. Why the distinctions?

Mr. JAVITS. The distinction is the one I made before: That the background of those who are eligible for social security is that they are members of a particular group. They are in the fund. They are insured. This is an extension of their insurance, as it were.

As I said to the Senator a moment ago, we had hoped this afternoon only to map out our basic ground.

Mr. CURTIS. We shall continue the discussion at another time.

Mr. JAVITS. I deeply appreciate the Senator's understanding.

Taxes will begin for the taxable years starting after December 31, 1962.

Also, we separate the trust fund. There will be a separate Federal medical trust fund, which will enable us to see precisely the viability of the whole enterprise, which is important.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD an analysis of that provision made by the Senator from New Mexico [Mr. ANDERSON] and myself.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

SEPARATE TRUST FUND

Under the bill I introduced last year, there would have been a health insurance account in the Federal social insurance trust fund. The trust fund would also have included special accounts for old-age and survivors insurance and for disability insurance. While I believe this arrangement would have been fully effective in segregating the monies

for the various benefits provided under social security, in the proposed amendment we have substituted provisions for a separate health insurance trust fund. We have made this change because some people believe that there would be merit in a separate trust fund for health insurance, and that there would be less danger of misunderstanding.

Of course, the payments for health services that would be made on behalf of those people who qualify for protection through the provisions for the uninsured would be made from general revenues. The trust fund and the rights of the social insurance beneficiaries would in no way be affected by these expenditures.

Mr. JAVITS. Mr. President, third—and this is very important, so far as we are concerned—is the whole scheme by which hospitals may be accredited, by which hospitals may join in allowing themselves to be represented by an organization like Blue Cross in their relationship to the Federal Government program; and providing also for some State administration.

All these factors are incorporated in this amendment and represent steps forward, taken as a result of merging the views of the Senator from New Mexico and his group and the group on this side of the aisle.

Finally, and most important—and this is the critical point of distinction—we have always made a big point of the fact that there should be an opportunity for private enterprise, whether cooperatives, group plans, or private insurance carriers, which would give, in value terms, very much the same thing as was given in the King-Anderson bill, to be compensated for so doing, helped by a premium payment from the Federal Government.

It is this fundamental option principle—also, incidentally, an option principle espoused by Governor Rockefeller, of New York—which has been one of the two big factors, the other being complete coverage, which is now being attained for all persons over 65, whether or not they are under social security.

What has happened with respect to the option is that we have adopted a basic principle with the Senator from New Mexico by which a private carrier may be reimbursed for benefits which it confers, if the benefits are the same as those in the Federal system after the bill has become law. Therefore, a private carrier may frame an insurance policy or coverage upon that base.

We have not worked out any way in which there would be premium reimbursements—which is a very different thing. It is one thing to reimburse benefits actually paid by the insurance carrier or the other carrier; it is quite another thing to reimburse for premiums. The Anderson amendments, in which we joined because they took us to where we were at that moment, carry the concept of reimbursement of the carrier for benefits paid.

So, Mr. President, I ask unanimous consent to have printed in the RECORD Senator ANDERSON's analysis of those provisions, which we have, in a sense, introduced, bid, and asked, to use a colloqual term. We on this side—the Senator from Kentucky [Mr. COOPER], my colleague [Mr. KEATING] and I—have joined in the concept of having the Federal Government pay such part of its own total fund as will represent the allocated actuarial risk to the particular person who chooses to have a private plan, instead of the governmental plan. It is on this that we are trying to have a complete meeting of the minds.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

PROTECTION FOR THE UNINSURED

Our proposed amendment provides to the residual group of 2½ million elderly people the same benefit protection that is provided those insured under the social security program and finances the protection for this group through general revenues. People who reach age 65 before 1967 and who do not meet the regular insured status requirements of the social security system would be deemed insured. Uninsured people who will reach age 65 in 1967 would be deemed to be insured for social security health benefits if they had earned as few as 6 quarters of coverage in covered work at any time—9 fewer quarters of coverage than men of this age need to qualify for social security retirement benefits and 6 fewer quarters of coverage than women of this age need to qualify for social security retirement benefits.

For people who reach age 65 in each of the succeeding years, the number of quarters of coverage needed to be insured for health insurance protection increases by 3 each year, thus, people reaching age 65 in 1968 would need 9 quarters of coverage, people reaching 65 in 1969 would need 12 quarters of coverage, and so on. For persons who attain age 65 after 1971 the special insurance status provisions for health insurance will require as many, or more, quarters of coverage as the regular insured status provisions for other social security benefits, so that for both men and women the new insured status provision will soon "wash out."

Under this special provision, people who are uninsured under the regular social security program and who become 65 after 1966 will be able to qualify for health benefits only if they have had reasonably substantial work under social security. This would be consistent with the work-related and contributory principles of the social security system.

It might be noted that one-half of the 2½ million uninsured people who will be affected by this proposal are receiving cash assistance under the Federal-State assistance program. Of course, some of these assistance recipients will be receiving health care through the Federal-State assistance program when our proposed health benefit program goes into effect. In their case the benefits of our amendment would sometimes be in the nature of a partial substitute for the aid they would be getting. Thus the cost of providing the new insured status provision will be offset in part by reductions in current expenditures. In other cases, however, the Federal-State assistance program does not give protection comparable to the benefits I am proposing, and in those instances the result would be a net increase in medical care for the assistance recipients.

I might also point out that in the uninsured group which would receive protection paid for by the general Treasury, there are some who have had the opportunity to come under social security but have declined to do so. For example, there are ministers and certain employees of nonprofit organizations who elected not to be covered and some employees of State and local governments who voted not to be covered. Of course, the uninsured group also includes doctors and their wives and widows who have not been included under social security solely because the American Medical Association has opposed such coverage. For purposes of administrative simplicity, no attempt has been made to exclude these groups.

COST OF HEALTH BENEFITS FOR THE NONINSURED

As I indicated, the cost of the proposed health benefits for the 2½ million noninsured would be met out of general revenues. The gross cost of the provision would be $250 million in 1964, the year the health benefits program would go into effect. This calendar year cost would be offset by savings in Federal medical care expenditures in 1964 that except for the passage of our amendment would be made under public assistance and the veterans' programs. These savings would be about $200 million, leaving a net cost to general revenues of about $50 million in 1964. Federal expenditures for the noninsured would decline over the years and eventually would wash out altogether.

SIGNIFICANT ADMINISTRATIVE ROLE FOR PRIVATE ORGANIZATIONS

Under the proposed amendment the Secretary of Health, Education, and Welfare would be given specific statutory authority to delegate some of the more sensitive administrative functions to Blue Cross or to other similar voluntary organizations that are experienced in dealing with hospitals and other providers of health services. Any group of hospitals (or group of other providers of health services) could designate a private organization of their own choice to receive their bills for services and to pay these bills. Advantageous additional administrative functions could be included in the contract between the Government and the organization. These administrative functions would include reviewing hospital fiscal records as a part of the determination of the cost of services, and acting as a center for communicating and interpreting payment procedures to hospitals.

I should point out that representatives of the American Hospital Association appearing before the Committee on Ways and Means last summer urged an approach that would utilize the services of voluntary organizations if a bill of this type were to be enacted, and I am convinced from numerous conversations with individuals in the field of hospital administration that the provisions I am now outlining will prove to be eminently satisfactory to them. The principal advantage hospitals and other providers of services would find in this arrangement would be that policies and procedures of the Federal program would be applied by the same organization which administers the private, voluntary benefit program with which most of them now deal.

The participation of Blue Cross plans and similar expert organizations in carrying out the provisions of our proposed amendment would have advantages that go beyond the benefits that would be derived from their experience in dealing with hospitals and the well-established working relationships that exist. With such organizations serving as intermediaries between the Government and the providers of services, those who are concerned that Government might try to intervene in hospital affairs would feel much more confortable.

ROLE OF STATE AGENCIES

Under our proposal the Federal Government would use State agencies to determine whether hospitals which are not accredited by the Joint Commission on the Accreditation of Hospitals are qualified to participate in the program. State agences would make these determinations also in the case of skilled nursing facilities and other providers of health services. The conditions of participation for such providers are spelled out

in the amendment. State agencies would determine whether they are met. I am confident that all States would be willing and able to enter into agreements to assume these responsibilities, just as they have participated in the administration of the disability portion of the OASDI program.

State health departments or other appropriate agencies designated by each State would also give professional consultation to providers of health services to assist them in meeting the conditions for participation and in establishing and maintaining necessary fiscal records and providing information necessary to derive operating costs which are the basis for payment for their services. State agencies would be reimbursed for the costs of activities they perform in the health insurance benefits program, including Federal sharing in the costs of coordinating these activities with other State activities related to health and medical services.

What is contemplated is a Federal-State relationship under which each governmental entity performs those functions for which it is best equipped and most appropriately suited. State governments license health facilities and State public health authorities generally supervise these facilities. In addition, State programs purchase care from providers of health services. On the basis of experience and function, State agencies should assist the Federal Government in determining which providers of health services conform to prescribed conditions. Furthermore, where an institution or organization that has not yet qualified needs consultative services in order to determine what steps may be appropriately taken to permit qualification, such consultative services should be furnished by the State health or other appropriate State agency. These types of consultative services are related to State programs and requirements and should logically be provided by, or coordinated in, the State agency.

PRIVATE INSURANCE

The final revision which added as a result of many conferences provides an option to beneficiaries to continue private health insurance protection in order to encourage private health insurance supplementation. The plan is as follows:

1. At the time of first eligibility for social security, beneficiaries who for a period of time had private insurance protection under plans which include the same benefits as provided under social security would be able to choose between having the statutory benefit paid for directly by social security or, if they wish to continue the private plan, they could have the statutory benefits paid for through the private carrier.

(Of course, those who did not elect to continue such a private plan could buy private policies completely separate from but supplementary to social security protection.)

2. Carriers would be reimbursed for the statutory benefits they paid for and for their administrative costs.

3. The beneficiaries could elect to have their benefits paid by a private carrier only if they have had the required plan in effect for a period before they become entitled to health benefits under social security. The required period of prior insurance would be brief at first, to allow for a change in private plans and then gradually lengthen until 5 years of previous membership is ultimately required. The required period of membership would be 3 months for persons entitled when the plan goes into effect on January 1, 1964, and would remain at 3 months until the end of March 1964. From then until the end of 1968 it would require continuous membership from January 1, 1964, until entitlement. After 1968, 5 years would be required.

4. Any carrier would be approved to participate for its group health insurance plans and all nonprofit plans would be approved. To participate for individual policies a commercial carrier would need to be licensed in all States and doing 1 percent of the health insurance business throughout the Nation, or is found by the Secretary to be national in scope. As an alternative it could be approved for a particular State if it did 10 percent of the business in that State.

Mr. JAVITS. Mr. President, in this connection I ask unanimous consent to have printed in the RECORD an analysis of our amendment, so that Senators will be able to see at a glance the option provided by Senator ANDERSON'S amendments—in which we have joined, for the reasons I have stated—which were filed last Friday. Thus, Senators will be able to see what we have in mind. I believe that will be taken as more than merely an idle statement, because I think the Senator from New Mexico [Mr. ANDERSON] and the Senators on our side who have joined with him have gone a long way toward reaching complete agreement; and I am very hopeful that by the time the measure is called up, we shall find ourselves completely in accord as to our views on the option, and thus I hope very much that it will not be necessary actually to press for adoption of the amendment which we have submitted for the purposes I have outlined.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

For those eligible individuals who have private health care plans for at least 1 year preceding age 65 and want to continue them, this option would provide a cash payment to an insurance carrier of premiums on a guaranteed renewable health insurance policy up to $100 per calendar year. The policy, which may be individual or group, shall provide benefits which the Secretary of Health, Education, and Welfare determines are equivalents of the value of the health insurance benefits provided in other sections of this bill. The carrier is also required to notify the Secretary in the event of a lapse in payment of premiums.

Mr. KEATING. Mr. President, will my colleague yield to me?

Mr. JAVITS. I yield.

Mr. KEATING. I think it is very helpful to have this amendment, so that Members can become acquainted with what we are trying to accomplish.

In the analysis my colleague has made this afternoon, I am not sure that one point was made entirely clear. It is my understanding that under the option contained in the revised Anderson amendments, the insured person can, if he wishes, bring into the plan, at age 65, a private policy, and that private policy need not be in terms of the benefits set forth in this act; it may be much broader, and many might wish to have a broader coverage. But if at age 65 such a person so covered was taken to the hospital and had benefits coming to him from the insurance company, the insurance company would be reimbursed to the extent that those benefits fell within the confines of those set forth in the bill. But for other benefits, beyond those, the insurance company would not be reimbursed. Is that correct?

Mr. JAVITS. That is exactly correct; and that would be covered by such remaining premium as the insurance company charged the insured.

Mr. KEATING. It is my hope, and I think it is the hope of all of us, that that might encourage the insurance companies to write broader coverage, because all of us recognize that the medical care envisioned by this bill is not by any means complete medical care. So this would encourage them to write a broader coverage at, we hope, a rather modest premium, inasmuch as the insurance company would be underwritten for the benefits set forth in the Anderson amendments.

Mr. JAVITS. That is exactly correct; and it is also accurate to add that the Anderson amendments benefits are calculated, at the best, to cover one-third of the total medical expenses, or perhaps even as high as 40 percent, but no more. So there is an enormous range for other benefits to be insured by insurance companies or cooperatives or group units of various kinds; and we hope that as we finally finish our discussions, we shall be able to present them—regardless of whether the insurance companies agree with us or do not agree with us; and right now they do not agree with us, any more than does the American Medical Association—with an opportunity which they will not forego.

Mr. KEATING. Yes.

Mr. President, I appreciate very much my colleague's comments on these matters.

Mr. ANDERSON. Mr. President, two newspapers of national standing have come out over the weekend in strong support of the bipartisan proposal for a program of health care for the aged. I ask unanimous consent that an editorial from the New York Times and an editorial from the Washington Post of Sunday, be printed in the RECORD at this point.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times, July 1, 1962]

COMPROMISE ON MEDICAL CARE

The success of Senate Democrats and Republicans in arriving at a compromise formula on medical care for the aged is a fresh demonstration of bipartisan responsibility in meeting urgent national problems. The extent to which the health issue has become enmeshed in party politics on both sides makes this in some ways an even more significant triumph for cooperation than the support the Trade Expansion Act was given in its passage by the House.

The new bill retains the sound insurance principles of social security as the bedrock of its financing, but it extends the plan's protection to the great bulk of the 3 million elderly citizens outside the Federal system. It also provides additional reassurance for those who fear the program might undermine the independence of the medical profession and it opens the way for an option to allow freedom of choice to persons preferring private health insurance. Senator ANDERSON, of New Mexico, and Senator JAVITS, of New York, chief engineers of the compromise, deserve special credit. The Nation's

structure of social insurance will be better geared to meeting the needs of our aged citizens if their bill wins congressional approval.

[From the Washington Post, July 1, 1962]

MEDICAL BREAKTHROUGH

There is room for qualified rejoicing over the new bill to provide medical care for the aged introduced in the Senate on Friday by 23 sponsors. It does the bill a disservice to call it a compromise; it is an improvement on the old version. And there is something really hopeful in the fact that it has the support not only of administration leaders but of five distinguished Republican Senators as well.

The Republican support comes from THOMAS KUCHEL, the Republican whip, and Senators JAVITS, KEATING, CASE; and COOPER. Although these men are progressive Republicans, who have already accepted the principle of social security financing for the medical care program, they are also men who have been articulately critical of the administration measure. That they and the Democratic sponsors of the program were able to adjust differences and join hands in a common proposal reflects the best sort of legislative accommodation and suggests a real determination on both sides to eschew political jockeying and find a practical solution for an urgent national problem.

The changes in the bill are all commendable. It will now include persons over 65 who are not covered by social security; it would be unwise as well as unjust to leave them out of the program. It provides that accreditation of hospitals furnishing services under the program be determined by the American Hospital Association and the American Medical Association; this should insure high standards, and perhaps it will in some measure mitigate the hostility of doctors. It will allow Blue Cross or other private insurance plans to deal with the hospitals in supervising administration of the program and it will give beneficiaries an option to continue private health insurance protection. In addition, it will adopt Gov. Nelson Rockefeller's idea of creating a separate health insurance trust fund instead of lumping medical care money in with other social security accounts. We see no harm in these changes.

The Senate is to debate the medical care program this week. We hope it will be an enlightening debate which will set at rest some of the hobgoblins raised by the American Medical Association. If the Senate passes the bill, it must go to the House where hopes for its adoption are far from high. Representative WILBUR MILLS, the redoubtable chairman of the House Ways and Means Committee, is against it and so there is little hope that it will be reported out by that body. If senatorial strategists try tacking it on to the general welfare reform bill as an amendment, it will have to go to the House Rules Committee where its chances do not seem much brighter. Nevertheless, let rejoice that it is on its way.

Mr. ANDERSON. Mr. President, the proposed welfare legislation embodied in H.R. 10606 is certainly of great importance. These proposals look to considerable betterment in the provision of public assistance and would make for a brighter future for those who cannot provide for themselves. I personally have strong feelings that there is need for this measure, and I particularly favor the greatly increased emphasis that it would place on rehabilitation of people now on relief.

I suggest, however, that we shall be remiss in fulfilling our obligation to the people of this country if we limit ourselves to taking action to improve the lot of people who have fallen into poverty but simultaneously take no action to remove the grave threat that faces the great majority of older Americans—average people who have always paid their own way and think of public assistance with its means test only as a last resort when all else has failed. The threat that they face, of course, is the possibility—even likelihood—that serious illness and a long hospital stay will wipe out their lifetime savings and leave them with the dreadful prospect of living out their later years in poverty.

Our obligation can be fulfilled only if legislation that would provide an effective program of health insurance for the elderly is enacted without delay. We must face facts. Giving assistance to people who are already reduced to poverty is necessary, but the prevention of dependency before it occurs is certainly more in line with the American tradition of self-reliance and the wishes and aspirations of the American people. I cannot stand by in silence and watch us try to pick up the pieces of lives that have been broken and not take the sensible, logical step of removing the haunting fear that faces almost all of our older people—the fear that costly illness will bankrupt them after many years of independence and force them to seek help from public or private charity or from already overburdened relatives.

Unless favorable action is taken now, health insurance for the aged is likely to be a major issue in the fall elections and next year a bill will be passed. But the problem that confronts our aged people is so pressing that I hope we will not delay a solution for another year.

GROUNDS FOR GENERAL AGREEMENT

For these reasons, a bipartisan group now proposes an amendment to H.R. 10606 to provide health insurance for people aged 65 and over. The amendment we would add to the welfare bill is a considerably improved version of S. 909, the bill I introduced last year. S. 909 is identical to Representative KING'S bill, H.R. 4222, which has been under consideration by the House Ways and Means Committee for some time.

In offering this amendment on the floor of the Senate, I recognize that the proposed health insurance for the aged measure is still under consideration by the House Committee on Ways and Means. My thought and purpose in proposing our amendment at this time is that the great importance of the proposal and the tremendous need for action justify immediate consideration by this body, thus facilitating early action by the Congress as a whole. We offer the proposed amendment as a clear and unequivocal demonstration that we in the Senate who agree, in principle, that the social security mechanism offers the only effective means of helping to finance the intolerable burden of health costs in old age are ready to resolve our differences of opinion and offer a proposal that can be enacted this year.

The amendment we offer proposes a program on which I am sure a majority of Senators can agree. It has been developed over a period of months after a painstaking evaluation of alternatives sponsored by my colleagues and thorough study of criticisms that have been raised against S. 909 and the points on which it has been misunderstood or misinterpreted. Our proposed amendment incorporates important features similar to those proposed by some of my colleagues but with decided improvements. I have welcomed suggestions from a number of other interested people and organizations and have improved a number of provisions of S. 909 in accordance with their ideas.

The proposed amendment offers what I can assure you is a conscientious effort to develop a plan distinctly superior to S. 909 while at the same time preserving its essential points—health insurance benefits for aged social security beneficiaries and railroad retirement annuitants without a means test and financed through the contributory social security system.

On these essential social security features I cannot compromise. Our proposed amendment would utilize social security financing, for through this mechanism the health insurance needs of our people in their later years can be met by payments made during their working years. Health insurance will go far to make retirement protection under social security truly adequate in a way that increased cash monthly payments can never achieve. Health costs of the aged are not evenly distributed from month to month or even from year to year. A person over 65 may have no appreciable health costs for several years and then in a short time have health costs running into thousands of dollars. It is not possible to increase the cash benefits under OASI sufficiently to cover such large expenses. The obvious solution is to even out this expense over a span of years and over millions of the aged through insurance. The health insurance to which the elderly would be entitled would be provided as an earned right through the social security system which they have helped support by their contributions during their working years. Beneficiaries could apply for and receive the health insurance benefits of the program with dignity, and let us not forget that the dignity associated with the social security program has been a major factor in its widespread acceptance by the American people.

Similarly, the amendment we offer would follow the same threefold attack on dependency in old age as that carried out by the present social security program. First, basic health insurance protection against hospital costs and certain alternatives to hospitalization would be afforded the elderly through social security; second, the existence of a program of basic protection would encourage the development of additional private protection which the individual could purchase by his own means; third, all the States would be placed in a far better financial position to provide adequate medical assistance to help the relatively small group whose special needs and circumstance make it impossible for them to meet health costs that exceed those covered by this bill.

The proposed program would be financed on the same fiscally sound basis as the present social security program. Its cost over the longrun future has been carefully calculated, and sufficient income to meet both short-term and longrun program obligations is provided for.

MAJOR IMPROVEMENTS MADE IN S. 909

Some of the objections to S. 909, the bill I introduced last year, as we all know, have not been based on anything associated with my bill. The American Medical Association has made clear it opposes the British National Health Service as a form of protection against medical costs. This is an interesting point, but it has nothing to do with my bill. Some doctors have said they would not participate—apparently they would not accept payment under social security. This is an interesting point, too, but my bill never proposed to make payments to doctors. While the American Medical Association has lately given lip service to compromise, it is quite clear that its only purpose is to delay action on constructive legislation in this area. The American Medical Association has stated its opposition to any program without a means test and to any program which uses social security financing. Its opposition and its statements cannot turn social security financing and protection given as a right, without a means test, into something that the American people regard as undesirable.

But I am speaking now of the objections raised by those who honestly want to see a health insurance bill passed. I have gone to great lengths to examine and study these objections and the reasoning behind them. I have made changes that I believe will be agreeable to all who really want a bill to be passed. It is with the sincere hope that efforts to work out satisfactory alternatives to some of the provisions in my bill will lead to the early availability of health insurance for the aged that I offer with other Senators our proposed amendment.

First, let me mention very briefly the general nature of the major changes embodied in our amendment. The amendment extends to aged persons who are not protected by the social security system the same health benefits that would be provided for aged social security beneficiaries and railroad retirement annuitants. Our proposal includes a number of new and explicit provisions that will make it crystal clear that the Federal Government will not be able to interfere with the practice of medicine or inject itself into the operation of hospitals. Specific provision is made so that hospitals may choose organizations, such as Blue Cross, to perform certain administrative functions that the Secretary of Health, Education, and Welfare could delegate to them. In addition, my proposal includes a provision for an option under which beneficiaries could get the health benefits through private insurance, group practice, and other voluntary plans instead of the Government plan.

Now, I should like to discuss the amendment, and the considerations that prompted the new provisions, in some detail.

THE UNINSURED AGED

When I introduced S. 909 early last year, there were many assertions that the great majority of the low-income older people who are not insured under social security would get help through Kerr-Mills programs of medical assistance for the aged. But there has been little of the hoped-for progress in this direction. The Kerr-Mills provisions clearly do not and cannot assure that people who need help with the payment of their hospital bills will get it. This is particularly true in the poorer States, which have not been able to muster the resources to match the Federal grants that are provided by the Kerr-Mills legislation. It is now obvious that if the basic health benefit needs of many of those who are not eligible under social security are not met through a Federal program tied in with social security, these needs will not be met in any satisfactory manner, if at all.

It is estimated that by January 1964—the effective date of our proposed amendment—the total population aged 65 and over in the United States will be 17,877,000. Of this number, about 400,000, though not eligible for social security or railroad retirement protection, would have their health needs taken care of under various other governmental programs. This 400,000 includes retired Federal employees who have Government programs of health benefit protection available to them, and people who are cared for in public tuberculosis and mental institutions at public expense. This leaves approximately 17½ million people who are 65 and over, of which about 15 million would be eligible for health insurance under either the social security or railroad retirement program. Our proposal would provide coverage for the residual group of 2½ million, which includes uninsured persons on old-age assistance and other public welfare programs, widows whose husbands died before becoming insured, and persons who are without health insurance protection under other public programs.

PROTECTION FOR THE UNINSURED

Our proposed amendment provides to the residual group of 2½ million elderly people the same benefit protection that is provided those insured under the social security program and finances the protection for this group through general revenues. People who reach age 65 before 1967 and who do not meet the regular insured status requirements of the social security system would be deemed insured. Uninsured people who will reach age 65 in 1967 would be deemed to be insured for social security health benefits if they had earned as few as six quarters of coverage in covered work at any time—nine fewer quarters of coverage than men of this age need to qualify for social security retirement benefits and six fewer quarters of coverage than women of this age need to qualify for social security retirement benefits.

For people who reach age 65 in each of the succeeding years, the number of quarters of coverage needed to be insured for health insurance protection increases by 3 each year, thus, people reaching age 65 in 1968 would need 9 quarters of coverage, people reaching 65 in 1969 would need 12 quarters of coverage, and so on. For persons who attain age 65 after 1971 the special insurance status provisions for health insurance will require as many, or more, quarters of coverage as the regular insured status provisions for other social security benefits, so that for both men and women the new insured status provision will soon "wash out."

Under this special provision, people who are uninsured under the regular social secuirty program and who become 65 after 1966 will be able to qualify for health benefits only if they have had reasonably substantial work under social security. This would be consistent with the work-related and contributory principles of the social security system.

It might be noted that one-half of the 2½ million uninsured people who will be affected by this proposal are receiving cash assistance under the Federal-State assistance program. Of course, some of these assistance recipients will be receiving health care through the Federal-State assistance program when our proposed health benefit program goes into effect. In their case the benefits of our amendment would sometimes be in the nature of a partial substitute for the aid they would be getting. Thus the cost of providing the new insured status provision will be offset in part by reductions in current expenditures. In other cases, however, the Federal-State assistance program does not give protection comparable to the benefits I am proposing, and in those instances the result would be a net increase in medical care for the assistance recipients.

I might also point out that in the uninsured group which would receive protection paid for by the General Treasury, there are some who have had the opportunity to come under social security but have declined to do so. For example, there are ministers and certain employees of nonprofit organizations who elected not to be covered and some employees of State and local governments who voted not to be covered. Of course, the uninsured group also includes doctors and their wives and widows who have not been included under social security solely because the American Medical Association has opposed such coverage. For purposes of administrative simplicity, no attempt has been made to exclude these groups.

COST OF HEALTH BENEFITS FOR THE NONINSURED

As I indicated, the cost of the proposed health benefits for the 2½ million noninsured would be met out of general revenues. The gross cost of the provision would be $250 million in 1964, the year the health benefits program would go into effect. This calendar year cost would be offset by savings in Federal medical care expenditures in 1964 that except for the passage of our amendment would be made under public assistance and the veterans' programs. These

savings would be about $200 million, leaving a net cost of general revenues of about $50 million in 1964. Federal expenditures for the noninsured would decline over the years and eventually would wash out altogether.

SIGNIFICANT ADMINISTRATIVE ROLE FOR PRIVATE ORGANIZATIONS

Under the proposed amendment the Secretary of Health, Education, and Welfare would be given specific statutory authority to delegate some of the more sensitive administrative functions to Blue Cross or to other similar voluntary organizations that are experienced in dealing with hospitals and other providers of health services. Any group of hospitals—or group of other providers of health services—could designate a private organization of their own choice to receive their bills for services and to pay these bills. Advantageous additional administrative functions could be included in the contract between the Government and the organization. These administrative functions would include reviewing hospital fiscal records as a part of the determination of the cost of services, and acting as a center for communicating and interpreting payment procedures to hospitals.

I should point out that the representatives of the American Hospital Association appearing before the Committee on Ways and Means last summer urged an approach that would utilize the services of voluntary organizations if a bill of this type were to be enacted, and I am convinced from numerous conversations with individuals in the field of hospital administration that the provisions I am now outlining will prove to be eminently satisfactory to them. The principal advantage hospitals and other providers of services would find in this arrangement would be that policies and procedures of the Federal program would be applied by the same organization which administers the private, voluntary benefit program with which most of them now deal.

The participation of Blue Cross plans and similar expert organizations in carrying out the provisions of our proposed amendment would have advantages that go beyond the benefits that would be derived from their experience in dealing with hospitals and the well-established working relationships that exist. With such organizations serving as intermediaries between the Government and the prviders of services, those who are concerned that Government might try to intervene in hospital affairs would feel much more comfortable.

ROLE OF STATE AGENCIES

Under our proposal the Federal Government would use State agencies to determine whether hospitals which are not accredited by the Joint Commission on the Accreditation of Hospitals are qualified to participate in the program. State agencies would make these determinations also in the case of skilled nursing facilities and other providers of health services. The conditions of participation for such providers are spelled out in the amendment. State agencies would determine whether they are met. I am confident that all States would be willing and able to enter into agreements to assume these responsiiblities, just as they have participated in the administration of the disability portion of the OASDI program.

State health departments or other appropriate agencies designated by each State would also give professional consultation to providers of health services to assist them in meeting the conditions for participation and in establishing and maintaining necessary fiscal records and providing information necessary to derive operating costs which are the basis for payment for their services. State agencies would be reimbursed for the costs of activities they perform in the health insurance benefits program, including Federal sharing in the costs of coordinating these activities with other State activities related to health and medical services.

What is contemplated is a Federal-State relationship under which each governmental entity performs those functions for which it is best equipped and most appropriately suited. State governments license health facilities and State public health authorities generally supervise these facilities. In addition, State programs purchase care from providers of health services. On the basis of experience and function, State agencies should assist the Federal Government in determining which providers of health services conform to prescribed conditions. Furthermore, where an institution or organization that has not yet qualified needs consultative services in order to determine what steps may be appropriately taken to permit qualification, such consultative services should be furnished by the State health or other appropriate State agency. These types of consultative services are related to State programs and requirements and should logically be provided by, or coordinated in, the State agency.

CONDITIONS FOR PARTICIPATION

Many people in the health field, including public health officials of the States, hospital administrators and many physicians have applauded the intention—clearly reflected in S. 909—to be specific about any conditions that hospitals or other organizations would have to meet before they could participate in the proposed program. To make sure that the new program would not in any way undercut the efforts of the health professions and would not permit payment to obviously substandard institutions, the participation requirements of S. 909 were intended to parallel requirements of the health professions as they define and accredit institutions. The provision has been interpreted as possibly implying an authority to impose additional requirements beyond those necessary for accreditation. The amendment we are offering makes very explicit that such authority is not provided. The amendment limits requirements for participation so that they may not go beyond the professionally set and professionally accepted standards established for hospitals save for the requirement of a review committee, which I shall discuss further. The original bill clearly anticipated heavy reliance on agencies like the Joint Commission on the Accreditation of Hospitals. Now the amendment goes so far as to name the Commission and require use of its provisions and findings. The Joint Commission is composed of representatives of the American Medical Association, the American Hospital Association, the American College of Surgeons and the American College of Physicians. There is a provision in the proposed amendment that specifically provides that, with the one exception of the review committee, a hospital that is accredited by the Joint Commission would be conclusively presumed to meet the conditions for participation in the proposed social security health insurance plan. About 84 percent of the hospital beds in the country are in hospitals that are accredited by the Joint Commission.

REVIEW COMMITTEE

The unconditional opportunity to participate that is assured to accredited hospitals is subject to only one exception. This exception is that all hospitals would also have to maintain some mechanism of their own for reviewing whether patients who are beneficiaries are in need of hospital services. The thought behind the bill was that the hospital's medical staff should keep an eye on long-stay cases. When S. 909 was drafted, the Joint Commission was considering adding to its standards for accreditation the requirement that hospitals maintain a formal hospital committee to conduct such reviews; S. 909 was drafted to require that hospitals maintain such committees. It is not now clear that a review requirement added to accreditation standards would take this exact form. Therefore, a utilization review requirement has been developed in the proposed amendment that would be acceptable to the Joint Commission no matter what form of review is decided upon by that organization. When the Joint Commission decides on what form the utilization review mechanism should take in order to qualify a hospital as an accredited hospital, that same requirement could be accepted in the proposed program.

MAINTAIN CLINICAL RECORDS

Another requirement that S. 909 provided as a condition for participating in the proposed health insurance program was that hospitals maintain adequate medical records. There has been some misapprehension that this provision would give the Federal Government authority to decide what was adequate. Of course, what was intended was a requirement that would merely follow accepted practices—in other words, a requirement that would go no further than the practices that any good hospital would have in effect anyway. Nevertheless, to preclude any misapprehensions, the new language in the amendment we are offering would require merely that hospitals maintain clinical records for their inpatients. This is parallel to a requirement of the American Hospital Association that institutions satisfy before they can be recognized as hospitals by that association.

LIMITATIONS ON REQUIREMENTS TO BE SET BY SECRETARY

There has also been some misunderstanding of the provision of S. 909 that authorizes the Secretary of Health, Education, and Welfare to prescribe such additional conditions of participation as he may find necessary in the interests of health and safety. It has been said that this authority to prescribe conditions of health and safety would lead to Government control. The fact that the intent of the bill was that the Secretary would lean heavily on the Advisory Council, State agencies, and accrediting bodies like the Joint Commission on Accreditation of Hospitals, and that this intent was clearly expressed in the bill, was apparently not enough to overcome all fear of Government control. To clear up any doubts, the amendment contains explicit limits on the Secretary's authority. First, as I mentioned previously, accredited hospitals would be conclusively presumed to satisfy the conditions that the Secretary would prescribe in the interests of health and safety of patients. Insofar as unaccredited hospitals are concerned, my amendment would specifically provide that the Secretary's health and safety requirements could not exceed those prescribed by the Joint Commission on the Accreditation of Hospitals.

Some of my colleagues may have wondered why the professionally accepted standards for adequate hospital operations are not used exclusively, and why the Secretary is given any authority in this area. Of course, the reason for this authority is not that the administration—or anyone else for that matter—wants to impose new standards of adequacy on hospitals and take over the health profession's responsibilities. The reason that the proposed health insurance plan cannot rely solely on the professional standards is that they are set too high for some hospitals and some parts of the country. Absolute adherence to the accreditation standards would unreasonably deprive the residents of some localities of protection under the proposed program.

MAINTAINING QUALITY OF CARE

On the other hand, if the proposed health insurance plan were to operate without any standards at all, or with only token standards of eligibility, the health insurance payments that would be made could damage the continuing efforts of the health professions to improve the quality of hospital care available throughout the country. Even more significant is the need for quality protection in the case of nursing homes. It would be regrettable if poor quality care in nursing homes were to be sponsored by paying for health care in institutions whose environment is truly a threat to the lives of their patients.

Our amendment would strengthen the assurance that nursing home services covered by the proposal are of high quality. It would do this by requiring that nursing facilities may participate in the program only if they are affiliated with hospitals.

MANNER OF PAYMENTS

There is another important area where a health insurance program under social security can back up the efforts of the health professions to improve hospital care. There is no better way to lower a hospital's ability to give quality care than to put patients there and then not pay the hospital fully for the services they receive. And this is just exactly what is happening under our public assistance programs in various parts of the country. I am not surprised that a good many people are genuinely concerned that the same thing not be allowed to happen under the proposed health insurance program.

No question has been studied more intensively than the matter of reimbursing hospitals under a social security health insurance program. Our amendment would absolutely assure that, under the proposed health insurance plan, payment would be made for the full and reasonable cost of the services the bill would cover. In addition to the assurances given by the reimbursement provisions of S. 909, the proposed amendment would include a specific reference to the guides to be used to assure that reimbursement would be made for all the various items of cost, including indirect costs, of the services covered under the proposal. The amendment states specifically that the reimbursement policy to be followed in paying hospitals would be oriented to the principles of reimbursement by third parties laid down by the American Hospital Association.

DRUGS

In addition to the modifications I have mentioned, the amendment we are offering makes a technical change that would make doubly sure that the bill would not discourage the use of any drugs of therapeutic value. Under S. 909, hospital payments would have been made for any drug or biological that is listed on any one of the three major U.S. drug listings that have been developed by the drug industry and the medical profession. Since these drug listings are entirely under the control of the medical profession, and since new drugs and therapeutic value can be added to the listings at will, I do not see how Government reliance on these compendia would involve Government supervision or restriction of physicians' choice of drugs. Nevertheless, the proposed amendment will clear up any misunderstandings by providing that payment would be made under the proposed program for any drug not listed on one of the professional drug listings if the drug is acceptable to the drug or pharmacy committee of the hospital in which the drug is used.

MEDICAL TEACHING PROGRAMS

Another charge made against S. 909 is that under it the Secretary might make use of decisions of organizations unacceptable to the American Medical Association in determining whether an intern and resident is a student doctor and not a full-fledged staff member. I have modified the provision in question to state specifically that a hospital intern or resident who is a member of a teaching program that is approved by the Council on Medical Education and Hospitals of the American Medical Association would be officially determined to be a student for whom payment could be made under the amendment. Obviously this was the intent of S. 909.

In making the language abundantly clear, in a bill already characterized by a full spelling out of provisions, I believe that the proposed amendment will put an end to any real concern that the Blue Cross type insurance program we are proposing—for less than 10 percent of our population—will somehow lead to a program of socialized medicine. It will not—and the American Medical Association should stop worrying.

SERVICES COVERED

The basic insurance protection provided under our amendment—as under my bill, S. 909—includes four major benefits:

First. Payment would be made for inpatient hospital services for as many as 90 days of care during any single period of illness. The patient would be required to pay $10 a day of the cost of inpatient hospital care for up to 9 days during each benefit period, with the minimum payment being $20.

Second. Payment would be made for up to 180 days of skilled nursing home services for patients who transfer to a hospital-affiliated nursing home from a hospital.

Third. Home health services would be paid for when furnished by, or through, public or nonprofit agencies under a plan prescribed by a physician. Up to 240 home health services visits could be paid for during a calendar year. These services would include nursing care, physical, occupational, and speech therapy, medical supplies—other than drugs—appliances for temporary use, and certain part-time or intermittent homemaker services.

Fourth. Payments would be made for outpatient hospital diagnostic services of the kind customarily furnished by or through a hospital to its outpatients, with the patient being required to pay the first $20 of the cost of each diagnostic study.

DOCTORS' BILLS NOT COVERED

I want to emphasize that physicians' services would not be covered except for services of interns and residents-in-training under an approved teaching program, and except for hospital services provided by physicians in the fields of pathology, radiology, physical medicine, and anesthesiology where such physicians are in the employ of, or work under an arrangement with, the hospital.

HOSPITAL ORIENTED

Our proposal is focused on hospital services because an illness that necessitates hospitalization is usually the most costly. The medical expenses for aged people who are hospitalized are about five times greater than the medical bills of aged people who are not hospitalized. Furthermore, among the aged, hospitalization is very likely to occur. It is esti-

mated that 9 out of every 10 persons who reach age 65 will be hospitalized at least once before they die; 7 out of 10 will be hospitalized at least 2 times; and almost 4 out of 10 will be hospitalized at least 3 times. The aged group spend at least twice as many days per capita in general hospitals as the population as a whole.

One of the most significant features of the proposal is that it provides alternatives to inpatient hospital care. Provision has been made for payment for skilled nursing home care, home health care, and outpatient diagnostic studies in order to promote the most efficient and economical use of existing health care facilities. In providing for payment for these alternative services, the proposed program would reinforce the efforts of the health professions to reserve hospital beds for acute illnesses requiring intensive treatment that can be provided only in a hospital.

As already noted, our proposal would not cover surgical services and other physicians' services. I believe that protection against costs of doctors' fees should not be included in the Government-sponsored program. Payment of doctors' fees requires financial arrangements to which physicians are adamantly opposed. Moreover, since the financial base of our proposed program is, like the entire proposal, intentionally modest and conservative, it seems better to concentrate the funds on hospital costs rather than doctors' fees, which by tradition are adjusted to the means of the patient. Since only basic health insurance protection would be provided under the amendment, aged people can be expected to purchase private, supplementary insurance against the cost of surgical and other physicians' services.

FINANCING OF THE PROGRAM

The chief actuary of the Social Security Administration has assured me that the benefits of the proposal would be financed on a sound actuarial basis with cost calculations based on assumptions and methodology consistent with those used for the other elements of the OASDI program. The financing of both the cash benefits, including the higher ones that would result from raising the earnings base, and the new health benefits, would be accomplished by raising the maximum taxable earnings base to $5,200 per year and by an additional combined employer-employee tax of one-half of 1 percent.

The proposed health benefits would be financed by an allocation to the health insurance trust fund from the total social security tax receipts—an allocation equal to what a combined employer-employee tax of .68 percent would yield. Part of this—.50 percent—comes from the increase in the scheduled contribution rates in all future years. The remainder comes from the net gain resulting in the cash-benefits portion of the system from raising the earnings base from $4,800 to $5,200.

SEPARATE TRUST FUND

Under the bill I introduced last year, there would have been a health insurance account in the Federal social insurance trust fund. The trust fund would also have included special accounts for old-age and survivors insurance and for disability insurance. While I believe this arrangement would have been fully effective in segregating the moneys for the various benefits provided under social security, in the proposed amendment we have substituted provisions for a separate health insurance trust fund. We have made this change because some people believe that there would be merit in a separate trust fund for health insurance, and that there would be less danger of misunderstanding.

Of course, the payments for health services that would be made on behalf of those people who qualify for protection through the provisions for the uninsured would be made from general revenues. The trust fund and the rights of the social insurance beneficiaries would in no way be affected by these expenditures.

ROLE OF PRIVATE INSURANCE

I want to emphasize that under this proposal the role of private insurance would be an important one. The proposal is designed to meet only the most pressing health care costs of the aged, and, as in the case of the present program of old-age and survivors insurance benefits, beneficiaries can be expected to build on the basic health insurance protection. I think we have every right to expect that at least some of the money the aged now spend to meet hospital costs, through insurance, and otherwise, would be used to purchase insurance against the costs of the services of physicians and dentists, drugs, and the other health services and supplies not covered under the proposal. Also, I would expect that many aged people who now go without any health insurance protection because they cannot afford to safeguard themselves against the financial catastrophe of a serious illness would also obtain supplemental coverage from private sources once real security becomes possible. Certainly, with basic protection furnished under the Government program, employers will be encouraged to carry supplemental protection for their retired employees just as they have provided supplementary pensions. Private financing alone cannot do the job but it can do much to make retirement and health insurance protection in old age adequate when basic protection under social security is available. Our amendment makes clear the intention to encourage and facilitate supplementation by States, private insurance, or other methods.

So the administration is indeed proposing that Government and private insurance play complementary roles in meeting the need. The role of Government in the health insurance area, just as it is in the area of retirement income, would be to provide a guarantee of basic protection for the aged through the Nation's social insurance system, while the role of private insurance would be to build supplementary protection on this base. By working together—and not by competing with each other—Government and private insurance can make comprehensive and adequate protection a realistic possibility for all of the aged.

SUMMARY

Mr. President, I am convinced that the amendment we are offering for the consideration of the Senate offers a reasonable basis for agreement. The amendment would embody all of the great merit of the social security approach and at the same time provide meaningful assistance for the relatively few older people who are not now protected by the social insurance system. The proposal has strong safeguards against any possibility that Government would exert control over providers of services and established medical practices.

I take great pride in pointing to the large area of agreement that has been reached by those of us who sincerely seek a way by which much-needed protection against the cost of serious illness can be provided for our senior citizens. We believe we have demonstrated that we have offered a workable and satisfactory plan that will meet with widespread public approval. I urge all Senators who are seeking a way by which much-needed protection against the cost of serious illness can be provided for the aged to join in support of our proposal. If we are truly of goodwill, we can meet objections with fair and workable solutions; we can demonstrate to the American people our sincerity and good faith. There is no justification for further delay; we must not wait longer to provide an effective program of protection for the Nation's elderly people.

The final revision which was added as a result of many conferences provides an option to beneficiaries to continue private health insurance protection in order to encourage private health insurance supplementation. The plan is as follows:

First. At the time of first eligibility for social security, beneficiaries who for a period of time had private insurance protection under plans which include the same benefits as provided under social security would be able to choose between having the statutory benefit paid for directly by social security or, if they wish to continue the private plan, they could have the statutory benefits paid for through the private carrier.

Of course, those who did not elect to continue such a private plan could buy private policies completely separate from but supplementary to social security protection.

Second. Carriers would be reimbursed for the statutory benefits they paid for and for their administrative costs.

Third. The beneficiaries could elect to have their benefits paid by a private carrier only if they have had the required plan in effect for a period before they become entitled to health benefits under social security. The required period of prior insurance would be brief at first, to allow for a change in private plans and then gradually lengthen until 5 years of previous membership is ultimately required. The required period of membership would be 3 months for persons entitled when the plan goes into effect on January 1, 1964, and would remain at 3 months until the end of March 1964. From then until the end of 1968 it would

require continuous membership from January 1, 1964, until entitlement. After 1968, 5 years would be required.

Fourth. Any carrier would be approved to participate for its group health insurance plans and all nonprofit plans would be approved. To participate for individual policies a commercial carrier would need to be licensed in all States and doing 1 percent of the health insurance business throughout the Nation, or is found by the Secretary to be national in scope. As an alternative it could be approved for a particular State if it did 10 percent of the business in that State.

That, I feel, makes the package complete and strengthens my hope that the Senate will take the forward step of approving this amendment.

Finally, I compliment the Secretary of Health, Education, and Welfare, Mr. Ribicoff, for the amount of time he has personally devoted to working out a satisfactory solution to some of our problems. Solutions were not easy to accomplish. A great deal of work was required to make sure that the proposals could be properly administered under the law. I wish to compliment Mr. Ribicoff for the fine job he has done.

Mr. McNAMARA. Mr. President, I ask unanimous consent that all staff members of the Committee on Aging be permitted access to the floor until the Senate has concluded its deliberations concerning H.R. 10606.

The PRESIDING OFFICER. Without objection, it is so ordered.

PUBLIC WELFARE AMENDMENTS OF 1962

Mr. METCALF. Mr. President, I ask that the Chair lay before the Senate the unfinished business.

The PRESIDING OFFICER. The Chair lays before the Senate the unfinished business, which will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

The PRESIDING OFFICER. The bill is open to amendment.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. MOSS. Mr. President, on Tuesday of this week, I proposed an amendment to this bill, and the amendment was debated at some length. Because of factors which then existed, I agreed to withdraw my amendment then, and reserved the right to call it up today.

I ask that my amendment, which was discussed at some length on Tuesday, now be called up and read.

The PRESIDING OFFICER. The amendment will be read.

The LEGISLATIVE CLERK. On page 70, between lines 17 and 18, it is proposed to insert the following:

(f) The increase in the Federal share of public assistance payments provided for in this section shall be paid to the States only upon the condition that the money payments received by recipients of old-age assistance, aid to the blind, and aid to the permanently and totally disabled shall be increased by the full amount of the increase in the Federal share.

Mr. MANSFIELD. Mr. President, if the Senator from Utah will yield, I should like to suggest the absence of a quorum.

Mr. MOSS. I yield for that purpose.

Mr. MANSFIELD. Then, Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MOSS. Mr. President, at page 11792 of the RECORD of the Senate proceedings for Tuesday, July 3, appears the brief wording of the amendment which we are now considering, together with the remarks I made at that time.

There was a colloquy among Senators at that time, including a discussion of the amendment by the senior Senator from Oklahoma [Mr. KERR], who is handling the bill on the floor. At that time the Senator from Oklahoma was in opposition to the amendment, and I think stated fully the reasons for his opposition. I stated my reasons fully at that time.

This amendment simply provides that any increase in the amount of Federal money granted for welfare in the classes of blind and disabled persons shall be passed on to the recipient at the end of the line, rather than be deflected or diverted or absorbed in any way by the State.

I think such a provision is of considerable importance because of the feeling of the people who are receiving this sort of aid that they have been betrayed when such benefits have not been passed on to them. I think when there has been a reason for Federal action increasing the amount of such support, certainly it should go to the recipient.

I have no reason to discuss the amendment in any more detail at the present time, and I ask for a vote on my amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Utah.

The amendment was rejected.

Mr. MOSS. Mr. President, I send to the desk amendments which I call up at this time and ask to have stated. They are the same as the amendment the Senator from Indiana [Mr. HARTKE] had prepared. However, the measure has been slightly amended to refer to the proper page and paragraph designations.

The PRESIDING OFFICER. The amendments offered by the Senator from Utah will be stated.

The CHIEF CLERK. It is proposed, on page 78, line 9, to strike out "and".

On page 78, line 13, to insert ", and (C) the ability of such individual's family or relatives to provide for his support" after "plan".

On page 100, between lines 15 and 16, to insert the following:

ABILITY OF FAMILY OR RELATIVES TO PROVIDE SUPPORT TO BE DISREGARDED IN DETERMINING NEED OF INDIVIDUAL FOR AID TO THE BLIND

SEC. 156. Effective July 1, 1963, section 1002(a)(8) of the Social Security Act is amended to read as follows: "(8) provide that the State agency shall, in determining need, take into consideration any other income and resources of the individual claiming aid to the blind as well as any expenses reasonably attributable to the earning of such income; except that, in making such determination, the State agency shall disregard (A) the first $85 per month of earned income plus one-half of earned income in excess of $85 per month, and (B) the ability of such individual's family or relatives to provide for his support;".

Mr. MOSS. Mr. President, my amendment would amend H.R. 10606 to abolish the legally enforceable obligation of a relative to contribute to the support of a person who is blind. This amendment is strongly desired by the National Federation for the Blind.

At present, State laws require, under the penalty of legal action, that family members must contribute to the support of a needy blind person. A blind person's family is fully investigated, and a decision is made as to how much the family can afford to contribute to his support. This amount is then deducted from the benefits the blind person receives under the program in his State, and he becomes a dependent ward of his family, living with them.

The average payment to a needy blind recipient in this country is $76.35. Therefore, should it be found that a family can contribute $20 toward the support of a blind member in a State where the payment is about average, the payment the blind person would receive would be about $55.

Now on the face of it this seems fair. But in many families where the blind can be classified as needy, the family itself is on the narrow edge of need. To pull out of their meager resources enough money to support the blind member of the family—a perpetually nonproducing member—is not only a genuine hardship, but sooner or later begins to cause resentment. The blind member feeling and hearing the resentment he cannot see, knows he is a burden and a drain on family finances needed for others who do have a future.

If a family is unwilling to take on a measure of support for the blind member, and has been forced to do so, the strain is even greater. The blind member feels he is not only a burden, but unwanted.

In either instance, an atmosphere of bitterness and strife often develops—bitterness which deeply affects a person made more sensitive than most because of his affliction.

Today, every effort is being made to encourage the blind to rehabilitate themselves. We have developed splendid programs to help them. We have all been touched and inspired by the sight of a blind person making his own way about town, going to a place of business, doing a job. We all know that the blind, with resolution and proper training, can learn to take care of themselves and can take their place in society.

To do so, however—to make the break from their world of darkness and dependency—the blind need an atmosphere of harmony and encouragement. To rehabilitate himself, the blind person must put forth intense personal effort. He must have incentive and understanding. He must have peace of mind and harmony about him. This he cannot find in a household filled with resentment against him, and with strife and bitterness over his plight.

We are told that many of the more than 100,000 needy blind covered by the provisions of this bill are eager to rehabilitate themselves. They have the initiative and ability—they need only the independence the passage of this amendment would give them to start them down the path toward rehabilitation and self-support. It is evident that the federally supported programs we have established are hindering as well as helping them—I feel they must be adjusted so they are as modern and progressive as the blind themselves.

The amendment I am offering is in character with the trend in welfare legislation. In 1956, for example, the purpose of the amendments the Congress added to the public assistance sections of the Social Security Act was stated as follows:

To promote the well-being of the Nation by encouraging the States to place greater emphasis on helping to strengthen family life and helping needy families and individuals attain the maximum economic and personal independence of which they are capable.

In the bill before us, both the House and Senate reports state similar objectives. The House bill states:

The new approach embodied in the bill places emphasis on the provisions of service to help families become self-supporting rather than dependent on welfare checks. The bill would make it possible for the States to provide incentives to the recipients of public assistance to improve their condition so as to render continued public assistance for such persons unnecessary. This approach accords due recognition to rehabilitation of recipients so as to restore them as useful, productive individuals, and assist them to become self-supporting, independent and able to take care of themselves.

The Senate report has similar language.

I realize that many people feel very strongly about filial and family responsibility and I anticipate that some of the Members of this body may hesitate to write it off even in the case of the blind. The Department of Health, Education, and Welfare has issued a very interesting study on "Filial Responsibility in the Modern American Family." Though it deals primarily with the responsibility of adult children to their aged parents, many of its conclusions are applicable to the situation we are discussing today.

It shows that filial support policies vary from State to State, both in rigor and in methods of application. Some States require a contribution by law or policy, but do not make assistance contingent on contribution. In general, children living outside a State are not obliged to contribute to their parents, but they are encouraged to support them. Various scales of support are used in various States.

Now let me quote some pertinent comments from the study:

Most administrators agree, regardless of their position on requiring filial support, that it is difficult and painful to administer * * * (and that) many parents resist the requirement and adult children resent it. The legislator enacting filial responsibility envisions a wealthy son whose father ekes out a desperate living on old-age assistance. But caseworkers and administrators see a different picture. Though income scales help to achieve a degree of equality, their application in varying situations and to families whose filial feeling may range from love to hatred may easily seem unjust to parent or child, client or caseworker. If in the end the agency must have recourse to the courts, prosecutors and judges are reluctant to bring these cases to trial. Even then, it frequently turns out that the child does not contribute the specified sum and the entire procedure begins again.

I would point out that such procedures are not unknown in the case of a family which is reluctant to contribute to the support of a blind person, either because of the strain on finances, or because of lack of a feeling of responsibility. What is the impact on the blind person?

This is brought out in another paragraph dealing again with filial responsibility to parents, but applicable in the case we are discussing:

We are left with the question of the effects of filial requirements on families. In a sense, this is the crucial question. At come expense of equity and of feelings, both clients and administrators, there is a net savings in enforcing filial support; opinions divide on whether it is worth while. The question that remains is, "what is the human cost of the saving?" * * *(There are) three kinds of human cost: The perpetuation of poverty, the substitution of enforcement for incentive, and the domination of family arrangements by considerations that are secondary, and often inimical to family cohesion.

Another question which undoubtedly would be raised is that of the saving of tax funds by requiring a family to assume either in full or part the care of a member who cannot support himself.

Again, I quote from the HEW study:

If one examines the caseloads of the States that require filial support, they turn out to be markedly lower than the States that do not. As these tend to be the wealthier States that would in any case have lower caseloads, however, the savings is only in part a result of filial support. Among people receiving assistance, through exploration of filial support does not usually, in agency experience, produce a great deal more than is already being contributed. It appears that the savings might be balanced by the cost of administration.

This would apply, perhaps in a lesser degree, to the investigations necessary to decide whether the family of a blind person can contribute to his support, and how much.

I could continue to quote at length from the HEW study, but the gist of the discussion seems to be that there are some serious doubts among welfare administrators and social workers about the wisdom and effectiveness of forcing filial or family support, and also about the extent to which tax funds are saved in the process. I certainly do not want to indicate here that I feel families who are able should not shoulder responsibilities they can well carry, nor do I want to indicate that I do not believe children should care for their aged parents, nor that families with blind members should care for them if they are able, and care for them with good will and understanding. But I feel we must recognize the fact that when such care is forced on those who feel they are not able to shoulder it, or who are unwilling to shoulder it, the recipient of the aid can be made to suffer cruelly.

Mr. President, I believe that in the case of the blind we should consider them first—consider them before we consider welfare policies and tax loads.

I feel we must not doom the blind person by laws which force him to be dependent on his relatives and his family. Rehabilitation starts not with skilled personnel, not with training facilities—but it starts with the person himself. He must believe in himself, and he must have help in gaining in this belief. If he cannot get the inspiration he needs from his family, then he must be freed from dependence on that family so he can go where he can get inspiration and help. With independence, he may succeed in rehabilitating himself; without it he may sit, helpless and crushed, in a chair for the rest of his life.

I ask that the amendment be agreed to.

Mr. RANDOLPH. Mr. President, will my colleague yield?

Mr. MOSS. I am happy to yield to my colleague from West Virginia.

Mr. RANDOLPH. I shall not discuss the amendment which has been offered. It has had, and will have, discussion by proponents and opponents. I followed the RECORD earlier this week in connection with this subject matter. My support will be given to the amendment as offered by the Senator from Utah. It was my privilege to join with Senator HARTKE early in the first session of this Congress and sponsor a measure to amend title X of the Social Security Act. It provided that consideration with respect to the ability of the family or relatives of a blind individual to provide for his support shall be disregarded in determining his need for aid to the blind under State programs established pursuant to such title.

When we consider the independence of this group of our citizens, it is important to realize that there are approximately 400,000 blind persons in the United States of America. From this reservoir of blind people have come those individuals who have had not only the aptitudes but also the attitudes which have been very important in regard to certain work programs. This has been true particularly with respect to one notable effort to which I invite our attention.

The Vending Stand Act of 1936 provided the way, as it were, for blind persons who could meet certain requirements, who could be trained. The act provided for operation of those small business units.

In fiscal year 1961 there were 2,332 blind persons who were conducting these small business units in Federal and non-Federal buildings, as well as parks and forest throughout the United States.

In the fiscal year 1961 those men and women did a gross business of more than $42 million. They netted to themselves in excess of $8 million. I mention that program, which was enacted in 1936, as one of the very intelligent activities by which the blind of the United States have been able to reach a status of independence, dignity, and ability to contribute to personal and community responsibilities rather than to be recipients of charity. I express my appreciation to that segment of blind people in the United States. For the benefit of the 400,000 blind citizens in our country, we need to develop, at this time, additional programs of the type which I have mentioned.

Mr. MOSS. I thank the distinguished Senator from West Virginia for his timely comments. Certainly much has been done in that area. I think we have all been inspired to see the blind obtain a degree of initiative in providing for themselves. It has been inspiring to see the self-respect that their work brings to them, in strong contrast to sitting as a defeated burden upon family or friends. The blind person who has initiative may move out and grow for himself. He thereby grows in his own self-respect and the respect of the members of the community.

The amendment about which we are speaking would merely eliminate the condition that may arise, and sometimes does arise, in which a deep internal conflict develops within a family group because of the requirement of the law for a contribution in cases in which the family, for one reason or another, justified or not, does not feel that it should be imposed upon by the person who is handicapped by blindness.

The amendment would require that the family not be required by law to make a contribution to a person, or that his blind aid be decreased by any amount that legally should be contributed by the family. The amendment would give a blind person a sense of independence.

I repeat that I do not at all negate the idea that family responsibility should voluntarily motivate a family to want to help any member of the family. That should be done, and will be done in a great many cases, regardless of what the law is. I am thinking of cases in which, for one reason or another, that feeling of responsibility does not exist. In such cases the entire weight of oppression falls on the shoulders of the blind person, who is already handicapped and working against a very great handicap. That oppression should not be inflicted upon him. The amount about which we are talking is not great. Therefore I hope that the amendment will be agreed to.

Mr. KERR. Mr. President, will the Senator yield?

Mr. MOSS. I am happy to yield.

Mr. KERR. Does the Senator know the extent to which his amendment would change the present law?

Mr. MOSS. It would change the existing law only to the degree that an immediate member of the family would not be required to support a blind person who is receiving financial aid.

Mr. KERR. Is there any such Federal law at present?

Mr. MOSS. I am not sure of the extent to which there is a Federal law. I know that many States have such a law. We are talking about the money contributed.

Mr. KERR. Will the Senator advise the Senator from Oklahoma which State has a law that requires a relative of a blind person to support the blind person?

Mr. MOSS. I am not sure that I have that information available. I do not have the reference, except that, from my acquaintance with the welfare laws of my own State, I know that there is a requirement of a family contribution. I have been informed that such is also true in a great many other States.

Mr. KERR. In the knowledge of the Senator from Oklahoma, such is not the case. There are States which have laws that declare that the ability of sons and daughters to support the blind shall be taken into consideration in determining aid to the blind. If I correctly understand the amendment of the Senator from Utah, it is intended to prevent States from requiring that a relative of a blind person should support that blind person. If I correctly understand the Senator's amendment, it would say to a State, "You cannot, by your own State law, have a program which would take into account the ability of a relative to support a blind person."

As I understand the Senator's amendment, it would prevent a State from exercising its right to require a person to support a blind relative. The Senator's amendment would deny to a State the right, under its laws, to take into account the ability of a relative of a blind person to support that person.

Mr. MOSS. In general the Senator is correct.

Mr. KERR. The Senator has said that my statement is correct in general. Will he specify in what manner it is not correct?

Mr. MOSS. Under the Federal funds made available in the bill to a State it would not be permissible to decrease the allocation of the amount a blind person would receive based upon any study of the State or any finding of the State that the family, or some relative, could contribute in part.

In other words, the benefit would not go in different amounts to different people based upon the family circumstances and relief. There are areas of friction in which a family feels it has been imposed upon, and therefore makes the blind person feel that he is a drain and a burden upon the family. The amendment would be an attempt to restore the self-confidence of that blind person.

Mr. KERR. The amendment of the Senator from Utah would go far beyond that point. His amendment would compel a State to disregard the fact that the blind person had a relative who wanted to help to support him and was doing so.

Mr. MOSS. I do not think the amendment would go that far.

Mr. KERR. The Senator should read his own amendment.

Mr. MOSS. No relative would ever be inhibited in helping in a case in which he wanted to help. But the State would be inhibited from taking that fact into consideration and thereby decreasing the amount that would otherwise come to a blind person.

Mr. KERR. The Senator is entirely correct in his last statement. Even though a relative might be very wealthy and was making abundant provision for a blind relative, the Senator's amendment would require the same payments to that blind person as he would receive if he had no relative making independent arrangements for his support.

Mr. MOSS. That is quite true. It would be available for him.

Mr. KERR. I do not believe the Senator would wish to urge that amendment.

Mr. MOSS. I certainly do urge the amendment.

Mr. KERR. As the Senator sets forth in his amendment, the law with reference to aid to the blind is the most liberal of any assistance program we now have. The law now is that the first $85 a month of earned income is disregarded, in determining how much assistance shall be given to a blind person.

The law now requires that one-half of what a blind person earns above $85 a month be not taken into account in determining how much he shall receive from the State program. The Senator would provide that even though the blind person himself were making $85 a month, which is disregarded, and another $100 a month, being one-half of another $200 a month, which is also disregarded, would compel the State to disregard the fact that an independent, wealthy relative of the blind person was making a provision for the blind person in addition to what he was earning himself; and to contribute to him as though he were not receiving such contribution from his well-to-do or wealthy relative.

Mr. MOSS. I quote again, as I did before, from the report of the Department of Health, Education, and Welfare:

> The legislator enacting filial responsibility envisions a wealthy son whose father ekes out a desperate living on old-age assistance. But caseworkers and administrators see a different picture, as we shall observe.

Then it discusses that situation. Of course, there may be a situation of the kind the Senator points out. It might be that a wealthy family had a blind member. Nevertheless, a large number of these cases fall into the marginal area, where the administrator may have reason to say that the family can give a certain amount of support and where the family does not believe it can. In that way we get into an area where a blind person is made to feel the brunt of the conflict, and to feel the depressing effect of the situation, in that he feels as though he is a complete burden on the family and is unwanted, and, as a result, does not have the stimulus that we say we want to give blind people.

Mr. KERR. As the Senator knows, there is another amendment in the bill which provides:

In determining need for aid to the blind, a State shall, in addition to presented exempted amounts ($85 a month in earnings plus one-half of the balance) exempt such other amounts of income or resources as may be necessary to fulfill a State-approved rehabilitation plan for a blind individual.

In other words, the bill contains an amendment which directs the State to disregard any income, just as the Senator would say, with reference to a wealthy or poor relative that may be necessary to make the blind person completely self-sustaining under a plan approved by his State.

Mr. MOSS. That is a very salutary provision. However, this would apply not only to the blind person who has an income but also to one who has an income and receives aid. In other words he would receive aid, and there could be no writeoff against the family.

I ask for a vote on the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Utah [Mr. Moss].

The amendment was rejected.

Mr. KERR. Mr. President, I move that the Senate reconsider the vote by which the amendment was rejected.

Mr. DIRKSEN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

PROPOSED UNANIMOUS-CONSENT AGREEMENT

Mr. MANSFIELD. Mr. President, I send to the desk a unanimous-consent request and ask that it be considered.

The PRESIDING OFFICER. The proposed unanimous-consent agreement will be read.

The legislative clerk read the proposed unanimous-consent agreement as follows:

Ordered immediately, That, during the further consideration of H.R. 10606, the public assistance and welfare bill, with the exception of the so-called Anderson and other Senators' amendments, hereinafter referred to, debate on any amendment, motion, or appeal, except a motion to lay on the table, shall be limited to one hour, to be equally divided and controlled by the mover of any such amendment and the majority leader: *Provided,* That in the event the majority leader is in favor of such amendment the time in opposition thereto shall be controlled by the minority leader.

Provided; That on the Anderson and other Senators' amendment to the said bill, debate on any amendment, motion, or appeal relating thereto, shall be limited to six hours, to be equally divided and controlled as above indicated: *Provided,* That on any amendment proposed thereto or motion relating thereto, debate shall be limited to one hour equally divided and controlled by the mover of any such amendment and Mr. Anderson, if he is opposed to any such amendment or motion, and that in the event he is favorable to such motion or amendment, debate in opposition thereto shall be controlled by the minority leader: *Provided further,* That no amendment that is not germane to the provisions of the bill or the Anderson and other Senators' amendment shall be received.

Ordered further, That on the question of the final passage of the said bill debate shall be limited to six hours, to be equally divided and controlled, respectively, by the majority and minority leaders: *Provided,* That the said leaders, or either of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, motion, or appeal.

The PRESIDING OFFICER. Is there objection?

Mr. MANSFIELD. It had been anticipated by the majority leader that the unanimous-consent request would be made prior to the final disposal of the honeybee bill. I hope there will be no objection to the proposal at this time, so that we may be in a position of assuring Members of what the status of the bill and amendments thereto will be for the rest of the week and possibly next week.

Mr. DIRKSEN. Mr. President, the majority leader has always been so obliging and he has always been so reasonable in his requests, that I often find it difficult to object.

However, I point out that we will be considering here a matter that has not been considered by the Finance Committee, which ordinarily would have jurisdiction in the matter; that we are considering a matter of such great import to the country and so permanent in its impact, and of a dimension that is scarcely appreciated by the membership at the moment, that I feel a maximum amount of discussion must develop on the Senate floor in every aspect of the proposal. Therefore, reluctant as I am, I feel constrained to and I must object.

The PRESIDING OFFICER. Objection is heard.

SOCIAL SECURITY FINANCING OF HEALTH COSTS

Mr. LONG of Hawaii. Mr. President, while we are hammering out a bill to provide health benefits for the aged which will be acceptable to the House as well as to the Senate, we will undoubtedly be faced with a variety of proposals all necessarily complex in their technical details. Because this is a complex and technical piece of legislation, the basic differences in philosophy of the alternatives proposed may not be immediately clear. I would like, therefore, to share my philosophy—the yardstick I shall use in determining whether a specific proposal measures up to my requirements of a program of health benefits financed through social security.

During this past year of serious debate over the issue of health care for the aged, one significant fact has emerged: There is now almost unanimous agreement that the problem is of such dimensions that only social security financing can provide the solution.

The AMA remains almost the lone holdout, still fighting a desperate rear guard attack, confusing the issue with indiscriminate labels of "too much" and "too little." Some of its members warn of strikes against the patient who uses social security benefits to pay for his hospital bills and of reprisals for any doctors who deviate from the official line.

First, the AMA objected to the King-Anderson bill because it excluded 3 million people—including the most needy—from coverage. Now we are considering legislation which will bring those 3 million under the program. They are now saying: "It's just an expanded version of King-Anderson." Many members of this body question the sincerity of the AMA. "We're damned if we do, and damned if we don't."

The first 6 months of 1962 have witnessed a number of impressive conversions to the principle of social security financing—conversions that give hope that the breakthrough of legislative action is near.

The year 1962 was barely underway before important developments took place. On January 4, Blue Cross Association and the American Hospital Association announced they would work out a national Blue Cross program for the aged, which involved governmental financial assistance, and that the method to be used by the Government in financing this program was "of secondary importance"—in other words, the social security financing mechanism could be used provided the plan was administered by Blue Cross. Significantly, the social security financing method, although long and vehemently opposed by organized medicine, had suddenly become acceptable to the one group directly involved in the administration's health insurance proposal—the hospitals.

On January 11, Senator JAVITS introduced his compromise bill to provide health insurance for the aged through social security financing, a radical departure from his earlier proposals based on general revenue financing.

Still another significant convert to the social security method was Representative KEITH, Republican, of Massachusetts, who said "from the viewpoint of a professional insurance underwriter and a proven conservative," called the social security financing "the true conservative approach to a problem we can no longer ignore."

And to list one more—Senator BUSH on June 27 introduced a bill, based on his dual conclusions that "there is a need for Federal action in this field which extends beyond the Kerr-Mills legislation," and that the "social security system provides an acceptable method of financing such a Federal program."

On June 20 Senator PAT MCNAMARA, chairman of the Senate Special Committee on Aging, released a staff report that assembles an impressive array of evidence leading inevitably to the finding that Kerr-Mills—by itself—cannot be expected to meet the medical requirements of America's elderly people "either now or in the years to come," and that a program of hospital and related insurance benefits under social security is also needed to "provide the broad base of financial assistance that would help assure older Americans independence, dignity, and security in their retirement."

These are some of the developments of recent months that indicate the spreading conviction that use of the social security financing method is an absolute necessity in handling this problem.

But there is less conviction—in fact, there is still considerable confusion—about the obligations to the contributors that accompany the use of this financing method—the guarantees of benefits that are essential when we use the social se-

curity mechanism to collect a compulsory payroll tax in return for a future promise of benefits.

As a longtime and wholehearted advocate of the social security financing principle, I believe strongly that use of this financing method involves certain commitments to beneficiaries, now and in the future. There are four commitments basic in measuring the appropriateness of the specifications of any legislative proposal which is based on the social security principle.

First—and I think this is almost too obvious to need saying—there must be no needs test or income test for persons who are beneficiaries under social security. Such a test, no matter how liberal, is irreconcilable with the principle that social insurance benefits are an earned right. Why should workers help to finance, through their social security taxes, a benefit for which they will be ineligible if their retirement income exceeds some limit? Why should they accumulate other sources of retirement income if this would make them ineligible for the health benefits?

Because I believe so strongly that an income test is incompatible with the social security financing method, I was delighted to see that Senator JAVITS amended his earlier proposal, initially introduced in January, to eliminate the income test for those eligible for social security benefits.

Second. The health benefits must be available to everyone who meets the tests of eligibility whether these are tests of insured status under the social security system or whether the tests go beyond—as I believe they should—to encompass other aged persons. This means that there must be a Government plan to guarantee the benefits. There must be no chance that anyone, no matter how poor his health, is excluded from the benefits completely, or that there are exclusions of preexisting conditions. No one should be ruled ineligible on the basis of a technicality or failure to comply with some routine regulation. Attainment of this objective requires a Government plan which excludes no one—no matter how bad a risk. And in order that the Government plan should not be left with all the bad risks while private insurance "creams off" the better risks, the Government plan would have to be an exclusive plan, or at the minimum, protected through carefully drawn safeguards.

This yardstick would, of course, rule out completely proposals which leave the entire job to private insurance, such as those put forth by Senator BUSH and by Congressman BOW and the sponsors of similar bills.

In this connection, I would call attention to the fact that Senator BUSH, in introducing his proposal, stated that it was estimated that 12.2 million persons "would take advantage" of the proposal in 1963. There would be at least 14½ million people who would meet the eligibility qualifications of his proposal in 1963—that is, who would be 65 or over and eligible for social security or railroad retirement benefits. It is hard to conceive of anyone eligible who would not wish to take the offer of $108 toward the purchase of health insurance. Does this mean then that the other 2⅓ million persons would be unacceptable to the insurance carriers? Is this what is meant by not "taking advantage" of the proposal?

Any proposal that collects compulsory contributions over the working years and leaves to the small print of a health insurance policy the determination of whether the individual is eligible at all—or for what he is eligible—is completely unacceptable under my standards.

Third, the plan should provide a guarantee of specified services—a meaningful guarantee based on assurance of payment in full for the services included.

Only in this way can the health benefits be truly paid up in advance of old age. This rules out all plans that merely offer the meaningless promise of cash indemnity toward unspecified, uncertain, and constantly rising fees and charges—fees and charges that can, in fact, be expected to rise ever higher since the providers of medical services are left free to increase their costs because of the existence of the insurance.

It is completely unreasonable to expect the worker to pay contributions over his working lifetime—perhaps as long as 30 or 40 years—only to find that the cash indemnity health insurance policy he has been purchasing is virtually worthless when he is ready to collect.

In specifying that service benefits are an essential element of a health insurance program financed through social security, I recognize that I lay myself open to the counterargument that the cash benefits to be paid on retirement after 30 or 40 years of contributions may also be depreciated in value. I would only point out parenthetically that these benefits are related to wage levels and the problem is not the same.

Fourth, social security contributions should not be used to pay profits to private insurance companies, thus spending large amounts which have been collected compulsorily without buying protection. During 1960, commercial insurance companies returned only 53 cents on benefits for every dollar they collected for individual health policies.

The social security mechanism provides an economical method of collecting contributions for health benefits on a group basis. These contributions should not be squandered on health insurance premiums, heavily weighted by profits and overhead and determined on an individual rather than a group basis.

These are the four criteria—the four yardsticks—I would use in assessing the acceptability of any proposal for health benefits based on the principle of financing through the social security system.

I firmly believe that the social security system is the only method through which older people can be relieved of the burden—and the fear—of rising and unpredictable health costs. It is only through our social security system that workers can provide for themselves, as a group and at a rate they can afford to pay, health insurance that is paid up prior to old age.

Fortunately, we have now reached a point in our history where these beliefs—these convictions—are widely shared. It is time now to move on to put our principles into operation—to expand our social security program by providing protection against the most essential health costs of the aged. In so doing, let us be ever mindful of the obligations placed upon us when we use the social security mechanism of financing. Let there be no dilution of our commitments to future beneficiaries, no deviation from our basic principles.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. McNAMARA. Mr. President, the amendment for health insurance for the elderly now before the Senate has been referred to as a compromise.

However, I am pleased to note that the new proposal is in many respects a significant improvement over the original King-Anderson bill.

I had supported that bill as a reasonable base on which to start building adequate protection for our older citizens against the heavy medical costs of their later years.

With one major exception, I am even more pleased to support this new proposal.

Particularly gratfiying is that a number of the improvements bring the proposal closer to my own bill —S. 65— which was introduce on January 4, 1961.

I say this not out of any pride of authorship, but because S. 65 had been carefully worked out to meet the basic needs of the elderly and to meet some of the arguments that have since plagued the King-Anderson bill.

Both bills provided for health insurance coverage for those eligible for social security to be financed through social security contributions.

However, we went further in S. 65 to include also the several million elderly individuals who did not have social security protection.

The new Anderson proposal now before the Senate, I am happy to note, would include those persons not now eligible for social security.

This is a most significant step forward, not only because this group includes many of the people most in need of health protection, but also because it meets one of the most telling objections to the King-Anderson bill which has been raised by the AMA and other opponents.

I sometimes feel that this argument, when raised by the AMA, somehow lacked the full ring of sincerity. Nevertheless, it was an argument that even many of the proponents felt was legitimate.

As in my bill, the costs of providing the protection for persons not eligible through social security would be met through general revenues. There would be no means test.

The inclusion of the noninsured aged is, I believe, the only way in which the States can be relieved of the almost intolerable financial burden of providing public assistance medical care for large numbers of needy aged persons.

Relieved of this burden, the States should be able to move ahead rapidly and on a sound financial basis to provide adequate medical care for those of the needy aged who may have medical costs beyond those met by the new program.

Recently the Senate Special Committee on Aging received a staff report entitled: "Performance of the States—18 Months of Experience With the Medical Assistance for the Aged (Kerr-Mills) Program."

In the introduction to that report, I stated:

> A program of hospital and related insurance benefits under social security should make it financially feasible for all the States to implement the Kerr-Mills MAA program. The two programs together would provide the broad base of financial assistance that would help assure older Americans independence, dignity, and security in their retirement.

I am pleased to see that the Anderson amendment also incorporates provisions like those in my bill for a separate trust fund for the health benefits and for the use of public agencies and nonprofit organizations for appropriate tasks.

Mr. MORSE. Mr. President, will the Senator from Michigan yield?

Mr. McNAMARA. I yield to the Senator from Oregon.

Mr. MORSE. I should like to emphasize that it was the distinguished senior Senator from Michigan who took the lead—and many of us were pleased and proud to support him—in proposing that these funds should be set up as a separate health trust fund, separate and distinct from the rest of the social security funds. I think that is a very important improvement in the bill.

Mr. McNAMARA. I think the Senator from Oregon for his generous remark.

The new Anderson proposal before the Senate does continue a feature of the King-Anderson bill which is not included in S. 65 and which I still find objectionable.

This is the so-called deductible feature, under which the individual must first make some basic payments for health care provided before he is entitled to benefits under the proposed law.

While I can appreciate the reasons why this feature is included, I hope that in the years ahead it will be possible further to improve the basic program by eliminating such features.

Mr. MORSE. Mr. President, will the Senator from Michigan yield?

Mr. McNAMARA. I yield.

Mr. MORSE. I join with the Senator from Michigan in his criticism of the provision of the King-Anderson bill which requires an initial $90 payment to be made by the recipient. I shall offer an amendment to the bill during the course of the debate which will seek to eliminate the $90 payment. I think we ought to start to make our fight against that provision this year. I hope that my amendment will be adopted. In my judgment, this provision of the bill is not justifiable. A sound social security principle or policy ought to be adopted in connection with the medicare bill. I think the total cost should be paid out of the insurance fund, not out of the pockets of the aged.

It is said by some persons that the $90 initial payment will not be a great handicap to those who need medical care, but, in my judgment, it will be a serious handicap to thousands of persons. It will cause many aged persons to postpone, postpone, and postpone even getting a diagnosis. In my judgment, such a requirement will result in great injustice to the aged having very limited means.

I know of no really good reason why we should not start at the beginning to put this plan on a complete insurance basis, with the understanding that the entire cost, to the extent that the bill covers health expenses, will be paid out of insurance funds, and not out of the pocket of the patient.

I recognize that this is considered a workable compromise between the unconscionable means test of the Kerr-Mills Act and the desirability of having some legislation passed at this session of Congress. But I am always interested in the question: What is the right thing to do? In my judgment, the right thing to do in this instance is to put this proposal on a strict insurance basis to begin with, and to eliminate the initial payment on the part of the patient. I shall offer an amendment in due course of time which will propose to do just that.

Mr. McNAMARA. I thank the Senator from Oregon.

Mr. ANDERSON. Mr. President, will the Senator from Michigan yield?

Mr. McNAMARA. I yield.

Mr. ANDERSON. I was interested in the closing remarks of the Senator from Oregon about putting the proposal on a straight insurance basis. That is precisely what was attempted. A sound insurance basis includes recognition of the fact that numerous nuisance claims are filed. It is necessary to have a valid claim.

For example, automobile companies provide collision insurance. In the days when they provided full collision insurance, it became too expensive; practically no one would carry it. Therefore, the insurance companies adopted a provision for $50 or $100 deductible, the idea being that if a person did not have a serious accident or a serious involvement with an automobile, he would not have his car repaired. If he had full collision insurance, he would immediately have every dent or scratch removed, or even replaced a damaged fender at a cost of $60, or whatever the price might be.

The same principle of deductibility has been carried into this bill. I do not say it is the wisest thing in the world; but otherwise, too many persons having slight illness would claim benefits.

Also, this provision is similar to provisions in all types of commercial insurance, particulary health insurance. It follows the provisions of the workmen's compensation laws in every State of the

Union, laws which require that a person must be incapacitated for a limited number of days before he may institute a claim.

From what little experience I have had in the insurance business, I think this is a good provision. It might be desirable to suggest that people should be paid for the first day; and there may be possibilities that welfare funds will cover this medium later if a change is found to be desirable.

We must always bear in mind that we are looking for an actuarial principle when we provide within a reasonable fee the amount of coverage which will be provided. This was hastily done, but it involved what I thought was an insurance principle.

Mr. McNAMARA. Ninety dollars is the maximum.

Mr. ANDERSON. Yes, it is the maximum. But the important point is that we are trying to see to it that devastatingly large bills do not descend upon those who are unable to pay them.

Today I received a letter from a woman who said she is 45 or 48 years old, as I recall; but the point is that she has a son, she is the sole support of the family, and she has worked a lifetime to save for his education. But just as he is about to enter college, she has been stricken with cancer. She says the doctors' bills not only are using up all her funds, but they also are making it absolutely impossible for her son to obtain a college education. In other words, even if the first $90 of the bills would not do that, the remainder would.

Mr. MORSE. Mr. President, will the Senator from Michigan yield?

The PRESIDING OFFICER (Mr. PELL in the chair). Does the Senator from Michigan yield to the Senator from Oregon?

Mr. McNAMARA. I yield.

Mr. MORSE. What I wish to say at this point will not be directed in any way to the amendment of the Senator from Michigan. I desire to state that when I offered my amendment, I wished to discuss at some length the amendment of the Senator from New Mexico.

However, at this time I merely state that I do not think it is sound, in connection with this matter, to make a comparison with the deduction made in connection with automobile insurance. It is quite different to be dealing with the question of whether, in connection with such a deduction, a claim for an entire new fender is legitimate, even though only a small dent was put in the original fender. I think there is no comparison between that situation and the case of an elderly person who should have a diagnosis, and perhaps has a latent cancer or some other ailment, but simply does not have the $90, or whatever the amount which will be required for the first few days in the hospital.

In this case we have an effective check: the doctor is the check. If in a given case the doctor finds that the patient should receive some hospital attention, in my judgment we should take the doctor's word for it, and he should have the authority to send the patient to the hospital to get the necessary treatment; and the patient should not have to pay the $90 maximum amount called for in this bill. It should be paid out of the insurance fund, because we are seeking to set up a great humanitarian program which will provide the necessary health attention at the time when it should first be given to the elderly person.

I have talked to a considerable number of doctors about this matter; and Senators will be surprised to find how many of them—a considerable number—are of the opinion that in dealing with the problem of the elderly who should have some health insurance, the doctors should be the ones to decide whether the patient should go to the hospital for treatment.

So the doctors will be the ones who will provide the check; and thus it will not be necessary to worry about possible malingerers, as contrasted with those who really need such attention, if we provide, as I propose, that the check shall be made by the doctor.

Mr. McNAMARA. Mr. President, one provision of the new amendment, however, gives me deep concern. That is the provision of section 1716 for an option to continue private health insurance protection.

I would be remiss in my responsibility as chairman of the Senate's Special Committee on Aging if I let this provision pass without protest.

During the years when I have had the privilege of serving as chairman of this subcommittee and its predecessor—the Subcommittee on Problems of the Aged and Aging, of the Senate Labor and Public Welfare Committee—I have had the opportunity to listen to our elder citizens and to carefully investigate their problems and possible solutions.

As a result, I question whether section 1716 properly protects the interests of our aged people, as the consumers who would purchase the private health insurance promoted through this option.

Personally, I oppose as unnecessary and potentially wasteful of tax funds any option which would go into private profits, rather than benefits.

Without question, however, the Anderson proposal is an improvement over other proposals for private health insurance options.

It is not a free option allowing beneficiaries a premium which they can apply to any private plan, regardless of the benefits that will be forthcoming. It is, instead, a provision which would reimburse a private plan only for the benefits covered by the Government plan which are actually used.

The formula of reimbursing the carrier, in terms of costs of service, plus reasonable administrative costs, assures the same level of benefits for the recipient. It virtually eliminates the effects of adverse selection found in the other proposals. This reimbursement formula is an assurance that the trust fund dollars will go primarily for benefits, not for excessive profits and costs.

The option provision is, nevertheless, deficient in the following respects:

First. The reimbursement to the carriers relieves them of the cost of the risk, but does not assure that this relief will result in correspondingly lower premium rates for the package the individual is purchasing, or in increased benefits.

A direct reimbursement without some form of review and regulation could result in creating a situation in which the carriers could make high profits for supplementary coverage.

Second. The tie-in of Government-financed benefits with private health insurance supplementary coverage would provide the industry with an opportunity to "milk" the aged consumer.

The consumer, already confused by the various diverse forms of policies, could easily be approached for the sale of overpriced coverage. Not realizing how much of his risk is assumed by the Government plan, rather than by the insurance company, he might pay premiums far beyond the value of his supplementary coverage. The lack of Federal regulation, combined with the diverse laws and regulations of States, would be an almost irresistible temptation to sell tie-in, lost-leader insurance.

Third. The option would result in payment of unnecessary administrative costs to private carriers. Under a straight Government plan, these administrative costs could easily be absorbed by the social security administrative structure already in existence.

Fourth. The original King-Anderson bill would not have prevented carriers from selling supplementary coverage in an open market to the recipient.

Spokesmen for the industry have admitted that under the King-Anderson bill there is room for the expansion of sales of supplementary coverage, and that potentially there is an ever-increasing market among the older citizens for these sales.

The option of the new Anderson amendment, however, would assure the carriers a Government-approved—indeed, a Government-financed—sales pitch.

My objection to the option in the Anderson amendment, then, is primarily because of its failure to protect the aged consumer who might be putting his scarce dollars into supplementary protection that would be overpriced but would appear attractive primarily because of the Government-financed portion of the package.

Let me make clear that the Anderson option is infinitely preferable to other options that have been proposed. It at least protects the health insurance trust fund, and thus the contributor, by assuring that the carrier will not collect from the Government for benefits that are never paid.

I would suggest that the operation of such an option be given continuous scrutiny if it is enacted into law.

In saying that the option included in the Anderson amendment is less objectionable than other options that are under serious consideration, let me explain through specific reference to the Javits amendment.

I am very happy to see that the Senator from New York [Mr. JAVITS] is present on the floor. I know he has given a great deal of attention to this amendment, and I am sure that any Senator

who has had even a passing interest in this subject has had an opportunity to hear from the Senator from New York on it.

Mr. JAVITS. Mr. President, will the Senator yield only on a question of fact?

Mr. McNAMARA. I am happy to yield.

Mr. JAVITS. I think it is fair to say—and the distinguished Senator from New Mexico [Mr. ANDERSON] is present—that what the Senator from Michigan called the Anderson option contained in the Anderson amendment is also the product of our joint work. I wanted to make that point factually clear.

Mr. McNAMARA. I am glad the Senator from New York has joined the Senator from New Mexico in this proposal. It makes it much better, so far as I am concerned.

This amendment proposes the payment of a sum, up to $100, to a private insurance carrier as partial premium on a policy that is "guaranteed renewable," and which provides benefits at least equal to the value of the benefits under the Government plan.

This proposal is inadequate in the following areas:

First. The so-called guaranteed renewable contract is not noncancellable—contrary to the common public impression.

It reserves to the company the right to increase premiums for classes of insured persons, or to terminate the policy for all who are insured.

The beneficiary, therefore, has no guarantee that he will receive benefits at a constant premium.

In fact, because medical costs are rising faster than other services, his benefit dollar will unquestionably provide less as time progresses.

In contrast, the social security approach assures the beneficiary benefits in terms of service for the rest of his life—a guarantee he can rely on without fear in his remaining years.

Second. The failure to prevent indiscriminate switching from the Government plan to private insurance, combined with the underwriting practices of the carriers which restrict enrollments, excludes undesirable risks and reserves to the carrier the right to terminate the policy, would result in an overloading of the Government plan with bad risks.

This lack of safeguards against adverse selection would defeat the economy and low cost of the social security plan which is based on spreading the risk over the greatest number of people—good and bad risks alike—in order to provide benefits at low cost.

Third. The option would result in payment of trust-fund dollars in profits to a loosely regulated industry.

Regulations vary widely in each State, and most State insurance departments are understaffed and underpaid and generally no match for the industry.

Unlike other forms of insurance, there is no specific rate regulation. The Javits amendment provides for no rate control.

The Secretary, charged with responsibility for proper use of social security contributors' dollars, would be forced to pay them out with no control over their disposition. This is an abdication of Federal responsibility not existent to this date.

Fourth. The Secretary, who is powerless to regulate rates or to bargain as do employers—including the Federal Government—for the advantages of group benefits, is compelled to pay dollars contributed by the Nation's workers to carriers who, on an average for individual policies, pay back little more than half of premiums received in benefits.

Almost half of these moneys may go for profits and costs, not benefits.

A situation like this is not tolerated in the administration of private trust plans. Far from fulfilling a commitment to the needs of the aged, this would be a gift of vast sums to insurance carriers.

Fifth. Commercial private individual health insurance policies today provide only limited dollar indemnities.

The beneficiary is not assured that these dollars will buy the same benefits next year or in the years thereafter, nor that they will buy the same benefits from one State to another.

The original King-Anderson bill provides coverage in terms of service, the same for every beneficiary, no matter where he lives.

He will know what he is getting and if he can afford to purchase supplementary coverage.

We can wait no longer to enact the proposed program of hospitalization and related health benefits for the aged through social security.

Each year that we delay means untold hardship for millions of older people.

One in every six people 65 and over go to the hospital each year.

But even more significantly, no one can predict whether he will be that one in six; all must be prepared for the eventuality.

No one is free from the worry that he will have a hospitalized illness, with all the heavy medical costs that go along with such illness.

During the past year, our Special Committee on Aging has held hearings in more than 30 cities throughout the length and breadth of the land, in rural areas as well as in large cities.

No one who had the opportunity to participate in these hearings, or who has read the printed records, can have the slightest doubt that the No. 1 problem facing the older people of this country is the problem of financing health costs during their later years, when incomes are at their lowest.

Our Committee on Aging has been the source of numerous studies and reports on the subject of the health and economic status of the aged.

All of these, including the 7,970 pages of State background studies for the White House Conference on Aging which we reprinted as a public service, make all too clear that the financing of health costs is an extremely serious problem for our older people.

They provide the factual proof of the existence and dimensions of the problem.

The hearings we have held added a new dimension to our knowledge—a perspective in depth. These hearings provided the voices and faces to go with our statistics.

We hear considerable talk nowadays of the importance of translating the problems of aging into the challenges of aging, of emphasizing the positive aspects of aging rather than the problems.

In simple fact, how is this possible, if our older people do not have the money for the basic essentials of everyday living, to say nothing of the heavy costs of medical care? How can they participate actively in community affairs if their lives are dominated by worry about failing health and heavy medical bills?

We must move ahead immediately to strengthen the economic security of our older population by providing basic protection against health costs.

This is the No. 1 step, which holds highest priority and urgency in our efforts to translate the problems of aging into the challenges of aging.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. McNAMARA. I am happy to yield.

Mr. JAVITS. In the first place, let me say I need not protest my respect and my personal affection for the Senator from Michigan, because he is well aware of them. Also, I have been designated by the Republican side to be a member of the Subcommittee on Aging. I am much pleased, knowing the strong feelings the Senator has on medical care, that he has taken a wait-and-see attitude on the option contained in the Anderson bill. It is with that in mind, and not in a contentious spirit, that I would like to call a few matters to the Senator's attention.

I think, as the Senator views the option concept, it is very important to note that it does not apply only to insurance companies. I think it is important to emphasize that fact for the country.

There are many cooperatives, many group practice organizations, and indeed pension and welfare funds—perhaps the most prominent is the Kaiser plan—which could fit into this concept which is called the option in the amendment.

There is another point I should like to suggest for a further study by the Senator. It is true that we wish to provide benefits for the aged. That is the fundamental point. It is also true, however, it is almost impossible for anybody to protect people against themselves. The people of whom we are speaking are fairly intelligent, older people. It has always been contemplated, as I have understood the bill, that there would be some kind of supplementary coverage. Indeed, the supplementary coverage which is called for by the bill itself is evidenced by the fact that the estimates generally proceed on the assumption that about one-third—up to not to exceed 40 percent—of the medical costs would be covered by the King-Anderson package. That is generally assumed to be the case, and I think the Senator himself has been a party to those estimates.

If there are to be supplementary benefits, and if the Secretary of Health, Education, and Welfare is to keep a rather tight rein on this whole situation, as I am confident he will, then under my amendment—even the one of which the Senator was rather critical, to which I will come in a minute—would it not be a fact that if we provided supplemental coverage, to be built efficiently upon the basic governmental coverage as contained in the bill, there would be a good chance to give to the person who seeks supplementary coverage more for his money? That was really the essence of the feeling of the Senator from New Mexico [Mr. ANDERSON], I believe.

I say "a chance." I am not trying to debate the Senator now, in view of the Senator's feeling that he would like to look into it further, with an open mind. Rather, I suggest areas of investigation, because the committee has a splendid staff which I think could be very helpful in looking into the implications of what we seek to do in regard to the totality of the Anderson proposal.

Mr. McNAMARA. I appreciate the remarks of the distinguished Senator from New York very much. I assure the Senator that what he has said concerning other organizations, as well as insurance companies, was included in my definite understanding. I hope there is nothing in what I have said which would indicate otherwise. I am happy to find out that we are as close together as this. I am moving, as the Senator has moved, considerably. Basically we are certainly on the same side, trying to get something done.

Mr. JAVITS. I agree that we are trying to get something done. I expressed the hope before that by the time this question gets to the voting stage there will be a single amendment, and that my amendment with respect to the option will not even be pending. I am hopeful that will occur.

There is one other thing which I would like to bring to the attention of the Senator.

I should like to bring to the attention of my colleague one other fact, because he did make some comment about it. The amendment which I filed—we kind of filed a "bid and asked amendment," to use a stock exchange term—went as far as we could in regard to the problem, since we did not wish to stand in the way of the filing of the amendment which the Senator from New Mexico [Mr. ANDERSON] worked out with us.

I say to my colleague—and I am sure he will agree, because this was in his own bill—to my mind, aside from the trust fund, there were two very important points to consider.

First, there was the generalized coverage for all of those who are over 65 years of age. That was in the McNamara bill, as it was in my bill, from the very start. That will be accomplished, I am sure. I know the Senator takes great satisfaction from that.

Mr. McNAMARA. Certainly.

Mr. JAVITS. Second, there was the question of the option.

Even in the amendment which I filed, in the first place, the standards for insurance or other coverage were to be set by the Secretary.

In the second place, the policy was not to be a cancellable policy. There was to be a guaranteed renewal at the option of the insured.

In the third place, at all times—and I think this is important, as bearing upon our good will in the matter, at least—the value of the benefits to be contained in the coverage must be not less than the value of the benefits to be provided by the King-Anderson proposal.

Finally, at no time would an older person be without coverage. We have provided even in our amendment—and, as I say, I hope that will be washed out—that the minute the policy lapses or is canceled for any reason, even for nonpayment of premiums, the Government coverage will immediately take effect.

I point that out to my colleague, because I think it is fair to those of us who have taken this position.

Finally, I should like to ask my colleague one other question. I assume that his view of the option turns upon the fulcrum of the discussions; that is, is the option to be for a premium payment or is the option to be for a reimbursement of benefits actually conferred? That goes directly to the solution of the so-called selectivity of risks argument, the traditional trade union argument, with which I know the Senator is very familiar.

May I have the Senator's reaction?

Mr. McNAMARA. I think that is true. My basic concern was not that part of the question, but the fact that the proposal involved such a potential drain on the trust fund. The potentiality of the drain on the fund on the first proposal of the Senator from New York was so great that I did not wish to run the risk of that drain. That was my primary objection.

Mr. JAVITS. I am very grateful to my colleague for this exchange of views.

Mr. ANDERSON. Mr. President, I call up my amendments No. "6-29-62—A."

The PRESIDING OFFICER. The amendments will be identified for the information of the Senate.

The LEGISLATIVE CLERK. The Senator from New Mexico [Mr. ANDERSON], for himself and other Senators, proposes amendments to H.R. 10606 identified as "6-29-62—A."

The amendments are as follows:

On page 1, line 4, strike out "Public Welfare Amendments of 1962" and insert in lieu thereof "Public Welfare and Health Insurance Amendments of 1962".

On page 100, line 16, strike out "II" and insert in lieu thereof "III".

On page 100, line 18, strike out "201" and insert in lieu thereof "301".

On page 100, line 23, strike out "202" and insert in lieu thereof "302".

On page 100, between lines 15 and 16, insert the following:

"TITLE II—HEALTH BENEFITS

"Findings and declaration of purpose

"SEC. 200. (a) The Congress hereby finds that (1) the heavy costs of hospital care and related health care are a grave threat to the security of aged individuals, (2) most of them are not able to qualify for and to afford private insurance adequately protecting them against such costs, (3) many of them are accordingly forced to apply for private or public aid, accentuating the financial difficulties of hospitals and private or public welfare agencies and the burdens on the general revenues, and (4) it is in the interest of the general welfare for financial burdens resulting from hospital services and related services required by these individuals to be met primarily through social insurance.

"(b) The purposes of this Act are (1) to provide aged individuals entitled to benefits under the old-age, survivors, and disability insurance system or the railroad retirement system with basic protection against the costs of inpatient hospital services, and to provide, in addition, as an alternative to inpatient hospital care, protection against the costs of certain skilled nursing facility services, home health services, and outpatient hospital diagnostic services; to utilize social insurance for financing the protection so provided; to encourage, and make it possible for, such individuals to purchase protection against other health costs by providing in such basic social insurance protection a set of benefits which can easily be supplemented by a State, private insurance, or other methods; to assure adequate and prompt payment on behalf of these individuals to the providers of these services; and to do these things in a manner consistent with the dignity and self-respect of each individual, without interfering in any way with the free choice of physicians or other health personnel or facilities by the individual, and without the exercise of any Federal supervision or control over the practice of medicine by any doctor or over the manner in which medical services are provided by any hospital; and (2) to provide such basic protection, financed from general revenues, to those persons who are now age 65 or over or who will reach age 65 within the next several years and who are not eligible for benefits under the old-age, survivors, and disability insurance or railroad retirement systems.

"(c) It is hereby declared to be the policy of the Congress that skilled nursing facility services for which payment may be made under this Act shall be utilized in lieu of inpatient hospital services where skilled nursing facility services would suffice in meeting the medical needs of the patient, and that home health services for which payment may be made under this Act shall be utilized in lieu of inpatient hospital or skilled nursing facility services where home health services would suffice.

"Part A.—Health insurance benefits for the aged

"Benefits

"SEC. 201. The Social Security Act is amended by adding after title XVI the following new title:

"'TITLE XVII—HEALTH INSURANCE BENEFITS FOR THE AGED

"'Prohibition against interference

"'SEC. 1701. (a) Nothing in this title shall be construed to authorize any Federal officer or employee to exercise any supervision or control over the practice of medicine or the manner in which medical services are provided, or over the selection, tenure, or compensation of any officer or employee of any hospital, skilled nursing facility, or home health agency; or to exercise any supervision or control over the administration or operation of any such hospital, facility, or agency.

"'(b) Nothing contained in this title shall be construed to preclude any State from providing, or any individual from purchasing or otherwise securing, protection against the cost of health or medical care services in addition to those for which payment may be made under this title.

"'*Free choice by patient*

"'SEC. 1702. Any individual entitled to have payment made under this title for services furnished him may obtain inpatient hospital services, skilled nursing facility services, home health services, or outpatient hospital diagnostic services from any provider of services with which an agreement is in effect under this title and which undertakes to provide him such services.

"'*Description of services*

"'SEC. 1703. For purposes of this title—

"'Inpatient Hospital Services

"'(a) The term "inpatient hospital services" means the following items and services furnished to an inpatient in a hospital and (except as provided in paragraph (3)) by such hospital—

"'(1) bed and board (subject, however, to the limitations in section 1709 (c) and (d) on the amount which is payable with respect to certain accommodations),

"'(2) such nursing services and other related services, such use of hospital facilities, and such medical social services as are customarily furnished by such hospital for the care and treatment of inpatients, and such drugs, biologicals, supplies, appliances, and equipment, for use in such hospital, as are customarily furnished by such hospital for the care and treatment of inpatients, and

"'(3) such other diagnostic or therapeutic items or services, furnished by the hospital or by others under arrangements with them made by the hospital, as are customarily furnished to inpatients either by such hospital or by others under such arrangements;

excluding, however—

"'(4) medical or surgical services provided by a physician, resident, or intern, except services provided in the field of pathology, radiology, physiatry, or anesthesiology, and except services provided in the hospital by an intern or a resident-in-training under a teaching program approved by the Council on Medical Education and Hospitals of the American Medical Association (or, in the case of an osteopathic hospital, approved by a recognized body approved for the purpose by the Secretary), and

"'(5) the services of a private-duty nurse.

"'Skilled Nursing Facility Services

"'(b) The term "skilled nursing facility services" means the following items and services furnished to an inpatient in a skilled nursing facility, after transfer from a hospital in which he was an inpatient, and (except as provided in paragraph (3)) by such skilled nursing facility—

"'(1) nursing care provided by or under the supervision of a registered professional nurse,

"'(2) bed and board in connection with the furnishing of such nursing care (subject, however, to the limitations in section 1709 (c) and (d) on the amount which is payable with respect to certain accommodations),

"'(3) physical, occupational, or speech therapy furnished by the skilled nursing facility or by others under arrangements with them made by the facility,

"'(4) medical social services,

"'(5) drugs, biologicals, supplies, appliances, and equipment which are furnished for use in such skilled nursing facility,

"'(6) medical services provided by an intern or resident-in-training of the hospital, with which the facility is affiliated or under common control, under a teaching program of such hospital approved as provided in subsection (a)(4), and

"'(7) such other services necessary to the health of the patient as are generally provided by skilled nursing facilities;

excluding, however, any item or service if it would not be included under subsection (a) if furnished to an inpatient in a hospital.

"'Home Health Services

"'(c) The term "home health services" means the following items and services, which are furnished to an individual, who is under the care of a physician, by a home health agency or by others under arrangements with them made by such agency, under a plan (for furnishing such items and services to such individual) established and periodically reviewed by a physician, which items and services are provided in a place of residence used as such individual's home—

"'(1) part-time or intermittent nursing care provided by or under the supervision of a registered professional nurse,

"'(2) physical, occupational, or speech therapy,

"'(3) medical social services,

"'(4) to the extent permitted in regulations, part-time or intermittent services of a home health aid,

"'(5) medical supplies (other than drugs and biologicals), and the use of medical appliances, while under such a plan, and

"'(6) in the case of a home health agency which is affiliated or under common control with a hospital, medical services provided by an intern or resident-in-training of such hospital, under a teaching program of such hospital approved as provided in subsection (a)(4);

excluding, however, any item or service if it would not be included under subsection (a) if furnished to an inpatient in a hospital.

"'Outpatient Hospital Diagnostic Services

"'(d) The term "outpatient hospital diagnostic services" means diagnostic services—

"'(1) which are furnished to an individual as an outpatient by a hospital or by others under arrangements with them made by a hospital, and

"'which are customarily furnished by such hospital (or by others under such arrangements) to its outpatients for the purpose of diagnostic study;

excluding, however—

"'(3) any item or service if it would not be included under subsection (a) if furnished to an inpatient in a hospital; and

"'(4) any service furnished under such arrangements unless (A) furnished in the hospital or in other facilities operated by or under the supervision of the hospital, and (B) in the case of professional services, furnished by or under the responsibility of members of the hospital medical staff acting as such members.

"'Drug and Biological

"'(e) The term "drugs" and the term "biologicals", except for purposes of subsection (c)(5) of this section, include only such drugs and biologicals, respectively, as are included in the United States Pharmacopoeia, National Formulary, New and Non-Official Drugs, or Accepted Dental Remedies, or are approved by the pharmacy and drug therapeutics committee (or equivalent committee) of the medical staff of the hospital furnishing such drugs or biologicals (or of the hospital with which the skilled nursing facility furnishing such drugs or biologicals is affiliated or is under common control).

"'Arrangements for Certain Services

"'(f) As used in this section, the term "arrangements" is limited to arrangements under which receipt of payment by the hospital, skilled nursing facility, or home health agency (whether in its own right or as agent), as the case may be, with respect to services for which an individual is entitled to have payment made under this title, discharges the liability of such individual or any other person to pay for the services.

"'*Deductible; duration of services*

"'Deductible

"'SEC. 1704. (a)(1) Payment for inpatient hospital services furnished an individual during any benefit period shall be reduced by a deduction equal to $20, or if greater, $10 multiplied by the number of days, not exceeding nine, for which he received such services in such period.

"'(2) Payment for outpatient hospital diagnostic services furnished an individual during any thirty-day period shall be reduced by a deduction equal to $20. For purposes of the preceding sentence, a thirty-day period for any individual is a period of thirty consecutive days beginning with the first day (not included in a previous such period) on which he is entitled to benefits under this title and on which outpatient hospital diagnostic services are furnished him.

"'Duration of Services

"'(b) Payment under this title for services furnished any individual during a benefit period may not be made for—

"'(1) inpatient hospital services furnished to him during such period after such services have been furnished to him for ninety days during such period; or

"'(2) skilled nursing facility services furnished to him during such period after such services have been furnished to him for one hundred and eighty days during such period.

Payment under this title for inpatient hospital services or skilled nursing facility services furnished an individual during a benefit period may also not be made for any such services after one hundred and fifty units of services have been furnished to him in such period; and, for purposes of this sentence—

"'(3) a "unit of service" shall be equal to one day of inpatient hospital services or two days of skilled nursing facility services, and

"'(4) there shall not be counted any inpatient hospital services furnished in a benefit period for any days in excess of ninety days or any skilled nursing facility services furnished in a benefit period for any days in excess of one hundred and eighty.

For purposes of the preceding provisions of this subsection, inpatient hospital services or skilled nursing facility services shall be counted only if payment is or would, except for this subsection and except for the failure to comply with the procedural and other requirements of or under section 1709(a)(1), be made with respect to such services under this title. Payment under this title for home health services furnished an individual during a calendar year may not be made for any such services after such services have been furnished him during two hundred and forty visits in such year.

"'Benefit Period

"'(c) For the purposes of this section, a "benefit period" with respect to any individual means a period of consecutive days—

"'(1) beginning with the first day (not included in a previous benefit period) (A) on which such individual is furnished inpatient hospital services or skilled nursing facility services and (B) which occurs in a month for which he is entitled to health insurance benefits under this title, and

"'(2) ending with the last day of the first ninety-day period thereafter during each day of which he is neither an inpatient in a hospital nor an inpatient in a skilled nursing facility.

"'Day

"'(d) For the purposes of this section, a "day" on or for which inpatient hospital services or skilled nursing facility services are furnished shall have the meaning customarily assigned to it by the hospital or skilled nursing facility furnishing such services, but in no event shall it be less than twenty-four hours (except the day on which such individual is admitted to, or discharged from, such hospital or such skilled nursing facility).

"'*Entitlement to benefits*

"'SEC. 1705. (a) Every individual who—

"'(1) has attained the age sixty-five, and

"'(2) is entitled to monthly insurance benefits under section 202,

shall be entitled to health insurance benefits for each month for which he is entitled to such benefits under section 202, beginning with the first month with respect to which he meets the conditions specified in paragraphs (1) and (2). Notwithstanding the preceding provisions of this subsection, no payments may be made under this title for inpatient hospital services, outpatient hospital diagnostic services, or home health services furnished an individual prior to January 1, 1964, or for skilled nursing facility services furnished him prior to July 1, 1964.

"'(b) For the purposes of this section—

"'(1) entitlement of an individual to health insurance benefits under this title for a month shall consist of entitlement to have payment made under, and subject to the limitations in, this title on his behalf for inpatient hospital services, skilled nursing facility services, home health services, and outpatient hospital diagnostic services furnished him in the United States (as defined in section 210(i)) during such month; and

"'(2) an individual shall be deemed entitled to monthly insurance benefits under section 202 for the month in which he died if he would have been entitled to such benefits for such month had he died in the next month.

"'*Definitions of providers of services*

"'SEC. 1706. For purposes of this title—

"'Hospital

"'(a) The term "hospital" (except for purposes of section 1704(c)(2), section 1709(f), paragraph (6) of this subsection, and so much of section 1703(b) as precedes paragraph (1) thereof) means an institution which—

"'(1) is primarily engaged in providing, by or under the supervision of physicians or surgeons, to inpatients (A) diagnostic services and therapeutic services for surgical or medical diagnosis, treatment, and care of injured, disabled, or sick persons, or (B) rehabilitation facilities and services for the rehabilitation of injured, disabled, or sick persons,

"'(2) maintains clinical records on all patients,

"'(3) has bylaws in effect with respect to its staff of physicians,

"'(4) continuously provides twenty-four-hour nursing service rendered or supervised by a registered professional nurse,

"'(5) has in effect a hospital utilization review plan which meets the requirements of subsection (e),

"'(6) in the case of an institution in any State in which State or applicable local law provides for the licensing of hospitals, (A) is licensed pursuant to such law or (B) is approved, by the agency of such State responsible for licensing hospitals, as meeting the standards established for such licensing, and

"'(7) meet such other of the requirements prescribed for the accreditation of hospitals by the Joint Commission on the Accreditation of Hospitals, as the Secretary finds necessary in the interest of the health and safety of individuals who are furnished services by or in the institution.

For purposes of section 1704(c)(2), such term includes any institution which meets the requirements of paragraph (1) of this subsection. For purposes of section 1709(f) (including determination of whether an individual received inpatient hospital services for purposes of such section 1709(f)), and so much of section 1703(b) as precedes paragraph (1) thereof, such term includes any institution which meets the requirements of paragraphs (1), (2), (4), and (6) of this subsection. Notwithstanding the preceding provisions of this subsection, such term shall not, except for purposes of section 1704(c)(2), include any institution which is primarily for the care and treatment of tuberculosis or mentally ill patients.

"'Skilled Nursing Facility

"'(b) The term "skilled nursing facility" means (except for purposes of section 1704(c)(2)) an institution (or a distinct part of an institution) which is affiliated or under common control with a hospital having an agreement in effect under section 1710 and which—

"'(1) is primarily engaged in providing to inpatients (A) skilled nursing care and related services for patients who require planned medical or nursing care or (B) rehabilitation services,

"'(2) has policies, which are established by a group of professional personnel (associated with the facility), including one or more physicians and one or more registered fessional nurse, or a medical staff responsible nursing care and related medical or other services it provides and which include a requirement that every patient must be under the care of a physician,

"'(3) has a physician, a registered professional nurse, or a medical staff responsible for the execution of such policies,

"'(4) maintains clinical records of all patients,

"'(5) continuously provides twenty-four-hour nursing service rendered or supervised by a registered professional nurse,

"'(6) operates under a utilization review plan, which has been made applicable to it under subsection (g), of the hospital with which it is affiliated or under common control,

"'(7) in the case of an institution in any State in which State or applicable local law provides for the licensing of institutions of this nature, (A) is licensed pursuant to such law, or (B) is approved, by the agency of such State responsible for licensing institutions of this nature, as meeting standards established for such licensing; and

"'(8) meets such other conditions of participation under this section as the Secretary may find necessary in the interest of the health and safety of individuals who are furnished services by or in such institution;

except that such term shall not (other than for purposes of section 1704(c)(2)) include any institution which is primarily for the care and treatment of tuberculosis or mentally ill patients. For purposes of section 1704(c)(2), such term includes any institution which meets the requirements of paragraph (1) of this subsection.

"'Home Health Agency

"'(c) The term "home health agency" means an agency which—

"'(1) is a public agency, or a private nonprofit organization exempt from Federal income taxation under section 501 of the Internal Revenue Code of 1954,

"'(2) is primarily engaged in providing skilled nursing services or other therapeutic services,

"'(3) has policies, established by a group of professional personnel (associated with the agency), including one or more physicians and one or more registered professional nurses, to govern the service (referred to in paragraph (2)) which it provides,

"'(4) maintains clinical records on all patients,

"'(5) in the case of an agency in any State in which State or local law provides for the licensing of agencies of this nature, (A) is licensed pursuant to such law, or (B) is approved, by the agency of such State responsible for licensing agencies of this nature, as meeting standards established for such licensing, and

"'(6) meets such other conditions of participation as the Secretary may find necessary in the interest of the health and safety of individuals who are furnished services by such agency;

except that such terms shall not include any agency which is primarily for the care and treatment of tuberculosis or mentally ill patients.

"'Physician

"'(d) The term "physician" means an individual (including a physician within the meaning of section 1101(a)(7)) legally authorized to practice surgery or medicine by the State in which he performs the functions referred to in this title.

"'Utilization Review

"'(e) A utilization review plan of a hospital shall be deemed sufficient if it is applicable to services furnished by the institution to individuals entitled to benefits under this title and if it provides—

"'(1) for the review, on a sample or other basis, of admissions to the institution, the duration of stays therein, and the professional services furnished (A) with respect to the medical necessity of the services, and (B) for the purpose of promoting the most efficient use of available health facilities and services;

"'(2) for such review to be made by either (A) a hospital staff committee composed of two or more physicians, with or without participation of other professional personnel, or (B) a group outside the hospital which is similarly composed;

"'(3) for such review, in each case in which inpatient hospital services are furnished to such individuals during a continuous period, as of the twenty-first day, and as of such subsequent days as may be specified in regulations, with such review to be made as promptly after such twenty-first or subsequent specified day as possible, and in no event later than one week following such day;

"'(4) for prompt notification to the institution, the individual, and his attending physician of any decision of the physician members of such committee or group that any further stay therein is not medically necessary.

The provisions of clause (A) of paragraph (2) shall not apply to any hospital where, because of the small size of the institution or for such other reason or reasons as may be included in regulations, it is impracticable for the institution to have a properly functioning staff committee for the purposes of this subsection.

"'Provider of Services

"'(f) The term "provider of services" means a hospital, skilled nursing facility, or home health agency.

"'Skilled Nursing Facilities Affiliated or Under Common Control With Hospitals

"'(g) A hospital and a skilled nursing facility shall be deemed to be affiliated or under common control if, by reason of a written agreement between them or by reason of a written undertaking by a person or body which controls both of them, there is reasonable assurance that—

"'(1) the facility will be operated under standards, with respect to—

"'(A) skilled nursing and related health services (other than physicians' services),

"'(B) a system of clinical records, and

"'(C) appropriate methods and procedures for the dispensing and administering of drugs and biologicals,

which are developed jointly by or are agreed to by the two institutions;

"'(2) timely transfer of patients will be effected between the hospital and the skilled nursing facility whenever such transfer is medically appropriate, and provision is made for the transfer or the joint use (to the ex-

tent practicable) of clinical records of the two institutions; and

"'(3) the utilization review plan of the hospital will be extended to include review of admissions to, duration of stays in, and the professional services furnished in the skilled nursing facility and including review of such individual cases (and at such intervals) as may be specified in this title or in regulations thereunder, and with notice to the facility, the individual, and his attending physician in case of a finding that further skilled nursing facility services are not medically necessary.

"'*Use of State agencies and other organizations to develop conditions of participation for providers of service*

"'SEC. 1707. In carrying out his functions, relating to determination of conditions of participation by providers of services, under section 1706(a)(7), section 1706(b)(8), or section 1706(c)(6), the Secretary shall consult with the Health Insurance Benefits Advisory Council established by section 1712, appropriate State agencies, and recognized national listing or accrediting bodies. Such conditions prescribed under any of such sections may be varied for different areas or different classes of institutions or agencies and may, at the request of a State, provide (subject to the limitation provided in section 1706(a)(7)) higher requirements for such State than for other States.

"'*Use of State agencies and other organizations to determine compliance by providers of services with conditions of participation*

"'SEC. 1708. (a) The Secretary may, pursuant to agreement, utilize the services of State health agencies or other appropriate State agencies for the purposes of (1) determining whether an institution is a hospital or skilled nursing facility, or whether an agency is a home health agency, or (2) providing consultative services to institutions or agencies to assist them (A) to qualify as hospitals, skilled nursing facilities, or home health agencies, (B) to establish and maintain fiscal records necessary for purposes of this title, and (C) to provide information which may be necessary to permit determination under this title as to whether payments are due and the amounts thereof. To the extent that the Secretary finds it appropriate, an institution or agency which such a State agency certifies is a hospital, skilled nursing facility, or home health agency may be treated as such by the Secretary. The Secretary shall pay any such State agency, in advance or by way of reimbursement, as may be provided in the agreement with it (and may make adjustments in such payments on account of overpayments or underpayments previously made), for the reasonable cost of performing the functions specified in the first sentence of this subsection, and for the fair share of the costs attributable to the planning and other efforts directed toward coordination of activities in carrying out its agreement and other activities related to the provision of services similar to those for which payment may be made under this title, or related to the facilities and personnel required for the provision of such services, or related to improving the quality of such services.

"'(b)(1) An institution shall be deemed to meet the conditions of participation under section 1706(a) (except paragraph (5) thereof) if such institution is accredited as a hospital by the Joint Commission on the Accreditation of Hospitals. If such Commission hereafter required a utilization review plan, or imposes another requirement which serves substantially the same purpose, as a condition for accreditation of a hospital, the Secretary is authorized to find that all institutions so accredited by the Commission comply also with section 1706(a)(5).

"'(2) If the Secretary finds that accreditation of an institution by a national accreditation body, other than the Joint Commission on the Accreditation of Hospitals, provides reasonable assurance that any or all of the conditions of section 1706(a), (b), or (c), as the case may be, are met, he may, to the extent he deems it appropriate, treat such institution as meeting the condition or conditions with respect to which he made such finding.

"'*Conditions of and limitations on payment for services*

"'Requirement of Requests and Certifications

"'SEC. 1709. (a) Except as provided in subsection (f), payment for services furnished an individual may be made only to eligible providers of services and only if—

"'(1) written request, signed by such individual except in cases in which the Secretary finds it impractical for the individual to do so, is filed for such payment in such form, in such manner, within such time, and by such person or persons as the Secretary may by regulation prescribe;

"'(2) a physician certifies (and recertifies, where such services are furnished over a period of time, in such cases and with such frequency, appropriate to the case involved, as may be provided in regulations) that—

"'(A) in the case of inpatient hospital services, such services are or were required for such individual's medical treatment, or such services are or were required for inpatient diagnostic study;

"'(B) in the case of outpatient hospital diagnostic services, such services are or were required for diagnostic study;

"'(C) in the case of skilled nursing facility services, such services are or were required because the individual needed skilled nursing care on a continuing basis for any of the conditions with respect to which he was receiving inpatient hospital services prior to transfer to the skilled nursing facility or for a condition requiring such care which arose after such transfer and while he was still in the facility for treatment of the condition or conditions for which he was receiving such inpatient hospital services;

"'(D) in the case of home health services, such services are or were required because the individual needed skilled nursing care on an intermittent basis or because he needed physical or speech therapy; a plan for furnishing such services to such individual has been established and is periodically reviewed by a physician; and such services are or were furnished while the individual was under the care of a physician;

"'(3) with respect to inpatient hospital services or skilled nursing facility services furnished such individual after the twenty-first day of a continuous period of such services, there was not in effect, at the time of admission of such individual to the hopsital, a decision under section 1710(e) (based on a finding that timely utilization review of long-stay cases is not being made in such hospital or facility);

"'(4) with respect to inpatient hospital services or skilled nursing facility services furnished such individual during a continuous period, a finding has not been made pursuant to the system of utilization review that further inpatient hospital services or further skilled nursing facility services, as the case may be, are not medically necessary; except that, if such a finding has been made, payment may be made for such services furnished in such period before the fourth day after the day on which the hospital or skilled nursing facility, as the case may be, received notice of such finding.

"'Determination of Costs of Services

"'(b) The amount paid to any provider of services with respect to services for which payment may be made under this title shall be the reasonable cost of such services, as determined in accordance with regulations establishing the method or methods to be used in determining such costs for various types or classes of institutions, services, and agencies. In prescribing such regulations, the Secretary shall consider, among other things, the principles generally applied by national organizations (which have developed such principles) in computing the amount of payment, to be made by persons other than the recipients of services, to providers of services on account of services furnished to such recipients by such providers. Such regulations may provide for payment on a per diem, per unit, per capita, or other basis, may provide for using different methods in different circumstances, and may provide for the use of estimates of costs of particular items or services.

"'Amount of Payment for More Expensive Services

"'(c)(1) In case the bed and board furnished as part of inpatient hospital services or skilled nursing facility services is in accommodations more expensive than two-, three-, or four-bed accommodations and the use of such more expensive accommodations rather than such two-, three-, or four-bed accommodations was not at the request of the patient, payment with respect to such services may not exceed an amount equal to the reasonable cost of such services if furnished in such two-, three-, or four-bed accommodations unless the more expensive accommodations were required for medical reasons.

"'(2) Where a provider of services with which an agreement under this title is in effect furnishes to an individual, at his request, items or services which are in excess of or more expensive than the items or services with respect to which payment may be made under this title, the Secretary shall pay to such provider of services only the equivalent of the reasonable cost of the items or services with respect to which payment under this title may be made.

"'Amount of Payment Where Less Expensive Services Furnished

"'(d) In case the bed and board furnished as part of inpatient hospital services or skilled nursing facility services in accommodations other than, but not more expensive than, two-, three-, or four-bed accommodations and the use of such other accommodations rather than two-, three-, or four-bed accommodations was neither at the request of the patient nor for a reason which the Secretary determines is consistent with the purposes of this title, the amount of the payment with respect to such services under this title shall be the reasonable cost of such services minus the difference between the charge customarily made by the hospital or skilled nursing facility for such services in two-, three-, or four-bed accommodations and the charge customarily made by it for such services in the accommodations furnished.

"'No Payments to Federal Providers of Services

"'(e) No payment may be made under this title (except under subsection (f) of this section) to any Federal provider of services, except a provider of services which the Secretary determines, in accordance with regulations, is providing services to the public generally as a community institution or egency; and no such payment may be made to any provider of services for any item or service which such provider is obligated by a law of, or a contract with, the United States to render at public expense.

"'Payment for Emergency Inpatient Hospital Services

"'(f) Payments shall also be made to any hospital for inpatient hospital services or outpatient hospital diagnostic services furnished, by the hospital or under arrangements (as defined in section 1703(e)) with it, to an individual entitled to health insur-

ance benefits under this title even though such hospital does not have an agreement in effect under this title if (A) such services were emergency services and (B) the Secretary would be required to make such payment if the hospital had such an agreement in effect and otherwise met the conditions of payment hereunder. Such payment shall be made only in amounts determined as provided in subsection (b) and then only if such hospital agrees to comply, with respect to the emergency services provided, with the provisions of section 1710(a).

"'Payment for Services Prior to Notification of Noneligibility

"'(g) Notwithstanding that an individual is not entitled to have payment made under this title for inpatient hospital services, skilled nursing facility services, home health services, or outpatient hospital diagnostic services furnished by any provided of services, payment shall be made to such provider of services (unless such provider elects not to receive such payment or, if payment has already been made, refunds such payment within the time specified by the Secretary) for such services which are furnished to the individual prior to notification from the Secretary of his lack of entitlement if such payments are not otherwise precluded under this title and if such provider complies with the rules established hereunder with respect to such payments, has acted in good faith and without knowledge of such lack of entitlement, and has acted reasonably in assuming entitlement existed.

"'Agreements with providers of services

"'SEC. 1710. (a) Any provider of services shall be eligible for payments under this title if it files with the Secretary an agreement not to charge any individual or any other person for items or services for which such individual is entitled to have payment made under this title (or for which he would be so entitled if such provider had complied with the procedural and other requirements under or pursuant to this title or for which such provider is paid pursuant to the provisions of section 1709(g)), and to make adequate provision for return (or other disposition, in accordance with regulations) of any moneys incorrectly collected from such individual or other person, except that such provider of services may charge such individual or other person the amount of any deduction imposed pursuant to section 1704(a) with respect to such services (not in excess of the amount customarily charged for such services by such provider) and, where the provider of services has furnished, at the request of such individual, items or services which are in excess of or more expensive than the items or services with respect to which payment may be made under this title, such provider may also charge such individual or other person for such more expensive items or services but not more than the difference between the amount customarily charged by it for the items or services furnished at such request and the amount customarily charged by it for the items or services with respect to which payment may be made under this title.

"'(b) An agreement with the Secretary under this section may be terminated—

"'(1) by the provider of services at such time and upon such notice to the Secretary and the public as may be provided in regulations, except that the time such agreement is thereby required by the Secretary to continue in effect after such notice may not exceed six months after such notice, or

"'(2) by the Secretary at such time and upon such notice to the provider of services and the public as may be specified in regulations, but only after the Secretary has determined, and has given such provider notification thereof, (A) that such provider of services is not complying substantially with the provisions of such agreement, or with the provisions of this title and regulations thereunder, or (B) that such provider no longer substantially meets the applicable provisions of section 1706, or (C) that such provider of services has failed to provide such information as the Secretary finds necessary to determine whether payments are or were due under this title and the amounts thereof, or has refused to permit such examination of its fiscal and other records by or on behalf of the Secretary as may be necessary to verify such information.

Any termination shall be applicable—

"'(3) in the case of inpatient hospital services or skilled nursing facility services, with respect to such services furnished to any individual who is admitted to the hospital or skilled nursing facility furnishing such services on or after the effective date of such termination,

"'(4) (A) with respect to home health services furnished to an individual under a plan therefor established on or after the effective date of such termination, or (B) if such plan is established before such effective date, with respect to such services furnished to such individual after the calendar year in which such termination is effective, and

"'(5) with respect to outpatient hospital diagnostic services furnished on or after the effective date of such termination.

"'(c) Nothing in this title shall preclude any provider of services or any group or groups of such providers from being represented by an individual, association, or organization authorized by such provider or providers of services to act on their behalf in negotiating with respect to their participation under this title and the terms, methods, and amounts of payments for services to be provided thereunder.

"'(d) Where an agreement filed under this title by a provider of services has been terminated by the Secretary, such provider may not file another agreement under this title unless the Secretary finds that the reason for the termination has been removed and there is reasonable assurance that it will not recur.

"'(e) If the Secretary finds that timely review in accordance with section 1706(e) of long-stay cases in a hospital or skilled nursing facility is not being made with reasonable regularity, he may, in lieu of terminating his agreement with such hospital or facility, decide that, with respect to any individual admitted to such hospital or skilled nursing facility after a date specified by him, no payment shall be made for inpatient hospital services or skilled nursing facility services after the twenty-first day of a continuous period of such services. Such decision may be made only after such notice to the hospital, or (in the case of a skilled nursing facility) to the hospital and the facility, and to the public as may be prescribed by regulations, and its effectiveness shall be rescinded when the Secretary finds that the reason therefor has been removed and there is reasonable assurance that it will not recur.

"'Payment to providers of services

"'SEC. 1711. The Secretary shall periodically determine the amount which should be paid to each provider of services under this title with respect to the services furnished by it, and the provider shall be paid, at such time or times as the Secretary believes appropriate and prior to audit or settlement by the General Accounting Office, from the Federal Health Insurance Trust Fund the amounts so determined; except that such amounts may be reduced or increased, as the case may be, by any sum by which the Secretary finds that the amount paid to such provider of services for any prior period was greater or less than the amount which should have been paid to it for such period.

"'Health Insurance Benefits Advisory Council

"'SEC. 1712. For the purpose of advising the Secretary on matters of general policy in the administration of this title and in the formulation of regulations under this title, there is hereby created a Health Insurance Benefits Advisory Council which shall consist of fourteen persons, not otherwise in the employ of the United States, appointed by the Secretary without regard to the civil service laws. The Secretary shall from time to time appoint one of the members to serve as Chairman. Not less than four of the appointed members shall be persons who are outstanding in the fields pertaining to hospitals and health activities. Each appointed member shall hold office for a term of four years, except that any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term, and except that the terms of office of the members first taking office shall expire, as designated by the Secretary at the time of appointment, three at the end of the first year, four at the end of the second year, three at the end of the third year, and four at the end of the fourth year after the date of appointment. An appointed member shall not be eligible to serve continuously for more than two terms. The Secretary may, at the request of the Council, appoint such special advisory or technical committees as may be useful in carrying out its functions. Appointed members of the Advisory Council and members of its advisory or technical committees, while attending meetings or conferences thereof or otherwise serving on business of the Advisory Council or of such a committee, or committees, shall receive compensation at rates fixed by the Secretary, but not exceeding $100 per day, and while so serving away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5 of the Administrative Expenses Act of 1946 (5 U.S.C. 73b–2) for persons in the Government service employed intermittently. The Advisory Council shall meet as frequently as the Secretary deems necessary. Upon request of four or more members, it shall be the duty of the Secretary to call a meeting of the Advisory Council.

"'Review of determinations

"'SEC. 1713. Any individual dissatisfied with any determination made by the Secretary that he is not entitled to health insurance benefits under this title or that he is not entitled to have payment made under this title with respect to any class of services furnished him, shall be entitled to a hearing thereon by the Secretary to the same extent as is provided in section 205(b) with respect to decisions of the Secretary, and to judicial review of the Secretary's final decision after such hearing as is provided in section 205(g).

"'Overpayments to individuals

"'SEC. 1714. (a) Any payment under this title to any provider of services with respect to inpatient hospital services, skilled nursing facility services, home health services, or outpatient hospital diagnostic services, furnished any individual shall be regarded as a payment to such individual.

"'(b) Where—

"'(1) more than the correct amount is paid under this title to a provider of services for services furnished an individual and the Secretary determines that, within such period as he may specify, the excess over the correct amount cannot be recouped from such provider of services, or

"'(2) any payment has been made under section 1709(g) to a provider of services for services furnished an individual,

proper adjustments shall be made, under regulations prescribed by the Secretary, by decreasing subsequent payments—

"'(3) to which such individual is entitled under title II, or

"'(4) if such individual dies before such adjustment has been completed, to which any other individual is entitled under title II with respect to the wages and self-employment income which were the basis of benefits of such deceased individual under such title.

"'(c) There shall be no adjustment as provided in subsection (b) (nor shall there be recovery) in any case where the incorrect payment has been made (including payments under section 1709(g)) for services furnished to an individual who is without fault and where such adjustment (or recovery) would defeat the purposes of title II or would be against equity and good conscience.

"'(d) No certifying or disbursing officer shall be held liable for any amount certified or paid by him to any provider of services where the adjustment or recovery of such amount is waived under subsection (c) or where adjustment under subsection (b) is not completed prior to the death of all persons against whose benefits such adjustment is authorized.

"'Use of private organizations to facilitate payment to providers of service

"'SEC. 1715. (a) The Secretary is authorized to enter into an agreement with any organization, which has been designated by any group of providers of services, or by an association of such providers on behalf of its members, to receive payments under section 1711 on behalf of such providers, providing for the determination by such organization (subject to such review by the Secretary as may be provided for in the agreement) of the amount of payments required pursuant to this title to be made to such providers, and for making such payments. The Secretary shall not enter into an agreement with any organization under this section unless he finds it consistent with effective and efficient administration of this title.

"'(b) To the extent that the Secretary finds that performance of any of the following functions by an organization with which he has entered into an agreement under subsection (a) will be advantageous and will promote the efficient administration of this title, he may also include in the agreement provision that the organization shall (with respect to providers of services which are to receive payments through the organizations)—

"'(1) serve as a center for, and communicate to providers, any information or instructions furnished to it by the Secretary, and serve as a channel of communication from providers to the Secretary;

"'(2) make such audits of the records of provider as may be necessary to insure that proper payments are made under this title;

"'(3) assist in the application of safeguards against unnecessary utilization of services furnished by providers to individuals entitled to have payment made under section 1711;

"'(4) perform such other duties as are necessary to carry out the functions specified in subsection (a) and this subsection.

"'(c) An agreement with any organization under this section may contain such terms and conditions as the Secretary finds necessary or appropriate, and may provide for advances of funds to the organization for the making of payments by it under subsection (a) and shall provide for payment of the reasonable cost of administration of the organization as determined by the Secretary to be necessary and proper for carrying out the functions covered by the agreement.

"'(d) If the designation of an organization as provided in this section is made by an association of providers of services, it shall not be binding on members of the association which notify the Secretary of their election to that effect. Any provider may, upon such notice as may be specified in the agreement with an organization, withdraw his designation to receive payments through such organization and any provider who has not designated an organization may elect to receive payments from an organization which has entered into agreement with the Secretary under this section, if the Secretary and the organization agree to it.

"'(e) An agreement with the Secretary under this section may be terminated—

"'(1) by the organization entering into such agreement at such time and upon such notice to the Secretary, to the public, and to the providers as may be provided in regulations, or

"'(2) by the Secretary at such time and upon such notice to the organization, and to the providers which have designated it for purposes of this section, as may be provided in regulations, but only if he finds, after reasonable notice and opportunity for hearing to the organization, that (A) the organization has failed substantially to carry out the agreement, or (B) the continuation of some or all of the functions provided for in the agreement with the organization is disadvantageous or is inconsistent with efficient administration of this title.

"'(f) An agreement with an organization under this subsection may require any of its officers or employees certifying payments or disbursing funds pursuant to the agreement, or otherwise participating in carrying out the agreement, to give surety bond to the United States in such amount as the Secretary may deem appropriate, and may provide for the payment of the charges for such bond from the Federal Health Insurance Trust Fund.

"'(g) (1) No individual designated pursuant to an agreement under this section as a certifying officer shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to any payments certified by him under this section.

"'(2) No disbursing officer shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to any payment by him under this section if it was based upon a voucher signed by a certifying officer designated as provided in paragraph (1) of this subsection.

"'Option to beneficiaries to continue private health insurance protection

"'SEC. 1716. (a) In lieu of paying a provider of services under an agreement under this title, payments may be made to an eligible carrier under an approved plan with respect to services which are furnished by such provider of services to any individual entitled to health insurance benefits (hereinafter in this section referred to as an "eligible individual") and for which payment would otherwise be made under the preceding provisions of this title (hereinafter in this section referred to as "reimbursable health services"), if such individual elects to have payment for such services made to such carrier.

"'(b) (1) An individual may make an election under subsection (a) with respect to the plan of an eligible carrier only if he was covered by a plan of such carrier (or an affiliate thereof), providing or paying for the costs of inpatient hospital services, skilled nursing facility services, home health services, and outpatient hospital diagnostic services which are subject to no greater limitations and deductibles than are provided in section 1704, and providing or paying for the costs of some additional health services, continuously during whichever of the following periods is the shorter—

"'(A) a period of not less than five years ending with the close of the month in which such individual becomes entitled, to health insurance benefits, or

"'(B) (i) if the month in which such individual becomes entitled to health insurance benefits is January, February, or March of 1964, a period of not less than ninety days ending with the close of the month before such month, or (ii) if the month in which he becomes so entitled is April 1964 or a subsequent month, the period beginning January 1, 1964, and ending with the close of the month before such month in which he becomes so entitled.

"'(2) An election may be made under subsection (a) in such manner and within such period after an individual becomes entitled to health insurance benefits, but in no event more than three months after the month in which he becomes so entitled, as the Secretary may prescribe; and an individual shall be permitted only one such election. An election so made may be revoked at such time or times and in such manner as may be so prescribed.

"'(c) To be approved with respect to any eligible individual, a plan must—

"'(1) include (A) provision of all reimbursable health services or payment to providers of services for the cost of all reimbursable health services furnished by them (as provided in subsection (d)(3)), and (B) provision of or payment for the cost of some additional health services; and

"'(2) provide for adequate notice to the Secretary and to such individual of termination of such individual's coverage under such plan.

"'(d) A carrier shall be eligible for purposes of this section if it—

"'(1) (A) is exempt from income tax under section 501(c) of the Internal Revenue Code of 1954, and is licensed in the State with respect to which it requests approval hereunder to provide or pay for the costs of reimbursable health services, or

"'(B) (i) is licensed in the fifty States and the District of Columbia to issue health insurance and, in the most recent year for which data are available, has made health insurance benefit payments aggregating at least 1 percent of all such payments in the fifty States and the District of Columbia, or (ii) is determined by the Secretary to be national in scope, or

"'(C) is licensed to issue health insurance in the State with respect to which it requests approval hereunder and, in the most recent year for which data are available, has made health insurance benefit payments aggregating at least 10 percent of such payments in such State, or

"'(D) in the case of a carrier which is not included in subparagraph (A), (B), or (C), is licensed to issue group health insurance in the State with respect to which it requests approval hereunder (but in such case it shall be eligible only with respect to such group health insurance);

"'(2) agrees to provide the Secretary, on request, such reports as may reasonably be necessary to enable him to determine the amounts due, under any plan with respect to which an election has been made under this section, on account of reimbursable health services and the administrative expenses of the carrier in connection therewith, and to permit such access by the Secretary to the records on which such reports are based as may be necessary to enable him to determine the accuracy of such reports; and

"'(3) agrees to make payments for reimbursable health services to providers of services in the same amounts, under the same conditions, and subject to the same limitations as are applicable in the case of such services for which payments are made under the preceding sections of this title.

"'(e) An eligible carrier shall be paid from time to time amounts equal to the payments made or the costs of services provided by it under approved plans for reimbursable health services and, in addition, such amounts as the Secretary finds to be the administrative costs of such carrier reasonably necessary to the provision of or payment for the cost of reimbursable health services under an approved plan for eligible individuals.

"'*Regulations*

"'SEC. 1717. When used in this title, the term "regulations" means, unless the context otherwise requires, regulations prescribed by the Secretary.

"'*Application of certain provisions of title II*

"'SEC. 1718. The provisions of sections 206, 208, and 216(j), and of subsections (a), (d), (e), (f), and (h) of section 205 shall also apply with respect to this title to the same extent as they are applicable with respect to title II.

"'*Designation of organization or publication by name*

"'SEC. 1719. Designation in this title, by name, of any nongovernmental organization or publication shall not be affected by change of name of such organization or publication, and shall apply to any successor organization or publication which the Secretary finds serves the purpose for which such designation is made.'

"Federal Health Insurance Trust Fund

"SEC. 202. (a) Section 201 of the Social Security Act is amended by redesignating subsections (c), (d), (e), (f), (g), and (h) as subsections (d), (e), (f), (g), (h), and (i), respectively, and by adding after subsection (b) the following new subsection:

"'(c) There is hereby created on the books of the Treasury of the United States a trust fund to be known as the "Federal Health Insurance Trust Fund". The Federal Health Insurance Trust Fund shall consist of such amounts as may be appropriated to, or deposited in, such fund as provided in this section. There is hereby appropriated to the Federal Health Insurance Trust Fund for the fiscal year ending June 30, 1963, and for each fiscal year thereafter, out of any moneys in the Treasury not otherwise appropriated, amounts equivalent to 100 per centum of—

"'(1)(A) 0.18 of 1 per centum of the wages (as defined in section 3121 of the Internal Revenue Code of 1954) paid after December 31, 1962, and before January 1, 1964, and reported to the Secretary of the Treasury or his delegate pursuant to subtitle F of the Internal Revenue Code of 1954, which wages shall be certified by the Secretary of Health, Education, and Welfare on the basis of the records of wages established and maintained by such Secretary in accordance with such reports; and

"'(B) 0.68 of 1 per centum of the wages (as defined in section 3121 of the Internal Revenue Code of 1954) paid after December 31, 1963, and reported to the Secretary of the Treasury or his delegate pursuant to subtitle F of the Internal Revenue Code of 1954, which wages shall be certified by the Secretary of Health, Education, and Welfare on the basis of the records of wages established and maintained by such Secretary in accordance with such reports; and

"'(2)(A) 0.135 of 1 per centum of the amount of self-employment income (as defined in section 1402 of the Internal Revenue Code of 1954) reported to the Secretary of the Treasury or his delegate on tax returns under subtitle F of the Internal Revenue Code of 1954 for any taxable year beginning after December 31, 1962, and before January 1, 1964, which self-employment income shall be certified by the Secretary of Health, Education, and Welfare on the basis of the records of self-employment income established and maintained by the Secretary of Health, Education, and Welfare in accordance with such returns; and

"'(B) 0.51 of 1 per centum of the amount of self-employment income (as defined in section 1402 of the Internal Revenue Code of 1954) reported to the Secretary of the Treasury or his delegate on tax returns under subtitle F of the Internal Revenue Code of 1954 for any taxable year beginning after December 31, 1963, which self-employment income shall be certified by the Secretary of Health, Education, and Welfare on the basis of the records of self-employment income established and maintained by the Secretary of Health, Education, and Welfare in accordance with such returns.'

"(b) The first sentence of the subsection of such section 201 herein redesignated as subsection (d) is amended by striking out 'and the Federal Disability Insurance Trust Fund' and inserting in lieu thereof ', the Federal Disability Insurance Trust Fund, and the Federal Health Insurance Trust Fund'.

"(c) Paragraph (1) of the subsection of such section 201 herein redesignated as subsection (h) is amended by striking out 'titles II and VIII' and 'this title' wherever they appear and inserting in lieu thereof 'this title and title XVII'.

"(d) The last sentence of paragraph (2) of such subsection is amended by striking out 'and clause (1) of subsection (b)' and inserting in lieu thereof ', clause (1) of subsection (b), and clause (1) of subsection (c)'.

"(e) The subsection of such section herein redesignated as subsection (i) is amended by adding at the end thereof the following new sentence: 'Payments required to be made until title XVII shall be made only from the Federal Health Insurance Trust Fund.'

"(f) Section 218(h)(1) of such Act is amended by striking out 'and (b)(1)' and inserting in lieu thereof ', (b)(1), and (c)(1)'.

"(g) Section 221(e) of such Act is amended—

"(A) by striking out 'Trust Funds' wherever that appears and inserting in lieu thereof 'Trust Funds (except the Federal Health Insurance Trust Fund)';

"(B) by striking out 'subsection (g) of section 201' and inserting in lieu thereof 'subsection (h) of section 201'; and

"(C) by inserting 'under this title' before the period at the end thereof.

"(h) Section 1106(b) of such Act is amended by striking out 'and the Federal Disability Insurance Trust Fund' and inserting in lieu thereof ', the Federal Disability Insurance Trust Fund, and the Federal Health Insurance Trust Fund'.

"Increase in Earnings Base

"Definition of wages

"SEC. 203. (a)(1) Paragraph (3) of section 209(a) of the Social Security Act is amended by inserting 'and prior to 1963' after '1958'.

"(2) Such section 209(a) is further amended by adding at the end thereof the following new paragraph:

"'(4) That part of remuneration which, after remuneration (other than remuneration referred to in the succeeding subsections of this section) equal to $5,200 with respect to employment has been paid to an individual during any calendar year after 1962, is paid to such individual during such calendar year;'.

"Definition of self-employment income

"(b)(1) Subparagraph (C) of section 211(b)(1) of such Act is amended by inserting 'and prior to 1963' after '1958'; and by striking out '; or' and inserting in lieu thereof '; and'.

"(2) Such section 211(b)(1) is further amended by adding at the end thereof the following new subparagraph:

"'(D) For any taxable year ending after 1962, (i) $5,200, minus (ii) the amount of wages paid to such individual during the taxable year; or'.

"Definitions of quarter and quarter of coverage

"(c)(1) Clause (ii) of section 213(a)(2) of such Act is amended by striking out '1958' and inserting in lieu thereof '1958 and before 1963, or $5,200 in the case of a calendar year after 1962'.

"(2) Clause (iii) of section 213(a)(2) of such Act is amended by striking out '1958' and inserting in lieu thereof '1958 and before 1963, or $5,200 in the case of a taxable year ending after 1962'.

"Table for determining primary insurance amount

"(d)(1) The table in section 215(a) of such Act is amended by striking out all the figures in columns II, III, IV, and V beginning with the line which reads

"'105.50 102.30 315 319 109 254.00'

and down through the line which reads

"'399 400 127 254.00'

and inserting in lieu thereof the following:

"'101.50	102.30	315	319	109	255.20
102.40	103.20	320	323	110	258.40
103.30	104.20	324	328	111	262.40
104.30	105.10	329	333	112	266.40
105.20	106.00	334	337	113	268.00
106.10	107.00	338	342	114	268.00
107.10	107.90	343	347	115	268.00
108.00	108.50	348	351	116	268.00
		352	356	117	268.00
		357	361	118	268.00
		362	365	119	268.00
		366	370	120	268.00
		371	375	121	268.00
		376	379	122	268.00
		380	384	123	268.00
		385	389	124	268.00
		390	393	125	268.00
		394	398	126	268.00
		399	403	127	268.00
		404	407	128	268.00
		408	412	129	268.00
		413	417	130	268.00
		418	421	131	268.00
		422	426	132	268.00
		427	431	133	268.00
		432	433	134	268.00'.

"(2) The amendment made by paragraph (1) shall be applicable with respect to monthly insurance benefits under title II of such Act for months after December 1962 and with respect to lump-sum death payments in the case of deaths after December 1962.

"Average monthly wage

"(e) Paragraph (1) of section 215(e) of such Act is amended by striking out 'and the excess over $4,800 in the case of any calendar year after 1958' and inserting in lieu thereof 'the excess over $4,800 in the case of any calendar year after 1958 and before 1963, and the excess over $5,200 in the case of a calendar year after 1962'.

"Technical Amendments

"Suspension in case of aliens

"SEC. 204. (a) Subsection (t) of section 202 of such Act is amended by adding at the end thereof the following new paragraph:

"'(9) No payments shall be made under title XVI with respect to services furnished to an individual in any month for which the prohibition in paragraph (1) against payment of benefits to him is applicable (or would be if he were entitled to any such benefits).'

"Persons convicted of subversive activities

"(b) Subsection (u) of such section is amended by striking out 'and' before the phrase 'in determining the amount of any such benefit payable to such individual for any such month,' and inserting after such phrase 'and in determining whether such

individual is entitled to health insurance benefits under title XVII for any such month,'.

"Advisory Council on Social Security Financing

"(c)(1) Subsection (a) of section 116 of the Social Security Amendments of 1956 is amended by striking out 'and of the Federal Disability Insurance Trust Fund' and inserting in lieu thereof ', of the Federal Disability Insurance Trust Fund, and of the Federal Health Insurance Trust Fund'. Such subsection is further amended by inserting before the period at the end thereof 'and the health insurance benefits program'.

"(2) Subsection (d) of such section is amended by striking out 'and the Federal Disability Insurance Trust Fund' and inserting in lieu thereof ', the Federal Disability Insurance Trust Fund, and the Federal Health Insurance Trust Fund'.

"(3) Subsection (f) of such section is amended by striking out ', the adequacy of benefits under the program, and all other aspects of the program' and inserting in lieu thereof 'and the health insurance benefits program, the adequacy of benefits under the program, and all other aspects of the program'.

"Part B—Amendments to the Internal Revenue Code of 1954

"Changes in Tax Schedules

"Self-employment income tax

"SEC. 211. (a) Section 1401 of the Internal Revenue Code of 1954 (relating to the rate of tax on self-employment income) is amended to read as follows:

" 'SEC. 1401. RATE OF TAX.

" 'In addition to other taxes, there shall be imposed for each taxable year, on the self-employment income of every individual, a tax as follows—

" '(1) in the case of any taxable year beginning after December 31, 1962, and before January 1, 1964, the tax shall be equal to 5.4 percent of the amount of the self-employment income for such taxable year;

" '(2) in the case of any taxable year beginning after December 31, 1963, and before January 1, 1966, the tax shall be equal to 5.8 percent of the amount of the self-employment income for such taxable year;

" '(3) in the case of any taxable year beginning after December 31, 1965, and before January 1, 1968, the tax shall be equal to 6.6 percent of the amount of the self-employment income for such taxable year; and

" '(4) in the case of any taxable year beginning after December 31, 1967, the tax shall be equal to 7.3 percent of the amount of the self-employment income for such taxable year.'

"Tax on employees

"(b) Section 3101 of such Code (relating to rate of tax on employees under the Federal Insurance Contributions Act) is amended to read as follows:

" 'SEC. 3101. RATE OF TAX.

" 'In addition to other taxes, there is hereby imposed on the income of every individual a tax equal to the following percentages of the wages (as defined in section 3121(a)) received by him with respect to employment (as defined in section 3121(b))—

" '(1) with respect to wages received during the calendar year 1963, the rate shall be 3⅝ percent;

" '(2) with respect to wages received during the calendar years 1964 and 1965, the rate shall be 3⅞ percent;

" '(3) with respect to wages reecived during the calendar years 1966 and 1967, the rate shall be 4⅜ percent; and

" '(4) with respect to wages received after December 31, 1967, the rate shall be 4⅞ percent.'

"Tax on employers

"(c) Section 3111 of such Code (relating to rate of tax on employers under the Federal Insurance Contributions Act) is amended to read as follows:

" 'SEC. 3111. RATE OF TAX.

" 'In addition to other taxes, there is hereby imposed on every employer an excise tax, with respect to having individuals in his employ, equal to the following percentages of the wages (as defined in section 3121(a)) paid by him with respect to employment (as defined in section 3121(b))—

" '(1) with respect to wages paid during the calendar year 1963, the rate shall be 3⅝ percent;

" '(2) with respect to wages paid during the calendar years 1964 and 1965, the rate shall be 3⅞ percent;

" '(3) with respect to wages paid during the calendar years 1966 and 1967, the rate shall be 4⅜ percent; and

" '(4) with respect to wages paid after December 31, 1967, the rate shall be 4⅞ percent.'

"Effective dates

"(d) The amendment made by subsection (a) shall apply with respect to taxable years beginning after December 31, 1962. The amendments made by subsections (b) and (c) shall apply with respect to remuneration paid after December 31, 1962.

"Increase in Tax Base

"Definition of self-employment income

"SEC. 212. (a)(1) Subparagraph (C) of section 1402(b)(1) of the Internal Revenue Code of 1954 is amended by adding 'and before 1963' after '1958'; and by striking out 'or' and inserting in lieu thereof 'and'.

"(2) Such section 1402(b)(1) is further amended by adding at the end thereof the following new subparagraph:

" '(D) for any taxable year ending after 1962, (i) $5,200, minus (ii) the amount of the wages paid to such individual during the taxable year; or'.

"Definition of wages

"(b) Section 3121(a)(1) of such Code is amended by striking out '$4,800' wherever it appears and inserting in lieu thereof '$5,200'.

"Federal service

"(c) Section 3122 of such Code is amended by striking out '$4,800' and inserting in lieu thereof '$5,200'.

"Returns in the case of governmental employees in Guam and American Samoa

"(d) Section 3125 of such Code is amended by striking out '$4,800' wherever it appears and inserting in lieu thereof '$5,200'.

"Special refunds of employment taxes

"(e)(1) Section 6413(c)(1) of such Code is amended—

"(A) by inserting 'and prior to the calendar year 1963' after 'the calendar year 1958';

"(B) by inserting 'or (C) during any calendar year after the calendar year 1962, the wages received by him during such year exceed $5,200,' after 'exceed $4,800,'; and

"(C) by inserting before the period at the end thereof 'and before 1963, or which exceeds the tax with respect to the first $5,200 of such wages received in such calendar year after 1962'.

"(2) Section 6413(c)(2)(A) of such Code is amended by striking out 'or $4,800 for any calendar year after 1958' and inserting in lieu thereof '$4,800 for the calendar year 1959, 1960, 1961, or 1962, or $5,200 for any calendar year after 1962'.

"Effective date

"(f) The amendments made by subsections (b), (c), and (d) shall be applicable with respect to remuneration paid after 1962.

"Technical Amendment

"SEC. 213. Section 3121(l)(6) of the Internal Revenue Code of 1954 is amended by striking out 'and the Federal Disability Insurance Trust Fund,' and inserting in lieu thereof ', the Federal Disability Insurance Trust Fund, and the Federal Health Insurance Trust Fund,'. The amendment made by this section shall be effective January 1, 1963.

"Part C—Railroad Retirement Amendments

"Health Insurance Benefits for the Aged

"SEC. 221. (a) The Railroad Retirement Act of 1937 is amended by adding after section 20 of such Act the following new section:

" 'Health Insurance Benefits for the Aged

" 'SEC. 21. (a) For the purposes of this section, and subject to the conditions hereinafter provided, the Board shall have the same authority to determine the rights of individuals described in subsection (b) of this section to have payments made on their behalf for health insurance benefits consisting of inpatient hospital services, skilled nursing facility services, home health services, and outpatient hospital diagnostic services within the meaning of title XVII of the Social Security Act as the Secretary of Health, Education, and Welfare has under such title XVII with respect to individuals to whom such title applies. The rights of individuals described in subsection (b) of this section to have payment made on their behalf for the services referred to in the next preceding sentence shall be the same as those of individuals to whom title XVII of the Social Security Act applies and this section shall be administered by the Board as if the provisions of such title XVII were applicable, references to the Secretary of Health, Education, and Welfare were to the Board, references to the Federal Social Insurance Trust Fund were to the Railroad Retirement Account, references to the United States or a State included Canada or a subdivision thereof, and the provisions of sections 1707 and 1712 of such title XVII were not included in such title. For purposes of section 11, a determination with respect to the rights of an individual under this section shall, except in the case of a provider of services, be considered to be a decision with respect to an annuity.

" '(b) Except as otherwise provided in this section, every individual who—

" '(A) has attained age sixty-five and

" '(B) (i) is entitled to an annuity, or (ii) would be entitled to an annuity had he ceased compensated service and, in the case of a spouse, had such spouse's husband or wife ceased compensated service, or (iii) had been awarded a pension under section 6, or (iv) bears a relationship to an employee which, by reason of section 3(e), has been, or would be, taken into account in calculating the amount of an annuity of such employee or his survivor,

shall be entitled to have payment made for the services referred to in subsection (a), and in accordance with the provisions of such subsection. The payments for services herein provided for shall be made from the Railroad Retirement Account (in accordance with, and subject to, the conditions applicable under section 10(b) in making payment of other benefits) to the hospital, skilled nursing facility, or home health agency providing such services, including such services provided in Canada to individuals to whom this subsection applies but only to the extent that the amount of payments for services otherwise hereunder provided for an individual exceeds the amount payable for like services provided pursuant to the law in effect in the place in Canada where such services are furnished.

"'(c) No individual shall be entitled to have payment made for the same services, which are provided for in this section, under both this section and title XVII of the Social Security Act, and no individual shall be entitled to have payment made under both this section and such title XVII for more than ninety days of inpatient hospital services or more than one hundred and eighty days of skilled nursing facility services or more than one hundred and fifty units of such services during any benefit period, or more than two hundred and forty visits in any calendar year in which home health services are furnished. In any case in which an individual would, but for the preceding sentence, be entitled to have payment for such services made under both this section and such title XVII, payment for such services to which such individual is entitled shall be made in accordance with the procedures established pursuant to the next succeeding sentence, upon certification by the Board or by the Secretary of Health, Education, and Welfare. It shall be the duty of the Board and such Secretary with respect to such cases jointly to establish procedures designed to minimize duplications of requests for payment for services and determinations and to assign administrative functions between them so as to promote the greatest facility, efficiency, and consistency of administration of this section and title XVII of the Social Security Act; and, subject to the provisions of this subsection to assure that the rights of individuals under this section or title XVII of the Social Security Act shall not be impaired or diminished by reason of the administration of this section and title XVII of the Social Security Act. The procedures so established may be included in regulations issued by the Board and by the Secretary of Health, Education, and Welfare to implement this section and such title XVII, respectively.

"'(d) Any agreement entered into by the Secretary of Health, Education, and Welfare pursuant to title XVII of the Social Security Act shall be entered into on behalf of both such Secretary and the Board. The preceding sentence shall not be construed to limit the authority of the Board to enter on its own behalf into any such agreement relating to services provided in Canada or in any facility devoted primarily to railroad employees.

"'(e) A request for payment for services filed under this section shall be deemed to be a request for payment for services filed as of the same time under title XVII of the Social Security Act, and a request for payment for services filed under such title shall be deemed to be a request for payment for services filed as of the same time under this section.

"'(f) The Board and the Secretary of Health, Education, and Welfare shall furnish each other with such information, records, and documents as may be considered necessary to the administration of this section or title XVII of the Social Security Act.'

"Amendment Preserving Relationship Between Railroad Retirement and Old-Age, Survivors, Disability, and Health Insurance Systems

"(b) Section (1)(q) of such Act is amended by striking out '1961' and inserting in lieu thereof '1962'.

"Financial Interchange Between Railroad Retirement Account and Federal Health Insurance Trust Fund

"(c)(1) Section 5(k)(2) of such Act is amended—

"(A) by striking out subparagraphs (A) and (B) and redesignating subparagraphs (C), (D), and (E) as subparagraphs (A), (B), and (C), respectively;

"(B) by striking out the second sentence and the last sentence of the subparagraph redesignated as subparagraph (A) by subparagraph (A) of this paragraph;

"(C) by adding at the end of the subparagraph redesignated as subparagraph (A) by subparagraph (A) of this paragraph the following new subdivision:

"'(iii) At the close of the fiscal year ending June 30, 1963, and each fiscal year thereafter, the Board and the Secretary of Health, Education, and Welfare shall determine the amount, if any, which, if added to or subtracted from the Federal Health Insurance Trust Fund would place such fund in the same position in which it would have been if service as an employee after December 31, 1936, had been included in the term "employment" as defined in the Social Security Act and in the Federal Employment Contributions Act. Such determination shall be made no later than June 15 following the close of the fiscal year. If such amount is to be added to the Federal Health Insurance Trust Fund the Board shall, within ten days after the determination, certify such amount to the Secretary of the Treasury for transfer from the Retirement Account to the Federal Health Insurance Trust Fund; if such amount is to be subtracted from the Federal Health Insurance Trust Fund the Secretary of Health, Education, and Welfare shall, within ten days after the determination, certify such amount to the Secretary of the Treasury for transfer from the Federal Health Insurance Trust Fund to the Retirement Account. The amount so certified shall further include interest (at the rate determined under subparagraph (B) for the fiscal year under consideration) payable from the close of such fiscal year until the date of certification.';

"(D) by striking out 'subparagraph (B) and (C)' where it appears in the subparagraph redesignated as subparagraph (B) by subparagraph (A) of this paragraph and inserting in lieu thereof 'subparagraph (A)'; and

"(E) by amending the subparagraph redesignated as subparagraph (C) by subparagraph (A) of this paragraph to read as follows:

"'(C) The Secretary of the Treasury is authorized and directed to transfer to the Federal Old-Age and Survivors Insurance Trust Fund, the Federal Disability Insurance Trust Fund, or the Federal Health Insurance Trust Fund from the Retirement Account or to the Retirement Account from the Federal Old-Age and Survivors Insurance Trust Fund, the Federal Disability Insurance Trust Fund, or the Federal Health Insurance Trust Fund, as the case may be, such amounts as, from time to time, may be determined by the Board and the Secretary of Health, Education, and Welfare pursuant to the provisions of subparagraph (A), and certified by the Board or the Secretary of Health, Education, and Welfare for transfer from the Retirement Account or from the Federal Old-Age and Survivors Insurance Trust Fund, the Federal Disability Insurance Trust Fund, or the Federal Health Insurance Trust Fund.'

"(2) The amendments made by paragraph (1) of this subsection shall be effective January 1, 1963. Such amendments and the amendments made by section 202(a) shall not be construed to increase or diminish the sums to be transferred, under the provisions of section 5(k)(2) of the Railroad Retirement Act before their amendment by paragraph (1) of this subsection, between the Railroad Retirement Account and the Federal Old-Age and Survivors Insurance Trust Fund or the Federal Disability Insurance Trust Fund.

"Tax on Employees

"SEC. 222. (a) Section 3201 of the Railroad Retirement Tax Act is amended by striking out ': *Provided*' and inserting in lieu thereof the following: '. With respect to compensation paid for services rendered after the date with respect to which the rates of taxes imposed by section 3101 of the Federal Insurance Contributions Act are increased with respect to wages by section 220 (b) of the Act which amended the Social Security Act by adding title XVII the rates of tax imposed by this section shall be increased, with respect only to compensation paid for services rendered before January 1, 1965, by the number of percentage points (including fractional points) that the rates of taxes imposed by such section 3101 are so increased with respect to wages: *Provided*'.

"Tax on Employee Representatives

"(b) Section 3211 of the Railroad Retirement Tax Act is amended by striking ': *Provided*' and inserting in lieu thereof the following: '. With respect to compensation paid for services rendered after the date with respect to which the rates of taxes imposed by section 3101 of the Federal Insurance Contributions Act are increased with respect to wages by section 220(b) of the Act which amended the Social Security Act by adding title XVII the rates of tax imposed by this section shall be increased, with respect only to compensation paid for services rendered before January 1, 1965, by twice the number of percentage points (including fractional points) that the rates of taxes imposed by such section 3101 are so increased with respect to wages: *Provided*'.

"Tax on Employers

"(c) Section 3221 of the Railroad Retirement Tax Act is amended by inserting after '$400' the first time it appears the following: '. With respect to compensation paid for services rendered after the date with respect to which the rates of taxes imposed by section 3111 of the Federal Insurance Contributions Act are increased with respect to wages by section 220(c) of the Act which amended the Social Security Act by adding title XVII the rates of tax imposed by this section shall be increased, with respect only to compensation paid for services rendered before January 1, 1965, by the number of percentage points (including fractional points) that the rates of taxes imposed by such section 3111 are so increased with respect to wages'.

"Part D—Health insurance benefits for presently uninsured individuals

"Coverage Provisions

"SEC. 231. Anyone who—

"(1) has attained the age of 65.

"(2)(A) attained such age before 1967, or (B) has not less than 3 quarters of coverage (as defined in title II of the Social Security Act or section 5(i) of the Railroad Retirement Act of 1937), whenever acquired, for each calendar year elapsing after 1964 and before the year in which he attained such age,

"(3) is not, and upon filing application therefor would not be, entitled to monthly insurance benefits under section 202 of the Social Security Act and does not meet the requirements set forth in subparagraph (B) of section 21(b) of the Railroad Retirement Act of 1937, and

"(4) has filed an application under this section at such time, in such manner, and in accordance with such other requirements as may be prescribed in regulations of the Secretary.

shall (subject to the limitations in this part) be deemed, solely for purposes of section 1705 of the Social Security Act, to be entitled to monthly insurance benefits under such section 202 for each month, beginning with the first month in which he meets the requirements of this subsection and ending with the month in which he dies or, if earlier, the month before the month in which he becomes entitled to monthly insurance benefits under such section 202 or meets the requirements set forth in sub-

paragraph (B) of section 21(b) of the Railroad Retirement Act of 1937.

"Limitations

"SEC. 232. (a) The provisions of section 231 shall apply only in the case of an individual who—

"(1) is a resident of the United States (as defined in section 210 of the Social Security Act), and

"(2) is a citizen of the United States or has resided in the United States (as so defined) continuously for not less than 10 years.

"(b) The provisions of section 231 shall not apply to any individual who—

"(1) is a member of any organization referred to in section 210(a)(17) of the Social Security Act,

"(2) has been convicted of any offense listed in section 202(u) of the Social Security Act,

"(3) is an employee of the United States, or

"(4) is eligible for the benefits of the Federal Employees Health Benefits Act of 1959 or the Retired Federal Employees Health Benefits Act.

"Payments to Trust Fund

"SEC. 233. There are hereby authorized to be appropriated to the Federal Health Insurance Trust Fund (established by section 201 of the Social Security Act) from time to time such sums as the Secretary deems necessary, on account of—

"(a) payments made from such Trust Fund under title XVII of such Act with respect to individuals who are entitled to health insurance benefits solely by reason of this part,

"(b) the additional administrative expenses resulting therefrom, and

"(c) any loss in interest to such Trust Fund resulting from the payment of such amounts,

in order to place such Trust Fund in the same position in which it would have been if sections 231 and 232 of this Act had not been enacted.

"Part E—Miscellaneous provisions

"Studies and Recommendations

"SEC. 241. The Secretary of Health, Education, and Welfare shall carry on studies and develop recommendations to be submitted from time to time to the Congress relating to (1) the adequacy of existing facilities for health care for purposes of the program established by this Act; (2) methods for encouraging the further development of efficient and economical forms of health care which are a constructive alternative to inpatient hospital care; (3) the feasibility of providing additional types of health insurance benefits within the financial resources provided by this Act; and (4) the effects of the deductibles upon beneficiaries, hospitals, and the financing of the program."

Make appropriate changes in the table of contents.

Mr. MANSFIELD. Mr. President, will the Senator yield with the understanding that he will not lose his right to the floor?

Mr. ANDERSON. I yield with that understanding.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll and the following Senators answered to their names:

[No. 112 Leg.]

Aiken	Fulbright	Miller
Allott	Goldwater	Monroney
Anderson	Hart	Morse
Beall	Hayden	Morton
Bennett	Hickenlooper	Moss
Boggs	Hickey	Mundt
Byrd, W. Va.	Hill	Murphy
Cannon	Holland	Muskie
Carlson	Hruska	Neuberger
Case	Jackson	Pastore
Chavez	Javits	Pell
Clark	Johnston	Proxmire
Cotton	Keating	Randolph
Curtis	Kefauver	Smith, Maine
Dirksen	Kerr	Sparkman
Dodd	Kuchel	Symington
Douglas	Long, Mo.	Thurmond
Dworshak	Long, Hawaii	Wiley
Eastland	Mansfield	Williams, N.J.
Ellender	McClellan	Williams, Del.
Engle	McGee	Young, N. Dak.
Ervin	McNamara	Young, Ohio
Fong	Metcalf	

The PRESIDING OFFICER (Mrs. NEUBERGER in the chair). A quorum is present.

Mr. ANDERSON. Madam President, I ask unanimous consent that without losing my right to the floor, I may yield now to the Senator from Missouri [Mr. SYMINGTON] in order that he may present a matter.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. SYMINGTON. I thank the Senator from New Mexico for his courtesy in yielding to me.

Madam President, as we stated on the floor of the Senate on July 3, and as reported in the CONGRESSIONAL RECORD for that date on page 11782, Missouri and a number of other States are deeply concerned about one of the provisions in the Public Welfare Amendments Act of 1962, H.R. 10606.

As passed by the House and as reported by the Senate Finance Committee, the long established dollar-for-dollar matching formula on the welfare programs under social security would be subject to change if the States did not meet minimum standards on certain additional administrative services not yet spelled out by the Secretary of Health, Education, and Welfare.

This problem would be corrected by a series of five amendments, intended to be proposed by the senior Senator from Massachusetts [Mr. SALTONSTALL], numbered "6-23-62—A." The Senator from Massachusetts is unable to be in the Senate today, but I have been assured of his continued support for these amendments. My colleague [Mr. LONG] joins in offering them.

Madam President, I ask unanimous consent that these amendments be considered at this time.

Actually, Madam President, there are five amendments, in order to take care of this single item; they appear on five different pages. In each case, the word "one-fourth" is stricken out, and the word "one-half" is substituted for it.

I have previously explained these amendments. I understand there is no objection to them; therefore, I ask unanimous consent that they be considered at this time.

Mr. YOUNG of North Dakota. Madam President, will the Senator from Missouri yield?

Mr. SYMINGTON. I yield.

Mr. YOUNG of North Dakota. I wish to join in supporting the amendments. The executive secretary of the public welfare board in my State, Mr. Carlyle D. Onsrud, says they are necessary in our State. He advises me the welfare program would be badly crippled without these amendments which would permit continued administrative matching funds at 50 percent regardless of whether or not the State failed to comply with minimum services to be prescribed by the Secretary of Health, Education, and Welfare.

The PRESIDING OFFICER. Is there objection to temporarily laying aside the pending amendment of the Senator from New Mexico, in order to consider the amendment offered by the Senator from Missouri? The Chair hears none; and the amendments offered by the Senator from Missouri, for himself, the Senator from Massachusetts [Mr. SALTONSTALL], and the junior Senator from Missouri [Mr. LONG], will be stated.

The LEGISLATIVE CLERK. On page 25, in line 5, it is proposed to strike out "one-fourth" and insert in lieu thereof "one-half".

On page 27, lines 5 and 6, strike out "one-fourth" and insert in lieu thereof "one-half".

On page 29, lines 12 and 13, strike out "one-fourth" and insert in lieu thereof "one-half".

On page 31, lines 10 and 11, strike out "one-fourth" and insert in lieu thereof "one-half".

On page 90, lines 1 and 2, strike out "one-fourth" and insert in lieu thereof "one-half".

Mr. CURTIS. Madam President——

Mr. SYMINGTON. I yield to the Senator from Nebraska.

Mr. CURTIS. I wish to thank the distinguished Senator from Missouri for calling up these amendments on behalf of himself and the Senator from Massachusetts [Mr. SALTONSTALL].

I have received a telegram from Gov. Frank B. Morrison, of Nebraska, urging that this action be taken; and I have before me a letter from Mr. F. M. Woods, director of the State of Nebraska Department of Public Welfare, in which he states:

> These are matters which can and should be resolved by the States themselves. Federal regulations in the field will be of very little direct benefit to recipients of public assistance. Rather, such interference will result in chapters of written regulations, mountains of useless reports, and unnecessary expenditure of administrative funds.

The action the Senate has taken has prevented the long arm of Federal bureaucracy from reaching farther down into matters which can be handled by the various States, through their departments of public welfare. I thank the Senator for the service he has rendered in this connection.

Mr. SYMINGTON. I thank the Senator from Nebraska.

Mr. LONG of Missouri. Madam President, will my colleague yield to me?

Mr. SYMINGTON. I am glad to yield to my colleague.

Mr. LONG of Missouri. I wish to compliment my distinguished colleague for calling up these amendments at this time. As he knows, the absence of these amendments could have meant a $2 million loss to our State, and possibly would have meant curtailment of old-age assistance and other necessary welfare programs in Missouri.

Mr. SYMINGTON. Yes. My colleague and I have carefully studied this matter together, and we know that would have been the result in our State.

Mr. LONG of Missouri. I feel that certainly this is the better way to handle the matter, rather than to maintain the penalty in connection with the 50-50 matching program.

Mr. SYMINGTON. It is; and I thank my colleague for his contribution.

The PRESIDING OFFICER. Without objection, the amendments will be considered en bloc.

The question is on agreeing to the amendments of the Senator from Missouri.

The amendments were agreed to.

Mr. SYMINGTON. Madam President, I thank the Senator from New Mexico for his courtesy in allowing these amendments to be considered and adopted at this time.

Mr. COTTON. Madam President, will the Senator from New Mexico yield to me?

Mr. ANDERSON. Madam President, I ask unanimous consent that at this time I may yield to the Senator from New Hampshire, without losing my right to the floor.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. COTTON. I thank the Senator from New Mexico.

Madam President, I send to the desk an amendment intended to be proposed by me to the so-called Anderson amendment; and I ask that this amendment be printed and lie on the table.

The PRESIDING OFFICER. Without objection, the amendment will be received and printed, and will lie on the table.

Mr. MORTON. Madam President, Will the Senator from New Mexico yield to me?

Mr. ANDERSON. Madam President, I ask unanimous consent that I may yield now to the Senator from Kentucky, without losing my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MORTON. Madam President, I ask that a bill I have introduced, Senate bill 3386, be considered as an amendment in the nature of a substitute for the Anderson amendment; and I wish to have my amendment considered and wish to bring it up on the floor of the Senate tomorrow, and have it disposed of. It is not my intention to press for a yea-and-nay vote on my amendment; but I think tomorrow this amendment in the nature of a substitute can be disposed of.

I call attention to the fact that my amendment is the text of Senate bill 3386, and is being offered as an amendment in the nature of a substitute for the Anderson amendment.

Mr. JAVITS. Madam President, will the Senator from Kentucky yield in connection with his amendment in the nature of a substitute?

Mr. MORTON. I yield.

Mr. JAVITS. This looks very much like the so-called Bow plan. Can the Senator from Kentucky in any way identify the amendment for purposes of our study and consideration—in short, to indicate what differences or what similarities there are?

Mr. MORTON. My amendment differs from the Bow plan, in that my amendment provides for a needs test. In other words, one who pays no income tax would not pay for his insurance policy; the Government would pay for it. One who pays an income tax of $100 would make a certain payment—and so forth. So my amendment provides for a needs test, and in that way is different from the Bow plan.

Mr. JAVITS. I thank the Senator from Kentucky.

Mr. MORTON. Madam President, I offer my amendment.

The PRESIDING OFFICER. The amendment of the Senator from Kentucky, offered as a substitute for the Anderson amendment, will be stated.

The Chief Clerk proceeded to read the amendment.

Mr. MORTON. Madam President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment offered by Mr. MORTON as a substitute for the Anderson amendment is as follows:

That this Act may be cited as the "Health Care Benefits for the Aged Act".

DEFINITIONS

SEC. 2. For the purposes of this Act—

(a) The term "Secretary" means the Secretary of Health, Education, and Welfare.

(b) The term "State" includes the District of Columbia.

(c) The term "State plan" means a State plan for health benefits for the aged.

(d) The term "State agency" means the agency established or designated in accordance with section 4(a)(11).

(e) The term "contract" means the policy, contract, agreement, or other arrangement entered into between a carrier and a State agency for the purpose of providing for the participation by individuals in a health benefits program under a State plan.

(f) The term "health benefits program" means a group insurance contract provided by a carrier for the purpose of providing, paying for, or reimbursing expenses for health services.

(g) The term "carrier" means a voluntary association, corporation, partnership, or other nongovernmental organization which is lawfully engaged in providing, paying for, or reimbursing the costs of, health services under group insurance contracts in consideration of premiums payable to the carrier.

(h) The term "premium" means the amount of the consideration charged by a carrier for participation by an individual in a health benefits program provided by the carrier.

(i) The term "State share" means the portion of the premium to be paid by the State with respect to the participation of an individual in a health benefits program.

(j) The term "individual share" means the portion of the premium to be paid by an individual for his participation in a health benefits program.

(k) The term "taxable year" means a taxable year as defined in section 441(b) of the Internal Revenue Code of 1954.

(l) The term "Federal income tax liability" means, in the case of any individual, the amount of the income tax imposed for the taxable year on such individual under part I of subchapter A of chapter 1 of the Internal Revenue Code of 1954, determined without regard to the provisions of part IV of subchapter A of chapter 1 of such Code (other than section 37 of such part IV). The amount of the Federal income tax liability under a joint return shall, for purposes of the preceding sentence, be deemed to be the amount of the Federal income tax liability of each of the parties to such return.

APPROPRIATION

SEC. 3. For the purpose of enabling each State to assist individuals residing therein who are age sixty-five or over to obtain, through prepaid health benefits plans, provisions of, payment for, or reimbursement for the expenses of, health care services at subscription rates which such individuals can afford to pay (determined on the basis of the amount of their Federal income tax liability for the taxable year), there is hereby authorized to be appropriated for each fiscal year a sum sufficient to carry out the purposes of this Act. The sums made available under this section shall be used for making payments to States which have submitted, and had approved by the Secretary, State plans for health benefits for the aged.

STATE PLANS

SEC. 4. (a) A State plan for health benefits for the aged must—

(1) provide for the participation, on a voluntary basis, by all residents of the State who are age sixty-five or over in a health benefits program which complies with the provisions of section 7;

(2) provide for adequate dissemination to such residents of full and complete information concerning the benefits provided under such program, the terms and conditions thereof, and the amount of the premium therefor;

(3) provide for such review by the Secretary and such other safeguards as the Secretary may determine to be necessary or desirable to assure that the premiums for participation in any such health benefits program reasonably and equitably reflect the cost of the benefits to be provided thereunder, and that participants therein shall receive the benefits to which they are entitled thereunder without undue delay;

(4) make suitable provision for the receipt, under such program, of benefits by participants residing in the State but who are temporarily absent therefrom;

(5) provide that any individual, who is enrolled under such a program for any taxable year, and who, during such year, changes his residence to another State, shall not be precluded from continuing to participate in such program for the remainder of such year by reason of his change of residence;

(6) provide that the full amount of the premium for such program with respect to each individual participating in such program shall be paid by the State;

(7)(A) provide that the individual share of any such premium shall be fixed in accordance with regulations issued by the Secretary under section 8, and that such share shall be collected by, or under the supervision of, the State agency; and

(B) provide that the tentative amount of such share, in the case of any individual, shall be determined on the basis of the amount of the anticipated Federal income tax liability of such individual as contained in his most recent declaration of anticipated Federal income tax liability (filed in accordance with section 9), and that, in the event of any discrepancy between the amount contained in such declaration and such individual's actual Federal income tax liability as reported to the State agency pursuant to section 11, a proper adjustment in the amount of such share will be made;

(8) provide that the State plan shall be in effect in all political subdivisions of the State, and, if administered by them, be mandatory upon them;

(9) provide that the cost of administration of the State plan will be paid by the State;

(10) provide such methods of administering (including methods relating to the establishment and maintenance of personnel standards on a merit basis, except that the Secretary shall exercise no authority with respect to the selection, tenure of office, or compensation of any individual employed in accordance with such methods) as are found by the Secretary to be necessary for the proper and efficient operation of the plan;

(11) either provide for the establishment or designation of a single State agency to administer the plan, or provide for the establishment or designation of a single State agency to supervise the administration of the plan;

(12) make provision, in accordance with regulations promulgated under section 10, for verification of representations made by individuals incident to the determination of their share of the premium for participation in such a health benefits program; and

(13) provide for prompt notice to appropriate law-enforcement officials of any facts or circumstances suggesting that any fraud or misrepresentation has been committed by any individual in connection with his participation, or application for participation, in a health benefits program under the State plan.

(b) The Secretary shall approve any plan which fulfills the conditions specified in subsection (a), except that he shall not approve any plan which imposes, as a condition of eligibility to participate in a health benefits program provided under such plan—

(1) any residence requirement which excludes any resident of the State; or

(2) any citizenship requirement which excludes any citizen of the United States.

PAYMENT TO STATES

SEC. 5. (a) From the sums appropriated therefor, the Secretary of the Treasury shall pay to each State which has a plan approved under this Act, for each quarter, beginning with the quarter commencing October 1, 1962, an amount equal to the sum of the amounts expended, during such quarter, under the State plan as the State share of the premium for a health benefits program under such plan with respect to each individual participating in such program, not counting so much of any expenditure with respect to any individual which is attributable to payment of such a premium in excess of $125 per annum.

(b) The method of computing and paying the amount referred to in subsection (a) shall be as follows:

(1) The Secretary shall, prior to the beginning of each quarter, estimate the amount to be paid to the State for such quarter under the provisions of subsection (a). Such estimate shall be based on (A) a report filed by the State containing its estimate (determined in accordance with regulations issued by the Secretary) of the amount payable to it under subsection (a), (B) records showing the number of individuals in the State who are sixty-five or over, and (C) such other data as the Secretary shall find useful. In making any such estimate with respect to an individual who, prior to the date such estimate is made, has (incident to his participation during such quarter in a health benefits program under the State plan) filed in accordance with section 9 a declaration of anticipated Federal income tax liability, the estimated amount payable to the State under subsection (a) with respect to such individual shall be based on the State share of the premium for such individual's participation in such program, determined on the basis of data contained in such declaration.

(2) The Secretary shall then certify to the Secretary of the Treasury, the amount so estimated by the Secretary, reduced or increased, as the case may be, by any sum by which the Secretary finds that his estimate for any prior quarter was greater or less than the amount which should have been paid to the State under subsection (a) for such quarter.

(3) The Secretary of the Treasury shall thereupon, prior to audit or settlement by the General Accounting Office, pay to the State, at the time or times fixed by the Secretary, the amount so certified.

OPERATION OF STATE PLANS

SEC. 6. In the case of any State plan which has been approved under this Act by the Secretary, if the Secretary, after reasonable notice and opportunity for hearing to the State agency administering or supervising the administration plan finds—

(1) that the plan has been so changed as to impose any residence or citizenship requirement prohibited by section 4(b), or that in the administration of the plan any such prohibited requirement is imposed, with the knowledge of such State agency, in a substantial number of cases; or

(2) that in the administration of the plan there is a failure to comply substantially with any provision required by section 4(a) to be included in the plan, or any other provision of this Act (or regulation issued thereunder by the Secretary) relating to the administration of the plan;

the Secretary shall notify such State agency that further payments will not be made to the State until the Secretary is satisfied that such prohibited requirement is no longer so imposed, and that there is no longer any such failure to comply. Until he is so satisfied he shall make no further certification to the Secretary of the Treasury with respect to such State.

HEALTH BENEFITS PROGRAMS

SEC. 7. (a) In order to qualify under the State plan, a health benefits program must—

(1) be offered by a carrier which is licensed to issue group health insurance in the State;

(2) be offered under a contract which contains a detailed statement of benefits offered, including such maximums, limitations, exclusions, and other definitions of benefits as the Secretary shall by regulations prescribe;

(3) offer participation of a noncancellable or guaranteed renewable basis; and

(4) offer each participant in the program a choice of either (A) ordinary or short-term illness coverage, or (B) long-term or catastrophic illness coverage.

(b) Subject to the requirements contained in subsection (a), a health benefits program may be of the following types:

(1) SERVICE BENEFIT PLAN.—
(A) Hospital benefits.
(B) Surgical benefits.
(C) In-hospital medical benefits.
(D) Ambulatory patient benefits.
(E) Supplemental benefits.

(2) INDEMNITY BENEFIT PLAN.—
(A) Hospital care.
(B) Surgical care and treatment.
(C) Medical care and treatment.
(D) Prescribed drugs, medicines, and prosthetic devices.

(3) COMPREHENSIVE MEDICAL PLANS.—Benefits of the types specified in this subsection under paragraph (1) or (2) or both.

(c) For purposes of this section the term—

(1) "service benefit plan" means a statewide plan under which payment is made by a carrier under contracts with physicians, hospitals, or other providers of health services for benefits of the types described in subsection (b)(1) rendered to participants in such plan, or, under certain conditions, payment is made by a carrier to the participant;

(2) "indemnity benefit plan" means a statewide plan under which a carrier agrees to pay certain sums of money, not in excess of the actual expenses incurred, for benefits of the types described in subsection (b)(2); and

(3) "comprehensive medical plan" means—

(A) a group-practice prepayment plan which offers health benefits of the types referred to in subsection (b)(3), in whole or in a substantial part on a prepaid basis, with professional services thereunder provided by physicians practicing as a group in a common center or centers. Such group shall include physicians who represent at least three major medical specialties which are applicable to aged persons, and who receive all or a substantial part of their professional income from prepaid funds; or

(B) individual-practice prepayment plans which offer health services in whole or substantial part on a prepaid basis, with professional services thereunder provided by individual physicians who agree, under certain conditions specified under regulations issued by the Secretary, to accept the payments provided by the State plan as full payment for covered services rendered by them including, in addition to in-hospital services, general care rendered in their offices and the patients' homes, out-of-hospital diagnostic procedures, and preventive care, and which are offered by organizations which have successfully operated for a period of not less than six months prior to entering into a contract with a State agency.

AMOUNT OF STATE SHARE AND INDIVIDUAL SHARE

SEC. 8. (a) The amount of the State share with respect to any individual for any period within a taxable year of such individual shall be based on the Federal income tax liability of such individual for such year and shall be determined in accordance with a schedule issued by the Secretary.

(b) Such schedule shall provide that the State share shall be—

(1) in case such period is a period of twelve months and the amount of the annual premium is $125 or less—

(A) an amount equal to 100 per centum of the premium, if the individual has no such tax liability for such year, (B) an amount equal to 20 per centum of the premium, if the individual has such a tax liability of $400 or more for such year, and (C) an amount (equal to not less than 20 per centum nor more than 100 per centum of the premium) established by the Secretary in regular inverse proportion to the amount of such individual's tax liability as aforesaid, if the individual has such a tax liability for such year but the amount thereof is less than $400;

(2) in case the amount of the annual premium is more than $125, the amount provided by paragraph (1) with respect to the first $125 of such premium plus 100 per centum of the excess of such premium over $125; and

(3) in case such period is less than twelve months, an amount which bears the same ratio to the amount of the State share (as determined under paragraph (1) or paragraph (2), as the case may be) as the num-

ber of months in the period bears to the number twelve.

(c) The amount of the individual share of any individual for any period shall be equal to the amount, if any, by which the amount of the premium with respect to such individual for such period exceeds the amount of the State share with respect to such individual for such period.

DECLARATION OF ANTICIPATED FEDERAL INCOME TAX LIABILITY

SEC. 9. (a) As a requisite to participation in a health benefits program under a State plan by any individual for any period within any taxable year of such individual, such individual shall file in duplicate, prior to the beginning of such period, with the State agency (or the local agency administering the State plan) a declaration (in such form and manner as hereinafter prescribed) of his anticipated Federal income tax liability for such year.

(b) Any such declaration shall be filed under oath or affirmation and shall be filed on forms supplied to the State agency by the Secretary. Such forms shall be prepared by the Secretary with the advice and assistance of the Secretary of the Treasury and shall require the submission of such data as may be necessary to provide, insofar as possible, an accurate estimate of the Federal income tax liability of the individuals filing such forms.

REPORT OF AMOUNT OF FEDERAL INCOME TAX LIABILITY TO STATE AGENCY

SEC. 10. Each individual who, during any taxable year, has participated in a health benefits program under a State plan approved under section 4(b), shall, at the time he files his Federal income tax return for such year, report to the State agency (on such forms and in such manner as the Secretary shall by regulations provide) the amount of his Federal income tax liability as determined by appropriate data contained in such return.

VERIFICATION OF ACCURACY OF DECLARATIONS OF ACTUAL FEDERAL INCOME TAX LIABILITY

SEC. 11. The Secretary and the Secretary of the Treasury shall cooperate in promulgating rules, regulations, and procedures for the purpose of—

(a) comparing amounts of actual Federal income tax liability reported by individuals to State agencies pursuant to Sec. 10 of this Act and the amounts of the actual Federal income tax liability of such individuals, as disclosed by Federal income tax returns submitted by such individuals or as determined by the Internal Revenue Service subsequent to the submission of such returns;

(b) assuring that, in the case of any such discrepancy, appropriate action will be taken to adjust the amounts of the State share and the individual share of the premium with respect to the individual to whom such discrepancy relates.

AMENDMENTS TO THE INTERNAL REVENUE CODE OF 1954

SEC. 12. Section 213(e) of the Internal Revenue Code of 1954 (relating to definition of medical care for purposes of deduction of medical expenses) is amended by adding after paragraph (2) thereof the following new paragraph:

"(3) Notwithstanding the provisions of paragraph (1)(A), no amount paid with respect to an individual toward any premium for participating in a health benefits program under a State plan approved under section 4(b) of the Health Care Benefits for the Aged Act shall be considered as an amount paid for medical care."

Mr. ANDERSON. Madam President, this afternoon amendments to my amendment have been offered. I am happy that that is taking place, because it is an extremely important measure.

One of the things that is regarded as most significant is that hearings have not been held in a regular committee session to consider this proposal.

In 1960 there was a vote without 1 hour's consideration of the measure by the committee. At the same time we took a whole series of amendments, on which there had been no public consideration. I regret that there has been none on this amendment. Nevertheless, I proposed a motion inside the Finance Committee months ago to afford that opportunity. It was refused. I do not question the judgment of Senators who voted that way. All I say is that, because of that fact, it is necessary to present this measure without adequate committee hearings.

One of the questions raised frequently is the question of financing. Certain persons say there are different kinds of answers to financing. One person said, "I thought it was going to cost me $13. Now they say it is going to cost $27.50."

The proposals in the bill deal with more than health insurance. Therefore, I shall place in the RECORD a brief statement, with tables that will be helpful, in order that it may be possible to understand what we have in mind.

Our proposal provides for financing the health benefits which it would add to the OASDI system through an increase in the payroll tax of one-fourth percent each for employers and employees, and of three-eighths percent on earnings from self-employment, and an increase from $4,800 to $5,200 in the tax base—the maximum annual earnings subject to tax.

Most of the revenues thus raised would be used for the financing of health insurance benefits. A smaller part would go to pay for increased cash benefits for persons whose earnings are greater than $4,800. Persons earning $4,800 or less would not, of course, be affected by any raising of the tax base. Under the existing social security system, benefits are weighted, that is, they are a greater proportion of lower average monthly earnings under the system than of higher monthly earnings. Therefore, the income received from the combined employer-employee tax through an increase in the tax base to $5,200 is greater than the cost of paying the increased benefits which accompany such an increase. Under the proposal, the additional revenue—above that required to finance increased cash monthly benefits—would go toward the payment of the cost of the health insurance.

In terms of dollars, the person who earns $4,800 a year would pay $12 more than under present law. The person earning $5,200 or more would pay $27.50 additional under my proposal. Of this $27.50 only $17.68 would go toward health insurance costs, however. The remainder would go toward the payment of the old-age, survivors, and disability insurance benefits which would be increased for this group.

Madam President, I ask unanimous consent that a table showing the tax rates for employees in 1964 and later years under the system with health insurance benefits added, compared with those under present law, be printed at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Contribution rate and amount of contributions for an employee under present law and under the proposal

	Contribution rate (percent)	Yearly earnings				
		$2,400	$4,800	$5,200		
				Total	OASDI	Health insurance
1964–65:						
Under the proposal	3⅞	$93	$186	$201.50	$183.82	$17.68
Under present law	3⅝	87	174	174.00	174.00	
Increase	¼	6	12	27.50	9.82	17.68
1966–67:						
Under the proposal	4⅜	105	210	227.50	209.82	17.68
Under present law	4⅛	99	198	198.00	198.00	
Increase	¼	6	12	29.50	11.82	17.68
1968 and thereafter:						
Under the proposal	4⅞	117	234	253.50	235.82	17.68
Under present law	4⅝	111	222	222.00	222.00	
Increase	¼	6	12	31.50	13.82	17.68

Mr. ANDERSON. Madam President, there have been a great many questions as to what changes will be made in the bill. I tried to review these at some length on Tuesday afternoon. Let me review what some of them may be.

There is a change in the establishment of a separate health insurance trust fund. In the original bill there would have been a separate account. I have never regarded as a separate account payments into a fund, as is done in a bank by different persons. If I have an account in a bank and someone else has an account in the bank, those accounts are not marked as separate accounts or separate deposits for purposes of insurance. What we want to be sure of is that the checks I write are not charged to his account and that the checks he writes are not charged to my account. We want to make sure that the accounts

are kept separately. I thought the problem in the original bill which involved the separate account was reasonably easy of solution. Others thought a trust fund would be better. Since we were both trying to reach the same base, I saw no objection to the establishment of a health insurance trust fund.

Second, in respect to a great deal of proposed legislation, we have had the proposal for blanketing in, for health insurance benefits, of two and a half million uninsured aged. We did not feel, at the beginning of this discussion, that this group of people should be covered under the health insurance fund through social security, because obviously they could not be paid from the social security fund. Therefore, in the earlier editions of the so-called King-Anderson bill there was no separate provision for the blanketing in of those two and a half million people.

Many people were seriously concerned about this problem and thought it should be attacked at the same time. I subscribe to that point of view. The senior Senator from New York [Mr. JAVITS] was one of those who recognized the problem. He recommended that in any final draft of the amendment we should take that problem into consideration. Others did the same. Therefore, we have incorporated in the amendments a proposal for blanketing in these two and a half million people.

Many have asked, "What would this do in my State? Who would be involved in my State?" Therefore, I ask unanimous consent to have printed at this point in the RECORD a table showing "Estimated Population and Persons Eligible for Health Benefits," under the amendments now before the Senate for its consideration.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Estimated population and persons eligible for health benefits under the Anderson amendment, Jan. 1, 1964

[In thousands]

State	Total population 65 and over	Number eligible under OASI	Number eligible under RRA	Total eligible under RRA and OASI	Number blanketed in
Total	17,877	14,448	794	[1] 15,009	2,500

[1] Corrected for duplication.

Mr. ANDERSON. Madam President, we made a third change. We tried to provide that private organizations, such as the Blue Cross plans, might be used for administration of the programs in making payments to hospitals.

Mr. KERR. Madam President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. KERR. To what extent?

Mr. ANDERSON. That would depend upon the extent to which the local agency desired to make use of them.

Mr. KERR. Do the amendments provide that any beneficiary or prospective beneficiary under the proposal would obtain money from the fund with which to pay for Blue Cross protection?

Mr. ANDERSON. They do not.

Mr. KERR. Is it not a fact that the only reference to Blue Cross in the amendments is one which would authorize the administration to channel the money through the Blue Cross to pay the hospital for the benefits to be provided?

Mr. ANDERSON. That is correct.

Mr. KERR. And the benefits would not be thereby increased or changed?

Mr. ANDERSON. That is correct. But there are a great many people who have gone up and down the country saying, "You are trying to break into this sacred relationship between the doctor and his patient." If people are worried about the sacred relationship, there should be no objection to the Blue Cross taking over the administrative phase and handling all the details, if it is their wish that Blue Cross do so.

Mr. KERR. If it is whose wish that it do so?

Mr. ANDERSON. The person involved.

Mr. KERR. The beneficiary?

Mr. ANDERSON. That is correct.

Mr. KERR. The beneficiary would get no more benefits.

Mr. ANDERSON. He might get benefits in this way: If he now has a Blue Cross policy, his policy may be very limited. He may have only a few days or a few weeks of benefits. If the amendments were agreed to and the bill was passed, it would be possible to extend the benefits a person would get from Blue Cross to a far greater field. It would not increase the benefits available because of the payment.

Mr. KERR. The beneficiary would get the same benefits, in addition to his own private coverage, whether the benefits provided for by the amendments were paid for through the Blue Cross or not, would he not?

Mr. ANDERSON. That is correct.

Mr. KERR. Is it not a fact that the only thing which the Senator's amendments would do with reference to Blue Cross would be to increase the administrative cost of the program without giving to the beneficiary a single dollar of added benefits?

Mr. ANDERSON. The point is that the administration can pay to Blue Cross the cost it would normally absorb itself in administration.

Mr. KERR. That is, the cost the Government would absorb?

Mr. ANDERSON. No; I did not say that.

Mr. KERR. The Senator said the Government could pay to Blue Cross what its own cost would be.

Mr. ANDERSON. What its own cost would be; that is correct.

Mr. KERR. The Government's cost.

Mr. ANDERSON. If the Government wished to do so, it could contact the Blue Cross to administer the program. The Blue Cross administration costs have been running about 3 percent. If they increased to 5 percent, that still

would not be an extravagant figure. It would cost the Social Security Administration something to administer the program. If it wished to allow the money for administration to be spent by Blue Cross, we would see no objection to that.

Mr. KERR. I see no objection to it. I merely wish to make the record clear that that provision in the amendments would not give an added dollar to the local beneficiary, but only would bring the Blue Cross in as an intermediary between the Government and the hospital. There would be an expense in connection with the Blue Cross handling that Government fund, which the Government would have to pay, but as a result of which the beneficiary would not get another dollar in benefits.

Mr. ANDERSON. I operated a little insurance company for quite a while. I had two options in that regard. I could use the claim adjusters of my own on every case, or I could hire an adjuster service. The costs were about the same.

That is what we are trying to provide. If someone wishes to use Blue Cross and to pay them a reasonable fee for adjustment, it would probably balance out to what it would cost if the Government had the Government employees do the work themselves.

This provision results from a great demand that we allow the Kaiser plan, for example, to continue operation for the people who are already under the plan. I think the Kaiser plan is a good plan. I should like to see an arrangement under which it might be utilized by all those who wish to utilize it.

I have no objection to the Blue Cross. The Blue Cross has done good work. Therefore, if any group, county or State wishes to make use of the Blue Cross, I do not object to their doing so.

I do not think agreeing to the provision would result in a double charge, because I do not think the Government could possibly administer the program without some cost.

Mr. CURTIS. Madam President, will the Senator yield to me?

Mr. KERR. If the Senator will permit, I should like to ask another question.

In connection with the insurance company which the Senator says he has operated, with reference to which claims arose, which claims had to be settled either by his own adjusters or by outside adjusters, the Senator refers to claims which were undetermined as to the exact amount; does he not?

Mr. ANDERSON. Yes.

Mr. KERR. Under this program the specific benefits would be spelled out in the legislation; would they not?

Mr. ANDERSON. Yes.

Mr. KERR. So there would not be a question of adjustment with regard to how much in benefits was to be provided. That would be in the law.

Mr. ANDERSON. There is a problem of adjustment in determining how many dollars are to be paid as between the Federal Government and the person who enters the hospital.

The person entering the hospital would have to pay a part of the cost. He might have to pay $10 a day for perhaps a maximum of 9 days.

There would be a question with regard to Blue Cross providing certain additional benefits over and above those provided for the basic law. I point out that if Blue Cross wished to say, "We will pay the basic benefits ourselves," the Government could well afford to give it money to do so.

Mr. KERR. To pay the basic Blue Cross benefits?

Mr. ANDERSON. No.

Mr. KERR. To pay only the Government benefits?

Mr. ANDERSON. That is correct. They could recover from the Government the amount paid out.

Mr. KERR. For the Government?

Mr. ANDERSON. For the Government.

Mr. KERR. Plus a fee?

Mr. ANDERSON. Only when there was a decision by the Government itself that this involved an arrangement needing adjustment. If arrangements could be made with Blue Cross, at a cost of from 3 to 5 percent, I personally think that would be a good range of cost for the Government.

Mr. KERR. Madam President, will the Senator yield further?

Mr. ANDERSON. I yield.

Mr. KERR. Has the Blue Cross indicated it would either desire or accept such an arrangement.

Mr. ANDERSON. The Blue Cross representatives have been in my office a few times suggesting that they would like to be included in some sort of an arrangement of this nature.

Mr. KERR. I asked the Senator if they had indicated a desire or willingness to participate in this program as provided by the Senator's amendments on the basis set forth in the amendments for them to participate?

Mr. ANDERSON. I answer by saying that they have no authority or power to commit their organization until something is presented to them. We have no way of saying today what the bill will look like when it emerges from this Chamber or from the Congress.

Mr. KERR. I am assuming that the bill will emerge as the Senator has suggested it emerge.

Mr. ANDERSON. If the bill should emerge as I have suggested, the Department of Health, Education, and Welfare should be well advised to immediately get in touch with the Blue Cross to see if the many representations they have made of a desire to participate in this program would actually result in any service to be given by them. If they then want no part of the program, that will be fine.

In the case of the Kaiser plan, representatives of the Kaiser plan have suggested language to put in the amendments to make it easier for the Kaiser plan to do what is necessary.

I do not know what form the final language will take. I can say only that the Senators from New York [Mr. JAVITS and Mr. KEATING], the able Senator from Kentucky [Mr. COOPER], the Senator from California [Mr. KUCHEL] and other Senators have suggested that certain plans be included.

The result was a rather limited option, I grant the Senator. Whether that option will have to be extended or expanded I do not know. I cannot tell what the Congress will wish to have done.

I know that the able Senators from New York [Mr. JAVITS and Mr. KEATING] and other Senators have worked steadily to find out if there is any basis on which the option itself might be altered in this proposal, to make it more workable. That is a hard problem to solve. It is very difficult to put in an option without changing the plan fundamentally. We have not yet been able to do so.

If we could devise such a provision, it would be proper, I think, to take it up with the Kaiser plan, the Blue Cross, or anyone else. Thus far we have not been able to accept the language submitted by the Kaiser plan. Whether we shall be able to deal with Blue Cross I do not know.

I can only say that many times Blue Cross has expressed the hope that we could keep this provision open so that they could give it consideration.

I believe that, as an organization, they would find it to their advantage, when they went to cover a case that is now under Blue Cross, to say, "If you are under the basic coverage of the social security approach which is carried in the bill, we will handle your adjustment. We will present a claim for the Government's portion. We will add 3 percent, or whatever it may be, for administration, and we will also take care of our own section of the claim, which the bill does not cover, because the provision is only basic. At a subsequent time we will ask for a payment from their own funds." I do not know what form it would finally take. We would try to keep it open so that the companies could make a presentation.

Mr. KERR. But no basis has yet been established as between the sponsors of the measure and the companies.

Mr. ANDERSON. The Senator is correct.

Mr. CURTIS. Madam President, will the distinguished Senator yield?

Mr. ANDERSON. I yield.

Mr. CURTIS. In the case stated, would the Blue Cross assume any of the risk?

Mr. ANDERSON. It depends on what the Senator means by "assuming any of the risk." If a person should go into a hospital, under the provisions of the bill he would have 90 days of protection. If the Blue Cross had issued a policy guaranteeing to pay that person from the first day onward, without any deductions, and for 100 days into the future, Blue Cross would assume a portion of the risk, because their policy overlaps the policy that would cover the basic considerations, but it would assume no part of the basic risk covered in the bill.

Mr. CURTIS. It would assume no part of the Government's risk?

Mr. ANDERSON. That is correct.

Mr. CURTIS. Is it anticipated that the Government would audit each indi-

vidual claim handled and paid by the Blue Cross?

Mr. ANDERSON. That question was asked of me two or three times in the preparation of the option amendment. My only answer was that I would hope not. At the present time a great many bills come to the Department of Health, Education, and Welfare for services supplied by the Blue Cross. The Department of Health, Education, and Welfare audited those bills for a while and found that the Blue Cross bills are—I was about to say always in line, but I had better not make that statement. Some may have been found out of line. But so far as I know, the Department has never found anything wrong with bills sent by Blue Cross.

I assume that if the Blue Cross took a section of the plan, or if the Kaiser Co. did, or if it were handled through Eastman Kodak Co.'s plan or handled through some other large organization's plan, the Government would audit a few of the claims. It might do as the Internal Revenue Department does with reference to the income tax returns. It might audit every 5th claim, every 10th claim, or every 20th claim until it had established for itself that since there was no financial advantage to Blue Cross to pad or reduce the claim, and since the conduct of the company had been exemplary all the way through in the handling of claims, they could be accepted with very little audit.

Mr. CURTIS. Is it not conceivable that a case might arise in which, if the Government's claim were paid in a larger amount, Blue Cross' supplementary requirement to pay a supplemental amount would be less?

Mr. ANDERSON. I cannot conceive of that. If the bill should become law, a man coming into a hospital would be eligible to receive 90 days of hospitalization, for which he would make a contribution for the first 9 days at $10 a day. How the Blue Cross would pad the hospital bills and make the hospital sign up for some service it did not render, is beyond my comprehension.

Most hospitals are operated by charities, not by grafters.

Mr. CURTIS. I understand. But suppose some medical attention were rendered in a hospital. Who would decide whether or not the service was incident to the hospitalization, and therefore should be carried under the Government's plan, and who would decide that another carrier—possibly the Blue Cross—should pay for the service?

Mr. ANDERSON. I assume that in the last analysis it would be the Government. Last August I went into a hospital and had my gall bladder removed. I could have submitted my claim to three different companies. I chose one. I presented the claim and notified the rest of whatever other insurance I had. Somehow the companies made the necessary adjustment. I assume that something like that would happen again.

Mr. CURTIS. What organizations or business institutions besides Blue Cross could take advantage of the option under the language in the amendment of the Senator from New Mexico?

Mr. ANDERSON. I mentioned the Kaiser plan. I mentioned the fact that many labor unions have a provision in their agreements that would allow their present benefits to be expanded in case a bill of the nature of the one before the Senate should pass, and therefore additional benefits would be made available to their workers.

I refer specifically to the General Motors contract, with which the Senator may be familiar. If the bill should pass, a basic coverage would be provided under the bill under which it is conceivable that General Motors could say, "in order to balance what we have been doing previously, we will not only give you the benefits which we agreed to extend at one time, but we will add other things, because of the assumption of basic risk under social security."

Mr. CURTIS. How about the case of a nonprofit fraternal insurance society?

Mr. ANDERSON. A "sick and bury" society?

Mr. CURTIS. Could a nonprofit, nontaxable fraternal insurance society that may be writing hospital insurance qualify under that section?

Mr. ANDERSON. I can say only that I believe it would be a question which would depend upon what sort of nonprofit organization it was, and would best be handled by the individuals who would pass on the question when the bill was passed and not by me. I would not want the measure to tie up the Secretary of Health, Education, and Welfare so that he could not operate.

Mr. JAVITS. Madam President, will the Senator yield?

Mr. ANDERSON. The Senator from New York has had more to do with the option provision than I have, and I recognize the fact freely. The two Senators from New York [Mr. JAVITS and Mr. KEATING], the Senator from Kentucky [Mr. COOPER] and others came forward with option provisions that seemed to me to be a step in the right direction. Because I regarded it as a step in the right direction, such a provision was inserted in the bill. The Senator from New York is more familiar with it than I because for many days and nights the two Senators from New York have tried to work to find language that would fit perfectly into the bill. I commend them for it.

Mr. CURTIS. Madam President, I ask unanimous consent that the present colloquy may take place without the distinguished Senator from New Mexico losing his right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS. Madam President, I should like to refer my colleague to the language on page 47, lines 8 to 12, of the amendments, which provides for a carrier which is exempt from income tax under the Internal Revenue Code, and thereby would open a door to nonprofit organizations of all characters, whether they are cooperative groups, unions, fraternal organizations, or otherwise.

I also call to the attention of my colleague the fact that the definitions which are contained in the bill also relate to private carriers, that is, profitmaking carriers, and would require them either to be national in scope, in terms very analogous to the kind of carriers that function under the Federal Government's employees insurance plan——

Mr. CURTIS. In other words, an insurance company operated for profit could qualify under the bill.

Mr. JAVITS. Provided it was either national in scope or represented an appreciable part of health coverage in a particular State. I think the Senator will find that the principles which are contained in the option in the bill will be finalized when the Senator from New Mexico [Mr. ANDERSON] and we agree upon the final character of the option. For example, we may make a change in the percentage of health insurance business which an insurance company must carry in a State in order to qualify. I think the 10-percent figure which is now contained in the amendment is too high, but the principle will be established that it can either be as it is now written, a nonprofit organization, fraternal, or otherwise, provided it is either a national company or a substantial company within a State. The 10 percent represents the experience of the Senator from New Mexico in his own company. That is the way in which the program would operate. As I say, there are three aspects: Nonprofit, a national company, or a company of appreciable consequence in the health and insurance field in a State will be able to qualify under the provision.

If the Senator from New Mexico will allow me to proceed, we are at the stage of elucidation, and I appreciate the way in which the Senator from Oklahoma [Mr. KERR] has opened the question. People are much more interested in what we are tyring to do rather than in the merits or demerits of the proposal, which we will have plenty of time to hammer out.

In terms of what we are trying to accomplish, I point out that, like the AMA, the insurance companies have been very much against the proposal—and I do not say this invidiously, because they are honest and sincere in their opposition. In connection with these options we worked in the field of two aspects. First, we have had to study the present practice in order to determine whether the option would lend itself to being adapted within the context of the present practice of Blue Cross and other organizations; second, we have had to do our utmost to look forward to a time when this provision could be law and when a company, in judging the provisions, would find a sufficient inducement in the option to get into this business, using Government benefits, as it were, as a business.

Mr. CURTIS. Madam President, how many insurance companies does the Senator anticipate would qualify as being national in scope?

Mr. JAVITS. I believe we can give those figures. We have found that there are about 750 insurance companies in the country which write health insurance. The best information we have been able to get from reliable sources is that under the definitions now contained

in the amendment, even before a change is made, about one-third of those companies would be eligible under this option. We are advised—and this is all I can tell the Senator—that this provision is an even more liberal provision than that contained in the statute for the insurance of Government employees for health, and that this provision allows even more companies to participate than does the regular Government employees' health plan.

Mr. CURTIS. Would the Secretary have authority arbitrarily to decide that 50 insurance companies, for example, could act as adjusting or servicing agencies, and would anyone who qualifies be entitled to such a contract?

Mr. JAVITS. The latter is the case. We have done our utmost to set out criteria which are self-operative. I remind the Senator from New Mexico that he said there was one situation in which Blue Cross could participate. I believe there are two under the terms of the bill, and therefore I think the record should be made clear on that point. I should like to have the record clearly show that one would be under the option provision which we are now discussing, which is by all odds the most pertinent. The other would be under the provision of the Anderson amendment, which I should like to read by number, so that we are clear about it. It is section 1715, at page 41, entitled "Use of Private Organizations to Facilitate Payment to Providers of Service."

There is introduced a nongovernmental entity servicing a group of hospitals, whether in a section, or area, or some other identity.

Mr. CURTIS. What kind of service?

Mr. JAVITS. As an intermediary between them and their accountings with the Federal Government. I am speaking now for the Senator from New Mexico, and I am sure he will correct me if I am in error. The Senator from New Mexico has ascertained that in many areas hospitals would prefer to continue their existing relationship with Blue Cross and let it have the relationship with the Government as being more convenient.

Mr. CURTIS. Who would make the selection of Blue Cross?

Mr. JAVITS. The hospital itself. We are talking about two different parts of the bill now.

Mr. CURTIS. I know.

Mr. JAVITS. We are talking about section 1715, which relates to the use of Blue Cross as an agent of the hospital, and we are also talking, quite separately and distinctly, about section 1716, which involves the use of Blue Cross or any other nonprofit or profit organization as carriers, using the option which is given to them.

Mr. CURTIS. The Senator means not taking the risk to pay the corpus of the benefits. Is that correct?

Mr. JAVITS. They would take some risk. They would take whatever part they contracted for, over and above the governmental part.

Mr. CURTIS. Not the Government's part.

Mr. JAVITS. No.

Mr. ANDERSON. Only the basic risks covered by the law.

Mr. CURTIS. Is it conceivable that a hospital would elect to have Blue Cross exercise the duties set forth in section 1715 as a go-between between the Government and the hospital, and that the patient in the hospital, being otherwise qualified, would elect a private insurance company to handle his claim?

Mr. KERR. Under section 1716.

Mr. CURTIS. Could that happen?

Mr. JAVITS. Yes. In that case the relationship between the insurance company would be with Blue Cross which represented the hospital, instead of with the Government. The problem could be handled very efficiently and conveniently in that manner.

Mr. CURTIS. Is it the Senator's proposal that there be a Government audit of all transactions between Blue Cross and the hospital pursuant to section 1715—an audit of the hospital claim and and audit of the insurance company?

Mr. JAVITS. On the question of audit, the answer would be "Yes." We would build up an audit situation with respect to individual claims. Let us remember that if we do not have the Blue Cross as an intermediary, there is involved either the individual hospital or the beneficiary himself. The question of audit exists in this situation, no matter how it is done.

Therefore, the answer to the Senator's inquiry about an audit would be "Yes." Of course, we must immediately say that that does not mean that every claim would be audited. There we get into the administration of claims audited by a Government department. No matter where we go, whether in the Department of the Interior or the Department of Agriculture, or any other branch of Government, although they have the right and power and authority to audit, they do not necessarily audit every claim.

Mr. CURTIS. We will leave the audit matter for the moment. Will every one of these claims be approved or disapproved by a representative of the U.S. Government?

Mr. JAVITS. The Senator from New Mexico will correct me if I am in error, but I would say that the Government will have full authority within the terms of the law. The answer to the question, "Can anyone qualify who can meet the terms of the law?" is "Yes." The Government would have complete authority as to the arrangement which is made, in toto; but that does not necessarily mean that the department will audit every claim. That would apply whether it involved Blue Cross, an insurance company, or a pension and welfare fund. Therefore, the arrangement would be entirely with the Government and entirely under the jurisdiction of the Secretary. That does not mean that he would audit every claim.

Mr. CURTIS. Suppose an individual otherwise qualified should spend only 1 day in the hospital. Would he be entitled to benefits?

Mr. JAVITS. As I understand the benefits laid out in the King-Anderson bill, he would not; he must himself pay for the first 9 days at $10 a day and at the very minimum, $20. If 1 day should cost more than $20, which is almost inconceivable, he would have a claim against the Government.

Mr. ANDERSON. If I may interrupt the colloquy at this point, Madam President, there are many technical questions being presented in the debate, and I therefore ask unanimous consent that representatives of the Department of Health, Education, and Welfare, particularly Mr. Robert Ball, Commissioner of Social Security, and Mr. Irwin Wolkstein, of that agency, may be privileged to sit in the Senate Chamber during the discussion.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS. I, too, hope the Senator from New Mexico will take counsel of his experts and interrupt those of us who he may feel have responded to a question in a way which he believes to be wrong.

Mr. ANDERSON. I did not make the request because I thought the answers the Senator from New York was making were incorrect. The subject is extremely complicated, and I thought we should make certain that the information we give is correct.

Mr. CURTIS. I appreciate the patience of both the distinguished Senators for their answers, because, after all, hearings have not been held on this proposal.

Mr. ANDERSON. How did the Senator from Nebraska vote on the question of holding hearings on the proposal?

Mr. CURTIS. I voted against holding hearings.

Mr. KERR. Did the Senator vote to hold hearings if and when a bill came from the House?

Mr. CURTIS. Yes.

Mr. ANDERSON. That is true. But the committee always holds hearings if a bill comes from the House. We tried to have hearings on this proposal.

Mr. KERR. Did the Senator try to have hearings on this provision?

Mr. ANDERSON. On what provision?

Mr. KERR. The provision in section 1716(a) was not in the bill on which the Senator asked for hearings.

Mr. ANDERSON. We made some changes in a good many provisions. Those are questions which normally would have arisen if hearings had been held. The Senator from New York would have come before the committee and made suggestions, and the committee would have accepted or refused to accept them.

But the Senator from Nebraska raised the point that the committee has not had hearings. I suggest that that is not the best thing to say, when it was the Senator from Nebraska who prevented the committee from having hearings.

Mr. CURTIS. I prefaced the statement without specifying who was to blame. I took the position that there could not be hearings until a bill had come from the House.

Mr. ANDERSON. Other Senators probably voted that way because they

thought it was the right way to proceed. I do not question that.

Mr. KERR. A request was never made to the Committee on Finance to have hearings on section 1716(a), which is one of the two items about which the Senator from Nebraska was asking.

If the Senator from New York is available, I should like to ask him a few questions, in view of the fact that the Senator from New Mexico has yielded to him.

Mr. ANDERSON. Certainly. Madam President, I ask unanimous consent that the Senator from Oklahoma may have the opportunity to discuss this subject with the Senator from New York, without my losing the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KERR. Do I correctly understand that section 1715 was in the Anderson amendment?

Mr. JAVITS. That is correct.

Mr. KERR. Section 1716(a) was not?

Mr. JAVITS. That is correct.

Mr. CURTIS. What about (b), (c), (d), (e), (f), and (g)?

Mr. KERR. All of them were in the two sections, sections 1715 and 1716.

Under section 1715, the provision with reference to the agreement between the Secretary and any organization or group of organizations is triggered by the providers of the services seeking an agreement.

Mr. JAVITS. That is correct.

Mr. KERR. But under section 1715(a) the organization with whom the contract is made, so far as this bill is concerned, does not add to or take from the benefits provided in the law.

Mr. JAVITS. If the Senator has not misspoken himself, my answer to his question is "Yes." Is he still talking about section 1715(a)?

Mr. KERR. I am.

Mr. JAVITS. That is correct.

Mr. KERR. The agreement, if made, would be made at the request of the provider; and if made, would be an agreement between the Secretary and the organization—it might be the Blue Cross or any other organization—whereby the designated organization would pay to the provider, so far as the agreement was concerned, the benefits provided in the bill, and them only.

Mr. JAVITS. That is correct.

Mr. KERR. Section 1716 would be triggered by a patient asking for the privilege of having the benefits to which he was entitled under the bill paid to the provider by Blue Cross or some other organization.

Mr. JAVITS. If the Senator will substitute for "patient" the word "beneficiary," I would say "Yes."

Mr. KERR. Yes. He could not be a beneficiary without being a patient.

Mr. JAVITS. There is a difference.

Mr. KERR. Suppose he were the beneficiary.

Mr. JAVITS. I am not being captious. The patient is a person already confined to a hospital; he is already collecting benefits; whereas a beneficiary is a person who may or may not ultimately collect the benefits. The option, therefore, is to be exercised by the person who is the beneficiary.

Mr. KERR. By the person who would get the benefit under section 1617(a)?

Mr. JAVITS. That is correct.

Mr. KERR. By his making that request and triggering a situation whereby Blue Cross or someone else became the payor of the amounts of which the beneficiary was the recipient, the benefits from the Federal Government under the bill would not be increased or decreased by his taking that action, would they?

Mr. JAVITS. That is correct.

Mr. KERR. But in each instance—that is, under the situation triggered under section 1715 or under section 1716—for the same identical benefits that would be payable without action being triggered under section 1715 or 1716, the Federal Government would pay the same benefits plus a fee for the disbursing of the amount by the intermediary.

Mr. JAVITS. I cannot agree with that statement for this reason: it would pay, plus a fee, and it would receive value.

Mr. KERR. I did not say it would not receive value; I said it would pay the expense plus the amount agreed to under the agreement between the intermediary and the Secretary.

Mr. JAVITS. That is correct.

Mr. KERR. The patient would get no more benefits.

Mr. JAVITS. I cannot agree that the patient would not get more benefits. In the first place, he would get more efficient administration, which helps in the sense that things run more smoothly between the hospital and the Government. That would be under section 1715.

Under section 1716, the beneficiary would get the advantage of being able to induce those who are able to offer broader benefits to engage in that line of business.

Mr. KERR. The Senator has said that the program would be administered better if there were a Blue Cross intermediary doing those things. Is he thereby saying that Blue Cross is able to administer more efficiently than the Department of Health, Education, and Welfare?

Mr. JAVITS. Not necessarily. I merely say that in those cases in which the hospitals would choose the intermediary, the beneficiary would be getting the benefit of the fact that the hospital would provide if there were a more efficient way to deal with the Federal Government.

Mr. KERR. But the beneficiary would not get any more benefits.

Mr. JAVITS. I think he would get more benefits when things were going smoothly between the hospital which was looking after him and the Federal Government.

Mr. KERR. But he would not trigger the procedure in that event.

Mr. JAVITS. It does not matter who triggered it. The question is, Would he get any advantage under the arrangement that I have referred to in the bill? I think he would.

Mr. KERR. He must indulge the assumption that the hospital would be more efficient in caring for the patient if it were getting its money indirectly from the Government than if it were getting its money directly from the Government.

Mr. JAVITS. I think what is implicit in the Senator's statement is that the administration as between the hospital and the Government is also a factor in the kind of operation the hospital can carry on, and therefore its service to the patient.

Mr. KERR. In other words, the Senator from New York takes the position that a hospital would give a patient better service if Blue Cross were paying the hospital for the service than it would give if the Government were paying it for its service, although the money in both instances would come from the Government—in the one instance through the Blue Cross, and in other instance direct.

Mr. JAVITS. The Senator from New York does not take any such position in terms of the personal bedside service that a patient might get. The Senator does take that position in terms of efficiency of operation between a group of hospitals and the Government, if it choose to operate through an intermediary. I thing we have a right to assume that the operation would be smoother for them and, therefore, in those very strange ways which contribute to the satisfaction of a patient, the smoothness of operation between the privider of the service and the Government would, in my view, also benefit the patient.

That does not mean that there would be an orderly around at all times with a bedpan; but in those interesting ways which, in a hospital organization, communicate themselves to patients when things are going smoothly and efficiently, as compared with when they are not, if the hospitals choose to have an intermediary between them and the Federal Government, the operation will go more smoothly, in my opinion, and will be of benefit to the patient.

Mr. KERR. In each analysis, the Federal Government will have to determine whether it will pay the claims or not.

Mr. JAVITS. Yes; it will.

Mr. KERR. In the event it pays the claim through an intermediary, the Government will pay the claim plus a fee. Is that correct?

Mr. JAVITS. That is correct. But I say that for that the Federal Government will get a benefit in the reduction of its own cost of administration and in the greater efficiency, in my opinion, with which, in that particular case—because that is the way the hospitals choose to conduct their business—it would operate with the hospital.

Mr. KERR. Has the Senator heard from Blue Cross as to whether they desire this arrangement?

Mr. JAVITS. I have not. In the first place, this is not my arrangement, so I would not have heard from Blue Cross as to section 1715. The Senator from New Mexico would have to answer as to that.

Mr. KERR. The Senator has sponsored it, has he not?

Mr. JAVITS. I will have to answer for that. It is easy to jump from one to another. We are talking about section 1715. In respect to section 1715,

I am a party to the bill. I believe in it as fully as does the Senator from New Mexico. But as to the direct evidence of communication with Blue Cross, I must leave that to the Senator from New Mexico to answer.

As to section 1716, I can speak, myself. I have done my utmost by consulting those in the field whom I consider to be of very great competence regarding the way in which the Blue Cross operates—and I shall be glad to give the Senator the name of my expert, so that when this option is finally turned out in its final form—for it is not yet in a form which is to my satisfaction——

Mr. KERR. Then the Senator from New York is not yet satisfied with section 1716?

Mr. JAVITS. I am satisfied with its basic principles. I stated the areas in which I am not yet satisfied with it; and we are now in what is, relatively speaking, an early stage of this debate. I have done my utmost to ascertain the principles now incorporated in this option, and the principles which will be incorporated in it when it is perfected. We may differ as to a percentage here or there, but this is now essentially as it will be, as regards the principles and the operating basis, which should interest Blue Cross and other cooperatives, and should also interest the insurance companies. I cannot get them to say now that they will use this. The opposition of all these entities is, as the Senator knows, very deep, but it is sincere. However, I am confident that if we set up a plan which, in the final analysis, will be such that they will be able to engage in it, there will be an excellent chance that they will engage in it.

But I think it is idle to suppose that we can now guarantee the extent to which the option will be exercised. However, the bill is not premised on that. The bill is premised on the opportunity; and we believe the opportunity will be presented in an effective way, so that it can be availed of by those within the complex of these private-enterprise entities.

Mr. KERR. But in order to do that, the Senator is assuming that the language of the bill will be changed, so that it will be acceptable to those who have not yet indicated to the Senator that it is acceptable to them; is that correct.

Mr. JAVITS. I think the changes of language will merely serve to improve a situation which, in my opinion, is already workable.

Mr. KERR. But the Senator has said, with reference to the language now in the bill, that he has not been able to get them to agree to operate under it.

Mr. JAVITS. That is correct; I have not yet been able to get anyone to agree to operate under it. And in my opinion that will be impossible until the bill becomes law, because the opposition of all these entities—their opposition to the bill and to the option and to everything else in that connection—is so deep that they will not agree that they can do anything with it, because they feel—and feel it quite sincerely, I believe—that such agreement by them now would compromise the depth and the intensity of their opposition. So if the standard of judgment is going to be that Blue Cross or the insurance companies will agree that they will use this, if I am going to accept that as the standard of judgment, then I guarantee the defeat of this whole proposition. So I will not do that, and I do not think it is necessary to have it before Senators decide whether they will vote yea or nay on this measure. I think other Senators will have to do what I have had to do, namely, determine on the basis of my experience and all the research I can make that this measure, as it will be passed by the Senate, will be susceptible of use; and thus there will be an option, and an opportunity—but not a guarantee in that connection—for the insurance companies and others actually to utilize the option.

Mr. KERR. Madam President, will the Senator from New York yield?

Mr. JAVITS. I yield.

Mr. KERR. Is the opposition to which the Senator refers—the opposition which he has said is so deep seated—any greater than the opposition the Senator from New York himself expressed in 1960, on the floor of the Senate, in connection with a plan proposed under a social security tax program?

Mr. JAVITS. Yes, I think it is much more deep seated and severe than the opposition I expressed to the social security method of financing, because they do not favor any kind of a medicare bill; and at that time, and to this very day, I am for a medicare bill; and my support of that position is superior to my opposition in the other case, so I have since changed my reason for being opposed to that method of social security financing.

Mr. KERR. But in 1960 the Senator from New York was deeply opposed to the Social Security financing plan, was he?

Mr. JAVITS. I was.

Mr. KERR. And the Senator from New York so expressed himself on the floor at that time, did he?

Mr. JAVITS. Yes.

Mr. CURTIS. Madam President, will the Senator from New York yield?

Mr. JAVITS. I yield.

Mr. CURTIS. Referring to section 1715, on page 41, what organizations or institutions or entities, other than the Blue Cross, can be utilized in connection with that section?

Mr. JAVITS. There are a wide range of organizations that can be. For instance, in New York we have two organizations: one is called Group Health Insurance—GHI; the other is the Health Insurance Plan. They are very large organizations; for example, one of them covers all employees of the city of New York. I believe that probably an organization of that type—and New York is not unique in that respect; there are others, in other parts of the country—could come under that plan. In addition, as the Senator from New Mexico [Mr. ANDERSON] has said, there are many other plans throughout the country—plans of industries and of trade unions—which have the necessary contractual flexibility to come within the purview of these provisions, once the provisions are available to us.

Mr. CURTIS. In reference to section 1716, beginning on page 45, could a newly formed, tax-exempt organization qualify for the purposes of that section?

Mr. JAVITS. If a newly formed organization is tax exempt and is licensed to do business in the State from which it requests approval to operate under that section, it may be qualified.

Mr. CURTIS. Could a newly formed insurance company, without qualifying nationally and without qualifying in whatever percentage is provided in lines 20 to 25, on page 47, qualify?

Mr. JAVITS. That would depend on the definition of "newly formed." A newly formed insurance company with even a modicum of experience—for example, experience of a year or two or three years, which is a rather small amount of experience for an insurance company—could qualify in a State under the percentage provision on page 47, in lines 20 to 25.

Mr. CURTIS. It would have to have at least 10 percent of such payments in that State, would it?

Mr. JAVITS. Yes. That calls for a certain amount of maturity, let us say, on the part of the company. In other words, it could not qualify the day it was organized, unless it could qualify under subsection (B) which requires a determination by the Secretary that the company is national in scope.

Mr. CURTIS. Does the Senator have any idea as to whether the words "10 percent of such payments in such State" refer to premiums or to other payments?

Mr. ANDERSON. I should like to say that a newly formed company which never has written any business obviously could not qualify. But the same thing could happen to such a company that is now happening to the Government Employees Health Plan—where the larger companies which have taken over these risks are allowed to farm out portions of the risks, and they are doing it now; they are doing that under all these policies that are being issued. They have a right to do it, and they do do it.

Mr. CURTIS. That was part of the basic legislation and the contract, was it not?

Mr. ANDERSON. It was required, but I do not think it is in the contract.

Mr. CURTIS. Is it required in this bill?

Mr. ANDERSON. No. We discussed including such a provision; but someone suggested that since they had done it under the other program without such a requirement, they probably could do this without such a requirement.

Mr. CURTIS. But I do not know what the 10 percent requirement on page 47 figures out to. It may be that some sound, established companies which are not now nationally known could not get 10 percent of that business.

Mr. ANDERSON. Let me explain how that version was included. Not every insurance company tries to write insurance in every State. So I tried to find a figure which would be a little more liberal than the one used originally in the Government Employees' Health Act, which provided that the company must be licensed in all 50 States. At one time, Texas passed the Ferguson Act, which

required life insurance companies to invest inside the State of Texas all their assets representing reserves for that particular State. So companies, such as New York Life and Prudential and Equitable, withdrew from Texas; and a whole flood of new companies were organized in Texas to handle that business. Most of the big companies have now gone back into Texas; but for a long time they were out of Texas.

So a requirement that such a company must operate in all 50 of the States would have meant that a big company would have been excluded if it had not been operating in Texas at that time. Then we included the provision about being national in scope; and the provision is that if the Secretary determines the company is national in scope, that will be satisfactory.

The provision in regard to 10 percent comes about in a different way. In many States there are companies which have a large amount of business in a particular State. I think the Lamar Co. is the largest writer in Mississippi—or, at least, it is one of the large writers there. Certainly it would write more than 10 percent of the business there; and, naturally, under those circumstances it would be able to qualify under this 10 percent requirement.

I say very frankly to the Senator from Nebraska that I do not guarantee that 10 percent is the proper figure. Five percent may be better. I do not know.

Mr. CURTIS. It is conceivable that there might be 40 or 50 well qualified, sound insurance companies writing hospital insurance in the State of Nebraska, and very few of them would have 10 percent of the business. Are they to be barred, and are only those which have 10 percent of the business to get in?

Mr. JAVITS. Madam President, will the Senator yield to me on this point?

Mr. ANDERSON. I yield.

Mr. JAVITS. This is one of the areas of the bill which I consider as unfinished. I am delighted to have heard the Senator. I think the figure will be fixed at 5 percent, and not 10 percent. I hope, too, that Senators as deeply interested in this subject as is the Senator from Nebraska will ascertain for us the appropriate information, because we are interested in factual information as to what would be a fair breaking point as between a company operating substantially in a State, and companies that have a very minor or small interest.

Mr. ANDERSON. I tried to bend over backward, as far as a human being could bend, to make sure that there were no exclusions of that nature in the amendment. Not only are the original provisions retained, but 10 percent is quite ample, because if there are 40 or 50 companies located in Nebraska writing insurance——

Mr. CURTIS. They do not have to be located in Nebraska. For example, New York Life, or Prudential, could be writing insurance in Nebraska; and we have a dozen of our own.

Mr. ANDERSON. If the Senator could imagine the Secretary of Health, Education, and Welfare saying that Prudential was not national in scope, he would be imagining the impossible.

Mr. CURTIS. I am talking about a business that asks for it but cannot get 10 percent of it.

Mr. ANDERSON. If the Senator will turn to the next page, it provides:

> In the case of a carrier which is not included in subparagraph (A), (B), or (C), is licensed to issue group health insurance in the State with respect to which it requests approval hereunder.

The situation can be taken care of. If the insurance commissioner says, "It is a small company, but it is being managed by good people, and is well known," it can qualify, and the Secretary of Health, Education, and Welfare can approve it; but it must write group insurance, and not merely individual policies.

Mr. CURTIS. But if the companies do write for groups, they qualify in toto?

Mr. ANDERSON. That is correct.

Mr. CURTIS. I thank the Senator, as well as the Senator from New York, for their great patience.

Mr. ANDERSON. I think the questions of the Senator from Nebraska are entirely proper. In the last few days we have asked hundreds of questions among ourselves.

The question as to which company should qualify was one in which I had a personal interest, because when I launched a company many years ago, I could not qualify under the law. I had to put up money I did not personally have. I had to borrow it and take out a policy on my life to insure repayment of the money.

Mr. AIKEN. Madam President, will the Senator yield for a question?

Mr. ANDERSON. I yield.

Mr. AIKEN. I am wondering if the insurance companies have indicated a desire or willingness to carry on the medicare program under the provisions of the Anderson amendment. Do they generally support the amendment of the Senator from New Mexico? What is their position? I have had communications from them asking my position, but, so far as I know, none of them has indicated to me what its position is, although I can infer, from reading between the lines, they are not happy with the amendment of the Senator from New Mexico.

Mr. ANDERSON. There is a mutual casualty group to which I have made contributions as president of a mutual insurance company, and a few days ago I received from them a vigorous letter telling me how awful this bill was. So I assume it is typical of the sort of comment we constantly receive from all sorts of insurance groups.

When the original Social Security Act was underway, there were those of us who were rash enough to predict it would be a fine thing for the insurance business. That view was not universally shared by those in the insurance business. The Senator from Vermont will recall that.

I pointed out, in that early day, if people were assured that their retirement needs were protected, they would have money to buy life insurance. Many insurance policies were annuity policies for protection of old-age requirements. They were wonderful if the people lived; but if they died there were not many benefits for their families. By establishing social security, the life insurance companies were permitted to show the value of having life insurance. There has been a great increase in pension plans and life insurance.

I predict to the Senator that if this measure is enacted into law, we shall see the greatest expansion of the health insurance business that this country can imagine.

Mr. AIKEN. I know how the Senator from New Mexico feels. He may recall that I worked for the St. Lawrence Seaway for 20 years, and when that law was finally enacted those who worked hardest against its establishment derived the greatest benefits from it. It seems to me the same thing may happen in the case of the medicare bill.

Mr. ANDERSON. My guess is that in the first few years after the bill becomes law we shall see a great expansion of insurance, because once the basic coverage is taken care of, people can always take care of themselves through the Blue Shield or similar plans. We shall see labor organizations getting contracts providing for the very basic needs, and there will be an expansion in the insurance field far beyond what is now in effect.

While the Senator from Michigan [Mr. McNAMARA] was absent from the Chamber, I referred to the insurance plan of the United Auto Workers in which there is specific provision to permit them to expand far beyond what is now in effect.

This will be one of the great blessings of the law. One of the reasons why I have said that, in the last analysis, this measure will be a boon to the medical profession is that there are many doctors who cannot get their bills paid, because when patients get through paying hospital bills nothing is left. Because of the expansion of service provided by this bill to take care of people, they will be able to pay their doctors, and that would be a fine thing.

Specifically, the answer to the question of the Senator from Vermont is that the insurance companies generally are not enthusiastic about this measure. They were not enthusiastic about the first provision. They were bitterly opposed to disability insurance in 1956. It was a horrible thing. It was going to destroy them. The bill passed, and we do not hear a word now against it from anybody. It is a fine proposal. Just as occurred in the case of the St. Lawrence Seaway, we shall find the same thing in this case. People who fought against it will say it is a good thing.

Mr. JAVITS. Madam President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. JAVITS. I would like the world to know that I will stand shoulder to shoulder with the Senator from New Mexico [Mr. ANDERSON] on this bill. Whatever our problems are with the option provision, we will solve them.

Second, I think we have not broken through the hard crust of opposition, which is merely opposition which comes to us from the insurance companies which do not want government in the insurance business. They have not gotten down to what the bill means, the opportunities under it, and so forth.

I would count it as fortunate—and I know the Senator will help us if he can—if we could get some of the insurance companies down to the specific cases of what they can do with particular provisions of the measure, or what they cannot do. That would be most helpful in respect to the drafting of the bill itself.

Mr. AIKEN. One thing which bothers me considerably about the proposal is that the financing involves a tax on people with low incomes, incomes of $5,200 a year or less, whereas there is to be no restriction on the benefits. It seems to me that most of the retired corporation officials of this country have reached the age of 65 and would get the full benefits of the program, without regard to cost. I do not like to see the burden of the cost placed on people with low incomes.

Mr. JAVITS. Madam President, if the Senator will yield to me further, no doubt the Senator from Vermont will remember that I was one of the most ardent opponents of the regressive aspect of financing the proposal through the social security system. I opposed the program at the time it was before the Senate, and some thought at great political risk. I voted against the bill in August of 1960. I am proud I did so.

Madam President, I am thoroughly persuaded that this is the way the people who are in that income bracket would like to have it. If they look at it in that way, from the point of view of a hardheaded, pay-as-you-go approach, it involves a vast source of money, and I do not see how we as Senators could in good conscience say, "We are not going to permit you to do so."

We have not had a plebiscite or a referendum upon the subject, but I say to my beloved colleague that I am convinced that the overwhelming majority of people who are under social security want to finance the program in this way. They take a certain pride in the fact that they would actually deposit the money themselves. I do not see why we should prevent them from doing so, because that is a very hardheaded way of paying for most of the cost of the program as we go along.

Mr. AIKEN. Both the proponents and the opponents of the Anderson amendment have behind them powerful national organizations which perhaps wield some influence on their members. I know a few people who belong to labor unions who perhaps do not agree with the top-level leadership of such unions. I know doctors who have not spoken in ultracomplimentary terms of the AMA, and with respect to whom one gets the feeling that they merely "go along."

I shall listen to the debate as attentively as possible, as it continues. When the time comes to vote, I shall weigh the advantages of the measure as it may then be worded against its disadvantages. I shall vote accordingly.

Mr. JAVITS. I thank my colleague.

Mr. PASTORE. Madam President, will the Senator yield to me at this point?

Mr. ANDERSON. If the Senator does not mind, first I should like to yield to the Senator from Ohio [Mr. YOUNG], who has been waiting.

Mr. YOUNG of Ohio. Madam President, I fully agree with the statement which has been made by the distinguished senior Senator from New York. In 1960 I voted for a medical-care-for-the-elderly program within our social security system. There has never been a doubt in my mind that this is what the vast majority of Americans desire and are entitled to.

The distinguished junior Senator from New Mexico is correct in the statements he has made concerning insurance company executives and the attitude they have taken in the past. In 1949 and 1950 I was a member of the Committee on Ways and Means of the other body. That committee then worked for some 6 months in respect to liberalizing and expanding the social security program. At that time, despite the fine experience which the American people had had from 1935 to 1949 with the social security program, executives of many of the insurance companies of the United States appeared before the Committee on Ways and Means and denounced the great work which was being done in that committee at that time in respect to expanding, liberalizing, and extending the social security system.

Despite their continuing opposition over the years from 1935 to this good hour, the private insurance companies of this Nation have increased their business by leaps and bounds. Years ago, people were not security minded. The social sceurity law has brought about a change in the feelings of the people of this country, and has caused them to become more security conscious in regard to their aging years. That has been a good thing for all, including private insurance companies.

Like the Senator from New Mexico and the Senator from New York, I am sure I am numbered with many people who look forward to the day when the social security law of this country will be universal in its application, when it will adequately cover all who are employed by others and all who are self-employed.

We are undertaking a great work in the Senate in connection with the amendments which have been offered by the distinguished Senator from New Mexico. We are going forward. Under the leadership of the junior Senator from New Mexico we shall provide a great service for the American people. Someday, the executives of the life insurance companies will realize this. More and more the physicians and surgeons of this country who are members of the American Medical Association are realizing the great service provided the American people by the social security laws. I think the rank and file of the American Medical Association are now beginning to realize that they have been on the wrong track in the past and that this legislation is in the best interests of all Americans, including those in the medical profession.

Mr. ANDERSON. Madam President, a great many people who are connected with insurance companies are most sympathetic to what has been suggested.

They recognized that it is probably not wise to advocate this sort of program. I agree with that, because it is a program which sometimes has caused some misunderstanding and at times had led to some abuse.

Many of those people, however, have been extremely helpful in regard to providing information. For example, I wrote to one of the large insurance companies and asked the question, "Has your business grown since the passage of the social security law because people have had money to put into life insurance, whereas they did not have it available before?" I have been provided with much valuable information, showing the tremendous growth of the insurance companies.

Madam President, I yield to the Senator from Rhode Island [Mr. PASTORE].

Mr. PASTORE. Madam President, I should like to add my voice in support of the proposed legislation. I have been in the Chamber only a short period of time, but I have heard most of the colloquy between the distinguished Senator from New Mexico and the Senator from New York. I quite agree that one of the phenomena in regard to the proposed legislation, as pointed out by the Senator from New York, is that the people who are under social security are really the ones who favor this approach to the problem. They want to build up the fund during their productive working years, to provide for themselves in the twilight of their lives, when, most likely, they will be subject to this kind of expense and will not have the available funds with which to pay for it.

There is another amazing thing which I have experienced. I do not know what has been the experience of others in this Chamber, but I have every regard for their sincerity, as I hope they have for mine. When one speaks to an individual doctor—and I have talked with many of them—one finds his position often quite different from the position taken by doctors as members of an organization.

Not long ago I was asked to address the wives of the staff members of a Rhode Island hospital. Our discussion drifted into the question of hospital care. I asked them if they knew what was contained in the pending proposal. Many of them did not know what was in it. When one talked to them about it lucidly and individually, they did not see any objection to the proposal. They did not see how it had anything to do with them. No choice of doctors is involved. There is no question of medical expense involved in the proposed legislation.

The proposal merely calls for hospitalization, and for that kind of hospitalization involved after a certain number of days, as I understand. The sickness

must be chronic in nature before any real benefits will be available to an individual under the proposed legislation; is that correct?

Mr. ANDERSON. I would not use the word "chronic," I would say the sickness would have to be severe.

Mr. PASTORE. How many days would a person have to be hospitalized before he could receive benefits?

Mr. ANDERSON. A person could start receiving benefits the first day, if his bill were large enough. This involves $10 a day as a deductible for the first 9 days. At the present rates of hospital care, that might be not nearly sufficient. The average cost to the hospital has gone from about $9.50 a day in 1946 up to about $35 a day at present.

Mr. PASTORE. In other words, for the first 9 days a person would have to pay $10 a day?

Mr. ANDERSON. The person would have to contribute $10 a day for the first 9 days. The balance of the bill would be paid by the fund. That would be, at the present time, about $20 or $25 a day.

Mr. PASTORE. In other words, an individual would be required to pay out of his own pocket $10 each day for the first 9 days.

Mr. ANDERSON. And the doctor must certify that he had to come to the hospital.

Mr. PASTORE. There would be no featherbedding under that provision.

Mr. ANDERSON. Certainly not.

Mr. PASTORE. Clearly the last place people wish to go is to a hospital. Most people do not want to go to a hospital unless they are really required to go. But for the life of me I do not know why anyone would resist proposed legislation that would assist individuals building up a fund during the time they are employed so they could take care of themselves on their own with dignity when they really need the hospital care after becoming 65 years of age.

The only people who talk about freedom of action and choice are—God bless them—those who do not need it to begin with.

I thank the able Senator.

Mr. KEATING. Madam President, will the Senator yield?

Mr. ANDERSON. I yield to the Senator from New York.

Mr. KEATING. Let me add a point to what the Senator from Rhode Island has just said. Last year, I conducted a poll on health care for the aged which was sent to about 1,050 doctors in New York State. The names were selected at random from the telephone book, 43 percent of them were selected from the city of New York and 57 percent from outside the city of New York. These percentages were selected because that is the voting ratio between New York City and the rest of New York State.

Rural doctors were not included, but 43 percent of the doctors from New York City and 57 percent from Buffalo, Rochester, Syracuse, Albany, and the other principal cities of New York State, were included.

The first question asked was approximately as follows:

Do you feel that the Federal Government has any responsibility in the field of medical care?

Approximately 80 percent answered "Yes," to that question.

The next question had to do with financing which, of course, includes the Kerr-Mills method, the voluntary approach, and financing under social security. I was very much surprised to find that one-third of those who favored a Federal role in this field supported financing under social security. Perhaps it is indicative of the high level of interest in this issue that over 50 percent answered the poll, which is considered a very high percentage.

Mr. ANDERSON. Very good.

Mr. KEATING. Approximately 500. Of those who felt that there was a responsibility on the part of the Federal Government, one-third said that they thought that it should be financed under social security. This is a little addition to what the Senator from Rhode Island has said.

I believe it would be fair to say that probably the large majority of doctors are opposed to this proposed legislation, even in its revised form. But I do not think their opposition is as intense as it was to the original bill. At least, I hope not.

As my survey and other similar polls have shown, there is a very substantial body of doctors who feel that the sound and proper method of financing medical care is under social security.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. PASTORE. We continue to refer to "medical care." That is farthest away from what the bill provides.

Mr. ANDERSON. The Senator is correct.

Mr. PASTORE. It is really a hospital care program. That is all it amounts to. It would not pay for doctors. It would not prohibit, restrain, or compel the choice of a doctor. The bill merely provides for hospital care, and for the first 9 days of hospitalization an individual would have to pay $10 a day out of his own pocket.

Mr. ANDERSON. The Senator is quite correct. We should get away from using the term "medical care."

Mr. PASTORE. It is not medical care.

Mr. ANDERSON. The hospital is the center of all medical care. For that reason it is important to get patients into a hospital early. They must realize that they should be in the hospital. We should make it possible for doctors to send patients to hospitals in time to do some good for the patients. I think it is a fine thing that doctors are coming to accept that idea.

I was surprised when the medical society in my hometown decided to conduct a poll on the question. Then the problem arose as to whether it should be a secret poll. The idea was opposed, but finally a secret poll was agreed upon. I was satisfied with the number who believe that the proposed program might be a successful approach.

I wish to return to one of the principal points I have made. People in the classes concerned would tax themselves for the benefits proposed. The social security benefits are what the worker really wants. He wants the help without a means test, and he knows that he can get the assistance he will need in later years.

A short time ago testimony was received that persons at lower earning levels would receive a greater return for their contribution than those at higher earning levels because the benefit formula is weighted in favor of those at the lower earning level. Under the health care proposal a worker earning $2,400 a year would pay $6 in increased taxes and a worker earning $4,800 a year would pay $12. Both would receive the same health insurance benefits. Thus the proposal would add an additional factor favoring the low-income worker.

We have had a great deal of discussion as to the plan. I was in a doctor's office talking to the doctor about my difficulties one day. On his desk lay a pamphlet entitled "Medical Aid for the Aged." Naturally I had more than passing interest in it. I picked it up, read it, and asked him if I could put it in my pocket. I did. I carried it with me. Those pamphlets are what the American Medical Association was putting out. These are further reasons why we believe socialized medicine for the aged should be rejected.

Those who have joined in trying to have a bipartisan approach to this question have tried to write into the bill a provision that would make sure that it would not be regarded as socialized medicine. There are provisions in the bill with respect to the selection and accreditation of hospitals. We put the provisions on the highest possible basis.

Accreditation by a committee would be required. Accreditation would include credentials from the American Hospital Association, the American Medical Association, the American College of Physicians, and the American College of Surgeons. There is no way in the world that someone could call that an attempt to build up socialized medicine.

Mr. MILLER. Madam President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. MILLER. I should like to cite to my good friend the Senator from New Mexico an example and see how the bill would affect the example. Incidentally, it is an actual case. The case is that of a young man, age 25, married, with two children, working at a job, covered by social security. He came down with multiple sclerosis, which in that particular case went on for about 8 years before he passed away. During practically all of that time he was completely bedridden. What would be the coverage that he or his family would receive under the amendments of the Senator from New Mexico?

Mr. ANDERSON. I am sorry. It is a bill for aged. It is not a health care program.

Mr. MILLER. I was wondering if, because of the fact that the young man became eligible for disability benefits under the social security system, there would be any provision in the bill that would cover him?

Mr. ANDERSON. I say again to the able Senator from Iowa that the amendments do not set forth a general health protection program. A person 25 years old would not be covered by a bill that provides for health care at the age of 65.

Mr. MILLER. There is no provision in the bill for coverage of someone under the age of 65 who becomes eligible for social security benefits on account of disability, then?

Mr. ANDERSON. Only his widow when she is 65 years of age, under the bill.

Mr. MILLER. I wished to ask that question of the distinguished Senator from New Mexico because I wanted to be absolutely sure that my impression was correct. My impression was that the man assumed in my example would not be covered.

Mr. ANDERSON. If we were to attempt to write a complete program of universal medical coverage, we could not do so with an addition of one-quarter of 1 percent to the social security payments. That is why we must hold to those things that can be covered.

There are many instances of the nature described by the Senator from Iowa that are very difficult. I received an account of one today in my mail. We get them constantly. The case to which I refer is that of a woman 45 or 48 years of age. She had been saving to send her boy to college. She had enough money to start him into school and was well satisfied with the situation. She is a widow. A short time ago she discovered that she had cancer. All the funds that she had set aside for the son's schooling are now gone. She said, "What can I do for my boy?"

Those are tragic instances. No one can wipe them away or laugh them away. At the same time it is not the purpose of the bill to try to control all the things that happen in a society.

Mr. MILLER. The point I should like to make is that we should really try to base the benefits of the bill on a financial need basis instead of extending them to millionaires as well as to poor people, and that we might arrange to cover the catastrophic situations such as the one that I have given. Several other situations have been brought to my attention which I hope to bring before the Senate before the debate on the amendments is completed. My point is that we have these catastrophic situations confronting us which, I believe, every Member of the Senate would like to have covered and which, as the Senator from New Mexico has said, we cannot cover at one-eighth of 1 percent contribution, if we are to have complete and general coverage. I believe we could cover situations like that if we were to limit the benefits to those who actually need them, rather than to give them to everyone, rich and poor alike.

Mr. ANDERSON. A great deal has been said about the fact that the bill would cover millionaires. I say to the Senator from Iowa that men with very large incomes already have all the protection they need when they get past 65. Once a person become 65, his entire doctor bill is deductible, as I discovered when I celebrated my 65th birthday, and as I have enjoyed since. Shortly after I became 65 I went to a very good dentist who built a small model of the Taj Mahal in my mouth. I worried about it. I thought he was taking in more territory than he should. As a member of the Committee on Interior and Insular Affairs I wanted to confine him to a restricted area. However, he took in a very substantial area and fixed things up in a fine fashion. When I got the bill I was not very calm about it. I thought it was more than it should be. I pointed that out to my wife. She, having more sense than I have, said, "Have you stopped to consider that you are past 65 and that this bill is deductible?"

The reduction for what the Senator says is a millionaire past 65 can run to 91 percent of the bill. Many people in the lower income tax brackets would like that too. It is not much satisfaction to a man who is well supplied with money to have this new benefit come to him. One might make that same statement with reference to the whole social security system in general.

Mr. MILLER. If it is not much satisfaction, why do we enact legislation to give them that benefit?

Mr. ANDERSON. We do not legislate for the benefit of millionaires. We legislate for the benefit of all people who are past 65. In that way we deal with people who may have a $50,000 income, who constitute three-tenths of 1 percent of all of those who are eligible under OASI. For those who have incomes of over $10,000 or more, it is only 3 percent. The other 97 percent are the ones for whom we legislate. We cannot help it if three-tenths of 1 percent get under the tent and are eligible for the benefits. I do not expect them to ask for it. I am told that there is a man in the Senate who, if he wanted to, could go out to Walter Reed and have certain sections of his anatomy removed, and the Government would take care of the bill. I believe there is historic precedent for that, for men high in Government. Not so long ago I had my gall bladder taken out. I went home and had my own physician take it out in a church hospital. I felt I got value received for my money. I also concede that it was deductible. I am not too worried about this general situation. There are men in the Senate who are eligible to retire from the Senate with large retirement pay. I suggest that the Senator from Iowa go to them and say, "Why don't you retire? You can draw your money." Those men still stay here. They do not quit. I understand there is a Member of the Senate who is not only past 60, but is past 70, and he might even be past 80, and is, for all of that, a rather young man. I would not suggest that he retire and draw the maximum of his retirement pay. He seems to be vigorously pursuing a political career and I hope he will be reelected.

Mr. MILLER. I did not intend that our colloquy should enter the field of the retirement of our colleagues in the Senate. What I should like to bring out is that we have it within our power to draw the pending bill in such fashion as to keep these benefits from going to waste, from going to those who do not need them. We could with the same stroke of the pen, so to speak, provide for coverage for a catastrophic situation of the kind to which I have referred, but which the bill does not cover. In that way we would be doing much more equity than by providing general coverage. It is not enough to say that if inequities result, and some of this money goes to people who do not need it, that is the way it is. It does not have to be that way. We have the ability to do something about it.

Mr. ANDERSON. I do not know exactly how we could write a bill to provide that benefits should be available to all who earn them, but that anyone who does not need them or does not want them, does not have to take them.

Mr. MILLER. The Senator has said that workers do not want a means test. I attended a meeting in my hometown of Sioux City, which was attended largely by workers. At that meeting they sought my support of the King-Anderson bill. However, when I pointed out that the benefits would go to those who did not need them, as well as those who need them, and when I pointed out the case that I related here, the strong consensus of that meeting was that benefits ought to go to those who need them. It may be that some other groups do not believe there should be a means test. However, if by having a means test we could reduce the benefits that would go to those who do not need them and turn those benefits over to victims of catastrophic situations of the kind I have outlined, I believe we would be doing equity. I cannot see why people would object to a means test if that were the end result of having such a provision in the amendment.

Mr. ANDERSON. The Senator says, "If that were the result." If it were the result, that would be one thing. The amount of money that we would save by a means test for people who have large incomes is negligible. In the first place, they do not claim the benefits. That has been proved to be the case many times. There are Senators who probably are entitled to a great amount of retirement pay. They are not worried about it. Senators have left the Senate and have not drawn their retirement pay. Not all people draw these amounts.

Mr. MILLER. I am not advocating a means test for those who have a $50,000 taxable income. I would go much lower than that. In that way more benefits would be available for catastrophic cases.

Mr. ANDERSON. How low would the Senator go?

Mr. MILLER. I have not reached a determination on this point but I would say, for example, that we might relate this to the amount of income which re-

duces the social security benefits. The Senator knows that if a person is over 65 and has income of a certain amount, he does not get social security benefits. I believe we might interrelate this matter.

Mr. CURTIS. Madam President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. CURTIS. It is not an income test. It is a work test. An individual can have an unlimited income and still draw his social security. It is, by ruling, tax free. I have never heard of anyone declining it, contrary to statements that have been made.

Mr. MILLER. I appreciate the Senator's clarifying that point. I recognize the fact that it is a work test. My answer to the Senator from New Mexico would be to tie the amount of income under the work test into what we have been talking about.

Mr. CURTIS. Is it not true that an income test is applied to every veteran of the United States who has served in the military forces for his use of a veterans' hospital, unless his disability is service connected?

Mr. ANDERSON. I think that is correct.

Mr. CURTIS. Does that test also apply if the disability is service connected?

Mr. ANDERSON I do not know.

Mr. CURTIS. Does the Senator know what the income test is?

Mr. ANDERSON. It does not apply if the disability is service connected.

Mr. CURTIS. Does the Senator know what the income test amounts to?

Mr. ANDERSON. I do not.

Mr. CURTIS. Would the Senator agree that so far as all persons who are now retired are concerned, they will not have contributed anything to the hospital trust fund, assuming they continue to be retired?

Mr. ANDERSON. This situation has occurred over and over again. Congress passed a disability provision in 1956. The people who were able to take advantage of the provision had not contributed anything to the system.

Mr. CURTIS. But an individual who had been disabled all his life could not take advantage of it. He had to have a certain social security experience.

Mr. ANDERSON. Not on the social security level. We do not say this shall apply to future cases.

Mr. CURTIS. I do not take that point of view. I am referring to the present retired veterans of the country. Under this provision, if it passes as written, the present retired veterans would get hospital benefits far more liberal than the veterans of the country can avail themselves of under veterans' laws.

Mr. ANDERSON. Veterans can get hospitalization under veterans' laws.

Mr. CURTIS. Not without meeting an income test. The burden is on the veteran to trace his disability all the way back to his military service; and if he cannot meet that test, he must meet an income test before he can receive hospitalization in a veterans' hospital. While that is our historic policy with the veterans, the proposal of the distinguished Senator from New Mexico would take all of the present retired aged and make hospitalization available to them.

Mr. ANDERSON. The question of veterans' benefits is a complicated one. I believe the provision is that if a veteran applies for hispitalization and says, "I cannot pay," even though he may have other income, he is admitted to a veterans' hospital on his mere statement that he cannot pay.

Mr. CURTIS. It is true that no rigid inspection audit is made. It is assumed that most applicants are conscientious persons. I am sure they are. But if they have income over a certain amount and reveal that fact, they cannot be taken care of in a veterans' hospital if the disability is nonservice connected.

Mr. PASTORE. But if a veteran is now over 65 years of age and is collecting social security for a non-service-connected disability, he can certainly come under this program.

Mr. ANDERSON. Surely.

Mr. CURTIS. If he has been disabled through the years and has never earned any social security credit, he cannot come under the program. But an individual who is already retired and who has not paid a dime into the hospital trust fund may come in.

Mr. PASTORE. That is correct; and the benefit cannot be cut off. How can it be measured? A person who is now 63 years old, or 60 years old, and is paying social security, will continue to pay for 2 or 5 years. Yet someone else, who is 21 years old, will be paying for many more years. If we started to scale the benefits down in that way, we would never reach a point of equity. It must be one way or the other.

It is true that under this amendment anyone who is now collecting social security—and this deals with whoever is entitled to this benefit after 65 would benefit.

It may be argued that they have not made a contribution.

Mr. ANDERSON. Virtually everybody over age 65, or who has attained age 65, would be taken care of.

If he were in a veterans' hospital, he would not be taken care of by social security. If he were not in a veterans' hospital, he would be eligible under social security.

Mr. CURTIS. If he does not have eligibility for social-security benefits, is not the hospitalization dependent upon appropriations?

Mr. ANDERSON. No; the person would be blanketed in under the bill.

Mr. CURTIS. He would be blanketed in under the bill; but where would the money come from?

Mr. ANDERSON. From the general fund of the Treasury.

Mr. CURTIS. Does the Senator anticipate annual appropriations?

Mr. ANDERSON. No.

Mr. CURTIS. How would the money be forthcoming?

Mr. ANDERSON. The Government would pay this bill in the same way it pays the Kerr-Mills bills. How are those paid?

Mr. CURTIS. I believe it is by annual appropriation.

Mr. ANDERSON. I am sure that if there is a provision which requires annual appropriation, it will come up; but the beneficiaries would be blanketed in under this program, the same as anyone else.

Mr. CURTIS. And the payments would be subject to annual appropriation. Their neighbors, who likewise do not pay anything into the hospital trust fund, could draw on the hospital insurance trust fund.

Mr. ANDERSON. I think this is exactly the same situation as that under the Kerr-Mills law. The States are allowed to advance money under Kerr-Mills. The Government promises to pay it back, and it does. No money is provided in the act, but Congress always provides the money, and it would do so for this proposal.

Mr. CURTIS. The Senator from New Mexico has been very generous in yielding. I appreciate that, because I freely admit that I did not favor holding hearings on this proposal prior to passage by the House.

This is what I find hard to reconcile in the bill. It means that employees and employers and the self-employed, which includes the whole army of young people who are buying homes, sending their children to college, and paying their own medical bills, will be taxed to pay the hospital bill, or a portion thereof, under this measure, for everyone, just because he has passed an artificially fixed age. It is conceivable that many of the payers are far less able to pay that bill than the beneficiaries.

Mr. ANDERSON. The Senator from Nebraska voted for the Kerr-Mills law.

Mr. CURTIS. Yes.

Mr. ANDERSON. Under the Kerr-Mills Act, the same thing happens. Health care is paid for by the general taxation of the country. This bill merely provides for a start in the making of social-security contributions.

Mr. CURTIS. When people pay through general taxes, they pay according to their income. The recipients, while not complete paupers, are unable to bear the expense of costly illness, and I agree that that is the concern of government.

Under the Kerr-Mills Act, if a costly prescription needs to be filled, it can be filled. If hospitalization is needed, or if a nurse is needed to call at a home, that can be taken care of.

But under this proposal, the Government will embark upon a system in which the young and the middle aged, the producers, and the farmers, who cannot pass their social security tax on to anyone else, will have to pay the hospital expense, or a part of it—and I hope that question will be discussed at a later time, because I do not know how much good this bill will do unless it can be enlarged a good deal—of people who have reached a fixed age, many of whom are more able to pay that the payers.

Mr. PASTORE. The Senator from Nebraska has brought up a very important point. I do not know what the experience of the Senator from Nebraska

has been. It is true that a young man who is now 25 years old and will start to pay toward the benefits cannot hope to gain anything under the act until he is 65. That is also true of middle-aged people. But I have not received one letter from such an individual who has opposed the proposed legislation. I invite any Senator to produce such letters. The remarkable thing is that objection has not come from those people.

I have received letters from people who themselves have fathers and mothers who might become subject to this measure. But I have not received one letter from anyone who is below age 50 or 55 or 60 who is opposed to this type of legislation on the ground that he would be paying for benefits which someone else would receive.

Mr. CURTIS. I have received such letters; but regardless of that, is it not true, if we are to be realistic, that this will be the beginning of a system; that it will be expanded to include more hospital care; that it will be expanded to include medical care; and that the age limit will be lowered? With millions of people paying, the money will be going, perhaps, to three-tenths of 1 percent of the people who come within a very high income category. I do not know whether it is three-tenths of the aged, or what percentage it is.

Mr. ANDERSON. All those who are over age 65.

Mr. CURTIS. I daresay that the income position of many persons aged 65 and over is far better than the income, property, and debt positions of individuals who are educating their youngsters, buying their homes, and paying all of their own hospital and medical bills.

Unless this bill is to be enlarged sufficiently to take care of everyone and to take care of all their expenses, it will never satisfy the American people. After all, a hospital bill of not more than $10 for 9 days is nothing. The point is that the costly things—such as the miracle drugs, and I am for them—are not covered at all by this measure.

So this is only a beginning, similar to the beginning which was made in Britain and in various other European countries. It is the beginning of a government system of medical care—at this time, only hospital care; but it is the beginning.

When Britain began its system in 1947, they had 1 doctor for about every 800 people; but today in Britain 1 doctor has to serve twice that many people.

Mr. PASTORE. Such statements were also made at the time we passed the Social Security Act, and also at the time we passed the unemployment compensation law. But, fundamentally, if the people of the United States want this program expanded after this beginning, what is so wrong about that? If the people of the United States want to pay for their hospital care by means of such insurance, in this fashion; and if they want this program, after they embark on it, to pay for more than hospitalization, what is wrong with that, if they want to pay for it?

Mr. CURTIS. Because it will ruin the free practice of medicine in this country.

Mr. PASTORE. I do not believe that for 1 minute. Certainly, among all the segments of our population, the doctors are well off, and make good incomes. In many instances they receive their education at public expense; the taxpayers pay for it. And I am happy that medical students are helped. I do not expect the doctors to go bankrupt 10 or 15 years from now, merely because we pass this law.

Mr. CURTIS. No; but I am talking about the patients. Why is it that all the countries of Europe that have government medicine no longer attract young doctors to go there to study and to practice. Instead, they come to the United States.

Mr. PASTORE. I would not say that is true.

Mr. CURTIS. I think it is.

Mr. PASTORE. There are many doctors in other countries. We do not have enough doctors here. Does the Sentor from Nebraska know why?

Mr. CURTIS. We have 1 doctor for every 750 of our people.

Mr. PASTORE. Does the Senator from Nebraska know why we do not have enough doctors in our country now? It is because over the past 25 years our medical institutions have not kept pace with the explosion of our population. Today we are graduating only as many doctors as we graduated 25 years ago.

Mr. CURTIS. We have as many doctors now as we had a few years ago; we have 1 doctor for every 750 patients. But the curve has gone in the opposite direction in any country that has a government system.

Mr. PASTORE. But I cannot contemplate that the doctors of this country will become paupers or bankrupt or discouraged merely because we are providing hospital care for sick people.

Mr. CURTIS. Neither do I; but I see poor service for the patients developing.

Mr. PASTORE. I do not see that at all.

Mr. ANDERSON. Madam President, as regards the doctors in Britain, I wish to say a few words. Let me refer to an article in which it was stated that doctors were leaving Britain in great numbers, and so forth. Dr. Robert Platt, president of the Royal Academy of Physicians, carefully investigated that allegation. In an article published April 1962, in the London Times, he pointed out that the figures developed in connection with that study were somewhere between 400 percent and 800 percent in error, and that among the reasons why the figures were in error was that doctors from the Irish Republic had been included, although of course the Irish Republic is not part of Great Britain. Those doctors study in Britain, and then return to Ireland. In addition, a great many medical students come to Britain from parts of what used to be the British Empire—for example, from areas such as Iran, Iraq, and other areas which always have been close to the British Empire. They come to Britain and study medicine, and then return home; but when they return home, they are included among the doctors alleged to have migrated from Britain.

I think one of the best articles I have seen in connection with this field was written by Robert H. Eastabrook, whom I admire and like very much. The article was published in the Washington Post on June 14. He wrote the article from London, where he has been observing for some time. The article is entitled "Britain Likes Its Medical Program." I ask unanimous consent that the article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, June 14, 1962]

BRITAIN LIKES ITS MEDICAL PROGRAM

(By Robert H. Estabrook)

LONDON.—How good is Britain's National Health Service? The question is pertinent in connection with President Kennedy's far less sweeping medical care plan for the elderly, and particularly with the many references to social medicine. Perhaps the fairest answer is: better than what the great majority of people had experienced beforehand.

Even today the National Health Act of 1946 is cited as the crowning achievement of the postwar Labor government. Under it all residents became entitled to "free" medical and dental care, medicines and hospitalization. Doctors, dentists and druggists were enrolled. Virtually all dentists and all but about 600 general medical practitioners participate, although some also retain private practices.

Patients are encouraged to select "family doctors." They are thereupon entitled to medical and dental consultation, surgery by specialists when necessary, ambulance service, blood transfusions, and rehabilitation. Hospitalization ordinarily is in general wards but private rooms may be rented when available for $3.45 a day.

Certain modifications in free services have become necessary. There are now minimal fees for prescriptions, glasses, dentures and appliances as well as for house calls, partly to discourage abuse. Employed persons also pay a special weekly insurance fee.

The system is financed 69 percent by national government appropriation, 12½ percent by insurance fees, and 8½ percent by local taxation. Direct charges to patients account for only about 4½ percent. Total expenditures of some $2.6 billion amount to about $50 per person per year. Doctors and local committees have a say in management of the program and in community health services.

Professional men are paid by the government on the basis of the numbers of patients on their lists. Payment to doctors and dentists are set to yield average yearly incomes of around $6,800 and $7,000, respectively. The typical doctor in National Health Service has a patient list of 2,300 persons. Additional payments are made to doctors with smaller lists and to those getting started.

In practice there are, of course, some shortcomings. Hospital facilities are still inadequate for the demand, and staffs are underpaid. Patients complain of delays for selective surgery, though not for emergency care. Perhaps in part because of too low a fee schedule there is a shortage of new doctors; there are charges, vigorously refuted by Minister of Health Enoch Powell, that dissatisfaction has caused substantial emigration. Despite the introduction of fees, costs of the program have continued to rise and are now double those of a decade ago.

Among the most comprehensive critiques is a study by Dr. D. S. Lees published by the Institute of Economic Affairs. Dr. Lees cites the inadequacy of medical and dental training and hospital building programs as evidence of the drawback of centralized control and reduced freedom to innovate. There is no proof, he says, that the general health improvement is attributable to National Health Service.

Dr. Lees also contends that the market is superior to the ballot box as a means of demonstrating consumer preference; he protests that the National Health Service eliminates individual decisions on how much to spend for medical care. He suggests that the program move away from free services to an insurance system that would reimburse doctors in private practice, as in some Scandinavian countries.

Lack of public awareness of costs is probably the most serious criticism. Doctors and dentists also could object that National Health Service makes them, in effect, public employees with their remuneration dependent upon Government fiat. Bureaucracy can be infuriating, and one hears occasional grumbling by doctors and patients alike. Some persons elect to go outside National Health Service when speed or delicate care is essential. At the same time, eligible foreigners who use National Health Service often are pleased by the service.

One point stands out, apart from arguments over principle and quality: There is remarkably little complaint that National Health Service has destroyed the doctor-patient relationship which the American Medical Association holds so sacred. Indeed, some authorities contend that this relationship has been improved by removal of the financial barrier. Criticisms must be weighed against relief from personal money worries.

In short, even with its faults most Britons seem proud of their National Health Service. Almost never is anyone encountered who wants to repeal it and return to the old system.

Mr. ANDERSON. The Senator has stated that the age would be lowered. But I do not think so, because those who still are at work want to keep the age level where it is. Voluntary insurance is doing a good job for these people.

As regards establishing an income test, that would tend to undermine the present cooperative relationships we have with the private plans, and there are more than 30,000 of them. The qualification provisions in connection with them are very liberal—just as those for many other private plans are. For example, the automobile industry has a liberal retirement program; and those who receive pensions would, under this means test, be eligible to receive medical care. I can see nothing wrong with using these plans, which apply during their working years, so that after the workers are 65 years of age, they can receive this care.

Mr. MILLER. Mr. President, will the Senator from New Mexico yield?

The PRESIDING OFFICER (Mr. METCALF in the chair). Does the Senator from New Mexico yield to the Senator from Iowa?

Mr. ANDERSON. I yield.

Mr. MILLER. The point was made that if the American people want this, we should give it to them. But my mail is running about 10 to 1 against the King-Anderson bill. I do my utmost to try to ascertain whether the letetrs are the result of spontaneous desires to write to me, or whether they are the result of requests by organizations that such letters be sent to me. I must say that my best evaluation of my mail on this subject indicates to me that although there is concern about meeting the hospital costs and nursing-home costs of our elderly people who cannot afford to do so—and there is no question about that, the great preponderance of those who are writing to me and those with whom I have visited in my State—which, as the Senator knows, has a very high ratio of its population in the older age brackets.

Mr. ANDERSON. But most of those are living in California.

Mr. MILLER. No, I must advise the Senator that although a great many of them have moved to California, and also to his great and beautiful State, there are still enough of them left in Iowa so that the ratio in Iowa of these senior citizens is much higher than the national average—in fact, very near the top. And the majority of those whom I have contacted have indicated to me that they do not want the King-Anderson bill—principally, I would say—although not necessarily only—because of the fact that it would extend these benfits to those who do not need them, those who can afford to handle them, at the cost of diluting the benefits which would go to those who do need them, and also at the cost of not covering some of the catastrophic situations to which I have referred.

I am sure that if there were a test vote, among the people of my State, as to whether they want to have cases, such as the catastrophic multiple-sclerosis case to which I have already referred, go by the board and not receive any coverage, or whether they wish to have benefits provided to a great many persons who have sufficient income to meet the costs of hospital and nursing-home care, their votes would be against the latter and in favor of the former.

That is why I point out to the Senator that I wish something would be done perhaps to tie in or interrelate the receipt of these benefits with the working-test rule of social security, so there would be sufficient funds to take care of the catastrophic cases, regardless of the age. When catastrophe strikes, it knows no age; and it seems to me there is a duty on the part of the Government to take care of catastrophic cases, when the persons involved do not have the wherewithal to meet the costs.

I thank the Senator from New Mexico for yielding to me.

Mr. ANDERSON. Mr. President, I yield the floor.

PUBLIC WELFARE AMENDMENTS OF 1962

Mr. MANSFIELD. Mr. President, is there further morning business?

The ACTING PRESIDENT pro tempore. Is there any further morning business? If not, morning business is closed.

Mr. MANSFIELD. I ask unanimous consent that the unfinished business be laid before the Senate and made the pending business.

The ACTING PRESIDENT pro tempore. Is there objection?

There being no objection, the Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the Morton amendment in the nature of a substitute for the Anderson amendment.

Mr. ROBERTSON. Mr. President, good health is vital to our economic as well as our physical strength. That is true not only for the elderly but also for the middleaged and the young. There is much wisdom in the saying that "the health of nations is more important than the wealth of nations."

In this country, inflation has hindered our ability to attain and preserve good health. Although personal incomes have increased, medical costs have risen even faster. Other living costs have gone up, too. These developments have made it harder for people with limited savings and income—including the elderly—to meet their medical expenses.

To benefit persons aged 65 years and over, the proposal now before the Senate would inaugurate another Federal health insurance program, even though a Medical Assistance for the Aged Act was passed as recently as 1960. This proposed program—to be financed largely by increasing taxes and coverage under the social security and railroad retirement systems—would do nothing to retard or reverse the rapid rise in the cost of medical care. On the contrary, it would tend to underwrite whatever the prevailing level of medical expenses might be. Rather than help to reduce medical costs, the proposal would shift the prevailing cost burden to favor one segment of the population selected solely on the basis of age rather than of need.

For these and other reasons that I shall mention later, I oppose this proposal. I urge my colleagues to do likewise.

We do not suffer today from any shortage of health insurance protection plans. Numerous plans and programs are now in operation. More and more persons, including the elderly, have been coming under private health insurance plans offered by many types of insurers. These programs may take the form of Blue Cross or Blue Shield plans, guaranteed renewable-for-life policies, prepaid group practice programs, pension plans, veterans benefit programs, old-age assistance plans, and many others.

Two years ago, the Medical Assistance for the Aged Act, Public Law 86–778, was approved. This Kerr-Mills law authorizes 50- to 80-percent Federal grants to States to help "furnish medical assistance on behalf of aged individuals who are not recipients of old-age assistance but whose income and resources are insufficient to meet the cost of necessary medical services." I supported that legislation. I believe that it is entitled to a fair trial in the field before any new scheme may be considered seriously.

The Kerr-Mills law was signed on September 13, 1960. It has been in effect only a short time. Yet the Senate is now asked to pass upon an additional plan that would go far beyond this existing legislation.

The features of the proposal differ drastically from the Kerr-Mills law provisions that were approved by the Congress and the President. The proposal would be financed largely through the social security and railroad retirement systems; the Kerr-Mills law is financed solely through appropriations. The proposal would cover nearly all persons aged 65 years and over, regardless of need; the Kerr-Mills law limits aid to elderly persons, not receiving old-age assistance, who are needy. The proposal would cover only a portion of the average medical costs that elderly persons are likely to incur even during a limited period of time; the Kerr-Mills law is designed to be more inclusive. The proposal would require little administrative participation, and no financial participation, by the States; the Kerr-Mills law works solely through the States which must contribute from 20 to 50 percent of the total assistance. The proposal would involve expenditures estimated to exceed more than $1 billion in the first year, and billions more later—far in excess of outlays under the Kerr-Mills law.

Despite its novel features, this proposal has been brought up without any formal prior consideration by the Senate. The health insurance proposal was first introduced early last year (S. 909), but no hearings on it have ever been held in the Senate. Several new amendments to this proposal were first set forth in the CONGRESSIONAL RECORD only a few days ago. No hearings have been held, either, on these amendments.

We have had no chance to examine publicly through hearings how far the proposal might go in extending Federal control as well as Federal aid over the entire field of medicine. We have not been able to find out how the proposal might affect the operation of our medical institutions, the quality and type of medical services, the charging of medi-

cal fees, or the degree of free choice that beneficiaries would be permitted, by regulation, to exercise. We have no public record in the form of Senate hearings to guide us.

Even without the benefit of Senate hearings on the proposed program, I have serious reservations about the use of compulsory payments under the social security and railroad retirement systems to underwrite a health insurance scheme based on age rather than need. The billions of dollars in expenditures that would be made under this program would have to be offset by billions of dollars of additional taxes raised largely from social security and railroad retirement contributions. Yet even if this proposal is not adopted, a substantial increase in such taxes is already scheduled.

At present, the social security contribution rate payable by employers and employees is 3⅛ percent each upon the first $4,800 of wages and earnings, or a combined total of 6¼ percent. The rate payable by the self-employed is now 4.7 percent. Beginning next year, existing law requires these rates to be increased from time to time until the year 1968. By then, both employers and employees will be taxed at a rate of 4⅝ percent, or a combined total of 9¼ percent. The self-employed will be paying 6.9 percent.

High as these tax rates are, the proposed health insurance program would levy an additional combined tax of one-half of 1 percent, to be shared equally by employers and employees, and an additional tax of three-eighths of 1 percent upon the self-employed. The maximum amount of annual wages and earnings subject to the social security tax would be raised to $5,200 from the present level of $4,800.

Under the railroad retirement system, the current tax schedule calls for a combined rate of 14½ percent upon the first $400 of monthly earnings, to be shared equally by contributions from employers and employees. Starting in 1965, these rates will be raised at intervals until the year 1969. By that time, both employers and employees will be paying 9⅛ percent, or a combined total of 18¼ percent. An additional combined increase of one-half of 1 percent would, of course, be required under this proposed health insurance program, plus an increase in the wage base to cover beneficial benefits.

Despite the high contribution rate under the railroad retirement system, a substantial actuarial deficiency now exists in the railroad retirement account. At pages 8 and 9 of the Railroad Retirement Board's 1962 Annual Report, it is stated:

> Actually, as indicated by the recently completed triennial valuation of the system, there was an actuarial deficiency on December 31, 1959, amounting to 1.69 percent of the level taxable payroll, equivalent to $73 million annually. Adjustments for the 1961 Amendments to the Railroad Retirement and Social Security Acts and for the actuarially insufficient tax rates during 1960 and the first half of 1961 have increased the deficiency to 1.79 percent of taxable payroll, or $77 million a year, as of June 30, 1961.

The proposed health insurance plan would do nothing to improve the situation.

In summary, the health insurance proposal would be financed through the social security and railroad retirement systems by levying heavier taxes and by broadening the tax base. These additional taxes would be imposed even though social security taxes of as much as 9¼ percent for employers and employees combined, and 6.9 percent for the self-employed, are scheduled under existing law to take effect only 6 years from now. Part of this scheduled increase in social security taxes will come into operation next year, at the very time the administration has indicated that general income taxes should be reduced.

Additional taxes would also be levied under the railroad retirement system, even though contribution rates of as much as 9⅛ percent each for employers and employees, or a total of 18¼ percent combined, are slated under the existing law to be imposed only 7 years hence. The additional health insurance taxes would not ameliorate the existing actuarial deficiency in the railroad retirement account—a deficiency which might well be offset only by raising contribution rates still more. All these taxes, of course, would be payable along with regular corporation and individual income taxes.

Heavier taxes toward financing the proposed health insurance plan would be imposed only upon contributors to the social security and railroad retirement systems. Persons not covered by either system would pay no direct contribution, although nearly all of them would be eligible for a full range of medical insurance benefits. For these persons, the cost of the health insurance program would be financed through appropriations from the general fund of the Treasury. In the first year alone, the estimated gross cost to be met from appropriations would come to about $250 million. It is said that part of this cost would help to offset Federal medical care outlays that otherwise would be made under existing public assistance and veterans' programs.

As a result, persons contributing toward social security or railroad retirement would pay more than their fair share for the health insurance plan. They would pay once through increased taxes under social security or railroad retirement. They would pay again through general income taxes.

All these taxes would go toward supporting a massive compulsory insurance program, whether or not contributors needed coverage. Rich and poor alike would receive equal consideration, regardless of their ability to meet their own medical needs. Benefits would be available to all 14.5 million persons aged 65 years and over now under the social security system and all 500,000 or so persons aged 65 years and over now under the Railroad Retirement Act. Benefits would also be available to about 2½ million aged individuals not now a part of those systems. That would be the case even though both the retired and the uninsured would have made no contribution whatsoever toward the health insurance plan.

What would these benefits cover? Too little discussion, in my opinion, has been given to the matter of coverage. In many cases, a substantial portion of medical expenses would apparently be ineligible for insurance benefits.

To cite only a few items, physicians' fees for surgery, home, office, or hospital visits would be excluded, and so would drugs and medicines not supplied in a hospital. Inpatient service of general hospitals for stays in excess of 90 days would be excluded; so would skilled nursing home services after 180 days. Any services provided by mental or tuberculosis hospitals would be excluded completely.

For each of the first 9 days in a general hospital, an insured patient would have to pay a deductible amount of $10 a day, with a minimum deductible amount of $20 and a maximum of $90. An outpatient would have to pay $20 for each hospital outpatient diagnostic study.

The range and cost of services not covered by the proposed plan argue further, I believe, for public hearings that would put these facts on the record for all to study.

No matter what costs may be covered under the program, there appears to be a lack of agreement between Government and private actuaries whether the costs could be met satisfactorily by the proposed increases in social security and railroad retirement taxes and coverage, and additional appropriations. Here again, we need the benefit of Senate hearings to throw light upon some of the problems involved in determining how adequate the financing provisions may be.

Mr. President, for all these reasons I believe that it is premature to act without an extended consideration of this proposal in the form of hearings, committee action, and floor debate. It is premature to act before we have had a chance to observe the operations of the Kerr-Mills law, approved less than 22 months ago. It is too early to observe how effectively this program will work in many States. In my own State of Virginia, legislation authorizing participation in the Kerr-Mills program was enacted this year, and funds appropriated for this purpose will become available in 1964.

In other words, Mr. President, this is no time to rush into a vast new program of health insurance involving billions of dollars of expenditures even in the first few years. We already have a program, endorsed by the Congress, the President, and the States, that is just getting underway.

Consequently, I oppose the proposed plan, and shall vote against it.

Mr. ROBERTSON. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ROBERTSON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

elderly. I shall not enumerate these five specific changes; however, I would like to take a few minutes today to show that these changes to a large degree remove the threat of Federal control over physicians and hospitals which has been advanced as a major argument in opposition to the administration's original King-Anderson bill.

The most important thing about any legislation in this field is how it helps and protects the elderly—but there are other considerations, and one of these is the impact which it will have upon the people who provide these health services. Will the doctors and hospitals involved come under the thumb of a huge Federal bureaucracy, or can means be found to accomplish our aims without subjecting these vital men and institutions to undue or excessive regulations from Washington? This is one of the major goals which we sought to achieve in working out the amendment now before us.

As far as hospitals are concerned, it provides that they shall be accredited for participation under the standards jointly established by the American Medical Association and the American Hospital Association—which together have for many years been in the business of accrediting hospitals. Only hospitals which meet these standards would be eligible under our amendment. The standards of the AMA and AHA are specific and measurable. The adoption of these standards enables us to rely on the expertise and good judgment of private citizens—rather than turn the responsibility over to a grand tzar of hospitals in some agency here in Washington.

Those few small hospitals in isolated communities which do not presently meet AHA–AMA standards will be certified—where suitable—by the Secretary of HEW who will administer a code of requirements based on the AHA–AMA standards but geared especially for exceptional cases, particularly small hospitals in out-of-the-way areas.

Madam President, as far as physicians are concerned, I remind the Senate that no doctors' services are provided under this measure. Furthermore, the option for private policies is developed so that private insurance companies will be strongly encouraged to write special policies which would take care of doctors' fees through private plans or various group health plans.

The option is designed to encourage people to obtain supplemental health benefits through private carriers at a relatively low cost. I envision that for somewhere around $3 to $6 a month in additional premiums, a person under this plan would be able to purchase a comprehensive health insurance package—including the basic benefits here provided, plus physicians' services, plus perhaps first dollar costs and some long-range protection for periods beyond the 90 hospital days which our amendment covers. Because this option is extremely easy to administer, I believe many people will take advantage of it. I hope private companies will eventually be eager to compete for this new business—which, in fact, will be made available as a direct result of this program.

Madam President, to reiterate, physicians are outside of this program altogether, hospitals are to be accredited by private experts, and insurance companies will be given an incentive to write supplemental health care policies including physicians' services, which entitles them to combine all of an individual's health insurance protection in one comprehensive policy.

While I still believe this option feature can and should be expanded, I am of the opinion that the bill before us today to a large part meets the major objections of those who are justly concerned that any new program in this field must not entail punitive or overwhelming Federal controls.

Madam President, these are not the only features of this new program which tend to avoid burdensome Federal controls. The plan we have devised explicitly permits State administration, where people would prefer it to Federal administration. It also allows private administration by groups like Blue Cross-Blue Shield or the Kaiser plan or private firms, where the providers of services and the Government can work out an arrangement to have this program privately administered.

Madam President, the social security program has been well accepted on both sides of the aisle. It sets a reasonable floor on want for retirement years. It says, in effect, that a person should have a minimal amount of food, clothing and shelter to meet his basic needs when he retires. Who would deny that the cost and advancements of health care in modern society make it necessary that this additional protection be provided?

I think this substitute is an excellent demonstration of our ability to work together to reach a common solution to a common problem. I very much hope that this debate will yield light—and not heat and partisan inflammation. I hope too that those of my colleagues on this side of the aisle who recognize the need for health care for the aged will find it possible in the final analysis to accept this sensible and carefully framed approach to one of our greatest legislative challenges, and I urge them to give support to this revised bill.

Mr. JAVITS. Madam President, will the Senator yield?

Mr. KEATING. I yield.

Mr. JAVITS. I compliment the Senator on his objective and excellent analysis of the measure which is now before the Senate and thank him for his outstanding cooperation in this field. I believe it is just such cooperation that has produced the results which have been achieved so far and which lead to some hope of realizing the long held objective of medical care for our older citizens.

I join with the Senator from New York in a plea to Senators to give their most careful and considered judgment to the proposal which is before the Senate. I share with him the feeling that it satisfies essentially and basically the objections which have stood in the way of a broader acceptance of the health care plan, which has been considered ever since August 1960, and brings it to a stage where it is worthy of acceptance

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. KEATING. Madam President, I understand that the pending business has been laid before the Senate. Is the Morton amendment to the Anderson amendment the pending question?

The PRESIDING OFFICER (Mrs. NEUBERGER in the chair). Yes.

Mr. KEATING. Madam President, I desire to speak concerning the Anderson amendment. In my judgment, it is a vast improvement over the old King-Anderson bill, which it replaces. It is a far superior and more responsible approach to the health needs of the aged.

The amendment contains five new features which were not in the King-Anderson bill and which a number of my colleagues on this side of the aisle and myself felt were essential in any legislation to meet the health needs of our

by all who have entertained a concern for private enterprise, private participation, freedom of choice, and State participation, so that the adjustment of benefits may become a reality, and not subject to abuse. These are the objectives which have characterized our attitude.

Mr. KEATING. Madam President, I thank my colleague for his remarks. All of us know that he has spent long hours, day and night, working to frame the terms of this revised measure. He has been a pioneer in the work in the field of health care, hospital care, and medical care; and he is undoubtedly as well informed on this subject as is any other Member of this body.

Madam President, I ask unanimous consent to have printed in the RECORD at the conclusion of my remarks an editorial from the Rochester Democrat-Chronicle, a very fine newspaper of my home city, which I feel sure would never and could never have endorsed the terms of the original King-Anderson bill, but which a few days ago published an excellent editorial in which it endorsed the provisions of this revised bill, and urged that it be enacted into law.

The PRESIDING OFFICER. Is there objection?

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MEDICARE CALLS FOR COMPROMISE

As the issue of health care for the aged neared the discussion stage on the floor of the Senate yesterday, there appeared signs of a spirit of compromise in its best sense.

The emotionally and politically charged question has taken the form of a bipartisan measure that includes some of the stronger features of and adds some provisions woefully lacking in the administration-supported King-Anderson bill. It is the product of statesmanlike negotiations between Senator JACOB JAVITS, Republican, and Senator CLINTON P. ANDERSON, Democrat, and has picked up initial support from, among others, Senator KENNETH KEATING and the AFL-CIO.

Since this is a congressional election year, the chances are good that some kind of a health care bill will be enacted this year. As we have repeatedly emphasized, the medical care of 17 million older Americans is a responsibility that cannot much longer be postponed. The real question is how best to meet their needs.

Of all the plans with some chance of passage, the compromise proposal is the soundest and most comprehensive. Yet it provides the flexibility which both the Federal and State levels of Government require to deal with this awesome and complex problem.

It would do what the King-Anderson bill would not do—provide benefits for 2,500,000 Americans not covered by social security. It would let States set up their own health care plans, sending participating States lump sums to provide basic health care for their aged. States could contract with private insurance firms for group policies and, if they wished, add State funds to extend benefits. It would stipulate that medical care money be kept in a trust fund separate from other social security funds. Another obvious advantage—since 75 percent of all Americans are already covered by some form of health insurance—is that the measure permits participants to continue their private insurance plans, with the Government paying part of the premiums.

Unlike the King-Anderson bill, it provides reassurance for those who fear the program might undermine the independence of the medical profession, and it preserves the freedom of choice for those preferring private health insurance. Financing would be accommodated by the vast social security machinery already in operation.

As long as most Americans believe the Government must take the initiative in the field of health care for the aged—and apparently that is true—legislation to that end should in its earliest stage be as inclusive of human need as practicable. This bill fills the glaring pockets of omission in the King-Anderson bill while lessening the risk of regimentation and socialism inherent in the administration bill. It is a measure that can be supported in good conscience.

Mr. ELLENDER. Madam President, the State of Louisiana has a long and laudable history of providing health care for the needy; and when I say needy, I mean all the needy, not just those 65 and older.

Our system was begun in the 1930's, and has grown until today we have a total of seven State-owned and operated hospitals located throughout the State. These are administered, and for the most part are paid for entirely by the State. In addition to large, well-staffed, and well-equipped hospitals, in each of our 64 parishes, or counties, we have a parish health center whose services are available to all, regardless of whether payment can be made. These health centers, I may add, are administered entirely by local personnel. Their services are financed through State and local taxes, with some assistance from the Federal Government.

In short, Louisiana has been guided by this philosophy, and I suspect that this will be true throughout the Nation: To the extent that citizens, not only senior citizens, cannot provide for their own needs, these needs become the concern of the community.

Let me emphasize the words "local community," "town," "city," and "parish." Where greater expenditures are called for, the State acts to provide such necessary facilities as hospitals.

Our general hospitals, assistance programs, and community, civic, social, and charitable groups have been the historical method of handling the medical needs of the poor. To this was added the financial assistance of the Kerr-Mills Act, passed in 1960. I feel that my State has done a good job of answering the needs of her people, regardless of whether they are covered by social security or whether they are over 65 years of age. This has been done with some Federal assistance in later years, it is true; but it has been done without Federal controls, and it has been done well.

Years ago, before introducing and enacting legislation to allow the State to participate fully in any Federal-State matching medical-care programs, Louisiana systematically and thoroughly conducted laboratories in one-third of its parishes, to learn at the community level how it could best administer for its people, and without permitting the system to be abused.

Hospitals, nursing homes, and the medical profession cooperated fully with the State in drafting procedures for financing medical assistance wherever necessary. This careful examination paid off; and I speak with assurance when I say that no one in Louisiana, of whatever age or station in life, can fail to get the needed medical attention. He or she can get it without paying a cent, if necessary, and can obtain it for as long as is required.

This has always been true in our State-owned and operated hospitals; but due to the enactment of the Kerr-Mills plan, direct payments to other hospitals are being made at a maximum of $35 a day for each patient, for a period of 10 days. If the individual's private doctor feels it is necessary, this period can be extended to 30 days. This 30-day limit can also be extended in special cases.

Direct payments to the patient's own doctor and the nursing homes have also begun. Hospitals, nursing homes, doctors, and patients have found the Louisiana system, coupled with the Kerr-Mills Act, to be adequate.

If we wish to consider only those over 65 years of age, and forget all others, it can be shown that 51 percent of the old people who are currently hospitalized in Louisiana are cared for by State aid alone, or by a combination of State and Federal aid. This is counting in the seven State owned and operated hospitals, and also the others participating under the Kerr-Mills Act.

It is true that our State hospitals are crowded. Wherever free services are to be found, there will also be found crowds. One of the most important features of the Kerr-Mills Act, though not much publicized, is to channel some of the needy from the State hospitals and nursing homes into more or less private facilities. This is a feature not to be overlooked. At present, the number of citizens who require hospitalization, and whose hospitalization is based on need, can easily be cared for by the State hospitals, with some help from those not operated by the State.

But I fear that if some version of the King-Anderson bill becomes law, not only will the State hospitals be overcrowded, but the other institutions will become overcrowded, as well. We all know that this is one of the main problems of socialized medicine, toward which this bill would lead the country. This overcrowding has troubled England's National Health Service since its beginning in 1948. Today, patients in England must wait weeks, except in extreme emergencies, before being allowed to enter the crowded hospitals. According to U.S. News & World Report, the file of applications for admission to one large London hospital shows many names that have been on the waiting list as long as 3 years. I would not want to see this situation come to prevail some day at almost every hospital in the United States.

Furthermore, Madam President, the original King-Anderson bill provides that the first $90 in expenses must be paid by the patient, as well as the normal fees for drugs and many of the extra services performed by hospitals.

All fees by doctors must also be paid by those over 65 years old.

Madam President, under the rules and regulations in Louisiana, a single person can have as much as $250 monthly income—$3,000 per year—and still can qualify for assistance under the Kerr-Mills program. If he is the head of a family, he may earn as much as $325 per month—$3,900 per year—and any member of his family may qualify.

In addition, the recipient of Kerr-Mills aid may own his own home, and own property worth as much as $5,000, as long as that property can be classified as "income producing." He is allowed $1,000 worth of property that is not income producing if he is single, and $1,500 worth, if married. Also, if single, he may have $1,500 worth of life insurance, cash value, and, if married, the figure is $2,000.

In addition to these exemptions, he is allowed to own his own car, farm equipment, and any property necessary to earn his living.

These facts do a good job of fighting the argument that a person must be a pauper, or put his house up for sale, before he can qualify for assistance under Kerr-Mills. However, it should be noted that these figures do not apply in all the States. The Kerr-Mills Act says that to qualify, a person may not earn more than $1,800 per year, and allows the State to liberalize this amount if the State agrees to bear a larger share of the cost.

I am proud to say that Louisiana has done just that.

The most important differences between the original King-Anderson bill and the amendment now proposed are:

First. The amendment provides for covering everyone over 65, whether the person is covered by social security or the Railroad Retirement Act, or not. It is interesting to note that this additional coverage will be paid for out of the general revnues. This would open the door of the Treasury for later raids when the program proved to be more expensive than estimated.

Second. The amendment would set up a separate and brandnew trust fund to administer the moneys.

Third. The amendment makes provision for allowing private insurance companies, such as the Blue Cross, to participate.

Fourth. The amendment purports to make certain that the Government would in no way control the standards of doctors and/or hospitals by putting a portion of the controls into the hands of the American Medical Association and the American Hospital Association.

But the amendment still does not provide the benefits available under the Kerr-Mills Act. A patient's doctor bills would not be paid, nor would his first $90 worth of hospital treatment. In other words, $90 is deductible, and must be paid by the patient. The coverage would no doubt be expanded in later years to assist persons under the 65 age limit, and to provide fuller coverage.

At present, in Louisiana, Kerr-Mills provides for total coverage to give the needy complete medical coverage, doctor fees, drugs, hospital and nursing home care, and so forth. Kerr-Mills is, of course, financed through the general revenues paid by all the people.

I submit that the patients in the State hospitals would be unable to meet these requirements. Certainly the Kerr-Mills Act is more far reaching in this respect, for not only are the normal hospital and nursing home expenses paid, but also doctor bills, extra fees, and, in short, everything necessary to insure adequate medical care.

In my opinion, this proposed amendment is both more and less than it is cracked up to be. On the one hand it would not supply the coverage to be had under existing legislation, at least not among those groups where State services and facilities are needed so desperately. On the other hand, and no matter what its supporters say, it opens the door of this Nation's storeroom of medical knowledge and skill to the evils of socialized medicine.

It would also open the door of the Nation's Treasury to provide this service, which, in my view, is neither desired nor necessary. The supporters of this plan estimate its cost will be approximately $1.2 billion for the first year. I feel that this figure would prove to be totally unrealistic.

For an example, I again turn to the National Health Service of Britain. By coincidence, the first full year of that operation cost approximately $1.2 billion, almost exactly the estimated cost of the King-Anderson bill. But the supporters of the British plan had estimated that its cost would amount to something like $400 million. The total cost was over three times the esimate, and I predict that we would see the same thing happen here.

Today Britain's so-called free health service costs each British family, regardless of age or need, $140 a year. In 1961, socialized medicine cost the British Government $2.2 billion, up 13 percent from the previous year. This was about half what England spent for defense. This year we have pased a bill calling for the expenditure of almost $50 billion on defense. It is not inconceivable that the King-Anderson bill, or some measure like it, would soon be costing us about $8 to $12 billion, or one-fourth what we spend on defense.

To the Senator from Louisiana, this is unthinkable. I cannot see the need for this legislation, and it has no appeal to the country as a whole. Certainly it is not appealing in my State, for I have received only about eight letters in its favor, and literally thousands of letters against.

In this instance, I think the thousands are right. This is a bad piece of legislation, and I hope it will be defeated.

The PRESIDING OFFICER. What is the will of the Senate?

Mr. ELLENDER. Madam President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. MORTON. Madam President, I ask unanimous consent that further proceedings under the quorum call may be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MORTON. Madam President, I have been impressed with certain changes which have been made in the proposal of the distinguished Senator from New Mexico [Mr. ANDERSON], who has offered a modification of the original King-Anderson bill. This proposal has been supported and cosponsored by many of our colleagues on both sides of the aisle.

One of my principal objections to the King-Anderson bill still remains in the revised amendments; that is, the financing of the program through taxes levied on our social security system, through an increase in the taxes on the payrolls of America, an increase in the tax on the employer and an increase in the tax on the employee.

The social security tax in any business operation is a direct cost of manufacture or of processing, as the case may be. The total cost of manufacture is ground directly into the cost card of any company doing business. This is not so with regard to general taxes, and not so with regard to the corporate income tax.

I well remember that when first I had the responsibility for the management of a business the Federal corporate income tax was 13 percent. I had some part in the business, but was not active in management; when we disposed of the company in 1951, the Federal corporate income tax at that time was 52 percent. So, in the years in which I had some association with the business I saw the Federal income tax quadruple, from 13 percent to 52 percent.

Never once, Madam President, when the Federal income tax was increased, did we change the price of the consumer product which we manufactured. However, if our cost of raw materials went up one iota, or if our manufacturing or processing expense went up one iota, we found it necessary to change our prices in order to stay in business. We were in the grain processing business, which is much like the meatpacking business, in which one operates on a very close margin.

During the years of my association with the company our average net profit was far less than 1 percent of sales. When one is in a business operating on such a thin margin, one must immediately reflect in his prices the total cost of manufacture, and that of course includes the cost of wages.

I admit that what we are now talking about is a quarter of 1 percent tax on the manufacturer and a quarter of 1 percent tax on the employee, which sounds like minutiae, but this will be only the beginning of what might happen. Those of us who have taken the trouble to read the debates which occurred on this floor many years ago, when a proposed constitutional amendment was passed to permit the graduated income tax, know that once the program is started no one in this body today can foresee what ultimately will happen.

In one colloquy it was suggested that the tax might rise to 15 percent. The

speaker was then talking about the personal income tax. He felt that it would become a confiscatory tax.

The rejoinder from one who was sponsoring the amendment was, "Oh, no. It is inconceivable that the Federal income tax of the United States would ever reach 10 percent."

As we all know, today the income tax starts at 20 percent and goes up to 91 percent.

I believe the same thing would happen under the proposed legislation. As more and more programs are loaded onto social security, we shall be bound to raise the cost to American industry, and consequently raise the price of American goods.

Why am I concerned about that? I am concerned because today we find ourselves unable to compete in many of the markets of the world that traditionally have been ours. Those markets concern basic steel and include automobiles and all sorts of other manufactured items. U.S. companies have been forced to establish subsidiaries abroad in order to hold their markets.

As I pointed out yesterday on the floor of the Senate, the Japanese are thinking of trying to invest in plants in our country, because the Japanese have found that in spite of their low wages, in order to hold their business abroad they must build plants abroad. They have plants in Latin America, in Europe, and elsewhere. We have similar plants. Why are we building such plants? We are doing so in order to hold our market. The plants abroad are providing job opportunities to American workers in this country, because component parts are made here.

Our system is also helpful to our balance of payments, because profits from abroad are returned to our country. But it is a fact, known to all, that today American industry is in the fight of its life to hold its position in world markets. That point is easily understood when we compare the wage rates in our country with wage rates in foreign countries. No one wishes to see wage rates in our country reduced. But it is now proposed that we should add to the wage cost the direct cost of such programs as medical care for the aged. Almost all Senators are for a program of medical care for the needy aged. In an affluent society such as ours we must face our responsibility in that field. I for one am prepared to do so.

The proposal which I have submitted to the Senate in the nature of a substitute for the amendment offered by my good friend the distinguished Senator from New Mexico [Mr. ANDERSON] would provide benefits for the needy aged. I believe it would more adequately take care of their total medical and hospital needs than any other program before the Senate. But it would not finance the program through a payroll tax.

Much is being said about how small the increase in the social security tax would be under the Anderson measure. However, such proposals start in a small way.

For example, in Germany a pension plan was started in 1883.

Health insurance came into the picture in a small way in the 1890's. Originally in Germany a payroll tax was levied to provide a small amount of sick pay to low income workers. Since the last World War the program has had a terrific growth. In Germany now the tax for the social security benefit package for pension and health is almost one-quarter of the payroll. The worker puts up 7 percent toward health insurance and 4½ percent toward his pension. The employer puts up an equal amount. Those percentages total 23 percent.

In every country in which health insurance is tied to a payroll tax the cost has risen to four or five times the original estimates. People feel that it is an investment, and therefore they want a greater return for their money than they put into it. Benefits rise and the costs are pushed further and further into the future.

I will demonstrate what has happened in some of the countries. Between 1949 and 1962 the percentage of payroll tax to cover pension plans and health insurance paid by the employee and the employer—and these figures do not necessarily follow the German pattern of a 50–50 division—is as follows:

In France the tax has risen from 16 percent up to 19½ percent.

In West Germany, as I have indicated, the tax has risen from 11 percent to 23.6 percent.

In Italy the tax has risen from 13 percent to 23.6 percent.

In Belgium the tax has risen from 14 percent to 16 percent.

Let us examine the situation in France in a little more detail. In France, the employer now must pay social security taxes for the national pension system, for the supervisor pension plan, for employees' income tax relief, for work accidents, and for apprentice education, plus an allowance for the employees' houses or apartments and for the employees' families. Think of it. There is a provision in France requiring a payroll tax for employee income tax relief, which makes it a direct cost.

Those countries are able to compete effectively with us and undersell us in spite of the high taxes because their wage base in relation to ours is extremely low. I am sorry that I do not have the latest figures with me, but I have the figures as of April 1959:

In Italy the hourly wages were 35 cents; in the Netherlands, 44 cents; in France, 47 cents; in West Germany, 54 cents; in Belgium, 56 cents; Switzerland, 67 cents; the United Kingdom, 68 cents; Sweden, 94 cents; the United States, $2.22.

If we total the fringe benefits, which include the social security taxes—and we can call them by whatever name we wish in the foreign countries—we find that in Italy the costs have risen to a staggering 74 percent of the hourly wage, and since Italy started in 1959 with a basic wage of 35 cents, Italian industrialists are still able to undersell us in many areas.

In our own case all fringe benefits, including social security taxes, and those negotiated through union contracts, amount to about 20 percent of the hourly wage. So one can see what might happen if we should continue to dump program after program onto the Social Security System, making it not an indirect cost, but a direct cost, as reflected in the cost card in the price of the article. If, however, we should finance the program or similar programs through the general fund, we would distribute the tax burden in our traditional manner. A heavier burden would be placed on those most able to pay. Under the social security method of financing medical care, the president of General Motors, who is under social security, would pay exactly the same amount in total dollars as the man on the assembly line. That to me is not in keeping with the traditional tax pattern of our country.

Social security is a good program. I do not suppose there is anyone in Congress who would vote to repeal it.

However, certain misconceptions have been developed about it, and I believe that these very misconceptions have led the public to jump for and clutch for the King-Anderson proposal which finances medical care through social security. These misconceptions are:

First. That the tax is a premium and, therefore, workers are prepaying their own benefits.

Second. That social security is an enforced or compulsory savings program.

Third. That the life income of those on the benefit rolls is supported—and therefore guaranteed—by the assets in the trust fund.

Fourth. That compared to traditional insurance, social security is a bargain.

Fifth. That people now on the benefit rolls and their employers have bought and paid for their benefits.

To correct these misconceptions I would like to quote from a statement by Mr. Robert J. Myers, Chief Actuary of the Social Security Administration. He said:

> Still another argument claims that the beneficiary has "bought and paid for his benefits" because he may have been contributing as much as 24 years. In actuality, however, a person who has had the maximum covered earnings for the period 1937–60 has contributed only $1,290 (and his employer a like amount). This represents, at most, only about 1 year's benefits payments for a retired worker without dependents so it is quite obvious that no person has anywhere nearly "bought and paid for his benefits." In fact, actuarial calculations indicate that, at most, the maximum proportion of benefits that have been paid for by an individual's contributions is now about 10 percent, and in many cases of beneficiaries now on the roll, this proportion is less than 1 percent.

Madam President, this indicates clearly that those who are today paying social security taxes are paying only, at most, about 15 percent or 20 percent into a reserve for their own retirement, and the rest is going to take care of those now on the rolls. Here we have a proposal that we know will not be held at

one-half of 1 percent. We know from past experience that it is bound to go up and up. What this is doing is transferring to the workers today and, through increased manufacturing and industrial costs, the obligation for the care of those who are over 65 years of age.

Mr. CARLSON. Madam President, will the Senator yield?

Mr. MORTON. I am happy to yield.

Mr. CARLSON. The Senator from Kentucky is making a very interesting statement about the ever-increasing cost of programs once they have been included in the social security field. I am sure it was true also in the medical field. If the Senator has not already mentioned it, when social security legislation was first passed, the base pay on which the taxes were collected was $3,000, and the rate was 2 percent, which amounted to $60 a year. Yesterday the distinguished Senator from New Mexico placed in the RECORD the payments that are being made at the present time on $4,800. Under the new proposal the base pay will be $5,200, on which, in 1968 and thereafter, the rate will be 4⅞ percent. Under the present law it is 4⅝ percent on the employee and the employer, amounting to more than 9½ percent.

This is a program which those of us who have been in Washington for many years have watched grow in costs. First we increased the base on which the taxes were based and then we increase the taxes themselves. I fully agree with the distinguished Senator from Kentucky that this one-quarter percent on the employer and the one-quarter percent on the employee will be the beginning of a great program that some day will mean the collection of taxes from individuals who enter the program in an amount equal to or in excess of some of the amounts the distinguished Senator has mentioned as being collected in other nations who have had this type of program for years. The Senator is rendering a real service.

Mr. MORTON. I thank the Senator.

Mr. ANDERSON. Madam President, will the Senator yield?

Mr. MORTON. I am glad to yield.

Mr. ANDERSON. I do not wish to get into a discussion with the Senator on this question, because, as he knows, I admire the care with which he has prepared and presented his amendment. I should like to point out, with respect to what the Senator from Kansas has said, that it might be useful to compare what a dollar in 1937 bought with what a dollar in 1960 would buy. Food costs have gone up. Hospital costs have gone up from $9.25, in 1946, to $35. Naturally payments had to go up, too. They had to go up in order to keep the fund solvent.

I am not trying to be critical of the Senator from Kansas. He is a very faithful and conscientious member of the Committee on Finance, and we are longtime personal friends. I only say that we must compare costs as between one period and another, and take into consideration the erosion of the dollar, which all of us regret.

Mr. MORTON. I thank the Senator. I agree fully that the costs have gone up. None of us likes to see it happen, but it has happened. We have had a degree of deflation or depression or debasement of the dollar—whatever one wishes to call it. I hope it is over. It may not be, but may continue.

I believe that to be an added reason for not setting up a program, the costs of which we cannot measure 10 years hence, placed squarely onto a payroll tax. It is an added argument for financing it and funding it from the general fund, where it does not work toward denying Americans jobs and further forcing American industry out of the markets of the world.

Mr. CURTIS. Madam President, will the Senator yield?

Mr. MORTON. I yield.

Mr. CURTIS. The Senator is pursuing a line of thought which has much merit. The costs of the social security, even if the proposal before the Senate is not adopted, will increase a great deal. The program started out as a retirement program for the covered worker. I believe it was the late President Roosevelt who warned against expanding it too far. He said it was a floor of protection for the individual who could not, by reason of age, earn wages. Since that time the program has been extended to include a survivor benefit, not only for the surviving spouse in case of the death of the aged person, but also for the widow if the individual dies before he reaches the required age. If he leaves minor children it has a life insurance feature. It has been extended to include disability, first for those over 50 years of age, and later that was taken out. It has been projected for a period of 10 years in the future by the gentleman in the Department of Health, Education, and Welfare who is in charge of the legislation. I refer to Mr. Cohen. He is very learned in the field of social security. He has been one of the architects of the system. During the time that he was in private life, prior to the present administration, he was a professor who made many speeches and statements on the subject of social security. According to his pronouncements, he favors, at the end of a 10-year period, fixing the base for applying the payroll tax, not at the present $4,800 figure, but raising it to $9,000.

He has declared himself publicly, and has reaffirmed his views in official documents, in favor of the base's expansion, extension, and liberalization. The sum total of all of this would be a very high social security tax.

Actually, Mr. Cohen favors the proposed legislation which is before the Senate today. A few years ago he championed the Murray-Wagner-Dingell bill, which would have provided medical care not merely for the aged, but for all people. We who are realistic have good reason to believe that if the bill before the Senate shall be passed, its benefits will be extended so as to cover the purposes of that bill. That is logical.

If out of tax funds hospital bills are paid from the social security fund for individuals who are over age 65, regardless of their income, Congress will gradually move in the direction of taking care of bills essential for the individua who has had a long illness and has no earnings.

Mr. Cohen, on the basis of what he now advocates and has advocated in the past, has envisioned a program under which, when it is completed in 10 years, the self-employed individual making $9,000, and having a wife and two children, will be paying more in social security taxes than he will be paying in income taxes. From the income tax and other Federal taxes, all the expenses of the Nation are paid, including veterans' benefits and the retirement of the national debt. Yet it is proposed to move in a direction in which, under social security legislation, the $9,000 a year person, if he is self-employed, will be paying more for social security than he pays for all the other costs of government.

I commend the distinguished Senator from Kentucky for his study and his observations and for pointing up the fact that we are not proposing to give people something. We are proposing to add to a social program which will be endangered by its own weight. The reason why there is no widespread recognition of that fact at present is, as the distinguished Senator has pointed out, that the full impact of the program which is now in force has not been realized. The individuals now on the roll have made only a token payment for the benefits which they and their families will receive. A time will come when the burden under social security, which must be assumed by a young man just out of college and carried for 40 years or more—all through the years when he is buying a home, educating his children, and paying his own bills—will be very great.

This is not a proposal to give the people something. It is a proposal to pay some hospital bills now and add to the future burden of the individuals who will do the work of the country in the years which lie ahead. It will be an onerous burden.

I thank the Senator from Kentucky for yielding.

Mr. MORTON. I thank the Senator from Nebraska, who serves on the Committee on Finance, and who served in the other body for many years on the Committee on Ways and Means. He is one of the leading authorities in Congress on the subject of social security.

I wish to reemphasize some of the points which the Senator from Nebraska made. When the social security program was first enacted, it was assumed that the tax on the individual and the tax on the employer would never go beyond $90 a year per person. We have already seen that amount almost doubled. Without adding anything more to social security, without adding any new programs under the present law, there will be a 54 percent tax increase between 1961 and 1968. I recognize, as the Senator from New Mexico [Mr. ANDERSON] has stated, that costs have risen substantially since the social security program was inaugurated. As a Member of both the House and the Senate, I have voted for increasing the payments, and therefore increasing the

number of benefits subject to taxation. Other provisions have been placed in the program. I voted for them; I did not quarrel about them.

First, in 1939—which was before I became a Member of Congress, but I approved of the action—Congress provided for a surviving child under age 18, a dependent child under age 18, a dependent wife age 65 or over; a widow age 65 or over, a widow under age 65 and having a child under 18; and a surviving dependent parent age 65 or over. They were included as beneficiaries.

In 1950—and I voted for this program also—Congress provided for a dependent wife under age 65 having a child under age 18; a dependent husband age 65 or over; a dependent widower age 65 or over; a surviving dependent; a former wife having an eligible child under age 18.

In 1956, Congress provided additional benefits. There were included disabled workers between ages 50 and 64; a dependent, disabled child 18 or over—if still disabled at age 18—a surviving disabled child 18 or over—if still disabled at age 18. Congress was pretty much in agreement on that amendment.

In 1958, 2 years later, Congress included the dependent wife of a disabled worker age 50 to 64. Also, a dependent child of a disabled worker, aged 50–64, was included.

Two years later, in 1960, benefits were provided for a disabled worker under age 50.

All this is good. It was done knowing that the cost would be increased. But now it is proposed to enter an entirely new field. The housing program for the aged might just as well be placed under social security. I read a list of benefits which are provided in France, all of which apply to social security. Many social welfare programs in this country might be transferred to the social security tax.

The question of health care is only one program; but when we start, we do not know where we will stop. I dislike to see a start made in burdening the payroll of America with these programs, worthy as they are, because any increase in the cost of administering them immediately affects the price of American goods; and the price of American goods affects the employment opportunities for American workers.

Madam President, on June 7, in the Senate, I stated my approach to this problem. I started along four basic lines: First, that any medical assistance program for the aged, sponsored by the Federal Government, should not be compulsory.

Second, the program should be administered by the States.

Third, governmental assistance should he be given to all persons over age 65 who need it, but no monetary assistance should he be given to those who are able to finance their own medical needs.

Fourth, the burden of the program cost should not fall most heavily on the lower income wage earner, as would be the case with an increase in the social security tax.

I have dealt at length with point 4. For a few minutes I shall discuss point 3, namely, that governmental assistance be given to all persons over 65 who need it, but that no monetary assistance be given to those who are able to finance their own medical needs.

I was impressed with the argument to the effect that one has to take a pauper's oath or has to disclose his assets or has to go through all the embarrassment, if you will, of making a full disclosure of his assets, in order to be a full beneficiary of certain medical care programs or proposals. But I point out that for many of the veterans' programs that system prevails.

However, in providing for the establishment of eligibility for this program, I suggest that we use one simple criterion, namely, the filing of an income-tax return. If one paid no income tax, the Federal Government would pay up to $125 for participation in this program, which would be administered by the States. If one paid a moderate income tax—the individual and the Government would share in the cost on a graduated basis. The higher the individual's income tax, the greater would be his share of his medical insurance cost. So the program would not involve a pauper's oath, but merely would involve disclosure of whether the individual concerned had paid an income tax.

When a needy person whose medical insurance payment had been made entirely by the Federal Government went to a hospital or to a doctor for care, neither the hospital nor the doctor would know whether the person had paid for the costs or whether the entire payment had been made by the Federal Government.

The position of the State in this connection would be that of carrying out the administration. The Federal Government would pay the full amount of the premium of a needy person who was unable to pay, or would pay whatever part of the premium the needy person did not pay. However, the States already have welfare organizations established, and could easily administer this program, and they should administer it. A State would approve two, three, four, five, six, or whatever other number of optional policies such a person could get.

A person who was completely indigent would perhaps want a policy which would particularly emphasize taking care of his day-to-day needs for drugs and medicines and doctor and dental services, and would not be so much concerned about catastrophic illnesses, because today a person who is a complete indigent is taken care of, one way or another, when he has catastrophic illnesses.

A person who had some means and could take care of his day-to-day drug and medical expenses and his doctors' and physicians' and dentists' bills might be disturbed about the possibility of a catastrophic illness which might wipe out whatever savings he and his family had. So that person would be more interested in purchasing a policy which would give consideration to, and would make provision for, the expenses in connection with a catastrophic illness.

We have already faced this problem, in connection with a bill passed under the leadership of the late great humanitarian, Senator Dick Neuberger, of Oregon; and we, ourselves, and all Federal employees have an option as to what type of insurance will best meet our needs. I believe that with the counsel and guidance of the welfare workers in the several States, the people would buy the policies which best fitted their particular needs or requirements. The policies would vary from State to State, of course. A person in Alaska might want to be covered against frostbite; but a person in Florida certainly would not be interested in such coverage. Of course, the policies would have to meet the broad guide lines established by the Secretary of Health, Education, and Welfare. In short, I think the people would get their money's worth.

Under my proposal, up to $125 would be paid for such an insurance program. Perhaps someone will say, "I am already sick, and no company will insure me." But the point is that the policies will be group policies, and no medical examination will be required. For example, a person over 65 years of age who today is in a hospital could get such insurance. But only in connection with a group policy could such a situation prevail. So I think that argument is of little weight or value.

What will be the benefits? What could be provided for $125? I think the benefits would be rather substantial. In my bill, I have deliberately left a degree of latitude, so that we would not require one particular type of policy, but would provide for a broad freedom of choice. So an elderly person could obtain a policy in accordance with what he or she thought the need would be.

Some definite benefits are spelled out in the so-called Bow bill, which has been introduced in the other body. I have made a sufficient investigation to know that those benefits could easily be covered under the $125 payment which I suggest in my bill. Senators who are interested in this matter can find these items beginning on page 3, line 18, of the so-called Bow bill, H.R. 10981.

In the bill we passed for Federal employees, we authorized a program under which insurance companies submitted bids, and then they were passed upon by the appropriate Government agency. A typical example is as follows—and I am sure that my proposal would cover this:

Subject to an overall $50 deductible, $12 for hospital room and board charges per day of confinement, for 90 days, plus $180 miscellaneous expenses and a $300 surgical schedule; or by increasing the deductible amount to $100, hospital visits and nursing home benefits of $5 in hospital doctor calls for 50 days and $6 nursing home for 31 days could be added.

Another would be $15 for room and board for 31 days, plus 75 percent of the first $750 of miscellaneous expenses, and a surgical schedule of $250, and $3 for doctors' calls for 31 days. Those are examples of benefits which I am sure could be covered by a policy costing $125 a year.

I shall not burden the RECORD or my colleagues by stating here the details set forth on these pages, but they give the details for the policies in connection with bids received from reliable insurance companies, for various types of outlined care which could be given under the retired Federal employees' health insurance program; and I feel sure that the $125 would give far greater end benefits to those in need of doctors' care, hospital care, medical care, surgical care, or dental care than is practicable under the approach outlined, certainly, in the original King-Anderson bill, and even in the Anderson amendment.

Madam President, I know that if we adopt the Anderson amendment and if it becomes law, there will be demands on us, as Members of Congress, beginning almost immediately—beginning next year—to add benefits. That would require us to add taxes on the payrolls and to add to the social security burden and to further impede our ability to maintain our markets and to withstand foreign competition and to provide job opportunities to the American people.

The history in other countries has been that the cost has immediately gone up four or five times the originally contemplated cost. And once we further opened up the social security tax as a device for financing worthy programs, we would have many other programs which would be clamoring to get in under the same tent, financed by social security.

A moment ago I mentioned housing for the aged. I think it is a typical example. There is no more reason for keeping housing for the aged out of this program than there is for putting medical care under it. After all, it does little good to keep a person healthy if he does not have a place in which to live; and I think it would follow, just as night follows day, that if we started this, we would be called upon to provide a much more pretentious housing for the aged program, to be handled through social security.

So, for all these reasons, I hope my substitute will be seriously considered by my colleagues.

First, I think it more effectively deals with the basic problem.

Second, it is more in keeping with the American tradition of taxing those who have the ability to pay.

Finally, I think it is certainly in keeping with many programs. This administration is interested in increasing our business abroad, in keeping America competitive, in increasing job opportunities here at home. It seems to me we get into constant contradictions. We get a program brought up to do one thing, and then we come up with another program that vitiates the purpose of the first one. A tax program is proposed that will hurt American business abroad and will restrict job opportunities at home through inability to export.

Now we have this medicare program before us which will add directly to the costs of American business, and therefore further impede job opportunities at home.

So for all those reasons—social, economic, and in the name of the spirit of American tradition—I think my substitute deserves attention, and I hope it will prevail.

Mr. JAVITS. Madam President, will the Senator yield for a question or two?

Mr. MORTON. I yield.

Mr. JAVITS. First let me state, with the Senator's permission, that the Senator from Kentucky is one of the most distinguished public servants in this body, not only in domestic but in foreign affairs. I think it is quite a tribute to him, in what we are trying to do, no matter how we are trying to approach the problem, that the Senator from Kentucky felt impelled to offer a constructive alternative, for which I have great respect, rather than rest on the proposition, which I think some persons do—and I hope very few—"Well, let us just leave it as it is and not get into this at all."

First of all, I feel that I am on the Senator's side because, whatever may be my position on the inadequacies of the Senator's proposal, the Senator is offering a constructive alternative.

Mr. MORTON. If I may interrupt at that point, the Senator from New York has given as much study to this matter as has any Member of this body. I remember that he gave us a positive approach to the problem in 1960. He offered a sound approach, which I was happy to support. My efforts here have been, in large measure, inspired by the great work he did in 1960.

Mr. JAVITS. The Senator is very kind.

The other day the Senator defined for me the differences between his bill and the Bow bill. I wonder if he would state them again, because I think it would be a good idea to have that statement in one place.

Mr. MORTON. First, under the Bow bill, the full insurance would be paid for all citizens over 65, regardless of need. Either the Government would pay for it or the full amount would be taken in a direct deduction when a person filed his income tax.

In my proposal, I have, to a degree at least, maintained the philosophy of need by putting it on a sliding scale: If the person pays no income tax, the Government pays the entire insurance premium cost; and then it graduates up to the point where the individual pays $400 in Federal income tax. At this point practically the full medical insurance premium would be paid by the individual.

Mr. JAVITS. The Senator mentioned another distinction.

Mr. MORTON. Another distinction is that the Bow bill spells out the benefits. My proposal leaves it in more general terms, merely requiring the States to certify a choice of plans, and those plans must be within the broad guidelines set by the Secretary of Health, Education, and Welfare.

Under the Bow bill, the persons would get their own insurance. My measure is on the group theory, so that anyone in a hospital today, for example, who might be 75 years old, would come under the provisions of the law.

Mr. JAVITS. Of course, in the measure of the Senator from Kentucky, the insurance contract is made by the State.

Mr. MORTON. Yes.

Mr. JAVITS. That is, the State contracts with as many carriers as it chooses?

Mr. MORTON. Yes.

Mr. JAVITS. Would the Senator contemplate that a State could contract with contractors and persons could have insurance with carrier A, B, or C, or does the Senator believe that, under his bill, the State would contract with a carrier to the exclusion of others, and therefore the people in that State would have to sign up for a policy with that particular carrier? What does the Senator have in mind in that respect?

Mr. MORTON. I would hope there would be several carriers, A, B, and C—not too big a number, but at least a reasonable choice, say, five, six, or seven. Although I do not specify it particularly, I think it is implied in my proposal that the Secretary of Health, Education, and Welfare, in his broad guidelines, would made it a requirement that a State would not favor one particular carrier.

Mr. JAVITS. If that is the case, does the Senator feel that the advantage is an actuarial advantage, in that a State would have a big bloc of subscribers to have insured? Also, would it not be a disadvantage that, unlike the option provision which is contained in the amendment of the Senator from New Mexico [Mr. ANDERSON] and our colleagues in its present state—and I hope we will improve it materially—it gives a wide range, through co-op plans, insurance companies, et cetera? Does the Senator feel that would be a fair point to make as between his substitute and the Anderson amendment?

Mr. MORTON. Yes. I would be perfectly willing to provide the same option under my plan. As I said at the outset, I think the bill the Senator from New York has had a chance to work on with the Senator from New Mexico is a tremendous improvement over the administration proposal or the King-Anderson proposal. I think it is a magnificent job. But my particular worry is the social security financing. However, that is not the point we are discussing now. I think the Senators have done a splendid job in developing an arrangement under which groups, cooperatives, and so forth, can be brought in. I do not think they would be precluded under my measure.

Mr. JAVITS. The Senator will note that under the Bow plan, which is in this respect not analogous, but which gives us a word of warning, it carries within it a lifetime limitation, so that under the plan of Representative Bow, if a person had a $100 deductible amount, his lifetime limitation which could be incurred under the plan would be $5,000 in cost. If it was a $200 deductible item, it would give that person a lifetime maximum of $10,000.

I ask the Senator whether it is not very likely that if we left the field strictly to the insurance people, they would write these provisions into other policies and therefore the policies would fall short of one of the very big problems which is involved in this area, which is giving people a sense of mental insurance

against catastrophe in all kinds of health problems.

Mr. MORTON. I do not contemplate writing any lifetime restrictions in the policies under my measure. I think experience and the competitive records of experience and the competition that is developing among groups which are seeking to sell health insurance today would work toward the highest possible liberalization of the policies.

Mr. JAVITS. Finally, I should like to ask the Senator this question. I was having a sandwich in the cloakroom, and the Senator may have already covered this point. Has the Senator from Kentucky made any estimate of cost under his measure?

Mr. MORTON. We have made an estimate, and as nearly as we can tell, it is somewhere in the neighborhood of $1.2 billion to $1.4 billion.

Mr. JAVITS. How many people does the Senator estimate that amount would cover?

Mr. MORTON. Of course, there are 17 million persons today who are over 65. Our difficulty in estimating cost came from trying to ascertain from the Internal Revenue Service how many of these persons paid taxes; and, if so, how much they paid in taxes. So our figures are somewhat of a guess. But we are pretty sure about the limit of between about $1.2 billion and $1.4 billion.

Mr. JAVITS. Certainly, the Senator's amendment would cover those who paid no tax at all?

Mr. MORTON. Yes.

Mr. JAVITS. And then those who paid less than $400? And it gives even a little to some who pay over $400 a year.

Mr. MORTON. Yes. Those over 65 years of age can deduct certain expenses now. They would get that benefit anyway.

Mr. JAVITS. I thank the Senator for his explanation. The Senator's plan would be premised upon appropriations to be made annually, in the amount somewhere between $1.2 billion and $1.4 billion.

Mr. MORTON. That is correct. That is a staggering amount of money, but there has been a great deal of talk about tax cuts. Some of our friends have been talking about a tax cut of as much as $10 billion. Perhaps we could ease up on the tax cut by 10 percent and have money available to provide for the health care of the needy aged.

Mr. JAVITS. I thank my colleague. Before I sit down I should like to express my appreciation for the constructive thoughtfulness which obviously has gone into the Senator's effort to meet this kind of problem. We often hear many words used in the endeavor to describe the ideology of Republican Senators—"liberal," "progressive," "conservative," and "ultraconservative." I prefer the word "thoughtful" for the Senator. I am very pleased that he has given his mind to this effort. I can only say that it will be helpful, whatever may be the fate of his particular proposal.

Mr. MORTON. I thank the Senator from New York.

Mr. MILLER. Mr. President, will the Senator yield to me?

The PRESIDING OFFICER (Mr. HICKEY in the chair). Does the Senator from Kentucky yield to the Senator from Iowa?

Mr. MORTON. I yield to the Senator from Iowa.

Mr. MILLER. Mr. President, I wish to join in the commendation of the distinguished Senator from Kentucky by my colleague from New York, for the excellent work he has done in endeavoring to come up with a reasonable, workable solution to the problem which confronts us.

I should like to ask my colleague from Kentucky a question about a subject which has troubled me considerably.

Although I like the approach used in the Senator's plan, I note that the means test, if we might call it that, seems to revolve around the concept of Federal income tax liability. I am sure that the Senator recognizes, as I do, that if we are to consider the economic means of people, the income tax liability does not necessarily reflect economic income. What the Senator from Iowa would like to have is a means test, based upon economic income.

On page 13 of the Senator's amendment, section 208, it is provided:

> The amount of the State share with respect to any individual for any period within a taxable year of such individual shall be based on the Federal income tax liability of such individual.

I should like to see that modified to reflect the economic income of the individual. The economic income could be defined to include the Federal net taxable income, which would be the adjusted gross income, minus the page 2 deductions, if there were any, or the optional standard deduction; and to that could be added the income not recognized for Federal tax purposes; such as, for example, tax-exempt bond interest or the unrecognized 50 percent of long-term capital gains.

I am sure we can visualize a situation in which many taxpayers might have no income tax liability whatsoever, but, as a result of having tax-exempt bond interest or long-term capital gains, might have a substantial economic income, which would put them in a preferred position as compared to those not having that income, if we should follow the approach used in the Senator's amendment.

My question to my colleague from Kentucky is whether it would be feasible to modify his amendment to include this type of approach.

Mr. MORTON. First, I recognize that the question posed by my colleague from Iowa is a valid question. I know the Senator is a distinguished tax lawyer and an expert in this field.

I thought of the point he has made. I think perhaps if we could provide for the economic income in a manner concise and easy, that approach would be better than my approach. However, there has been a great deal of talk about the "pauper's oath" and this, that and the other. I took what seemed to me to be the simplest device, even though I recognize there would be certain beneficiaries under the program who would be people of substantial means, who would pay either no Federal income tax or very little Federal income tax.

I am sympathetic toward the approach outlined by the Senator from Iowa, but I could not figure out a way to do it, I will say frankly, without getting the proposal so complicated that we would leave the basic objective.

Frankly, in total numbers I do not think we would find very many citizens who have substantial income from tax-free sources who do not also have large income from taxable sources. Therefore, they would pay income taxes.

Mr. MILLER. I agree with my colleague that the number probably would not be great. In my own State, and no doubt it is true in other States, I am sure it is true that there is a feeling that the economic status of an individual should be the critical test.

I recognize the practical problems of enforcement, when there is a departure from a simple test of income tax liability, adding in other factors.

Speaking from my own experience in my own State, I would suggest that this proposal should not be difficult to work out. As the Senator knows, on the Federal income tax return the full amount of long term capital gain is shown. It would not be difficult to obtain that information from the Federal income tax return. On the State income tax returns the tax exempt bond interest or other items exempt from taxation for Federal purposes are readily set forth. I do not believe we would encounter much difficulty in the administration of it, if we tied down the definition of economic income to the factors I have mentioned.

If the Senator thinks this suggestion has merit, the Senator from Iowa would be happy to sit down with him and try to devise an amendment to his amendment which would spell out a definition of economic income which would be practically enforcible. I do not think we need to get into too many refinements. The items I have mentioned are the two big items. I believe the two main items with respect to which we should take action are the unrecognized 50 percent of long term capital gains and the tax exempt bond interest. Both of those represent millions of dollars of income during any year. If we could get those out of the way, I think we would have a much more equitable approach, a much more palatable approach so far as the administrators in my State are concerned. I am quite sure the people in the social welfare administration in the State of Iowa would feel more comfortable about the program if an economic test tying in these other factors were used, rather than the straight income tax liability.

Mr. MORTON. Again I must say I have no way of knowing how many people are in that category. I think there are indeed very few people who have substantial income from tax-free sources, or who have long-term capital gains of any consequence, who do not at the same time have taxable income which would take them outside of the framework of the formula I have developed in my pro-

posal. I think we are talking about so few people that I would hate to see us get bogged down in the argument, when I am trying to establish a more basic, fundamental concept of how to pay for medical care for the needy aged in an affluent society.

Mr. MILLER. But the Senator's proposal would tie the hands of a State. For example, my own State of Iowa could not take into account these other factors I have mentioned. I believe when a proposal would tie the hands of a State we should be reluctant to override long-standing policies of a State, and I think those policies would be overridden if we relied strictly on the income tax liability.

Mr. MORTON. If the Senator will permit me to interrupt, I shall be glad to endeavor to work with the Senator to develop language which would permit the States to consider the problem on the basis of actual economic income instead of on the basis of income taxes paid.

Mr. MILLER. Then I say to my colleague that I think we might be able to work something out to make it a better amendment. I know the Senator has spent far more time going into this subject than has the Senator from Iowa. All I am trying to do is to be helpful in perfecting a reasonably good amendment, which I think will be much more supportable than the amendment now pending.

Mr. MORTON. I thank the Senator. I shall be glad to work with him on the problem.

I yield the floor.

Mr. ANDERSON. Mr. President, first I wish to say to the able Senator from Kentucky [Mr. MORTON] that while we may not agree with his amendment, and some of us may have some argument about it, I desire to commend him publicly for the fact that when the suggestion was made in the Senate Committee on Finance that a hearing be held on the bill, the Senator from Kentucky voted to have a hearing, because the bill is an important one and would involve a great deal of money.

I appreciate the fact that the Senator from Kentucky took the position he did in the committee. I am glad to see that he recognizes that at this time there is very little disposition on the part of people to repeal the basic social security legislation. I was appreciative of the recital which he gave of the changes which have been made in social security legislation through all the years to date.

It is important, however, to realize that we have made the system grow as people wanted it to grow. When features are added to the bill, naturally the cost of the program is increased. I am glad to say that the Senator from Kentucky is one of those who has been helpful in the passage of good legislation along that line. I was pleased to hear his recital today.

However, we have seen what happens when we come to the question of proposing an income tax method of handling the program. People will say that it is not a good means test. Their statement is correct. It is not a good means test. If we were to apply a good means test, the experience of MAA, the medical assistance for the aged program, would show an average cost of about $42 per case in order to put it on the books. Therefore I think the Senator from Kentucky has a good point in saying that if we should try to improve on the income tax approach by a means test, we would have a rather costly venture that might or might not be the correct approach to it.

The Federal payments toward premiums would vary in accordance with the Federal tax liability of the insured aged individual. One intent of the provision is, of course, to conserve Government funds by relating payments to individual need. There is some question, however, as to whether that provision would actually save the program a significant amount of money.

The Government would pay a $125 premium with respect to a person who has no Federal tax liability. About 80 percent of the aged have no tax liability, so the Federal Government would be involved in paying all the cost of 80 percent of the people. At the present time, with the number of people we now have, it would mean a cost of about $1,750 million, to which we would add certain other costs, which would probably bring the total closer to $2 billion. But if we take only the rough figure of $1,750 million, the amendment would be an expensive one which would certainly continue to throw our budget further out of balance.

An income test based on Federal income tax liability has some deficiencies. For example, such a test would exclude various forms of income from nontaxable securities, certain dividends, social security and railroad retirement benefits, and a part of certain long-term capital gains. A retirement income credit is also allowed. Income from State and local bonds and securities is not counted. The option to file joint or individual returns also raises an issue as to treatment of individual members of a couple. It is unclear how such cases are intended to be treated under the bill.

Moreover, any cash income test—even if not tied to income tax—would favor persons receiving noncash income as contrasted to those receiving cash income. Noncash income is an important source of the income of the aged, with homeownership the most common source of significant income of this kind. About two-thirds of the aged people are homeowners. The value of this rent-free housing—ranging from $500 to $1,500 in most cases—would not be counted as income, whereas the nonhomeowner while no better off but with savings equivalent to the value of a home invested in assets providing interest or dividends might find the increase in cash income disqualified him. Almost half of the widows are homeowners and this group would especially be at a disadvantage in the case of a cash income test.

In any case, the test is not an effective means for preventing high-income people from receiving benefits exceeding $25 per year.

The administrative costs under the proposal of the Senator from Kentucky [Mr. MORTON] would be generally higher than that under my amendment. One of the basic reasons for this difference in cost is that Senator MORTON would require specific proofs in determining how much aid would be given to any aged person. The applicant would have to prove his age and each year a determination of his income would be involved. Considering that the average benefit to an individual per year would be in the vicinity of $100 if the cost of the determination were as low as $10, this determination alone would result in 10 percent costs for administration. While I have assumed $10 for this purpose, it should be recalled that in the MAA program administering the means tests costs $42 per case on the average.

So I hope the amendment will be rejected. I believe that it is an interesting proposal. I say again that the proposal of the Senator from Kentucky has been carefully drawn. I realize that it represents a good deal of thought, care and attention. But I think the amendment should be rejected.

Mr. JAVITS. Mr. President, I shall not detain the Senate very long. I did wish to make a few observations.

Mr. KERR. Mr. President, will the Senator speak a little louder?

Mr. JAVITS. I might suggest that if perhaps the Senator from Oklahoma would come a little closer, he could hear better.

Mr. KERR. If the mountain will not come to Mahomet, Mahomet will go to the mountain.

Mr. JAVITS. And the mountain will be very honored.

Mr. President, I wish to make a few observations on the very interesting substitute suggested by the distinguished Senator from Kentucky.

I preface my observations by pointing out that the amendment represents a very thoughtful effort to meet the problem. And admittedly it is a problem.

I make my observations only because there will be other amendments. The Senator from Connecticut [Mr. BUSH] has an amendment.

The amendment of the Senator from Kentucky may find favor with the Senate, although I hope it does not. There may be other suggestions which raise the same points. Perhaps it is just as well that at an early stage of the proceedings the Senate should consider those points.

First, there is the question of cost, which I believe is very important. My distinguished and beloved friend, the Senator from Oklahoma [Mr. KERR], in his usual trenchant way, made me face the fact yesterday that there was a time when I was very much opposed to social security financing. I should like to face that fact again today. The amendment of the Senator from Kentucky [Mr. MORTON] raises the point very properly. There is no question about the fact that the program would result in less cost, in terms of the Federal budgetary establishment, if the social security financing prevails.

The reason I was opposed was that I felt it would be a tax upon those elements of the population at the lower income levels. Therefore I criticized the tax as regressive. It took about 2 years

for me to come to the realization, which I repeat was my decision as a person in public life with an extrasensory perception which we all acquire after while, that those who would pay what I called and still call a regressive tax are not only willing but eager to pay it.

There is inherent in the concept dignity, strength, self-sufficiency, and self-help. The concept that people would be putting up some extra money to provide health protection for them when they grow older is an attractive concept to the working people of the United States. That strange alchemy occurs in a free society.

It is my observation—and I am acting upon it because I thoroughly believe it—that the great majority of the American people who would pay the extra percentage called for by the amendments of the Senator from New Mexico are willing and glad to pay the required amount for the protection which they consider they would be getting under a suitable bill. That is a classic case, so far as I am concerned, on the question of financing.

When I was working on my bill in August 1960, I had to admit that it would cost $1 billion to $1¼ billion. The Senator from Kentucky [Mr. MORTON] must admit that his bill would cost $1,200 million to $1,400 million. Therefore, we must compare that cost with the fact that under the substitute of the Senator from New Mexico [Mr. ANDERSON] which we have joined in, the cost out of the general Federal Treasury would be something in the area of $250 million. The rest of the cost, roughly $1 billion more or less, but on the whole just about that figure, would be produced out of social security taxes. Since I am intellectually convinced that people are willing and ready to pay that tax for the purpose stated, why should we stop them? It certainly would reduce the drain upon the regular Federal budget, the regular Federal expenditures, and what we consider to be the cost of running the Federal Government, especially in respect of a program of the character we are considering.

The second thing is the question of benefits, which I think is raised very admirably by the proposal of the Senator from Kentucky. There are two ways to approach the benefit question. One way is as he has approached it, by allowing the competitive forces in the insurance field to establish benefits competitive within approved limits. He names a category; he does not specify benefits.

The other way is to set a standard to which private enterprise is invited to repair—better, if it can, but a standard nonetheless. I rather think for myself—and again I speak solely as an advocate and as one who has worked in this field—I prefer the setting of a standard. I believe that the standard that will be set will be a notch above what the private enterprise system is likely to go to now. Nonetheless and notwithstanding the fact that it is a notch above what it will go to now, I think the way we have it, with the option added to it, it will result in giving the private enterprise system a new base upon which to stand.

May I repeat that, Mr. President? We are having a conversation not only with each other, but with the country on this subject. I believe it should be very clear to everyone what we are trying to attain and what people like myself, who have come over to a point of view, believe. I believe that we are setting a standard which will be a base for the private enterprise system at a level higher than what in my view it would attain for some time.

Therefore, the standard we would be setting in the bill, according to the Anderson substitute, is desirable. It is a standard which I believe represents a reasonable contribution to the adequate medical care of the individual over 65. We all know that it does not represent all of his medical care. We know, for example, the great power and effectiveness of preventive care in respect to our older people. We know, for example—and geriatricians tell us—that it is important to keep older people ambulatory. We know that not less than 50 percent or probably nearer 60 percent of their medical expenses will not be met by the pending bill even if it is passed in its present form. Nonetheless, it is a big contribution to medical security. That is what it is. It is a platform on which private enterprise can build higher. It can build even higher on the concrete base that the bill will provide, and bring about adequate medical care for people over 65 in terms of money and in economy.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. CURTIS. The cost of the program under the Anderson proposal would be borne through taxation, would it not?

Mr. JAVITS. It would be borne through the social security tax.

Mr. CURTIS. That is a compulsory tax.

Mr. JAVITS. Yes.

Mr. CURTIS. What remedies can be resorted to if it is not paid voluntarily?

Mr. JAVITS. Well, the same penalties that would apply to any other mandatory tax imposed by the Federal Government.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. ANDERSON. When the Senator from Nebraska says "if it is not paid voluntarily," I only wanted to say that I have always thought that most social security taxes were collected at the source by the Government. I did not know that the Government went around to the individual to collect its dollar.

Mr. CURTIS. The self-employed pay it directly.

Mr. JAVITS. The employer pays both for the employee and for himself.

Mr. CURTIS. Severe penalties are imposed if they do not collect it and pay it. Where does the money go after it is paid in taxes?

Mr. JAVITS. Under our bill it will go into a separate trust fund, a medical trust fund set up solely for this purpose.

Mr. CURTIS. In the U.S. Treasury?

Mr. JAVITS. Well, it will go into a separate trust fund which is under the jurisdiction and control of the Treasury; yes.

Mr. CURTIS. Who will pay out the benefits?

Mr. JAVITS. The benefits will be paid out in the first instance from the trust fund by the Treasury.

Mr. CURTIS. The Government will make arrangements with the provider of the service, whether it be a hospital or nursing home?

Mr. JAVITS. Or with an agent or with a supplier of the service to the beneficiary, where the beneficiary has availed himself of it—a private enterprise operation.

Mr. CURTIS. The Government must furnish it one way or another?

Mr. JAVITS. The Government must pay one way or another.

Mr. CURTIS. What makes it a private enterprise system when the Government collects the money with all the force of law of collecting any tax and where the Government administers the program even though there is an option that permits them to have an agent assist with the administration?

Mr. JAVITS. I would say that it is a partially private enterprise system and a partially Government system. I would say it is a mixed system.

Mr. CURTIS. If an individual lives in an area where Blue Cross is not going to act as the agent for the hospital or for the beneficiary, what part of it would be private enterprise?

Mr. JAVITS. That part which actually supplies the service to the individual. It will be supplied in many cases by hospitals or nursing homes or some health service agencies, which are private enterprise.

Mr. CURTIS. The hospitals are not Government-owned.

Mr. JAVITS. In the main, that is true.

Mr. CURTIS. But the operation of the plan otherwise is a Government system of paid medicine.

Mr. JAVITS. Well, I cannot agree with the Senator that this is a Government system of medicine. I think a fair description of it is that it is a system of private enterprise and Government. It is a mixed system of giving medical care—it is not really medical care—giving health care to those over 65. I cannot agree with the Senator. I know he is an able questioner, and I would like to go along with him, but I am intellectually convinced that this is not strictly a Government plan.

Mr. CURTIS. Turning to another subject, does the Senator know what the cost of a hospital bed runs to? Let us say a hospital bed in a semiprivate accommodation or in a ward.

Mr. JAVITS. There is great variance. I would fix the cost at somewhere in the $10 mark and as high as $35. It depends on the place.

Mr. KERR. That is per day.

Mr. JAVITS. Yes. It depends on the type of accommodation that is furnished.

Mr. CURTIS. If the beneficiary finds it necessary to go to a hospital and his illness is such and the facilities are such that he is placed in a bed which costs not to exceed $10 a day and he stays 8 days in the hospital. How much of the hospital bill will be paid by the plan?

Mr. JAVITS. Nothing.

Mr. CURTIS. Very well. My next question is, What is the average length of stay in the hospital for an aged person?

Mr. JAVITS. Our researches, when we looked into the matter, showed that last year in round figures it was 15 days. I do not believe the figures are any different today. The Senator will not hold me to a slight percentage, I am sure.

Mr. CURTIS. I cannot even hold the Senator to that figure, because it is too round. I believe it is much lower.

Mr. JAVITS. It is actually 14.7 days average stay. I said 15.

Mr. CURTIS. For what class of people?

Mr. JAVITS. Over 65.

Mr. CURTIS. Those figures vary from the ones I have. I would be interested in the source of the Senator's figures, because I believe we are all in danger of having figures from my point of view and from the Senator's point of view which will not be complete.

Mr. JAVITS. I could not agree more with the Senator from Nebraska. When one draws upon one's recollection, it is always dangerous. So I ask the Senator's leave to submit to the Senator, and for the record, the precise figure and the precise source. This is not the end of the matter, so we can go into it again at another time.

Mr. CURTIS. Does the Senator from New York know what percentage of the aged of the country now have some sort of private health insurance or hospital insurance?

Mr. JAVITS. I would not wish to say about health.

Mr. CURTIS. I will confine it to hospital insurance.

Mr. JAVITS. My understanding is that some kind of health coverage extends to something like 7 million-plus of persons over age 65. Again, the Senator is entitled to my source and to every detail; but, again, I am giving the Senator my best recollection.

Mr. CURTIS. Seven million out of how many million?

Mr. JAVITS. About 7 million out of about 17,500,000.

Mr. CURTIS. Has that number increased materially in the last 10 years?

Mr. JAVITS. I am sure it has increased materially, because the whole rate of increase in health coverage, through various types of health plans, is very great.

Mr. CURTIS. Does the Senator from New York have any facts to indicate that that increase will not be greater in the next few years than it has been in the past?

Mr. JAVITS. The Senator from New York cannot give the Senator from Nebraska those facts, except to point out that the rate of increase is slowed as a certain rate of participation is reached. But one of the main factors, which also affects the 7 million, is the extent of the coverage, which is one of the important points which have been made in these debates, which explains, in many cases, perhaps even the majority of the cases, the very limited nature of the coverage. There is health coverage, but it is quite limited in nature.

Mr. CURTIS. To what is it limited?

Mr. JAVITS. It varies with different plans and different types of participation.

Mr. CURTIS. Does it include prescriptions?

Mr. JAVITS. I could not say that to the Senator generically. Could the Senator tell me to what plan he refers?

Mr. CURTIS. I am talking about the new plan.

Mr. JAVITS. I beg the Senator's pardon. I understood the Senator to be talking about the so-called voluntary plan.

The plan of the bill does not include prescriptions. It includes such medicines as are provided in connection with hospitalization, and there is a fair degree of procedural formulas.

Mr. CURTIS. In other words, if there is an aged individual who, in order to sustain life, must have a prescription filled once or twice a week, this program would not provide for that?

Mr. JAVITS. I would not say that.

Mr. CURTIS. If he is not in a hospital?

Mr. JAVITS. If he is not in a hospital, that is a fact, except for one minor difference. There is a certain amount of outpatient diagnostic service provided in the bill, with a deductible amount of $20.

Mr. CURTIS. That is a cheap way of keeping the person out of the hospital.

Mr. JAVITS. Well, let us say that.

Mr. CURTIS. Suppose an aged person had to report to his doctor's office once a week. What would the Anderson proposal do for him?

Mr. JAVITS. Aside from the outpatient service, to which I referred, the Anderson proposal would not cover the doctor's service.

Mr. CURTIS. Suppose such a person called the family doctor, and the doctor went to the home. Would such service be covered under the Anderson proposal?

Mr. JAVITS. No, it would not.

Mr. CURTIS. We are asked to inject the Federal Government into a plan under a universal tax which will provide some benefits, and the proponents admit that the benefits are rather small. What is the Senator's estimate, or what is the best figure the Senator can obtain, concerning what a private carrier would charge for all the protection which is provided in the Anderson bill as now written?

Mr. JAVITS. We have tried to get various estimates on that subject for the 90 days of hospitalization with the $90 deductible. The best figure I can give the Senator is this. Our research has indicated wide diversities. Many companies have much lower ratios of operatings to premiums than do others.

We are told that the optimum ratio was somewhere in the 80- to 85-percent bracket. That is not even attained. The best figure I can give the Senator is that I calculate the cost to the Federal Government of this type of coverage, on a premium basis, as in the order of magnitude of $100 a year. What a private company would charge for that service remains a question, because the private companies have not been faced with this issue. However, I think it is fair to assume that Representative Bow rather carefully did his utmost to ascertain what insurance coverage would cost in connection with the proposed Bow plan.

It is rather significant to me that even with a lifetime limitation of $5,000, on the basis of $100 deductible, and $10,000 on the basis of $200 deductible, on the whole his figures for a $125 premium give, if anything, fewer benefits than the benefits provided by the Anderson plan. For example, because, again, we want to have our figures correct, his plan A—he has two alternatives in his proposal—provides 90 days' hospitalization, assuming a cost of $12 a day, which I think is a pretty low cost assumption, because apparently insurance companies, generally speaking, prefer an overall figure of $1,080 for all days of confinement in a calendar year. They give $120 for hospital ancillary charges, including surgery and emergency treatment; $6 a day for convalescent hospital room and board charges; and $186 for all such days of confinement in a year. So they are talking about 31 days, and they pay surgical charges—which the Anderson plan does not—according to a fee schedule with a $300 maximum for any single operation.

I submit that those benefits are rather materially lower than the Anderson benefits. The insurance companies are protected by a lifetime limitation, which I have described. Nonetheless, apparently the optimum figure which Representative Bow was able to get is $125 a year.

Mr. CURTIS. That includes surgery.

Mr. JAVITS. I know; I equated that fact with the nursing home service and the health service provided in the Anderson bill. Therefore, what will be provided by the Federal Government, even on this actuarial cost basis, is very much more for the money than what is provided today. I am hoping for much better things.

Mr. CURTIS. For whose money?

Mr. JAVITS. For the individual payer's money. The individual payer of the social security tax will get more for his money today than he would, generally speaking, in the insurance field.

Mr. CURTIS. When the Senator speaks of "today," is he referring to the young man of 25 years of age who begins to pay the bill?

Mr. JAVITS. No; I am talking about the man who needs coverage at age 65.

Mr. CURTIS. He will get his service free if he is already retired. That is pretty cheap.

Mr. JAVITS. That is correct; it is very cheap. But we are now talking

about the impact on a man of average age when he becomes 65 years of age.

Mr. ANDERSON. Mr. President, will the Senator from New York yield at that point?

Mr. JAVITS. I yield.

Mr. ANDERSON. In connection with the discussion about the length of stay in a hospital, I ask unanimous consent to have printed at this point in the RECORD a table from the "Health Statistics of the National Health Survey of the United States, 1958–60." Table 12 shows the average length of stay in days for both sexes in different age groups. In the age group 25 to 34, the average length of stay is 6 days. In the age group above 65, the average length of stay is 14.9 days.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 12.—*Average annual number of hospital days and average length of stay by sex, family income, and age: days for discharges from short-stay hospitals, United States, 1958–60*

[Data are based on household interviews and refer to the living, civilian, noninstitutional population. The survey design and information on the reliability of the estimates are given in appendix I. Definitions of terms are given in appendix II]

Family income and age	Average annual number of hospital days in thousands			Average length of stay in days		
	Both sexes	Male	Female	Both sexes	Male	Female
All incomes						
All ages	166,935	77,018	89,916	8.4	10.5	7.2
Under 15	20,560	11,353	9,207	6.0	6.1	5.8

NOTE.—Estimates of discharges are based on the experience of members of the sampled households who were alive at the time of the family interview.

Mr. CURTIS. Mr. President, may I inquire if that is the average length of stay of everyone who went to the hospital, or is it the average based upon all persons over age 65?

Mr. ANDERSON. It is the average length of stay, in days, of persons who went into the hospital.

Mr. CURTIS. Who went into a hospital?

Mr. JAVITS. It is based on discharges per 100 persons.

Mr. CURTIS. But the average person did not spend that many days in the hospital.

Mr. JAVITS. That is correct.

Mr. CURTIS. My last question is: Can the Senator enumerate for me the list of businesses in which the U.S. Government has engaged, in which the Federal Government operates more efficiently and economically than does private enterprise?

Mr. JAVITS. Of course——

Mr. CURTIS. I would not suggest that the Senator start with the Senate restaurant or the Post Office Department.

Mr. JAVITS. The Senator could start with the protective services of the FBI; I think that would be a fairly good example.

Mr. CURTIS. But that is not a business.

Mr. JAVITS. I think there are in the country a number of persons in that business—Dougherty, the Burns organization, and a number of others.

Mr. CURTIS. The first inherent power of the government is the police power, to maintain order; and that is a government power. It is not a private business. But I mean the running of a restaurant or construction or work on force account or similar activities. I should like to have a list of examples in which the Government has excelled private enterprise in terms of progress and low cost.

Mr. JAVITS. Mr. President, I do not believe that a debater should ever be drawn into arguing for a point which he does not maintain.

Mr. CURTIS. I thank the Senator for his concession.

Mr. JAVITS. I would point out to the Senator from Nebraska that in 2 years I have rather worn myself thin in bringing into this plan the private enterprise element, because I think in this respect that mix might give us the most economical and just plan we could possibly get.

Mr. CURTIS. But when has a mixture of private enterprise and socialism ever worked?

Mr. JAVITS. Again the Senator from Nebraska bases his question on a postulate which does not arise here. None of us is talking about socialism. We are talking about Government and private enterprise, and that mix is working very well, in the main—for example, in the production of weapons systems; and, somehow or other, we have been able to work it effectively in war; and the other day we passed, with practically no opposition, a renegotiation statute which provides for a mix of Government and private enterprise. If we are to make progress in the directions in which this world must make progress and if we are to carry on enormous works, of a size today undreamed of, our business community will have to become more accustomed, rather than less accustomed, to this idea, because the alternative is all government; and that I, myself, reject with all the strength and force of my being.

Mr. CURTIS. Does the Senator from New York mean that a little bit of it is good?

Mr. JAVITS. No, I do not say that. I say that in order to make progress and in order to do the work which must be

done, our private enterprise is learning; and I think one of the things it is learning in connection with this field and in connection with other fields is the ability to work with Government.

Mr. CURTIS. I thank the Senator from New York.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Kentucky [Mr. MORTON].

Mr. KERR. Mr. President, will the Senator from New York yield?

Mr. JAVITS. I yield.

Mr. KERR. I have been intrigued by what the Senator has said about this being a mixture of private enterprise and Government. Yesterday, in response to questions by me, the Senator from New York admitted that under both sections of the Anderson-Javits amendment which have to do with disbursing money in paying for the benefits to be provided, the Government would pay all the money, and beneficiaries would not get any more benefits under the program, whether the Government paid for it directly or whether it was paid for by the Government through intermediary, a private enterprise; and the Senator from New York admitted that if the payment was made through a private enterprise, through an intermediary, in addition to paying for the benefits, the Government would pay a fee to the intermediary, but it would not be a program in which the intermediary would be operating at a profit insofar as the health or hospital program itself was concerned. I believe that is a fair statement of what the debate yesterday disclosed.

Mr. JAVITS. Well, with all love and affection, although it is alleged that I said that, I do not believe that is a fair statement of what I said. But I shall wait for the Senator's question.

Mr. KERR. My question is this: To what extent is private enterprise involved, other than the extent I have just now described?

Mr. JAVITS. I have pointed out that the benefits which will accrue to the individual will include an opportunity for him to purchase on a better basis than he otherwise could, the additional coverage he needs, if he wishes to have more complete coverage than the Anderson plan would give him.

Mr. KERR. Then the Senator from New York would have to say that through this program the intermediary will get more money for the services provided by this bill than the cost of the services or than the amount the intermediary will pay to the hospital or to the nursing home or to the health service.

Mr. JAVITS. I would not have to say that at all, because under the option provision, which I gather is the one the Senator from Oklahoma is talking about——

Mr. KERR. There are two options; the Senator from New York said, yesterday, that there are two options.

Mr. JAVITS. I am talking about the option provided in section 1716.

Mr. KERR. Very well.

Mr. JAVITS. Under that, there will be no private enterprise operation except in addition to the basic guarantees of the plan—for the reason that the one giving the service cannot charge a premium for what is contained in the plan. So unless a person furnished service greater than that provided by the plan in the Anderson bill, he would not qualify as a person with whom such an option could be exercised.

Mr. KERR. But the beneficiary would not get any more from the Government, by reason of having exercised the option, than he would if he did not exercise it.

Mr. JAVITS. That is correct; he will not get any more from the Government; but he will get something from the company or the entity with which he exercises the option, as payment for it.

Mr. KERR. If he pays for it?

Mr. JAVITS. Yes. And if he does not, he will not.

Mr. KERR. Does any provision here require that the beneficiary shall receive more than what the intermediary is paid for—more than he would get if the Government did not make the payment to the intermediary?

Mr. JAVITS. The answer is "Yes."

Mr. KERR. I ask the Senator from New York to show it to me.

Mr. JAVITS. Because no payment may be charged by an intermediary for the services the Government provides.

Mr. KERR. But that was not my question. I asked whether any provision here states that the beneficiary will get more for the money he pays to the intermediary than the services provided and paid for by the Government.

Mr. JAVITS. But the Senator is not stating what the beneficiary is paying.

Mr. KERR. Does the Senator from New York assume that any payment by the beneficiary under this bill would require the intermediary to give that beneficiary more, if the payment were made under the provisions of this bill, than if the payment were made directly?

Mr. JAVITS. Of course. Suppose he paid a premium of $250 a year. He would get the services the Government would provide; and, in addition, he would get much more.

Mr. KERR. He would get $250 worth.

Mr. JAVITS. And much more, in addition, including probably surgical services, medical services, and all kinds of things.

Mr. KERR. But he would get only what he paid the intermediary for, would he not?

Mr. JAVITS. Certainly. Under any insurance policy, one gets only what he pays for.

Mr. KERR. Certainly, and that is the position I am taking.

I ask the Senator from New York what the beneficiary would get for his payment to the intermediary, under the provisions of this bill, that he would not get in the absence of this bill?

Mr. JAVITS. He would get the basic service the bill provides, plus many other things that he would not get if he bought a straight policy under a $250 premium. He would get more than he otherwise would get today for a $250 premium, because the carrier could give him the service the Government gives, plus many other things, in addition. Therefore, he would get a very much better deal.

Mr. KERR. But he would get only as much of a better deal as he paid for out of his own pocket, would he not?

Mr. JAVITS. But he would pay for the actuarial risk; and that risk is very much reduced when there is a provision that the Government will make reimbursement for the cost.

Mr. KERR. Will the Senator read the provision in the bill which requires the intermediary to give the beneficiary more for what the beneficiary pays than the intermediary would give the beneficiary if the deal were directly between the two and were limited to the deal? Does the Senator mean he would get the same service twice if he paid for it and the Government paid for it?

Mr. JAVITS. No; I do not mean that at all.

Mr. KERR. He would get two bottles of aspirin instead of one?

Mr. JAVITS. No. I mean when the insurance carrier can charge the premium for giving the service——

Mr. KERR. Where is that provided for?

Mr. JAVITS. I will get that language. The Senator has broached this question rather suddenly, he will admit.

Mr. KERR. I do not believe any Senator knows what is in section 1716 if the Senator from New York does not know, because he knows as much about the language as any Senator does whose name is on the bill.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. MANSFIELD. Are we discussing the substitute offered by the Senator from Kentucky, or the amendment offered by the Senator from New Mexico?

Mr. KERR. I will answer the question of the Senator from Montana, and say the Senator from New York has been discussing neither.

Mr. ANDERSON. Mr. President, if the Senator will yield, may I ask the Senator from New York if we may vote on the pending amendment first, before discussing the other amendment?

Mr. JAVITS. I shall be glad to withhold any further statement and take up the matter again after the vote on the pending amendment.

Mr. KERR. I have asked the Senator from New York a question. I hope I succeed in getting a more direct answer than what I have received.

The Senator from New York said a while ago that he was limiting his remarks to what the beneficiaries would get under the bill today. Then the Senator made a statement, which I think I understood, and if I did not, I hope the Senator will correct me, "I am hoping much better things for them in the future."

Mr. JAVITS. No; I do not think that is a fair characterization of what I said.

Mr. KERR. If the reporter who took down the Senator's remarks is here, perhaps he can read what the Senator said.

The reason why I asked the question is that in 1960 the Senator from New York made a statement, which appears on page 15716 of the RECORD, as follows:

Mr. President, I think the hard nut of the issue is, Do we wish to inaugurate in the social security system what is, for all

practical purposes, a health care scheme? I would not say it is exactly what the British do, but it is very much like it. * * *

We are now starting with the aged over 68, but once we have imbedded it so fundamentally into the responsibility of the Government in terms, at the very best, of a Government insurance program, of course it will develop, without any question.

That is what the Senator said in 1960.

What he said a while ago today is that once we get written into the law what he has offered in this bill in the way of benefits for the beneficiaries, he hoped very much better things for them in the future.

In other words, as I understand the Senator from New York, today he hopes for things under this system in the future which in 1960 he feared would be the result.

Mr. JAVITS. No; I said no such thing. I said no such thing in 1960, and I have said no such thing now.

Mr. KERR. The Senator from Oklahoma read what the Senator from New York said in 1960.

Mr. JAVITS. I agree, as interpreted by the Senator. If the Senator will allow me to interpret what I said——

Mr. KERR. The Senator said that in 1960.

Mr. JAVITS. The Senator from New York reserves the right to explain what he said in 1960, if the Senator from Oklahoma will allow it.

Mr. KERR. I could not stop the Senator, and would not if I could, because the more the Senator speaks, the deeper he sinks into the mire of his own contradictions.

Mr. JAVITS. If the Senator will allow for the contradictions of Senators, which are famous——

Mr. KERR. I hope the Senator will speak for himself only in that regard.

Mr. JAVITS. The Senator from New York will.

In 1960 I was against the social security method of financing, and I used every argument at my command against it.

If the Senator from Oklahoma will let me have his attention, I would appreciate it. Having made his point, I think I would like to make mine.

In 1962, coupled with what I consider to be an option method, a radical difference in the whole approach and thrust of this bill, opening it to the cool, clean air of the private enterprise system, I have accepted the social security method of financing for the reasons which I have stated.

Among those reasons are that the people want to pay for such medical insurance; that there is no other way of getting a bill passed; that a medical care bill is desirable; and that there are precautions, which we have gone over time and again, which have overcome a good many of the objections I had to the bill originally.

I would be less than honest with myself, and less than honest with the people whom I represent in the State of New York, if, having come to that conclusion, I did not act on it, which I have done. I am not dismayed by remarks which I made in 1960, of which the Senator may find more, which indicated the basis of my conviction upon the previous occasion in reference to the bill which I then sponsored.

I would like to point out to the Senator that that bill provided for a system of broad medical care for our older citizens substantially as now exists in the pending proposal. The only difference between that bill and the Anderson bill was in the method of financing.

Whether the Senator from Oklahoma thinks so or not, the present Anderson bill has been widely hailed as being a real departture, in substantial terms, from the previous King-Anderson bill, on which we voted in 1960.

In answer to the substantive question which the Senator asked me before, I invite his attention to the provision of section 1716, subsection (b), which reads——

Mr. KERR. From what page is the Senator reading?

Mr. JAVITS. Page 45, lines 14 through 23:

An individual may make an election under subsection (a) with respect to the plan of an eligible carrier only if he was covered by a plan of such carrier (or an affiliate thereof), providing or paying for the costs of inpatient hospital services, skilled nursing facility services, home health services, and outpatient hospital diagnostic services which are subject to no greater limitations and deductibles than are provided in section 1704, and providing or paying for the costs of some additional health services, continuously—

And so on. I point out particularly the words "some additional health services."

In short, whether we have expressed it artistically or to the satisfaction of the Senator from Oklahoma—and if we have not expressed it artistically, the Senator from Oklahoma is perfectly free to correct it—it is our desire and intention to make only those private plans available which have an additional quotient over and above the services provided by the Anderson bill.

Mr. KERR. But for which the patient himself pays.

Mr. JAVITS. He will pay a premium.

Mr. KERR. And having paid it, there is nothing in the provision which provides that he will get more benefits than if he had not paid for it.

Mr. JAVITS. That is correct.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. CURTIS. With reference to the cost of the two plans, is it not a fact that the social security tax paid by an individual is not an allowable deduction from the income tax, but that a payment for a private hospital and medical insurance premium for a person over 65 is a deductible item?

Mr. JAVITS. That is correct.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Kentucky [Mr. MORTON] in the nature of a substitute for the amendment of the Senator from New Mexico [Mr. ANDERSON].

The Morton amendment in the nature of a substitute for the Anderson amendment was rejected.

POSITION OF AMERICAN MEDICAL ASSOCIATION

Mr. ANDERSON. Mr. President, in course of the past several months an increasing number of doctors have voiced support of proposals to provide health care for the aged through social security. They have taken a stand in direct opposition to the spokesman of the American Medical Association. I ask unanimous consent that the following letter to the editor from the El Paso Times of June 20, 1962, be printed in the RECORD. It is a fine statement by four physicians who support the social security approach.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the El Paso Times, June 20, 1962]

SPEAKING THE PUBLIC MIND

EDITOR, EL PASO TIMES:

At a time when careful and intelligent thought is needed on the very real problem of providing good medical care for our growing elderly population, it is most regrettable that there is at present a paucity of such thought by most segments of our population. Pressure groups have loudly presented their propaganda in an effort to achieve their objectives.

One such pressure group is the American Medical Association, a group which wrongly represents itself as the spokesman for all American physicians. By no means is this the case. Many thoughtful physicians, while endorsing wholeheartedly the AMA's programs of fighting health quackery and of aiding in the maintenance of high standards of medical education in this country, emphatically oppose the organization's ultraconservative political statements.

The AMA has recently, it seems to us, been guilty of perpetrating in numerous periodicals and in pamphlets placed in physicians' offices many half-truths and outright falsehoods concerning the King-Anderson bill and its supporters. We are ashamed and deeply disappointed that a group of men who like to consider themselves scientifically oriented are capable of reasoning of a caliber which would lead to failure of any freshman philosophy examination and of sordid emotionalism. Their publications accuse supporters of the King-Anderson bill of desiring to establish a National Health Service similar to that of Great Britain and insinuate in at least one publication which we have seen that perhaps there is a definite interest of Moscow in the passage of this bill. They have absurdly asserted that "the average income of those over 65 is greater than for those under 65." According to the New York Times, a usually reliable source, "the median annual income of families headed by persons over 65 is $2,897, as compared with $5,905 for other families" (May 27, 1962, p. 2E). They assert that living costs for the aged are lower, when we all know that grocery stores, utility companies, clothing stores, and landlords do not have special prices for the aged, nor should they. They pretend that medical expenses are no greater a threat to an individual over 65 than for a younger individual, ignoring common knowledge and life insurance statistics and the fact that a minority of these persons is gainfully employed. They speak of the King-Anderson bill's "interference with the doctor-patient relationship," when it pertains only to payment of hospital and nursing-home bills and has no clause which interferes with the patient's right to choose his own physician or the physician's right to diagnose and treat.

The Kerr-Mills bill covers those who qualify for and are willing to accept welfare aid. It does not adequately cover millions of aged

citizens who are unable to afford prolonged and expensive medical care. Nor is it true that all physicians will see welfare patients. We have known of some who will not. We do not believe that the plan to add medical care to the social security system is unreasonable. The argument that this is a forerunner of frank socialism is not valid. The same argument has been given against every important piece of social welfare legislation from social security to slum clearance and is advanced by those who oppose any change in the good old status quo.

We hope that physicians, social scientists, and those entrusted with making the laws of this land will join to work for better medical care for all citizens, applying rational and informed minds to this very complex problem.

(NOTE.—The above are physicians currently stationed at Walker Air Force Base. This letter is to be understood as expressing solely the private opinion of its writers, and in no way expresses the policy of the 812th Medical Group or of the Medical Corps of the U.S. Air Force.)

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call may be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. ANDERSON. Mr. President, I ask unanimous consent that the pending amendment be set aside in order that the Senator from Illinois [Mr. DOUGLAS] may offer an amendment to the bill.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. DOUGLAS. Mr. President, on behalf of myself and other Senators, I send to the desk an amendment which I ask to have stated.

The PRESIDING OFFICER. The amendment of the Senator from Illinois will be stated.

The CHIEF CLERK. The Senator from Illinois [Mr. DOUGLAS] (for himself, Mr. HUMPHREY, Mr. YARBOROUGH, Mr. BURDICK, Mr. DODD, Mr. FULBRIGHT, Mr. GRUENING, Mr. HOLLAND, Mr. JACKSON, Mr. LONG of Missouri, Mr. MCCARTHY, Mr. METCALF, Mr. MOSS, Mr. PELL, and Mr. RANDOLPH) proposes an amendment to the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes, viz:

On page 78, line 13, strike out "and" and insert in lieu thereof the following: "except that, in making such determination with respect to any individual claiming old-age assistance, the State agency may disregard not more than $25 per month of earned income; and".

On page 100, between lines 15 and 16, insert the following:

CERTAIN EARNED INCOME MAY BE DISREGARDED IN DETERMINING NEED FOR OLD-AGE ASSISTANCE

SEC. 156. Section 2(a)(10)(A) of the Social Security Act (as amended by section 106(a)(1) of this Act) is further amended by striking out the word 'and' at the end thereof and adding in lieu of such word the following: "except that, in making such determination, the State agency may disregard not more than $25 per month of earned income; and".

On page 100, line 24, strike out "and 134" and insert in lieu thereof "134, and 156".

Amend the table of contents of the bill so as to add, after the description of the contents of section 155 of the bill, the following:

SEC. 156. Certain earned income may be disregarded in determining need for old-age assistance.

The PRESIDING OFFICER (Mr. HART in the chair). The question is on agreeing to the amendment offered by the Senator from Illinois for himself and other Senators.

Mr. DOUGLAS. Mr. President, I ask unanimous consent that the name of the junior Senator from Wisconsin [Mr. PROXMIRE] may be added to the amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOUGLAS. Mr. President, the purpose of the amendment is to allow those on old-age assistance to earn small amounts of pin money by babysitting, gardening, and other casual work without being penalized. The amendment would accomplish that objective by permitting States to exempt from the determination of an aged individual's need for old-age assistance an amount of earned income up to $25 a month. If enacted, the amendment would take effect beginning on July 1, 1963, which is at the beginning of the next fiscal year, and not during the current fiscal year.

The present law provides that in determining need under old-age assistance, the entire income and resources of an individual are to be taken into account.

What that means in practice is that any amount an aged person earns is deducted from the grant which has been determined to represent his need.

For example, suppose an aged individual is receiving a grant of $58 a month, which is the nationwide average excluding vendor medical payments. The average cash grant is approximately $58, and the medical assistance given is the equivalent of approximately $14 a month. In April 1962, the average money payment was $57.91 and the average medical payment was $14.33.

Mr. AIKEN. Mr. President, will the Senator yield for a question?

Mr. DOUGLAS. I yield.

Mr. AIKEN. Can the Senator inform the Senate as to the maximum grant in any State?

Mr. DOUGLAS. We have the figures. For April, California had the highest average money payment of $89.31. Including vendor medical payments, the California average was $101.60. In Connecticut, including medical payments, the average was over $111. Of course, in exceptional cases an individual monthly payment can run over $500 including medical payments.

Mr. AIKEN. I was wondering why the Senator arrived at $25 as the amount which could be earned over and above the grant? Why not $35 or $40?

Mr. DOUGLAS. I tried to be very conservative.

Mr. AIKEN. Possibly the Senator thought that he was dealing with conservative people in offering his amendment.

Mr. DOUGLAS. Yes; extremely so.

Mr. AIKEN. Nevertheless, it seems to me that $25 is little enough.

Mr. DOUGLAS. Mr. President, that statement is very interesting. When I submitted an amendment in 1956, I included in it the amount of $50 a month. On a yea-and-nay vote in the Senate the amendment was agreed to, but it was lost in conference. This time I thought I would be more modest.

Mr. AIKEN. The conservative individuals to whom I referred would not have been the Senate anyway.

Mr. CURTIS. Mr. President, will the distinguished Senator yield?

Mr. DOUGLAS. I am happy to yield.

Mr. CURTIS. Does the amendment of the Senator from Illinois have the support of the Department of Health, Education, and Welfare?

Mr. DOUGLAS. I am not certain.

Mr. CURTIS. I should like to ask one further question. At the present time additional earnings on the part of a recipient of old-age assistance are in the same category as a gift or some assistance from a relative. Is it not true that if a recipient of old-age assistance were drawing the average which was mentioned—$72—and it was learned that a son, daughter, or some other relative by some sacrifice was giving the recipient an additional amount of $25, if that fact were disclosed, the old-age assistance would be reduced from $72?

Mr. DOUGLAS. The Senator is correct.

Mr. CURTIS. But the amendment of the Senator from Illinois would not take care of that situation?

Mr. DOUGLAS. No. The amendment merely provides for an amount up to $25 of earned income. It would not apply to gifts, but to earned income.

Mr. CURTIS. I thank the Senator.

Mr. AIKEN. Mr. President, will the Senator yield for a further inquiry?

Mr. DOUGLAS. I yield.

Mr. AIKEN. How much unearned income would a recipient be entitled to retain with, we will say, an average old-age assistance payment of $72 a month?

Mr. DOUGLAS. Unearned income would be treated in the same way that earned income would be treated, and would automatically be deducted from the cash allowance which otherwise would be paid.

Mr. AIKEN. Can the Senator enlighten me as to how a person living on old-age assistance can live on $72 a month or even $97 a month?

Mr. DOUGLAS. The $72 is not necessarily the total income of the individual.

Mr. AIKEN. That is what I thought.

Mr. DOUGLAS. The amount of old-age assistance is the difference between the needs of the aged man or woman as determined generally by social workers, on the one hand, minus the resources of the aged man or woman.

Mr. AIKEN. I see.

Mr. DOUGLAS. The difference is the amount of old-age assistance. On the average $58 is approximately the cash payment and $14 is the average medical assistance.

Mr. AIKEN. I thank the Senator for the explanation.

Mr. DOUGLAS. The difference between the needs of the aged man or woman as determined by a social worker and the resources found by such a social worker represents the amount of the individual's old-age assistance grant. Suppose the aged person found that he could obtain a small amount of healthful and personally satisfying employment doing gardening work during summer months. If he earned $10 in 1 month, the full amount of his earnings would have to be reported and it would be subtracted from the cash grant $58.

He would get $48 in old-age cash assistance for that month. If he could arrange for similar employment for consecutive months, this amount of regular small earnings, though very small, would be subtracted from his grant, so that his determined regular payment would be only $48 in cash.

Now, the disadvantages of such a provision are obvious. First, the old-age assistance recipient is discouraged from any useful paying work because, if he follows the law and reports his income, he will lose every dollar of it. And second, if he does accept some regular income for a few months and then loses it or gives it up, he will experience, in many cases, frustrating delays and difficulties in getting a return of his full entitlement under old-age assistance.

Thus, the old-age assistance recipient is not only discouraged from seeking casual and part-time employment but he is actually penalized for doing so.

What could be further from the purpose of our welfare programs than to enforce idleness and total dependency on the part of our older citizens by penalizing those who have insufficient resources when they attempt to work to meet some of their needs?

Moreover, I think we should take into consideration the unfortunate effect that this provision of the law has on the self-respect and psychological well-being of the individual. The opoprtunity to perform useful work for pay is important both to the "inner man" and to the individual in relation to his family life. For the aged person living with members of his family, and perhaps relying on them in some degree, it is certainly helpful to family harmony if the person able to do so is permitted to do rewarding work.

This provision of the law is antiquated. It stems from the depression days when the community wanted to discourage as many old people from working as possible in order to open up jobs for younger people.

But our employment problems are not basically of this kind today. The median age of the old-age assistance recipients is 76.4 years. Of the 2¼ million old-age assistance recipients very few will prevent younger persons from working by seeking casual employment yielding $25 or less a month.

Except for the amount of the exemption—this amendment is identical with the amendment which I offered in 1956 and which the Senate adopted by a roll-call vote of 56 yeas to 34 nays. Primarily because of the opposition of the Eisenhower administration, the amendment was lost in conference.

In 1958, I again offered a similar amendment to the social security amendments bill of that year, but including the exemption of an amount of earned income for ADC parents as well. This amendment was strongly opposed by the administration, and it failed to pass on a division.

In the 1956 amendment passed by the Senate, the exemption provided was $50. At that time, the average total old-age assistance payment was about $56. In April of this year, the average total payment had gone up to $72.24, including $14.33 of vendor medical payments. Thus, there has been some increase and under H.R. 10606 an additional small increase would be permitted. Because of this, but particularly because I would like very much to have this principle embodied in my amendment become law, I have submitted the amendment calling for only a maximum exemption of $25.

Of course this increase from $56 to $72 in the average payment is stated in current dollars. In 1957–59 dollars, the increase is only from about $60 to $68.65. So this amendment calls for a very small exemption.

The total cost of all this is somewhat clouded because it is not certain how many States will accept the provision. It is not mandatory upon the States to do so. It is only permissive. If they do so the Federal Government is ready to meet its share of the cost. There will be something of a windfall to the States because it will make more aged persons eligible for old-age assistance and Federal aid exceeds 50 percent of the cost on the initial amounts paid. In some cases a State may receive as the Federal Government's "matching" share as much as 5 or 10 times the amount actually paid to the new old-age assistance recipient.

Mr. President, I ask that the Senate adopt the amendment and thereby take this very gentle and moderate step, to show the 2¼ million recipients of old-age assistance that we have not written them off as having nothing to contribute to our economy in a modest way or as undeserving of a little earned pin money.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. I compliment the distinguished Senator for bringing the amendment to the Senate, and following up the fight he has made for many years for an adequate opportunity for people to earn a very limited amount in their old age to supplement their old-age assistance by meager earnings in doing odd jobs, thus obtaining some income that is necessary to provide a bare subsistence standard of living.

I, too, have been working on this idea. I have come into complete agreement with the Senator as to the need and as to the logic of offering these people—who never would be able to qualify for social security, and whose problems were inherited from the days when it was no concern of the Federal Government or of the States whether they were able to exist or not—with an opportunity to provide themselves with this little income.

If my memory serves me correctly, we are talking about a declining number of people, as the Senator has said, who are around 76 years of age. I am told that today approximately two-thirds of the aged population have social security benefits for which they have paid and to which they are entitled. They may earn up to $1,200—I believe the figure is—a year, or perhaps more under social security.

Mr. DOUGLAS. One thousand three hundred and fifty dollars.

Mr. MONRONEY. The correct figure is $1,350. These people in most States are denied even income from selling chickens and eggs and the very meager change that they might earn in supplementary work.

I know that all the sociologists believe that one of the best means of helping to maintain respectability and the feeling of being wanted in old age is an opportunity to earn a few dollars.

I agree with the Senator that the earnings limitation is obsolete, because today the problem in small towns, as in large towns, is the problem of finding people who will do part-time work, who will babysit for parents who go out, as well as finding people who will take care of children of working mothers, and widows who have only a pittance on which to rely.

Mr. DOUGLAS. And people who will cut the lawns and do a little gardening.

Mr. MONRONEY. And those who will cut lawns. Consequently there is this void in the labor supply. Young men today want full-time jobs and salaries of about $200, for a high school graduate. Yet the aged citizens are denied this opportunity to work even though the need for work is there, such as taking care of cars, parking cars, pumping gasoline, working in a supermarket, and doing many other things that can give a feeling of being needed, and at the same time supplement income.

The national average monthly cash benefit of old-age assistance people runs to about $57 a month. Added to this is about $14 in vendor payments for medical care. Therefore, if the national average monthly cash benefit is in the neighborhood of $57, a greater earning allowance could logically be made.

Several of my colleagues in the Senate, among them the distinguished Senator from West Virginia [Mr. RANDOLPH], who is here, and the distinguished Senator from Vermont [Mr. AIKEN], who is here, feel that since this does not add to the money the Government pays out this should be more liberal than the $25 figure. I know the Senator wishes it to be more liberal. I believe that earnings of $50 a month would be possible without any serious impact upon the cost of the program. By that I mean that most of the people who retire today receive social security. Persons who have been on the rolls, subject to the means test, have been on social security for years, because Congress has expanded social security so much.

The idea that a new class would be opened by allowing persons to earn $50 a month or $25 a month is simply not factual in the light of the situation that exists today. Since this money comes from earnings, it will not come out of any money which will be appropriated.

I wish the Senator would go along with the amendment I should like to propose and to raise the amount to $50 a month. Five or six dollars a week will not encourage these people to run the risk of being cut off of the retirement rolls in the States.

Mr. DOUGLAS. May I reply to the Senator?

Mr. MONRONEY. Yes.

Mr. DOUGLAS. I am somewhat astonished at my own moderation. I came to the Chamber expecting to be torn limb from limb for proposing $25. Now I find the Senator from Oklahoma and the Senator from Vermont, who are very thrifty men, not upbraiding me, but suggesting that I should double the figure. I am afraid the cost would be high. Much as my heart beats with them, let us be moderate about this proposal; let us not go overboard. We should remember that this will make more persons eligible and that the States will get a windfall from the Federal payments. The greater the exemption, the greater the windfall. I am trying to combine prudent thrift with humane generosity.

Mr. MONRONEY. I believe we are being more than moderate when we limit earnings to about $6 a week. In other words, if a man has to take 2 days to mow his lawn, and he might get $7.50, and he might have a regular customer for whom he would tend a lawn at $7.50, then 1 week he will have to skip the job.

Mr. DOUGLAS. Why not have us start at $25; and if that is not enough, the amount can be increased later. Let us not swamp the system to begin with.

Mr. MONRONEY. The Senator from Illinois has been a pioneer in this field. It was his leadership that helped to establish this program twice in the Senate. As he mentioned, today's dollar is not the dollar of the days when he first presented the $25 amendment.

Mr. DOUGLAS. There has been an increase of 15 percent since 1957–59.

Mr. MONRONEY. Let us be reasonable and start it where it will be worth while for persons to have an earning capacity and go out and try to help themselves. I think it would be real frugality to help those who help themselves.

Mr. AIKEN. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield to the Senator from Vermont.

Mr. AIKEN. I should like to add my voice to what has been said by the junior Senator from Oklahoma.

I would not consider that permitting an old-age recipient to earn up to $50 a month as being the acme of radicalism, exactly, because I would not say that $105 a month on which to live would permit any of them to become spendthrift.

Mr. DOUGLAS. Could they not live very handsomely on that in the little villages in the State from which the Senator from Vermont comes. Could they not live handsomely in the Connecticut River Valley at Thetford or Putney?

Mr. AIKEN. They could have at the time I was born, but they could not today. I have heard about going back to the pre-McKinley days; but actually the cost of living has been increasing in Putney, Vt., Thetford, Vt., and other places in Vermont.

I know the Senator from Illinois spent much of his early life—shall we call them formative years or informative years?—in the State of Maine. I never knew of anyone who came from the State of Maine or the State of Vermont to resist the opportunity to bargain.

While I would favor permitting an old-age recipient to earn up to $50 a month, that would not be taking it out of anyone else, because he would, for the most part, be doing much of the work he would be doing anyway. It would be just that much more money to be spent in the community, and it would increase business generally.

Mr. DOUGLAS. I believe thoroughly in the principle, but I never thought I would be reproached for not giving enough.

Mr. AIKEN. Everyone has his conservative moments. I suppose the Senator from Illinois is entitled to his. But if the Senator from Illinois, who was raised in the habits of New England, is unwilling to accept $50, what would he accept?

Mr. DOUGLAS. Now we have reached the point of bargaining on the Senate floor.

Mr. KERR. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield to the senior Senator from Oklahoma.

Mr. KERR. Has not the Senator amended his amendment to the point where it is permissive instead of mandatory?

Mr. DOUGLAS. That is correct; that is a still further concession.

Mr. KERR. If the $50, suggested by the junior Senator from Oklahoma [Mr. MONRONEY], the Senator from Vermont [Mr. AIKEN], and the Senator from West Virginia [Mr. RANDOLPH] were accepted, it would not be mandatory upon the States.

Mr. DOUGLAS. That is correct.

Mr. KERR. It would only provide the authority to do that if they had the money to carry their program with the additional provision.

Mr. DOUGLAS. That is correct. But the Federal payments would increase by a greater ratio.

Mr. KERR. If a State could not go above $25, it would not be compelled to do so; but if it had the money which would enable it to do so, it could pay as much as $50 under the permissive provision.

Mr. DOUGLAS. Is the Senator from Oklahoma arguing in favor of raising the amount from $25 to $50?

Mr. KERR. I am.

Mr. DOUGLAS. My heart, is deeply pleased; but my judgment is dubious.

Mr. RANDOLPH. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield to the Senator from West Virginia.

Mr. RANDOLPH. Hot or cool, we all seem to be warming to the subject. As a cosponsor of the amendment which has been offered by the astute Senator from Illinois, whom we admire——

Mr. DOUGLAS. I have never been charged with being astute.

Mr. RANDOLPH. I did not charge the Senator with being astute; I commend him for it.

Mr. DOUGLAS. I have never been so labeled.

Mr. RANDOLPH. It is my feeling, in view of the lucid arguments presented by both the junior Senator from Oklahoma [Mr. MONRONEY] and the senior Senator from Vermont [Mr. AIKEN], that I not attempt to present further reasons or seek to reinforce points well made, but rather that I should appeal to the Senator from Illinois to raise our figure. I trust he will do so. I am in full agreement with the desirability of having the amendment provide for $50 rather than $25. Of course, I would not oppose the amendment for $25. I favor the principle of this proposal, but I believe the amount is too conservative as provided in the amendment which I have cosponsored with other Senators, under the leadership of the senior Senator from Illinois. I sense there is a meeting of minds and a harmony of heart on this matter of equity to older persons who do part-time work, and should be rewarded rather than penalized for their initiative and industry.

Mr. DOUGLAS. At times we can pass measures by a bare majority. At other times, I yearn for a consensus. Since the proposal of $50 was opposed by the Eisenhower administration both in 1956 and 1958, I was afraid I would run into trouble from our friends on the other side of the aisle, if I proposed that sum again. Therefore, I thought I should be more moderate and, therefore, could then have the amendment adopted by a stronger vote.

But now, when the revered and respected Senator from Vermont [Mr. AIKEN], who is one of the spiritual leaders of the Republican Party, says he would like to have the amendment provide for $50, it makes me feel that possibly we might have success. But I wish more of our Republican friends would express themselves, so that I will not be led down the primrose path to the ultimate destruction of a good principle.

Mr. KERR. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. KERR. The Senator is aware of the fact, is he not, that if this amount is increased, it will still be necessary to go to conference?

Mr. DOUGLAS. Yes.

Mr. KERR. If he makes the $50 maximum permissive, is he not in a better position than he would be otherwise?

Mr. DOUGLAS. That all depends on who would be the conferees. I have had a bitter experience with the statement, "We will take it to conference." Again and again I have said that that is the parliamentary equivalent of taking a proposal into a secret chamber and cutting its throat.

Mr. KERR. Is it not true that the position of the Eisenhower administration was expressed to a mandatory provision, not to a permissive one?

Mr. DOUGLAS. No; I think it was permissive.

Mr. KERR. The Senator from Oklahoma remembers it the other way.

Mr. MANSFIELD. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield to the Senator from Montana.

Mr. MANSFIELD. It is my understanding, so long as the question has been raised, that the Department of Health, Education, and Welfare is not opposed to the amendment as offered by the Senator from Illinois and a number of other Senators. I feel fairly certain that if a reasonable figure should be reached, the Department would still not be opposed to the amendment, which is not mandatory, but leaves the payment to the discretion of the States.

Mr. DOUGLAS. Even of a larger figure than this?

Mr. MANSFIELD. Even of a larger figure.

Even for a larger figure.

Mr. DOUGLAS. Well, that is very reassuring. I may say to the senior Senator from Oklahoma that I hold in my hand a press release which I issued in 1956, and it stated that my amendment of 1956 was permissive, not mandatory.

Mr. KERR. And in what amount?

Mr. DOUGLAS. Fifty dollars a month.

Mr. KERR. Has the Senator from Illinois grown that much more conservative over these years?

Mr. DOUGLAS. O, I get more conservative every year. [Laughter.]

Mr. KERR. Then roll back the hand of time, and lift the banner you held aloft in your youth, that it may prevail. [Laughter.]

Mr. DOUGLAS. Well, the Senator from Oklahoma is a man mighty in valor and in strength.

Mr. MONRONEY. Will the Senator from Illinois accept the $50 amendment?

Mr. MANSFIELD. Mr. President, if the Senator will yield, let me say, in response to the question raised before by the Senator from Oklahoma [Mr. MONRONEY], that the Department of Health, Education, and Welfare does not oppose the amendment if it is optional.

Mr. MONRONEY. This is not only optional; when we talk about $50 in any 1 month, this will not automatically guarantee that any of the thousands of people on old age assistance will ever reach $600 a year.

Mr. DOUGLAS. That is correct.

Mr. MONRONEY. But if one on Social Security is allowed to have $1,350 of earnings, I do not think we are doing a grave injustice if we provide here for one-half of that amount of earned income. It will not be a balanced level; perhaps in the summertime it will be more. Also I venture to say that the total of earned income of the 25 or 33⅓ perecnt of those who may find employment will come closer to being $25, on the average, for the 12-month period than to being $50 a month.

This is optional for the States; but it is also problematical as to who can work, and, second, who can find the kind of job that will fit.

Mr. DOUGLAS. If the Senator from Oklahoma is prepared to offer an amendment to strike out the $25 and substitute $50, I will not object. In fact, secretly, I will exult. But if this should defeat the bill—if our friends on the other side of the aisle and their allies on this side of the aisle combined to defeat the bill—I would be unhappy.

Mr. MONRONEY. I would be very unhappy, too; and if I felt that the amendment would have that effect, I would be the last on this floor, or the next to the last, to offer this amendment.

Would the Senator from Illinois care to join in sponsoring the $50 amendment?

Mr. DOUGLAS. No. I think the Senator from Vermont [Mr. AIKEN], and the senior Senator from Oklahoma [Mr. KERR], and the Senator from West Virginia [Mr. RANDOLPH] should join in sponsoring the amendment; and I will accept it.

Mr. MONRONEY. But the amendment of the Senator from Illinois is the genesis of this amendment. I simply proposed the amendment in order to arrive at a better earning rate.

Let me say this applies to earned income; it has nothing to do with a person who obtains his income from investments or rent, and so forth.

Mr. DOUGLAS. That is correct.

Mr. MONRONEY. So it means he will have to find this much additional work.

Mr. DOUGLAS. Does the Senator from Oklahoma wish to offer the amendment formally?

Mr. MONRONEY. I shall send the amendment to the desk. It is the same as the Senator's amendment, except that——

Mr. DOUGLAS. But I do not want the amendment to be offered as a substitute for mine. It would be better merely to strike out the $25 and substitute therefor $50, would it not?

Mr. MONRONEY. Yes; that will be the amendment.

Mr. AIKEN. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. AIKEN. I should like to add that I will do the best I possibly can to keep the 35 Members on this side of the aisle from defeating the 64 Members on the other side of the aisle. [Laughter.]

Mr. DOUGLAS. I thank the Senator from Vermont. We frequently have to deal not merely with the 35 over there but also with their numerous and powerful allies on this side.

Mr. MONRONEY. Mr. President, I ask to have the names of my colleague [Mr. KERR], the Senator from West Virginia [Mr. RANDOLPH], and the Senator from Vermont [Mr. AIKEN] added as sponsors of the amendment.

Mr. DOUGLAS. And if other Senators wish to "hit the sawdust trail," they will be welcome. [Laughter.]

Mr. KERR. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Oklahoma will state it.

Mr. KERR. Has the amendment offered by the Senator from Oklahoma [Mr. MONRONEY], on behalf of himself, myself, the Senator from Vermont [Mr. AIKEN], and the Senator from West Virginia [Mr. RANDOLPH], been accepted?

Mr. DOUGLAS. Yes; I accept it.

Mr. KERR. Then the question is on agreeing to the amendment offered by the Senator from Illinois on behalf of himself and other Senators, as amended by the amendment submitted by the Senator from Oklahoma [Mr. MONRONEY], on behalf of himself, the Senator from Vermon [Mr. AIKEN], the Senator from West Virginia [Mr. RANDOLPH], and the senior Senator from Oklahoma [Mr. KERR].

The PRESIDING OFFICER. Does the Senator from Illinois so modify his amendment?

Mr. DOUGLAS. Yes; I do.

Mr. KERR. Then, Mr. President, I ask that the amendment, as modified, be accepted.

The PRESIDING OFFICER. The amendment of the Senator from Illinois has been modified accordingly.

The question now is on agreeing to the modified amendment of the Senator from Illinois. [Putting the question.]

The amendment, as modified, was agreed to.

Mr. DOUGLAS. Mr. President, never in my wildest dreams did I think that such an amendment as this would be accepted unanimously by the Senate. [Laughter.]

Mr. KERR. Mr. President, if the Senator from Illinois is able to withstand a further shock, I should like to have his attention.

Mr. DOUGLAS. Yes.

Mr. KERR. Mr. President, I move that the vote by which the amendment, as modified, was agreed to be reconsidered.

Mr. McNAMARA. Mr. President, I move to lay on the table the motion to reconsider.

The motion to lay on the table was agreed to.

PUBLIC WELFARE AMENDMENTS OF 1962—AMENDMENTS

Mr. SALTONSTALL. Mr. President, on behalf of Senator AIKEN, Senator SCOTT, Senator FONG, Senator BOGGS, Senator PROUTY, and myself, I submit amendments to House bill 10606, to extend and improve public assistance and child welfare services programs of the Social Security Act, and for other purposes, and ask that the amendments be printed and lie on the table.

The PRESIDENT pro tempore. The amendments will be received, printed, and will lie on the table.

Mr. BUSH submitted amendments, in the nature of a substitute, intended to be proposed by him to the amendments designated 6–29–62—A, proposed by Mr. ANDERSON (for himself and other Senators) to House bill 10606, supra, which were ordered to lie on the table and to be printed.

result would be quite similar to the unsatisfactory experience of England and Canada. It would be certain to result in much abused and costly programs. It would be the beginning of the deterioration of our fine medical practice. No country in the world can equal the high standard of medicine practiced in the United States under our present system.

The modified King-Anderson proposal, which would place a heavy tax on every person covered by social security to pay hospital bills for millions of Americans who are financially able and willing to pay their own, is only one of its great weaknesses. The modified King-Anderson proposal still would only take care of a small part of the medical problems of people 65 years of age or over. It would only pay for a part of the hospitalization costs. Any elderly person in need of doctor's care, surgery, dental work, drugs, eyeglasses, and many other needs would still have to depend on their present State programs of which the Kerr-Mills Act is a part.

Mr. President, these are only a few of the reasons why I shall vote against the King-Anderson proposal. All during my 30 years in the State legislature and in the Congress of the United States, I have tried to help the elderly and voted for many programs to give them much needed and well-deserved assistance.

I have consistently voted for huge increases in funds for cancer, heart, and other forms of health research. This is the type of program in which the Government can rightfully play a major role. It can do a great amount of good without being directly involved in the private practice of medicine.

I recognize that there is great need for more assistance to elderly people. I believe this can be met within the framework of our present programs which do not and will not overturn our great present system of medical practice.

PUBLIC WELFARE AMENDMENTS OF 1962

Mr. YOUNG of North Dakota. Mr. President, the pending modified King-Anderson medical care proposal in the form of an amendment to the public welfare bill is a considerable improvement over the first draft of this proposal. It is still far from acceptable, however. Putting the Federal Government into the business of hospitalization and other health insurance would be taking the first step toward socialized medicine. Inevitably, there would be future steps to put the Government all the way into the medical field. The end

PUBLIC WELFARE AMENDMENTS OF 1962

Mr. HUMPHREY. Mr. President, I ask the Chair to lay before the Senate the unfinished business.

The PRESIDING OFFICER. Without objection, the Chair lays before the Senate the unfinished business.

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

The PRESIDING OFFICER. The amendment offered by the Senator from New Mexico [Mr. ANDERSON] for himself and other Senators is the question now pending.

AN OUNCE OF PREVENTION: HEALTH BENEFITS THROUGH SOCIAL SECURITY

Mr. LONG of Missouri subsequently said:

Mr. President, as one of the spokesmen for the State with the second highest proportion of older people in the Nation, I am particularly concerned that we move ahead without further delay to provide health benefits through social security. I believe that this is the only constructive method of dealing with the problem—the only way of applying the principles of prevention to the financing of health costs—the only way of being sure that we will not have to face today's problems all over again tomorrow.

In Missouri, 11.7 percent of our people are aged 65 or older. This is a significantly higher proportion than in the Nation as a whole—9.2 per cent. Only one State—Iowa—exceeds our percentage.

Proportionately, more of our older people live in rural areas—38 percent as compared to a national average of 30 percent.

The average income in our State is slightly below the national average.

During the course of the six hearings I held in Missouri last year for the Senate Special Committee on Aging, I had an opportunity to delve behind these State averages. My committee found that in some of our Missouri communities, as many as one in every four or five people have passed their 65th birthday—a proportion that cannot help but have

a significant impact on the economy of the community. We learned that in the 10 rural counties in the eastern Ozarks section, nearly half of the farm households where the principal breadwinner was 65 or older had family incomes of less than $1,000 for the year; 82 percent had incomes of less than $2,000. In some of our counties, 7 out of every 10 aged people are still on old-age assistance.

Missouri cannot adequately meet the needs of its older population through the public assistance approach. Because of our more agricultural economy, our working people were not covered by the original Social Security Act to the same extent as in the more industrialized States. Much of this lag has been made up through subsequent extensions of coverage; more than three-fifths of our people over 65 were receiving social security benefits in mid-1961. But we still have a relatively high proportion—22 percent—who are dependent on old-age assistance for their basic maintenance needs.

In Missouri, we are not now meeting the standards we have set for basic requirements for people on old-age assistance—with "basic" defined to exclude special needs such as medical care. According to a special study in the autumn of 1960, we were falling short of meeting these basic needs by $1.3 million monthly, or nearly $16 million a year.

If we cannot meet even basic everyday needs for persons already on old-age assistance, how can we adequately finance the medical care they need? Currently, payments for medical care made on behalf of old-age assistance recipients average under $6 a month. Obviously, this is a completely inadequate amount for a group of people of very advanced age with heavy needs for medical care.

And if we cannot fulfill our obligation for people already on relief rolls, how can my State move beyond this group to finance medical care for other aged persons?

This is the problem with which we are now struggling in Missouri. Currently, an interim committee on medical problems of the aged is exploring these questions with specific reference to implementation of the Kerr-Mills Act.

We have been unsuccessful thus far in arriving at a solution "primarily because of the substantial cost involved and not because of indifference or lack of interest on the part of the members of the general assembly." I quote from the statement of our director of the division of welfare at our Kansas City hearing.

I contend that we will not be able to work out a sound program of financing public assistance medical care—even with the very substantial help offered by the Federal Government in the form of grants—unless and until we have a basic program for financing health costs through social insurance.

We need to emphasize the preventive approach in the financing of health costs just as we have emphasized the prevention of dependency in our present social security program.

In 1935, when this Nation established a social security program, it chose as its first line of defense against economic dependency a social insurance program. Through a system of compulsory old-age insurance, workers began contributing to a fund out of which payments would be made when they were no longer working—thus assuring that most of them would never reach a state of destitution. This is the preventive approach, the approach that seeks to prevent poverty from arising instead of waiting to deal with it after it has become a fact.

Wisely, the Nation also established a second line of defense—a public assistance program for those whose needs were not met by the insurance program. The numbers primarily dependent on old-age assistance have decreased over the years—but the numbers who need assistance to supplement social security benefits have increased. Of persons now being added to the old-age assistance rolls, about every other one is a social security beneficiary, many of whom have had to turn to public assistance because of medical expenses.

Our experience over the years has proved that the dual approach to economic security in old age is sound. Why can we not apply the same approach—the approach that has earned the wide support of all our people—to the financing of medical costs?

To the extent possible, should we not prevent the poverty which health costs create among the aged rather than wait for the poverty to occur and then provide help only to those who have already exhausted their own resources? If we withhold health benefits until people have exhausted their resources, do we not create further poverty and greater need for basic assistance?

Our medical profession has long been aware of the importance of prevention in health care. Doctors have properly emphasized the preventive aspects—the necessity to innoculate against disease instead of waiting to treat it—the foresight and timely care that eliminates or greatly reduces the acute emergency.

Why then do they resist the principle of prevention when applied to the financing of health costs? Why is the old adage: "An ounce of prevention is worth a pound of cure," not equally applicable to the economics of medical care?

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. ANDERSON. Mr. President, I wish to place in the RECORD, without taking any time to discuss them, some editorial comments and articles dealing with the subject now pending before the Senate. I understand the Senator from Florida is ready to address the Senate.

First I wish to have printed in the RECORD an article entitled "Medical Aid in Britain," written by Seth S. King and published in the New York Times of yesterday, Sunday, July 8.

I believe that this article, detailing how the national health service plans has worked out in Great Britain, would be of some interest to Senators.

The author of the article points out that 14 years after the birth of the medical plan in Great Britain, two unchallengeable conclusions can be drawn. He says:

> The British people want it and would not hear of any radical changes in what they have. British doctors are still skeptical of some of its methods, but 98 percent of them participate voluntarily in some phase of the national health service.

Mr. President, we are not trying to advocate and we do not advocate the British medical system in the United States. I believe we are all opposed to it. However, many things have been said about our program, among them that it will eventually lead to the system now in effect in Great Britain, which is always portrayed in the most gloomy terms possible.

I ask unanimous consent that the article by Mr. King be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEDICAL AID IN BRITAIN—DESPITE SOME CRITICISM FROM MEDICAL PROFESSION THE NATIONAL HEALTH SERVICE HAS BECOME ENTRENCHED

(By Seth S. King)

LONDON, July 7—Fourteen years ago this week Britain's National Health Service came into being, bringing with it womb-to-tomb medical and dental care for everyone.

In the days since its inception it has had its confusions and difficulties. It has been praised and damned, with equal fervor, by both doctor and patient.

But 14 years after its birth, two unchallengeable conclusions can be drawn: The British people want it and would not hear of any radical changes in what they have; British doctors are still skeptical of some of its methods, but 98 percent of them participate voluntarily in some phase of the National Health Service.

From the system's beginning in Britain there have been no rebellions by doctors such as Saskatchewan is now experiencing.

Today, out of the 42,000 qualifying physicians practicing or administering hospitals, the British Medical Association estimates that barely 500 are engaged exclusively in private practice.

CHANGES TRIED

This virtually universal acceptance does not mean that the British medical profession has made no attempts to amend the system the Labor government imposed on them in 1948.

There have been constant efforts by the medical societies to improve the lot of the doctor, and, in their opinion, to make the service more attractive to the patient.

Some of these efforts have succeeded. Others are still being pursued.

The National Health Service functions with relative simplicity. A new patient begins by getting from local authorities a list of doctors practicing in his neighborhood. He chooses one and presents himself at this doctor's surgery (as his office is called). He is given a small card to fill out and on it he writes his name and address, his age, and his national insurance number. If he is a nonresident foreigner, he does not need to have a number.

He takes his turn in the usually crowded waiting room. The doctor examines him and prescribes a remedy. If he needs additional treatment, such as surgery, physiotherapy, special appliances, or whatever, he is referred to one of the hospitals in the neighborhood. There he is treated, or makes application to be treated when his turn comes, by a resident specialist.

HOUSE CALLS

A National Health patient may ask his doctor to make a house call on him. The response to this is considered no more reluctant than for most general practitioners in the United States.

For virtually all the medicine the patient requires he pays a fee of 2 shillings (28 cents) for each prescription. If he needs special appliances, he may be asked to pay part of the cost of these.

For all this the head of each family pays 10 shillings 7 pence ($1.48) a week. Three-quarters of this goes to unemployment and other relief and only one-quarter for the National Health Service.

If he is not satisfied with his doctor, he may change to another in his neighborhood.

The general practitioner in the National Health Service is paid on the basis of a capitation fee. He receives a set amount annually for each patient who registers with him, regardless of whether he treats that patient once or daily. There are other added fees paid to him for certain services. Rural doctors get special allowances as compensation for the generally fewer patients they treat.

An individual doctor may handle a maximum of 3,500 patients. The average city general practitioner has about 2,000 patients on his list. For this, plus his extras, he earns about £2,425 ($6,790).

A specialist, beginning at the age of 34, gets a base annual salary of £2,550 ($7,100). As he grows older and becomes more skillful, this may rise to £3,900 ($10,920). In addition, if he becomes an outstanding man in his specialty, he will be given merit awards, decided by the local medical board where he practices. These may run as high as £4,000 ($11,200) a year. So the handful of top specialists may earn as much as £7,900 ($22,120).

In addition, both specialist and general practitioner may legally have as many private patients as he chooses to handle. In the case of the specialist, private patients are referred to him by other doctors when these

patients choose to get their treatment in the specialist's private clinic or nursing home. Private patients come to general practitioners during the hours when the surgery is not maintained for National Health patients.

Under these conditions, it is obvious that the specialist has the best of both worlds, with his fees for public patients guaranteed through a government salary while he may also be paid by as many private patients as he attracts.

The general practitioner has less to cheer about and it is here that the greatest discontent with the system is voiced.

GLORIFIED ATTENDANTS

With the rise of personal incomes in Britain, more people are indulging in the extra attention they get as private patients, and the incomes of many general practitioners are rising.

For the patients themselves, there are certainly annoyances in the system. Britain is shockingly short of hospital bed space. A child who needs a tonsillectomy may wait under National Health, as long as 9 months before his turn comes.

It is generally conceded that a general practitioner often cannot give enough time to routine examinations that might catch some diseases earlier.

But the British public has embraced the security that National Health gives them, and they would not be without it. The poorest dust-bin man has access to Britain's greatest surgeons and her best hospital care and he has no worry of how to pay for it.

"It's true that we may not get as much personal attention and sympathy from a doctor under the National Health as we might in private systems," a British businessman explained not long ago. "But we know we are going to get treatment when we need it, and no matter how much we need, we aren't going to mortgage our future to pay for it."

The discontent of some British doctors over the system is getting more attention of late in the British press. A spirited debate is going on over how many British doctors are migrating and whether Britain is training enough medical students.

DOCTORS LEAVING

Some private studies have produced claims that as many as 600 doctors are leaving Britain each year to work elsewhere. The Government has challenged these assertions. It argues that the National Health System is actually increasing by 500 doctors a year after retirements and deaths have been replaced.

It has been estimated in the last week that about one-third of the doctors who are now protesting so bitterly in Sasketachewan are British doctors who migrated there because they refused to practice under the National Health Service.

But however an individual doctor or patient may feel about the National Health scheme, there is no British politician bold enough to attack it outright.

Even Enoch Powell, the current Minister of Health, who is a paragon of modern Toryism, took the trouble recently to point out that the National Health Service has carried the support of all major political parties in Parliament and that therefore it could not properly be called "socialized medicine."

Mr. ANDERSON. Mr. President, a great deal of trouble is connected with the Canadian situation, about which all of us have read in the newspapers recently. Many people are wondering whether that kind of trouble will not also arise here at home. It is a problem which has arisen recently, but which was never anticipated during the early discussion of the subject. It shows what can take place when there is a struggle on the part of doctors against the establishment of practices to take care of the aged. I call attention, in this connection, to an editorial entitled "Doctors Outside the Law," published in the Globe and Mail of Toronto of July 4, 1962. The first paragraph reads:

The doctors of Saskatchewan have taken action which is not open to any individual or any group within a democracy. They have deliberately decided to disobey a law of that province, a law duly enacted by a duly elected government of the people.

Further along in the editorial it states:

The doctors have not indulged in acts of violence in Saskatchewan, but the passive resistance they have instituted is the worst form of violence that could be perpetrated against the people of Saskatchewan.

I ask unanimous consent that this editorial be printed in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DOCTORS OUTSIDE THE LAW

The doctors of Saskatchewan have taken an action which is not open to any individual or any group within a democracy. They have deliberately decided to disobey a law of that Province, a law duly enacted by a duly elected Government of the people. They have withdrawn their services from the people of the Province, refusing to practice medicine under the Government's Medical Care Insurance Act.

Earlier in the week this newspaper condemned the International Brotherhood of Teamsters and the Seafarers' International Union of Canada for acts of violence and intimidation outside the law. What applies to truckers and to seamen applies equally to doctors. None has the right to set himself above the law. That way can only lie anarchy, and the destruction of our democratic way of life.

The doctors have not indulged in acts of violence in Saskatchewan; but the passive resistance they have instituted is the worst form of violence that could be perpetrated against the people of Saskatchewan. Except for emergency staffs in 34 of the Province's hospitals, they have left the sick and the injured without medical care, they have exposed those people to permanent disability and death; and they admit that they have done so in order to force the Government to repeal the Medical Insurance Act.

Such action cannot be condoned in a law-abiding community. The doctors disapproved of the act, and that was their privilege; but there are proper methods of registering disapproval of and seeking to change the laws of a democracy, and these the doctors have not employed.

The doctors of Saskatchewan could have worked within the framework of our system and sought to persuade the electorate to throw the Government out at the next election and replace it with one that would repeal the act. Results of the recent Federal election would indicate that in such a move they might well have been successful. They could have decided to remove themselves from Saskatchewan and practice medicine where such a law does not apply; in that case there would have been a moral obligation upon them to give their patients sufficient notice of such termination of service to enable them to provide for alternative medical care.

They did neither. They announced that they would not practice medicine under the law as it applied in Saskatchewan, and they went on strike. Even legal strikes in services essential to the welfare of the community are today condemned; and earlier this year the Ontario Legislature took legislative action to prevent such a strike among employees of Ontario Hydro. How much more to be condemned, therefore, is this illegal strike.

Premier Woodrow Lloyd might have been well advised to call the legislature into session to deal with the situation. But the doctors have already rejected a number of Government compromises which removed their chief expressed objections to the plan; and it is apparent that their leaders, at least, demand nothing less than total surrender by the Government. Those leaders, supported, it must be suspected, by the Canadian and American Medical Associations, are fighting, not this particular medical insurance plan, but any form of government health insurance anywhere on this continent. It is unlikely that the legislature, any more than the Government, would have found them prepared for compromise.

In the ugly and dangerous situation which has developed, Dr. Allan Bailey, professor of medicine at the University of Saskatchewan, had words of reason on Monday for his fellow physicians. He told them: "Strike action, or its equivalent—withdrawal of services—is in my opinion unethical and illegal for a doctor." He said that, while he disagreed with several features of the Medical Insurance Act, he believed the impasse between the doctors and the Government could be settled by reasonable men, and he proposed that new negotiations and a mediation board be sought. In the meantime, he urged that doctors continue to treat their patients:

"Surely if doctors are willing and courageous enough to refuse services to their patients, then they have the courage to refuse to fill out a specific form (required by the insurance commission). I cannot desert my patients who are referred to me and I urge doctors to work, and if they so desire, work outside the act as I will do. * * * Doctors, it is time for us to return to our work as free persons bound neither by the Government nor the Saskatchewan division of the Canadian Medical Association."

What Dr. Bailey proposes is still technically without the law; but it is a proposal for temporary action by a reasonable man who believes that agreement is possible and is prepared to work toward it. It is to be hoped that the rank and file of Saskatchewan doctors will heed his advice, and end this massive and horrifying breach of the law by which an honored profession strikes at the democratic foundation of its country.

Mr. ANDERSON. Mr. President, I also ask unanimous consent to have printed in the RECORD at this point an article entitled "Doom of Private Medicine Seen in Doctor's' Strike," written by Harry Nelson, medical editor of the Los Angeles Times, and republished by the Washington Post. It also deals with the Saskatchewan situation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NO TURNING BACK NOW—DOOM OF PRIVATE MEDICINE SEEN IN DOCTORS' STRIKE

(By Harry Nelson)

One week ago today in Saskatchewan, Canada, the private practice of medicine as we have known it for hundreds of years on this continent was dealt a blow from which it will never recover.

For better or for worse, medical economics will never again be the same.

The precedent has been set in Saskatchewan. And in spite of the opposition of organ-

ized medicine, there will be no turning back.

On July 1 the government of that prairie Province became willing to assume the medical burdens of all its 900,000 residents. The government is having considerable difficulty getting the program started, but it is bound to win—if not this time, then soon.

BASIC ISSUE ECONOMIC

It will win because the basic issue is an economic one. People, even people with money, don't like the high cost of medicine. It's cheaper, or perhaps just easier, to use taxes as a pay-as-you-go medium.

The doctors opposing the scheme, both in Canada and in this country, say it will deteriorate the quality of medicine.

Doctors opposing the scheme sincerely believe what they say. They are not saying these things to frighten the public in demanding a repeal of the act.

Saskatchewan doctors, like most doctors in the United States, are true individualists. The imperfect state of the art of medicine has taught them to hold strong convictions about medicine which carry over into economic and political philosophies.

In the beginning there will be a period of transition during which the quality of medicine probably will suffer. It will suffer because the doctors who are economic individualists will either cease practicing or pull up stakes and head for greener pastures—freedom, they call it.

In Saskatchewan, for example, because many of these individualists are the topflight specialists, there will be a temporary deterioration of the kind of medicine practiced.

FAILURE HELD SURE

But the doctors' strike is doomed to failure. The government, foreseeing the exodus, long ago began a recruitment drive in Great Britain. Already the replacements are arriving in Regina and Saskatoon at the rate of four a day. Others come from other Provinces in Canada and even from the United States.

But all of Saskatchewan's doctors will not leave, even when the truth that their fight is fruitless finally sinks in. In fact, some have already accepted the inevitable. There are two good reasons why this is so.

First, the conviction that there is something wrong in receiving fees from a government source is not uniformly strong among all doctors. This lack of conviction, if it can be called that, is especially strong among the country doctors of the predominantly rural Province.

For most people, including doctors, the prospect of having to sell office and house, say goodbye to friends and patients and head for the unknown is not pleasant. It is especially unpleasant if the doctor realizes he will soon face the same threat elsewhere.

It is far easier to stay and to hope that the restrictions which inevitably will come from the government will be bearable. And a doctor's sincere concern for patients whom he has known and cared for for years—and this is especially true in rural areas where ties are closer—makes the decision to stay easier.

But there is another reason and it is strictly economic. As with doctors everywhere, much of the country practitioner's service is done gratis. In Saskatchewan, however, a doctor who cooperates with the government plan will never again go unpaid. He will, in fact, never again have to send a bill. He will receive payment for every service he performs. True, he may occasionally see the medical necessity for a service not currently covered. But all in all, he will make more money than he has in the past.

It is this attraction, considering Canada's higher economic standards, which is attracting the doctors from Great Britain. The average income of a Saskatchewan doctor in 1959 was slightly over $18,000 a year. The Saskatchewan government is promising immigrating physicians an income of $10,000. Even this is more than the average doctor makes in England.

There is a less than even chance that the Saaskatchewan doctors may temporarily win their strike. This could happen if a spontaneous public uprising, triggered by a death or some kind of medically related tragedy, were directed against the government instead of the doctors. Then the party in power, the New Democratic Party (also called the Cooperative Commonwealth Federation or CCF), which is already in a precarious political position, may be forced to back down.

This party, an ultraliberal coalition of farmers and labor unions, is gambling its future on the success of socialized medicine in Saskatchewan.

THE PARTY LEADS

It can be said that the party actually is leading the people into socialism rather than merely following the dictate of the people. Most of the people of the Province want socialized medicine, but their thinking is not yet as far advanced as that of the NDP social planners who are giving it to them.

It is possible that the public, incensed by some medical calamity, may decide the government has gone too far too quickly and demand an alteration.

But if this does happen, the effect will be merely to delay socialized medicine. In the Canadian political campaigns a few months ago, every major party had a platform offering some type of socialized medicine.

Before leaving Regina 3 days ago, I had dinner with three top Government officials.

"How long will it be before your medical care insurance act is picked up by every Province in Canada?" I asked.

"Five years," they said.

"How long before it seeps down into the United States?"

"Ten years," they said, "and it will make its first appearance in California."

Mr. ANDERSON. Mr. President, finally, I ask unanimous consent to have printed in the RECORD at this point an article entitled "Embattled Canadians View U.S. Medicare Plan as Modest," written by Allan Blanchard, a contributing writer, which appeared in the Sunday newspapers. In the article the writer points out how very simple and rather modest the program proposed by the Anderson amendment could be.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EMBATTLED CANADIANS VIEW U.S. MEDICARE PLAN AS MODEST

(By Allan Blanchard)

REGINA, SASKATCHEWAN, July 7.—Medicare in the United States, as it is proposed under the pending Kennedy administration bill, would hardly cause a ripple if suggested in Saskatchewan, where doctors are engaged in a pitched battle with the Provincial government over compulsory government health insurance.

When the question is brought up here in Regina, capital of the first Socialist Province, or State, in North America, there is a quiet chuckle, and a remark similar to this one from a young government officer in the newly constituted Saskatchewan medicare office:

"What's being proposed in the United States is really a misuse of the word medicare as it applies here," he said. "Actually the United States is far behind us in the matter of government health insurance—or maybe far ahead of us, depending on one's political viewpoint."

The provisions contained in the King-Anderson medicare bill now before the United Senate have long been in effect here in one form or another. And there has been no great stir about them within the medical profession here.

DIFFERENCE STRESSED

Basically, the U.S. medicare plan is an old-age hospitalization program paid for partially by the patients themselves through increases in the social security tax on wages. It provides limited hospital service (up to 90 days in the hospital for each illness) and does not include doctors' bills.

More than this was provided to all Saskatchewans as far back as 1947 when the Provincial hospitalization plan was put into effect. In fact, since 1957 almost all Canadians are under Provincial hospitalization plans much more far-reaching in benefits than the Kennedy-sponsored bill would provide.

Under the Provincial hospitalization insurance here, individuals pay a premium of $24 a year, with a maximum of $48 set for families. For this the patient, regardless of age, receives unlimited hospital care, including all drugs and services needed during his stay.

How long the patient is able to stay in the hospital is left solely to the judgment of his doctor, with the government footing the bill.

Last week as the medical care act which is causing the present doctors' strike was put into effect, the government also extended its old hospitalization program to include all diagnostic services (X-rays, laboratory work, etc.) provided on an outpatient basis.

WIDE SERVICES

For persons incapable of paying the minimum hospitalization premiums required by the government, public welfare pays the hospital bills.

Moreover, for persons 70 years of age who receive old-age assistance the government has another plan in effect for several years, under which the Saskatchewan Department of Public Health Medical Division provides 50 percent of the cost of drugs, all basic medical and surgical treatment, dentures, hearing aids, eye glasses, wheel chairs and prosthetics appliances.

Saskatchewan also has two major cancer clinics, one here in Regina, the other in Saskatoon which are operated by the government and which offer complete diagnostic treatment service to cancer victims free of charge. A doctor who suspects his patient has cancer sends him to the clinic where a staff of government physicians is supplemented by top specialists who work on a per diem basis.

If the diagnosis happily proves to be incorrect the patient is charged a fee of $10 for the examination. If it turns out he has cancer, all of his expenses for treatment of the disease are picked up by the government.

All of these programs have been instituted by the Provincial government without a doctor's strike such as the one afflicting Saskatchewan now.

ABOUT 930,000 INVOLVED

The controversial Saskatchewan Medical Care Act passed last November is an attempt by the Government to provide complete medical insurance for all of the province's 930,000 citizens.

The Medicare Act, simply defined, will pay the doctor bill. It has been drawn up in such a way to dovetail into the other Government health programs in the province so that there will be no overlapping of services. The only things exempted by the act are the cost of drugs, eye glasses and dental work, except as it is needed in oral and facial surgery.

The act is expected to put the two private health insurance programs, Medical Services, Inc., and Group Medical Services, out of business. Already large withdrawals from the two plans which are operated by doctors

have been noted, especially as companies began switching their group plans to the Government medicare program as prescribed by the new law.

Only two-thirds of Saskatchewan's citizens were covered by medical insurance before the Medicare Act became effective. Now health insurance is compulsory—everyone must enroll in the plan under penalty of fine for failure to do so.

The medical care insurance fund is collected from the following sources:

Twenty-eight percent from personal premiums ranging from $12 annually from each adult and not more than $24 a year from each family.

Fifty percent from 1½ percent sales tax increase which brings the provincial sales tax to 5 percent.

Twenty-two percent from corporation and income tax increases.

The taxes went into effect the first of the year, while the collection of premiums will not begin until January 1963. Total needs of the fund and its administration are expected to run about $22 million annually in the beginning years. The Government expects the cost will rise gradually in subsequent years.

The Government insurance will reimburse the doctor at the same rate set up by the two private plans—85 percent of the fee.

The schedule of fees, drawn up by the Sakatchewan College of Physicians and Surgeons for use by the private plans remains in effect..

BILLS TO GOVERNMENT

The plan as put into law initially made it compulsory for doctors to practice under the medicare program. The doctor was to send his bills to the Government and in turn he would be reimbursed once a month by Government check. This has been one of the key points in the doctor's protest against the act. Before the strike began, Premier Woodrow Lloyd's government gave an order in council (an administrative order) allowing the doctors to practice outside the act.

This meant that the doctor would bill the patient. The patient would then bill the Government which in turn would send the patient a check for 85 percent of the fee allowed in the schedule of fees.

The doctors turned this down on the basis that the Medicare Act is a written statute and that the order-in-council edict would not be valid without an amendment of the act by the legislature. The legislature does not meet until next February.

Besides, the doctors said the modification amounted to looking at the same horse from a different end.

The main argument used by the doctors against the act is a paragraph that gives the eight-man Medical Care Commission the right to make regulations "prescribing the terms and conditions on which physicians and other persons may provide insured services to beneficiaries."

The doctors argue vehemently that this provision gives the council dictatorial rights over the practice of medicine in Saskatchewan.

GOVERNMENT ADAMENT

The Government has not offered to amend this provision, and it is doubtful that it would solve anything if it did. The physicians go through paragraph after paragraph of the 30-page act and point to things they feel infringe upon the right of a professional man to mind his own business.

Unfortunately, the situation even before the strike began had degenerated into a matter of "principles" on both sides with communication between opponents virtually shut down and with neither giving the other an indication of the terms that would be acceptable for settlement.

The feeling in Canada is that the minute points of argument over the Medicare Act are not the meat of this strike, but instead that this has become the battleground against "socialized" medicine in North America.

Deputy Premier J. H. Brockelbank has intimated that the Government believes the American Medical Association is hand in hand with the Canadian Medical Association in outlining strategy and providing support for the striking doctors of Saskatchewan. He admits, however, that he has no evidence of this.

In the meantime, the strike continues without much change. No mediation is yet planned although the Government and the doctors represented by the College of Physicians and Surgeons and the CMA each have taken one step forward.

Today their positions amount to something like this: "We will call a special session of the legislature," says the Government, "if you will call off the strike."

"And we will go back to work," reply the doctors, "if you will suspend the Medicare Act."

Mr. MANSFIELD. Mr. President, what is the pending business?

The PRESIDING OFFICER. The pending question is on agreeing to the amendment of the Senator from New Mexico [Mr. ANDERSON].

Mr. MANSFIELD. I should like to ask the distinguished minority leader if he is prepared to vote on the Anderson substitute at this moment.

Mr. DIRKSEN. I am afraid not.

Mr. KERR. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. KERR. Does the Senator mean to vote without a quorum call?

Mr. MANSFIELD. We will have a quorum call and then vote.

Mr. KERR. I thought the Senator said he wanted to vote now.

Mr. MANSFIELD. Yes.

Mr. KERR. Without a quorum call first?

Mr. MANSFIELD. If the Senator will agree, we will have a quorum call and vote immediately thereafter.

Mr. KERR. We could not agree to that proposal.

Mr. MANSFIELD. Mr. President, I propose that we vote on the Anderson substitute at this time.

Mr. DIRKSEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. McGEE. Mr. President, I wish to address myself for a few moments to the Anderson amendments, which seek to provide funds for medical care for senior citizens through social security.

This proposal has generated across the Nation one of the most active and acrimonious debates that has occurred in many years. Unfortunately, the debate has generated considerably more heat than light. Too often those entering the debate have obtained their mental exercises by jumping to conclusions.

Therefore I should like to discuss a few of the more obvious misconceptions which it seems to me have obscured the real issue. Io do so in the hope that we may then reach the real issue, which is whether we can devise an adequate plan to help our elder citizens obtain necessary medical care.

The first misconception is that most of America's 17 million citizens in this age group do not need help in financing their medical bills. But obviously a majority of those in that group do need such help. Although it is true that much health care is provided free of charge to those who need care for which they cannot pay, public assistance agencies, private charitable organizations, and many physicians provide free services only to the extent that they can with the limited funds available. The sad fact is that many elder citizens who are sorely in need of medical care do not obtain it, because they are too proud to request charity.

Mr. CURTIS. Mr. President, will the Senator from Wyoming yield for a question?

Mr. McGEE. I am glad to yield for a question.

Mr. CURTIS. What portion of the almost 17 million persons over 65 years of age are able to pay their own hospital bills or purchase insurance for that purpose?

Mr. McGEE. I should say that a very small fraction of the total can bear the entire burden without making considerable sacrifices in their standard of living which were not expected.

Mr. CURTIS. How many of the 17 million are able to buy hospital insurance which would provide benefits equal to those provided by the Anderson amendment?

Mr. McGEE. I am advised by members of the staff who are closer than I to the statistics involved that the percentage is very small.

Mr. CURTIS. I am concerned about the statistics, but I am also concerned about the Senator's view. At what income could a person 65 years of age afford to buy his own hospital insurance?

Mr. McGEE. I think that question calls for a generalization and a calculation which it would be difficult for an elderly person to make, for the reason that in connection with a long serious ill-

ness such a person could easily spend $100,000. Thus, it would be unjust to set a hard-and-fast figure as the minimum income necessary to enable an elderly person to pay all his medical expenses, and, in that connection, to avoid any uncertainty as to those who would stand the chance of having their funds wiped out under such circumstances.

Mr. CURTIS. But the pending bill gives no assurance against being wiped out. The pending bill would not pay for any drugs or medicines, or any surgical treatment. My question is, at what income can such a person well afford to buy the hospitalization which would provide benefits equal to those called for by the Anderson amendment?

Mr. McGEE. I think the question should be reversed, for it is obvious that any person over 65 years of age, who does not now have the income he had during his younger years, would lack the funds necessary in order to meet his medical expenses.

Mr. CURTIS. But suppose he then has the highest income of his entire life.

Mr. McGEE. But that would be to suppose the improbable.

Mr. CURTIS. Oh no; many people make more money after age 65, for a few years, than they do before that age; and under this proposal it is not necessary that one retire.

Mr. McGEE. I dare say the Senator from Nebraska would agree with me that most persons over 65 years of age do not make more money than they did in their younger years. Some do, but most do not; and that is the point which is made in connection with the proposed legislation.

Mr. CURTIS. But the Senator from Wyoming overlooks the fact that more people under 65 years of age are paying for their homes and are sending their children to college and are paying the medical bills and the hospital bills for a family of four, rather than a family of two; and the Senator from Wyoming cannot escape the fact that many persons at age 65 have income and savings far beyond what would be required in order to pay for all the benefits which would be provided by the bill.

So I should like to ask the distinguished Senator from Wyoming at what level of income he believes such an elder person could provide his own hospital insurance sufficient to give him as many benefits as those proposed to be provided under this measure?

Mr. McGEE. Let me say that as a U.S. Senator my salary is $22,500; and I manage to keep even with my medical bills, with a family of four children. But if I were receiving less income, even with fewer dependents, I would probably find it a severe financial drain to pay my medical bills.

I remind the Senator from Nebraska that the retired income of most persons who have been employed is but a pittance in comparison with their earnings while they were at the peak of their earning capacity. The average is somewhere between $2,500 and $3,000 a year; and certainly that would not go very far if there were large medical or hospital bills, even when there are no college bills to be paid or no payments to be made on homes, but when such persons are merely trying to keep body and soul together. I think that is the real basis of the proposed legislation.

Mr. CURTIS. My question is quite simple; namely, At what income level does the Senator from Wyoming think a person 65 years of age should be able to purchase his own hospital insurance?

Mr. McGEE. I should say that when a person retires and is on the downgrade from the peak of his earning capacity, the pinch is on as regards his ability to meet his hospitalization requirements.

Mr. CURTIS. Is not the Senator from Wyoming aware that these hospital benefits are not available to the retired, as a class? If someone should avail himself of the right to retire because of disability, the bill as it now stands would not provide for any hospital payments. If a woman should retire at age 62, she would not be covered by the Anderson amendment. If a man should elect to take reduced retirement payments and retire at age 62—and most of them do so because of health reasons—he would be retired under the social security law, and would not be covered by the Anderson amendment.

More than 1,200,000 are eligible to retire, but have not done so. So the failure to retire does not provide a uniform test in this case.

Mr. McGEE. Is the Senator from Nebraska suggesting that perhaps the bill does not go far enough, and that the need is more desperate?

Mr. CURTIS. No. I am trying to find out at what level of income the Senator from Wyoming thinks an individual who has reached age 65 should be able to pay for the cost of his own hospital insurance.

Mrs. NEUBERGER. Mr. President, will the Senator from Wyoming yield to me?

Mr. McGEE. I yield to the Senator from Oregon.

Mrs. NEUBERGER. I was especially interested to hear the Senator from Nebraska say that most women who retire at age 62 do so because of poor health.

Mr. CURTIS. Mr. President, if the Senator from Wyoming will yield again to me, let me state that I said that was the compelling reason for early retirement for many men. The argument advanced in the committee report in connection with the retirement of women at age 62 is that, as a general rule, they are a bit younger than their husbands; but it is pointed out that men who retire at age 62 do so, among other reasons, because of declining health, and that many do retire for that reason at that age, although they are unable to qualify for disability retirement benefits.

Mrs. NEUBERGER. I was questioning the statement that most women who retire at that age do so because of declining health. Such a statement does not seem to be in accord with the facts. I am a member of the President's Commission on the Status of Women; and in that connection we find that most women who retire do not do so because of declining health, but in order to be able to enjoy some of the waning years of life, at a time when they are in very good health. Of course, one of the reasons for that is that medical science has greatly increased the span of life. It is true that many persons in that age group are faced with catastrophic illness; but we cannot make the generalized statement that most women who retire at that age do so because of failing health or bad health.

Mr. CURTIS. Mr. President, will the Senator from Wyoming be so kind as to reply to my question?

Mr. McGEE. The Senator from Nebraska has asked what income is necessary to enable these people to meet their medical bills. I think one of the studies referred to in the course of the debates on this question showed that a couple with an income of from $2,300 to $3,100 could expect that all of their income would be used to pay rent and the other items in connection with the ordinary cost of living, and that there would be no excess to be applied to unexpected medical expenses.

It seems to me that, when we talk about costs of medical care, the Senator and I must think about the lower income groups, and not the upper income groups.

Mr. CURTIS. The Senator is correct.

Mr. McGEE. It is to such groups that this bill is directed. With an average income of from $2,500 to $3,000, there is not enough margin left for them to pay for their medical costs. The number under $2,000 with no medical insurance is about 33 percent of the total number of the elderly.

Mr. CURTIS. If the Senator will yield further, at what level of income does the Senator think an aged person is able to buy his own hospital insurance?

Mr. McGEE. The Senator persists in turning the questions around in inverse order.

Mr. CURTIS. No.

Mr. McGEE. The fact remains that a person is not able to buy it if he does not have it now. I have mentioned that a study of those over 67 shows that about 33 percent have no insurance at the present time.

Mr. CURTIS. That is not because it is not available; is it?

Mr. McGEE. It is because they cannot afford it.

Mr. CURTIS. Who cannot afford it?

Mr. McGEE. The 33 percent who make under $2,000, and I submit, also those who make under $3,000.

Mr. CURTIS. Then those who make over $3,000 can afford insurance?

Mr. McGEE. No; those are the figures which show——

Mr. CURTIS. At what point does the Senator believe they are able to pay for insurance?

Mr. McGEE. I think it is ridiculous to talk about a point at which they can afford the insurance, because it is more a question of whether they are eligible for insurance. Many of these people would not be eligible for any insurance at any price.

Mr. CURTIS. Why?

Mr. McGEE. Perhaps, because of phyical conditions of which they are not

aware, they could not have any insurance. There are 1 million diabetics walking the streets who do not know they have it; and if they should apply for insurance and the discovery were made, the insurance would not be available to them.

Mr. CURTIS. What would the Anderson amendment do for them?

Mr. McGEE. The incidence of diabetes is greater at a later age. Under the bill, they would be eligible for insurance regardless of their health condition.

Mr. GORE. Mr. President, will the Senator yield?

Mr. McGEE. I yield to the Senator from Tennessee.

Mr. GORE. Would not the questions as to ability to purchase or pay for insurance, those who could pay the premiums, and the point at which one could or could not pay, apply with equal force to the ability, or age, or other questions relating to the feasibility of individuals purchasing for themselves retirement insurance policies? In other words, would not all these questions apply to the social security program, in the same way they would apply to hospitalization and medical care in connection with the social security program?

Mr. McGEE. Indeed, they would. The Senator from Tennessee is correct.

Mr. GORE. One important point which seems to be overlooked by some persons is that a mass program, with a wide base and wide coverage, would not only spread the risk, but would also bring into the program the mass of the people a large portion of whom would not, through lack of initiative, decision, ability, or otherwise, have hospitalization and medical care insurance.

Mr. McGEE. The Senator is absolutely correct. We must bear in mind the element of financial insecurity. This was the element of fear that Franklin Roosevelt often talked about years ago—the great uncertainty about whether, in approaching old age, an individual would be able to take care of his health needs on his own responsibility.

It seems to me the key to this bill is that, through the social security system, an individual can, through his contributions, take care of his health needs in his declining years.

We must remember that the incidence of breaks in health and the need for hospitalization multiply several times over as one's years increase. We are trying to face up to the hard fact that at the very moment when people need health care—except for the few wealthy friends of the Senator from Nebraska—they have the least ability to pay their own medical costs, which become more intensive and out of proportion to their expected income.

For that reason, we must face this problem not as a new hospital plan, not as a new medical program for the American people, but as a way to permit an individual, honorably and honestly, in his own lifetime, to contribute to a fund to pay for medical costs in his aging years.

I suggest that the question of whether senior citizens need medicare or not was attested, sometimes in dramatic and heart-rending fashion, in a series of hearings held throughout the country by the distinguished Senator from Michigan. One has only to acquaint himself with stories of people whom we do not see here every day, people who are not lobbying for special interests, to realize the need for people to have a chance to pay for medicare. The bill would provide that opportunity.

Mr. GORE. Mr. President, will the Senator yield?

Mr. McGEE. I yield.

Mr. GORE. I wonder if the Senator has the statistics as to the number of our citizens who are now covered under the social security program with respect to unemployment compensation and old age and survivors' retirement.

Mr. McGEE. Let me check with the staff. That is one of those statistics that I do not carry in my head.

I am told by members of the staff that it is 70 percent now and that, under the pending legislation, the percentage would increase to about 85.

Mr. GORE. Is the Senator in a position to hazard a guess or estimate as to the proportion of this vast number of our citizens who, without the social security program, would now have in effect insurance policies for their retirement and for unemployment insurance which they would have purchased on their own initiative.

Mr. McGEE. I would have to hazard a guess. I hope it might be an educated guess. It would be influenced largely by the experience of the past 25 or 30 years. I think an educated guess would be that, without the social security system, a very small minority would have taken care of their possible medical costs in their later years in advance.

Mr. GORE. That brings up the question of whether it is advisable to have a "compulsory" system, under social security. I should like to inquire of the Senator whether the social security program is a compulsory program.

Mr. McGEE. The social security program indeed is a compulsory program. It was instituted, as Franklin Roosevelt said, to help overcome the aura of fear which seemed to be the central disease undermining our Nation in the 1930's. The social security program, when instituted, did more than any other single enactment to remove the great sense of uncertainty and fear which plagued the American people at that time. As President Roosevelt said—I am sure the Senator from Tennessee knows this better than I—"We have nothing to fear but fear itself." That fear was partly because of uncertainty as to what one could do in respect to retirement in the later years of life.

Mr. GORE. Is not the unemployment insurance program in effect in all 50 States a compulsory program?

Mr. McGEE. Indeed, the programs are compulsory, under the State enactments as well as under the Federal enactments.

Mr. GORE. Does the Senator know of any program of the Federal Government, or of a State government, which levies a tax for its support and operation, which is not compulsory?

Mr. McGEE. I know of no such example. A voluntary tax program, as the Senator knows, might leave something open with respect to desirable returns.

Mr. GORE. Then why do so many people wish to condemn the program of hospitalization and medical care through the social security program because it would compulsory?

Mr. McGEE. This I cannot understand, except that there are vested interest groups which always oppose this kind of approach.

I well remember, that in my earlier years, when some individuals were talking about private financing schemes for paying the costs of medical care—one of them was called White Cross, one of them was called Blue Cross, and one became Blue Shield—many people condemned them. Now some of the voices which are being raised against the social security approach for paying for the proposed program are those which condemned the Blue Cross, as being a device which would be used to destroy the initiative of private medicine, which would set up a dictatorial regime for regimentation of the medical fraternity. Those same voices are today defending Blue Cross as the greatest thing since Adam and Eve.

That does not suggest that those persons have demonstrated a great deal of foresight, a great deal of vision, or a great deal of straightforward recognition of the problem at hand. They have been only against, without attempting to address themselves to the problem.

If these same people think this problem will go away, if they think that somehow we can sweep it under the desks of Members of the Senate and dispose of it, I say to them that something much more extreme and all-inclusive will descend upon us in years to come, and before very long, because the situation is desperate enough and the problem is extensive enough so that the movement will go in that direction.

Therefore, it is imperative in the interests of private medicine, and imperative in the interests of those who cry "socialized medicine"—which is so much "bunk" with respect to this bill—that we take action now, to protect the dignity of the individual citizen in respect to financing his own medical costs, so that it will not be necessary to adopt some more extreme system in order to meet the needs.

Mr. GORE. Does the Senator know of any way by which the Government could have a self-supporting, pay-as-you-go, actuarily sound program of any sort—whether it be for health insurance, a retirement program, social security, unemployment compensation, highway construction, or anything else—except that it be based upon a requirement of a certain category of citizens who would participate and make regular contributions thereto?

Mr. McGEE. There is no actuarily sound alternative to this approach. The Senator is correct in the import of the question which he has asked. That is why I cannot understand the attitude of those who oppose the social security approach. Many of them are the same

people who say that we ought to be fiscally responsible, that we ought to pay for what must be done for us. They are the ones who would try to avoid doing the same thing they preach, at least on the floor of this body. They would not meet the problem in terms of the deed, which this would permit them to do, through the financing of the measure under social security.

Mrs. NEUBERGER. Mr. President, will the Senator yield?

Mr. McGEE. I am glad to yield to the distinguished junior Senator from Oregon.

Mrs. NEUBERGER. I have been interested in the colloquy between the Senator from Tennessee and the Senator from Wyoming.

I had some experience with a pension plan which was noncompulsory in its terms. In Portland, Oreg., when I was a schoolteacher, in the beginning of the depression days, a pension plan was inaugurated. At that time schoolteachers were being paid approximately $125 a month. A good many of the fine, retired teachers were suffering.

The school board decided that it did not wish to force anything on anybody, so the retirement program was not a compulsory one. Many teachers, especially those who were older, took the position, "I have always planned for my old age, and I have always been able to save my money." Therefore, a percentage of the teachers did not go into the Portland Teachers Retirement Association.

Little did I know, in those days when I joined the group, that I should be called upon as a member of the Legislature of the State of Oregon to help straighten out those poor benighted souls.

Naturally, in order to make the retirement fund work, it was necessary to have a larger percentage of teachers in the association. As time went on, we who invested our money—and I must admit we did not have much money to invest—assumed the risk involved in starting this program. It proved successful.

What happened? A group of somewhat fewer than 100, I think, petitioned the legislature for State help and city help to make up the back payments. A benevolent State, and all of us, forgave them for not having the foresight to join. We passed legislation to bring in the group.

They came to me at the legislature and said, "How foolish we were; but also how foolish the district was not to make this program compulsory, so that everybody would participate equally."

One would think that by now we should have enough experience and enough examples, as Senators have pointed out. We have observed the history of the Social Security Act. "Bugaboos" and scare words should not continue to confront us. What is the value of history, if it is not to teach us something? We have had a good base of experience in the history of the past, on which to build.

Mr. McGEE. To paraphrase a famous historian, history repeats itself when Senators fall for the same scare words over and over again.

Mr. GORE. Mr. President, will the Senator yield to me so that I may ask the distinguished Senator from Oregon a question?

Mr. McGEE. I am glad to yield.

Mr. GORE. As the distinguished Senator from Oregon knows, there is in effect a very fine wildlife program, which provides conservation, protection, care, and enforcement of the rules during hunting seasons. It is a self-supporting program.

Mrs. NEUBERGER. The Senator is correct.

Mr. GORE. Hunters buy duck stamps. Is the duck stamp a compulsory stamp, or is it not? Of course, the answer is that it is compulsory to the extent that if a person is caught duck hunting without a duck stamp he is subject to the penalty of law.

I should like to ask the distinguished junior Senator from Oregon what percentage of duck hunters she thinks would buy duck stamps for the privilege of hunting ducks if they were not required by law.

Mrs. NEUBERGER. Of course they would not buy any stamps, but the duck hunters have a choice as to hunting ducks. People who become sick have no real choice as to whether they will die or go to the hospital. They cannot control the problem.

Mr. GORE. I deduce from the Senator's statement that the Senator does not think it the height of wisdom to make duck stamps compulsory and payments into a health and medical care program voluntary.

Mrs. NEUBERGER. Those interested in the duck stamp program know that they will get protection, and that the swamp areas will be maintained so that they may hunt and pursue their interests. People who pay into a medical fund of the kind of which we speak know that they will get full value, just as the duck hunter does.

Mr. McGEE. I thank the Senator from Oregon for her comment. I thank the Senator from Tennessee for the additions he has made in our colloquy on the question.

The point was raised a moment ago as to the possibility that the elderly could be helped along the road with assistance from their families and their children. I think it is a really important point that we should bear in mind in our discussions on the bill. The suggestion has already been advanced on the floor of the Senate that young people who are raising their families are buying homes. They are preparing to send their children through college. That involves a considerable expense. It is a point that many Senators fully appreciate. The additional expense of having to care for elder members of their clan would likewise impinge upon a successful financing of family operations. Therefore, from the point of view of young people—and not alone from the point of view of the anxiety of the elderly themselves—from the point of view of the fiscal stability of young couples starting out, it is important that some kind of financing operation for medical costs for the elderly be instituted.

I should like to turn from the first suggestion I made; namely, that most of the 17 million seniors need some kind of assistance in their declining years in view of the uncertainties of medical costs, to a second suggestion that is often made; namely, that the existing Kerr-Mills bill offers adequate medical benefits.

It has been incredible to me to observe the number of members of the medical profession who have suggested that that bill would be sufficient to cover most cases. As we well know, so far as the Kerr-Mills bill is in operation now—and I believe it is in operation in less than half of the States—it limits medical assistance to extreme instances in which the individual can prove that he is incapable of financing his medical costs. Under the law now on the books medical services are available only to those who can prove that they have failed economically in the pursuit of the fruits of life. For example, as the present occupant of the chair, the distinguished junior Senator from North Dakota [Mr. BURDICK], has reminded me, in the State that he represents in part a mere handful of individuals are able to avail themselves of assistance under the Kerr-Mills bill. That situation does not address itself to the broad base of medical need in the age group with which we are concerned under the proposed legislation.

Mrs. NEUBERGER. Mr. President, will the Senator yield?

Mr. McGEE. I yield.

Mrs. NEUBERGER. Are not the provisions of the Kerr-Mills bill close to socialized medicine?

Mr. McGEE. Running the risk of using inflammatory terms, it seems to me that is very close to socialized medicine. It provides a handout to those who must have it if they can prove they are bankrupt or poverty stricken and cannot pay the necessary expense. It is desperately close to socialized medicine.

For that reason I cannot understand why the same individuals, almost in the same breath, will condemn a measure with a base of individual financing of his own medical costs and approve another method that is the opposite of what is good enough for them.

Most of those who are opposed are able to afford the kind of medical care they need, through any private agency they choose, but that is not so, as we know, of the great masses of our people.

I turn to the third misconception that is recklessly bandied about, which comes down to the issue of socialism. We are told that the social security approach to the financing of care for the ill and the aged under the King-Anderson bill would be a step toward socialism and Government control of medicine. That is perhaps the most ridiculous and the most obviously false argument that is being used against the measure. In the literature that comes to me, in the letters that have been organized and mailed to me, in the solicitations that have been made door to door in the communities in my State by the doctors themselves, the people have been advised, "Write your Senator and tell him you do not want socialized medicine."

I say that is a complete falsehood. It is the perpetuation of the evil of misrepresentation, and it has been coming from the mouths of some of the fine doctors in our land. We ought to deal with those questions as problems that face us rather than through name-calling stunts designed only to confuse and obfuscate the issue which we want to resolve, we hope, with wisdom.

It is difficult to think of any new step forward this country has taken in the past 60 years that has not been condemned first as socialistic. I say that in our system of democracy it is time that we face an idea as an idea, and address it to the problem at hand to see if we can conquer the problem that threatens to weaken the fiber of our society. If we can do so, we had better make that idea a part of our democratic theme. That is precisely what has been done.

For example, we recall the critical years in the 1890's and at the turn of the present century, when a program was advanced for modernizing democracy. The secret ballot was proposed. The direct election of Senators was proposed. Monopoly controls and the postal savings system of our country were proposed. This whole package of suggestions for improvements in our democratic system was condemned everywhere across the land as socialistic, as dangerously un-American, and as unconstitutional. Yet within 15 years the same people that condemned those proposals were writing them into the platforms of their political parties and proposing that on both sides of the political fence, they be made a part of the law of the land.

That again suggests the folly of trying to destroy an idea with a name or trying to destroy a proposal with a slogan. It is imperative that we consider the ideas advanced in terms of their substantive quality and in terms of how well they meet the problem at hand.

No one needs to remind Senators of the frequency with which we heard the cries of "socialism" in the 1930's. Socialism was the major indictment against the inception of the social security system. Yet it is difficult to find a voice ever raised on the floor of this body proposing to roll back social security or to repeal the social security law. If it is socialism, why do not those who oppose socialism get up their courage, stand before their constituents, and ask for the destruction of the social security approach to the financing of the problems of the people of our land?

One of the great steps forward that our country took in the 1930's was to disregard the scare word of "socialism" and attack the great problem of fear that people had about their own well-being and their elder years. That program—and it alone—preserved the deep and strong roots of American capital enterprise, or American free enterprise, as some call it.

We need not think back very far to recall that capital enterprise was "on the ropes" in 1929. The direction in which our country was to go was very much open to question. We did not know whether it would go to the Communist left or the Fascist right. We came closer to going in one of those two directions than some people in our country like to remember.

Students of our country's history should refresh their memories once again, because not long ago we were on the brink of abandoning the American capitalistic private enterprise system because of the desperateness of the hour in the years 1929–32. The New Deal, with its social security elements that were condemned with all kinds of words, provided the fiber of faith and confidence in the American people to put us back on the road once again in our capital enterprise system. We found the agreeable road. We found it without violence and without the extremes of one of the "isms" to the left or to the right. Therefore I say we had better face the question now or there will descend upon our heads, as the problem worsens, a solution much worse, much more extreme than even that dreamed of by the oral opponents to the social security approach to financing medical costs at the present time.

Mrs. NEUBERGER. Mr. President, will the Senator yield?

Mr. McGEE. I am glad to yield to the Senator from Oregon.

Mrs. NEUBERGER. I know that the Senator comes from a predominantly rural State, similar to Oregon, which has many small communities, and which at one time had a great shortage of hospitals. Does not the Senator believe that some of the doctors who worry about the pending bill bringing socialized medicine are doctors who practice in what might be called socialized hospitals? Where would we be in Oregon and Wyoming if we did not have Hill-Burton funds with which to construct hospitals?

Mr. McGEE. That is different. That is called incentive. That is incentive to a more vigorous private practice of medicine. We cannot call that socialism.

Mrs. NEUBERGER. The hospital, of course, furnishes accommodations for the doctors, but it does not interfere with the patient-doctor relationship in any way.

Mr. McGEE. It certainly does not. The doctors live with it, and they have found it successful. No one has ever proposed that we turn that back.

Mrs. NEUBERGER. The bill would help the patients pay hospital bills, nursing home charges, and bills for X-rays.

Mr. McGEE. I believe it would help a doctor to collect his bill. People would have help in paying their hospital bills, and would have money left with which to pay the doctor. We are reminded of what some of these people said 20 years ago about Blue Cross. That has been a great success. Certain people, having said what they did about Blue Cross, are not experts to whom to turn for insight and wisdom and farsightedness as to how to meet the present problem.

My father-in-law was a country doctor, a general practitioner. He knew what it meant not be be paid. He knew what it meant to get a couple of chickens in payment for a house call. He knew what it meant to get a shank of meat in payment for a simple operation.

Those days are gone. In America we have in effect moved to towns, to areas in which distances have been reduced. Our people are no longer in the position of bartering. It means paying or not getting a service. Of course, we are not now talking about paupers. We are talking about honorable Americans who would like honorably to meet their financial obligations in their retiring years.

For that reason it seems to me that we ought to stop talking in terms of hokum about socialized medicine, and about Government control and Government medicine. We are trying to make it possible for an individual American to hold up his head, knowing that he has a chance to enjoy retirement out of a retirement reserve, without that reserve being eroded by the severity of a lengthy stay in a hospital.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. McGEE. I yield to the distinguished Senator from Louisiana.

Mr. LONG of Louisiana. Does the Senator believe that if the program he is advocating is started, of using the social security system to provide for medical care for those who are well able to pay their own bill—I realize that at the moment it does not cover doctors' bills, but only hospital bills—it will be extended to other fields, and applied to the disabled, and various other individuals? Does he not believe that it will be extended to other people, and eventually will cover everyone's hospital and doctor bills?

Mr. McGEE. Various approaches would have to be evaluated in trying to cover medical costs. I speak of medical costs in the broad sense. At this stage, medical costs are extremely severe—both doctor and hospital costs—but I confine myself to meeting the cost factor, not how benefits are to be received or how the program is to be administered.

Mr. LONG of Louisiana. Has the Senator any idea that if we start this program it will not be extended to cover others, perhaps the disabled, and then the blind? Does not the Senator believe that the majority of those who support the present proposal will eventually seek to extend the plan to all hospital costs and all doctor costs? Has the Senator any doubt that that would probably be the end result?

Mr. McGEE. I hesitate to say that that would be the probable end result. Each of these steps ought to be considered as a social question which is a part of the economic scene. Some of the elderly groups are already assisted by various kinds of programs. Therefore, the question of extending this particular approach to the blind and various other groups of disabled would not be a very real one, because of the existing programs. What the Senator is getting at, apparently, is that trying to finance the medical costs of the elderly would be only the beginning of a much more extensive and more encompassing program. I believe we must address ourselves to the problem at hand, rather than to a problem that may exist 10 years from now.

Mr. LONG of Louisiana. I asked the Senator that question because I am one of those who made the fight at the time social security benefits were extended to those who were disabled, starting at age 50. There was no doubt in my mind that in the end, if we won that victory, to start the benefits at age 50, we would later seek to take care of disabled persons of any age. We are doing that now. The day we adopted the amendment referred to, I started planning another amendment, to be the first to start with such a proposal, to extend the social security benefits to those who are disabled below age 50. In fighting for it I felt I was fighting for the beginning of a program that would be extended. I am frank to say that if I were to support the Senator's position I would feel that in fighting for it I would be accepting the responsibility for feeling that I was fighting for the beginning of a principle that would be extended to all medical costs. I wonder whether the Senator would agree with that statement?

Mr. McGEE. What I am trying to suggest to the distinguished Senator is that I do not believe we ought to undertake to bring new issues into this question now. There has been enough of a tangent issue brought in to confuse a great many people back home. If we were to follow the Senator's course we would trigger different kinds of responses. I believe we must keep focused on the one idea of trying to bring about the financing of medical costs in this category with respect to elderly citizens, and do that successfully, in order to resolve the problem in the most expeditious manner possible.

Mr. LONG of Louisiana. Some of those who have supported this position came to me early in the history of the proposal and suggested that I should be the one to offer this proposal. This happened many years ago. I did not agree with them. I am frank to say that it was their view then that this would be the beginning of a program that would be extended to other areas. I believe the best argument for the program can be made by applying it to the aged, and that the argument becomes weaker as one tries to apply it to other groups. I am frankly content to debate it on the basis that it is not a good thing to do so far as the present issue is concerned. However, if we vote for it, we ought to recognize what we are in for eventually in other fields.

Mr. McGEE. Any other field would have to be another subject for legislation. It would have to be weighed on its merits, irrespective of what we do or do not do in this session of Congress on the pending question. Therefore I believe it would be an unrealistic approach to pose the hypothesis the Senator has put as to what the next step might be.

Mr. LONG of Louisiana. I believe that I have been as strong a welfare supporter as any other Senator. Many times I fought for increases in payments and additional benefits to persons who through no fault of their own were unable to provide such benefits and payments for themselves.

For the most part what the amendment does initially is to tax the young people to pay the costs of medical expenses for others, whether they be millionaires or people with substantial resources, or at some other level of economic life.

That is somewhat in conflict with my theory that people ought to be taxed to pay for the medical care of other people only if they are unable to pay for the care themselves. I am willing to support the principle of paying taxes to pay the medical bills of persons who cannot pay the bills themselves. I would include more than the medical cost. I would include the doctor's bill, the cost of outpatient care, and anything else which might be necessary. But when you propose to extend a tax bill to pay the medical costs of people who are well able to pay their own medical bills—some of them being millionaires—I find it difficult to support such a proposal.

Mr. McGEE. I am really more concerned about the tens of millions of people who are not in the millionaire class, whose earnings are not the earnings of millionaires, but who are already plagued with this problem. I would rather let the experience of the operation determine what should happen later, after we have started to cover these people. We can then determine whether there should be any modification, to make certain that we are not doubling back on the millionaires. Even so, millionaires will still pay for their costs, whether they can finance them themselves or not. Such a program would not cost the Government anything. The millionaires would be paying for their costs in their contributions.

Mr. LONG of Louisiana. They may have been retired and living on retirement income. They would not be taxed on social security in that event, but they would still be drawing social security benefits.

Mr. McGEE. The uncertainty at age 25 or 30, when a young couple are starting out in life, as to who is going to be a millionaire at age 65 is probably a reasonable question to put. We are trying to act at a time when the cost is low, so that we can build up the program to the point where it is actuarially sound, over a long period of years; and to finance the cost, considering the risk circumstances, in such a manner that it would be possible to pay the medical costs of some of those people 30 years later.

Mr. LONG of Louisiana. If this program becomes effective, the Government will be paying for a greater amount of medical treatment than the people would buy for themselves, even if they had all the money of Midas with which to pay for it. In Louisiana, the experience in State medicine has been that the average patient in a State hospital would stay 50 percent longer than he would stay in a private hospital. A problem in a State hospital is persuading a patient to leave the hospital as soon as he is sufficiently well enough to go home. For instance, maternity cases stay much longer in a State hospital than they would in a private hospital, where they would pay their own expenses. So, too, all other cases.

One of my own relatives, who required all the influence we could muster to put him into a veterans' hospital, felt like staying on indefinitely, because he enjoyed it so much. If he had been paying for his hospitalization himself, he would have been eager to get out at the earliest possible moment. But when he found it pleasant, with all sorts of facilities available, and good treatment, his desire was to remain in the hospital for a while longer.

That has been the history in Louisiana when the State pays for the hospitalization. My guess is that that would be the history under the proposed legislation. My guess is that the same is true of veterans' hospitals.

Mr. McGEE. I have been in hospitals a number of times. I do not enjoy it; my desire is always to be discharged as soon as possible. But the decision as to whether I should remain in the hospital was not mine; it was made by the doctor.

If we have a medical profession of integrity, such a decision is made by the medical profession, not by the whims of a family or by anybody else. It is a medical decision. I trust the Senator from Louisiana does not believe that this kind of decision ought to be injected into the program envisaged by the Anderson amendment.

Mr. LONG of Louisiana. In Louisiana, the average stay of a patient in a State hospital is 50 percent longer than it is in a private hospital. I shall be glad to marshal the evidence to prove that statement. It is a matter of cold, hard fact, which doctors recognize. A human factor is involved. When a person is paying his own expenses, he desires to get out of the hospital as soon as he can. But there is a certain reluctance to move soon when he is not paying his own expenses.

Mr. McGEE. Would that have any bearing on whether he ought to have remained in the hospital longer? Is there any evidence that the cost might crowd some people out? I hope the decision is one that can be left to the doctor to determine. That is where the decision is made in every instance I know of.

Mr. LONG of Louisiana. In Louisiana, it is the same doctor in either case. The doctors who treat the patients in a State hospital volunteer their services. They would be paid for their services in a private hospital; but they volunteer their services in a State hospital. Inasmuch as about 50 percent of the hospital days are spent in State hospitals, all the factors that this Senator has been able to imagine—and my impression from discussing them with doctors who are treating in both State and private hospitals are the very factors to which I have referred—if a person is paying his own medical bill is concerned about the cost, he wants to get out as soon as possible.

Mr. McGEE. Where does the Senator get the information that the patient himself determines when or when not to leave the hospital? This is a strange aspect of the question that he has introduced.

Mr. LONG of Louisiana. I am speaking from the factual side of the situation.

Our State experimented, as an economy measure, with discontinuing free ambulance service. Many doctors with whom I have spoken seemed to think that that was the most expensive economy that could be imagined. There are some persons whom it will not be possible to save. Some have cancer or other incurable diseases. They will linger for years before they pass away. If we are trying to do the best we can for the greatest number, after a doctor has done all he can for the person in a hospital he sends him home to the family. If that person is in a State hospital, the family would try to put pressure on the hospital to keep him there. About the only way to get such a patient home is to take him home in an ambulance, so as to make room in the hospital for other persons who require treatment, rather than to allow incurable cases to remain indefinitely. That is one more illustration of the problem to which I have referred.

Mr. McGEE. If that is the point of the Senator's suggestion, my guess is that persons whose illness is incurable ought not to become a burden in a private home, where they cannot receive the necessary care that modern medicine makes available.

Mr. LONG of Louisiana. The proposal for which the Senator is arguing would not keep people in those hospitals indefinitely. I assume that if this system ever went into effect, he would want to extend it to the people in question. But personally there is a question as to how far to go in providing at State expense that at which families ordinarily pay themselves. In the case of a person who is suffering in the last stages of cancer, the Senator's proposal would not undertake to keep the person in the hospital indefinitely. The person would go home and might linger there for a year; and the proposal now before us would terminate the hospital services after a certain period of time.

Mr. McGEE. I find it difficult to accept the Senator's suggestion. Consider the case of an incurable cancer in a person over 65, with all the haunting elements that are present. I have been familiar with two or three such cases. They did not involve members of my family, I am grateful to say. I would find it hard to accept the philosophy that such people ought to be returned to their homes, to die a slow death, with that kind of burden, and the absence of continual watching and medication which brings some relief under those circumstances.

I think the example cited would be a good case in point, as to what we ought to look forward to, to make sure it is covered. But I am only developing the initial point of the experiences in Louisiana. In cases where people like to go to the hospital and stay as long as possible, and it is difficult to get rid of them, I wonder whether there is a deductible provision or clause in the State regulations. Do the patients pay a certain part of the bill for a certain period of time?

Mr. LONG of Louisiana. No; I am talking about a case in which the State takes care of the entire expense. A person can go home and convalesce, and then go back to work; or a person may remain in the hospital and convalesce over the same period of time, after the doctor had done that which can be done in the hospital.

I believe the Senator knows that a great amount of healing and treatment must take place in the home, even if there is State medicine.

Mr. McGEE. But I would not be the one to make that judgment. My doctor alone would make it. I will not speak in defense of any State system which would take that decision away from the attending physician. In my opinion, that decision should be made by the doctor; and I think that references to such a situation injects into the debate on the proposed legislation an unrealistic element.

Mr. LONG of Louisiana. I believe the Senator would find that the doctor would send the patient home from the hospital as soon as possible, and thus the patient would not be worried about the cost of remaining in the hospital.

Mr. McGEE. I thank the Senator from Louisiana for his comments.

Mr. GORE. Mr. President——

The PRESIDING OFFICER (Mr. BURDICK in the chair). Does the Senator from Wyoming yield to the Senator from Tennessee?

Mr. McGEE. I yield.

Mr. GORE. If the Senator from Wyoming will permit me to do so, I wish to comment on the two points the able Senator from Louisiana raised. One was that if the program of insurance, hospitalization, and medical care were enacted, those of us who support it should take the responsibility of considering it as only a beginning. I am pleased to accept that responsibility; I think it would be the beginning of a sound program. If the program proves to be actuarially sound, and socially beneficial, on a pay-as-you-go basis, I think time will show that improvements will be needed.

The same argument was made at the time of the enactment of the social security program—as I am sure the able Senator from Wyoming will recall. Since then, as the junior Senator from Louisiana will recall, Congress has found it wise, in its judgment, to extend the benefits.

Congress has been a little tardy in a few instances in increasing the benefits in a manner commensurate with the increased need, both in connection with such costs and other factors.

A similar argument was made when compensation for the veterans of World War I was under consideration. Some said, "Once this is started, there will be no stopping." However, I point out that the Senator from Louisiana is the author of a bill, on which he conducted a hearing today, to permit veterans to continue their service life insurance. Some persons oppose this proposal; but today I was happy to find that the Veterans' Administration, after opposing the Senator's bill for several years, now endorses it, and informed the committee that it was actuarially sound, and that the program not only had proved to be sound, on a pay-as-you-go basis, but also had shown a surplus.

I shall not predict that a surplus will be accumulated in this case. I refer to that situation only as an example.

We have found that in the case of unemployment compensation it has been necessary in times of distress to extend the period of benefits; but no one has said that because we found that necessary and desirable, the program was unsound and should be scrapped or else it would wreck the country. If we are able to support, on a sound basis, a program that is beneficial to the people and that pays for itself as we go, then it may very well be—and I hope that would be our experience—that both the benefits and the coverage, and perhaps the degree of payroll taxes, would, by a future Congress, in its wisdom, judgment, and courage, be increased realistically. I do not question the capacity of the Congress of tomorrow to proceed in that way. I do not doubt the capacity of our people to sustain self-government. In looking to the future, I do not believe everything is going to be dark, and that if a program is begun, it will carry us over the cliff. That has not been the experience in this country in dealing with the social security field or the unemployment compensation field, or with veterans compensation, or with many other fields to which I could refer.

So I am prepared—as the Senator suggests those of us who support this program should be prepared—to assume the responsibility that this program may be a beginning. I believe it will be the beginning of a very good program which Members of Congress 10 years from now will never think of repealing. I point out that all such questions which have been raised in connection with this program apply equally to the social security program itself.

Let me ask whether the Senator from Wyoming minds if I refer to the second point which was made.

Mr. McGEE. Indeed not. I am pleased to have the Senator from Tennessee proceed.

Mr. GORE. The junior Senator from Louisiana [Mr. LONG] raised this point; and at this time I should like to reply to it, because it has been raised by a number of persons. It deals with an important point for our consideration—namely, the statement that this program would place a tax on the young people of today, in order to pay for the hospitalization charges of some persons who might be able to pay their own hospital bills. However, if we refuse to begin such a program on an actuarially sound basis and on a compensatory basis until that situation would not prevail, such a time would never come. Such an argument reminds us of the old question of whether the chicken or the egg came first.

If we had taken such a position, we would never have begun the social security program, because it came into effect as a result of the provision of benefits for those who retired at age 65 after they had paid into the social security fund a very small percentage of their paychecks during only a very few quarters. I have forgotten the exact number; as I now recall, it was over a period of 5 years.

Mr. CURTIS. Mr. President, will the distinguished Senator from Wyoming yield?

Mr. McGEE. I have yielded to the Senator from Tennessee.

Mr. GORE. I am advised by the staff that it was after a year and a half. But even if 10 percent of a person's salary were taken during a period of a year and a half, that would not be sufficient to entitle him, at age 65, to an annuity for the remainder of his life.

But we began the program; and it was based upon a mechanism through which we required almost everyone who was of working age to pay into the fund while he was working, in order that neither he nor his fellow workers, whatever might be their age, would become burdens on the taxpayers when they were old and no longer were able to work.

If we are to operate upon an insurance basis, upon a contributory, actuarial basis, we must go upon that course. I am sure the Senator from Louisiana would not suggest that a doctor who had a fire insurance policy on his home which was destroyed by fire should not be allowed to collect his insurance because he was a rich man. I am sure the Senator would not suggest that a man who had automobile collision insurance should be denied the right to collect upon his insurance policy when his Ford was destroyed because in his garage he had a Cadillac. That is not the basis upon which an actuarially sound compensatory program is based.

The Senator pays taxes into the retirement system. It may well be that he will not retire when he is 65. I hope to be either in the Chamber or in the galleries to hear his melodious voice long after he is 65. But in the event he retired, either voluntarily or involuntarily, the Senator would be entitled to share and participate in the fund into which he has been contributing, and into which he will continue to contribute. He would share and participate as a matter of right, not as a matter of charity.

If we are to criticize this program on that basis, we must accept the responsibility of criticizing the social security program, because it is on that basis.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. McGEE. I yield.

Mr. LONG of Louisiana. I should like to make a point. When the Senator talks about collecting on an insurance policy on which a person has paid, I hope the Senator is not trying to put that in the same category as a bill in which Congress proceeds to vote a tax on working people today to provide insurance for persons who have not paid 1 cent into that program so far as medical care is concerned, because at the time they took that insurance it was entirely a retirement program. They were not paying for medical care; they were paying for a retirement insurance program.

I hope the Senator does not propose that anyone should be entitled to collect on an insurance policy when he did not pay 5 cents for the insurance, did not want it, and did not have any interest in it. I hope the Senator is not putting his argument on that basis.

Mr. McGEE. If I may, Mr. President, I would like to put it on that basis, because, through the social security approach, which was a program to provide for some uncertainties, it could not be argued that after contributing to the fund for a year and a half, a person was eligible for benefits. It could not be argued that he had contributed enough money to make it possible to finance the cost of such a program when he drew upon the fund. It is not right to penalize a person who is 65 because of the failure on the part of the country to provide for him.

I think there may be ways to close the gap. The numbers outside the social security program are small. Some of them are being included under the amendments. So the bill penalizes certain members so far as actuarial soundness is concerned. But I do not think we have a right to penalize those who reached a certain age before we enacted the system.

Mr. LONG of Louisiana. If we are going to talk about someone getting something as a matter of right—and I question it—a person who cannot afford to pay because he is poor has more right to expect the Government to pay for his medical care than one who has not paid 1 cent for medical insurance has to expect to have his medical expenses paid for, even though he can well afford it.

Mr. McGEE. He has a right to expect that, because he did not know it was going to be the law of the land. I do not think we should penalize him because he reached the age of 65 before the program was enacted, and not let him share in a program that would tend to reduce his medical costs.

Mr. LONG of Louisiana. There is no criterion of need here. This program would be a medical care program at Government expense for a great number of people who have no need for such aid, because they are able to take care of themselves at their own expense. I concede that many people might need such help and could not pay for it, but the group the Senator's proposal would care for would include people who could take care of themselves, either by themselves or with the aid of relatives. I realize that the Senator knows that is implicit in what he is talking about here.

Mr. McGEE. I suggest again that the great bulk of this program—we are talking about numbers of people now—is addressed to people who do not have the means to meet the extra medical costs that may be imposed upon them. I suggest that out of this group of 17 million, those who have an annual income of as much as $10,000 to which they can turn for living costs would include only 3 percent. We are talking about the very large mass who have very low measurable income, the average of which is $2,500 to $3,000. In the urban communities, where most of them happen to live, the cost of living equals or exceeds that amount.

The Senator has raised some legitimate questions in terms of millionaires and those who are able to finance their own costs. However, that is not the group on which this question should be focused. The emphasis should be upon the group which is the greatest in numbers. Experience in this field will help us to work out the basis for a solution of the specific questions the Senator from Louisiana has raised about millionaires and those who are able to finance their own medical needs.

In connection with the earlier question, I suggest that the State hospitals in many of the States—and the Senator used that element as a part of his illustration—are required to take care of long-term chronic cases. This bill is not directed specifically toward that problem. Perhaps a bill should be, but this particular bill does not involve that ingredient. I think mental cases and TB cases fall in that category.

Likewise, the bill provides for a professional medical review board in each contracting hospital in order to effect standards of admission, discharge, and policies of the medical corps and medical doctors administering the cases in terms of occupancy of hospitals. The program has worked effectively in Colorado and Pennsylvania. I think there is enough of a record to suggest that there is a way to get at this problem without upsetting the purposeful impact or direction of financing this particular bill.

I yield now to the Senator from Nebraska [Mr. CURTIS], who has been very patiently waiting.

Mr. CURTIS. I commend the distinguished Senator from Wyoming for the statement he made when he started his speech, to the effect that what we needed on the subject was light.

What benefits will be available for the people who will come under the program, should the Anderson amendments be agreed to?

Mr. McGEE. In general, without spelling out the details of the proposal, for the first 9 days the individual would have to pay $10 a day. This provision is designed to eliminate the malingerers, the professional "go to the hospital" people, who like to lie in bed. It would minimize their number.

The difference between that $10 a day and the actual cost of the hospitalization would be picked up for that interval of 9 days. The hospital costs beyond that period, for the limited numbers of intervals spelled out in the proposal, would represent the benefits. A substantial economic burden would be borne by the program, if that burden should happen to descend upon an individual or his family.

Mr. CURTIS. For how long a time would the hospital bill be paid?

Mr. McGEE. It would be paid for 90 days.

Mr. CURTIS. With a $90 possible deductible?

Mr. KERR. Mr. President, will the Senator yield to me, to permit me to ask a question about his previous answer?

Mr. McGEE. I yield to the Senator from Oklahoma.

Mr. KERR. Did the Senator say there the hospital bill for the individual or his family would be paid?

Mr. McGEE. It would be for the individual patient.

Mr. KERR. I thought the Senator said for the individual or his family.

Mr. McGEE. I am sorry if that was what it appeared I said. I was trying to suggest that this program would reduce the burden the individual or the family otherwise might have to bear.

Mr. CURTIS. It is conceivable, then, that there would be many cases in which the first $90 for hospitalization would be paid by the beneficiary?

Mr. McGEE. That is not quite correct. I understand the cost would be $10 a day for 9 days.

Mr. CURTIS. It is conceivable, then, there would be many cases in which there would be a $90 deductible item which the beneficiary would bear?

Mr. McGEE. Yes.

Mr. CURTIS. What would be provided by way of medical prescriptions?

Mr. McGEE. Does the Senator refer to medicines the patient would get, in or out of the hospital?

Mr. CURTIS. Everywhere.

Mr. McGEE. The hospital drugs would be totally covered. The out-of-hospital drugs would not be covered.

Mr. CURTIS. So when we receive letters from our constituents stating they have costly medical burdens, expensive drugs they must buy once or twice a week, if they are not in a hospital this proposal would not relieve their burdens; is that correct?

Mr. McGEE. Yes. I understand from the hearings that the pharmacists did not wish to participate.

Mr. CURTIS. Is that provision out, because the pharmacists did not wish to come in?

Mr. McGEE. I remember that the pharmacists did not wish to come in.

Mr. CURTIS. Is that the reason the cost was not included in the proposal?

Mr. McGEE. That is not necessarily the whole reason. The point is that it it not in the proposal. The Senator's question was whether drugs were to be covered. I said that the hospital drugs were to be covered, and that drugs outside the hospital were not to be covered.

Mr. CURTIS. Would surgery be covered?

Mr. McGEE. No; surgery would not be covered. That is a doctor's charge.

Mr. CURTIS. Suppose an aged person had to call at his doctor's office for treatment or examination periodically?

Mr. McGEE. Doctor's bills are not to be covered.

Mr. CURTIS. Suppose a doctor had to call at a patient's home?

Mr. McGEE. That would not be covered.

Mr. CURTIS. In addition to the hospital cost coverage, there would be provided certain home nursing facilities, as a sort of substitute for hospitalization; is that correct?

Mr. McGEE. It would be supplemental, rather than a substitute.

Mr. CURTIS. If the amendments are agreed to, how many people will become eligible for benefits right away?

Mr. McGEE. About 17 million, I am informed.

Mr. CURTIS. How many of those 17 million have paid anything for the program?

Mr. McGEE. I would suppose that all but 2½ million have.

Mr. CURTIS. What have they paid?

Mr. McGEE. I wish to correct that statement. I was in error. I was thinking about the 2½ million people who were not under social security, to be brought in. The answer is that none have paid.

Mr. CURTIS. None have paid?

Mr. McGEE. That is correct, because it is to be a new program.

Mr. CURTIS. The Social Security Act was passed in 1936. It went into effect January 1, 1937. The first benefits were paid in 1940.

Someone who qualified under the act at the maximum rate, with the maximum covered wages at that time—and some of those people are still alive—may have paid $30 a year for 3 years, or a total of $90. That person, if still alive—and a number of such people still are—received a monthly check last month of $89. The benefit for 1 month was nearly equal to everything he paid. That person has been drawing benefits through the years.

That person has not paid anything into the hospital trust fund, has he?

Mr. McGEE. No; not at all.

Mr. CURTIS. Why has the age been fixed at 65 for the payment of the hospital benefits?

Mr. McGEE. I think it is to coincide with the social security system; that is, the preponderant portion of the social security system as it now operates.

Mr. CURTIS. Both men and women may retire now at age 62, and those who are disabled may elect to retire at any age.

Mr. McGEE. Yes. I think the age for retirement could be 62, 65, 67, or 60. That is not the issue in regard to this proposal.

Mr. CURTIS. Would a person have to retire to get the benefits?

Mr. McGEE. A person would not have to retire to get the benefits under this proposal.

Mr. CURTIS. So this would not be a retirement benefit.

Mr. McGEE. This is not to be a retirement benefit. This is to be a health benefit for persons who have reached the age of 65.

Mr. CURTIS. The cash benefits which are paid are intended to supplant wages, when someone can no longer perform work. Some people elect to retire at the age of 68 or 70, and they draw no benefits until that age. Some people elect to retire at age 62.

I wonder what is the magic about the age of 65.

Mr. McGEE. I do not think there is any magic.

Mr. CURTIS. Whether people are retired or not, regardless of job, regardless of capital, regardless of savings, regardless of income, if they are eligible for social security they are to be eligible?

Mr. McGEE. If the Senator will permit me to address myself to the question he asked, I think it is necessary to make an arbitrary selection of an age at some reasonable point. One could raise the same question about any particular line we might draw. The age of 65 has been a common retirement age, accepted in private industry, as well as in public fields.

The point which I think the Senator should bear in mind is that while some people may still be working at that age, the fact that they are still working will probably mean they will not draw upon the health insurance fund after the age of 65 quite as much as those who perhaps have had to slow down for health reasons, and have had to retire, as the alternative they have accepted.

In addition, those who are beyond the age of 65 who are still working likewise will be paying money in. That group will somewhat reduce the cost to which the Senator referred, for the 17 million people who will have paid in nothing. This program would work both ways. The kind of situation to which the Senator addressed himself a moment ago would be ameliorated.

Mr. CURTIS. The individual who cannot afford to retire will have to pay into the fund; is that correct?

Mr. McGEE. The individual who does not retire will pay into the fund.

Mr. CURTIS. Many older people continue to work from necessity; is that not correct?

Mr. McGEE. Some of them do. I am certain that is true. The desire is not to work in some cases, as soon as the budget can be balanced.

Mr. CURTIS. There is no arbitrary age for paying the cash benefits under social security. The test is, when did the person retire?

Mr. McGEE. The Senator is correct.

Mr. CURTIS. But in this instance an arbitrary age has been selected.

Mr. McGEE. The reason is that the age of 65, as medical records will reveal to the Senator—I am sure the Senator has studied them—is the age at which the incidence of health disaster mounts very sharply. It goes up after the age of 65, contrasted to the ages preceding 65. Therefore, it is as good a demarcation line as could be selected.

Mr. CURTIS. Has the Senator any idea what would be the cost of buying insurance to provide the benefits as set forth in the Anderson amendments?

Mr. McGEE. The cost of insurance to provide equivalent benefits?

Mr. CURTIS. Yes.

Mr. McGEE. I assume that the cost would be considerably more.

Mr. CURTIS. More than what?

Mr. McGEE. More than the cost under the social security approach.

Mr. CURTIS. What would it cost annually to buy that kind of protection?

Mr. McGEE. Under the social security approach the average would be somewhere in the neighborhood of $13 for a base of $4,800. As the amount increased, it would approximately double on an annual basis.

Mr. CURTIS. Of course, we would not know the answer to that question for many years.

Mr. McGEE. We have a reasonable way of making an educated guess, because we know the pattern of income in our country for the most part.

Mr. CURTIS. I am not so sure with reference to the present beneficiaries if we should start with the proposed program. What I am trying to determine is what it would cost to provide such protection if the individual went to a private insurance company in order to secure it.

Mr. McGEE. I am not sure I can answer the Senator's question. I do not have that information available.

Mr. CURTIS. What percentage of the people past 65 at the present time have some hospital insurance?

Mr. McGEE. About 50 percent.

Mr. CURTIS. Has that number increased in recent years?

Mr. McGEE. Yes.

Mr. CURTIS. Has the Department of Health, Education, and Welfare predicted that the percentage will continue to increase?

Mr. McGEE. I think the answer to that question is "Yes."

Mr. CURTIS. Do not many people—not all of them—have a coverage that would be equivalent, at least, and probably more than would be provided by the amendments of the Senator from Oklahoma?

Mr. McGEE. I think the element of difference is that the substance of the benefits under the Anderson proposal is the differential between the statistic that the Senator from Nebraska has asked for and the number who are over the age of 65 that have some kind of insurance. It is the amount of coverage that they have that, in relative terms, would establish the validity.

Mr. CURTIS. Is the Senator urging the adoption of the proposed system because it is needed or merely because in his opinion it would be a good system to follow?

Mr. McGEE. I think it is a very badly needed operation.

Mr. CURTIS. That point brings me back to my original question. Who needs it? At what point in income can a person over 65 be reasonably expected to provide his own hospital insurance?

Mr. McGEE. I am afraid the Senator must again face the fact that it is a question of income in relation to cost. We cannot select an arbitrary figure. All we know is that on the average there is a group over 65 who are receiving an average of $2,500 to $3,000 and we know they cannot pay the known and predictable medical expenses out of that income. Therefore, the success of their economic stability has been impinged upon.

Mr. CURTIS. Of course, under the bill they would not pay the known medical expenses.

Mr. McGEE. They would pay a substantial portion of them. If the Senator so proposes, we can make the bill provide a larger amount. The measure does not provide for the payment of all costs. All the Senator is doing is building a case for greater medical provision. I say that the proposal would be an important assault on the element of cost, even though it leaves out some of the big factors in cost.

Mr. CURTIS. The Senator from Nebraska believes that it is the concern of Government to provide not only hospitalization, but also surgery, medicine, office calls, and home calls for those who are unable to provide it for themselves. I think we should be generous in arriving at those benefits. The Senator from Nebraska does not believe that we should inaugurate a program that will not be paid for by the living workers, because the full impact of it will not have been reached in the lifetime of the present workers, but would be paid to a people who are well able to provide it themselves. That is why I have been trying all afternoon to find out at what point the distinguished Senator from Wyoming believes that a person of the age 65 should no longer be the concern of government? Would an income of $5,000, $6,000, $7,000, $8,000 or $9,000 indicate that point? After all, the costs would all be paid from taxes.

Mr. McGEE. I have tried to explain to the Senator from Nebraska again and again that it is an imponderable in terms of the relative impact of an unexpected, unplanned sickness cost on the income of a person over the age of 65. Studies that have been made suggest that the great majority of such persons have an income under $3,000 a year; $3,000 a year for a couple is not an adequate income to provide the kind of medical expenses that we are discussing. When the Senator refers to a couple over 65 whose income is $8,000, $9,000, or $10,000 a year, I remind him that that group is less than 3 percent of the age group we are talking about. We are addressing ourselves to the great majority of them. How many times must we go over and over the generalization about the capability of a person receiving an income under $3,000 a year to meet the known medical costs that are going to descend on his age group—if not on him personally, on his next door neighbor?

Mr. CURTIS. I fear the distinguished Senator did not understand my question. The question was not what percentage of the aged could pay for their own hospital insurance. My question was at what point of income the distinguished Senator from Wyoming thinks that they should be able to do so?

Mr. McGEE. I have suggested again and again to the Senator that it is a relative subject. We know that from the age of 65 on income drops very sharply. Most people in that age group are receiving less than $3,000; and, as I have said to the Senator previously, $3,000 is not enough.

Mr. CURTIS. Three thousand dollars is not enough?

Mr. McGEE. That is not an absolute figure. Again it is a relative cost; $10,000 would not be enough for some. It depends on the nature of the illness in relation to one's income.

Mr. CURTIS. The Senator recognizes social security taxes as taxes, does he not?

Mr. McGEE. I did not hear the Senator.

Mr. CURTIS. The social security payments that an employee, and employer, or a self-employed person makes are taxes, are they not?

Mr. McGEE. They are a form of taxes. But they are set aside in a fund.

Mr. CURTIS. An individual who works must pay those taxes from his first dollar of income. Is that not correct? There is no personal exemption.

Mr. McGEE. The Senator is correct.

Mr. CURTIS. So it is the most severe type of taxation there is. The Senator is advocating a system——

Mr. McGEE. Is the Senator now shifting the field of his questions from where we were a moment ago? Is the Senator now speaking about the form of taxation covered by the measure?

Mr. CURTIS. Yes.

Mr. McGEE. The Senator is opposing a social security type of taxation as the most vicious form of taxation there is?

Mr. CURTIS. A taxation that allows no personal exemption is about as tough as any I can think of.

Mr. McGEE. Is the Senator suggesting then, that we should modify the social security tax?

Mr. CURTIS. No. I am suggesting that we should not continue to add to it. We have a social security tax. No personal exemption is provided. At some future time I hope the personal exemption in the income tax law can be raised. The social security tax is one on which the worker pays from the very first dollar he earns. We would increase that tax to bring in a system to supply a need that is moving in the direction of being met. I think the distinguished Senator from Wyoming himself said a moment ago that half the people over 65 have some health insurance. That is a great deal more than the number who had it a few years ago. The prediction is that more people will have it.

I wonder what the Senator has to support the need for such a program at this time.

Mr. McGEE. The first thing that is compelling is that half of the people in most cases do not have sufficient coverage. The 50 percent is a very misleading statistic. The compelling reason is the element of need. I say to the Senator that this kind of investment is quite different from direct taxation, in that the contributor, the fellow with a job, who contributes one-quarter of 1 percent to the social security tax for health insurance in his later years is contributing to his own benefit in the predictable years ahead. It is different from some other forms or types of taxation. A sales tax is probably much more severe than a social security tax. This is, in effect, a forced saving for the individual

to cover the exigencies of his retiring years.

Mr. CURTIS. Are the beneficiaries at the present time getting back the forced savings that they have made?

Mr. McGEE. I am sorry I did not hear the full question of the Senator.

Mr. CURTIS. Are the present beneficiaries under social security merely getting a return of the forced savings that they have had to make?

Mr. McGEE. They are if they have retired and are getting $89 a month. This is a compulsory system.

Mr. CURTIS. Are benefits limited to that figure?

Mr. McGEE. There are many tangent programs, as the Senator knows, that try to approach particular extenuating situations.

Mr. CURTIS. I am talking about the social security benefits that people are now receiving. Are they getting a return on what they have been forced to save?

Mr. McGEE. It varies with the age of the individual, and how long he has been in the system.

Mr. CURTIS. Is it true for any beneficiary at this time?

Mr. McGEE. It would be theoretically true for one who had put in the equivalent amount if he were to draw it out by the time he died. It could be assumed that he had gotten, then, equivalent benefits.

Mr. CURTIS. I am speaking of someone 65 years of age who retires on July 1, 1962. He has been covered in the program for the maximum taxable and creditable earnings for every year since the program began, in 1937. Such a person would have a primary benefit of $123 a month. If he has a wife of exactly the same age, her benefit would be $61.50 as long as he was living, and $101.50 after his death. These figures assume that the individual had the maximum covered earnings of $4,800 in the first 6 months of 1962. On the basis of the U.S. White Life tables for 1949–51, which are the latest available official complete mortality tables, a man and his wife can expect to receive, on the average, about $32,600 in monthly benefits. The total amount of the employee taxes that this individual paid were $1,584. This is a part of a statement signed by Robert J. Myers, chief actuary of the social security system.

Consider the case of someone who has paid since 1937, to this date. He would have paid $5,184. He has benefits, on the average, of over $32,000.

The social security system is a system of social benefits which are paid not by the recipient, but by taxing the people who work, taxing the self-employed, and taxing employers. They will not catch up during the generation of the workers who are now over 21.

Therefore, we are discussing a program the full impact of which will not fall on the present workers, but on future workers.

I thank the Senator.

Mr. McGEE. I thank the Senator for his comments. I remind the Senator from Nebraska that the existing social security fund has been under repeated, continual reexamination, and that the fund continues to be actuarily sound. It is the strong feeling of economists that the proposed fund with respect to medical care will likewise be actuarily sound because of the interplay of a great many forces. Rather than take any more time—and I see the majority leader approaching apparently to ask me how soon we expect to conclude—I suggest that the remainder of my remarks be included in the RECORD. I had some extended statements prepared in addressing myself to the question of why private insurance cannot do the whole job.

I ask unanimous consent that these statements may be placed in the RECORD at this point.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MCGEE, OF WYOMING

The proposal now before this body, to provide funds for medical care for the aged through social security, has generated one of the most active and acrimonious debates across the Nation that has occurerd in many years. Unfortunateiy, these debates have generated considerably more heat than light. Too often we find that those entering the debate have obtained their mental exercise by jumping to conclusions. Therefore, I would like to discuss a few of the more obvious misconceptions which have obscured the real issues in the hope that we may then get to the real issue—whether or not we can devise an adequate plan to help our older citizens obtain adequate medical care.

Misconception No. 1: Most of America's 17 million seniors do not need help with their medical bills.

This is obviously a view alien to that of the majority. While it is true that much health care is provided free to those who need care for which they cannot pay, public assistance agencies, private charitable organizations, and many physicians provide free services only to the extent that they can with the limited funds available. The sad fact is that many older citizens who are sorely in need of medical care do not get it because they are too proud to ask for charity. Those who do receive paid care from public and private assistance agencies do so only after the humiliating experience of proving they are in want. And consider that people over 65 suffer twice as freqeuntly from chronic sickness as those under 65—even excluding those who are in institutions. They spend 2½ times as many days restricted to their beds—they are forced to limit their activities due to illness six times as often. Medical costs and health needs of the aged are greater today than those of other age groups in the population, their incomes often are too low for them to purchase private health insurance. The primary social security benefit (on which most retirees must rely exclusively) averages only $73 a month. The maximum benefit for a retired couple, which only a small proportion of beneficiaries receive, is but $180 a month. Out of these small sums must come rent, food, clothing, and other necessary expenses. There is no margin for huge medical expenses brought on by a stay in the hospital.

Opponents to this bill answer this with the suggestion that the aged should therefore look to their children or relatives for help. Families do, in fact, often provide such help. Too often, however, this burden is borne at the expense of the education and the well-being of the children and grandchildren of the elderly ill. This unfortunate fact brings a heavy cost in family harmony and in the future opportunities of the children involved; and, in many instances, the relatives themselves are totally unable to meet the heavy costs involved.

Misconception No. 2: That the Kerr-Mills bill offers adequate medical benefits.

But the Kerr-Mills law clearly spells out that each State "will furnish medical assistance to aged individuals as far as practicable under the conditions in such State." Under this law, the medical services available to eligible applicants are directly proportional to the ability of each State to purchase these services. Wealthier States like New York and Massachusetts offer more medical services than do poorer States. In no State are unlimited services available to the medically indigent aged. This bill, backed by most doctors, is proving a sad failure in most of the States that have adopted it, even in the richer and more progressive States. My home State of Wyoming, which will have an estimated aged population of 29,000 by January 1965, has not yet seen fit to adopt this law.

In short, Kerr-Mills requires a degrading poverty test; it covers only so-called charity cases; it guarantees no free choice of doctors or hospital; its program has not been adopted by most of the States; and—most important to those of us who are economically minded—it provides a drain on the Federal Treasury with no provision to balance that drain with new revenue.

Misconception No. 3: That the social security approach to financing care for the ill and aged under the King-Anderson bill would be a step toward socialism and government control of medicine.

This is, perhaps, the most ridiculous of the arguments against medicare. Nothing could be further from the truth. The improved King-Anderson bill clearly and forcefully spells out:

"There shall be no Federal controls over or intervention in the free practice of medicine."

Socialism exists when the doctors are salaried by the Government, when the hospitals are run by the Government, and when the Government controls the personnel and facilities. The proposed program would not provide a single medical service but would only help people finance the cost of their health care—and there are even alternatives to this in the compromise bill. It would in no way control, regulate, or interfere with the practice of medicine.

The patient also is free to choose his own doctor, who, in turn is free to work in the hospital of which he is a staff member. The bill further guarantees to hospitals the freedom of choice to participate in the President's proposed health care program or not.

If enacted into law, it will operate like Blue Cross with the doctors and hospitals free to disburse their services as they have done in the past. The only point of difference is the method of financing the costs of those services rendered. Instead of the individual or private insurance paying all, the social insurance trust fund will cover all or part of the allowable costs.

This health insurance is a reasonable and important part of income protection in retirement. Without such benefits the social security program cannot adequately provide basic security for the aged. This is the only way to remove the threat to the financial independence of older people posed by the high cost of illness.

Misconception No. 4: That this program would cost too much.

Under the social security insurance, under which the individual contributed during the working years when he can best afford the contributions, payments are spread out over a working lifetime and the cost to the individual is reduced to pennies a day. The program would be financed by contributions from both workers and their employers without imposing a burden on general revenues. In fact, reduction in expenditures which would otherwise be necessary by the

States and Federal Government under public assistance would partially offset the cost of the new program. The cost to the Federal budget would be nil whereas under the present law the cost was $280 million in fiscal year 1961. In fiscal year 1963 it will be an estimated $412 million.

Admittedly, the social security tax will be increased by one-fourth of 1 percent and the self-employed, covered by social security, will pay an additional three-eighths of 1 percent. In dollars and cents, this one-fourth of 1 percent amounts to about $12.50 per employee per year, or $1.04 a month, or 26 cents a week—less than the price of a pack of cigarettes—and undoubtedly healthier.

Misconception No. 5: That there would be an overutilization of services.

The plan provides at least three safeguards against overutilization. First, there are the attending physicians that must certify, and at certain times recertify, that services are required for medical treatment or diagnosis.

The second safeguard is provided by the institution itself, which would review admissions, duration of stay, and services furnished.

The third safety measure is built into the program in the types of services covered and in the requirements for deductibles. Since protection is provided against the costs of outpatient diagnostic, skilled nursing home, and home health services, there will be no financial incentive to unnecessarily use higher cost services when the lower cost services will suffice. The deductibles might also tend to reduce unnecessary utilization of hospital services.

Aging is a phenomenon both personal and public, both evident and elusive. Time passes: as an experience within, as a dimension without. New forces and new problems make disturbing patterns in the latter years. The stereotypes are only too familiar: the rocking chair, the empty hands, the illnesses of age, the unwanted look, the passive posture. Are these the only meaning of being old? Too long have these misconceptions persisted. These cobwebs have ensnared the struggling elderly, thus denying them their rightful place in the sun. Realities, if not ignored by those who do not want to admit hard truths, can bring security and peace of mind to those elderly who now face fear and deprivation as an unwelcome reward for their many years of toil.

Up to the present time, nearly all programs in behalf of the aging in the United States are the product of the welfare mood and of uncritical adoption of untested projects. The proposed administration bill for aid to the aged medically indigent is not only not welfare but has been tested through long and favorable experience. The time has come for Congress to provide the insight and the law to help both the younger and an older society to act with wisdom about age.

So far the debate on this proposal, now before us, has degenerated into a picayunish business which is smothering it under a landslide of verblage—and at a time when it desperately needs fresh air. At present there is the very real danger that this headless chase will end in a monster bill embodying just those aspects of the problem we wish to avoid.

We must not allow this comprehensive piece of legislation to be pecked to death. Rather, we must get off our petty and sometimes partisan political stumps, and provide for the urgent need of the elderly ill by passing this constructive and essential King-Anderson medical care bill, as improved, with all deliberate speed.

Private Insurance Cannot Do the Whole Job

(By Senator McGee, of Wyoming)

The proposals recommended by President Kennedy for health insurance benefits for the aged under social security have been opposed on the ground that private health insurance should and can do an adequate job in providing health insurance for older people. It is not surprising that people argue this way. In the postwar years, health insurance coverage figures have soared, both in terms of the number of people covered and in terms of the amount of benefits provided. Hospital insurance, which in 1945 covered only a quarter of the population, now covers about 70 percent. The proportion of people with some insurance against surgical costs has increased from 10 percent to nearly 70 percent. Over 45 percent of the population has insurance against the costs of other services by physicians in the hospital, as compared with only about 4 percent in 1945.

While commercial health insurance had its beginnings in the late 19th century, the commercials played a secondary role until the end of World War II. Since then the commercials have won a larger and larger share of the health insurance market, and in 1951 the commercials passed Blue Cross in enrollment. Today membership in commercial health insurance exceeds Blue Cross membership by more than 20 million.

But there is one major gap in this picture of increasing coverage. Health insurance for the retired aged is inadequate both in the number of people who are covered and in the amount of protection afforded those who are covered.

The national health survey, a comprehensive survey sponsored by the Public Health Service, found that in the first half of 1959, 46 percent of those 65 and over had some form of health insurance. As for the retired aged—those who did not usually work in the survey year—only 42 percent had any kind of health insurance.

In many instances, the protection aged persons have against hospital costs is inadequate. For example, the special guaranteed-renewable policies offered to senior citizens in normal health by a number of insurance companies typically provide room-and-board payments of $10 a day for 30 to 60 days, up to $50 or $100 for extra hospital expenses and surgical expenses up to $200 or $300. Such policies provide relatively little protection against the costs of hospital care, which may average $30 a day or more. Also, they often have lifetime limitations on total benefits. And these policies will become increasingly inadequate as hospital and medical costs continue to rise. In general, policies available to people in poor health have prohibitively high premiums or inadequate benefits, cancellable features, exclusions of preexisting conditions for the first 6 months or more (and sometimes forever, which may make the policy almost worthless to the insured), or a combination of such restrictions. And of course, very few older people have insurance against such health care costs as surgical and other physician's fees and the cost of drugs.

Why are the retired aged not able to protect themselves adequately through health insurance? It is a simple matter of economics. People over 65 have health costs that are twice as high as those of younger people, while their incomes are only half as high. The median annual income of an aged couple is only about $2,500, and the average aged person living alone has about $1,100. Furthermore, the retired aged are generally not in groups that can be insured, but instead must buy insurance on an individual basis, if at all. This form of coverage is, of course, quite expensive, sometimes costing twice as much as group coverage offering the same protection.

Not only is coverage now inadequate, but it tends to be concentrated in the higher-income group and among the better risks. The National Health Survey found that while more than half the population aged 65 or over had no health insurance, for older people in families with income of $2,000 or less (which include 40 percent of all older people) 67 percent had no health insurance. Among people aged 75 and over, 68 percent had no such insurance. Among the aged in poor health—people with chronic conditions who are unable to carry on their usual major activity—70 percent had no hospital insurance.

In considering the rate of future expansion in health insurance, the fact must be faced that any significant extension of adequate health insurance protection in the older age groups will necessarily involve people with lower incomes, those in the higher age brackets, those who are no longer working, those in ill health—in short, the very people who represent the poorest risk from a health insurance standpoint and who are least able to pay for protection.

Two special techniques have been developed to make it easier for high-risk, low-income groups to obtain adequate health insurance protection, but neither seems likely to succeed in this objective. The first technique is the so-called community-rating approach. This approach dates back to the beginning of the Blue Cross movement—to the early 1930's—and has been a basic tenet of the Blue Cross philosophy of public service to the community as a whole. Originally, the objective of Blue Cross was to offer one policy at one cost for all enrollees in the community. This community rating approach was intended to pass on part of the costs of insuring high-cost subscribers—including the aged—to the younger working group.

Since the entrance of the insurance companies into the health insurance field in the 1940's, the future of community rating has become clouded, and many observers believe that it is in a state of decline. The competitive nature of commercial insurance has inevitably led to following the opposite principle—that of experience rating, which results in a lower price for the good risks and a higher price for insurance for the aged.

In the competition between the Blues and the commercials, the commercial carriers have increasingly been able to attract the large low-cost groups. Conversely, the higher cost groups find the Blue Cross rates more attractive. Blue Cross premiums are thus driven higher; and as they are driven higher, good risks find the Blues less attractive. Under the circumstances, it is understandable that Blue Cross plans have found it increasingly necessary to compromise their community-rating principle.

Under the other technique for handling the problem of the high-risk, low-income group, the retired person's previous employer pays part or all of the health insurance premiums in retirement. Under this sort of arrangement, the retired employee ordinarily retains all or part of the group health insurance coverage he had while he was working. From the employee's standpoint, there are many advantages to this sort of an arrangement: In addition to having the advantage of the employer contribution, he benefits from the economics inherent in group coverage and from the fact that the level of benefit protection provided by group insurance is characteristically high.

Good as this approach is, it is clear that it can never reach the majority of workers. The worker's right to remain in his company's health insurance plan after retirement is usually tied to his eligibility for a pension. At present, less than 10 percent of the aged are drawing private company pensions, and only a small portion—about a quarter—of these are eligible for health insurance under the company plan. The number of pensioners will grow in the future—about 40 percent of the wage and salary workers are now covered—and thus undoubtedly more aged will have health insurance protection under group plans. However, it is necessary to consider that many workers covered by plans will never collect pensions; in many instances 20 or 30 years of work for one company, and even employment right up to the time of retirement, is required. Even allowing for an increase in pension plan coverage and health insurance protection under these plans, it is doubtful if, under the most optimistic assumptions, over 20 or 25 percent of the future retired aged will have health insurance protection under group plans. And those who will be protected under group insurance will be the very same sort of people who now have protection on their own.

A third method should perhaps be mentioned. There are for sale by a few companies individual policies providing paid-up protection at retirement. Such a policy guarantees that a specified set of health insurance benefits, payable, of course, in dollars rather than in services, will be available to the policyholder after he reaches a specified age. The great advantage of this sort of an arrangement is that the cost of post-retirement health insurance protection can be paid for while the individual is working and can better afford the premiums.

A paid-up indemnity plan, however, is of very uncertain value. After a lifetime of premium payments, the best indemnity plan for paid-up health insurance could become worthless if health care costs have increased substantially between the date of issue and age 65. For example, a policy written to meet 1940 health care costs would be almost worthless today. On the other hand, private insurance can hardly be expected to underwrite the cost of service benefits to be delivered 30 or 40 years in the future. Moreover, this type of policy has little promise as a timely solution to the problems of the aged, for the paid-up policies by definition cannot become effective for many years. Consumer interest and sales have not been impressive.

It is no wonder, then, that many students of the problem have come to the conclusion expressed by Dr. Basil C. MacLean, formerly president of the Blue Cross Association, in these words:

"A lifetime's experience has led me at last to conclude that the costs of care of the aged cannot be met, unaided, by the mechanisms of insurance or prepayment as they exist today. The aged simply cannot afford to buy from any of these the scope of care that is required, nor do the stern competitive realities permit any carrier, whether nonprofit or commercial, to provide benefits which are adequate at a price which is feasible for any but a small proportion of the aged."

If the problem cannot be solved by private insurance, why is it that the social insurance approach is effective? The social security program now provides protection for practically all working people and their families. More than 9 out of 10 people who work are covered under the program and already 85 percent of the people now becoming 65 are eligible for retirement benefits; this percentage will rise in the future to 95 percent or more. In the course of a year some 73 million earners contribute to the program; 86 million have contributed long enough to be fully insured. Coverage, then, is nearly universal.

People qualify for benefits under social security by working, and while they are working they pay toward the cost of those benefits. Thus the payments for health insurance protection under social security are made while the person can best afford it, rather than out of his reduced income in retirement.

Social security benefits are paid regardless of income from savings, pensions, investments, and the like, so that the worker is encouraged to supplement the basic protection afforded by his social insurance benefit with whatever additional protection he can afford to buy. The social insurance approach to meeting need is thus a major social invention, largely eliminating the old fear that meeting need will injure incentives to work and save.

The use of the payroll tax to finance the program has the effect of automatically increasing income to the program as earnings rise. The increase in income permits benefits to be adjusted somewhat in accordance with current levels of living and current prices. This is a particularly important point in providing a service benefit under conditions of rising costs.

It is these characteristics of social security that make it the most practical approach to making health insurance generally available to the aged.

Admittedly, the President's proposal is designed to meet only the most pressing health care needs of the aged. But as under the present program of old-age and survivors insurance benefits, people can be expected to build on the basic health insurance protection. At least some of the money the aged now spend to meet hospital costs, through insurance and otherwise, could be used to purchase insurance against the costs of the services of physicians and dentists, drugs, and the other health services and supplies not covered under the proposal. Also, many aged people who now go without any health insurance protection because they cannot afford to safeguard themselves against the financial catastrophe of a serious illness would also obtain supplemental coverage from private sources once real security becomes possible. Certainly, with basic protection furnished under the Government program a larger number of private companies will be encouraged to carry supplemental protection for their retired employees.

The President's proposal, then, is that Government and private insurance play complementary roles in meeting the need. The role of Government in the health insurance area, just as it is in the area of retirement income, would be to provide a guarantee of basic protection for the aged through the Nation's social insurance system. The role of private insurance would be to build supplementary protection on this base. Neither can do an adequate job alone, but in partnership the result can be a new level of security for our people in their retirement years.

Mr. McGEE. I close by again reminding Senators that no proponent of the pending measure is proposing socialized medicine or wants anything to do with socialized medicine. We want only to meet the financing of medical costs of our senior citizens, particularly of the great majority of them who find it impossible to meet such costs with their own resources. That is the nub of the proposal.

It is mistake, and it is a disservice to the country, to drag in the strawmen that have been set up and then try to knock them down, or to beat dead horses in this arena. Instead, we ought to address ourselves to the medical costs. In my judgment, the bill does exactly that. Therefore, I vigorously urge the adoption of the Anderson amendments by the Senate.

Mr. MANSFIELD. Mr. President, first I wish to say to the distinguished Senator from Wyoming that I was not approaching him to ask him to cease and desist. I was learning a great deal from what he was saying this afternoon. As a former professor of history at the University of Wyoming, he has much to offer the Senate. Personally I wish to express my thanks to him for the information which he has so generously given those of us who have been in attendance in the Senate this afternoon.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, on behalf of the distinguished minority leader and myself, I submit a unanimous-consent agreement and ask that it be read.

The PRESIDING OFFICER. The unanimous-consent agreement will be stated.

The Chief Clerk read as follows:

Ordered, That beginning Wednesday, July 11, 1962 after the morning hour during the further consideration on H.R. 10606, the public assistance and welfare bill, debate on any amendment, motion, or appeal, except a motion to lay on the table, shall be limited to 1 hour, to be equally divided and controlled by the mover of any such amendment and the majority leader: *Provided,* In the event the majority leader is in favor of such amendment the time in opposition thereto shall be controlled by the minority leader: *Provided further,* That there shall be 4 hours of debate to be equally divided on the substitute of the Senator from Massachusetts [Mr. SALTONSTALL], and there shall be 4 hours of debate to be equally divided on the substitute of the Senator from Connecticut [Mr. BUSH]: *Provided further,* the Senate shall proceed to vote on a motion to table the Anderson amendment at 3 p.m., Tuesday, July 17. If the motion to table the Anderson amendemnt should fail, there shall be a time limitation of 4 hours debate on the Anderson amendment. All time shall be equally divided as provided at the beginning of this agreement: *Provided further,* there shall be 6 hours of general debate on the bill to be equally divided as previously provided.

Mr. JAVITS. Mr. President, will the Senator from Montana yield for a clarifying question?

Mr. MANSFIELD. I yield.

Mr. JAVITS. It is understood that under the unanimous-consent agreement the 1-hour limitation on amendments may apply as well to amendments to the Anderson amendment, notwithstanding the fact that that is not expressly mentioned in the unanimous-consent agreement?

Mr. DIRKSEN. That is correct.

Mr. CURTIS. Would the 1-hour limitation on amendments apply to all amendments?

Mr. MANSFIELD. To all amendments.

Mr. CURTIS. Including amendments hereafter submitted?

Mr. MANSFIELD. Yes.

Mr. KEATING. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. KEATING. Has the junior Senator from Minnesota [Mr. McCARTHY] been consulted with regard to the amendment which he and other Senators may propose to the welfare bill, other than to the medical care portion?

Mr. MANSFIELD. Such amendments are in order; and the amendment or amendments of the Senator from Minnesota could be brought up. I feel certain that the proposed unanimous-consent agreement would be satisfactory to him, although I have not asked him.

Mr. KEATING. It might require some discussion.

Mr. MANSFIELD. The leadership was being as generous as possible, taking into consideration the needs of individual Senators.

Mr. KEATING. I do not make any point about it.

Mr. GOLDWATER. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. GOLDWATER. As I understand the unanimous-consent request, the Senate will vote at 3 p.m. on Tuesday, July 17, on the question of recommitting the Anderson amendment.

Mr. DIRKSEN. On the question of tabling the Anderson amendment.

Mr. MANSFIELD. That is correct.

Mr. GOLDWATER. Following that, there would be 4 hours of debate on the Anderson amendment. Would that preclude the submission of any other amendments prior to the 4 hours of debate on the Anderson amendment?

Mr. MANSFIELD. To the best of my knowledge, it would not.

Mr. GOLDWATER. Would the Senator definitely say "No"?

Mr. MANSFIELD. I would say definitely no.

Mr. HRUSKA. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. HRUSKA. The question was whether the submission of amendments could be made prior to that time. Could they be made after that time?

Mr. MANSFIELD. Yes.

Mr. HRUSKA. At any time?

Mr. MANSFIELD. At any time.

Mr. HRUSKA. Any amendments offered either before or after that time would be subject to 1 hour's debate?

Mr. MANSFIELD. That is correct.

Mr. DIRKSEN. Incidentally, the germaneness clause is not included in this request.

Mr. AIKEN. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. AIKEN. I listened to the question as to whether other amendments would be in order. If the Anderson amendment should be tabled, amendments would not be in order.

Mr. DIRKSEN. Not to the Anderson amendment.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request?

Mr. KERR. Mr. President, as I understand under the proposed unanimous-consent agreement, although amendments to the Anderson amendment may be pending, at 3 p.m. on Tuesday, July 17, a vote will take place on a motion to table the Anderson amendment.

Mr. MANSFIELD. The Senator is correct.

Mr. HRUSKA. Would that vote be on a motion to table the Anderson amendment as amended at that time?

Mr. MANSFIELD. Yes; it would be on a motion to table the Anderson amendment as completed at that time.

Mr. HRUSKA. Namely, at 3 p.m. on Tuesday, July 17—a week from tomorrow?

Mr. MANSFIELD. A week from tomorrow.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request? The Chair hears none, and the agreement is entered.

LEGISLATIVE PROGRAM

Mr. MANSFIELD. Mr. President, I thank the distinguished minority leader and his colleagues for their consideration. I thank the distinguished Senator from Oklahoma [Mr. KERR], the distinguished Senator from New Mexico [Mr. ANDERSON], and all other Senators for their cooperation in bringing about an agreement which is as near to a settlement as could be reached at this time.

The agreement does not mean that between now and Tuesday, July 17, the Senate will be considering only the welfare proposal, H.R. 10606. It is anticipated that at convenient times other measures on the calendar will be brought before the Senate for consideration.

For the information of the Senator from Oklahoma [Mr. KERR] and the Senator from Wisconsin [Mr. PROXMIRE], and with the concurrence of the distinguished minority leader, I announce that tomorrow, at an appropriate time, it is proposed to have the Senate consider Calendar No. 1593, H.R. 11737, to authorize appropriations to the National Aeronautics and Space Administration for research, development, and operation; construction of facilities, and for other purposes.

Mr. DIRKSEN. Mr. President, will the distinguished majority leader yield?

Mr. MANSFIELD. I yield.

Mr. DIRKSEN. Of course it is anticipated that if all the time is not utilized on amendments or substitutes, the majority leader should be in a position in which he can set aside the consideration of that measure and have the Senate resume the consideration of the satellite bill or proceed to the consideration of any other measure, so that the time will be used to advantage. I believe we have a thorough understanding in that connection.

Mr. MANSFIELD. I thank the distinguished Senator from Illinois.

In addition to the National Aeronautics and Space Administration bill, there is also on the Calendar No. 1631, Senate bill 3392, to authorize appropriations for the Atomic Energy Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended; and there is also on the Calendar the appropriation bill for the Department of Health, Education, and Welfare.

Mr. DIRKSEN. Mr. President, will the majority leader yield again to me?

Mr. MANSIFELD. I yield.

Mr. DIRKSEN. I presume there is some quandary regarding the possibility of the taking of votes during the session tomorrow, in view of a certain well-known athletic event which is to transpire in the Capital City. I assume that, other things being equal, there will be no record votes tomorrow to disturb the poise and enjoyment of those who may attend that event.

time he utilizes coming from the time on either side.

The VICE PRESIDENT. The Chair is informed that the unanimous-consent agreement does not go into effect until tomorrow.

Mr. SMATHERS. Very well.

PUBLIC WELFARE AMENDMENTS OF 1962

The VICE PRESIDENT. Is there further morning business? If not, morning business is closed, and the Chair lays before the Senate the unfinished business.

There being no objection, the Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. SMATHERS. Mr. President, in view of the fact that the Senate is now operating under controlled time, I ask unanimous consent that the Senator from Oregon may proceed without the

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

LET'S NOT BE STAMPEDED ON MEDICARE

Mr. BENNETT. Madam President, no bill which Congress will consider this year will have anywhere near the far-reaching effects of the proposal for medical care to the aged through social security. If we abandon the present system, the Kerr-Mills Act, and substitute the Anderson approach, we will be making a permanent and drastic change in the social security program which will affect Americans for generations to come.

I should like to discuss two things today. First is the overall effect of the social security approach. Second is the danger of enacting the Anderson amendment as a result of hasty floor consideration, without giving this highly complex and very controversial amendment the benefit of full committee hearings.

Recently, the Senator from New Mexico [Mr. ANDERSON] told the Senate—and I am quoting now from the CONGRESSIONAL RECORD—that "unless favorable action is taken now, health insurance could become a major issue in the fall elections."

I argue with his selection of the word "could." The fact is, social security financing of health care for the aged is a major issue as of this moment, and it will be an issue in the fall elections regardless of what happens to the distinguished Senator's amendment.

If this were not a major issue, it would not be for lack of trying. On no other subject has the administration demonstrated more forcibly its desire to drive—not lead—the Congress.

For months on end, administration officials have shuttled back and forth across the United States, lobbying social security medicine at the taxpayers' expense. Pamphlets have been published on the subject by the Department of Health, Education, and Welfare. Cabinet officials have journeyed throughout the Nation in order to speak at rallies organized to campaign for the King-Anderson bill.

Within the White House itself a special unit of government employees was set up to thump the tubs for the King-Anderson proposal—through television and radio scripts, the drafting of advertisements, and the production of press releases. President Kennedy himself addressed the Nation in support of this legislation from Madison Square Garden.

To this concerted effort must be added the relentless pressure of labor organized campaigns throughout the country, the steady pounding of the labor press and radio stations, the stimulation of letters to Congress, the employment of labor leaders as speakers before King-Anderson rallies, and so on.

PRESSURE ON CONGRESS

All of this campaigning had one purpose: to impress Congress with the political rewards or penalties involved in dealing with this legislation.

Yet, did a groundswell of national support for King-Anderson develop?

I am convinced that it did not, despite the calculated oversimplification, hard sell, distortion, and sometimes untruth developed in this massive, public relations campaign. What groundswell developed was, in my view, largely snythetic. I base that appraisal on the mail I have received from my constituents and from the reports I have had from other Senators.

Letters to Congress more often oppose the King-Anderson concept than they support it. Further, when Members of Congress have polled their districts on the subject of using the social security mechanism to provide health care for the aged, their findings have borne out my statement.

Some 52 polls had been reported in the CONGRESSIONAL RECORD up to and including June 23 of this year. Of these, which included more than 600,000 replies, 33 polls opposed the use of the social security mechanism and 19 favored it.

Breaking this down, 334,339 individuals opposed the use of the social security mechanism; 241,383 favored it; and the remaining 39,502 had no opinion. Stated in percentages, the tabulation shows 54.4 percent opposed: 39.2 percent in favor; and 6.4 percent with no opinion.

Excluding those with no opinion, the percentage in opposition to the use of the social security mechanism would be 58 percent, with those in favor 42 percent.

Madam President, I ask unanimous consent to insert the tabulation of these polls at this point in the RECORD.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

The following report of public opinion concerning the use of the social security mechanism to provide health care to the aged is based on polls conducted by Members of Congress in their districts and reported in the CONGRESSIONAL RECORD during the 87th Congress, up to and including June 23, 1962. Where the Congressman has reported 2 polls concerning this question, the latest poll has been used. Where the poll has not reported the number of responses received, the information was elicited from the Congressman's office.

Of the 52[1] polls, which included 615,284 responses, in this tabulation, 33 opposed the

[1] Two polls reported in the CONGRESSIONAL RECORD are not included in this tabulation.

The question posed by Mr. MCDONOUGH, Republican, of the 15th District of California, is such that the support or opposition to the use of the social security mechanism cannot be determined. However, Mr. MCDONOUGH interpreted the results as being in opposition.

The question posed by Mr. AVERY, Republican of the first District of Kansas, concerned the financing of medical care by 3 mutually exclusive mechanisms. The largest single vote (44 percent) opposed any Federal participation in health care for the aged.

use of the social security mechanism and 19 favored it—334,399 individuals opposed the use of the social security mechanism, 241,383 favored it, and the remaining 39,502 had no opinion. Stated in percentages, the tabulation showed 54.4 percent opposed the use of the social security mechanism, 39.2 percent favored it, and 6.4 percent had no opinion.

If those with no opinion are excluded, the percentage in opposition to the use of the social security mechanism would be 58 percent. The percentage of those favoring would be 42 percent.

While the results of these polls are in dispute with the recent Gallup poll, they tend to confirm that poll's finding of a reduction in the number of people supporting the President's plan. Of the 10 Congressmen reporting polls in 1961 and 1962, the 1962 poll shows an increase in opposition to the use of the social security mechanism in 8 districts.

Public opinion on the use of the social security mechanism to finance health care for the aged as tabulated from congressional polls during the 87th Cong.

Mr. BENNETT. Also, Madam President, I ask unanimous consent to insert the latest Gallup poll entitled "Medicare Support Drops," taken from the Chicago Sun-Times, July 1, 1962.

There being no objection, the poll was ordered to be printed in the RECORD, as follows:

KENNEDY MEDICARE SUPPORT DROPS

(By George Gallup, director, American Institute of Public Opinion)

PRINCETON, N.J.—In the heated fight over medical care for the aged, the last few months have seen a dropoff in public support for the administration's proposed social security financing of such health benefits.

Since March, an increased number of voters have swung over to the belief that such aid for the Nation's older citizens could be better handled privately—through Blue Cross or other forms of voluntary health insurance.

The latest Gallup poll indicates that supporters of the public approach still outnumber those who prefer private financing. But the Nation is much more evenly divided on the issue than it was 3 months ago.

To measure the net impact of the rival efforts made recently by administration forces and by groups like the American Medical Association, Gallup poll reporters repeated a question first asked in March:

"Two different plans are being discussed in Washington for meeting hospital costs for older persons:

"One plan would let each individual decide whether to join Blue Cross or buy some form of voluntary health insurance.

"The other plan would cover persons on social security and would be paid by increasing the social security tax deducted from pay checks.

"Which of these two plans would you prefer?"

In March of this year, a majority backed the social security approach as follows:

	Percent
Social security	55
Private insurance	34
Undecided	11

Today the vote divides as follows:

Social security	48
Private insurance	41
Undecided	11

Further analysis reveals the administration's proposed public financing plan has lost support among both Republicans and Democrats, as well as among independent voters.

Mr. BENNETT. I am not suggesting, Madam President, that the Senate should allow polls to weigh very heavily in its deliberations on any legislative proposal. I am citing those polls taken by Members of Congress and printed in the CONGRESSIONAL RECORD only to show that the bandwagon psychology of the administration has not worked. And the longer this widespread public discussion lasts, the more the administration position loses adherents. The reason for this is simple: The facts of the matter are beginning to shine through the artificially created fog of emotion generated by the administration and its allies from the hierarchy of labor.

REASON FOR BYPASSING COMMITTEES

Why, then, are we urged to rush the Anderson amendment into law? Be-

cause this variety of social security legislation is rapidly losing public support and has never attracted congressional support from those who have studied it. And why has this effort been made to circumvent the Senate Finance Committee to prejudge the findings of the House Ways and Means Committee, to usurp the right of the House of Representatives to initiate all tax legislation? Because the supporters of the administration position know that reason, based on facts, would inevitably prevail if the proper procedures for legislating were followed.

Mr. Maurice H. Stans, former Director of the Budget and a highly respected public official, wrote a very pertinent column on the health care for the aged controversy. It is worth reading at this point.

MAURICE STANS ARTICLE

Under the headline "Our Changing Economy—Emotionalism Fogs Medical Care Issue," Mr. Stans wrote in a syndicated column appearing in the Times-Mirror of Los Angeles in late January 1962, and I ask unanimous consent that it may be inserted at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR CHANGING ECONOMY—EMOTIONALISM FOGS MEDICAL CARE ISSUE

(By Maurice H. Stans)

President Kennedy has repeated his request to the Congress to write a new law putting medical care for the aged under social security. It is likely to be one of the hottest and least understood issues in the current session.

Ever since medical care for the aged became a political issue early in 1960, it has generated an atomic lot of heat and a minimum of reality. Even today many people wrongly seem to believe the issue is medical care or no medical care. This is the result of another case of undue emotionalism in Washington—a surge of sympathy misdirected toward an excess of government.

There are no facts or figures, of course, a to how many people there are over 65 who need and want medical or hospital care and don't get it. Whatever their number, no one in this enlightened country wants anyone to suffer from that lack. The problem has been, and is, how to find the most sensible way to see that they don't.

We do know some facts. There are nearly 17 million people over 65. A large proportion of them are not medically indigent. Those over 65 account for 9 percent of our total population, and, despite the retirement majority, they still receive 8 percent of all personal incomes.

More than half of those over 65 have coverage under some form of health insurance, and the number is increasing rapidly. Millions more are safeguarded by their own wealth, the resources of their families, and services of local welfare and church agencies. Other millions are assured of present or future benefits by their rights and privileges under veterans' benefit programs. The number without adequate health protection is proportionately small. It will grow even smaller as those now under 65 and holding an even greater degree of coverage of their medical needs move into the over-65 bracket with retirement protection.

KERR-MILLS BILL

Under these conditions, the White House and Secretary Flemming in 1960 developed a plan that would fill the medical gap, whatever it might turn out to be. Under it, the provision of medical and hospital services to all those in need of assistance would be left to local communities. The State would advance the cost, and Washington would pick up 50 to 80 percent of the bill, variable according to the wealth of the States.

Depending on the scope of the benefits covered and the estimates of numbers of beneficiaries, the Federal Government's share would be something over $200 million in the first year of the program and about $400 to $500 million in later years. And it was accepted that under a widespread program like this, these costs would include a fairly substantial amount which would not represent new protection but merely a transfer of responsibility from existing sources to the State and Federal Governments.

With some changes, the Flemming plan was enacted as the Kerr-Mills bill in the 1960 session of the Congress. It is now in operation in 26 States and a dozen others are moving toward it. Unfortunately, the continued agitation for a more expansive plan under social security has slowed up action in some States. But there is no evidence that the present program is inadequate.

NO TEST OF NEED APPLIED

The social security proposal is entirely different in a fundamental way. It applies no test of need and gives everyone over 65, regardless of wealth, income, or other means, the vested right to submit medical and hospital bills to Washington to be paid. The cost would be paid by another increase in social security taxes, already scheduled to rise to 9¼ percent by 1968, to be shared equally by working people of all ages and their employees. The total annual cost of this plan has been estimated to be from $1.5 to $2.5 billion at the start and rising in later years to $5 billion or more.

I have never been able to understand why the social security way would make sense, or why any workingman would support it. It would multiply the tax collections and payments for medical care eightfold, tenfold, only to provide added funds to give to those who didn't need them.

It would, in other words, set up a program that benefited 8 or 10 people for every 1 that needed help. To cite an extreme, it would cover payments to the Fords, Rockefellers, Morgans, Harrimans, and other wealthy individuals over 65. It would mean that working men and women would dig up taxes to cover such expenses for Maurice Stans when he reaches 65 and for millions of others who ought to meet their own bills. It would double the social security bureaucracy, which now has 32,000 employees and a vast forest of electronic machines.

THREE MILLION UNPROTECTED

Despite this, it would fail to protect 3 or 4 million people over 65 who are not eligible for social security. And the program, I feel sure, would not stop at age 65. Let's not deceive ourselves. Within a year or so after it were operative, the drive would begin to lower the age qualification, especially since the taxes would be paid by younger employees, and the pressure could continue until everyone was covered. And certainly the administrators of the funds would have to fix limits and standards on the kind of medical care and hospital services that would qualify.

By degrees we would move into a socialization of medical and hospital practices. I can understand why the medical profession does not want this, and, with the ever-increasing cost experience of Britain and other countries as evidence, we should beware of it here.

Putting medical care for the aged under a mandatory social security program would be the beginning of the largest single step we could take toward government paternalism and the centralized state. If we want to preserve our personal pride, our sense of character and responsibility, our freedom of choice and decentralized government, we ought to oppose this to the fullest. And no one will suffer, because the machinery already in law will take care of everyone who needs help at a lot less cost to the taxpayer.

Mr. BENNETT. I concur with Mr. Stans—the machinery is already in law to take care of everyone who needs help at a lot less cost to the taxpayer. I was privileged to vote, with a majority of the Senate, in favor of the Kerr-Mills law; and it was similarly my privilege to work side by side with the distinguished senior Senator from Oklahoma within the Finance Committee where the Kerr amendment was shaped and written.

Why should not the Kerr-Mills law be given a chance to work?

Let us put aside controversy for the moment and identify one general area of agreement.

Both sides of the aisle have recognized the need to help our older people finance the costs of their health care, and have moved to meet that need.

We may be at odds on method. We are not at odds on the need to act effectively and wisely.

We are not here to create campaign issues but to discuss workable solutions to a human problem. It is my conviction that such workable solutions have already been found through voluntary health insurance, assistance programs, the contributions of individual citizens, and the Kerr-Mills law itself.

To cast these aside without fair trial is to act rashly.

SUMMARY OF KERR-MILLS LAW

Let me summarize the main provisions of the Kerr-Mills law. It made three basic changes in the existing old-age assistance program, which is covered by title I of the Social Security Act. These changes were made in order to encourage the individual States to improve and extend medical services for the aged.

The effect of the Kerr-Mills law was threefold:

First. It increased Federal funds to the States in order to provide medical services for the 2,400,000 older persons covered under the old-age assistance program.

Second. It provided Federal grants-in-aid to States for payment of part or all of the medical services required by aged persons with low income.

Third. It instructed the Secretary of Health, Education, and Welfare to develop guides, or recommend standards, for the use of States in evaluating and improving their programs of medical services for the aged.

In its previous form, title I of the Social Security Act provided Federal funds to the States for medical services to those of the aged determined to be in need by the individual States. In turn, the States gave those needy older people cash to pay for the medical services they required, or made payments to those who supplied the medical care—that is, the physicians, the hospitals, and the nurses.

Such programs varied widely, State by State, under the old law.

The Kerr-Mills law changed this by increasing the extent of Federal participation, thus giving strong encourage-

ment to the States to extend comprehensive medical services covered under the old-age assistance program.

The Kerr-Mills law further provided Federal grants to the States for payment of all or part of the cost of medical services required by those older persons with low incomes.

Participation in this Federal-State program is optional with the States, and each State may determine the extent and character of its own program, including standards of eligibility and range of benefits.

While the Federal Government made funds available to the States for the medical care of those on old-age assistance, prior to passage of the Kerr-Mills law, it limited Federal participation to a stated statutory proportion of average assistance expenditures. The maximum allowed under the old law was $65 per person per month.

The Kerr-Mills law as amended made additional Federal funds available to the States of up to $15 per month in addition to the existing $65 maximum.

The Federal share of the program ranges from 50 to 80 percent, depending on the per capita income of the State, when the State's monthly average payment is over $65. When the State's average monthly payment is under that figure, the Federal share is set at 65 to 80 percent.

The effect of amending title 1 was to make it clear that the States could extend their existing programs to cover the medically needy. The States were not only given the incentive to establish such programs where they did not then exist, but to extend programs inadequate in coverage and increase the scope of benefits they were then providing.

Finally, the Kerr-Mills law provided that the State standard for determining the need for medical assistance could be broadened substantially under the terms of the law and need not be the same standard as that for determining need for assistance payments.

Here, then, was the structure for helping every aged person in need of help, whether on old-age assistance, on social security, or on neither. So long as a need for medical care existed, the State could move to meet that need within a flexible, adaptable plan.

KERR-MILLS PROVIDED INCENTIVES TO STATES

It goes without saying that the Kerr-Mills law offered great incentive to a number of States with an acute problem of needed medical care for the aged. Prior to its passage, those States with less than the national per capita income had experienced great difficulty in getting such programs underway. But under the new law, it became possible for a low-income State to inaugurate a medical care program for its older people on the financing basis of $1 of State money to $4 of Federal money.

The question arises, How successful has the Kerr-Mills law been thus far?

In less than 2 years, the Kerr-Mills law has made astonishing strides. To the best of my knowledge, it is being implemented as fast as, if not faster than, any previous Federal-State matching program ever devised.

The following have initiated medical care under old-age assistance since Kerr-Mills became law:

Alabama, Alaska, Arizona, Georgia, Kentucky, Mississippi, South Dakota, Texas, Guam, and Puerto Rico. Delaware is also initiating such care, but has not yet set an effective date for the program to begin.

Medical care programs that were already in existence have been expanded in Arkansas, California, Connecticut, Florida, Hawaii, Idaho, Indiana, Iowa, Louisiana, Maine, Maryland, Michigan, Missouri, Nevada, New Mexico, North Carolina, Ohio, Oklahoma, Pennsylvania, Tennessee, my own State of Utah, Vermont, Virginia, Washington, West Virginia, Wisconsin, the District of Columbia, and the Virgin Islands.

Programs have been adopted for the medically indigent under the medical assistance to the aged facet of the program and are now operating in Alabama, Arkansas, California, Connecticut, Hawaii, Idaho, Illinois, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, New Hampshire, New York, North Dakota, Oklahoma, Oregon, Pennsylvania, South Carolina, Tennessee, my own State of Utah, Washington, West Virginia, Guam, Puerto Rico, and the Virgin Islands. Vermont's medical assistance to the aged program is expected to be in operation this month. Georgia and Iowa enacted programs in 1961 but have not yet acquired the funds to put those programs in operation.

FORTY-SIX STATES PARTICIPATE

Summing up, 46 States, territories, possessions, and the District of Columbia have now taken advantage of one or both facets of the Kerr-Mills law. Arizona and Delaware, which have now initiated old-age assistance medical care programs, already had excellent assistance programs at the local level which included medical care, so they will build upon a solid base.

I submit, Madam President, that this is not the record of failure. Indeed, it is a record of solid accomplishment.

Essentially, the medical assistance to the aged program is similar to other public assistance programs, but there are several important differences. All public assistance programs have, as their main purpose, the provision of help to a specific group to the degree that such a group needs help. Programs of this sort are administered by the individual States, with Federal financial participation being based on per capita income; and eligibility standards and the amount of help to be given are left to the States themselves.

The major difference between medical assistance to the aged and other public assistance programs is that medical assistance to the aged was set up to provide Federal funds only for medical and ancillary services. The other differences are minor, but worth noting: the provisions prohibiting a set length of residence in the State for eligibility; the provision that residents temporarily absent from the State be taken care of; the requirement that all counties within the State implement the program; and the requirement that both institutional and noninstitutional care be included in the State plan.

Yet potentially, depending upon the degree to which the States use it, the Kerr-Mills medical assistance to the aged program provides a mechanism for financing whatever health services are needed for any person over 65 years of age who cannot pay for them himself.

PLAN IS FLEXIBLE

Most important, the plan is flexible enough to strike a balance between the individual's medical needs and his ability to pay for care—and still not waste tax moneys on the one hand, or destroy the individual's ability to support himself after his treatment has been completed on the other.

As of the moment, some States have set up programs providing a comprehensive range of health services and elastic standards of eligibility under which the cost of services required is weighed against individual income. Other States have comprehensive services but more rigid eligibility requirements. Several States provide relatively few types of services but have set their eligibility regulations more broadly. And there are some States, admittedly, in which eligibility requirements are set stringently and services are likewise limited.

Thus, despite the record of success compiled by Kerr-Mills during its brief period of operation, the program has still not reached its potential. That does not mean, Madam President, that this potential cannot, or will not be achieved—given a little more time, and a little more encouragement.

The latter, let me point out, has been notably lacking.

Let me go further: Concerted efforts have been made to sabotage the program's success.

SABOTAGE OF KERR-MILLS

Ever since Congress passed the Kerr-Mills law, it has been disparaged by the very people who seek to force social security medicine down our throats. They have called medical assistance to the aged a program to pauperize the aged when its purpose and effect have been to prevent pauperization; they have said medical assistance to the aged was unwieldy administratively, while pointing with pride to the bureaucratic nightmare that social security medicine would become; and they have referred to medical assistance to the aged as a pork barrel while rolling out the succession of barrels that would accompany passage of King-Anderson type legislation.

I ask the Senators to consider the degree of success Kerr-Mills would now enjoy if the Department of Health, Education, and Welfare had devoted as much time and energy to its support as the Department has devoted to downgrading the program and hawking the administration-backed substitute?

If I have heard the statement once, I have heard it a hundred times: "The States don't have enough money to match the Federal funds granted under Kerr-Mills."

From this, it must logically follow—or so these people suggest—that the Federal Government can provide the only

solution through use of the social security mechanism.

I shall discuss the Anderson amendment in detail a little later, Madam President. For now I would simply like to point out that this amendment does not cover either mental hospitals or tuberculosis hospitals, which constitute the greater part of any State's hospital expenditures and which are supported by tax dollars raised within the State. So much for the plight of the States as the proponents of this legislation seek to alleviate it.

The question arises of why the administration has applied the brakes instead of the accelerator in getting Kerr-Mills into high gear? The answer is plain: The more successful the Kerr-Mills law, the more chances diminish of passing a King-Anderson bill in an atmosphere charged with ersatz panic and bogus emotionalism.

In addition to the campaign against Kerr-Mills, we have also been subjected to a barrage of propaganda to the effect that medical assistance for the aged would be outmoded by passage of some old age and survivors disability insurance oriented program like the Anderson amendment. And make no mistake about it, the propagandists warned, passage was inevitable—just a matter of time.

Is it any wonder that many States were reluctant to devote State funds to a program which seemed doomed to be superseded? Can the States be blamed for listening to Federal officials who presumably knew what they were talking about?

STATES PROCEED DELIBERATELY

Of course some of the States dragged their feet.

While I do not have the specific information, I understand that authorities in the State of Vermont adopted the Kerr-Mills program and turned the administration of the program over to a State official, saying to him, "From now until the time the legislature again meets, you are personally and solely responsible. You can decide what the benefits will be. You can decide what the qualifications can be. You are free to change your program from day to day or from week to week." That procedure was adopted on the theory that by so doing, when the legislature did meet again, they would have had sufficient experience to write a successful bill.

Other States moved cautiously out of laudable fiscal restraint. Still others regulated their pace to the speed with which information could be gathered on a number of unknown quantities. How many of the aged needed help? What sort of help did they need? It is no wonder that State legislatures, especially those inexperienced in the area of statewide vendor payment medical care programs, proceeded deliberately.

And yet, despite all of these factors, the Kerr-Mills law has moved ahead faster than did the medical vendor plan during a comparable period following its enactment in 1950.

I submit, Madam President, that in view of the pressures against the rapid implementation of the Kerr-Mills law, its success has not only been astonishing but demonstrative of the program's strength.

To those who attack the law because of its alleged administrative shortcomings, I would reply that it is impossible to attack the administrative mechanism at the Federal level without also damning all other Federal grant-in-aid programs. To attack the administrative mechanism at the State level—which was done, by the way, long before many of the States had even decided on what administrative plan they would adopt—is equally ridiculous. This program is no more difficult to administer than any other statewide aid program. I will go further: With all of the flexibility allowed the States under this law, administration should be simpler than that of other public assistance programs.

Can the States afford to implement Kerr-Mills? No, say the proponents of the Anderson amendment. But the States can afford social security medicine. To this spurious argument I can only reply with the old-fashioned observation that all the money spent by the Federal and State governments comes from the same place—the pocket of that harassed, put-upon, ofttimes forgotten man, the taxpayer.

PAUPER'S OATH ARGUMENT NOT VALID

I should like to comment on what may be the most nonsensical argument used against the Kerr-Mills law and in support of the social security approach. It is the argument against the means test—the "pauper's oath," as it is sometimes called. The "pauper's oath"—always surrounded by quotation marks, whether spoken or written—is "degrading" and carries a "stigma."

These are words of high semantic intensity, chosen carefully to obscure meaning and cause the adrenalin to flow. No one wants to be pauperized, degraded, or stigmatized, Madam President. Therefore, everyone should be in favor of using old-age and survivors disability insurance as a financial mechanism and consigning the Kerr-Mills law to the nethermost regions, along with child labor and the 60-hour week.

I should like to make it clear to the Senators that I am four-square against degradation, unalterably opposed to the pauper's oath, entirely against the imposition of stigma, and perfectly in favor of the means test.

I see no contradiction in that statement.

The means test came into being as a method whereby the people's taxes could be conserved for use where they were most needed. If, in the process of discharging this fiscal responsibility, some few of the States may have set up means tests which affront the individual's pride, there is nothing in the Kerr-Mills law to prevent those States from revising their procedures for determining eligibility for assistance.

It is not the means test itself which is degrading; it is the manner in which the means test is sometimes applied. We are, after all, dispensing tax-supported aid. We must do so based on a knowledge of the applicant's resources and need—or turn every assistance program into a bonfire fed by tax dollars.

Old-age assistance requires a means test for the needy aged who need money to buy food, clothing, and shelter, and who must have medical care provided for them.

Aid to dependent children, aid to the blind, aid to the permanently and totally disabled—all require means tests.

The Public Housing Administration provides low-rent housing for persons of low income, which involves a means test. Similarly, the Secretary of Agriculture must invoke a means test in determining what farmers can obtain financial assistance in building, improving or repairing their farm dwellings and outbuildings.

The school lunch program involves a means test. Veterans' pensions are based on the veteran's annual income—a means test again. Veterans' widows and children receive compensation on the basis of need—a means test.

There has been no outcry that I have ever heard about the means test required for non-service-connected care in Veterans' Administration hospitals.

And is not a means test involved in reducing or withholding payments under old-age and survivors disability insurance to beneficiaries who earn more than a specified amount each year.

For that matter, does not the King-Anderson bill provide a means test by automatically labeling every person over 65 as a medical indigent?

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

OTHER EXAMPLES AVAILABLE

Mr. BENNETT. Mr. President, I could go on indefinitely with other examples—like the programs to provide astance to old, disabled, or indigent Indians; like our surplus food programs; like our maternal and child health services; like our programs for crippled children; like our National Defense Education Act loan program, under which student loans are granted on the basis of need.

I believe, however, that I have made my point: in government or in private life, we help those who need our help—and neither give nor force our tax or philanthropic dollars on those who are not in need of them.

There is another reason why I favor the Kerr-Mills law and find it sound.

The funds for this program are derived from general revenue, to which the entire taxpaying population contrlbutes according to its ability to pay. Contrast this with the payroll tax called for under the Anderson amendment and similar proposals. Under such a social security taxing mechanism, according to the Department of Health, Education, and Welfare, some 40 percent of the national income would make no contribution to the fund.

In other words, the burden would fall heaviest upon those taxpayers earning $5,200 or less a year; and a man earning $5,200 a year would pay the same tax as a man earning $52,000 a year. To compound that inequity, the health services provided in the amendment would be furnished to the elderly with no consideration given to their ability to pay for them. Millions of older people can pay the costs of their health care and are doing so now in a wide variety of ways. Why, then, should younger workers assume this unneeded burden? Why should young families, during the period of maximum expense when there are mortgages to meet, children to clothe and feed, insurance to keep up, college educations to be financed, savings to be

accumulated, assume the expense of health care for millions of older people who do not want it and have not asked for it?

THE PRESENT SOCIAL SECURITY DILEMMA

Mr. President, the social security program already faces some very serious problems, resulting from the built-in imbalance in the system. U.S. News & World Report for July 2, 1962, had an excellent article pointing out some of the inequities of the present system and some of the fiscal problems facing the social security system.

As pointed out in this article, the social security commitment for today's workers is $624 billion. The fund now has only $22 billion. Taxes paid in by present workers and their employers will total an estimated $282 billion. This leaves a gap of $320 billion which must come from somewhere; and the only place it can come from is the social security taxes paid by the children and granchildren of present-day workers.

In other words, social security is a real bargain for those who are receiving benefits today; but in a few years every worker will be paying in much more than he can expect to get out, in order to pay for the benefits being paid out today.

If that is not the case, we will go on stretching the burden further and further into future generations. This situation is a result of the unwillingness of Congress to keep the social security program fiscally sound. Congress has been too willing to buy votes by making changes in social security benefits which just were not financially feasible.

We must not compound the mistakes of the past by making similar mistakes today. Those who say that participation in the social security medical care program will establish a right based upon the money the participant has paid in are misleading the public. The benefits will bear no more relationship to participation than is the case with the present system, and we will be saddling our future generations with a terrible burden, one which may threaten the destruction of the social security system itself.

It is unthinkable that Congress would approve so unsound a program when a far more equitable system—the Kerr-Mills law—already is in existence.

Mr. President, because the U.S. News & World Report article is so significant, I ask unanimous consent that it be printed at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. BENNETT. Mr. President, we in Utah have had MAA since our State legislature passed the public assistance act of 1961. Our State department of public welfare initiated the program nearly a year ago to the day—on July 1, 1961.

The legislation passed in Utah allowed the department of public welfare to exercise its discretion in establishing rules and regulations pertaining to eligibility and the expenditure of funds in accordance with the Federal program.

Rather than to leap blindly into a new plan with which we had no previous experience, we in Utah launched our MAA program on a relatively modest basis. Benefits were limited to physicians' and hospital services, and eligibility was restricted to State residents over 65 with limited resources.

How limited could those resources be?

We set the net value of liquid assets at $1,000 or less for a single applicant, or $2,000 for a couple or family. We set the net value of other personal or real property at $10,000 or less, not including a home owned and occupied, or a necessary automobile. We set the amount of net income at $110 a month for single applicants and $170 a month for married couples.

It was further provided that the recipient would have to pay the first $20 per quarter or 90-day benefit period for any physician's services, and the first $50 for inpatient hospital admission. The department then undertook to pay all amounts in excess of these deductible factors.

In other words, Utah designed its program to take care of major medical or catastrophic medical expenses.

Now all of this sounds like a very modest start. But as experience was developed with the program, we broadened our benefits.

By December 1, 1961, the public welfare commission had authorized the payment of nursing home care under MAA, and the payment of drug bills up to $15 a month for individuals in nursing homes.

By April 1, 1962, we had eliminated the $20 deductible for physicians' services.

And as time went on, we also discovered that our administrative costs were running far less than anticipated. MAA is now 1 year old in Utah.

Let me now read to the Senate, with considerable pride, this recent report of further progress. It appeared in the Deseret News of June 1.

STATE PLANS TO TRIPLE AID TO AGED—MEDICAL PROGRAM TO EASE ELIGIBILITY, BOOST OUTLAY

(By Clarence Barker)

The joint State-Federal program of providing medical assistance to the aged (MAA) in Utah will be accelerated by approximately three times its present cost, beginning July 1.

Ward C. Holbrook, State welfare commission chairman, announced Friday that the payments, after that date, will be liberalized and eligibility requirements will be lowered.

The MAA program is intended primarily to aid persons over 65 years of age who are unable to qualify for old-age assistance (OAA) because of their incomes, but who are still unable to pay for adequate medical service.

AMA ENDORSEMENT

The program is endorsed by the American Medical Association and other groups.

Utah is one of 27 States which enacted legislation to implement the Federal program.

"Although the Utah program has been in operation since last July, relatively few of our estimated 65,000 persons over 65 have taken advantage of it," Mr. Holbrook said.

During the 10 months, which ended April 30, only $400,000 in State and Federal funds had been spent on the program.

The liberalized program to begin July 1 will increase costs approximately three times.

TRANSFERRED TO MAA

In recent months, needy aged persons in nursing homes, which are qualified to give medical services, have been transferred from old-age assistance to MAA, thus relieving a stringency in OAA.

Changes in the program will be as follows:

Persons over 65 with monthly incomes of less than $125 per person or $200 per couple may qualify. The previous ceilings were $110 and $170 respectively.

Deductible factors requiring those receiving help to pay the first $20 of doctors' fees and the first $50 of hospital costs will be eliminated. This means that persons qualifying will not have to pay any portion of the costs of doctors' services or hospitalization.

OTHER FUNDS

The welfare department will pay for needed drugs up to a maximum of $15 a month and for dental care and eye care, including purchase of glasses and dentures.

Mr. Holbrook said the 1961 legislature appropriated $1.25 million for MAA which made available $2.3 million Federal matching money, for a total of $3.55 million State and Federal money.

The program as now planned will cost $2.4 million for the 2-year period, ending June 30, 1963.

In other words, Mr. President, there is still opportunity for further liberalization.

I have only one further comment to make on the Utah experience, Mr. President.

MANY STATES MAKE HASTE SLOWLY

It indicates to me that many States are, like Utah, making haste slowly. If our experience is significant, and I suspect it is, the financial need and ill health of the aged have been violently exaggerated. Of the estimated 65,000 persons eligible for help under Utah's MAA program, relatively few have taken advantage of that help. It is my conviction that there can be only one major reason for this: Most of those 65,000 people are self-sustaining until serious illness strikes. When that happens, Utah stands ready to help. But for the great majority of our older people, the need for help arises less often than the Nation has been led to believe by those who support social security health care.

One of the main reasons for this is the increasing ability of private health insurance to cushion the financial shock of illness.

It is a longstanding principle, Mr. President, that government should act only when private resources and initiative have failed to meet a public need. It is therefore germane, at this point, to inquire how well private resources are doing.

The answer is reassuring. As of the middle of last year, 53 percent of all persons 65 and over were protected by some form of voluntary health insurance. I realize that some will immediately respond to this figure by pointing out that 47 percent are therefore without insurance protection—for, while the optimist will say the bottle is half full, the pessimist will say the bottle is half empty.

But the fact that 53 percent of the aged have health insurance has more meaning than this figure alone would suggest. We must think of that figure

in terms of the growth it represents. The truth is that the amount of health insurance owned by the aged is growing at a faster rate than the rate at which the insurance owned by the population as a whole is growing. This can readily be appreciated when it is remembered that only 26 percent of persons 65 or over had health insurance of any kind in March of 1952. By contrast, 59 percent of persons of all ages were covered as of 1952, while 74 percent, or more than 135 million people, were covered as of the end of 1961.

This means, then, that while coverage for the number of persons of all ages rose 15 percent from 1952 to 1961, coverage for our aged citizens showed an amazing jump of more than 50 percent. And while the percentage figure has doubled, the number of persons covered has tripled—from 3 to 9 millions.

Furthermore, some 25 to 30 percent of the aged are not in the market for health insurance because their health care is provided through old-age assistance programs that predate the Kerr-Mills bill. We can therefore conclude—with considerable safety—that 70 percent of the aged who want voluntary and Government health insurance now have it.

PERCENTAGE WITH INSURANCE INCREASING

We can also conclude that this percentage will increase in the years ahead. The Health Insurance Institute of America estimates that by the end of 1965, 80 percent of the aged needing and wanting protection will be insured. The figure is expected to climb up to 90 percent by 1970.

Why, then, is it sensible to adopt such permanent methods as the Anderson amendment to a problem which is temporary in nature? Again, I must reply that the unseemly haste with which we are urged to pass such legislation—lest it become an issue in the fall election, to quote the distinguished junior Senator from New Mexico—is because if this measure is not passed soon, any justification for its consideration will evaporate before its proponents' eyes.

The extent of the growth of voluntary insurance and its availability to the aged at a reasonable cost are borne out by a recent publication of the Health Insurance Institute, entitled "Guaranteed Lifetime Health Insurance: For Persons Over 65; For Persons Under 65."

This report shows that more than 80 insurance companies are now providing a total of 157 health insurance plans and policies for persons in or near retirement.

RECENT DEVELOPMENTS

Furthermore, Mr. President, some of the recent developments in the health insurance field are well worth noting:

First. There are now mass enrollment programs under which guaranteed renewable coverage is offered to anyone 65 or over, regardless of his present or past condition of health. Almost a million aged persons have enrolled in these programs within the past 3 years.

Second. Many companies are now offering guaranteed renewable policies to those over age 65, with benefits as high as $10,000 and coverage for in and out of hospital expenses—including the costs of physicians, drugs, and private-duty nurses.

Third. Those now retired are eligible to enroll in group plans. An example of this is the group plan issued to the American Association of Retired Persons.

Fourth. The Connecticut age 65 plan breaks new ground. It is issued by a group of insurance companies under special State legislation actively supported by the companies involved. Two coverages are available, the higher providing $10,000 maximum major medical benefits. Enrollment is open to all, regardless of past or present health status. It is significant that other States have passed, or are now considering, bills of a similar nature.

Fifth. Increasingly, group health insurance plans are being written or broadened to continue coverage after retirement. Often the employer pays part or all of the cost of the retiree's benefits under these group programs.

Sixth. A nationwide Blue Shield program of surgical and medical care benefits has been developed for all persons over age 65, at an estimated cost of about $3 a month a person.

The important thing is that voluntary health insurance is contributing solutions to the problem of cushioning our aged population against the financial shocks of health care. The health insurance industry is a dynamic, creative partner of the Federal and State Governments; and it is developing the answers within the free-enterprise system.

A byproduct of the great strides being made by the insurance industry is, perhaps, even more important in terms of the future. I am speaking, Mr. President, of the ever-increasing number of Ameircans who will own adequate health policies when they move into the retirement years.

HEALTH INSURANCE PROGRESS

To give the Senate an idea of how vast the Nation's progress in the health insurance field is, I ask unanimous consent to have printed in the RECORD at this point an article from the Health Insurance News of June 1962.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MORE THAN 135 MILLION PERSONS HAVE HEALTH INSURANCE; BENEFIT PAYMENTS TOPPED $6.3 BILLION IN 1961

More than 135 million Americans—74 percent of the civilian population—had some form of health insurance at the end of 1961, the Health Insurance Council said today in reporting on its 16th annual survey of the extent of voluntary health insurance coverage in the United States. The survey is based on reports from insurance companies, Blue Cross-Blue Shield, and other health care plans.

The council said both the number of persons covered, and the amount of benefits paid by health insurance reached new highs last year. Coverage increased 3.1 million during 1961 to reach a total of 135,042,000.

Benefit payments by all health insuring organizations to help cover the cost of hospital, surgical and medical care amounted in 1961 to more than $5.4 billion, up $600 million over 1960, said the council. In addition, persons with loss-of-income policies received $855 million in benefits from insurance companies to replace income lost through disability.

Thus, a grand total of $6,329 million in health insurance benefits were distributed during 1961, up 11.3 percent over 1960, said the council.

The HIC, a federation of eight insurance associations, said that based on early trends for 1962 it estimated that as of June 1, 1962, some 136 million persons had hospital expense insurance, 126 million had surgical expense insurance, 94 million had regular medical expense insurance, 36 million had major medical expense insurance, and 43.5 million were insured against loss of income, or had some other formal sick leave pay arrangement.

The council said these figures also revealed the breadth of health insurance protection which Americans have. The organization said that as of June 1, 93 percent of persons with health insurance had both hospital and surgical expense insurance, and 69 percent had hospital, surgical and regular medical expense insurance, the last of which helps pay for doctor visits for nonsurgical care. Five years ago, the figures were, respectively, 88 and 58 percent, said the council.

COVERAGE DETAILS

A breakdown of the number of persons with health insurance at the end of 1961, by type of coverage and type of insuring organization, is as follows:

Hospital expense insurance was provided by insurance companies to 81,369,000 persons; by Blue Cross-Blue Shield and similar groups to 58,797,000, and by other health care plans to 5,675,000. After deducting persons protected by more than one type of insuring organization, the council reported that 135,042,000 persons had hospital insurance, a 2.3 percent increase over the 131,962,000 persons so covered at the end of 1960.

Surgical expense insurance by insurance companies covered 78,861,000 persons; by Blue Cross-Blue Shield and similar groups 50,120,000, and by others 6,803,000. Allowing for duplication, 125,297,000 persons had surgical insurance, a 3.5 percent boost over the 121,045,000 persons of 1960.

Regular medical expense insurance accounted for 46,190,000 persons through Blue Cross-Blue Shield and similar groups; 44,399,000 through insurance company programs, and 7,007,000 through other plans for a total, eliminating duplications, of 92,633,000 persons, a 5.8-percent climb over the 87,541,000 persons in 1960.

Major medical expense insurance coverage through insurance company programs increased 24.4 percent, from 27,448,000 to 34,138,000 persons. Major medical insurance is designed to help absorb the cost of serious illnesses, and pays benefits up to $10,000, $15,000, or more for all areas of care prescribed by a physician.

Loss of income found 32,055,000 persons covered by insurance company policies. The number of persons who work where there are formal sick leave arrangements brought the total figure to 43,055,000 persons, said the council.

Mr. BENNETT. So much for health insurance, a vital part of the answer to the problem of how our aged population can, does, and will meet its health care costs.

Let us not forget, in our feverish haste to pass radical, enduring, expansive legislation before the fall elections, that a number of well-established welfare programs, both public and private, exist throughout the United States. It would be totally unrealistic to ignore these programs designed to help the aged, and others in need, to obtain health and medical care.

I shall not go into detail on these programs, with which most Senators are no doubt familiar. Perhaps it is enough to say that they constitute a basic resource for the needy aged, and that the individual taxpayer is already contributing to them at the community and State level.

At this point I should like to interpolate that we must remember there are innumerable local institutional programs operated by churches, fraternal organizations, and others, that make their contribution to the solution of this problem.

I ask Senators to consider, however, whether a Federal medical care program of the sort we must now consider would not cut across and conflict with these existing programs, leading to waste, inefficiency, and confusion, and perhaps the abandonment of many programs which are now working satisfactorily and successfully.

Communities have always been responsible for their members. These local and State programs are the natural outcome of that assumption of responsibility, and recognize an individual's right to call upon his neighbors in time of need for the help he requires.

What will happen to these locally administered, flexible plans under a Federal program of the sort proposed by this administration? Can they be replaced by a master blueprint of health services, drafted in Washington and run from Washington, for the aged throughout the entire Nation?

Here again is a virtue of our present law. Under Kerr-Mills, Federal assistance to the States in meeting the problem is a valuable supplement to existing aid programs—not a means of short-circuiting them and blowing out the fuses.

OUR PRESENT MEDICAL CARE SYSTEM

At this stage, Mr. President, let us pause for a moment to consider the Nation's present system of health and medical care, for it is surely the world's most unique.

It is unique because it operates in almost total freedom of Government controls.

This is not to say that government at all levels, from the local to the Federal, does not perform many essential functions. Government does, and has, for many years. But the Nation's complex of governmental medical programs reinforces rather than replaces our free system. It has been so designed. Not yet have we produced governmental straitjackets to constrain the practice of medicine. By way of contrast, government exercises varying degrees of stringent control over the provision and financing of health care in most every other nation of the world. Further, these controls are not restricted to programs which care for the indigent, but cover entire populations regardless of their need.

Yet, we in the United States remain an exception.

There are two schools of thought about this phenomenon.

One concludes that the absence of governmental controls in medical care is proof in itself that our Nation lags behind the others.

A second school of thought argues that we in the United States are wise to stay away from any sort of governmental programs developed abroad.

I am a stanch believer in this second school of thought. I feel that the tangible results of our unique free system speak for themselves.

In the United States, our health professions never cease their constant search for better methods of treatment, for more effective and powerful drugs, for more efficient techniques to use in the treatment of illness.

WORLD'S BEST MEDICAL SCHOOLS

I point, Mr. President, to our medical schools, which are recognized the world over as the best in existence. No longer do we send our young men and women abroad to study medicine. We teach them here, in what are recognized by authorities as the greatest medical schools extant. This is borne out by the increasing number of medical students from abroad who journey thousands of miles to study in the United States.

Who matches us in research? Who matches us in the development of new operating techniques? Who matches our health plants?

Clearly, we stand alone and unrivaled in the field of medical care.

Yet this is not good enough for some Americans. At the very moment when American medicine is acknowledged to be the world's best, these myopic people suggest that we try out the very systems under which one foreign nation after another slipped from a position of medical leadership.

THE BRITISH EXPERIENCE

It seems very much to the point, Mr. President, that we observe the lessons learned abroad and apply them to our lawmaking at home. Forget the relative merits or demerits of socialism for the moment, and let us view the British experience pragmatically; for it is recent, and, it seems to me, pertinent.

The British Labour Party has published a booklet entitled, "Members One of Another," which is subtitled "Labour's Policy for Health." On page 2 of that booklet, the following words appear:

> But in 8 years of Conservative rule, performance has not matched early promise.
>
> Nearly half a million people are waiting for hospital beds.
>
> Too many doctors' surgeries are still grim and gloomy.
>
> Too many hospitals are still out-of-date and make-shift.
>
> The mental hospitals are overcrowded and dilapidated, and, despite gallant efforts of those in charge, are quite unsuitable for modern psychiatric care.
>
> The committees and staff of the service have been frustrated by endless administrative delays, and inevitably enthusiasm has been dimmed.

I ask my colleagues to look around in their own communities and in the Nation's Capital to see if this description of hospital and medical services applies in the United States as it does in Great Britain. At this point I cannot resist the temptation to refer to a family experience. About 7 years ago my son was in Scotland and discovered that it was necessary to have an abdominal operation. He went to the British Medical Service, as he was required to do, and was told that, since he was not about to die, they could not get him into the hospital for that operation for at least 6 months. By that time no one knows what would have happened. I am afraid his American father telephoned him and said, "Find a doctor in a private practice who will operate on you as soon as possible, because obviously that is what you need."

I do not know how many people are in the same situation now that he was in at that time—forced to wait 6 months for an operation which in this country would be considered serious enough for immediate action.

I ask Senators to remember that this is the Labour Party itself speaking about its own, dearly beloved creation, the National Health Service.

It seems that all is not well with socialized medicine if this dreary little vignette is accurate—and who would know better than the British Labour Party?

Let me refer the Senate now to another British spokesman, D. S. Lees, Ph. D., senior lecturer in economics at the University College of North Staffordshire, and an expert on the British social services. Speaking before the Institute of Economic Affairs in London last October, Professor Lees had a number of pertinent observations to make on the British National Health Service.

The good doctor's comments are too long for me to read at this point, and I ask unanimous consent that they may be inserted in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

HEALTH THROUGH CHOICE

In Britain, as in other Western societies, individual freedom of choice is a prime social value. High priority is given to the right of individuals to spend (and save) their own incomes in their own way. This philosophy of freedom requires that governments should provide, through the compulsory payment of taxes, only those goods and services that cannot be provided through voluntary exchange in the market. The classic examples are defense and justice. Further, it is generally accepted that competitive markets result in a more efficient solution than collective provision by government: consumer preferences are more closely satisfied and the cost is lower. Governments have a continuing role to play in keeping markets free from restriction. If they do this, freedom and efficiency can go hand in hand.

The British National Health Service is in conflict with both principles. Under it, medical care is provided by the Government, virtually free of direct charge, with taxes meeting over 90 percent of the cost. The private medical sector is too small to generate effective competition nor, as for most other commodities, is there competition from substitutes or from international trade. The NHS is thus a monopoly of a unique kind, operating without a market and without competition. This is a measure of the revolutionary change that took place in 1948. The sensitive link between consumer demand and the supply of medical care was broken. Competition was eliminated. Dispersion of power was transformed into extreme cen-

tralization. The self-adjusting forces of the market were replaced by the single, overriding decision of the Minister of Health.

The NHS is also a monopoly buyer of the services of doctors and dentists, few of whom can earn adequate incomes in private practice. Before 1948, the bulk of medical incomes were determined by supply and demand in the market; since 1948, they have been determined by Ministerial decree. Incomes are settled by periodic bargaining between the Minister and the professional associations and here the Minister has an enormous advantage because the vast majority of doctors and dentists must sell their services to the NHS, or not at all, and this, coupled with the refusal of the medical professions to use strike action, gives the Minister dictatorial power.

The same kind of power extends to the manufacturers of prescription drugs, all of whose domestic sales go to the NHS. Here again, the Minister holds most of the cards.

This circle of governmental control is closed by the medical schools. These are attached to universities and are outside the NHS but the fact that universities rely for three-quarters of their income on public funds gives the Government close control over the intake of medical students and thus over the future supply of doctors and dentists.

Thus under the National Health Service, it is the Government and the Government alone which decides how much medical care there shall be; which fixes the incomes of the medical profession; which sets the prices and profits of drug firms, and which determines the future supply of medical skills.

We are surely right on general grounds to suspect this extraordinary concentration of power. All would be well if governments always made the right decisions. If that were so, the collectivist viewpoint would be irresistible. But there is no such assurance and the mistakes of government are larger and more important in their consequences than those of private groups. In the British medical system, there is no dispersion of decisionmaking power to prevent small mistakes becoming large catastrophies. The equilibrating forces of the market are missing. Nor is there competition to provide built-in guarantees against inefficiency or to stimulate sources of innovation and/or improvement. And while the consumer of medical care has a wide freedom of choice among the supplies allowed by the Government, consumers as a whole are not free to choose to have a larger total supply in the future, should they so desire.

It is a remarkable fact that the National Health Service had entered its second decade before it was subjected to an analysis in the light of these basic principles. Until then, it was assumed and frequently asserted, that the British system was the finest in the world and thought uncritically that the National Health Service was the only sensible way to arrange health affairs. One reason for this was a misconception of the state of British medical services in 1939—a misconception which the study by Profession and Mrs. Jewkes, "The Genesis of the British National Health Service," has gone far to redress.

Another reason was the paternalistic assertion that, if people were left to their own devices, they would not purchase as much medical care as they ought to do, i.e.; more medical care would be provided by the State than through the free market. The facts have turned out differently. In the United States and Switzerland, where people have free choice, a larger proportion of income is spent on medical care than in Britain and, further, expenditure has increased more rapidly in those countries over the past 10 years. So, far from the NHS pushing health expenditure up, it has held it down.

Thirdly, there was the notion that, if medical care was bought like other commodities, "the rich" would have an unfair advantage. Here again the evidence (supplied this time by Socialist writers) does not bear this out; it has been found that the middle-classes and not "the poor" gained most from the introduction of the NHS. But even if the notion were correct, it does not justify nationalizing health services and supplying them free. The problem is one of the distribution of income and this can be dealt with by means of taxes and subsidies without any governmental intervention in the medical market. This is by far the most effective line of policy: there would be general agreement that nationalization was irrelevant to the problem.

Allied to this was the demand for the abolition of the "financial barrier" between the patient and medical services so that every individual could have ready access to care irrespective of means. The most seductive appeal of the NHS is that its services are free. In a fundamental sense, they are not free; they are paid for by the alternative use of resources foregone: doctors rather than teachers, hospitals rather than schools, medical equipment rather than motor cars. It is another of the dangers of the NHS that it creates the illusion of getting something for nothing. But, that notwithstanding, the NHS does remove the financial anxiety from the users of medical services.

However, to argue for the collective provision of medical care of these grounds is to commit two elementary errors. In the first place, most financial anxiety could be removed in a free medical market by a combination of private insurance and public grants for those in need.

Secondly, the NHS achieves free health services only at the cost of abolishing the market in medical care and substituting centralized control for it. It is easy enough to eliminate prices; it is far more difficult to ensure an increasing supply of improving medical services, and these are more likely to be achieved by discriminating consumers in a free market than by harassed politicians in Government.

The anxiety in Britain today is not financial—it is about the availability and quality of care. Despite the claim in 1948 that only the vast resources of the State could put the war-scarred hospital system on its feet, only one new hospital has been built and stringent restrictions on capital resources have left the British hospital system the most dilapidated in the Western world. Doctors are now no better off (and some are worse off) than in 1939 and this depression of medical incomes in the context of growing prosperity is causing an increasing number of doctors to emigrate, mainly to the United States and Canada. Governmental refusal to expand the medical schools means that the output of doctors is now little higher than prewar, despite increased population and rising demand for service. An acute shortage of doctors is emerging and this will be intensified by early retirements in the next few years. Over half the junior posts in hospitals are now filled by doctors from Commonwealth countries (mainly India and Pakistan) finishing their training: without them, the hospital system would break down. There is a growing shortage of nurses and midwives. Beds are unused through lack of staff and hospital waiting lists are lengthening rapidly. Casualty departments are in a parlous state.

All this is clear from official reports and statistics. No one is in any doubt that the NHS is in a state of gathering crisis. The disagreement arises over the diagnosis. Many still hold that the NHS is "the finest in the world" and that the troubles now besetting it are incidental and can be corrected by enough will and resource on the part of government. I disagree profoundly with this view. My verdict would be that the crisis stems from the fundamental structure of the NHS itself and that wise policy would dismantle that structure and rebuild a free medical market in its place.

Mr. BENNETT. Mr. President, the closing words of Dr. Lees' statement are particularly sad. Wise policy, he says, would dismantle the present structure and rebuild a free medical market in Great Britain in its place. I fear it is too late, however, and that the damage has been done.

The furry young tiger cub brought home as a household pet has grown into a hungry, 600-pound, full-grown tiger; and he is no longer easy to deal with.

MIGRATION OF BRITISH DOCTORS

Meanwhile, British physicians are leaving by the hundreds to practice abroad—anywhere abroad where the heavy, deadening hand of government weighs less heavily on their shoulders.

With characteristic British understatement, Dr. John Seale, a consultant in medical economics and health services, writes in the British Medical Journal:

The data indicate a mass migration of young British doctors in the last 15 years away from their native land on a scale hitherto unknown. A possible explanation of the phenomenon is that practice in the National Health Service is relatively unattractive to young doctors economically, professionally, and idealistically. The great influx of doctors from India, Pakistan, and other countries to take junior hospital appointments in the National Health Service does not mean that the service has permanent attractions for them. Most come to Britain to enhance their professional standing and then return to their own country—few intend to remain in Britain permanently.

At this point, Mr. President, I can anticipate what many of my distinguished colleagues might say. "What has this got to do with the Anderson amendment?" they might ask. "We are not talking about socializing medicine in the United States. We are simply discussing a modest plan for financing the health care of the aged under social security."

I feel sure my colleagues are in good faith when they say this. Yet, I have seen a number of remarks quoted in various publications which make me uneasy. I read in "New America," the official publication of the Socialist Party-Social Democratic Federation, a statement by R. W. Tucker, chairman of the Socialist Party's committee on medical economics. He was talking about the Forand bill, which was the forerunner of the Anderson amendments. He said:

Once the Forand bill is passed, this Nation will be provided with a mechanism for socialized medicine, capable of indefinite expansion in every direction until it includes the entire population. And it is already evident that there will be massive pressures in favor of such expansion.

Mr. Tucker must be presumed, as a Socialist, to have expert knowledge of what a mechanism for socialized medicine really is.

FOOT-IN-THE-DOOR GOAL

I remember that former Representative Aime Forand said of his bill:

If we can only break through and get our foot inside the door, then we can expand the program after that.

I remember that Walter Reuther, president of the United Automobile Workers, said during hearings before the House Ways and Means Committee:

It is no secret that the UAW is officially on record on backing a program of national health insurance. But even if we were against national health insurance, we would favor passage of the Forand bill.

He went on:

A strong case could be made that this bill should go much further into the range of care provided and the duration of its benefits.

I remember that Ted Silvey, an AFL–CIO lobbyist said, "We will come back for more and more—and more," when asked what his organization would do if the Forand bill were passed.

The Forand bill was not passed, of course. But it was succeeded by a milder version, the King-Anderson bill, and the proponents of the one are still the proponents of the other. We must now consider a variation on the same theme—the Anderson proposal. An innocuous sort of measure, on the face of it.

Or is it? Can this be a younger, more harmless looking tiger cub?

Something over a year ago my friend, the Senator from the great State of Nebraska [Mr. CURTIS] was questioning Wilbur Cohen, the Assistant Secretary of HEW. He asked this question—and I quote from the record of the hearings of the Committee on Finance:

If compulsory health insurance was extended to everybody, the total payroll tax would be up to 19 or 20 percent. If it was a 20-percent rate, the self-employed rate would be 15 percent. With a $9,000 taxable wage base, the maximum tax on the employee and employer would be $900 each, and the maximum tax on a self-employed person would be $1,350, if we do what you advocated today plus what you advocated in 1946.

Do you feel that as much of that man's earnings of $9,000 as a Federal tax source should be devoted to this one single program of social security as is available to help finance all other activities—the functions of the Government, the paying of the national debt, and the defense of our country?

Mr. Cohen replied simply:

Yes, I do, Senator.

I believe this exchange is as thought-provoking as any I have heard in recent years. Mr. Cohen gazes untroubled at the distant vistas. He is not at all appalled at the prospect of a Federal program which would cost more than all other Government functions and expenditures combined, financed by a total tax without any exemptions of 20 percent on all earnings up to $9,000.

I urge Senators to ponder this conversation before they let any legislative proposal get its foot inside the door. Bureaucrats are busy plotting for empires—and they will have them, too, if we allow it. In December 1960, the Department of Health, Education, and Welfare had 64,847 employees. By April of this year, that number had risen to 74,901, for an increase of 10,054 employees in 16 months.

Where do we go from here, Mr. President?

We now face the Anderson amendments. I have read them—twice. I have encountered similar proposed legislation in the Senate Finance Committee and may be presumed, therefore, to have a closer acquaintance with such proposals than some of my colleagues in the Senate. But, I can only remark that the amendment's sponsors were wise in routing it directly to the Senate instead of following orderly procedure. Conceivably, they hope to railroad this proposal past the Senate if they can work quickly enough.

MACHINEGUN IN VIOLIN CASE

But few Senators would vote "yea" on such a measure if they thought their way through it, phrase by phrase, section by section. For what we have here is a machinegun in a violin case, a bomb in a grandfather's clock.

Perhaps some Senator has done more homework than I, and has somehow managed to read this amendment thoroughly enough to understand it. I confess that portions of it baffle me completely. Perhaps some Senators have had time to think through the far-reaching implications of this proposal by now. I confess that I would prefer more time for study. Perhaps some Senators feel that hearings on such a technical and complex measure are a waste of time.

Perhaps it is on the old theory of "My mind is made up; don't confuse me with the facts." They might feel that our proper course is to pass this proposal before it becomes an issue in the fall elections. I wish that we, as Senators, could hear expert opinion from the people it would affect.

I would think the testimony of physicians, hospital administrators, insurance experts, nurses, actuaries, and even taxpayers would be pertinent to our decision. We are, unfortunately, unable to call these witnesses, because time is running out between now and the fall elections.

We must deal with a tax increase, of course. It would amount to 69 percent of the present rate for employers and employees and 68 percent of the present rate for the self-employed in the next 6 years.

A worker earning $4,800 today pays $150 a year in social security taxes. His employer pays the same amount. A self-employed person earning at least $4,800 pays $225.60 a year. The social security tax is already scheduled to rise to $222 each for employee and employer in 1968. To the self-employed person, that will mean a rise on schedule to $331.20, without adding the medical benefits.

By 1968, the combined employer-employee tax will reach 9¼ percent while the tax on the self-employed will rise to 6⅘ percent. Add medical care to these retirement benefits—a mere quarter of 1 percent for employer and employee—and the difference seems trifling. But increase the wage base from $4,800 to $5,200, together with the additional amount required to pay for old-age benefits, and both employer and employee will be paying $253.50 each by 1968, with the self-employed person paying $379.60, compared with the present amounts of $150 for the employer and the employee, and $225.60 for the self-employed.

It hardly seems to me, Mr. President, that a tax increase of these proportions is an unimportant thing—particularly when it is to be used to pay for service benefits instead of cash benefits. That change of approach alone sets a precedent which deserves examination. What happened to the concept of using social security benefits as a floor of protection? Must we now cover our floor with an Oriental carpet?

GROWTH OF SOCIAL SECURITY TAXES

The time is rapidly approaching when many of this Nation's wage earners will be paying a higher social security tax than a Federal income tax. By 1968, under the proposed plan, the total social security tax for a self-employed man who earns $4,000 a year and has three dependents will be $292. The same man would pay only $245 in income taxes at the present rates.

Implicit in the amendments, therefore, is a drastic reorganization of our tax structure, with increasing burdens to be borne by those least able to afford it. For as I pointed out before, some 40 percent of the national income will make no contribution to this financing plan whatsoever, based upon a social security payroll tax. Are Senators prepared to go along with so important a revision in our taxing system without thorough study?

How sound are the actuarial studies on which the Anderson amendments base the tax increase and collections? I do not pretend to know, Mr. President, not having been given time to find out, nor has the Committee on Finance been given time to find out.

I can say, however, that the Forand bill would have cost an identical amount, according to its sponsors, for different benefits.

And I can say that the King-Anderson bill would have cost the same amount, with different benefits.

Does the Anderson amendment tailor its benefits to the amount of the tax increase? Or does it tailor the tax increase to the benefits it will provide? Are the benefits the amendment proposes the proper benefits for our aged population, assuming, for the sake of argument, that they are needed at all? And if these are the proper benefits, in ideal balance in terms of health and expenditure, what is the sponsors' authority of believing so?

Will this single tax increase be sufficient to cover the benefits promised? I remember the King-Anderson bill of last year, which called for an increase of one-half percent on employer and employee and an increase in the tax base from $4,800 to $5,000. Between the time the bill was introduced and the time hearings were held in the House Ways and Means Committee, that tax increase had already gone out of date. Said the Social Security Administration's Chief Actuary, Mr. Robert J. Myers:

We're sorry that tax increase won't quite do it. We'd better raise the tax base another couple of hundred dollars.

There is also the fact that one of HEW's top researchers reported that the HEW cost estimates for the King-Anderson bill were about one-fourth of the probable costs. I am informed that this researcher's speech was canceled and his full report never issued, but that HEW was never able to stop the circulation of an abstract of it.

WHAT WOULD THE BILL COVER?

Thus I feel that we have a right to find out on what basis this tax increase was figured. How did the actuaries determine the cost of hospital care, for instance? Will not the cost of hospital care continue to rise, as all the authorities say it will? The amendment will cover diagnostic tests, but what diagnostic tests is it talking about? Blood tests? Cancer tests? The GI series? The answer to those questions surely affects the cost of this benefit, but the amendment offers no enlightenment.

The amendment provides some sort of insurance option for the beneficiary, but as it is probable that no insurance policy extent embraces precisely the benefit pattern called for, I cannot help wondering whether the insurance option is really an option at all.

Mr. President, I understand that the authors of the amendment are still wrestling with the language of that section, which relates to insurance options, and when the bill actually comes before the Senate the language may be changed. Such changes may be made as the whole amendment was written without the opportunity for committee study.

Certainly I see no mention of the word "premium" in any part of the Anderson amendment. From this I can only conclude that none are involved. I hazard the theory that rather than receiving premium payments for the individuals it insures, the insurance carrier would simply be reimbursed for the amounts it pays to the providers of services for the authorized benefits.

In other words, the carrier would merely be acting as a middleman, or fiscal agent. However, I have been told that the Senator from New York's [Mr. JAVITS] proposed amendment to the Anderson amendment will presumably rectify this.

I cannot speak with any detailed knowledge, however, on any particular of the bill. I have heard it said that the King-Anderson bill is the least understood piece of legislation in the current Congress. I dispute this. The Anderson amendment will, I predict, succeed to that title. For at least the House Ways and Means Committee held hearings on the King-Anderson bill, and some of us have had an opportunity to scan the record of testimony.

A FEW QUESTIONS

I ask, however, that I be allowed to pose just a few of the questions which should be answered as factually as possible before the Senate acts on the Anderson amendment. I ask these questions because we have not been given time to develop the answers through committee hearings, and because I feel the answers are of major importance.

Despite the disclaimers, will the Secretary of Health, Education, and Welfare be given the power to regulate the Nation's hospitals and some of its nursing homes?

Does the nursing home care covered in the amendment amount to as much as 5 or 10 percent of the nursing home care available?

Can it really be said that this measure would not affect the patient's freedom of choice—of hospital or doctor?

Would its passage lead to overuse of our hospitals?

Would this in turn lead to overcrowding of our hospitals?

What would this amendment do to the quality of medical care?

Is passage of such legislation necessary in the first place?

Is there indeed across-the-board need for health services among our aged? Is the health of our older population as bad as the amendment's proponents tell us? And are our aged in the straitened circumstances they are pictured to be?

On what basis have costs been figured? Will those costs increase?

Can the social security system withstand the added burden of a program to change the present pattern and setup and to provide services instead of cash benefits?

Is it wise to set such a precedent?

Do the services, which are estimated to provide less than 25 percent of an older person's health needs, have a predictable cost in the first place?

What would passage of such a measure do to private health insurance and other prepayment mechanisms?

What are the moral byproducts of such a bill when measured in terms of the decline, and perhaps the demise, of voluntary efforts at the community level?

Is it wise to provide benefits to millions of people who are capable of meeting their own health care problems, and who are doing so now?

Is it sound thinking to base a Government program on age instead of need?

What effect would passage have on the traditional Judeo-Christian teachings of individual and family responsibility?

I pause at this point to return to the comment that I made earlier. Based upon a study made by the U.S. News & World Report, those who think that by adopting the proposed program they would prepay the medical care benefits for their own retirement are being sadly misled. Whether they realize it or not, children would have to take care of their parents, only they would not do so directly on a personal basis. They would do it by paying for medical care a generation late.

What is to be gained by eliminating the States' historical responsibility in a vital area of government, and by further diminishing the States' authority?

What pressures will develop to expand and enlarge the benefits and coverage of the bill?

Would not the Anderson amendment, by reason of its very inequities, require broadening?

If costs cannot be controlled, would services be curtailed?

These and other questions occur to me, Mr. President. I hope they will be answered in the course of this debate, as limited as that will be in view of our obligation to settle this matter before it becomes an issue in the fall election, in view of the fact that we now have a limitation of time which has been agreed to by the Senate.

POLITICS BEFORE PUBLIC WELFARE

For myself, however, one puzzling question remains:

Why this unseemly haste when our aged population will receive no benefits under the program until January 1, 1964? I suppose the answer to this must be the unsatisfactory reply that we must vote on this amendment before it becomes an issue in the fall elections.

Meanwhile, however, the amendment has been cynically tacked on to the welfare bill, upon which millions of Americans are depending for help.

Passage of the welfare bill will therefore be delayed, Mr. President.

Perhaps that delay will also become an issue in the fall election.

And now, Mr. President, I would like finally to take up the question of the method in which this amendment bypasses the traditional committee system of the Senate. To me that is the one unanswerable argument against consideration of the measure at the present time, and under the present situation here on the floor of the Senate.

First, let me say that I think the administration's attempt to bypass the Senate Finance Committee on this legislation is just one more example of an alarming trend within the present administration of either circumventing Congress or circumventing the normal congressional procedures. In its effort to obtain back-door financing for major programs, in its move earlier this year to get the Urban Affairs Department bill out of committee before the committee had finished its work, in its effort to transfer all power over international trade from Congress to the executive branch, this trend has been obvious. Earlier this year Congress indicated its unwillingness to surrender its traditional processes to the President in the name of expediency; I hope we will do the same in the case of the bill now before us, and that even these Senators who might favor the bill in principle, if it had been worked out with due deliberation by a Senate committee, will vote against it for procedural reasons out of respect for the Senate's traditional mode of operations.

Let me emphasize that what I am anxious to protect here is not merely a meaningless tradition. There is a very sound reason for the tradition of committee consideration of technical bills, as every Member of this body knows.

We have no better example of this than the tax bill which has been before the Committee on Finance since early April, and on which we are still working in committee.

Only one who has sat through hundreds of hours of testimony on social security bills can appreciate how complex such legislation of necessity must be. During the hearings on legislation such as this, questions inevitably arise which

require further research, further study by the staff, further investigation by the administration. To consider such legislation on the floor without the benefit of committee consideration is folly.

Since its inception, the committee system in the Senate has functioned to the benefit of the Nation. It has reduced, if it has not eliminated, error. Are we to junk the Senate's time-honored procedure everytime we are urged to hasty action by an administration concerned more with political profit than with sound laws? I submit, Mr. President, that we cannot afford to do so.

Yet we are being asked to leap before looking, to vote before knowing the facts of a matter which has far-reaching importance to the destinies of every American, a matter which has had no study by any committee.

COMPLEXITY OF BILL

The pending bill, H.R. 10606, is a good example of just how complex social security legislation can be. The measure, which is 102 pages long, would amend four titles contained in the Social Security Act. Originally introduced as H.R. 10032 by the administration, the bill was subject to 3 full days of hearings—mornings and afternoons—by the House Ways and Means Committee.

Forty-seven witnesses, familiar with various aspects of the proposal, appeared before the committee to deliver their expert testimony. In addition, 113 others submitted statements on the bill.

Having weighed these arguments pro and con, the House Ways and Means Committee amended the original bill so drastically that a new bill, H.R. 10606, was reported out and sent to the floor.

As is the custom, the Committee report explained in detail exactly what each provision of H.R. 10606 would do. Ample time was then given to each Member of the House to study the Committee report and the 697 pages of the printed hearing.

However, as is the custom in the House, the legislation was considered under a closed rule because of its technical nature, and after 4 hours of debate was passed by a vote of 319 to 69.

During the debate, a number of Members of the House indicated their regret that amendments could not be offered.

When the bill, now 81 pages long, was referred to the Finance Committee, it received 4 more full days of hearings, morning and afternoon. Thirty-six witnesses appeared before the committee. Fifty-six additional statements were filed with the committee.

And after due consideration of all the arguments presented, the Finance Committee reported the bill with a number of important amendments.

WELFARE BILL NOW IMPROVED

The welfare bill has now been refined, and I think improved. It has thus far gone through two searching studies and a House debate prior to its consideration by the Senate.

If enacted, it will help many of our citizens who are in need of help.

In addition to providing increases in cash benefits, the bill continues the increased Federal participation in medical care costs incurred by those receiving old age assistance—a participation provided by Public Law 87-31, enacted a little over a year ago. Further, the bill continues the increased Federal participation in medical care costs incurred by those participating in the medical assistance for the aged program, which authorizes liberal Federal contributions to the States to provide medical care for those of the aged who, while able to meet the cost of everyday living, may have difficulty in meeting some of their medical expenses. This law, as the Senators will recall, was acted late in 1960.

My point, Mr. President, is this:

Complicated legislation can only be understood, changed, improved, and properly refined when the responsible committees of Congress subject it to hearings.

In this case, H.R. 10606 comes before the Senate after such hearings. Its substance has been altered, its provisions have been weighed, its implications and ramifications have been duly explored by those committee members entrusted with that responsibility. And this is as it should be. The Senate can now consider the endproduct of these deliberations in depth in full confidence that the measure before them has been subjected to the closest possible scrutiny beforehand.

Let me contrast now a departure from that orderly procedure.

If the entire social security law can be characterized as complex and technical, and it can, there is no question whatsoever that title II, the Old Age and Survivors Disability Insurance programs, is its most complicated part.

The King-Anderson bill involves amendments to that program. As the Senators know, this bill would provide certain hospital and nursing home benefits, plus a few other health services, to those persons 65 years of age or over who are eligible for OASDI coverage.

To call this bill "controversial" is to utter the understatement of the year. Perhaps "embattled" would be a better word, for the proponents and opponents of this type of legislation have argued it in and out of the Nation's press, on television and radio, in speech and debate, on editorial pages and in town meetings, in magazines and over the backyard fence, ever since Former Representative Aime Forand first threw its predecessor, H.R. 4700, into the legislative hopper.

The bill's power to evoke heated controversy is a byproduct of its far-reaching importance—an importance recognized at first glance by tens of millions of Americans. However, the sparks of controversy have been deliberately fanned into flame by the leaders of labor and their allies within the administration—this, in my opinion, in the hope that public pressures will force the Congress to legislate on the basis of emotion rather than reason.

RECORD OF FORAND BILL

Thus far, the Congress has remained firm. The Forand bill—similar to H.R. 4222, in that it too sought to provide health care services to OASDI recipients through the social security financing mechanism—was given 5 days of hearings in 1959 by the House Ways and Means Committee. The committee then voted, by an overwhelming majority, to retain the bill in committee.

The Senate Finance Committee also conducted hearings on the Forand bill and voted to hold the measure in committee. Despite this, an attempt was made—as the Senators remember—to amend the Kerr-Mills proposal by tacking on the Forand bill. This effort, sponsored by Senator ANDERSON, of New Mexico, and the then Senator but now President of the United States, John F. Kennedy, was defeated also.

However, Mr. President, aside from the Senate Finance hearings on the Forand bill, our committee has held no hearings on the legislation which succeeded it—H.R. 4222.

It has not done so for the good and sufficient reason that action on the bill is still being considered by the House Ways and Means Committee.

Is it suggested, Mr. President, that the Senate Finance Committee has thereby been derelict in its duties? I can assure the Senators that this is not the case. I cannot remember when the Senate Finance Committee has been busier than it has this year. We have held hearings on the President's new tax bill; the public welfare bill now before us; two tax extension bills; the debt limit bill; the sugar bill; and the extension of the Renegotiation Act.

I do not think that the Senate Finance Committee can be accused of dilatory behavior in the discharge of its responsibilities; nor do I think that my friend, the distinguished senior Senator from Virginia, need apologize for his own or his committee's application of maximum effort.

Yet, as I have pointed out, the Senate Finance Committee has given no consideration to H.R. 4222. Recognizing the need to proceed in an orderly fashion, the committee earlier this year voted 10 to 7—not on the merits of the bill, but on the procedure involved—to delay consideration of the King-Anderson bill until the House had had the opportunity of taking action. Thus, not one word of testimony from the public has yet been taken on the administration's proposal by the Senate committee assigned by law with the responsibility for dealing with this sort of legislation.

Mr. KERR. Mr. President, will the Senator yield?

Mr. BENNETT. I yield.

Mr. KERR. Is it not true that the Committee on Finance included in its action a definite statement of its purpose to conduct hearings on this measure as soon as it had come from the House to the Senate, in the event it did so?

Mr. BENNETT. The memory of the distinguished Senator from Oklahoma, who is the ranking majority member of the Committee on Finance, is eminently correct. The committee, by its vote, pledged itself to hold hearings on this proposal when it was constitutionally proper for it to take such action.

Mr. KERR. Has the Senator from Utah analyzed the amendment which is before the Senate to determine the extent to which it is a revenue-raising measure?

Mr. BENNETT. It is obviously a revenue-raising measure, because it would add to the social security tax an amount of at least one-half of 1 percent.

Mr. KERR. Is the Senator aware of the fact that if the measure were passed, it would increase the taxes collected under the social security program approximately $810 million in 1963; more than $2 billion in 1964; and then an increasing amount each year thereafter?

Mr. BENNETT. The Senator from Utah, earlier in his statement, covered that field in terms of percentages and the cost per person participating in the system, but had not used the particular figures supplied by the Senator from Oklahoma. I appreciate having them in the RECORD.

Mr. KERR. So the measure would be not only a revenue-raising measure but, so far as the Senator from Oklahoma is concerned, it would be a measure intended to raise more new revenue than any other tax measure that I know of which has been passed in some years.

Mr. BENNETT. This is true; and it is interesting to comment, in passing, that we should be asked in this bill to increase the take from the individual taxpayer at a time when the President of the United States is suggesting that individual taxes must be reduced in order to get the economy moving again.

Mr. KERR. The remark of the Senator from Utah is very appropriate, and, I think, of partciular significance in view of the fact that one of the authors of the amendment has been making a number of public statements to the effect that it was a matter of great concern and, in his opinion, perhaps of necessity, that Congress take action to reduce taxes, while, so far as I know, he has proposed no legislation to reduce taxes but is vigorously sponsoring a measure which provides for the increase of taxes by a minimum of $2 billion a year beginning in 1964.

Mr. BENNETT. That is true. He is probably obeying the Biblical injunction not to let his right hand know what his left hand doeth. But the net effect upon the taxpayer would be to destroy any value of any tax cut of a similar size that may come before the Senate in the next few months, and for which there are very vocal proponents.

Mr. KERR. Certainly the group who would be affected by this measure—that is, the group who would be required to pay the taxes called for by the measure—would individually suffer the effects of a more substantial increase in the amount of taxes they would have to pay than they would benefit under any provision that has yet been suggested for a tax reduction.

Mr. BENNETT. That is the impression of the Senator from Utah. I should like to reemphasize that if the argument is made that the social security tax is for the benefit of the future, and therefore has a moral justification, it is still a tax that has to be paid out now and will have an effect upon the individual taxpayer, as the Senator from Oklahoma has well said.

Mr. KERR. I thank the Senator from Utah. I congratulate him upon the statement he has made, because it is very lucid, appropriate, and accurate, one which I believe to be of great significance. I express my appreciation to the Senator for the work which has gone into the preparation of the statement and for his effort in making it.

Mr. BENNETT. Mr. President, I am grateful for those words of approval and approbation.

As I have already said, the Committee on Finance has given no consideration to the House bill or to the King-Anderson amendment. Earlier this year, the Committee on Finance voted, 10 to 7—not on the merits of the bill, but on the procedure involved—to delay the consideration of the King-Anderson bill until the House had had an opportunity to take action. Thus, not one word of testimony from the public has as yet been taken on the administration's proposal by the Committee on Finance, which is charged by the rules of the Senate with the responsibility for dealing with this sort of proposed legislation.

We must now cope, the administration suggests, with a radically amended variation of H.R. 4222, without benefit of committee study. We are asked to legislate in haste regardless of whether this entails repenting at leisure.

LEGISLATION NOT STUDIED BY SENATORS

I find it inconceivable, Mr. President, that the Senate of the United States should be asked to pass legislation which few—if any—of its Members had seen prior to July 2, 1962—only 8 days ago.

Personally, I take it as an affront to a committee that has worked long and hard on major portions of the administration's program; and to one of the hardest-working members of the committee—its chairman, the Honorable HARRY F. BYRD, of Virginia.

To my mind, this challenge to the committee system is justification enough to vote down this amendment.

I ask the sponsors of this proposal whether they now consider themselves an ad hoc committee of the Senate, empowered by this body to bypass the Finance Committee when, as, and if it suits the demands of political expediency.

Let there be no doubt on one thing, Mr. President:

This amendment has been drafted and is being handled in this way with the deliberate intention of winning votes.

CONGLOMERATE OF PROPOSALS

I regret that I have not had sufficient time to study this proposal—the King-Anderson amendment—in minute detail. But I have not. Neither have its sponsors. Neither has any other Member of the Senate.

I have, however, reviewed the amendment to the degree possible since its introduction, and I can tell the Senators this:

The amendment seeks to be all things to all men, and succeeds in being a jerry-built conglomerate of proposals glued together with the single purpose of promising something for everyone. A more cynical, a more frivolous, a more irresponsible effort to stampede the Senate into precipitous action has never been encountered, and it is a pity that we are now compelled to spend our time—time which could be used to much better advantage—time which should have been spent in committee—in the consideration of such a legislative monstrosity.

I say to the administration that if they want a law rather than a campaign issue, let them follow the regular procedure for making the law. Let them follow the Constitution and the law of the land, which give the House of Representatives the power to initiate this kind of legislation. Let them use the appropriate committees of Congress in order that the public be heard. Let the administration recall that it is the executive's responsibility to propose laws to the Congress but the responsibility of Congress to the people of this Nation to draft the laws thoughtfully, to the best of its ability, and with the people's freedoms and best interests in mind.

If we follow that course, Mr. President, we will vote down the hastily prepared and hastily considered Anderson amendment, and will consider this legislation in the deliberate and careful manner in which such important legislation should be considered.

I urge the Senate to defeat the Anderson amendment.

EXHIBIT I

THE UNTOLD STORY OF YOUR SOCIAL SECURITY

This is to be the untold story of your social security. It concerns the pension to which you are entitled in retirement, or if disabled, and to payments to your survivors in event of death.

Social security is a vast system. Old age and survivors insurance alone in this year will involve benefit payments of more than $13.2 billion. And the total is to grow steadily over the years ahead.

In 4 of the last 5 years, payments to persons drawing benefits have been exceeding income from payroll taxes. Some alarm has been expressed about this deficit between outgo from the social security reserve fund and income into the fund.

That, however, is not the story to be told.

Payroll taxes rose on January 1. They go up again on next January 1. Money flowing into the reserve fund, as a result, once again will begin to total more than money flowing out. Fears about the safety of the fund will subside.

A fact—and questions: A hard and little-understood fact, however, will remain to raise questions.

The fact is this: Benefits promised to people now covered by old age and survivors insurance total an estimated $624 billion. Reserves now on hand total around $22 billion. Taxes to be paid by people now covered by social security to support pensions are to be an estimated $282 billion.

That leaves $320 billion in benefits to present "policy holders" to be paid by someone else. Who will that be?

The answer, in simple terms, is that this deficit, if it is to be paid, will have to be paid by future workers at tax rates now in the law. Otherwise, persons now in the pension system would have to pay sharply higher taxes.

Pension bargains for people of the present are to become pension burdens for workers of the future.

These workers of the future will pay substantially higher taxes on their earnings—taxes earmarked for social security. They will work over a longer span of life, paying higher taxes all the way, in order that the 68 million others now covered by social security can enjoy pensions and other promised benefits.

One more windfall: It now is proposed that hospital insurance for retired persons be added to the social security system. Once again, if this type of insurance is added, older people will get a bargain. Those retired when the plan would take effect would become entitled, at no cost, to hospital and nursing care valued at thousands of dollars.

Here would be a windfall for persons now retired and those who will retire in years shortly after the plan takes effect.

The tab for the cost would be picked up—as it is being picked up for old age and survivors insurance—by employers and by those who go on working. In the end the cost would fall on employers and on generations not yet working.

In a word: social security programs, to date, represent a gigantic bargain for persons retired, soon to be retired, or fairly well along in years.

For relatively small payments these people are assured of an income on retirement. Men are assured that, when they die, their wives will go on getting an income. There is further assurance that minor children will get checks in event of the man's death. A binding promise is made of a monthly check in event of total disability.

Once the hospital-care program is in the law, pressure will grow to cover hospital costs for all persons covered by social security, whether working or retired. The final step might possibly be to cover doctor bills as well.

Idea—pay later: In each case, planning rests on the idea that future generations will get and pay much of the bill for those who are getting, or stand to get, the bargains of the present.

All of this is part of the strong trend toward special advantages for older people at the expense of the Nation's younger people.

Young people with children to educate, with a house to furnish and pay for, with saving to do if there is to be any venturing, with insurance payments to make, get few favors. Payroll taxes, increased eight times in the past 13 years, will be increased three more times for old age and survivors insurance. Hospital insurance would mean another tax. Then, at some point, there will be unpaid bills from social security promises to meet.

Old people, all of the time, are getting more and more advantages. People age 65 and older get a double exemption on personal income tax. If retired, they get a special retirement credit against income tax. The social security pension—for which they paid little—bears no tax. All their bills for medical and hospital care are deductible for income tax purposes.

All of this raises the question whether young people with more votes than old people will go on giving the breaks to the elderly.

For young alternatives: Two courses would be open to them if ever they wanted to get out from under what is to be a growing burden.

1. Inflation of prices can be accepted while a determined effort is made to keep individual pension benefits from rising. In this way, inflation could be used to reduce the pension burden, since pensions would represent a smaller part of an inflated national income.

2. Taxes could be used to take away some of the advantages enjoyed by retired persons. One tax "reform" now under study calls for taxation of social security income. There is some pressure to end many other special deductions extended to older people.

However, experience in the United States and Europe indicates that old people will go on getting their bargains and young people will continue to bear their rising burdens. In Europe there is a strong trend toward shifting to employers a larger and larger part of the social security burden.

The generous attitude of young people is attributed to two factors.

One of these factors is the realization that sometime they, too, will be old and will want some favors.

The other factor is that the young people see social security as a means of spreading the risk that comes from being forced at some point, for most, to care for their own parents.

As it's done abroad: To fill out the untold story of social security, U.S. News & World Report asked its staff members in Europe to explain how those countries—with long experience—have met the rising burden of welfare programs.

West Germany: The idea of national pension plans got its start in Germany. Two world wars, ending in two defeats and destruction of currency, destroyed the pension systems. Yet each time these systems have come back stronger than ever.

To finance old-age pensions, employers and employees each contribute 7 percent of the gross wage. For health insurance they each contribute an added 4.8 percent. An added 0.7 percent goes for sick pay, special leaves, family allowances. On top of it all, employers contribute an average of 16 percent for other fringe benefits. Payroll additions for social security amount, overall, to approximately 45 percent.

Benefit payments in recent years have been adjusted to compensate for price rises. Young people do not appear to object to the burden they carry.

Great Britain: Welfare costs now account for more than a third of all government spending. Workers covered by welfare programs and their employers pay special taxes that pay less than half of welfare costs. In the case of health insurance, three out of every four dollars come from general taxes.

Government subsidizes the whole welfare program, and political pressure is constantly on the side of larger benefits. There is pressure to cut down defense spending so welfare can expand.

Sweden: A 6-percent sales tax was introduced in Sweden 2 years ago to help meet the skyrocketing costs of welfare. Social security benefits now account for 15 percent of national income, compared with 7 percent before World War II.

In 1960, goverment, central and local, carried 69 percent of welfare expenses, workers 20 percent, and employers 11 percent. Now the pressure is to increase the employers' burden.

France: Social welfare in France extends from maternity grants, family allowances, rent allowances, and hospitalization to old-age pensions and death benefits. The expense falls mainly on employers, who pay about 30 percent on their payrolls. The employee contributes about 6 percent on maximum pay of $1,920 a year.

Italy: Social security in Italy includes old-age pensions, unemployment insurance, health insurance, maternity benefits, family allowances, and some subsidized housing. The Government contributes 25 percent to the retirement pension fund.

Employers' contributions amount to a tax of about 50 percent of payrolls. Workers contribute approximately 11 percent of their earnings.

In Western Europe as a whole, social security benefits now approximate 15 percent of national incomes. The range, according to official figures, is 12.6 percent in the Netherlands to 16.4 percent in France.

The trend in Europe is toward more and more social services, with heavier and heavier taxes on employers, plus larger contributions by the Government out of general revenues. This suggests that, in the United States, as the years go on, the Government, too, will be called upon to support the pension fund in addition to the payroll taxes that now are scheduled.

Mr. KERR. Mr. President, will the Senator from Utah yield?

Mr. BENNETT. I yield.

Mr. KERR. Was the Senator in the Chamber the other day when the distinguished Senator from New Mexico [Mr. ANDERSON], one of the cosponsors of the amendment, and the distinguished Senator from New York [Mr. JAVITS] were discussing one provision of the amendment and made it quite clear, with reference to section 1716, beginning on page 45, that the sponsors of the amendment had agreed in principle upon what the language of the amendment should be, but were still discussing among themselves the question as to what the language should consist of and provide if and when it were voted upon?

Mr. BENNETT. I was not then on the floor, and did not hear that debate. This is a process which may be safe in committee, up to a certain point; but after we discuss proposed legislation in principle on the floor of the Senate and after the Senate finally votes on it, there is no time, later, to correct the language, except in conference; and inasmuch as this bill has the unique distinction of having originated in the Senate, there is no assurance that it will go to a conference. I understand that some Senators who are joining in support of this measure are still considering changes in the language of their own amendment—changes which probably will be offered to us from time to time, as the debate continues.

Mr. KERR. The Senator's remarks are very appropriate. In fact, when one of the proponents was discussing the amendment, he was asked how many persons would be affected by it; and he had to have considerable consultation with a member of the staff before he was able to determine whether 2½ or 17 million persons would be affected by it—all of which would seem to indicate a real necessity for the Senate to have an opportunity to have one of its committees learn who would be affected by it and what language it would contain, before the Senate takes final action on it.

Mr. BENNETT. It seems to me that this may be one of the bills with attractive titles, and the proponents are anxious to have the bill passed on the basis of the attractiveness of its title, and are not too much concerned about the details of the bill itself.

Mr. KERR. No doubt the Senator is aware of the fact that approximately 75 pages of legislative matter are involved in the amendment, as it was submitted;

and, furthermore, in view of the remarks by the sponsors, it seems likely that many additional pages of language will be included in the amendment before its sponsors will be able to agree upon what the language of the amendment should be when it is voted on.

Mr. BENNETT. Yes, I am aware of that. If this measure had been handled in the regular committee process, the business of reworking the language would have occurred in committee, and we might have had another 75 pages of amendments. However, if such amendments had been worked out in the committee, they would have been carefully considered, and would not have been hastily put together on the floor of the Senate in order to attract a vote here and a vote there or to satisfy a question raised by one Senator or another.

Mr. KERR. And if the committee reported it, the bill would be accompanied by a report which would disclose with great clarity the contents of the proposed legislation.

Mr. BENNETT. Yes; and certainly that is one of the things which it is impossible to have under the process under which we have been working.

Mr. President, in addition to the material which I have previously asked to have printed in the RECORD, I shall ask unanimous consent to have printed in the RECORD, at the conclusion of my remarks, several items.

First, I submit a statement of policy regarding the position of the American Farm Bureau on the administration's medical care program.

The American Farm Bureau Federation has consistently taken a firm position against the inclusion and liberalization of benefits which would require an increase in social security taxes.

To bring myself up to date on this matter, I checked with the American Farm Bureau Federation, and was informed that its attitude on this modified bill is adequately presented in an editorial statement released last year by President Charles B. Shuman; and it appeared in Nation's Agriculture for November 1961. This statement is based on the policies adopted by the elected voting delegates in recent annual meetings, and reflects the thinking of more than 1,600,000 farm families in America.

The most recent policy was approved December 14, 1961, and I quote it: "Social security taxes should not be increased to pay medical costs for any portion of the population."

I now ask unanimous consent to have printed in the RECORD the following:

An editorial, from the Nation's Agriculture, dated November 1961, and entitled "Socialized Medicine."

An editorial, from the Wall Street Journal of May 22, 1962, entitled "One Sunday Afternoon."

An editorial, from the Wall Street Journal for June 11, 1962, entitled "A Warning From Mr. Roosevelt."

An editorial, from the Deseret News of Salt Lake City, Utah, dated July 2, 1962, entitled "The Road to Socialized Medicine."

An editorial, from the Salt Lake Tribune, dated June 5, 1962, entitled "A Back-Door Plan To Get Medicare Law."

A news release, dated July 9, issued by the Blue Cross Association, stating its opposition to the "patchwork" Anderson amendment.

There being no objection, the statement, editorials, and release were ordered to be printed in the RECORD, as follows:

[From Nation's Agriculture, November 1961]

STATEMENT OF POSITION OF AMERICAN FARM BUREAU

The next session of the Congress will be brought under great pressure to adopt legislation for the inclusion of medical care for the aged in the social security system. This emotion-charged issue is the entering wedge for national compulsory Government health and medical care—socialized medicine.

One of the original proponents of Government-managed medical care, ex-Congressman Forand, frankly admitted as much when he said: "If we can only break through and get one foot inside the door, then we can expand the program after that."

The current scheme provides for an increase in social security taxes by raising both the tax rate and the amount of earnings subject to tax. The higher revenues would be used to pay for doctor, hospital and nursing home expenses for all aged persons who are on social security regardless of need. The Secretary of Health, Education, and Welfare would develop regulations, determine whether charges were reasonable and, in effect, approve doctors and hospitals of the Nation.

Is there a real need for this new step toward welfare state socialism? In 1960 legislation was enacted providing Federal grants to the States for medical assistance for older people with low incomes.

A recent survey reveals that less than 15 percent of the aged are unable to provide the finances for adequate medical care from their own resources. Approximately 130 million people in the United States are now protected by voluntary prepaid hospital expense insurance. Surgical and medical expense protection for all age groups is being added to this coverage at a very rapid rate.

With this evidence of limited and rapidly diminishing need, why are the proponents of this step toward socialized medicine so insistent on taxing workers to pay the medical bills for the millions of older people, most of whom are able to help themselves?

The answer is obvious. The Government interventionists do not believe that the people are capable of spending their own money wisely. They believe that Government bureaucrats and planners will make better decisions on how to spend the income of the workers than the individuals who earn the money. Furthermore, the more money the Government has to spend, the greater is the power of the politicians in charge.

The vast majority of farmers believe in the maximum possible freedom of choice, competition, and opportunity. They do not want to be assigned to a Government doctor whose income depends on his political standing rather than upon his competence.

Farmers believe in taking care of their own but, when assistance is needed, it should be administered by local government—not a remote Washington agency. They are alarmed by the potential cost of the constantly expanding social security system—the social security tax rate is already scheduled to rise to almost 10 percent of the payroll base by 1969. They also understand that socialism is government management of individuals and their spending.

Farmers challenge the theory that government "can do it better" or spend more wisely. Government-run schools and hospitals are not superior to private institutions; the Department of Agriculture does not store or market grain as efficiently as the private trade; electricity from public powerplants is usually more costly than from private utilities when hidden costs and tax advantages are considered; government-controlled medicine would be expensive and unsatisfactory.

[From the Wall Street Journal, May 22, 1962]

ONE SUNDAY AFTERNOON

Since the days of the ancient Athenians one of philosophy's often expressed fears about democracy has been that its political leaders would yield to the demagogic clamor of the crowd. In our own country's beginning there were men who prophesied that would cause our ending.

Well, we've had our share of demagogues—in our own time Huey Long and Townsend come readily to mind—who made political capital of social discontent. Sometimes, as Congress did back in the thirties on the soldiers' bonus, our political leaders have yielded to the clamor.

But on the whole we have been lucky. While President Roosevelt was responsive to the people's mood, he didn't try to create discontent where none existed before; he opposed not only the soldiers' bonus but also Huey Long and the Townsendites.

So we come to last Sunday afternoon.

Across the land there were 33 great rallies for a bill which, so it is said, is going to take care of the medical bills of all the Nation's old people with hardly any cost to anybody at all. These rallies were sponsored by the administration and arranged by an organization called the National Council of Senior Citizens for Health Through Social Security, created for this purpose. The biggest of these rallies was held in Madison Square Garden in New York under the stage managership of Z. J. Linchtenstein, a professional organizer who learned his business organizing anti-Communist efforts in his native Poland.

All these rallies were addressed by important people, Vice President Johnson spoke in St. Louis, Secretary of the Interior Udall in Kansas City, Secretary of Commerce Hodges in Boston. And so on, with President Kennedy himself at Madison Square Garden, from which his speech was carried to the Nation over three television networks.

President Kennedy's speech, which set the tone for the others, wasted little time on the specifics of the King-Anderson bill; in fact, in all the day's outpourings there was hardly any serious discussion of the problem itself or of any alternative proposals that have been made. Mr. Kennedy's theme was that the people were demanding this particular bill, would have no other, and that it was being blocked only by the wicked machinations of the American Medical Association.

At the Garden, from which the circus had just moved out, there were some 15,000 people, mostly old people in shirt sleeves, come to hear the President's promises and enjoy the entertainment. Bert Parks was master of ceremonies, there was a full-sized symphony orchestra, LaVern Hutcherson and Avon Long did a medley from "Porgy and Bess," and the stars included Robert Merrill of the Metropolitan Opera and Mitch Miller with his Sing-Along group.

It was a very hot day in New York, but the air was festive, and as the old people filed out afterwards most of them were smiling and happy. We suppose it was the same all over the country, where the other

rallies could follow the show in New York through an elaborate television hookup.

Such being the mood of the day, there seems little point in our indulging either in any serious discussion about this promise of the Government to take care of us in our old age. It was hard to keep our minds on that anyway, as our thoughts drifted off in another direction.

If it were true, as everybody was saying, that there was already an irresistible clamor from the people for this program, why was it necessary to have this 33-ring circus? Could it be true that the men in Congress who come from our cities, hamlets, and farms have really been so deaf to the voices back home that they have not heard the spontaneous cry for the Government to give us this boon?

And our thoughts wandered even further afield. Like the philosophers of old, we know that it is sometimes difficult for statesmen to resist the cry for bread and circuses. But at the moment we could not recall another occasion, at least in our own country, when all the leading statesmen of the Nation joined the bands and the performers on the stage to urge the crowd to raise a clamor for what they had thought up to give them.

A quarter of a century ago we sat under a hot California sun and heard some simple people dazzled by promises of ham and eggs and $30 every Thursday. The memory seemed very vivid last Sunday afternoon.

[From the Wall Street Journal, June 11, 1962]

A WARNING FROM MR. ROOSEVELT

When Franklin Roosevelt proposed establishment of the social security program in 1935, he was careful to warn Congress against "extravagant action." If the program were "too ambitious," the President said, "its whole future would be endangered."

As the years have gone by, the program has certainly grown a great deal more ambitious, and now there's this enormous political pressure to push it into the field of medical care. The House Ways and Means Committee is scheduled to take up the administration medicare bill this week.

Now we realize that any criticism of the 27-year-old American social security institution is regarded in some quarters as somehow suspect, if not downright unpatriotic. Nonetheless, it's time we paused to ponder the meaning of Mr. Roosevelt's words.

In terms of its later growth, social security got off to a slow start. Farmworkers, domestic employees, and a number of other groups were excluded from coverage. Benefits for the aged were to range from $10 a month to $85, and no payments at all were to be made until 1942.

But this initial design was soon altered. Even before the first social security taxes were collected, organized labor was pressing for a liberalization of benefits. In 1939, Congress responded by broadening the program to include dependents and survivors of the aged and, in addition, advanced the date of first benefits to 1940 from 1942. And so it has gone from that time to this, with benefits and coverage being steadily enlarged and expanded, especially in election years.

How has Congress provided for payment of these growing benefits? In the beginning the plan was to build a giant reserve fund, invested in Government bonds, so that eventually interest income would shoulder a large part of the benefit burden. Taxes were to start at 1 percent each on employees and employers, based on the first $3,000 of each employee's wages, and were to rise to 1½ percent in 1940 and then by stages to an "ultimate" rate of 3 percent by 1949.

But politicians aren't anxious to boost taxes on voters if they think there's any way around it. And with tax receipts running far ahead of benefit payments in the early years of the program, Congress couldn't see anything urgent about tax boosts at all. As a result the tax rate didn't rise to 1½ percent until 1950, a decade behind schedule.

Soon things began closing in on social security and its manipulators. With reserve funds shrinking fast, Congress found that both old and new benefits called for new taxes. So the maximum tax on each employee now is $150 a year, compared with the $90 that the lawmakers first thought would be the "ultimate."

And the end isn't even remotely in sight. The reserve fund, in any real sense, is no longer any reserve at all. Its interest earnings each year now equal only about 2 percent of benefits. To keep the program stumbling along on a hand-to-mouth basis, even without the added burden of medical care, tax rates are slated to rise by nearly 50 percent in the next 5 years. It's certain there will be pressure for more benefits, whether medical care or something else. That's the way politicians have been using social security for 27 years.

If the pressures continue to bring action, even higher taxes than those now envisioned will be needed to keep the system from sliding into insolvency. Ironically, the taxes bear hardest on the lower-income groups; as things stand now, earnings above $4,800 aren't touched. Yet the benefits, because they are tax-exempt, are most helpful to the wealthy. To a person in the 20-percent-tax bracket, $800 of social security payments is equal to $1,000 in taxable income. To a 60-percent-bracket taxpayer, the $800 payment is equal to $2,000—twice as much.

There are other inequities. Middle-aged and older workers who entered the plan in its early years had the prospect of getting back a good deal more than they put in. But an average worker under 40 who enters the plan now, with tax rates so high and rising, has little prospect of receiving benefits worth even as much as the taxes he paid. Not to mention that the more inflation we have the less his benefits will buy.

As time goes on, the people at work will take on more and more of the burden of paying growing benefits to people already retired. Is there no limit to the load America's active work force will accept?

For the average American, even now, social security is a costly way of buying insurance. That's because a true insurance system operates with a reserve fund, a fund that generates interest income to carry much of the load. Americans, especially labor union leaders who negotiate pension fund agreements, are becoming increasingly familiar with this principle. Will there, at some point, be a public outcry against the high cost of social security?

There is another worry, and this is one that should have special significance for an administration which so often voices concern about the rate of economic growth. To speed growth, the Nation must have more savings and investment. And social security cannot help but divert funds from savings, since it takes over many burdens that otherwise would be carried by insurance. When savings go into regular insurance companies, they are invested in productive enterprise. When funds go to the Government, they merely fuel nonproductive Government spending. Is there no limit to the diversion of savings the Nation can weather?

Entirely aside from all the social implications of expanding social security, the economic questions must be considered now. For the financial planning of most Americans centers on social security, and the system should not be lightly sacrificed for political gain.

In these Democratic days in Washington, you'd think there would be someone willing to listen to Mr. Roosevelt's warning.

[From the Deseret News, Salt Lake City, Utah, July 2, 1962]

THE ROAD TO SOCIALIZED MEDICINE

The way the controversial King-Anderson bill on medical care for the aged is being watered down looks like a sure sign that it is in trouble in Congress, as it ought to be.

This makes a mockery of the earlier rosy assurances from the bill's supporters that the measure had overwhelming support and virtually nothing could stop it. If that were really the case, they would not be offering to compromise on certain provisions.

But if what happened to the administration's ill-fated farm bill is any indication, the proposed compromises on the "medicare" measure won't help it much. The parallel between the farm and medicare proposals is this: At the last minute several "sweeteners" to the farm bill were offered in an attempt to make its harsher provisions more palatable to Congress, but since they didn't alter the bill's basic flaws, it was defeated.

The same thing seems to be the case with the medicare measure. That is, the suggested medicare compromises do meet certain objections—but in the process they create new ones, besides which they do not go to the heart of what's wrong with the medicare bill.

The basic trouble with the proposed compromises is that they try to be all things to all men. Thus, the major changes made in working out the compromise would:

Permit States to set up their own health care plans by sending the participating State a lump sum to provide the basic health care for its aged. This, of course, raises the time-worn objection that it's wasteful and inefficient to raise tax funds in the States, send it—or, rather, part of it—back to the States again.

Place the medical care money in a trust fund separate from the rest of the social security fund: That might not be a bad idea since the social security fund is in such poor fiscal condition. But if that's done, what's the sense in tying the medicare program to social security in the first place?

Cover about 2.5 million persons not under social security. (The original bill would have covered only those persons participating in social security.) The trouble with this is that social security participants evidently would have to shoulder the extra burden of paying for the medical care of those not covered by social security, which would be manifestly unfair.

Permit participants to continue their private insurance plans, with the Government paying for part of the premiums instead of receiving the payments directly from the Government. But since the Government could argue with some justification that it should set standards to determine which private insurance firms would qualify to participate, this might well open the door to further Federal regulation of this particular segment of free enterprise.

Beyond these objections, the compromise medicare proposal is still a scatter-gun approach to the problem. Three-fourths of the population already has some form of medical insurance. Of those over 65, more than half have medical coverage. Moreover, coverage has been growing steadily—so why meddle with progress?

Still another danger is that if the Government is to provide, on a compulsory tax basis, medical services for one age group, why shouldn't it do the same for other groups? The end of this road is clear—socialized medicine.

What it all adds up to is that combining Government and medicine creates an unhappy mixture that would best be left alone.

[From the Salt Lake Tribune, July 5, 1962]

A BACK-DOOR PLAN TO GET MEDICARE LAW

The administration is making a strenuous effort to get congressional approval of its

social security medicare program by roundabout, and questionable, Senate action.

Stymied by inability to blast the King-Anderson bill out of the House Ways and Means Committee, administration forces have attached the bill as an amendment to a bill already passed by the House for extension and increase of certain Federal welfare payments to needy persons and dependent children.

Many Senators object to attaching such a vital piece of legislation as medicare as a rider to an unrelated bill. This threatens to destroy, or at least delay, vital legislation on which there is general agreement. The aim is to swing votes to the controversial rider in order to get the initial bill passed.

In this case the welfare bill must be passed promptly or some of these aid programs cannot be continued. Authorization for some of the funds expired June 30. The States, which administer the aid programs, are concerned—which may explain in part why 19 State Governors in their 54th annual conference voted for a resolution favoring the administration's social security medicare program.

Senator ANDERSON, one of the sponsors of the King-Anderson bill, has made certain changes in consultation with Senate opponents of the original measure which he hopes will gain enough votes to get it through the Senate.

But the compromises do not touch the heart of the matter, which is the tying of medicare to social security.

The medical profession opposes this because the doctors are convinced that once health care is tied to social security, it will inevitably expand until most, if not all, health care is brought under Government control and financed through federally imposed taxes.

Walter Reuther, head of the United Auto Workers, who has advocated many socialistic causes, made this very clear in his testimony before Congress. He said: "If we can get the principle established, we want to build on that principle." President Kennedy himself has described the King-Anderson bill as just a start.

Once health care of even the limited kind spelled out in this bill is tied to social security, we do not doubt it will inevitably expand, first to give a better level of care to older citizens, then to extend social-security health care to other age brackets.

It may be that the people of the United States want to adopt a scheme of socialized medicine such as is in effect in Britain and in many European countries.

But if so, it should be with eyes open, and after full debate, not by a foot-in-the-door subterfuge based on first establishing the principle and then building on it to accomplish full social-security financed health care.

The Tribune does not believe this country wants socialized medicine. We do not believe social security should be distorted by paying for health services rather than paying pension benefits based on previous earnings.

Furthermore we do not think a fair test has been given the aim of providing adequate medical care for the aged through the Kerr-Mills law, or through further extension of the voluntary health insurance programs which have already done so much to bridge the medicare gap.

It is regrettable that this whole problem has become such a political issue, charged with emotionalism, and characterized by misinterpretation and subterfuge.

Social security medicare is too vital a decision to be slipped through the back door as a rider on unrelated legislation. It should be decided on its own merits, with full understanding of where advocates of this foot-in-the-door program intend to take it in the years ahead, once Mr. Reuther's principle of social-security health care is established.

CHICAGO, July 9.—The financing of health care for the aged with Government participation is too important a matter to be resolved by patchwork compromise or expediency, said Walter J. McNerney, president of the Blue Cross Association, today.

In a statement relating to current discussions in Washington, Mr. McNerney said:

"There have bene many references to Blue Cross during the current debate in the U.S. Senate on the compromise proposal to finance health care for aged citizens. It is stated that the providers of services may select an organization, such as Blue Cross, to represent them in dealing with the Federal Government and that the Secretary of Health, Education, and Welfare may enter into an agreement with the agency so sellected to perform some of the administrative functions of the program. Just how this would work out is not clearly defined, but at best it seems that Blue Cross would serve largely as a conduit for money and instructions from the Department of Health, Education, and Welfare to the providers of the services. In our view this is not the most efficient and realistic way in which to utilize the assets and capabilities of Blue Cross plans. It is unfortunate that this and other provisions of the compromise plan have been advanced without the thorough examination warranted by so complex a subject.

"The member plans of the Blue Cross Association are on record to the effect that many retired aged persons need Government assistance to enable them to purchase health protection through the voluntary system. Based on extensive experience in covering more than 5 million aged persons and long standing relations with the Nation's hospitals in every State, the plans feel that the Government assistance to the aged should be related in amount to income levels; that legislation should state benefits only in broad categories so that the realities of changes in medical science and revenues could be reflected; and that Government's relations with Blue Cross should be on an underwriting basis rather than a cost plus basis; i.e., Blue Cross, to the extent that it is involved, should assume the risks at a given rate for a given period of time. The scaled income provision would help those aged who need it the most; it would encourage preservation of present coverage; and it would avoid a means test. Furthermore, an underwriting basis would enable the Congress and the administration to determine annual costs in advance, and would preserve to the highest possible degree the concept of local responsibility through local plan administration.

"Our estimate is that the income from the revenues provided in the amendment proposed in the Senate is not sufficient to cover the benefits described. Furthermore, it is doubtful that some of the benefits could be produced by providers of services because of shortages of skills and facilities in many areas.

"The voluntary system is undergoing an orderly progression in covering disadvantaged groups such as the aged. The control, underwriting and cost relations developed are effective and getting stronger continually. It is hoped that the Congress will do nothing to retard continued progress in this area."

Mr. BENNETT. Mr. President, the Senate has been very patient with me, this afternoon; and I appreciate the opportunity to present these views on the proposal before us. I am afraid I shall have other views to present, and no doubt before the end of the debate I shall again take the floor, to expand on my views on some of these problems. But at this time, in closing my remarks now, I urge the Senate to reject the Anderson amendment.

PUBLIC WELFARE AMENDMENTS OF 1962

The PRESIDING OFFICER. The unanimous-consent agreement with respect to the public assistance and welfare bill (H.R. 10606), comes into effect at this time.

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. MANSFIELD. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. MANSFIELD. What is the pending question?

The PRESIDING OFFICER. The pending question is on agreeing to the amendments offered by the Senator from New Mexico [Mr. ANDERSON] for himself and other Senators to the public assistance and welfare bill.

Mr. MANSFIELD. A further parliamentary inquiry, Mr. President.

The PRESIDING OFFICER. The Senator will state it.

Mr. MANSFIELD. It is my understanding that, while the Anderson amendments are the pending question, they will not be voted upon until next Tuesday, at a time certain, and that in the meantime other substitutes or amendments may be offered under a time allocation. Is that correct?

The PRESIDING OFFICER. The Senator is correct.

Mr. ALLOTT. Mr. President, I send to the desk an amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment offered by the Senator from Colorado will be stated.

The CHIEF CLERK. It is proposed, on page 75, to strike out, beginning with line 3:

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. ALLOTT. I yield.

Mr. DIRKSEN. May I inquire whether the distinguished Senator from Colorado has one or more amendments, and whether he expects record votes on them?

Mr. ALLOTT. The Senator from Colorado has several amendments, but does not anticipate asking for a record vote.

Mr. DIRKSEN. Can the Senator from Colorado give us some intimation as to how much time he will require on them?

Mr. ALLOTT. The Senator from Colorado thought he would probably offer about four amendments this afternoon.

Mr. DIRKSEN. Very well. I thank the Senator.

The PRESIDING OFFICER. The amendment offered by the Senator from Colorado will be stated.

The LEGISLATIVE CLERK. It is proposed, on page 75, to strike out beginning with (3) on line 10 through the word "Act" on line 12.

Mr. LAUSCHE. Mr. President, will the Senator from Colorado yield me 3 minutes from the time on the bill?

Mr. ALLOTT. Mr. President, I ask unanimous consent that I may yield the distinguished Senator from Ohio 3 minutes from the time on the bill, with the understanding that I shall not thereby lose my right to the floor.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Colorado? The Chair hears none, and it is so ordered.

Mr. LAUSCHE. Mr. President, I send to the desk, for printing under the rule, an amendment which I intend to offer. The amendment would deal with the Health Insurance Benefits Advisory Council which would be created under section 1712, on page 37, of the Anderson amendments.

The section would provide that there be created a Health Insurance Benefits Advisory Council, consisting of 14 members. The 14 members would be appointed by the Secretary of the Department of Health, Education, and Welfare. The section provides, in part:

> Not less than four of the appointed members shall be persons who are outstanding in the fields pertaining to hospitals and health activities.

My amendment contemplates identifying 12 of the prospective appointees by way of occupation. My amendment would provide that:

> Of the appointed members, not less than three shall be actuaries, not less than three shall be persons who are outstanding in the fields pertaining to hospitals and health activities, not less than two shall be members of the medical profession, not less than two shall represent management, and not less than two shall represent labor.

The purpose of my amendment is to have on the Advisory Council persons who are members of professions which are directly interested in the sciences and arts connected with the program. I would provide for the appointment of three actuaries. In my opinion, actuaries are vital to the efficient operation of the Advisory Council. I would provide for three members who are acquainted with the management of hospitals. I believe such appointments are vital. I would provide that not less than two members shall be members of the medical profession, that two shall represent management, and that two shall represent labor.

Under the language of the Anderson amendments only four persons would be identified as persons having experience in hospital management. I think the presence on the Advisory Council of actuaries is absolutely needed to insure that fiscally the system, if it is adopted, will be efficiently operated.

I thank the Senator from Colorado for yielding me this time.

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table.

The Senator from Colorado has the floor.

Mr. ALLOTT. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. ALLOTT. How much time have I remaining on the amendment?

The PRESIDING OFFICER. The Senator has yielded 4 minutes. The Senator has 26 minutes remaining.

Mr. ALLOTT. I thank the Presiding Officer.

Mr. President, we are considering today a health care proposal which, if enacted, would destroy America's unique system of competitive medicine and could bankrupt the social security system.

It would dilute the quality of medical care to the detriment of the patient. It would drastically change the original concept and purpose of the Social Security Act. It would shamefully exploit our elderly for political purposes. It would tax many of the poor to provide health care for many of the rich. It would encourage dependency rather than independency.

Mr. President, this proposal relies on compulsion and denial of freedom; it proclaims the state superior to the individual; it violates Judeo-Christian teachings because it rejects the divinity of man.

The measure before us was hastily conceived. It is nothing more than an expanded version of what is known as the King-Anderson bill. The bill is basically bad. The cloak of compromise does not change its defects or conceal its inherent dangers. It is still "a medicare wolf in sheep's clothing."

Yet, Mr. President, Congress is being asked to abandon its customary rules and traditional procedures and to hastily approve a proposal which would not become effective until January 1, 1964. Let us not be stampeded into making a hasty decision on a hastily conceived measure.

That great American, Abraham Lincoln, once said:

> If we could know first where we are, and whither we are tending, we could better judge what to do and how to do it.

There are many questions still unanswered.

It is often generalized that the elderly of this Nation are unable to pay their medical bills and that most of them are in poor health. But as far as I have been able to determine, there are no facts or figures as to how many—I repeat: how many there are over 65 who need and want medical and hospital care and do not get it.

I am certain, however, that the health care problems of the aged definitely are not of the magnitude as represented by some wishing to exploit them for political purposes.

No one wants anyone, regardless of age, to suffer from the lack of medical care.

But the problem before us is to determine the most sensible way to help those who need help without sacrificing the present high quality of medical care available to the Nation and without starting this Nation down the road to socialized medicine.

The measure now before us proposes to provide health care to everyone over 65, whether it is needed or not. Somebody might need it; so everybody gets it. This is a shocking disregard for the taxpayers' money.

This health care proposal is based on the false premise that most of the aged are ill and poor.

A quick sampling of surveys and studies made in various sections of the country indicate the problem of our aged citizens is an overexaggerated one.

For example: The Fort Wayne, Ind., News-Sentinel recently reported that "a documented survey—see reference one—provides indisputable evidence that Indiana's senior citizens are, for the most part, in position to finance their own health needs. Of the 445,510 Hoosiers age 65 or over, 94 percent are caring for themselves either out of private income, savings, insurance, pensions or other nonwelfare sources."

The survey pointed out that 300,560 of the aged group own their own homes and 367,000 are eligible and covered for health and accident insurance by commercial insurance companies, Blue Cross, Blue Shield, or by veterans' benefits.

The survey also revealed that out of 4,357 hospital admissions for those over 65 only 84 patients, or 1.93 percent, were unable to pay or make arrangements for payment of their hospital bills.

Another study was made in Greene County, Mo.—see reference two—where the residents are described as being in the middle-to-low income group, with farming and small manufacturing the basis of the economy.

One portion of the study included patients of 18 physicians doing mixed family care and specialty practice. The survey disclosed that patients over 65 are responsible for only 9 percent of the unpaid bills.

A 100-bed, general medical and surgical hospital also was surveyed. A study of the unpaid bills at this hospital revealed that the 65-and-over group has the best record for payment of hospital bills. Of the 857 elderly patients treated during an 11-month period, only 15 percent failed to pay their bills.

A survey conducted—see reference three—at the Billings, Mont., Deaconess Hospital disclosed that almost 95 percent of the hospital bills of 559 aged patients were paid within 6 months.

Spot surveys by three Blue Cross plans—see reference four—indicate that the majority of hospitalized persons 65 and over either are having the cost of hospitalization paid by health insurance or are paying the cost from personal resources.

Results of the 1-day surveys in Texas, Oklahoma, and northeast Ohio showed:

First. Eighty-three percent of the 2,596 persons 65 or older who were in 60 northeast Ohio hospitals last February 7 were covered by health insurance or had the resources to pay their bills.

Second. 61.2 percent of the 1,300 aged persons in 44 Oklahoma hospitals last March 14 had health insurance or private resources, and the remaining 38.8 percent were receiving either old age assistance or medical assistance to the aged through the Kerr-Mills law.

Third. 70.9 percent of the 5,701 aged patients in 480 Texas hospitals on April 11 had some form of health insurance coverage.

A survey—see reference 5—of 296 patients, aged 65 or older, who were treated at Staats Hospital in Charleston, W. Va., in a 1-year period showed that only 1.5 percent did not pay their bills.

Patients over 65—see reference 6—at the Tucson, Ariz., Medical Center had a far smaller percentage of uncollectable bills than patients under 65, according to a study by M. G. Wolfers, president of the Arizona Hospital Association.

This study, which included 1,960 patients 65 or over, revealed that only 0.36 percent of their hospital bills were unpaid.

In the State—see reference 7—of Vermont, which I am told has a higher percentage of its population over age 65 than any other State, a survey showed that 80.7 percent of the aged said they would pay doctor bills through health insurance, from savings, or with current income.

The fact is that there is considerable evidence that the majority of people over 65 are able to finance their own health care.

Additional evidence is found in the studies made by the Conference of Catholic Charities in three lower-middle-income parishes in St. Louis, Cleveland, and Buffalo.

The report stated:

> When asked who would pay for hospitalization if it were necessary, between 80 percent and 90 percent of all the aging in all studies said they had hospitalization insurance, savings, or potential help from children and relatives. The Buffalo study, which had the only further analysis of this kind, found 7 percent who would turn to welfare organizations and 5 percent who said they did not know what they would do.

Of the approximately 65,000 persons age 65 or over in the State of Montana—see reference eight—about 6,500 require assistance through public welfare and the remaining 58,500 are able to provide their own living expenses and medical care through investments, savings, current employment, pensions and health insurance.

Studies show that the overwhelming majority of aged patients in Delaware—see reference nine—can and do pay their hospital care. Of the aged admissions in Delaware hospitals, 86.2 percent paid the hospital bill in full.

These are only a few examples of studies conducted by various groups, but they provide proof that the problem has been blown out of proportion. There are some of our aged who are needy, or near needy, but to generalize about a group of 17 million on the basis of a relatively few individual cases is exploitation.

The Right Reverend Monsignor A. C. Dalton, director of Catholic hospitals, archdiocese of Boston—see reference 10—told the Senate Subcommittee on Problems of the Aged:

> From all that I have observed, heard, or read, it is my opinion that the problem of our aged citizens is an overexaggerated one. Reliable authorities appear to be unanimous in stating that the vast majority of those 65 years and over present no special problem; they can handle their own situations well or have them handled satisfactorily by those near and dear to them. It is with regard to the minority that any problem exists * * *. Public interest focuses upon this minority all out of proportion. This is no doubt due to the rapidly increasing number of these aged citizens and the fact that such an increase was neither foreseen or well prepared for. The result is a certain amount of confusion and not a little hysteria in trying to arrive at a sane and sensible solution.

Aged persons value their independence and may be resentful if ready-made plans for their welfare are thrust upon them, according to a study conducted by the Catholic—see reference 11—University of America's Bureau of Social Research among 466 aged residents of Wilmington, Del., and among 130 persons 60 years of age or older living in Wilmington suburbs.

The bureau concluded that while there is a minority of aged persons who are "desperately poor or seriously ill," Wilmington's senior citizens as a group appear to be financially independent, socially well adjusted, and in good health.

The study showed that more than two-fifths of both men and women surveyed believe they are financially able to provide comfortably for themselves the rest of their lives. Another two-fifths can pay ordinary expenses. Nearly 62 percent of the men and 54 percent of the women own their own homes or apartments.

Some 71 percent of the men and 67 percent of the women either had not been confined to bed, or had been confined 6 days or less by illness in the preceding year.

More than two-thirds of all respondents spent either nothing or less than $100 for medical care in the preceding year. Approximately four-fifths had been attended by private physicians rather than at hospital clinics for minor illnesses in the preceding 5-year period.

More than two-thirds said they would pay for long-term hospitalization through hospital insurance and/or savings.

"The most striking feature of this whole analysis," the bureau said, "is the relative economic independence of such a very high proportion" of both men and women.

A study of a random cross-section of all older persons in the United States disclosed that the health care problems of the aged definitely are not of the magnitude they have been purported to be.

This study, conducted by the National—see reference 12—Opinion Research Center of the University of Chicago, revealed that only 9.6 percent of persons aged 65 and over said they could pay a medical bill of $500. More than 90 percent said they have available means to meet such a bill.

Findings of the Federal Reserve Board disclosed that the liquid assets of persons 65 and over are up and are growing faster than the assets of any other age group during the last decade.

G. Warfield Hobbs—see reference 13—a New York banker and chairman of the National Committee on Aging, said he believed the whole country will vote more effectively and intelligently and with less emotion on health care legislation if the people are more aware of the financial facts of life concerning our aged citizens. He pointed out that our present indigent aged are diminishing both by numbers and by proportion, and are being replaced with the newly aged who are increasingly able to care for themselves.

Mr. Hobbs has warned that if sentiment or politics carries us overboard on a permanent basis to solve the temporary financial problems of a segment of the aged population, "we may find in the future that we are providing perhaps more than necessary for a very large and self-supporting aged group at the expense of other age groups."

As proof that the new generation of older citizens is attaining better financial independence, Mr. Hobbs cited figures showing that the number of aged receiving public assistance reached a high of 2,789,000 in 1950, but 9 years later there was a decrease to 2,394,000, despite the fact there were 3 million more in the aged group. The reduction continues at a rate of about 3,000 a month in spite of a net gain in the number of aged of about 30,000 a month, he said.

Dr. Willard C. Rappleye—see reference 14—in his report as president of the Josiah Macy, Jr., Foundation said:

> Planning for the long-term future under conditions which exist then should be given more consideration rather than creating permanent legislation for a temporary phase of our economy.

Some economists believe that in the not too distant future old-age assistance will have been reduced to an insignificant proportion, and that a great majority of our elderly will be self-respecting and financially independent based upon a combination of social security benefits, private pensions, private savings and insurance, and wider homeownership.

Today, those over 65—see reference 15—account for about 9 percent of our total population, and, despite the retirement majority, they still receive about 8 percent of all personal incomes.

In many respects, the aged are better off than any other group. In addition to having higher liquid assets and higher percentage of homeownership, their financial obligations are significantly less and they enjoy tax advantages not available to younger citizens.

I am sure most of us have heard the statement that 60 percent of our aged have incomes of $1,000 a year or less. This figure, while accurate, is totally misleading. It includes dependents, many of whom have no individual incomes of their own. It would be equally accurate, and just as misleading, to say that nearly 65 percent of all Americans had incomes of $1,000 or less a year. Facts are of little significance until they are examined and interpreted by reason.

The report—see reference 16—of the planning committee for the White House Conference on Aging estimated the total income of the over-65 population in the United States from all types of private investments at from $4,300 to $8,300 million a year, or approximately 17 to 28 percent of the total cash income of the group. This includes dividends, interest on savings, annuities, rents, royalties, and the like. Thus, at a conservative estimate, a total of from $75 to $150 billion worth of income-producing assets would appear to be owned by this age group.

This is a healthy figure, especially in view of the fact that it does not include such non-income-producing assets as homes occupied by the elderly or the value of businesses in which the over-65 age are still actively engaged.

There are two facts that must be kept in mind in evaluating the economic status of the aged:

First. Income alone is not a valid yardstick for measuring the financial situation of the aged.

Second. Our elderly are not a homogeneous group from either a financial or health standpoint.

To generalize that the aged are in poor health is just as misleading as to state that most of the elderly are on the brink of bankruptcy.

Doctors tell us that most older people are in good health. They explain that there are no such things as diseases of the aged. There are diseases among the aged, just as there are diseases to be found in any age group.

It is true, however, that there is a greater degree of chronic illness among older people. But it is important to understand what is meant by the term "chronic illness." It means a recurrent condition, or one that persists over a period of time.

It is significant to note that only 14 percent of the aged with chronic ailments experience any significant limitation of activity. Only 5 percent have major limitations of mobility.

There are many examples of the chronically ill who lead perfectly normal lives. Several years ago a diabetic represented the United States on the Davis Cup team. He was chronically ill, but with the help of insulin he led a normal life. President Franklin Delano Roosevelt was chronically ill as the result of polio. I need not comment on the active life he was able to lead.

Just as there has been misunderstanding about the financial status of the aged there also has been confusion about the health of our aged. Chronic illness has been interpreted by some to mean that most older people are sick and debilitated. It is false to assume that the majority of our aged required constant medical attention. We would be less than honest with ourselves if we enacted legislation on the premise that most of our aged are ill and unable to pay for medical care.

A study conducted by the National Retired Teachers Association and American Association of Retired Persons among the organizations' members revealed that 87 percent consider themselves in reasonably good health. Eighty-six percent of the 150,000 members reported that they had medical or hospital insurance.

Voluntary health insurance and prepayment plans, which permit persons of all ages to protect themselves against the cost of unexpected illness and accidents, have made a phenomenal growth. This growth has been referred to as one of the great social advances of our time.

Health insurance is now available to all aged everywhere. Today, more than 9 million, or 53 percent, of the aged already have health insurance. The number covered has tripled in the last 10 years and the elderly are purchasing health insurance at a faster rate than any other age group.

In 1937, less than 4 percent of the population of the United States had any form of health insurance. Ten years later in 1947, about 30 percent were covered. Today, an estimated 75 percent of the total population have some voluntary health insurance coverage.

The PRESIDING OFFICER. The time of the Senator from Colorado has expired.

Does the Senator from Tennessee wish to yield time?

Mr. GORE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. How does the Senator from Tennessee wish to dispose of the time consumed in the quorum call?

Mr. GORE. Mr. President, I ask unanimous consent that the time consumed in the quorum call not be charged to either side.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. HUMPHREY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HOLLAND rose.

Mr. HUMPHREY. Mr. President, how much time remains on this amendment?

The PRESIDING OFFICER (Mr. METCALF in the chair). The Senator from Minnesota has 30 minutes in opposition.

Mr. HUMPHREY. How much time does the Senator from Florida desire?

Mr. HOLLAND. I could conclude in from 5 to 8 minutes.

Mr. HUMPHREY. Mr. President, I yield 10 minutes to the distinguished Senator from Florida.

Mr. HOLLAND. Mr. President, I appreciate the courtesy of the acting majority leader in yielding time to me. I am not speaking in favor of any single amendment or in opposition to any single amendment. I am speaking in opposition to the absurd procedure under which we find ourselves operating at this time, and in an effort to show that we are wasting our time in considering the important question of medicare for the aged in the way it is now being considered.

The bill before the Senate relates to important amendments to the body of our welfare legislation. It is a bill of many pages. The report of the Committee on Finance, which gave consideration to the various proposals which are embodied in the public welfare amendments of 1962, as the measure is styled, is 82 pages in length. That bill and the report relating to it are based upon hearings held by the Committee on Finance, as shown by the printed hearings, consisting of 603 pages. The hearings represent 4 full days of intensive work in the Committee on Finance and the study of the proposed measures by the many witnesses who appeared before that committee, including, of course, the official witnesses who are charged with the administration of the welfare acts.

Prior to the time the Committee on Finance considered the bill, it had been discussed at great length in the House of Representatives. Long hearings had been held upon the bill in that body, also. I do not have before me the volumes of the printed record of the hearings held by the House committee, but I understand they were even longer, both in terms of duration of the hearings and the extent of the printed record, than is the case with the Senate committee documents on the subject. I have already stated that the printed hearings of the Senate committee comprise 603 printed pages, and that the Senate report comprises 82 printed pages.

But, Mr. President, we now find that, notwithstanding the fact that none of those printed pages had to do with the subject of medicare, which was being handled in separate proposed legislation, subjected to long hearings in the House committee, but which has not yet come up for hearings in our own Finance Committee, we are confronted with four long amendments—as well as various shorter amendments to each of them—which have to do with the subject of medicare.

The first is the amendment proposed by the distinguished Senator from New Mexico [Mr. ANDERSON], for himself and a group of our colleagues; and that amendment alone consists of 79 printed pages; and it existed for the first time as a proposal at the time when it came to us in the form of this amendment, representing, as it did, a compromise between the ideas of its distinguished authors—that is to say, the Senator from New Mexico [Mr. ANDERSON] and various other authors; and, so far as I know and believe, the bill had never seen the light of day until a few hours before the time when it came here as a proposed amendment to the Welfare Act amendments of 1962. Yet, Mr. President, though it has not been subjected as a unified measure to hearings, either in the House committee or in the Senate Finance Committee—and I repeat that no hearings on this general subject have yet been held in the Senate Finance Committee—we are expected, on the basis of the debate on the floor of the Senate, and notwithstanding our committee duties and our other duties, and without the benefit of comment by the administrative agencies and all others who have very vital interests in connection with this measure, to decide upon it and pass upon it—each of us from the background of his own experience—and determine whether the provisions contained therein are wise.

To complicate the matter further, there are three other proposals on this subject. One of them has already been voted upon; it is the amendment proposed by our colleague, the distinguished Senator from Kentucky [Mr. MORTON]. A second voluminous amendment has been proposed by the distinguished Senator from Massachusetts [Mr. SALTONSTALL], on behalf of himself and other Senators; and a third has been proposed by the distinguished Senator from Connecticut [Mr. BUSH], on behalf of himself and certain other Senators. But, Mr. President, not one of those four measures is identical with any of the others. Not one of them is exactly like anything else that has ever been considered before by the Senate. Not one of them is exactly like the proposal which has been subjected to hearings before the House committee—and again I comment on the fact that our own Finance Committee has not heard testimony on any of these measures, nor has it given us the benefit of its consideration and its recommendations in regard to any of them. Notwithstanding all these important facts, we are expected to emerge from debate of this kind with a wise answer to a question which transcends in importance and in public interest all the other proposals included in the amendments to the Welfare Act of 1962 put together.

My own mail—and I am certain this is also true of the mail of other Members of the Senate—on the subject of medicare is several hundred times greater than the amount of mail I receive upon the various other important items included within the purview of the pending bill—that is to say, the amendments to the Welfare Act of 1962. Furthermore, the amount involved in increased taxes is greater, and the amount involved in burdens upon certain employed taxpayers is greater. Yet, Mr. President, without the benefit of any study, we are expected to arrive at a wise answer to this problem, which is a question of first impression to most Members of the Senate.

I do not challenge the principle or the high purpose of any of the distinguished Senators who have offered these amendments; but I call attention to the fact that whereas they may have had a chance individually to study this subject and to come forth with these long, involved proposals as to what they think we should do in the field of medicare, that opportunity has not been afforded all 100 Members of the Senate; and the proposals now before us have not been supported by a study by our Finance Committee and by its recommendations directed to all of us.

So, Mr. President, I cannot think of anything more absurd than for us to attempt out of such a situation to arrive at a wise or defensible answer; and, therefore, so far as I am concerned, I do not propose to vote for any of the proposed amendments dealing with the field of medicare. I feel that if I did vote for any one of them, I would be voting without the guidance and without any kind of recommendations or advice from those who, under law, are charged with administering laws in this field, and also without the recommendations and advice and guidance of the Members of our own body and our colleagues at the other end of the Capitol who, as members of an appropriate committee, are charged with bringing forth proposed legislation in this field.

Thus, Mr. President, I shall not vote for any of these amendments.

Furthermore, Mr. President, it seems to me that Senators who are offering these amendments——

The PRESIDING OFFICER (Mr. PELL in the chair). The time yielded to the Senator from Florida has expired.

Mr. HOLLAND. Mr. President, will the Senator from Minnesota yield additional time to me?

Mr. HUMPHREY. Mr. President, I yield 5 additional minutes to the Senator from Florida.

The PRESIDING OFFICER. The Senator from Florida is recognized for 5 more minutes.

Mr. HOLLAND. I thank the Senator from Minnesota.

I was about to say that it seems to me that Senators who are offering these amendments are practicing what is referred to in the Constitution as "cruel and unusual punishment," not only upon Members of the Senate who have to listen to this long and involved debate, regardless of whether they must run, this year, for reelection, but particularly upon the Members of the Senate and the Members of the other body who must run for reelection this year, because this is probably the most controversial subject matter to be discussed by the people of the United States in recent years; and certainly this question is entitled to, and must have, the careful study and consideration, not only of the respective committees of the Senate and the House, but also of those who are learned in this field and who have devoted a large portion of their lives to finding out the answers to the question of what is the best way to take care, under democratic principles, of the undoubted need of many older persons in our country who do not have sufficient means to assure themselves and their loved ones of hospitalization, medical care, and surgical care.

I realize that not all of these measures go that far, and perhaps none of them covers all of these fields. However, these proposals are submitted as the answers to the undoubted need of millions of older U.S. citizens for hospital

care, medical care, nursing care, and care by doctors and surgeons. Such subject matter is entitled to better handling and more serious handling than this, especially in view of the fact that we know that the body at the other end of the Capitol is not likely to give serious consideration to a measure which originates here as a rider, and particularly when it knows that this proposal has not been studied by our committee. I would think much less of those who represent the legislative arm of our Government at the other end of the Capitol if I thought they would regard with great seriousness a measure which would come out of debate of this kind and out of proposals so carelessly advanced as those which are now before us.

So, Mr. President, I hope the Senate will reject these amendments, will insist upon handling this subject in the regular manner, and will insist that this subject matter is of sufficient seriousness and gravity to be entitled not only to ordinary handling by our committees, but also to the most careful handling by them—the most careful handling possible for so delicate, complicated, and difficult a subject.

Therefore, Mr. President, I hope the Senate will, in a showing of wisdom in connection with so controversial a subject matter, refuse to place the stamp of its approval upon any of the four proposed amendments which deal in a general way with the subject of medicare for our aged.

I thank my distinguished friend, the Senator from Minnesota, for yielding to me; and I now yield the floor.

Mr. HUMPHREY. Mr. President, how much time is left on this side?

The PRESIDING OFFICER. Fifteen minutes remain.

Mr. HUMPHREY. What is the pending question?

The PRESIDING OFFICER. The pending question is the amendment of the Senator from Colorado to the Anderson amendment.

Mr. HUMPHREY. Mr. President, I shall make a brief comment. The amendment, as I understand, strikes item (3) in line 10 through line 14, which includes item (4) of the bill, H.R. 10606, "Part E—Miscellaneous Provisions, Studies, and Recommendations."

The Senator from Colorado seeks to strike out the following language:

> The feasibility of providing additional types of health insurance benefits within the financial resources provided by this act; and the effects of the deductibles upon beneficiaries, hospitals, and the financing of the program.

It is my view that the language which the Senator from Colorado seeks to strike out should be sustained and maintained in the bill. These provisions went through committee hearings in both the House and the Senate. Careful consideration was given to the provisions. It seems to me the purpose is merely to provide additional information to the Congress and to the executive branch, within the limitations set down in items (3) and (4).

I am particularly concerned about the language which affects the deductibles upon beneficiaries, hospitals, and the financing of the program.

I am hopeful the amendment of the Senator from Colorado will be rejected.

The PRESIDING OFFICER. Does the Senator from Minnesota yield back his time?

Mr. HUMPHREY. Yes.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Colorado to the Anderson amendments.

The amendment was rejected.

Mr. ALLOTT. Mr. President, I ask unanimous consent that the pending Anderson amendments be temporarily laid aside and that the Senate proceed to the consideration of the amendment which I now send to the desk.

The PRESIDING OFFICER. Without objections, it is so ordered. The amendment offered by the Senator from Colorado will be stated.

The LEGISLATIVE CLERK. It is proposed on page 33 to strike out the matter appearing on lines 7 through 12 and insert in lieu thereof the following: "and for each of the succeeding fiscal years' "

Mr. ALLOTT. Mr. President, I want to express my sincere appreciation for the remarks of the distinguished Senator from Florida. I concur wholeheartedly in his approach to this question, and, as I shall develop in later portions of my amendments and speeches, I also think this question should be considered by the Finance Committee.

As I stated earlier when I spoke on my previous amendment, 11 times as many persons are protected against hospital expense as there were in 1940; more than 24 times as many have surgical insurance; and more than 30 times as many are protected against medical expense other than surgical.

By far the most rapidly growing part of this health insurance picture is the growth in coverage of the elderly. And most of this growth has occurred in the past 10 years.

A survey conducted in 1952 disclosed that 26 percent of all persons past 65 had some form of health insurance protection. Today, 53 percent of the aged are protected.

This growth is even more impressive when we consider that an estimated 25 percent of those 65 and over are not even in the market for health insurance, since their health care is financed in other ways. If we subtract this group, who either do not need or do not want health insurance, we find that 68 percent of those over 65 who want this protection already have it.

It is known that some 13 percent of the aged are eligible to receive health care as beneficiaries of Federal-State old-age assistance or medical assistance to the aged programs. There are many others who do not need, desire, or believe in health insurance. This group includes those being cared for by the Veterans' Administration, by medicare, by general assistance, or by other local public and private agencies. There also are those whose private incomes and resources are sufficiently large to make it unnecessary for them to have insurance coverage.

The number of our elderly who will have health insurance coverage will increase because of the trend by insurance companies to allow and encourage persons to continue their health insurance on an individual basis when they retire. This fact, coupled with a continuing expansion in coverage among the total population, means that more and more individuals will be reaching 65 with health insurance still in force.

It has always been an important provision in Blue Cross and Blue Shield contracts that subscribers who desire to do so may elect to continue their coverage after leaving their groups, or after reaching age 65.

In 1951, 5 percent of Blue Shield enrollment, or about a million members, were 65 or older. Today, Blue Shield subscribers over 65 total more than 3,250,000. There also are more than 5 million Blue Cross subscribers over 65.

In the past 10 years, total Blue Shield enrollment increased 133 percent, but the number of persons over 65 covered by Blue Shield increased 225 percent.

A survey made 2 years ago by the Health Insurance Institute showed that 7 out of every 10 workers covered under group policies can retain their coverage after retirement.

A few years ago most hospital policies sold by private insurance companies terminated at age 65. Today, more than 60 policies or programs offered by major insurance companies are guaranteed renewable for life.

In recent months there has been a dramatic increase in the number of individual and group health insurance contracts being made available to persons over 65.

A report issued in January of this year by the Health Insurance Institute contained not a complete list, but a representative selection of the policies from which noninsured over-65 persons can select health insurance protection. More than 70 programs, covering a wide range of benefits, were listed in this report.

A major medical expense program developed in Connecticut, in which private insurance companies in the State pooled resources and risks, offers comprehensive coverage for a variety of services to anyone over 65 in that State. This pioneering venture is now spreading to other States.

In January of this year the National Association of Blue Shield Plans announced a new, national low-premium plan, providing a broad scope of medical and surgical benefits in hospitals and nursing homes for the aged. I am told that as of this date 66 of the 70 Blue Shield plans have approved participation in the new plan, and 53 of these already have received their local medical society's approval and cooperation.

This brief summary of the growth of voluntary health insurance in this country should indicate to all that the number of aged in this country who need but

do not have health insurance comprise a group that is steadily shrinking. Congress should not adopt any program that would lead to the decline, if not the demise, of voluntary health insurance in this country.

The measure we are considering would substitute a compulsory system of Government health care financing for a private voluntary system that has shown phenomenal growth and an ability to provide a financial cushion against medical expenses for millions of Americans.

Our voluntary health insurance programs are versatile enough to offer a wide selection of policies to meet the needs and pocketbooks of most citizens; they are available now to all who need and want them, and they are adequate enough to meet the needs of this Nation.

Fastest growing of all types of coverage is major medical expense. These plans provide payment—after a deductible amount—for 75 to 80 percent of virtually all expenses incurred as a result of catastrophic illness, up to limits as high as $10,000 or $15,000. In just the last 8 years, the number of persons protected under these programs has grown from 2 million to more than 35 million—a 1,700-percent increase.

Not only has there been a great growth in the quality of coverage, but also in the quality of coverage. A study published by the Brookings Institution showed that health insurance covers 88 percent of all hospital expenses incurred by beneficiaries, and 81 percent of all surgical expenses.

Other studies—the latest made in 1960—bear out these percentages.

Mr. President, it is important for us to consider in our deliberations here today that the vast majority of our aged population is neither disabled by illness nor verging on bankruptcy. There are some who are, but programs are available to provide for their health care needs.

In 1960 this Congress wisely enacted the Kerr-Mills law to provide medical care for those who need it and cannot afford to pay for it. This law is now on the books and is being rapidly implemented. It enables individual States to guarantee to every aged American who needs help the health care he requires. The law also is designed to benefit older persons who are paying their day-to-day living expenses, but who could not afford to meet the cost of a serious or prolonged illness.

As I pointed out earlier, the problems of the aged vary with the individual States. The Kerr-Mills law enables each State to pattern its program to meet its own particular needs.

The growth of health insurance in this country has been little short of phenomenal in the past quarter century. A variety of health insurance policies are available now to all who are able to purchase them. The Kerr-Mills law already is available in most States to help those who need help.

Msgr. John O'Grady, secretary of the National Conference of Catholic Charities, has said that too many workers in the field of aging are, in effect, not seeing the forest for the trees. By concentrating on the small minority of our aged who represent an extreme situation—medically, emotionally, socially or economically—they are winding up with a distorted picture.

They have magnified the problems of a minority segment to such an extent that their image of the total group has become blurred.

Each year those who reach retirement age are better equipped financially to live self-sufficiently. The aged are bringing with them, into their years of retirement, the protection of pension plans, which an ever-increasing number of employers are setting up. And, as most of them have carried health insurance during their working lives, they have learned to value its protection and continue it after retirement.

The problem of financing the health care of our older nonindigent people comes closer and closer to solution each day.

The problem is a diminishing one. The dramatic change in the economic status of the aged is most noteworthy. Only 14 percent of the aged over 65 receive public assistance today, whereas 22 percent were receiving public aid in 1950.

Economists predict that this improvement will continue at an accelerating pace. We are dealing with a diminishing problem. There is no crisis. There is no need to make a hasty decision now on a hastily conceived proposal.

I should like to digress for a moment from my prepared remarks to say that there is no need at this time to make a hasty decision on a proposal now offered to the Senate as an amendment to the public welfare bill, which in itself exceeds 75 pages, which the Senate Committee on Finance has had no opportunity to hear.

I should like to comment on this phase of the question later. Anyone who knows of the workings of the U.S. Senate must recognize that the entire work of the U.S. Senate depends upon the slow and perhaps painful but also logical consideration of measures which come before it. Members of the Senate are required to a great degree to depend upon the logical, objective and thorough consideration which the committees of the Senate give to questions which come before us.

Despite the propaganda, the problem is a constantly diminishing one. It is a diminishing problem because it is being met by self-reliant individuals, by sympathetic families, by health insurance, and by private agencies and public programs such as the Kerr-Mills law.

The medical care system in this country has been largely responsible for the ever-increasing length of life expectancy. It has given millions a chance to live when they might have died a few years ago.

More and more people are passing the 65-year milestone into the era we commonly call old age. Only 1 person in 10 born in 1900 could expect to live to age 65, and then only to live 3 or 4 years longer. But today more than 66 percent will survive beyond age 65 and not for 3 or 4 years but for 15 or more additional years.

More than 4,400,000 Americans are living today who would have died if the 1937 death rate had continued at that level.

Our system of medicine has known no peer in history. Yet, if we adopt this health care proposal now before us we will be taking the first big step toward replacing our system with government medicine which has been tried and found wanting in country after country.

Similar health care proposals have been before Congress in the last three decades, but each time they were blocked by an upsurge of public protest.

I add at this point, Mr. President, my own mail on this question over a period of months has been running in excess of 90 percent against the medicare proposal.

I am sure my esteemed colleagues are aware of the present public sentiment on this issue as evidenced by the mail Members of Congress have received.

The most recent Gallup poll also confirms the fact there is a rising tide of sentiment against the proposal for financing medical care for the aged through an increase in social security taxes.

In his latest poll released this month, Mr. George Gallup, director of the American Institute of Public Opinion, said:

> The last few months have been a dropoff in public support for the administration's proposed social security financing of such health benefits. Since March, an increased number of voters have swung over to the belief that such aid for the Nation's older citizens could be better handled privately.

A year ago the Gallup poll reported that 67 percent of the people favored the administration's plan over private programs. In March of this year, the poll showed that 55 percent favored the social security approach. In the latest poll, announced this month, only 48 percent of the people favored the King-Anderson bill over private programs. This is a substantial shift in sentiment away from the administration position.

It is clear that this proposal is losing ground as more people understand it and what it really would do to them individually and to the Nation as a whole.

A survey conducted by the American Press magazine among newspaper editors and announced in the publication's April 1962 issue showed that 78 percent of the editors opposed the King-Anderson bill and that 84 percent favored a private program over a Government plan. It is reasonable to assume that most of these editors reflect the majority opinion of their readers.

The June 1962 issue of Nation's Business magazine reports the results of a survey of students in 17 public and private medical schools throughout America.

The magazine said the study showed:

> Greater Federal activity in health care would cause many young Americans to abandon the study of medicine. * * *
>
> All but a small number of the students interviewed feel that more Government interference would drag down the quality of treatment available to the public, impede medical research, reduce incentives for top performance by doctors and discourage

many bright young people from entering the profession. * * *

The survey showed that medical students overwhelmingly oppose proposals for providing medical care for older citizens under the social security system.

One of the principal reasons why many are opposed to the King-Anderson bill is the fact that the proposal would force the workers and employers of this country to pay increased taxes to provide health care for millions of the elderly who are financially able to pay for these services themselves.

Mr. President, I have used the term "King-Anderson bill" because, as I explained earlier, the Anderson-Javits amendment now pending before the Senate is a slightly disguised and modified version of the original King-Anderson bill, no matter how it is attempted to be interpreted.

There has been considerable confusion about how much additional payroll taxes wage earners and employers would be compelled to pay if this proposal became law.

At the present time, a worker making $5,200 a year is paying 3⅛ percent on a wage base of $4,800 or $150 a year. His employer is paying the same amount. Starting January 1, 1963, the worker will pay 3⅝ percent on $4,800 or $174 a year and again his employer will match it.

The King-Anderson bill calls for a double-barreled tax increase—a tax increase of one-fourth of 1 percent for employees and employers alike, three-eighths of 1 percent for the self-employed, plus a $400 boost in the tax base from $4,800 to $5,200.

By January 1, 1964, when the King-Anderson bill—or the Anderson-Javits amendment—would go into effect, the worker making $5,200 would pay 3⅞ percent on the new wage base or $201.50. Again his employer would match it with another $201.50. The tax increase for this measure would be $27.50 a year for each worker and the same amount for his employer—a total of $55.

This amounts to a 16-percent tax increase for employee and a like increase for employer.

Two more social security tax increases already are approved and scheduled to go into effect in 1966 and 1968.

The tax jumps to 4⅛ percent for the worker, matched by employer, in 1966, and to 4⅝ percent in 1968.

If the King-Anderson bill—or the Anderson-Javits amendment—becomes law hiking the tax base to $5,200, every social security tax boost now scheduled and all future increases will be paid on that new base.

And these figures are based on the lowest estimated cost of the proposed plan. No nation which has tried similar medical care programs ever has been able to estimate the cost correctly, and some insurance actuaries believe the estimates for the King-Anderson proposal are unrealistically low.

The young man entering the labor market at age 21 would be forced to pay this tax for at least 44 years, while today's retired, many of whom are well-to-do and who have not contributed a dime to the program, could get the benefits free.

This social security approach places the burden of meeting the cost of the program only on low-income workers and then on a gross income up to $5,200. The secretary earning $5,200 a year would pay the same social security tax as her boss earning $52,000 a year.

It has been estimated that 40 percent of taxable income in the United States is not subject to social security tax.

If medical care for the aged is a national problem, it should be financed from general revenues as provided in title VI of Public Law 86–778.

There has not been time to fairly assess the Kerr-Mills program or the many new private insurance plans for the elderly. They deserve a fair trial.

The Federal grant-in-aid program for the medical care for the needy and near-needy is designed to help those who actually need help—not to arbitrarily established groups. It preserves voluntarism, permitting the nonneedy to take care of themselves. It follows the traditional Federal-State organizational structure of our Nation. And it places administrative responsibility and authority where it belongs—on the local government, which understands and is close to local problems.

The Kerr-Mills law does not waste tax dollars on aged people who are perfectly willing and able to take care of their own medical care costs. It preserves the high quality of medical care now available in this country by maintaining the patient's free choice of doctor and the doctor's freedom to treat his patients in an individual way.

To adopt the King-Anderson bill—or the Anderson-Javits amendment—would be to meddle with the free practice of medicine—a system that has given this Nation the best medical care in the world. It would be the beginning of an irreversible program that eventually would expand until it covered every man, woman and child in this country.

We cannot strengthen this Nation by copying medical systems under which one country after another around the globe has lost leadership in science and medicine. We cannot strengthen this Nation by substituting medical failure for medical success. I urge you to reflect on the consequences of such a radical measure and to heed the lesson taught in England. The British have given us a history lesson we cannot afford to ignore.

Mr. President, I ask unanimous consent that there be printed in the RECORD at this point a table of references keyed to the remarks I have made, showing the sources and authorities for the figures and statistics I have given.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Mr. ALLOTT. Mr. President, I should like to propose a parliamentary inquiry at this time.

The PRESIDING OFFICER. The Senator will state it.

Mr. ALLOTT. Is it in order for me to withdraw the amendment which I have proposed?

The PRESIDING OFFICER. It is in order for the Senator to do so.

Mr. ALLOTT. How much time do I have remaining?

The PRESIDING OFFICER. The Senator has 5 minutes remaining.

Mr. ALLOTT. I withdraw the amendment which I previously proposed.

The PRESIDING OFFICER. The amendment is withdrawn.

Mr. ALLOTT. Mr. President, I send to the desk an amendment to the Anderson amendment and ask that it be read.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. In the Anderson amendment, identified as "6–29–62—A," it is proposed to strike the language beginning on line 1, page 1, through line 25 on page 74.

Mr. ALLOTT. Mr. President, much has been said and is being said on the subject of medical assistance for our elderly citizens. Yet for some reason we seem no closer to the truth today than ever before. The amendment I have offered would strike the so-called Anderson-Javits amendment. I venture to suggest that the large bulk of confusion has been induced by a deliberate effort to confuse, that the entire matter has become submerged in a morass of conflicting testimony that appeals to the emotions rather than to reason.

Much of what I will say today has been said before but if we are to understand this problem in its entirety and the effect of our actions not only upon the aged of our country but on future generations as well, the time we spend in reviewing the facts will be time well spent.

The subject of medical care of our senior citizens is a grave and complex

one, and cannot be dismissed with a few pat, cavalier statements. Neither is it a subject that should be charged with emotionalism, arbitrarily resolved in accordance with the whims of an administration that seeks only to enhance its power regardless of the harm that will be done. This administration seems to be more concerned with the means rather than the end and I propose therefore to set the record straight.

In order to set the record straight we must first define the problem. The problem concerns the individual, the community and the country as a whole. The problem needs to be examined with regard not only to the plight of our elderly people, but with respect to the role that is played by the family, various institutions and the government of the States in assisting the elderly to meet the growing costs of medical care. This problem is in danger of becoming, and has indeed become, a political football and it is time we cried "enough." The administration is so emotionally involved in trying to get its way with this matter, that it refuses to concede that the problem is already in a fair way being solved.

Rather than give the law of the land a chance to work, the administration would prefer to hold up the legislative processes concerning other important problems still to be solved by the Senate and the House, while it drags red herrings across our path. As a result the time we spend here will serve to delay needed legislation further.

At the same time through a lack of cooperation from the administration the law of the land which was enacted to provide the assistance that the elderly most desperately need is not being implemented with the deliberate haste that it deserves and the elderly of certain areas of our country are being deprived of the assistance they require.

It apparently matters not to this administration that our senior citizens are being deprived of their rights as long as the majority gets its own way with them. I suggest, Mr. President, that when the results of this recalcitrant attitude of the administration are weighed in the balance, that they are found wanting.

None of us are insensible to the needs of our senior citizens. All of us are gravely concerned regarding the problems of those who arrived on this earth before us and to whom we owe so much. We who are their sons and daughters have benefited from their labor and sacrifices on our behalf. They provided for us in our early years with the sweat of their brow; they watched over us and they guided us; they nursed us through our illnesses in the far watches of the night and through dark hours of despair. They saw to our education to the best extent of which they were capable, doing without in order that we might have advantages which they to a large degree could not afford themselves.

Even those who were childless were joined with our parents in achieving the scientific breakthroughs, the medical progress, the engineering marvels, the great strides in transportation, in education, in every phase of our modern life, so that we came into a life of advantages far greater than they themselves had enjoyed.

Who are the elderly of today but the workers, the scientists, the engineers, the teachers, the ministers, of yesterday? And now as they reach their sunset years, and as others reach them tomorrow, next year, and the years to come, their security and dignity is on our conscience. Now in the twilight of their years, some of our senior citizens are in need of assistance and it is and will continue to be the responsibility of all of us to see that they get it. We must see to it that they enjoy their remaining years in peace and dignity, not as wards under the benevolent despotism of an all-powerful Federal Government, but as free citizens able to live their own lives in gracious fulfillment.

Many of the facts and tables from which I will quote are from already published reports, but if we are to bring this problem to light in its true perspective, then these facts will bear repetition.

The problem is simply this: How many of our senior citizens need assistance in meeting the costs of medical care; what kind of medical care do they need; how much do they need; what will it cost; how is the required assistance to be given to them?

It is a well-known fact that since the early part of this century the proportion of the population which represents people of age 65 and over has doubled and that by 1980, about 10 percent of our population, something over 24 million people, will be 65 years of age or older. At the same time, that is, by 1980, the proportion of the population of working age will be less than it is today. So, whatever the cost, and rising as it will, to take care of an ever-increasing quantity of people in the elderly bracket, payment for those costs will have to come from an ever-diminishing group of wage earners.

Further factors bearing on the problem are that the majority of the aged are women and this proportion increases with age, the proportion of married persons drops with increased age and the proportion of the population age 65 or over varies not only State by State but further by county within States. To summarize, the essential facts are that our aged population is increasing with greater longevity among women and an uneven geographical distribution.

By the beginning of 1964 Social Security Administration estimates the total population 65 or older will be about 9 percent or approximately 17,900,000 persons. As I said a moment ago, not only the oldest age group, but also the youngest, will grow faster than the rest of the population. Between 1950 and 1960, while the number of persons 65 years of age or older increased by 34.7 percent, the number of those under 20 years of age increased by 34.4 percent. At the same time the increase in the group 20 to 64 years old was only 6.9 percent. This latter is the age group, of course, in which are the vast majority of those actively employed.

To interpret this information in another way, it might be said that while the younger group is growing very fast and those in the oldest group are growing very fast, those in the middle group, who would have to provide the money to pay for this program, are not increasing nearly so fast.

As I have said, the increase in the group 20 to 64 years old was only 6.9 percent. This latter is the age group, of course, where we find the vast majority of those actively employed. It represented 57.9 percent of the total population in 1950 and only 52.3 percent of the population in 1960. In this same decade there was an actual decline of 9.2 percent in the number of persons 20 to 29 years old. This is the age group which was made up of persons born during the prewar years when the birth rate was low.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD two tables published by the Bureau of the Census. One shows the total U.S. population and population age 65 and over for the years from 1920 to 1980. The second depicts the shifting percentage composition of the population by age group.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

Total U.S. population and population age 65 and over, 1920–80

Year	Total population (millions)	Population age 65 and over	
		Number (millions)	Percent of total population
1920	106.0	4.9	4.7
1930	123.2	6.6	5.5
1940	132.1	9.0	6.9
1950	151.3	12.3	8.2
1960	179.3	16.6	9.2
1970	208.2	19.5	9.4
1980	245.4	24.5	10.0

Source: U.S. Bureau of the Census: U.S. Census of Population: 1960, vol. I, for 1920 to 1960 data; "Illustrative Projections of the Population of the United States by Age and Sex, 1960 to 1980," series P–25, No. 187 (Nov. 10, 1958), p. 16, for 1970 and 1980 projections. Projected data are series III of the 4 series prepared and are based on an assumption of relatively high birth rates. The projections exclude data for Alaska and Hawaii.

Percentage distribution of U.S. population, by age, 1900 to 1960

Year	Percent of population			
	Total	Under 20 years	20 to 64 years	65 years and over
1900	100.0	44.3	51.4	4.1
1910	100.0	41.9	53.6	4.3
1920	100.0	40.8	54.6	4.7
1930	100.0	38.8	55.8	5.5
1940	100.0	34.4	58.7	6.8
1950	100.0	34.0	57.9	8.2
1960	100.0	38.5	52.3	9.2

Source: U.S. Bureau of the Census, U.S. Census of Population: 1960, vol. I. Because of rounding, items may not add to totals.

Mr. ALLOTT. Mr. President, a steady increase in the proportion of the aged group in the population during the last 60 years is apparent. The proportion of the population that is under 20 has not followed a consistent pattern. Predictions for this segment of the population over the next two decades are difficult because this birth rate depends on economic developments, social trends, and changing attitudes regarding the desired

size of families but I think that it is safe to say that the proportion of the working age group will be less in 1980 than it is in 1960. Factors that are inhibiting the growth of this age group are military service and the emphasis on higher education which reduces the number of those available for employment.

I believe the two tables which I have just placed in the RECORD support this conclusion adequately.

It should be further noted at this point that the greatest relative increase among the over-65 population has been at the upper end of the age scale. Data from the 1960 U.S. Census of Population show that, among the aged, the older the group, the greater has been its proportionate growth. Between 1950 and 1960 the following increases in population were registered in the specified age groups:

Increase in population from 1950 to 1960

Age group:	*Percent*
65 to 69 years	24.8
70 to 74 years	38.6
75 to 84 years	41.1
85 years and over	60.8

The geographic distribution of the aged is also worthy of note. In 18 States at least 10 percent of the population was age 65 or over on April 1, 1960. The heaviest proportionate concentrations of aged persons were in the Plains States and New England. Iowa and Missouri respectively had 11.9 percent and 11.7 percent of their populations age 65 and over. Florida, with 11.2 percent, had the largest ratio of 65 and over persons of any State outside these regions. In only eight States, Alaska, Arizona, Hawaii, Nevada, New Mexico, North Carolina, South Carolina, and Utah, was less than 7 percent of the population in the age group with which we are here concerned. The highest rate of growth in the aged population took place in Florida and Arizona. Here, the number of persons age 65 or over more than doubled between 1950 and 1960. California and Nevada have had rises in their aged population of over 50 percent in each of the past two decades. However, because of the rapid growth in the total population in Arizona, California, and Nevada, the proportion of the total represented by the aged has not changed significantly. Indeed, the proportion over 65 in Nevada declined from 1950 to 1960.

An excellent examination of the economic factors affecting our elderly people can be found in a report prepared by the Blue Cross Association and the American Hospital Association. This report is based on factual data supplied from a number of sources, including the U.S. Bureau of the Census, the Social Security Administration, and others.

Mr. President, I ask unanimous consent that this statement may be printed at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. ALLOTT. Mr. President, I believe we should now turn our attention to medical developments and changing health patterns as they affect the people with whom we are concerned. For many reasons of advances in medical science and improvements in our environment there has been a marked increase in life expectancy from 1920 to 1960. For example, in 1920 male babies could be expected to live for an average of 53.6 years. In 1960 male babies could be expected to live an average of 67 years. At the same time there has been an increased exposure on the part of the aging population to chronic disease.

The decline in the death rate is in great measure attributable to the enormous advances made in the control and elimination of infectious diseases but the pattern here is that while pneumonia and influenza, tuberculosis, and diarrhea and enteritis are all but conquered we now find ourselves faced with increasing incidents of heart disease, cancer, and cerebral vascular diseases.

It has been said, then, that chronic illness, in contrast to acute illness, is much more prevalent among the elderly than among those under 65.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a table showing the percentage of persons having chronic conditions, by age and sex, in the United States, July 1957–June 1958.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Percentage of persons with chronic conditions, by age and sex, United States, July 1957–June 1958

Chronic conditions	Males			Females		
	All ages	Under 65 years	65 years and over	All ages	Under 65 years	65 years and over
Percent of persons with at least 1 chronic illness	39.1	36.0	75.2	43.5	39.8	80.6
1 chronic condition only	23.1	22.9	26.2	22.8	22.4	26.9
2 chronic conditions	9.3	8.3	21.3	10.7	9.8	19.9
3 or more chronic conditions	6.7	4.8	27.7	10.0	7.6	33.8

Source: U.S. National Health Survey, "Limitation of Activity and Mobility Due to Chronic Conditions, United States, July 1957–June 1958," U.S. Public Health Services Publication 584–B11 (July 1959), cited in Mortimer Spiegelman, Ensuring Medical Care for the Aged, Pension Research Council Publication (Homewood: Richard D. Irwin, Inc., 1960), p. 51.

Mr. ALLOTT. Mr. President, what is the outlook for the future? While it is difficult to forecast accurately, there is very good reason to believe that science will continue to improve the state of the medical art, and that our people will live longer; and it is, therefore, likely that a greater portion of the population will live to older ages than even now are extrapolated.

In examining the needs of our elderly, we must consider the costs of medical care and must note the increase that has taken place within the past several decades. While the consumer price index rose 70 percent from 1929 to 1959, the medical care index rose 105 percent; and from 1950 to 1960, the percentage rise in the medical care index was approximately twice that of the overall index, and more than that of any other major CPI component. There are many reasons for this, of course. Inflation has taken its toll here, as it has everywhere else. There are other factors, also. While a manufacturer can automate with machine tools to offset the rise in labor costs, a hospital can automate only a small part of its clerical functions. The surgeon must still perform the surgery; an anesthetist cannot be replaced by a punched card; a scrub nurse cannot be replaced by a conveyor belt. In addition, science has introduced into the medical world an ever-widening scope and an ever-increasing complexity of services. Labor costs have risen significantly, through the correction of extremely low wages, shorter workweeks, the increase in hospital personnel, and the higher costs of personnel who are better trained, in order to be more efficient and skillful, and who can meet the demands of today's medical science for higher standards of care. In the factories, new techniques often result in smaller labor forces in specific areas, while in the hospitals, new techniques and services result in the need for more and better trained personnel and equipment, rather than less. As an illustration, I request unanimous consent to have printed at this point in the RECORD a news report from Time magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FREEZING FOR PARKINSON'S

The movies that Manhattan's Dr. Irving S. Cooper showed to the American Medical Association last week were heart rending even to medical men familiar with the ravages of disease. There were pictures of adult victims of Parkinson's disease, or "shaking palsy"—men who could not stay the agitated tremor of their rigid, half-clenched hands, or could not walk except in jerky petits pas. There were children suffering from nerve disorders similar to Parkinsonism. During an attack, a pretty girl of 11 was doubled up, her whole body distorted and shaking. A boy the same age was bent backwards; eventually, said Dr. Cooper, his back and legs might arch until his head touched his heels.

All those pictures were of people who had not yet been operated on by Dr. Cooper. Next, the inventive neurologist paraded the same grateful postoperative patients before the professional audience. Ex-Coal Miner Arnold Smith, 46, has been so completely freed of the palsy that he has taken up a new career as a physiotherapy aid at the Whitesburg Memorial Hospital in Kentucky. Remarkably erect Joan Harris, now 15, of Larchmont, N.Y., is doing well in school. The boy, 13, is as straight as a spruce, and supple as a birch. But there were still more surprises to come. These patients, like famed Life photographer Margaret Bourke-White, were operated on by techniques that Dr. Cooper, 39, now considers outmoded. The patients he really wanted to show off

were the next to be presented: a housewife and a schoolgirl on whom he operated by freezing a pea-sized portion of the brain.

CROSSED CONNECTIONS

Parkinsonism (the cause of which is unknown in most cases) is a disorder of nerve cells near the thalamus deep in the brain. The affected nerve cells keep on firing impulses for muscle contraction when the contractions are not necessary. Effective treatment consists of somehow interrupting these misfiring nerves.

Dr. Cooper's first approach, back in 1952, was to sever an artery supplying the nerve-cell complex. Though many patients got relief, several died, and an equal number were left worse off than before their operation. Next he tried injecting absolute alcohol into part of the brain near the thalamus. Then Dr. Cooper put the alcohol into the thalamus, as in Photographer Bourke-White's case.

THREE IN ONE

But the neatest, cleanest way to kill a specific segment of tissue in a living body is by rapid deep-freezing. Dr. Cooper's newest technique, used in almost 200 cases in the past year, is to put the patient on the operating table under a battery of X-ray machines. Using a local anesthetic, he saws out a dime-sized piece of the skull, then inserts a three-in-one tube, only 2 millimeters (less than one-twelfth inch) in diameter. The tube slips painlessly through the insensitive brain to the deep-lying thalamus. The tube's outer layer is a vacuum insulator; the innermost bore carries liquid nitrogen supplied at minus 196° C.; the middle layer is for warmed and gaseous nitrogen to escape.

When the X-rays show that the tip of the tube is in the thalamus, Dr. Cooper lets in enough liquid nitrogen to drop the tip temperature to zero or minus 10° C. This knocks out the nerves, but does not destroy them. He asks the patient to raise an arm, or leg, or both: If the patient has full control of his limbs, with no tremor remaining, the tip is in the right place.

Then Dr. Cooper admits more liquid nitrogen, to drop the tip temperature to minus 40° or minus 50° C. In less than 5 minutes, this rapid freezing kills the offending, misfiring nerve cells. If the freezing extends a bit too far and the patient becomes unable to move his arm satisfactorily, Dr. Cooper has 30 seconds in which to correct the error and rewarm the thalamus. Most patients can be out of bed the same day and out of the hospital within a week.

Now that nitrogen injection kits are being manufactured, other neurosurgeons, still skeptical, will try to duplicate Dr. Cooper's results. Awaiting the benefits of his bold pioneering are at least 300,000 U.S. victims of Parkinsonism, a lifelong affliction, of which doctors say: "Patients don't die of this disease—they die with it."

Mr. ALLOTT. Mr. President, it has been reported that the small special equipment developed for the operation referred to in the article which I have submitted for the RECORD would cost $5,000 per unit, certainly not an overwhelming figure when we think of the misery and agony such equipment will do away with, but, nevertheless, an illustration of the fact that every step of progress is costly.

Not only must we be concerned with the increasing cost of rendering hospital services of one sort and another; another factor in those costs is the increase in the per capita use of hospitals. As further improvements in medical science are inaugurated, we can expect that they will spur continued growth in the demand for health services. Hospitals and doctors are doing their best to maximize the result per dollar cost, by introducing efficiencies in their procedures and organization; but even as these are improved, we can expect the standards of care to be raised, the scope of services to be expanded, and consumer demand to continue to grow.

At this point I should like to state that in my personal conversations with the superintendents of many hospitals, and particularly in my conversations with the superintendents of hospitals in my own State, I have been impressed by the very great efforts they have made to try to find ways to reduce hospitalization costs. Some of the plans they have thought of and have considered show a maximum of objective thinking in their attempts to deal with this problem. They know what the problem is. But it is not possible to place, as I have stated, hospital patients on a conveyor belt and, by placing a screw here and a nut there, expect to have them repaired.

So it is obvious that hospitalization costs will constantly increase. But I should like to make very clear that, in my opinion, the personnel involved—the hospital superintendents and all the other administrative personnel of the hospitals—are devoting their best energies in the endeavor to find new ways to prevent further increases in hospitalization costs.

As examples of the kind of costs I am talking about, it is well to consider that while we gratefully hear of someone whose life has been saved through the use of an artificial heart, or that a cancer has been arrested through the use of a cobalt machine, very few of us know that an artificial heart-lung machine costs about $45,000, a cobalt machine about $30,000, and X-ray movie cameras cost from about $20,000 to $50,000. As these newly developed machines are added to the hospital inventories, they require more, rather than less, people to operate them. True, the equipment is expensive; but the outstanding cost for these new services is that for the new, trained personnel to operate the equipment.

These costs will continue to rise as medical science continues to develop, because as fast as the new services and equipment are developed, the public or the consumer demands that their use be made available to him. So as time goes by, medical care will become more complex and more costly.

Let us now take a look at what these costs mean to the individual consumer. In 1958, the annual per capita gross expenditures by noninstitutionalized citizens for personal health care was $177 for persons 65 and over, and less than half this amount, or $86, for persons under 65. The Department of Health, Education, and Welfare recently estimated that the total public and private annual expenditures for health care of the aged was nearly $5 billion. Total health expenditures for all persons in the United States in the year ended June 30, 1960, were $26.5 billion—$20.3 billion private expenditures and $6.2 billion public expenditure. It would appear, then, that the health bill for persons 65 and over, although they constitute less than 10 percent of the total national population, represents almost 20 percent of total national expenditures for health. Not only are the health-care expenditures for aged persons greater than those for their younger counterparts, but in recent years they have been increasing at a greater rate. A Health Information Foundation study compared two 12-month periods—1952–53 and 1957–58. Between the two periods, the gross per capita expenditures for elderly persons increased by 74 percent, while for all persons the rise was only 42 percent.

One of the difficulties apparent here is that the higher per capita health-care expenses incurred by the aged come at a time when family income has declined. As a result, health-care costs take a disproportionately large part of the elderly family's income.

As of 1958, hospital-care expenditures represented a greater proportion of the total health-care outlays for the aged than for those under 65. From 1952–53 to 1958 the greatest absolute increase among the types of medical expenditures for the elderly was for those for hospital services. For all major types of physicians' services—home calls, hospital calls, office calls, and surgery—expenditures for aged persons are substantially higher—from 26 to 105 percent higher—than those for all individuals.

In addition, hospital care for the elderly costs much more than that for younger persons. If we examine the history of hospitalized persons, we find that those over 65 incurred an average expenditure of $352, compared with an average of $168 for persons of all ages who were hospitalized. These figures are for the years 1957–58.

The PRESIDING OFFICER. The time available to the Senator from Colorado has expired.

Mr. HUMPHREY. Mr. President, has the Senator from Colorado used all of the 30 minutes available to him on the amendment?

The PRESIDING OFFICER. That is correct.

Mr. HUMPHREY. Let me inquire whether the Senator from Colorado wishes to have additional time made available to him. I think so highly of my friend that I wish to cooperate in every way possible.

Mr. ALLOTT. I am very grateful to the Senator from Minnesota, even though I do not seem to have impressed him this deeply before. So I shall be grateful to have additional time made available to me.

Mr. HUMPHREY. Would an additional 10 minutes be helpful to the Senator?

Mr. ALLOTT. Of course.

Mr. HUMPHREY. Then, Mr. President, I am glad to yield 10 additional minutes to the Senator from Colorado.

The PRESIDING OFFICER. The Senator from Colorado is recognized for 10 additional minutes.

Mr. ALLOTT. I would like now to turn to the utilization of health facilities and services by the aged. Aged persons utilize most health-care services to a

considerably greater degree than the population as a whole. They are admitted to hospitals more frequently and stay longer. They are the predominant users of nursing homes and other long-stay institutions. They require and use a greater volume of physicians' services. They spend more on drugs. They do spend less for dental service than the population as a whole.

How is the financing of health care for the aged managed? A National Health Survey provides the most recent and comprehensive nationwide data on hospital insurance coverage. The survey was conducted during the period of July 1958 to June 1960.

The study showed that two-thirds of all persons discharged from short-stay hospitals met at least some of their hospital charges through insurance. Half of the aged discharged patients had some part of their bills covered by insurance. Some portion of hospitalization charges was covered by insurance for 63.3 percent of the persons age 65 to 69; for 53.9 percent of those between 70 and 74; and for 37.5 percent of those 75 and over.

Among all persons discharged from short-stay hospitals who received some insurance benefits, 75 percent had at least three-fourths of their bills paid by insurance. Of those 65 and over who received insurance benefits, 59.2 percent had at least three-fourths of their hospital charges covered.

The net result is that among the discharged patients, at least three-fourths of the hospital bill was covered by insurance for 51.3 percent of the persons of all ages, 30.3 percent of the persons 65 and over, and 20.2 percent of those 75 and over. It is interesting to note that hospital insurance coverage, particularly for the aged, is largely dependent upon employment. In a 1957 study of aged persons, it was found that less than 4 out of every 10 persons 65 and over had some form of voluntary health insurance. Almost all of those with health insurance had hospitalization, approximately two-thirds had coverage for inhospital doctor visits, and about one-fifth had coverage for physicians' home or office visits. Fifty-seven percent of all aged persons with health insurance had first obtained such coverage through a job, either their own or their spouse's.

About one-sixth of the elderly persons studied were uninsured but had been insured in the past. Nearly half of the formerly insured persons had obtained insurance through their work. The principal reasons given for terminating insurance were retirement from employment, belief that coverage was too expensive, and dissatisfaction with the benefits offered.

Half of the aged who had no health insurance said that they would be interested in obtaining such insurance, but felt that they either could not afford it or could not obtain it. The rest of the uninsured group either did not want insurance or were not interested.

A study of the uninsured in 1958 indicated that persons who did not have health insurance were more likely to be found among these groups: nonwhites, unmarried individuals, full-time housewives, retired persons, members of low-income families, residents of rural farm areas, and the aged. For 12 percent of the uninsured persons of all ages, coverage could be obtained through work by either the uninsured individual or other members of his family. However, only 1 percent of the uninsured persons 65 and over could obtain coverage in this way, and no coverage was possible through work for approximately 99 percent of the uninsured aged.

A 1957 survey by the Bureau of Old-Age and Survivors Insurance showed insurance paid at least part of the hospital, surgeon, and inhospital physician costs for 54 percent of the OASI beneficiary couples with a member hospitalized in general hospitals and 48 percent of the hospitalized single beneficiaries. Slightly more than 30 percent of the hospitalized beneficiaries had at least half of these costs paid by insurance; 7 percent had all these costs so paid.

The survey also found that the percentage of those who received hospital care during the year was higher among those who had insurance—14.2 percent—than among those who did not—8.8 percent.

A 1958 study indicated that average hospital bills increase with patients' age and, moreover, that older persons pay a larger proportion of such charges out of pocket without the help of insurance. The data also suggested that not only do fewer of the aged than of the young have health insurance, but that those who do have insurance have poorer protection than their juniors.

Data provided by Blue Cross plans show that between 4.3 and 5.1 million persons age 65 and over are covered by Blue Cross. Some 24 percent of all Blue Cross group subscribers are now included in enrolled groups that have provisions for continuing retirees as part of the groups. Provisions for employer contributions toward the cost of this arrangement are increasing. Some 25 percent of all Blue Cross subscribers are persons who have left employment where they were covered on a group basis, or who enrolled as individuals—a large segment of this group are persons 65 or more.

About 4 to 4¼ million persons age 65 and over are covered by commercial health insurance. Of these, 750,000 are insured under group plans and about 1 million are covered under mass enrollment programs. The remaining aged—about 2.5 million—covered by insurance companies have individual policies.

There are many programs of private health insurance which are of assistance to the aged. Coupled with these, as I will later show, the Kerr-Mills law is being made a workable solution to the problem of assisting the elderly to obtain and pay for the assistance they need.

What, then, is the problem? A few of the major points are these:

Half of the aged persons in the United States have money income of less than $1,000 a year. Although the older persons have somewhat higher than average asset status when compared with younger persons, much of their assets are difficult to convert into purchasing power. A mortgage-free home is a fine thing to have, and actually represents a type of income, because the owner does not have to pay rent; but such assets are difficult to convert into purchasing power.

The aged have higher medical expense. They use hospital and medical services more. On the average, the aged spend considerably more than the rest of the population for hospital care and significantly more for all the other elements of medical care except for dental care. Like all of us, they face rising medical costs, and these costs have been rising faster than any other item in the Consumer Price Index. Because of the nature of medical science, it is likely that medical care costs will continue to rise faster than other items in the Consumer Price Index. We know that, as among all age groups, the costs of medical care fall unevenly and unpredictably; that while some have few medical expenses in a given year, others have very high expenses. We know that the incidence and prevalence of illness are greater among the aged, and we know that once the aged become ill, they are more likely to remain ill.

We know that fewer of the aged are covered by prepayment or insurance than persons below 65. We know that the coverage of the aged is of lesser benefit quality, in general, than the coverage of younger age groups. We know that in the past few years, prepayment and insurance have made impressive strides in coverage of the aged and in removal of many restrictions. Various public programs such as those covering free or reduced rate mental and tuberculosis care, are widely available. It is not only the aged who experience low income, high medical expenses, and low protection. To a lesser extent, the younger population contains persons in a similar plight. But more of the aged are caught in the problem of low income and high medical expenses, and their economic position is unlikely to change, a hope that is not denied to the younger. Because of their fixed position, they are more vulnerable to the costs of inflation.

The PRESIDING OFFICER. The additional time of the Senator from Colorado has expired.

Mr. HUMPHREY rose.

Mr. ALLOTT. Does the Senator have in mind speaking on this particular amendment?

Mr. HUMPHREY. The Senator primarily has in mind cooperating with the Senator from Colorado.

Mr. ALLOTT. I shall be pleased if the Senator will yield me another 10 minutes.

Mr. HUMPHREY. I am glad to yield the Senator 5 minutes at this time.

Mr. ALLOTT. I am glad to have it. I appreciate the Senator's courtesy.

The PRESIDING OFFICER. The Senator from Colorado is recognized for an additional 5 minutes.

Mr. ALLOTT. Mr. President, what are the requirements, then, of a health assistance program? The requirements can be simply stated. It should be based on free enterprise and freedom of choice

which, God willing, will always be the posture of Americans. It should be established on a sound and reasonable basis for providing assistance to individuals over 65 who otherwise would experience difficulty in paying for medical care.

Mr. President, it is important to repeat that latter phrase—"who otherwise would experience difficulty in paying for medical care." There are many who are able to take care of their own problems quite satisfactorily in their own way without any assistance from anybody, least wise the Federal Government.

Such a program needs to be administered at the State and local level, where the problems of the people within the State are better understood and more efficiently handled.

And finally, such a program should be made financially feasible for the States in order that they can implement it.

Mr. President, I now propose to show that the Kerr-Mills law meets the requirements better than the proposal which we have before us today.

Mr. President, if I may have the attention of the distinguished acting majority leader, I have in mind offering another amendment. This is a convenient time for me to interrupt my discourse. If the Senator wishes to reply to the argument on the amendment, to use the remainder of his time, I inform the Senator it is my intention to withdraw the amendment.

Mr. HUMPHREY. I suggest that the Senator proceed according to his announcement and withdraw his amendment. I know the Senator has strong convictions on these matters and wishes to express those convictions, as he has done so well today. We can proceed to consider the other amendments. I shall be more than happy to yield back any remaining time I have on this particular amendment. If the Senator will withdraw the amendment, we can proceed to consideration of other amendments.

Mr. ALLOTT. Mr. President, if the Senator has yielded back his remaining time——

Mr. HUMPHREY. I yield back my remaining time.

Mr. ALLOTT. I withdraw my amendment.

The PRESIDING OFFICER. The amendment is withdrawn.

Mr. HUMPHREY. Does the Senator intend to offer another amendment?

Mr. ALLOTT. Mr. President, I offer the amendment which I send to the desk, and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. It is proposed to strike out the language beginning on line 18, page 57, and ending on line 15, page 75, of the Anderson amendments.

KERR-MILLS ACT

Mr. ALLOTT. Mr. President, as I have suggested, I now intend to discuss certain provisions of the law relating to the Kerr-Mills Act.

It has been the custom under the present administration, as well as in past administrations, to hold White House Conferences, in which experts in a particular field are called together in an effort to work out recommendations for solving some of the problems facing the Nation. One such conference was called, for a meeting in January of 1961 to discuss the problems, potentials, and challenges of an aging population. For 4 days, more than 2,500 delegates met in Washington, D.C. The results of that conference cover a variety of subjects.

We are fortunate that on May 15, 1961, the Special Committee on Aging of the U.S. Senate, under the able guidance of my good friend and colleague, the Senator from Michigan [Mr. McNAMARA], issued a document which I now hold in my hand. It is the committee print of the White House Conference on Aging, and I would call special attention to page 37 of the committee print, which is entitled "Policy Statement and Recommendations—Institutional Care." Since the recommendations by the experts on the subject of our senior citizens deals directly with the matter under consideration by the Senate, I should like to read from the report.

On page 37, after a preliminary statement, the Report by the White House Conference on Aging says:

> Adequate care cannot be provided without sufficient financing, both for construction and for provision of services. Costs should be kept to the lowest possible level consonant with high-quality care, through planning, efficient management and economical use of facilities. No needed care should be denied because of inability to pay, nor should the financing mechanism create impediments to the proper utilization of the various types of facilities, including the home. Everything possible should be done to encourage voluntary prepayment groups to expand and broaden their coverage for aged individuals, and further, to extend such coverage over the whole institutional care spectrum, and to care in the home. Local, State, and Federal Government financing will be required in increasing amounts to supplement individual resources and voluntary prepayment. Existing Federal State, matching programs will provide effective, economical, dignified medical care for our elderly citizens who need help. The implementation of such programs should result in the high quality of medical care desired. Compulsory health care inevitably results in poor quality health care.

I repeat, "Compulsory health care inevitably results in poor quality health care." I would like to point out, for the benefit of any of my colleagues who might have entered this Chamber toward the end of my statement, that I was not reading from the Republican platform of 1960. I was reading from the committee print published by the Special Committee on Aging, listing the recommendations of the White House Conference on Aging of January 1961.

The minority views hold to the contrary, and urge what is tantamount to medical care under social security, although it is not specifically referred to as such. It is worth noting that in July of 1962, just as in the early days of 1961, the people of this country continue to hold steadfastly to the view reflected by the majority in the White House Conference. My mail has been running overwhelmingly against the King-Anderson-Javits approach, that is to say, medical care for our senior citizens under social security.

It appears to me that in the deliberations which are now taking place in this Chamber we are disregarding the considered judgment of experts as well as the wishes of the majority of the people in this country. From my State of Colorado there was a delegation to this White House Conference which included Robert L. Knous, our Lieutenant Governor, the chairman of the Governor's Commission on Aging. In addition, the following persons were also in attendance:

Dr. Albert H. Rosenthal, District Regional Director of HEW; Mr. Riley Mapes; Dr. William T. Van Orman; Miss Charlene J. Birkens; Dr. Roy L. Cleere, head of our State medical office; Dr. Franklyn Ebaugh; Dr. Richard Haney; Dr. Heber Harper; Mr. Samuel Janzen; Mrs. Ray Landis; Mr. Archie G. Maine; Mr. Herrick Roth; Mrs. Edith M. Sherman; Dr. Lennig Sweet; Mrs. Leslie E. Taylor; Mr. Franklyn Stewart; Mr. Bernard Teets, Director of our State Department of Employment Security; Mr. Lindsay E. Waters; Dr. John Zarit.

The severest critics of the Kerr-Mills approach to medical care for those over 65 point to the fact that the act has simply not accomplished the purpose. Apart from the fact that I consider it ill-reasoned to expect a program of this magnitude to be functioning at peak performance 22 months after enactment—just as unreasonable as criticizing our space program for its inability to reach the moon in the relatively short time it has been in existence—there is also the fact that the executive branch has not been pursuing the implementation of Kerr-Mills as assiduously as the program warrants. During the hearings before the House Subcommittee on HEW Appropriations, Secretary Ribicoff made the following statement:

> Now, administratively, we want to get results. One important task was the problem of getting out the results of the White House Conference. Thirty-seven separate publications have been issued.

On the other hand, and as I will point out in just a moment, the Department of HEW, with appropriated funds at its disposal, has not been moving forward in an effort adequately to put Kerr-Mills into full operation as the Congress intended. I commend the Secretary for disseminating the results of the White House Conference, and find myself only disappointed that the recommendations have not been followed, at least as they apply to Kerr-Mills.

At this point I must go outside my prepared statement and remark upon one of the great failures and frailties of the Congress and the great structure of Government that we have. An hour or so ago the Senate voted upon an amendment proposed by the distinguished Senator from Wisconsin which would provide for a commission to study manpower needs and the assets available for our space program.

His amendment provided for the appointment of a council to make such a study. I voted against the amendment, not because I am not convinced that

there is a need. There is a great need for such a study. I voted against the amendment because the council would meet, much money would be expended, and then even before a report of the study was published or before the council had arrived at a conclusion, the chances are about 90 to 1 that the people in the space agency, the Congress and the administration, would go galloping off without paying any attention to what the council had reported anyway.

We have followed such a procedure on the question of taking care of our aged. I am astounded that we in the Congress again and again appropriate money to various commissions, agencies, and bureaus to investigate aspects of certain questions, and then before even a report of the study is prepared, we pass impressive and extensive legislation involving hundreds of millions of dollars which does not even take into consideration the findings of the various commissions so appointed, because the commissions have not yet reported.

In the present instance, we are asked to do it again, and we shall repeat the process again and again. I wished to refer particularly to the vote today on the amendment of the Senator from Wisconsin, because I think it is perfectly obvious that while the need the Senator from Wisconsin had in mind is very great, the results from such a study would never have seen the light of day. If they did see the light of day, they would wilt as fast as a fresh violet plucked from a mountain meadow.

Mr. HRUSKA. Mr. President, will the Senator yield?

Mr. ALLOTT. I am happy to yield to the distinguished Senator from Nebraska.

Mr. HRUSKA. First, the Senator from Colorado is making a fine contribution to the discussion at hand. He handles his material well and shows that he has become a student of no mean knowledge on the subject.

I should like to ask the Senator from Colorado whether or not it is true that on occasion, instead of overstudying a subject or a pending measure, we do not get into it enough by way of our legislative process, and the measure which is before the Senate—the so-called King-Anderson-Javits proposal—is probably a good example of that point. No committee hearings have been held. There has been no documentation of the various points of view or of the provisions of the bill. No estimate of cost that I know of has been formulated by any Government authority which would normally be consulted on the question. Would the Senator have any comment upon that particular aspect of the proposed legislation to which his amendments are directed?

Mr. ALLOTT. I certainly do have. I wish to thank the distinguished Senator for his contributions. It is true both ways. I was particularly interested in the fact that while we paid attention to what the White House conference for the aged did, we have turned around and pursued the most inconsistent, illogical, and almost immature approach to a question like the one pending before the Senate, which would affect the lives of most of us, God willing, and certainly the lives of many individuals. We would do so by seeking to jam through the Senate an amendment which would take the social security approach to the health care for the aged.

It is a measure which would have great tax consequences for every employer and employee, and its provisions are completely inadequate. Sometime within the next few hours I shall probably get to that aspect of it. It is completely inadequate for the needs.

We are asked to commit hundreds of millions of dollars to a program in a field which is already adequately serving or could adequately serve the people, and yet we would do so without even letting the measure go to the Senate Committee on Finance, the committee upon which we must depend to study these questions and make recommendations. We are asked to act on the measure without a report or a recommendation from that committee.

Mr. HRUSKA. Mr. President, I thank the Senator for yielding to me.

Mr. ALLOTT. I thank the Senator. His thoughts have been most helpful.

In recognition of the fact that among our senior citizens, there are those unable to meet the costs of medical, hospital and other related treatment, the Congress, in 1960 passed the Kerr-Mills bill which, in essence, provides for a Federal financial participation in State programs established to meet these needs. To provide for those 65 and over already covered by old-age assistance, the bill would increase those benefits to cover the medical aspects.

While I shall discuss that point later, I think it is only appropriate to call attention now to the fact that the Anderson-Javits amendment, which we are now considering, would provide no medical care outside of a hospital or certain designated nursing homes. For those over 65 not covered by old-age assistance, the Kerr-Mills bill authorized medical coverage in specified amounts.

Kerr-Mills has the benefit of the customary legislative process, and was accorded complete committee hearings and consideration—culminating in a report by the Senate Committee on Finance dated August 19, 1960.

Mr. President, each of us who was here at the time had an opportunity to study that report. It was Report No. 1856, 86th Congress, 2d session. It stands as a tribute to the unanimity of feeling regarding the bill, that the vote on final passage was 91 to 2 in favor of passage. And yet, scarcely has the time elapsed in which to implement this legislation, and the Senate is now being asked to junk it and start afresh.

What is proposed is that we pile this monstrosity on top of it. If we do so, we will have a real situation on our hands.

Opponents of Kerr-Mills urge that the act be set aside, almost before the ink is dry, despite the fact that better than 24 States have enacted legislation in reliance upon its permanency. It is difficult to conceive how a program, concurred in by 91 Members of this body, only 22 months ago should now become unworkable or, as the Special Senate Committee on Aging concluded:

> It proves that Kerr-Mills cannot, of itself, solve that problem which our committee has found to be the most persistent and frightening one confronting millions of older people and their children in all parts of the country—the problem of assuring economic access to medical care for all our older people on a decent, self-respecting basis.

Before this body relegates to the ashcan a program upon which a substantial number of States have relied, a program which a number of States have implemented by legislation, a program which was and is dedicated to fulfilling the needs of our senior citizens, it would be very useful to examine the act in detail in order to clear the air of misunderstandings and have clearly in mind what the objectives of the Kerr-Mills bill are, and what its accomplishments have been in the brief period it has been law.

The Senate Finance Committee, reporting on H.R. 12580, the social security amendments of 1960, said as follows:

> In this 25th anniversary year of the Social Security Act, the committee has examined proposals relating to almost every title of the Social Security Act. As a result of our consideration, the committe is reporting a bill which makes changes and improvements in all of the programs encompassed by this legislation. The major issue presented to the committee this year has been the increasing cost of adequate medical care for older people. The evidence presented to the committee indicated that these costs derive, to a large extent, from the fact that impressive improvements have been made in medicines and medical technology, which assist in better diagnosis and treatment, and from improved hospital and other facilities and their wider availability to the public. The knowledge that these costs are unpredictable and sometimes very heavy, especially for our older men and women living on reduced retirement incomes, has been a matter of grave concern to this committee. As a result we are recommending a program of Federal assistance in providing through the cooperation of the States, an expanded program of medical care for persons aged 65 and over. Under this proposal, the Federal share of existing old-age assistance plans will be substantially increased to encourage States to strengthen their medical programs for these people or to initiate new programs. In addition, Federal money will be made available, on a generous matching formula, to assist the States in aiding those aged persons, many of them otherwise self-sufficient, who need help only in meeting the costs of medical care of a very expensive nature.

In the event that the successful implementation of Kerr-Mills has not proceeded with such dispatch as its detractors would wish, the responsibility must, in part, at least, be borne by HEW. Under questioning by Representative MELVIN LAIRD and Chairman JOHN E. FOGARTY at recent hearings of a House Appropriations Subcommittee, Secretary Ribicoff admitted he had hired only one professional staff member, although Congress had provided $145,000 to em-

ploy a staff of 18. Further questioning also brought out that little has been done by the Department to implement the 600 recommendations of the White House Conference on Problems of the Aging. One of them, dealing specifically with medical care for the aged, I discussed a moment ago.

Mr. President, I ask unanimous consent to insert in the RECORD at this point in my remarks an excerpt from the hearings before the House Committe on HEW appropriations on January 30, 1962.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

REFERENCE TO APPROPRIATE HOUSE HEARINGS BEFORE THE SUBCOMMITTEE ON HEW APPROPRIATIONS, JANUARY 30, 1962—PART I

Pages 104 and 105:

"Mr. FOGARTY. What did Mr. Kent [works for the Secretary, studying the Conference recommendation and developing legislation to carry them out] originally ask of the Bureau of the Budget?

"Mr. KELLY. In his supplemental request?

"Mr. FOGARTY. Yes.

"Mr. KELLY. I am going to have to act from memory, Mr. Chairman. My memory is we went over there with a request for 21 additional positions, and we came up to the Congress with a request for 18 positions. And we have an operating plan for utilizing 14 of those jobs that the Congress gave us, and we are requesting 3 additional positions in 1963.

"Mr. FOGARTY. How much did you get; how much did the Congress give in that supplemental last year?

"Mr. KELLY. They gave us the whole 18 positions as requested.

"Mr. COHEN. Yes. I think $145,000, if I recall correctly.

"Mr. FOGARTY. And how much of it was put in reserve, if any?

"Mr. KELLY. Well, I know it was four positions. I do not recall the amount. But out of the 18 positions, 4 were withheld.

"Mr. FOGARTY. Percentagewise, that is a pretty good clip.

"Mr. KELLY. Yes, sir. We had to save eight jobs in the Office of the Secretary. Four of them were in the special staff on aging.

"Mr. FOGARTY. Four out of eighteen?

"Mr. COHEN. I think, while there is a tremendous need there, Mr. Chairman, I might say I worked with Mr. Kent on trying to recruit some of these people——

"Mr. FOGARTY. I understand he has had problems. But I think I am going to find the same fault I found with everybody over the past 10 or 12 years. I do not think you are going fast enough or far enough."

Pages 105 and 106:

"Mr. FOGARTY. You gave me a breakdown but I have forgotten. About how many people have been added to the special staff on aging, and when were they added?

"Mr. COHEN. I have here the two additional people in the information branch reporting to duty on January 29. One person has been recruited to the field operations branch, reporting to duty in February. A fourth person on research and training branch has been recruited and reporting to duty in March.

"Those are the four professional positions in the increase.

"Mr. FOGARTY. What year are you talking about?

"Mr. COHEN. This year, sir. Right now.

"Mr. FOGARTY. January 29, you mean yesterday?

"Mr. COHEN. Yes, sir. Reported to duty yesterday. That is January 29—two of them.

"Mr. FOGARTY. Well, I would not brag about that kind of action, would you?

"Secretary RIBICOFF. Well, it is pretty hard to find people sometimes."

Pages 106 and 107:

"Mr. FOGARTY. What are you going to do, give up?

"Mr. COHEN. No, sir.

"Secretary RIBICOFF. We are keeping on trying.

"Mr. COHEN. We are keeping on trying. Mr. Kent is going ahead. I talked to him several times.

"And we have now prepared a position description for each of these positions and we are advertising them and circularizing so we can see if we cannot get some more people interested in them. I think there is a great need in this area, and I would hope we could expand it.

"Mr. FOGARTY. That is what I was hoping for, too, when Mr. Kent was named. I do not see that he is doing much better than those before him. There is, and has been, a lot of talk about this for years as you well know.

"You have been talking about it, but as of today, January 30, nothing much has been accomplished with that supplementary appropriation. That is a fair statement, is it not?

"But the White House Conference came up with about 600 recommendations, and how many of those recommendations have been put into effect?

"There was a lot of talk at that conference about a blueprint for action.

"Mr. COHEN. Wnat we have done, of course, has been a continual exploration of this problem. Over on the Senate side, in connection with the Senate hearings, we have moved wherever there were some legislative recommendations.

"Mr. FOGARTY. Was there ever an advisory committee appointed?

"Secretary RIBICOFF. No. An advisory committee has not yet been officially appointed, but——

"Mr. FOGARTY. I think last August was the last time I talked with you.

"Mr. COHEN. Yes.

"Mr. FOGARTY. And you told me it was right around the corner.

"Mr. COHEN. We have been clearing the people and discussing them. I would hope that we can formally appoint them very shortly.

"Mr. FOGARTY. What do you call 'shortly'; a month from now or next year?

"Mr. COHEN. Before the end of this year.

"Mr. FOGARTY. The fiscal year or the calendar year?

"Mr. COHEN. Fiscal year."

Page 107:

"Mr. FOGARTY. What happened to the Federal Council on Aging?

"Mr. COHEN. The Federal Council on Aging has been more or less inactive, and I think it is Mr. Kent's intent to reactivate the Federal Council.

"Mr. FOGARTY. There is nothing being done now, is there? They have not met in a long time?

"Mr. COHEN. I think we have had one meeting. I think there has been one preparatory or one planning meeting to see what they worked out."

Pages 108 and 109:

"Mr. FOGARTY. Well, the thing I am after and have been after for 10 or 12 years is action.

"I was just amazed to find that the first man hired under last year's supplemental appropriation was put on yesterday."

Page 109:

"Mr. LAIRD. You have been passing that money around, though. You have been looking for anybody who would like to do a little consulting work, have you not?

"Secretary RIBICOFF. I have not. I know Mr. Kent is sincere and hard working and a self-starter; and I have the utmost faith in him. If you give Kent a reasonable period of time, he will have a staff that you will be proud of, Mr. Chairman. And I would like to see where Mr. Kent stands next September, frankly.

"Mr. FOGARTY. You call a reasonable length of time——

"Secretary RIBICOFF. Well, I would say that the moneys available in October, I would like to see the results next September 1.

"Mr. FOGARTY. How long has Mr. Kent been on the job? How long has he been in office?

"Mr. COHEN. I think he came something like July 1. * * * As the Secretary stated, I hope you will wait until he has an opportunity to appear before you, Mr. Chairman.

"Mr. FOGARTY. Oh, I will. He will be given every opportunity, of course. He will not be shut off. He can talk as long as he wants to.

"But from what I already know, I am still afraid I am going to be disappointed in the action so far."

Pages 1084 and 1085:

"Mr. FOGARTY. We thought this was a real important program last summer. When you asked for a supplemental appropriation we were led to believe it was ncessary and needed. In fact, I thought more was needed.

"Now tell us what you have done with these funds.

"Dr. KENT. At present, on our supplemental, we have 14 positions—7 professional, and 7 clerical. The seven clerical were easy to fill and we filled five. We have not filled the other two because we will wait until we have the complement of professionals. In terms of professionals, we have filled four; for two more we have tentative acceptances and two that we are negotiating for, which includes one vacancy on the regular staff.

"Mr. FOGARTY. You think you have done as well as you could but I think a better job could have been done. I think if I were in your position, when you came down here last summer, that I would have known that these jobs were hard to come by. There is a general impression around from the groups that I have talked to, and I have talked to a great number of them, that there is no real program in aging. Every group that I have talked to has been disappointed in the lack of action to initiate one."

Mr. ALLOTT. Mr. President, geared as it is to the needy, Kerr-Mills Act is designed to authorize Federal participation in approved State plans which provide medical assistance first, on behalf of aged recipients of old-age assistance; and, second, for aged persons not on old-age assistance whose incomes and resources are not sufficient to meet the costs of necessary medical services. The act has the following provisions:

MEDICAL ASSISTANCE FOR THE AGED WHO ARE NOT RECIPIENTS OF OLD-AGE ASSISTANCE

Under this program, States can receive Federal funds to help pay the cost of medical services for persons aged 65 and over who are not recipients of old-age assistance, but whose income and resources are insufficient to meet such costs. States may choose among a broad scope of medical services, but the services for which they pay the costs must include those of both an institutional and noninstitutional character. The law is specific in outlining the scope of care and services that may be provided including: inpatient hospital services; skilled nursing-home services; physicians' services; private-duty nursing services; physical therapy and related services; dental services; laboratory and X-ray services; prescribed drugs, eyeglasses, dentures and prosthetic devices; diagnostic, screening and preventive services; and any other medical care or remedial care recognized under State law.

In considering the merits of these two proposals we must consider what is now offered by present law and the paltry,

parsimonious, limited benefits that would be offered under the King-Anderson-Javits amendments.

However, as under the law before the 1960 amendments, there can be no Federal participation in payments with respect to medical services furnished an inmate in a nonmedical public institution or to a patient in a mental or tuberculosis institution. Persons with a diagnosis of tuberculosis or psychosis may be covered for 42 days of care in a general hospital.

To qualify for Federal matching grants, State plans for medical assistance must meet certain requirements already in the act and still applicable to old-age assistance as well as the new program—the requirements, for example, that the program be in effect in all political subdivisions, provide for financial participation by the State, and insure proper and efficient administration. In addition, under a State plan for medical assistance for the aged, no enrollment fee or charge may be imposed as a condition of eligibility, and under regulations prescribed by the Secretary the State must furnish assistance to State residents absent from the State. Reasonable standards for determining eligibility and the extent of medical assistance are required. There must be a provision that no lien can be imposed during a recipient's lifetime on account of payments under the plan—except pursuant to a court judgment concerning incorrect payments—and that adjustment or recovery is permitted only after the death of the recipient and spouse. A State may not impose an age requirement higher than 65, and no resident of the State and no citizen of the United States may excluded. Federal Government participation in the total amount expended by the States for medical assistance for the aged under a Federal matching percentage will range from 50 to 80 percent under a formula based primarily on per capita income.

MEDICAL CARE FOR RECIPIENTS OF OLD-AGE ASSISTANCE

Under the amended title I of the Social Security Act, as formerly, there is no Federal requirement as to the scope of medical services that the States provide for old-age assistance recipients. However, the Kerr-Mills Act made additional funds available to the State for expansion of such services for recipients of old-age assistance.

An additional plan requirement for old-age assistance under title I is the same as one that applies to medical assistance for the aged—the State plan must include reasonable standards for determining the eligibility for patients in a medical institution as the result of diagnosis of psychosis or tuberculosis for 42 days after such diagnosis is permitted for old-age assistance as well as for medical assistance. The law, continues, however, to exclude from the matching provision money payments of such patients. Before the amendments the maximum average monthly payment for old-age assistance in which the Federal Government would participate was $65. This amount included both money payments to the individual and vendor payments for his medical care. The Federal Government will continue as before to share in such expenditures for old-age assistance up to four-fifths of the first $30 of the average monthly payment, with variable matching ranging from 50 to 65 percent in the remainder up to $65 based on the relationship of the State's per capita income to the national per capita income.

For States with average monthly payments of more than $65, the 1960 amendments provide for Federal participation in additional expenditures except that such participation will be limited to the amount of the average vendor medical payments up to $12 a month, or the amount by which the total average payment exceeds $65, whichever is less, with the Federal share ranging from 50 to 80 percent based on per capita income. For States with average monthly payments of $65 or less the Federal share in average vendor medical payments up to $12 a month will be an additional 15 percent over the usual Federal percentage applicable to the amount of payments falling between $30 and $64. This percentage, when added to the usual Federal percentage for the second part of the formula for payments, will give a total Federal share of 65 to 80 percent. The additional Federal share of 15 percent will also be available to States with average monthly payments of more than $65, when it is advantageous to them as an alternative to the method described above. The Federal Government also pays 50 percent of the cost of administering State plans under the Kerr-Mills Act.

Kerr-Mills is legislation designed to accommodate the two pressing problem areas—namely, by providing those persons over 65 who are covered by programs of old-age assistance with an expansion of medical coverage and by also providing medical assistance to those persons who have reached 65 but who are not recipients of old-age assistance. Of the more than 17 million persons in these classifications, the Senate Finance Committee figures indicate that approximately 10 million persons might meet eligibility requirements. The number actually affected will depend upon the number of States participating, and the eligibility standards formulated by such States. Each year, after all State plans are in full operation, an estimated one-half to 1 million persons among these 10 million may become ill and require payments. The number of recipients per year 1961–63 as listed in the budget, fiscal year 1963, is: 1961, actual, 80,400; 1962, estimate, 495,500; and 1963, estimate, 729,300.

The argument is often made that Kerr-Mills is inadequate and insufficient to meet the pressing needs as they exist today. The Finance Committee figures do not give umbrage to such a position. It should be borne in mind in the coming year better than 72 percent of those senior citizens who will require medical attention will be taken care of under Kerr-Mills—and this assumes no further implementation on the part of the States not presently participating. When there is taken into account the fact that the establishment of such a State program cannot be accomplished overnight, every indication suggests that Kerr-Mills is doing the job which the Congress felt should be accomplished, and rapidly. At this point, it would be well to have a list of the States which are participating in the Kerr-Mills program. They are as follows:

Alabama, Arkansas, California, Connecticut, Hawaii, Idaho, Illinois, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, New Hampshire, New York, North Dakota, Oklahoma, Oregon, Pennsylvania, South Carolina, Tennessee, Utah, Washington, West Virginia, Guam, Puerto Rico, and the Virgin Islands.

THE MEANS TEST

In an effort to discredit the Kerr-Mills Act, the oponents have resorted to emotionalism. There is a tendency to cloud the real issue by casting adjectives about and thus attempt to discredit what is a perfectly proper administrative aspect of the program in terms of the purpose which it was intended and does serve. Kerr-Mills came to grips with a problem which faced us, namely, how to provide adequate medical and hospital care to our senior citizens incapable of providing it themselves. In reporting the bill, the Committee on Finance called attention to the purpose of the medical assistance aspect for the aged not receiving old-age assistance:

> The bill would amend existing title I to make it clear that States may extend their assistance programs to cover the medically needy. The bill would give the States a financial incentive to establish such programs where they do not exist or to extend such programs where they are not adequate in coverage or comprehensive in the scope of benefits. Benefits under a State program may be provided only for persons 65 years of age or over to the extent they are unable to pay the cost of their medical expenses. Under this program, it will be possible for States to provide medical services to individuals on the basis of an eligibility requirement that is more liberal than that in effect for the States old-age assistance programs.
>
> It would cover all medically needed aged 65 and over; it would cover every such person including those under the social security system, railroad retirement system, civil service system, or any other public or private retirement program whether such person is retired or still working, subject only to the participation in the program by the State of which they are resident; it would cover the widows of such workers as well as their dependents who meet the age 65 requirement and are unable to provide for their medical care. There are many individuals who have not worked under the social security program or any other retirement program for a sufficient time to ever become eligible for retirement benefits; this is another needy group which would be able to receive medical assistance under the health plan endorsed by the Finance Committee.

The report to the Special Committee on Aging, in discussing the means test, uses descriptions such as "humiliating," "degrading." The act, itself, has two provisions covering this subject, one of which applies to a State plan which includes old-age assistance and the other to a State plan which includes medical assistance. Section 2(10)(A)—the State

agency shall, in determining need for assistance, take into consideration any other income and resources of an individual claiming old-age assistance; (B) include reasonable standards, consistent with the objectives of this title, for determining eligibility for and the extent of such assistance; section 2(11)(D), include reasonable standards, consistent with the objectives of this title, for determining eligibility for and the extent of such assistance; (E) provide that no lien may be imposed against the property of any individual prior to his death on account of medical assistance for the aged paid or to be paid on his behalf under the plan—except pursuant to the judgment of a court on account of benefits incorrectly paid on behalf of such individual—and that there shall be no adjustment or recovery—except, after the death of such individual and his surviving spouse, if any, from such individual's estate—of any medical assistance for the aged correctly paid on behalf of such individual under the plan.

There is nothing onerous, nothing degrading, humiliating in these requirements. There is nothing in that language suggestive of a pauper's oath; and any such suggestions are eminently unfair to the purposes and objectives of the program. Quite obviously, if an individual is capable of taking care of his or her medical needs, then in the American tradition, such individual would want to do so. But, it should be borne in mind that the people this legislation is trying to help are those without adequate funds to help themselves. Does it not stand to reason that an inquiry of one sort or another must of necessity be made, in order to arrive at a determination as to the applicant's eligibility? It was never the intent of Congress to oblige anyone seeking this assistance to be embarrassed, and certainly no one would condone such treatment outside the realm of emotionalism, leading to the unavoidable conclusion that, since the act was intended for the needy, some determination of this need must be made. Since those who are going to be helped are of modest means, does not a fair and reasonable test have to be applied in order to make that determination? It should be remembered that there are Federal and State funds involved, and there is the duty upon those charged with administering the program to see that the funds are properly applied.

The charge that the means test is demeaning is not well documented. However, if experience were to show that, in reality, an undue hardship is being placed upon those persons seeking assistance, then the obvious remedy is to amend the requirements, not discard the program. The minority report to the Special Committee on Aging carries the suggestion that one way to remedy this, if a problem in fact exists, is through an amendment to the present law stipulating that a simple statement setting forth details of the individual's finances, submitted under oath, by the applicant for aid would be presumed valid in determining eligibility.

In an effort to bring all the facts into their proper perspective, it should be noted that Kerr-Mills was designed to provide assistance to senior citizens as and where needed. The need factor cannot be too strongly underscored. Approximately 2.5 million, or 16 percent of our population, at the 65 age level or above, receive public assistance. Beyond that there are those having incomes adequate to cover living expenses, but inadequate to take care of hospital and medical expenses of a protracted nature. But, regardless of numbers, it is the needy who must be considered, and it is just that purpose which Kerr-Mills, in its full and complete implementation, will accomplish.

Kerr-Mills was intended to supplement, not supplant. In this connection, Dr. Vetalis V. Anderson, president of the Colorado State Medical Society, wrote to me recently, outlining the society's proposal to implement the medical assistance for the aged portion of Kerr-Mills. Dr. Anderson does point out that the plan has been submitted to the Colorado General Assembly Legislative Council for study. I ask unanimous consent that Dr. Anderson's letter be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COLORADO STATE MEDICAL SOCIETY,
Del Norte, Colo., May 1, 1962.

Senator GORDON L. ALLOTT,
U.S. Senate,
Washington, D.C.

DEAR SENATOR ALLOTT: The Council on Governmental Relations of the Colorado Medical Society, working closely with Mr. John J. Vance of Colorado Blue Shield, has drafted a proposed method implementing the medical assistance to the aged portion of the Kerr-Mills law (Public Law 86-778). In the hopes of obtaining passage of this plan or some revision thereof, at the next session of the Colorado General Assembly, we have submitted our plan to the assembly's legislative council for study.

We believe that you will also be interested in knowing something about our proposed implementation of the medical assistance to the aged portion of the Kerr-Mills law in Colorado. The object of implementing this portion of Public Law 86-778 is to help those persons in Colorado who are over age 65 and acknowledged to be presently, or potentially, medically indigent, and who for one reason or another are not eligible for the OAP medical care program.

Our proposed medical assistance to the aged program recognizes the first dollar needs of the very indigent, but mainly its help is directed at the catastrophic expenses which can represent financial hardship to even the reasonably affluent aged members of society.

The program would not replace the benefits available through the many voluntary prepayment plans in existence, but is designed to encourage self-help and enrollment in such plans, and to supplement them through an extension of benefits. We propose that certain base plan benefits be established, the cost of which constitutes a deductible feature which must be borne in whole or in part by the medical assistance to the aged recipient. When the medical assistance to the aged recipient finds the benefits of his base plan are exhausted, or when similar services have been paid out-of-pocket by the recipient with no base plan coverage, then the protection of this medical assistance to the aged extended benefit approach becomes applicable.

It is recognized that the potential medical assistance to the aged recipients vary in degree of medical indigency. Each can help himself to some degree and self-help is the foundation of this approach, although recognition is given to the extreme indigency status of some classes of medical assistance to the aged recipients.

The base plan constitutes the deductible services, the cost of which the individual must bear, either through membership in prepayment plans or as an out-of-pocket expense at the time the service is incurred. In the case of real indigency, the cost of the base plan would be subsidized by medical assistance to the aged.

Any voluntary hospital-medical prepayment plan would be eligible to underwrite the base coverage at whatever rates the individual organization felt were warranted, providing the plan offered the precise benefits set forth by the Colorado Department of Public Welfare, administrators of the plan, on a noncancellable basis, and were approved by the Colorado Insurance Department as reputable firms.

We propose that the base plan coverage include complete hospital benefits up to 30 days per year; outpatient service; nursing home benefits of 30 days[1] a year at an allowance of up to $5 per day when under the care of a physician in a licensed nursing home; home nursing service during any 30-day convalescent period each year with daily visits if necessary at an allowance of up to $3 per nursing visit; medical-surgical benefits in the hospital or doctor's office and home calls by a physician at a rate of up to two calls each year during a 30-day convalescent period following hospital care.

The medical assistance to the aged is proposed in the form of subsidization of the cost of the base benefits for the very indigent, thereafter in extended hospital and medical benefit protection, applicable only after the base benefits are exhausted. The medical assistance to the aged program would renew the base benefits (except for the nursing home care) as often as medically necessary, with each renewal after the first subject to a minimal payment by the recipent on the basis of his financial condition. Our proposed program omits convalescent nursing home services, in the belief that such service beyond ,that provided in the base plan, is of a custodial rather than of a medical nature, and is therefore a cost of living, not a medical cost.

There are some unknowns in our cost estimates of the proposed program, but we feel that this is not an insurmountable obstacle. Much of the cost of base benefit renewal can be ascertained from OAP experience, which discloses in the last fiscal year that only 860 cases out of 20,754 admissions required more than 30 days of acute hospital care. We believe that a liberal estimate of the cost of this program would be $3 million of State money to be matched by Federal funds under the Kerr-Mills law.

We hope this rather lengthy explanation of our proposed medical assistance to the aged program will give you some idea of what we believe can be done for Colorado's needy and near-needy aged. We feel that this is the proper solution to the medical care problems of this aged group in Colorado and could be adapted by every State in the Nation.

Sincerely,

V. V. ANDERSON, M.D.,
President.

Mr. ALLOTT. Mr. President, my State has already in effect an old-age pension, health, and medical care pro-

[1] In addition to the 30 days of convalescent nursing home care, provision is made for an additional 12 months extended care in a person's lifetime.

gram which it adopted in 1956. At that time, a limitation of $10 million was placed upon the funds to be earmarked for carrying out the program. Therefore, while we have a good program presently operative, the constitutional limitations will have to be amended in order to adopt the MAA program under Kerr-Mills.

Mr. President, I now withdraw my amendment.

The PRESIDING OFFICER. The amendment of the Senator from Colorado is withdrawn.

EXHIBIT 1

ECONOMIC FACTORS

SUMMARY

Money income: Eleven out of every twelve persons 65 and over received some cash income in December 1960. Slightly more than half of this income came from private and the balance from public sources. Social security and other forms of public insurance accounted for the bulk of public income and employment accounted for the bulk of private income. Over one-third of the estimated aggregate income of $32 billion received by the aged was represented by earnings from employment.

Employment status: Of the elderly men who worked in 1959, 54 percent held full-time jobs for more than half the year. Over half of the elderly working women held part-time jobs, and 36 percent of them worked full time for more than 26 weeks. Employment of the aged involves a significant amount of part-time, or part-year work. The prevalence of work decreases with age and, among those who continue to work, self-employment becomes more dominant. In late 1959, the percentage of aged men looking for work was less than the rate for all men. Their length of time out of work was greater. For most aged who work, income from their jobs is only one source of total income. Often public sources are also involved.

Retirement: The number of workers covered by private pension plans in the United States increased from 2.7 million in 1930 to 20.2 million in 1959, or from 5.4 percent to 29.1 percent of the civilian labor force. The typical pension pays 25 to 40 percent of average earnings before retirement. The vast majority of pensioners are covered by Old-Age, Survivors, and Disability Insurance. Roughly, 50 percent of private retirement programs have vesting provisions and the percentage is growing. Private pensions and individual annuities represented slightly less than 6 percent of the estimated aggregate income of persons 65 and over in 1960. In 1959, as in the preceding 4 years, private pension plans took the largest single share of employer-empolyee contributions to employee-benefit plans.

Of the public income-maintenance programs, OASDI is by far the most important It now covers 9 out of every 10 workers and is paying benefits to nearly two-thirds of the aged population. In August 1961, the average individual benefits were $75.77 per month. In December 1960, average monthly benefits were $123.90 for man and wife, and $57.70 for an aged widow.

The railroad and Federal retirement systems provide higher pension benefits than the OASDI program. Benefits paid by State and local governments vary widely. These programs generally require direct participation by the employee.

Two types of public benefits based on demonstrated need and derived from general tax revenues are old-age assistance benefits and payments to wartime veterans for nonservice-connected disabilities. The former vary considerably by State, ranging in July 1961 from $35.32 to $114.26 a month. The national average was $67.99. Veterans 65 or over are eligible for monthly pensions based on disability, unemployability, and low income. The benefits range from $40 to over $150 a month.

Distribution of money income among the aged: In 1960, less than $1,000 in total money income from all sources was received by 52.7 percent of all noninstitutionalized aged individuals; 27.1 percent of the men and 73.9 percent of the women were in this income group. The median income of aged persons was approximately 83 percent higher in 1960 than in 1950 as measured in 1960 dollars. Money income of $5,000 or more was received by 11.8 percent of the men and 1.7 percent of the women in 1960.

In 1959, of the 6.2 million families headed by persons 65 or older, money incomes for half were below $2,830 and for one-fourth were below $1,620. The average family comprised 2.6 members of whom three-fifths were 65 or over. Of the 3.6 million elderly persons living alone or with nonrelations in 1959, incomes of half were below $1,000 and of four-fifths below $2,000.

The per capita income of families headed by persons 65 and over, in 1958, was only 58 percent as much as that for families whose head was between 55 and 64, but it was 81 percent as much as that for families headed by persons 25 to 34 years old. The income position of the aged is more fixed than for the younger age groups. Many of the younger families are in transition to larger incomes; the aged are not.

Assets: Of the spending units with heads 65 and over, 13 percent did not report owning any liquid assets, corporate stock, equity in home, other real estate, or unincorporated business in 1960. An additional 23 percent held less than $5,000 in such assets. Approximately 40 percent had assets valued at $10,000 or more. All together, half had assets of $8,000 or more. Equity in home was the most important type of asset in terms of value. The type of asset held by the largest percentage of spending units was liquid assets. The pattern of holdings was similar to spending units with heads between 45 and 64. Younger spending units had considerably less than those headed by aged persons. In regard to aged OASI recipients alone, in 1957, 10 percent of the retired couples, 33 percent of the single retired workers, and 27 percent of the aged widows had no net worth (value of selected assets—major portion of total assets—less reported debt). On the other hand, 48 percent of the retired couples, 39 percent of the single retired workers, and 32 percent of the aged widows had a net worth of $10,000 or more. The data show quite a spread in asset position among the aged.

In regard to liquid assets, in early 1960, more of the aged spending units had no liquid assets than all spending units (30 percent versus 24 percent), but more had at least $2,000 in such assets (40 percent versus 25 percent). Twelve percent of the aged units had over $10,000 in liquid assets alone. Among the aged, those with the smallest incomes are likely to have the least liquid assets.

One of seven aged spending units had corporate stocks or bonds in 1960. The median equity greatly exceeded that of younger spending units. Most of these aged spending units also had significant bank accounts and savings bonds.

In 1959, 66 percent of the nonfarm family units headed by persons 65 or over owned their own homes. Of these homes, 83 percent were free of mortgage debt. In contrast, 58 percent of all nonfarm family units owned the homes in which they resided and 44 percent of these homes were mortgage free. In 1960, the median equity in their own homes of aged spending units who were homeowners was $9,700. Home ownership was positively correlated with level of savings and with income. For example, in 1957, among OASI beneficiaries, 8 of 10 couples with incomes of $5000 or more owned nonfarm homes, but less than two-thirds of those with incomes below $1,200 were owners.

In 1957, 56 percent of the spending units with aged heads owned a life insurance policy, compared to 79 percent of all spending units. The value of the insurance was, in general, enough to cover burial expenses.

In 1959, a survey showed that 69 percent of the aged spending units were entirely free of debt, as compared with only 32 percent of spending units of all ages. Only 11 percent of units headed by elderly persons had mortgage debt (versus 31 percent for all units), and 26 percent of the older group had personal debt (three-fifths under $200) compared to 60 percent of all spending units.

The aged tended to look upon savings and other assets as resources to be used to meet expenses only in a dire emergency. This was particularly true of housing.

Noncash income: Noncash income probably plays a more important role in the well-being of elderly people than it does in the case of younger adults. In 1957, among OASI beneficiaries four of five couples and three of five nonmarried persons had noncash income of one or more of the following types: imputed rental value of an owned home, rent-free housing, food homegrown or obtained without cost, medical care provided free or at someone else's expense. It has been estimated that the value of noncash income of the aged amounted to $3 billion in 1958.

Tax position of the aged: In 1957, 6.5 million of more than 16 million persons 65 and over filed an income tax return. Of these, 3.2 million returns were taxable. The Federal and State Governments have special tax provisions for the aged. For example, the Federal Government gives special consideration to age itself, blindness, public and private retirement benefits, and medical expenses. Certain taxes, other than those on income, may be unfavorable for the aged.

Budgetary needs: It is estimated that, on the average, persons over 65 have somewhat lower living costs than their younger counterparts. Budgets for the aged have been worked out by various government agencies. These budgets are calculated to support a modest but adequate living. They have several limitations which are noted in the text. Within these limitations, the fact that many aged fall below the threshold of adequacy is shown. It is also noted how many of the aged are well above the threshold and presumably able to meet living expenses.

The economic picture of the aged is mixed. Not all are in a difficult position. A significant segment of the aged, however, have neither the monthly income nor the capital assets to withstand protracted economic adversity. The aged who are disadvantaged differ from the younger disadvantaged mainly in the fact that their position is relatively immune to change either through prospective employment or otherwise.

Mr. ALLOTT. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MILLER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MILLER. Mr. President, I send to the desk an amendment and ask that it be read.

The PRESIDING OFFICER. The amendment will be stated.

The CHIEF CLERK. It is proposed to strike out all in line 19, page 2, after "(4)," and all of lines 20, 21 and 22, and insert in lieu thereof the following: "it

is a duty of government to provide necessary hospital and medical services for those citizens, young and old alike, who cannot otherwise obtain such services."

Mr. MILLER. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Iowa will state it.

Mr. MILLER. Do I correctly understand that 30 minutes is allocated on each side of the amendment?

The PRESIDING OFFICER. The Senator is correct.

Mr. MILLER. I yield myself 30 minutes.

Mr. President, I ask unanimous consent that 3 minutes from the opposing side be extended to the distinguished Senator from Pennsylvania [Mr. CLARK] and that his remarks appear at this point in the RECORD.

The PRESIDING OFFICER. Is there objection?

Mr. HUMPHREY. Not at all; the time is gladly yielded.

The PRESIDING OFFICER (Mr. METCALF in the chair). Is there objection? The Chair hears none; and the Senator from Pennsylvania may proceed.

Second. The social security program is proposed as the vehicle for financing the program, notwithstanding the serious financial situation the social security program is in today. I propose to elaborate on these reasons in the course of my remarks.

There are a good many misunderstandings about President Kennedy's so-called medicare program, now modified and incorporated in the Anderson-Javits amendment. One of these is that my making payments into the social security program during their working years, people will be building up an insurance fund out of which their medicare needs—hospital and nursing-home care, as covered by this amendment—can be met after they reach age 65. But such is not the case. In 1959, the Supreme Court of the United States made this clear, in the case of Fleming against Nestor, in the following statement:

> Persons gainfully employed, and those who employ them, are taxed to permit the payment of benefits to the retired and disabled, and their dependents. Plainly the expectation is that many members of the present productive force will in turn become beneficiaries, rather than supporters of the program. But each worker's benefits, though flowing from the contributions he made to the national economy while actively employed, are not dependent on the degree to which he was called upon to support the system by taxation.

Note the words "not dependent." Social security benefits to those over 65 are not met by payments made during their working years, but are met by taxes paid by current active workers. This is why it is misleading to talk about this program as health insurance. It is not insurance at all. If it were, the millions of people now retired under the social security program would not receive any medicare benefits at all, because they never paid anything into the social security program for them; and the millions who are in the middle age bracket would receive only a fraction of the medicare benefits, because they would have paid into the social security program only a fraction of the taxes needed to meet the cost of the benefits. The value of the benefits of those who have paid nothing at all for them is estimated at between $10 and $20 billion. The value of the benefits in excess of taxes that will be paid in by the worker and his employer, for all present active workers is estimated at $15 to $40 billion. The result is that the young people who will be entering the labor force in the future must make up between $25 and $60 billion of benefits which the recipients have not paid for. This is not insurance at all. It is a windfall that the present generation is proposing to receive at the expense of future generations.

The statement has been made that this is desired by the younger generation in order that their older relatives may have some medical benefits. I do not question that statement insofar as it applies to our older citizens who cannot afford decent hospital, nursing home, and even doctor's care. But I certainly do question it as far as concerns those who can afford these essentials. I do not believe that our young people want to be taxed to pay for benefits for people who can afford them. And I do not believe those who can afford them are selfish enough to want a free ride on the backs of their children and our future generations.

I do not know how many of the some 15 million people 65 and over who would become eligible for these medicare benefits under this amendment can afford to pay for them. Apparently, of the 12 million 65 and over under social security now, some 1.2 million of them are excluded from benefits by reason of their earned-income receipts. But there are many, many others who are receiving pensions, rental income, interest income, and didivend income who could afford these medicare benefits too. It is common knowledge that, to protect their social security retirement pensions, many older citizens convert their self-employment income into nonworking income of the kind I have referred to. Others have built up substantial property holdings as nest eggs to cover contingencies such as prolonged illness and catastrophic disease. Others have built up accident and health insurance programs which, either in full or in part, would take care of their hospital and nursing home needs, as well as doctor bills. It is grossly unfair to give these people a windfall at the expense of younger people, with families, who are trying to make ends meet right now. The inequities of the situation which this amendment would create are aggravated by the fact that these same people can deduct for income tax purposes the entire cost of their medical needs, whereas those under 65 cannot do so. In fact, I would estimate that most of those under 65 never receive the benefit of any medical expense for income tax purposes, because the tax law is so arranged that either they use an optional standard deduction—in which those with medical expenses are treated the same as those without medical expenses—or the arbitrary 3 percent of their adjusted gross income exceeds their medical expense so that no deduction at all is received.

Note also that while the medical expenses of our older citizens are higher than those of our younger people, these younger people are beset by medical expenses for their children, clothing and education costs of their children, mortgage payments on their homes, costs of home furnishings and appliances, and automobiles. Many of these older citizens have no automobiles—they are retired and do not need one in connection with their work—they own their own homes, which have long since been furnished, their families are raised and are out on their own. Their food and clothing costs are much less. I am not suggesting that this is not as it should be. After long years of hard work, this is a financial situation which should only naturally develop. What I am saying is that, in this state of affairs, it is unfair to ask the future generations of our Nation to pay for hospital and nursing home care for those older citizens who can afford to do so, themselves. Indeed, I would suggest that those older

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

The PRESIDING OFFICER (Mr. METCALF in the chair). The Senator from Iowa is recognized for 28 minutes.

Mr. MILLER. Mr. President, I am opposed to President Kennedy's medicare program, sometimes called the King-Anderson bill, and now before us substantially in the form of the Anderson-Javits amendment. My principal objections are twofold, as follows:

First. The Anderson-Javits amendment would provide benefits to anyone over 65 years of age, regardless of his or her financial need.

citizens who can afford to do so are resentful of the appeal to selfishness which this amendment contains.

The only way to cure this amendment of this inequity is to modify it to provide for exclusion of benefits of those who can afford them, or for partial exclusion of benefits of those who can afford some of them. I suggested to the distinguished Senator from New Mexico [Mr. ANDERSON] last week in a colloquy that one approach would be to take the income-from-work test now used in scaling down or eliminating social security payments. The defect here, however, would be that people receiving income from rentals, interest, or dividends would not be excluded, and these people might well be even better able to afford their hospital and nursing home expenses than some of those receiving income from wages or self-employment. As I pointed out in my colloquy with the distinguished Senator from Kentucky [Mr. MORTON] last Friday, income from long-term capital gains which—to the extent of 50 percent—is not recognized for income tax purposes represents economic income and should be reflected in determining eligibility.

If it be suggested that all of this would be administratively cumbersome, the answer is that the States are doing this right now in determining eligibility for old age assistance and aid to dependent children; and while it may be administratively cumbersome, it is necessary to prevent taxation of people to pay expenses of others who can afford to pay for them—perhaps even better than those who are being taxed.

My colloquy with the Senator from New Mexico [Mr. ANDERSON] brought out the point that, under the Anderson-Javits amendment, the cost of catastrophic disease or illness of people under 65 would not be covered. Accordingly, I suggest that, from the standpoint of the duty of government to provide for those citizens who cannot provide for themselves, this amendment is grossly deficient. In addition to the case I referred to in the colloquy, let me give the Senate some other cases. The first three are hypothetical, but are based upon facts of actual cases given to me by a practicing physician. The fourth is quoted from a recent article in Medical Economics:

Case No. 1, Mr. A., age 40, fell at work 7 years ago and severed his spinal cord, causing permanent total paralysis of both his legs. For 2 months his insurance company assumed responsibility for his hospital bills. After that, he paid his own way until he had liquidated all his assets. He lost his home, his car, and his savings. Having become a pauper, he at last became eligible for public welfare and has been on the welfare rolls since. This injury has caused extensive hardships to the patient and his entire family. His lot has recently been somewhat improved, but only by his winning a lawsuit which was drawn out over the years and was in itself most unpleasant.

Comment: This man was working in a State (not Massachusetts) which has grossly inadequate liability laws for workingmen. Another individual with a similiar injury, but properly insured, has maintained his home intact and since his injury has had two sons graduate from college with honors. Legislation providing coverage for all individuals struck with catastrophic illness would prevent the hardship suffered by Mr. A. and his family.

Case No. 2. Mr. B., age 45, worked 20 years in a satisfactory manner for company X, One year ago he had a heart attack. After a 3-month convalescence, Mr. B. was ready to return to light work. Company X, and all others to which he has applied for work, refuses to hire him unless the doctor will certify he has returned to normal and is physically capable of doing any job in the plant. Since this cannot be done, Mr. B. is being denied his rightful employment and is being forced to do either menial odd jobs about the town or accept charity. The reasons company X will not hire him involve seniority rules and bumping rights written into their contract with the local union, and unrealistic State liability laws regarding heart disease and symptoms related to it which appear on the job.

Comment: Legislation aimed at making a place in industry for partially disabled men is sadly needed. Many companies would hire such people if they could control what type of work they did, and if liability laws were made more realistic.

Under the Anderson-Javits amendments, this person would be left out in the cold.

Case No. 3. Mr. C., age 32, was a partner in a small contracting business. His job was to operate and maintain the heavy machinery. This required extreme physical exertion, long hours, and exposure to the elements. Three years ago he developed acute Bright's disease (kidney trouble) and almost died. Convalescence was slow and painful. As time went by, it became apparent that he could not resume his previous occupation, and he was advised to learn a new trade. He applied to the State rehabilitation commission for help. For several months he went to interviews, filled out forms, and watched the bureaucrats shuffle papers. Then his wife went to work, friends loaned him money, and he went to a school for laboratory technicians for 1 year. On graduation he applied for and obtained a job as part of a research team in one of our finest hospitals. The rehabilitation commission did nothing.

Comment: Our Federal Legislature could set up a true rehabilitation (retraining) program available to anyone disabled by illness. It would be much more economical to get these people back to work than to pass out pensions, which is all our rehabilitation commission ever seems to do. The Federal Government has demonstrated what a great job it can do with the VA rehabilitation program.

I point out that under the Anderson-Javits amendments Mr. C would be left out in the cold.

Case No. 4. L. D. was a 37-year-old machinist living in Milwaukee, married, with two children. In 1956, he was crossing a street one evening on the way home from work when a car struck him and broke his hip. The driver was at fault but had minimal insurance and too few assets to be worth suing.

L. D.'s fractured hip became infected (osteomyelitis). He spent the next 3 years in a plaster cast from chest to toes, and at this writing has had more than 20 operations. He'll never walk again; he'll be in pain for much of the rest of his life; he'll need further operations approximately once a year.

L. D.'s tragedy isn't only medical, but financial. His bills are astronomical; so far he owes the hospital alone more than $25,000. His savings have vanished. His health insurance, as always in such cases, was a cruel disappointment. His earnings have stopped for good; and he worries day and night.

Comment: This is a case where the Federal Government could return this man to society at the same economic level he had reached prior to his horrible injury, if they would back everyone, regardless of age, color, etc., who is struck down by catastrophic illness.

The Anderson-Javits amendments would leave this individual out in the cold.

All of these cases are those of young people. All of them are what one might call catastrophic situations. All of them should be covered by the Government, at least after the point is reached that the people involved cannot afford to pay for their medical and hospital bills. However, the Anderson-Javits amendments would not take care of them at all.

Another unfairness which the amendments would perpetrate is that by covering everyone over 65, regardless of his financial need, the benefits going to those who are in need would inevitably be reduced. In fact, this is one reason why the benefits provided by the amendments are inadequate to take care of a catastrophic situation. If adequate coverage is to be extended, then the cost of the entire program will have to be greatly increased—if everyone is going to be covered. By limiting coverage to those who are in need, we would not face such a dilemma. Costs would be kept down, and the benefit coverage would be kept high. Indeed, I believe I speak for a great many people when I say that I am more concerned about coverage for people such as those referred to in the foregoing examples that I am about coverage for someone who happens to be over 65 years of age and who has the wherewithal to meet the costs of his medical and hospital care.

One of the most controversial features of the Kennedy medicare program, as reflected in the pending amendments, is that it is proposed to finance it by payments into the social security system. Millions of people are now working under social security and are (between themselves and their employers), making payments for what they hope will be a reasonable pension during their retirement years. Unfortunately, the purchasing power of these social security pensions has been steadily eroded by inflation. And so, Congress has periodically increased the amount of the pensions in order to preserve the purchasing power of the pensioners. The social security taxes have not been increased proportionately however. The increase in taxes has largely been scheduled to meet the increased numbers of people coming into retirement status. Accordingly, more and more of the burden of paying for these unfunded social security benefits has been shifted to future generations.

In the June 29, 1961, issue of the Wall Street Journal, an article by Mr. Ray M. Petersen, vice president of the Equitable Life Assurance Society, points out that if social security taxes had ceased in 1950, the trust fund would have covered 113 percent of the benefits promised for the future for those then in receipt of payments; but if taxes should cease in 1965, only 20 percent of the benefits for

those then on the rolls would be covered, with no provision at all for those not retired. Such a state of affairs would not exist if social security taxes had been increased in the amount needed to pay for increased benefits and for the broader coverage of workers. But they were not increased. The decision was made by Congress to shift the burden on to our future generations—the same ones, I might add, to whom is being passed a national debt of over $300 billion.

This was, perhaps, the easy way out for Congress and those now covered by social security. It would have been fairer either to have increased the social security taxes or to have appropriated the difference needed out of the general fund into which taxes paid by everyone are funneled. We are running into a similar problem now with respect to the retirement of our Federal civil service employees. In the July 2 issue of the Washington Evening Star, a timely article by Joseph Young, staff writer for the Star, calls attention to the present unfunded liability of the civil service retirement fund of $32 billion and to warnings by CSC officials that the fund will go bankrupt by 1980 if additional means of financing it are not secured. Mr. Young reports that a considerable number of Members of Congress believe the situation poses a greater threat to the civil service retirement system than any plan to coordinate the retirement system with social security as the administration is expected to advocate next year. Such a solution, of course, would merely shift the burden on to future generations. A fairer way of handling it would be to increase the amounts contributed by Civil Service Commission employees to the retirement fund, or to make appropriations from the general fund to make up the deficit, which is what we are doing today.

However, Mr. Young says that if the civil service retirement fund's liability increases to a point where the Government would have to begin to pour billions of dollars into the fund each year in order for it to meet its obligations, the Congress might then very well be in a mood to reduce civil service retirement benefits, merge it with the social security system or abandon it entirely. In the face of this financial mess of our civil service retirement system, it is now reported that the Senate Civil Service Subcommittee will approve a bill giving retired Federal workers and their survivors an immediate 10-percent increase in annuities. We will trust that the subcommittee comes up with the solution of not only how to finance this increase but how to clean up the financial mess which the increase will worsen.

Anyone can see that if the benefits are increased, someone is going to have to pay the freight. It probably will not come from increases in the contributions made to the retirement system, because that would be unpopular. It probably will not come from appropriations from the general fund, because the budget is already badly unbalanced, and the future is as bad as the present.

The quick, easy answer is to pass the whole load on to the backs of future generations by integrating the system with the social security system. That is why, no doubt, the administration is reported as planning to take this action.

I call attention to the plight of our civil service retirement system as a parallel to the plight of our social security system. The trust fund is practically used up. As graphically pointed out in an excellent article in the July 2 issue of U.S. News & World Report, entitled "The Untold Story of Your Social Security," there is now some $22 billion on hand in the social security trust fund. The value of future contributions to be made by workers now covered by social security and their employers is some $282 billion. Thus, between the balance in the trust fund and the amounts present workers will pay in, we have a total of $304 billion to fund the benefits which are to be paid to those now retired and those now working when they retire. The pension money required for this purpose, however, is estimated to amount to $624 billion, leaving a "gap," as the article puts it, of $320 billion—a deficiency to be made up by taxes to be paid by future generations of workers and employers. This is a most serious situation. It is a most unfair heritage to pass on to our future generations, and let it be made clear that this $320 billion deficiency is in addition to the $300 billion plus national debt which is also being passed on to the future generations.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MILLER. Mr. President, I withdraw my amendment. I send to the desk an amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment of the Senator from Iowa will be stated.

The LEGISLATIVE CLERK. The Senator from Iowa [Mr. MILLER] proposes an amendment to the Anderson amendments on page 2, line 13, to strike out the word "most" and insert in lieu thereof the word "some."

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Iowa.

Mr. MILLER. Mr. President, as if that is not enough, it is now reported that the administration is thinking about coordinating the civil service retirement system with the social security system, thus letting the social security system absorb the serious deficit of $32 billion in the civil service retirement fund. That would add up to a $352 billion social security debt being passed on to future generations.

Now the Anderson-Javits amendment comes along, proposing to pile another $25 to $60 billion on top of that. This is nothing less than selfishness—a free ride for people who are unwilling to pay the cost of their own program and who desire to let the future generations of the United States pay for it.

I ask unanimous consent that the U.S. News & World Report article to which I have referred be printed in the RECORD at this point in my remarks, along with the examples set forth on page 47 and the table set forth on page 48 of the article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE UNTOLD STORY OF YOUR SOCIAL SECURITY

Check your own social security, and you'll probably find you are getting a bargain. Check your grandson's, and it's a different story. Reason: Pensions for this generation must be paid, in large part, by future generations.

To answer questions now being raised:

This is to be the untold story of your social security. It concerns the pension to which you are entitled in retirement, or if disabled, and to payments to your survivors in event of death.

Social security is a vast system. Old-age and survivors insurance alone in this year will involve benefit payments of more than $13.2 billion. And the total is to grow steadily over the years ahead.

In 4 of the last 5 years, payments to persons drawing benefits have been exceeding income from payroll taxes. Some alarm has been expressed about this deficit between outgo from the social security reserve fund and income into the fund.

That, however, is not the story to be told.

Payroll taxes rose on January 1. They go up again on next January 1. Money flowing into the reserve fund, as a result, once again will begin to total more than money flowing out. Fears about the safety of the fund will subside.

A fact—and questions: A hard and little-understood fact, however, will remain to raise questions.

The fact is this: Benefits promised to people now covered by old-age and survivors insurance total an estimated $624 billion. Reserves now on hand total around 22 billion. Taxes to be paid by people now covered by social security to support pensions are to be an estimated $282 billion.

That leaves $320 billion in benefits to present policyholders to be paid by someone else. Who will that be?

The answer, in simple terms, is that this deficit, if it is to be paid, will have to be paid by future workers at tax rates now in the law. Otherwise, persons now in the pension system would have to pay sharply higher taxes.

Pension bargains for people of the present are to become pension burdens for workers of the future.

These workers of the future will pay substantially higher taxes on their earnings—taxes earmarked for social security. They will work over a longer span of life, paying higher taxes all the way, in order that the 68 million others now covered by social security can enjoy pensions and other promised benefits.

ONE MORE WINDFALL?

It now is proposed that hospital insurance for retired persons be added to the social security system. Once again, if this type of insurance is added, older people will get a bargain. Those retired when the plan would take effect would become entitled, at no cost, to hospital and nursing care valued at thousands of dollars.

Here would be a windfall for persons now retired and those who will retire in years shortly after the plan takes effect.

The tab for the cost would be picked up—as it is being picked up for old-age and survivors insurance—by employers and by those who go on working. In the end the cost would fall on employers and on generations not yet working.

In a word: social security programs, to date, represent a gigantic bargain for persons retired, soon to be retired, or fairly well along in years.

For relatively small payments these people are assured of an income on retirement. Men are assured that, when they die, their wives will go on getting an income. There is further assurance that minor children will get checks in event of the man's death. A binding promise is made of a monthly check in event of total disability.

Once the hospital-care program is in the law, pressure will grow to cover hospital costs for all persons covered by social security, whether working or retired. The final step might possibly be to cover doctor bills as well.

IDEA: PAY LATER

In each case, planning rests on the idea that future generations will get and pay much of the bill for those who are getting, or stand to get, the bargains of the present.

All of this is part of the strong trend toward special advantages for older people at the expense of the Nation's younger people.

Young people with children to educate, with a house to furnish and pay for, with saving to do if there is to be any venturing, with insurance payments to make, get few favors. Payroll taxes, increased eight times in the past 13 years, will be increased three more times for old-age and survivors insurance. Hospital insurance would mean another tax. Then, at some point, there will be unpaid bills from social security promises to meet.

Old people, all of the time, are getting more and more advantages. People age 65 and older get a double exemption on personal income tax. If retired, they get a special retirement credit against income tax. The social security pension—for which they paid little—bears no tax. All their bills for medical and hospital care are deductible for income tax purposes.

All of this raises the question whether young people with more votes than old people will go on giving the breaks to the elderly.

FOR YOUNG: ALTERNATIVES

Two courses would be open to them if ever they wanted to get out from under what is to be a growing burden.

1. Inflation of prices can be accepted while a determined effort is made to keep individual pension benefits from rising. In this way, inflation could be used to reduce the pension burden, since pensions would represent a smaller part of an inflated national income.

2. Taxes could be used to take away some of the advantages enjoyed by retired persons. One tax reform now under study calls for taxation of social security income. There is some pressure to end many other special deductions extended to older people.

However, experience in the United States and Europe indicates that old people will go on getting their bargains and young people will continue to bear their rising burdens. In Europe there is a strong trend toward shifting to employers a larger and larger part of the social security burden.

The generous attitude of young people is attributed to two factors.

One of these factors is the realization that sometime they, too, will be old and will want some favors.

The other factor is that the young people see social security as a means of spreading the risk that comes from being forced at some point, for most, to care for their own parents.

AS IT'S DONE ABROAD

To fill out the untold story of social security, U.S. News & World Report asked its staff members in Europe to explain how those countries—with long experience—have met the rising burden of welfare programs:

West Germany: The idea of national pension plans got its start in Germany. Two world wars, ending in two defeats and destruction of currency, destroyed the pension systems. Yet each time these systems have come back stronger than ever.

To finance old-age pensions, employers and employees each contribute 7 percent of the gross wage. For health insurance they each contribute an added 4.8 percent. An added 0.7 percent goes for sick pay, special leaves, family allowances. On top of it all, employers contribute an average of 16 percent for other fringe benefits. Payroll additions for social security amount, overall, to approximately 45 percent.

Benefit payments in recent years have been adjusted to compensate for price rises. Young people do not appear to object to the burden they carry.

Great Britain: Welfare costs now account for more than a third of all Government spending. Workers covered by welfare programs and their employers pay special taxes that pay less than half of welfare costs. In the case of health insurance, $3 out of every $4 come from general taxes.

Government subsidizes the whole welfare program, and political pressure is constantly on the side of larger benefits. There is pressure to cut down defense spending so welfare can expand.

Sweden: A 6-percent sales tax was introduced in Sweden 2 years ago to help meet the skyrocketing costs of welfare. Social security benefits now account for 15 percent of national income, compared with 7 percent before World War II.

In 1960, government, central, and local, carried 69 percent of welfare expenses, workers 20 percent and employers 11 percent. Now the pressure is to increase the employers' burden.

France: Social welfare in France extends from maternity grants, family allowances, rent allowances and hospitalization to old-age pensions and death benefits. The expense falls mainly on employers, who pay about 30 percent on their payrolls. The employee contributes about 6 percent on maximum pay of $1,920 a year.

Italy: Social security in Italy includes old-age pensions, unemployment insurance, health insurance, maternity benefits, family allowances and some subsidized housing. The Government contributes 25 percent to the retirement pension fund.

Employers' contributions amount to a tax of about 50 percent of payrolls. Workers contribute approximately 11 percent of their earnings.

In Western Europe as a whole, social security benefits now approximate 15 percent of national incomes. The range, according to official figures, is 12.6 percent in the Netherlands to 16.4 percent in France.

The trend in Europe is toward more and more social services, with heavier and heavier taxes on employers, plus larger contributions by the Government out of general revenues. This suggests that, in the United States, as the years go on, the Government, too, will be called upon to support the pension fund in addition to the payroll taxes that now are scheduled.

Social security taxes and how they grow

	Rate paid by worker, matched by employer	Maximum paid by worker matched by employer
1937–49	1 percent on 1st $3,000 of pay	$30.00
1950	1½ percent on 1st $3,000 of pay.	45.00
1951–53	1½ percent on 1st $3,600 of pay.	54.00
1954	2 percent on 1st $3,600 of pay	72.00
1955–56	2 percent on 1st $4,200 of pay	84.00
1957–58	2¼ percent on 1st $4,200 of pay.	94.50
1959	2½ percent on 1st $4,800 of pay.	120.00
1960–61	3 percent on 1st $4,800 of pay	144.00
1962	3⅛ percent on 1st $4,800 of pay.	150.00
1963–65	3⅝ percent on 1st $4,800 of pay.	174.00
1966–67	4⅛ percent on 1st $4,800 of pay.	198.00
1968 and after	4⅝ percent on 1st $4,800 of pay.	222.00

ANOTHER INCREASE COMING?

To provide for hospitalization and nursing home care for the aged, President Kennedy now urges an extra one-quarter of 1 percent in the payroll tax. The tax base would rise from $4,800 to $5,200. The maximum tax then would be raised to $201.50 next January 1, and go on up to $253.50 by 1968.

NOTE.—The social security tax on self-employed persons, first covered in 1951, is 1½ times the tax on employees.

IS YOUR SOCIAL SECURITY A BARGAIN?—HERE ARE SOME EXAMPLES

Example A: A worker who retired in 1940 at age 65. Wife the same age. Before retirement, worker and employer had paid social security taxes for 3 years. Total tax, worker and employer combined: $180. Since retirement, this man and his wife have been drawing benefits for 22½ years. Total benefits to date: $24,973.

Example B: A worker who retired last January 1 after paying the maximum social security tax since 1937. Total tax paid by worker and employer: $2,868. Add interest at 3 percent, and this contribution to the pension fund becomes $3,714. Pension from now on will be $121 a month for the worker, plus $60.50 for his wife if she also is 65 years old. If both live out their normal life expectancy, then total benefits for man and wife: $32,074.

Example C: College graduate starts working in 1962, pays maximum social security tax until retirement in the year 2005. Total tax paid by worker and employer: $18,564. Add interest at 3 percent, and this contribution to the pension fund becomes $36,226. Pension for man and wife, after retirement, will be at a rate of $190 a month. Total benefits, normal life: $33,664.

Example D: Young man gets a job in 1968 pays the maximum tax from then until retiremen in the year 2011. Total tax, worker and employer: $19,092. With interest at 3 percent, this is worth $37,954. Assume this man is a widower, with no dependents. He lives 2 years after retirement, and dies at age 67. Total benefits, 2 years: $3,048.

Mr. MILLER. Mr. President, the backup figures or computations which support the conclusions set forth in the article I have asked to have printed were prepared by Mr. Robert J. Myers, Chief

Actuary of the Social Security Administration. They are set forth in a table showing the results of liberalizing amendments of 1958, 1960, and 1961 which I ask unanimous consent to have printed in the RECORD at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Balance sheet cost analyses of OASDI system, 1958, 1960, and 1962 intermediate cost estimates at 3 percent interest

NOTE.—Present members are all living persons (including beneficiaries) who have earnings credits, as of the given date. New entrants include those participating in the system at any time after the given date who had no earnings credits before that date.

Mr. MILLER. An additional table prepared by Mr. Myers discloses that the per capita deficit for present members of the social security program is $4,679. This means that, on the average, everyone in the social security program today—both retired and working members—is passing on to our future generations a debt amounting to $4,679.

I ask unanimous consent that this table be printed in the RECORD at this point in my remarks, along with a final table showing the deficit for present members as a percentage of current taxable payroll, also prepared by Mr. Myers.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

Per capita deficit for present members, 1958, 1960, and 1962 intermediate cost estimates at 3-percent interest

NUMBER OF PRESENT MEMBERS [1]

[In millions]

Item	Jan. 1, 1958, 1956 act	Jan. 1, 1958, 1958 act	Jan. 1, 1960, 1960 act	Jan. 1, 1962, 1961 act

DEFICIT AS PERCENTAGE OF CURRENT TAXABLE PAYROLL

[Percent]

149	160	154	150

[1] Taxable payroll for previous calendar year, e.g. calendar year 1961 for valuation of Jan. 1, 1962.

Mr. MILLER. The proponents of the Anderson-Javits amendment make considerable point over the fact that the social security tax would be increased only one-fourth of 1 percent for employees and one-fourth of 1 percent for employers in order to finance the program. I ask unanimous consent that a table showing the social security tax rate for 1962 and future years, both as now constituted and as it would be if this program were adopted, be printed in the RECORD at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

EMPLOYERS AND EMPLOYEES

[Percent]

Years	Now	Bill
1962	3	3
1963–65	3½	3¾
1966–68	4	4¼
Thereafter	4½	4¾

SELF-EMPLOYED

1962	4½	4⅛
1963–65	5¼	5⅞
1966–68	6	6⅜
Thereafter	6¾	7⅛

Mr. MILLER. It would be far more fair to our future generations if this proposed modest increase were greater, so that the program would be on a pay-as-you-go basis instead of $25 to $60 billion unfunded. If I understand this argument of the proponents, we might as well ask for an increase of one-eighth of 1 percent instead of one-fourth of 1 percent in social security tax. "This would make it easier for the present generations and who cares about how much more of a load will be placed on our future generations" is what their argument comes down to.

However, let us not be so naive as to think that this is where the social security tax increase will stop. We know from the history of the social security program that the trend is to bring more people into the program and to increase the benefits. When this is done, either the tax must be increased or the burden on future generations will be just that much greater. Social security taxes have been moving steadily upwards—although not enough to prevent the load on future generations from being increased even more. This program is not going to be able to satisfy the needs of people who are met with catastrophic illness or disease, or who have large doctor bills, and who do not have the wherewithal to pay for them. As times goes on, these areas of need will be covered, and this will mean a further boost in the social security tax—unless benefits to those who do have the wherewithal to pay for their medicare costs are dropped from coverage.

Mr. Wilbur J. Cohen, Assistant Secretary of the Department of Health, Education, and Welfare testified that over the next 10 years, the earnings base for social security taxes might well go from $5,200, as proposed in the amendment, to $9,000. If this were to happen, we might just as well tack the social security tax on as an addition to the individual income tax instead of having separate taxes. The rate is likely to go up too. If all people, young and old alike, were covered under a program of hospital and medical care, the rate would be at least 10 percent on employer and employee alike; and let me make it clear that such a rate is a flat rate applied against gross

salaries and wages—not against net income, as is the case with the income tax.

Some opponents of the Anderson-Javits program have insisted that the Kerr-Mills Act should be given a reasonable opportunity to work, and that if this is done, the need for coverage will be met—at least for catastrophic disease and illness cases. I would hope that implementation of the Kerr-Mills Act by the States to the point of giving it a full opportunity to become effective would rapidly take place. Doubtless it is imperfect in some respects, but a reasonable trial period will isolate these imperfections and enable the Congress to make a sound determination of what is required. Enacting legislation at this time is legislating in the dark, if we used no more than the factual data available to us in connection with the Anderson-Javits amendments.

One of the features of the Kerr-Mills Act is that it permits benefits only on the basis of need. However, one of the defects at the same time is the wide variance in need among the definitions of the various States.

In more than half of the 24 States which have so far passed enabling legislation or appropriations, or both, to implement the Kerr-Mills Act, the value of the home occupied by an applicant is disregarded. The range extends from Hawaii, with a limit of $14,000, to Arkansas, which specifies $7,500. In many States some valuations are exempt from need considerations. Differences exist in the amount of personal property allowable and that permitted to be used for business or income-producing purposes.

A single person may retain a cash reserve of $300 to $2,000, depending on his residence. A married couple may retain a cash reserve of from $600 to $3,000, depending on residence.

The face or surrender value of health insurance policies is exempt in a few States. A reasonable amount is exempt in another. Up to $1,500 may be retained by a single person, and $2,000 by a married couple in other States.

Monthly incomes allowable—in some cases the annual allowance has been divided by 12 to compute this figure—range from $83 to $250 for a single person, and from $125 to $325 for a couple. Limits differ in one State, Louisiana, depending upon whether hospital or physician services are required. In a few States the applicant's total resources are evaluated without regard to individual limits, and then compared with maintenance levels established by the State welfare department, to determine eligibility.

In a pamphlet entitled "State Finances and Medical Care Programs for the Aged," prepared for the 20th annual meeting of the National Taxpayers' Conference and Tax Foundation Conference on Federal Affairs, held in Washington, D.C., from February 3 to 7 of this year, at page 9, there apears a table showing State property-income eligibility requirements for medical assistance recipients under the Kerr-Mills provisions.

I ask unanimous consent that the table may appear at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 4.—*State property-income eligibility requirements for medical assistance recipients under Kerr-Mills provisions as of Feb. 7, 1962*

Legend: S=single person; M=married couple; E=exemp.

State	Real property		Personal property	Cash reserve, liquid assets, etc.	Surrender value of life insurance	Monthly income limit	
	Home	Except home				Single	Married
Alabama	E	$1,000				$100	$150

Washington	[15] E	[15] E	(15)	(15)	(15)	(15)	(15)
West Virginia	$4,000			S1,000 M1,500		125	250

[1] Residence required: 3 out of last 5 years. All other States have no durational requirement.
[2] Not to exceed medical, personal, and home and certain debt costs.
[3] Program to begin Apr. 15, 1962.
[4] Reasonable amount exempt.
[5] Income producing.
[6] Maximum allowable for hospitalization benefit.
[7] Automobile exempt.
[8] Maximum allowable for physicians' services.
[9] Plus furnishings.
[10] Plus certain other agricultural/domestic exemptions.
[11] Tools of trade.
[12] Face value.
[13] Liens executed after death of recipient.
[14] Or equity of $4,000.
[15] Excess considered as available to meet medical expenses.

NOTE.—Data for Idaho not available.

Mr. MILLER. The point to be drawn from this table is that one of the defects under the Kerr-Mills Act is the wide variance between various States in the definition of "need." That does not mean that the Kerr-Mills Act could not be improved; nor does it mean that the Anderson-Javits amendment could not be improved, by cranking in a need factor along the lines of the colloquy which I had with the Senator from New Mexico [Mr. ANDERSON] last week.

A great many people have been fearful that implementation of the amendment would result in a medical system or a Government health program in the United States which would be not unlike the one in Great Britain—not necessarily overnight, but over a period of time; in other words, that sooner or later we would get into a system such as the British people have been suffering under for the last several years.

Dr. John R. Seale, a member of the medical profession of Great Britain, made an address before the House of Delegates of the California Medical Association in San Francisco on April 24 of this year, in which he discussed the operations and the defects, as well as some of the benefits, of the British National Health Service.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point the address delivered by Dr. John R. Seale.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE BRITISH NATIONAL HEALTH SERVICE—THE WINDS OF CHANGE

(By John R. Seale, M.D.)

My purpose in visiting with you is to clarify the current debate on the part Government should play in the control and finance of medical care in a democracy. This is merely an extension of what I am trying to do in my own country. There is no place for an Englishman to tell American citizens what they should or should not do—not since the Boston Tea Party—but I may be able to illuminate some of the issues involved. This is my third visit to the United States, and as I lived near Boston for a whole year when I was at Harvard in 1958, I have for long taken a particular interest in events in your country.

There is a book on the British National Health Service which is to be published in London at the end of April by one of our Conservative Members of Parliament who is also a physician. He states, in passing, that the medical system in the United States is by no means perfect—in no country is it perfect—but he goes on, "If my history of the British National Health Service can help the Ameri-

cans to avoid some of the pitfalls into which we in Britain have so clearly fallen, then my efforts in the writing of this book will have been worth while." If my talk to you has the same effect then it also will have been worth while.

The organization sponsoring my visit to your country is the American Medical Association. I am myself a member (though, of course, not a representative) of the British Medical Association, and as I am a physician it is appropriate that my talk should be sponsored by an association of physicians. I have no particular interest in, or knowledge of, the details of the present proposals for financing medical care for the aged in the United States, which represents a domestic political issue which as an Englishman is no concern of mine. On more general issues, however, I believe that my views coincide with most of the American medical profession, and also with most doctors in other nations of the Western World.

I have been witnessing for several years what I believe to be the progressive destruction of the excellence of the medical profession in Britain as a result of excessive control of the profession by the state, and it would appear that the British experience is revelant to other countries. I have no doubt that in the long run not only does the medical profession suffer from total nationalization of medical care, but the people themselves suffer also.

The AMA has often used events in the British Health Service as propaganda against Government intervention in medical care. In doing so it has nearly always painted a uniformly black picture which being both inaccurate and lacking in analytical profundity has in my opinion weakened its case in the United States and has caused much offense in Britain. I hope that I shall be able to show from a review of trends in Britain that although the state has a part to play in medical care the extent of its intervention should be strictly limited.

Before turning to the British National Health Service I wish to draw your attention to the fundamental difference between the National Health Service, as I shall call it, and the medical care provided by it. The failure to draw this distinction has caused endless confusion in discussion about the National Health Service on both sides of the Atlantic. The National Health Service is an organization for financing, administering and distributing medical care. It is not the medical care itself.

Let me illustrate. When I was a senior resident in internal medicine at St. Mary's Hospital in London an American was admitted to the ward suffering from a coronary thrombosis. He was particularly impressed with the excellence of the nursing care he received, which is considerably better than that usually available in American hospitals. He assumed, incorrectly, that this excellence was evidence of how good the National Health Service was. He did not know that the high quality of the British nursing profession had been built up from almost nothing in the 100 years that followed the pioneering efforts of Florence Nightingale, and the National Health Service took over this profession with its high standards and ideals—it did not create it. The National Health Service is not the nursing profession, it is not the doctors, it is not even the hospitals, nearly all of which were built long before it was thought of. It is only a financial and administrative organization, although the structure of the organization does, in the long run, affect the quality of medical care provided by it.

You will find that I am highly critical of the national health service because, in my view, it is damaging the health professions and the quality of medical care available to the people of Britain. Doubtless many of you will have heard, quite correctly, of the excellent care received by many people under the national health service, but before you assume that my analysis is inaccurate, once again let me remind you that this excellence which does exist may do so in spite of, and not because of, the national health service.

Medical care of all forms is provided in Britain through the health service which is operated by the state and was created in 1948 by the Labor government in power at the time. The state provides medical care free of direct charge to the entire population irrespective of income, thus relieving the individual of much of the financial hardship associated with illness. All hospital and specialist care are free, all the services of general practitioners are free, and there are only nominal charge of 30 cents for prescribed drugs, and small charges for dental treatment. The act of Parliament laid upon the Central Government the responsibility of providing these services itself, and to enable it to do so the private and city hospitals were nationalized, the state pays specialists a salary, and it pays general medical practitioners a modified form of salary. Although the health service is partly financed by compulsory insurance payments, nearly 80 percent of the cost has been covered by general taxation.

To make available to all the medical care they require, free of charge, is a very attractive proposition to the people, although a utopian intention, because what is required is largely a subjective concept. Certainly there was immense support from the general public and from the national press for a health service of this type at the time, and in many ways it has remained popular over the years. The climate of the times in Great Britain in 1946 when the National Health Service bill was passed by Parliament was favorable to extension of the activities of the state. Emerging from a world war which had lasted 6 years we had come to accept a degree of control of the individual by the state from which we have since moved away in almost all fields, except for health. In recent months, however, several of our economists have been questioning the basic arguments for nationalizing medicine, but even more important, signs of strain in the state service are now developing which suggest that it contains fundamental defects. There is a growing awareness that the wholesale nationalization of medical care 14 years ago was a mistake and the damage done may take a long time to repair.

The provision of free medical care does, of course, reduce the risk of financial ruin for the individual through illness, a highly desirable objective. But a system which provides it brings new problems. Although the patient does not pay directly for medical care at the time he consumes it, nurses, doctors, dentists, and other health workers still have to receive an income in return for the services they provide. These incomes are no longer derived from the people as patients paying fees or voluntary insurance premiums—they come from the people as taxpayers. The problem of paying directly for medical care as a patient is merely shifted to the problem of paying taxes—and taxes are no more popular than direct payments for medical care. Furthermore, if the taxes are entirely raised by the central government, then it, through the Department of the Treasury, tends to exercise direct control over the hospitals and the health professions.

Although the cost of the service to the taxpayer has worried both the public and the Government ever since it started, a new, more complex, and more important problem is developing—the quality of medical care available in the Service. So much attention has been devoted to keeping down costs that the effects on quality—indeed the importance of quality—have been inadequately perceived. But the quality of medical care received is vital for if it is not high the patient may lose his health, happiness, and sometimes his life. If a child dies during an appendectomy because the surgeon is inadequately trained, or the anesthetist is inexperienced, or the intravenous pentothal is defective, the fact that the operation is performed free of charge is little consolation to the bereaved parents. Direct payment for medical care does not by itself guarantee high quality, but neither does provision by the state.

Ever since the state service started successive governments have thus been faced with a dilemma and I fully appreciate the difficult position in which they are in. On the one hand the Government has attempted to provide medical care of the quality and quantity acceptable to the electorate; on the other hand they have tried to limit expenditure of tax funds as much as possible. Although the two objectives tend to be mutually exclusive, the issues are not of minor importance to the Government. The whole nation is intensely interested in the level of taxation, and in the effectiveness of its state-operated health service, almost the only channel through which it now obtains medical care—money and life interest us all a great deal. If the cost is too high or if the quality of medical care available is too low then a government could fall from power. Troubles in the health service strike at the very heart of political activity.

So far, as the most articulate public critics of nationalized medicine have leveled their attacks at high cost rather than low quality, the politicians and the health departments have naturally done likewise. We must not forget that the Government tends to do what the people want in a democracy, even though the wishes of the people may be harmful to themselves in the long run if their opinions have been based on inadequate information. Democracy itself can be no more than a facade if the people are not well informed. To lower public expenditure the Government can either increase the share of cost borne by the patient and private insurance, or cut down expenditure on the service itself. It has been considered politically inexpedient so far to raise substantially the cost to the patient, and little serious thought has been given to encouraging the expansion of private health insurance. Great efforts however have been directed to curtailing total expenditure on the service itself with a success which is not generally realized.

How has cost been kept down over the last 10 years or so? By efficiency in the use of material and human resources? Economy with efficiency have been the aims of the state authorities for 10 years and in principle they are highly desirable objectives. However, economy in practice often means cheapness and this carried too far tends to impair efficiency.

The easiest way to economize is to cut capital expenditure. Capital was the first casualty in the economy campaign in the hospitals. It should be recalled that one of the primary arguments in favor of nationalizing the hospitals in 1946 had been the view that capital expenditure on them under the old system before the war had been inadequate, and that after the damage and neglect of the war years only the state could afford the huge investment required to modernize them. Nevertheless, according to a Government sponsored report on the cost of the health service, annual capital expenditure on the hospitals in the first 6 years after nationalization, at constant prices, was only one-third of that spent in the 1930's. The proportion of the total capital investment of the nation devoted to hospitals, already so low in 1949, fell substantially for 8 years and has only been rising since 1957. It was not until 1962, 14 years after the state monopoly was created, that detailed plans for a

major rebuilding of the hospitals have been put forward. Because most of the capital which has been spent has gone toward patching and mending old buildings few entirely new hospitals have been completed since the end of the war, although another 20 or so are now under construction. To economize on capital in the hospitals, in which labor is the major item of cost, and in which much of the plant is already obsolete, is contrary to the principles of sound management. Much of the energy of doctors and nurses has, as a result, been wasted as they work in inefficient surroundings which have been perpetuated by an excessively narrow pursuit of economy.

A policy of stringency tends to lower the incomes of those who work in any organization dominated by this aim. For doctors in a nation where the state has a virtual monopoly in medical care, it comes almost the only buyer of their services, because private practice is of necessity severely curtailed. Most people believe that governments spend their money raised by taxation very lavishly, but it should not be forgotten that the state is not always generous. The state has in fact used its immense power over doctors, nurses, and other health professions, to obtain their services inexpensively. These professions are particularly vulnerable when faced with a monopoly employer because they will not harm their patients by striking against their employer.

I shall not trouble you with the details of the prolonged struggles over earnings between the medical profession and the state. According to the English economist, D. S. Lees, in his recent book, "Health Through Choice," between 1950 and 1959 the real incomes of general medical practitioners fell by one-fifth while those of the community in general went up by about as much. Even with the much publicized increase in doctors' pay in 1960 they are still no better off than they were 10 years ago. This can be said of few other sections of the British working community and contrasts strongly with the trend of medical incomes in most other countries in the Western World.

The fall in the earnings of doctors in hospitals has been more complex. All are paid salaries and many grades of hospital doctors receive considerably lower real incomes today then they did in the early days of the National Health Service. Probably more important than the fall in real incomes of any particular grade, however, is the rapid expansion of medical appointments with low salaries compared with expansion of those with high salaries. This was not so in the first 4 years of the Service, but between 1953 and 1960 the number of senior, relatively well-paid specialists increased by 8 percent while the number of residents and interns increased by 21 percent. In the case of general surgery in the last 9 years the number of senior specialists has actually been reduced. The result has been that surgeons have remained in junior posts as residents on low pay for many years—indeed often till middle age. For the purpose of this paper I define middle age as the age of 40. During the long years as a resident the surgeons have often been undertaking, according to a recent Government sponsored report, the same work as a consultant. But the salary of a resident is only about half that of a consultant. Increasingly the demand for doctors in the nationalized hospitals has been for those who are willing to provide their services for low prices.

Is the policy of economy in doctors' earnings have any effect on the quality of medical care available in the nationalized hospitals? Many young doctors are showing themselves unwilling to accept the prices offered for their services by the state and they dislike the rigidity, and the impairment of their professional freedom, in the system in which they work. The rigidity and restriction of their freedom does, I believe, follow necessarily upon finance and responsibility being vested in the hands of central government. With the state virtually a monopoly employer of doctors they must either accept the terms offered by the state, or leave the country, or leave their profession. Large numbers have left the country. In the 10 years of the 1930's, that is, before nationalization, an annual average of 27 doctors with British degrees registered for practice in Australia according to official Australian sources. But in the last 5 years the annual rate has been 225. The 1959 figure of 256 in the 1 year was almost equal to the total for the entire 10 years of the 1930's. In the last 8 years an average of over 200 British doctors emigrated to Canada each year according to the Canadian Department of Immigration. In the 1 year, 1960, more doctors (162) trained in England and Ireland passed their State boards examination in the United States than did in the whole 10 years of the 1930's. In short, in the last 10 years the number of British doctors going to Australia and North America has been well over five times the rate prevailing in the 1930's, is over five times the general rate of emigration, and the total of 600 a year is equivalent to one-third of the annual output of the British medical schools. The reasons for their departure is, in my opinion, that in Australia and North America the professional freedom of doctors is greater, the opportunity to practice medicine well, particularly in general practice, is greater, and the financial rewards are more appropriate to the years of study, the long hours of work, and the heavy responsibility which doctors carry.

To sustain the large loss of doctors by emigration there has not been a correspondingly high output from the British medical schools. The number of medical students in training has fallen continuously from 14,200 in 1950 to 12,300 in 1959. In spite of the steady fall in the early years of the 1950's a committee recommended a further 10 percent cut in the intake of students in 1957. As a result the number of students in training is now no greater than it was before World War II in spite of a rise in population and in spite of the increased complexity in medical practice which has characterized the last quarter of a century.

To aggravate the shortage of doctors in Britain due to high emigration and low recruitment, the rate of retirement of elderly doctors is now rising steeply. This reflects the uneven age distribution of British doctors—an unusually large number of men entered the medical profession after the end of the First World War in 1918 and these are now reaching retiring age. In the next 5 years about 60 percent more doctors will reach the age of 65 as did in the last 5 years.

As the supply of doctors with British degrees has been falling the hospitals have relied increasingly on doctors from overseas to take temporary posts. By 1960, 41 percent of all junior hospital posts in England were filled by doctors trained outside the British Isles (nearly 4,000 doctors from overseas), and the proportion is rising rapidly. Most come from India and Pakistan. The total number is now equivalent to well over 2 years of output of the medical schools. In the region around Sheffield, an area in the north of England, 26 of the 74 hospitals have no doctors at all below the grade of consultant (that is under the age of about 40) who were trained in Britain. Increasingly the medical staff of the hospitals is a rapidly shifting labor force recruited from abroad, most of which does not intend to settle in Britain. These young doctors from overseas arrive with little experience, but once they have become highly competent they return to their own lands.

The effect on the quality of medical care in hospitals was described by several of the speakers in the now famous debate in the House of Lords on the shortage of doctors on November 29 last. There is no system whereby the hospitals are made to keep within specified standards for the training of postgraduate doctors from overseas. Large numbers of these, instead of receiving training and experience under supervision at the postgraduate institutes for which Britain is famous, are being used for what in economic terms, might be described as inexpensive medical labor.

Difficulty in language is one of the major problems because of the short time many remain in Britain. Not only do some of the doctors have the greatest difficulty in communicating with their patients, they also have difficulty in talking with other doctors. The language difficulties of interns from abroad has been a problem in U.S. hospitals, but the American Hospital Association has imposed a compulsory linguistic test which now insures a knowledge of English before a hospital appointment is made. In Britain there is at present no such test though doubtless one will soon be imposed.

I have spoken a good deal about how the nationalization of medicine has affected the earnings and conditions of work of the doctors. But again how has it affected the patient, without whom the doctor has no function? Up until the present the patients have been cared for satisfactorily, particularly those who have been acutely or severely ill. Now there are signs that a crisis has been reached, particularly in the emergency departments of the hospitals, and in the maternity services. This has been extensively documented recently in Britain in official and nonofficial publications, and doubtless many of you will have read of it.

I have concentrated on troubles in the supply of doctors because they are the most essential of the skilled personnel providing medical care. If the supply fails then there is real trouble ahead and I should remind you that the future supply of doctors in your country is by no means assured. However, the effects of the national health service are also beginning to show in the nursing profession and in other health professions with unhappy consequences for the patients. The cumberous administrative structure of the health service, described by our present Minister of Health as "lumbering Leviathan," often impedes the efforts of the individual in it to work well. I have stated on many occasions in my publications that the undoubted success of much of the state health service up till the present in providing medical care of high quality has been due to the abundant stock of human, moral, and material capital which it inherited in 1948. British doctors, and British nurses have for long had a world-wide reputation for excellence. Few will doubt that the material capital—that is the hospital buildings and equipment—has been allowed to run down. It is now becoming apparent that the human and moral capital of the health professions has also been consumed but only partially replenished. Until recently there has been no clear evidence of declining quality of medical care, but this is the problem which is now emerging in nationalized medicine which is as yet only imperfectly appreciated, but which will dominate the medical care field in Britain in the 1960's. The national health service, which started with such high hopes and great expectations, is now moving into a phase which has many of the characteristics of high tragedy.

I think there are some lessons of general interest to be learned from these recent occurrences. It has been an error to assume that the major problem in medical care is cost. If the burden of payment is removed from the patient then all will be well was the oversimplified approach of the 1940's. This is just not true. Of equal or greater importance is quality of medical care avail-

able. This is a complex concept, and somewhat intangible, just as the concepts of freedom and patriotism are, but their compiexity and their intangibiiity makes them no less important.

It would be absurd to suggest that cost is of no importance. But surely the objectives one wishes to attain in any form of heaith system is, first, to insure that there is available in a nation medical care of high quality, second, to insure that no individuai shaii be unable to obtain medical care for financial reasons, and, third, to insure that he shall not be financially ruined because of medicai expenses alone. In the United States, possibiy in no country, have these objectives been achieved. But they can be approached by a great variety of means, and it was certainly not necessary to nationaiize all the medical facilities and personnel, and provide all medical services free, as happened in 1948. This achieves the last two objectives, but impairs the achievement of the first. The state has an important part to play—in your country for instance the treatment of mental disease and of tuberculosis and many other health problems have for long been a function of public authorities—but the individuai also has a part to play. It is the preservation of a reasonable balance between the right and duties of the state and of the individuai which is the hallmark of a free but responsible society. In my country, this deiicate balance has been disturbed in the field of heaith but we shaii be making efforts to restore it. The realization that some change is needed is just beginning to dawn.

In the United States also the winds of change are blowing strongiy. With an aging population the probiem of financing medical care for the elderly becomes more important, and the citizens of a prosperous nation do not wish to be exposed to the risk of reduction to penury by iii heaith. There is no easy soiution, there is no complete solution, but do not fali into the error of assuming that the state, by usurping the responsibilities of the individuai, will provide all the answers.

You may think from what I have said that medicine in Britain is in trouble. Indeed this was precisely what was said by the British Medicai Journai in its leading article commenting on the now famous debate in the House of Lords last November. But to assume that this is all there is to be said about the situation would be erroneous. The British may be siow to change their minds but once they realize that change is necessary they are weli able to bring it about. Furthermore, it is when they see that a situation is particuiariy disastrous that they are at their best.

You may be wondering why I shouid be here to tell you of these troubles in my own country. It is only in part because I hope you wiii avoid some of the errors which we have made. It is aiso because I do not wish you to misunderstand what is happening in Britain as you read reports of further events in the health service in the years ahead. My three strongest emotions are love of my country, of my family, and respect for my profession, and I do not wish you to underestimate the potentialities of my country to remedy an unfortunate situation.

I can only remember dimly as a child the episode in 1938 now known as Munich. At that time the vast majority of my fellow countrymen was behind Mr. Chamberiain, the Prime Minister, in his policy of peace—at almost any price. We now accept this was a mistake. Few British thought at the time, that there would be war, and none wanted it. But as events unfolded in the early months of 1939, as we perceived the abyss toward which we were heading, then a great change came over the people and we moved toward war in September as if we had always known that it was coming. It was, however, only after the shattering defeat of our armies in France in May 1940, that we reaiiy showed our worth. All the rest of the world, all informed opinion in the United States, wrote us off as finished. The Germans even demobilized some of their fighting divisions. Yet in England we took it entirely for granted that we would continue to fight alone against Nazi Germany. This we did for more than a year until the United States came to our assistance and together we marched forward to final victory.

So if you think that the British wiii never change their nationalized heaith service because they like the state to provide free medical care for aii, and if you think that because medicine is in trouble we shall not remedy it, then I suggest that you think again. When my feiiow countrymen come to reaiize from the course of events that they have taken a wrong turning, changes will be made, and if we are in real troubie then we wiii get out of it. After ali—we have done so before.

Mr. MILLER. Mr. President, I think it well to point out that some of the benefits which are claimed for the British National Health Service are not those that came about as a result of that program. They were those which were already in existence at the time the program was started.

Some people talk about their friends in Great Britain thinking that the medical care which they receive under the national health service is satisfactory. Then they attempt to justify the program which is being presented to Congress on the basis of the fact that things are satisfactory over in Great Britain.

The only reason why they have been as satisfactory as they have been thus far has been the fact that these are benefits which have carried over from the system that existed prior to the national health service. Since the national health service has gone into effect, according to those who know, the medical program furnished to the people of Great Britain has deteriorated. They now have a situation whereby they cannot get enough persons to go to medical schools for training as doctors. The level of medical students today is about the same point as it was back in the 1930's, even though the population has been increasing steadily. They have been bringing doctors in from overseas. This is not a good situation.

Then, of course, there is the problem of the doctor-patient relationship, which is a precious and important heritage in the medical profession of the United States.

Mr. President, the situation with respect to the number of medical students in British medical schools is something that has given much concern to members of the British Government. One reason why the situation has arisen has been that under the British National Health Service the Government has what most people would consider to be socialized medicine. In my arguments against the Anderson-Javits amendment or the Kennedy medicare program, I have refrained intentionally from using the phrase "socialized medicine." To be fair about it, I think it can be pointed out that there could be a great difference between the British National Health Service as now constituted and the situation which would exist in the United States if the program of the Anderson-Javits amendment were implemented. However, that does not make it right. Whether the Anderson-Javits program is socialized medicine or is not socialized medicine is not, in my judgment, the question.

The points, as I have already emphasized, are first, that under the Anderson-Javits amendment we would drain off the benefits from those who need them, dilute those benefits, and tax the people for benefits for those who can afford them. I think that is unfair; and second, the social security system would be used to finance the program although it is already in a very shaky financial condition. It will not get any better, and it will get much worse if we keep putting more burdens on the backs of future generations by increasing the coverage and the benefits under this program. I think it would behoove the people who are so eager to have the social security system embrace all of the proposed new coverages and benefits to watch out lest the social security system become bankrupt some day, or lest the coverage and the benefits be reduced.

When future generations come into the heritage we are leaving them and begin to run Congress, I wonder whether they will be satisfied with the heritage the present generation will have left to them. They could cut back the benefits, scrap the program, or have an entirely new program financed out of general taxation, any of which would be fairer than what we will be passing on to them by the actions we have been taking in the last several years.

I do not know whether a majority of the people in my State of Iowa favor the Anderson-Javits amendment or not. On the basis of the correspondence I have received, my guess is that a substantial majority of them are opposed to it.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD an article entitled "Hospital Care for Older People," published in Wallaces Farmer for February 17, 1962.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOSPITAL CARE FOR OLDER PEOPLE—IOWA FARM FOLKS SPLIT ON LINKING HOSPITAL CARE TO SOCIAL SECURITY

Should the social security tax be raised to pay hospitai biiis for foiks 65 or over? This is one of the projects the present Congress is arguing over.

What you pay the doctor is not an issue here. If the biii is passed, it would oniy help on hospital expenses. Patients would use Biue Shieid or private insurance policies to help with medical expenses.

About half of Iowa's farm families carry some kind of hospitai insurance. What older folks sometimes worry about is the prospect of a serious illness that would not be covered by limited hospital insurance. And the ones that have ro insurance are naturally stiii more concerned over the health hazards of advancing years.

The Wallace's Farmer poll asked Iowa farm people what they think about the sociai security proposal. Those who had heard about it were asked:

"President Kennedy is urging that a hospital insurance plan be added to the social security program. The plan would help pay hospital costs for men and women when they reach 65. Social security payments would be increased to cover cost of the plan. On an income of $3,000 a year, the added social security payment would be $11.25 a year. * * * Do you approve or disapprove this proposal?" Here are the results:

[Percent]

	Men	Women	Total
Approve	44	39	41
Disapprove	39	39	39
Undecided	17	22	20

Last year's bill provided for hospital care up to 90 days. The patient would pay the first $10 of hospital costs per day for the first 10 days. After that (up to 81 days for a single illness), the social security insurance would pay all the hospital bills.

Cost of nursing home service was also covered, up to 180 days.

The new 1962 bill hasn't been worked out in detail yet. Costs may differ a little, but the betting is that the benefits will be about the same.

Older men, as you might expect, liked the plan better than younger ones:

[Percent]

	24 to 34 years	35 to 49 years	50 to 64 years
Approve	28	44	57
Disapprove	44	42	32
Undecided	28	14	11

Farmers with gross incomes of less than $5,000 a year liked the plan better than did those with more money. But men with gross incomes of $10,000 or more still gave the bill an approving vote of 42 percent.

Farm women voted much as the men did except that very few young women (21–34 years) were undecided. They divided almost evenly for and against the plan.

One young farm woman in Buena Vista County wondered if the plan would hold together until she was 65. She said: "I'll have to pay for it but I sure want some security that my hospital bills will actually be paid when I'm 65."

The mother of a young farmer in Taylor County said emphatically. "No: Take my son. He doesn't get as big an income as his dad and he still has to pay more for social security than he can afford."

There was a family split on a farm in Wright County. The man, now getting social security payments, approved the hospital plan. But his wife said:

"I'm over 65 but I disagree. I think it's putting an awful burden on the young people. If we can afford to pay for our own, we should."

A middle-aged farmowner in Webster County said: "I'd approve hospital insurance for old people on social security. Goodness knows they can't afford it at present."

A young man in Greene County said: "I just wonder how much hospital insurance you can really get for that money. Maybe they'll have to increase the tax more."

Blue Cross, Blue Shield, and other private organizations are moving to provide help for older people without bringing in social security. Blue Cross, for instance, is talking of a plan whereby folks of 65 or over would pay $10 or $12 a month for hospital insurance providing 60 days of hospital care a year.

Blue Shield suggests a $3 a month fee for older people to cover medical expenses. This would be open to couples with incomes below $4,000 a year.

In each case, special provisions of some kind would be made to help those with incomes so low that they could not meet these monthly charges for Blue Cross and Blue Shield.

Wallace's Farmer will report details on these and other plans as they develop. The new social security bill will assume definite form soon and farmers will know in more detail what the administration proposes. Until then, many farmers will be like the man in Jackson County, Iowa, who said: "I would need to know more before I vote yes or no.

Mr. MILLER. Mr. President, the article contains the results of a poll taken among Iowa farm people. It is not a complete coverage, but it is a poll of a type which quite often adequately represents a good cross-section of the thinking of Iowa farm people. It points out that there is an almost even split between those who approve and those who disapprove with about one-fifth of those polled being undecided. I suggest that on the basis of the way the questions were asked, the people who voted in the poll, both for and against the proposal, did not have a good background of the facts behind the questions which were asked. I am well satisfied that if they knew the facts, if they knew that the program would pay benefits to those who can afford them as well as to those who are poor and cannot afford them, they would not have voted for the program.

In fact, my mail is running about 10 to 1 against this program. I am trying to weed out of my mail those letters and other communications which are prompted by pressure group action. I am trying to arrange the correspondence on the basis of spontaneous opinion. To date it is almost unanimously opposed to the proposed program, although many persons would favor some kind of program to cover catastrophic situations.

The State of Iowa, which I have the honor to represent, has passed an enabling law with respect to the Kerr-Mills Act. Unfortunately, the legislature was not able to appropriate any money to implement that act. What will be the action on this subject in the next session of the legislature is difficult to forecast; but I assume, on the basis of results in other States, and if Congress does not go off the deep end and pass the type of program that is envisaged by the Anderson-Javits amendment, that not only the Iowa Legislature, but also a great many other legislatures, will find a way to pass a reasonable appropriation to implement the Kerr-Mills law, so that catastrophic situations can be covered.

Mr. President, the problems of my State in connection with the consideration of this subject in the last session of the legislature are well set forth in an article entitled "Should Iowa Aid 'Medically Needy'?" published in the Waterloo Daily Courier of February 28, 1961. I ask unanimous consent that the article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHOULD IOWA AID "MEDICALLY NEEDY"?—ASSEMBLY PONDERS FEDERAL AID PLAN

(By Dave Dentan)

On the last legislative day before the recess, the House Committee on Public Health filed a bill in Des Moines to authorize participation in the Federal matching program for medical aid to those past 65 who are not indigent but are living on small incomes.

The bill is primarily an enabling act, since it carries no appropriation and does not establish the minimum of income and savings which would make a citizen eligible for the aid.

The program involved is the "medical aid for the aged" (MAA) authorized by the Kerr-Mills bill which passed the last session of Congress. Six States already have programs in operation, using Federal grants which pay from 50 to 60 percent of the cost.

The bill filed in the Iowa House would make the State board of social welfare and county welfare boards the administrators of the program, subject to advice from a council representing various professional associations, such as the Iowa State Medical Society and the Iowa Hospital Association.

All Iowa residents over age 65, with one exception, would be eligible for the aid, according to the bill, if such a resident "has not sufficient income or other resources of his own, or available to him to provide himself with such needed medical care and services."

The one exception is that the beneficiary under this program could not be a recipient of old-age assistance. Iowa already provides medical (doctor's fees and outpatient laboratory services) care for those receiving old-age assistance.

This care has been costing on the average $7.48 a month per recipient. This could be increased to $12 a month under another provision of the Kerr-Mills bill if Iowa wants additional Federal matching funds for this purpose.

Some officials also argue that if hospital and surgical care is to be given to the "medically needy" in their home towns, the same benefits should be given to the "medically indigent" (the recipients of old-age assistance). This latter group receives hospital and surgical care, except for emergencies, at University Hospitals, Iowa City.

The MAA program for the "medically needy" is intended to aid those aged who, after a lifetime of hard work and rearing a family, are able to support themselves in their old age except for unusual medical care—particularly the lengthy and costly catastrophic illness.

A program for a large part of this group would be needed even if the program of President Kennedy for compulsory hospital insurance under the social security program were adopted by Congress this year.

Iowa has approximately 325,000 residents past age 65, of which 35,000 are receiving old-age assistance and 215,000 are receiving retirement benefits under the social security program.

This leaves an estimated 75,000 who are receiving neither. About 65 percent of these, if they are typical of the older group generally, would have incomes of less than $1,500 a year.

Various estimates may be obtained of the probable need for the individual in any group ruled eligible for the MAA program. The Health Insurance Institute lists $177 as the average actual yearly expenditure for medical care for those 65 and over.

Medical care standards would improve, however, if more financial resources were made available. On the other hand, some deductible feature might be incorporated in the program under which the individual would contribute the first $100 to $500 of cost of an illness, perhaps depending on income.

On a different basis, the Iowa Department of Social Welfare estimates that some 42,403 Iowans (including many receiving social security retirement) would apply for aid under an MAA program and might need an average of $250 each. (This would be the actually sick group, so the average would be higher than for all old persons.)

If this estimate were used, the program would cost some $10,600,750 a year, of which the Federal Government would pay 58.48 percent.

A more moderate and limited program could be devised. There are about 178,709 persons past age 70 in Iowa who are not receiving old-age assistance. According to a recent study of the elderly, 30 percent would have no resources for an emergency. If the average assistance were $100 for each of these 53,613 medically needy persons, the total cost would be $5,361,300 a year, of which the Federal Government would pay 58.48 percent.

The figures for this calculation were furnished by R. J. Quackenbush, executive secretary of the Iowa Nursing Home Association.

Governor Erbe in his budget message suggested that surpluses in the fund accumulated to pay the Korean bonus could be used to finance a beginning on the program. Such use would hinge on a determination, either by the attorney general or the courts, that the money could be legally used.

Some legislators indicate a desire to delay enactment of the MAA program until Congress determines what action it will take on the Kennedy hospitalization program under social security. But others point out that some program will be needed for needy Iowans not receiving social security benefits and that the proportion of Iowans in this category is considerably higher than the national average.

In any case, the bill introduced in the House is written in such broad terms that it could be used (1) to let the board of social welfare prepare a program based on the amount of money available or (2) permit the attachment of amendments to define more precisely the rules of eligibility.

The Journal of the Iowa State Medical Society declares that a State appropriation of at least $2,500,000 is needed to get the program underway.

Mr. MILLER. Mr. President, in the Des Moines Register of May 22 there appeared an excellent article entitled "Doctors Say It Does Not Meet Needs"—referring to President Kennedy's medicare program. I ask unanimous consent that the article be printed at this point in the RECORD, in connection with my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DOCTORS SAY IT DOES NOT MEET NEEDS—SEE A STEP TOWARD BRITISH SYSTEM

NEW YORK, N.Y.—Leaders of the American Medical Association, Monday, denounced President Kennedy's medical care for the aged plan as a cruel hoax aimed at establishing welfare state medicine for everyone.

"Don't mistake it," an association official declared in a paid, national televised reply to Mr. Kennedy's Sunday speech here.

"England's nationalized medical program is the kind of thing they have in mind for us eventually."

Mr. Kennedy urged passage of the King-Anderson bill, commonly known as medicare. It would pay some hospital and other medical bills through social service taxes. Doctor bills generally would not be covered.

The AMA representatives said the public was in danger of being blitzed, brainwashed and bandwagoned into swallowing a plan that would disrupt health services and turn individual patients into impersonal numbers.

ELEMENT OF NEED

The plan would cover millions who don't need it and ignore millions of others who do, said Dr. Edward R. Annis of Miami, Fla., a surgeon who is chairman of the AMA national speakers bureau. He added:

"Our fees are not involved. Our practice of quality medicine is. Your health is."

In an impassioned plea, he urged viewers to consult the "one they know and trust—your doctor" about what the Kennedy plan would do to American medicine.

"There are only a few things which touch so close to God and the relationship between a doctor and his patient is one of them," he said, charging that the Kennedy plan seeks to undermine it.

CROWDLESS GARDEN

The doctors' reply to Kennedy was filmed in Madison Square Garden, the same place where Mr. Kennedy Sunday addressed a cheering crowd.

But instead of a crowd scene for a backdrop, the AMA spokesmen appeared in an empty, silent arena, its vast expanse littered with paper, broken balloons and decorations left from the Kennedy rally.

An association spokesman estimated cost of the show, carried on paid time over the National Broadcasting Co. network, at $75,000. The group had asked for equal time to reply to Mr. Kennedy's half hour address, but was turned down. Mr. Kennedy's speech was carried free.

AMERICAN SYSTEM

Dr. Leonard D. Larson of Bismarck, N. Dak., association president, spoke briefly. He said the administration's program would deprive older people of "the American system of medicine, based upon the private doctor treating the private patient."

In the last 20 years alone, he said, this system has "added 10 years to the life of every American."

Dr. Larson said the King-Anderson bill would not cover 3 million over-65 people not eligible for social security benefits, and thus probably most in need of medical aid.

At one point, Dr. Annis held up a copy of the King-Anderson bill and said: "This bill is a cruel hoax and a delusion."

ADDED TAX

He said it would add as much as 17 percent to the working American's payroll tax to give medical care to "the rich, the well-to-do and the comfortable, as well as those of low income.

"Whether they need it or not; whether they want it or not—they'd be in," he said.

"Now, there is some more interesting reading in here for those on social security who genuinely need medical aid. Just what would you get under King-Anderson? You can read it as we did. For a hospital room containing one, two, or three other people—it would still cost you $10 a day for the first 9 days of your hospitalization. That's $90.

"After you left the hospital or nursing home, you wouldn't be eligible for further hospital benefits for at least 3 months. Don't have a relapse or get sick again. To get into the hospital you'd apply in writing and get the certification of a doctor.

PAY DOCTOR

"You'd have to pay for your doctor, and you'd have to pay for a private duty nurse if needed. And you can also read if your illness required hospitalization for more than 30 days, it'd have to be passed on by a special committee who'd have to consider a lot of other people too, don't you know. After all, the Government has to treat everyone fair and equal, don't you know.

"They know all about how to make things exactly alike—like human illnesses. Like a broken toe * * * and cancer. A bed is a bed. Thirty days is thirty days. Your doctor won't decide. The committee will decide—when it meets.

"Do you know that you'd have to pay the first $20 of each diagnostic study you'd get at the hospital as an outpatient?

"Do you know that the only drugs that would be paid for are those you'd get at the hospital or nursing home—and that many important drugs used today do not appear on the list approved for hospitals and that a prescription made out by your doctor in his office or your home is not covered by the King-Anderson bill? Do you know that in order to get into a nursing home for your maximum of 150 units of service—you'd have to go to the hospital first?

DOCTOR BILLS

"Maybe some of you are still thinking in the back of your heads, what are the real reasons the doctors are so dead set against this King-Anderson bill? You may believe that it must have something to do with doctors' fees * * * our income.

"But, do you know what? The King-Anderson bill doesn't even cover most private doctor fees. Doctors would probably make more money, not less, under King-Anderson * * *. Anyone knows there is more money in mass production.

"But that is beside the point. The American system of medicine is a system of quality medicine * * * not mass production medicine. It is a system of private medicine, practiced by private doctors treating private patients, free to make decisions based on the patient's specific medical needs—and nothing else."

KERR-MILLS ACT

Dr. Annis claimed that the Kerr-Mills medical aid for the aged law, passed by Congress in 1961, provided means for caring for the elderly who need financial assistance in meeting medical costs.

The Kerr-Mills law, he said, "is a desirable supplement" to "one of the greatest social advances of our generation—the spectacular growth of private, voluntary health insurance systems to which millions of Americans already belong."

MEANS TEST

In reply to charges that obtaining aid under the Kerr-Mills plan requires submitting to a "means test" that is "degrading and undignified," Dr. Annis said: "When you apply for the low rent benefit of public housing—don't you have to prove that your income is below a certain level? This is a means test. A test of your means.

"And when you apply for social security, aren't you asked to prove that your wage earnings are below a certain amount? Is this degrading or undignified? Well, that's a means test, isn't it?—a means test for social security itself.

"A means test is a desirable protection for those who are really needy, as against those who are merely greedy."

The King-Anderson bill would not repeal the Kerr-Mills Act. If the King-Anderson bill were passed, the Kerr-Mills Act could continue to provide medical care for needy persons not covered by social security, in those States that fully implemented the act. (Iowa has passed an enabling act, but has not provided any money to put it into operation.)

IOWA HOSPITALS OPPOSE MEDICARE

The Iowa Hospital Association has reaffirmed its stand against any plan to provide medical care for the aged under the Federal social security program.

The association in 1960 voted to oppose the plan and reaffirmed this stand at a meeting of the board of trustees and officers last Friday in Spirit Lake.

An association statement, made public Monday said:

"We are convinced that the solution to the medical-care-for-the-aged problem can be found within the framework of this country's existing system of private voluntary health care.

Mr. MILLER. Mr. President, in the March 1961 issue of the Iowa State Medical Society Journal appeared an interesting and timely article entitled "Colorado's Plan for Administering Medical Aid for the Aged." I ask unanimous consent that the article be printed at this point in the RECORD in connection with my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COLORADO'S PLAN FOR ADMINISTERING MEDICAL AID FOR THE AGED

In Colorado, a medical service plan for elderly people with little or no income has been administered throughout the past 3 years by Blue Cross and Blue Shield, under contract with the State welfare department. The arrangement—virtually identical with that which is being proposed by several of the groups that will furnish services under the MAA program in Iowa—meets with the enthusiastic approval of all the parties involved.

EVERYONE IS PLEASED WITH THE ADMINISTRATION

As a part of a study that a team of investigators made last year for the Health Information Foundation, an instrumentality of the commercial (non-Blue Cross-Blue Shield) health insurance companies,[1] about 100 participants in the Colorado program—physicians, hospital administrators, welfare officials, pensioners, and Blue Cross-Blue Shield executives—were interviewed individually. Every single one of them declared that the administrative arrangement has worked well.

"With Blue Cross administering the program," a county welfare director explained, "we have no problems with hospitals—no difficulty about admissions and no time-consuming conferences about charges and the like."

An orthopedic surgeon stated: "Physicians' acceptance of this program was largely due to its use of Blue Shield. If the same program had been set up through a State bureau, we would have had a completely different reaction to it."

A State welfare official declared: "By using the existing channels—Blue Cross and Blue Shield—we avoided any conflict with physicians and hospitals and held down our paperwork, too."

A hospital administrator observed: "Existing Blue Cross and Blue Shield controls have held abuses to a minimum in this program—far less than would be found in a Government program."

THE SCOPE OF THE PROGRAM

Before we present an outline of the administrative setup, a brief sketch of Colorado's payments and service benefits is in order. In September 1937, every indigent beyond 60 years of age, in that State, began receiving a pension. The amount has been raised several times since then, and is now $107 per month, less other income. On January 20, 1957, the Colorado medical care plan for pensioners went into effect, and an amendment to the State constitution decreed that $10 million per year—no more and no less—should be budgeted for its support. All pensioners are eligible for its benefits.

Originally, patients were allowed 30 days of hospitalization per admission, and readmission might succeed discharge without the patient's stepping outside the door and reentering it. Last fall, in what may have been only the first in a series of curtailments, the limit was reduced to 21 days per admission, and unless the attending physician requests an extension, a period of 30 days must elapse between discharge and readmission. Emergencies are given special consideration, thus preventing hardship, and it is thought that the change in rules is helping to stem overutilization.

Pensioners entering nursing homes agree to pay the proprietors $100 per month, retaining for themselves just enough money to pay for their clothing and incidentals. The State makes direct payments to the nursing homes in varying amounts, depending upon the facilities and services that the institution is able to provide, and upon the type of care that the particular patient must have. These sums may not exceed $95, and at present average $67 per patient per month. From the pensioner's relatives, the proprietor may collect additional amounts, provided that the total from all sources does not exceed $250 per month for any particular patient.

Pensioners are provided surgery and inpatient medical care much as they would be if they held Blue Shield service contracts. Those in nursing homes are provided two doctor's calls per month, and as many as two more when they are acutely ill. Those who live at home are entitled to a noncumulative, two office or home calls per quarter at State expense. Consultants' and surgical assistants' fees are covered, as in Blue Shield contracts.

Prescription drugs, except cortisone and its compounds, are furnished to patients at State expense, but dietary supplements, household remedies, and personal care items are not. In many instances, because Colorado has counties without hospitals and even without doctors, its elderly people must travel long distances to obtain health care. In such cases, the plan covers transportation.

THE FUND'S "DEFICIT" IS A BOOKKEEPING FICTION

The pensioners' medical care plan in Colorado is proving more costly than was anticipated, and as has already been mentioned, curtailments of benefits have been undertaken in an effort to curb overutilization. The annual budget for the fund was permanently set at $10 million 3 years ago, and expenditures over that amount are technically "deficits" that Federal grants under the provisions of the Kerr-Mills Act cannot formally erase. But when, by dipping into general funds, Colorado spends Kerr-Mills money for its eldercare program, during this and ensuing years, only the most rigid purist can say that it is spending improperly.

ADMINISTRATION HAS A MINIMUM OF COMPLICATIONS

Blue Cross and Blue Shield began administering the Colorado hospital-care and physician-service arrangements on February 1, 1958, less than a month after the inauguration of the medical care plan, and they have continued doing so ever since. Payments for nursing home care and for transportation of patients are made directly to the vendors by the welfare department. Drugs are purchased direct from retail pharmacies, and claims from druggists are audited by a committee of independent pharmacists.

A medical advisory committee containing representatives of the State medical society, the osteopathic association, the pharmacal association, the hospital association, the dental association, the State department of health, the State association of county commissioners, the National Annuity League, the State chamber of commerce, the League of Women Voters, and the county welfare directors' association was set up by the State welfare department to guide it in implementing and perfecting the program.

Blue Cross and Blue Shield were selected to administer the bulk of the old-age pensioners' medical care program partly because they already had the machines and personnel to do the job. They could carry out the details of the program for less money than the State welfare department could do the work in its own offices. And just as importantly, less paperwork would devolve upon the suppliers of services.

Each of the eligibles receives a card resembling a Blue Cross-Blue Shield identification, and he presents it to his doctor when he seeks medical care outside the hospital, and presents it at the hospital when his doctor has requested his admission there. The hospital's paperwork is limited to (1) confirming the patient's eligibility, since despite the card, the patient may no longer be entitled to service; (2) billing Blue Cross when the patient has been discharged; and (3) notifying the local welfare office by post card when the patient has left the institution. Normally, the physician whose patient has been hospitalized has only one form to complete—a standard statement for services rendered, which he sends to Blue Shield. If the patient needs an extension of his hospitalization, the doctor must fill in another form, which goes to the director of medical services at the State welfare department. The doctor must send individual billings to Blue Shield for his visits to nursing-home pensioners and for visits to or from pensioners who live at home.

Blue Cross and Blue Shield must keep their lists of eligibles current, and must see to it that the billings that are presented to them are for covered services and that their amounts conform with the fee schedules that have been negotiated between the suppliers and the welfare department. They pay the hospitals and doctors, and bill the welfare department, adding their administrative fees to the sums that they have paid out, and attaching an IBM card for each pensioner-patient and a list of all disbursements.

The State welfare department determines the financial eligibility of each elderly applicant, passes upon requests for extensions of hospitalization and for readmission within 30 days after discharge, provides the nursing home, drug, and transportation parts of the program, and reimburses Blue Cross and Blue Shield.

CONCLUSION

The Colorado State Department of Welfare retains ultimate responsibility for its pensioners' medical care program, and its management contracts with Blue Cross and Blue Shield would not prevent it from imposing new controls, if such seemed desirable.

Since Blue Cross-Blue Shield administration has saved money, lessened paperwork and promoted good relations between the welfare department and the suppliers of health services in Colorado, it is probable that a similar arrangement would work advantageously in Iowa.

Mr. MILLER. Finally, Mr. President, I wish to point out that a study of the frequency of hospital admissions of major and minor economic importance in the old and the young was conducted by Dr. J. Robert Browning, of Plymouth, Mass. The study represents a compilation of data by the staff of the records room and the business office of the Jordan Hospital, in Plymouth, Mass. I believe the conclusions of the study merit the attention of the Senate; and they are as follows:

[1] Reich, William T., and Anderson, O. W.: Colorado's Medical Care Program for the Aged, Health Information Perspectives No. a2, Health Information Foundation, 420 Lexington Avenue, New York City 17, 1960.

First. Catastrophic illness occurs in significant numbers in both young people and old people.

Second. Most periods of hospitalization are of minor economic importance, regardless of age group.

Third. True need for aid is related to economic severity of illness, rather than age.

Fourth. Further data analysis in a similar manner is needed from other areas of the country.

Fifth. If confirmatory data is obtained, a reappraisal of the approach to the solution of current medical problems is needed.

Mr. President, let me say, in conclusion, that I do not question the motives or the desire for a better society which prompt those who have submitted this amendment but I think it is a waste of the time of the Senate, for it is common knowledge that if the amendment is adopted by the Senate, it will not be adopted by the House. As recently as last week, we heard arguments to the effect that we should not take action on bills or amendments which will not be acted on by the House. Yet we are consuming many days of valuable time of the Senate in working on a measure which will not be dealt with by the House. I think that is most unfortunate.

However, since it has been decided that this matter will be brought to a head in the Senate, I wish to say that, since this measure will not be passed by both Houses at this session of Congress, regardless of predictions by some who like to indulge in wishful thinking, I desire to have it clearly understood that one benefit will come from this debate—namely, the American people will receive a full disclosure of the arguments in connection with this problem.

I hope that what I have said this afternoon will assist in formulating public interest along the right lines in connection with this most important problem.

The PRESIDING OFFICER. The time available to the Senator from Iowa has expired.

Mr. MILLER. Mr. President, I yield the floor.

The PRESIDING OFFICER. Does the Senator from Iowa withdraw his amendment?

Mr. MILLER. I do.

The PRESIDING OFFICER. The amendment of the Senator from Iowa has been withdrawn.

Mr. JAVITS. Mr. President, I rise to propound a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from New York will state it.

Mr. JAVITS. Is the pending question on agreeing to the Anderson amendments to the bill?

The PRESIDING OFFICER. That is correct.

Mr. JAVITS. Mr. President, I call up my amendment which is identified as "6–29–62–B." I offer the amendment on behalf of myself, the Senator from Kentucky [Mr. COOPER], my colleague [Mr. KEATING], and the Senator from California [Mr. KUCHEL].

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. It is proposed to strike out section 1716, and insert in lieu thereof the following:

"CHOICE OF BENEFITS

"SEC. 1716. (a) Any individual entitled to health insurance benefits under section 1705 may elect, in lieu of the health insurance benefits provided in other sections of this title, to receive payment of insurance premium benefits.

"(b) For the purposes of this section 'payment of insurance premium benefits' means payment to the insurance carrier to premiums on a private health insurance policy of which such individual is the beneficiary, but such payment shall not exceed $100 per calendar year.

"(c) The term 'private health insurance policy' means a health insurance policy which (1) conforms with standards established by regulations promulgated by the Secretary, (2) is offered by an insurance organization licensed to do business in the State wherein such policy is offered, (3) is guaranteed renewable at the option of the insured individual, (4) provides benefits which the Secretary determines to be of a value which is not less than the value of the health insurance benefits provided in other sections of this title, and (5) provides that such organization will, after the expiration of the usual grace period, notify the Secretary of any lapse in payment of premiums on such a policy by any individual eligible to receive health insurance benefits under this title. Such term shall include, with respect to any individual eligible to receive such benefits, any group policy if (i) such policy otherwise conforms to the requirements prescribed by the preceding sentence, and (ii) such individual has been covered by such policy for a period of not less than one year immediately preceding the date he attains 65 years of age.

Mr. JAVITS. Mr. President, I give notice that I shall substitute another amendment for this one; and I ask unanimous consent that immediately after the morning hour tomorrow, I may proceed in accordance with the unanimous-consent agreement.

Mr. HUMPHREY. Mr. President, will the Senator from New York withhold his request for a moment?

Mr. JAVITS. Yes, Mr. President.

Mr. HUMPHREY. As the Senator from New York may recall, immediately after the morning hour tomorrow, the nomination of Matthew H. McCloskey, of Pennsylvania, to be Ambassador to Ireland, will be called up; that has already been ordered. Therefore, will the Senator from New York modify his request accordingly, so that following the vote on that nomination, the Senator from New York may proceed?

The PRESIDING OFFICER. Let the Chair state that the Parliamentarian informs the Chair that when the bill is laid down tomorrow, unless the Senator from New York uses the time available to him tonight, he will automatically have that time tomorrow.

Mr. JAVITS. And will I be entitled to recognition to speak upon my amendment at that time, before the recognition of any other Senator to speak on my amendment?

The PRESIDING OFFICER. As the Chair understands, under the unanimous-consent agreement the Senator's amendment is the pending business; and on tomorrow, if he then seeks recognition, he will be entitled to it.

Mr. JAVITS. As soon as the unfinished business is laid before the Senate?

The PRESIDING OFFICER. Yes.

Mr. JAVITS. Mr. President, I thank the Chair; and I announce that I wish to proceed in that way. I gather that that has the concurrence of the acting majority leader.

Mr. HUMPHREY. Yes.

Mr. President, I appreciate the action of the Chair in clarifying the situation, so that the Senator from New York fully understands his rights under the agreement. As I understand, after the Senate acts tomorrow on the nomination of Mr. McCloskey to be Ambassador to Ireland, the Senator from New York will be entitled to the floor.

The PRESIDING OFFICER. Yes; after the Senate acts on that nomination and after the unfinished business is laid down, the Senator from New York will then be entitled to address himself to his amendment.

PUBLIC WELFARE AMENDMENTS OF 1962

The PRESIDING OFFICER. The Chair lays before the Senate the unfinished business.

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

Mr. MORTON. Madam President, there is some apprehension in the State of Kentucky that the existing arrangements for placement of children in foster home care may be upset by the provisions of H.R. 10606. The welfare functions in Kentucky have been reorganized on a number of occasions. Until recently the Department of Child Welfare, which has had responsibility for placement of children in foster homes, has been in a separate agency from the one which administers aid to dependent children under title IV of the Social Security Act. Within the past few months a State statute has been passed which places both of the former departments, along with a number of other State agencies, in what is termed a Health and Welfare Agency. In view of the fact that there have been a number of organizational changes within recent years some persons question whether even this arrangement is likely to be a permanent one, believing that the chance that it will not is such that proper safeguards to maintain existing practices in the field of child welfare should be considered in relation to this bill.

It is my understanding from the Department of Health, Education, and

Welfare that insofar as can be determined, the new Health and Welfare Agency would be considered a single State agcncy responsible for both the administration of the aid to dependent children program and of the child welfare services program. Under such circumstances, no problem would arise.

Public Law 87–31 of this Congress deals with the subject of foster home care of certain children and its provisions in this respect would be made permanent by H.R. 10606. Among those provisions is one for "use by the State or local agency administering the State plan, to the maximum extent practicable, in placing such a child in a foster family home, of the services of employees, of the State public welfare agency referred to in section 522(a)—relating to allotments to States for child welfare services under part 3 of title V—or of any local agency participating in the administration of the plan referred to in such section, who perform functions in the administration of such plan." This provision would seem to assure that so long as the health and welfare agency is responsible for the administration of both the aid to dependent children program and the child welfare services program that there would be maximum utilization of the child welfare services program and that there would be no threat to existing arrangements.

Moreover, the Senate Committee on Finance adopted an amendment to H.R. 10606—section 155 of the bill under consideration—which permits the responsibility for placement and care of children in foster homes to be the responsibility of an agency other than the agency responsible for the administration of aid to dependent children if such agency is a public agency which has in effect an agreement with the agency administering title IV, the aid to dependent children program, which assures a suitable plan for the children. This latter section would be in effect for 1 year ending with the close of June 30, 1963. For that year and on a continuing basis if the section is continued, the role of the child welfare services agency would seem to be assured whether it remains a part of the health and welfare agency of the State or if some further reorganization should take place, since maximum utilization would be required for the services of the Department of Child Welfare under section 408 and even though separate from the agency responsible for administering aid to dependent children it would be authorized to operate under an agreement with such agency if the amendment adopted by the Committee on Finance becomes law. Under these circumstances, it is unthinkable that a traditional responsibility for placement by the child welfare services agency would be upset by the enactment of this legislation.

WHAT PRICE FOR MEDICARE?

Mr. BENNETT. Madam President, this discussion of providing certain health-care benefits to our senior citizens has not to date adequately touched upon what I regard to be one of the significant points with which this body should be concerned. We have heard discussion of the needs of our senior citizens and we have had presented to us a number of proposals for accomplishing this purpose. I repeat, however, that the most essential factor has been missing in all the discussion of the last few days. I refer to the cost of providing benefits of the type proposed by the Senator from New Mexico and several of his colleagues.

The Social Security Administration, and particularly its Actuary, whom we have all long since come to admire for his ability and knowledge in the area of forecasting costs of providing social security annuity coverages, has no firsthand knowledge of the cost of providing health-care benefits. While it is true that the social security program has a history of workability, never has it been tested with a provision of handling health care on a service basis. I take exception, therefore, to the statement that we can rely upon the tried and tested social security mechanism. This mechanism has never been either tried or tested in an area such as we are discussing today.

COSTS ARE UNPREDICTABLE

The uncertainty of the costs of providing these health-care benefits is shared by the Chief Actuary of the Social Security Administration. In a document published last July by the Department of Health, Education, and Welfare, this uncertainty of predicting costs for medical-care benefits is stated in concrete terms. Let me quote a few key phrases of this Actuarial Study No. 52. In this document the following is stated:

> Long range actuarial cost estimates, by their very nature, can present the general range of costs but cannot be a precise forecast of future experience.

The report states:

> Nonetheless, precise estimates are not possible because of such unknowns as the extent of hospital utilization by persons who have not had insurance in the past, but who would have benefit coverage under the provisions of the bill.

Further:

> Another major difficulty in making costs estimates for hospitalization benefits is the extent to which hospital costs will rise in the future.

These qualifications which the chief actuary has been careful to spell out, and I commend him for this, have been lost sight of as we glibly talk about providing health care benefits at a cost of one-half or 1 percent of a $5,200 payroll base.

In view of the lack of experience of the Social Security Administration in this particular area, are we risking a serious blow to the social security mechanism without careful examination of the true cost level? Is there any group which has adequate experience in providing health care benefits, and has such a group made such experience available to the Congress?

There is, of course, such a group. I refer to the health insurance business, including insurance companies as well as the Blue Cross and other such plans. Health insurance has been provided to the American public, in one form or another, since before the turn of the century. Currently, some 136 million Americans of all ages have some form of voluntary health insurance and in many instances a major portion of the premium for such protection is provided by the employer. In fact, in excess of 9 million of our current senior citizens have this protection and this 9 million figure is 3 times what it was several years ago.

INSURANCE INDUSTRY VERSUS GOVERNMENT ESTIMATES

Now, what does the insurance business say about the true cost of providing benefits such as are contained in the amendments proposed by Senator ANDERSON and his colleagues? Last July, in an appearance before the House Committee on Ways and Means, the insurance business presented detailed actuarial cost estimates for these benefits. They were testifying, of course, with respect to H.R. 4222. Since the benefits proposed by the junior Senator from New Mexico with respect to the OASI population are essentially the same as those contained in H.R. 4222, these estimates are applicable.

Let me recite the nature of the dollar differences as well as the tax requirements as between actuaries experienced in providing medical insurance benefits and Government statisticians with no such experience.

First. Benefits provided under H.R. 4222 would cost $2.2 billion in 1963 as compared with the administration's estimate of $1 billion. In 1964, with the nursing home provision available for the entire year, the total cost would rise to $2.5 billion. The administration's estimate for this year is again $1 billion.

Second. By 1983, the anual cost of H.R. 4222 would be $5.4 billion while the administration has estimated that by 1990 costs will reach only $2½ billion.

Third. The level premium costs of H.R. 4222, as defined by the Social Security Administration, are 1.66 percent on a $5,200 taxable earnings base while the administration's estimate is only 0.66 percent. While it is not strictly comparable, the administration estimates this level premium requirement basis. In our judgment, this is unrealistic.

The insurance companies' estimates are based upon the actual claim experience of insurance companies as well as Blue Cross and Blue Shield plans gathered by the New York State Insurance Department. Its long experience would indicate that this substantial actual data is far more reliable in predicting cost than is unverified data obtained from household interviews of a limited sample of the aged population as is the case of the data of the administration.

ADMINISTRATION'S ESTIMATES UNREALISTIC

In the opinion of insurance actuaries, the administration has greatly overestimated the effect of the deductible.

Further, the administration's estimate of cost has not made an adequate allowance for future increases in hospital and related health care costs.

Furthermore, it is believed that the administration's cost estimates have not

been realistic as to the ultimate costs of the skilled nursing home benefits.

As the Senate is well aware, OASDI taxes prior to this year are scheduled to reach 9¼ percent in 1968. Within 6 years it is the estimated cost of H.R. 4222 added to the 9.25 percent tax rate, workers earning up to $5,200 per year would, jointly with their employers, be subject to total OASDI taxes of 10.91 percent. Secretary Ribicoff has indicated that a 10 percent total social security tax rate appears to be about the maximum which should be imposed. Based on these estimates, the addition of health care benefits would result in a total OASDI tax which would exceed this practical limit.

It is well to observe that this estimated tax of nearly 11 percent would cover only those benefits provided and beneficiaries presently eligible under H.R. 4222. Once enacted, pressures would be engendered to remove the present deductible provision, to cover more forms of health care to provide care for longer periods of time, and to lower the age limit.

Although I am no actuary, I have spent time in a careful reading of the actuarial appendix filed by the insurance business. This analysis is based, as I have indicated, upon actual claim experience of insured lives under both insurance company policies as well as those of Blue Cross and Blue Shield plans. Such experience indicates a hospital utilization rate per aged person per year ranging from 2.6 days at the lower ages to 6.0 days at ages 80 and over. According to the American Hospital Association, the average cost per day in a hospital in 1960 was about $32. Hospital costs have been rising annually at an average increase of about 7 percent. Assuming that such per diem costs increase by only 5 percent between 1960 and 1964, the cost per day in a hospital should be about $38 in that year. A projection of the cost per day and the aforecited hospital utilization by the aged produces the estimated costs predicted by the insurance business.

The Government's statisticians, on the other hand, have used a hospital per diem of about $29, and let me call your attention to the fact that this per diem that they have used is even less than the actual costs in a hospital today, let alone what it will be by 1964. The Government's statisticians have based their hospital utilization on information obtained in a survey conducted 6 years ago among some 5,000 OASI beneficiaries. In that survey, such persons were asked how frequently they went to a hospital and how long they stayed. Statistical experts tell me that the range of sampling error, memory error, and other such factors make surveys of this type, for purposes of predicting hospital utilization, completely unreliable. This is one major reason why the insurance business believes that the Government has underestimated the true costs of the health care benefits.

COSTS THREE TIMES PREDICTION

There are a number of other reasons why the true cost will be about three times what some Government statisticians predict. Again, the Government people have used household interview material, and in this instance, a survey among about 600 persons, to measure the financial effect of the up to $90 deductible contained in the health care benefit provisions. The insurance business, on the other hand, utilized actual claim experience with deductible provisions. They note with exactitude that the financial effect of the deductible will be considerably less than that predicted by the administration. This represents a second reason for the understatement of the Government's estimates.

A third reason for the understatement rests in the fact that there will always be a certain amount of what insurance actuaries call "extra utilization and longer hospital stays" under a governmental program as compared with a program of insured lives. Governmental programs in Saskatchewan, British Columbia, Great Britain, and elsewhere, have all experienced considerable increases in utilization over what existed prior to the organization of the plans. The insurance business, in developing its estimates, added an allowance of 5 percent for such extra utilization. There is no evidence that any similar allowance was provided for by the Government's statisticians.

A fourth and perhaps the most significant reason why the half of 1 percent is not realistic lies in the area of future hospital costs. The cost per day in a hospital, as I have indicated, has been rising by some 5 to 7 percent a year. All knowledgeable authorities in the hospital field predict a continuance of this yearly percentage increase for the foreseeable future. In fact, Assistant Commissioner of Health, Education, and Welfare Wilbur Cohen, himself, has testified before a governmental body to this very effect. Built into the insurance business' estimate therefore is an allowance for future increases in the cost of a day in hospital. No similar allowance is contained in the Government's estimate of the cost of these benefits. In fact, and I repeat, the hospital per diem amount used by the Government is actually less than what is being charged for a day in hospital today.

ANDERSON PROPOSAL INADEQUATELY FINANCED

There are a number of other reasons contained in this actuarial study which make me feel that the cost aspect of these health care benefits is an overwhelmingly important matter for the Senate to consider. If this amendment to H.R. 10606 with its present proposal of financing the benefits of a half of 1 percent is passed, I predict that within a short period the administration will be back with a request for an increase in the tax, or else benefits will be paid out via further deficit financing.

My comments to this point have been concerned with only that portion of the proposal of the Senator from New Mexico which have to do with the OASI aged population. The Senator proposes to provide these same health care benefits to the non OASI aged at a net cost to the Government of $50 million per year. I have studied this figure with some care and I cannot conceive of such a small amount. Where he predicts a gross cost of a quarter of a billion dollars, I have good reason to feel the gross cost will approach half a billion dollars per year with a net cost of about a third of a billion dollars. I have equally good reason to feel that this third of a billion dollars which will have to be paid out of the Treasury each year will not wash itself out in a few years but will continue into the indefinite future. Let me recite the reasons why I feel this aspect of the cost of H.R. 10606 is equally unsound.

ERRORS IN ANDERSON'S ESTIMATES

With respect to the cost of providing benefits to non OASI eligibles, the Senator from New Mexico—CONGRESSIONAL RECORD, June 29—assumes a cost of $250 million to provide coverage to "2½ million aged people." The Senator indicates that the net cost of covering such aged persons would be only $50 million in that the Government would derive a savings of some $200 million via lesser payments under public assistance and veterans programs. These estimates are totally unrealistic for reasons outlined below.

The Senator's estimates are erroneous because:

First. He has understated the number of aged persons not eligible for either OASI or railroad retirement benefits.

Second. He has understated the cost of providing health benefits to those eligible under this provision of his amendment.

Third. He has overstated the savings which the Government would realize under its public assistance and veterans programs.

With respect to the number of aged who would be eligible, the Senator from New Mexico derives his figure as follows. As of January 1964, there will be 17.9 million aged persons. Of this number, he says, a quarter of a million, while not eligible for either social security or railroad retirement, would be covered under the Federal civil service governmental health insurance plan. Subtracting this quarter of a million, he incorrectly arrives at 17½ million. He then indicates that about 15 million aged persons are eligible for either social security or railroad retirement, leaving a remainder of 2½ million aged persons who would require health care benefits to be financed from general revenue. According to the Social Security Administration, Department of Health, Education, and Welfare, there will be 17.9 million persons at age 65 and over on January 1, 1964.

Excluding the quarter of a million Federal civil servants—even this figure may be high—leaves a remainder of

17⅔ million—17½ million. According to the same governmental sources, there will be 14.4 million aged persons eligible for OASI and an additional quarter of a million for railroad retirement benefits—not already include under OASI. By subtraction, there remains 3 million aged persons not covered by either OASI, railroad retirement, or having benefits by reason of being Federal civil servants, who would qualify for health care benefits from the general revenue.

SAVINGS OVERESTIMATED

The junior Senator from New Mexico estimates that the cost of caring for each non-OASI eligible would be $100. The insurance business has presented detailed actuarial cost estimates to the effect that the cost per OASI eligible should approximate $141 in 1964. The non-OASI aged population is, according to governmental estimates, a significantly higher age group than is the OASI aged population. This being the case, the cost per person among the non-OASI aged should be even higher than $141. Apart from this, and using a base cost of $141 per person, with an allowance of 10 percent for the cost of administering these benefits, the cost in 1964 for providing health benefits to the non-OASI eligible population should approximate $465 million—compared with the Senator's estimate of $250 million. We are unable to substantiate the basis for the Senator's estimate that this aspect of his proposed program would result in a savings of $200 million.

There is a presumption that such an estimate is unduly optimistic. According to the Social Security Administration, public assistance expenditures for general hospital care in 1960 totaled $100 million. Such expenditures were for aged persons under old-age assistance of which about one-third are also covered under OASI. If it is assumed that the OASI and non-OASI public assistance recipients used hospital care at about the same amounts, then about $67 million was expended by both Federal and State Governments to provide general hospital care in 1960. The Federal Government's share of this $67 million approximates $45 million, or two-thirds. In 1960, the Veterans' Administration spent $165 million for general hospital care. It is to be noted that the very large majority of veterans are covered under OASI. The saving to be derived by way of this program is, therefore, questionable.

Apart from the above, and accepting the $200 million savings—as indicated this is very likely too high—we estimate the net cost to the Federal Government, for providing health benefits to the non-OASI aged population, to be $265 million in 1964 with the likelihood that this figure could well be in excess of one-third of a billion.

NOW OASI AGED COSTS WILL CONTINUE

One other aspect of the Senator's estimate is open to question. The Senator indicates, in the aforestated CONGRESSIONAL RECORD, that the "annual cost of the provision would drop sharply—and eventually wash out altogether." It is difficult to accept this statement in light of the fact that, according to the Social Security Administration, there would still be by the year 1980, 217 million aged persons not eligible for OASI benefits. By that year, according to the insurance business' estimate of the cost of providing such health care benefits, the cost per person will be in excess of $200. Thus, 16 years from now the Federal Government would still be providing, from the general revenue, approximately one-third of a billion dollars to provide coverage to this group of the aged population.

Madam President, the Senate of the United States has a history of careful thought prior to approving any piece of legislation. Since the Anderson amendment is a fiscally unsound proposal, I urge its rejection by this body.

PUBLIC WELFARE AMENDMENTS OF 1962

The Senate resumed the consideration of the bill (H.R. 10606) to extend and improve the public assistance and child welfare services programs of the Social Security Act, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from New York [Mr. JAVITS].

Mr. JAVITS. Madam President, I send to the desk a modified amendment and ask that it be stated.

The PRESIDING OFFICER. The modified amendment of the Senator from New York will be stated.

Mr. JAVITS. Madam President, I ask unanimous consent that reading of the amendment may be dispensed with, and in lieu of reading, that an explanation of the amendment be printed as part of my remarks.

The PRESIDING OFFICER. Without objection, reading of the amendment is dispensed with, and the amendment and explanation may be printed in the RECORD.

The modified amendment is as follows:

On page 14, line 17, insert "after December 1963" after "month".

On page 15, lines 8 and 9, strike out "(as defined in section 210(i)".

On page 23, between lines 11 and 12, insert the following:

"States and United States

"(h) The terms 'State' and 'United States' shall have the same meaning as when used in title II."

Beginning with line 1, page 45, strike out all to and including line 5, page 49, and insert in lieu thereof the following:

"OPTION TO BENEFICIARIES TO CONTINUE PRIVATE HEALTH INSURANCE PROTECTION

"SEC. 1716. (a) In lieu of payments to a provider of services under an agreement under this title, payments may be made to an eligible carrier under an approved plan with respect to services, for which payment would otherwise be made under the preceding provisions of this title (hereinafter in this section referred to as 'reimbursable health services'), which are furnished by such provider of services to any individual entitled to health insurance benefits under this title if such individual elects to have payment for such services made to such carrier.

"(b)(1) An individual may make an election under subsection (a) with respect to the approved plan of an eligible carrier only if he was covered by an approved plan of such carrier (or an affiliate thereof) continuously during whichever of the following periods is applicable—

"(A) if the month in which such individual becomes entitled to health insurance benefits under this title is any month in 1964 or January, February, or March of 1965, the 90-day period ending with the close of the month before such month, or

"(B) if the month in which he becomes so entitled is April 1965 or a subsequent month, the period beginning January 1, 1965 and ending with the close of the month before the month in which he becomes so entitled or, if shorter (i) in the case of a plan meeting the requirements of clause (A), (B), (C), or (D) of subsection (c)(5), the one-year period ending with such close of such month, or (ii) in the case of a plan meeting the requirements of clause (E) of such subsection, the 2-year period ending with such close of such month.

"(2) An individual may make an election under subsection (a) in such manner and within such period as the Secretary may prescribe, but in no event more than 3 months after the month in which such individual becomes entitled to health insurance benefits under this title; and an individual shall be permitted only one such election. An election so made may be revoked at such time or times and in such manner as may be so prescribed, and shall be effective at the end of the 90-day period following such revocation or, if later, the end of the benefit period (as defined in section 1704(c)), if any, of the individual during which such revocation is made or, if a benefit period begins during such 90-day period, the end of such benefit period.

"(c) To be approved for purposes of this section with respect to an individual, a plan must—

"(1) be an insurance policy or contract, medical or hospital service agreement, membership or subscription contract, or similar arrangement provided by a carrier for the purpose of providing or paying for some medical or other type of remedial care;

"(2) with respect to the period before an individual becomes entitled to health insurance benefits under this title, include provision of, or payment for the cost of—

"(A) inpatient hospital services, with no greater deductible and limitations than are applicable in the case of inpatient hospital services which constitute reimbursable health services, or

"(B) in the case of a plan meeting the requirements of clause (A), (B), (C), or (D) of paragraph (5), inpatient hospital services to the extent provided in subparagraph (A), but without application of the deductible under section 1704(a)(1) and with a limitation of forty-five days on the duration of such services;

"(3) with respect to the period during which an individual is entitled to health insurance benefits under this title, include provision of, or payment to providers of services for the cost of—

"(A) all reimbursable health services, or

"(B) in the case of a plan meeting the requirements of claus · (A), (B), (C), or (D) of paragraph (5), such reimbursable health services, but without application of the deductible under section 1704(a)(1) and with a limitation of forty-five days on the duration of inpatient hospital services;

"(4) include provision of, or payment for part or all of the cost of, some additional medical or other type of remedial care not included as reimbursable health services; and

"(5)(A) be a group plan, or a continuation of a group plan which is available to individuals on conversion of a group plan after their separation from the group, or (B) be issued by a corporation, association, or other organization which is exempt from income tax under section 501(c) of the Internal Revenue Code of 1954, or (C) be a prepayment group practice plain, or (D) be a plan which the Secretary determines, on the basis of available data, is likely to result in a ratio of acquisition costs to payments with respect to the cost of medical or any other type of remedial care which is not greater than the ratio of such costs to such payments in the case of most of the group plans approved under this section, or (E) in the case of a plan which does not come within clause (A), (B), (C), or (D), be issued by a corporation, association, or other organization which (i) is licensed in the 50 States and the District of Columbia to issue insurance covering all or any part of the cost of medical or any other type of remedial care and, in the most recent year for which data are available, has made payments with respect to the cost of such care aggregating at least 1 percent of all such payments in the 50 States and the District of Columbia, or (ii) is determined by the Secretary to be national in scope, or (iii) is licensed to issue insurance covering part or all of the cost of such care in the State with respect to which it requests eligibility hereunder and, in the most recent year for which data are available, has made payments with respect to the cost of such care aggregating at least 5 percent of such payments in such State.

"For purposes of paragraph (5)—

"(6) a 'group plan' issued in any State is a plan which meets the requirements established by the law of such State for such plans or, in the case of a plan in a State in which there is no State law establishing requirements for such plans, which—

"(A) is issued to employers for their employees, or to unions for their members, or to other associations for their members who are bound together by a single, mutual interest other than insurance, and

"(B) covers at least 10 persons in the group;

"(7) the 'acquisition costs' of a plan are costs directly related to the sale of coverage under such plan to individuals, including costs such as costs of advertising, commissions and salaries of agents, and salaries and other expenses of field staff directly involved in the sale of coverage under the plan.

"(d) A carrier shall be eligible for purposes of this section if it—

"(1) is a corporation or other nongovernmental organization which is lawfully engaged in issuing plans described in subsection (c)(1) in the State with respect to which it requests eligibility under this section;

"(2) agrees that any information provided in connection with any approved plan will be accurate and complete;

"(3) agrees, in the case of any individual who has made an election under this section with respect to an approved plan and who revokes such election (including termination of such coverage by such individual or the carrier), to continue to make payments under such plan with respect to him until his revocation is effective (or would be effective if such termination were considered a revocation) as provided in subsection (b)(2);

"(4) agrees to provide the Secretary, on request, such reports as may reasonably be necessary to enable him to determine the amounts due, under any plan with respect to which an election has been made under this section, on account of reimbursable health services and the administrative expenses of the carrier in connection therewith, and agrees to permit the Secretary to determine the accuracy of such reports;

"(5) agrees to make payments for reimbursable health services to providers of services, or to provide reimbursable health services, with respect to individuals who have made an election under this section in the same amounts, under the same conditions, and subject to the same limitations as are applicable in the case of such services for which payments are made under the preceding sections of this title; and

"(6) agrees not to impose any fees, premimums, or other charges with respect to reimbursable health services for individuals entitled to health insurance benefits under this title.

"(e) If a plan ceases to be approved under this section or a carrier ceases to be an eligible carrier or ceases to do business, any individual who has made an election under this section and is covered by such plan or by a plan of such carrier shall be deemed to have revoked his election under this section and such revocation shall, notwithstanding subsection (b)(2), be effective immediately upon such cessation; except that the limitations applicable under such plan shall apply with respect to the benefit period (as defined in section 1704(c)), if any, of such individual existing at the time of such cessation.

"(f)(1) An eligible carrier shall be paid from time to time amounts equal to the payments made or the cost of services provided by it for reimbursable health services under approved plans with respect to individuals who have made an election under this section, and in addition, such amounts as the Secretary finds to be the administrative costs of such carrier which are reasonably necessary to the provision of or payment for the cost of reimbursable health services for such individuals under an approved plan, except that such additional amounts for any year may not be more than 50 per cent greater than the comparable part of the cost of administration of this title.

"(2) In the case of a plan to which subparagraph (B) of subsection (c)(3) is applicable, the limitations and conditions of payment for reimbursable health services under the preceding sections of this title shall be modified in accordance with such subparagraph; and for such purposes the maximum units of reimbursable health services (within the meaning of section 1704(b)) for which payment will be made under this title shall be 105 units."

The explanatory statement submitted by Mr. JAVITS is as follows:

EXPLANATION OF THE (JAVITS, COOPER, KUCHEL, KEATING) AMENDMENT TO THE ANDERSON AMENDMENT TO H.R. 10606, STRIKING AND INSERTING A NEW SECTION 1716 "OPTION TO BENEFICIARIES TO CONTINUE PRIVATE HEALTH INSURANCE PROTECTION"

The purpose of this amendment is to offer the individual an opportunity to purchase or continue a private health care plan which would give him the statutory benefit of 90 days of hospitalization with a deductible, or under group and similar plans 45 days of hospitalization with no deductible, in addition to other health care benefits.

The amendment permits any individual entitled to health insurance benefits for the aged, under proposed title XVII of the Social Security Act, at his option to elect to have payment for those benefits he uses be made to an eligible private carrier under an approved plan.

An approved plan must include the benefits under the statutory plan plus some other health care benefits to be provided by the private carrier. Except that as an option in place of the 90-day hospital benefit with a deductible of $10 a day for 9 days, specified private plans could offer a 45-day hospital benefit with no deductible.

Qualified to offer the option of either the 90-day hospitalization benefit with the deductible, or the 45-day hospitalization benefit paying "first costs," would be group insurance plans, prepayment group practice plans, nonprofit plans, and plans (generally "mass enrollment" plans) having acquisition costs comparable to those of approved group plans. Other nongraup plans must offer the 90-day hospital benefit, and could qualify if the carrier did business in the 50 States and wrote at least 1 percent of the health insurance business, was determined by the Secretary to be otherwise national in scope, or did at least 5 percent of the health insurance business within a State in which it sought to write business under this bill.

Private plans must include medical or other health benefits in addition to those reimbursed by the Government. No fee, premium, or other charge to the individual could be made for the reimbursable benefits. The carrier would be paid the reasonable administrative costs of providing the reimbursable benefits, but not to exceed 150 percent of Government costs for the same functions.

An individual must make the election to continue a private health plan within 3 months after becoming entitled to health insurance benefits, and is permitted one such election; he may later revoke that election if he desires. He must have been covered by the approved plan for 1 year prior to becoming eligible for health insurance benefits in the case of group and nonprofit plans, and for 2 years in the case of commercial individual policies (except that coverage for 90 days is sufficient for those becoming eligible prior to April 1965, and coverage beginning January 1, 1965, is sufficient for those becoming eligible in or after April 1965, if less than 1 or 2 years).

The private plan is required to include only the 90- or 45-day inpatient hospitalization benefit during the period before the individual becomes eligible under the program; after he becomes eligible, the plan must also provide all auxiliary benefits such as skilled nursing facility, home health, and outpatient hospital diagnostic services.

Mr. JAVITS. Madam President, the amendment would amend the Anderson amendments which are pending before the Senate, and is the definitive

provision for an option to beneficiaries to continue private health insurance protection, which has been under discussion for a number of days, to replace that part of the bill which relates to the subject.

The reason for submitting the amendment at this time is to perfect the Anderson amendments, in view of the fact that it is well known to all Senators that the Senator from Massachusetts [Mr. SALTONSTALL], the Senator from Connecticut [Mr. BUSH], and perhaps other Senators will be proposing complete substitutes for the consideration of the Senate. It is therefore important that the Senate have before it the definitive provisions of the measure offered by the Senator from New Mexico [Mr. ANDERSON] when it considers substitutes. It is my belief that the amendment which I am submitting is acceptable to the Senator from New Mexico [Mr. ANDERSON]. Obviously there will be adequate opportunity to debate its merits pro and con as we go along and to debate the amendments of the Senator from New Mexico. I therefore hope that I may make a brief explanation of my amendment. As I understand, the Senator from Massachusetts [Mr. SALTONSTALL] is prepared to present his substitute.

Mr. ANDERSON. Madam President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. ANDERSON. I wish to say to the Senator from New York that I appreciate very much his consideration of the amendment. I appreciate the many long hours he has put into it, along with many of us. This is the matter having to do with options. If the Senator from New York is agreeable, I would be happy to modify my amendment to include the text of the amendment that he has submitted as his amendment.

Mr. JAVITS. I ask only that the Senator from New Mexico indulge the Senator from New York for about 10 minutes while I explain my amendment. Then I shall be glad to have the Senator do that.

Mr. ANDERSON. Will the Senator permit me to make two other modifications?

Mr. JAVITS. Certainly.

Mr. ANDERSON. Madam President, I also send to the desk an amendment to the Anderson amendment identified as "6–29–62—A," which reads:

On page 21, lines 17 and 18, strike out "decision of the physician members" and insert in lieu thereof "finding (after opportunity for consultation to such attending physician) by the physician members".

On page 23, line 10, insert "(after opportunity for consultation to such attending physician)" after "finding".

On page 28, line 6, insert "(by the physician members of the committee or group)" before "pursuant".

The amendment would make it clear that the patient's physician would be consulted before the hospital staff committee or other groups reviewing utilization makes a finding that the patient's continued stay in a hospital or skilled nursing facility is not medically necessary. It was expected that such consultation would take place as a matter of course. However, so that there can be no question or misunderstanding, my amendment is modified to that extent.

I also send another amendment to the desk. This is an amendment to the Anderson amendment identified as "6–29–62—A" which reads:

One page 75, line 13, insert "and use of the option" after "deductibles".

I modify my amendment to that extent. I am very happy to accept the language of the Senator from New York.

I modify my amendment further by striking' the original language and putting in the option language which has been the result of many hours of thoughtful and faithful consideration of this problem in an attempt to encourage free enterprise as much as possible. I thank the Senator from New York and his associates for the many hours of work that they have devoted to the preparation of the option.

Mr. JAVITS. Madam President, I yield myself 10 minutes. Unless other Members of the Senate desire to be heard in connection with the amendment which I have sent to the desk, at the conclusion of my remarks, I will yield back the balance of my time, because I understand the Senator from Massachusetts [Mr. SALTONSTALL] desires to proceed.

Madam President, the health care insurance bill in which I and my Republican colleagues have joined with Senator ANDERSON is the inclusive and most comprehensive bill on medical care for the aging to come before the Congress. It goes far beyond the original King-Anderson proposal and incorporates the essential principles which my colleagues and I have been working for and which are consistent with the declarations of the 1960 Republican platform.

Madam President, I should like to emphasize to the Senate that "this is it," so far as the Anderson proposal is concerned. This is the definitive package which we hope the Senate will accept.

Madam President, what has been achieved? First, all persons who are 65 years of age and older are now entitled to health care benefits under the bill, including those who are not presently covered by social security. This brings into the programs an estimated 3 million persons who would have been excluded under the old King-Anderson bill.

Of great importance, too, is the new provision establishing a separate medical trust fund for purposes of financing this program. We shall be able, then, to see exactly how much has been collected, how much paid out for this medical care program, and how much it is costing the social security system.

A third principle which I have maintained refers to State administration, and a measure of such State participation has also been provided as well as private administration of the Government program.

An opportunity is also given to individuals to select or continue their private insurance plans.

This amendment may be termed the "freedom of choice" amendment. It gives private enterprise a considerable share on a voluntary basis in the health care program, by substantially liberalizing the option to beneficiaries in section 1716 of the bill now before us and by offering a choice of hospital benefit programs which a beneficiary thinks is best suited to his needs.

In addition, this private health insurance protection, which would give the individual much more than the statutory benefits, would actually cost the individual much less than he would otherwise have to pay for such increased protection because the carrier would not be permitted to charge a premium for that part of the health insurance benefit which is reimbursable by the Government.

The amendment introduced by my Republican colleagues strikes out the present section 1716 in the pending amendment and substitutes under the same heading another provision. It adds to the private insurance option for individuals now in the bill, which must contain the same benefits as the statute makes generally available, an alternative preventive care benefit program. This is a truly preventive care option which has as its base the actuarial equivalent of the proposed statutory benefits and is offered to groups, mass enrollment and nonprofit plans; it features 45 days of hospital coverage without any deductible.

This is in addition to other benefits.

I cannot emphasize too strongly the critical importance of what has been accomplished.

Thus the individual has the freedom to choose between continuing his private insurance protection with a choice of benefit programs or the standard proposed statutory benefits program. The private insurance carrier has an unprecedented opportunity to provide as an addition—for a fair premium—a well-rounded preventive care health program. A policy could be written to contain the following as sample benefits, according to reliable estimates:

For a premium of $7.50 a month per person, built upon the basic coverage which will be provided by the bill, there can be added to the basic coverage any number of doctors' visits at home or office, for which the carrier will pay $6 toward the office visit, and $4 toward the home visit.

Also, there will be provided, in addition, diagnostic, X-ray, and laboratory fees on a schedule of items costing from $2 to $50.

Also surgery in or out of the hospital, from $350 on a schedule of items.

Also specialist consultation of $15 to $25.

Madam President, based upon the same estimates, for only $3.30 a month. the carrier could offer on a similar basis:

Out-of-hospital diagnostic services.

Surgery.

Medical care in the hospital.

These extremely generous programs, which have been prepared for me by a health insurance organization, carry out the geriatrics emphasis on preventive care and could thus result in a substantial reduction in the hospital utilization—and subsequent lower cost to the Government—if participated in on a

large scale. They preserve the doctor-patient relationship, provide for competition and give private enterprise a tremendous incentive to participate in this vast health care effort. Let no one regard the benefits program I have outlined as the last word. Even it can be improved, and I think that private enterprise has the creativeness to come up with many different kinds of valid benefits that are possible in this context.

Since this bill would go into effect on January 1, 1964, the individual beneficiary must hold his private insurance or group plan for at least 3 months prior to the time he becomes eligible for social security benefits during the first year and quarter after December 31, 1963, or for 1 year after March 1965.

After the individual becomes entitled to social security benefits or reaches age 65, if he is not covered by social security, his private insurance plan would also have to provide all the other statutory health benefits, such as skilled nursing facility, home health services and outpatient hospital diagnostic benefits. If the beneficiary become hospitalized, the Government would reimburse the carriers for the cost of the statutory benefits or the equivalent 45-day hospital plan. The carrier would also be paid for its reasonable administrative costs in connection with the benefits for which it is reimbursed but not over 1½ times the estimated cost of administration to the Federal Government. No premiums or other fees would be charged to beneficiaries in connection with these reimbursable health services.

This amendment thus makes it possible and attractive for private enterprise to take a substantial role in this great nationwide effort. It means, further, that health care insurance is not going the road of socialized medicine, as its critics have charged, nor in fact a road comparable in substance to that pursued in other countries.

The proposal now before the Senate is a distinctly American approach to a problem which all of us recognize. The fact is—and it cannot be repeated too often—that our older citizens need more medical care at a time when their incomes and earning power are too low for them to be able to afford the kind of care they need.

With this amendment in the bill we stand on the threshold of a new era in American health care. It is tremendously gratifying to me that we have reached this point. For many years I have supported a program of health care insurance for the aging, because I believe it is an urgent domestic need which we can no longer delay meeting.

I have contended for the very program, in essence, which the Senator from Massachusetts [Mr. SALTONSTALL] will place before the Senate today. But I have accepted the social security approach to finance this program because I am convinced that that is the way to have the program enacted into law, and also because I believe the American people want to pay for it in this way.

Madam President, this is the essence of my presentation to the Senate. I do not wish to run down any other plan. But I am now convinced that this is the only way in which we will get anywhere. I am also convinced that it is essential if we are to get anywhere, at long last, in this field.

On another occasion I shall argue that two points have been raised with respect to adding the health care program to the public welfare bill. I am particularly aware of the fact that there has been what is tantamount to the most comprehensive inquiry and investigation of this whole subject which it is possible to have in American public life—perhaps not directly in the hearings on the bill, but certainly in what has taken place in this field within the past 3 or 4 years. I have on my desk, by way of physical exhibits—and Senators are welcome to a mimeographed summary of the documents which I have before me—a sample of the hearings, investigations and reports which have taken place within the last 3 or 4 years on the subject of health care for the aged. This subject has been reviewed as few other subjects in American public life have been reviewed. The evidence is all before us.

In addition, the precedents are overwhelming and complete to the effect that the Senate has absolute constitutional policy and power to do precisely what it would be doing if it were to adopt the Anderson amendment.

The other day it was said that I made certain statements in the debate in 1960. I shall quote what was quoted to me in connection with my views. The Senator from Oklahoma [Mr. KERR] quoted me, and I again quote the statement:

> Mr. President, I think the hard nut of the issue is: Do we wish to inaugurate in the social security system what is for all practical purposes a health care scheme? I would not say that it is exactly what the British do, but it is very much like it. The point is that we would for the first time inaugurate a system by which we would have a national responsibility for the health care of the people.

I wish to make it very clear that what has been done by the amendment which is incorporated in the amendment of the Senator from New Mexico [Mr. ANDERSON] is exactly what I hoped to accomplish in 1950. We are no longer inaugurating a British-type system; we are inaugurating an American-type system, because under this system we are opening the whole plan to the winds, to the effect of competition. We are giving the individual a choice which is thoroughly American. We are giving him the choice of being under either a Government administered plan or a privately administered plan. The choice is his. I believe that that proposal definitely negates the principal concern, which I expressed, quite properly, in 1960.

Finally, with respect to the advocates of social security financing, I said at that time:

> I hasten to refute any idea that a social security approach is "un-American." Of course it is not. I only point out that the question of context, of the way in which we live, our national attitudes, is an important consideration in making what is really a fundamental and a very important sociological decision. I wish to emphasize that point. I shall not go to Bermuda, nor will grass grow in the streets, if the Congress decides that way, but I think it would be a profound and important departure from anything we have ever done before, with great sociological implications. I therefore urge my colleagues who are thinking about it, and I know many are, to consider it in those terms as well.

Madam President, because there is universal coverage in the Anderson proposal, because there is a completely open option in respect to the private enterprise system, I urge the Senate today, to consider the plan as a thoroughly American plan, entirely congenial and wise for our institutions, and entirely necessary in the public interest. I pointed out—and I shall do so again—that this is a completely Republican approach, one which should be extremely congenial to Senators on this side of the aisle. It is what we contended for in 1960. Our idea is now incorporated in what has been presented. This can never again be termed a partisan issue. There is now a bipartisan approach, one which does credit to the issue, credit to the elder citizens, and credit to the political processes of the Nation.

I salute my colleagues and friends, the distinguished Senator from New Mexico [Mr. ANDERSON], the distinguished Senator from Kentucky [Mr. COOPER], the distinguished Senator from New York [Mr. KEATING], and the distinguished Senator from California [Mr. KUCHEL], for seeing the direction which this health care program must take.

Mr. KEATING. Madam President, will the Senator yield?

Mr. JAVITS. Madam President, I yield 3 minutes to my colleague from New York.

Mr. KEATING. Madam President, I commend my colleague from New York for all his work in this field, and specifically for the work which he and other Senators have done to help to produce the new amendment.

The amendment which has been offered would provide an even greater opportunity for free enterprise to work hand in hand with Government. The expansion of this free enterprise option will make it much more attractive for group health associations, corporate health plans and private insurance companies to write large numbers of comprehensive health insurance programs for the elderly. If anything, it will increase the number of health care policies held by people over 65. It should also encourage younger people to join good group health plans before they retire, because they will now be guaranteed that this coverage will continue to be available to them at a limited and reasonable cost after they reach age 65.

The five major changes which we have made largely obviate the problem or fear of Federal control. Private companies are encouraged to cooperate. The amendment specifically says that no attempt shall be made to interfere with the traditional free practice of medicine by physicians. State and local control, AMA–AHA certification of hospitals and other related revisions in my

mind clearly refute the unfounded charge by those who contend that no material changes have been made. The fact is that this proposal is vastly different from the original King-Anderson bill which we had before us.

The new proposal retains the social security principle of financing. It is true that it has added many important features. It is evidence of the kind of cooperation and progress which is needed in this field if we are to move forward with legislation, rather than try to devise some political issue.

I congratulate not only my distinguished senior colleague from New York, but also the distinguished senior Senator from New Mexico [Mr. ANDERSON], for the time, perseverance, patience, and personal attention which they have so generously devoted to the bill and to the long, careful, and helpful meetings which have been held on the modifications which are now included in it. I sincerely hope the bill will have the support of all Senators.

Mr. JAVITS. Madam President, I yield 4 minutes to the distinguished Senator from Kentucky.

Mr. COOPER. Madam President, I join with the distinguished junior Senator from New York [Mr. KEATING] and other Senators in commending the senior Senator from New York [Mr. JAVITS] for the leadership he has shown in developing amendments to the original proposal of the Senator from New Mexico [Mr. ANDERSON]. I also pay my tribute to the Senator from New Mexico for the willingness he has shown to consider the amendments which have been proposed, and to accept them.

To me, at least, the amendment which we now offer adds great strength to the original amendment offered by the Senator from New Mexico, in which several of us joined as cosponsors. The amendment in which we joined a few days ago provides the option that a person eligible for health insurance benefits may make the decision to rely solely on the benefits provided by payments that can be made under the bill. These benefits are, first, up to 90 days' hospitalization, but with a $20 to $90 charge; second, up to 180 days in a skilled nursing facility; third, up to 240 home visits by a public or private nonprofit home health agency; and, fourth, outpatient hospital diagnostic services, with a $20 charge during any month.

Or, the individual can choose, in place of the means provided by the bill, to subscribe to or continue a private insurance policy, or to join a prepayment group practice plan, which offers medical, surgical, or other benefits in addition to the benefits provided by the Government program—for the Government share of which no premium could be charged.

Under the amendment we have offered today—again developed under the leadership of Senator JAVITS—individuals could also choose group or nonprofit plans providing a 45-day hospitalization benefit with no deductible charge against the individual, for which the Government would reimburse the private plan.

I point out that it has not been claimed that the hospitalization and other benefits provided by the original Anderson amendment can meet the full medical costs of most older persons. Perhaps only 40 to 50 percent of medical cost would be met. The remaining medical costs must be met out of pocket, through private supplemental insurance through Kerr-Mills, by the charity of doctors and through higher charges by hospitals and doctors to those who can pay—or else they will not be met. Our amendment integrates needed private insurance protection with the Government program, and does so in a way that makes it possible for these additional health needs to be met, and in a much better way than the original administration proposal would do.

To those who are concerned about the role of Government in guaranteeing a degree of protection for older persons against the high costs of their medical care, I answer that this bill—with the changes and improvements which have been secured by the Senator from New Mexico [Mr. ANDERSON], together with the leadership of the Senator from New York [Mr. JAVITS] and the cooperation of other Senators—brings into the program all types of private health insurance plans, will permit them to handle needs which they cannot now cover at a cost which older persons can well afford, and provides an opportunity for individuals to secure through private plans a broad range of benefits and a useful choice of benefits.

Madam President, I also address myself to the point referred to by the Senator from New York at the conclusion of his remarks; that is the real question involved in this debate, which revolves around the question of whether we should support a program financed through the social security system. I say frankly that this matter has been on my mind ever since I have been in the Senate. When I first came here, the Senate was then discussing in 1947 and 1948 a health program; and after all these years, I have accepted this method for a health insurance program, as I have accepted it for the existing social security retirement and other benefits. The persons who pay the compulsory payroll deduction are eligible for benefits from the social security trust fund. Under this bill, persons who pay into the health insurance trust fund will receive benefits from the trust fund, through hospitals and other providers of health services.

The real issue we are called upon to decide is whether it is possible to provide for the minimum health needs of persons over 65 in any other way. I do not think so.

And I do not think it is necessary to study statistics in order to reach that conclusion. I only need to travel through my own State and my own county, and to visit people's homes; I do not need any great mass of statistics. I can draw upon my own experience and can use my own eyes. I have come to the conclusion that there is no other possible way to provide for the minimum medical care of the great mass of people over 65 years of age.

The services of doctors, often free in the case of many in need, and the increasing use of private insurance plans—valuable as they are, and they will continue—will not meet the needs of millions who are deprived of the opportunity to obtain the same extent of hospital care and nursing care as those in more fortunate financial circumstances.

I think it proper that these people should have an opportunity to provide for their future care, by payments into the health insurance trust fund of the social security system during their working years. Medical care is important to persons over 65 years of age—and often is as important as housing, food, clothing, and security from dependency, all the purpose of the social security system.

That is my basic reason for supporting the bill.

Madam President, so far as I am concerned, after all these years, I have made up my mind. And I have made my decision on the basis that these human needs should be met.

Mr. JAVITS. Madam President, I yield 2 minutes to the Senator from California [Mr. KUCHEL].

The PRESIDING OFFICER. The Senator from California is recognized for 2 minutes.

Mr. KUCHEL. Madam President, my purpose in rising is to pay a highly deserved tribute to a great American and a great Senator. Some of us on this side of the aisle will not turn our backs on the need of so many people at this time and in the future; and we on this side of the aisle, under the leadership of the Senator from New York [Mr. JAVITS], have had conferences with the Senator from New Mexico [Mr. ANDERSON], in the effort, not to reap partisan advantage, but to solve this problem as Senators and as American citizens.

So I rejoice in the progress which has been made by us under the leadership of the Senator from New York, and I have cooperated fully and will continue to cooperate fully with him; and at the same time I compliment the Senator from New Mexico [Mr. ANDERSON] for the completely unpartisan fashion in which the bill has been improved to the point where it merits approval by the overwhelming majority of Members of the Senate.

Mr. JAVITS. Madam President, I yield myself 1 minute.

The PRESIDING OFFICER. The Senator from New York is recognized for 1 minute.

Mr. JAVITS. Madam President, I ask to have printed in the RECORD, as part of my remarks, a list of the volumes which are available to demonstrate the manner in which this matter has been given the most detailed attention and study by a number of committees in the past few years.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

Problems of the aging

Number of volumes	Year	Title	Committee
1-13	1961	Hearings: Problems for the Aging	Subcommittee on Federal and State Activities of Special Committee on Aging.
1-3	1961	Hearings: Nursing Homes	Subcommittee on Nursing Homes, Special Committee on Aging.
1-4	1961	Hearings: Retirement Income of Aging	Subcommittee on Retirement Income of Special Committee on Aging.
1-5	1961	Hearings: Housing Problems of Elderly	Subcommittee on Housing for Elderly of Special Committee on Aging.
2-14	1959	Hearings: Aged and Aging in the United States (pt 1 exhausted—summary attached).	Subcommittee on Aged and Aging of Labor and Public Welfare Committee.
1-14	1960	Background Studies Prepared by State Committees for White House Conference.	Do.
1	1959	Hearings: Federal Programs for the Aged and Aging	Do.
1	December 1960	Report: Aging Americans—Their Views and Living Conditions	Do.
1	1960	Study: Condition of American Nursing Homes	Do.
1	1960	Report: Directory of Voluntary Organizations in Field of Aging	Do.
1	1960	Report: Aged in Mental Hospitals	Do.
1	1960	Hearings: Aged and Aging in United States (S. Res. 65). Report: Aged and Aging in United States.	Do.
1	1959	Survey: Major Problems and Solutions in the Field of the Aged and Aging.	Do.
1	1959	Hearings: National Organizations in the Field of Aging	Do.
1	March 1961	Report: Action for the Aged and Aging	Do.
1	July 1959	Hearings: Hospital, Nursing Home and Surgical Benefits for OASI Beneficiaries (H.R. 4700).	House Ways and Means Committee.
1	April 1960	Testimony: Health Needs for the Aged	Subcommittee on Aged and Aging, Labor and Public Welfare Committee.
1	Nov. 1959	Analysis: Rising Costs of Public Education Trends in the Supply and Demand of Medical Care.	Joint Economic Committee.

Mr. JAVITS. Finally, Madam President, I thank my friends and colleagues—and I assure Senators that I am not now indulging in rhetoric—for their trust and their very real and most helpful support. This result could not have been obtained without it. I am most grateful to them. Furthermore—and this is even more important—I believe the people of the United States should be very grateful to them for having achieved, together with me, the very marked advance which we have recorded today.

At this time I yield to the Senator from New Mexico [Mr. ANDERSON].

Mr. ANDERSON. Madam President, I do not wish to use any great amount of the time available to those on this side. I merely wish to announce that I accept the amendment of the Senator from New York, and modify my amendment accordingly.

The PRESIDING OFFICER. The amendment of the Senator from New Mexico will be modified accordingly.

Mr. SALTONSTALL. Madam President, I call up my amendments identified as "7-9-62—N", to House bill 10606. I offer the amendments on behalf of myself, the Senator from Vermont [Mr. AIKEN], the Senator from Pennsylvania [Mr. SCOTT], the Senator from Hawaii [Mr. FONG], the Senator from Delaware [Mr. BOGGS] and the Senator from Vermont [Mr. PROUTY].

The PRESIDING OFFICER. The amendments will be stated.

The LEGISLATIVE CLERK. On page 1, in line 4, it is proposed to strike out "Public Welfare Amendments of 1962" and insert in lieu thereof "Public Welfare and Health Insurance for the Aged Amendments of 1962".

On page 100, line 16, strike out "II" and insert in lieu thereof "III".

On page 100, line 18, strike out "201" and insert in lieu thereof "301".

On page 100, line 23, strike out "202" and insert in lieu thereof "302".

On page 100, between lines 15 and 16, insert the following:

TITLE II—HEALTH INSURANCE FOR THE AGED

SEC. 201. This title may be cited as the "Health Insurance for the Aged Act".

SEC. 202. The Social Security Act is hereby amended by adding after title XVI the following new title:

"TITLE XVII—MEDICAL BENEFITS FOR THE AGED APPROPRIATION

"SEC. 1701. For the purpose of assisting the States to improve the health care of aged individuals of low incomes by enabling them to secure, at cost reasonably related to their incomes, protection either against the expenses of preventive and diagnostic services and short-term illness treatment or against long-term illness expenses, there are hereby authorized to be appropriated for each fiscal year such sums as the Congress may determine. The sums made available under this section shall be used for making payments to States with State plans submitted by them and approved under the title.

"State plans

"SEC. 1702. The Secretary shall approve a State plan under this title which—

"(a) provides for establishment or designation of a single State agency to administer or supervise the administration of the State plan;

"(b) provides that each eligible individual (as defined in section 1705(a)) who applies therefor (and only such such an individual) shall be furnished whichever of the following he may elect:

"(1) preventive, diagnostic, and short-term illness benefits, which, for the purpose of this title, shall consist of payment on behalf of an eligible individual of the cost incurred by him for the following medical services rendered to him to the extent determined by the attending physician to be medically necessary (but subject to the limitations in section 1706)—

"(A) inpatient hospital services for not to exceed twenty-one days in any enrollment year, except that at the request of the individual days of skilled nursing-home services may be substituted for any or all of such days of inpatient hospital services at the rate of three days of skilled nursing-home care for one day of inpatient hospital services;

"(B) physicians' services furnished outside of a hospital or skilled nursing home, on not more than twelve days during any enrollment year;

"(C) ambulatory diagnostic laboratory and X-ray services furnished outside of a hospital or skilled nursing home to the extent the cost thereof is not in excess of $100 in any enrollment year;

"(D) organized home health care services for not more than twenty-four days in any enrollment year; and

"(E) such additional medical services as the State may elect (subject to the limitations in clauses (E) (vi) and (vii) of paragraph (2) and to the limitations in section 1708); or

"(2) long-term illness benefits, which, for purposes of this title, shall consist of payment on behalf of an eligible individual of 80 per centum of the cost above the deductible amount incurred by him for the following services (hereinafter in this title referred to as 'medical services') rendered to him to the extent determined by the attending physician to be medically necessary (but subject to the limitations in section 1706)—

"(A) inpatient hospital services for not to exceed one hundred and twenty days in any enrollment year;

"(B) surgical services provided to inpatients in a hospital;

"(C) skilled nursing home services;

"(D) organized home health care services;

"(E) such of the following services as the State may elect (subject to the limitations in section 1708)—

"(i) physicians' services;

"(ii) outpatient hospital services;

"(iii) private duty nursing services;

"(iv) physical restorative services;

"(v) dental treatment;

"(vi) laboratory and X-ray services to the extent the cost thereof is not in excess of $200 in any enrollment year;

"(vii) prescribe drugs to the extent the cost thereof is not in excess of $350 in any enrollment year; and

"(viii) inpatient hospital services in excess of one hundred and twenty days in any enrollment year; or

"(3) private insurance benefits, which, for purposes of this title, shall consist of payment on behalf of such individual of one-half of the premiums of a private health insurance policy for him up to a maximum payment for any year of $60;

"(c) provides for granting an opportunity for a fair hearing before the State agency to any individual whose claim for benefits under the plan has been denied;

"(d) provides for payment of enrollment fees, payable annually or more frequently, as the State may determine by eligible individuals applying for long-term illness benefits or diagnostic and short-term illness benefits under the plan, the amounts of such fees to be determined by a schedule established by the State and approved by the Secretary as providing fees the lowest of which is equal to not less than 10 per centum of the per capita cost for the enrollment year involved of the benefits provided and the remainder of which vary in relation to the

come (as defined in section 1705(b)) of the individuals;

"(e) includes provisions for individuals who, for the enrollment year involved, would not be eligible individuals but for the provisions of section 1705(a)(2);

"(f) includes such methods of administration as are found by the Secretary to be necessary for the proper and efficient operation of the plan, including—

"(1) methods relating to the establishment and maintenance of personnel standards on a merit basis, except that the Secretary shall exercise no authority with respect to the selection, tenure of office, or compensation of any individual employed in accordance with such methods;

"(2) methods to assure that the applications of all individuals applying for benefits under the plan will be acted upon with reasonable promptness;

"(3) methods relating to collection of enrollment fees for long-term illness benefits or diagnostic and short-term illness benefits under the plan, except that the State may not utilize the services of any nonpublic agency or organization in the collection of such fees, and

"(4) methods for determining—

"(A) rates of payment for institutional services, and

"(B) schedules of fees or rates of payment for other medical services,

for which expenditures are made under the plan;

"(g) sets forth criteria, not inconsistent with the provisions of this title, for approval by the State agency, for purposes of the plan, of private health insurance policies;

"(h) provides that no benefits will be furnished any individual under the plan with respect to any period with respect to which he is receiving old-age assistance under the State plan approved under section 2, aid to dependent children under the State plan approved under section 402, aid to the blind under the State plan approved under section 1002, aid to the permanently and totally disabled under the State plan approved under section 1402, or aid or assistance under a State plan approved under title XVI (and for purposes of this paragraph an individual shall not be deemed to have received such assistance or aid with respect to any month unless he received such assistance or aid in the form of money payments for such month, or in the form of medical or any other type of remedial care in such month (without regard to when the expenditures in the form of such care were made));

"(i) provides safeguards which restrict the use or disclosure of information concerning applicants for and recipients of benefits under the plan to purposes directly connected with the administration of the plan;

"(j) includes (1) provisions, conforming to regulations of the Secretary, with respect to the time within which individuals desiring benefits under the plan may elect for any enrollment year between the types of benefits available under the plan and may apply for the benefits so elected for such year and (2) to the extent required by regulations of the Secretary, provisions, conforming to such regulations, with respect to the furnishing of benefits described in paragraph (1) or (2) of subsection (b) to eligible individuals during temporary absences from the State;

"(k) provides for establishment or designation of a State authority or authorities which shall be responsible for establishing and maintaining standards for any persons, institutions, and agencies, providing medical services for which expenditures are made under the plan; and

"(l) provides that the State agency will make such reports, in such form and containing such information, as the Secretary may from time to time require, and comply with such provisions as the Secretary may from time to time find necessary to assure the correctness and verification of such reports. Notwithstanding the preceding provisions of this section, the Secretary shall not approve any State plan under this title unless the State has established to his satisfaction that the medical or any other type of remedial care, together with the amounts, if any, included in old-age assistance in the form of money payments on account of their medical needs, for recipients of old-age assistance under the State plan approved under title I will be at least as great in amount, duration, and scope as the diagnostic and short-term illness benefits included under the State plan under this title;

"(m) makes provision (1) authorizing employees' pension or welfare funds to contribute to the payment of enrollment fees under the plan for or on behalf of eligible members or beneficiaries of such funds, (2) authorizing employers (including the State or any political subdivision thereof when acting as an employer) to contribute to the payment of their employees' enrollment fees under the plan, and (3) permitting any employee, or member or beneficiary of an employees' pension or welfare fund, to authorize his employer (including the State or any political subdivision thereof when acting as an employer) or trustee or other governing body of such fund to deduct from his wages or from such fund, as the case may be, an amount equal to his enrollment fees under the plan and to pay the same to the State agency administering the plan.

"Payments

"SEC. 1703. (a) From the sums appropriated therefor, each State which has a plan approved under section 1702 shall be entitled to receive, for each calendar quarter beginning with the quarter commencing July 1, 1963, an amount equal to (1) the Federal share for such State of the total amounts expended during such quarter by the State under the plan as long-term illness, diagnostic and short-term illness, or private insurance benefits, plus (2) one-half of the total of the sums expended during such quarter as found necessary by the Secretary for the proper and efficient administration of the State plan.

"(b) Payment of the amounts due a State under subsection (a) shall be made in advance thereof on the basis of estimates made by the Secretary, with such adjustments as may be necessary on account of overpayments or underpayments during prior quarters; and such payments may be made in such installments as the Secretary may determine. Adjustments under the preceding sentence shall include decreases in estimates equal to the pro rata share to which the United States is equitably entitled, as determined by the Secretary, of the net amount recovered by the State or any political subdivision thereof, with respect to benefits furnished under the State plan, whether as the result of being subrogated to the rights of the recipient of the benefits against another person, or as the result of recovery by the recipient from such other person, or because such benefits were incorrectly furnished, or for any other reason.

"(c) For purposes of subsection (a), (1) expenditures under a State plan in any calendar year shall be included only to the extent they exceed the amount of the enrollment fees collected in such year under the State plan, and (2) expenditures under a State plan for preventive diagnostic and short-term illness benefits or for long-term illness benefits in excess of $128 multiplied by the number of individuals enrolled for benefits under such plan in such year shall not be counted.

"Operation of State plans

"SEC. 1704. If the Secretary, after reasonable notice and opportunity for hearing to the State agency administering or supervising the administration of any State plan which has been approved under section 1702, finds—

"(1) that the plan has been so changed that it no longer complies with the provisions of section 1702; or

"(2) that in the administration of the plan there is a failure to comply substantially with any such provision;
