

1915

Aug. 16 - Dec.

Shelburne, Vt.

1915

Aug 16

Clear, warm A.M., cloudy in P.M. a few rain drops from a thunder-storm, a few drops in the evening.

This morning I was in my study and part of the time I wrote on my marble article -

I did some reading this P.M. and wrote some more, and late I walked down to the river and spent a lovely hour there on the stony area that is covered at high water. There are a number of interesting plants there, and just now there are innumerable plants both small and large of Oenothera biennis.

I collected a number of plants of various sps.

Cutting & taking up has been going on vigorously to-day,

This evening Jack Wright came up & gave us an account of his long trip to Colorado Canyon, San Francisco Mts., ascent of Mt Hood, trip over the Canadian Rockies, visit to Lake Louise and home. He had a good number of photographs and it was a most enjoyable account.

I have learned to day of the death of my good friend Prof. Fred. W. Putnam. How sorry I am. He died on Saturday, Aug. 14. Funeral to-morrow.

I collected to-day,

Millebogia sulphurea (L.)
Cyperus dentatus (L.)
Eleocharis acicularis (L.) R. & S.
Polygonum lapathifolium L., var. incanum (Willd.) Koch
" *pennsylvanicum* L.

Rheocallis rugosa L., var. *nana* (L.) "Golden Wray" A. E. P.
Euphorbia corollata (L.) Engelm.
Hypericum ellipticum Huds.
" *magus* (Gray) Britton
" *virginicum* L.
Oenothera biennis L., *minicula* L. (See Ken Wiegert, 16/1921)
Scutellaria lateriflora L.
Solidago graminifolia (L.) Salisb., var. *nuttallii* (Greville) Fernal.

PROF. FREDERIC W. PUTNAM

He Was Prominent as a Scientist and Historian and Had Been Connected with the Faculty of Harvard Since 1874

Aug. 14

Professor Frederic Ward Putnam, who died Saturday afternoon at his home, 149 Brattle street, Cambridge, following an illness of several weeks, had been associated with the faculty of Harvard University since 1874. He was prominent as a scientist and historian.

Professor Putnam was born in Salem, April 10, 1839 and was the son of Eben and Elizabeth (Appleton) Putnam. He received the degree of bachelor of science from Harvard in 1862, honorary degrees of master of arts from Williams in 1863 and of doctor of science from the University of Pennsylvania in 1894.

From 1856 until 1894 he was associated with the Essex Institute and the East India Marine Society, being vice-president of the former from 1871 until 1894; from 1869 to 1886 he was director of the Peabody Academy of Sciences, Salem; from 1857 to 1861, and again from 1879 to 1887 he was assistant in ichthyology in the Museum of Comparative Zoology; in 1874 he was an assistant with the Geological Survey of Kentucky, and in 1876-79 he was with the United States engineers on the survey west of the 100th meridian.

He was professor and director of the Anthropological Museum of the University of California from 1903 to 1909; State Commissioner of Inland Fisheries from 1882 to 1889; chief of the department of ethnology of the Chicago Exposition; curator of anthropology of the American Museum of Natural History, 1894 to 1903. Professor Putnam was curator of the Peabody Museum of Harvard University from 1874 until 1900, its honorary director from 1900 to 1913 and its honorary director in charge during 1913. From 1886 until 1909 he was also professor of American archaeology and ethnology; in 1910 he was professor emeritus in these subjects, but until his last illness he maintained his interest and worked in these branches.

Professor Putnam received from the French Government the decoration of the Cross of the Legion of Honor, and he also had been honored with the Drexel medal for archaeological research. He enjoyed membership in the National Academy of Sciences, the American Philosophical Society, the Massachusetts Historical Society, and the American Antiquarian Society, and was a fellow of the American Academy of Arts and Sciences besides having close association with many foreign and State scientific societies. He was a member of the Harvard Chapter Phi Beta Kappa, California Chapter Sigma XI, Harvard Club of New York, Colonial Club of Cambridge and the Faculty Club of California. He was the originator in 1865 of the Naturalists' Directory and also its editor, and he was a contributor to many scientific periodicals and had edited all the publications of the Peabody Museum at Harvard since 1873. Many valuable papers on anthropology and zoology are from his pen.

His first wife was Adelalde Martha Edmands of Cambridge. She died in 1870. Three years later Professor Putnam married Esther Orne Clarke of Chicago. She and two daughters and a son survive him, the daughters being Miss Alice Putnam of Cambridge and Mrs. John H. Lewis of Minot, S. D., and the son, Eben Putnam of Wellesley Farms, a local historian and genealogist.

Busc. orig. manuscript. Aug. 16, 1915

1915
Aug. 17

Stellburne, N.H.

Cold, shower day, with high wind -

morning 57° at 9 A.M., with 64° maximum.

I have spent much of to-day writing letters, to Mrs. F.W. Putnam, Mrs. Alice Putnam, Dick Davis, T.N. Rose, Rebecca Rose.

J.H. Remond has sent me a copy of Baynes' book, "Wild Bird Nests" with his list of fruit-bearing trees & shrubs adapted to birds. I have written him a letter of thanks. I helped him somewhat on this matter.

This morning I walked with Mrs. Goodall some ways up the Crows Nest path and returned to the house with her and had a good talk with Dr. Goodall. He told me a good deal about Prof. F.W. Putnam and his early connection with Agassiz, Low, Le Conte and others of his students, all later note worthy men, left him and went to Salem and started the American Naturalist, etc. Prof. Putnam was first an ichthyologist & later studied archaeology -

This evening for a while the half moon shone brilliantly in the sky. Barrett came up with me to see it, but it entered a heavy cloud for the rest of the evening, though the rest of the sky was as clear & brilliant as could be. Jupiter was up well above the horizon at 9 P.M.

I collected to-day:

Hamamelis virginiana L.

A tall shrub loaded with fruit with few gall on the pasture slope back of our cottage.

Shelburne, N.H.

1915

Aug. 18

A day of sun and cloud and very strong wind - Cold.

Much baying has been done to-day. Many loads came in in spite of the fierce wind;

This morning Miss Mayerson called with a party from Evans', consisting of Miss McChesney, Herman Howard, two other ladies & one man. After a chat, all went but Miss Mayerson who said some time when she went, and Mr. & Mrs. Edwin H. Abbott called.

I spent some time to-day cleaning driers and reading the paper and writing letters. I wrote Mr. R. N. Carabé, welcoming Rollin to Cambridge. He comes to Harvard -

This afternoon I called on Prof. Emerson and we wandered over his garden which is full of interesting plants & vegetables -

Mrs. Thim Brown went to an afternoon tea at the Shack, a ladies affair -

After supper we went up to the Shack with Miss Crisfield & Miss Lowell. Miss Dixie went with us. We had a good fire and Miss Lowell read to us an account of the Belgian Relief Work. A wonderful tale.

Miss Crisfield saw a fox to-day in the Scudder pasture Fox

This morning before breakfast I walked over the intervals with Gus inspecting the bay. I collected to-day,

Vicia Cracca L. Good fruit in the intervals.

Miss Lillian W. Brown collected in Scudder Pasture along ^{of wood} *Lycopodium clavatum* L. var. ~~montanum~~ ^{on Evans & Hook,} *anerium* ^{var. acutifolium} (Fenzl)

Shelburne, N.H.

1915

Aug. 19

(1)

Cloudy, a little haze, light breeze, perfect, cool.
This morning Miss Brown & I walked round through the pastures and woods to Wheeler Pasture at the foot of Crows Nest. I collected some on the way, and Miss Brown got a number of plants from the house & garden. *Mentha Cardica* is flourishing in the same spot, & *Physalis heterophylla*, var. *ambigua* is in flower where I got it last year. We got back to dinner —

This afternoon I worked on my plants and at 4:15 we had an afternoon tea. All the invited guests were present: Dr. & Mrs. G. L. Goodale

Miss Tolsom, their sweet aunt of Francis' wife. She lived on Piedmont Ave.

Miss Wheeler } Miss Bonham

" Sautie }	" Gephard
" "	Mrs. T. B. Greenough
" Hildreth }	Miss Dilke

This evening I showed the moon to Barrett, Alfred, Catherine. We saw Copernicus.

Returning with Barrett I dropped in at the Farhacs where Mr. & Miss Bonham were & Mrs. Gephart. We had music on piano & Victrola —

I collected to-day:

<i>Aspidium</i> <i>Thelypteris</i> (L.) Sw. <i>swampy ground</i>	Woods, foot of Crows Nest.
" <i>marginalle</i> (L.) Sw. <i>in wet ground</i>	
" <i>spinulosum</i> (O. F. Müller) Sw. <i>Richmond</i>	

<i>Ribes</i> <i>Cynosbati</i> L. <i>var. H. C. Nash</i>	saw to Crows Nest
<i>Urticarpium</i> <i>lineare</i> Lam.	
<i>Anaphalis</i> <i>margaritacea</i> (L.) B. & H. <i>rich soil</i>	

Shelburne, N.H.

1915

Aug 19

(2)

This afternoon as I was standing by the telescope stand looking towards the south I saw a large Bald Eagle with white head, poised, apparently motionless, over Olivet. Soon he soared in circles, slowly descending till he disappeared behind the slopes of Olivet. I saw an immature Bald Eagle on July 27 near the same place -

Henry Stetson was happy today for he Woodchuck caught in his traps in the interval another Woodchuck. This time it was an adult. I saw it after he brought it up to the barn -

Shelburne, N.H.

1915

Aug. 20

Clear, hot, glorious day, light breeze.
This morning I worked at home and read a little - The others were busy at the main house over French Hospital work - That is Tuesday & Friday mornings.

This afternoon Dr. & Mrs. Donald Jordan called - Gus built this cottage for the Jordans. They selected the situation.

At 4:15 we went down to Dr. & Mrs. Goodale's to meet him, Hobom aunt of Francis' wife. She, her sister & Francis' wife used to live on Riedesel Avenue. Prof & Mrs. Emerson and Mr. & Mrs. Abbott were there. We had a most enjoyable time -

This evening we three enjoyed the moon through the telescope. It was brilliant and a little past half. We studied Tycho and Copernicus especially. Jupiter was well up, by 9 o'clock. His central bands are very distinct and 2 moons are on the right, 2 on the left.

The foreign news is depressing. Now the Arabic is torpedoed without warning and with Americans on board. No Americans were lost. It is awful.

I collected to-day:
Solidago rugosa Willd.

" *canadensis* L.

" *nemoralis* L. Sust to Nat. Herb.

Gran land near road close to our cottage.

Shelburne, Vt,

1913

Aug. 21

Dry, after the rain dissipated the mist in the afternoons, a light haze in the air all day, thickening towards evening when the air was thick though one could see across the valley. A very little rain in the evening.

The haying was practically finished to-day. A few cocks are in the S.E. corner of the intervals, and some mowing on the creek borders will be done.

I spent the A.M. & P.M. at home quietly, feeling rather tired. I wrote and read on the piazza most of the time.

At between 5.30 & 6.00 P.M. a small party of us, Miss Lowell, Miss Crisfield, Mr. Farnham, Miss Carrie A. Gauthier, Miss Brown & I with food, lantern electric lights &c started off for a walk up Crag, there to build a fire, have our supper, and see, if possible, some of the beacon lights that were to burn on many peaks to celebrate the opening of the new Mt. Washington house. We had a pleasant ride a mile & a quarter to the foot of Crag and the pony track to the top was pleasant. Crag is 1420 ft. high, making our ascent some 700 ft. We reached the top by 7 o'clock and built a small fire on the rocky summit and ate our supper. The haze was too thick to see much beyond the valley but a reappearing and vanishing light in the direction of Washington led us to think it was from there. We also saw two red lights that were doubtless from Pine but.

Up Crag.

mentha arvensis L., var. canadensis (L.) Brongn.
Damp shaded soil, in. size of Pine Grove -

We sat and lay down on the rocks and talked and enjoyed the peace. We left at a little before 10 and reached home by 10.45 P.M.

1915

Aug. 22

~ Sunday ~

Shelburne N.H.

A.m. cloudy, air thick, P.m., heavy rain, lasting through the evening.

I have spent most of to-day writing letters. It is hard to get to the last one. Helen's brother-in-law's death. Otto Faber, in East Africa is very sad and Helen sent the Memorial Service that was held in the English Church in Madeira, our country is getting more and more implicated in the war troubles and Russia is getting very seriously beaten at present. The end is far off.

Mrs Dike of Simmons College called today. She goes tomorrow and we hope to see her again - she wants to show us the College.

The steamer trip of the season was to-day. Miss Eozzalo, Miss Chapin, Jack Wright, Dr. Johnson & Endicott Rantoul in his car rode about 30 miles to Mr. DeMenil in Riley and there they were joined by Mr. DeMenil and they tramped 6½ miles up Sunday River to some rock caves in Swafford. They had a hard time in pouring rain and it was a very great expense. They returned home here by 10.30 - I will tell on Aug 23.

Shelburne, N.H.

1915

Aug. 23 Rainy in Am., clearing in P.M., evening bright with cloudy
and clouds and brilliant many full moon.

This morning after breakfast I walked with Woodchucks
Henry Sleton & Richard Read over the intervals to
visit the Woodchuck holes and reset the traps.
Yesterday from our piazza I watched a large
Woodchuck cross the intervals from the Creek
close by the Knobble to the fence between the
Lower & Upper intervals. Then he sought a
spot where there were two holes near together
and remained there. He ambled along feeding,
I think, when he came to some green grass,
for the grass is cut now. This morning I
saw another near the Knobble ambling along.
Henry set the traps and we returned.

The rest of the morning I spent at home, and
also the afternoon till about 5 o'clock. We sun-dried
all my deer & I took out of four some 50 sheets.

About 5 P.M. I went to the main house to
bade good-bye to Miss Wheeler & Miss Gaalilee
who went off with the Niskie settee, R.R.
The top will not come back next year.

Mr. McClellan & 2 daughters came back here
today from York Harbor.

This evening Miss McClellan from Gates College
read in the dining room to a large number from
here, Evans & Gates Colleges two plays. The last one
"Spreading the news" in Irish dialect was most amusing.
Tickets 50¢ - The money goes to the French Hospitals.

I collected today,

Salix lucida Muhl. Leaves only. By the Creek opp. main house

Shelburne, N.H.

1915

Aug. 24

Clear sunny, mild glorious day, fine cloud effects.
At home this morning, writing letters and
reading, finished "Touring in 1600", most in-
teresting and instructive.

This afternoon we had a tea on the piazza.
The following were invited and all came:
Dr. & Mrs. J. L. Morse.
Mrs. & Mrs. Johnstone
Dr. "
Prof. & Mrs. & Clara Emerson
Mrs. Walcott
Dr. & Mrs. Lord Dartmouth
Mrs. Scales
Jack Wright
Mrs. & Catharine Farbman
Mrs. Lowell
Miss Crisfield
Miss Sozzalelli
Mrs. G. F. Williams

About 6 o'clock a flight of Nighthawks & Nighthawkins
took place up the valley past the cottage.
At first they were pretty well bunched and
then single birds followed for some time.
There were 40 or 50 or more in all. As they
scattered part way at a reasonable elevation
the white spots under the wings
were very plain. They were going west.
I collected to-day;

Solidago bicolor L. Dry soil near the cottage.

I put in press today, coll'd by Mrs. J. H. D. Stone on Concord.
Woodia

Fresh specimen, given me Aug. 20.

Stichburne, Vt.

1915

Aug 25

Heavy thunder storm at 2 P.M., and at about
P.M., rest of day cloudy & sunny, evening cloudy-

I was not quite well last night and
have been quiet to-day, I have spent much
time writing letters, reading the papers, etc.

This afternoon Mr. McChesney called and
we had a pleasant talk on the piazza.

I collected to-day,
Panicum philadelphicum Bernh.

A weed in one of our garden plots by
the cottage.

Impatiens biflora Wall.

I took a single flower from a plant
by the brook on the side of Pine Grove
and dissected it and put it into my
Baby Press - The flower is peculiar and it
is not generally agreed as to what are
the sepals and what are the petals -

I shall mount these parts on a sheet in
the form of a diagram ~
Lobelia inflata L.

Pasture near our cottage.

Shelburne, N.H.

1915

Aug. 26

Cold, Am. cloudy, rain at noon, P.M. clear with fine clouds, evening with moon. Jupiter & five clouds.

This morning I had a chat with Mr. Johnson by his cottage & with Mrs. Gray at Lee cottage where I went on an errand. Next Mrs. Fletcher lunched with Mrs. Van Tol. Mrs. Greenough went to. I read & worked at home till dinner.

This afternoon I had a call from Little Clevantine & Beppie Johnson and at four o'clock I took Mrs. & Miss Carrie Gauthier on a short botanical walk. We spent two floating hours. We went over to the Knubble and I dissected plants on the way and collected a number. We traversed the Knubble thoroughly and examined the Habenaria Hookeri for fruit, saw about a dozen places. The fruit is green and not perfectly ripe. Generally but few ovaries on a plant have been fertilized. I took one plant. We got back to the house at six.

This evening I put my plants into pots & showed Mr. a lot of photos Charlie sent from Australia on his Southern U.S. trip early in the yr.

I collected to day ^{Terpnium (Thelypteris) sw., var. intermedium DC Gray}
Bolychium obliquum Nutt. Gras land by Knubble,
Habenaria Hookeri Torr. Forest Knubble, see above.

Hydrocotyle americana L. By Seamy Brook near Knubble.
Chelone glabra L. " " " "

Solidago hispida Nutt. Grass land edge of Knubble.

" arguta Ait. n.w. slope of Knubble.

" serotina Ait. "

Aster acuminatus Michx. n.w. slope of Knubble.

Last day came in this P.M., a gloeae, cut on the 21st, just S.E. of Knubble.

Shelburne, Vt., H.

1915
Aug. 27

Clear as crystal, cold, warmer in the grains.

This morning I was at home doing some work on my marble plants article, and writing -

This afternoon the great event of the season came off at 3:30 on the Emerson lawn & site of the house, a fête for the benefit of the French hospitals, performed mainly by the children. A large audience assembled on the lawn and under trees & melodies were performed to music and singing. It was charming by done, and the effect was wonderful. Little Bo Peep, Pied Piper of Hamelin, Jack & Jill, Old King Cole etc., were done and the children looked so pretty, and sang so well. Ernest Rautou, Dr. Johnson, Jack Bright, John Walcott, Clara Emerson assisted too. Clara led the music with her violin. After the performance Prof. Emerson explained the hospital work and the meeting broke up. Then all scattered over the grounds and a bat was passed round, and hot & cold were sold. Mr. thin Brown ran the pink lemonade made by Miss B. (lemonade, blueberry juice & mint, ~~huckle~~ ~~Cordial~~) at 5 & 10¢ per glass with some cake. Tea &c was served. The proceeds amounted to \$92.16 if success.

During the performance & after a huge Bald Eagle flew three times over the place and soared over the interval. It was a noble sight. I saw him this morning at about 9 o'clock over head near our cottage -

I collected today;
Solidago rugosa well.

Large plants ^{on} hill-slope by our cottage.

Shelburne, N.H.

1915

Aug. 28

(1)

Fog in early AM. Then clear & brilliant, calm, cool, light breeze. This morning I took a walk with Miss Margaretson to Wheeler's then into his field opp. the house and down to the river. It was very beautiful and the river view was fine. I had never been there before. I collected a few many plants by the river and in Wheeler's intervals.

As we were by the river I saw a Bald Eagle soaring over the water well up. He was soon joined by a second and they played around each other sportively, coming very close together and diving over and under each other, these separating and soaring in circles above & below each other. It was a very beautiful sight. In a few minutes a third Eagle approached rather near and soared. He alone, however, plunged & dove out of sight over the woods. I used my binoculars and had a fine view. I think the birds were all in immature 2^d or 3^d year.

I returned home to dinner and spent Dr. Gordale ^{read a letter from} ^{from} ^{him} ^{him} reading a letter from Mr. Blaschka, Mr. Blaschka. He is well, not conscripted & working on the glass models. He is 47 yrs old and the conscription has reached on 45 yrs thus far.

I spent an hour laying out my plants (35 sheets) and the Mrs. & Miss Carrie Gaither called and had tea. Mrs. Gray & Miss McKeachie called for a time. Then Miss Gaither told us of her work in Worcester - Wm. D. Goff, Society for the Prevention of Cruelty to Children. Evening at home.

Shelburne, Vt.

1915

Aug. 28

(2)

I collected and put into press to-day; Wheeler
Bromus ciliatus L. Wheeler intervals

Border of wood, Wheeler intervals.
Apis tuberosa Moench.

Sandy border of river, Wheeler intervals.
 Extremely abundant - the brown-purple flowers
 making a beautiful show. It occurs also on
 bushes in the grassy intervals. I secured
 rootstocks with the tuberous enlargements.

Amphicarpa monovich (L.) Ell.

Climbing on bushes, Wheeler intervals. In flower,
Crataea hispida Vent.

Abundant in fruit, sandy border of river
 Wheeler intervals.

Gaultheria mucronata L.

Viburnum Opulus L., var. *americanum* (Mill.) Ait. }
 Intervale - a ^{sampson} border of Wood, Sterile laden with fruit

Eupatorium purpureum L., var. *maculatum* (L.) Dark.

Low ground, very abundant.

Solidago serotina Ait.

Border of wood.

Aster laevis L.

From Sandy soil by river. Abundant on intervals.

Aster dumosus L. grassy intervals

Ambrosia artemisiifolia L.

Shady sandy border of river.

Helianthus strumosus L.

Border of wood. Abundant.

Bidens frondosa L.

Sandy border of river

Bidens cernua L.

Low ground, intervals.

Shelburne, N.H.

1915

Aug 29

Cloudy, but air clear, a little rain in the Col.

(V)

This morning we heard that there had been a fire in Mt. Washington - Mrs. Crisfield, Miss Powell and Mrs. Greenough had gone up yesterday for the night. Miss B. & I with others following went over to the Presidential Platform but there were no signs.

I spent the rest of the morning over plants and writing. At dinner we found the party had returned. The old classic Tip Top House burned to the ground at 7 A.M. this morning. Of course the stone walls remained. It is a great misfortune I think.

I have spent the afternoon mainly writing letters. Prof. Emerson called for a Dowell and he inspected our garden plots and expressed much enthusiasm.

I had a gift on me at dinner. A strange large mysterious box was at my plate (Woodpecker) and much mystery prevailed. After a long unwrapping and reading choice inscriptions (see page 2) I exposed a Woodpecker made of wood, gaily painted and pecking at a stump when pushed. A searching enquiry revealed (Miss Emerson at the fault) one in communion with Mr. Walcott. It was found at Shorey's in Enfield. I collected Solidago hispida Matil.

Dry rocky ledge by The Hedge near my cottage. Miss Carrie A. Gauthier collected for me on the top of Gray yesterday (28th) Solidago Randii (Porter) Britton.

Aug. 30

Morning cloudy with fine rain part of the time
(1) Afternoon sun & cloud, Evening pleasant -

This morning a party of us consisting of Mrs. Thruitt Carrie & another, the two horses Mr. Clechlan, him & I went up Cabot. Mrs. Hall went a short distance and I helped her get some Little Spruces, Hemlocks, White & Norway Pines to take home. The air was good and the climb refreshing. As we approached the summit Aster euminiatus, and macrophyllus, with beds of it large basal leaves, Solidago ^{part of a} macrophylla and arguta became very abundant and on the summit Solidago Randii made a Solidago magnificent display. It was extremely abundant Randii and the long wand-like spikes of inflorescence made a beautiful show. The plants grow in tufts, each tuft by itself, sometimes 8 or 10 stems in a single tuft, either erect or extending flat on the rock like radii, over and beyond the dense mat of tufted basal leaves. I was delighted to find a little way below the top in the rock wood this fruiting specimen of Microstegia unifolia. We had a fine rain on top, but it made no difference. The view of the cloud-capped mountains and the beautiful misty valley below was all-sufficient. We returned pretty late for dinner much refreshed by the tramps -

This afternoon I drove over to Endicott Farm to call on Mrs. Rantoul and was disappointed to find that all had gone

1915

Aug 30

(2) By auto to Intervale, so I left a note and returned.

Mrs. Edwin H. Lebott called shortly after and we Philip Abbott had a long talk. He gave me the whole story tragic death in detail of his son tragic death on Mount Le Trois in the Canadian Rockies in Alberta. He fell from a height, within 300 or 400ft of the summit, of from 20 to 30 and then slid down the ice slope some thousand feet. He evidently was unconscious immediately. The rock that he was grasping evidently crumbled. He had just called to the party, Prof. C.E. Fay &) that he had found a good way up. They were on a ledge and he had gone round to find an ascent. After he called to them they saw a shadow fly by and then they saw his body rolling down the long ice slope up which they had come by cutting ice steps. They were 12000 ft up. They reached his body as soon as they could descend, and there was still breath in it but it ceased shortly after. They left it, descended, and the next day it was recovered.

This evening we went to the Farnhams and heard a children's concert. Room full, all 5 children performed. Frank John on mandolin, Edward on violin, Albert on cello, Catherine on piano! It was most creditable.

We then called at the Sheeles. Miss Coxford goes to-morrow.	
<i>Cinna latifolia</i> (Trev.) Griseb.	near summit of Cabot. Rich woods.
<i>Hincapiea unifolia</i> (L.) Benth. <u>Fruit</u>	" " " " "

Shelburne, N.H.

1915

Aug. 31 Clear cool, brilliant, calm -

This morning I worked in my study, chiefly over my poems which are very full and I also arranged Miss Fays plants to show her when she comes.

This afternoon I was busy at home and later Mrs. H. M. Gauthier called with a large lot of wild flowers for M. I grew these and we went over to the Presidential Platform woods to get some Bunch Berries, &c, to take home from them. From the Platform the view of the big range was wonderfully fine. What you see of the summit on Mt. Washington is:

The view includes from right to left: Mt. Madison, Adams, Jefferson, Mt. Washington.

M. has a headache to-day and on my return I found her in bed. I fear she worked too hard this morning at the French work.

This evening I spent some time studying the constellations. Constellations. For a wonder the sky was clear as crystal and the stars stood out marvellously. Jupiter is now well up in the evening. In Young's Uranography there indeed (66 constellations), 3 being synonymous. These represent the area of the heavens as far south as 50° south of the celestial equator. I have found all but 10. None of these are very significant in the extreme south where here the hills practically hide them and exceptionally clear weather is needed. In Cambridge it is impossible to see anything so far south. One, Taurus Doniaturii, a part of Cepheus. I can make out to-night, if clear. It is now discredited as a constellation.

Shelburne, N.H.

1915
Sept 1.

Clear, cloudless, calm mild. Cold last night.

It has been a wonderful day. This morning a number left, The Evatts & party, Mrs. S. J. Williams & Barrett. Mrs. & Miss Annie Gauthier left in an auto for the Glen, there to change and go up the mountain reaching there about 2,30, and going down by train the next day. They will have wonderful weather. The two horses we borrowed went with them to the Glen & returned.

I spent the morning at home, part of the time reading to M. who is up & better, but is not going to meals quite yet.

This afternoon I walked up the road as far as Mill Brook. Herman Howard & William Argus overtook me on their way to the swimming pool and we kept together. I collected a few plants and we returned.

We spent the evening as usual at home, after a short time at the main house. Some new guests have arrived.

I collected to-day:

Phegopteris dryopteris (L.) T. & G.

A large clump by the swimming pool, Mill Brook. ^{Toroid.}
Thuja occidentalis L.

Fruit from Ford-sized tree pasture just below Hamlin.
Solidago caesia L. ^{chrysanthemum} *x* *bicolor* L. ^{Perky Gray} { ^{June 27, 1915-}

Roadside a little east of Mill Brook. Two or three stalks, from the same center, with pure white rays. A few stalks near by with yellow rays -

Shelburne, N.H.

1915

Sept. 2

(1)

Clear, calm, warm, fine day.

This morning very soon after breakfast Mrs Brown & I walked down to Wheeler Pasture at the foot of Crows Nest along the wood path. It was a little warm but the air was good. I collected a number of plants as usual while Miss Brown picked blackberries. We went a little farther than usual, going to Little Nipmuck Brook and following it up some ways. We stopped in a shady spot by the cold stream and had a little lunch and drank copiously of the delicious water - We got home to dinner. We walked about $3\frac{1}{2}$ miles -

This afternoon I put my plants with leaves, filling 32 sheets - I have now in press 111 sheets! Work is booming -

Mrs Sheffield came this P.M. Mrs Farnham & family left for Portland by the afternoon train - The house is rapidly clearing -

This evening I have devoted mainly to studying the double constellation of Ophiuchus (or Serpentarius) and Serpens. It occupies a large area in the heavens between 20° N. & 30° S. Declination. In it is the now discredited constellation, "Poniatowski's Ball" (Taurus Poniatovii), proposed in 1777. It is much like the Hyades in Taurus.

This morning Miss Brown & I picked a number Blueberry plants and we have done them up, and shall send them to-morrow morning to Mrs. & Miss Carrie & Sauthier -

Steelburne, N.H.

1915

Sept. 2

- I collected this morning; *ternatum* (Thunb.) Sw.,
 (2) *Botrychium obliquum* L. var. *intermedium* D.C. Eaton
 ^{Send to Nat. H. Woods}
 ternatum (Thunb.) Sw. var. *intermedium* D.C. Eaton ^{Send to Nat. H. Woods}
 Sunny pasture foot of Crow Nest. One from wood near by
Asplenium Filix-femina (L.) Bernh.
 Woods, s. of Crow Nest - Wheeler's.
Pleopeltis ~~lucida~~ ^{hole-potatoe} ~~lucida~~ (Lindb.) Fée.
 Dryopteris (L.) Fée.
 P Cool wood by Little Ingalls' Brook near Wheeler's pasture.
Panaceum philadelphicum Linn.
 Weed in one of our garden plots.
Zizaniopsis ciliata L.
Juncus effusus L., var. *Dytaei* (Laharpe) Tenuel + Grevaud
 Pasture by Little Ingalls' Brook
Spiranthes gracilis (Bigel.) Beck.
 Damp woods, Wheeler's, s. of Crow Nest.
Solidago hispida Muhl.
 Evans sunny open field. Gras cut.
Solidago Canadensis L.
Aster cordifolius L.
 " *pumiceus* L.
 Cool wood by Little Ingalls' Brook, near Wheeler Pasture
Ceratodon purpureus (L.) Pers. *ramosus* (Wall.) B.S.P.
Cirsium arvense (L.) Scop.
Prenanthes altissima L. { ^{involucres of 5 primary bracts} _{5 flowers} }
Hieracium scabrum L. inclyp.
 Sunny pasture by Little Ingalls' Brook.

Shelburne, N.H.

1915
Sept. 3

Clear with more or less haze, calm, warm.

This has been our warmest day, 86° max,

I have been busy to-day over my plants,
Taking a large number out of press, changing
series. &c.

I was much pleased this morning to
receive from Miss Gauthier a box of fresh
plants from Mt. Washington as follows.

Plants coll. by Miss Carrie A. Gauthier on ^{and by the self was placed} Plants from
Mt. Washington near the 5 mile sign ^{on Sept. 1} Mt. Washington
and mailed to me fresh:

Arenaria groenlandica (Retz.) Spreng. flower

Potentilla tridentata L. flower & fruit

Vaccinium Vitis-idaea L. var. minus Todd.

" *uliginosum* L.

Solidago macrophylla Pursh flower

" *Randii* (Porter) Britton, var. monticola (Porter) Fernald "

Achillea Millefolium L.

This afternoon Mr. & I went to Prof. H.
H. Emerson's to meet Prof. Mrs. Johnson of
Cambridge. Prof. Johnson is Prof. of Hist. at Harvard.

This evening I was surprised to receive another
box of plants from Miss Gauthier. This time from
the summit of Mt. Washington. I shall
open the box to-morrow morning.

This evening we examined *Ophiocarpos* & *Serpens*
again, also *Hercules*, and we saw the wonderful
star cluster in the latter. We studied Bootes.

I collected to-day:

Desmodium canadense (L.) DC. Sunny exposure. Pine Groves. back of
main house. Fruit. See August 1 -

Shelburne, N.H.

1915
Sept. 4

Clear calm quite warm in sun,

This morning I took a walk to Bowls & Pitchers with Mrs. Ferguson, & daughters, Marjorie (junior in Wellesley) & Barbara (at school in Cambridge), Miss Gilmore Smith, Miss Frances R. Wilson, and others.

We turned in at Hamlin's and struck the Yellow Trail. It was refreshing in the woods and when reached our destination every body but Mrs. F. & me went in wading and enjoyed it immensely. We returned by the Wiggans and the Swimming Pool and were just in time for dinner -

On the way we picked up the cocoon of a Polyphemus Moth which was given to Bunny.

This afternoon we sat on the piazza reading the paper. Dr. & Mrs. Goodale called, and we waved vigorously to Mr. Sprague when the P.R. train passed by, as he had written that he would be on it. He goes to the Glen House, but comes here on the 11th.

Mrs. Fay arrived on the same train - we are glad to see her again -

This evening Mr. & I staid down and talked with the people - Mrs. Smith says - Later I the double B Cygnis

I collected today:

Panicum philadelphicum Bernh. Tid. A.S. Hitchcock
n. v. 19, 1915;

Weed in one of our garden plots.

Carex capillaris Muhl.

Muddy pasture opposite Hamlin's.

Gnaphalium decurrens Pres.

Grassy, sunny roadside between Wiggans & main road.

Shelburne, N.H.

1915

Sept. 4 List of plants collected on the summit of Mt.
 (2) Washington, N.H. among rocks on Sept. 2 and
 sent to me fresh by Miss Carrie A. Gauthier
 of Northampton, Mass. I put them in press today.
 I received them Sept. 3.

Arenaria Groenlandica (Retz.) Spreng., Flower.

Stellaria borealis Bigel. Fruits.

Rubus idaeus L., var. *aculeatissimus* (C. A. Mey.) Regel & Tiling. Leaves

Drapetisca lapponica L. Leaves

Solidago macrophylla Pursh. Flower.

" *Cutteri* Fernald

" *Randii* (Porter) Britton

" " var. *monticola* (Porter) Fernald,

Achillea Millefolium L. Leaves only.

Shelburne, Vt.

1915

Sept. 5 Clear & dry, clouding in P.M. evening cool.

I have taken it easy to-day, writing letters and distributing plants, which takes time.

This afternoon, Mr. & I walked into the Scudder pasture between 4 & 5 o'clock, hoping to see a fox ~~that~~ ^{had} been in the upper end with young about that time of day, but we were unsuccessful. We then called on the Johnsons who were out on an auto ride. On our return Miss Gozzaldi called. She returns to Cambridge to-morrow morning.

I have made a record of my pressing to date.

960 sheets out of press, ^{including a very bad} _(given me fresh)

46 " still in press

1006 " total

5 ^{pm} This evening from my man L. Fay ^{7th} went over and called on the Emertons and their guests Prof. Mrs. Johnston. We had a very pleasant time indeed.

When we arrived here on June 11, my Button-Bush (Cotton Bush) behind the barn was bare of leaves and looked dead except for 2 or 3 buds that gave promise of a little life. The hard winter had nearly killed it. Weeks passed & the little buds developed and a few more appeared. This has gone on gradually and now at this late day the whole plant is full of leaves & flowers, and Mrs. Philbrick says it has 5 times the vigor it ever had before.

Shelburne, N.H.

1915
Sept. 6

Cloudy with a little rain in the P.M. Air very pleasant. Calm -

This morning I collected a few barn yard plants near my button bush -

I spent much of to-day arranging my pressed sheets in systematic order

We had an afternoon tea on the piazza. Everybody was bright -

They were present:

Mrs. Gray (Mrs. Stetson's mother), Mrs. Hammond

Dr. S. L. Goodale

Mrs. M. L. Fay

Mrs. "

Mrs. J. B. Greenough

Prof. E. Emerson

" George Sheffield

Mrs. "

Mrs. J. L. Morse

Prof. Johnston

Mrs. Hope MacLachlan

Mrs. "

" "

Mrs. Mayerson

Mrs. Hilman.

" Stone

Mrs. Bartlett.

There were invited but declined:

Henry & Eleanor & Mrs. Stetson.

Mrs. Dixon, Clara Emerson & Mr. Walcott

The Rantoul's & Mrs. Endicott.

Evening at the Farm, talking and at our cottage.

I collected to-day:

Polygonum aviculare L

Chenopodium album L. var. nitre (L.) Moq. } 14 sheets, around the

Camaranthus retroflexus L.

Farm barn.

Stellaria media (L.) Cyrill.

Lepidium virginicum L.

Raphanus Raphanistrum L.

Plantago major L. South Nat., N.H., Marsh

Shelburne, N.H.

1915
Sept. 7
(1)

Sunny & cloudy, mild, calm, a few rain drops at noon.
This morning I took a walk with Miss Margesson to Evans Island where I had never been. We went down to the Farm and crossed the creek on a bridge, thrown up to let the men cross over and we walked over the entire Island. It is continuous with Ennis Island being separated by a creek and is bordered on the north side by trees. The river bank is steep and the water rapid. Most of the Island furnishes bay. At the northeast end is waste land covered with a dense growth of weeds in full flower, making a glorious symphony of color with the yellow of Solidago scotina & canariifolia, the lemon-yellow of Cenothera biennis, the magenta of Epilobium angustifolium, the white of Liatris ligulistylis, the deep purple of Eupatorium purpureum, var. mucronatum and others. I took 2 photos (4x5) of the creek, one of the river bank with elm, & one of Crow Nest. We returned to dinner. I took a picture from our pasture fence, southeast.

This afternoon I was busy with my plants, Mrs. Sheffield called. At supper we met & greeted Mr. & Mrs. & Miss Drew who are here for two weeks.

After supper I sat on the piazza and listened to Miss Gertrude Smith who sang many songs ending with The Tiger. The parlor & piazza were full of people and the music was extremely good.

Shelburne, N.H.

1915
Sept 7

I collected and put into press today
(2) The following, 25 sheets -
Quercus sensibilis L.

39g on Evans Island, sterile & female flowers, large & abundant.

Sterile flowers as long as 39 inches.

Quercus Struthiopteris (L.) Hoffm.

♀ flowers from The Fair by Evans Island,
Diglaria sanguinalis (L.) Scop.

Setaria viridis (L.) Beauv.

Evans interval opp. base,

Calamagrostis canadensis (Hickl.) Beauv.
Evans Island by creek.

Polygonum pensylvanicum L.

The Fair opp. Evans Island.

Clematis virginiana L.

Evans Island, west border. ♀.

Epilobium angustifolium L.

Evans Island, waste land, east end.

Cuscuta Gronovii Willd.

The Fair, opp. Evans Island

Mentha arvensis L.

Evans Island, west border.

Aster novi-belgii L.

The Fair, opp. Evans Island.

Snaphalium decurrens Ives.

Evans Island, waste land, east end.

A fragment of a large branching plant

Odeas sulphurea Greene.

The Fair, opp. Evans Island. Plants
five feet high and widely branching.

Shelburne N.Y.

19/5

Sept. 8

(1)

Rain in early morning before light. Hazy, calm, warm, evening very clear overhead.

This morning Miss McCleekler, Miss Brown & I walked through the pasture toward to Wheeler Pasture and some distance along Little Hyalls Brook, some 2 miles from home. The ladies picked blackberries. I botanized, as page 2 will show. I am collecting about everything. The brook is a well shaded cold stream and is very attractive. Blackberries are there. We returned pretty late to dinner. From the berries picked this morning seven pint jars of canned fruit were made.

This afternoon I was busy with my plants.

This evening Miss Brown & I went to Sunset Rock and enjoyed the wonderful view of the heavens. The horizon was not clear, but from a short distance above every constellation was picked out.

Mr Sprapul sent me a letter to-day from "The Glen". He had been up Tucker main Ravine and he enclosed Rhododendron cappuccinum in flower and a flower of Gemm Peckii. He will be here some time next week - C.S. Pease writes and sets Monday night for my day to visit him.

Shelburne, N.Y.

1915

Sept. 8

9 collected and put into press today

(2) The following 31 sheets:

Botrychium obliquum Muhl.

Sunny open Wheeler Pasture

Lycopodium clavatum L.

" var. monostachys ~~one~~ Great Neck,

" *complanatum* L., var. *flabelliforme* Fernow

Open wood by Ingalls Brook (Little)

No. 1 an more condensed form of leaves in damp
woods s. of Crow Nest.

* *Arisaema triphyllum* (L.) Schott. Fruit.

By Little Ingalls Brook near Wheeler Pasture

Ribes Cynosbath' L. Fruit-

Wheeler Pasture

Leecha intermedia Lept. (var. *juniperina* (Bicknell)
Robinson.)
Wheeler Pasture.

Pasture by Little Ingalls Brook

* *Panicum implicatum* Forsb.

Open pasture by Little Ingalls Brook

Shelburne, N.H.

1915
Sept. 9

Fog in AM.; clearing, warm, calm.

I have been at home to-day, busy over many things. My plants are drying well, presses are full. This morning at 11.30 Miss Fay came up and we spent an hour over the plants she sent me from Malone, N.Y.

This afternoon Miss Hammond and Miss Fay called and we had a delightful time looking at Miss Hammond's photographs of her trip this summer to Colorado Canyon, San Diego & San Francisco Expositions and Crater Lake, Oregon - Miss Hammond gave us extremely interesting accounts of her trip. Later we had calls from Mrs. Bartlett, Prof. & Mrs. Lord.

After supper I took Miss Gertrude Smith, & Mayorie & Barbara Smith back to the cottage and showed them Jupiter through the telescope. We had a pleasant time.

Shelburne, N.H.

1915

Sept. 10

Clear, calm, warm. Evening wonderfully clear,
the constellations sparkling with brilliancy.

The morning I went with Miss Marfesson
through the woods to Crows Nest and took up
3 plants of Rosa gallica for her to take to
Milan to set out. I did not collect any
plants this time - Returned in time for dinner.
Miss Marfesson returned home on the 13th.

This afternoon I worked and read part
of the time. Late Mr. Greenough, Miss Bowd-
man & nurse called and soon after Mr.
Walcott called. I showed him how I
press plants.

This evening all the Smith and
Ferguson family came to the cottage,
Mrs. Smith, Miss Gertrude & Miss _____ and
Mrs. Ferguson, Marjorie and Barbara. We
sat on the piazza and enjoyed the won-
derful view of the heavens, and we picked
out the constellations and saw many
meteors flashing through the sky. I
took out the telescope and Jupiter was
never so brilliant. The 4 moons were very
visible. and the two broad bands across
the middle of the planet were astonishingly
clear. Everybody saw them clearly - I
showed them the double star in the handle
of the dipper, and the nebula in Cladromeda.

Miss Bowdman collected for me this P.M.,
Solidago squarrosa bunch.

Roadside, n.e. side of river on road to Stevens Farm,

Stellburne, N.H.

1915

Sept. 11 Clear & cloudy, wind, cool.

(1)

This morning I wandered over the Knubblle by myself, primarily to see how the Habenaria Hookeri was fruiting. It is still green - I collected a number of plants, 8 sps. making 17 sheets.

About noon, when we were all at home, who should appear at our cottage but Mrs. McMillan and Ellen - They arrived last evening at Emerson Farm, all safe & sound. We had a good talk for half an hour. We shall see them again soon - they have had quite an experience.

This afternoon I have been busy in my room, and I sat on the piazza an hour and a half -

For one hour I watched, through my binoculars, Great Blue a Great Blue Heron standing in the river on the Heron stony beach, opposite our cottage and near the Knubblle. He ^{was} standing about "knee deep" and for much of the time was preening his feathers and pecking at himself. Then he would assume various attitudes for a few minutes at a time. He straightened himself up like a Bittern, except that the bill was not quite perpendicular. Then he drew his neck partly in, his body being in the natural position, and his head on a line with the body on the top, and his bill at an angle of about 45° . He seemed gazing intently into the water. He struck various attitudes between these two. Finally he walked down stream & disappeared. He never struck for a fish or other food - This evening I went to the Casino & heard songs of the 1903 lumber trip by Mrs. Mrs. Shefford, Greenough & Miss Smith.

Shelburne, N.H.

1915

Sept. 11
(2)

I collected today the following:

Lycopodium obscurum L.

Oakeria sessilifolia (L.) Wats. Fruit.

Habenaria Hookeric Torr. I examined seven

plants and the fruit is sparse and still green.
But few fruits are formed on a plants. Some-
times none. Send to Natl. Her. Wash.

Top of the Knubble in shade.

Rubus vernutanus Blanchard. Five in h. Fernald, Feb., 1919.

Foot of the Knubble, n. side, edge of field.

Desmodium grandiflorum (Walt.) DC.

A colony of 8 or 10 plants on the top of the
Knubble near the center - This is a new
station, the other being on the north slope.

Viburnum Opulus L., var. *americanum* (Mill.) Gilt.

A large shrub full of fruit, border of creek,
off the east end of the Knubble, a few rods.

Solidago Latifolia L.

The Knubble, n. slope, $\frac{1}{3}$ from top -

Vitis cordata Preneuter *trifoliolata* (Cass.) Fernald.

Foot of Knubble, n. side, edge of field.

Involucre of 8 primary bracts, 8-flowered,

This may L. Fay gave me today
Arisaema triphyllum (L.) Schott, ^{sent to Kortt & Co.}

Low ground near our cottage - Fruit.

17 sheets in all -

Shelburne, N.Y.

1915

Sept. 12 Clear & cloudy, cool, calm -

At home till noon, writing - Then we three called on Dr. & Mrs. Goodale who return home on the 14th. They are always very cordial. The trees on and below their slope have been thinned, much improving their view -

After dinner I drove over to the McMillan Farm to call. All were there, Charles, Mrs. & Endicott Rantoul & Mrs. Endicott, & Mrs. McMillan Ellen, Andrew & John - They were very cordial, and invited me to join them on a drive up Sunday River near Bethel on a picnic. We started before four o'clock in two cars and ran 20 odd miles on the north side to Bethel Bridge and then up the Umbagog road some miles and then turned off up Sunday River and stopped some 2 miles from Mr. DeMerritt's house - We lunched by the roadside on the grass in an open field and had good things to eat out of very heavy lacquered baskets - We returned home with lights burning and I got back to the cottage at 7.45 P.M.

I collected to-day:

Solidago Randii (Porter) Britton.

A fine plant with six stalks in sand in open field below Tumble-Down-Dick in Gilead, Me.

1915

Sept. 13

St. Albans, Vt.

Rainy day, light rain, fog low, calm, chilly.

This has been a very uneventful day.

I have felt pretty tired and have been very quiet and lazy. This morning I did a little writing and then read along by the fire till dinner time. It was chilly & wet outside.

After dinner I lay down on the sofa in the sitting room and actually took quite a nap and dreamed pleasant dreams.

After supper I walked over to the Gorham's and bade them good bye for they go back to Cambridge to-morrow morning. It has been a great pleasure to have them near us. Others leave to-morrow.

Shelburne N.H.

1915

Sept. 14

Foggy part of day, clearing. Rly. clear, calm, but.
~ Trip to Randolph ~

This morning by auto & train I went to Randolph and spent the time from about 12:15 to 6:00 with C.S. Pease & family. Pease met me at the Randolph Sta. at 12:12 and we walked to the "Pod," his cottage where we staid till after dinner, talking and discussing with the family. There were Dr. Thrus, Pease and little daughter, Mrs. Pease's uncle and mother (Mrs. Tappan). They have a fine southern outlook over the intervals up Madison and Adams. After dinner we looked over some interesting Coos Co. plants and later Pease & wife & Henrietta & I walked over to see Mrs. Pease senior, who welcomed me cordially. After a pleasant call there, Pease & I took a stroll through the woods back of the cottage through Mossy Glen, an exquisite bit of woods with a brood stream in a wide gulf running over rocks covered with green. We passed a stream of clear, cold water gushing out of the rocks and dash deep, for it was hot. Our stroll ended at the Ravine House where I most unexpectedly met Fred Dodge and his daughter and Miss Dodge of Mefford & Dr. Tuckerman. From these we inspected the new addition to the Ravine House and strolled across the interval to the station "Appalachia" where is the beginning of the mts. climbs up the big ravine. Train to Upper Sorrell & auto home. It was a very pleasant day throughout.

Shelburne, N.H.

1915

Sept. 15 Clear, after early fog, calm, very hot. 92° max.

This has been a day to keep still in.

I spent the morning at home writing letters and doing a bit of reading in the paper &c. I also went over my presses and have removed every thing excepting about 15 sheets of persistent things -

This afternoon A. C. Sprague appeared and we were much pleased to see him. He will stay through next week. Then Dr. Jenkins appeared for a call on his way to his family in Jackson. We havent seen him for a long time.

We had a 4 o'clock tea on the piazza and there were present -

Mrs. F. H. Gray

" George Sheffield

Mrs. Hammond

Fay

Mrs. Row. S. Drew

Mrs. " "

Mrs. Lucy "

" Sarah Barrows

Mrs. Clara Rantoul

Mrs. " "

Mrs. W^m M. Kendall

Mrs. Endicott

Mrs. McLellan

Ellen "

We had a very bright time. I was so glad to see Mrs. Kendall after years. She auto'd from Saranac to Endicott Farm on the 15th. !!

This evening Miss Hammond, Miss Fay, Mr. Sprague came up, and we had the telescope out and examined Jupiter & ☽ (and no. 1 go behind), moon, double star in basket of Dipper, Algol, Nebula in Andromeda, Tornalhaut & constellations.

Shelburne, N.H.

1915

Sept. 16

Clear with stray clouds and thunder in evening.
Very hot. Calm.

This morning I wrote letters and later
Clare & Lois Howe & Mr. Sprague called and we
all sat on the piazza.

This afternoon I worked on my Marsh
paper. Later Mr. Sprague called and we spent
an hour and a half in my study making
measurements of distances on Charles River
from the marsh. He told me about the
significance of City Base, meaning so many feet
above or below mean low water. Dikes or walls
buildings stand must be immersed twice a day
at least to prevent rotting, and they cannot be
cut so low as to prevent that.

This evening Miss Hammond, Miss Fay & Mr. Sprague
came up and we had a grand time with our
books and telescope. The moon, in her first quarter,
showed finely and Jupiter was never so bright
and beautiful. We examined the double star
Albiero Cygni through the tele-
scope though it was very high up. We
discussed constellations and in the sitting
room we read and studied many books
and illustrations. It was great pleasure.

I have received lately what I consider my last letter from J.W. Rose from South America written August 20. He expects to sail for home about September 16,
today! He was enthusiastic over his
trip.

Shelburne, N.H.

1915
Sept. 17

Clear & cloudy, smart thunder storm at noon
warm, then cool & pleasant, calm.

I spent the morning at home working
on my March paper. It is approaching a
conclusion, but will take time yet.

After dinner Miss Brown & I drove with
Gus to Gorham. The air was refreshing -

On our return Mr. Sprague and I took
a walk down the road to the first house
beyond Wheelers. I found by the roadside
several hundred feet before reaching the first
house beyond the bog a delicate Caryophyl-
aceous small plant growing abundantly on
either side of the road. We followed it for
several hundred feet and I took specimens -
Miss Dwight had shown me a bit yesterday -

We returned through the woods & pastures
along Crows Nest and saw a beautiful sunset.

This evening Mrs. & Mrs. (Mrs. Lucy Drew)
Mr. & Mrs. Mackenzie & Miss Barrow came up
and saw Jupiter, the Moon & the double star in
The Dipper. The sky was clouded a good
deal. We had a good time and I showed
them my books and my work.

I collected to-day: *Gypsophila muralis* L. ^{Second}
(first time seen alive).
(seen in bud), N.H. Aug. 7/1917)

Abundant on both sides of the road for several hundred
feet some $\frac{1}{4}$ mile beyond Wheeler Bog -

Anemone virginiana L.

Woods south of Crows Nest. Three plants seen. I
took one with single flower. 1 had no flowers. 2 are each others
other
Aster undulatus L. ^{2 miles S.E. of Pine Grove} Roots near Wheeler Bog -

Shelburne, N.H.

1915

Sept. 18 Cool Am. & Pm. Sunny, warm in midday. Clear with fleecy clouds, evening cloudy - Calm -

This morning Mr. Sprague & I took a walk down the road and turned in at Wheeler Cemetery and crossed the rolling grass land beyond where the view is very fine. Then we went on to the river by the course of Cong. 28 last through the wood opposite Wheeler's. There we sat down & enjoyed the view. Shelducks passed by in rapid flight and we saw one Black Duck. Some Shelducks landed on the rocky shore above us and Hobbies flew over the streams, a Kingfisher screamed from his perch opposite us, and a Fish Hawk hovered above, at times diving, in the air as he passed downward in the river. I examined carefully the *Cypripedium* so does abundant there to see if there was fruit, *Cyp. taurinum* but I could find no trace. I found one flower fruit? stalk with flowers fallen off and the stalk dead and about to drop off from the stem - I have seen no reference to this lack of fruit.

From here we proceeded home to dinner.

This afternoon I was busy with my plants & later Mr. H. Johnson called. I showed them the moon & Jupiter. The moon was never more brilliant.

This evening I staid a while at the Farm -

I collected to-day:

Botrychium obliquum Muhl., Wheeler Cemetery, grass land.
Sium cicutae folium Schlecht. ^{meadow} Gravelly river bank, Wheeler's.
Bidens frondosa L. fruit. Gravelly river bank, "

Shelburne, N.H.

1915

Sept. 19

Sun and cloud, calm, rain between 5 & 6 P.M.

This morning I was busy writing letters - Miss Sally Olara Howe and I called on Mrs. Wright, Mr. coming a little later. Mrs. Wright has been an invalid all summer. She goes back to Cambridge tomorrow.

This afternoon I read aloud a little on the piazza and then Mr. Sprague & I strolled back into the woods as far as Caroline Ledge. Approaching rain drove us home in a hurry. We found here Prof. & Clara Weston and we all had a good talk.

After supper I talked with Mr. Drew in regard to the enlargement of a map he wanted done & then I returned home & we after while examined the moon & Jupiter as the heavy clouds were scattering. Tycho & Copernicus are among the most interesting features and they are now in good position.

We celebrated Miss Brown's birthday this evening - It comes to-morrow. I gave her John Wesley's Journal in 4 vols. (Everyman) & she gave her money -

If all goes well I shall take the Crawford Hotel trip to-morrow.

I collected to-day
Hamamelis virginiana L.

now in good flower on the slope north of the cottage.

Shelburne, N.H.

1915

Sept. 20

(1)

Clear as crystal, calm, mild -

A trip round the White Mountains.

This morning at about 9 o'clock a party of us in two automobiles made a trip completely around Mt. Washington, through Pinkham Notch, Jackson, Glen Sta., up through Crawford Notch, Bretton Woods, round Chen's Mt., Waumbell House, Jefferson, Jefferson Highlands, Randolph, Sorbeam, Shelburne reaching home by 5.30 P.M. The party consisted of Mrs. & Miss Lucy Drew, Mr. & Mrs. McMurtry, Miss Sarah Barlow, Clara & Lois Howe & I with two chauffeurs. The air was as crystal clear as could possibly be and I never saw the fine details of mountain cliff, ravine, falls and the like more clearly. It was a continuous panorama of beauty. I carried a map of details and I was told yesterday by Mr. Sprague to pick out certain falls, cliffs, ledges, mountains and the like which he had often visited either alone or with others, C.S. Pease among them.

We found the roads wonderfully good, almost all the way we did not hurry at all, and when we wanted to, we stopped to examine some special view. My binoculars I used freely, and the clear details were fascinating. We paused at and a little beyond the Glen and examined Madison, Adams, Jefferson & Basiling tree.

Stellburne, N.H.

1915

Sept. 20

The halfway house of Chandler Ridge and the buildings on the summit were very clear and I was much interested in the Knob of Jefferson that Mr. Sprague called my especial attention to. The chimney wall in Huntington's Ravine and Raymond Cataract, gleaming white high up a little beyond. I especially examined. Lately Mr. Sprague three times climbed up to the Cataract.

We stopped at Glen Ellis Falls and some of the party went to the foot. I went down about half way and saw the falls from the Platform. I, on a former visit, photographed them. Then we glided on to Jefferson and to Glen Station getting views of Mount Washington & Kearsarge. We followed up the Laco Pines and I examined particularly Harts ledge where DePease has lately done so good botanizing.

From there we turned north and the mountains began to close in, till finally we stopped between Mrs. Webster's Hilliard for lunch. This is right in Crawford Notch and there two heights are wonderfully impressive. ~~Hillier's~~ ~~House~~ ~~of~~ ~~the~~ ~~old~~ ~~Hillier~~ ~~House~~ is still there. We enjoyed our rest by the brook under the trees and I put into my botany box some fruiting specimens of White Bucklerot (*Eupatorium cicutacefolium* Reichenb.) growing under the trees in the rocky soil. I saw more by the road near by. I have not seen

Shelburne, N.H.

1915

Sept. 20 this plant up here before. Mt Willard is a
 (3) frightful cliff on the notch side. A little
 before we reached this point we passed but.
 Willey on our left and saw the old cellar
 where the house stood before the avalanche.
 After lunch we passed on through the gate
 way to the hotel where there is just space
 for the railroad & the carriage road and
 between them the small stream of the Sac
 River which rises in the pond just above.
 We passed on to Rooster Woods and paused
 to fit the view of the big range. Madison &
 Adams are not visible, but all the other
 mountains from a noble mass. Jefferson,
 Clay, Woodstock with 3 trains visible crawling
 along on the mountain side. Monroe, Franklin
 Pleasant with its rounded dome, Cleopatra
 Jackson, Webster. The huge Mt. Washington
 Hotel is beautifully surrounded by ex-
 tensive lawns, golf courses & riverways.
 We now entered the valley of the Am-
 monucue River which we followed
 down past the Mt. Pleasant Hotel, Gor-
 Tabians, entirely given up to firs. Every boy
 about the house and on the piazza
 was unmistakably a few, white mountain
 home & twin but. And where we turned
 north and skirted Cherry Mt. We
 paused on the upper part of the road
 and had an extensive view of the
 country to the north and west, including

Shelburne N.H.

1915

Sept. 20 Mrs. Pleasant & Prospect, the Mt. View House in
 (4) Whitefield, and I could see plainly with
 my binoculars Uncle Robert's house with
 its tower. I thought of the summer we
 spent there. In the south was Lafayette.
 We dropped into Jefferson Meadows and
 passed by the Waukumbek House at the foot
 of Starr King and then home through J.
 Highlands, Rindge & Gorham. It was an
 ideal day from start to finish —
This evening we went to the Casino, where Mrs. Sheffield is, with others,
 and heard Mrs. Ross on the piano (unusual), Mrs. Smith (organ), Clara Estrella (violin)

This morning before breakfast, from the Ravens' piazza of the Farm, I saw two Crows by the Creek close to the road over it. They were apparently very large and are undoubtedly the birds which Miss Caroline G. Soule calls Ravens. No other birds were near them. They rose from the Creek border with graceful swoops keeping very near the ground. One of them flew beyond the other across the lower interval and, as he approached the fence in a gliding curve upward, he alighted on it. Soon the other followed in the same manner and alighted close beside the first one. I then had to leave them. They seemed very large and much larger than the Common Crow. No Crows were about. [Subsequent observation showed that they were Crows.]

I collected to-day:

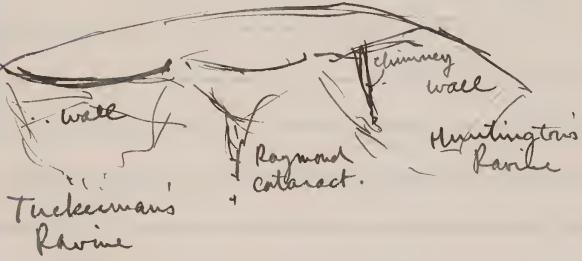

Eupatorium urticacefolium Richard.
 Rocky woods, Crawford Notch between Webster & Willard.
 In fruit -

1915

Sept. 21

Rainy, windy chilly day, in evening clearing
with swiftly drifting clouds revealing & obscuring
the nearly full moon and Jupiter -

Today has been a day after the ball.
I have been quiet, writing my journal and
some letters, and this afternoon Mr. Sprague
came up and we had a long talk over my
trip of yesterday. He explained many points
in topography for his knowledge of the whole
region is supreme -

This afternoon there came up to talk and
drink tea - Clara & Lois Howe, the two Misses
Dwight, Mrs. Sheffield, Mr. Sprague.

Invited guests who didn't come were:
Mrs. J. H. Morse, Miss Mary L. Fay, Miss E. P. Hammond
Miss Sally Howe and Miss Elizabeth Smith -

The rain came down in sheets at the time
we had a pleasant time till supper time
I showed those who wanted to know, how I
pressed plants -

This evening I staid rather late at
the Farm, talking in the sitting room with
friends - As I came home about 10 o'clock
the wind was very strong and the heavy
broken clouds were drifting swiftly.
The moon shed a strong light as it broke
out from under a cloud, only to pass rapidly
under another -

The war news is dismaying, the Russians
are hard put, I fear, to escape east from
Vilna -

Shelburne, N.H.

1915

Sept. 22 Clear, with clouds, heavy wind from the west,
very cold -

I have been at home to-day not being
quite up to the mark. This morning I worked
on my plants and on my Marsh paper -

This afternoon Mr. Sprague came up and
spent the time with me. We examined the
garden work that Miss Brown has been do-
ing, quite transforming the area south
of our cottage. We discussed the first
part of my marsh paper and he drew me a
map of Mt. Washington showing the ravines,
trails, crags, roads, ponds and local names, &c.
I shall insert it in my journal -

The sunset was grand, the colors on
the clouds wonderful. A rich rose-purple
covered madison, cedars, and the clouds about
them. We were all much impressed -

This evening Miss Rous of Baltimore who
is here with her mother played for us in
the Farm parlor. It was a great treat.

The heavens this evening are crystal
clear, the moon nearly full, and close by,
Jupiter, shine with dazzling brilliancy.

Shelburne, N.H.

1915

Sept. 23

(1)

Clear as crystal, calm, very cool.

- A trip to Dixville Notch -

This morning Clara & Lois Howe, Mr. Spaulding & I with Celine, chauffeur and the car made a trip through Dixville Notch. It was a glorious ride. The air was never clearer and the views were fine. We went through Gorham, Berlin, Milan, Dunmere, Errol to Dixville. Goose Eye stood out finely on the east flanked by fine mountains and we stopped at times to photograph or rest. We followed the Androscoggin closely to Errol and the 13 miles drive through the woods in pleasant shade close by the river without a house was delicious. The pointed firs, with spires against the sky, by the rippling water was exquisite. At Errol we turned west straight for the notch, following Clear Stream and at last the mountains closed in about us and we entered the famous Notch. I was there in the early 60's with Geo. Dexter and others but my recollections were vague. The tilted strata of stratified rocks are cut through, and towering cliffs, apparently overhanging in places are wonderfully impressive. Table Rock is one of these. Photographs & sketches were taken and we had lunch in the Notch under the cliffs in the shade. In the dark rock there is more or less quartz and we

Shelburne, N.H.

1915

Sept. 23 took back some pieces.

(2) After lunch we went a short distance and saw the country stretching over into Vermont, with Vermont Monadnock west of us. We circled round by the The Balsams a fine large hotel and returned through the hotel home the way that we came. Total distance 117 miles. At Enol we went a mile beyond to see Enol Dam, a most interesting structure, built many years ago to regulate and control the flow of the Lamoille River. There are many locks and gates, and water can be held back in dry seasons and let out at will. The logs coming down in the spring river go through a given lock guided by booms above.

In the flooded area above the dam, I watched through my binoculars a muskrat sitting on a rock that projects just above the water some distance from shore. He sat close to the water and was busily eating something. Soon he swam off 25 ft. & more, reappearing after a quarter of a minute, returning to the rock again and eating as before. He had some vegetable matter brought up from the bottom of the river.

We got home by 7 P.M. Tired from lighting the way (on our ride we had been breaking up log jams in the river with cant-dogs, pick-poles & dynamite, the last making great water sprays).

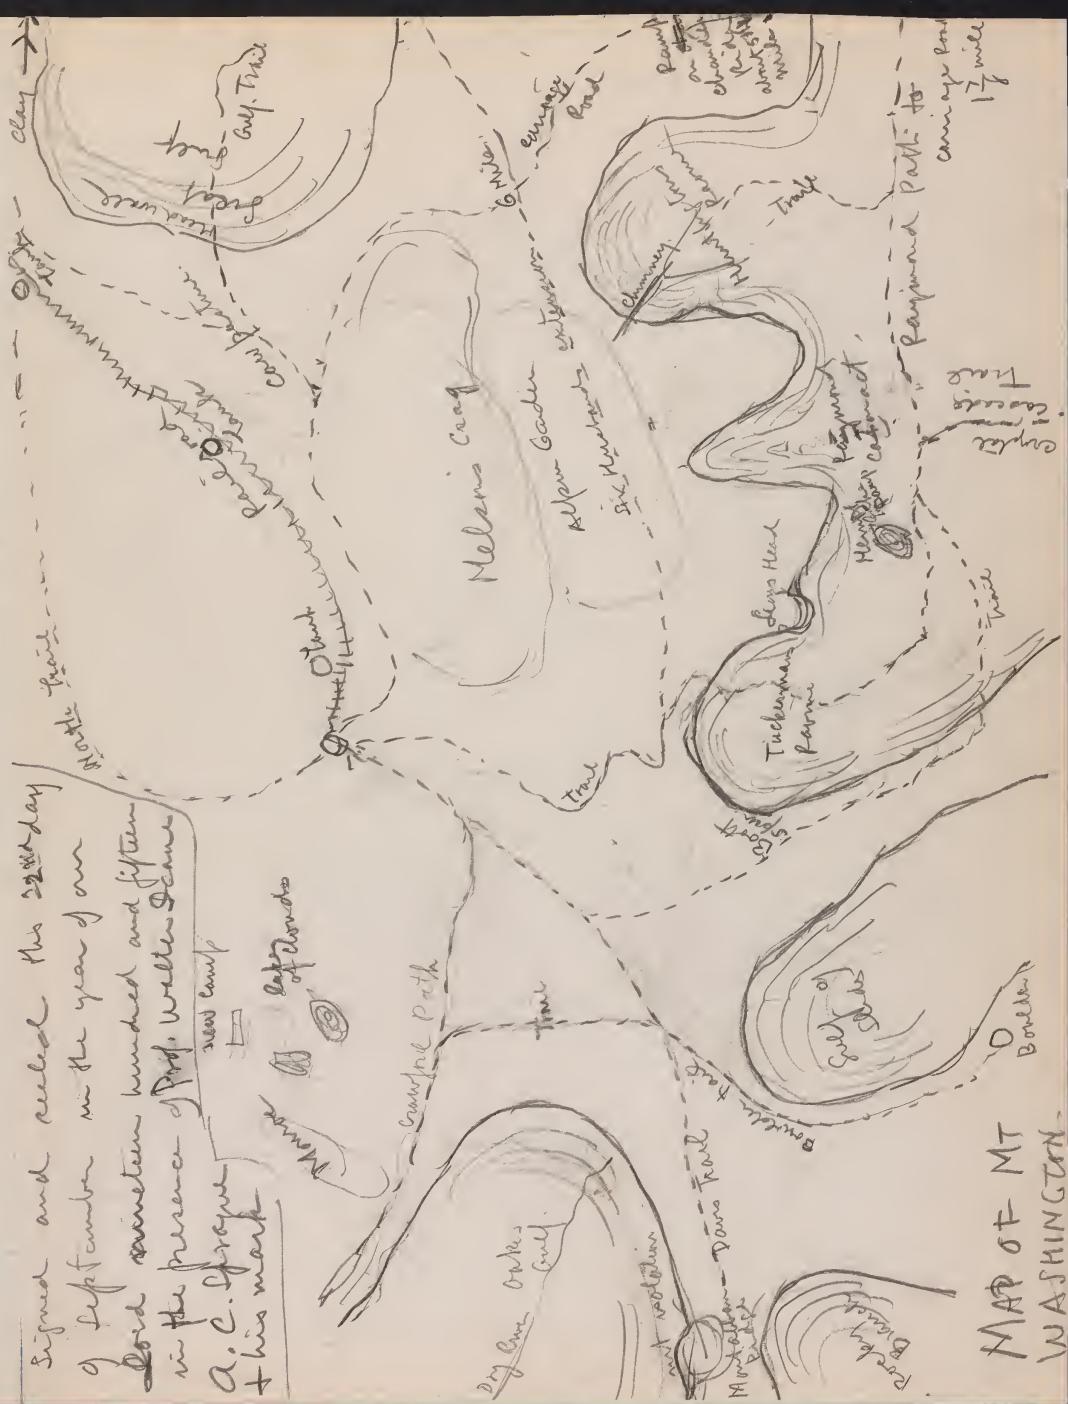

I collected to-day;

Ledum groenlandicum (Leder) *Axville hotel near road*

Vaccinium Vitis-idaea L., var minor (Lodd.) *part of Table Rock,*

Aster puniceus L. *Roadside, a tall branching plant. Dummer*

Signed and sealed this 22nd day
of September in the year of our
Lord nineteen hundred and fifteen
in the presence of Prof. Walter Deane
A.C. Spence
At his mark

Shelburne, N.H.

1915

Sept 24 Cloudy all day, a few rain drops, calm, cool,

This morning was spent over work in my study, journal writing, work on plants, business with J.R. Churchill, Jr.

This afternoon Miss Hammond came up and read a play that she had written to be acted at a small private club ~~for ladies~~.

It was wonderfully written and was one continuous string of bits and jpeasant slang expressions. There were here Miss Fay, Clara, Lois & Miss Sally Howe, Mrs. Sheffield & Mrs. Morse. After the reading we had calls from Miss Chase, Miss Hildreth, Miss Holmes & Miss Stone. This lasted till supper-time.

This evening Miss Sampson called and witnessed my signature to a paper for J.R. Churchill. Later Miss Rous played for us as exquisitely as ever. She is ever ready to play.

This morning early Mr. Sprague went to Berlin by auto & electric and started to walk 9 miles up to Goose Eye, and then up the mountain. He was to return this evening but when we left the main house at 9 o'clock he had not returned. We do not like to have him do this, alone. On ankle may get twisted or some accident occur that would cripple him without a companion. I shall send word tomorrow where he is.

Stellburne, N.H.

1915

Sept. 25

Cloudy, calm, chilly -

This morning we were glad to see Mr. Sprague safe & sound. He walked from Berlin to aid up Goose Eye and back to Berlin and from Berlin home, in all 29 miles!! Good time. He came up here this morning and later he & I went over the Knobble where I collected a few fruiting plants.

This afternoon I talked with Mr. Sprague a while and by 3:30 I bade him good-bye. He went to Boston and we waved him off, as the train passed -

At 4 P.M., we had an afternoon tea. Present,
Prof. & Mrs. George Chase, New York City

Miss Jessie	"	"	"	"
Mrs. Charles Rous	,	Baltimore, Md.		
Mrs. Marion Charles	"	"	"	wonderful pianist
Mrs. Elizabeth Smith	,	Lexington, Mass.		
" Terbude	"	"	"	"
Mrs Hildreth	{	was unable to come:		
Mrs Walter	{			

We had a very bright time. I showed them my work on my plants, insects, etc.

This evening I was at the Farm for a while. Then I came up here & laid out my plants.

I collected this A.M. on the Knobble in shady light woods the following in fruit:
Maianthemum canadense Desf.

Habenaria Hookeri Torr. Fruit green, turnip; seeds ripe.
Actaea alba (L.) Willd. Jr. Sent to Natl. Hd., Wash.

Pyrola secunda L.

" *americana* Sweet
Viburnum acerifolium L.

Shelburne, N.H.

1915

Sept 26 Morning cloudy, afternoon rain began about 3 o'clock after a breaking of the clouds and an apparent clearing up, the wind west and the sun pouring through the drifting cloud. Soon it clouded over heavily, the wind increased to a gale and the rain came dashing down. Fierce wind continued into the night. Rain slackened.

This morning I wrote letters and did some work on my marble paper. This work I continued through much of the afternoon. Then I read a novel for a wonder 'The Poison Belt' by Conan Doyle a very clever bit of work. I finished it this evening.

The fierce gale this afternoon & evening kept us in the house and we did not go down to supper, but had a simple repast here. Later in the evening George came up and brought some supper from the Farm. At present writing, 9 P.M., the wind is very strong, howling round the house in a terrific, really frightful manner. The rain dashes against against the window panes, the gale seems capable of blowing anything over. I wish it would stop.

To-day I went over my plants still in press and removed a number. I have not much in press now -

Got auto'd to Umbagog to-day and he must have had a hard ride back. I shall bear about it tomorrow ~

Shelburne, N.H.

1915

Sept. 27

Fierce gale through the night, and with diminishing intensity through the day. Sun at times. Some rain quieted in evening, but wind strong at 9 P.M.

Last night the wind increased and we sat facing up till 12:30 to 1:00 before returning. The trees were lashing in a terrific manner and the brilliant moon & Jupiter shone above and made the night clear as the day. The clouds drove over them with great rapidity, covering and uncovering every moment. We watched the scene from our various windows. The birds were lashing themselves and bending almost horizontally and the big cloud seemed unable to bear the strain. They held out however. We did not venture down to supper, and Lulu Groce appeared with a basket of food. My telescope stand was blown over for the first time. It stopped on the brow of the hill slope.

This morning we saw the Farnham's tents torn to shreds. The wind was still beating about the canvas. I photographed them to show half what had become of his sleeping quarters. The poles were down and the canvas flopping in strips over the bed. I also photo'd some pines on the slope back of the barn, that had been uprooted. Our goat back safely last evening from Umbagog after many adventures.

To-day has been spent mainly at home, reading along the papers & magazines and working in my room. At the farm we all talked over the gale which was widespread.

This evening we spent till 8:30 at the farm - A big fire of logs glows on the hearth -

Shelburne, N.H.

1915

Sept. 28

Heavy clouds & wind all day, cold.

The wind, while much less than on the afternoon & night of Sunday, the 26th, is very strong and the air is cold.

This morning Gus invited Albert Briggs who came recently, Mr. Garrison and me to drive to Gorham with him - he had a good time, and we saw the many broken & uprooted trees that the gale had destroyed - Elms, maples, oaks & pines were met every moment, prostrate, the earth-covered roots, projecting into the air. It was very cold and my carriage and rubber were more too much. Returning Mr. Garrison & I walked 2 miles after our tour. Endicott Rauval met us & took us back & we returned home.

This afternoon the Mrs. Howe, Mr. & Mrs. Garrison, Miss B. & I devastated walked down the road. Endicott Rauval picked up the Garrison by cyclone for a ride - the rest after watching the cutting of corn for the silo at Hamlin Farm, went on to Cathedral Woods which we entered. There we saw devastation. A swath $\frac{100}{100} \text{ ft. } 200$ wide was cut by a cyclone for a length of 300 or more yards, the trees mainly White Pines lying prostrate all in a northeasterly direction. They were from 2 ft. across at the base to less and most were torn up to the roots, some were snapped in two some feet above the ground. A good-sized Norway Pine stood erect in the midst of the desolation.

On our return there came to an informal tea: Mrs. Hussey Dred, the Misses Dwight, the 3 Mrs. Howe, Mr. Shifford, Mr. and Mrs. Hammond, who came later, Mr. & Mrs. Garrison.

Evening at the farm. I collected to-day: *Vitis versicolor* L. fruit, bog Hamlin pasture just off the house; *Gaultheria procumbens* L. Hamlin's woods, near Cathedral Woods.

Stelburne, N.H.

1915
Sept. 29

Cloudy, quite cool, sun breaking out at times
Wind nearly gone done -

This morning & afternoon with friends,
M. & him Brown among them in the afternoon,
I walked over to the scene of the tornado ^{The tornado} in Cathedral woods. We examined the
situation carefully and measured one fallen
White Pine that was $4\frac{1}{2}$ ft. round, 3 ft.
up, and 85 ft. in height. That was the
largest we could find. It was a sad sight
to see so much wood, ~~and~~ product of quite
a flood many years destroyed in a minute.
Lucy Drew, Mr Garrison & I with others quite agreed that
the uprooting of these pines, several hundred in num-
ber, was the work of a minute or less. They
were doubtless lashing for some time as the
marks of violent friction showed, but the actual
uprooting was, we thought doubtless the work
of a sudden swift passage of the gale.

I have had many letters to write to-day
to L. H. Bailey, C. A. Weatherby, J. R. Chamberell
Mrs. E. J. Wolfe in re a book of pressed ferns
that has belonged to her grandfather, she
wants to sell the work. It is at Clark, in
Boston. Dr. Ware has examined it for me &
reported on it. His value is entirely as a sou-
venir of Joseph Jefferson -

Clarissa, Lois & Sally Howe went off this After-
noon to Cambridge. Miss Lucy Drew went too.

I collected today

Zotyglochium tervalatum (Thunb.) Sw., var. *intermedium* D. C. Eaton
~~not the species~~
at the Old Woods -

Shelburne, N.H.

1915

Sept 30 Clear as crystal calm, cold.

The first sight to greet us this morning was the big mountains white with snow. Two autos were filled after breakfast. In the one from Sildead with our former driver now the ^{rest} were Miss Hildreth, Miss ^{was a} Dodge, Miss Kretzer, Miss Chase & I. We drove as far as Glen Ellis Falls. The views were glorious and I took six $\frac{1}{4} \times 5$ pictures 1 from behind bridge, 2 Jefferson in center, 3 to right of 2, 4 to left of 2 5 Tuckerman Ravine, Raymond Cataract, Huntington Ravine, 6 top of mt. At Glen Ellis Falls we found the path leading in a scene of devastation from the fall, huge trees uprooted and lying here & there. It was a wonderful sight. I saw the falls again. We returned home to drive stopping at Storrs to leave my film.

This afternoon I wrote letters and later Miss Hammond came up and read to us the 1st Act of her play Shakespearean style. It is very beautiful and splendidly done. Mrs. Morse called.

This evening I heard Mr. Garrison play on his violin with Miss Smith at the piano. She sang. Well done - Then I took up with house Misses Elizabeth Smith, Miss Hildreth, Mrs. Ross, Miss Doe, Miss Kretzer, the two Misses Dwight and showed them Jupiter and his moons, the nebulae in Cendromeda and Hercules and the double star in the Dipper & Algol.

M. has been at home to-day writing a little cold. It does not seem to increase ~

Shelburne, N.H.

1915
Oct. 1

Sunny and cloudy, air bracing -

We are starting in our last month
I can't realize that June, July, Aug. & Sept.
have gone by and we are on the home stretch.

This morning Mr. Thos. Garrison & I with
Gus auto'd to Gorham on errands. The air
was very bracing and the views as always,
fine. At Shorey's I got a number of post
cards showing the White Mountain trails, peaks,
etc.

This afternoon I spent much of it over
Gus's telescope that Mr. Weston gave him.
It is a good glass, 3 in. diam, and I tested it
on the tripod on Caribou and on Mt. Madison.
I want to try it on Jupiter the next pleasant
evening.

My photographs of yesterday have come and
they are quite satisfactory.

Mrs. Wm. Whitney came this evening for
a visit. I saw her at supper. I don't
quite see why she has come. She is alone,
I introduced her to a number of the people.

Wm. is still housed and she coughs a
little. We trust the cold will not go
down.

This morning at 4:45 I looked out of the south window and in the crystal sky on the meridian was Orion sparkling bright, with Sirius near by, our brightest star. A beautiful sight.

At 7 A.M. I saw from my window a Great Blue Heron with blue heron
fishing in the Creek close to the Knobble - I seen the
bird but three times this season. Sept. 11, 14 & to-day.

Shelburne, N.H.

1915
Oct. 2

Rainy day, calm, chilly -

Today has been a wet one. I have been busy at home with the exception of some at the Farm among the people there. Howard Philbrook has been here most of the day. He came last evening. He is a fine fellow with large responsibilities.

This noon's mail brought me a letter from Charlie Batchelder & a package of grasses to be named. I named them and have the package ready to go back Monday. Charlie is in Cambridge again. Mr. Batchelder now runs a car and lately auto'd to Peterborough and back in a day! What next?

The war news is always absorbing and I read about much today. Bulgaria is evidently on the point of entering the war with Germany in which case she will have Greece & Serbia at her. The Allies have been making gains in the West. May it continue!

Collecting plants is practically over for the season, but I collected today;
Spiraea latifolia Borkh.

" *tomentosa* L.

Dierilla Lonicera Mill.

Fruit, open dry land by our cottage.
Gnaphalium decurrens Griseb.

Fruit, dry, grassy slope of our hill below the Telescope Stand.

I have pressed thus far 1208 sheets.

Shelburne Vt.

1915
Oct. 3

Cloudy, cool, calm, evening brilliant.

This has been progressing all day and we feel that she is getting warmer cold nicely.

This morning I spent some time at the Farm talking by the fire. I wandered over the hill back of the Farm & examined the two big White Pines that were down. The large roots projected in every direction. I am impressed by the shallowness of the roots in the soil. Their hold seems so slight and yet they reach such an old age, or they used to.

This afternoon Miss Brown & I took a walk down the road to the Farm opposite Evans Cottage. We called on Miss Stone & Miss Hilman. Miss Stone was out but we had a pleasant talk with Miss Hilman. I collected a few plants on the walk.

This evening I staid a while at the Farm & heard Miss Smith & Mr. Garrison playing. Mr. Garrison plays very sweetly on his violin. Returning home I found the weather brilliant so I took out Mr. Philbrick's 3-inch terrestrial telescope and tested it on Jupiter. The field is very clear, the moons were more brilliant than in my equatorial, but Jupiter seemed a little smaller. Mr. Philbrick should be congratulated on having this instrument. I have written many letters to day & practically finished my marsh paper. I collected to-day *Lycopodium obscurum* L. (L.) Pers. back of barn. *Bartsia*, back of barn. *Euclea Spathiphyllum* (L.) Hoffm. The side opp. Evans house. *Hediondina pulchridens* (L.) Pers. Evans vegetable garden opposite. *Steironema ciliatum* (L.) Raf. The far opp. Evans house low ground.

1915
Oct. 7

Shelburne, N.H.

Clear, calm, air, warm & frosty.

This has been an ideal day —

In the morning I strolled down to the river with Mr. & Mrs. Garrison. We walked over to the Island and sat on the high bank above the river watching a flock of five Mergansers in the water a little way off. They presently arose and flew over us in a wide circle. A Black Duck flew by also, and, on a log behind the bubble, sat a fine Great Blue Heron. Soon he arose followed by another, and together they flew off down stream, looking very large. It was like a summer day.

This afternoon I was busy at home, when Stone called and later Mr. & Mrs. McEntire & Miss Barrow.

This evening I showed Jupiter's moons to George, who works in the place, — Dean who works in the kitchen and Harry who lives in Island & is here for a couple of days to run his car.

Then I went to the Farms, wrote letters and heard music.

We hear that Mr. George Jefferson's son has been killed in the Dardanelles. It is too terrible for words. This war grows more and more fierce and more & more are involved in it. Now the Balkan States are hanging in the balance —

His cold is about gone. She has been to all meals to-day

Shelburne, N.H.

1915

Oct. 5

Rain, a little wind, mild -

Another disagreeable day. M. felt her head tired this morning and she has kept in,

This morning I wrote letters, and went over my plants in press. The stubborn fruits are gradually yielding. Collecting is practically over now.

This afternoon I read almost most of the time from one of my astronomical books, and from the paper and the Outlook. I cannot feel at present that the outlook for the Allies is very bright. How can Serbia keep from getting crushed between Germany-Austria and Bulgaria who is certainly about to enter the war.

I have good letters from Rand and Batchelder, recounting the events of the Club of Oct. 1.

On October 1 scarcely a single bit of autumnal color was to be seen. Now colors there is a real change and it has come on very suddenly within 2 or 3 days at most. When the sun shines we shall see a decided change.

Shelburne, N.H.

1915
Oct. 6

Heavy clouds all day, calm, mild, the air soft, but no sun.

This morning I worked at home writing letters and going over my plants, I have begun to label Miss Fays set. About noon Miss Brown & I walked through the woods as far as Wiggins Rock. The traces of the wind storm of Sept 26 were only too visible. One White Pine about 2 ft. thick was snapped off some 5 ft. up like a pipe stem and many others were lying about. The leaves on the tops of the deciduous trees are torn in shreds, parts of them still on the tree.

This afternoon I spent some time tattling at the farm and later I read & wrote at my cottage. I had a good letter today from J. R. Churchill on business and on the Club meeting.

Mrs Gertrude Smith sang Limericks this evening, as she often does, much to our amusement.

I collected w-day.
Polyodium vulgare L.

On a shelving rock in the woods at the foot of Wiggins Rock.

Shelburne, N.H.

1915
Oct. 7

Heavy clouds all day very chilly, calm.
The sun will never shine -

This morning we three took a walk through the Scudder pasture and a little way into the wood. We examined more fine fallen trees, they are everywhere, I ascended the Presidential Platform but heavy clouds shrouded the big hills - The cold is coming rapidly, two fine white Birches in the n.w. corner of the pasture are down, their roots mingling with those of a huge prostrate White Pine that had blown down probably 50 years ago. The woods were very silent,

This afternoon Gus, Albert Briggs and I drove to Berlin on various errands. As Gus was busy, we drove on a little & crossed the covered bridge to the east side of the river and went a little ways on where I had not been before. We returned, picked up Gus & returned home doing so errands in Gorham.

In this evening I have been busy enough writing letters which seem my occupation now. The war news is very disquieting - Will Germany get through Serbia? Will Greece remain neutral?

I collected to-day;
Bidea cernua L.

Fruit - Bog, edge of wood, just off n.w. corner of Scudder pasture -

The cows were put into the upper intervals to-day -

Shelburne, N.H.

1915

Oct. 8

Cloudy all day, smart rain early hours before breakfast - Cool, calm.

This morning worked at home and later with Mr. Garrison, went over the Knubble - Fall is indeed at hand. The leaves are turning in all the smaller & larger plants and many have fallen.

This afternoon I read the paper carefully with my map and I realize the fierce drive of the German-Austrian forces in northern Serbia. They have crossed over in the northern part in three places, over the Danube, the Save and the Drina Rivers. They want the control of the railway from Belgrade s.e. into Bulgaria in general along the line of the Morava River. What will hold them back? Greece refuses to move -

We had a tea this afternoon at 4 o'clock. Those present were:

Mrs H. M. Whitney, Mr. & Mrs. F. W. Garrison, the two sisters Dwight, Mrs. Shaffield, Mr. & Mrs. McEntire & Miss Sarah Pope Barrow - Mrs. Endicott, Mrs. Fannie & Mayorie were invited, but couldn't come -

This evening we staid at the Farm and had some delightful music from Miss Gertrude ^{Smith} on piano, & singing and Mr. Garrison on his violin -

I collected to-day:
Habenaria Hookeri Torr.

Knubble, a plant with one ripe fruit, & splitting open.

Shelburne N.H.

1915
Oct. 9

Saturday, with a little sun & wind, calm, cold.

This morning I was very busy with my plants. I am getting ready now to label them. Yesterday I labelled Miss Fays Malone, N.Y., collection. I wrote re. I sent to Miss Mary A. Doe, Riverbank Court, Cambridge, copies of the White mt. photos & note of September 30.

This afternoon I walked with Mr. Thunb. over the intervals to the river and then over to the upper intervals. I visited the potato fields where the potatoes have been dug, and, as I suspected, there were a good number of Titmasks walking and running about and occasionally whirring from one part of the field to another, and uttering soft notes.

This morning I saw a Winter Wren on the fence rail back of Pine Grove and, going down to dinner, I got very close to another bird, perhaps the same Wren, by the bridge over Emerson Creek by Pine Grove. He hopped merrily, low near the ground from branch to branch.

This evening we sat at the Farm, talking and listening to Mr. Garrison & Miss Smith, piano, voice & violin.

The stars & Jupiter are wonderfully clear. J.A. Rose Rebecca Rose writes me that her father arrived Wed. the 6th, returns! Poor mother is at home sick -

I collected today: Weeds by the Philbrick Barn:
Rumex crispus L.

Chenopodium album L., var. *viride* (L.) Moq.
Amaranthus retroflexus L.

Plantago major L.

Shelburne, N.H.

1915

Oct. 10

Clear, with heavy clouds, cold, windy.

This morning after some letter writing which takes up so much time I took a stroll with Miss Brown and Mr. Garrison. The foliage is now changing rapidly and beautifully and it will be at its height ere long. We went to Evans' and then turned in and went along the foot of Crows Nest nearly to the old Wheeler Pasture. Then we returned round Wheeler Pond. We saw many fine birches & oaks down. The gale of Sept. 26 has left its mark everywhere. On the way back we met and had a pleasant talk with Ellery Wheeler who is full of his family history. The cellar in the old Wheeler Pasture is about one hundred years old.

This afternoon more letters and then I took my ease by the open fire and read with much interest "Red-Clover Seed Production.

"Pollination Studies" by a corps of men of the U.S. Dept. Agri. Ind. Agriculture Experiment Sta. & Iowa etc. The result shows the cross-fertilization by Bumblebee or Honeybee is necessary for the production of seeds. Much progress has been written in this subject since 1883.

This evening I read aloud the Harvard Alumni Bulletin and later we looked at Jupiter through the telescope. The satellites this year are often above each other in a way not observed last year.

I collected today fruit of:
Prunus pensylvanica canadensis Desf. Top of Pine Grove in shade.
Desmodium canadense (L.) DC. Side behind Farm house of
 This makes 1234 sheet.

Shelburne, N.H.

1915

Oct. 11

Clear cool, at first cold, breezy, calm.

Mercury last night the lowest 29° F.

This morning for a while the white frost covered everything. I was busy at home writing and reading the paper, &c.

This afternoon I read aloud and worked on my Marsh paper. This evening I have finished it as far as I think I can. I feel that it has a continuity and I am glad to have it finished.

I received to-day samples of a new botanical label for my Shelburne plants from the Mountaineer, Sorham. It is very satisfactory and I have ordered 1500 as I have over 1200 sheets. I want to do what labelling I can before I return.

This evening I have been busy with my Marsh paper. I have had the telescope out. The satellites this year are more out of line than I ever noticed them last season. This evening was. $\rightarrow \Theta$
I do not understand it.

I collected to-day:

Epaphalium decurrens Ives.

Slope of our hill, dry grass land — fruit.

Shelburne N.H.

1915

Oct 72

clear, with light cloud, warm, calm.

This is a remarkable change. Last night the mercury went down to 30° F and yet to-day it has been delightfully warm with a highest temperature of 73° . After some writing, I took a walk with Miss Brown over the Yellow Trail we turned off from the trail and followed the Hamlin wood road to the rocky, hilly pasture to the north, cut over 7 or 8 years ago. I had never been there. It is a desolate hill covered with stumps & huge boulders. We climbed it and had a superb view of Baldcap & Craig and the big mountains. I saw 3 Red-tailed Red-tails Hawks soaring above. One of them alighted on the top of a very tall stump and stood there for several minutes with outstretched wings. As he soared in circles he displayed his brick-red tail to advantage. We followed on to Mill Brook and crossed a logging road that Charles Hibbard is making to draw out balsam wood in the winter. We returned by the Yellow Trail to dinner.

This afternoon we read a good deal in the press and I wrote to Theo. Holm & Chas. E. Taylor in regard to some twigs of evergreens Holm wanted.

This evening Albert & Catharine Briggs came up to the cottage and showed us a series of photographs made by Mrs. Muller & her son, H. B. Muller of their remarkable little bldgs and groups of themselves in poses all done in the woods near Gates Cottage. Most strange & interesting indeed is near the winding up of the Estate business I collected to-day:

Gnaphalium polycephalum Michx. Abundant on the rocky

pasture north of Hamlin's woods near Mill Brook.

Hieracium currantaceum L. In spots, same locality, ^(spreading)

Shelburne, N.H.

1915

Oct. 13 Clear, calm, warm, a perfect day -

It has been an ideal day. This morning Gus drove Miss Brown, Catherine & me down to Wilson's by Hark Hill. It was a great pleasure to drive behind a horse - the foliage was brilliant and the air delicious. From the road by Hark Hill we saw a flock of 15 Black Ducks, 5 of them about half grown, in the river. My glass showed them very clearly. We turned in at Wilson's and drove down over the intervals to the river. The Ducks rose at our close approach and flew off. Skirting the bank on course we found a clump of High-bush Cranberries as Mrs. Wilson had directed and we picked a large basket full. All kindly contributed to one basket, so we have enough for preserves. The heavily laden bushes made a beautiful stand before we picked them. Returning we drove through the woods at the base of Hark Hill as far as Crows Nest and then took the road home round Wheeler Pond -

This afternoon I read aloud on the piazza in the warm sun, the newspaper and a novel. The news is as bad as can be. Serbia is being crushed between the Austro-Germans & Bulgaria! London denies that the Allies' cause is in danger. The Allies have been outwitted in diplomacy.

This evening I spent much of my time with an electric light my Uranograph showing constellations especially Pisces, Aquarius, Capricornus, bulgeular Sajetta, Cignula, etc. etc. I collected today:

Fraxinus canadensis (L.) Carr. fruit. Woods near foot of Crows Nest.

Shelburne, N.H.

1915

Oct 14

Clear morning. clouds gathering in after noon.
Calm, warm - Rain at 10.30 P.M.

This morning I finished reading 'Conjuror's House' by Stewart Edgeworth. It is a real good story and gives a vivid picture of fur northern life in the Hudson Bay Company.

I have been busy & I took a walk up the old trail on Cabot as far as the 2^d brook. I visited the station for the Cypripedium arietinum of last June 12. The slope has a western exposure (see June 12) but close to the hemlock is a white birch - I found a single stalk, scar & yellow, with no sign of fruit. There was only a solitary bract at the top of the stem.

We gathered a few apples in the Back Apple orchard. We returned in time for dinner.

This afternoon I read about on the piazza the paper and "Blue Buckle" an interesting mystery story by W^m H. Osborne.

We staid at the farm some time this evening talking in the sitting room.

I have another letter from J. B. Rose, this time from Mendoza, Argentina, Sept. 3, written 8 days before his letter of Sept. 11 from La Plata rec'd Oct. 8. Strange. He says Mendoza has little rain, some years as 3 mm.!! the grape country of California, wine cheaper than water in the hotels! *Juniperus communis* L., var. *depressa* Pursh.

Fruit, Leighton's pasture near entrance to Yellow tail.

Cypripedium arietinum R. Br. Slope of Cabot. See about June 12.
Lactuca canadensis L.

Dry grassy slope Leighton's Back Apple Orchard, slope of Cabot. A clump of basal leaves close to but not attached to it seem to belong to it.

Shelburne, N.H.

1915

Oct. 15

Cloudy A.M. a little rain, clear & cloudy P.M.
calm, cool.

I spent part of the morning over my
press. I have still 13 sheets drying - 9 took
out the four sheets of High Bush Cranberry, put
in on Aug. 28 & Sept. 11!! The fruit is well
pressed and dry. I was pleased this morning
to get my new labels from Gorham. They
are very satisfactory and I have already
started labelling my plants. I have a long
job, but the more I do here, the better.

This afternoon I read a long on the
piazza the paper & "The Blue Buckle".
The latter is a clever bit of mystery, but
too long.

This evening the heavens were wonderfully
clear. Jupiter and the moon during the first
quarter were resplendent.

Shelburne, N.H.

1915

Oct. 16

Clear, calm, cool.

It has been an ideal autumn day. The leaves are falling, and those on the trees are rich in color in the rays of the sun.

This morning I strolled up to Briggs Rock and this afternoon Miss Brown & I took a walk to the Shelburne bridge and then along the river to the large White Pine with the monument under it. Then we walked over through the bushes to Mill Brook, and followed it up a ways. The Witch Hazel has lost its leaves and is in full flower, always a strange sight. We returned home by the road.

This morning and afternoon I have worked hard labelling my plants. This involves some analysis and it takes time. However, all is now so much gain when I return.

I had a good letter to-day from Mr. Theo. Holm. I can send him some specimens he wants. Helen Faber writes a most interesting letter. The war affects them very, very sadly.

This evening Mr. & Mrs. Garrison and Mrs. Sheffield came up and enjoyed seeing Jupiter, his satellites, and the moon. It is wonderfully clear.

I collected to-day:

Hamamelis virginiana L. Leaf-stem in flower, Mill Brook.
Conioselinum elineurum (L.) B.S.P. a pocket of fruit from same station as 16 Aug. & Sept. 22, 1914

1915
Oct. 17

Shelburne, N.H.

Clear, crisp, sun warm at noon -

A glorious autumn day -

This morning Mrs. Sheffield, Min B. & I walked up Craig taking the usual route by Mill Brook. The cleaving foliage with the brilliant sun reflected on it made a beautiful sight. At the summit, 1420 ft. (about 720 ft. above the valley) we rested and enjoyed the exquisite view. Then we descended by the path to Gates Cottage, a route I had never taken. The views of Mt. Ascutney and Bald Cap are very fine, the descent is much steeper, and somewhat rougher but on the whole more attractive I think than the other. Close to the foot of the trail we passed the remarkable buildings of Mr. Moller his mother. We reached home in time for dinner.

This afternoon we all spent at home. I wrote letters and labelled plants - We return home on Oct. 27 and I want to accomplish what I can before then.

This evening I gave a short talk to four of the men in the place John Dean, Cleve, George & the Frenchman on the heavens and then showed them Jupiter, his satellites, the moon, double star in the dipper. They showed the deepest interest and enthusiasm, having never seen these things before. I was as interested as they were - Before they came I showed Mrs. H.M. Whitney the heavens and she was extremely interested, too. The Frenchman wished the Germans were in the moon!!

Shelburne, N.H.

1915

Oct 18

Cloudy, with sun, cool, calm -

This morning I was busy labelling plants,
I am making headway.

A letter from Clara Howe says that
Mrs. Wheeler will have the Shakespeare Club
on November 2. So I must send off the
notices Wed. A.M.

This afternoon, after some labelling, Miss
Brown & I went over to the Yellow Trail and
I hunted for young plants of Juniperus communis,
var. depressa for T. Holm. We visited both
plants, the one near the beginning of the Yellow Trail
and another one nearer Leighton's Barn, but
there are none. However I took a piece with
roots of an old one for T.H. wants roots - Then
we wandered in Leighton's woods and found many
lovely spots. We came out on the road leading
up to the Bach Orchard. I got a number of small
fir boughs T. Holm who wants the roots for study.

I found, in lifting up a dead rotten branch,
a brown lizard that I shall take to
G. M. Allen -

This evening I got ready the box for T. Holm
and shall send it to-morrow morning. Then
I filled out the Shakespeare notices, and then I read
aloud in "The Blue Buckle" ~

I collected today in Leighton's & body woods.
Lycopodium annotinum L. Leaflets distinctly serrate.

Clavaria h., var. monostachys Grev. & Hook.

Michelia repens L. fruit

Shelburne, N.H.

1915
Oct. 19

Cloudy cool with rain in P.m. & evening.
I leave spent much of to-day labelling
my plants and am making headway.
This afternoon Miss Fanny and Mrs. Williams
wife of the former minister here, and a warm
friend of the Philbrooks, came up at four
and staid an hour, and talked & drank tea.

Part of this afternoon and evening I read
aloud & finished "The Blue Buckle". It is
certainly a very clever piece of mystery,
with of course, many improbable events.
We were all very much interested in it.

I had letters to-day from Martha Rose who
is much better, and C. C. Sprague -

To-day I folded and sent off at last
the Shakespeare Notices, in ample time
for the meeting on November 2 -

Work began to-day on a bathroom for
the third floor on the main house.

Shelburne, N.H.

1915

Oct. 20

Cloudy with a litter rain, fine caust, cool -
I have been busy today labelling
plants and going over my papers, destroying
many and deciding what to take home and
what books to leave here.

This afternoon we had a tea:

Mrs. Henry M. Whittier	Mrs. Radcliffe was invited but could not come. Hill too much.
Mrs. George Sheffield	
Mrs. & Mrs. Frank W. Garrison	

This evening I worked mainly on my
plants -

I collected to-day:
Ampliaripa monica (L.) Ell.

Pods of the upper flowers by Emerson
Brook, Pine Grove along while the plant
is so abundant. I have never been
able to find perfect flowers on the plant
at this place.

Shelburne, N.H.

1915

Oct. 21

Clear balmy, cloudy in afternoon and short smart rain. Evening clear as crystal.

This morning I examined the beautiful memorial that I received yesterday (Oct 21) from Erwin F. Smith in memory of his wife. I wrote him and told him I should write again when we had read it.

I have spent a good part of the day labelling my plants and I must be about half through -

I took a short stroll this A.M. & P.M. to the Scudder Pasture to see, if possible, the fox, but in vain. Gus saw him yesterday.

Mrs Lillian Smith came yesterday with her friend Mrs. Ballard & Child, and their nurse. She staid at the main house some time this evening -

Shelburne, N.H.

1915

Oct. 22 Clear, with gloomy clouds, drifting west, breeze - cool.

This has been another perfect day -

I had a poor night from lack of sleep.
This morning after collecting plants, Mrs. Brown & I walked for nearly 3 hours. We struck in at Evans' and climbed the pasture opposite, a thing I had never done. The views were very fine, and I was much interested in visiting the White Birch on top which I have seen from the road & field so often. It is a steep climb; I took 6 (4×5) views & 9 ($2\frac{1}{2} \times 4\frac{1}{4}$) on the slopes and top of the ridge. We struck the Crows Nest trail and returned home in time for dinner.

This afternoon I have been busy again collecting, pocketing seeds &c and I am surely over half through.

On the road of Crows nest were some beautiful fin. On one that had shed its scales, a White-breasted Nuthatch was flying busily to & fro taking away the scales that were sticking to the shelled cones. I also saw there a Fox Sparrow, while about a dozen Fox Sparrows were flying about near by uttering soft notes.

I collected to-day:

~~Mollugo verticillata L.~~ *Spergula arvensis* L. a sp.
Barn yard. Philbrick Farm. Fruit.

Shelburne, N.Y.

1915

Oct. 23 Cold blustery day, sun & cloud, some snow last night, snow in the air to-day. Last night 31° F.

This morning I went to Gorham with Cleve. Gus went as far as Gates. The leafless trees allow an open view of the mountain sides. Snow was on Leadmine Brook, and at Charles Philbrick's there was much snow on his house and in the adjoining fields. I had my hair cut at Bennett's. We picked up Gus on our return.

I have put my telescope into the box and also Gus's, and shall report to Prof. Willson in regard to it. I have also been getting things into shape for our departure next Wednesday.

This afternoon Miss Lillie Smith, Miss Elizabeth Smith, Miss Monroe & little Lucy Ballard came at 4 P.M. to call and we had a very pleasant time with open fire and lights. I showed them my botanical work.

This evening Miss Lillie Smith sang two, among other songs, Stevens'is Requiem by Homer, which we love so well.

On our return I read some on Erwin F. Smith's Memorial and labelled plants.

Shelburne, N.H.

1915

Oct. 24

Sunny and cloudy, cold, windy - Evans brilliant.

This morning and in fact all my spare time at home I have written letters & cards and I have been putting things into shape for leaving on Wednesday the 27th.

This morning I walked over the intervals to the river and back of the Knobble. Fall has indeed come, and the change is striking. The steep southern slope is plainly visible throughout and I followed along the creek to the Island and noted the flow of the water, and the division between Philbrick's & Evans' Islands. I crossed over at the east end of the Knobble cut and returned to the house for dinner.

This afternoon Luis Brown & I repeated the walk, only we entered the intervals at the western end and followed the line fence to the river. We wanted to see how Lylestair's Black Holstein Cow, an eccentric animal got over into our intervals. We found ways through,

This evening we talked in the sitting room with Ben Simpson about his beloved Scotland. He had much of interest to tell.

This evening the clouds cleared away and the moon just beyond full, and Jupiter shone very splendid in the brilliant, cool, atmosphere, obliterating the stars very largely. Capella & Aldebaran seemed to be alone. At about ten o'clock with the Gemini rose Saturn over the hills. It was my first sight of Saturn this season —

Shelburne, N.H.

1915

Oct. 25

Clear, quite calm, cold, tracing -

This morning we were busy, going over the house, and getting ready for our departure.

This afternoon Gus invited me to drive to Gorham. Mr. & Mrs. Garrison went with us. This is a charming time of the year when the early colors pierce far into the woods, which are so hidden in the summer time. We spent about an hour in Gorham, doing errands of all sorts. I called on Guy Shorey and left a roll of 12 ($2\frac{1}{2} \times 4\frac{1}{4}$) with him. I bade him good bye till another year. I also called on Mrs. Ingalls who printed my labels for me, and had a pleasant chat. On the street I met Mrs. Guy Shorey & her baby, a really beautiful child. I chatted with her -

On our return I walked down by the Island, crossing over at the east of the bubble, and studied out the intricate streams about there. I went to the end of the Island and found the river flowing in between Gus' & Evans Islands and then flowing east round Evans Island. From this point I had a beautiful sunset. Returned home.

This evening my 4x5's came from Shorey and they are very satisfactory. I sat with Gus a long time, talking over his younger days when his father was alive and they drove cattle to the Brighton market. Mr. Garrison & Miss Smith played for us most pleasantly ~

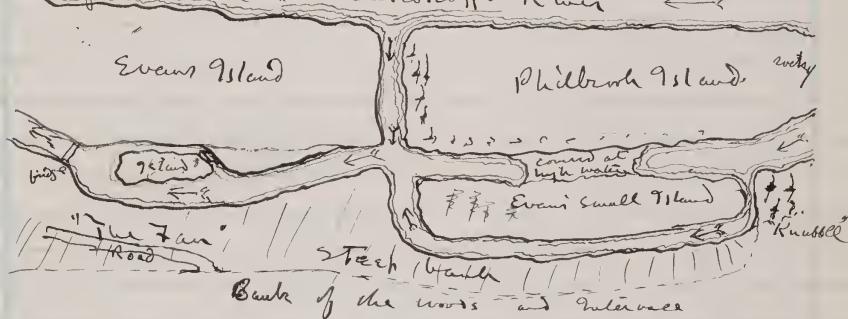

Shelburne, N.H.

1915

Oct. 26

Cloudy, warmer, rain in afternoon.

This morning I investigated the creeks from the east end of the Knubble as far as the "Fan" opposite Evans Island. I made my way along the shore the entire distance *androsaceum River*

I traced out clearly the course of the streams. It is intricate. It is easy to see now that the trees are bare. I returned home and read Ervin G. Smith's 'Memorial'.

This afternoon we were all busy getting ready for tomorrow, when we start for home.

The last things were done this evening.

My plants are all packed and they fill a trunk. There are 1260 sheets, including a few collected by friends or sent me fresh,

Shelburne, N.H. to Cambridge, Mass.

1915

Oct. 27

(1)

Fog early this morn clearin, day clear mild.

We bade all our good friends good-bye this morning, and sped away to Portland by the 8.27 A.M. train. As we passed the Farm we saw the vigorous waving from before the house and the flag was at half-mast. We reached Portland about 12 and were met at the G.T. Sta. by Mrs. Faribault & Catharine. They took us quite over the city, along the Eastern & the Western Promenades with fine views of the island-studded harbor, and through the city proper which lies between the two promenades which are very high, where we saw the older residential portion where the Mayfield School is, and the busier quarter. We saw the house where Longfellow was born, the house where he lived etc., then we drove to Mrs. Faribault's house on Singleton Ave. in the suburbs on high land overlooking the city proper. We saw there John, Edward and Albert, all but Frank who is at the military academy.

The house is a very large one, rectangular in shape, the outer walls of red slate. The center is given up to a large hall, rising two stories, with a balcony round two sides and the back at the second story. Rooms lead off from the hall in the ground floor and balcony. The third floor is devoted to bedrooms. It is very handsome.

Shelburne, N.H. to Cambridge, Mass.

1913

Oct 27

(2)

We had a hearty lunch and then were taken over the house, through all the rooms and on to the balcony where are two sleeping apartments in the open air - As darkness came on, the view over the lighted city was very beautiful.

We had music by the children, and Mrs. Farnham sang at the piano and, also, to the Graphophone.

Later Miss Lowell called from the High School and we had tea and a good talk. Catherine goes to the school and I am glad that she enjoys it.

As we were driving through the city we passed Portland Fire an Observantine Tower in the thickly settled, 1866, portion which I immediately recognized as the one we boys ascended in the summer of 1866, to see the ruins of the Portland Fire of that time. Several fires were going to Shelburne, my first visit, and we took the night boat from Boston and had a wait in Portland for our train. The terrible fire had recently occurred. I recall it very distinctly indeed.

At 5.45 Mrs. Farnham took us with Miss Lowell to the Union Sta. where we took the 6.05 train, and bade our friend good-bye. We reached Boston at 7.20 and our home at 10 P.M. It was a most successful day and we shall always remember it.
