The Vitaphone Reproducing Device

Showing the

Vitaphone Stationary Sound Box

The extreme sensitiveness of the Vitaphone diaphragm, bringing out the full strength and correct tone of such instruments as the harp, piano and piccolo, is due to its fixed position and a non-metallic flexible connection under constant tension pressure. This exclusive Vitaphone sound box construction develops detail hitherto considered impossible to secure from a record and eliminates all disagreeable metallic harshness.

The Vitaphone Wood Arm refining the vibration and the extremely sensitive stationary diaphragm provide a system of reproduction without competition in tonal quality or price.

Vitaphone machines are sold only under a maintained and established price, which is protected by absolutely unassailable basic patents.

Price Ten Cents

CREDIT TO THE CREDIT MAN.

The Important Position Held by Credit Man in Modern Business World.

The credit man has to convince the salesman that, besides being a waste of time, it is foolish to take orders from irresponsible parties and put upon the credit man the burden of declining them. Further, that in being easy with a delinquent customer, the salesman is frequently doing him anything but a favor, and that beyond the immediate ill results to his own house, there is danger of weakening all along the line, and consequently injury to every other grantor of credit.

In these and many other ways the credit man is a great force in elevating business standards, in eliminating bad practices and antiquated customs, and the result of the teaching of the modern credit man will be more apparent as time goes on.

Although he gives credit, like many other teachers, he rarely is given much of the credit for the value of the work he does. The things he doesn't do are often the most important. He must be content to have his reward in the knowledge that in teaching others he is himself learning to be a better business man, doing better work for his company, widening his influence and becoming a more useful man in his community.

PRICE MAINTENANCE UPHELD

By California Supreme Court in Recent Suit Fought Through the Various Courts.

The Supreme Court of California, in deciding the case of D. Ghirardelli Company vs. Jeremiah E. Hunsicker and Fritz Ernest, December 16, upheld the right of a manufacturer to fix the resale price on his unpatented goods by means of a label on the case. The defendants had cut the retail price on ground chocolate of the plaintiff's manufacture, and the Superior Court granted an injunction in May, 1911. The defense contended that since the goods were sold to jobbers and then to retailers, the Ghirardelli Co. parted with title to them and could not force a retailer to maintain the price when he bought the goods from a jobber and not directly from the maker.

In deciding this point the Court said: "If the goods in the hands of the wholesaler or jobber, who had purchased directly from the plaintiff, were subject to the conditions we have specified, including the stipulation that if he sold them at wholesale he would do so subject to the same conditions, the situation presented by the complaint is in all respects substantially the same as if defendants had purchased directly from plaintiff upon the same terms and conditions as the jobber or wholesale purchaser."

SAVING TIME IN REPORTING.

One of many instances of the usefulness of the phonograph in connection with court reporting comes from Seattle, Wash., via the Tacoma Tribune. That newspaper tells how two reporters, W. L. Fenstermacher and James M. Palmer, relieved each other in working shifts of one hour and by the aid of phonographs kept three typewriters busy taking from 150 to 175 pages a day.

The plan of redictating notes is in use all over the country, says the Phonographic World, and anyone taking the trouble to go around to the south side of the Capitol in Washington may see Fred Irland and others of the reporting corps talking into a machine after taking down in shorthand the more or less enlightening remarks of the solons of the nation.

As a matter of information, too, it might be added that no matter how large the output of talk in Congress, and it runs pretty high some days, it appears in the Congressional Record early the following morning. The Congressional record is practically the only daily publication for which the reporting is done in shorthand.

TALKING MACHINE EXPORTS.

The Figures for November Presented—Reports Show Increase for the Month.

(Special to The Talking Machine World.)

Washington, D. C., Jan. 11, 1913.

In the summary of exports and imports of the commerce of the United States for the month of November (the latest period for which it has been compiled), which has just been issued by the Bureau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies are set forth:

The total exports of talking machines, records and supplies for November, 1912, amounted to \$302,714, as compared with \$269,556 for the same month of the previous year. The eleven months' exportation of talking machines, records and supplies amounted to \$2,343,550.

TO HANDLE EDISON LINE ONLY.

Harger & Blish Relinquish Victor Representation in Conformity with Contract and Issue Interesting Announcement to the Trade.

(Special to The Talking Machine World.)

Des Moines, Ia., Jan. 10, 1913.

Harger & Blish, the prominent talking machine jobbers of this city, have just issued the following announcement to their dealers. It speaks for itself:

"We announce our intention to distribute for Iowa and South Dakota Mr. Edison's new disc phonograph.

"Our distributor's contract with the Victor Talking Machine Co. prohibits our jobbing any other line of disc machines and records than Victors. This means, of course, that we must discontinue the Victor line.

"After fourteen years of successful jobbing of their product and the splendid treatment always accorded us by the Victor Co., this was not an easy decision to arrive at, but after careful consideration we deemed it advantageous.

"To our former Victor dealers we extend our heartfelt thanks for their loyal support.

"To our Edison friends we bespeak for ourselves your continued support and patronage, assuring you that our facilities will be increased and bettered. With the new Edison disc added to the wonderfully improved cylinder products we will have a full and complete combination line to offer to our clientele."

NEW HOME FOR ROSS P. CURTICE CO.

Four-Story Building to Be Erected for Use of Lincoln, Neb., House.

The Ross P. Curtice Co., Lincoln, Neb., has secured a site in that city and completed arrangements for the erection of a large four-story building with a frontage of 50 feet and depth of 142 feet for the housing of its growing business. Work on the new structure will begin early in the spring and will be pushed rapidly. A feature of the building will be a spacious recital hall on the third floor, which will be used for talking machine, player-piano and other forms of recitals.

VICTROLAS FOR BATTLESHIPS

Included in Specifications for Two Fighters Now Being Built in this Country for Argentine Republic.

In the specifications for two new battleships now being built in the United States for the Argentine Republic, there are included two Victrolas apiece for each vessel as a part of its regular and official equipment. Such a high tribute to the Victrola is to be greatly appreciated.

In learning salesmanship don't confine yourself to the study of the theory. Get right into the harness and learn from practical experience.

VICTROLAS REPLACE PIANOS

In Sixteen Different School Buildings in Des Moines—Testimony to the Value and Educational Influence of the Talking Machine.

(Special to The Talking Machine World.)

Des Moines, Ia., Jan. 6, 1913.

Commenting upon the growth of the talking machine in the schools and the fact that in many institutions it is replacing the piano, one of the local papers remarked:

"Des Moines school children don't march out to the music of a ratty piano any more. No, indeed; the up-to-date school boy shakes his feet downward to the classic music of a Victrola.

"There are sixteen different school buildings in Des Moines which own their own expensive Victrolas. The machines are purchased by the school children themselves as the result of school entertainments. It is hoped that every school in the city will eventually own its own music maker.

"The buildings which have Victrolas transfer them from room to room. There are special music days when the voices of some of the world's greatest singers in classic numbers are heard.

"Miss Frances Wright, music supervisor for the Des Moines schools, acts as censor of the Victrola records, and only those may be played which have her approval. There are plenty of lively marches but no ragtime."

MRS. BELMONT'S TALKING PICTURES.

Suffragist Leader Is Considering Offer to Make a Six Minutes' Speech.

Mrs. Oliver H. P. Belmont has been asked to give a "Votes for Women" speech for the kinetophone, Thomas A. Edison's new talking and moving picture invention, and she is considering whether it would help the suffrage cause. Mrs. Belmont does not like making speeches, and she is rarely heard outside her own club rooms, 15 East 41st street.

In the new pictures Mrs. Belmont would appear as the president of the Political Equality Association, which she founded, and as one of the leaders of the movement in this country. She has been asked to talk on suffrage for six minutes. Since she joined the fighters for the franchise no other woman has shown greater activity and been more before the public than Mrs. Belmont.

FOURTEEN NEW CATALOGS

Containing Lists of Selections in Twenty-six Foreign Languages Issued by the Victor Co.

Fourteen catalogs of Victor records, listing selections in 26 foreign languages, were sent out early this month by the Victor Talking Machine Co. to its dealers in every part of the country. Accompanying these catalogs was a two-page letter from the advertising department of the Victor Co., calling the attention of the Victor representatives to the unlimited possibilities that exist for the cultivation and development of a profitable trade in foreign records.

Very gratifying progress has been made the past few years in the production of foreign records that will satisfy the tastes and requirements of the vast numbers of foreign-speaking people who reside in our large cities and cosmopolitan trade centers. The demand for foreign records is steadily advancing, and the aggressive dealer is already laying plans for the securing of a profit-sharing share of this trade during 1913.

The recent catalogs sent out by the Victor Co. contain records in the following languages. These records were selected with the utmost care as to their fitness and merit: Arabian, Bohemian, Hungarian, Polish, French, French Canadian, German, Gregorian, Greek, Hawaiian, Hebrew, Yiddish, Italian, Portuguese, Swedish, Danish, Norwegian, Finnish, Spanish, Turkish, Russian, Ruthenian, Slovak, Croatian-Servian and Roumanian.

THOS. A. EDISON'S NEW TALKING PICTURE INVENTION

A Decided Success and Wins the Highest Encomiums from Those Present at the Initial Exhibition Given at the Laboratory in West Orange, N. J., Recently—Represents the Latest Development of Thos. A. Edison's Efforts in the Line of Synchronizing the Motion Picture and the Phonograph—Presentation of an Entire Play or Opera Combining Action, Conversation and Singing Now Possible—Full of Possibilities.

Talking motion pictures are at last a reality. This newest form of amusement is to be offered to New York City in the course of four or five weeks. The inventor, Thomas A. Edison, promised it after a demonstration of his latest invention in the directors' room of the Edison laboratory in West Orange, N. J., on January 3. Arrangements have been made to install the talking motion picture machine in four vaudeville theaters in Manhattan and three in Brooklyn.

After many years of experimentation Mr. Edison has at last perfected a machine synchronizing the motion picture and the phonograph, solving a problem that has engaged the attention and study of investigators in every country where the motion picture is known.

The demonstration at the laboratory was witnessed by several of his associates and employes and the veteran inventor was an interested spectator himself. He occupied a seat on the front row, where he could best catch the strains from some of his favorite selections.

In all seven reels were exhibited. The first picture was that of a lecturer advancing to the front of the stage, bowing to the audience and proceeding in good voice to describe the new invention, which he called the "Kinetophone;" the words having been placed in his mouth, after the fashion of ventriloquists, by the synchronized phonograph behind the curtain. He then made several tests to establish his assertion of perfect synchronism. A piece of chinaware was dashed to the floor with a crash. Horns and whistles were blown, followed by piano, violin and vocal solos. When collie dogs that actually barked were introduced into the picture, the shadowy lecturer, apparently satisfied that his audience was convinced, came forward again and said:

"To what vast purpose it can attain can only be guessed. Consider, for instance, the historic value of a Kinetophone production of George Washington if it were possible to show it now, and you will realize the splendid opportunities of future generations to study the great men of today. The political orator can appeal to thousands while remaining at his own fireside; the world's greatest statesmen, actors, singers can be seen and heard in even the smallest hamlet, not only to-day, but 100 years hence. In fact, there

seems to be no end to the possibilities of this greatest invention of the wizard of sound and sight, Thomas A. Edison."

Mr. Edison, taken by surprise at the complimentary utterances of the picture talker, looked as embarrassed as a schoolboy, and, fearing that there might be further tributes to himself on the unwound reel, straightway demanded of his chief engineer, M. R. Hutchison, that the performance be discontinued.

The next reel showed the miser scene from the "Chimes of Normandie," and in turn the Miserere from "Trovatore," the quarrel between Brutus and Cassius from "Julius Caesar," a comedy sketch entitled "The Politician," and two others, "Her Redemption" and "Dick, the Highwayman."

In light and grand opera, in comedy and serious

Thomas A. Edison.

drama, the movements of the actors and singers were marked by the realism of the present-day stage. Distinct articulation was attained, and this made it all the more obvious that voice and action had been simultaneously recorded. In order to synchronize light and sound waves it was necessary to have a recorder of sufficient delicacy to be affected by the minutest sound waves at a distance of fully 40 feet, so that the recording apparatus would be outside the field of the lens. The phonographic recorder was attached to the picture machine, and it was only left for the actors to perform in the regular way to make a dual record. The record thus made is reproduced in the same

way that all motion pictures are projected, with the addition of the synchronized phonograph that interprets the pictures from behind the curtain. The phonograph can be removed from the picture machine at distances varying up to 300 feet. The talking machine is so constructed that it "sets the pace" for the picture machine, so that the reel cannot overrun the record on the phonograph. The operator of the picture machine, whose booth the law requires to be fireproof and consequently almost soundproof, is provided with a transmitter from the phonograph and a speed indicator, by which he can detect any trouble behind the curtain.

Mr. Edison expressed himself as highly gratified at the results achieved. He was frank to admit, however, that there were still some defects to be overcome, and his critical ear was quick to find fault with the selection from "Trovatore," which, he said, was "still rough" and would have to be "toned down."

"In the next year or two," said Mr. Edison after the completion of the tests of his new contrivance, which seems to have solved the problem of synchronizing the motion picture and phonograph, "it will be no unusual thing to present an entire play or opera, as we now are able to produce a playlet or scene from the big plays.

"The trouble was in getting sound tonal effects, as the recording device is obliged to act in concert with the photographic instrument. This compelled the players to talk at an instrument forty feet away, and it was quite difficult to get their words so that they could be reproduced naturally. We have managed it somehow, so that the amusement public, as well as ourselves, will be the gainer."

"How will this affect the stage?"

"It will give everybody an opportunity to not only see celebrated stage folk but to hear them in their portrayals as they speak their lines. The voices will be easily recognizable, and the larger the theater the better the words can be understood. The Kinetophone is not yet perfected by any means, but you may say that in my opinion the talking moving picture is no longer a theory but a scientific fact."

Mr. Edison then said it was his wish to put the best operas and dramas within the reach of the man of small means, or, as he expressed it, "to make it possible for the poorest families in Squeedunk to see the same operas and plays that are produced in New York City for an admission price of five cents."

THE POWER THAT WINS.

I know of no power more irresistible than the power of enthusiasm, optimism, proper self-confidence. It's the power that wins.

We are busy

with nineteen thirteen business but take this opportunity to thank our dealers who favored us during nineteen twelve, for their support and to extend to them our heartiest wishes for their continued success in the year to come.

During the current year we shall aim to improve our service and by so doing not only hold our regular trade but attract new dealers, familiarize them with our methods and be able to number them among our "regulars" and to favor them over the transients during the time of shortages as we have during the holiday season just passed.

IF YOU ARE NOT BUYING OF US NOW—WRITE.

EASTERN SERVICE IS GOOD SERVICE. BUT ABOVE ALL IT IS JUST.

EASTERN TALKING MACHINE COMPANY

177 TREMONT STREET, BOSTON, MASS.

FOR EIGHTEEN YEARS TALKING MACHINES EXCLUSIVELY

Victor-Victrola

The Victor-Victrola combines all the best qualities of all musical instruments.

It is a leader of music and of all things musical—the vital force of the musical world.

Its unequaled tone and its artistic appearance have put the Victor-Victrola into homes of culture and refinement everywhere.

The commercial triumphs of the Victor-Victrola have been in keeping with its musical successes. It has turned the stores of Victor dealers into the modern and impressive salesrooms they are today, and raised the entire musical industry to a higher and more substantial basis.

And the unprecedented opportunities for prestige and profits keep on growing larger and larger with every new development of this wonderful instrument.

Victor Talking Machine Co., Camden, N. J., U. S. A.

Berliner Gramophone Co., Montreal, Canadian Distributors.

Always use Victor Machines with Victor Records and Victor Needles—the combination. There is no other way to get the unequaled Victor tone.

TESTIMONY AS TO ACTIVITY IN DETROIT.

The Talking Machine World Scout Makes Gratifying Report Regarding Conditions as He Found Them in His Quest for News—Found an Army of Buyers of Talking Machines at Points Visited and a Cleaning Out of Stock That Bodes Well for Continued Activity During the New Year—News of the Month Worth Noting.

(Special to The Talking Machine World.)

Detroit, Mich., Jan. 9, 1913.

Some people are suspicious of the veracity of figures, arguing that they can be made to lie, so probably there will be among those who read the following a few skeptics who will glance aslant at the truthful facts herein recorded. But all scoffers are warned that The Talking Machine World scout in Detroit, having no reason to prevaricate, and having no physical disabilities causing him to see double, guarantees what is herein set forth, for one year, or money refunded.

On his monthly news-seeking tour he dropped into Grinnell Bros., State jobbers for the Victor and Edison companies, and found no less than twenty-eight prospects undergoing the ordeal of deciding just what machine they wanted to buy. And it wasn't the day before Christmas, either, but one week later, with the holiday rush seven days astern.

Manifestly, under those conditions getting an interview was out of the question, so The World scribe, marveling, betook himself to the Victrola shop of the Max Strasburg Co. There, too, every one of the dozen demonstrating rooms was in use. Mr. Strasburg himself waited on two or three patrons at once.

Exit once more, disappointed and wondering where the copy was coming from to fill a column in the January number. Invasion of the Detroit branch of the Columbia Phonograph Co. followed. All rooms in use and all attachés humping themselves. Something had to be "did," so in desperation Manager K. M. Johns was chased into a corner and held there by main strength until he was forced to disgorge a few remarks.

"No, it wasn't anything unusual," he said. That sort of stuff had commenced shortly after the first of December and had waxed steadily greater until in the closing hours of the holidays it had assumed proportions which made to-day's scramble seem considerable of a lull. The evidence was to the effect that almost everyone who had heard a Christmas phonograph had decided to go buy one of his, or her, own. The business had extended beyond the holidays in a way that made December a far bigger month than the same period of 1911, and put the entire year miles ahead of last year.

The talking-machine manufacturers have at last awakened to the importance of the Detroit trade, too, if not to the possibilities, for they kept all stores fairly well supplied, in comparison to last year.

"We couldn't get enough of the \$200 models," said Mr. Johns, "nor enough of three or four of the styles costing less than a hundred, but otherwise we filled our orders pretty promptly. The machines came in large lots, and besides that, we had enough special orders shipped by express to run up a bill of \$80 for that kind of transportation. All styles were in good demand, and we had lots of inquiry for the new \$500 grand, but it didn't arrive in time. All of our downtown Detroit agents had ordered from the picture, without seeing one."

The Farrand Co. is the fortunate possessor of the only Columbia Grand that has yet reached Detroit. It came in December 30 and held a levee in the show-window all day Tuesday. It was displayed in a way to show its gold-mounted arm and gold-plated tools, oil can and other interior fix-

tures, and a crowd was always on hand. Manager E. P. Andrews was so proud of it that he took delight in personal demonstrations for all comers. The owner of a \$200 machine, the best previously to be had, put in a bid for it, and it was as good as sold before it had been on exhibition a day.

A second trip to the Victrola Shop found Mr. Strasburg in position to talk while he worked, having switched from demonstrating to checking up a big shipment of records.

"I could have sold twenty-five machines to-day if we had had them to send out," he said. "As it was, we sent ten to their permanent homes. You see we are pretty well cleaned out. During the holiday trade we lost at least six or seven thousand dollars' worth of business in just that way—we couldn't get the goods to deliver."

"It puts me in a quandary. Here we are with a big store, all fitted up, and the talking-machine business growing at a rate that makes it seem as if we shall have to go after still more space. Yet, we can't get the stock to fill it and make the added expense pay a profit unless we put in a line of pianos to utilize the room. So I haven't decided what I shall do. I think we will wait a while, in hope that the talking-machine manufacturers will take care of us, for it is the best end of the music trade business. The goods move quicker because of the smaller prices and greater variety of styles and of music they furnish, and consequently the profits are turned over faster. But if we can't get the talkers, we will be compelled to put in pianos."

The Strasburg Co. has just hung up one of the finest electric store signs in Detroit. It is placed so that it can be seen from Library avenue, Farmer street, Grand River avenue and Woodward avenue. It is large enough to be read half a mile away. It says: "Victrolas and Grafonolas. Max Strasburg Co."

Lack of stock is not deterring the Detroit dealers from advertising, however. They are all intent on building for the future, rather than for the present alone, and are confident that in time the facilities of the manufacturing plants will be increased so that their trade may be adequately catered to. Then they expect a business that will repay them for the trials of the present.

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

VICTOR RECORD TO HELP COMPOSER.

May Offer Mascagni Means for Learning Tones of Nightingale's Voice.

According to the London Telegraph Mascagni has put nearly all the finishing touches on the opera in which he has collaborated with Gabriel d'Annunzio and the libretto of which is based on Byron's "Parisima." The only thing completed is a section of the music, which is expected to represent the voice of the nightingale. It is said that Mascagni has never heard a nightingale warble and must wait until spring to become familiar with its notes.

"But wait!" says the Evening Post, of New York, "there is a Victor record, the result of a lucky chance, which reproduces the song of the nightingale most charmingly."

It is little comments like these that help.

VICTROLA FEATURE OF COMEDY.

Instrument Acts as One of the Central Figures in a Charming Love Scene in "Years of Discretion."

One of the features of the new Belasco comedy, "Years of Discretion," at the Belasco Theatre, New York, is the use of a handsome Victrola in the second act, the instrument and the record of a love ballad which it plays dividing interest with the actors in a charming love scene in which the Victrola furnishes inspiration and acts as a scene between two couple. It is not often that a talking machine is referred to so directly or plays so prominent a part in a legitimate production as the Victrola at the Belasco.

The Victrola was furnished by the Silas E. Pear-sall Co.

Steam is useful only when properly disciplined. It's the same with energy and enthusiasm.

Ysaye, the greatest violinist of this or any other age, has just made his first records. An announcement significant to Columbia dealers.

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

SUGGESTS RECORDS OF PIPE ORGAN MUSIC.

An Interesting Letter Which May Appeal to Laboratory Heads Regarding Neglected Records of Special Music for Important Events.

A number of valuable suggestions are made in the letter printed below, in which the writer points out the need for more instrumental records which might be used at funeral services either in churches or in the homes, particularly in the smaller cities, where good music is the exception and not the rule.

As far as organ records are concerned it has been difficult hitherto to secure first-class reproductions of pipe organ music, but this, however, is now being obviated, and the time is coming when

organ records will form as great a feature of the catalogs of our manufacturers as the piano now does. Until such time as the laboratories are equipped with pipe organs an excellent substitute may be had in the Mason & Hamlin Liszt pedal organ, which, by reason of its construction, simulates the pipe organ tone most effectively.

The talking machine is now entering so many fields of artistic usefulness both in the home and in the concert hall that a new future has been unveiled, and a new appreciation evidenced, that

tells of the firm place which this instrument has won in the affections of those who at one time apparently underestimated its value and its importance.

The letter referred to is as follows, and we commend it to the attention of the manufacturers of records:

To the Editor of The Talking Machine World:

Apropos the interesting item in your current issue touching the Victrola music at the funeral service of a prominent citizen of Zanesville, O., November 29, permit me to say I was present on that occasion and found it the most impressive and appropriate music, both in selection and rendition, I had ever heard at a funeral; and that was the common verdict of all who heard it.

The only wonder is that such music has not already come into general use, as it surely must in the near future. For the records afford or can furnish vocal selections by the best of choirs, quartets and soloists and instrumental records by the best of bands and orchestras—resources to be had, except by this means, only in the largest cities, and there only at considerable expense and inconvenience.

There is now no lack of hymns and other vocal records suitable to such occasions. But desirable and needful additions might well be made to the instrumental records. At present (I am writing of disc records) there are but two funeral marches recorded in this country—Chopin's Marche Funebre and Handel's Dead March in Saul, the latter but a recent record. The Victor and the Columbia have band records of each, but one of the records of the Dead March is unsatisfactory, being a ten-inch, and hence too brief and played altogether too fast to be appropriately solemn and impressive.

I have band records of three others, but they are foreign—Wagner's from Götterdämmerung (12-inch double face); Beethoven's, from the Heroic Symphony, and Guilman's Marche Funebre. Others by Beethoven, Mendelssohn and Schubert, to say nothing of lesser lights, afford a fertile field for selection. Good instrumental records might also be made of familiar hymns commonly sung at funerals.

Not the least impressive or appropriate of instrumental music would be good organ records. But, strange to say, no American organ disc records have yet been made—apart from a few accompaniments. That this grand instrument can be successfully recorded is shown by a number of foreign records, including Chopin's Funeral March and the Dead March in Saul.

As your columns have shown, this marvelous machine music has already been used with marked interest and appreciation on a number of funeral occasions, and its use is destined steadily to grow until it becomes universal. It is up to the companies to encourage and meet the demand by providing all desirable records in number and variety; and dealers would find it to their interest to keep on hand a supply of such records to meet the wants of those not having machines and records of their own.

VICTROLIST.

New York, December 18.

A NEW PICTURE OF SOUSA.

Great Bandmaster Snapped While Listening to Records of His Band During Stay in Springfield, Ohio—Well Pleased with Them.

A particularly interesting picture of John Philip Sousa, the famous bandmaster, was snapped recently in the store of H. H. McFarland, a Victor dealer in Springfield, O.

Upon the appearance of Sousa and his band in

newspaper reporters and photographers at the proper moment. Mr. Sousa was photographed while listening to one of the selections by his own hand.

Mr. Sousa apparently appreciated the advertising value of the incident to the Victor dealer and aided in every way possible to make it a success.

GOES HUNTING DE LUXE.

A Victrola talking machine put in a rather unusual two weeks in the north woods of Michigan last month. When C. A. Grinnell and A. A. Grinnell, of Grinnell Bros., Detroit, Mich., went to the Upper Peninsula on their annual deer-slaying expedition, they stopped at one of the Grinnell branch stores and corraled the aforesaid Victrola and took it to the hunting lodge, together with a cargo of the most modern and modish records.

There were seven hunters in the Grinnell party, but the usual dull routine of evening camp life did not bore them. They did not have to invent hunting yarns in an attempt to entertain each other

or to listen to the same. The Victrola made the evenings as entertaining as a Broadway playhouse. There was a greater variety and no dull spots.

The best place to buy is where you are sure of prompt and careful attention.

Sousa Listening to His Own Music on the Victor

that city some time ago Mr. McFarland arranged a special window display of Sousa records, which attracted much attention. One of his employees met Mr. Sousa at the hotel and requested that he drop into the store for purposes of inspection. Good press agent work resulted in the presence of

EDISON Blue Amberol Records

Mr. Edison's latest invention

—will make your sales far and away the best sales in your experience, because they make the Edison Phonograph far and away the best sound-reproducing instrument that can be had.

For the first time you can tell your patrons that you are offering a record which no amount of careless handling can injure, and yet has a clear tone of wonderful purity, an increased volume and a more lifelike quality of reproduction than any record they ever heard.

More than this, they can be assured that when they buy a Blue Amberol record, it will always be theirs as vividly as at first, for the Blue Amberol never wears out.

Three lists are now ready. Are you letting your jobber keep you up-to-date with them as fast as they appear?

THOMAS A. EDISON, Inc., 59 Lakeside Ave., Orange, N. J.

EDISON Amberola III.

**makes a hit with
the pocketbook**

This is the model that will doubtless be within the reach of the many people who have listened to the more expensive models in your store.

You know how many times you could have put over a sale if the customer had just been a little richer. He didn't need to be convinced of the charm of an Edison—all he lacked was the wherewithal.

He's the man who will be equally fascinated by this handsome hornless Phonograph at a very reasonable price. The mechanism is precisely the same as the already famous "Opera" model—probably the one that made such a hit with your customer. The new model is finished in mahogany (piano or dull) and gold or weathered oak.

It's Amberola excellence less Amberola cost.

NEW YORK, JANUARY 15, 1913.

THE business craft has been launched for the new year, and sails are now set for an eventful voyage during 1913. Whether it arrives at the port of success depends entirely on the soundness of the craft and the ability of the men to run it.

One thing is sure, the year just opened can be made one of good, sound business profit by talking machine men who look at the situation as it is, who do not fool themselves as to conditions, and who go ahead resolutely and courageously developing a business campaign on advanced lines.

Basing opinions on reports which come from eminent authorities in the financial and commercial worlds, the conditions for 1913 point unerringly to a era of prosperity.

At no period in its history has the talking machine and its position as a musical and educational factor been so greatly appreciated or understood as to-day.

This is due, first and foremost, to the perfection attained by the manufacturers in the production of machines and records, and to the exploitation which they are receiving in national periodicals.

This great educational campaign is now being better supported and supplemented by the right kind of work on the part of the retail selling forces.

This means much for the future of the business.

In the past too many of the men selling talking machines did not fully appreciate the remarkable merits of the product which they were offering to the public, nor did they seem to understand the importance of doing their share in bringing them before their local clientele by means of vigorous publicity.

There has been a tremendous awakening, and talking machine men now generally comprehend the importance of well-established and equipped warerooms or attractive windows, and the value of recitals and other publicity to interest the public in their product.

Talking machine merchants and salesmen are displaying a keener interest and more enthusiasm in their work. To such people the talking machine business opens up opportunities which are bound to pay a goodly return in increased business and profits.

The steadily increasing demand for talking machines of the better grade indicates that the product is steadily increasing its army of friends among those who are best able to judge of its artistic values. To-day the talking machine has reached a point where it supplies the demand of discriminating people for a perfect entertainer and instructor, and judging from the con-

tinued labors of inventors there will be no let up in its development.

ONE of the most gratifying developments in the talking machine field during the past year has been the increased appreciation and understanding of the talking machine as a musical factor in the community.

This feeling is not confined to any one section of the country. Travel where you will, you will find that old-time prejudices against the talking machine have disappeared. This is true particularly among teachers and others in the musical world, who sneered at the talking machine and calculated that it would "debase" musical art.

These people have been converted from their heresies, and to-day they are paying tribute to the talking machine by using it, not only in their homes but in their studios, as a means of enlightening pupils how certain noted artists interpret famous operatic roles.

This is a tribute not only to the reproductive perfection of the talking machine, but to the perfection of the record. And properly, for in this department of manufacture wonders have been accomplished along the lines of artistic completeness.

Plato, in his "Republic," declares that among the factors which make for the development of an ideal state "musical training is a more potent instrument than any other." And the reason assigned is this: "Because rhythm and harmony find their way into the secret places of the soul, imparting grace, and making the soul graceful of him who is rightly educated, or ungraceful of him who is ill-educated."

If, therefore, "sweetness and light" are the distinguishing characteristics of the noblest manhood and womanhood, and music makes for these traits, then any man who contributes to the spread of musical taste is a public benefactor, whether it is done in the name of philanthropy or primarily as a matter of business.

Indeed, the talking machine manufacturers and merchants who are distributing their products are to-day doing service of the highest possible order in stimulating musical taste and appreciation in America. Through the aid of the "talker" the greatest artists of the world have been brought into the homes of the people and have been made acquainted with the works of the masters, and in this way their tastes have been elevated and a new vista opened up to them in a musical way.

A PUBLIC acknowledgment of the value of the talking machine as an educational factor came within the hearing of the writer during a recent visit at the Wadleigh High School in New York, to hear a lecture on "Music in the Home." The lecturer, in speaking of the various factors that are influencing musical taste to-day, spoke in flattering terms of the talking machine.

He considered it one of the greatest influences for good, and gave it as his belief that the continued hearing of good songs by means of the talking machine could not but engender a liking for a better class of music, and especially among the young people would it stimulate a love for music which could not be attained in any other way.

This spontaneous tribute to the talking machine was not influenced by any monetary consideration, but rather a statement of fact based upon observation.

In this busy country of ours work and business of all kinds are conducted under a great strain. There is little time, as in the old world, for contemplation or concentration. When many people return to their homes in the evening they are either mentally or physically tired, and just in a receptive mood to listen to and enjoy a good song or instrumental number played on the talking machine.

This may be considered merely entertainment. It is more. It conveys a knowledge to the hearer of a special song or a certain class of music, which in time he is bound to like, and in this way his tastes are sharpened and his love for music broadened and accentuated.

The merchant will do well to get this viewpoint—that the talking machine to-day is far different from the toy of years ago, that it is now a musical instrument of tremendous scope, one that

has earned the right to recognition, no matter where it is sold. It should arouse his enthusiasm, and he should sympathize in a practical way with the efforts made by the manufacturers to acquaint the public with its possibilities whether in the school, in the church, in the studio, or in the home.

A READER of The Talking Machine World asks the following question: "Will you be good enough to give me your opinion regarding the use of proxies at conventions?"

Certainly we will, but our friend did not state specifically what kind of conventions he had in mind, and that is a very important matter to settle before answering the question.

If he means trade conventions we would say that such action must be governed entirely by the by-laws under which the organization works.

There is no opinion to express in a matter of this kind.

If the by-laws distinctly say that proxies should be used, then their use is in perfect form and there is no violation of rules whatsoever in securing them by members of the association.

If our reader means his question to apply to the Talking Machine Jobbers' Association, we would say that we are inclined to believe that the gentlemen connected with that organization are perfectly capable of managing its affairs without any special suggestions from us.

And right here we may say that a meeting of the Talking Machine Jobbers' Association is to be held in this city on January 14 and 15, the day when this paper appears, discussing many matters which may properly come before the meeting.

It is understood that one of the leading subjects which will be up for discussion will be amending the by-laws so that the use of proxies for the election of officers at the annual meeting may be rescinded.

Should the by-laws be changed to harmonize with this suggestion, it is proposed to retain the proxy privileges to apply to all other purposes.

After the Atlantic City Convention last year the use of proxies for the annual election of officers was discussed and a good many opinions were expressed which did not favor their use—in fact, some members did not hesitate to condemn the custom in the strongest terms.

As a matter of fact, we believe that when proxies are given by members of such an association they should be accompanied by an explicit statement that the party has a preference for a particular nominee for stated offices.

In no other way, in our opinion, can the giving of proxies work out satisfactorily and avoid the creation of ill feeling.

We might go a step further and say that it is hardly fair to the men who devote time and money to attend conventions to have their proxies nullified to a large extent by having proxies given by men who do not care enough about the Association to make any outlay to support it.

Really, the men who are engaged in the building up of the Association are the ones best qualified to judge as to its proper management and as to what rules should safeguard its future.

We do not know what action the meeting in New York may take at this writing, but we repeat that it is a matter entirely up to the members of the Talking Machine Jobbers' Association, or any other association for that matter, to establish rules which shall govern the organization.

If men do not care enough about the Association to participate in its workings, they have no moral right at least to sit back and criticize the actions of men who are devoting serious thought to its advance!

A DECISION of national interest and one which covers a most important issue was that handed down by Judge Hazel in the United States District Court recently in the suit of the American Graphophone Co. against C. A. Pickard, as assignee of the Hill Piano Co., Waterton, N. Y., which some time ago became involved in financial difficulties.

The question under consideration was whether the threatened violation by the assignee of the contract containing restrictions as to the selling price of Columbia goods signed by his assignor constituted contributory infringement. In this respect the court decided in the affirmative, and thus for the time definitely decides a question on its merits which has been of long standing.

The court held that the defendant assignee could not by the assignment to himself for the benefit of creditors secure any greater right to sell the patented articles than had his assignor. Thus the right of the Federal Court to enjoin the assignee appointed by the State Court is confirmed and the right of the assignee to sell at cut prices denied, the court holding that this he had no right to do, and enjoins him from doing.

The circumstances leading to the suit are interesting and as set forth elsewhere in this issue of The World are well worth reading. From the start the American Graphophone Co. was determined to assert its rights in this matter, and its attorneys took such steps that a rehearing was brought about, followed by the decision of Judge Hazel reinstating the original restraining order, which prevents the assignee from selling the goods at public auction.

IN the establishment of credits it is now conceded that business management with its orderly, exact cost accounting and money-saving efficiency system, is a factor of tremendous importance which is considered and weighed by banking interests who recognize its advantages in the development of modern industrial enterprise.

Conditions in the manufacturing field are being watched more and more, for the industry which is capably conducted has a relatively greater borrowing capacity than one which has failed to keep abreast of the times, even though it may have behind it many years of successful operation.

Those lynx-eyed men at the head of our great credit systems, keep a close watch, not only on the young industry, but on the old, in the fear that the latter may be retarding its progress to its own loss, and to the gain of its more progressive competitors. With these changes come corresponding revisions in credits.

Institutions are judged by their actions; in other words, there can be no resting on past achievements in the manufacturing world. Constant advance must be in evidence. Dry rot must be eliminated, and a close watch kept on competitors to the end that a healthy development of business ensues.

Many manufacturers never consider that credits are frequently judged by factory management, but the fact remains that the concern that lives in the past and is not alive to present opportunities is not in a condition to merit the financial support that is so readily given to those men and concerns which are imbued with progressive ideas in the control and advancement of their business.

BOOK TALKING PICTURES.

Edison Invention to Be Installed in 100 Vaudeville Houses.

It was announced Monday by the United Booking Offices that arrangements had been made with Thomas A. Edison whereby his latest invention, the kinetophone, or talking pictures, would be installed in more than 100 vaudeville theatres under its control.

Contracts signed with the American Talking Picture Company, which will distribute the invention, are expected to net more than \$500,000 in royalties within the year. One day last week an exhibition of the kinetophone was held at the Edi-

son laboratories in West Orange, at which the vaudeville men were present. Among them were E. F. Albee, representing B. F. Keith; A. Paul Keith; Martin Beck, head of the Orpheum Circuit; J. J. Murdock, executive manager of the United Booking Offices; F. F. Proctor, Sr., and F. F. Proctor, Jr.; M. Shea of Buffalo and Toronto, Jake Wells of Wells's Southern Circuit, Harvey Watkins of Montreal, Carl Lothrop of Detroit and Rochester, and Mr. Shenberger of Baltimore, and they expressed surprise and pleasure at the perfection of the Kinetophone.

In discussing the matter, Carl H. Wilson, Vice President of Thomas A. Edison, Inc., said that there would not be any contract made whereby any manager could get exclusive use of the inven-

tion. He said that while the selling arrangements had not yet been perfected it was certain that any one who wanted to could buy one of the machines.

WORTH EMULATING.

The success of another man should be something to emulate, not to envy. His success is proof that success is possible and this is all the assurance one needs.

The people you work for don't want to know about what you did yesterday. What they want to know is about what you are doing to-day and what you are going to do to-morrow.

"This is not the place to discuss the actual figures of the margin of profit on Columbia instruments and Columbia Records, but we are prepared to go into the full particulars with any dealer who will put a little of his time against a little of ours. We will agree to make the conversation interesting."

(From "Music Money", a book you ought to have.)

HEADS OF DEPARTMENTS AND FOREMEN ENTERTAINED.

Management of the American Graphophone Co. Entertains Heads of Departments in Connection with the Opening of the Exhibition Room at the Factory in Bridgeport, Conn. Interesting Remarks by C. E. Woods, Manager of the Factory—President Easton and Messrs. Lyle and Dorian Also "Among Those Present"—An Interesting Gathering.

(Special to The Talking Machine World.)

Bridgeport, Conn., Jan. 9, 1913.

An exceedingly enjoyable affair was the supper and smoker given last night in behalf of the management of the American Graphophone Co. to the heads of the departments and their foremen, in connection with the opening of the exhibition room at the local factory of the company. The affair was made more enjoyable by the presence of President Edwin D. Easton, General Manager George W. Lyle and Frank Dorian, head of the dictaphone department. These gentlemen made the journey from New York to hear, as they all said, in the course of their remarks, the words of wisdom which were to be heard from C. E. Woods, who has been the manager of the factory for the past seven months.

Not only these visiting officers of the company, but all of those who have been serving under Mr. Woods, and noting the improvements he has made in every department of the factory in the brief time he has been at the helm, found what he had to say of the most vital interest. It had been generally known by most of those present that Mr. Woods was one of the top liners in the art of modern manufacturing and scientific management, as well as the author of books on technical subjects that are held in high esteem, even among the masters. Therefore, a great deal was expected and it is gratifying to note that no one was disappointed.

It was said of Mr. Lincoln's first inaugural address that he delivered it with an ease and perfect mastery of his subject that indicated that the business of his life had been to deliver inaugural addresses. Mr. Woods' manner, the geniality with which he spoke, his absolute freedom from any attempt at oratory, and the prevalent strain of common sense that characterized all he said, went home to the heart of every man present. There was no jarring note, no accent of criticism in a single sentence.

He pointed the way to the results he desires and expects to achieve, and impressed all who listened with the thought that here is a man who comes to help in solving hard problems and who says frankly that he needs help as much as the helpers need him. It is not to be doubted that no body of men engaged in "making things" ever listened to a more instructive talk on subjects with which they were familiar or to one more charmingly blended with light and shade.

Frank Dorian spoke with grace and pungency about the Dictaphone and was listened to with great pleasure.

General Manager Lyle was very generous in his remarks, crediting the factory with having made great advances, during the past year, over anything that had ever been achieved before, and

predicting for 1913 still further advances. His words were those of encouragement and kindly praise and everybody felt the happier for having heard direct from the general manager.

President Easton was most happy in his remarks. One thing he said, every man present carried away with him under lock and key, and that was that whatever of machinery, of patents, of good will, with all that these imply, any company might have, the most valuable asset that any corporation possesses is its men. He called upon those who had been in the service of the

C. E. Wood.

company twenty years to stand up. There were a handful of these, including Herbert A. Budlong, the assistant manager of the factory; Frank A. Dorian, of New York, and B. C. Root, of this city. He then asked those to stand up who had been in the service fifteen years and more than twenty men arose, and so on until the call for ten-year and five-year classes brought nearly every man present to his feet.

William E. Parker, the assistant general superintendent, who is in the fifteen-year class, made an effective speech relating to the manufacture of graphophones and some of the many difficulties that are encountered in their construction.

Aside from those already mentioned, there were present Raymond L. French, general superintendent of the factory; James I. Brereton, purchasing agent, both of whom are in the fifteen-year class; Charles A. Chadwick, a veteran who is probably in the twenty-year class, for he was associated

with the late Thomas H. Macdonald in East Bridgeport, when the talking machine art was very young; Charles Morrison, one of the fifteen-year men, and Walter P. Phillips, of the same class; Frank L. Capps, Homer Reid, W. S. Tyler, Thomas Stevenscn, M. E. Lyle, Walter E. French, Edward Brurdage and A. A. Steventon, the two last named in the fifteen-year class, as well as E. V. Sloan and A. E. Belcher. Also the following named of vintages ancient and recent, and all of them of vintage rare: W. S. Tyder, F. Horsfall, F. Hinckley, W. S. Kerr, W. P. Case, A. Elwood, R. R. Meade, James Phelan, W. S. Scott, C. W. Ellison, P. G. Verrelle, Fred Emaneger, Daniel Fogarty, J. H. Bentley, W. H. Mueller, Herman Mueller, Charles Horsey, W. H. Crowther, James Mullen, Charles Lomme, James McCaffrey, E. E. Moore, Hugo Windhovel, E. L. Tanner, D. W. Rowell, Frank Kron, Thomas Condon, P. McLaughlin, George H. Symonds, H. J. Kennedy, M. J. Grant, Charles Plumb, P. Brantmeyer, Fred Tordoff, G. B. Rowell, A. Fardee, J. T. Wilson, A. E. Crowther, E. E. Price, J. Scully, A. W. Wadham, L. Morrison, G. W. Spall, J. R. Petrie, E. S. Towne, F. Barrow, A. Burkhard, J. Riley, J. Murphy, G. Langham, F. Bray, J. Cashman, H. Warren, G. Finch, J. Kramer, A. Seaman, T. McGovern, C. Haugh, W. Parsell, G. Bentz, Edward Kermode, James Moloney, Nicholas Cullen, George Hawkins, Patrick McGough and Messrs. Callahan, Dunleavy, Rauscher, Connors and Hopkins.

CARD OF APPRECIATION.

Sent Out by the Blackman Talking Machine Co. to Its Friends in the Trade.

The Blackman Talking Machine Co., 97 Chambers street, New York, is sending out to all its dealers a card of appreciation for their unswerving loyalty during the past year, and expressions of good wishes for the coming year. Accompanying each card is a handsome fob, designed for both artistic appearance and durability with a very pretty figure as a charm, bearing the words "Victor" and "Edison."

It is a general custom for the employes of the Blackman Talking Machine Co. to present Mr. Blackman with a Christmas gift as a token of their appreciation of his treatment during the year. This idea has never met with Mr. Blackman's approval, and he informed his staff last Christmas that he would be obliged to decline any gift in 1912 as being against his principles of doing business.

When the rumors early last month of a gift being selected by his employes reached Mr. Blackman's ears, he immediately wrote a letter to his employes, explaining his position in the matter, assuring them of his appreciation of their good intentions and splendid work during the year, and emphasizing the fact that any Christmas present would be positively declined by him.

It's good advertising and right treatment of a customer that anchors him to the house. It's that kind of a store policy that pays, and pays BIG.

The Right Record

WITH

The Right Surface

Fit Any Phonograph

The demand today is for an indestructible record with a smooth playing surface. A record free from knocks and gratings. A record that will not break or wear.

U. S. Everlasting Records meet these conditions in every particular, and are the only records fulfilling this demand.

The construction of U. S. Everlasting records is indestructible throughout—not partially. Dropping them to the floor does no harm. They will not break in handling. They are true to name—everlasting.

We invite—yes challenge comparison—with any indestructible or semi-indestructible record on the market. Compare the surface of U. S. Everlasting Records with any other so-called indestructible records by playing them side by side. A trial will give you ample evidence—the results convincing as to the supremacy of U. S. Everlasting Records.

The January list of U. S. Everlasting Records will meet with the unqualified approval of the most critical. Your copy is ready for you—also our complete new record catalog. Ask for them today and make the comparison suggested above. It is to your advantage.

THE U. S. PHONOGRAPH COMPANY

ASSOCIATED WITH

THE BISHOP-BABCOCK-BECKER COMPANY

CLEVELAND, OHIO

The announcement of the Columbia "Grand", price \$500, will have a big effect on those people who insist upon getting the *best*—but it is also bound to give a tremendous impetus to the sale of the Columbia "De Luxe" at \$200, from the large and representative class of people who always seek the happy medium.

Tribune Building, New York

EXPECTATIONS OF PACIFIC COAST DEALERS REALIZED

In the Matter of Holiday Business—December as a Matter of Fact Established a New Record in the Number of Machines Sold—Complaints of Shortage Were Universal—Opening of the Emporium Department an Event—Sherman, Clay & Co.'s Big Victor Business—Pacific Phonograph Co. Featuring Edison Goods.

(Special to The Talking Machine World.)

San Francisco, Cal., Jan. 5, 1913.

Holiday business in talking machines was fully up to the expectations of the local distributors and dealers. In many cases December established a record in the number of machines sold. The only cloud in the sky was the general shortage of machines. Jobbers shipped out machines as fast as they were received, but they could hardly supply the demand. Stocks are very low now that the holidays are over and the managers are placing orders quite freely for immediate delivery. They find business keeping up very well since the holidays, especially record business. Columbia dealers were a little disappointed because the new \$500 Grand Grafonola did not reach the Coast in time for the holiday trade, but even so, it is expected to attract considerable attention when it does arrive. Dealers in Edison goods are also holding over orders on account of the shortage of the new disc machines.

Opening of the Emporium Department.

The principal event in the local talking machine trade the past month was the formal opening of the Emporium department, which took place in time to share the holiday rush of business. It opened with a complete line of Columbia machines and records, and opening business proved very gratifying to Manager Morgan. The department is situated on the third floor adjoining the piano display space, and is an attractive show place, although the present arrangement is only temporary. Soon after the first of the year it is to be given considerable more space, which will be utilized for more demonstration rooms and an auditorium, where Saturday afternoon concerts will be held. A few days before the opening of the department the Emporium devoted a full page advertisement in one of the daily papers to an opening announcement, giving in detail the policy of the department, terms, etc. It stated that any machine up to and including \$50 styles could be had for \$2 down and \$5 a month; any machine over \$50, for \$5 down and \$5 a month. The announcement stated further that there would be no discount for cash, no interest charge, and that monthly charge customers would be entitled to these terms. Since the opening of the department Columbia machines and records have been featured quite extensively in one of the large show windows and in various prominent places on the first and second floors of the building in order to call attention to the new department.

J. H. Dorian, representative of the Columbia Phonograph Co., General, stopped over a few days in San Francisco on his way to New York from the Orient, where he has been for the past four years, during which time he has achieved great

success in introducing the talking machine into new territory and stimulating the demand in sections where it had been introduced before his arrival in the field.

The local office of the Columbia Phonograph Company, General, is closing the best fall business it has ever enjoyed, according to Manager Gray. He says for several months they have shipped out machines on orders just as fast as they could get them, and that now stocks are generally low all along the Coast.

A. R. Pommer, manager of the Pacific Phonograph Co., distributors of Edison goods, is very enthusiastic over the new disc machine, and says he is finding no difficulty in getting dealers to recognize its strong points. The supply of records being very limited handicaps demonstrations to a certain extent, but even so, the special room arranged for the reception of visitors interested in the new product is hardly ever silent. The representatives of the company, who covered the Coast territory, giving special demonstrations with the new machine just after its arrival, met with very good success in securing large initial orders among the out-of-town dealers.

J. B. Chandler, special representative of the Edison Company, who makes his headquarters with the Pacific Phonograph Co., in this city, returned a short time ago from a visit to the trade in the Northwest, and reports having placed good substantial orders with jobbers in Portland, Tacoma, Seattle and Spokane for the disc machine.

Manager Bailey, of the local branch of Babson Bros., reports a very good holiday business in Edison goods, considering the fact that the supply of disc machines was so limited. Mail order business in Blue Amberol records during the month of December was very good.

Peter Bacigalupi, Jr., manager of the talking machine department of Peter Bacigalupi & Son, who handle Victor and Edison goods, reports a very good holiday business in both lines. He expects big things with the new Edison machines.

A. G. McCarthy says that Sherman, Clay & Co. had the biggest Christmas business in Victor goods in the history of the organization. They are practically sold out. The day before Christmas they put on four extra delivery wagons for the delivery of talking machines alone. Business is keeping up very well since the holidays also, especially in records, the people with new machines now being much interested in records. Mr. McCarthy says that the branch stores of Sherman, Clay & Co., all along the Coast enjoyed a good talking machine business during December, as well as the local establishment.

Manager Black, of the Wiley B. Allen Co.'s talking machine department, reports a very successful Christmas business, but the same as other deal-

ers, experienced difficulty in filling the demand for certain styles of machines. He noticed a decided falling off in the demand for horn machines. In fact, he says there were very few inquiries for them, and in most of the cases where visitors did ask for them, they changed their minds before placing their orders.

Christmas morning found Kohler & Chase with but very few machines, either Columbia or Victor, on hand, which indicates a splendid holiday business in the department. E. W. Scott is now getting ready to replenish his stocks.

The California Music House, on lower Market Street, owned by R. A. Daniels, is being moved to San Jose, where Mr. Daniels will occupy part of the store of the J. H. Harrell Co., piano dealers, with his stock of small goods, talking machines and sheet music. The two companies have not consolidated, however, as was planned a short time ago.

The Columbia Phonograph force celebrated the close of the year's business by a dinner at the downtown cafe, followed by a theater party.

The entire stock carried by Benj. Curtaz & Son, outside of pianos, has been purchased from the trustees by the Mission Phonograph Co.

TWO NEW SIMPLEX BOOKLETS.

Interesting Information for Both Trade and Public Regarding Simplex Start and Stop Device Offered in New Literature.

The Standard Gramophone Appliance Co., 173 Lafayette street, New York, manufacturers of the Simplex automatic start and stop device, has just issued two interesting pamphlets, entitled "Hints to Dealers and Jobbers," and "You Need This Simplex Automatic Start and Stop Device." The first named booklet is being distributed in large quantities to jobbers and dealers, and shows how to attach the Simplex for demonstration purposes without disfiguring the top of the cabinet, explains how to demonstrate the Simplex with ease and accuracy and is a brief but concise circular on the merits of the device. The second named booklet is along the lines of the "Hints," but is intended for distribution by dealers direct to the consumer. It is a very neatly printed circular, and contains much information of value to prospective purchasers of a start and stop device.

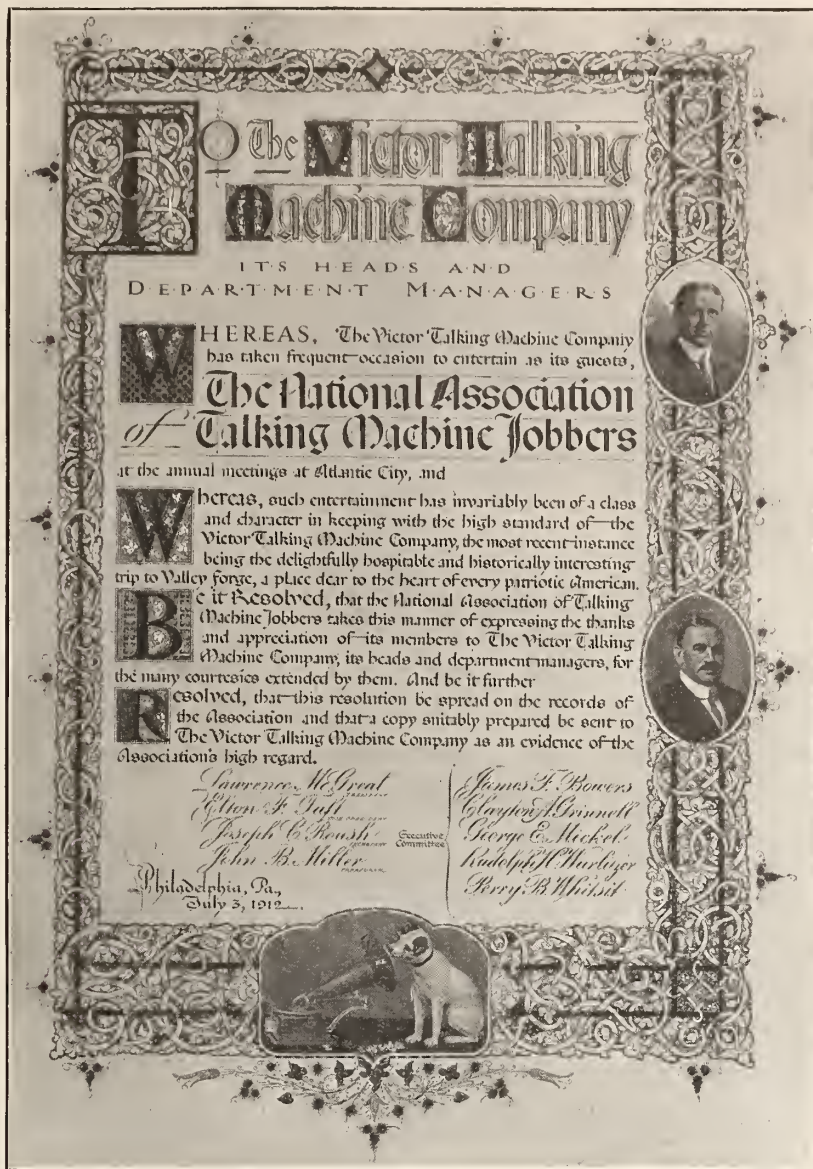

"We are progressing very nicely," stated Thos. W. Kirkman, manager of the company, in a chat with The World. "We are adding new representatives to our lists all the time, and our circulars are bringing excellent returns. We are working on an extensive advertising campaign to feature the device in the daily newspapers in order that our dealers may reap the results of localized publicity. This campaign is well under way, and our agents will also be aided by display cards and various forms of publicity that we are now preparing. The outlook for this year is very promising, and I am very well pleased with the success to date of the Simplex device."

Good will as a business asset is the hardest to get and the easiest to lose, yet without it no business can long prosper.

ILLUMINATED RESOLUTIONS PRESENTED TO VICTOR CO.

The accompanying illustration portrays the set of resolutions presented to the Victor Talking Machine Co. by the retiring officers and executive committee of the National Association of Talking Machine Jobbers. As explained in detail in last month's World, the object of presenting these resolutions was to express the appreciation of the association for the many entertainments furnished it by the Victor Talking Machine Co., and particularly for the one enjoyed by the association's members and guests at Atlantic City last year.

The illustration hardly does justice to the beauty of the original set of resolutions, which are engrossed in gold and colors. The panel portraits of Mr. Johnson and Mr. Geissler are in water colors and enclosed in a beautiful and expensive frame. The presentation

address was made by Jas. F. Bowers at an informal

luncheon held at the Bellevue Stratford Hotel, Philadelphia, on Dec. 7, 1912.

INDIANAPOLIS TRADE GLEANINGS.

Thomas Devine to Feature Dictaphone—Handsome Victor Window—Kipp-Link Co. and the Edison—Victrolas for Christmas Gifts.

(Special to The Talking Machine World.)

Indianapolis, Ind., Jan. 10, 1913.

Thomas Devine, manager of the Indianapolis branch of the Columbia Phonograph Co. since 1905, leaves that position this week to devote all his time to the Dictaphone business, and a new manager will succeed Mr. Devine.

In view of Mr. Devine's experience with the old commercial graphophone in New York, it is predicted that he will handle his new position successfully. Mr. Devine will still have his office in the local store in North Pennsylvania street.

In the past Mr. Devine has handled both the Dictaphone business and the graphophone business, but both have grown to such proportions that it became necessary to separate the work. Mr. Devine is pleased that the opportunity came to him to devote all his time to the Dictaphone.

The talking machine business in Indianapolis in December went above the high water mark. All dealers are one in saying that they cannot account for the large amount of business done in their lines.

The window of the Stewart Talking Machine Co. in North Pennsylvania street has been attracting more than usual attention. W. S. Barringer, manager, has installed a miniature grand opera stage with a number of scenes from the well-known grand and light operas. Victor business with the Stewart store has been the same as everywhere else—not enough machines.

The new Columbia reproducer has made a tremendous hit and the demand for it exceeds the supply at the present time. The window in the Columbia store has been attracting attention. It was designed by C. P. Herdman. With a white background, the full Columbia line in mahogany finish showed up wonderfully well.

At the request of several Indianapolis newspaper men, Hylton Howell, of the local Columbia staff, gave a musical entertainment at the Denison Hotel on the Sunday night preceding Christmas. The Grafonola was used by Mr. Howell and the affair was a pronounced success.

The Kip-Link Co. in Massachusetts avenue is busy taking orders for the new Edison disc machine. Mr. Kip says he will not be able to get enough machines for some time to fill the orders he has taken. This company has the State agency for the Edison machines, and it reports that all who have heard the new Edison are loud in their praises of it.

Miss Lazarus, manager of the talking machine department of Aeolian Hall, did not have enough Victor machines for the holiday trade, and her record trade has exceeded her fondest hopes, she says. One woman bought three Victrolas from Miss Lazarus for Christmas presents.

STRONG PROTEST BY DEALERS.

At Suggestion of Victor Co. Dealers All Over the Country Sent Telegrams and Letters to Congressmen Protesting Against Passing of Oldfield Bill.

Before this issue of the Talking Machine World reaches subscribers hundreds of Victor talking machine dealers and other members of the trade will have dispatched a telegraph night letter to

both their Senator and their Congressman, protesting against the passage of the Oldfield Bill. Spurred on by the manufacturers, who have impressed upon the dealers the disastrous effect the Oldfield Bill would have on their business if it becomes a law, the retailers of talking machines have evinced a strong interest in the fight against the passage of the bill and their telegrams of protest sent, at the suggestion of the Victor Co., must have created a strong impression on those who have received them.

FAMOUS RECORD ALBUMS

SHOWING ALBUM CLOSED

When full of Records the Album will fit in a cabinet or book case.

These Albums are made to match Victor, Edison, Columbia and all other Cabinets.

Containing 17 pockets, made of strong Jute fibre paper, for both single and double faced Records.

Each pocket is hinged on both sides and joined to a heavy back, covered with a rich brown cloth, and has emblematic gilt stamping on the front cover. Also bound in very attractive Imitation Leather.

SHOWING ALBUM OPEN Showing Reference Index

THE "NATIONAL" RECORD ALBUMS are made by the most skillful workman. They possess qualities found in no others, and are sold at very low prices

THE TRADE IN BOSTON AND NEW ENGLAND

JOHN H. WILSON, MANAGER, 324 WASHINGTON STREET, BOSTON, MASS.

(Special to The Talking Machine World.)

Boston, Mass., Jan. 11, 1913.

Boston talking machine dealers are especially interested just now to see what effect the new parcel post will have upon their business, for there is a feeling among some of them that this method of transportation to going to work out advantageously when it comes to sending away records. Several local concerns are experimenting with it and there is an eagerness to get hold of the new zone maps, that a careful study of the proposition may be made before dealers take advantage of the new privilege.

Successful School Work.

The work among the schools undertaken by the Columbia Phonograph Co. has been meeting with wonderful success. Manager Erisman has lately compiled a tabulation in considerable detail of the work done among the Boston public schools, and this is being forwarded to the head offices of the Columbia Co. According to the figures from September 15 up to January 1 there were 217 calls made on the masters of the schools, and only six of that number failed to give the plan proper attention. During this same period 681 teachers and 28,429 pupils have heard the Columbia machines, and there are 37 of them now installed in schools, with a number of good prospects ahead.

To Handle the Edison Line.

Thomas A. Edison, Inc., has made a selection of four representatives in Boston who will be the dealers for the new disc machines which now are practically on the market. These dealers will be F. H. Thomas Co., of 690 Boylston street; George Lincoln Parker, Colonial building, Linscott Sporting Goods Co., 7 Hanover street, and the C. E. Osgood Co., 744 to 756 Washington street.

45 Per Cent. Increase in Business.

Manager Erisman, of the Columbia Phonograph Co., reports that the 1912 business in this city was 45 per cent. in advance of last year's business. He says that the outlook for the new year is exceedingly bright and rather different from a year ago, when many dealers were found who were not pushing business as they ought. During the year the field was pretty well gone over, so that today nine out of every ten dealers retained are "on the job" in no uncertain way.

Eastern Co.'s Striking Window Display.

One of the most conspicuous windows along Tremont street during the holidays was that of the Eastern Talking Machine Co., which had a large display of dolls dressed by Gaby Deslys, the foreign musical comedy star and dancer, who was playing an engagement at the Shubert Theater at that time. These dolls were subsequently distributed by the little dancer on the stage of the theater to a number of poor children. With the dolls were a number of machines and records, so that no one could look at the window without becoming familiar with the talking machine appurtenances. In the same way the past week the same window has been full of Harry Lauder reminders, that famous Scotch comedian and entertainer also playing an engagement at the Shubert Theater.

Recovering from Accident.

The trade will be glad to learn that Edward Read, of Read & Read, one of the veterans in the talking machine business, is rapidly recovering from the accident which befell him in the subway a few weeks ago. Mr. Read is one of the best-known talking machine men in New England, and was one of the first to sell outfits in this part of the country.

The Champion Carter.

E. J. Wilkinson, the champion carter for talking machines, and familiarly known as the "chief of the papposes," has been about the busiest man in the business the past few weeks. He is known to everyone in the trade, and when it comes to expressing machines no one knows how to handle the outfits quite as does "Old Ed."

Visit from Legal Light.

C. A. L. Massie, the legal adviser of the Columbia Phonograph Co., was a caller in Boston lately. Mr. Massie combined business with pleasure on this visit. He was entertained by Manager Erisman, of the Columbia, while here.

Doing Increased Victor Business.

Ever since the downtown retail warerooms of Chickering & Sons have been opened in Tremont street the Victor business has been surprisingly large, and Manager Urquhart has experienced only one difficulty, and that was getting a sufficient number of machines to supply the demand.

A Visitor from Manchester.

The Boston trade has had the pleasure quite

often lately of welcoming to the city William F. Howes, who is with the Piper & McIntyre Co., of Manchester, N. H., who are Victor and Columbia distributors. Mr. Howes formerly was head of the phonograph department of Houghton & Dutton, in this city.

Geo. L. Parker Exploiting the Edison.

George Lincoln Parker, who has added another room to his Victor department in the Colonial building, has made rather extensive arrangements for demonstrating the new Edison disc machines under the most approved conditions. Mr. Parker has taken a large apartment, almost a small hall, at the top of the Colonial building, where visitors are entertained with this new machine. The daily demonstrations are being largely attended and Mr. Parker's method of publicity is meeting the eye and ear of hundreds of people.

To Lecture on Talking Machines.

W. L. Hubbard, the publicity manager of the Boston Opera Co., who has been giving a course of well-attended and instructive lectures on opera at the parlors of the Columbia Phonograph Co., has a most informing lecture on talking machines which he is preparing to give, and arrangements may be made to present this lecture at the Columbia parlors shortly.

Close Phenomenal Year.

Manager Herbert L. Royer, of the Victor department of the M. Steinert & Sons Co., reports the year 1912 as having been a phenomenal one and 1913 begins with a great number of excellent prospects. Mr. Royer, as soon as he can find the time, will make a tour of some of the principal New England cities by way of stimulating trade. The arrangement of the executive offices on the second floor, which Manager Royer put into effect some time ago, is proving of the utmost value in the dispatch of business.

Guests of E. F. Taft.

Manager E. F. Taft, of the Eastern Talking Machine Co., entertained his mother and father, from Providence, over the Christmas holidays, at his pleasant home in Beacon street, Brookline.

Planning to Take on More Room.

So rapidly is the business growing with the Columbia Co. that Manager Erisman is planning to take on more room at the Tremont street quarters, and at the same time there will be a rearrangement of the apartments, by which Mr. Erisman will have new private offices. The new parlors on the second floor have proved an immense benefit in the demonstration of machines.

Attractive Window Display.

Charles F. Atwood has an attractive Victor display in his Tremont street window, and the most conspicuous feature is the announcement in the center of the window of gems from "The Merry Countess," which is especially opportune, as that musical piece opens to-night at the Shubert Theater, a block away from Mr. Atwood's warerooms. Mr. Atwood sold a large number of Victor outfits during the holidays.

Travels for the Edison Institution.

Through an inadvertence H. R. Skelton, the active, enterprising traveling man for the Edison goods, was last month referred to as of the Pardee-Ellenberger Co., though everyone knows that Mr. Skelton is directly associated with Thomas A. Edison, Inc., by which concern he is recognized as a most valuable man.

Ditson Co.'s Clever Victor Display.

Victor business with the Oliver Ditson Co. is all that could be asked for and the year has begun most promisingly for Manager Winkelman and his able staff. In the show window of the house devoted to the display of musical instruments there has just been installed a clever display by way of advertising the Victor. It is no less than an optical illusion. In the center is a large Victrola of Louis XIV design with the doors open, and through the opening one sees at the rear at an

THE TRADE IN BOSTON AND NEW ENGLAND

JOHN H. WILSON, MANAGER, 324 WASHINGTON STREET, BOSTON, MASS.

angle a Red Seal disc, over which are spread quantities of fiber needles which seemingly are kept in position by nothing at all. On both sides of the Victrola are fancy screen arrangements carrying out the Louis XIV idea, and on these is an elaborate arrangement of floral designs, one panel on one side advertising Caruso records; the similar panel on the other side calling attention to the Melba records. The display is attracting a great deal of attention because of its artistic cleverness.

Orders for Columbia Grands.

Manager Erisman, of the Columbia Co., states that he is in receipt of a number of orders for the new \$500 machines for February delivery. The public who have the money seemingly want the best there is when they select a Columbia outfit. **Boston Opera Artists Make Columbia Records.**

Two of the new artists of the Boston Opera Co. to begin recording for the Columbia are Jeska Schwartz, contralto, and Fely Dereyne, soprano, arrangements for whose appearance at the Columbia laboratory were made through Manager Henry Russell, of the Opera House, and Manager Erisman, of the Columbia.

Tom Murphy with Thomas A. Edison, Inc.

Tom Murphy, who made many friends in Boston when he was in charge of the Boston Opera ticket office when it was located in the warerooms of the Eastern Talking Machine Co., has associated himself with Thomas A. Edison, Inc., as a special agent and will travel in the interests of the new Edison disc machine.

Grafonola Concerts Half Movies.

The Dream Theater, in Winthrop, a few miles out of Boston, has taken advantage of the Columbia machines as aids in its entertainment, and between the moving pictures on the screen the manager gives concerts, mostly of the vocal character, advertising on the outside of the house the artists who are appearing, and even asking the audience often for a choice of singer and giving them what they ask for, too.

Spends Whole Time in School Campaign.

The Eastern Talking Machine Co. has put Edward A. Welch out on the road to give his whole time to the school proposition. Accordingly, he will spend all of his time among the schools for the most part in Greater Boston. Manager A. W. Chamberlain, of the wholesale department of the Eastern Co., has been hustling for fair lately and he has the satisfaction of seeing a notable growth in his department. Speaking of goods purchased through the Eastern warerooms, there is a man over in South Boston, so The World correspondent was told the other day, who is the proud owner of 950 Victor records, practically all of them purchased through the Eastern's salesmen.

Lively Post-Holiday Demand for Victors.

At the Henry F. Miller Victor warerooms one finds all the demonstration rooms occupied these days, many of the callers being persons who have just become interested in the Victor proposition. Manager Francis T. White and his assistants have been unusually busy since the new year came in.

A LIVE COLUMBIA DEALER.

(Special to The Talking Machine World.)
Boston, Mass., Jan. 10, 1913.

One of the particularly live Columbia dealers of this city is R. A. Dinsmore, proprietor of the Roxbury graphophone store, which is now located in attractive new quarters at 1221 Tremont street. Through the medium of original and persistent advertising and live salesmanship Mr. Dinsmore has built up an excellent demand for the instruments and records of the Columbia line.

Some dealers have tried short items in the local news columns and with good results. People come in the store and mention the advertising.

M. SONNENBERG PIANO CO.'S STRIKING WINDOW DISPLAY.

The M. Sonnenberg Piano Co., which controls a number of stores in the leading cities of Connecticut, is justly proud of the cleverly ar-

hibiting this line has been most gratifying. As will be noted, the display is designed along original lines. The talking machines are shown prominently and tastefully. The M. Sonnenberg Piano Co. represents some of the leaders in the piano field, and caters to a high-class clientele that appreciates quality as represented in a piano or talking machine. The celebrated Chickering and the old-established Kranich & Bach lines are extensively advertised by this progressive house.

NO WONDER.

"I've found a new use for those gramophone records you bought last week and which cost such a lot of money," said his wife, according to the San Francisco Chronicle.

"How clever you are," he exclaimed. "What is your latest?"

"In the first place," she began. "I hold a skein of wool over my arm, tie one end of the wool on a reel, place the reel on the gramophone pin and then start the machine. The wool is wound up in no time."

The fond husband gasped in admiration.

"But that is not all," she continued. "To-morrow I shall place a little bath-brick on one end of the records, start the gramophone, and so clean the knives."

He is still gasping.

ranged handsome show window in its store at Bridgeport, Conn., shown in the accompanying illustration. This enterprising house recently closed a contract with the Columbia Phonograph Co. to handle a complete line of Columbia products, and its success to date in selling and ex-

ALL BUSINESS RECORDS BROKEN IN 1912.

At Least as Far as the Sales of Talking Machines and Records Go in Baltimore—The Final Spurt Made in December the Climax to a Most Remarkable Season—Interesting Reports Along Optimistic Lines Made by the Various Dealers in the Monumental City.

(Special to The Talking Machine World.)

Baltimore, Md., Jan. 5, 1913.

December broke all previous monthly records for the sales of talking machines and records in this locality and the year of 1912 broke all yearly records for the same business. The final spurt made by the dealers in December was the climax to one of the most remarkable seasons that any of the men ever engaged in the trade have experienced. The break which led to the making of the two records described above started just after the vacation period last September and kept up unabated right straight through the fall months without any let-up, but increasing steadily each month. The result of the whole business is that at every store the dealers declare that their stock is completely depleted and with the exception of a few of the smaller instruments there is practically nothing in stock and the dealers are awaiting shipments from the factories.

One of the features of the Christmas trade was the remarkably pretty window display at Cohen & Hughes, Victor representatives, which was arranged entirely by Mr. Silverstein, the manager of the Victor department. This display represented a beautiful and up-to-date music room with the mother and father and two children enjoying the charms of music from a Victor Victrola and a player piano. The mother was the operator of the new musical instruments and she placed the records on the Victrola and the music roles in the player-piano, while the father occupied an easy chair smoking a Havana cigar, while the children were romping about the floor in gay delight. The figures used were of genuine wax and it is unnecessary to

say that the crowds about the windows were large each evening.

Mr. Silverstein said that there was more business than could really be attended to because of the lack of supply of machines and the month was the largest the firm has ever had. Mr. Silverstein is preparing for a trip South where he will visit the trade for the firm in the various localities.

Charles F. Stran, who recently entered business for himself under the firm name of the Lyric Music Co., reports that December was an excellent month for the sale of Victor and Columbia machines and records.

Manager Denison of the Columbia Phonograph Co. branch, stated that the business done during December was the largest of any month which the firm has done since the branch was started 22 years ago, while 1912 carried off the honors of being the banner year for the trade.

"A 75 per cent. increase over the business done any previous year is what our records for 1912 show," is the way Manager W. C. Roberts, of E. F. Droop & Sons Co., explains the condition of trade as far as his firm is concerned. This firm handles the Victor line and the only kick Mr. Roberts has is that he cannot keep a sufficient supply on hand to satisfy all customers. Mr. Roberts is preparing to make a trip to the Victor factory within the next week or so.

Manager Thomas Gordon, of the Gordon Talking Machine Co., Columbia and Victor representatives, announced that December was the best month ever so far as his firm is concerned. He and his able assistant, Josie Fink, were on the go night and day looking after the rush of customers.

Sanders & Stayman enjoyed their share of the good business during the month with the Victor and Columbia lines, while they also had a nice trade with records.

William Knabe & Co. did well with the Columbia line, while the Kunkel Piano Co. had a number of good sales to report of Victors. Hammann & Levin likewise had a good run on the Victor machines and records.

WIRE RECORD RACKS

Made Under the Heise System by the Syracuse Wire Works Are Steadily Enlarging Their Sphere of Usefulness.

The Heise system of wire record racks was evolved by the Syracuse Wire Works, Syracuse, N. Y., to aid the talking machine dealer in the maintenance of records. The system occupies but little space and is so arranged that any particular record can be secured instantly. In addition, a minimum of record breakage and damage is reported by those using the Heise system.

There are two types of this system, the wall model and the revolving model, both furnished for either cylinder or disc records. Of course, the large demand is for the disc styles. The prices are very low, costing about \$2 a tier, each tier holding approximately 250 records. Material used in the construction is heavy, strong wire, plated and lacquered, made by skilled workmen, and the finished product represents a record system that is "simply perfect and perfectly simple."

WHAT NON-ADVERTISERS LOSE.

Business men who do not advertise lose: New customers; interest on invested capital in stock unsold; time waiting for customers who do not come; clerk hire for the same periods of waiting; decadence in dust-collecting stock; popular acquaintance, which means return of trade; credit among live business men; loyalty of employes; confidence of customers; opportunity; their business.

EXCELLENT POST-HOLIDAY TRADE IN PHILADELPHIA.

The Volume of Business in December Was Far Beyond Expectations—Depleted Stocks Being Rapidly Replaced—Much Interest Displayed in Edison Disc Plans for Quaker City—Important Pennsylvania Co. Moves—Strawbridge & Clothier Take on the Columbia—More Room for Wanamaker—Few Changes at Opening of Year—News of the Trade.

(Special to The Talking Machine World.)

Philadelphia, Pa., Jan. 10, 1913.

The talking machine business in Philadelphia during the entire month of December was phenomenal. The holiday business was beyond all expectation. Everything was practically cleaned up and deliveries were continued well into Christmas Day. There was a shortage of goods and many sales were lost, but not to the same extent as last year, for the dealers had provided themselves more bounteously. And the most satisfactory feature of the business was the high-class machines which were sold in the majority.

The dealers started the new year with practically nothing in the way of machines to sell, and with a very much depleted record shelf. But owing to the foresight of all the big companies they kept their factories continually at it, and already a number of the stores have been able to get about a normal stock. A still further agreeable feature is the amount of selling that was done between the holidays. Many, it is evident, who had found money in their Christmas stocking, decided to invest it in a talking machine, and the dealers believe that business is going to keep steadily on and they are all optimistic regarding the present year.

No changes have taken place among the Philadelphia talking machine merchants with the dawn of the new year, and neither can I hear of any new dealers entering the business. The factories, in a great measure, have made this prohibitive except to some one with a substantial backing and with capital to purchase and pay for a stock sufficient to start a respectable place. Through the State it is different and a number of new fellows are being continuously started.

Manager Eckhardt, of the Pennsylvania Talking Machine Co., is going right after the dealers with success. The Strawbridge & Clothier department took on the Columbia in the early part of December and they had a phenomenal holiday trade on the Columbia.

The Estey Co.'s talking machine department was wonderfully successful and the proprietors are so delighted with the results they have had in Philadelphia that they will add the Columbia to their piano store in New York. Walter Linton, in charge of the Estey department, says: "We surpassed our most sanguine expectations in our December business. Considering that it is only a new thing with this company, started last June, the heads of the firm are very much gratified with the results. One gratifying feature was that the Columbia had prepared itself to the extent that we were able to get enough machines. The storm before Christmas simply swamped our delivery, so that all day Christmas we were delivering and were kept busy at the 'phone answering inquiries as to when the machines would arrive."

The Wanamaker talking machine department, for at least two weeks prior to Christmas, was congested at all times. It was compelled to make hearing rooms out of its offices and move the management into the main concert room. It expects shortly in the new year to build a number of additional hearing rooms, as the twelve booths it now has is not nearly adequate for its trade. Otherwise there will be no change in this department.

In the talking machine department of C. J. Heppé & Son, Mr. Elwell says they had a banner month and the business they did was greatly in excess of last year. They received more goods this year, but not enough in proportion to the orders. The trouble that we did experience was that the machines did not come in at the time we most needed them, and for that reason we were compelled to turn down a number of sales. They also had a tremendous record business, and Mr. Elwell says that the same report that is made of

the Philadelphia store applies to all the stores in this district who obtain their goods from the Heppé house.

The Edison Co. is preparing to enter this field with its new disc machine very shortly. While no announcement is made as to who will handle it rumor has it that before spring it will be in full running order here and with an establishment thoroughly in keeping with this firm. Just prior to the holidays it had quite an extensive Edison disc machine exhibition in one of the large parlors of the Continental Hotel. This exhibition was visited by a number of the dealers, in spite of the busy period.

Manager Eckhardt, of the Pennsylvania Talking Machine Co., reports that his holiday business was most satisfactory. And what is especially pleasing is that all the dealers in the Columbia in this territory enjoyed with the main house in Philadelphia the holiday prosperity. With them the retail business showed a very substantial increase over last year, and business has been keeping up very nicely since the holidays, with every indication of a bigger business three months after than was enjoyed three months prior to Christmas.

Mr. Eckhardt says: "I believe the people are beginning to appreciate and realize the excellent advantages of the new model Grafonola, and this is shown in the little difficulty we experience in selling these instruments." M. H. Housel, of Sweet & Reid's, Williamsport, Pa., will join the Pennsylvania Talking Machine Co.'s local force this week and will cover eastern Pennsylvania for them, filling the vacancy caused by Mr. Heath joining the Columbia force at New York.

The Pennsylvania Co. has two very important deals now pending and it believes that during 1913 it will be able to show that it is necessary for all talking machine merchants who desire to keep strictly up to date to handle the Columbia. The local business in December was handicapped somewhat in its inability to wait on all the trade for want of room. The Mignonette, \$100, was the most popular seller, but there was also a very heavy trade on the De Luxe and the Regents, which are very popular with the trade in this territory.

Gimbel Bros. report that they had a fine holiday business in talking machines, and the two new rooms that they recently added to the department helped them materially during the rush, but they are badly in need of more space, but don't hope to secure it at least for the present. They made a big gain the past holiday season over last year. The entire holiday selling force will be continued at the Gimbel department on account of the increased business, and it is practically the only department in the store in which there was not someone laid off after the Christmas rush.

Louis Buehn & Bro. in December closed the biggest month they ever had, and Louis Buehn is highly delighted with the success of his house in 1912, not alone in its talking machine business but in the very excellent business they have had in the Edison dictating machine. He says: "The prospects for the new year show every indication of being a better year than last year." They are going after the dictating machine business for everything that is in it in the coming year, and they already have on tapis a number of very big orders. They are going to try to see whether this machine cannot be placed in every important establishment in Philadelphia where it could be used. The firms now using it are highly delighted.

THERE'S LITTLE DIFFERENCE.

Little difference whether you are the man who hires or the man hired. One aim means success for you and for the firm. It is to have a foundation of satisfied customers.

**The Victrola Engineer**

does not worry about stopping and starting his Victrola when it is equipped with a

Simplex Automatic Start and Stop Device

—the one with the exclusive starting feature.

—the stop which adds to the appearance of the Victrola and completes the Victrola equipment.

—the device that can be attached to any Victrola by anyone in a few minutes.

—the stop that people appreciate and buy wherever they see it demonstrated.

Our skilfully prepared newspaper advertising campaign to benefit dealers

is of enormous importance in popularizing the SIMPLEX AUTOMATIC START AND STOP DEVICE in your own town.

Write us for the details of our newspaper campaign and how we make it effective for you.

Ask us how to proceed to interest your customers so that every Victrola you sell may be equipped with the SIMPLEX.

Ask us to demonstrate to your complete satisfaction why the SIMPLEX START AND STOP DEVICE is by far the most practical and useful appliance of its kind.

Be sure you understand clearly those superior points which make the SIMPLEX the one Victrola attachment in its field which leaves absolutely nothing more to be desired.

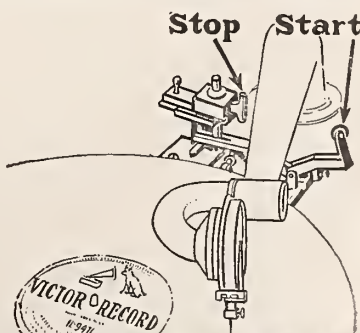

Everybody wants it

There's a virgin field awaiting you, and our proposition will let down the bars to some mighty profitable grazing for you.

How to Increase Your Profits

Why not supplement your stock of Talking Machines and Records by carrying as a "side issue" a profitable quick-selling line of Small Musical Instruments and Supplies? Such a line occupies little space, requires but a small investment, can be handled by your regular sales force and offers a very handsome margin of profit. It is a very desirable adjunct to a Talking Machine store, attracting a class of customers who are likely to develop into purchasers of Talking Machines and Records—the amateur players on Guitar, Mandolin, Banjo, Violin, etc. Suppose, for instance, that a violinist should step into your store to purchase a set of strings and that you should, for his benefit, put on a record by one of the famous concert soloists. Doesn't it stand to reason he would at once see that possession of such an instrument by him would be almost equal to a course of study under that particular artist, and that a realization of that fact would be a strong incentive for him to buy a Talking Machine as well as to become a regular customer for records by players of his favorite instrument?

We are certain that it would be well worth your while to give this matter your immediate and careful consideration and to write us for further information. Our experience of nearly half a century in the music business is at your service in the selection of a stock of goods exactly suited to your requirements. We should like to tell you about our Musical Supply and Show Case Outfits. They cost little and bring quick returns.

Why not write us today and thereby open the way to a very desirable addition to your regular line of business?

Lyon & Healy

Chicago

FROM OUR CHICAGO HEADQUARTERS

ROOM 806, NO. 37 SOUTH WABASH AVENUE, E. P. VAN HARLINGEN, MANAGER.

(Special to The Talking Machine World.)

Chicago, Ill., Jan. 8, 1913.

The only complaint one hears in the Chicago trade, both wholesale and retail, regarding business for 1912 can be characterized as a negative one. It refers to the larger business we could have done had it not been for the shortage of machines. As it was the year as a whole was an excellent one showing a fine increase over the preceding year. December made an excellent showing. Although business really started even in a retail way in November, the first part of December was somewhat disappointing, but a heavy rush started about the 10th and brought the month up to the proportions of a record breaker. The week between Christmas and New Years is reported by many of the retail stores as having been something of a revelation in point of sales.

Jobbers say that since the first of the year types of machines on which there has been a severe shortage have been coming forward and material relief of the situation now seems to be in sight. That both dealers and the public have come to a realization of the situation is found in the fact that although every distributor carried over large numbers of unfilled orders cancellations have been surprisingly few. There has been some revision of orders, of course, but little reduction in total volume. The record business has been something immense, the dealers generally heeding the urgent advice of the jobbers to specialize on record sales and thus offset any deferred or lost business through the machine shortage. The great bulk of machine business has been on the higher priced goods; that is the report all along the line.

General conditions are considered healthy, collections this fall have been satisfactory, and the opinion generally expressed is that 1913 is going to be a bigger year than 1912 with less worry and strain as the year advances because of a more perfect adjustment of supply to demand.

Columbia Makes Exhibit.

The Chicago office of the Columbia Co. has a fine exhibit at the Household Show which opened at the Coliseum on Jan. 3 and closes on the 12th. A fine showing of the various types of Grafonolas is made, Columbia records are exhibited and photographs of the Columbia grand opera artists occupy strategic positions. An attraction that draws crowds to the booth is a guessing contest further conducted by the Industrial Exposition Co., the promoters of the show. It is the traditional jar of

beans proposition, but the prize offered is certainly up to date enough, being a Columbia Princess \$75 Grafonola. The exhibit is in charge of S. M. Field, the retail floor manager of the company's Chicago office.

Damon and Pythias.

Frank Moses, Wisconsin traveler for the Talking Machine Co., underwent an operation for appendicitis at St. Luke's Hospital last Saturday. The offending organ was successfully removed and Mr. Moses expects to be back on the job again in a fortnight. With him during the operation was Elmer Dittmar, his college chum and fraternity brother, who also travels for the Talking Machine Co., with Illinois and Iowa for his territory. A year ago Moses was Dittmar's constant companion when the former underwent a similar experience. Prior to Mr. Moses' seance under the surgeon's knife the twain had spent the holidays happily at Dittmar's home in Clay Center, Kans. Truly a case of "comrades in joy and adversity."

Monthly Sales Energizer.

The Chicago house of the Rudolph Wurlitzer Co., will send to their dealers each month this year a blotter bearing the calendar for the month and a Victor sales argument selected from the Victor advertising literature. "Grand Opera at Home" is the subject of the January blotter talk which is embellished with a pertinent illustration. The recipient is advised "to try it (the argument) on your trade." The idea is just to place one of the strong Victor sales arguments before the dealer each month on the dealer's desk where it will be kept constantly before his eye.

Represent New Line.

The O'Neill-James Co., 337 West Madison street, will act as jobbers for the entire line of the Boston Talking Machine Co., and which will be shortly ready for the market. The machines are equipped with a reproducer with a sapphire needle and play the Phono-Cut (hill and dale) disc record. The O'Neill-James Co. have already on their floor a sample of a Boston hornless machine retailing at \$30 and other and more expensive styles will follow. The initial record bulletin shows a fine list of double-face records retailing at 65 cents. Besides acting as a jobber for the entire line, The O'Neill-James Co., announce that they are the sole distributors for the United States for the Little Wonder talking machine made by the Boston Talking Machine Co. It is a small horn machine of

unique construction with a tone which in volume and quality is entirely out of proportion to the size of the machine itself. It has the sapphire point reproducer and uses the Phono-Cut records. The company are prepared to supply the trade with this machine and have a stock of records on hand.

Columbia Notes.

C. F. Baer, manager of the Chicago office of the Columbia Co., says that both in point of dealers' business and the Chicago retail business December was a record-breaking month. The bulk of the business ran on machines ranging from \$50 up, with an amazing proportion on the highest price machines. An important point in the business of the Chicago office is the number of good new accounts recently established. Two notable deals in the loop were made last month when the P. A. Starck Piano Co., and Rothschilds added the Columbia line. Within the past week or so The Packard Co., Fort Wayne, Ind.; Bell Bros., Muncie, Ind.; Elbell Bros., South Bend, Ind., and the Brown Piano Co., Bloomington, Ill., have all put in the line last named, being exclusive Columbia dealers. E. B. Selbman, 2033 Milwaukee avenue, one of the largest talking machine dealers outside the loop, gave the company the largest order he ever placed with them.

The Chicago office of the Columbia Co. has organized a department for the establishment of Dictaphone agencies in the Chicago territory outside of the city. Desirable agencies have been established recently, Hammond, Fort Wayne, South Bend, Hammond, Oshkosh, Peoria, Cedar Rapids and a number of other important points. The work is in charge of E. F. Baumann, who has had charge of the order department for several years past.

W. A. Everly, E. O. Zerkle and G. L. Cook, travelers for the Columbia Co., all spent the holidays in Chicago.

W. C. Fuhri, District Manager of the Columbia Phonograph Co., is spending the week at headquarters in New York.

The U. S. Line in Canada.

T. J. Bennett, Canadian representative for the United States Phonograph Co., of Cleveland, recently returned from an extended trip to Canada and the Northwest. At Winnipeg he found Whaley, Royce & Co., who were made United States jobbers a year ago, doing an excellent business.

(Continued on page 22.)

The Wade

Fibre
Needle
Cutter No. 1

The Wade

Fibre
Needle
Cutter No. 2

The WADE FIBRE NEEDLE CUTTERS, No. 1 and No. 2, trim the needle at the proper angle, and the needle can be repointed from 12 to 15 times, thus giving as many perfect tunes per needle as any other cutter made. This cutter is provided with a self-acting stop, which prevents cutting away more than enough to make a new point.

The WADE CUTTERS have an upper and lower blade, the upper blade being loosely pivoted and pressed against the lower blade by means of a spring, making a perfect contact. These blades are made from the best Swedish Tool Steel, and are scientifically hardened by electricity, giving the most lasting and finest cutting edge that it is possible to produce, and seldom ever needs sharpening.

The construction of the WADE No. 2 affords the most powerful cut of any tool ever made, and the blades work parallel to each other, therefore it requires practically no exertion whatever to trim the needle.

We fully guarantee this cutter in every respect, and if the blade of this cutter ever gets dull we will give you a new blade upon return of the old one.

LIST PRICES—No. 1, \$1.50; No. 2, \$2.00

Order from your regular Distributor—we sell to Jobbers only

WADE & WADE,

1227 East 46th Street
CHICAGO, ILL.

FROM OUR CHICAGO HEADQUARTERS—(Continued from page 20)

ness on the line throughout the provinces of Manitoba, Alberta and Saskatchewan. The Hudson Bay Co., is doing a large business at its numerous trading posts. At Vancouver he arranged with the Tepporrtten Drug Co., as jobbers for British Columbia. The Vancouver Piano Co., are handling the United States line and the Victor goods and have a beautiful department fitted up for the purpose. At Portland, the Eilers Music House has taken on the line as jobbers, while at Seattle a new distributor was established in the Stewart & Holmes Drug Co.

Has New Manager.

E. P. Rowe has been made manager of The Talking Machine and Music Parlors at 1010 Wilson avenue, succeeding P. A. Tyson, who disappeared a month ago. Mr. Rowe was formerly a member of the sales staff of The Talking Machine Shops, Jackson Boulevard and Wabash avenue.

A Joyful Announcement.

Chicago friends of L. C. Parker, manager of the talking machine department of Gimbel Bros., Milwaukee, have received cards announcing the arrival on January 5 of Miss Fern Parker. The little lady weighed seven and a half pounds at the time of her debut and is said to be the possessor of a fine lyric soprano voice.

Enlarge Departments.

The house of Adam Schaaf, the well-known Chicago piano manufacturer, is enlarging its Victor department on the second floor of its building at West Madison street, and building two additional demonstration booths.

T. P. Flannery, Halstead street and Diversey boulevard, who has handled Victor goods in connection with his drug business, will incorporate a company for the conduct of his talking machine business, which will be provided with separate quarters in the vicinity of his present store.

Developing Record Sales.

In one of its meaty monthly letters to its trade, the Talking Machine Co. recently had this to say on the subject of the proper following up of record sales. It's worth remembering:

"It's the man, who, when he first buys his machine, is sold a well selected list of records—not all Grand Opera, not all comic, nor Collins and Harlan stuff—but a few of the standards, some of the old song—but a few of the comics—a line of which he can't tire—and who in some way is made to buy a few new records each month; that's the man who is the profitable customer.

The question is, how to get that man into your store. A card system showing each customer, the machine he owns, and possibly keeping track of every record he buys, will give you a very good index of his taste, and also the opportunity of guiding him into the correct way of purchasing records.

"See to it that your customer keeps a proper index of records and carries them in convenient form, so that when he wants a certain record he can put his hands on it. You have no idea how this helps you to keep up the customer's interest."

Brieflets.

George M. Nisbett, sales manager for the U-S Phonograph Co., Cleveland, O., paid a visit to the Chicago branch of the company a few days ago.

George Cheattle, traveler for the Talking Machine Co., is spending a week's vacation in New Orleans.

Both Lyon & Healy and the Rudolph Wurlitzer Co. have discontinued as jobbers of the Edison phonograph line and will devote themselves to the Victor line exclusively.

Babson Bros. bought the Edison stock of Wurlitzer in Cincinnati and Chicago and the Edison record stock of Lyon & Healy.

Phonograph Co. Opening.

No definite statement can be made as to the exact date when The Phonograph Co. will open in its new quarters at 227 Wabash avenue, in this city, which is being remodeled, but this will occur as soon as a complete stock of Edison disc phonographs can be secured, it is stated. The company will handle Edison disc and cylinder goods, both wholesale and retail. It is understood that one

of the best-known talking machine men in the country, with a wide knowledge of and acquaintance in the Western trade will have charge as manager.

The Phonograph Co. will occupy the first floor as machine demonstration and general reception rooms. A series of attractive booths are now being constructed. The record sales department will be on the second floor. In all probability the third floor will be devoted to wholesale stock. The fourth floor of the building has been leased to E. C. Barnes & Bros., the Edison dictation machine dealers, who will move in about February 1. They will have more than double the space now occupied in the First National Bank building.

Take on the Victor Line.

The Bissell-Weisert Piano Co. has just closed a lease for a series of seven rooms adjoining its warehouses in the Fine Arts building and extending along a passageway connecting with the main warehouses. The rooms are beautifully decorated, having been used formerly by W. K. Cowan as showrooms for art furniture, and will need little rearranging to adapt them to the company's purposes. They will be used for additional pianos and for Victor talking machines, which this house handles exclusively. O. C. Searles, who has been manager of the talking machine department of the Aeolian Co.'s Chicago branch, has been secured as manager. When he had charge of the talking machine department of the Bissell-Cowan Co. he went with the department to the Aeolian Co., when that company took the lease of the Bissell-Cowan Co., two and a half years ago.

Now that the Aeolian branch is discontinued the Bissell-Weisert Co. will have the only talking machine department on Michigan avenue.

LYON & HEALY AND PARCEL POST.

The Prominent Institution Has Put in Practice a System Which Will Be of the Greatest Benefit to the Customers of the House.

(Special to The Talking Machine World.)

Chicago, Ill., Jan. 11, 1913.

As a result of careful study of the new parcel post law, Lyon & Healy have just put into practice a system which will be of the greatest benefit to their customers.

This system consists in having all orders to go by parcel post filled complete, including wrapping and stamping, in one handling. Parcel post packages are then placed in specially designed receptacles ready for the Lyon & Healy parcels post messenger service. This messenger begins at 8 o'clock in the morning, making the circle of the various departments of the big house, collecting all parcel post packages. As soon as he has made the tour of the house he takes all the packages over to the Chicago post office.

He then returns and makes another tour of the house. This proceeding continues throughout the entire day. The result is that many dealers will now receive their orders from Lyon & Healy twenty-four hours ahead of the old schedule. For instance, if an order is received, say, from Indiana, at 8 a. m., it may be filled and ready for delivery at 8.15. If it is, it is certain to be at the post office and on its way by 9 a. m. The post office, in all probability, will catch a noon train and the music dealer will have his supplies in hand by the middle of the afternoon. Under the old express system this order would be filled in the morning, checked later, and finally sent to the shipping room in time for collection by the express company at 5.30 in the evening. Dealers on Lyon & Healy's lists are now in a position to offer their customers such service as would have been entirely out of the question last year.

LARGER QUARTERS FOR TALKERS.

The Florida Talking Machine Co., of Jacksonville, Fla., is experiencing the most successful season in its career and has moved its office to the mezzanine floor of the store in order to make room for additional sound-proof demonstrating booths.

DEALERS' ASSOCIATION MEETS.

Talking Machine Men Hold Their Regular Quarterly Session on Wednesday of Last Week—Resolutions Against Oldfield Bill and the Advertising of Certain Jobbers Passed.

The regular quarterly meeting of the Eastern Talking Machine Dealers' Association and the first meeting of the new year, was held on Wednesday of last week at the Cafe Lion d'Or, New York, with a large percentage of the membership of the association in attendance. The session held particular interest for the dealers in that a thorough discussion of the Oldfield bill was one of the leading features.

The dealers went on record as being strongly opposed to the bill and passed a resolution to that effect, it being also resolved that a committee representing the Eastern Talking Machine Dealers' Association, possibly accompanied by a committee from the Philadelphia association, call upon Representative Littleton, of New York, and a member of the House Committee on Patents, and present the arguments of the dealers against the bill in person. The committee called upon Mr. Littleton at Whitestone, L. I., on Tuesday last.

The Oldfield bill and its ramifications and the price maintenance question came in for much general discussion, pro and con, before the resolutions were passed. It was suggested that where manufacturers of articles protected by patents sold them at prices that offered the manufacturers excessive profits at the expense of the public, the matter should be the subject of Federal investigation with a view to regulation, but the protection of the actual patent rights should be maintained. The dealers were particularly impressed with the dangers that lurk in the price-cutting which would surely be indulged in by the department stores were the fixed price on machines and records wiped out.

Another matter that caused considerable discussion was the advertising of certain jobbers, which, it was claimed, was directed against and proved detrimental to the interests of the dealer. A resolution was passed to the effect that the dealers discontinue patronizing the jobbers who offended in the matter of advertising and that the jobbers be notified regarding the objections of the dealers and their stand in the matter.

Several new members to the association were announced at the meeting. The next meeting of the association will be held at the Lion d'Or on the second Wednesday in April, at 12:30 p. m., which has been decided upon as the official opening hour.

DATING CHECKS AHEAD.

How One Shrewd Merchant Saved His Money When a Customer Died and Left Affairs in Bad Shape.

This is what one shrewd retailer did, and saved his money in doing it. He received information that one of his heaviest customers was in close quarters, and that a loss might be made on the account with his storekeeper. The latter called on his customer, who admitted that he was short of cash. "But I'll do this," he said. "I will give you a check dated thirty days ahead."

"I don't like that plan," said the merchant. "Suppose you give me a check dated to-day. I will pledge my word not to bank it or use it any way for thirty days. You know that my word can be taken." The debtor demurred, but finally gave the check as asked for. This is what happened: When the customer failed the merchant was clear. Others, who accepted checks dated thirty days in advance, lost their money, for the customer, who was apparently most healthy, suddenly died. The check dated back was good. Those dated ahead were worthless—because dated after the death of the man who signed them, says the Hardware Dealers' Magazine. Dating a check ahead is simply a promise on the part of the maker to have the money in the bank at a certain time. As a matter of fact, he is simply giving a promissory note for the amount.

An Incident

"Have you Record number 16377?"

"I will see. No, we have not got that one, but—"

"Well, let me hear number 35259."

"We haven't that one in stock either, but I can get it for you."

"Never mind, good day."

Short a Few Records and a Customer Lost

Mr. Dealer: Full loyalty and allegiance to Victor Goods has made us Distributors in the sense of the true wholesaler.

MAKING A HOBBY OF ONE'S BUSINESS.

**Develop a Penchant for Hard Work, and Specialize—Then Watch Prosperity Draw Near—
Good Advice for the New Year.**

A happy new year to you, Mr. Dealer, and here's hoping that old Father Time has not aroused your superstition with the unlucky 13.

There is just one way to fool the crusty old gentleman of the scythe and silvery locks, and at the same time prove to the world that there is nothing unlucky in a baker's dozen. Make up your mind to do thirteen times as much business this year as you did last, and rest assured if your wish comes true (and there is no reason on earth why it should not) old Dad Time will crawl into his hole and pull his superstition after him.

By this time, I imagine, you are wondering what recipe for prosperity I have copied in my little red memorandum book for you. Be patient only a little while and the same shall be unfolded to you.

It materialized in this way: Three gentlemen were dangling from straps in a crowded trolley car. The writer was more fortunate, having procured a seat. There being no ladies standing in his immediate vicinity, he did not feel it his duty to keep his attention focused upon the pages of *The Talking Machine World*, which lay across his lap, so he gazed at the gentlemen instead.

Two represented normal specimens of the desk-toiler, solid, capable men, you understand, but a little worn, tired, and dissatisfied looking. The other fellow, however, was as jubilant as a school boy on the verge of his vacation. If he had a care in the world, his face did not show it, and while his companions were saying unkind things about the traction company for not running sufficient cars to provide for the comfort of its patrons, he was gaily propounding to them the advantages to be derived from maintaining an upright position while in transit. They were an interesting trio, and as the car rocked its way down town I enjoyed their company hugely.

When at last I reached my destination and alighted, I found the care-free one beside me. We exchanged greetings, as is customary in the City of Brotherly Love, and walked on together, chatting as we went.

Learning that he was a substantial talking machine jobber with whom I had long desired an interview, I told him of my wishes and he promptly invited me to his office.

Upon our arrival there, he excused himself for a sufficient time to look over his mail, dictate an important letter or two into his commercial phonograph, and then with a courteous invitation to ask as many questions as I liked, he proclaimed himself at my service.

"Please tell me about yourself," I suggested. "Give me a brief resumé of your career."

"Very well," he answered smiling, "if that is what you want, you shall have it, and a simple and unvarnished tale it shall be."

"From the very first," he began, after a moment spent in careful thought, "I made a hobby of my business. Really, young man, there is little else I

can say, because I owe my entire success to that one thing."

"I will emphasize that point in my story," I promised him, "but I would like the details, please. Making a hobby of one's business sounds mightily interesting. Won't you particularize?"

He looked at me quizzically for a minute in silence, then asked, with a grin, "Did you happen to notice those fellows on the car with me this morning? You did? Well, they were bound for a Southern gunning trip. Didn't seem very enthusiastic over their prospective vacations, did they? They never do; they have no hobby, you see.

Capturing That Check.

They're good chaps, and all that, but a man without at least one hobby will never achieve real success, because his heart is not in his work."

"Now, my friends will go down along the Maryland shore and bang at ducks for a couple of days, and try their level best to think it's fun they're having. When they get back to Philadelphia and sit at their desks once more they will endeavor to do business in a businesslike way, but their success will be in proportion to their endeavor—'nuff sed."

"I have developed a penchant for hard work to the degree of taking it to bed with me nights and to the table with me at meal times, and yet it has not undermined my health or interfered with the sunny side of my disposition to the slightest degree. Why? Because I have made it a hobby, and consequently it does not seem like work to me, but rather a congenial and absorbing pastime; a game I am playing against old Father Time. Every time I pull off a good deal or one of my men makes a big sale I feel as happy as a baby over its first tooth.

"When you make a hobby of your business you conduct it along scientific lines. You are not content to fight the battle for existence as the other

fellow fights it, but search for the heaviest weapon obtainable, and proceed to lick him if you can. You make warriors of your subordinates, too.

"One of the most powerful weapons with which to gather the scalps of your competitors is specialization. To illustrate how a talking-machine specialist can make a sale materialize from thin air, I will cite an incident that occurred a few days after Christmas. One of my young salesmen was on his way to the store—he makes business a hobby like his boss—and in the course of his journey overheard, unintentionally, of course, the chatter of two fair maidens. One of them, it seemed, had received a check from father, and had not definitely decided how to spend it.

"It was up to the specialist to collect sufficient data to put that check in circulation, so he bided his time until he saw a meek-looking young man lift his fedora to the lady of wealth, then he diplomatically engaged the meek one in conversation, first speaking casually of the weather, and the after-Christmas crowds, but gradually drifting round to his heart's desire. Eventually, as opportunity offered, he feigned an acquaintance with one of the maidens, mentioning a name.

"By Jove! That's rich! Why, you's made the mistake of your life!" exclaimed the meek one. "That's Geraldine Dale. Lives at the Hamilton apartments, you know."

"Of course he knew. How horribly stupid of him.

"That afternoon Miss Dale was waited upon by my specialist with a wonderful talking machine, together with a glorious array of crimson-centered discs, and when they parted company the check from father nestled against his heart.

"A hobby, according to no less an authority than Webster's Dictionary, is that which a person pursues with zeal or delight. Therefore, if a man will but choose his profession carefully, being sure of its congeniality, and making it a hobby, success must surely knock at his door ere long."

Thus ended the interview.

How about making a hobby of your business during 1913, Mr. Dealer, and see what happens?

HOWARD TAYLOR MIDDLETON.

IN SEARCH OF BUSINESS SUCCESS.

Many merchants, like Sir Launfal, travel far and at random in search of the Holy Grail of business success that lies at their very doors.

The men who try to do something and fail are infinitely better than those who try to do nothing and succeed.

This Is What It Will Do

THE GRAPHITE RECORD LUBRICATOR will improve the reproduction. It will reduce the scraping noise one-half. It will make the record last three times as long. It has scientific basis. It is what has been looked for from the beginning. Send for circular and learn all about it.

**Vox Humana Talking Machine Co.
NANTUCKET, MASS.**

MEETING OF TALKING MACHINE JOBBERS ASSOCIATION.

Held at Hotel Knickerbocker on Tuesday of This Week with Many Officers and Members Present—Clause in Illinois Corporation Laws Prevents Amendment of By-laws—Old-field Bill Discussed and Energetic Action Taken—Question of Fixed Instalment Price for Talking Machines and Records Again Laid Aside.

A special meeting of the National Association of Talking Machine Jobbers was held at the Hotel Knickerbocker, New York, on Tuesday morning, January 14, for the purpose of taking up the question of amending the by-laws of the association with a view to prohibiting the use of proxies in voting at the annual elections of officers.

Although called together for the purpose of accomplishing a definite object, the members of the association were met with a peculiar situation, for it developed that J. Newcomb Blackman, president of the association, had consulted a firm of corporation attorneys for the purpose of insuring the legality of any action that might be taken at the meeting, and had learned that the by-laws of the association providing for the amending of any of the sections of the by-laws at a special meeting of the members of the association was in direct violation of the corporation laws of Illinois, under which the association is incorporated.

The Illinois corporation laws provide that changes in the by-laws of a corporation can only be made at an annual meeting of the members of the corporation and after due notice being served thirty days in advance. Considerable expert information was also collected regarding the legality of proxies, and as a result the matter was laid aside to be taken up at the next annual convention of the association.

The Oldfield Bill.

Upon learning that the membership of the association as a whole could not take action in amending the by-laws, a meeting of the executive committee of the association was called, at which the members at large attended. The regular routine business to come before the committee was disposed of and a discussion of the Oldfield bill entered into. The resolutions committee reported that the resolution protesting against the bill based on that passed by the National Association of Piano Merchants, had been forwarded to Representative Oldfield and various other members of the House of Representatives. It was decided that those present at the special meeting should sign a protest against the Oldfield bill, to be sent on Wednesday night to the father of the bill, as well as to both the majority and minority leaders in the House, and that the individual members at the same time make formal protest to their Congressmen.

The Matter of Prices.

The question of two fixed prices, cash and instalment, for talking machines, also came up for consideration at the meeting, owing to the fact that a special instalment price feature appears in the new agreements issued by Thomas A. Edison, Inc. The executive committee, in whose hands the question was left at the last convention in Atlantic City, however, decided that it would be unwise at this time, as it was before, to stir up the price question while dangerous legislation is pending.

The business before the meeting was all completed at the morning session, and in the afternoon most of those in attendance divided their interest between the Automobile Show and the gathering of piano merchants at the Hotel Astor.

Those Present.

Those present at the meeting included Emanuel Blout, New York; S. B. Davega, of the S. B. Davega Co., New York; A. F. Ferris, Utica, N. Y.; N. D. Griffin, of the American Talking Machine Co., Gloversville, N. Y.; E. P. Hamilton, of Frederick Loeser & Co., Brooklyn, N. Y.; M. Goldsmith, with Sol Bloom, New York; Louis Buchn, Philadelphia; R. H. Morris, American Talking Machine Co., Brooklyn, N. Y.; Benj. Switky, New York; H. L. Royer, M. Steinert & Sons Co., Boston, Mass.; O. K. Houck, of the O. K. Houck Piano Co., Memphis, Tenn.; Burton J. Pierce, of J. W. Jenkins' Sons Co., Kansas City, Mo.; M. H.

BLACKMAN BANQUETS JOBBERS.

President of National Association of Talking Machine Jobbers Provides Handsome Entertainment at Hotel Knickerbocker for Visitors.

J. Newcomb Blackman, president of the Talking Machine Jobbers' Association, tendered a sumptuous banquet to the members present at the meeting at the Hotel Knickerbocker at seven o'clock in the evening. The banquet was purely informal and was thoroughly enjoyed by all present.

Mr. Blackman acted as toastmaster, and introduced several of the guests, who responded with extemporaneous talks, some of a serious nature and others in a humorous vein. There was no attempt to make the banquet the scene of trade discussions, but rather to promote the feeling of good-fellowship which marked the proceedings.

Each guest at the banquet was presented with a handsome souvenir of a delightful evening in the way of a fob bearing the words "Blackman, Victor and Edison." This fob presents a very attractive appearance, and its receipt was appreciated by all present, who pronounced it a souvenir in harmony with the enjoyment of a "comrades" dinner. The table was artistically decorated, and the menu reproduced herewith did credit to the ability of the Knickerbocker chef, who served a dinner that left nothing to be desired on the part of the diners.

MENU.

Cape Cod Oysters		
Veloute	Camart aux	Croustons
Supreme de Sea Bass,	Duglere	
Medaillon de Bouef,	Choisy	
Pommes Helene	Laitnes	Braise au Jus
	Sorbet	Favorney
Chapon de Philadelphia	Roti,	Cressonniere
	Salade	Lorette
Mousse	Glace aux	Violette
	Mignardises	
	Cafe	
Cocktail	Sauterne	Champagne

In welcoming the guests to the banquet, Mr. Blackman reminded them that the dinner was intended as a "get-together" meeting of the members, and that informality would be the rule of the evening. He called attention to the pleasant relations that exist at the present time between members of the association, and his earnest desire that these cordial relations will never cease to exist. At the conclusion of his speech of welcome, Mr. Blackman was unanimously greeted and toasted as the "white blackman" and a "general good fellow."

In presenting the first speaker of the evening, O. K. Houck, of Memphis, Tenn., Mr. Blackman commented on the splendid establishment that Mr. Houck represents, and the magnetic personality of its president. Mr. Houck responded with a semi-humorous talk dealing partly on the important part which talking machines will undoubtedly play in the hereafter and the probability that the traditional harps above have been surely changed to Victrolas by this time. Speaking seriously, Mr. Houck stated that he believed that the Victor Co. had done more in the last ten years to uplift and elevate music than any other force had accomplished in the previous hundred years. He remarked on the splendid opportunities that exist at the present moment for the development of a profitable talking machine clientele, and stated that the industry was in its infancy. In support of this assertion, Mr. Houck stated that his profits in his talking machine department for the month of

Pearsall, New York; J. Newcomb Blackman and R. B. Caldwell, Blackman Talking Machine Co., New York; J. W. Blackman, Blackman & Son, New York; J. J. Wood, Charles H. Ditson & Co., New York; G. T. Williams and V. W. Moody, of the New York Talking Machine Co., New York; O. L. Neal, Neal, Clark & Neal, Buffalo, N. Y.; J. F. Bowers, Lyon & Healy, Chicago; F. A. Seamon, Rudolph Wurlitzer Co., Chicago; H. L. Ellenberger, Pardee-Ellenberger Co., Boston, Mass.; James B. Landay, Landay Bros., New York; James K. O'Dea, Paterson, N. J.; Perry B. Whitsit, Columbus, O.; J. C. Roush, Standard Talking Machine Co., Pittsburgh, Pa.; J. H. Dittrich, Rudolph Wurlitzer Co., Cincinnati, O.; J. G. Corley, Corley Piano Co., Richmond, Va.; and Carl A. Droop, E. F. Droop & Sons Co., Washington, D. C.

December, 1912, were greater than the profits for the entire year of 1911.

In introducing the next speaker, Edward Lyman Bill, Mr. Blackman made a short address outlining the importance of trade journalism in the talking machine industry, and commented on the fact that prior to the publication of The Talking Machine World the talking machine trade had had no means of exploiting their product in a public way, and was considerably handicapped by this lack of proper support. Mr. Blackman spoke of the inestimable good that Mr. Bill had conferred on the entire industry by his tireless work on its behalf, and of the many instances when he had occasion to refer to Mr. Bill or the paper for the solution of some difficult trade problem.

Mr. Bill gave an interesting address on the present condition of the talking machine industry, its steady growth, and the future in store for it. In speaking of the men behind the industry, Mr. Bill paid tribute to the ability, personality and progressiveness of the men who form the National Association of Talking Machine Jobbers, and stated that the association had accomplished incalculable good by standing together as a single unit, instead of striving in opposite directions as individuals. Mr. Bill also commented on the benefits of price maintenance, and the fact that this single feature plays an important part in the placing of the talking machine industry on the high pedestal it now occupies. Mr. Bill concluded his remarks with a short talk on trade journalism.

Mr. Blackman next called upon W. D. Andrews, of Syracuse, N. Y., and in presenting him to the guests, spoke of the troubled conditions that existed years ago, before any association had been formed, of the formation of the Eastern Talking Machine Jobbers' Association, and the difficulty in locating a man who would steer the ship during these troublesome days. The ultimate selection, stated Mr. Blackman, was Mr. Andrews, who had assisted largely in the promotion of the feeling of good-fellowship that now exists between members.

Mr. Andrews gave a short talk on the progress of the industry and of the pleasant relations that now exist between the jobbers and the factories. In the course of his address, Mr. Andrews stated that he did not believe it would be a wise thing for the jobbers to ask the manufacturers to change their policies at the present time, as the industry is in a very prosperous condition, and in view of the fact that the factories are turning out goods as fast as they possibly can.

At the conclusion of Mr. Andrews' talk, Mr. Blackman placed the remainder of the evening in the hands of the guests, who were asked to call upon anyone present. The following remarks were purely informal, and among those who contributed to the jollity of the evening were Louis Buchn, Burton J. Pierce and Milton Goldsmith.

After the guests had expressed a vote of thanks to Mr. Blackman for the delightful evening that had passed, the banquet came to a close.

The Standard Gramophone Appliance Co. exhibited its Simplex Start and Stop device to an interested gathering of jobbers prior to the opening of the banquet. The exhibit was in charge of Manager Thomas W. Kirkman. W. A. Condon, of the Condon Autostop Co., also exhibited its new device called the "Nose!" Autostop.

PROPOSED TAX ON SHELLAC AND COPAL GUM.

Talking Machine Records Affected—Proposed Underwood Tariff Bill Imposes a Duty on Raw Materials Used in Their Manufacture.

In an interview with M. Dorian, treasurer of the American Graphophone Co., bearing on his recent appearance in Washington in connection with the hearing on tariff revision, he furnished The World with the following particulars:

The Committee on Ways and Means of the House of Representatives (Hon. Oscar W. Underwood, chairman) began hearings on the 6th inst., at which interested parties were permitted to express their views or to submit briefs for or against the proposed amendments and modifications of the existing tariff laws and regulations. The hearings will continue until each schedule, of which there are about a dozen, has been gone over in this manner.

These hearings are preliminary to a revision of the present tariff act—known as the Payne Tariff Act—and are expected to afford the Committee on Ways and Means, which will have charge of the drafting of the revision, all necessary data for properly presenting its views and recommendations to the House of Representatives when the same convenes in special session at the call of President-elect Wilson early in March.

Schedule A—chemicals, oils and paints—was the first to be considered by the committee. The hearings on this schedule lasted two days. A large number of industries are affected under this schedule. The talking machine industry is one of them.

Under the so-called Underwood bill (H. R. 20182), paragraph 37, a duty of one-half of one cent per pound was imposed on copal gums, and from one to one and one-half cents per pound on shellac.

Both of these products enter into the composition of disc talking machine records, some manufacturers using one ingredient only and others both.

The House bill 20182 was under consideration by the Committee on Finance of the U. S. Senate in March of last year. The Senate Committee on Finance reported adversely upon the proposition to put shellac and copal gum and other articles now upon the free list upon the dutiable list.

In this report the Finance Committee says: "It does not appear that any representations have ever been made to Congress by manufacturers of chemicals, by the manufacturers using said products, or by any other persons, looking to a revision of said schedule. On the contrary, all of the representatives of such industries who have appeared before your committee have protested against the enactment of said bill in whole or in part."

Further along in the report the committee said: "Many of the articles transferred by this bill from the free list to the dutiable are articles of common household use. They are not produced in this country and cannot be profitably produced here. To place them upon the dutiable list, therefore, would constitute a tax without any compensation by way of the encouragement of home industry and without any possibility of the tax being avoided by the production of such articles in the United States."

The Committee on Ways and Means of the House proposes to reintroduce this same schedule and to place under the handicap of a duty those products which are not produced in this country and which cannot be produced here—profitably or otherwise—but which are indispensable ingredients to the American manufacturer.

Mr. Dorian appeared before the Committee on Ways and Means and urged that shellac and copal gum be retained upon the free list. He pointed out to the committee that both of these commodities are of foreign origin; cannot be produced in this country, and are indispensable in many American industries, including the talking machine industry. That American manufacturers are in close competition with foreign manufacturers for foreign markets on products where these ingre-

dients form an important part, and that the foreign manufacturer already enjoys an advantage over the American because of his closer proximity to the source of supply, cheaper transportation rates and cheaper labor. That the imposition of a duty upon these hitherto free raw materials will constitute discrimination against the American manufacturer in favor of his foreign competitor so far as these foreign markets is concerned, and either result in closing these foreign markets to him or compel him to shift such portion of his manufacture as is meant for foreign consumption to a foreign country, thus depriving American labor of an opportunity to retain for its benefit work it has formerly exclusively enjoyed.

In the course of the hearings the statement was made on behalf of the committee that the purpose of the proposed revision was to reduce the duty on some schedules and to meet this loss of revenue by putting some hitherto free materials upon the dutiable list. The opinion was expressed by several members of the committee that the industries affected should be willing to support this additional tax.

There was also manifest on the part of a majority of the House committee a determination to adhere to the original program, notwithstanding the protests and arguments submitted.

The consensus of opinion about the Capitol is that the bill when introduced will follow closely the provisions of H. R. 20182 and that it will finally pass the House in that form.

When it reaches the Senate, however, the industries affected will renew their objections with better prospects of securing some relief from the unfair and burdensome provisions favored by the Ways and Means Committee.

THE VALUE OF STOCK ENVELOPES

Demonstrated Most Successfully by the New York Talking Machine Co.

The New York Talking Machine Co., 83 Chambers street, New York, is experiencing a steady and gratifying demand for their special dealers' stock envelope which embodies several features of considerable value to the Victor dealer.

This stock envelope was conceived with the idea of enabling the dealer to keep an accurate record of the drawing-powers of each separate and individual record, thereby making it possible for him to know at a glance how many of a certain record should be called for in his order or re-order, and at the same time the dealer can keep his Victor envelope fresh and clean, and have it in a presentable shape to give to a purchaser.

The stock envelope is used in the following manner: When a stock of records is received, they are immediately transferred to these special stock envelopes, and their factory number placed in the upper corner of the envelope. The Victor envelope is then placed aside, and is fresh and clean for the use of the purchaser of the record. The record in the stock envelope is placed in the record rack, and after a sale is made the dealer has an empty stock envelope on hand, which serves as a re-order. When the dealer places his re-order with the jobber or distributor he places the date of the order and the quantity ordered on the bag. On receipt of the quantity ordered he places a ring around the quantity showing that they have been received, and continues to re-order on this arrangement.

It can be readily seen that the dealer by means of this system has an infallible record of the popularity of a particular selection with his clientele, as the number of re-orders and the quantity called for each time will, of course, increase as the demand for the record grows. Whereas, the first and initial order placed may have called for only one record, the sixth order placed one month later will probably call for twenty-five records of a certain number, as the dates on the stock envelope

will tell the dealer accurately just how long the last order was on his shelves, and give him a definite basis for the time and quantity of his next order.

COLUMBIA WITH ESTEY CO.

New York House to Follow Example of Philadelphia Institution.

The Columbia Phonograph Co. has just completed arrangements with the New York headquarters of the Estey Piano Co., at 23 West 42d street, whereby this prominent concern will handle the Columbia line in its New York store. The Columbia products have been handled by the Philadelphia house of the Estey Co. for some time, and the results achieved were so satisfactory that the company decided to install a Columbia department in New York.

JUST A FRIEND FROM HAVANA.

The Illustration Not New Form of Record, but Reproduction of One of the "Smokes" That Made Friends of Vitaphone Co. Happy.

No! this is not a page from a cigar catalog. The illustration simply shows the style of business card adopted by the Vitaphone Co. of Plainfield, N. J. To have things consistent, the company had to buy good cigars, so anyone favored by a Vitaphone call will smoke "long and hearty." Judging from its size, it must be a "two-hour record" and the music is well flavored, showing admirable choice in selection. To those who had the privilege of being favored around the holidays with these choice "dispellers of gloom," the Christmas dinner left no bad after effects. The "grouch" was eliminated by the "optimist" who bid the old year a hearty farewell with all its "hard knocks" and the New Year was started with the cheerful feeling that as the world grows on there will be room enough for all to get their share in the way of business. And no one smoking these cigars

could overlook extending to the donors the best of wishes for advancement and progress during 1913.

A well-known English recorder of seven years' experience recording in Europe and Asia, Edison tuition, desires position in America. For full particulars address "Recorder," care of The Talking Machine World, 373 Fourth Avenue, New York City.

CHAUFFEUR'S COMPLETE OUTFIT SACRIFICED.—Consisting of elegant mink fur-lined coat, Persian lamb collar, \$35; pair of elegant bear robes, \$15 each; raccoon cap, \$5; pair of fur gloves, \$4; pair of goggles, 50c.; 1 pair leather leggins, \$3.50. Will sell separately or the lot, all new; never worn. Original price, \$225. C. CHASE, 118 East 28th St., New York City, N. Y.

FOR SALE.—5,000 Edison 2-minute records, 10c. each; 5,000 Zonophone 19-inch records, 15c. each; all new, clean stock. DENINGER, 335 North St., Rochester, N. Y.

POSITION WANTED.—Experienced talking machine man with wholesale and retail experience, will be open Jan. 1 for position, either traveling or retail; capable of taking managership; prefer West. Excellent references; know business thoroughly from repair to selling. Address "M. L.," care The Talking Machine World, 373 Fourth Ave., New York City.

EXPERT REPAIRMAN, familiar with all makes of talking machines and phonographs, is open for a position; highest references as to capability. Address "EXPERT REPAIRER," care The Talking Machine World, 373 Fourth Ave., New York City.

THE TRADE SITUATION IN THE CREAM CITY.

Heavy Holiday Business Causes Shortage of Stock Among Both Jobbers and Dealers, but Plans Are Made to Take Care of Coming Demands—Better Class of Both Machines and Records Have the Call—Some Interesting Window Displays—McGreal Now a Minion of the Law—The Victrola Used in Vaudeville—The Month's News Summarized.

(Special to The Talking Machine World.)

Milwaukee, Wis., Jan. 11, 1913.

Everywhere one hears the same thing—the report that this season's holiday business established a new high record. Jobbers and retailers have the same story to tell and all say that they could have disposed of more machines had they been able to secure them. Indeed, the shortage of stock seems to have been the only disquieting feature of this year's business. Dealers all over the State say that people bought goods more freely than they have in recent years and that demand was not confined to any one class of goods, but was more general in nature. This seems to prove that prosperity is widespread in the Wisconsin field and that the talking machine men are coming in for their just share of the good things. Another bright feature of the situation is the fact that collections are giving probably less trouble than they have in years.

The shortage of stocks is still being experienced, owing to the fact that the factories are still behind on their orders and are unable to supply jobbers with the necessary goods. This state of affairs has its bright side as well as its dark, because there is no denying the fact that stocks in dealers' hands are lighter than they have been in many seasons. Instead of the dealer laying in a heavy stock of machines before the holiday rush, the average retailer was able to secure hardly enough to meet his actual requirements, so there is a fertile field for the jobber from now on. Jobbers in all the leading lines say that they will be able to dispose of every machine which they can lay their hands on for the next three months. This fact, combined with the bright outlook in all lines of trade, certainly promises a period of prosperity for the talking machine interests. Dealers and jobbers are all decidedly optimistic regarding the coming year and all seem convinced that a record breaking trade will be secured.

"Our business during the month of December was remarkable," said Miss Gertrude Gannon, head of the Wisconsin Talking Machine Co., jobber for the Victor line, "but it would have been much better had we been able to secure the machines to meet the demands of our dealers. The prospects for the coming year are certainly bright. Leading Milwaukee dealers have told us that their holiday business this year was the best in their history."

"We couldn't have asked for a better holiday trade," said Lawrence McGreal, well known Edison jobber. "There was a strong demand, as usual, for high grade goods, although I think that demand was more general than it has been in some time. If 1913 business keeps up at the rate at which it has started, we will be more than satisfied. The new Edison disc machine is making a decided hit with the Wisconsin dealer and orders are coming in even better than we expected. There is not the slightest doubt but that the Edison people have a wonderful proposition in this machine."

"The holiday business was the best in the history of our store," said A. G. Kunde, 516 Grand avenue, Columbia jobber and retailer. "Demand was good for both machines and records, but we were handicapped like most of the other dealers by the inability to secure stock enough to satisfy the trade."

William P. Hope, traveling representative of the Thomas A. Edison, Inc., in Wisconsin and Upper Michigan, was in Milwaukee this week on business. Mr. Hope has been demonstrating the new Edison disc machine about Wisconsin and has been meeting with the best of success in securing orders. Mr. Hope says that dealers are intensely interested in the new machine and that they are backing up their convictions by placing some fine contracts.

Paul A. Seeger, manager of the new Victor department at the Edmund Gram Music house, reports that the December business far exceeded his expectations. Mr. Seeger says that the demand for Victrolas X, XI, XIV and XVI, has been especially good.

J. H. Becker, Jr., manager of the Victor department at the Espenhain department store, is maintaining his past reputation of featuring interesting window displays. While the "Pink Lady" was at one of the local theatres recently, Mr. Becker filled an entire window with "Pink Lady" records, literature and Victor machines, with the result that some fine sales were made. The same scheme was followed with "Robin Hood" records. Mr. Becker is keeping up his daily concerts and he believes that they are bringing in a lot of new business.

L. C. Parker, manager of the Victor department at Gimbel Brothers, has found business so good after the holidays that he has retained all the extra employes secured for his department during the rush season. Mr. Parker has found that his gain in business for the past year exceeded his expectations. Some fine Victor sales to Milwaukee public schools are reported by Mr. Parker.

The talking machine departments at the two stores of the Edward Schuster & Co. are continually making more of a feature of the Victrola business. Miss Elizabeth Hughes, assistant manager at the Third and Garfield store, has been giving special demonstrations of the Victor line before various organizations and has met with a fine sale of high-grade Victrolas as a result. Miss Elizabeth Meizer, assistant manager of the Twelfth and Vliet street store, has met with a fine business of late.

H. O. Franke, representing the Pooley Furniture Co., of Philadelphia, recently called upon the Milwaukee trade.

Lawrence McGreal, Edison jobber, who was elected sheriff of Milwaukee county at the last election, entered upon the duties of his new office on Jan. 5. Joseph F. Gannon, assistant manager of the Wisconsin Talking Machine Co., jobber for the Victor line, was appointed one of the deputies. Both Mr. McGreal and Mr. Gannon are

finding time to look after their talking machine interests.

The Victrola was well advertised in Milwaukee this week by Charles Kellogg, the "nature singer," who appeared at one of the local vaudeville theatres. Five Victrolas, furnished by the Wisconsin Talking Machine Co., assisted Mr. Kellogg in his different singing and whistling acts.

The Auxetophone was made good use of recently at Madison, Wis., by Dr. L. A. Coerne, well known head of the school of music of the University of Wisconsin, who employed one of these machines and a Tel-Electric piano to demonstrate opera music at one of a series of lectures given by the faculty of the school of music. The Auxetophone was especially successful in demonstrating the Wagner opera, "Die Walkure."

RATHENAU MEDAL TO EDISON.

First American to Receive Prize Coveted by the Scientists of Europe.

Thomas A. Edison has been awarded the Rathenau medal for the best device or process in the electrical industry for safeguarding industrial life and health.

It will be presented to him on the evening of Jan. 23 at the American Museum of Safety, No. 29 West Thirty-ninth street. The medal is coveted by inventors and scientists in Europe. It gets its name from its presentation in one year by the German Emperor to Dr. Emil Rathenau, long at the head of the Berlin Electricity Company, for a submarine wireless telegraph device with which in 1894 messages were sent for three miles under water. Mr. Edison will be the first American to obtain an impression from the famous die.

The award is made to him because of his storage battery as a safety device in mines, tunnels, submarine boats, factories where explosives are made, powder magazines and in industries in which explosive gases are generated or used. This invention has reduced to a minimum the physical risks of workers in these lines.

The following concerns have completed arrangements with the Columbia Phonograph Co. during the past few weeks to handle the Columbia line: S. R. Leland & Sons, Worcester, Mass.; Robert W. Carter, Concord, Mass.; F. A. Guttenberger Co., Macon, Ga.; D. J. Stevens, Danbury, Conn.; Allen Piano Co., Perth Amboy, N. J.; F. A. Von Entress, Town of Union, N. J.; Norwalk Piano Co., Norwalk, Ohio; Fairbanks & Son, Natick, Mass.; Tampa Hardware Co., Tampa, Fla., and Emanuel Somenfeld, Cleveland, Ohio.

IN the clinches you can rely upon the Ditson Victor Service. Profits are contingent upon *our fast work*—and we know it.

STOP saying to your customers: "We haven't got it," because you can get it from **DITSON**.

FAST Victor service is our aim and that we hit the mark is proved in our rapidly growing clientele of dealers.

ALL Victor styles, records and parts, with a complete line of albums, cabinets and needles.

WE specialize upon Victor goods exclusively, and correspondence with dealers desiring the best in Victor service is invited.

Oliver Ditson Company, Boston, Mass.

Watch
interest

And those dealers who

Last year more dealers sold more Columbia product than ever before in the history of the Company—60% more than in 1911. Any dealer able to look through an open window can see that the demand for Columbia product is healthy, natural and dependable, and that Columbia dealers are putting away an extra amount of dollars for a rainy day.

So our first message to you for this most promising year of 1913 is to ask yourself if you can unearth one solitary business reason why you *can't* or *shouldn't* sell the thousands of record buyers who are now going down street or across town.

Columbia Phonograph Tribune Building

Creators of the talking machine industry. Pioneers and leaders in the world.
Largest manufacturers of talking machines in the world.

See the Columbia for the most interesting events in 1913—

who watch *from the inside* will have a much better view.

People are asking for Columbia product. The demand proves it. And they are going to continue to ask more and more. They are asking for records by

Destinn,	Nielsen,
Fremstad,	Bispham,
Slezak,	Parlow,
Zenatello,	Hofmann,
Nordica,	White,
Garden,	Gay,
Harrold,	Seguro.

They *want* records by artists such as these—and there are *no substitutes*. In just the same manner they will want Bonci records, just announced, and Ysaye records soon to be announced.

Is there any reason under the sun why *you* shouldn't get this business?

And instruments: Our \$20 "Eclipse" can play rings around any competitive instrument at \$25; while the same machine in mahogany at \$25 is the only mahogany machine under \$40. There's our good old "Favorite" at \$50, the most popular and the largest selling instrument ever put out, with every comparison boosting it a notch higher. There's our "Baby Regent" at \$100, "Colonial" at \$150 and "Regent" at \$200, the only line of table instruments made and absolutely free from competition. There's our "Mignonette" at \$100, "Nonpareil" at \$150, and "De Luxe" at \$200, that need no "boosting" from us. They are able to stand on their own legs in more senses than one.

Finally there's our Columbia "Grand," price \$500, an instrument that will find a ready market with those who want only the best, and are willing to pay for the best.

We have the demand; we have the product; we have the organization; we have many thousand loyal, plugging dealers, and your only excuse for not securing a Columbia agency should be because some live dealer got there first.

RECORDING ARTISTS IN MOSCOW AND ST. PETERSBURG.

An Impression of Moscow and Its People—The Artists Including Cossacks and Sarts—Life of the Artists in St. Petersburg—Other Interesting Data.

By T. J. THEOBALD NOBLE, a Prominent European Talking Machine Recorder.

After a very tiring journey lasting four days, from London through Paris, Berlin and Warsaw, I arrived in Moscow, where it was extremely cold, the thermometer registering 24 degrees of frost. I had encountered one or two incidents so common and anticipatory when entering or leaving Russian Territory. I will mention but one. At Warsaw I was compelled to wait twenty-two hours in a desolate, ill-smelling and unsanitary room as there was a suspicion of a trivial kind on my passport. In my excitement at such unmitigated impertinence, I went from asseverations to threats; both proved unavailing, the officials were inexorable, and what is the more amazing would not be bribed. (The first time in my experiences, and they are many, that a Russian official refused a bribe). On the following day I was released with many belated expressions of regret and apology, but unrequited as to the reasons of my temporary arrest. I eventually discovered the reason through the inevitable means, "A bribe, surreptitiously given" to an under officer. It transpired a passport had been stolen in Berlin from an Englishman, and on my arrival at the frontier I had been suspected, being alone and not having a knowledge of the language (the Russians immediately suspected me of purposely not speaking the language with a view of passing myself off as an Englishman), together with the suspicious appearance of my recording outfit, which they believed to be parts of an infernal machine. The arrest of the culprit in Berlin I was informed saved me from the possibility of several days detention. Moscow has been written about to such an extent I will not worry you with my encomiums, but I should like to say a few words of Moscow from a talking machine recorder's point of view. I found the town wonderfully interesting, and when once settled down, I found myself living in and amongst customs and life of the early nineteenth century, for comparatively (with other great towns) speaking, Moscow remains in the same state of progress now as when Napoleon saw it. There are in Moscow sixteen hundred churches, or as the Moscovites say "forty times forty churches." The famous historical building the Kremlin (Moscow's Acropolis) is there with its three tremendous old-time fortified walls, surrounding it, the size of which can be gauged when it is known that contained in its walls, is the city or business center of Moscow, also fifty churches and the Royal Palace. Outside the principle streets the shops are rudely constructed of wood, and appear to have stood just as they now stand for centuries.

On the sidewalks are to be observed—and many times felt—obstacles of various sizes which outside of Moscow would not be tolerated. Large ten-inch rain pipes protruding from the shop fronts on to the sidewalk, for any person to cut, break or bruise their shins. Gratings lifted out of the walk a good three inches for tripping over and inflicting Heaven knows what damage.

Shop shades or blinds pulled down to within five feet of the walk. Holes, posts, and projections of all kinds are tolerated in a manner which is to other than Moscovites extraordinary.

Yet, strange as it will doubtless appear, after a very short time one becomes accustomed to this curious state of negligence, and commences to enjoy and appreciate this association with an earlier period, the existence in an atmosphere which is not yet contaminated with the progress of mechanical life which is referred to in Europe and America as, "civilization."

Here, there are no tubes, overhead trains, motor lorries, motor buses, taxicabs or motorcycles; no rush, wild-headed speculations or hustle. All is different, business proceeds in a leisurely form, and it is a proverbial fact, that you cannot succeed in making a Moscovite "hurry."

This must not be interpreted to mean that they

are a lazy or lethargic populace—it is a state of, or an existence in an earlier period of civilization, a period which we have already passed and forgotten. Of the people, I find them interesting, philosophical, intellectual, and argumentative. In business (talkers), careless, mercenary and a bad creditor.

Hospitable Russians.

Hospitality is such that its magnanimity is incomprehensible. Sympathetic, confidential and most sincere friend when once obtained. In trouble they display the same characteristics as most discontented souls—courage, bravery and daring. (I had many times witnessed this latter statement.) Until one penetrates into the vast areas of police terrorism which crowd on the Russian people from every side, it is difficult to comprehend the great feeling of disgust and contempt which the people have against the Government in their tyrannous rule. Such is my opinion of the Russian people after having lived amongst them for over three years.

My recording room in Moscow was large and very satisfactory, and I was anxious to test it with my diaphragms, and make the necessary alterations to them for using in a new atmosphere. My first date was with a choir of eight men who had arrived from Kazan. I was not a little perturbed on observing them, for they were all big heavy fellows over six feet and must have averaged a weight of fifteen stone at least.

Their bulk was such that I could not record them as to horns I had were too short to allow bunching them round the machine and near enough to the horns to make a satisfactory record. I was, therefore, compelled to postpone the date in order to have two longer horns constructed. When they did sing, however, it was a revelation, the very building shook with the immense volume of tone, and although I had figured out the distance away from the horns they stood, I was inclined to believe that the strength would be too great for my diaphragm and that there would be a number of blasts in these "masters." I was accustomed to record loud records, but I certainly had never recorded such a volume of tone and such great power before. To my surprise the diaphragm held and had made a good record. I here surmised and afterwards proved that there is a certain quality in the language which assists the recording, there is an absence of the hard, guttural and blatant words so common in the English and German languages.

The expression, synchronizing, and harmony in each of the numbers was faultless and above criticism. The clearness of the tenors, the roundness of the baritones and the sonorous tone of the basses was a thing which I had never heard before. The rendering was so fine that it fascinated me and I was sorry when I had finished making their records.

Records of Noted Artists.

My next artist was the bass Cibieriakoff, another giant. In his case I was compelled to have a part of the floor opened to allow him to stand down ten inches. Otherwise the angle of the recording horn would have been such, that it would have entirely altered the tone of his voice and resulted in a bad record; unnatural, thin and weak. He made a number of very fine bass records of which no doubt there are many in America.

My next artist was the baritone Kamionski who had just returned from America where he had won success and was returning. It was here I first encountered a Russian, or I should say a Moscow Orchestra, whose playing was so bad that I was forced to dismiss the whole of them. They played in a nonchalant manner as though accompanying a third rate vaudeville turn and treated

the whole process of recording as a big joke, which was, however, quickly dispelled through my summarily dismissing them. I was paying Kamionski a hundred dollars per song, and the orchestra a dollar an hour for three hours. The conductor three dollars the session.

I wasn't wasting any time with bad musicians. Apologizing to the artist I postponed the date for a week, determined in the interim to scour the town with the intention of acquiring sixteen reliable or musically intellectual men.

During the four following days I recorded four more artists, sopranos, tenors and a choir, all with excellent voices and a perceptive knowledge of the intricacies in recording which was of great assistance. About this time I recorded, or attempted to record a military band. I noted the draggled-tailed slovenliness of the men, the dirty instruments which to my surprise were being carried as one would carry a piece of wood or rope, and prognosticated that all this omened bad playing.

I nevertheless decided to test them, and after having carefully focussed them, informed the conductor he could commence. To my horror they commenced to play without having first tuned up, and when it is remembered that outside it was freezing hard, the awful result can better be imagined than explained. I have never heard such an abominable conglomeration of music before in all my experience, they were not only out of tune, but were not blowing clearly and making the most horrible mistakes. After listening with great patience for ten minutes, I saw that it was hopeless and dismissed them, much to the astonishment of the conductor who was ignorant of even the first principle in music.

Difficult to Get Good Military Bands.

After this debacle I was compelled to go round in an endeavor to discover a representative military band, but after a seven days' search and after hearing approximately twenty bands I was unable to obtain a really good one. However, military bands being a necessity for the catalogue I chose the best of a bad crowd. Eventually I was able to instill into their heads the necessity of playing without error, and I was able to make a number—but certainly very few—good band records.

By this time I had formed a pretty bad opinion of Moscow orchestras and bands, for it must not be forgotten that I had been also trying to discover sixteen good musicians for accompanying, and in this I was experiencing incredible difficulty. At the opera where fifty men are playing and where there has been several days' rehearsal of the opera by the men, the playing is irreprovable. To choose sixteen of their number for recording, however, is quite a different matter—they are useless after an hour. I eventually succeeded in obtaining fourteen fairly good men from the opera and the symphonic orchestras. Even these men to say the least were an uncouth, lethargic and disinterested group, who looked upon the recording from a monetary point of view only, a thing which surprised and disappointed me considerably, for the vocalists were such charming people. Several amusing incidents occurred which illustrates conclusively the blatant ignorance of the military band conductors who are a callous, mercenary, malignant and unscrupulous clique.

During the playing one day of the first selection I noticed the cornets were blowing a curious tone and remonstrated with the conductor, who without even testing it himself replied, "Oh, no, Monsieur, it is impossible." I immediately demanded through my interpreter for the cornet to tune to the clarinet, the result was that we found the instrument broken and blowing a tone similar to a two-cent whistle.

The man afterwards confessed that his conductor was aware of the broken instrument and had forbidden it to be mentioned to me.

On another occasion I had a similar dispute as to the band being out of tune, but in this instance a conductor ordered the men to tune, which they did. Still, the fault was there, but this time the conductor pretended, or actually did not notice it until the men tuned their instruments singly, when it was discovered that the basses had brought, and were actually playing on flat, instead of sharp-pitch

instruments. I was in the habit of paying the band (the conductor) sixty-five dollars for a session of three hours, with twenty-four men. I was not a little surprised and disgusted when I learned that the conductors were paying their men but 75 kopecs (35 cents) for the three hours' work, whilst pocketing over fifty-six dollars themselves. One no longer is amazed at the slovenliness of the poorer fellows. They are treated as dogs by their conductors and it is little wonder that there is such a painful absence of good military bands for recording purposes.

My next artist was a contralto, Mme. Vasskevitch. She possesses a voice of exceptional range and was a pleasure to record, she so quickly grasped how to record that I was able to record a dozen different songs in three hours. This artist I may add spoke perfect English having been educated in England; she also spoke fluent French, German and Italian. She is visiting America in 1913 and should prove a big success both on the stage and on records.

It was about this time that I recorded the finest selections I have ever recorded in my experience—a mixed choir from the Opera House. If these records were on sale in America, I have no hesitation in saying they would prove a revelation, not so much for the actual recording, but for the magnificent, incomparable and glorious rendering of the "Savitzky Choir." This choir, consisting of twelve women and twelve men, sang selections of such varying styles that were extraordinary. One selection would be Faust, the next a Russian peasant's wedding feast; it made no difference to their rendering, which was at all times superb. To make a record of such a choir with an accompanying orchestra consisting of twenty men is an extremely difficult undertaking for a recorder at any time, but especially in a foreign country.

The placing of forty-four musicians and vocalists around four horns, all in focuses, is an operation that obviously requires a certain amount of cogitation, and I have no hesitation in saying that had I not received the co-operation and assistance of the artists, I should never have succeeded in making the records. They entered into the recording with a contagious enthusiasm and vital interest which was amazing and of incalculable help to me.

During the progress of these selections the recorder has to be in and among the artists, for in one part he may have to draw four men away from the horns and at the same time place five others nearer, while in another part the sopranos may have a few bars to themselves, necessitating the men to withdraw from the horns and the ladies to approach nearer. In the next few bars it will be "ensemble," and then all have to bunch around the horns and in such a position to insure a good balance, and so on through the record. All these movements have to be surreptitiously carried out without the slightest noise. The manner in which the Russian ladies entered into the recording was beyond praise. I remember in a particular record the ladies were not required for the last half minute of the selection; they did not merely bend or lean away from the horns, but voluntarily stooped and almost sat on the floor to enable all the men to approach nearer the horns. Imagine getting some of our own dear ladies to assist in the recording to that extent—Caesar!

The hilarious selections with singing, yelling, balalaika, harmonium, tambourines, whistling and all other forms of sound were difficult to record, but were nevertheless delightful selections and gave an excellent insight into the Russian national character in their amusements. A number of these records are among my most prized collection in my home, and their piquancy and irresistible jocundity are often the cause of much amusement and appreciation. The singing of the Cossacks was a great disappointment, for their singing can only be likened to a lot of overgrown children yelling and crying, each making an earnest endeavor to cry louder than another, resulting in an awful hulla-balloo. They were in most cases accompanied by one of their women playing on an old—very old—harmonium, which produced a tone similar to a pig who objects to being kicked. I

afterward recorded many records of the Cossacks in their own territory, "The Beautiful Caucasus," but with similar results—very disappointing.

During my sojourn in Moscow I had recorded a little over two hundred titles, including the best and the worst of Moscow and other Russian artists, whose fees ranged from 5 roubles to 600 roubles per song. The latter price was paid to the most popular artist in Russia, a lady who received the equivalent to \$6,000 for twenty titles (600 roubles per song). The Cossacks, on the other hand, received their railroad fare from Vladikavkaz and back, and the large sum of 500 roubles for forty titles (eight men). I recorded

but a few important artists in Moscow, for the best were, I was informed, in St. Petersburg. After receiving the necessary permission from the police to leave Moscow, I left for "Peterburg." Before leaving Moscow I should like to say once again that the recording was a success and the array of talent was unexcelled throughout the world. The people were charming and hospitable to a degree and I was treated with the utmost respect by the employes of the company. It was here, too, that I met and enjoyed the company of that inveterate globe-trotting American recorder, Fred Gaisberg, of the Victor Co.

(To be continued next month.)

INCREASING DEMAND FOR EDISON DISC PHONOGRAPH.

Continues to Be of Enormous Proportions—Working Hard to Supply the Demand—To Issue Salesmanship Record—F. K. Dolbeer's Report on Conditions.

Conditions at the Edison factory in regard to shipping the new disc phonograph and records have greatly improved since the last writing. Jobbers and dealers, however, are still using their creative powers for new excuses to secure the goods from the factory and to their customers because they have not got sufficient goods.

The day the writer was there a concern telephoned from Boston claiming that they could sell within a week one hundred of the new \$250 Edison disc phonographs, providing they could receive sufficient records to go with them.

To show how the Edison disc records are moving, a little town just over the line in Canada which formerly used \$200 or \$300 worth per year, increased their volume many times, recently ordering \$5,000 worth.

For the exploitation of these disc records the Edison Co. is putting on the market what they call their Advertising record, but which is really more of a salesmanship record. It is a talk upon the Edison machine, its inventor and its scope. A deep, powerful voice tells the story, beginning with Mr. Edison's first experiment thirty-four years ago—how he made 2,000 experiments on reproducers; how the materials are selected and manufactured; of the details of the recording of

the artists; of the plans to come for music—an interesting story in every way.

This will be a valuable aid to dealers throughout the country. All that will be required is to put this record upon the machine and the machine sells itself, so to speak. There will be fifty disc records in the new list when it is completed.

The sales offices of the Amusement Phonograph end of Thos. A. Edison, Inc., have all been segregated upon the second floor of the Administration building. This was done for the purpose of concentrating upon details. For instance, F. K. Dolbeer now has offices formerly occupied by President Wilson; C. E. Goodwin, manager of the traveling men, is now in the rear of the second floor, instead of being on the third floor. The third floor is now devoted to the kinetophone, kinetograph, business phonograph and advertising executive departments.

F. K. Dolbeer, sales manager, gave The World details covering the above story, particularly in regard to the ordering and shipping of the goods. Mr. Dolbeer is exerting every influence he can to care for the trade, but he fights heavy odds, owing to the tremendous demand for the goods and the limited output so far, notwithstanding an increased working schedule.

YSAYE MAKES COLUMBIA RECORDS.

The Famous Belgan Violinist Who Is Scoring Such a Great Success in America Signed a Contract with the Columbia Phonograph Co.—His Records Will Have a Great Vogue.

The Columbia Phonograph Co. announces that arrangements have been completed whereby Eugene Ysaye, the world-famous Belgian violinist, will produce records exclusively for the Columbia Co. Ysaye is recognized as the greatest living violinist,

Eugene Ysaye.

and his tour in America this year has been a continual chain of tremendous successes. His performances are attended by large and enthusiastic assemblages and the mere announcement that Ysaye will perform is sufficient to draw music-loving crowds.

Ysaye made his first Columbia records last week,

and according to those present at his recordings they were unusually successful. These records will be placed on the market the early part of next year, and the international fame of Ysaye assures an enormous sale. The Columbia Phonograph Co. is justly elated over the addition of such a wonderful artist as Ysaye to its rapidly growing list of famous record producers. It was only after many months of persuasion that Ysaye would consent to sign a contract for the producing of records, but he finally signed for a number of years, and his first records will be the forerunners of many more to appear regularly.

CABINETS AND ALBUM RACKS.

Featured by John Wanamaker—Most Attractive Propositions—Business Continues Active.

The talking machine department of John Wanamaker's New York store continues to do a splendid business notwithstanding the passing of the holiday season. High class types of Victor machines are in particular demand, and the call for expensive records has been enormous following the large sales of machines made during the holidays. There is also a steady call for the language outfits manufactured by the Thos. A. Edison, Inc., in conjunction with the International Correspondence Schools.

On another page of this issue of The Talking Machine World is shown a number of talking machine accessories which the Wanamaker talking machine department is handling both wholesale and retail, and which have met with uniform success. Their record cabinets and album racks especially have won high praise from users for their completeness and excellence throughout.

Keep advertising it all the time, rain or shine. You'll find 'twill pay.

PARCEL POST POSSIBILITIES

So Far as It Affects the Talking Machine Trade Summarized—Little Too Early to Note Whether It Will Be Used Largely or Not.

With the opening of the new parcel post system on January 1, talking machine dealers have been discussing the possibilities of the new system, whether or not it will help their trade, and to what extent its use will become general. As the system has been in use but a few weeks, there has hardly been sufficient time to make a fair test of the benefits to be derived from an active use of the system by talking machine dealers. The public in general has not become thoroughly acquainted with the detailed working of the parcel post, and as a result, there has been a slight tardiness in taking advantage of the benefits it undoubtedly offers, if utilized extensively by the public.

Talking machine dealers are offered a wide field for the use of the new system, as they may not only send records by the parcel post, but needles and similar accessories for the talking machine. In order to ascertain the views of talking machine dealers in New York and vicinity, a representative of *The World* visited several of the dealers who were practically unanimous in their opinions as to the various benefits to be derived from the use of the parcel post. They stated that this was particularly true as regards the summer trade, when customers, who are away on vacations and unable to secure records, needles, etc., from any dealer within a considerable distance, will be greatly assisted by the parcel post which delivers any parcel up to eleven pounds to any point reached by rural or free delivery.

The regulations provide that parcels of merchandise, including farm and factory products (but not books and printed matter) of almost every description up to eleven pounds in weight and measuring as much as six feet in length and girth combined, except those calculated to do injury to the mails in transit, may be mailed at any post-office for delivery to any address in the country.

Delivery will be made to the homes of people living on rural and star routes as well as those living in cities and towns where there is delivery by carrier. Where there is at present no delivery by carrier the parcels will go to the post-office as is the case with ordinary mail.

The postage rate for the first zone—that is, within distances not exceeding fifty miles, will be five cents for the first pound and three cents for each additional pound. The rates increase for each successive one of the eight zones into which the country is divided, the maximum rate being 12 cents a pound, which will carry a parcel across the continent, or even to Alaska and the Philippines.

For a fee of ten cents a parcel may be insured, and if the parcel is lost in the mails an indemnity to the amount of its value, not to exceed \$50, will be paid to the sender.

The law provides for the use of distinctive postage stamps, and there is now being distributed to postmasters for use in parcel post systems a set of stamps of twelve denominations. Parcels post maps, with accompanying guides, are to be sold to the public at their cost, 75 cents, through the chief clerk of the Post-Office Department.

OF INTEREST TO EXPORTERS.

Trade Conditions in South America Described in Detail in Instructive Books Prepared by the Pan-American Union.

The Merchants' Association has just received for filing in its reference library a number of books descriptive of Latin America which will be of interest to New York manufacturers exporting to South and Central America and the West Indies. Most of these books are published by the Pan-American Union, under the direction of the Hon. John Barrett, and all are distributed through the agency of the International Bureau of American Republics.

ARTISTIC VICTOR ROOMS IN LOS ANGELES.

Illustrations and Description of the Very Beautiful Establishment Conducted by the Musical Record Co., Give an Idea of the Value of Artistic Environment.

(Special to *The Talking Machine World*.)

Los Angeles, Cal., Jan. 5, 1913.

The opening of the Victor shop by the Musical Record Co., of this city, of which Albert D. Wayne is manager, has created considerable comment among the friends of the Victor product in south-

one immediately to the heart of the Orient. The mission Indian room, with its Navajo blankets, Indian baskets and pottery, together with oil portraits of some of the famous Indian chiefs, seems to be the proper setting for "Ragtime Cowboy Joe." But the crowning feature of this establish-

The Tropical Garden of the Musical Record Co.'s Victor Shop.

ern California. The manager, after seventeen years' experience in the talking machine business, decided to pin his faith exclusively to "His Master's Voice." The salesroom of this department is finished in mahogany, and its walls covered with goblin tapestry is without a doubt one of the most handsome of its kind in the country. The record

ment is a garden in the rear filled with a valuable collection of tropical plants and palms which is the private collection of one of the stockholders. The swinging seats and rustic benches scattered about in the garden, giving a capacity of three score or more of people who would like to enjoy the afternoon and evening concerts around the goldfish

Reception Room of the Musical Record Co.'s Victor Shop.

rooms, with their upholstered walls of padded brocaded silk, are certainly unique, one of which is furnished in the Louis XVI. type, with Vernis Martin Victrola and gold-plated furniture; is in fact the most gorgeous outlay. Another room with its Turkish couches, Oriental rugs, old Persian wall hangings and Damascus blades seem to transport

fountain and under the vine-covered pergola. The patronage extended the company has so far exceeded its expectations, and it has been put to its wit's end to replenish the stock, being compelled to order by wire from wherever the goods could be had. The people in the city appreciate a talking machine shop that is "different."

The titles of some of the books received are as follows:

"Latin America—The Land of Opportunity."
 "Traveling Notes in Central America."
 "Panama—Method of Acquiring Public Land."
 "Rubber and Its Relatives."
 "Tobacco."
 "Cotton, the Most Widely Used Staple in the World."

The Hon. John Barrett, the Director-General of The Pan-American Union, has also forwarded to the association for the information of the members consulting the library:

"Chili; an Account of Its Wealth and Progress,"

by Julio Perez Canto. "Brazil in 1911," by J. C. Oakenfull, and "Guide to Modern Peru; Its Great Advantages and Vast Opportunities," by A. de Clairmont, M.D.

These publications are especially important in view of the approaching completion of the Panama Canal and the keen interest which is now being taken in trade extension in Central and South America. A somewhat similar series of books dealing with the industries of the Netherlands was recently added to the library and catalogued in last week's *Greater New York*. These books are available for consultation by the members of the Merchants' Association.

THE HIGH COST OF CHEAP CREDIT.

By J. NEWCOMB BLACKMAN, President of the Blackman Talking Machine Co., New York, and the National Association of Talking Machine Jobbers.

[A discussion of the freedom in which credit is extended in both the wholesale and retail trades, and the importance of more care being taken in the extension of credit, not only for the sake of economy, but in justice to those members of the commercial world who are entitled to credit by reason of their true financial standing and value.—EDITORIAL NOTE.]

The high cost of living seems to be a favorite excuse for many ills of to-day, both in business and private life. I believe the American people fail to realize the important part which every merchant and buyer plays in the cause and effect of this situation. Did you ever stop to carefully consider the fact that the honest man must pay for those who are dishonest? That the man who pays his bills must also pay those of the one who fails to do so, and again the fact that crime and dishonesty in many forms exist makes it necessary to maintain an expensive police force?

The man who does not pay his bills and makes a habit of not doing so is not worrying as much about the high cost of living as the honest man, but he is the common enemy of all classes except those of his own kind. Now let us consider this situation as confronting us in the talking machine business, and it will apply equally as well in practically every other line of commercial life.

Millions of dollars are spent each year telling people their credit is good and letting them believe that all they need do is to express a wish for something, whether it be a luxury or otherwise, and it will not only be granted them by the delivery of the article without delay, but payment will be the last consideration. Is it any wonder in view of this state of affairs that the average buyer fails to recognize the justice of insisting that he establish his responsibility before delivery?

It is the duty of every employer not to surround his employes with temptations, and rules must be formulated that will safeguard them against temptations. Taking the extension of credit, however, and starting with the retail buyer you will find that the dealer must be liberal or lose the business to the other fellow. Too often it is a case where they fail to regard their obligations seriously, simply because their jobber is too liberal in extending credit.

Recently a failure of several hundred thousands of dollars in Newark, N. J., disclosed simply another example of the truth of the high cost of cheap credit. Here was a concern that obtained some \$400,000 worth of credit on what eventually appeared to be, according to a commercial agency report, a "paid in" capital of about \$150. Talking machine jobbers and piano merchants extended liberal credit and allowed this firm to compete, by means of their assistance, with those dealers in that territory who are paying their bills and are entitled to credit.

Many creditors of this concern gave them credit, simply because they relied on what should have been the good judgment of some of the bigger fellows dealing with the same firm, and in the meantime this concern filled the newspapers with advertisements which tended to ruin the reputation of reputable piano manufacturers, piano merchants and talking machine dealers. During the interim others looked on, with the courage of their convictions, losing business, or continually asking themselves whether or not "two and two still make four," or if they were not mistaken, and had better not leave the path of good business judgment and follow suit. You probably know the final outcome so far as the existence of this particular company was concerned, but who pays the bills?

Every creditor who lost money will at the end of his business year look at his profit and loss sheet and perhaps forget one of the real causes should it fail to be satisfactory to him, but, instead, may complain that the profit on the goods he handles is not sufficient, or he may even tighten a little more where not justified or needed.

I take the position that it is the duty of every merchant not to extend credit in a reckless man-

ner, if for no other reason than to give the dealer who pays his bills and is entitled to credit an honest chance. Also that failure to follow this principle has driven many an honest dealer to dishonest methods or to a reckless conduct of his business, eventually bringing about disaster.

For the benefit of the dealer who wants cheap credit let me say that if he does not realize that it is not good for him, in many cases he should be treated like the child that cries for candy just before meal time. Did that dealer ever stop to consider that he cannot have a monopoly on this cheap credit, and that he should look with suspicion upon the jobber or manufacturer who is enabled to offer him things which old reliable and financially strong concerns are unable to do?

Right here let us consider the position of some of the dealers who owe a bankrupt concern a considerable amount, and who may be put out of business by the cold demands of the receiver to pay up at once or suffer the consequences. Such a course

J. Newcomb Blackman.

of duty seems rather harsh after notes had been renewed and other usual privileges had been discontinued, but why did he not consider that possibility when he did business with that kind of a concern?

One of the chief causes of the high cost of living to-day is wastefulness, and the fact that there are too many consumers and not enough producers, but this thing is sure—if the safe, sound and conservative merchants and dealers will find each other and stick together, the reckless concerns will find their game harder and an economy will be introduced that will be very productive for all. The Government is investigating a claimed "money trust," and yet the concern that I referred to before, I am told, had no difficulty in finding eighty-seven banks who made them loans on what I am safe in saying was certainly questionable security.

We have some of the best organizations in the country dealing with the subject of credits, and that they do not lack knowledge of credit methods is evidenced by the fine speeches heard at banquets and the excellent articles written, but which are not always carried out in practice by the authors. In defence of some of these authors let me say that many a credit man is unable to follow his convictions because the house keeps on complaining of poor sales and will not back him up or the house itself, suffering from competition made possible by cheap credits, thinks it necessary to take many chances.

Fortunately, merchants and the buying public are beginning to realize that honesty in merchandising pays, and that a square deal policy is the best for all. There is also a noticeable change in

the advertising of the best concerns, for they are taking their customers into their confidence, as it were, and talking in an open, frank and honest way about their methods. They should have the support of everyone, and it is to be hoped that the American people in measuring a man's success in life will not do it by means of the dollar sign.

Everybody likes to be encouraged, and it is a great help to the merchant or employe who is trying to do what is right. Would it not therefore be a good resolution for the year 1913 that every jobber and dealer resolve for his own protection, in justice to others and for the sake of economy that he will not give or accept credit which his own common sense tells him is like gambling, even though he may have to discontinue business and work for someone else. This will at least be one of the many ways that great improvement and economy in the conduct of business will be attained, and there will be less bad debts and bankrupts, and business men will conduct their business not only with an eagerness to acquire money but for the confidence and respect of those with whom they deal.

PRICES CANNOT BE CUT.

Decrees and Injunctions Issued Against Concerns in Butte, Mont., and in Chicago, on Complaints of American Graphophone Co.

A decree and injunction have been entered in the U. S. District Court, District of Montana, against Orton Bros., of Butte, Mont., for cutting prices on Columbia products.

A similar decree and injunction for price-cutting on Columbia products have also been entered in the U. S. District Court, Northern District of Illinois, Eastern Division, against Spiegel, May, Stern Co., of Chicago.

In both of these cases the defendants appeared by counsel and paid the costs. Spiegel, May, Stern Co. was represented by Mayer, Meyer, Austrian & Platt, Esqs., of Chicago, and Orton Bros. by E. B. Howell, Esq., of Butte, Mont.

The American Graphophone Co., complainant in both suits, was represented by its counsel, Elisha K. Camp, Esq.

OPEN "TALKER" DEPARTMENT.

A. McArthur Furniture Co., of Boston, Takes on the Columbia Line and Will Feature It in a Prominent Way in the "Hub."

A recent addition to the rapidly growing list of Columbia Phonograph Co. representatives in the New England states is the A. McArthur Furniture Co., of Boston, one of the largest furniture establishments in the state of Massachusetts. This firm has opened a handsome talking machine department, and will handle the Columbia line exclusively. Their initial order was placed by the American Supply Co., of Worcester, and called for a representative stock of all the different Columbia machines. Although the new department has been open but a week or two, Manager H. A. Yerkes, of the Columbia Phonograph Co.'s wholesale department, states that they are achieving a splendid success.

EDISON AGENTS IN PORTLAND.

Three Edison agencies were established in Portland, Me., this week by the traveling representative of Thos. A. Edison, Inc., who visited Maine demonstrating the merits and features of the New Edison disc machine. The new representatives are Lord & Co., Edison Phonograph Co., and the James Bailey Co.

Franz Ewald Thormeyer of Hamburg, Germany, was granted a patent this week on a device by means of which the inventor proposes to so regulate the starting of a talking machine as to produce synchronous action with the movements of a picture reproducing machine.

The question of whether or not there is room at the top need not trouble you until you get there. Then it will take care of itself.

HER RECORDS ARE POPULAR.

Those Made by Mme. Staberg-Hall, the Noted Soprano, in Swedish and Norwegian, Particularly, Are Great Favorites.

In the Columbia list appear a number of records made by Mme. Staberg-Hall, a concert singer of note, who began her career under the training of Fritz Arlberg. The brilliancy and beauty of her voice secured her the position of first soprano in the Swedish Ladies' Octet, which toured America for two seasons. Then she developed into a coloratura singer, appearing in the large cities of

Mme. Staberg-Hall.

the country as soloist with such noted musical organizations as the Boston Symphony Orchestra and the Minneapolis Symphony Orchestra. She has also sung before royalty in Europe and her concert travels have taken her as far away as Australia.

Mme. Staberg-Hall then returned to Berlin and Stockholm for three years, following which she took up her residence in Minneapolis, where she secured a great success as a vocal teacher as well as in concert work. Four of the records made by Mme. Staberg-Hall are in Swedish and one in Norwegian, and recently she commenced making a new series of songs. Her records are considered to be of the highest character in enunciation and intonation.

AN ALBUM MUCH IN FAVOR.

The accompanying illustration shows the new style of album cover stamping introduced by the Schafford Album Co., 26-28 Lispenard street, New

York. This is designed to meet a popular demand for 1913, and orders to date give indications of its success. These albums are furnished in brown silk cloth and Viennese imitation leather, with gold plated rings. Each album contains seventeen envelopes and are

made for either ten inch or twelve inch records. The company still furnishes albums with the regular marking of only the two words, "Record Album," to those who prefer it. Prices are low, as shown by the Schafford announcement elsewhere in this number.

Do not growl because the old man goes out to play golf at 3 o'clock. Either he has earned the right by perfecting his organization or he is giving you a chance to pick up opportunities which he is neglecting.

GREETINGS TO COLUMBIA DEALERS.

General Manager Lyle Reviews the Progress Made in the Columbia Business During the Past Year and Predicts Further Advances and Great Activity for 1913—Compliments Dealers Upon Co-operation.

George W. Lyle, general manager of the Columbia Phonograph Co., this week sent out the following letter to the dealers throughout the country handling the Columbia line late in December:

"To Columbia Dealers: The season of the year is at hand when Christmas greetings and good wishes for the New Year will reach you from your many friends.

"None can be more earnestly sincere and hearty than those which the Columbia Phonograph Co., General, herewith extends you.

"The year 1912 is nearing its close. It has proven the most prosperous in our company's history. We cheerfully accord to all our dealers a high measure of praise and acknowledgement for the success which has so abundantly crowned our efforts throughout the year.

"Without their loyal co-operation, their keen appreciation of the quality which we put into our product and advertising, and their superior salesmanship and business methods, our success would have been measurably less.

"We are going to show our appreciation in something more than mere good wishes, however hearty.

"We are going to increase our factory capacity again, notwithstanding we increased it fifty per cent. less than six months ago. Our advertising for 1913 will, as in the past, be focused on bringing the business to the dealer, and will be more extensive, more comprehensive and more insistent than ever before.

"Quality in product will continue to govern every instrument and record put out under the mark 'Columbia.'

"To be first on the market with new models—thus giving Columbia dealers the opportunity to take the cream of the trade—will be our aim and accomplishment.

"A liberal and sane policy—a policy of non-interference with the management of the dealer's own business except in the matter of price maintenance—will continue to regulate our relations with the trade.

"These are the elements upon which we propose to rely for infinitely greater prosperity in 1913 than has been our good fortune in 1912.

"We want all Columbia dealers to have an ample and satisfying share in this prosperity, and if we pull together that result will be sure to follow. We pledge ourselves to do our share and confidently count upon you to do the rest. If you respond as effectively as in 1912 the victory is as good as achieved."

WINDOW TRIMMERS.

The Art Continually Growing in Importance as Competition Becomes Keener.

The art of window trimming is fast becoming an important one. The window trimmer, known as the "window advertiser," has become a professional man. He is looked upon to plan, originate, and decorate displays that will sell merchandise. To perform his duties most effectively, he must have something in addition to his merchandise. He must put something in the foreground or background to attract and hold attention—window cards, movable displays, etc., proper fixtures, lighting, etc., all serve for the foreground. The background must be such that will "show off" or pose the merchandise in the best possible way and in the proper atmosphere.

For all his work, including scenic backgrounds,

NYOIL

For polishing varnished woodwork it is extremely satisfactory. No oil is so clean.

Ask your watch repairer whose oil he uses on your watch.

plain or panel backgrounds, ceilings or walls, floors, fixtures, etc.—the window trimmer must use colors. To use colors successfully and change, whenever he desires to change his color scheme, suggest the use of flat colors and other paint products. The introduction of the new prepared wall boards has increased the demand for flat colors.

AN ORIGINAL WINDOW DISPLAY.

Arranged by Victor Dealers in Indiana—Advantage of Special Displays That May Be Made to Reflect Local Conditions.

While the window displays arranged by the manufacturers for the use of jobbers and dealers are admirable in every respect and most effective when used properly, the dealer who has the am-

Harding & Miller Music Co.'s Artistic Window.

bition to create his own window displays along individual lines, is deserving of much credit.

A window display may reflect local conditions in a manner that is entirely beyond the made-to-order displays. For instance, local celebrations may be marked by special window displays and much trade be secured from the numerous visitors.

The accompanying window display was originated by Start Nueller for the Harding & Miller Music Co., Evansville, Ind., for use during the Thanksgiving period, suggestive of a bountiful harvest and the desirability of a Victor to play during the annual dinner are admirably brought out.

E. P. Cornell is now associated with the Musical Instrument Sales Co., the offices of which are at 635 West Forty-ninth street, New York. Mr. Cornell has had a wide experience in the trade, having been with M. Steinert & Sons Co. and the Boston Talking Machine Co., and recently with John Wanamaker of Philadelphia.

GREETINGS FOR VICTOR DEALERS.

Open Letter by Louis F. Geissler Full of Optimism Regarding Conditions in the Talking Machine Trade Continuance of Victor Co. Progress for Year Just Opened.

The following greeting to Victor dealers for the new year appears on the front of cover of the "Voice of the Victor" for January, and indicates that the Victor Co. is full of optimism regarding the outlook in the talking machine field for 1913. The letter is signed by Louis F. Geissler, general manager of the company, and reads:

We have just closed the biggest year in the history of the talking machine industry.

Notwithstanding the necessity of curtailing shipments during May, June and July to clear the market for the introduction of the new Victrolas X, XI, XIV and XVI, the trade have enjoyed an increased supply of Victor goods over any previous year.

The improved Victor X, XI and XIV have each found their own particular market without the least interference to the demand and sale of the Victrola XVI, which retains its dignified position at the top of the Victor line.

Our new factory buildings are being equipped with machinery and labor as fast as the former can be installed, and the latter secured—which means an early increase in factory output, and more sales and greater profits to Victor dealers.

To our dealers who have materially aided us in all the achievements of 1912, we take this opportunity of making known our deep appreciation of their splendid energy, enthusiastic co-operation and unswerving loyalty to the Victor, with the assurance that the Victor will climb to bigger and greater achievements during 1913.

Wishing every one a New Year full of health and prosperity.

TRADE EXPANSION IN CUBA.

Frank G. Robins & Co. Is Building a Most Successful Business with the Columbia Line—A Believer in Publicity and Gets Results.

M. D. Easton, road ambassador for the export department of the Columbia Phonograph Co., returned to New York recently after a month's trip to Cuba. "Our Havana agent, Frank G. Robins & Co., is achieving a large measure of success," states Mr. Easton. "It is not only selling a large number of Dictaphone outfits, but its talking machine business is gradually assuming imposing proportions. Under the capable management of R. W. Crain, the company is taking advantage of every opportunity offered it to gain valuable publicity in Cuba. It not only accepts our co-operation plans gladly, but has also originated several ideas which has gained it many sales. One unusual scheme it tried while I was there consisted in presenting a Columbia Regent, Jr., to the leading batter in a baseball series being played between the Cuban teams and a well-known American colored team. The publicity resulting from this offer was surprising, as the people of Havana are baseball fanatics, and the immense crowds in attendance each day were furnished by F. G. Robins & Co. with score cards showing the leading batters' averages and a suitable advertisement of the Columbia products. Mr. Crain assured me that many sales were closed each day as the result of this novel publicity."

TO CHANGE COMPANY NAME.

Resolution Presented to Change Name of Columbia Phonograph Co. to Columbia Graphophone Co. at Meeting This Month.

A special meeting of the stockholders of the Columbia Phonograph Co., General, was held early this month, when a resolution was presented requesting the stockholders to vote on changing the name of the company from the Columbia Phonograph Co., General, to the Columbia Graphophone Co.

GREETINGS for 1913

The year 1912 is gone, never to return, but has its place in history. We greet with "OPTIMISM" the new year, and it forecasts nothing "unlucky," although the "13" is very prominent.

Our DEEP APPRECIATION is extended to those who have made our closing year prosperous.

It is very encouraging to know that the bulk of our Trade represents customers who have dealt with us for years, and that in expanding our business our policy has always been to safeguard them and not neglect the "old" for the "new."

It is not so difficult for merchants to adopt a policy insuring a "SQUARE DEAL FOR ALL," but it is no easy task to stick to it. That this policy pays, however, we firmly believe, and that our customers appreciate it is evident in the steady, healthy growth of our business.

Our policy for 1913 will be that of further progress, using the past only as a guide to avoid repeating mistakes and considering the results as the starting point for improvement.

You will notice no "LAGGING BEHIND," no "RESTING ON OARS," but "ADDED ENERGY," and a more close contact between ourselves and our Trade.

It has been mostly through a "misunderstanding" of the real conditions, either on the part of customers or ourselves, that has caused whatever little friction there has been at times.

We want to ENCOURAGE the GREATEST CONFIDENCE on the part of our Trade, and will endeavor to maintain a BROAD POLICY that will give all the possible support to those Dealers who deserve it, whether it be in the extension of credit or in the shipment of goods, and to maintain this policy. To avoid giving support to unfair competition, we will decline to grant unreasonable requests.

It is not to be safely predicted what another year will bring forth, but anything we do will first be given the most CAREFUL CONSIDERATION, not only as to how it will effect us, but OUR CUSTOMERS.

Will you SUPPORT US, and HELP US by pointing out the defects of our organization, and thus enable us to introduce REMEDIES where necessary?

Yours for a Healthy, Happy and Prosperous New Year.

Very sincerely,

BLACKMAN TALKING MACHINE CO.

J. Newcomb Blackman, President

97 Chambers Street, New York.

TRADE CONDITIONS AND THE OUTLOOK IN ST. LOUIS.

December Business Breaks All Records with Majority of Dealers—Stocks of Machines and Records Cleaned Out During Rush, Including Shopworn Goods—Silverstone to Change Name of Company to Silverstone Musical Instrument Co.—Some Interesting Selling and Advertising Stunts Recorded—Waiting Arrival of Columbia Grand.

(Special to The Talking Machine World.)

St. Louis, Mo., Jan. 12, 1913.

The St. Louis talking machine dealers experienced a glorious New Year's. Chiefly it was because they had footed up the December business and knew that the totals were far and above previous figures. At the Columbia store Retail Sales Manager Byers says "more than 40 per cent. increase over last December." At other stores exact figures are not quoted, but several say "almost double."

One very pleasing feature of the situation is that the stocks are remarkably clean for the beginning of what all declare "will be the biggest year the trade has ever known."

"We can now go ahead with our new model machines without embarrassment," say the Victor folk. "Our new reproducers are putting us in right in front," say the Columbia dealers. "The disc machine makes us leaders again," is the Edison assertion. All of these dealers say their decks are cleared for action on the new models.

The Christmas trade was somewhat embarrassed in most stores by a lack of both machines and popular records. In fact, the business ran beyond conservative expectations and slow delivery of machines caused some embarrassment and light advertising early in the month of December.

President Silverstone, of the Silverstone Talking Machine Co., says that his greatest difficulty is to keep from selling machines. "I have customers for fifty or more of the disc machines, and they cannot be made to understand thoroughly why, if I have the machines here in my store, I should not sell them. If I had had the records to deliver with these machines, I could have so far eclipsed all previous sales records for this company that it would have looked like we had changed environment entirely. Of course, we are carrying this business in prospect for future months, but we are anxious to deliver it, and the customers apparently just as anxious as we are. I have written to the Edison Co. urging a date for delivery, as I think a positive date would be much better than the indefinite scheme under which we are working."

Victor dealers in St. Louis are practically clean of dead and damaged stock. The demand for machines prior to Christmas was so sharp that old styles, shopworn goods and second hand instruments were sold at prices undreamed of in September, and after visiting several stores and learning of stock conditions, the purchasers invariably realized they were being given the very best service possible. Practically all that was left after the Christmas rush were box machines and a few horn instruments. One dealer with a large stock declared that he had more than 50 box instruments loaned to persons who wanted to buy better and larger machines. He closed the holiday with less than a dozen instruments in his store.

Bollman Bros. Piano Co. did an excellent Victrola business. President Piper said that he had placed orders with practically every jobber shipping to St. Louis, and fared very well in the late distribution.

Harry Levy, of the Aeolian Co., says the busiest days of his life were those when the belated shipments arrived. The machines were unloaded on the sidewalk, and as one wagon placed them there another stood at the end of the line to receive them for immediate distribution.

"We did not get all of the machines we wanted for either our retail or jobbing trade, but I think the Victor factory did remarkable work in those last few weeks. We could have handled more, and our order books are open now for a large number of immediate shipments. Dealers from far and near tell us they have small machines in pawn for the delivery of large ones. Our own

retail department is in the same shape. We declined more jobbing orders than we filled, and handled hundreds of machines that never entered the stock room. But the trade ended in very satisfactory shape.

"I look for a splendid Victor year. Tradesmen everywhere are realizing that the talking machine opens a vast field for immediate and good profit and is a clean, likable business. More men are pushing the sales of talking machines to-day than ever before and more persons are ready to be sold to. The appreciation of the machine as a musical instrument and as an ornamental piece of furniture is rising daily. The stage is set for a monster business that will again tax the capacity of the factories."

The holidays interrupted the Aeolian Co. plan of demonstration concerts for records. It was realized that it would be impossible to gather attentive audiences for such concerts, and so that for the January records was called off. The series will be resumed at once, and matinee concerts for January records were planned to again attract attention, and with the February records full demonstrations will be undertaken.

Manager Robinson, of the Thiebes talking machine department, says that his department fared very well indeed with the holiday trade. "We had a good supply of machines," he said, "and we had the trade all right. Our needle manufacturers came across with a shipment of 100,000 of our special needles in time to save us from embarrassment during the big season, and now we have promise of a shipment of 1,000,000 within a few days." At the Thiebes store they are taking a good deal of pride in a letter one of the young women demonstrators received from a customer for whom she selected an order of \$85 worth of records. The order was open, it being a first order, and the machine buyer did not have time to listen. "Send what you think we would like," was the order, with a total limit. The letter says: "There seems to be nothing lacking in what you sent and nothing that we care to change."

The Silverstone Talking Machine Co. appears to have "put one over" on other Edison dealers in working out the factory permission to cut the prices of wax records to 31 and 21 cents. This permission reached the local trade just before the holidays and the dealers, almost without exception, immediately cut their prices, each fearing their competitors would get ahead of them.

Not so with Silverstone. He disregarded the notice for the time being and held to regular prices during the holidays. When any customer quoted cut prices to him, he told them that his stock was too complete to cut, but that after the holidays he would cut prices in half-dozen lots. And immediately after Christmas he put up signs and advertised to that effect. And he is doing a thriving trade.

Mr. Silverstone has concluded that the phonograph of to-day is a "musical instrument," and he will act accordingly to the extent of changing the name of his firm. After this month it will be the Silverstone Musical Instrument Co. "I got to thinking it over," he said, "after I had listened to the new reproducer and the disc machine. It is certainly a musical instrument. Persons who weigh the meaning of words would see my firm name and think that I sold only dictating machines. Hence the change. The fact that I am selling pianos now has something to do with this decision, but chiefly I want to rise to the dignity of my chief line, for I will place the phonographs first in my line."

Manager Ramsdell, of the Columbia Co., says that he is much pleased with the country holiday trade, but he admits that he was not in a very good mood a few days before Christmas. "We

did not get the advance Christmas business we expected," he said, "but the late orders looked very well. Since Christmas I have received letters from a number of our dealers reporting that they are cleaned out and are in the market for good bills. That is what makes me feel so good.

As to the new reproducers, Mr. Ramsdell says they have made a hit. "We received 100 of the improved reproducers," he said, "and have none in stock now. We have placed all of them on Columbia machines already in use, and the customers are immensely pleased at the improvement this modest investment has brought. We are ready to handle a lot more of them just as soon as we can get them. Columbia owners are sort of a club, and they pass a good thing along, and it is going to keep us busy keeping up with the demand that this 100 has created."

Mark Silverstone, of the Silverstone Talking Machine Co., has found a talking machine reputation a good asset for beginning a piano business. He is now selling pianos in his new location at 1124 Olive street, and he expects to have his entire business removed to the five-story building at that number by Feb. 1. "Several of my old-time customers have come in to buy pianos," he said. "They say, 'You treated me right before and I know you will now.'"

Mr. Silverstone expects to keep his talking machine line as the major in his business, and will give over to it almost the entire first floor. I am a talking machine man," he says, "but there is more space here than I need and I am going to let the pianos help pay the rent."

Mr. Silverstone's plans for his new building include a concert hall arrangement for demonstrations of the disc machines and monthly records. He has placed his pianos on sale in the building while it is still in the hands of the carpenters, and his talking machine arrangements are just becoming evident. His first floor demonstration parlors will be equal to any in the city, he says.

Mr. Silverstone's well-known advertising ingenuity has taken a new form in this situation. For one thing he has put his new disc machines on display in the new building, and to customers who care to hear them he takes them from the old building to the new, less than a block away, to impress them with the new store. He is doing this while the disc machines are not actually on sale.

The Thiebes Piano Co. has created something of a stir by having the Victor monthly catalog bound in a special cover each month. The special cover present views of the talking machine department, the monthly selections and other advertising for the firm, the last page being devoted to service. The catalog looks entirely different from those distributed with the local imprint.

The Columbia sales force is anxiously awaiting the arrival of the Grand machine, promised for last month but delayed. They think they have four or five as good as sold, and besides they want to show the novelty in their always attractive show windows.

The Thiebes Piano Co. has recently dropped the line, "Leading Victor Parlors," that for several years was a part of all that company's advertisements. Asked as to the change, Manager Robinson said: "I understand one of our newer competitors kicked on our use of the line which the Victor rules prohibit except under certain conditions. While I was confident that we could establish our right to the title, I did not think it worth while entering a controversy and so let it go. It will not hurt us much and will not do the other fellow any good."

Traveling Auditor Lauri for the Columbia Co. was a guest of the local store for two weeks just before Christmas, having been given this engagement after completing his work in Texas.

A. L. Ginzell, of the Ginzell Mercantile Co., of Trenton, Ill., and A. L. Askew, vice-president of the McFall Hardware Co., Benton, Ill., were recent business callers on talking machine jobbers.

The Columbia Favorite was the popular machine with that company in the holiday trade. At one time in December the local store had more than 300 in storage and cleaned out on them.

The John Wanamaker Store

Broadway and Ninth Street, New York

National Wholesale and Retail Distributor of the Victor-Victrola

The Wanamaker Record Cabinet for the Victrola

Designed by H. B. Bertine, N. Y., 1911. (All rights reserved)

Interior of the Record Cabinet (open)

Especially constructed to match the \$200 and \$250 Victrolas, Type XVI, in design, size and all woods. It comes in mahogany, Circassian walnut and all oak finishes.

Invaluable for record collections and especially desired by Victrola owners.

This Cabinet Complete Is Priced at \$75

IT INCLUDES:

Eighteen volumes, turkey red binding, having a capacity of three hundred ten and twelve-inch discs of all makes, backs of albums alphabetically lettered A to R. A record card index, shown below, also belongs to the outfit. Cabinet has a disappearing slide shelf to support the open albums, and is completely equipped with castors, brass hinges, lock and keys.

The Record Cabinet (closed)

Record Card Index

Designed by Louis Jay Gerson, N. Y., 1911 (All Rights Reserved)

Fits in the Top of Victrola

A Simple Arrangement For Classifying Victor Records.

Tray with Index and 200 Cards, Complete, \$1.75
Extra Cards per (100) 25c. Extra Index (A to Z) 25c.

This illustrates the mahogany tray which holds the ruled cards. These cards are separately indexed in alphabetical order. In writing on the cards, copy the printed matter direct from the record labels. Each card should describe and index the name of the music on each record, and the entire collection be represented in the index.

RETAIL PRICES OF THIS RECORD CABINET

In Solid Mahogany, Golden Oak or Mission Oak, \$ 75.00
In Circassian Walnut or White Enamel . . . 100.00
In Vernis Martin—(Solid Gold Leaf) . . . 250.00

THE DIMENSIONS OF THE CABINET ARE:

Height 4 ft. 4 in. Width 1 ft. 11 in. Depth 1 ft. 8 in.
The net weight is 137 Pounds.
The gross weight (packed for shipment) is 200 Pounds.

Wanamaker Record Cabinet Is Our Exclusive Design

This Record Album Rack, similar to a book rack, can be placed on or underneath a table. A wide window-sill will hold it conveniently, or it can rest on top of a book-case or other similar piece of furniture. The Victrola Album Rack comes in either genuine mahogany, quartered golden oak, or mission oak complete with five albums in either 10 inch or 12 inch sizes.

These albums are cloth bound and of the latest double face pattern containing 16 oblong indexed pockets of the strongest material.

Trade Prices Upon Application

British Talking Machine Trade of 1912 in Retrospect—Year Marked by the Appearance of Several New, Low Priced Records on the Market—The "Stencil" Record in Evidence—Expiration of the Berliner Patent and Its Effect—How the Cost of New Copyright Bill Has Fallen on the Trade Rather Than the Public—Comparatively Small Amount of Litigation During Year—The Situation in the Cylinder Field—What the Dealers' Protective Association Is Doing—Blue Amberol Record Announced—New Companies to Enter Talking Machine Field—New Company Formed to Take Over National Gramophone Co.—Other Items of Immediate Interest.

(Special to The Talking Machine World.)

London, Eng., Jan. 6, 1913.

The New Year is now with us. What trade secrets it will reveal remains to be told upon a future occasion. From a business viewpoint it has opened up amazingly well here, and with the expression that it will continue to offer equally good prospects throughout its span of existence, we will turn to a retrospect of trade conditions during the past twelve months. Copy book maxims have it that one should look forward; never backward. I believe in looking both ways, for in business "success doesn't consist in never making mistakes, but in never making the same one twice." In other words, one builds hope of the future upon avoiding failures of the past. Anything I may say, therefore, is without string, without partiality, and with the sincerest hope that this brief chronicle may be accepted as a mirror of events as I see them. Others may not see eye to eye with me in every thing, but with slight modifications according to individual view, I believe it will be conceded that my presentment of the trade situation during 1912 is founded upon incontestable facts.

The Record Situation.

An examination of the disc field furnishes interesting reading. During the year close upon a dozen new records have been placed on this market, but contrary to general expectations the consequent increased competition, broadly speaking, has not materially affected the sales figures of individual record manufacturers. As a matter of fact the new records, in the main priced at 1/6, as against the hitherto recognized standard figure of 2/6, were responsible for the cultivation of fresh fields and pastures new, although there can be little doubt but what a portion of the extra trade occasioned would have gone to the account of the older firms. The latter, however, have nothing to complain about, for if the result of my inquiries is confirmed by their profit and loss accounts in pretty well every instance, a very considerable trade increase is to be recorded. Certainly my reports emphatically indicate a much greater amount of business all round, compared with the figures available for the preceding year.

The "Stencil" Record Appears.

To my American and Colonial readers, it may appear somewhat extraordinary that a ten-inch double-faced disc of average good quality can be sold at the low price of 1/6 retail, 10½d to 12½d wholesale. The reason is not far to seek. Some of the records represent surplus factory production, put out under a variety of names and labels; others are what we call "stencil" records. These latter are in every respect the same as the mother records; that is to say so far as concerns the artist, selection, and recording, the only difference being their issue under a different name and a nom de plume for the artists. The mother record may be sold at 2/6, the offspring only 1/6. A peculiar situation, you must agree.

Apart from this aspect of the disc record situation, from a scientific viewpoint, a certain amount

of progress is identified with 1912. As a rule, professional records are not of a confiding nature, so that one is precluded from entering upon specific details of the improvement made in the reproduction of sound. Although individually these improvements may appear to be of no great significance, collectively they are of the utmost importance as representing a progressive step in the scientific fight which is being constantly waged for the harnessing of nature, so to speak.

Recording has advanced in many directions, and by the purity of tone alone innumerable records testify to the progressive action of the man at the helm. A diminishing amount of surface scratch is noticeable.

A Progressive H. M. V. Move.

With the exception of one or two insignificant issues all the leading disc records here are double-faced. The last to come into line was the Gramophone Co., Ltd., who during the year announced an important departure in the direction indicated. With such an extensive repertory of single records the action was certainly a bold one. The change is evidently to be of a gradual nature, because so far only instrumental selections are recorded on the double-sided discs, the number of which is quietly on the increase. This far-reaching event won instant approval from the trade, especially having regard to the fact that the company issued the double-faced record at the same price as that charged for the single discs, i. e., 12-inch 5/6, 10-inch 3/6. Naturally the business increased tremendously and H. M. V. agents have every reason to congratulate themselves upon their allegiance to a company whose first interests are that of their dealers.

Price Reduction.

The tendency to reduce prices of established records was this year considerably less noticeable than last. During December Messrs. Hough announced that their velvet-faced record, hitherto sold at 3s., will be reduced to 2/6 each, the reason given being the discovery of a new process which facilitates manufacture.

Another announcement of great importance emanated from Messrs. Barnett Samuel & Sons, Ltd., who are the sole agents for Fonotopia, Odeon and Jumbo records. Intimation was given to the trade that the well-known Odeon record would be reduced from 4s. to 3s. each. This departure exercised a big influence in the direction of increased sales, and was the subject of much favorable trade comment.

Beka English Factory.

The enormous expansion of the Beka record trade in this and other countries was a determining factor in the decision of the Beka Company directors to facilitate the manufacture and save time by the establishment of an English factory. Plans were soon developed and without much loss of time building operations commenced a few months ago. Situate at Hertfordtown the factory is now *fait accompli* and has been in full operation for some time. The ground area is some 15,000 feet, and while most of this is utilized provision has been made for an early extension of the building. W. O. Ruhl expresses himself as very pleased with the general quality of the records produced in the new factory. Upon another occasion I shall hope to give my readers further details concerning this departure.

A Fine Cut Disc Record.

Last year (in my review of the year 1911) I spoke of the coming "Marathon" long playing record and said that "the sooner the proprietors get active the better." In the spring of 1912 preparations commenced in earnest and it was not long before the firm, styled The National Gramophone Co., Ltd., began an active campaign to make known their unique record. The "Marathon" people use a very fine thread on the record, by

which it is possible to obtain as much as six and one-half minutes' of music on one side of a 10-inch disc. The longest piece, however, recorded so far plays for five minutes and forty seconds, which in itself is a wonderful achievement. The Marathon 12-inch record, of course, carries a proportionately greater amount of music.

Although only in operation a few short months, the company's business has expanded to a remarkable extent, the latest returns being most satisfactory. Their £1 shares are (at the time of writing) quoted on the Stock Exchange at close upon £9! The advent of the "Marathon" record was certainly a most important feature of the past year's business.

Expiring of Berliner Patent.

The seeming eagerness with which the expirations of the above famous patent was awaited in trade circles here, led me to believe that European manufacturers would prepare to invade the American market in force. There has, however, been little evidence of any such intention lately, and I believe as a matter of fact, except perhaps in an isolated case or two, there has been no serious attempt in the direction indicated. Record manufacturers this side are busy enough providing for the home and Colonial demand, and many think it good policy to fight shy of the almost certain litigation which would follow any attempt on their part to capture American business, even if it were possible to secure any substantial support from your dealers.

Effect of the Copyright Bill.

Six months ago—July 1, 1912, to be precise—the act providing for royalty payments came into force. It has created a tremendous amount of work for the record people, and in very many instances special staffs have been created to deal with the detail involved. As I predicted, the cost of the act has not fallen upon the public. It represents a big item for the trade alone, to pay, and especially so with the manufacturers, becomes increasingly serious. In working, the act has presented several difficulties, due in part to the obscure meaning of certain clauses which lend themselves to slightly varying interpretations. All things considered, however, the trade seems to have adapted itself very well to the new order of things. It is really early days yet, but there are not wanting signs of indication that the copyright act from the author's viewpoint has been very successful. But in this regard, I may say that record makers have in course of preparation certain protective measures which may or may not minimize the royalty expense. It is obviously inexpedient at the moment to enter into details, but at some future date things may develop in sufficiently concrete shape to justify publicity.

Litigation.

The courts were not greatly troubled during 1912. With the exception of one very important action—National Phonograph Co., Ltd. v. National Gramophone Co., Ltd.—there were few cases of interest. In this action the National Phonograph Co. sought to restrain the defendant company from using the word National. Interesting evidence—much of it of quite an historical nature—was furnished by a number of prominent trade witnesses, and after a protracted hearing, His Lordship intimated in a verbal manner that plaintiff's case was none too strong, but that whatever his opinion may be, the defendants should proceed with their answer. After some further evidence, plaintiff's counsel intervened and stated that his clients had instructed him that, having regard to the views expressed by the learned judge, they did not desire to continue the action and accordingly withdrew. His Lordship thereupon directed that the action should be dismissed with costs.

Another case was that in which Lionel Monckton sought to claim copyright in sound. He based his case on the common-law right of proprietorship,

FROM OUR LONDON HEADQUARTERS—(Continued from page 38).

and sought to restrain defendants from reproducing his song "Moonstruck" on gramophone records. The copyright act was not in force at this time, and the Master of the Rolls in non-suiting plaintiff said "the law had never recognized property in an idea expressed not in language but in some system of musical notation, when it had once been made public. Plaintiff was endeavoring to assert a right which did not exist at common law."

The Phonograph Trade.

Whether or not the cylinder will ever come into its own again time and the Thomas A. Edison Co. will determine. If progressive action, a constant striving after something better all the time, and many other attributes, in conjunction with effective advertising, counts for anything, then the Edison Co. will have cause to congratulate itself upon the energetic fight it has consistently waged in favor of cylinder goods. The trade situation is of good omen, and sales during the past year have been of satisfactory volume. It may be very reasonably ascribed to the many improvements and innovations introduced by the Edison concern here. Before I enter upon these, it should be mentioned that Thomas A. Edison, Ltd., is responsible for the greater bulk of cylinder trade in this country, and under the direction of Paul H. Cromelin, the outlook has considerably improved. By the way, during 1912 an important change was made in the style of the company, the title, National Phonograph Co., Ltd., having been dropped in favor of Thomas A. Edison Co.

For the first time I believe in its history, the company announced in February an exchange scheme of a generous nature whereby dealers were enabled to relieve themselves of much old and otherwise unsalable stock. Later, the scheme was extended to the public; it remained in force until December 31, and was very widely utilized. This in itself exerted a powerful influence for good, and when later in the year a very effective and improved home recording apparatus was marketed, dealers began to revive interest in the vast possi-

bilities for business thus afforded. No other kind of machine offers provision for this fascinating pastime, and the trade did not fail to push it as an exclusive Edison feature.

Especial interest is attached to the issue of the new "opera" type phonograph, owing to its unique features. Equipped with a moving mandril, the reproducer being stationary, this new method of playing a record won much admiration, and dealers have experienced quite a nice demand for the "opera," which certainly represents a forward step in the reproduction of music mechanically.

In the latter part of 1912 announcement was made of the suspension of further issues of the Standard series, although deliveries would be made of the old titles which are retained in the Edison catalogue. Its effect was an immediate increase of the Amberol sales and attachments. From all of which it is evident that the Edison business is not going to lag in 1913 when, I understand, a number of other new lines will be announced. The first—that of the Blue Amberol record is referred to elsewhere, and doubtless now that the Edison disc is marketed on your side, it will not be long before the British trade will have a sight of it.

Dealers' Protection Association.

Reference to the above may legitimately cover a brief survey of the situation in regard to price maintenance, and I propose therefore to deal with the subject generally. Perhaps at no other time has such a serious attempt been made to grapple with this question as during the past twelve months. Early spring saw the formation of the Gramophone and Phonograph Dealers' Protection Association, its chief object apparently being to arouse manufacturers to their responsibilities in connection with safeguarding not only their own interests but that of their customers also against the growing practice of undermining established prices. Let us examine the position. The association has been at work some eight months, and viewing its operation in the most impartial light I am unable to report very material results. The officials, I know, are animated

with the sincerest desire to accomplish good, but it is a very uphill fight they are waging. Without substantial membership their efforts lack the force and influence necessary to move "the gods" to a full realization of the position of things, and with the exception of one or two manufacturers the rest are practically indifferent to all representations. To combat the evil successfully I maintain that it is the manufacturers—in a united body—who must take action. A dealers' association is of great subsidiary value, and for this reason its administrators are entitled to all the encouragement and support of which the trade is capable. The association has unlimited sources of great influence at its disposal, but it must first place itself in a position to command these sources by sheer strength. An essential consideration to this end is, of course, numbers—a membership of one or two thousand of the better class dealers, but one cannot disguise the fact that to secure this is, under present circumstances, a task of such gigantic magnitude as to appal the most optimistic. Acting in quite an honorary position the present officials are devoting considerably more time to the work than can reasonably be expected of them, having regard to their business interests, and while the valuable services of these gentlemen should be retained as long as possible, there is no doubt in the minds of thinking men that a paid official should be appointed, as in the case of the cycle dealers association, whose duties would mainly center upon gathering in the subscriptions. With that, a brief reference to what the companies are doing towards suppressing price cutting, and I will pass on to another subject. By its system of trading only with dealers, the Gramophone Co., Ltd., is enabled to exercise a close control over its output and in consequence it is an exceedingly rare occurrence for "H. M. V." records to be sold under price. A few other concerns trade direct and with them the same conditions apply. But the majority of records are sold through factors, and to a great extent manufacturers thereby lose con-

control over the retail distributor. Should they be inclined to take action against a "cutter," there being no patents affected (except in one or two cases), the courts will only grant an injunction restraining the dealer from selling below the agreed price. Great praise is due the Columbia Co. in particular for the active campaign waged against this profit-wrecking mania. During 1912 the company has secured quite a number of injunctions, apart from the substantial amount of good accomplished by friendly representations. It has certainly made every endeavor to protect legitimate and straightforward trading dealers, and expresses intention of waging an active campaign against all who sell Columbian goods under established prices.

Upon this question, the British Gramophone Co. also maintains a very strict attitude. In any flagrant breach of its agreement a warning is issued to the delinquent, who, if not amenable to this reasonable representation, is at once cut off the books. A notable case occurred during the year, and being a well-known and large buyer, it naturally caused a deal of surprise in trade circles. A policy is only a policy when it is rigidly enforced!

In other directions certain companies have made spasmodic efforts to stem the tide of price cutting, but as may be expected, with little result. A continuity of effort must obtain all the time if any impression is to be made. However, the signs of 1912 in this respect are much better than in any previous year, and with the new year hope is born afresh.

Personal.

During the year a number of staff and agency changes occurred and briefly the following represent the most important cases:

After several years' service with the Gramophone Co., Ltd., James C. Goff relinquished his position as manager. Messrs. Anderson, Davis, Heighway and Crawley have also resigned.

S. P. Turner, one of the joint managers at Messrs. Pathe Freres has now commenced on his own account. He is managing director of a new concern—Saphone, Ltd., with offices in this city.

Charles J. Hopkins, who has been associated with this industry since 1907, is now with Thomas A. Edison, Ltd., in charge of its business phonograph department. Several years with the Columbia Co., Mr. Hopkins possesses a wide and useful experience of this trade, in the interest of which he has made many journeys in foreign climes.

The agent of the Dacapo record since its inception here, Mr. Barrand (Barrand & Co., Ltd.), recently relinquished the agency, and has now taken over an entirely new record to this market. It is called "Invicto," and in a short time has won much favor.

The Dacapo agency is being run by a new company, the Dacapo Record Co., Ltd., with Mr. Hale as manager. Formerly with the Columbia, and the Homophone companies, this gentleman brings to bear an experience which will stand him in good stead in his new sphere of activity, and I beg to tender him my hearty congratulations.

Miscellaneous.

Quite a number of novelties were introduced during the year. In point of number, so-called tone-modulators easily carry the day, but I have yet to discover one of real merit.

The most interesting device for the improvement of sound is undoubtedly the Rayflex sound reflecting elbow. It is the novelty of the year. With ordinary elbows the top is round, but the Rayflex represents a radical departure from this principle. On the top bend there are two flat plain surfaces set at different angles, by means of which the sound is directed straight out of the trumpet without impinging on the walls thereof. The result is a purified and increased reproduction. A good thing!

A number of fires are to be recorded. Early in the year, the premises of Robert Nelson & Co., Edison's factory, London, were badly damaged and much stock destroyed. It has all been made good and business is proceeding as merrily as ever.

The month of May witnessed a disastrous outbreak at the Columbia factory, located at Earlsfield. The whole place was practically gutted, valuable buildings, stock and machinery being reduced

to a scrap heap. Not during a particularly busy time of year, yet the fire was sufficient to cause considerable inconvenience and delay in obtaining supplies. Other factory accommodations was fortunately available. The factory is now rebuilt on an enlarged and improved scale, and equipped with up-to-date machinery, is turning out better records than ever.

Later in the year a terrible fire occurred in City Road at premises situated between the Columbia and Baker buildings. Two persons unfortunately lost their lives. The prompt attendance of the fire brigade resulted in confining the fire to the building in which it originated. A lucky escape though, for the two record houses on either side.

Blue Amberol Edison Record Announced.

At the moment of closing for press I have received intimation of the early issue of the Edison Blue Amberol record. Recording for the Standard record has ceased and the January wax Amberol supplement is the last to be issued. About fifty titles in the February list represents the initial output of Blue Amberols. Of course, titles listed in present catalogue of wax Standard and Amberol records will be available for supply against order. That being clear, let me say that in common with all who have heard Mr. Edison's new record, I believe it will absolutely revolutionize the cylinder market, and interest a goodly percentage of disc enthusiasts, too. For the sole reason that its tone quality is so sweet and natural, pure and free from harsh foreign noise in reproduction, as to at once stamp its superiority over all other records. My readers are doubtless aware that the Blue Amberol is practically unbreakable, and according to a recent test, almost unwearable. It is reported that a sample was played three thousand times, the three thousandth reproduction being as good as the first. That's an experiment though, that few will want to try, but as testimony of the record's durability it's a good sales point of which full advantage should be taken.

The Blue Amberol will certainly make a strong appeal to the masses, because with commendable foresight Mr. Edison ensured that it could be played on all existing machines without alteration, and with much better results than that obtained by the wax Amberol. The highest and best degree of sound reproduction is, however, made possible by the use of a new diamond point reproducer, just marketed. The purity of its tone and power of delivery in reproducing the most delicate shades of music is really wonderful, and the company is justly proud of the new goods as representing the most scientific advance in the art of recording and reproducing sound within recent years. The result of thousands of experiments, this new diamond point reproducer in its construction alone represents a radical departure from the general form of phonograph repro's. A world search for a new diaphragm, after many trials and the testing of an innumerable variety of substances, ended at last in Japan, where a suitable and satisfactory material was found. The Blue Amberol record will be issued in two classes—ordinary 2s. each retail, concert and grand opera selections, 3s. The latter is particularly significant and will come as a pleasant surprise to cylinder users in view of the hitherto prevailing prices, 4s. to 8s. each.

Ample provision is made for exchanges, and under the terms announced dealers are allowed to return their stocks of wax Amberol and Standard records for full credit to the extent of 20 per cent. in value of their monthly Blue Amberol record purchases. 1913 is evidently going to be a red letter year for Edison dealers, the Blue Amberol being only the first of the many new things coming along, including the new concerted horn cylinder machines, the new disc (ready, I understand, in a month or so), a new Home recording campaign, etc. It will not be the fault of Thomas A. Edison Co., Ltd., if the cylinder does not come into its own again. The prospect could not be brighter, and with hearty co-operation Edison dealers may expect to enjoy a real trade boom. The Blue Amberol is going to instil a little enthusiasm into all apathetic phonograph owners, for let them once hear the

record, they are converted. Another time I will hope to be in a position to announce further interesting details, meanwhile, I may be allowed to heartily congratulate the Edison company upon the issue of such a beautiful production.

Saphone, Ltd., a New Concern.

S. P. Turner, who recently resigned the management of Messrs. Pathe Freres, commencing a new company under the name of Metophone, Ltd., now announces that in consequence of the word "Metophone" having been previously used in connection with records, the company will in future be known as Saphone, Ltd.

Synchronized Film Talking Machine.

Apropos Mr. Edison's synchronized film and talking machine, of which, by the way, some favorable press comments have appeared this side, it is interesting to read that the Gaumont Co. recently demonstrated in Berlin a device which they claim solves the problem of perfect synchronization. *Nous verrons!*

New Companies.

The Victory Gramophone & Record Co., Ltd., private company. Capital, £100 in £5 shares. Registered by Goldberg, Barrett & Newall, 2-3 West Street, Finsbury Circus, London, E. C.

Barker, Son & Heins, Ltd., musical instrument dealers. Capital, £1,000. No address given.

Pathescope, Ltd. Objects: to secure the exclusive trading rights of Pathe Freres home picture machine for the United Kingdom.

Taxing Foreign Companies.

Of great interest to manufacturers' agents in this country, who, according to the "British Trade Journal" are threatened by income tax officials with requests for payment of income tax upon the profits made in England by the foreign manufacturers whom they represent is the opinion of Mr. F. G. Aylett, whose position as the honorary solicitor to the Manufacturers Agents Association, lends considerable value to his views upon the matter. Mr. Aylett writes: "When a foreign manufacturer has an office in this country, holds stock here, and collects accounts and discharges liabilities here, then the foreign manufacturer, or failing him, his manager or agent, is liable for income tax on the profits of the business done in this country. On the other hand, if the agent merely receives a contribution from the manufacturer towards the expenses of the office, needs to receive confirmation of contracts before he enters into them, even though he holds stock, he is not liable for income tax, provided that all payments for goods made to the agent are remitted by him straightway to his foreign manufacturer. The chief point upon which the manufacturers' agent must be circumspect is that he must not pay cheques received from his customers into his own bank, but must forward them, endorsed, if necessary, to his foreign principal."

In New Premises.

The Seymour Manufacturing Co. inform me that they have removed to a more convenient location—50 Tufnell Park Road, Holloway, London, N.

His Master's Voice Publicity.

The New Year has opened up remarkably well for His Master's Voice dealers, for which the advertising and the issue of choice lists of new records is largely responsible. I have before me the January Supplement of H. M. V. Records, and to say that it is replete with unusually good fare is to convey but little idea of quality offered. Perhaps the finest orchestral combination in the country is the New Symphony Orchestra, whose contributions to the list under review are characteristic of the difficult classical selections which they undertake with such masterly credit. The following are the three records in question: Theme and Variation, Suite No. 3 in G., Op. 55. Themes 1, 2 and 3; Themes 4, 5 and 6; and Themes 8, 9 and 10 (Tschaiowsky). It would, however, be invidious to select any special records for distinctive mention and dealers are well advised to study the complete list for themselves: "Why Do the Nations," "Messiah" (Handel), Mr. Clarence Whitehill; "Love Not the World," "Prodi-

FROM OUR LONDON HEADQUARTERS—(Continued from page 40).

gal Son" (Sullivan), Mme. Kirkby Lunn; "The Yeoman's Wedding Song (Poniatowski), Mr. Thorpe Bates; "The Sailor's Dance" (Molloy), Mr. Harry Dearth; "The Floral Dance" (Katie Moss), Mr. Peter Dawson; "Love and Wine," "Gipsy Love" (Lehar), Mr. Peter Dawson; "Somewhere a Voice is Calling" (Arthur Tate), Mr. Hubert Eisdell; "Let Me Dream Again" (Sullivan), Miss Percival Allen; "Mona" (S. Adams), Miss Ruby Helder; (a) "Bourrée" (Handel), (b) "L'Abeille" (Schubert) (Violin), Miss Marie Hall; "Novelletten—Last Movement" (Gade), Renard Trio; "Gems," "Duchess of Dantzic" (Caryll), Light Opera Company; "I Had a Little Garden" (Hanray), Mr. Tom Clare; "The Suwanee River Bend" (Mierisch-Lowitz), Mr. Arthur Collins; "The Kilty Lads" (Lauder), Mr. Harry Lauder; "The Pro's Landlady" (Pether), Mr. George Robey; "Come Over the Garden Wall" (J. W. Tate), Miss Clarice Mayne; "Ragtime Soldier Man" (Irving Berlin), Messrs. Collins and Harlan; "Be My Little Baby Bumble Bee" (Murphy-Marshall), Miss Ada Jones and Mr. Billy Murray; "Jubilee Medley," American Quartet. H. M. V. double-sided records: "Lurline," overture (Wallace), and "Crown Diamonds Overture" (Auber); "Gipsy Love," Selection I, and "Gipsy Love," Selection II (Lehar); "Le Myosotis Intermezzo" (Wachs), and "Salome Intermezzo" (Lorraine), the Band of H. M. Coldstream Guards; "Badinage" (Mindeatt), and "Song of Autumn" (Joyce); "Three Dances" from "Palace of Puck," first dance, "Tarantella; second dance, "Rhodanthe;" third dance from "Palace of Puck," "Masquerade" ((Fenn-Leyland), and "Dance Russe" (Tschaikowsky), Mayfair Orchestra "The Girl in the Taxi," waltz (Jean Gilbert), and "Un Pen d'Amour," Melodie (Las Litesu), and "The Girl in the Taxi" March (Jean Gilbert), and "Once

Upon a Time" (Lincke), Jacob's Trocadero Orchestra.

Government Report Criticized.

In many directions the American Governmental report, which has been extensively published your side, of talking machine trade in Great Britain is amazingly inaccurate and misleading, a typical instance being found in this paragraph:

"Both cylinder and disc records are used, but the former more extensively, as the machines with which they are played are cheaper than the disc machines, and the records themselves cost less than the disc. The latter, however, have grown in favor among those able to afford the more expensive article."

My experience is that for every cylinder record sold in this country, there are at least 100 discs sold. Ninety-nine per cent. of new buyers choose the disc; a good disc machine costs no more in price than does a good cylinder machine; often in fact, it is the cheapest. According to list prices, and having regard to the fact that one disc contains two selections, there is no difference between the lowest prices of the two types of record!

Outline of New Company.

The subjoined report has just reached me: A company has been formed with a capital of £250,000 in shares of £1 each, to take over the present National Gramophone Co., with all the assets, including the patent rights all over the world, and including existing cash assets, etc. The vendor company will receive £165,000, leaving £85,000 for working capital, of which amount £50,000 has been guaranteed. The nominal capital of the vendor company is £25,000. Of this amount the directors have been able to secure the cancellation of 11,000 shares, leaving 14,000 to participate in the purchase consideration.

The vendor company has reserved to itself the

right to apply for, within eight days of the registration of the new company, 150,000 shares at par. A statement of the earnings of the vendor company is in course of preparation and will be published very shortly. In the meantime the directors desire to inform the shareholders that the trading results have been far in excess of their anticipations, the inability of the vendor company to cope with the orders in hand being the reason for the formation of a new company.

Apropos the above, the following which appeared in the columns of "John Bull" is of interest:

NATIONAL GRAMOPHONE—A PROMISING INDUSTRIAL.

The forecasts which I have made with regard to the development of business in the miscellaneous department of the Stock Exchange are being amply fulfilled. National Gramophones afford a distinct example, and in response to the active demand the shares have gone up to 7 5-8. Profits are being earned already, as the chairman stated at the recent meeting, at the rate of 100 per cent. per annum. The company owns the world's master patents for records cut to some depth, but practically without width. This system is claimed to obviate all harshness heard on records chiefly used hitherto, is more reliable, playing twice as long as any others, and is, therefore, of great service. A German company is in process of formation, in which the National Gramophone Co. will hold a controlling interest, while negotiations are stated to be well advanced for the sale of the French and American patents. It is reported that in that case royalties would accrue to the company, which are estimated at £42,500 for the French, and £60,000 for the American patents per annum. Should these sales be successfully concluded, the price of the shares would, of course, be greatly affected.

SCHOOL PROPAGANDA INTERESTS.

Professor Goodwin of the Educational Department Tells of Dealers Specially Interested.

Professor Frederic Goodwin, director of the Educational Department of the Columbia Phonograph Co., which was only created four months since, reports a most pleasing interest on the part of dealers as regards the school business. "Our work the past few months has achieved gratifying success," stated Mr. Goodwin in a chat with The World. "I am naturally optimistic over the outlook for the ensuing year, and with the appointment of special school representatives in every city of importance,

we are certainly prepared to make a strong bid for school business during 1913. Nothing succeeds like success, and judging from the reports received from our new representatives, our school business will certainly spell success. We closed a number of important sales during the past two months, and our dealers who are going after school business are taking advantage of every co-operation offered them by this department. It is pleasing to observe that our initial publication entitled "School-room Music," is at present running in its sixth edition, and this meaty booklet is being generally commended by both our dealers and school teachers. Our plans for the coming year are based on the development of our work along the lines we have started, and our

working in harmony with the leading school-room book publishers will doubtless tend toward the production of very satisfactory results."

The special representatives referred to above are as follows: W. M. Edwards, Atlanta, Ga.; Philip Lang, Baltimore, Md.; E. A. Kingsley, Boston, Mass.; W. M. Handley, Birmingham, Ala.; Mr. Brown, Cincinnati, Ohio; C. A. Routh, Cleveland, Ohio; J. G. Kirby, Dallas, Texas; Louis Rae, Detroit, Mich.; W. H. Moore, Hartford, Conn.; C. P. Herdman, Indianapolis, Ind.; L. V. Smith, Kansas City, Mo.; Leo J. Reid, Louisville, Ky.; J. M. Means, Memphis, Tenn.; H. M. Young, New Haven, Conn.; D. Barre, New Orleans, La.; G. C. Kenny, Omaha, Nebr.; Jos. Murphy, Philadelphia, Pa.; Harry Buck, Pittsburgh, Pa.; J. F. Halfpenny, Portland, Me.; Miss A. Pennick, Portland, Ore.; Herbert Corri, Providence, R. I.; F. W. Warren, Rochester, N. Y.; E. L. Smith, Scranton, Pa.; F. W. Doubleday, Springfield, Mass.; Chas. Byars, St. Louis, Mo.; R. L. Blanchard, St. Paul, Minn.; L. L. Archibald, Terre Haute, Ind.; Albert Mack, Toledo, Ohio; C. B. Eastburn, Wilmington, Del.; W. B. Sharpe, San Francisco, Cal.; W. T. Graves, Washington, D. C.; C. F. Baer, Chicago, Ill.; M. A. Dunn, Buffalo, N. Y.; H. D. Turner, Los Angeles, Cal.; New York and Brooklyn, Robert E. Cleary, H. E. Foster, A. L. Williams, W. D. Martone and A. N. Thomas.

INVENTORS ACTIVE IN 1912.

The marked prosperity of the country is reflected in the receipts of the United States Patent Office from fees for applications, according to Edward B. Moore, Commissioner of Patents, in his annual report. The total receipts of the office for the fiscal year ended June 30 were \$2,094,059, compared with \$1,987,778 for the previous year. The number of applications for patents for inventions aggregated 69,236, against 65,154 for the fiscal year ended June 30, 1911.

The establishment of the Patent Office as an independent bureau of the government is recommended by Commissioner Moore. He also recommends that a new building be erected. The present quarters, he says, are insanitary and crowded and valuable records are in constant danger of destruction by fire.

A BUSINESS OPPORTUNITY

A live wire Electric Self-Stop for the live wire dealer. Now is the time after the holiday rush to handle an accessory of merit and push it.

Here is a Self-Stop of quality. It is absolutely guaranteed and means very large profits.

Large and reputable dealers in the East have turned prejudice into profits. Why?

The answer is in the booklet. Write for one.

ADVERTISING MANAGERS CONDEMN OLDFIELD BILL.

Their National Association Issues Strong Plea Against Proposed Measure—Fight Against Bill Has Spread Throughout the Country—Thomas A. Edison's Views on the Patent Law and Its Operation Will Be Read with Interest—He Is an Authority.

In the talking machine trade jobbers and dealers should keep alive to the fact that the campaign against the Oldfield Bill is still on, and those who have not taken steps to get in touch with their Senator or Congressman and acquaint him with their views regarding their opposition to this measure are neglecting a very important duty.

The fight against this proposed measure which was given its initiatory stimulus by the efforts of the manufacturers of talking machines, has now been taken up all over the country, and the Association of National Advertising Managers has issued a strong plea urging every man connected with advertising—manufacturer, agent and publisher—to immediately aid in the opposition to the Oldfield Bill which will be voted on by Congress soon. It properly says:

"The passage of that bill would be a severe blow to all advertising, as Section 2 proposes to make impossible the fixing and maintaining of prices on patented articles. It would be a misfortune of far-reaching effect to have the American Congress declare itself on the wrong side of this issue, for it would spread the impression that price regulation by the manufacturer was outlawed and would start an onslaught of price cutting on both patented and unpatented goods as well as influencing the Courts in their judgments on all price agreements and price-maintaining systems."

It is interesting to note that in Leslie's Weekly of January 3, Thomas A. Edison, who has been granted patents on about 4,000 inventions expressed his views very fully in opposition to the Oldfield Bill when he said in part:

"The patent law as it exists is fundamentally sound. What is needed is not the making of any changes in the fundamental principles of the law,

such, for example, as lessening the consideration granted to an inventor for making his invention publicly known, thereby discouraging and hampering the inventor, instead of giving him encouragement. What the public has contracted for is new and useful devices, introduced commercially so they may enjoy the use thereof, and to secure this the inventor should be given prompt and effective protection against an unworthy competitor.

"The inventor is in a position to obtain capital when the contract between the Government and the inventor is being carried out in a practical manner; no great combination of capital can raid him—there are literally thousands of small shops with which he can deal.

"The next thing is the introduction and selling of the invented process or device to the public. This the inventor does by employing jobbers and dealers, which are the common merchandising instrumentalities of the country. These jobbers and dealers, to all intents and purposes, are the salesmen of the inventor; they are part of the mechanism the inventor must use to introduce, educate, and create a demand from the public and sell the goods.

"These jobbers and dealers trade in goods of which the great preponderance are not patented. They are free goods and the public has been educated as to their value. The demand is large and the profits are not great, but, as a rule, sufficient. Competition has been fought to a finish; all know what it means to cut prices, hence the custom is to put a moderate profit on each article, the large sales bringing an adequate return.

"The inventor and his associates will not make the price to the public any higher than is necessary to afford such percentage of profit to the

jobber and dealer as will prevent them from giving up the sale of the goods; just that amount of profit over free goods that will recompense the sellers for the risk and comparatively small demand. Any higher price will diminish the inventor's sales. These price contracts should be enforceable by suit for infringement, as now; otherwise the Government is not carrying out in good faith its compact with the inventor or making the law practical.

"I have heard and read numerous statements that many corporations buy valuable inventions to suppress them, but no one cites specific cases. I myself do not know of a single case. There may be cases where a firm or corporation has bought up an invention, introduced it, and afterwards bought up an improvement and ceased using the first patent—suppressed it, in fact. Why should that not be done? It is for the benefit of the public that it should get the latest improvement. I can not see why the public should be asked to change the patent law to enable a competitor to get hold of the disused patent so he could have a basis on which to enter into competition with the pioneer of the invention who has introduced an improved machine.

Before any changes in the law are made, let the objectors cite instances where injustice has been worked on the public by the alleged suppression of patents for other reasons than those which were due to improvements."

SUPPLEMENT TO SPANISH RECORDS.

The February supplement of Spanish records just issued by the Columbia Phonograph Co., contains the selections of a number of artists prominent in the operatic and musical worlds. The cover of this supplement is unusually attractive, and portrays Alice Zeppilli, the world-famous soprano. The Columbia business in Spanish records is steadily advancing, and careful attention is paid to the production of records that will appeal to the music-loving population of Latin America. The recent Portuguese-Spanish catalog published by the company has been accorded a most gratifying reception by South American dealers.

MR. DEALER, SEND YOUR ORDERS TO

The Corley Company

RICHMOND, VA.

We give our Regular Dealers first consideration, of course, but we are strong believers in the Victor Department of our business and we are Big buyers, so are more likely to be able to fill your orders than any other distributor in this growing Southern territory.

RETURNS FROM RECORD MAKING TRIP AROUND WORLD

An Interesting Story of Henry L. Marker's Trip and Accomplishments in Hawaii, Singapore, Java, Hong Kong, Shanghai—Some Odd Experiences in Making Records—Many Difficulties Encountered, but the Winning Man Conquers—Java a Country That Delights the Student of People and Happenings—How Marker Managed to Secure a Photograph of a Procession in Which Three Sons of the Sultan of Java Participated.

On Christmas eve, 1912, Harry L. Marker, Columbia recording expert, boarded a train in the Jersey City station of the Lackawanna railroad

H. L. Marker.

and made the last lap of a 12,500-mile hike that brought him home to Orange, N. J., just in time to celebrate Yuletide. He had left China nearly two months before and traveled west—the Trans-Siberian railroad across Siberia and Russia; on through Germany, after an argument with the cus-

H. L. Marker's Laundresses at Work.

toms officials, a stop-over in London while awaiting some baggage that had gone astray in the middle of Europe; and then the North Atlantic trip.

in some experimental work and then traveled together as far as Frisco. Here they parted. Mr. Emerson stayed a while in San Francisco, his birthplace, and Mr. Marker kept going west. His first stopping place after leaving this country was Honolulu, and the result of his visit there materialized in the wonderful series of Hawaiian records that the Columbia Phonograph Co. has since put on the market. Some of them have been listed domestically for home consumption, and are proving very popular.

But the records had nothing on Marker, for in Hawaii he made himself just as popular as the records have become in America, and the oldest inhabitant of Honolulu will tell you that there never was such a triumphal exit from that fair and beautiful island as that made by Harry L. Marker. Hawaiian royalty turned out for the occasion and, led by princesses of royal blood, with native bands and singers, the Harry L. Marker farewell to Honolulu was a tremendously impressive and picturesque occasion. Mr. Marker

Native Band of Batavia on Way to Make Records.

himself, the center of all the proceedings, was easily the most picturesque figure there, with floral decorations and wreaths and festoons of flowers and garlands of green stuff draped around his manly chest and shoulders. The latter he flung back onto the surface of the waters in token that he returned the good-will of his hospitable hosts.

From Hawaii Mr. Marker went to Singapore. In Singapore he found John Dorian, the Columbia Phonograph Co.'s Oriental representative, in the hospital. Mr. Dorian had gone down with fever and dysentery in Siam and had journeyed by grad-

made with Tio Tek Hong, and where Mr. Marker made over five hundred records. It is quite possible that those Javanese records might not appeal to the cultured musical taste of America and Europe, but over in Batavia they are reckoned

John Dorian on Left—H. L. Marker on Right.

great stuff. Most of them are native music pure and simple, but among them are adaptations from Broadway. There is one in particular—a record of "After the Ball"—sung in Javanese and accompanied by the Javanese idea of what an accompaniment ought to be. The orchestra included a

Victor H. Emerson.

The most typical instrument of native music throughout Java is the gamalong. It looks like twenty-four

State Procession at Java (Royal Princes Under Umbrellas).

Harry L. Marker left New York in April, 1911. Victor H. Emerson, superintendent of the Columbia Recording Laboratory, started with him. The two stopped over in Salt Lake City, Utah, and put

ual stages to Singapore, where he could get better medical treatment. He recovered his health in some measure and the two traveled together to Batavia, Java, where the Columbia contract was

RETURNS FROM RECORD MAKING TRIP AROUND THE WORLD.

(Continued from page 43.)

gamelong records, both with the instrument in solo and also as an accompaniment.

The favorite diversion of the wealthy Javanese is to get some star vocalist who can sing and play his or her own accompaniment on the gamalong. Mr. Marker got hold of one lady who, according to all reports, was the local Tetrizzini, only more so. At the time appointed for the securing of records the dusky diva made her appearance with a retinue of coolies carrying the various component parts of the gamalong. These she set out in battle array, so to speak, and at the word "go" from Mr. Marker she opened up hostilities.

Mr. Marker personally had his troubles, but they were counterbalanced by a good many very enjoyable recollections. Not the least of these was the assistance and general good treatment he received from E. S. Reardon, American consul in Batavia, and B. Powell, an Englishman, who is the American consular agent in Soerabaya. Both of these were men of fine caliber and just the right type for the work they have to do out there—brainy, enterprising diplomats. The latter, Mr. Powell, gave Mr. Marker two or three days' shooting on his country estate up in the hills, and the Columbia recording expert's bag included three lions and a couple of panthers, besides wild fowl.

A lot of Arabian and Chinese records were secured in Soerabaya, and then Mr. Marker went on to Singapore for L. E. Salomonson for Malay and Chinese records. In Singapore, after a good deal of investigation through the native quarters, Mr. Marker satisfied himself that he had the best native band there was in the city, and the usual appointment was made for them to play into the recording machine. Mr. Marker, be it known, in a pith helmet and a suit of white duck, with shoes to match, is an imposing figure. Wherever he went he made a great impression on the natives; in fact, in one place he had a whole regiment of them praying to him. This Malay band in Singapore was no exception to the rule, and they decided that if they were going to play for the big white sahib it was up to them to put on their best bib and tucker, so to speak. They did, and it was a gorgeous sartorial kaleidoscope that presented itself at the temporary recording department—fourteen of them actually wearing trousers and boots. After the first selections had been made, however, Mr. Marker noticed that the band did not seem quite comfortable, and then a bright idea struck him and he said to the interpreter: "Tell that bunch of misguided heathens to take off their boots or there will be no more records made." The boots came off, they stretched their toes and wiggled them with a keen degree of comfort, and the balance of the record-making session was a success.

It was Java that yielded up the biggest homage to Mr. Marker's white suit, for it was there that Mr. Marker stage managed a royal pageant until he had it to his own liking. One day while Mr. Marker was staying in Djokjokarta, the capital of middle Java, the three sons of the Sultan of Java

were to be initiated into certain mysteries of the court, and the event was celebrated with true Oriental pageantry. There were musicians and dancers and all sorts of court functionaries in the procession which followed the ceremony. Marker was looking on, and it struck him that a really good photograph of the scene would be a fitting souvenir. When his interpreter was told what he wanted, he was scared to the verge of paralysis, but managed to collect his wits enough to run away, so Marker fell back on an ancient Dutchman, who spoke the native language. He told him what he wanted. "Sure thing," said the Dutchman, or words to that effect. "Come along." So they held up the procession and they grouped the princes and functionaries and the musicians and soldiers into just the kind of pose they wanted; then they borrowed a couple of the soldiers to keep the rest of the crowd away and Marker took his picture, said "Thank you," and the procession went on—in proof of which we reproduce the photo—and each of the three umbrellas indicates a prince. Marker had a close call in Singapore. He was using gasoline for illuminating purposes and the climate was so hot at that season of the year that it exploded and Marker caught fire. Had it not been for the devotion of his Javanese servant, whom he had taken along with him from Soerabaya, Marker would never have come back to New York. The Javanese first of all put out the flames that enveloped Marker—although not before he was badly burned—and then with three or four volunteers managed to save his instruments before the building burned down.

From Singapore Marker went on to Hong Kong for Chinese records and was aided considerably here by Mr. Fong-Foom. A building was hired in the city and the recording plant installed; then Marker looked around for a watchman. He engaged one, but when "Watch" saw the building he salaamed very profusely and said: "Me no sabee want um job; no can do." That was all he said, but he said it over about ten times and lived up to it. He simply refused to go inside the house and Marker started to investigate the trouble. He went to the owner. The owner, of course was Oriental, folded his hands across where his waist line ought to have been, and said: "Me velly solly; eight people die one week—plague." With a few days to spare after making his Hong Kong records, Marker accepted the invitation to visit Fong-Foom's home up the West River. A crew of women paddled him up the river in a dugout until they came to a place where Fong was making ramee cloth. There were a couple of hundred or so coolies working in the ramee field, and one of them when he came down toward Marker accosted him in perfectly good English: "Hello; where are you from?" As there wasn't a white man living within fifty miles of that place, Marker was considerably startled. "New York," said he. "You sabee know New York?" "Bet echr life," said the coolie in the

most approved Bowery accent. "I ran a joint in Third avenue for eleven years."

Shanghai was Marker's next stop and here a contract was made with the firm of Mustard & Co. A further set of Chinese records was secured and John Dorian, whose health at this time had broken down, left Marker and sailed for San Francisco.

Marker took a train on the Trans-Siberian for New York; was held up as a cholera suspect; his baggage was sent astray; he nearly became a prisoner in a military fortress because somebody thought he looked like a spy; he had a very hot argument with German customs people because he hadn't brought his baggage with him, and finally was held up in London for a week until the baggage did turn up. After all of which, as we said in the beginning, he made Orange, N. J., on Christmas eve, and achieved what he intended to do when he left China—spend Christmas day with his wife.

TO SELL THE KINETOPHONE.

The American Talking Picture Co. Organized to Handle Thos. A. Edison's Combined Moving Picture and Talking Machine.

The American Talking Picture Co. has been organized to sell the Kinetophone, a new machine manufactured by Thos. A. Edison, Inc., Orange, N. J., which is a combination of moving picture and talking machine. The office of the company is at 1495 Broadway, New York, the representative being W. E. Wardell. The factory management is under the direction of William Pelzer.

This is the device that has long been expected and is going to be a great boom to the moving picture houses. While no deliveries are being made, it is understood that orders are being booked.

GRAFONOLA FOR Y. M. C. A. CAR.

(Special to The Talking Machine World.)

Spokane, Wash., Jan. 8, 1913.

Willis S. Storms, local manager of the Columbia Phonograph Co., General, of this city, was greatly pleased recently at the sale of a Columbia Favorite Grafonola, a cabinet and a large collection of records to be used in the Y. M. C. A. traveling car which will run from Boville, Idaho, to Elk River, Idaho. This car will stop at various lumber camps throughout this district for a few days at a time and entertain the lumbermen with music from the Grafonola. It is a new use for the talking machine, that of furnishing music to the lumbermen in the wilds of the Northwest, and as the very best music will be furnished, the innovation will certainly meet with well-deserved success. The idea furthermore is to hold religious services and to play selections on the Grafonola by Gipsy Smith and the other evangelists.

Some people don't realize what competent liars they are until compelled to make an effort to tell the truth.

All losses come out of your net profits

RECORD HOLIDAY BUSINESS IN CINCINNATI.

Increase of Fifty Per Cent. and More of Previous December Claimed by Several Prominent Houses—More Expensive Types of Machines and Higher Class of Records Have the Call—Even Better Conditions Looked for During Present Year—What the Various Dealers and Managers Have to Say—Krolage Music to Close One Branch and Plans to Open Another Nearer Headquarters—John Arnold Considering Enlarging Quarters.

(Special to The Talking Machine World.)

Cincinnati, O., Jan. 8, 1913.

The holiday business was an immense one, and might have been greater but for the fact that the talking machine stock in the Cincinnati market was not up to the demand. Manager Dittrich, of the talking machine department of the R. Wurlitzer Co., tells the story as follows:

"We had a fine holiday trade in Victrolas—a very large increase over last year, in spite of the almost insurmountable difficulties resulting from shortage of instruments. Every Victor instrument of the Victrola type, irrespective of model, wood or finish, went to fill the tremendous demand for Victrolas. The wonderful hold that the Victrola has obtained was clearly shown by the fact that choice had to be made from a line that was incomplete at all times and buyers had to accept styles and finishes other than they had in mind to purchase.

"The reason assigned by the Wurlitzer Co. for the great impetus in Victrola sales is that the new model machines leave nothing to be desired. It is a singular fact, notwithstanding that the Victrola has long since become standardized, and generally recognized that nearly every purchaser remarks on the perfection of reproduction by the new types.

"It is a fact that with a majority of Victrolas sold this Christmas the Sextette and other high priced Red Seal records have been included when the same selections could be bought in the lower priced records. The selecting of Red Seal records in most cases was the first thought of the purchaser. The lighter selections were seemingly a secondary consideration."

The Wurlitzer Co. looks on the future of the Victrola business with supreme confidence, and adds: "An instrument that is a perfectly satisfactory medium for all that is good in music and the only one available must live as long as music itself."

Throughout December, and especially the last two weeks of the month, business at the Columbia Phonograph Co.'s local store was characterized by strenuous hustle and bustle all through the day and late into the night, both in the wholesale and retail departments.

"Business during the holidays," said Manager Whelen, "was unusual, and we did the largest business by 50 per cent. than any previous holiday season in the history of the Cincinnati store, both in records and machines. The stock was practically cleaned out in both and business was limited only by our inability to obtain sufficient machines and records and lack of room to accommodate customers. However, we are now getting in supplies

sufficient to keep trade moving, and the new year has opened up most encouragingly and we have a fine lot of machine prospects for the month of January, thus making a successful wind-up of a prosperous year's business. The largest demands were for the higher priced Grafonolas, such as the \$150 Nonpareil, the \$200 De Luxe and the various types of Regent tables. As is always the case, however, the popular \$50 Favorite held its own, and the new Eclipse and Regal proved that there is a tremendous demand for popular priced high grade instruments. The demand for our line of grand opera records was beyond even our expectations, and all who heard them expressed admiration at the life-like rendition of the reproductions of the great artists offered by the Columbia Co."

In conclusion, Mr. Whelen said: "We all went home the night before the 'big day' tired but happy, ready to enjoy our much earned holiday. During the month we enjoyed the visits of many of our dealers who came in personally to select their holiday stock, and reports from all over the territory are to the effect that business in this line was phenomenal. The year as a whole has been a most gratifying one from the Grafonola and Symphony point of view, but the year 1913 bids fair to be the banner year in the talking machine business, and when next Christmas rolls around 1912 figures will be very small in comparison, although now they loom up in good, round, substantial figures.

"Business in the Dictaphone line has been exceptionally good for this time of year, and we have doubled our sales over last year. While everybody was thinking about Christmas the local Dictaphone salesmen have not been idle and many installations will be made this month. The general public are beginning to realize more and more every day what the word 'Dictaphone' means, and we expect to triple last year's business in 1913. The way the new year is starting out it looks as though our anticipations will be more than realized."

The Lyric Piano Co. is well pleased with its trade for the holidays in the talking machine shop. The results obtained were better than expected.

"We found that we ran short on a certain number of machines that it was impossible to get, and this goes to prove the assertion made before," said the manager, "that if the agencies that had been previously established could have had their wants supplied we would have had still better results. But take it all in all, we feel well paid for our efforts.

"We sold with every outfit quite a number of records, and by getting cash for the records sold, besides the first payment on the machine, made each and every deal a good one, hence we feel that we have secured a better class of business than we

have ever had before, and we find that our trade has kept up very nicely since Christmas."

John Arnold, of Fifth and Elm streets, said it was the best season he had experience in the ten years he has been in the talking machine game. So successful has he been that he is now seriously considering making a move to a more prominent location—one with larger quarters.

J. E. Poorman, Main street dealer, was likewise successful. He also handles the bicycle as well as a side line, and claims that the sales in the latter were the greatest in eighteen years.

The Krolage Music Co., Race and Arcade, is closing out its branch talking machine store on Central avenue, near Twelfth street, and intends to open up one near the present headquarters.

Manager Stadler, of the Milner Musical Co., is visiting his parents in "Old Virginia."

PLEASING VITAPHONE PROGRESS.

Reported at Annual Meeting of Company Held Recently—All Officers Re-elected—Reproducing Device Proves Interesting to the Trade.

At the recent annual meeting of the officers of The Vitaphone Co., Plainfield, N. J., the old officers were re-elected together with several new ones. The board of directors include the officers of the company and W. A. Lawrence, of Newark, N. J.; Ralph C. Lupton, of Wilmington, Del., and Frank T. Wentworth. The Vitaphone officers are: C. B. Repp, president; Archie M. Loudon, vice-president; J. H. Greene, Jr., treasurer; H. N. McMenimen, secretary and general manager.

The reports of the various officers were received and accepted. The directors felt particularly pleased at the expansion and progress evidenced during the past year, and were impressed with the possibilities of the future. They found a busy organization and a busy factory, both attempting to fill the orders for goods, and the meeting was a satisfactory one in every way.

The recently erected building for assembling and shipping is now occupied and its output is helping the sales department. Another temporary structure is being built, and this plant will be devoted only to assembling. In a few weeks three buildings will be devoted to the production of Vitaphone products, which shows the advancement made by the company during the past year better than a verbal description.

One feature that is impressing the readers of The World is the new reproducing device for the non-metallic reproduction of sound, including the use of the Vitaphone solid wood vibratory arm. H. N. McMenimen, general manager, summarizes the Vitaphone proposition to the dealer in these words: "Vitaphone dealers enjoy the advantages of tone without comparison; splendidly built instruments; novel, interesting and simple construction; assured profits of a maintained selling price and the protection of absolutely unassailable basic patents." In the Vitaphone catalog this device is featured at length, with illustrations and descriptive matter.

MUSIC BRINGS CHEER TO THE SETTLEMENT HOUSE.

With Spirit of Christmas in His Mind, Talking Machine Man Uses Grafonola for Furnishing Welcome Entertainment for the Less Fortunate.

The following incident is related with the idea of presenting to dealers and salesmen an example of the many opportunities for sales that exist in places off the beaten tracks, but which can be ferreted out by research and investigation. In the accompanying story the only object in the use of the Grafonola was to promote good cheer and add to the general Christmas spirit, but the fact that the audience, poor as it was, nevertheless was both amused and impressed by the performance is substantial evidence of the truth of the statement that opportunities for sales exist in many out of the way places.

"It is quite a long step from a New England Christmas party one evening to a Christmas party down in a settlement house on the east side of New York the next. The stage settings are not quite the same, you can readily suppose." With this statement a modest worker in the executive offices of one of our large talking machine companies looked out of his office window into the distance as though he were reflecting upon something pleasant to remember. He had just answered my question, "How did you enjoy Christmas?" with these words, "I both enjoyed Christmas, and gave of myself in the spirit of it."

"How is that," said I, sensing a "story," for this man with his constructing helpful nature is always mixing into some good somewhere in this wide world, and a great deal of his work is very interesting, for his scope is extensive and his opportunities for research both many and varied.

He answered, "I had a Christmas made to order up in my New England home. It was a fine Christmas, one full of the great good things of the soul, the things that tend to uplift and better mankind. The next night I made a Christmas for others in a measure. It was an unusual but pleasing experience and taught me that no matter how contrasting the environment the Christmas spirit can be made anywhere that humans are found. On the subject of these contrasts let me draw your attention to these two dissimilar pictures.

"Tradition has lent both charm and dignity to descriptions of a snow-clad New England Christmas, and while mine was much like the tales of tradition, it looks so good to me I am going to describe the details. It may help in appreciating the surroundings of the second picture. Imagine then for the first picture a large living room with that quiet charm of the refined well-kept New England home, decorated with wreaths of holly, the family gathered around the open fire on the hearth, and a single candle burning in the front window, and you will realize a sense of homelight of love and kinship that is enhanced only by reminiscences of the 'old folks,' the song of the middle-aged and the patter of a recitation by the youthful heir of the household that begins 'The Night Before Christmas,' social joy that fills the heart with tender emotions.

"Then look into a well-filled room where upwards of fifty mothers of divers nationalities are convened within the four walls of a Settlement house in a crowded section of this great city to gather the crumbs of happiness distributed by others who are interested in their welfare, heart and soul. A Christmas tree lighted and resplendent with decorations and a wool snowman with a 'stovepipe' lid on, that the children had pelted with imaginary snowballs at their little party held the previous afternoon. Otherwise a barren and not altogether attractive room, the mothers referred to before, a few women who give of their lives for others and a man who for the past eight years has directed the little social gatherings in this spot of charity and good-will. As I thought of my own blessings as I found myself wondering about the home surroundings of various types of the poor classes I wondered if my efforts to bring something of joy to them would be fraught with success.

"I had sent a Columbia 'Favorite' down to the

settlement house and had chosen a number of records along lines which I calculated would generally please. As I played the march 'Lorraine' I started the ball rolling by telling them to form for a grand march knowing that this march brings people together quickest of any and creates a feeling of good spirit and friendship. 'All two-step' the director next shouted out and in an instant the room was awlirl and the spell was broken. Dancing is elemental you know. 'Horrigan's reel' found four sprightly Irish women dancing with a grace that no 'glide' or 'trot' can compare with. The German women sang 'Holy Night,' the Italian

women hummed the arias from the operas. They all sang the popular song 'Where the River Shannon Flows,' they laughed and made merry with the comical records, and changed to tears when they listened to the old folk songs of their native lands across the seas. They danced with all the joy of children, and at the close of the performance at ten o'clock, after refreshments had been served, they went back to the place they know as homes. As they passed out the door the expression of pleasure on their faces would have well repaid infinitely more time or labor than I had given them and their sentiments were summed up in these two sentences whispered to the sweet-faced but care-worn matron, who is their friend through thick and thin. 'We are going to hold our own entertainments in order to make enough money to buy a 'Grafonola,' and 'We have been given a foine time.'"

A GREAT PRIVATE RECORD LIBRARY OF A CHICAGO MAN.

Victor Enthusiast in Windy City Has Added to His Library of Records Until He Now Has Fifteen Hundred of the Interesting Discs in His Home:

Those connected with the talking machine trade often hear of people with libraries with a thousand or more records, but it is rare indeed to see a real

Home of a Record Enthusiast.

library with over 1,500 records in it, and that the property of a private person.

The accompanying illustration appears at first

glance to be the demonstration parlor of a live Victor dealer, with most of the stock of records available for testing purposes. As a matter of fact it is simply the private collection of P. S. Goodman, a talking machine enthusiast of Chicago.

The photograph was obtained through the efforts of Lyon & Healy, Chicago, from whom Mr. Goodman has bought most of his records and is referred to by the Victor Co. as an example of what may be accomplished through the combination of good salesmanship and good records. Indeed, it should be a stimulus to greater achievements on the part of members of the trade.

PREDICTS WONDERS IN FILMS.

Sir Hubert von Herkomer Expects All Facts Will Be Recorded in Them.

Sir Hubert von Herkomer draws a striking picture of the future of the cinematograph in a letter he has written to a London paper on the subject of the censorship of films exhibited in public.

"The cinematograph has already shown itself to be a potent factor in daily life," he says, "and possibly the day will come when one film will take up form, color, and sound and reproduce all these simultaneously; when a cinematograph will be laid in every home as your gas or electricity is now laid; when the world's stories will be brought to you in pictorial and dramatic form such as one has not yet dreamed of; every child will be taught geography, natural history and botany by screen pictures rather than by books; actors and singers be recorded for all time; the progress of any great engineering feat be recorded accurately. In short, the feature will be made of recorded facts.

"I will not venture to say it is all for the good of mankind; but man is getting more and more subjective, and his inventive faculties lean altogether that way."

Sir Hubert von Herkomer considers that with the public rests the question whether the cinematograph can be made one of the greatest powers for good so far placed in the hands of man.

"Before it can attain its full development," he concludes, "the strong prejudice still existing among middle class people must be overcome."

THE
Heise
SYSTEM TRADE MARK

You need the Heise System for the best keeping of your records.

Above is shown a small multiple of the system. Made for 10" and 12" records; built of heavy, strong wire, plated and lacquered. Furnished in 2 to 7 tiers, each tier holding about 250 records. Cost about \$2 a tier. An immense space saver; keeps records clean and accessible.

Write for 20-page catalog giving details and information on record systems.

IMPORTANT COURT DECISION ON PRICE CUTTING.

United States Court Grants Preliminary Injunction Against Assignee Appointed by New York State Court, Enjoining Him from Selling Columbia Graphophones and Records Below the Authorized List Prices—First Time This Question Has Been Definitely Decided on Merits—Decision Results from a Vigorous Following-up.

An opinion by Judge Hazel, U. S. District Judge, was filed in the U. S. District Court, Western District of New York, on December 23, 1912, in the suit of American Graphophone Co. against C. A. Pickard, as assignee of the Hill Piano Co. The question at issue was whether the threatened violation by the assignee of the contract containing restrictions as to the selling price, signed by his assignor, constituted contributory infringement. The court held that it did and that under the facts as alleged in the bill of complaint, the "defendant assignee could not by the assignment to himself for the benefit of creditors secure any greater right to sell the patented articles than had his assignor."

The Hill Piano Co. was one of the largest piano houses in Western New York and at the time of its failure had in its possession a large stock of Columbia graphophones, Grafonolas and records.

The assignee, a well-known lawyer of Jamestown, N. Y., proceeded to advertise the goods for sale at public auction, notwithstanding the fact that he was warned not to do so by the complainant, taking the ground that he had the right to sell the goods at the best price to be obtained for them regardless of the restrictions under which they had been sold to his assignor, the Hill Piano Co.

The American Graphophone Co., as the owner of the patents under which all Columbia product is manufactured, at once entered suit and its attorney appeared before Judge Hazel at Buffalo and obtained an order to show cause with a restraining order meanwhile which effectually prevented any further proceedings on the part of the assignee as far as the sale of the goods was concerned.

On the return of the order to show cause the motion for preliminary injunction was denied on the ground that Section 265 of the Judicial Code, re-enacting Section 720 of the Revised Statutes, prohibited the United States courts to stay proceedings by writ of injunction in any court of a State, except in cases where such injunction may be authorized by any law relating to proceedings in bankruptcy.

The American Graphophone Co. at once took an appeal to the United States Circuit Court of Appeals for the Second Circuit, upon the theory that as the goods had been sold to the Hill Piano Co. subject to conditions and restrictions as to the person to whom and the prices at which they might be resold by any person into whose hands they came, the threatened sale by the assignee at cut prices in violation of those conditions and restrictions, constituted infringement of its U. S. Letters patent under which they were manufactured, over which question the Federal Court had exclusive and original jurisdiction, and that the defendant assignee, standing in the shoes of his assignor, with no better or greater rights, could only sell the said patented articles subject to the same conditions and restrictions.

Shortly after the assignments of error on the appeal were filed, Judge Hazel handed down a memorandum decision in which, on his own motion, he granted a rehearing and an order vacating the order denying the motion for preliminary injunction, and requested counsel to file briefs within ten days regarding the right of the court to grant the preliminary injunction.

In accordance with this decision an order was entered which, among other things, reinstated the original restraining order, which effectually prevented the assignee from selling the goods at public auction pending decision on the rehearing.

While the right of the Federal Court to enjoin the assignee appointed by the State Court was decided in the affirmative, the main point at issue was the right of the assignee to sell at cut prices, and this, the court holds, as above stated, he had no right to do and enjoins him from doing.

The assignee put up a hot fight and summoned

to his assistance two of the ablest lawyers in Western New York.

The following is Judge Hazel's opinion:

DISTRICT COURT OF THE UNITED STATES, WESTERN DISTRICT OF NEW YORK,
AMERICAN GRAPHOPHONE COMPANY,
Complainant,
Against
C. A. PICKARD, as Assignee of the Hill Piano Co.
Defendant.
On rehearing.
ELISHA K. CAMP, for Complainant.
WEEKS & ROSS, for Defendant.
HAZEL, J.

The denial at the hearing of a preliminary injunction to the complainant proceeded on what I now think was an erroneous assumption that the suit was based solely on contract, and was not strictly an action arising under the patent laws. If this assumption were correct the earlier decision would doubtless have been necessary under Section 720 of the Revised Statutes which forbids federal courts to stay proceedings of a state court of concurrent jurisdiction. But a closer examination of the bill shows that the gravamen is the indirect infringement of complainant's patents by the breach of the conditions upon which the patented articles were to be sold. The question then arises as to whether the threatened violation by the defendant of the contract containing restrictions as to the selling price constitutes contributory infringement. The Supreme Court of the United States in *Henry v. Dick Co.*, 224 U. S. 1, has set this precise question at rest. There it was expressly held that an action which raises a question of infringement is an action arising under the patent law, and may be instituted in the district court, even though the construction relating to the contract is also involved. Nor is it sufficient to bar an action in the district court that in general the rule of comity requires that this court should not enjoin the sale of property in the possession of the State court. In the present case effect must be given to the nature of the action and the relief sought, a relief which the federal courts alone can grant. *Hupfeld v. Automaton Piano Co.*, 66 Fed. 788.

It appears herein not only that the patented articles were bought from complainant by the Hill Piano Co. subject to terms and conditions relating to the selling price, but also that notice thereof together with notice that the articles were covered by complainant's patents were brought home to his assignor, i. e., a license subject to price restrictions. Under such circumstances the defendant assignee could not by the assignment to himself for the benefit of creditors secure any greater right to sell the patented articles than his assignor, i. e., a license subject to price restrictions. *Oliver et al. v. Rumford Chem. Co.*, 109 U. S. 75; *York Mfg. Co. v. Cassell*, 201 U. S. 345; *Thompson v. Fairbanks*, 196 U. S. 516; *United Wireless Tele. Co. v. National Electric Signaling Co.*, 198 Fed. 385. In the latter case it is held that where a defendant has infringed a patent and is subsequently adjudged a bankrupt, the court has power to enjoin the sale by the trustee in bankruptcy of the infringing apparatus. By analogy this principle applies to this case.

Next, it is contended by the defendant that the complainant violated its contract conferring upon the assignee exclusive right to sell the patented articles within a specified locality. It is argued that if the defendant had remained the sole salesman, the selling price fixed by the maintenance contract would have been obtainable from intending buyers, but said contract does not I think bear out the claim of exclusive territorial agency and was terminable by the complainant. At any rate, it appears that only after the assignment by the Hill Piano Company which has since been adjudicated bankrupt, did the complainant designate another selling agent. This, in my opinion, is insufficient to require a denial of the injunctive relief prayed for, and therefore the injunction may now issue.

December 23, 1912.

HEADS GENERAL FILM CO.

Frank L. Dyer Assumes Important Position in Motion Picture World.

Frank L. Dyer, who recently resigned as president of Thomas A. Edison, Inc., and severed his connection with other Edison interests in Orange, N. J., is now the president of the General Film Co., with offices at 200 Fifth avenue, New York. Mr. Dyer's recognized ability as an executive and his wide experience in the motion picture field make him particularly fitted for his new position, which he assumed with the feeling that the motion picture field offered him great opportunities. The General Film Co. is a remarkable organization with branches throughout the United States and Canada and is steadily growing in power and importance.

Don't stop to chat socially with one customer after a sale is made, if another is waiting for attention.

Skating on rather thin ice

—the dealer who has a "promising" jobber, who gets promises handed out to him when he ought to be receiving the goods he ordered.

You never can tell when there'll be a break between you and your customers—but there surely will be one—when you have to depend upon such a jobber.

That's just the point—you don't have to depend upon a jobber of that caliber. It costs you no more to have the right kind of a jobber—one who is alive to your interests and helps you take care of your customers.

This is the way we do it: we ship all orders the same day they are received. And whatever you want in Victors, Victor-Victrolas, Victor Records, record cabinets, horns, fibre cases, needles, repair parts and other accessories, is here subject to your orders.

Right now is the best time to send for our catalog and our booklet, "The Cabinet That Matches".

Victor foreign records

"If it's in the Victor catalog, we have it" applies to foreign records as well as all other Victor goods. We have the entire Victor list ready for immediate delivery.

YEAR OF UNEXAMPLED PROSPERITY AHEAD.

Trade in Cleveland Continues to Be of Large Proportions—U-S Phonograph Co. Closed Gratifying Business for Year—Many Dealers Cleaned Out of Stock After Holidays—High Priced Victrolas and Grafonolas Most in Favor—L. A. Lucker Reports Lively Edison Trade—The Talking Machine as a Bird Trainer—Other Items of Interest.

(Special to The Talking Machine World.)

Cleveland, Ohio, Jan. 10, 1913.

The Cleveland talking machine dealers, without exception, assert that the recent holiday business largely exceeded all records and are positive in the belief that the trade is entering upon a year of unexampled prosperity—a year of continued extending trade and development of a phenomenal character.

Christie MacDonald and members of the "Spring Maid" company were frequent visitors at the Eclipse Musical Co.'s store while the opera had its stay in Cleveland. They all were particularly interested in the new records of Titta Ruffo. Miss MacDonald requested the loan of a Vernis-Martin Victrola, which was placed in her parlor at the new Statler Hotel, where she had her picture taken holding a Victor record and listening to her own voice. She has promised The World one of her photos.

Sales manager of the U. S. Phonograph Co., G. M. Nisbett, made a hurried trip to Chicago last week. He reports the results of his visit was most successful from every point of view.

M. Elser, a special representative of the Dictaphone, was a visitor at the Columbia store the first of the year.

"Take a canary bird when it is young and bring it up in an artistic environment, surrounded by a talking machine with select records and it will develop into a regular warbler and can whistle tunes just like a human sort of a college bred bird," said R. N. Russell, the postmaster's secretary. His fad is canaries and he brought one he had just purchased to the post-office to demonstrate its vocal ability. The bird gave a satisfactory exhibition of its vocal powers in an hour's flow of melody. "That's the best warbler I ever heard," said Russell, when the concert was over. "He was brought up on a phonograph and can whistle a number of tunes. He'll make a fine addition to my collection."

The prosperous conditions existing in the talking machine trade have been shared in a large degree by the U. S. Phonograph Co. The season just closed has been the most successful in the history of the company. The holiday trade exceeded the fondest expectations, and orders on hand for future delivery, it was stated, guarantee that the next four months will be as busy at the factory as during December. The demand for U. S. Rex and U. S. Royal phonographs was unabated, in fact, is so great that the company has decided to discontinue practically all other types of machines and dispose of the existing stock of Banners, Operas, Grand and Peerless types at extraordinarily attractive prices to the trade.

The volume of business transacted by the Columbia Co., at the Cleveland store, during the past The entire stock of Victor machines was nearly month, was the largest the company have ever

done, G. R. Madson stated. "We were rushed throughout the holiday season, night and day," he said, "and by strenuous work managed to meet the extraordinarily heavy demand. Columbia dealers in our territory were all able to supply the wants of their customers in all lines and report an exceptionally large trade."

Mr. Probeck reports the Dictaphone business is as good as usual at this season, and that the prospects for this year are very promising. He has a number of fine prospects ahead.

The Eclipse Musical Co. has much to be thankful for. "Business is very favorable," said Mr. Towell. "Not a machine was left on our sales floor Christmas Eve. An unusually large record trade for January is following and it looks now as if there would not be any of the best selling records left if the factory is not able to supply the immediate demand." Fred E. Lane, in charge of the retail department, is continuing his monthly record concerts, with the attendance increasing each month. Many machine and record sales follow these recitals.

The Eclipse Musical Co., as well as the entire talking machine trade, mourn the death of one of their most progressive dealers, Frank Semence, of Erie, Pa. He was a man admired and loved by all with whom he came in contact. P. J. Towell, manager of the wholesale department, who was a close friend of Mr. Semence, attended the funeral at Erie.

At the Edison distribution warerooms of Lawrence A. Lucker the past month was one of unceasing activity. The sales of both machines and records was extensive although curtailed by inability to procure supplies from the factory. The new disc machine has met with great favor and a large number of dealers were supplied. There is a steadily growing demand for the new Blye Amberol records, the demand being much greater than the present supply.

Phil Dorn, manager of the Collister & Sayles Co., is highly pleased with the prosperous business of the past month in the talking machine department. The stock of Victor machines was practically cleaned up with some orders unfilled.

It was a very busy place in the talking machine department of the Bailey Co., throughout the holiday season. E. A. Friedlander, manager, expressed himself delighted with results of the month's business.

Business in the talking machine department of the Hart Piano Co. is moving along prosperously. The manager stated the company enjoyed a very large trade in both Victors and Edison goods during the season and that the demand, especially for records, continues good.

The past month closed with the largest sales in the history of the W. H. Buescher & Sons Co. exhausted and the record sales decimated the supply to the lowest ebb.

The H. E. McMillin & Son Co. report an unusually satisfactory holiday business in both the Victor and Edison lines. The company was well prepared with a large supply of machines and records to meet the unusual demand. Trade in pianos and other lines of musical goods was also good.

Miss Ethel M. Volk says business in the talking machine line of the May Co. during the past month has never been excelled. Practically the entire stock of machines were disposed of as well as nearly all the high grade records.

The attractive display of Victrolas at the beautiful parlors of the W. F. Frederick Piano Co. drew crowds of customers seeking suitable holiday presents. The volume of trade was eminently satisfactory, and has continued well into the new year, giving promise of continuous growth and prosperity.

H. D. Berner, who handles the Columbia and U. S. Phonograph Co.'s goods, located in the Taylor Arcade, reports business is exceedingly good. He did a large holiday trade and it has continued good right along to date. His U. S. phonograph display is especially attractive.

R. Svehla, proprietor of the West Side Columbia store, is doing a prosperous business. He says his last month's trade was the largest, most satisfactory and profitable he has ever had.

The H. M. Brainard Piano Co. reports trade in Columbia machines and records is very satisfactory. The company is well pleased that it took on this popular line of goods.

TO HAVE INDIVIDUAL MANAGER.

With the Resignation of O. A. Gressing the Claffin Stores Will Be Separately Controlled.

Otto A. Gressing, supervisor and general manager of the Victor departments of the four Claffin stores in this city since their establishment about two months ago, retired from this position the first of the year. According to present plans no successor to Mr. Gressing will be appointed, but each one of the four stores will be in charge of its own manager. The four stores in question and their present managers are as follows: Lord & Taylor, manager, Henry Broad; O'Neill-Adams, manager, Harry Munroe; McCreery's 34th street store, manager, Miss Steel; McCreery's 23d street store, manager, Miss Katherine Tracy.

GREAT DEMAND FOR VICTORS.

The expensive styles of Victor machines still continue to be in great demand by the Victor dealers, and the New York Talking Machine Co., 83 Chambers street, New York, is finding extreme difficulty in supplying the needs of their many customers. Record sales are way ahead of last year, and the company undoubtedly closed the greatest year in its history.

Dealer: "Yes, sir. This is the famous Columbia 'Regal.' It is the finest instrument at its price on the market. Motor, sir? Very fine piece of work, sir. Plays six records without winding."

Customer: "And—er—how many will it play if I wind it?"

Utter collapse of dealer.—World of Records.

SHEIP & VANDEGRIFT, Inc.

PHILADELPHIA, PA.

TRADE ACTIVITIES IN LOS ANGELES.

December a Record Breaking Month with Leading Dealers in Southern California—T. H. Barnes Co. New Concern in Los Angeles—Fitzgerald Music Co. Settled in New Home—Other Items of General Trade Interest.

(Special to The Talking Machine World.)

Los Angeles, Cal., Jan. 1, 1913.

Dealers throughout this entire section are very much pleased with the business for the month of December, it being a record breaking month, in fact, the largest month that many of the leaders have ever experienced. All types of machines were ready sellers, especially Victrola XI and XVI, which in all cases were considered very popular.

The Andrews' Talking Machine Co. is one of the many pleased dealers of this city, who had a large machine and record business. Mr. Andrews, Sr., states that if the present conditions existed much longer a new sale force would be necessary to cope with the demands.

The Fitzgerald Music Co. is now nicely settled in its new home at 947-49-51 South Broadway. The talking machine department is being successfully conducted by its new manager, Emma H. Kennedy, who has made a great showing in the past few weeks.

The Geo. J. Birkel Co. reports, through their talking machine manager, A. Graham Cook, a satisfactory business in that department. The same satisfactory reports are made by W. F. Stidham, local manager of the Columbia Phonograph Co. (Gen'l), the Wiley B. Allen Co., of which R. E. Wolfinger is manager, and E. E. Purser, who has taken hold of the talking machine department of the Eilers' Music House.

W. C. K. Campbell, who has been manager of the Pasadena Music Co., Pasadena, Cal., for the past four years, is back again with Sherman Clay & Co., Victor distributors, where he originally spent many years.

The George H. Barnes Piano Co., 131 South Broadway, is a new concern carrying a complete line of pianos, and also an up-to-date talking machine department with several sound-proof rooms for demonstrating machines and records. The Columbia line is handled very extensively and good results have been obtained by the able manager, Miss A. N. Brown, formerly with the Fitzgerald Music Co.

C. S. Ruggles, local manager of Sherman, Clay & Co., states that the month of December was the largest in the history of this branch and even the shortage of some styles of Victrolas did not seem to hinder very much.

Miss M. V. Sullivan, who is well known to the talking machine trade in San Diego, is again in the game, now having charge of the talking machine department of Therle's Music Co. of that city. Miss Sullivan is one of those whose ability shows the results by the many sales.

F. Saltamachia, special representative for the Columbia Phonograph Co. (Gen'l), returned from his Arizona and New Mexico trip, where he has had great success calling upon dealers of that district.

CO-OPERATION AND SUCCESS.

A recent letter sent out to Victor dealers by the advertising department of the Victor Talking Machine Co. starts out in the following interesting manner: "If you could borrow a little horse-power from Niagara Falls without expense you would do it quickly and feel proud of your shrewdness." It can be readily surmised that any letter with such an unusual introduction will contain items of interest and benefit to Victor dealers, and a further perusal of the letter justifies this idea. This letter accompanied the proofs of the newspaper advertisement to be used this month by the Victor Co. and dealers were told that if they worked in co-operation with this advertising they would be well rewarded by increased sales of Victor products. Particular attention is called to the fact that Victor newspaper advertising localizes and strengthens the dealer's publicity while the magazine campaign creates a national demand for Victor goods.

THE COLUMBIA IN TRAVELOGUES.

Columbia Records and Machines Furnish Music Preceding and During Lectures of Professor Robeson—Something Entirely Novel.

A novel form of publicity recently evolved by the Columbia Phonograph Co. and used in connection with the travelogues of Professor Frank R. Robeson is attracting considerable attention and meeting with gratifying success. Prof. Robeson is acknowledged to be one of the top-notchers in America's lecture world, and appeared before over 150,000 people in his recent lectures in New York and Brooklyn.

Preceding every lecture a concert of Columbia records, on a Columbia machine, has been given by C. J. Thayer, connected with the Twenty-third street store of the Columbia Phonograph Co. As a rule Prof. Robeson also introduces two or more records during the course of his lecture, which all adds to the popularity of the talking-machine as the records used apply to the subject of the evening.

Prof. Robeson left last Saturday night to open up a course of lectures on seventeen different countries, and will stop for one or two weeks at various cities en route to Denver, Colo. He was accompanied by a Columbia outfit of machine and records, and will use these in the same fashion as he did in New York. His itinerary includes such prominent cities as Toledo, Dayton, Buffalo and etc.

At all his performances circulars describing the Columbia product are distributed to people in the audience, and as his travelogues are usually given in conjunction with some leading newspaper of the city he visits, as was the New York Globe in this city, there is certain to be an unusually valuable amount of publicity given Columbia products. It has been estimated that Prof. Robeson will lecture to over 250,000 persons on this trip, and the "live-wire" Columbia dealers, by keeping in close touch with the activities of this prominent lecturer will doubtless close many sales as a result of his visits.

Said a domineering store manager: "You bet my men all jump when I speak." Yes, but how much jumping do they do when you are not there."

FOREIGN TRADE IN TALKING MACHINES AND RECORDS.

The Special Report Issued by the United States Government Bearing on Talking Machines Shows the Wide Scope of the Business in Canada, Central and South America, Germany, France, Russia, Great Britain, Asia, South Africa—in Fact, Everywhere—The Opinions of the Local Consuls Regarding Methods of Selling and Other Matters Are Interesting and Valuable—Shows the Importance of the Industry Throughout the World—Great Export Markets for American Machines and Records.

[In The Talking Machine World for November and December there were published two instalments of the Monograph, issued by the Department of Commerce and Labor, on the foreign musical instrument trade of the United States, relating directly to talking machines and records. The first instalment referred particularly to the present business and the opportunities existing in Central and South America, which is considered to be the section which offers the natural field for the export trade of this country. Last month, trade in Germany, Great Britain, Italy, Switzerland, Russia, Turkey and Greece was the important subject under consideration. The closing instalment this issue covers a number of widely separated countries, running from the Orient to South Africa.—EDITORIAL NOTE.]

Asia.

The use of talking machines has spread to all countries of Asia, and the trade presents about the same features as in European or American markets. The fact that the "talker" can be easily adapted to any language has given it a quick and wide popularity in the Near and Far East. Disc machines are practically universal, and there is apparently no particular choice as to the character of the selections. Throughout the whole continent, however, the market for the best grades of machines is small, and in many none can be sold.

American machines have found a considerable sale only in China, Japan and (to a smaller extent) British India, though they are known in most other countries. As in European countries, the German machines control the market for inexpensive articles.

In Asiatic Turkey, where the popularity of the phonograph is declining, they share the market with the English makes, largely if not wholly the products of the Gramophone Co., and in Indo-China with the French Pathé machines. In both places there is a small demand for the superior machine, but conditions are not encouraging for the sale of American instruments. The same thing is true of Siam, where machines to the value of \$21,013 and records valued at \$38,095 were imported in 1910, but where practically the whole trade is in the hands of English, French and German exporters.

Most of the machines imported into Vladivostok in the past have been Victors, of German make, but recently some Russian machines have made their appearance. In the Straits Settlements the countries from which phonographs are imported, in order of their importance, are Germany, England, the United States and France. Germany's lead is due to the extremely low prices at which the German products are sold, the attractive design and finish, and the very liberal credit terms.

The English makes are the product of a factory using American patents and operating in conjunction with a leading American company, and are practically identical with these American machines. American and French sales are limited, the former largely on account of the high prices and the apparent unwillingness of the manufacturers to make minor changes in finish and equipment demanded by the trade there, which is largely with the native population. While the German machines are generally conceded to be inferior in mechanical excellence and durability, they sell best because the natives will not consider wearing quality as against cheapness and attractiveness. Machines retailing at more than \$50 have an extremely limited sale.

In Java there is a fair market for all grades of talking machines which are sold for \$10 to \$100, and most of which are supplied by Germany. That country sends about \$50,000 worth annually. Apparently there are no American machines on the market. In most countries of Asia quotations should be c. i. f., but in the Straits Settlements sales are made, as a rule, f. o. b. with both European and American firms.

China.

There is a good market in this district for talking machines and one which gives promise of future expansion. The Chinese here, as elsewhere in the country, have taken very kindly to these instruments, and have them in their homes, shops and places of amusement. The value of the phonograph as a crowd gatherer is already recognized by them, and many of the large shops in the native city have one or more playing all day long.

The value of machines of this kind and accessories imported into Canton in 1909 was \$10,758, and in 1910, \$16,239, most of which were apparently American. In 1909 the value of the phonographs and accessories imported into the whole of China was \$121,029, of which the United States supplied \$39,291 and France a little more than half that amount, with Canada a close third and Germany and Belgium following with about \$18,000 each.

There are comparatively few machines owned by foreigners in Canton, and it is the Chinese market that must be worked. The talking machine for the local market is a cheap, ornate instrument, with the disc records of Chinese words and music. One of the chief qualities which appeal to the Chinese is loudness. No machines with concealed horns are on sale here as yet, but it is said that a trial shipment was easily sold in Hongkong at \$15 each, and it is probable that they will soon be on sale in Canton. Instruments sold here retail for \$5 to \$63, the most popular being the \$8 to \$12 grade.

The question of how best to push the sale of phonographs in this district is involved in the general question of how to push sundries of all sorts. The representatives of American phonographs are now certain foreign firms in Hongkong, and under this system a fair sale has been attained. The machines are sold in Hongkong to the local native retailers, who know where to look for them. Much might be accomplished by advertising in the Chinese press and by posters, thus keeping the phonograph always before the eyes of the native public. If American manufacturers wish to alter the present system there are several alternatives open to them. They may open their own offices in the district, or leave their agencies where they are in Hongkong, or transfer their agencies, so far as this market is concerned, to foreign firms in Canton itself. It is doubtful if the present local market warrants the opening of a special office by any American phonograph manufacturer, but a special representative might be sent out for a time to look over the market and perhaps carry out a scheme of advertising.

Conditions in Hongkong, Shanghai, Swatow, Tientsin, Manchuria and the Harbin districts are pretty much the same as in Canton. The sales of American machines are large and steadily increasing, the United States imports of these specialties heading the list.

India—Bombay.

Natives here are very fond of machines. The Gramophone Co. (Ltd.) has established in Calcutta a record-manufacturing plant and its output is the most popular in India. These records are all discs. Probably 75 per cent. of the records sold in India are manufactured in this country. The greatest demand is for records in the Hindustani, Gujarati and Urdu languages, comprising songs, humorous sayings, speeches, etc., just as in the English language.

There is a small demand on this market for the best phonographs. German machines are sold here for as low as \$2.90 and dealers say that dozens of machines are sold for less than \$13 to one for more than that. A few machines with concealed horns are marketed, but the percentage is very small.

American machines are not imported to the same extent as they were a few years ago, probably because of the high prices and because the American manufacturers have not solicited the trade as much as they formerly did. Another reason perhaps is that Americans do not supply records in the native dialects. German machines apparently lead in sales, with Swiss next, and American, French and English following in the order named. Sales from the importer to the user of a machine are invariably for cash. Practically all sales to importers are made by the manufacturer upon payment against draft.

Madras.

At present there is but one American machine in use here, an American Victor-Victrola, with disc cabinet attached, which would retail in the United States at \$200. The selections rendered by this instrument are far superior to those of any European machine introduced, but while this is conceded the type is too large and expensive to have an extended sale. Instruments of a corresponding grade, but smaller and less expensive, and preferably with concealed horn, would probably find a good market.

In all machines constructed of foreign woods, the cases invariably warp. The native teak wood is the most suitable for such purposes, as it is unaffected by the climatic conditions here, and it is probably not more expensive than other hardwoods. The current price of such wood is about \$1.18 per cubic foot c. i. f. New York and 81 cents f. o. b. Madras. Importations of talking machines and accessories into Madras in 1910-11 amounted to \$7,907, of which the United Kingdom sent \$2,917 worth, Germany \$2,793, and the United States \$253.

Japan.

The principal factor in the phonograph business of Japan is a manufacturing plant located near Yokohama, which is owned and managed chiefly by Americans. This enterprise is handled by American experts both in the manufacturing and the selling end, and in the factory American overseers direct the work of native employes, some of whom produce approximately the same results as workmen in the United States at about one-fourth the cost.

The output of the factory is sold by a selling company called the Nipponophone Co. (Ltd.), which has thirty-one branches and 106 agents and which has been notably successful. One of its methods has been to make every dealer a stockholder. According to the plan the dealer is required to deposit approved security for goods sent to him on consignment and when he buys stock in the selling company and pays cash for it he is allowed to deposit his stock as security, besides getting a discount of 2 per cent. on goods purchased. The company sells the machine at cost and gets its profits from the sale of records.

There is small market for high-grade phonographs and those with exposed horn are in greatest use. The sliding panels which are used in Japanese houses instead of doors and windows are usually kept open and more of the sound escapes than in foreign houses. The machine with considerable volume of sound is therefore best liked.

Africa.

Apparently the only African markets for talking machines worth considering by American manufacturers are in Egypt and British South Africa. In Morocco about \$20,000 worth of machines are annually imported, but they are mostly from France, and no American makes are represented. France and Germany also supply most of the articles of this kind in Algeria.

Egypt.

There are a large number of the better grade of phonographs in use in Cairo, and machines costing as much as \$150 find a ready market among the wealthier natives. The phonograph with concealed horn was introduced a year or so ago and some few sales were effected, but most of the machines sold are of the other type. Most machines sold are imported from the United States, but there are also a large number from France and Germany. The American phonograph costing between \$40 and \$50 is usually preferred, as are disc records with operatic music.

American phonographs are also preferred in

Demonstration—Proof—Evidence!

The only article of merchandise that actually tells its own story: the Columbia Double-Disc Demonstration Record gets the names of owners of disc machines and makes a friend of every name.

**Columbia Phonograph Co., Gen'l
Tribune Building, New York**

Alexandria and enjoy a large sale. There is considerable advertising both in newspapers and on billboards, as well as by elaborate window displays, and, judging from these, the operatic selections are in greatest demand. The phonograph is perhaps the only article of American manufacture for which the Egyptian buyer will pay prices f. o. b. American point of shipment. The damp climate of Alexandria is said to have a very destructive effect on disc records.

Union of South Africa.

The imports of phonographs into the Union of South Africa in 1909 were valued at \$131,892, the principal countries sharing in the trade being credited with the following amounts: United Kingdom, \$68,934; Germany, \$27,875; United States, \$22,488; France, \$8,258, and Belgium, \$3,548. The gramophone and Pathephone seem to be the most popular types of machines, and the demand is for popular as opposed to classical selections. Quotations are more satisfactory to South African importers if made f. o. b. New York.

Johannesburg.

Until the introduction of Edison cylinder machines two years ago disc records were almost universally used here, but now there is a considerable demand throughout the country for the phonographs of the cylinder-record type. The chief sale here, however, is still for the cheap German disc machines, which are largely sold by jewelers and pawnbrokers. All the leading music houses find a good demand for the better class of machines and the market is well supplied with high-class goods. The exposed-horn machines seem to be in greatest demand, and they are apparently holding their own with the newer concealed-horn type.

Imports of talking machines by countries cannot be ascertained for a later year than 1909, as they are now included in the same classification with bioscopes, magic lanterns, etc. However, it is known that the Johannesburg firm which has probably the largest sale of phonographs in this district last year imported from the United States for sale here and at its branches in Kimberley and Durban phonographs and accessories exceeding \$35,000 in value.

Zanzibar.

There is a growing demand among the Indians, Arabs and Swahilis, who make up the bulk of the population of this consular district, for talking machines of various kinds, and the two classes first named have also the ability to buy. Songs and readings from the Koran in Arabic are eagerly listened to by the Arabs. The coffee houses frequented by the mixed native population use the cheaper grades of phonographs with outside horns, while those with concealed horns are to be found in the private dwellings. At present the cheap machines for which there is the principal demand are being imported from Germany and a much better grade from Great Britain. Machines of American make are also found here, but so far as can be learned they are received through British agencies. Although there is generally a loss in tone value in this climate, machines and records stand the conditions here fairly well if properly looked after.

Australia.

American talking machines and accessories find one of their chief markets in Australia, and their sales far exceed those of any other country. The general prosperity of the country, the low tariff duties, the fact that the English language is spoken, and perhaps the scattered nature of the population make Australia one of the best markets in the world for American phonographs and records. Although there is direct steamship service between New York and Australian ports, many American shipments are sent by way of England and are credited to that country.

Oceania.

The Australian people are lavish buyers, and there is always a good market in Australia for goods of superior grade, though these will never be sold in the same quantities as the less expensive machines. This is only natural, as talking machines are purchased generally by all classes, and as the working people are in the majority, the largest number of machines sold will be of the grades they can buy.

Records in Demand—Sales Methods.

So far the cylinder records have had by far the strongest hold on the market, though there is always a certain demand for disc machines and records. The music usually termed popular has much the larger sale here, the operatic taking a comparatively low position in point of sales. The climate has no effect on records except perhaps in the extreme northern portions of the country, where some makes of both cylinder and disc records would be affected.

Machines with concealed sounding horn are comparatively new in this market, and dealers say that although a number of them may be sold, the general demand will always be for the exposed-horn machine. The retail prices of the most popular cylinder machines range from \$12 to \$30.

General advertising in magazines and trade papers has naturally a certain amount of effectiveness, but the selling companies realized long ago that to do the largest amount of business possible in this country it was necessary to establish branch offices here. This course has been followed by the Columbia Phonograph Co., General, the Victor Talking Machine Co. (which markets its goods through the Gramophone Co.), and Thomas A. Edison, Inc.

Melbourne.

Talking machines are extensively sold here and the business is capable of great expansion. One English and two American companies practically control the market, although there are seven or eight other companies, principally German, whose products are also on sale in comparatively small amounts. The three companies referred to have depots to facilitate the distribution of their machines and records, the price of the former rang-

ing from \$15 to \$200 retail and of the latter from 60 cents to \$5. The trade in disc records is growing and that in cylinder records correspondingly decreasing.

New Zealand.

It is impossible to say how many talking machines are sold in this country, as the customs department does not give separate statistics for these articles, but there is no doubt that the sales are very considerable. Most of the accessory parts are brought from England, but it is understood that, as with machines, parts are manufactured in the United States and sent to England, where they are put together and from there shipped to New Zealand, thus obtaining the benefit of the 10 per cent. reduction under the preferential tariff. A certificate from a British firm saying that any musical instrument exported to this country contains 25 per cent. of British material and 25 per cent. of British labor in its construction will serve to admit it as British goods.

The utmost care is necessary in packing records. Out of three recent shipments, aggregating 10,000 records, 7,000 were more or less damaged by mildew. It is possible that they were packed in damp straw and placed somewhere near the engine room, and that these unusual conditions accounted for the loss, but it is nevertheless desirable that zinc-lined cases should be used for all such shipments in order to reduce the possibility of damage.

TALKS OF VICTOR CO-OPERATION.

Ernest John, of the advertising department of the Victor Talking Machine Co., Camden, N. J., had an interesting chat in a recent issue of Printer's Ink on the Victor Co.'s policy of helping the dealer, in which he gave an interesting description of what Victor co-operation means and the system of advertising designed to identify the local Victor dealer with the visiting Victor artist.

ROUSH ON TRADE IN PITTSBURGH.

J. C. Roush, of the Standard Talking Machine Co., Pittsburgh, Pa., the well-known Victor jobbers, was a visitor to New York recently. He called on his many friends in the trade, and when seen by The World stated that the talking machine industry in his section of the country was in a very prosperous condition. In common with other Victor jobbers, Mr. Roush stated that his company's business would have been much larger than this year's total if they had had the goods to fill the orders received from their customers.

Have you mapped out your line of campaign for the spring, or are you going to "take things as they come"? Being prepared to meet the situation is nine points of the game.

THE POINT OF VIEW.

The big salesman sells his customer a fat bill of goods, but the great salesman makes his customer feel sorry he can't double the order.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Special to The Talking Machine World.)

Washington, D. C., Jan. 7, 1913.

NEEDLE-CONTROLLING MEANS FOR SOUND BOXES.
James P. Shinn, Camden, N. J. Patent No. 1,048,219.

This invention relates to improvements in needle-controlling means for sound boxes, the object of the invention being to provide a phonographic sound box with improved means for controlling the vibration of the needle, which means is always under the control of the operator, so that the needle may be allowed just the proper amount of vibration to insure the best possible results.

A further object is to provide an improved diaphragm having a needle arm fixed thereto and projected through a cylinder in which mechanism is provided for elastically controlling the vibration of the needle arm.

In the accompanying drawings: Figure 1 is an end view of the sound box illustrating the improvements. Fig. 2 is a view partly in section on the line 2-2 of Fig. 1. Fig. 3 is a fragmentary view in section on an enlarged scale illustrating the needle arm controlling mechanism, and Fig. 4 is a view in elevation partly in section showing an improved form of diaphragm holding gasket.

PHONOGRAPH RECORD. Josiah B. Miller, Boston, Mass., assignor to Boston Talking Machine Co., same place. Patent No. 1,047,971.

This invention relates to phonograph records and more particularly, though not exclusively, to records in disc form. Figure 1 shows the component parts of a disc record embodying one form of the invention in the condition in which such parts are prior to pressing; Fig. 2 shows the complete record after pressing; Fig. 3 shows in cross section of a portion of composition sheet material from which a record made according to one form of the invention may be formed; Fig. 4 shows a disc formed from such material prior to pressing; Fig. 5 shows a completed record after pressing; and Fig. 6 shows a modified form of record.

SOUND-RECORDING APPARATUS. John Noll, New York, assignor of one-half to Eugene Del Mar, same place. Patent No. 1,047,976.

This invention comprises new means for effecting a talking machine record of speech or sounds and is particularly adapted to the making of records of telephonically transmitted speech. The term talking machine is used broadly, the particular type illustrated herein being that in which the record is made in a circumferential spiral line upon

a cylinder, as of wax or other appropriate material. The organization comprises, among other things, a stylus lever operated by vibrations of a medium such as a stretched metal band actuated electromagnetically in the case of telephonically transmitted sounds, said stylus lever having a floating fulcrum through which an adequate gravity stress, capable of adjustment if desired, may be imposed upon the receiving stylus bearing upon the record receiving surface.

In the accompanying drawings: Figure 1 is an end elevation; Fig. 2, a plain view; Fig. 3, a section on the line 3-3 of Fig. 2; Fig. 3a is a detail horizontal section taken slightly above the stretched metal band and through means for holding one end of the same, parts being shown in elevation; Fig. 3b is a side elevation of the post which engages the feed-screw; and Fig. 4 a bottom plan view of the recording devices.

SOUND CONDUIT AND AMPLIFYING DEVICE. Alex. Fischer, Kensington, London, Eng. Patent No. 1,046,454.

This invention relates to sound conduits and amplifying devices and refers to that class of such conduits and amplifying devices as are constructed with reflecting surfaces after the manner described in applications for Letters Patent Serial No. 555,776, filed April 16, 1910, and more particularly to those in which no sectional area at right angles to the reflector is less than the area of the smaller tube, or in the case of circular tubes the vertical distance from the reflecting surface to the inner angular point where the two tubes join is approximately equal to the diameter of the smaller tube.

In applying the principle of the former aforesaid patent application to certain cases, in adapting it for instance to the receivers and transmitters of telephones, to speaking tubes, as well as to sound conduits of talking machines, certain phenomena became apparent. It was observed that when two tubes or sound conduits met at an angle and a reflector was provided, as described in the foresaid application, if the reflector was only of sufficient size to include on its surface the projection of the smaller tube the sound waves were too much confined, while on the other hand if the reflector was of sufficient size to include on its surface the projection of the larger tube, the sound waves were allowed to spread out to an undesirable extent, and in each case the result was not so perfect as it can be made by carrying into effect the principle of the present invention.

According to the present invention, in place of making the reflector of sufficient size to include only the projection of the smaller tube or large enough to include that of the larger tube, it is made intermediate in size. Then, supposing we have the tubes which are to be used as sound conduits, and one of these tubes has a diameter of x millimeters, while the other has a diameter of $(x+2y)$ mm. When these are connected together at a certain angle and a reflector is provided the projection of the smaller tube on the plane of the reflector is an ellipse with a minor axis x mm. in length. Again the projection of the larger tube on the same plane would give an ellipse with a minor axis of $(x+2y)$ mm.

According to the present invention there is selected for the minor axis a length intermediate between the two, say $(x+y)$ mm. This construction enables the waves to spread to a certain extent without giving them too much freedom, and produces surprisingly good results. It will be understood that the major axis of the ellipse and the

general dimensions of the reflecting surface are correspondingly and suitably proportioned, and the end portions of the reflector, that is the portions representing the amounts by which the reflector exceeds toward the end the ellipse forming the projection of the smaller tube, may be adjacent to one of the tubes or part may be adjacent to each of these tubes. These portions may be formed of one or more small plane reflectors set at suitable angles to catch and reflect the spreading waves, or, especially in the case of the larger tube, the auxiliary reflector may be curved in one direction so that the spreading waves impinging at slightly varying angles, due to their having

emerged from the smaller tube, may nevertheless be reflected straight along the larger tube. And in order that this invention may be better understood, reference is made to the drawing accompanying this specification, which shows by way of example two methods of carrying the invention into effect.

Figure 1 is a side elevation of the junction of two sound conducting tubes. Fig. 2 is a back elevation of same. Fig. 3 is a similar view to Fig. 1 of another form. Fig. 4 is a similar view to Fig. 2.

GRAMOPHONE, PHONOGRAPH AND LIKE HORN. Joshua Green, London, Eng. Patent No. 1,047,789.

This invention relates to the manufacture of horns for gramophones, phonographs and the like. Such horns are in practice usually made of metal, such as tin, or of wood, and in the latter case are built up of sections or strips, the edges of the adjacent strips being connected together so as to form a complete horn. This construction, however, is costly.

Now, this invention has for its object to provide means whereby such wooden horns, which, for various reasons are preferred to the tin horns, can be manufactured at a considerably less cost than has hitherto been possible. To this end, according to this invention, a horn is made from a single blank of wood which is shaped to the usual conformation and is connected together at the two adjoining edges.

In carrying out this invention a blank of plywood is taken and subjected to a dry heat, the heat being continued until the wood becomes pliable and can be worked on a mold of the shape of the horn to be produced. In practice use is made of a hollow metal mold which is internally heated in any suitable way, say, for example, by the passage therethrough of the gases of combustion from a fire or furnace, or of steam. The plywood from which the horn is to be made is applied to the said heated mold and is gradually caused to assume the shape of the finished horn. To connect the abutting edges of the bent blank forming the horn, use is made of a butt strip, or the edges may be halved and connected together.

In the case of horns in which the bell-mouth or flared end is of marked dimensions some difficulty may be experienced in the molding; the inventor may then make the extremity of the strip which is to form the said bell-mouth or flared end with a series of slits which permit the said extremity to be opened out or flared to the extent desired. The wedge or other shaped spaces which are formed by the slits when the extremity is thus opened out may be filled up in any convenient way. For example, separate pieces of wood

may be filled in the said spaces or a strip or strips of wood may be applied circumferentially around the inner or the outer surface of the horn at the slit extremity.

In practice the insertions or portions of wood applied to the flared end or bell-mouth of the horn may be of different colors, thus giving rise to artistic effects of a kind which may be varied as desired.

To enable the invention to be fully understood reference is made to the accompanying drawing:

Figure 1 is a side view of a horn molded from a single blank of wood according to the invention. Fig. 2 is a front view thereof. Fig. 3 is a transverse section of the joint between the edges of the wooden blank forming the horn and drawn to a larger scale. Fig. 4 is a view similar to Fig. 3, but illustrating a modified form of joint, and Figs. 5 and 6 are views similar to Figs. 1 and 2, respectively, of the modified construction of horn.

TALKING MACHINE. Charles P. Carter, Kingston, N. Y., assignor by mesne assignments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,047,497.

This invention relates to improvements in the sound reproducing mechanism of talking machines, and particularly to the stylus and mounting therefor.

It consists broadly in a single stylus adapted to track two different kinds of record grooves, as, for example, record grooves having 100 threads per inch and record grooves having 200 threads per inch, as the grooves upon the so-called two-minute and four-minute cylindrical sound records. This is accomplished by forming the stylus of different contours in planes at right angles to each other, so that the stylus as viewed in one direction is narrower than when viewed in the direction at right angles thereto. A cross section of the stylus in one direction is of suitable size and form for tracking the 200 thread record grooves, for example, and its cross section in the other direction is of suitable size and form for tracking a record groove of different size and shape, as for example a 100 thread record groove. The stylus is mounted by any suitable means, which can be shifted through an angle preferably of 90 degrees, to permit the stylus to be used in a single reproducer comprising preferably a single diaphragm, a single floating weight, and a single stylus lever upon one end of which is mounted a holder for the stylus. This holder is rotatably mounted upon the lever. Upon moving the holder through an

angle of 90 degrees, the stylus will be rotated to present a contour suitable for engaging a record groove having a different number of threads per inch from the record groove with which the stylus was adopted to coact before the rotation.

Figure 1 is a central vertical section of a phonograph reproducer provided with and embodying the invention. Fig. 2 is a bottom plan view of the same. Fig. 3 is an enlarged vertical section through the stylus lever, the stylus being shown in side elevation. Fig. 4 is a bottom plan view of the same, and Fig. 5 is an end view of the same.

GRAMOPHONE RECORD. Cornelius Leonhard Roth-eudt, Walheim, near Aachen, Germany. Patent No. 1,046,650.

When it is desired to play a gramophone record several times in succession, the stylus must each time be lifted and transferred from one end of the record groove to the other, the play being meanwhile interrupted. This is of great disadvantage particularly when marches and dances are to be repeated, which repetition ought to be obtained without noticeable interruption in the play. This drawback is remedied by the present invention according to which the groove of a

gramophone disc is made endless, the ends of the record groove being joined by a return groove carried in a parabolic curve across the turns of said record groove. The direction of the curve is naturally dependent upon the direction in which the disc turns and its form should be such as to guide the stylus with as little resistance as possible. Having once been started in the direction of the return groove, the stylus is easily guided through the same, and the part of the groove which crosses the turns of the record groove can therefore be narrowed sufficiently for preventing it having a detrimental effect on the record. The interruption caused to the music while the stylus passes through the return groove will hardly be noticeable.

In the drawings a is the disc and b the spiral groove which contains the record. The ends of the groove b are joined by the return groove c, which is carried in a parabolic curve across the turns of the groove b.

The record is started in the ordinary manner and the stylus is automatically returned by the groove c to the starting end of the groove b, so as to repeat the piece as long as the disc is kept in motion.

VICTOR NUMERICAL CATALOG

Just Issued Up to and Including December List Will Be an Immense Aid and Convenience to Salesmen in Filling Orders with Dispatch.

The Victor Talking Machine Co. has just published the December numerical catalog of Victor records, which will be found of immense value to Victor representatives. In a letter to its agents the Victor Co. calls the attention of the dealers to the practicability and meritorious points of the catalog. The following extracts will give some idea of the features of this publication:

"It will be observed that preceding each serial number is a ruled space for the convenience of dealers in keeping accurate account of stock on hand, record orders placed and shipments received, which in the end will conclusively show the sale of each record.

"Our suggestion is that you enter in front of each serial number the date and quantity of each record in stock, and as further shipments of records are received, make an entry of the exact quantity, and repeat this same process as often as additional stock is received. When stock is again inventoried (which should be done at least twice a year) you will have complete information as to the sale of each particular record, which will certainly assist materially in keeping up your stock on all the big sellers and avoid overstocking on the slow-selling numbers."

KEEPING AHEAD OF THE GAME.

Successful Merchant Is the One Who Thinks Quicker Than the Other Fellow.

"Keep your mind open to the oncoming events. Do not be content to think just what somebody else has thought. Give your own mind a chance. Reach out into the future, remembering that nothing in this world stands still; everything moves—either backward or forward. See the faults that exist, and in them see your opportunities for improvement," says a successful business man. "Is it thinkable, for even a fraction of a second, that the limit

of the human mind has been reached? More has been done by that brain in the last twenty-five years for progress than in any preceding 100 years, and the young men of to-day are the descendants of such brains. What an inspiration for the future! Be an optimist. Believe in the United States, in its institutions, and in its men."

INTRODUCE NEW REPRODUCER.

Columbia Co. Gives an Interesting Description of This New Reproducer.

The January list of the Columbia Phonograph Co.'s new records contains an important announcement relative to the production of the new Columbia reproducer No. 6, which is now being delivered to Columbia dealers, who have been authorized to allow \$3 for any Columbia reproducer as part payment toward the price of the new reproducer, which retails at \$5.

The new No. 6 is shown herewith, and the following extracts from the printed description will give some idea of its merits and features:

"In its construction the new No. 6 reproducer

New Columbia Reproducer.

is a marvel of mathematical exactness. The gauge of proportions is not in hundredths or even in thousandths of an inch. It runs as finely as ten-thousandth parts of an inch; for its range of usefulness must cover every form of music.

"In a large measure this is due to the one-piece, drop-forged tempered steel needle arm, which is an innovation in the mechanics of reproducers. It is made of the finest instrument steel, tempered with the nicety of a tuning fork. It has all of a tuning fork's elasticity to transmit vibrations and works absolutely true to tone, from the most delicately shaded vocal solo to the heavy instruments of a brass band. Each individual note is so clearly analyzed and the full, rich undertones of accompaniment so richly retained in all their softness, that the results obtained are truly remarkable."

LATEST ADDITION TO GIMBEL LINE.

The Columbia Phonograph Co. recently completed arrangements with Gimbel Bros., New York, whereby this prominent establishment will handle a complete line of Columbia products. The initial display is now being shown in the handsome talking machine waterrooms of the store on the eight floor.

Thomas A Edison

MR. EDISON'S policy has always been that an invention was not good enough for the public until it was as perfect as he could make it—and that means as perfect as it could be made.

FOR two concrete instances of this, see the Edison double-page in this issue.

The TALKING AND NOVELTY NEWS MACHINE WORLD

Published Each Month by Edward Lyman Bill at 373 Fourth Avenue, New York, February 15, 1913

The best-known trade mark in the world

“The Victor talking machine’s design, ‘His Master’s Voice,’ has become a household word, and the quaint little fox terrier at attention before the horn is familiar to more Americans than any of the world’s great masterpieces”—*Collier’s Weekly*.

The Vitaphone Reproducing Device

Reproduces Every Disc Record Made

Without the disagreeable metallic harshness, scratch, nasal twang, or barrel tone. No screw driver, extra attachment or mechanical contrivances are required to play any known cut record on the Vitaphone.

Those who understand the different cut records can appreciate the selling advantages of an instrument which plays equally well, needle or permanent jewel cut records, as the Vitaphone owner can play any disc record that may please his musical ear.

The Vitaphone brings out the true harmony and detail impossible to obtain from any other reproducing system, and talks for itself.

TRIBUTE TO TALKING MACHINE.

Music, of London, Points Out the Strong Position That It Has Won—Appreciated by Music Publishers Since New Copyright Act Became Effective—Some Interesting Remarks.

In the course of an interesting tribute to the talking machine and its influence our London contemporary, Music, says:

It is not only the greatest invention of the age so far as concerns the music trades and the wide musical public, but it is impossible to define its future potentialities.

The early talking machine was clever but grotesque. Now it is not only clever but stupendous in its powers. It seems to have hardly any limitations, and yet it is being constantly improved upon, not only in its sound-producing qualities, but in those aspects which make it the companion of the home. The questions of disc or cylinder records, type of machine, etc., are for individual preference and do not concern us, but it does concern us to recognize in the variety of types the immense opportunities for fair and lively competition which that diversity affords. It is doubtful whether any musical instrument was ever the subject of competition so keen as the talking machine, or whether it paid the dealer so well to study everything in regard to it.

The talking machine has now obtained a status in the eyes of genuinely musical folk far higher than before, and, thanks to the new Copyright Act, is now regarded as a friend and a brother by the music publishers, who formerly regarded it as a burglarious intervener. Only the other day one of London's most important publishers said to us, "I think the talking machine is the best friend the publishing trade ever had." Whatever defects may lie in the clauses of the latest Copyright Act, the removal of a grievance between talking machine and publishing houses entitles the act to respect. Despite pessimism in certain quarters the collection of royalties seems to work quite smoothly and to be dissipating a prejudice not unnaturally felt previously at the indiscriminate use of valuable copyright property. The music dealer who is not blind to the trend of the times perceives in the talking machine a "side line"—as some prefer to term it—of invaluable possibilities. We should call it by a more important name—an indispensable department of any music business.

NO PATENT LEGISLATION NOW.

Oldfield Bill May Not Come Up Until Next Winter, the Latest Report.

(Special to The Talking Machine World.)

Washington, D. C., Jan. 28, 1913.

Efforts to amend the patent laws have been dropped as far as the present Congress is concerned. This was the announcement to-day of members of the House Patents Committee. Chairman Oldfield of the committee said the time was too short to attempt the reforms that had been planned. He was doubtful if the legislation could be brought up before next winter because of the proposed limitations of the extra session.

Mr. Oldfield has a bill on the House calendar which will be reintroduced soon after March 4, proposing sweeping changes in the patent laws, one feature being specially designed to meet the decision of the Supreme Court in the A. B. Dick mimeograph case.

LEAVES TALKING MACHINE FIELD.

O. W. Taylor, formerly manager of the talking machine department of the Whitney & Currier Co., Toledo, O., resigned for the purpose of entering the automobile business, and on February 1, took charge of the tire department of the Erie Supply Co., 310 Erie street, Toledo, O., in which he is a stockholder. Mr. Taylor has been in the talking machine business for the past ten years.

MELBA-KUBELIK TOUR

Of America Next Season Will Interest Talking Machine Concerns.

A dispatch from London tells of a remarkable concert aggregation arranged for America, the personnel of which will interest especially dealers in talking machine records of Mme. Melba and Jan Kubelik.

The combination consists of Mme. Melba, Jan Kubelik, Edmund Burke, the baritone of the Covent Garden Opera; Lapiere, the French pianist, and Marcel Noyes, the celebrated French flutist.

The tour will commence next October 1, and will continue until April 1, 1914. It will be under the management of Loudon Charlton, of New York.

VOTING ON NEXT CONVENTION CITY.

Louis Buehn, secretary of the National Association of Talking Machine Jobbers, recently sent out a post card to the members of the association, requesting them to vote as to the place of holding this year's convention. Up to the time of going to press the vote indicates that Niagara Falls will be the place selected by the members.

WILL TALK ON ADVERTISING.

Geo. P. Metzger, advertising manager of the Columbia Graphophone Co., will be one of the speakers in the course of lectures on advertising which is being given weekly at the West Side Y. M. C. A., New York. Mr. Metzger ranks as one of our leading publicity experts. He possesses a rich vein of originality, fecundity of ideas, and the ability to present advertising matter to the public in a manner to interest. All who attend his lecture, which occurs on March 17, will hear something that will be interesting and helpful.

AN INTERESTING SECTION OF THE NATIONAL MUSEUM.

That Devoted to the Exhibition of Musical Instruments—Talking Machine Development from Its First Crude Form to Present-day Standard Illustrated in Interesting Manner.

One of the sections of particular interest in the United States National Museum in Washington is that given over to the musical instrument collection, which is of surprisingly large proportions. A number of the relics are, of course, preserved as personal mementos of prominent men in the country's history, but in the main instruments in the collection have been selected because of their interest as examples of a type or the workmanship and design of a given period of history, and it is this circumstance that renders the collection rich in inspiration for present-day manufacturers of musical instruments, who are not averse to searching the products of the masters for ideas that may be turned to account in modern musical design.

Most of the instruments in the Governmental collection are originals, although there are some copies, as in the case of a number of reproductions of famous violins, the originals of which are in European collections. Just here it may be noted that, strange as it may appear, the United States Government officials are in an exceptionally advantageous position when it comes to securing "originals" for certain branches of their musical instrument collection. Reference is made to the early examples in the player-piano and talking machine fields. Both classes of instruments have been developed to their present stage of perfection in the United States, and naturally the most interesting examples of all the various stages of evolution are to be found in this country. The Federal officials are making an effort to secure for the National Museum these early examples of sound-producing instruments and player-pianos just as they are securing the early automobiles and flying machines.

Already a respectable beginning has been made in the case of talking machines and phonographs.

LAWRENCE MCGREAL RETIRES.

Sells Out Edison Jobbing Business to Babson Bros.—Devotes Himself to Duties as Sheriff—Returning to Trade at Expiration of Term—The Milwaukee Phonograph Co. Organized to Handle Former McGreal Business.

(Special to The Talking Machine World.)

Milwaukee, Wis., Feb. 10, 1913.

Lawrence McGreal has severed his connection, temporarily at least, with the talking machine business, and has disposed of his holdings as jobber for the Thomas A. Edison, Inc., in Wisconsin territory. This move on the part of Mr. McGreal was not entirely unexpected, as he was elected sheriff of Milwaukee county last fall, an office which requires practically all his time.

The Edison jobbing interests in Wisconsin have been purchased by the Babson Brothers, of Chicago, who have organized the Milwaukee Phonograph Co. Papers of incorporation for the new concern were filed with the Secretary of State in Madison recently, giving the capital stock at \$12,000, and the incorporators as W. A. Schmidt, A. Schmidt and Otto Jalass. W. A. Schmidt, formerly associated with Mr. McGreal as traveling representative, and later as manager of the New Idea Cabinet Co., has been made manager of the new Edison jobbing concern and is now in charge of the new offices which have been opened at 349 Broadway.

Lawrence McGreal's name and good will is still being used in connection with the McGreal retail store, now owned by Gertrude Gannon, head of the Wisconsin Talking Machine Co., and it is understood that the well known jobber will re-enter the talking machine field as soon as his office of sheriff expires. Meanwhile the plans of the new company will be watched with interest.

The first Edison machines, as well as representative later types, have already been deposited in the Museum, and an appeal to be made to the Victor and Columbia companies to enrich the National treasure house with instruments that will illustrate in progressive stages the march of improvement in mechanism and design. The same policy is to be pursued in assembling practical object lessons to chronicle the evolution of the player-piano, and in both fields the museum will probably be able to supplement the original instruments by the original models from the United States patent office.

While the Federal officials receive many donations from manufacturers and others, who are interested in preserving for posterity those instruments that mark epochs in the musical instrument industry, there is at all times available a modest fund for the purchase of desirable instruments, and a search for such is prosecuted continually. Every year or two a representative of the Museum goes to Europe in quest of material for the musical instrument collection and foreign dealers are constantly on the alert in behalf of the American institution. It is seldom that Uncle Sam will pay fancy prices for musical instruments, and thus he lets slip through his fingers the musical relics of famous musicians and composers that from time to time command high prices when put up at auction abroad; but, as has been said, the object of the officials at Washington is not so much to acquire rarities and "show pieces" as to provide a collection that will be broadly educational and will reflect the history of musical instruments in general. At this writing the Government's collection of musical instruments comprises more than 1,500 specimens, and there is a steady, though by no means, rapid growth.

MAKING BUSINESS CAPITAL OUT OF A HOLIDAY.

Every Talking Machine Dealer Should Herald the Approach of Washington's Birthday by Featuring Selections Appropriate for the Occasion—Spread a Thick Layer of Patriotic Literature on Your Publicity and on Your Circulars to Customers—It Will Pay.

Have you considered the advisability of celebrating the twenty-second day of February in the way it should be done by every loyal American talker man? Do so, Mr. Dealer, and receive the plaudits of your customers who will glory in your zealous ardor, and reward you by purchasing the blood-stirring melodies you offer them.

There is every reason why the Father of his country should have the same consideration shown his memory as the chaps who made the Declaration of Independence a reality enjoy, and you are just the fellow to do it.

It will be easy for you to give George a boost, because you will not have the pop of firecrackers and the crash of blank cartridges to drown your phonographic efforts as you do upon the Fourth of July. You can allow your patriotism—"that noblest passion that animates a man in the character of a citizen"—to run riot, and wax fat upon the dollars of the public at the same time if you will only enter into the spirit of the occasion with sufficient passion. To do this, you must send your mind surging back across the years to the revolutionary days—the time when George was a living, thinking, red-blooded American; and then, when you have arrived at your destination, just think for a moment if you will, what he and Martha, and the whole family, for that matter, missed by not having a talking machine around the house. Fierce, is it not?

I am very sure that old Lord Cornwallis would have received his trouncing a good deal sooner if George had owned a phonograph and sharpened up his appetite for British gore on a few good canned martial airs every morning before buckling on his sword.

Returning once more to the present, what (as I think I asked you at the outset), are you going to do about the 22nd ult? Do your customers appreciate how great an aid the talker will prove to any form of entertainment, no matter what, they may have in mind for that day? Whether the affair be in a church, hall, school or home, the talking machine should be there.

Now, Mr. Dealer, you and I know, do we not, that our instrument, the talker, in its many types and styles of dress, can do more for George—can speak his glorious name louder, and narrate of his wonderful career more eloquently than any other sound producing medium on earth. Methinks I hear a discordant chorus of Washington's Birthday orators vociferously calling me to account for

the above declaration. Gentlemen, if you object to being classed sound producing mediums, I most humbly apologize, but in the language of my friend Shorty McCabe, the talker's "got you pounded to a pulp, at that."

Here's my advice to you, Mr. Dealer:—Spread a good thick layer of patriotic literature upon the office desks and in the home letter boxes of your patrons, and I emphasize the word *thick*. Give it to them the way you liked molasses on your bread back in the childhood days—*thick!*

Tell them a little about George—something they

"If George Had Owned a Phonograph."

do not already know if you can—just enough to start their memories joggling along the path of patriotism; then, explain to them what George missed, and what they also will miss if they fail to get busy and buy some soul-inspiring, nerve-stimulating, feet-tickling records, with which to entertain their friends upon (to my mind), the greatest holiday of the entire year.

Your window display also will facilitate holiday trade if you decorate it a la revolution. How about a scene depicting a camp fire at Valley Forge? Ragged Colonial soldiers recline by its ruddy embers (concealed incandescents), and listen enthralled to the strains of a talking machine

Their clothing hangs in tatters; they are numb with cold, and weak with hunger, but they scoff at ill fortune and stare death in the face with a laugh; because, through their misery runs the cheery melody of the song they love best. Some dream of a broad plantation home with its cotton picking darkies, and a brown-eyed lass who awaits their return to the dear Southland—others of a quaint farmhouse nestling amid snow-clad New England hills; and they are happy in spite of all, their cares shattered and blown away by the wonderful influences of the talker. War is hell, but music is divine! We will call this picture, "What Might Have Been."

Uncle Sam realizes to-day the great value of the talking machine as part of his war equipment. There is never a cruiser or battleship launched nowadays, nor an army post established without a number of talkers being included among the furnishings. He also knows what George and his Colonial soldiers missed and is profiting by the inventive genius of their descendants.

In conclusion, Mr. Dealer, let me urge upon you the expedience of making the most of Washington's Birthday. Select a repertoire of records in harmony with the holiday you are celebrating, and feature them. Get them into the homes of the people on approval. Also have your salesmen give patriotic recitals in churches, distributing literature and taking orders at the close of the entertainment. Hold a Martha Washington tea for the ladies at your talker shop, Mrs. Dealer playing the part of hostess, and in every way possible pay due respect to the memory of George Washington, soldier, statesman and honorable gentleman.

HOWARD TAYLOR MIDDLETON.

REPUTATION MAKES THE STORE.

The Opinions of People a Strong Factor in Insuring Business Success—How Good-Will May Be Gained and Business Accelerated.

You are advertising your store at this season, and nothing should be omitted that can increase the attractiveness. Polite clerks with accommodating manners are great helps. Many poor people may be among your visitors, but be sure the same degree of politeness be accorded them that you would bestow upon the rich. The character of your store is what you make it; its reputation depends on what the people think and say about it. If the reputation it receives among the people is good, you have succeeded in widening your range of trade; but if it is contrary, no system of advertising will give it a satisfactory standing among the people of your particular community. A reputation for fair and polite treatment, neatness and orderly arrangement, fine goods and good quality, is a thing much desired by every retailer.

Cash Your All the Year Round Loyalty

During the rush and time of shortage around the holidays have your name on our list of regular dealers and be in line to have your orders receive preference over the fellow's who "shops" during the rush season and who buys from his nearest jobber the balance of the year to save on freight and express, and maybe puts up with second-class service at that, sacrificing increased profits made possible by prompt and full-filling of orders for the sake of the "economy bug" working on his freight and express expense account.

FORGET THE SMALL DIFFERENCE IN EXPRESS

if there is a difference between your store and ours in favor of a jobber nearer you, and remember there are a lot of things about "Eastern Service" which will more than repay you.

Maine, New Hampshire, Vermont, Rhode Island and Connecticut Papers Please Copy.

EASTERN SERVICE IS GOOD SERVICE. BUT ABOVE ALL IT IS JUST.

EASTERN TALKING MACHINE COMPANY

177 TREMONT STREET, BOSTON, MASS.

FOR NINETEEN YEARS TALKING MACHINES EXCLUSIVELY

CALIFORNIA OPTIMISTIC OVER BUSINESS OUTLOOK.

General Conditions in State Most Favorable—Exposition Work and Highway Improvements Mean Money for the Talking Machine Users—Record Business Heavy—Parcel Post Being Utilized to Good Purpose—Sherman, Clay & Co.'s Good Year—Columbia Publicity—What Manager W. S. Gray Says—The News of the Month Worth Recording.

(Special to The Talking Machine World.)

San Francisco, Cal., Feb. 4, 1913.

Talking machine business for the month just closed more than came up to expectations according to reports from both the retail and wholesale quarters, and dealers are more than ever optimistic over the prospects for an unusually heavy business during 1913. General conditions are very favorable. The State is now in the midst of an \$18,000,000 campaign of highway improvement, stimulating business in many lines, while much money is being put into circulation by large power and other development projects, work on which will be continued through the present year. Improved roads and extension of railroad lines are giving easier transportation throughout the State, and many sections which have been sparsely settled are rapidly filling up with prosperous agricultural communities. In view of these new business possibilities more goods will undoubtedly be handled, and the expense of handling in some ways will be less. The entire State will share in the effect of the Exposition work, which has now passed the merely preliminary stage, and which will for the next two years furnish employment to many people. The advertising of this event has already produced beneficial results, and is drawing the attention of the people from all over the world. From present indications dealers feel justified in making large plans for the immediate future, and it is anticipated that 1913 will establish a new record for the Coast talking machine business.

Record business has been especially heavy this month, owing to the large number of machines delivered at holiday time, and it is thought that the parcel post has stimulated country record

business. A good many firms have adopted this method of shipment and on the whole have found it satisfactory. Edison dealers are having difficulty in supplying the demand for blue amberol records and are anxious to get a better assortment of disc records, the supply so far being very limited.

The travelers for the Pacific Phonograph Co. are at headquarters after their initial trips of the year, and are more enthusiastic than ever over the Edison disc phonograph. J. E. McCracken has just returned from the Southern part of the State, where he says dealers generally placed large orders. E. W. Cyrus covered Oregon and Washington with equally good results. The limited factory supply of records seems to be the only drawback in the introduction of the new machine. A. R. Pommer, manager of the Pacific company, says that much interest is being taken locally in the new product; that E. W. Scott, who runs the talking machine department at Kohler & Chase's in this city, and Clancy & Le Clair at the Oakland store of Kohler & Chase, have placed orders for Edison machines, and that several other dealers are considering the line.

Since the introduction of the new disc phonograph, the Pacific Phonograph Co. has been obliged to reorganize its quarters on Mission street. The entire fifth floor is now given over to disc products and the cylinder part of the business has been moved to the fourth floor. Yards of new shelving is being built and other changes are under way for the accommodation of the increased business. Another traveler has been added to the sales force in the person of E. L. Sues, formerly with the Talking Machine Co. of Chicago.

Manager Bailey, of the San Francisco branch of Babson Bros., reports business thoroughly satisfactory since the first of the year, but feels the need of an adequate supply of disc records in order to push the sale of the Edison disc phonograph. He says the adoption of the parcel post is a good thing for them, as they do a big mail order business in records, and the new system of shipment enables them to reach customers in small places heretofore beyond their reach because there were no express offices near them.

Sherman, Clay & Co. closed its fiscal year the end of January and A. G. McCarthy says the closing of the books revealed the fact that the year just closed was the best in the history of the house. January business was excellent, he says, in his department, retail business being better than last year, and wholesale as large as it could be with some of their shipments held up by the railroad blockades. Now the shipments are coming in without delay and Victor products are being distributed as rapidly as possible.

It has been decided to have another Portola celebration here in October this year, and P. T. Clay, of Sherman, Clay & Co., has been elected chairman of the committee in charge, and A. G. McCarthy has been named as chairman of the publicity department. Mr. Clay had charge of the affair when it was given here before in 1909.

W. S. Gray, manager of the Columbia Phonograph Co., Gen'l., has been making short trips out into the country districts this month in order to get in close touch with the Columbia dealers. He returned from Sacramento a short time ago, and is now preparing to leave for San Jose, Stockton and surrounding towns. He has devoted much advertising space in the daily papers this month to the records of grand opera singers, who have had engagements here the last few weeks, the number being unusually large, including Nordica, Pasquali, Bispham, Claude Cunningham and Carolina White. Their records have been in great demand. F. R. Anglemeir, manager of the wholesale end of the business, says that business has fully recovered after the slight lull just after the holidays when dealers were taking inventory, and that orders are coming in in fine shape. The California Music Co., owned by R. A. Daniels, who moved from here to San Jose last month, has placed a large order for Columbia goods.

E. W. Scott, who is located with Kohler & Chase, says business since the holidays has exceeded his expectations, especially in the number of machines sold. He is now featuring a new line of record cabinets, known as the Wood button cabinets. These are made in Los Angeles and can be had in sectional form. Mr. Scott anticipates a big business with them.

L. V. Ridgeway, representing Lyon & Healy, Chicago, was a recent visitor to the San Francisco trade.

MOTION-PICTURE TRUST.

M. Pathe Starts a Serious Controversy in the Trade in England.

Charles Pathé, of the firm of Pathé Frères, manufacturers of films, have started a serious controversy in the cinematograph trade in London, England. He purposes to form two groups of manufacturers, the first to be composed of not more than five firms and the second to consist of about fifty of the smaller manufacturers who "will control the output of the film market in Europe, and limit the number of manufacturers."

PLEASES HIGH SCHOOL PUPILS.

The pupils of the Vineland (N. J.) High School, through the courtesy of the Victor Talking Machine Co., at the suggestion of Davies & Son, enjoyed a demonstration of educational and grand opera records one afternoon recently.

Change your stock around. Give the store a change, a new appearance, as though new goods were coming in right along. Eyes always take in more than the tongue will inquire about. Remember that.

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

International Correspondence Schools

Box 918, Scranton, Pa.

It is not only the dropped-forged tempered steel needle arm, or the grommet-connection of needle arm and diaphragm, or the scientific exactness of its construction, but the perfect combination of these features that is giving the trade so much interest in the tone-results of the new No. 6 Columbia reproducer.

THE LAW GOVERNING THE USE OF PROXIES.

James F. Bowers Submits Legal Opinion from Judge C. N. Goodwin, Who Prepared the Charter of the National Association of Talking Machine Jobbers, Covering the Above Question—Proxy as Proper and as Legitimate as a Personal Vote.

The use of proxies has been a subject which has been discussed in trade circles considerably during the past few months, and upon this subject we have received the following communication from James F. Bowers, of Lyon & Healy, Chicago.

Mr. Bowers was the first president of the National Association of Talking Machine Jobbers and has been prominently identified with other trade organizations, among which may be named the Piano Merchants' National Association, in which he has held a high official position for a number of years.

Mr. Bowers, therefore, speaks as a man of experience and a parliamentarian of admittedly high rank.

Chicago, Ill., Jan. 25, 1913.

My Dear Colonel Bill—I have read with much interest your editorial in the last issue of The World in reference to the question asked you in regard to voting by proxy at the meetings of the National Association of Talking Machine Jobbers. There seems to be in the minds of some of the members of the association a rather confused idea

as to what a proxy is or what it is for. I think the fears of these members, so to speak, have been played upon by designing persons, who are not members of the association, and I think more of the trouble arises from the fact that some of the members of the association are not accustomed to the ways and acts of deliberative bodies or associations.

All this talk of "politics" in the association is the veriest rubbish and nonsense. There is nothing of the kind. A proxy is just as proper and just as legitimate as a personal vote, and there is no impropriety or "politics" whatever in asking a member of the association for a proxy in the event of such member not being able to attend the meeting in person.

I beg to enclose herewith a letter to me from the Honorable Clarence N. Goodwin, judge of the Superior Court of Cook County (which includes Chicago), who drew and prepared the incorporation or charter of the association, and which will settle any question as to the right of a member to vote by proxy or to solicit one, and I hope it will

Superior Court of Cook County
Clarence N. Goodwin, Judge
In Chambers

Chicago, Ill. January 25, 1913.

Dear Sir:—

In reply to your letter of January 21st, 1913, I beg leave to say that the National Association of Talking Machine Jobbers is incorporated under an act of the General Assembly of the State of Illinois entitled "An Act Concerning Corporations" as an association not for pecuniary profit. Section 31 of that Act provides with reference to general and special meetings of such corporations as follows: "At any such meeting members of the corporation may take part and vote in person or by proxy." The right, therefore, to vote and take part in any such meeting by proxy cannot be lawfully denied to any member. No amendment to your By-laws can contravene or set aside a statute of the State of Illinois under which you operate and do business.

Very truly yours,

Clarence N. Goodwin

To James F. Bowers, Esq.

Judge Goodwin's Letter to J. F. Bowers.

close the incident and, as it were, make the minds of the well-meaning members of the association easy.

I ask you to give this letter and the opinion of Judge Goodwin space in the next issue of The World. Very truly yours,

J. F. BOWERS.

Col. Edward Lyman Bill.

ANXIOUS FOR NEW MACHINE.

Army Officer Keeps in Touch With Progress on Disc Machines and Records While Duty Takes Him Half Way Around the World—Machines Shipped by Express to Impatient Ones—Demands from Old-time Edison Admirers Feature of Present-Day Business.

An instance of the general interest to those who already possess Edison phonographs in the new Edison disc machines and records, is that furnished by an officer in the United States army, who while in the Philippines a couple of years ago, first wrote to the Edison headquarters at Orange for information regarding the new disc machines and records, and when they would be placed on the market, as he was anxious to secure one to replace his old style cylinder machine. The officer was supplied with the information available at that time and was next hear of from Panama, then Porto Rico, Atlanta, Ga., where he managed to be present at one of the demonstrations, and finally from New York where he is stationed at the present time. The progress made with the new line was reported to him regularly and the prospects are that by this time he has secured one of the much sought machines.

Other Edison enthusiasts were so anxious to secure machines, with or without records, that at the urgent request of dealers machines have been sent by express to several cities in the Middle West and even so far as the Pacific Coast, a costly proceeding at best.

M. P. MARTIN CO. ORGANIZED.

Succeeds the Harper & Miller Music Co. in Hutchinson, Kan.—Handling a Full Line of Victor and Edison Talking Machines.

(Special to The Talking Machine World.)

Hutchinson, Kan., Feb. 6, 1913.

The M. P. Martin Music Co., which was recently organized in this city with a capital stock of \$10,000, succeeds the Harper & Miller Music Co., and means an amalgamation of four of the best-known business men in this city, who constitute the board of officers of the company as follows: M. F. Martin, president; J. H. Harper, vice-president; S. A. Poe, secretary, and M. P. Miller, treasurer. The new concern will continue to occupy the salesroom of its predecessor at 18 North Main street, and will handle the Sohmer, Bent, Crown, Lester, and other pianos, and the full line of Victor and Edison talking machines. In this connection a large order was recently placed with the Schmelzer Arms Co., of Kansas City, who are the Victor and Edison jobbers in that territory.

**The new Record
is the Blue Record
and it's making
record sales.**

The real test of Mr. Edison's inventions is their wonderful success. The latest of these and the most important to you is

The Blue Amberol

a four-minute Record rich and full in tone—practically unbreakable—that can be played with the same fine effect over 3,000 times. The wide scope of selections fills every desire of music lovers, whatever their tastes may be.

THOMAS A. EDISON, Inc., 59 Lakeside Ave., Orange, N. J.

This record played on

The Edison Phonograph

makes its own instant appeal. The lack of buzzing and rasping and the fine, steady pitch sell the Edison Phonograph just as they sell the Records.

For home record-making the four-minute recording outfit is far and away the best of its kind. Your customers, once they see it and hear their own efforts reproduced, will enthuse over it.

Push the Edison line. Put it over strong, not only for the present, but for the big things that are coming.

Get in touch with your Edison jobber today. You can lead the Phonograph business in your locality.

THOMAS A. EDISON, Inc., 59 Lakeside Ave., Orange, N. J.

NEW YORK, FEBRUARY 15, 1913.

TRADE reports from dealers for January show a very excellent condition of business for the first month of the new year. Usually a very quiet spell is looked for following the great activity which prevails around the holiday period, and naturally the prospects are not over-brilliant for a large volume of business in the succeeding weeks. This, however, has not obtained to any large degree this year, and trade as a whole has been better than for the same month of last year, with an unusually large call for records. This is a natural sequence to the sales of machines around the holidays.

The sales of high-priced machines have been most noticeable for January, and this despite the efforts being made by dealers to concentrate the attention of the public a little more on the lower-priced products. There is one peculiar trait of the American, however, and it is when he has money he wants the best, hence he selects the high-priced talking machine when he comes to make a purchase.

The outlook is excellent for better business conditions as the season advances, and it is now expected that the change of administration in Washington will have no disturbing effect on business.

ONE of the essentials to success in the merchandising field is to carry a complete stock to meet the demand of purchasers. This is of special importance in connection with records, and it is a mighty bad thing to let one's stock of machines and records or supplies run out, because it creates a bad impression when people make a demand for goods that are not carried in stock. And true as fate, the very day a dealer runs out of some particular record someone calls at the store and asks for it. Haven't you often had it happen that way? If you haven't you are an exception to the rule.

When a person makes up his mind that he is going to buy something he usually buys it at that time. If he comes into a store, asks for some particular article and is unable to get it, he goes away disgusted, visits a competitor's store around the corner, finds the desired article, makes his purchase and thus a customer is lost. Hence it pay and pays well to keep a full stock at all times. People soon learn to know the store that has the goods, and that store is the one they visit.

Salesmen should be trained to the necessity of not allowing stock to run down. There should be a "want" book in every department, and if such is not employed it will be found a mighty convenient aid to good stockkeeping. This book should be hung in a convenient place where the salesmen can have ready access to it. Whenever there is a call for any article that the stock does not

contain it should be written in the book. This book should be inspected every day, and it will keep the head of the business well posted on the condition of the stock and the nature of the public's demand.

This "want" book scheme is well worthy consideration where it is not already used. It will be found a great help, and through its aid much benefit may be derived. It insures a house having the goods the people want and when they want them.

NO one factor in the retail sales domain is of more importance than enthusiasm. A salesman may possess honesty, wealth, ability and initiative, knowledge of the business, tact, sincerity, industry, and open mindedness—in fact, all the virtues, but without enthusiasm he would be a statue.

Contrast the enthusiastic, magnetic man with the one of every day attributes, and you will know the reason why one succeeds and the other drags along. Hugh Chalmers recently put this very clearly when he emphasized that enthusiasm is the white heat that fuses all the qualities above referred to into one effective mass. He thus illustrated his point: "I can take a sapphire and a piece of plain blue glass, and I can rub the plain glass until it has a surface as hard as the sapphire. But when I put the two together and look down at them, I find that the sapphire has a thousand little lights glittering out of it that you cannot get out of the blue glass if you rub it a thousand years. What those little lights are to the sapphire, enthusiasm is to the man."

The man who works merely for his salary without interest or enthusiasm in his business is not a great producer, nor is he a great success. For the man who doesn't get some comfort and enthusiasm out of his daily work is in a bad way.

Some men are almost irresistible, and it is because enthusiasm radiates through their expression, beams from their eyes, and is evident in their actions. In brief, enthusiasm is one of the great assets of value to a man, no matter what his mission in life may be.

In salesmanship enthusiasm is of primary importance, and in no business is it more essential than in selling talking machines. The man who can convert the prospective purchaser of a low-priced machine into buying the highest priced machine in the house, and a goodly roster of high-priced records, is the fellow who employs well considered arguments, backed by enthusiasm and conviction.

It affords the keenest pleasure to watch such a salesman handle a customer—to note the transmission of that magnetic force called enthusiasm. The viewpoint of the prospective buyer is so readily changed that one can easily understand why a man possessing enthusiasm can win out as compared with a man who moves along stereotyped lines.

SIX weeks' experience with the parcel post has demonstrated its value to the community at large. For the first four weeks forty million packages were handled throughout the country, while in New York City alone nearly three million packages were handled, which undoubtedly meant a saving in cost to the senders of from twenty to forty per cent.

In the talking machine field the parcel post can be used to good advantage, at least by those who keep closely in touch with their customers. Records, needles, reproducers, etc., can be sent by mail expeditiously and cheaply, and in this way customers can be presented with the latest records and enabled to try them over in their home without visiting the store. This, of course, only applies to reputable and recognized purchasers. Every wideawake dealer has on his books such people—steady buyers of records, who watch the new issues with the keenest interest. Dealers short of stock can also utilize the parcel post to get supplies from their jobber, and so it works from the jobber to the manufacturer—all along the line.

Any and every means that enables the dealer to get in touch with the purchasing public should be given immediate and serious consideration, and no dealer who desires to be up to date can afford to overlook the possibilities that exist in the parcel post.

It is a current complaint that the parcel post has been designed largely in the interest of the mail order houses, and the big department stores. Without discussing this issue, the fact remains that the parcel post is conceived for the best interests of the public, and for every merchant, and it is up to each and every one, no matter

what his resources, to take advantage of it—to utilize it, as a means of enlarging his trade.

The talking machine dealer, particularly those who have hitherto kept in touch with their customers through the mail—that is, in circularizing them and sending out invitations for recitals and other means of promoting sales, will find that they can also make sales and deliver the goods by parcel post most satisfactorily. This means giving the matter some thought and developing a plan of campaign that is worth the effort.

The latest suggestion of the Postmaster-General is to make the parcel post a still greater factor in getting goods to the purchasing public, and he proposes in his last report to Congress to enlarge the weight now restricted to eleven pounds to a much larger figure, so as to enable larger parcels being forwarded.

There is one thing sure, the parcel post is here to stay, and the dealers who take advantage of it are those who will profit most.

NO better means of concentrating the attention of the public on the talking machine—at least of those musically inclined—has yet been evolved than the giving of concerts by dealers. Not only are the possibilities of the talking machine brought home to hundreds of people in this way, but people come to the store, become acquainted with the sales force, and thus an important and valuable connection is established.

A RECORD THAT DECEIVED.

Religious Element in Arkansas District Thought Talking Machine Was Reproducing a Prayer, but It Proved to Be a Prize Fighter's Lament Upon Being Beaten—An Edson Effusion.

C. L. Edson, who under the title of "An Arkansas Man on Broadway," writes some intensely human comparisons of life on Broadway and in the backwoods of his native State, for the New York Evening Mail recently wrote the following of misplaced confidence in a talking machine record:

A stranger from the city came into our woods on Half Moon several years ago. He built himself a cabin and said he was "communing with nature." We asked him why he left the city, and he said he was disgusted with humanity. Now I can understand what sickened him against the city crowd. It was the jam and the sham and the moral rottenness. I asked him if country people were better, and he said:

"No; man is rotten whenever you find him. But in the country he is scattered around, two or three to the square mile, and in such diluted quantities he can't entirely pollute the landscape."

I liked to hang around that fellow, for I learned a lot of philosophy from him. He used to come to our prayer meetings at Uncle Jimmy Honeycutt's big house. Now there was a funny thing about the Honeycutt prayer meetings. Uncle Jimmy had a battered phonograph and one record. How this talking machine worked its way into the woods is too long a story to tell here. There had been more records to start with, but they kept getting broken as the instrument passed from one owner to another. When Uncle Jimmy got it there was only one left, and we couldn't understand what it said on that one. It sounded like the sobbing and wailing of repentant sinners at the mourners' bench at some great revival. Every once in a while a voice could be heard above the sobs like a suppliant sinner saying: "He must give me another chance; just another chance. I will follow him forever."

When this record was played at our prayer meeting it had a highly religious effect on us, and we would shout "Amen!" "Preach on, brother!" "Ain't it the truth! Halleluja!" We regarded that record as a holy messenger leading us to better lives. Uncle Jimmy thought it must be the record of the mighty Henry Ward Beecher converting the multitudes.

One time I asked the city pilgrim if he didn't know for certain just what that prayer meeting record was. "Is it really Henry Ward Beecher and the sinners?" I asked. "No," he replied, "and I'll tell you what it really is if you will prom-

ise never to tell your neighbors. That record is a holy thing to them and it brings them nearer to the mighty presence of the Deity. If they knew the truth it would take something good out of their lives and give them something bad in its place.

"That record is 'The Lament of James J. Corbett in His Dressing Room After the Battle with Fitzsimmons at Carson City.' Corbett was a prize fighter and Fitzsimmons whipped him. That record is a fake, but it pretends to give the sobbing and moaning of the whipped man begging for the other bruiser to give him another chance to fight and saying he will follow Fitzsimmons around until he does."

THE ONLY MAN WHO MAY REST.

The only man who can afford to rest is dead. He doesn't need to bother any more. The one man who is absolutely sure to get lost in the rear of the procession is the self-satisfied fellow who is too content to think any more and is determined to spend the rest of his days in self-contemplation.

If this concert publicity is to be conducted along the right lines everything in connection therewith must be right. Therefore, if the store is not large enough to hold a fair number of people, it will be best to hire a small hall, send out either engraved or well printed invitations, and have the programs well printed, and the selections varied and well chosen. Whatever expense is involved in this preliminary work will be well repaid in a short time.

We have on file letters from the talking machine men in widely separated sections of the country who have been giving concerts for several seasons, and in every instance they have found this expenditure for concert exploitation a most profitable investment. These people do not include the dealers in the larger cities who give talking machine concerts on a palatial scale, for no matter how humble the effort, it can be made a success if carried out with intelligence and with enthusiasm.

We have referred to this matter many times, because its value to the dealer is so great that we want them to awake to the opportunity that exists in making friends for their store by means of recitals.

Think of the vast army of singers, instrumentalists and musical organizations, all of national fame, that can be called upon to make up a program to captivate the public! No such opportunity exists in any other business that we know of for securing such a maximum of results at the minimum of expense and effort.

WINNING GOOD-WILL OF CUSTOMERS.

Pleasant Manners and Little Attentions That Make Friends for the Store and Thereby Help the Salesman on to Better Things.

The salesmen and clerks who would succeed should cultivate charm of manner. Courteous manners in little things are an asset worth acquiring. When a customer approaches, rise and offer a chair; step aside, and let the store's guest pass first into the elevator. These are little things, but they make you and your work finer. Your promise to a customer is your employer's promise. A broken promise always hurts, and it shows weakness in the character of a business organization, just as unreliability does in an individual.

If your business is to wait on customers, be careful of your dress and appearance. Do your manicuring before you reach the store, not after you get there. In a thousand ways a salesman can give evidence of a desire to be helpful, which is far removed from officiousness and which attitude makes friends for a store.

IN the clinches you can rely upon the Ditson Victor Service. Profits are contingent upon *our fast work*—and we know it.

STOP saying to your customers: "We haven't got it," because you can get it from **DITSON**.

FAST Victor service is our aim and that we hit the mark is proved in our rapidly growing clientele of dealers.

ALL Victor styles, records and parts, with a complete line of albums, cabinets and needles.

WE specialize upon Victor goods exclusively, and correspondence with dealers desiring the best in Victor service is invited.

Oliver Ditson Company, Boston, Mass.

Noset *The* Autostartstop

The Greatest Scoop in Talking Machine History

We watched to see which way the cat was jumping—jumped with it—and landed first

NOSET is the only absolutely *automatic* stopping device. It automatically starts the record by the movement of the tone arm to the right, and automatically stops it at the end, with **no** setting adjustment or regulation. You cannot stop NOSET from starting when you move the sound box to begin the record, and it will always automatically stop at the right place on the record—the end—without adjustment. It will stop any record on any disk machine before you can possibly get to the machine, bringing it to a gradual stop within one and one-half revolutions.

Literally Quicker Than The Cat.

Positively No Batteries, no screws to spoil the tropical wood, **no** springs and **no** gears. **No** mechanic need apply to fit it, and **no** adjustment required in its installation. No matter what size record or machine, NOSET is there with the start and the stop.

NOSET is attached to the machine, close to the back of the turn table, and every time you use a machine which is equipped with NOSET, you are calling attention to it in the best possible manner—*silent salesmanship*. The high-cost-of-profit does not enter into consideration of NOSET, it's all net profit. **No** trouble, **no** bother, **no** cost for display, large discounts—larger net profits.

"Tone"—If you think that word is getting worn out, you will find it is only just now coming to carry its full meaning so far as sound-boxes are concerned. That's one thing the new No. 6 Columbia reproducer is accomplishing.

**Columbia Graphophone Company
Tribune Building, New York**

RUDOLPH WURLITZER CO. TO INCREASE CAPITAL.

Stockholders to Vote on This Proposition February 25—A Mere Matter of Form, However—Columbia Trade of Enormous Proportions—W. H. Stever Discusses the Oldfield Bill and Other Matters—Volume of Victor Trade at the Wurlitzer Co. Exceeds Expectations—Record Trade of Unusual Proportions with Cincinnati Dealers.

(Special to The Talking Machine World.)

Cincinnati, O., Feb. 4, 1913.

Satisfactory conditions appear to prevail in the talking machine field of the Middle West. All the dealers seem to be happy. Glowing reports of past successes come from these sources and they also tell of their anticipations. Several have plans for larger store rooms, but these may not materialize for some months.

The average business man hesitates in these days of general trade somnolence to even intimate that there is anything in the least suggestive of a "boom," but there was no hesitancy in Mr. Whelen's manner when asked the stereotyped question, "Well, how is business?" his answer came quick and to the point. "Great!"

In talking further on the subject, Mr. Whelen, the local manager of the Columbia Graphophone Co., stated. "The mere word 'satisfaction' is hardly adequate to express my feelings in regard to the splendid business which we experienced during the month of January. Unlike the advent of previous years, the opening of 1913 was marked by a strong demand for Grafonolas and records, where as a general rule a strong reaction is generally felt after the holiday season. However, in the present instance the annual 'slump' has been conspicuous only by its absence. We expect record sales to be good, owing to the large number of Grafonolas sold during the holidays, but this steady demand for machines is certainly gratifying. 1912 was a phenomenal year, but from the way the new year is starting off, there is no doubt but that this year's figures will far exceed those of 1912. Just take a look around and you will agree with me that the Cincinnati Columbia headquarters is no place for a 'rest cure.'"

Speaking of the new Columbia grand which is causing such a stir in talking machines circles, Mr. Whelen said: "Every mail brings inquiries relative to this wonderful instrument and we expect to have one on exhibition in the very near future. In fact, we are expecting some daily. I take considerable pleasure in inviting all the readers, and their friends, of the Talking Machine World to visit our store and see and hear the 'Columbia Grand.'"

A large number of Columbia dealers in the Cincinnati territory have visited the local headquarters during January, stocking up for present demands, after the holiday rush which plays havoc with the stock. All report large increases in profits over 1911 and perfect satisfaction at the present outlook.

Notices have been sent out to all the stockholders of the Rudolph Wurlitzer Co., of this city, of a proposed increase in the capital stock of this well-known corporation from the present capitalization of \$1,000,000 to \$4,000,000, the increase being

\$3,000,000. The stockholders will be asked to cast their ballots upon the proposition on February 25. As the stock is held by friends of the corporation, there is little reason to believe that the proposed plan will meet with opposition. The method of taking care of the present stockholders is somewhat interesting. The preferred stock today pays but 6 per cent., whereas the new issue would bear 7 per cent., an increase of 1 per cent. The stock now is equally divided between the preferred and common issues, and the increase of \$3,000,000 would be issued in the same manner, resulting in the company eventually having \$2,000,000 preferred and the remainder of common stock. The proposed increase, as far as the preferred is concerned, has already been underwritten by some stock house.

W. S. Givler has joined the forces of the Columbia as salesman for the wholesale department and has just finished a very successful trip through Ohio. He is at present making a trip through Indiana and is closing with quite a number of new dealers throughout the territory.

W. H. Stever, president of the Lyric Piano Co., and head of the "Talking Shop," said:

"Trade since the holidays in the Talking Machine Shop has been quiet, still we are very well pleased with the class of trade we have been receiving. Our attention has been called in particular to the Oldfield bill, and we were requested to take the matter up opposing this bill. I believe that this is a matter that ought to be given consideration, owing to the fact that it is pretty hard to figure out who is going to receive the greater benefit, providing this bill should pass or should not.

"The writer has formed quite an opinion on this matter, but does not think it would be advisable to exploit it at the present time, however, we hope that what might be done in regards to it will be in favor of the retail man instead of assisting corporations to be stronger, as the retailer is the man who has got to pay his bill or he does not get the goods, and the next question is—after you have paid the man for his product, it is up to you to pay the freight and drayage and sell them on the installment plan to get your money back, and I think the retailer has got quite a problem before him. This is the reason I express myself in this way and for this reason alone is why I think we should give this matter due consideration.

"I have no objection to assisting in the passage of any bill that will help to make it better for the retailer, as he has certainly got to stand the brunt of the transaction. So if the Oldfield bill should be defeated and the manufacturer should be protected, let us then go to the manufacturers and have them assist us to pass a bill compelling every one who purchases a Victrola or talking machine

of any description to pay for it under a penalty of law. I think in this way that we would be in a position to get our money back upon some deals which have already been made in good faith."

The Milner Musical Co. is one of the busiest places in town this month. The systematic and clever advertising carried on by this concern during the past four or five months seems to be bringing big results, and we understand from reliable sources that the amount of business done by the Milner Musical Co. during December was second only to one other store in this city. Practically the entire first floor has been given over to the display of Victrolas; the arrangement is very impressive. During the coming month Miss Irene DeLaney, in charge of the record department, has arranged a series of afternoon recitals, which promise to be most attractive.

John Arnold, of Fifth and Elm, is a sure booster for the new Edison blue amberol record. He said it was a great help to his January business.

The Rudolph Wurlitzer Co. makes the following report: "In reviewing the January Victor business, we can only say that we were very much surprised at the volume, all things taken into consideration. We had miserable weather, practically during the entire month; almost a continuous rain, and this, together with the flood, certainly had its effect. In spite of these conditions the record business was extremely brisk, living well up to the big promises that the new year brought us. This business is not all new, either, as we find upon looking over our files that a greater proportion of the Victrola owners listed in our files bought records during January than in any previous month.

"The big demand for records during January cannot be traced to the machines sold in November and December, and we can therefore safely say that the business is on a more substantial basis than it ever was before. The shortage of machines is the only obstacle with which the dealer must contend and with prospects of larger shipments even this will be eliminated, leaving the field clear for the tremendous business that we all know is in store for the year 1913.

"One of the most encouraging features of the wholesale business is the fact that practically no cancellations were made on the Christmas orders, which naturally were only filled in part. These orders are now standing practically intact, with directions from the dealers to forward the goods as quickly as we can. The machine situation is a little easier and dealers are profiting greatly by this fact.

"We have a splendid stock of records and were able to get the complete benefit of the big demand. One thing must be taken into consideration when we speak about the volume of Victor business, and that is that during the last three months practically no efforts have been made to get new accounts, but thousands of deals will be opened up just as soon as stock becomes more plentiful and the distributors are in a position to take care of the dealers satisfactorily. When this time comes the tremendous increase will be felt by every jobber and new business will be opened up that will greatly increase the consumption of both machines and records."

The Right Record

— WITH —

The Right Surface

Fit Any Phonograph

The demand today is for an indestructible record with a smooth playing surface. A record free from knocks and gratings. A record that will not break or wear.

U. S. Everlasting Records meet these conditions in every particular, and are the only records fulfilling this demand.

The construction of U. S. Everlasting records is indestructible throughout—not partially. Dropping them to the floor does no harm. They will not break in handling. They are true to name—everlasting.

We invite—yes challenge comparison—with any indestructible or semi-indestructible record on the market. Compare the surface of U. S. Everlasting Records with any other so-called indestructible records by playing them side by side. A trial will give you ample evidence—the results convincing as to the supremacy of U. S. Everlasting Records.

The January list of U. S. Everlasting Records will meet with the unqualified approval of the most critical. Your copy is ready for you—also our complete new record catalog. Ask for them today and make the comparison suggested above. It is to your advantage.

THE U. S. PHONOGRAPH COMPANY

ASSOCIATED WITH

THE BISHOP-BABCOCK-BECKER COMPANY

CLEVELAND, OHIO

THE TRADE IN BOSTON AND NEW ENGLAND

JOHN H. WILSON, MANAGER, 324 WASHINGTON STREET, BOSTON, MASS.

(Special to The Talking Machine World.)

Boston, Mass., Feb. 11, 1913.

The very unseasonable weather has played not a small part in the talking machine business; that is to say there has been a slackness of business in the past few weeks that is directly attributable to the mildness of the season which has been an inducement to people to keep out of doors. Were the weather such that they would be compelled to stay indoors there would be a more extended use of machines, and as outfits are used less frequently when people keep out of doors, there is not that eagerness to purchase records that otherwise might be the case.

Talking Machines in the Schools.

Business at the Eastern Talking Machine Co.'s quarters in Tremont street has been picking up considerably of late and all the salesmen are working hard to keep up with the demand for goods. W. J. Fitzgerald, who devotes a good part of his time to the school proposition reports that he is meeting with marked success, and in a conversation a few days ago he stated that there are twenty-one Victor outfits in the schools of Boston. Another hustler on the school proposition is E. A. Welch, who is making good. He has been instrumental in getting Victor outfits into some of the Normal schools, and to-day there are equipments in the Salem, Framingham, and Bridgewater Normal schools, and soon they all will be equipped with Victors, so it is stated, with the exception of the Boston Normal.

Occupying Ground Floor Quarters.

Manager Arthur Erisman, of the Columbia Phonograph Co., is now located on the ground floor in finely equipped offices and all his visitors are congratulating him on the better advantages of the location. His former quarters in the semi-story at the rear, has been transformed into a department for the exclusive use of foreign records in which the Columbia is developing a very large business. This is especially true of the Italian, Polish, Hebrew, Russian, Chinese, Portuguese and French music, though strangely enough there is little call for German music, especially if sung by German singers. It is said that while a strong effort has been made to popularize German "canned" music the Germans do not seem to take kindly to their native interpreters.

Speaking of changes in the Columbia quarters a number of new demonstration booths have just been installed, the additional ones being imperative owing to the many customers that find their way into the store at a single time, all of them clamoring for opportunity to try out this or that selection.

Excellent Publicity for Steinert and Victor.

Manager Herbert L. Royer, of the Arch street Victor headquarters for the M. Steinert & Sons Co., was over in New York last week, and he reports business as very good everywhere. The Steinert Co. came prominently to the front a few nights ago when in the course in salesmanship given under the auspices of the Boston Y. M. C. U. in Union Hall, a demonstration of the selling and business methods of the house were exhibited. The stage was set with pianos, players, and Victor talking machines, and considerable interest centered in the process of selling a Victor. The honor of handling this proposition fell to Frank Cunningham, one of Manager Royer's best salesmen, who spends much of his time outside the office. Mr. Cunningham has special gifts as a salesman and they were well exploited when he sold the Victor to an imaginary customer. Herman N. Baker, advertising manager of the Steinert Co., was on hand and made an address on salesmanship which was full of good points, and at the end of the demonstration Mr. Baker handled an imaginary dissatisfied customer in such good style that, of course, the customer went away perfectly satisfied.

Good Business Being Developed.

The Victor business with Chickering & Sons in Tremont street, though operative only a few months now has developed in a most satisfactory way, and Manager Urquhart has every reason to be well pleased with results, and Manager Urquhart's right hand man, Warren A. Batchelder, is kept on the jump all the time these days. Mr. Batchelder, by the bye, is a benedict. He was married a few weeks ago to Miss E. L. Lovejoy, of Arlington, where the couple are now living.

Making Many Sales of Edison Phonographs.

Chester J. Sylvester, the able and hustling manager for the talking machine department of the C. E. Osgood Co., has all he can attend to, and the fiscal year which closed on January 31, showed

the business of Manager Sylvester's department as having been extremely large. The Osgood Co. is one of the dealers for the new Edison disc phonograph, and Manager Sylvester has been able to make some splendid sales of these instruments. Mr. Sylvester says that despite the talk in some quarters of the difficulty of getting records from the Edison laboratory, he has been well pleased at the way the goods have been coming along.

Pleased With New Steinert Building.

A visitor to some of the Boston Victor dealers a few days ago was Allen T. Waite, manager of the Victor department of the M. Steinert & Sons Co., in Providence, R. I. Mr. Waite is most enthusiastic over the new Steinert building in Westminster street, and says it is admirably equipped for business, and this is especially true of his own Victor department. Mr. Waite says that a branch store is soon to be opened at Westerly, R. I.

Columbia Grafonola De Luxe in Concert.

A most enjoyable program was given on the evening of January 18 at the Roxbury Evening High School through the medium of a Columbia (Grafonola de Luxe). The program was both vocal and instrumental and was carried out under the able supervision of W. E. Getchell. A Grafonola Favorite was used for a concert on January 31st at the High School in Everett, which was largely attended. E. A. Kingsley was in charge of this one. The Columbia quarters are giving a number of these concerts this winter and everywhere there is the greatest enthusiasm.

Henry A. Winkelman Honored.

Henry A. Winkelman, head of the Victor department of the Oliver Ditson Co., has been elected a member of the Boston Music Trade Association, and he will be given a royal welcome when that organization holds its annual banquet at the Copley-Plaza on March 15. O. K. Houck, of Memphis, Tenn., a jobber in Victor goods, was a caller at Mr. Winkelman's department a few days ago. Business at this Victor quarters is all that could be expected, and everybody is happy.

Records by Bert Williams.

There is a rumor around Boston that Bert Williams, the eccentric colored comedian, who is with the "Follies" now playing at the Colonial Theater, is going to make records for the Victor Co. He is a frequent visitor to the Eastern Talking Machine Co.'s Tremont street quarters. Incidentally there is a good demand for the "Follies" music, which has already become very popular.

Interested in the Records.

Otto Urack, the assistant conductor of the Boston Symphony Orchestra, is a frequent visitor to the headquarters of the Eastern Talking Machine Co., and is always much interested in the records.

Waiting for Edison Records.

George Lincoln Parker's enlarged quarters in the Colonial building are being quite generally visited these days, and as the days begin to lengthen, business begins to strengthen at this headquarters. Mr. Parker lately was over to New York and met some of the talking machine dealers, and he also paid a visit to the Edison laboratories at Orange, where he was most cordially received. Thus far Mr. Parker has sold a number of the high priced Edison disc machines, but he'd like to see a few more records, as the supply seems to come slowly. Meantime the Victor business is keeping up to a high average.

Burdick Rejoins Columbia Force.

Manager Erisman reports that David Burdick, formerly a salesman in charge of the cylinder department at the Columbia quarters, is coming back into the local business, and will soon be located at the Columbia offices, the scene of his early choice. For some time Mr. Burdick was in charge of a store at Brockton, which he now has sold out to other parties. He will be associated with the retail end of the Columbia business.

When your customer decides to purchase she wants the machine and records of HER selection.

With two sources of supply, the trade is well protected.

Boston and New Haven offers many ways of reaching your store without delay.

Write, wire or telephone your orders.

The Pardee-Ellenberger Co.

BOSTON—NEW HAVEN

THE TRADE IN BOSTON AND NEW ENGLAND

JOHN H. WILSON, MANAGER, 324 WASHINGTON STREET, BOSTON, MASS.

Perrett Takes Charge in Providence.

R. L. Perrett, formerly the instalment manager at the Boston office of the Columbia Phonograph Co., and who for a time was out of the talking machine business, has been placed in charge of the Providence, R. I., store which is located at 119 Westminister street. S. H. Brown, the New England traveling man for the Columbia, who has many friends everywhere, will make his headquarters hereafter in Providence as an assistant to Mr. Perrett.

Developed Steady Business.

Wilber Frohock, who is in charge of the phonograph department of A. McArthur & Co., in Boston, developed a steady business ever since the department was opened a few months ago. His demand for Columbia outfits has been large.

The Dictaphone on the Stage.

During Mrs. Minnie Maddern Fiske's engagement at the Hollis Street Theater everyone was interested in her use of the dictaphone in the fourth act of "The High Road." During her engagement curiosity was so keyed up that any number of persons made enquiries about this remarkable machine of the Columbia Phonograph quarters.

To Embark on Matrimonial Sea.

G. R. Harris, of the dictaphone department of the Columbia Phonograph Co., and Miss Rose Haynes, an employe of the company, are to be married some time during the present month. Both have been quite popular with their fellow employes, who will wish them all good luck when they embark on the sea of matrimony.

In an Intellectual Atmosphere.

Manager Arthur Erisman, of the Columbia Co., has moved his domestic establishment over into Cambridge where he is now revelling in the culture and intellectuality of the University City.

Has Handsome Department.

R. A. McInnis, in charge of the Columbia department of the Houghton & Dutton Co.'s large department store, has a well arranged and finely equipped suite in which to conduct his business. He reports quite a call for the goods.

Utilizing Enlarged Quarters.

Manager Silliman, of the Pardee-Ellenberger Co., has found the enlarged quarters in the Battery-march street store none too expansive for his present needs. One large room is now devoted to a display of machines in which the new Edison phonographs are quite conspicuous. The Blue Amberol records are selling like hot cakes, in fact, they cannot be gotten fast enough to supply the demand.

GOOD MUSIC FOR PROVIDENCE.

(Special to The Talking Machine World.)

Providence, R. I., Feb. 10, 1913.

The M. Steinert & Sons Co., of this city, is furnishing a grand musical treat to the people of Providence and vicinity in the form of a Victor Victrola Pianola Piano and recital. Every Wednesday afternoon at three o'clock these recitals afford the public an opportunity to enjoy the renditions of vocal and instrumental gems of the great masters of grand opera and classical art.

The beautiful little recital hall as located in the new Steinert building, to be known as Steinert Hall, has a comfortable seating capacity of two hundred and fifty people. In testimony to the appreciative features of these recitals, is shown by the select and enthusiastic audiences that fill the handsome recital hall each week. These recitals are complimentary, with an entirely new program each week.

Good health, honest work, unselfish kindness! These are the factors which help to bring about the realization of the oft-repeated wish for a Happy New Year.

TWENTY-FIVE YEARS IN THE TALKING MACHINE FIELD.

(Special to The Talking Machine World.)

Boston, Mass., Feb. 11, 1913.

George H. Waldron, who entered the talking machine field on February 5th, 1888, and thus is to-day celebrating his twenty-fifth anniversary of

of Boston, and during his period with this concern he had for his associates such men as C. G. Childs, now of the Victor Co.; John H. Foote and Augustus S. Sampson.

Mr. Waldron marked out many important discoveries while with this company, and they have been patented and since have proved successful. Business did not thrive as well as had been expected, so after a few years the New England Phone Co. moved to Gardiner, Me., where it was incorporated under the laws of that State.

Mr. Waldron then joined the ranks of the North American Phone Co. Here he found ample room for expansion and the carrying out of his ideas, and he began to work upon a commercial machine for office use. From time to time he made some advantageous additions to this machine, and it was not

George H. Waldron in His Shop at the New England Phonograph Co.'s Building, Corner of Washington and Boylston Streets, Boston, Which He Occupied From 1888 to 1892.

long before he had assembled something that commanded the attention of business men. He then planned to place the machine on the market, and the first place where he got it installed was in the Boston Police Department. That was in 1892, and the work done by the machine proved eminently satisfactory. Other installations soon followed. To-day Mr. Waldron may be found at the establishment of the Eastern Talking Machine Co., 177 Tremont street, still engaged in experimenting. The representative of

his connection with the business, has done as much probably as any other man in the mechanical line to advance the business in the commercial world. That a man could start out in life with scarcely any knowledge of the business, and with no resources that he could call his own, and then to invent some of the most widely known features of the talking machine business seems little short of remarkable. Mr. Waldron was born in 1848, and his love for the talking machine business began early in life. At the age of forty he entered the employ of the New England Phone Co.

**Columbia Graphophone Company
Tribune Building, New York**

TRADE IN BOSTON AND NEW ENGLAND.
(Continued from Page 17.)

The Talking Machine World, when he called upon him a few days ago, found him as deeply interested in his work as ever, and always ready to discuss the talking machine and its immense possibilities. He believes that daily the public is taking more enthusiastically to this wonderful invention, and it is his claim that from time to time new uses will be found for it. Mr. Waldron is a great admirer of Thomas A. Edison. "The achievements of that inventor are so wonderful," said he, "that one never knows what next he is going to startle the public with."

A. W. ROOS SUCCEEDS THOS. DEVINE.

As Manager of Columbia Store in Indianapolis—Kipp-Link Co. Awaiting Larger Shipments of Edison Products—Victrola for Public Schools—Victor Line With Wulschner-Stewart Co.—Victrola Takes Place of Orchestra at Keith's Theater—Other News.

(Special to The Talking Machine World.)
Indianapolis, Ind., Feb. 8, 1913.

A. W. Roos, traveling auditor for the Columbia Phonograph Co. for the last year, is the new manager of the local Columbia store. He succeeds Thomas Devine, who is devoting all of his time to the Dictaphone end of the business. Mr. Devine has his office in the local store.

Mr. Roos's first month shows a substantial increase over the same month of last year and he is well pleased with the prospects offered by the Indianapolis field. Mr. Roos reports that the sale of the new disc reproducer has been phenomenal and has greatly increased record buying.

Orville Harrold, who sings for the Columbia Co., will appear in concert here February 22d, and the local branch is arranging to make a special display of his records. John McCormack, the Irish tenor, also will be a visitor here in the next few months.

W. E. Kipp, of the Kipp-Link Co., distributors of the Edison machine, is anxiously awaiting the arrival of the new Edison disc machines. Orders for the new machine are piling up at the Kipp-Link store. Mr. Kipp says he will be able to dispose of "carload lots" as soon as they begin coming from the factory. Mr. Kipp has a number of the new Edisons on display.

Miss Lazurus, manager of the talking machine department of the Aeolian Co.'s local store, says her department did three times as much business in January as it did last year in the same month. Miss Lazurus simply can't get enough machines to supply the demand, she says. In fact, that is the case with all the Victor houses here.

Miss Lazurus recently sold a Victrola to one of the public schools. The machine will be used in teaching the children folk dancing. In connection with this work, Mrs. Henrietta Heaton, of the educational department of the Victor company, has been here, making her headquarters at the Stewart Talking Machine Co., distributors for the Victor machine, and also spending time with the talking machine department of Aeolian Hall.

Her work has been appreciated by the local stores.

The Wulschner-Stewart Music Co., purchased last May by William T. Woodley, has installed a complete line of Victor machines. It had been rumored for sometime that this company would handle the Victor machine, but nothing definite was given out until recently. The department was opened last Saturday.

When Alexander Stewart sold out to Mr. Woodley he took the talking machine department with him and established the Stewart Talking Machine Co. The quarters occupied by the talking machine department under Mr. Stewart's ownership are being utilized for the same purpose by the Wulschner-Stewart Co. The company has very attractive quarters in the basement.

The Stewart Talking Machine Co. is experiencing trouble in getting enough machines to supply its trade. Talking machines are a scarce article around the Stewart store.

Paul Bassett, formerly with the Kipp-Link Co., and recently manager of the Victor talking machine department of the Taylor Carpet Co., has resigned to accept a position at Anderson, Ind.

A Victor Victrola is being used in a novel manner at the B. F. Keith's vaudeville theater, namely, to entertain the audience while it is waiting for the curtain to rise.

FURNISH AIDS FOR THE DEALER.

National Publishing Co. Supply Circulars Free on Request, in Order That the Dealer May Have Descriptive Matter on Hand to Help in Closing Sales.

The albums for the filing of disc records, manufactured by the National Publishing Co., Philadelphia, possess a number of features that have made an excellent impression on the owners of talking machines. The albums are made to accommodate 10 and 12-inch records and each contains 17 pockets for the accommodation of records. The albums may be piled one on the other, flat, as books or arranged in a bookcase.

In order to facilitate the sale of its record albums, the National Publishing Co. has prepared convenient circulars bearing illustrations of the albums, open and closed, and also detailed descriptive matter. The circulars in quantities free to the jobbers, who in turn distribute them among the retailers on their lists for use in closing sales. On the circular there is a liberal space left for the insertion of the jobber's or dealer's name and address, and when desired the names will be inserted by the manufacturers before the circulars are sent out.

The efforts of the National Co. to aid the dealer in closing sales are apparently effective and appreciated, and there are many requests being received for sample albums and printed matter regarding them.

Some dealers have tried short items in the local news columns and with good results. People come in the store and mention the advertising, and usually favorable comment is made.

STRASBURG'S "OPENING RECEPTION"

New Store in Detroit Fully Completed and 10,000 Invitations Sent Out for Formal Opening February 19 to 21—Strasburg Co. to Increase Space—Business Is Growing.

(Special to The Talking Machine World.)
Detroit, Mich., Feb. 10, 1913.

The Max Strasburg Co. will tender the public a formal "opening reception" in its new store February 19, 20 and 21. The fixing up is almost completed. It requires an actual visit to enable one to comprehend the attractiveness in which those Victrolas and Columbias are ensconced. Inch thick carpets and rugs, the costliest French plate glass partitions, elegant chandeliers, mahogany chairs, matching the mahogany talking machines, palms and flowers, with the resulting fragrance, and the soft music of the phonographs remind him who strolls along the corridor past the demonstrating rooms of a promenade in the salon of a palatial steamship. The old store, joined to the new one, is being equipped similarly, and when this is completed the reception will be held.

Ten thousand invitations are being sent out. A special concert will be given each afternoon. The function will be advertised liberally. The place is so alluring that a first visit seems certain to demand a second one, thus developing the simply curious into prospects, then into customers.

"I hope to get some Victrola XVI's in time for the reception," said Mr. Strasburg. "It would be a shame to hold a costly reception without having our best instruments on hand to display. If anybody in the world has any to spare I will pay spot cash for fifty of them. I still have fifteen unfilled orders for mahogonies, given me for the Christmas trade. The parties have been loaned smaller machines while waiting for the ones they want."

On one side of the store is a record case in which are twenty thousand records. Everything in both Victor and Columbia catalogs is carried. "We have from five to fifty of every record," said Mr. Strasburg.

An unusually desirable sale was made by Mr. Strasburg to-day. The Edison Illuminating Co. maintains a club room near Fort Wayne, at the western city limits, for the benefit of the employes of its plant in that district. To-day the company purchased a two hundred dollar Victrola to be installed there, with fifty dollars worth of records.

The Strasburg Co. has increased its cash capital and will add still more space as soon as a store adjoining can be obtained. The space just taken, though doubling the company's former facilities, already is taxed to capacity, and on Saturdays is overtaxed.

VIEWS OF AUSTRALIAN HOUSE.

The World is in receipt of several interesting views of the establishment of the Talk-O-Phone Co., Sydney, New South Wales, of which Pogonowski & Wollaston are the proprietors. The concern imports and deals in Edison phonographs, Gramophones and small musical instruments, and its quarters are especially fitted up for handling the lines to advantage.

MANY HAPPENINGS DURING MONTH IN MILWAUKEE.

Business in Both Machines and Records of Various Types Unusually Good—Gensch-Smith Co. to Enter Retail Field with New Victor Store—Changes Among the Salesmen and Managers—McGreal Retail Store to Move—McGreals' Lose Infant Son—Free Trial Plan Condemned—Concerts Prove Effective in Drawing Trade—Some Personal News.

(Special to The Talking Machine World.)

Milwaukee, Wis., Feb. 10, 1913.

Business in both machines and records is unusually good for this season of the year, according to local dealers. The demand for the higher priced machines has shown a steady increase, but there has been an especially strong demand for moderate priced machines. This is accounted for to a certain extent by the fact that industrial conditions have improved so much that people in moderate circumstances are finding themselves able to purchase machines which are not too high priced.

Everything seems to indicate that 1913 will witness a big business for the Wisconsin talking machine dealer. Bumper crops were harvested in this section of the northwest last fall, while now the prices which are being received for livestock, produce and dairy products are doing much to keep up prosperity in the smaller cities and towns about the State. The big heavy machinery producing plants in Milwaukee are working overtime, everybody is employed and money is much more plentiful than at this time a year ago.

With the organization of the Gensch-Smith Co., preparations have been completed for the opening of another retail Victor store in Milwaukee, and it is expected that by the time this appears, the new concern will have opened for business in a handsome new store at 730 Grand avenue. W. F. Gensch, who heads the new concern, is a man who has had wide experience in the talking machine field. He was for five years connected with the Columbia Phonograph Co., and for several years was associated with A. G. Kunde, Columbia dealer and jobber, 516 Grand avenue. Recently he was connected with L. C. Parker, manager of the Victor department at Gimbel Brothers' local store. Mr. Gensch is the inventor and patentee of a successful diaphragm, now in active use. Mr. Gensch will spend most of his time calling on the trade in Milwaukee, and about the State, while the other member of the new firm, Mrs. A. J. Smith, will have charge of the store. The order for the entire stock of machines and records for the new store was placed with the Wisconsin Talking Machine Co., jobbers for the Victor line in this State.

Harry R. Fitzpatrick, manager of the Wisconsin Talking Machine Co., jobber for the Victor line in the Badger State, will wed Emma Krech, late in February. The bride-to-be, a young woman of unusual attraction, is well known in the Milwaukee talking machine trade, having been connected for several years with the retail McGreal store.

Ernest F. Leichti, for several years manager of the Victrola department of the Arthur P. Griggs Piano Co., of Davenport, Ia., recently with Gimbel Bros., has joined the sales force at the Edmund Gram music house and will assist Manager Paul A. Seeger, of the Victor department. Mr. Leichti has a wide acquaintance in Milwaukee, especially among the music loving people of the city. Manager Paul A. Seeger reports that business has been showing steady and consistent growth and that the prospects for the coming year are unusually bright.

Roy J. Keith, of the Talking Machine Co., of Chicago, was a recent Milwaukee visitor. While in the city, Mr. Keith was entertained at the home of Paul A. Seeger, manager of the Victor department of the Edmund Gram music house.

The McGreal retail talking machine store, at present located in the Merrill building, will be situated in larger and more adequate quarters after May 1. Gertrude Gannon, owner and manager of the store, has secured a lease for a ten-year period on the store at 312 Grand avenue. The entire building will be remodeled and made into one of the most handsome retail talking machine shops in Milwaukee. The Wisconsin Talking Machine Co., jobber for the Victor line,

will have its offices at the new store. The company now has extensive warerooms at 183-185 Fourth street.

News has reached Milwaukee that the Wisconsin Music Co. of Madison, has opened new Victor retail stores at both Janesville and Beloit, two of the most prosperous cities in the southern part of the State. Each establishment is being conducted under the name of the Victrola Shop, and both are under the management of a Mr. Hughes, formerly of Madison. The entire stock of machines and records for both new stores was purchased of the Wisconsin Talking Machine Co., of Milwaukee.

Harry McGreal, nephew of Lawrence McGreal, who was associated with the Edison jobbing business in Milwaukee for several years, has joined the forces of the Wisconsin Talking Machine Co., and is manager of the shipping and stock departments.

G. W. Gabriel, formerly Milwaukee representative of the Multiphone, is now connected with A. G. Kunde, Columbia jobber and retailer, 516 Grand avenue, and has full charge of the Dictaphone business at the store. Mr. Gabriel has succeeded also to most of the work formerly carried on by W. P. Gensch, who now heads a new Victor retail concern on Grand avenue. Manager Kunde at the Columbia store reports that business is brisk in both machines and records. He says that the trade is anxiously waiting the arrival of the Grafonola grand.

Lawrence McGreal and Mrs. McGreal have the sympathy of the trade in the loss of their little four-months' old son, Lawrence Gannon McGreal, who was found dead in bed in the sheriff's apartments on the morning of January 29. The body was taken to Dixon, Ill., for burial, besides little Jack McGreal, who died two or three years ago.

L. C. Parker, manager of the Victor department at Gimbel Brothers' store, says that business during the month of January made tremendous gains over that of the corresponding period a year ago. Mr. Parker's daily concerts in the Victor hall at the big department store are patronized by large crowds and are the means of bringing much business to the store.

U. P. Gibbs, of the Rudolph Wurlitzer Co., of Chicago, Samuel Goldsmith and Mr. O'Neil, representing the Victor Talking Machine Co., were among the recent visitors in the Milwaukee talking machine trade.

Miss Elizabeth Hughes, manager of the Edward Schuster & Co.'s store at Third street and Garfield, is setting a high mark in Victor salesmanship. The young lady is conducting daily concerts which are doing much to increase business, while she faithfully follows the scheme of going out and calling upon prospective customers.

The so-called trial proposition does not meet with the favor of J. H. Becker, Jr., manager of the Victor department at the Espenhain department store.

"We are doing a steadily increasing business and we have been steering clear of the free trial scheme," said Mr. Becker. "I believe that the so-called trial proposition is easy to 'knock' out. People are getting used to this scheme and they prefer to go to the dealer who allows his machines and records to go out only on sale. The plan of leaving machines and records with the prospect for a week or two is detrimental to business, and people are coming to realize that they are apt to buy stock that has been used by some one else, or on the other hand they may make up their minds to buy only second-hand goods. Altogether, it is a poor policy for the dealer to follow."

The daily concerts given at the Espenhain store by Manager Becker are proving decidedly popular. Demand for the Victrola IX. is especially good, and Mr. Becker says that he is behind on orders with this machine.

It's all clear sailing
For the dealer who sells the

Simplex Automatic Start and Stop Device

We have cracked the Automatic Stop nut and have added our exclusive starting feature.

The SIMPLEX positively meets every requirement of the trade. Accurate, easily attached, easily operated, simple in construction, a ready seller, it is the ideal automatic stop.

The SIMPLEX is the only automatic stop ever placed on the market, which wins the absolute approval of the customer, the dealer and the jobber.

A Victrola fitted with the SIMPLEX completes the Victrola equipment and leaves nothing more to be desired.

To the prospective customer who reminds you of the automatic feature of other gramophones, a Victrola equipped with a SIMPLEX is the answer.

To prove our claims absolutely, here is
OUR OFFER

We shall send on memorandum to any dealer of recognized financial standing one SIMPLEX AUTOMATIC STARTING AND STOPPING DEVICE. Only one SIMPLEX will be sent to a dealer under this offer, and for a trial of thirty days only. At the end of thirty days we will bill you for the machine and request you to send check or return the SIMPLEX.

Jobbers and dealers, all over the World, are selling thousands of SIMPLEXES.

WORLD'S LARGEST

MUSIC HOUSE

FROM OUR CHICAGO HEADQUARTERS

ROOM 806, NO. 37 SOUTH WABASH AVENUE, E. P. VAN HARLINGEN, MANAGER.

(Special to The Talking Machine World.)

Chicago, Ill., Feb. 10, 1913.

The various jobbers and company branches here all declare that January was a good month, a mighty good month, and that 1913 has started out under the most favorable auspices.

Of course, the shortage on some types of machines is still felt, but deliveries have been coming forward fairly well and their influence would have been felt to a greater degree had it not been for the great number of back orders which swallowed up the new goods as fast as they arrived.

Another month, however, should witness a decided change for the better in the situation.

The January record business has simply been enormous, according to all reports, and presents new evidence of the stability of the talking machine business.

Talking Pictures to Be Shown.

Members of the talking machine trade here who have read with interest the enthusiastic reports of the initial presentation in the East of Thomas A. Edison's talking pictures will have an opportunity to see the pictures for themselves, and no doubt to study the remarkable synchronizing apparatus at close range a week hence.

The talking pictures will be shown beginning February 17 at both the Majestic and Palace theaters of the Orpheum circuit. Different films will be presented at the two theaters, although the dates of their presentation are simultaneous. The machines are now being installed.

Kimball to Handle Talking Machines.

The W. W. Kimball Co. is to open a talking machine department in connection with its retail piano department in the Kimball Building, corner of Wabash avenue and Jackson boulevard, and has qualified as Victor and Columbia dealers. The importance of this move may be understood when the wide prestige and influence of the company in the piano trade is considered.

Edgar C. Smith, the manager of the retail interests of the great piano manufacturing company in Chicago, has been considering the matter for some time, but has preferred to go slow and be reasonably sure of his ground before making the departure.

A year ago the Ogden avenue branch store of the company added talking machines and Mr. Smith has watched it and has had an opportunity to study the matter carefully. The results have been such as to confirm his belief that the line

would prove a valuable adjunct to the business of their great main store.

"While we always move conservatively," said Mr. Smith, "and are not prone to do anything with a flare of trumpets, I can assure you that if the new departure is not a success it will not be because of lack of effort. I intend to give a great deal of my time personally to the work. We have secured a competent young man to take immediate charge and I expect to get right into the game myself and to occasionally take a hand in the selling of goods myself so that I can get right into the talking machine atmosphere."

The department proper will be on the second floor, where there will be a large general salesroom and five handsome private demonstration rooms. The salesrooms will adjoin Kimball Hall, which can be utilized to excellent advantage. The opportunity for exploiting grand opera records with the accompaniments played by the great Wimbald pipe organ will, no doubt, be taken advantage of.

The great piano warerooms and immense window frontage on the ground floor will be utilized for the display of machines, which will be shown side by side with pianos. There will be a Victrola or Graphophone in every one of the fourteen or fifteen windows, and special advantage will be taken of the big corner window.

Further, Mr. Smith says that each one of their private piano salesrooms will contain a machine but which will not be for demonstration but simply to call attention of visitors to the fact that talking machines are to be obtained there.

The location of the Kimball warerooms is most advantageous and the thousands of people who pass there daily cannot but be attracted by the important display which will be made.

That the Kimball Co. is going into the business in earnest is shown by the size of the initial orders, despite Mr. Smith's modesty. Arthur D. Geissler, manager of the Talking Machine Co., who signed them up on Victors, says the deal is one of the most important they have ever put through. W. C. Fuhri, district manager for the Columbia Graphophone Co., handled the contract for the Columbia goods in person and is naturally pleased with the recognition of the Columbia by a house so important in the musical world.

New Victor Department Opened.

The new Victrola department of the Bissell-Weisert Piano Co. has been completed and thrown

open to the public and the company's regular patrons with what Manager O. C. Searles characterizes as "most gratifying results." It is certain that all who have inspected the stock and fittings of this new branch of the Bissell-Weisert Co.'s business have pronounced the rooms as among the most attractive in the West. They adjoin the piano showrooms of the company on the fourth floor of the Fine Arts Building and face upon the famous Florentine Court, which affords an abundance of daylight and air and which enhances the interior finish of the showrooms. There are six of these, as well as an office and a record room, opening upon a long hall that fronts upon the court and each of which is large enough to accommodate several machines and cabinets. The rooms are decorated in soft shades with woodwork in cream color and doors of leaded glass. Fine hangings and soft rugs give an air of elegance to the rooms, and photographs of various artists and old prints of interest to music lovers adorn the walls. Directly across the court is the Little Theater, much patronized by the "400" and in which it is planned to give occasional Victrola recitals. Mr. Searles has succeeded in giving to the new rooms an atmosphere which is in keeping with the clientele of the Bissell-Weisert Co. and the former patrons of the Aeolian Co., who have been pleased with Mr. Searles' courteous attention. With him are H. P. Carlton, George Wright and Miss E. McClelland, all of whom were formerly with the Aeolian Co.

Doings at "The Shops."

George Davidson, of the Talking Machine Shops, the local Victor retailers, reports a very satisfactory January, but with many Christmas orders yet to be filled, especially on Victrola XVI. He also reports a good business in records, with the call for "On the Mississippi" and "When that Midnight Choo-Choo Leaves for Alabama" equal to the record-breaking "Alexander's Ragtime Band." In fact, the "Shops" has been so busy that Stanley Sackett has been obliged to give up his customary afternoon tea, to which he has become very much attached.

William Giezer, repair man at the "Shops," became a benedict January 11, when he was married to Miss Bertha Dornquist. He is taking the "jolly" of his numerous friends quite gracefully.

Edward Blinke's Father Dies.

Edward Blinke, city salesman for the Columbia

The Wade

Fibre
Needle
Cutter No. 1

The Wade

Fibre
Needle
Cutter No. 2

The WADE FIBRE NEEDLE CUTTERS, No. 1 and No. 2, trim the needle at the proper angle, and the needle can be repointed from 12 to 15 times, producing clean, perfect playing points. This cutter is provided with a self-acting stop, which prevents cutting away more than enough to make a new point.

The WADE CUTTERS have an upper and lower blade, the upper blade being loosely pivoted and pressed against the lower blade by means of a spring, making a perfect contact. These blades are made from the best Swedish Tool Steel, and are scientifically hardened by electricity, giving the most lasting and finest cutting edge that it is possible to produce, and seldom ever needs sharpening.

The construction of the WADE No. 2 affords the most powerful cut of any tool ever made, and the blades work parallel to each other, therefore it requires practically no exertion whatever to trim the needle.

We fully guarantee this cutter in every respect, and if the blade of this cutter ever gets dull we will give you a new blade upon return of the old one.

LIST PRICES—No. 1, \$1.50; No. 2, \$2.00

FROM OUR CHICAGO HEADQUARTERS—(Continued from page 21).

Graphophone Co., has the sympathy of his many friends in the trade in the loss of his father, who died this week of pneumonia. The funeral was attended by Manager P. F. Baer and other of Mr. Blinke's business associates.

Columbia Items.

January was a good month for the Chicago office of the Columbia Co., showing an increase both in the wholesale and retail over the corresponding month of last year.

W. C. Fuhri, district manager, will go South the end of the month and will meet George P. Lyle, general manager of the Columbia Co., with whom he will visit New Orleans, Dallas and other points.

Manager C. F. Baer, of the local office, is now on a brief trip to Iowa. Mr. Baer, by the way, has joined the noble army of automobilists and has just invested in a Reo touring car.

Hyatt LeMoine, who recently joined the office force here, is having excellent success.

At Lyon & Healy's.

L. C. Wiswell, manager of the talking machine department of Lyon & Healy, is again at his desk after a ten days' tussle with the grip. Various interior changes have been made in Department H incident to the concentration of their entire efforts on the Victor line, with the result of improving the already famous L. & H. Victor service in many particulars. January showed a gratifying increase in the corresponding month of last year. Machines came forward from the factory in increasing quantities, but were quickly absorbed by back orders. However, a steady improvement in conditions is promised from the factory. Mr. Wiswell is particularly well pleased regarding the demand for records in January, which, in fact, was one of the best months in the history of the house in this respect. Furthermore, both the January and February bulletins have contained many unusually good selling. Other evidence of the vitality of the trade at present is found in the demand for supplies of all kinds. For instance, the Lyon & Healy Fibre Needle Cutter is one of the best specialties the house has ever put forth. On a recent Monday orders for no less than eleven gross were received.

Downstairs in the Victor Recital Hall, through which the house has done such valuable educational work for many years, interest continues unabated. Victor concerts are now given hourly, from ten in the morning until five in the afternoon, instead of from noon until five as formerly. The playing of accompaniments to Caruso and other Red Seal artists in a Lyon & Healy grand piano is a popular feature of these concerts.

Lyon & Healy have done some expensive Victor advertising of late, printing a list of selections from the various grand operas under the caption of "The Best Moments of Grand Opera." Mr. Bluffman, of the record department, says that many people have come in with these lists in their hands and wish certain numbers to which their attention has been attracted. These advertisements have of late been headed with an illustration showing the entire Victor line.

F. L. Fritsche With Lyon & Healy.

F. L. Fritsche, a well-known Western talking machine traveler, has joined the Lyon & Healy road forces and will cover Iowa for them. Mr. Fritsche for a number of years traveled for the Edison Co. and was afterwards with the U-S Phonograph Co. and has recently been with Grinnell Bros., of Detroit.

Opposes Oldfield Bill.

The Chicago Talking Machine Dealers' Association, which is composed of dealers outside the loop, passed resolutions at the January meeting, which occurred too late for mention in the last issue of the World, asking the national House of Representatives not to pass the Oldfield bill. All of those present sent individual telegrams to their respective Congressmen to the same effect.

The February meeting of the association was held Monday of this week at the Windsor-Clifford Hotel, Monroe street and Wabash avenue, where

the meetings will hereafter be held. President Van DeMark made an interesting report showing that the association had uncovered various instances of dealers violating their contracts with the manufacturers with satisfactory results. Also that one department store which had been giving trading stamps with everything was compelled to place a notice in each advertisement that no stamps were given with talking machines. After an interesting discussion of various trade matters the meeting adjourned.

Increases Cabinet Output.

The Salter Manufacturing Co. states that its business in January was as large as in December. Naturally, the first month of the year is always a good cabinet month because of purchases by people who received talking machines for Christmas presents. Purchases by the dealers are as large as in the holiday month. The Salter company, however, was greatly behind in its orders the latter part of the year because of the usual heavy demand for its product. Jobbers and dealers were pretty thoroughly cleaned out. The company is now making arrangements for increasing the production in every part of its business and will be able to take care of orders very promptly in the future. The steady advance of all materials entering into the construction of cabinets makes advances in the prices of the finished product imperative. Therefore dealers are advised by the company to anticipate their orders to the largest possible extent.

Returns to "Old Love."

Arthur English, who up to a year ago was a silent member of the retail talking machine force of the Rudolph Wurlitzer Co., but who resigned to go into another line, has returned to his former position. Mr. English is an accomplished musician and is more than happy to find himself again in his old congenial environment.

Tributes to U-S Records.

The Chicago office of the United States Phonograph Co. is having a big demand for the Rex and Royal machines. The demand for U-S indestructible cylinder records has been the largest in the history of the Chicago branch the past month, and a number of dealers have written in to express their appreciation of the particularly high quality of some of the recent issues.

Wade Needle Cutters.

Wade & Wade, manufacturers of the Wade Fibre Needle Cutters, report that their business last year more than doubled that of the preceding year. January was a better month than December, showing both that new machine owners are eager for anything that aids in the enjoyment of their instruments and that dealers are evidently pushing the Wade cutter with might and main. Cuts and descriptions of the two models of the Wade cutters are shown elsewhere in this issue.

The Mission of Hope.

Will Hope, who travels Wisconsin and Northern Michigan for the Thomas A. Edison Co., is spending a few days in the city helping Manager C. E. Goodwin get things started at the Phonograph Co., the new Edison jobbing house in Chicago.

Excellent Advertising Slide Service.

The many friends in the talking machine trade of Edward C. Plume will be glad to know that the Edward C. Plume Co., whose place of business is at 417-21 South Dearborn street, Chicago, and which he started a year or so ago, has proved a remarkable success. At the annual meeting in January the capital was increased from \$35,000 to \$60,000 to provide for the expanding trade.

In addition to the Pyro signs and the valuable newspaper advertising service for merchants in various lines, the company has recently put on the market a line of hand-colored advertising slides for the use of retail piano dealers in gaining publicity at their local moving picture theaters. The illustrations are full of human interest and tell their story at a glance. Several of the slides in the series exploit talking machines exclusively. Many of the readers of the World will be able to use the entire series to advantage. The com-

pany also issues a series of attractive mailing folders for music dealers. On one side are views, one for each month of the year, of the Panama Canal, scenes from the great Northwest, the Golden West, etc., while on the other is a beautifully illustrated sales text.

John Dorian in Better Health.

His friends will be interested to learn that John Dorian, who was forced to give up his successful work in the Orient for the Columbia Graphophone Co., and return to America on account of ill health, is now visiting Chicago. Mr. Dorian's condition was such as to necessitate a course of medical treatment and a complete rest. He, therefore, came to Chicago and secured an apartment on the South Side, where he is living with his family. He is steadily improving and since coming to Chicago has gained something like 10 pounds in weight. His many friends made here when he was manager of the Chicago office of the Columbia Co. some years ago will wish him a speedy return to complete health.

A Big January.

"Forty per cent ahead of 1912" was the way Arthur D. Geissler, manager of the Talking Machine Co., characterized its business for the first month of the year. It was the third largest January in the history of the house, and February started in at an accelerated speed.

Wurlitzer News.

A good January, exceeding that of last year, is reported by the Chicago house of Wurlitzer. The record business was something notable, according to Assistant Manager Siemon.

Manager E. H. Uhl is now on an Eastern trip, including visits to the Victor factory, the Wurlitzer piano factory at North Tonawanda and the company's branch houses in New York City and Philadelphia.

L. K. Cameron gave a theater party to the employees of the retail talking machine and musical merchandise departments, of which he is the manager, at the American Music Hall last Tuesday night. December 23 was the biggest day in the history of the first floor and the "blowout" was a belated recognition of the jubilant fact.

The Wurlitzer house is now using four half pages a week in the dailies, one each in the Tribune, News, Examiner and American. They are run in conjunction with the Victor company and constitute very terse and forceful publications.

Make Interesting Trips.

Roy J. Keefe, sales manager for the Talking Machine Co., is on a trip to Milwaukee, Madison, Minneapolis and St. Paul, looking after some large accounts which he has established in the mentioned cities.

George Cheattle, assistant sales manager of the Talking Machine Co., returned from a combined business and pleasure trip to the South, on which he was accompanied by his wife. With New Orleans as the objective point, stops were made at Memphis, Nashville, Birmingham, Jackson, Miss., and Pensacola, Fla. Dealers were seen in all these towns and some excellent orders secured. Mr. Cheattle said that while the progress in the talking machine field had not been as rapid in the South in the past as the North, that there was every evidence of a remarkable awakening by the preparations made by old concerns to enlarge their department and the recent opening up of many new dealers.

Visitors and Personals.

Mr. Coe, of Bradford, Weiss & Co., Waverly, Ill., was a visitor this week.

S. W. Neuberger, of S. W. Neuberger & Co., of Albany, Ind., was in a day or two ago. They have recently added a Victor department to their department store.

C. A. Senn, of Bloomington, Ill., attended the automobile show, a yearly habit of his. He handles both automobiles and talking machines.

O. S. Ogren, Rockford, Ill., was a recent visitor.

W. J. Stahlschmidt, of Evansville, Ind., was in replenishing his talker stock a few days ago.

(Continued on page 24.)

STOP

One Minute, Please, Gentlemen, before you turn this page!

If 1912 wasn't the biggest year in your Talking Machine history it should have been. Could there be anything wrong?

Supposing there is. Our Sales Department could flood you with new ideas of advertising, circular letters, little points of personal service, etc.

If out of this bunch of selling ideas you get one good idea, it would pay you to write us.

Write the Sales Department today, simply saying:—
"THOSE IDEAS, GENTLEMEN, LET US HAVE THEM."

The
Talking Machine
Company

137 North Wabash Avenue
Chicago, Illinois

FROM OUR CHICAGO HEADQUARTERS—(Continued from page 22).

Parsons' Visit to Headquarters.

W. W. Parsons, district manager of the dictaphone department of the Columbia Graphophone Co., has just returned from a ten days' visit to the general headquarters and factory of the company at Bridgeport, Conn. He was given every opportunity by Mr. Woods, the general factory manager, to witness the manufacture of the Columbia dictaphone. He was greatly impressed by the thoroughness and care with which the parts of the machine are manufactured and assembled. The demand for dictaphones has been so great that the company has hardly been able to supply it. Mr. Parsons visited the factory mainly for the purpose of seeing if he could not hurry the filling of orders from the Chicago office. He found that the conditions he complained of were experienced in all parts of the country, but that the company has greatly increased its facilities for the production of dictaphones and soon will be in a position to fill all orders promptly. He spent several days at the general offices in New York and was entertained at the homes of the general manager, Geo. L. Lyle, and Fred Dorian, general manager of the dictaphone department, both of whom reside in Hackensack, N. J. He visited the recording laboratory of the company in New York and talked with some of the distinguished artists, who were there at the time. He was also given a glimpse of the new quarters to be occupied May 1 for the general offices of the company and which embrace the entire 28th floor of the magnificent new 52-story Woolworth building.

Training School for New Managers.

The Talking Machine Co., of this city, has taken a special interest in training managers for new Victor departments which they are instrumental in establishing. A large Western house was recently induced by the Talking Machine Co. to open a Victor department and a man was chosen for the management who had the confidence of the house, as to his general business ability, but who had little experience in the talking machine field. He was given several weeks' instruction at the Talking Machine Co.'s headquarters here in Chicago. First, he put on overalls and spent some time with the company's corps of expert repair men. He was shown how to take the machine apart, locate any trouble, and learned the construction of the machine in detail when the parts were re-assembled. When he was through he was able to explain the construction of the machine thoroughly and was equipped in an emergency to make any necessary adjustments. Next, the future manager spent a few days in the record filling department. He obtained knowledge of stock-keeping systems, got an idea of the kind of records that were being sold and learned how to engage the proportions of the different classes of records. It is safe to say that he saved months of experiment by reason of the few days' guidance of the Talking Machine Co. He was then turned over to the sales manager. The selling points of Victor machines and records were clearly explained to him and he was invited to ask all of the questions he wished. After that he accompanied a salesman on his rounds among the dealers and saw how they conducted business. He became acquainted with many ingenious and effective sales methods and studied store arrangement and other features at first hands.

The Talking Machine Co. is doing this kind of thing all the time and it is seldom that it has not one or more men going through this training course. This entails considerable time and effort, of course, but the company finds it reaps rich dividends, in increased sales by having competent and trained men in charge of new departments, men who are imbued with the true Victor enthusiasm.

Artists Hear "My Own Columbia" Records.

Henry Scott, the famous baritone, who created such a favorable impression during the engagement of the Chicago Opera Company, which has just closed, was a recent visitor to the local Columbia warehouses. Mr. Scott has received a number of master records, which he had made at the Columbia laboratory and tried them out here and made his selection. He was very enthusiastic re-

garding the clarity and beauty of the records and the faithful reproduction of his voice. Mr. Fields, the retail floor manager, who waited upon Mr. Scott, has a great deal to say about the man's pleasing personality and his evident freedom from the professional jealousy, which is so often found in people of musical temperament. Mr. Field sees a large sale for the Scott records when they are all on the market.

Mme. Rosa Olitzka, Columbia artist, who makes her home in Chicago, returned to the city from a concert trip the other day. She told of some new records she had made at the Columbia

laboratory and which she believes are the best she has yet produced.

The Chicago office of the Columbia Graphophone Co. is sending out announcements of eight new violin records by Ysaye and six new records by Bonci. It is expected that these new records will prove to be some of the most remarkable numbers in the Columbia repertoire.

Oliver Jones a Visitor.

Oliver Jones, credit manager for the Victor Talking Machine Co., was in Chicago for a few hours in the course of a Western trip one day last week.

THE PHONOGRAPH CO. READY FOR BUSINESS MARCH 1.

Chicago's New Jobbers of Edison Phonographs and Records Under Management of C. E. Goodwin—Spacious Quarters at 227 South Wabash Avenue Ready for Occupancy.

(Special to The Talking Machine World.)

Chicago, Ill., Feb. 9, 1913.

The Phonograph Co., Chicago's large new Edison jobber, is now prepared to make prompt shipments of Edison cylinders and machines to dealers. It has accumulated several hundred of the new Edison disc phonographs and as soon as a commercially adequate stock of disc records is secured, which will be about March 1, they will commence making deliveries of disc goods.

C. E. Goodwin will be the general manager of the new company. Rumors to this effect have been afloat for a long time, but no authoritative

with the dealers of the Middle West and has kept in touch with the Edison situation in this section ever since he resigned and went East four years ago with the Edison Co.

In that time he has been in close touch with the remarkable improvements in the cylinder line and especially with the new diamond point reproducer and blue Amberol records. He has also witnessed every step in the development of the new Edison disc phonographs and records.

"Just listen to that," he remarked, turning to a new Edison disc phonograph which was playing "Hearts and Flowers." "Do you wonder that Herr Otto Urack, of the Boston Symphony Orchestra, said: 'Mr. Edison has not only produced the best phonograph ever made, but he has created the greatest musical instrument in the world.'"

"The stories of the ceaseless toil and infinite pains that Mr. Edison has spent in the development of the disc have not been exaggerated," said Mr. Goodwin. "I've been right on the ground and I know. Twenty hours a day for three years and a half. I never dreamed of the possibility of a human being capable of such absolute concentration. Why, I've seen him reject records which, to my ear, and I am certainly no novice, were flawless. Of course, I predict a tremendous success for the Edison disc phonographs and records. Knowing the product as I do, this is inevitable. Just wait until the Western public has the same opportunity as that which has been afforded the people of the East. You will find the verdict the same—'It's wonderful!' 'Almost incredible,' etc."

The building of The Phonograph Co. at 227 South Wabash avenue, on the complete reconstruction and equipping of which an immense sum of money is being expended, will form a center of Edison activities in Chicago. The first four floors will be occupied by The Phonograph Co., while the top floor has been subleased for the local offices of the primary battery department of Thomas A. Edison, Inc., the Edison Storage Battery Co. and Edwin C. Barnes & Bros., the Chicago agents for the Edison dictation machines.

The front of the building is of beautiful cream-colored glazed brick with ornamental terra-cotta trimming and is of such an uniquely beautiful architectural design as instantly to attract the attention of the passerby.

As the interior will not be completely finished for several weeks, any description now would be inadequate and is deferred to a later issue. Suffice it to say, however, that it will be one of the finest phonograph establishments in the country.

The first two floors of the building will be devoted to the retail department. On the main floor will be a large reception hall, where daily concerts will be given, and the retail machine department, embracing seven private salesrooms.

The second floor will be devoted to the record department. Seven sound-proof demonstration booths are being erected and in the large reception room opening from the elevators there will be service tables, where customers can go over the catalogs at leisure with clerks able to aid them in making their selections. The retail department

(Continued on page 26.)

C. E. Goodwin, Manager The Phonograph Co.

announcement was made until this week, when Mr. Goodwin arrived in Chicago to consult with the company about some of the details of the interior arrangements of the fine new establishment at 227 South Wabash avenue, work upon which has been in progress for some time.

Mr. Goodwin will return to Orange next week, as his resignation as manager of the traveling salesmen for Thomas A. Edison, Inc., is not effective until March 1, when he will come to Chicago permanently as manager of the new Edison house.

The Phonograph Co. is an entirely independent concern and the Edison Co. was reluctant to release Mr. Goodwin from the responsible position which he has filled so acceptably with them, but they readily agreed with the Phonograph Co. that the ultimate interests of both concerns would be furthered by having the destinies of the new jobbing house in charge of a man so thoroughly acquainted with the company's product and policies.

Mr. Goodwin needs no introduction to the Western trade. During the ten years he was manager of the talking machine department of Lyon & Healy he became intimately acquainted

THE NEW EDISON JOBBER IN CHICAGO

We are filling orders the day received from an immense new stock of EDISON BLUE AMBEROL RECORDS and Cylinder Machines.

We have the finest building devoted to the sale of phonographs in America and are getting together an organization of experts.

Edison Disc Phonographs

We have already stocked several hundred of the new disc phonographs and Mr. Edison promises a good supply of his wonderful disc records by March 1st.

Apply for a disc dealership early. It is going to be the greatest thing in the music trade.

You are invited to come to our warerooms for a demonstration of the musical triumph of the century.

Our watchword will be protection to the dealer and an absolutely unequalled service on both lines of Edison phonographs and records.

THE PHONOGRAPH CO.

C. E. GOODWIN
General Mgr.

CHICAGO

227 So. Wabash Ave. between
Adams St. and Jackson Blvd.

TELEPHONE HARRISON 1503

FROM CHICAGO HEADQUARTERS.*(Continued from page 24.)*

will probably not be ready for opening until about March 10. On the third floor will be the general offices and wholesale stock room, and is already occupied for that purpose. A large stock of cylinder records and machines is in the place and order-fillers are at work. A full stock of disc phonographs is already on hand for the inspection of those prosperous dealers who are to qualify on this high-grade line.

"These disc franchises are already in great demand in the East, where the Edison disc is better known, and the dealers in Chicago and surrounding territory will understand this when they call and hear this new instrument," said Mr. Goodwin.

"The Edison Co. requires a special application with a suitable qualifying order before the right to vend the disc is considered. Mr. Edison's idea is to have each dealer qualify for the disc on a proper scale and that his store be so located that it will enable him to take care of several thousand population, thus avoiding the necessity of qualifying so many dealers."

MAKE PERMANENT DISC NEEDLE.*(Special to The Talking Machine World.)*

Chicago, Ill., Feb. 12, 1913.

The Permanent Phonograph Disc Needle Co. has been incorporated with a capital stock of \$2,000, and will vigorously push the sale of the Permanent Disc Needle, the invention of Samuel Levin, of Highland Park, Ill., and which has been on the market for some time. Mr. Levin has perfected his needle and has introduced an improvement making it perfectly adjustable. The needle consists of a small garnet shaped to a point, bringing it into contact with the record the same as the ordinary needle. The jewel is fitted in a shank, which is inserted in the sound box the same as a steel needle. The price of this permanent needle is placed at one dollar each. The address of the company is 1138 N. Winchester avenue, Chicago.

ORATORY BY ELECTRICITY.**Manikin Elocutionizes at Electrical Banquet When Button Is Pressed.***(Special to The Talking Machine World.)*

Chicago, Ill., Feb. 7, 1913.

At the Electrical Club banquet last night the feature of the evening was a speech by an electric manikin, whose burning eloquence poured forth from the electric vibration of tin plates somewhere in his "innards," proved that he could do everything human but eat, sleep and walk.

ESTEY CO. SHOWS COLUMBIA GRAND.**New Style Grafonola Proves a Strong Window Attraction at Retail Warerooms.**

The Estey Co. is displaying in its show window the first model of the new \$500 Columbia grand to be shown in New York retail warerooms. The instrument is placed in the center of the window, and although it has been on display but a few days, has already elicited considerable praise for its graceful appearance. The talking-machine warerooms of the Estey Co. are about completed, and the machines are displayed to excellent advantage in handsome quarters on the third floor of the Estey building.

THE SALTER PLAYER ROLL CABINETS.

Besides their extensive line of talking machine cabinets, the Salter Mfg. Co., 337-343 North Oakley avenue, Chicago, make combination player roll and music cabinets. As many talking machine dealers also handle pianos they will find much to interest them in this statement. An especially popular cabinet is Style No. 47, which is of unusual capacity and will hold over 110 player rolls. It is furnished either in mahogany or in oak in any of the several finishes. The line includes a number of other attractive styles in various sizes and capacities. Dealers should by all means secure a copy of the company's music roll and cabinet catalog as well as one of their talking machine cabinet catalogs.

CONTRACTS MUST BE RESPECTED.**An Important Ruling Handed Down by the Referee in Bankruptcy in Connection with the Sale at Public Auction of a Large Number of Talking Machines and Records at List Prices to Authorized Talking Machine Dealers by the Receiver—His Attitude Upheld.**

The sale at public auction of a large number of Edison, Columbia and Victor machines and records at the authorized list prices to regularly authorized talking machine dealers by the receiver in bankruptcy in the matter of Edison Co., bankrupt, in the United States District Court, District of New Jersey, has been confirmed by the referee in bankruptcy, notwithstanding the objections of certain unsuccessful bidders, whose objections were based upon the fact that their bids were higher than those which were actually accepted, and that the receiver should have sold to them regardless of the restrictions under which they had been sold to the Edison Co. and irrespective of whether the lowest bidder was a licensed dealer or not.

The goods were sold to bidders who were able to satisfy the receiver that they were the duly authorized dealers of these companies, and they signed the conditions of sale which had been prepared by the receiver's attorneys in accordance with the assurance which the latter had given the attorneys of these companies to the effect that no sales would be made of their clients' goods except in accordance with the restrictions imposed by them. These conditions were announced at the sale.

The referee in bankruptcy, Hon. Edwin G. Adams, of Newark, handed down the following important memorandum after hearing arguments in the case:

This matter is before me, on motion of the receiver, for confirmation of a sale at public auction, and on objections to its confirmation by unsuccessful bidders. The goods sold included a large number of talking machines and records—Edison, Columbia and Victor—and it is admitted by all parties that the bankrupt had entered into patent license agreements with each of the said phonograph companies, providing, among other things, that these goods should not be sold at less than certain fixed list prices, except to regularly authorized dealers who were required to sign similar license agreements; and it also appears that the same restrictions are printed upon the goods and their containers. Each of the phonograph companies had served notice on the receiver and his attorneys that injunction suits for patent infringement would be brought if the sales of the talking machine goods were to be made below list prices, except to regularly authorized dealers in the particular lines of goods purchased, and the receiver's attorneys had given their assurance in writing to the various talking machine companies that no sales would be made of talking machine goods except in accordance with the restrictions imposed by the manufacturers and had prepared and announced conditions of sale in which substantially the same provisions were embodied.

At the sale the goods were sold to bidders who were able to satisfy the receiver that they were such licensed dealers and who signed the conditions of sale, all bids made by others being refused. Among the bids so refused were the bids of the parties now objecting to the confirmation of the sale, which bids were higher than the bids actually accepted. It appears that if the bids of the objecting parties had been accepted, the sale would have realized several hundred dollars more than the sales which actually have been made; and the objections made are to the effect that the receiver should have sold these goods to the highest bidder, notwithstanding the restricted patent licenses existing between the bankrupt and the various talking machine companies and irrespective of whether such lowest bidder was a licensed dealer or not.

The objecting parties cite numerous authorities to the effect that the bankrupt was bound to perform the license conditions, and that a violation thereof by the bankrupt itself would be enjoined as a patent infringement at the suit of the talking machine companies. That the bankrupt's receiver stands in the shoes of the bankrupt, except where fraud is present and except for the provisions of Section 47 (a) of the Bankruptcy Act, is well established by numerous decisions of the Supreme Court. See, for example, *Thompson vs. Fairbanks*, 196 U. S. 516-526, 13 A. B. R. 437; *York Manufacturing Co. vs. Cassell*, 201 U. S. 344, 15 A. B. R. 633. The case of *In re Spitzel & Co.*, 168 Fed. Rep. 156, 21 A. B. R. 729, I regard as directly in point, as in that case the court enforced against the bankrupt's receiver the restrictions upon the sale of the patented goods to which they had been subject in the hands of the bankrupt.

The action of the receiver and his attorneys was in accordance with the decisions on the subject, and in my estimation was proper and correct under the circumstances.

An order confirming the sale will be allowed.

(Signed) EDWIN G. ADAMS,
Referee.**HARD WORK TO MEET DEMAND.****Wider Knowledge of the Vitaphone Has Increased Orders for This Product—Vitaphone Co.'s Plant Rushed—Style 30 in Weathered Oak—President Repp's Improvements.**

The plant of the Vitaphone Company at Plainfield, N. J., continues at its usual activity. It is probably more handicapped to-day than ever because more people in the trade are becoming acquainted with the Vitaphone products and are seeking information. Even the occupancy of the new building has not helped the company towards filling orders, as it seems that no sooner does its capacity increase than the demand does otherwise, leaving them always behind with deliveries on orders. This condition emphasizes the value of the Vitaphone more than anything else.

A supplement to the Vitaphone catalog has been issued covering style No. 30, in weathered oak. This is Vitaphone No. 30; it weighs net 30 pounds and costs \$30, and the combination ought to make it popular. This style is like the other Vitaphone styles, way oversold.

C. B. Repp, president and inventor of the Vitaphone, has made some recent improvements in tone production that are considered most important.

OPERA RECITALS IN DALLAS.**Series of Free Opera Recitals Arranged for by Sanger Bros., the Victor Distributors, Fill Big Hall to Overflowing—Make Strong Impression on Local Music Lovers.***(Special to The Talking Machine World.)*

Dallas, Tex., Feb. 8, 1913.

Sanger Bros., the prominent and successful Victor distributors of this city, attracted much attention recently through a special series of operatic recital of the various operas to be given during the coming grand opera season in this city on February 28 and March 1, when Tetrizzini, Mary Garden, Dalmore and other prominent artists will appear.

Sanger Bros. engaged Miss Anna Shaw Faulkner and Max Oberndorfer to give the recitals, and the general interest in the event was indicated by the fact that at each recital the large auditorium on the seventh floor of the Sanger Bros.' building was filled to overflowing and many opera enthusiasts were turned away. Wagner's "Die Walkure" and Massenet's "Thais" were selected for the recitals, which were given in the morning and afternoon. The recitals were well advertised and were free.

Speaking of the success of the venture, Sanger Bros. say: "Grand Opera has become so closely associated with the Victor that, while Dallas is out of the beaten path of the grand opera companies, the Victor is the means of keeping our musically inclined people in touch with the world's best music."

PUBLICITY FOR THE DEALERS.

A striking two-page spread devoted to their "Eclipse" and "Favorite" types of machines is featured by the Columbia Graphophone Co. in this week's Saturday Evening Post. The advertisement is very attractively arranged, and is displayed to the best possible advantage. Early this month the advertising department of the company sent out to Columbia dealers an advance proof of this two-page spread, with several excellent suggestions on its utilization as a window display. Several windows in the nearby vicinity have been arranged as suggested by the company, and the display is one of the most attractive that has been shown in some time. The window hold the attention of passersby and create an interest that materializes into ready sales.

According to the revised tariff recently put in force in Brazil the import duty on records and talking machines has been fixed at two milreis per kg., without any distinction between single and double-faced records. The following clauses are contemplated: Single-sided records, one milreis per kg.; double-sided records, two milreis per kg.; component parts of machines, two milreis per kg.

AN IMPOSING CATALOG

Of Columbia Double Disc Records, Containing All Selections Up to and Including January 1913, Issued by Columbia Graphophone Co.

The Columbia Graphophone Co. has just issued a new and complete catalog of Columbia double-disc records, presenting all selections listed up to and including January, 1913. This catalog, which contains 300 pages, has been arranged in as concise, and at the same time, as thorough a manner as could be conceived by the advertising department of the company, and the main thought in its production was to facilitate its use by the dealer in every way possible.

The new edition of the Columbia record catalog does not differ radically from the arrangement and contents of the July, 1912, edition, which was universally commended by Columbia dealers. A feature of the January edition is the presentation of a separate section devoted to the newly created educational department. This section of the book consists of about ten pages describing the various types of music particularly adaptable for schoolroom use, with lists of selections recommended by the Columbia educational department and well-known school authorities.

The index for the new catalog is very simple, permitting a user to locate a desired record with a minimum of effort. The first part of the catalog is devoted to an alphabetical arrangement of every record issued by the Columbia Co., with the exception of those listed in their foreign catalogs. The selection on one side of the record is featured in one instance, while the second selection is printed below in smaller type. This principle is followed throughout the index, thereby ultimately showing every selection in display type under some letter of the alphabet.

Grand opera and concert records are listed in a special tinted section of the catalog, which also contains a special artists' index of the singers who performed these records. The general list of records is also classified into different types of selections, such as standard songs, popular songs, minstrel songs, etc., and records are placed under these various headings with the page number on which they appear. At the end of the book is an ingeniously arranged artists' index, containing the number and page of listing of every record made by the artist named. This index has proven to be of considerable assistance when the artist's name is known, while the title of the record is not so familiar. The last few pages illustrate several popular types of Columbia machines, including a splendid cut of the Columbia "Grand." The new catalog is complete in every detail, and will undoubtedly appeal to Columbia dealers because of its simplicity of arrangement.

INCORPORATED.

The American Telephonograph Corporation, New York City, was incorporated under the laws of Delaware on Wednesday to manufacture talking and dictating machines, etc.; capital, \$1,000,000. Incorporators: Frederic G. Toplift, P. D. Beresford and George V. Maynard, all of New York City.

QUICK DECISIONS PAY.

Learn to make decisions quickly. Some of us wouldn't be able to get very far if we didn't have to make decisions quickly. Learn to size up things and make decisions as quickly as you can. There are times when judgment is better to-morrow, but if you are in touch with the business, you can make your decision as well now as later.

It Should Be Worth While for Anybody

having good records, and a discriminating ear, to inform themselves about the Graphite Lubricator. It clears the tone, improves articulation, lessens the scrape, prevents dust and grime, and trebles the life of records. It slips into the place of the ordinary needle. One application for a dozen playings will do.

It makes reproduction musical instead of hurdy-gurdyish. Send for circular.

VOX HUMANA TALKING MACHINE CO.
Nantucket, Mass.

OPPOSE NEW JERSEY BILL.

One of Governor Wilson's "Seven Sisters" Anti-Corporation Bills Aimed at Fixed Prices—Opposed by Talking Machine Men.

Business concerns incorporated in New Jersey are following, with much interest, the various bills affecting corporations now before the legislature of that State, and colloquially known as the "Seven Sisters" anti-trust bills, introduced at the suggestion of Governor Wilson of New Jersey.

The bill that has created the most discussion and against which considerable opposition has developed is Senate Bill No. 43, which is aimed primarily against the maintenance of fixed prices.

Talking machine manufacturers and dealers in New Jersey and jobbers who handle trade in that State are unanimous in their opposition to the passage of this bill, and at the hearing recently in Trenton representatives of the Victor Co., the Thos. A. Edison, Inc., and a number of well-known New Jersey dealers and jobbers pointed out to the committee the evils that would be legalized if this bill became a law.

The contrasting attitudes of the States of New Jersey and California in this sort of legislation were pointed out by Senator Robbins, who referred strongly to the legislation passed by the California Legislature in December giving people the right to control prices of their products by their contractual relations, or implied relations, by means of notifications affixed to their products.

The most important clauses in bill 43 concerning fixed prices, and which is of great interest to the talking machine trade in New Jersey, reads as follows: "A trust is a combination, or an agreement between corporations, firms or persons, any two or more of them, for the following purposes and shall be illegal and indictable if they 'fix at any standard or figure whereby its price to the public or consumer be controlled, any article or commodity of merchandise, produce or commerce intended for sale, use or consumption in this State or elsewhere.' Another clause, No. 6, also makes it indictable and illegal to 'make any secret oral agreement or arrive at any understanding without express agreement by which they directly or indirectly preclude a free and unrestrained competition among themselves or any purchasers or consumers, in the sale or transportation of any article or commodity, either by pooling, withholding from the market, or selling at a fixed price, or in any other manner by which the price might be affected.'"

Punishment for conviction on any of the clauses noted in this bill is given as follows: "Whenever an incorporated company shall be guilty of the violations of any of the provisions of this act, this offense shall be deemed to be also that of the individual directors of such corporation ordering or doing any of such prohibited acts and on conviction thereof shall be punished accordingly." It is also set forth that the charter of a guilty corporation may be revoked.

NEW COLUMBIA REPRESENTATIVES.

New Columbia agents include the Atherton Furniture Co., of Brockton and Worcester, Mass.; Wise, Smith & Co., Hartford, Conn.; and Meekins, Packard & Wheat, Springfield, Mass.; Schmidt & Zitter, Hastings-on-Hudson, N. Y.; John de St. Leger, Hicksville, L. I., N. Y.; and H. Baker, Landing, N. Y.; F. C. Henderson Co., for the C. T. Sherer Co., of Worcester, Mass.; R. H. Decker, Pittsfield, Mass.; Robert M. Carter, Concord, Mass.; Mason & Phelps Piano Co., Keene, N. H.; A. C. Bay, Chicago, Ill.; Edward B. Selyman, Chicago, Ill.; Brenard Mfg. Co., Iowa City, Ia.; Taylor Music House, Waterloo, Ia.; Ohio Pottery & Glass Co., Cleveland O.; R. B. Henderson Drug Co., New Albany, Miss.; Columbiana Columbia Grafonola Co., Columbiana, O.; Winter Piano Co., Erie, Pa.; and Ramaker Bros. Co., Seattle, Wash.

As The World goes to press it is announced that Chauncey Olcott has signed with the Columbia Graphophone Co.

TO MAKE TALKING MACHINES.

The Cort Sales Co. Discloses Its Plans to The World—Intends to Enter the Manufacturing and Sales Field at an Early Date.

The Cort Sales Co., incorporated last week with a capital of \$10,000, was organized by John Cort, the well-known theatrical manager, for the purpose of manufacturing talking machines and records. Associated with Mr. Cort in this enterprise are Edmond V. Giroux, his general manager, and William Grossman, a prominent New York lawyer.

In discussing the organization of the new company with The World, Mr. Grossman said: "We have not yet made any definite arrangements as to our officers, or our general merchandising plans, etc., but we are planning to manufacture disc talking machines and records. Our factory and executive offices will probably be located in New York, and we expect to produce a line of machines similar in price to those on the market at the present time. In all likelihood, our first machine will be a fifty-dollar model, which we are working on now. Our record library will probably consist of about 300 records at the start, but we expect this library to grow, of course, as our business expands. Details are in embryo at the present moment, but full information will be forthcoming shortly."

GOING AFTER RETAIL TRADE.

The Sonora Phonograph Co. (reorganized), of Manhattan, was incorporated with the Secretary of State at Albany, on Feb. 3, for the purpose of conducting a talking machine business, with a capital stock of \$25,000. Those interested are G. E. Brightson, S. Brightson and G. C. Rumbough. This company recently leased the basement and street floor of the building at 78 Reade street and are going strongly after the retail trade. At present no attempt will be made to manufacture and sell to talking machine dealers.

TO HANDLE THE COLUMBIA LINE.

The Columbia Graphophone Co. has just closed arrangements with R. H. Macy & Co., New York, and Abraham & Straus, Brooklyn, N. Y., whereby these two prominent department stores will handle a complete line of Columbia products. These establishments are situated in the hearts of their respective shopping centers, and the Columbia line should prove a marked success in its new homes.

TO HANDLE TALKING MACHINES.

The latest addition to the rapidly-growing list of Columbia representatives is the progressive piano house of Sedgwick & Casey, Hartford, Conn., who completed arrangements this week to handle the Columbia line.

CASH PAID for any old and new disc phonographs, records, horns, boxes, motors and cabinets. Address **H. WALCER, 137 Orchard St., New York City.**

WILL SELL or exchange 5,000 Columbia Italian X. P. two minute records for any make of disc records. Will also buy any quantity of disc machines and records. What have you? Address, X. P., care The Talking Machine World, 373 Fourth avenue, New York City.

RECORDING ARTISTS IN MOSCOW AND ST. PETERSBURG.

An Impression of Moscow and Its People—The Artists Including Cossacks and Sarts—Life of the Artists in St. Petersburg—Other Interesting Data.

By T. J. THEOBALD NOBLE, a Prominent European Talking Machine Recorder.

(Continued from January World.)

The journey from Moscow to St. Petersburg takes only eleven hours, and leaving at night, one is able to enjoy a comfortable night's rest and awake to enjoy coffee and find yourself in St. Petersburg.

The railroad track between the two towns is perfectly straight, and as the train travels at only moderate speed there is little or no oscillation and sleep is easy. When the surveyors of the line laid their proposal before the Emperor Nicholas, they begged him to state which towns he desired the line to touch. The Emperor called for a ruler, which carefully placing on the chart from Moscow to St. Petersburg, he ruled a line straight

Making Records in St. Petersburg.

through, and handing the chart back to the surveyors, remarked, "That is how I command the line to be constructed," and it was. I found it extremely cold and damp, and the difference between the two climates was most marked. I was not sorry to reach the hotel, for the cold, Baltic winds sweeping over the town from the Baltic were far from pleasant.

After Moscow, I never expected to find this town so up to date. It certainly is not Russian, and appeared to be a copy of several European towns. It has no distinctive features, with the exception, perhaps, of its splendid thoroughfare, the "Nevsky Prospect," which is a mile in length and varies between 80 to 120 feet in width. On both sides is an array of large modern shops, and include all nationalities. In one part is the Cathedral of Kazan, a magnificent building. In another part are the large, palatial red buildings of the War Office; it is indeed a grand thoroughfare. At one end is the royal palace, and the other the railroad station to Moscow.

I found the river Neva frozen hard, and they had thrown an electric tram service across for four months—a remarkable piece of hustling for the Russians.

The difference between Moscow and St. Petersburg does not terminate with their diversities in construction, for in the latter there are many more Europeans of society; the people are far more fashionably dressed; there is a great deal more movement in the streets, which are also better lighted; a conspicuous absence of the Tartar, Armenian and all other south Russian races is noticeable; the climate is abominable; the theaters are more interesting; and, lastly, the artists are superior for recording purposes. Here I found the best of all Russia.

The Nevsky Prespect is always filled with a bustling populace, including a great many officers of the two services. The naval officers had sur-

prisingly white, pasty countenances, quite the reverse to what one expects of navy men. These men, I learned, are hardly ever at sea, and when they do go it is for the maneuvers, which consist of calling at a number of Baltic ports to enjoy a real good time. One day my wife and I interested ourselves counting the army men we passed in a walk from our hotel to the top of the Nevsky, a distance of half a mile. We counted 27 generals, 18 captains, 33 officers of lesser rank and 8 privates. Generals are as common in the Nevsky as trams in Broadway. When a private espies a general he has to immediately halt, swing around, stand rigid and salute. This sudden salutation happened several times and caused much amusement, for in this

crowded sidewalk it was not unusual for a lady to have her hat knocked over, a man's hat knocked off, and in one case a private bowled a man right over into the snow. The soldier nevertheless retained an immobile expression and the general pretended not to have observed the incident, while one or two officers who were passing assumed an expression of "I'm bored stiff," the pedestrians at the same time roaring with laughter at the ridiculous discipline which is enforced on the principal and most crowded sidewalk of the town. Almost every

man is in some kind of uniform; also the school boys. Even the iswershics (cabmen) have to don a regulation dress and headgear.

In my observations I quickly discovered that the Russian moneyed class exists merely to eat, drink and sleep. They rise at eleven and partake of coffee and roll; breakfast (lunch) at one o'clock, a meal they generally get through in two hours; tea at four, where, incidentally, nearly two hours are passed in gossip; dinner at six-thirty, which occupies two hours should they be visiting the theater afterward, otherwise this meal will last any time over five hours, after which they adjourn to a cafe chantant to continue their dissipation until they retire to bed, usually at four a. m.

I must mention one instance of this extraordinary custom of living at the table. On a certain day, while lunching in the hotel restaurant, my attention was attracted by the jocund clash of glasses, and I observed sitting around a table three obvious Russians with their wives. I left the restaurant a little after two o'clock and returned to take tea at five. I noticed the party still sitting at the table and eating what appeared to be cutlets. I returned to the restaurant at seven-thirty for my dinner, and sure enough the party was still busy at the table. My curiosity being aroused, I appealed to the waiter to tell me whether the party had once left the table; he replied in the negative. They had commenced in the morning at eleven with coffee and rolls and gone through to dinner. On the following morning I interrogated the waiter as to the time the party did eventually bid adieu to the restaurant and was informed that they had been the first to take coffee and the last to leave at two in the morning. The strangest thing of all is in the fact that they were all comparatively sober. It was afterward quite a common occurrence for me to have my lunch and dinner and notice a party sit through both my meals without having moved. Between the courses

a Russian, providing he has the necessary time, will sit and smoke for half an hour, chatting and enjoying his surroundings, especially should there be women present.

A general laziness is noticeable among the people, which is no doubt to be attributed to their strange manner of living. The majority are pale and one seldom encounters a really healthy-looking Russian. This applies especially to women. They are lavish with their money and spend it in a way that would amaze some of your New York "fingers of gold."

In the restaurants one has to be particularly wary that their bills are not fictitious concoctions; a more thieving set of waiters cannot exist. In the restaurants and cafe chantants where the uneducated rich class congregate, abominable scenes are to be witnessed on certain joy days, irresponsible men and women drinking champagne as only Russians do—swilling it—who deny with inexplicable effrontery the commonest rules of etiquette and later the authority of the moral sense. In all its multifarious manifestations Paris has nothing like this, for in Paris there is a certain type of women from whom one expects such behavior and where one has restaurants which are known to those seeking amusement; but here it is a community of pseudo-respectable people who indulge in a manner which almost takes one back to Rome.

The laundries are horrible; the clothes are washed in dirty underground cellars, where the commonest laws of sanitation are neglected. I refer to the laundries outside the radius of a mile from the royal palace; those inside are French and are satisfactory. In a later visit to Russia I lived in a boarding house, and during a sojourn of five months lost two shirts, two sets of pajamas and over a dozen handkerchiefs. The girls of the peasant class who deliver the washing are illiterate, and to protest against a loss is a waste of breath.

As regards sport in St. Petersburg, the British colony here is diligently impressing several games into the town and the Russians are now able to play with a certain amount of proficiency football, hockey, cricket and tennis. They are very enthusiastic and no doubt will soon take their place with the nations of the world in athletics. I find the average Russian, after three years' experience of them, is light-hearted and despondent alternatively; philosophical, argumentative, pragmatical in his beliefs, and decidedly intellectual. He is usually susceptible to the charm of women, is an ardent lover but a failure as a husband. They lavish money about in a manner which is incomprehensible. In financial and business matters (particularly talking machines) he is mercenary careless and a slow-paying creditor; friendly, confidential, sympathizing and a sincere friend when once obtained.

(To be continued next month.)

STRONG ARGUMENTS IN FAVOR OF FIXED PRICE

Presented to Representative Oldfield in a Letter Sent Him by the General Manager of the Victor Talking Machine Co.—An Able Analysis That Will Interest Trade.

The effects of price cutting and the objections to it were presented in a most interesting and detailed way in the letter recently sent to Representative Wm. A. Oldfield by the Victor Talking Machine Co., which conveys a fund of information that cannot help to be enlightening to the father of the Oldfield bill. It handles this entire subject in a broad and argumentative way and it is not too much to say that such a letter cannot help but be effective in preventing this legislation from going through at this session. Louis F. Geissler, who has written this communication as general manager of the Victor Talking Machine Co., is to be complimented on the handling of the subject which is most comprehensive and convincing. The letter is as follows:

Dear Sir—Engaged as you are in legislating for the public good, we can only believe that you will welcome vital information, from whatever source. We wish to set certain facts before you in regard to fixed-price commodities. The reasonableness of that desire cannot, surely, appeal to you in vain.

We do not believe you seriously wish to discourage invention, but we do believe that such will be the effect of your proposed bill.

It has been said that the Oldfield bill will not deprive the inventor of any of his rights. May we respectfully submit that the deduction is erroneous?

From what does the inventor's reward come?

From manufacturing and selling his invention at a profit, and—unless there is a profit, neither the inventor nor anyone else will undertake these difficult and hazardous operations. The invention becomes valueless to the inventor, and the public is deprived of its use. Experience has shown that the inventor is seldom a business man. Therefore, he must usually depend on someone else to manufacture and market the product of his brains. This, sir, cannot be done unless there is a profit to those who make and distribute that product.

That statement is not a thesis, but a fact, as surely as human experience can establish fact. Economic conditions are as they are, and must be so reckoned with—the best intentions or the best motives do not suffice to change them.

To sum up: The Government itself does not reward the inventor. To make the handling of that inventor's wares profitless to the dealer is to deny the inventor an opportunity to secure his OWN reward. Such, broadly, is the case from the inventor's point of view.

Now, let us suppose that we, as inventor or manufacturer, are unable to maintain the price at which our goods shall be sold. We cannot possibly do so under contractual relations, short of interminable lawsuits—but it can be done under adjudicated patent laws.

What, then, will happen? Some strong retail establishment will at once cut the price, and by so doing divert to its own coffers an unusual quantity of business, until someone else cuts the price still more. The end is obvious; meanwhile, what has happened to the small dealer, in city and country alike? One more commodity has been gobbled up by the retail corporations. The retail corporations have thrived on it, but what of the small dealer? We have robbed him and enriched the retail corporation. Surely, that is not the way to build up national prosperity.

You may reply that we shall have sold as much of our

product as ever, and at our own first price. Most probably we shall, but the profits which would have helped to make a living for a hundred dealers will have gone to swell the bank accounts of two or three rich retail corporations. That, we believe, would be a questionable achievement, if we are to consider general welfare.

So much for the case of the small dealer—now the public. Is the public benefited by price-cutting? If our own experience at buying at retail is any guide, there is no real benefit. A big retail corporation cuts the price on, let us say, Victor Talking Machines. It is an undeniable cut; the people, knowing the usual price, know that it is undeniably a cut, and so flock to buy. That house has made a reputation by selling standard goods at less than standard prices. On the strength of that reputation it can gouge the public for years on other commodities, the price and quality of which the public does not know. How much real good, or rather how little good the public derives from the mail-order house of the present day is cleverly and convincingly set forth in the clipping hereto attached. It shows, Mr. Oldfield, not a supposititious condition, but one which exists. Where is the public's gain?

It must be remembered that a large proportion of the public you seek to serve is made up of those whose living depends upon profitable retail trade. Consider the number of small storekeepers in this country, the thousands of clerks, the thousands of dependent wives and children. Will their gain or their loss be the greater if their most profitable merchandise is monopolized by the powerful cut-price institutions?

Another point of view: When indiscriminate price-cutting is the general method of doing business, what results? A dealer, in self-preservation, must, instead of being an honest man, become something of a "shyster." He must give as little as he can for as much as he can get. Because Mr. Oldfield is Mr. Oldfield, he can afford to pay a little more for the same thing than can someone else, and so on down the social register. Is that a foundation on which honest, widespread prosperity can be built?

For a moment, in opposition to the above, will you allow us to submit a present-day condition? You have referred to the case of a razor, which retails at \$5, the price being rigidly maintained. Has that razor, or the maintenance of its price, suppressed competition or restrained trade? It has not; for a safety razor has recently been offered to the public at 25 cents. Moreover, a most significant fact is that the manufacturer of the cheap razor is just as anxious to maintain the 25-cent price as is the manufacturer of the higher-priced article. He gives straightforward, logical reasons for it, which are as follows: "We are frank to say that our interest in 'price regulation' is due simply to the fact that under the system of 'fixed prices' we know where we stand; we know that we shall not wake up to-morrow and find half our outlet stopped, because some mail-order house has advertised this razor, for instance, at 15 cents for the sake of attracting trade at exorbitant profit on some unknown articles costing dollars. As a matter of fact, under uncertain 'open-price' conditions we should never have attempted to market this razor at 25 cents; a materially higher price would have been necessary to cover the extra hazard of doing business that way."

To resume: If, under the circumstances, there are persons who continue to pay \$5 for a safety razor it would seem that they do so because the \$5 razor is, to them, worth what it costs. Otherwise, why do they buy it? They are certainly not obliged to pay \$5 for a razor because one manufacturer insists that that price be paid for his product.

The same thing applies to other articles—even talking machines.

Eldridge R. Johnson, president of this company, recently published a booklet, entitled "Price-Cutting—A Restraint of Trade," and a saner, more dispassionate treatise was never written by an interested party. A quotation: "Price-cutting is the favorite weapon used by people who conspire to monopolize trade that belongs to others."

That is precisely the condition and precisely the modus operandi of those who have money enough to stand the strain, to the utter annihilation of those who have not. Again, and we believe you will find it wholly true, and wholly dispassionate: "Wholesome competition stimulates trade and benefits both consumer and producer, but wholesome competition means more than the simple matter of marking down a price." "It takes brains to lower costs by fair and humane methods."

That "fair and humane methods" is just the point. There is a living wage for our workmen, a margin of profit for our dealers to-day. What will happen if we must meet a market based on the condition which has long been described as "dog eat dog"? Eventually, one of two things: We must cheapen production—humanely or otherwise; or, failing that, go out of business, when thousands will lose their present livelihood.

These statements are offered, sir, in all earnestness, and in all respect, for your consideration. We know, and you, too, no doubt know, that France, the land of conspicuous thrift, with, at this moment, or until very recently, more savings per capita than any other, trades preferably where the sign "Fixed Price" (*Prix fixe*) is displayed on the window.

In conclusion: In an article which was published in the New York Globe of September 25 or 26, you were quoted as saying, "The manufacturers are fighting the bill." May we respectfully call your attention to the resolution which was passed by the National Federation of Retailers in St. Louis?

We have ventured a personal letter to you, because we believe you will welcome actual, dispassionate information on the subject under consideration. Continuing in that belief and the hope of a personal expression of your opinion on the matters contained herein, we are,

Very respectfully yours,

VICTOR TALKING MACHINE CO.,
Louis F. Geissler, General Manager.

A CLEVER IDEA.

Talking Indian and Electric Cigar Lighter Invented by H. B. McNulty, of Cleveland.

The illustration is a novelty in the talking machine line, the invention of H. B. McNulty, of Cleveland, since its inception, and until recently, with the United States Phonograph Co. The photograph illustrates a combination phonograph

How Mr. McNulty's Invention Looks.

and cigar-lighter. When a customer presses the button of the lighter shown on the right the phonograph contained in the reclining figure of the Indian automatically starts. The words spoken may be any thing desired; a phrase enunciating the name of some cigar dealer wishes to introduce on the market or the merits of some special brand. The device is intended to be used in any kind of model or design of the human form, and besides talking, moves the lower jaw as if the image was actually speaking the words. When the cylinder has completed the message of whatever character it may be, the reproducer automatically reverts to the initial point ready for a repetition. It is an ingenious novelty in phonographic and mechanical invention.

ANOTHER TELEPHONOGRAPH CO.

The New York Telephonograph Corporation, 115 Broadway, New York, was incorporated early this month, with a capital of \$100,000. This concern will manufacture dictating, talking machines and telephonographs, and the following names are given as the incorporators: Edward L. Langley, William M. Moore and Vere B. Reed, all of New York City.

THE TALKING MACHINE AS AN EDUCATIONAL FACTOR.

Use of the Columbia in Gymnastic Drill in Hartford School, and to Illustrate Most Effectively a Talk on Opera and Its History in Boston School, Tells of Its Value to Teachers Who Appreciate Its Aid—Possibilities in This Field Are Beyond Measure.

The accompanying illustrations portray two of the many ways in which talking machines are utilized by teachers in the public schools. These photographs, taken from actual scenes in the classroom furnish evidence of the interest manifested

board the following arrangement of the study of the opera, and with the aid of the Columbia machine has apparently secured the attention of her pupils. "Wagner's opera, 'Lohengrin'; the Story of the Opera, Characters, Plot, Special Se-

Daily Drills to the Tune of Talking Machine Music.

by the pupils in the performance of the machines.

One of the photographs shows a Columbia "Favorite" in use in a Hartford school gymnastic drill, while the other was taken in a Boston schoolroom during a study of the operas. The talking machine has been found to be very successful when used in connection with marching, drills or exercises where music is an incentive to the pupils, and the Columbia machine in this Hartford school is praised by the teacher as being of great assistance to her in her day's work, which includes singing and daily drills.

The Columbia machine being used in the Boston school to increase the interest of the pupils in

lection (now being played on the machine), Life of Composer, Language, Composition and Production." These pictures are but two of many being received by the Columbia Graphophone Co., and shows the educational possibilities of the talking machine.

IMPORTANCE OF KINETOPHONE.

Evening Post Comments Editorially Upon Edison's Accomplishment in Perfecting New Form of Talking Pictures.

Commenting editorially on Mr. Edison's production of the kinetophone, the new talking picture device which will soon be introduced to the public, the Evening Post says:

"If Mr. Edison has succeeded in synchronizing the moving picture and talking machine he has accomplished what has long baffled experimenters, both at home and abroad. Four years ago a representative of Pathé Frères spoke hopefully of the time when a whole 'canned play' might be

produced by such a combination, the pictures tinted with the hues of life, the talking machine enforcing action with speech. There was nothing impossible in this, he said, but added that the mechanical difficulties had proved greater than had been supposed. If Edison has at last surmounted these difficulties, he has done more than realize the dreams of the film-makers by presenting to the world one of those ingenious contrivances Madame de Beaumont did not explain in 'La Belle et la Bête'? It will be remembered that when Beauty was becoming weary of the wonders in the Palace of the Beast, she found that by merely opening a window she could view the performances at the Comédie Française, or, by opening another window, enjoy the music at the Opera. Thus by some generations did the weaver of fairy tales anticipate the man of science. Thomas Young had devised a means of recording sound in 1807, and

Studying Opera with the Aid of the Talking Machine.

the study of the opera, has done more to keep the minds of the children on this subject than all their books or discussions had accomplished before the installation of the machine. With the talking machine playing one of the popular selections from the opera being studied, the teacher explains the various characteristics of the music, and the study of the opera becomes a pleasure to the pupils instead of a wearisome addition to their day's work. The teacher's talks, combined with the playing of the records and short readings of the plot, characters, etc., of the opera form a co-operative force that is achieving remarkable results in the Boston schools, where the talking machine is as familiar an object in the classroom as the desk or inkwell.

The record being played in this particular instance is Fremstad's "Elsa's Dreams," from "Lohengrin," the opera under discussion at the time this picture was taken. The teacher had marked on the

Leon Scott invented a 'phonautograph' in 1857. Mr. Edison's first talking machine patents were not taken out until 1876. Like other experts in mechanics, he profits by the labors of his predecessors, but so unusual is his talent for improving on the work of others, and so numerous are the devices encountered which bear his name, that there is danger of finding some day a sketch of the man under the head, 'The Inventor of Electricity.'!"

DISCUSSES VICTOR PUBLICITY.

The Six Point League of New York had as guest at its monthly luncheon at the Victoria Hotel, January 24, H. C. Brown, advertising manager of the Victor Talking Machine Co.

Mr. Brown related some of his experiences as a seller of advertising before he was connected with the Victor Talking Machine Co. and expressed his sympathy for the sellers of advertising who were kept waiting an unreasonable length of time in the offices of advertisers and agents, before they could present their proposition; and many times this privilege was not granted them.

Since he became a buyer of advertising Mr. Brown stated that he had never knowingly kept a seller of advertising waiting to see him more than a minute or two. By following this method he had secured a great deal of information that was of value to his concern.

Within the past nine months the Victor Talking Machine Co. has commenced to advertise in newspapers, and Mr. Brown predicts that at the end of five years his firm will be one of the largest users of newspaper space.

He called attention to the fact that newspaper publishers all over the country were cleaning up their columns and refusing to accept undesirable advertising, although a number of publishers had not yet come to this stage. He said there was enough new business ready to go into the newspapers that would more than make up for the undesirable element, as soon as it stopped appearing.

He told representatives the kind of information he wanted from them was facts about the territory in which their papers were published; what the payrolls of the manufacturers were; how often the employes of these manufacturers were paid; and full information about business conditions.

Mr. Brown did not want to hear one representative knock another paper but simply present his proposition in the best manner possible and let other representatives do likewise.

He mentioned the fact that it was sometimes very difficult to get reliable information from dealers in various cities regarding the newspaper or newspapers that were best suited to carry the advertisements of the Victor talking machine.

He cited Buffalo as an example. He said the advertising of the Victor talking machine had been appearing in the Buffalo News and Express, and that the Victor dealer had written in stating that they were both Republican papers, and he would recommend using the Times, which was published by Norman Mack, chairman of the National Democratic Committee, and was the leading Democratic paper of the city and that the Democrats formed a very large proportion of the population in Buffalo.

Such information as this was very valuable and always helpful to advertisers.

Mr. Brown laid emphasis on how necessary it was to get reliable information from the representatives concerning their own paper, and when this information was all in, the claims of each could be analyzed intelligently and the advertising placed where it would do the most good.

Mr. Brown stated that newspaper representatives could well afford to spend considerable time developing new advertisers, and he mentioned concerns which could advertise to great advantage. He commented on how foolish it was for manufacturers to build up a business that they could not control, when this control could easily be maintained by the proper kind of advertising.

In the course of Mr. Brown's remarks he mentioned the fact that during 1912 the Victor Talking Machine Co. had spent a great deal more than a million dollars in advertising.—Printer's Ink.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York for the Past Two Months.

(Special to The Talking Machine World.)

Washington, D. C., Feb. 11, 1913.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past two months from the port of New York:

December 12.

Algoa Bay, 11 pkgs., \$353; Buenos Aires, 296 pkgs., \$12,759; Calcutta, 5 pkgs., \$160; Caracas, 17 pkgs., \$670; Guayaquil, 3 pkgs., \$129; Havana, 23 pkgs., \$1,832; Liverpool, 85 pkgs., \$5,375; London, 197 pkgs., \$11,149; 258 pkgs., \$5,259; Manos, 3 pkgs., \$414; Milan, 5 pkgs., \$386; Montevideo, 6 pkgs., \$505.

December 19.

Baranquilla, 7 pkgs., \$313; Berlin, 31 pkgs., \$535; Callao, 4 pkgs., \$330; 9 pkgs., \$263; 8 pkgs., \$395; Colon, 16 pkgs., \$416; Havana, 5 pkgs., \$152; 7 pkgs., \$330; Iquique, 45 pkgs., \$2,270; Liverpool, 4 pkgs., \$1,052; London, 123 pkgs., \$4,590; 26 pkgs., \$491; Port Antonio, 1 pkg., \$100; St. Johns, 17 pkgs., \$500; Sydney, 61 pkgs., \$6,250; Tampico, 21 pkgs., \$924; Vera Cruz, 29 pkgs., \$1,940; Vienna, 4 pkgs., \$400; Yokohama, 11 pkgs., \$341.

December 26.

Batavia, 8 pkgs., \$244; Berlin, 144 pkgs., \$4,900; Callao, 4 pkgs., \$608; Guayaquil, 3 pkgs., \$257; 22 pkgs., \$2,847; 5 pkgs., \$245; Hamburg, 1 pkg., \$151; Havre, 7 pkgs., \$125; La Paz, 1 pkg., \$101; Limon, 11 pkgs., \$292; London, 135 pkgs., \$4,656;

3 pkgs., \$478; Manos, 20 pkgs., \$1,416; Montevideo, 12 pkgs., \$160; Riga, 3 pkgs., \$705; Valparaiso, 8 pkgs., \$991.

January 3.

Boliver, 4 pkgs., \$221; Colon, 9 pkgs., \$123; Guayaquil, 32 pkgs., \$2,081; 2 pkgs., \$117; Havana, 41 pkgs., \$1,603; Hong Kong, 20 pkgs., \$553; Montevideo, 8 pkgs., \$275; Port Antonio, 7 pkgs., \$587; Rio de Janeiro, 77 pkgs., \$4,574; 33 pkgs., \$1,990; Shanghai, 5 pkgs., \$120; Stockholm, 8 pkgs., \$450; Trinidad, 9 pkgs., \$370; Valparaiso, 7 pkgs., \$434; Vera Cruz, 102 pkgs., \$3,243.

January 10.

Belize, 7 pkgs., \$176; Berlin, 1 pkg., \$100; Buenos Aires, 118 pkgs., \$5,408; Havana, 27 pkgs., \$1,540; 1 pkg., \$1,350; Havre, 3 pkgs., \$130; Kingston, 5 pkgs., \$108; Liverpool, 5 pkgs., \$1,040; Macaris, 19 pkgs., \$1,382; Para, 11 pkgs., \$1,067; Southampton, 8 pkgs., \$1,233; Sydney, 5 pkgs., \$417.

January 17.

Arica, 2 pkgs., \$145; Buenos Ayres, 190 pkgs., \$12,715; Colon, 2 pkgs., \$129; 9 pkgs., \$694; Havana, 2 pkgs., \$120; 12 pkgs., \$904; Havre, 3 pkgs., \$137; Iquique, 35 pkgs., \$1,285; 9 pkgs., \$408; Leghorn, 2 pkgs., \$402; London, 159 pkgs., \$4,911; 60 pkgs., \$3,081; 6 pkgs., \$148; Manila, 63 pkgs., \$2,064; Maracaibo, 7 pkgs., \$212; Para, 3 pkgs., \$217; Port Alegre, 9 pkgs., \$930; Riga, 2 pkgs., \$457; Singapore, 24 pkgs., \$767; St. Petersburg, 25 pkgs., \$435; Taltal, 23 pkgs., \$1,634; Vera Cruz, 53 pkgs., \$1,819; 33 pkgs., \$1,168.

January 24.

Berlin, 19 pkgs., \$510; Boliver, 4 pkgs., \$263; Havana, 3 pkgs., \$454; London, 28 pkgs., \$2,675; 240 pkgs., \$5,379; Montevideo, 6 pkgs., \$455; 4 pkgs., \$263; Puerto Barrios, 5 pkgs., \$723; Puerto

Cabello, 19 pkgs., \$213; Puerto Madryn, 89 pkgs., \$2,701; Smyrna, 3 pkgs., \$135; Valparaiso, 9 pkgs., \$298; 6 pkgs., \$162.

January 31.

Barbadoes, 2 pkgs., \$122; Callao, 4 pkgs., \$212; Caracao, 5 pkgs., \$115; Colon, 5 pkgs., \$146; 2 pkgs., \$350; Corinto, 3 pkgs., \$201; Guayaquil, 3 pkgs., \$114; Limon, 8 pkgs., \$255; 3 pkgs., \$173; London, 138 pkgs., \$7,938; 6 pkgs., \$1,410; Manaus, 3 pkgs., \$135; Manila, 2 pkgs., \$1,365; Maracaibo 4 pkgs., \$204; Montevideo, 6 pkgs., \$168; Pernambuco, 8 pkgs., \$1,192; Vera Cruz, 1 pkg., \$110.

SOME CHANGES IN LOUISVILLE.

(Special to The Talking Machine World.)

Louisville, Ky., Feb. 8, 1913.

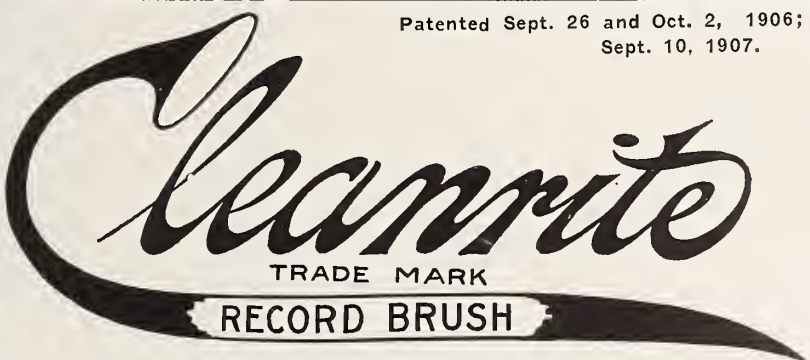

E. B. Watchall, who has been the local manager of the Columbia Graphophone Co for the past year, and connected with the company since 1907, resigned February 1, to take the position of manager for the Rudolph Wurlitzer Co. in Louisville. He has been succeeded by D. S. Ramsdell, former manager of the St. Louis store.

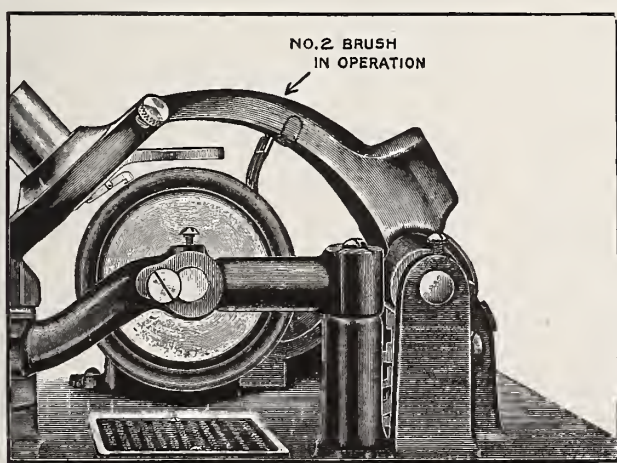

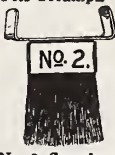

The Wurlitzer Co. expects to open up an elegant new place, possibly on Fourth avenue, and they will be in their new quarters within thirty days.

Leo J. Reid has joined the sales force of the local store of the Wurlitzer Co.

N. E. Jones, former manager of the Dictaphone department of the Columbia Co., has gone with the Baldwin Piano Co., as piano salesman.

The wise merchant will not neglect the other mediums—his local papers, street cars, outdoor positions, etc., etc., but these should supplement the window display.

MANUFACTURED BY **BLACKMAN TALKING MACHINE CO.** 97 CHAMBERS STREET, NEW YORK
J. NEWCOMB BLACKMAN President "The White Blackman"

MAKE IMPORTANT ANNOUNCEMENT.

The Condon Autostop Co. Announces a Number of New Products That Will Interest the Trade—Merits of "Noset," a New Autostart-stop, Set Forth by W. A. Condon, Who Leaves Next Week on Extended Trip of United States—Other Condon Specialties.

In its announcement elsewhere in this issue the Condon Autostop Co., 109 Broad street, N. Y., announces to the talking machine trade the perfection of several new devices—talking machine accessories—which are now ready for delivery to the trade. These new productions consist of "Noset," the Autostartstop, recently perfected automatic start and stop device; a Fibre Needle Cutter, which the company guarantees to give absolute satisfaction; and "Dolcetone" an article to be placed inside of the sound box in order to produce a sweeter and more mellow note.

The most important of this new product is "Noset," which retails at \$4.50 in nickel and \$5.00 in gold plate. This device represents a year's experimenting and testing, and the company makes the claim that "the last word is said on the subject of automatic stops when the singular and interesting one of 'Noset' is spoken." In a recent chat with W. A. Condon, treasurer of the company, he gave an interesting description of the construction and use of the start and stop device as follows:

"Noset," the Autostartstop, automatically starts the machine by the movement of the tone arm to the right and automatically stops the machine without any setting adjustment or regulation. It is most easily attached and does not alter the machine in any way. "Noset" is a permanent attachment on the tone arm and is secured to it so that the box is placed in close proximity to the turn table by means of a thumb screw. The box is very light in weight and is under three inches in length by one inch in height and width, and travels with the movement of the tone arm above the top of the cabinet under the tone arm. This box has in its manufacture no batteries, no springs, no gears, and does not contain a single screw."

"It will play on any record that has a spiral; Victor, Columbia, Vitaphone, Edison Disc, and Pathe Freres. In this latter type of machine the device is operated from the inside to the outside of the record by simply reversing its position on the machine. "Noset" is operated on an ingenious principle. It operates with entire independence to any pitch, or vibration of the record, as long as the tone arm continues to advance in one given direction, either from right to left, or from left to right. In advancing to the left, the brake lever will be thrown in position to stop the turn table of the machine and produce the stop at the end of the spiral, the proper position being determined by its rare mechanical action of finding the last line without adjustment; the movement of the tone arm to the right, as stated, produces a release of the brake, thereby starting the record.

"We back our new product with the strongest possible guarantee that anyone could advance, namely, we agree to refund the money if it does not do everything we claim for it, and we do not in any way limit this guarantee. The article has no wearing parts in its construction.

"We are planning to make shipment all over the country, simultaneously, priority being considered of course. While first deliveries are now being made, it will be three weeks before we are able to cope with the order situation.

"In addition we are marketing a new style Fibre Needle Cutter which retails for \$1. This cutter gives a perfectly clean cut every time and we guarantee that it will not 'run down at the heel nor stub at the toe.' The blades can be easily removed and resharpened and it is most easy to operate, being built on a most practical principle.

"The cleverness of the Condon-Autostop, operating on the involute principle, in view of its feature of raising the needle off the record in making the stop, gives promise of greatly increased manufacture, in view of the retail price of \$1.50 and \$2. The Fibre Needle Cutter design will also be used in connection with the present form of the Con-

don-Autostop at \$2.50 and \$3, the advance of \$1 to be represented by the addition of the Fibre Needle Cutter—a "Two-in-One Autostop"!

"Our other new product—'Dolcetone'—is an article to be placed inside of the sound box of the machine, and the construction of it on the screen principle, with many fine layers of a most suitable material, produces remarkable improvement. Its retail price of 25 cents guarantees a universal sale for it.

"In conclusion, I may say that, in covering every important jobbing point in the United States (with the exception of the Pacific Coast), which has been accomplished in the last year and a half, the trade has been found unanimous in contending that an automatic stop is the most valuable accessory in the talking-machine trade. It is, however, essentially a convenience, is sold and used as a convenience and the large sale for an article of this kind can only be attained where this important fact is considered. In the purchase of an automatic stop the user of the machine demands an article that can be easily attached and that requires no alteration of the machine, and once permanently secured requires no further thought, fussing or attention. It must start the record every time and must automatically stop every record all the time without any setting, or involving any extra effort in its use. It is necessary that it should be a convenience in the prime meaning of the word. It must be a secondary article in the original use of the machine; that is to say, the regular use of the tapering arm, back and forth, will produce the desired result; indeed, it must be automatic in every meaning of the word."

Mr. Condon will leave next week for a four months' trip, during which he plans to visit every important jobbing point in the United States, including those on the Pacific Coast.

CAVALIERI IN CONCERT.

The Famous Operatic Star Revisits America and Her Appearance Should Augment Sales of Her Records Throughout the Country.

Columbia dealers throughout the United States, Canada and Mexico will have an exceptional opportunity to make profitable record sales when Lina Cavalieri, the famous operatic star, makes an extended tour of the country, appearing on the concert stage in company with a tenor from the Paris Opera House. Cavalieri's records have been remarkably successful since their first introduction by the Columbia Co., but this tour of the prima donna will help wonderfully in promoting larger sales of her records.

The famous soprano arrived in America Tuesday, after an absence of three years, and completed arrangements for her tour. She appeared only four times on the concert stage during her opera engagement, but in a letter to her friends in America states that she has always been attracted by the friendship that exists between concert-goers and the performers. Columbia dealers can take advantage of Cavalieri's concert tour to increase Columbia record sales by doing some timely advertising, which will undoubtedly produce considerable profit.

AN ACTIVE JANUARY TRADE

Reported by J. Newcomb Blackman—Reasons
Why—Changes in "Cleanrite" Brushes.

"We closed the biggest January we ever had," states J. Newcomb Blackman, president of the Blackman Talking Machine Co., 97 Chambers street, New York. "Our business showed a substantial gain over last year's total sales for the first month of the year. Part of this gain must be attributed to the fact that we were obliged to hold over a number of our December orders owing to the shortage of goods. It was very gratifying indeed to note how very few cancellations we have had, as practically every one of our orders that we carried over from December still held good with our customers.

"Even with our big January business, however, we are still behind with our orders on Victrolas Nos. XI and XVI, although we have been able to protect our regular dealers from losing actual sales of these types.

"We are at present making a number of changes in our 'Cleanrite' brushes. Owing to the introduction of the new Edison machines which are equipped with different speaker arms than heretofore, changes will have to be made in our line of 'Cleanrite' brushes in accordance with the new features of the Edison machines. We are working on these changes at the present time, and in the very near future will have our new models ready. These will also be made to eventually fit all Edison phonographs, as the Edison Co. has discontinued supplying brushes as a part of the equipment of its machines. We will send full information regarding our new brushes to the trade as soon as possible."

THOS. A. EDISON'S BIRTHDAY.

The sixty-sixth anniversary of the birth of Thomas A. Edison occurred on Tuesday, February 11, without any form of celebration at the home of Mr. Edison or at the factory. Mr. Edison explained the matter in this wise: "I work twenty hours every week day, and it does just as much good for me now as it did forty years ago. Four hours' sleep is enough. I try not to work on Sunday, but I do not let even a birthday anniversary interfere with my work on week days."

ISSUE LIST OF MASONIC RECORDS.

In a recent letter the Victor Talking Machine Co. called the attention of their representatives to the Masonic records featured in the March advance list of Victor records. H. C. Brown, advertising manager of the Victor Co., suggests to Victor dealers that they take advantage of this opportunity to promote the sale of these records among their customers who are Masons, in addition to placing them in the rooms of the Masonic lodges. A showcard and special sheet are also ready.

SUBSTANTIAL INCREASE OVER LAST YEAR'S BUSINESS

Is Report from George W. Lyle, General Manager of Columbia Graphophone Co.—Increase for the Opening Six Weeks of This Year Running Forty Per Cent. Over Same Period of Last Year—Prestige Gained Through Production of New Styles, Including Columbia Grand and Records of World-Famous Artists, Such as Ysaye and Bonci.

George W. Lyle, general manager of the Columbia Graphophone Co., is very well pleased with the Columbia business closed the first month of the new year, and in a recent chat with *The World*, discussed the general condition of the company's business, the outlook for the future, and the plans for the coming year. Mr. Lyle expects to leave the 24th of the month for an extended business trip through different sections of the country, and will probably be away some time.

"Our January business was very gratifying," stated Mr. Lyle, "as it showed a very substantial increase over the total business of the January previous. This month's business has started in at a rate, which, if continued in similar proportions, will show an increase over last February of fully forty per cent, which is a figure well calculated to please us considerably. This month to

George W. Lyle.

date is also showing a very large increase over the corresponding number of days in January of this year. These figures form an interesting study, when it is considered that our orders in hand and business in sight justify the belief that business is sure to be good throughout the spring months, and looking still further ahead, we have every reason to believe that 1913 will prove a more prosperous year than 1912, which was our banner year.

"The announcement of our master triumph, our Columbia "Grand," has created a great deal of favorable comment, not only because of the beauty and utility of the instrument itself, but because of the enterprise and business judgment of the Columbia Graphophone Co. in presenting an in-

strument of such artistic merit to the talking machine trade. The first lot of Columbia "Grands" was very quickly disposed of, and the demand continues to exceed all our expectations. It is certainly pleasing to observe that the "Grand" is selling as rapidly as we can turn them out in our factory. The concensus of opinion, not only in the trade, but in musical circles, is that this particular instrument, the Columbia "Grand," has done more than any other type introduced in years to put the industry as a whole on a higher plane, commercially, musically and artistically than it has ever occupied before. Our company has every reason to feel not only satisfied with, but proud of, the cordial and hearty reception accorded our new instrument. In discussing the instrument's future and the possible results to be accomplished by the introduction of our "Grand," it is well to bear in mind that this artistic instrument, retailing at \$500, will undoubtedly prove to be a powerful factor in a Columbia dealer's development of his general high-class trade. The mere fact that such an instrument as our "Grand" has been introduced to the trade and the public, is sufficient to attract the attention of prospective purchasers to the high class talking machine in general, and this idea in the minds of the public will certainly prove very valuable to the dealer when presenting a "Regent" or "De Luxe" type of machine to a customer. Our "Grand," therefore, will not only result in direct benefits to the industry, but will help the trade in the development of high-grade business.

"In addition to the presentation of our Columbia "Grand," we recently introduced to the trade as a regular product, our new reproducer, No. 6, one of the most important inventions we ever perfected. This new reproducer was a marked success with the public and trade from the first moment it was introduced, and our dealers unite in proclaiming its many merits. Its compactness, accurate adjustment and firm steady tone were quickly recognized and indorsed. It is as sensitive as a tuning fork, and as true to tone as a mechanical contrivance can hope to be. The reproducer has been on the market just about a month, and in addition to those sold with machines, very large quantities have been sold separately and apart from the machine itself to talking machine owners who wanted to substitute the No. 6 for other types of reproducers. In connection with the introduction of our new reproducer, I may say that we have several improvements in course of construction which are equally as important as this one. The improvements that we are working on now are not quite ready for introduction to the trade, but detailed information will be forthcoming in the very near future.

"The Columbia Graphophone Co. will continue

its well defined policy of a liberal expenditure for publicity, and, as heretofore, this publicity will be directed toward creating for our dealers a demand for Columbia products, the aim of our company being to foster in every legitimate way the interests of the dealer, and to educate the public to the fact that the best dealers everywhere sell and recommend Columbia products. We are planning to spend much larger sums for advertising during the year 1913 than in any previous year, and we are sure that our dealers throughout the country will reap lasting benefits from this campaign of publicity.

"Another way by which our company hopes to promote the interests of our dealers, is in the acquisition of new artists of recognized musical merit. An instance of this policy may be found in the exclusive contract we have just closed with Ysaye, the world's greatest living violinist. Ysaye's tour of America will accentuate the interests which American music lovers have always felt in his

The Columbia Grand.

wonderful art, and the Ysaye records will be in great demand all over the country. These records are absolutely perfect reproductions of Ysaye's art, being approved by the "master" himself; and as soon as they will be placed on sale, the demand for them will undoubtedly be tremendous. Another great artist now under exclusive contract with our company is the famous tenor, Bonci. Absolutely new records by this prominent artist, perfectly recording his marvelous voice, have been made in our laboratory. These two world-famed artists, Ysaye and Bonci, are but two of the many celebrated artists under contract, and they emphasize the strides we expect to make in the next eleven months, and every step in our continuous march of advancement means another valuable Columbia feature, which will benefit our dealers all over the world."

Schafford Record Albums

Furnished in Brown Silk Cloth or Viennese Imitation Leather; Gold-Plated Rings.

Made of quality materials by skilled workmen. Because of the volume of our Album business our prices are cut to 52½c. each for the 10-inch Album (17 envelopes) and to 75c. for the 12-inch album; also made with 17 envelopes.

TRADE UNUSUALLY ACTIVE IN ST. LOUIS.

The Silverstone Co. in Its New Store—I. W. Reid Now Columbia Manager—Thiebes Co.'s Victor Stock Attracts Attention—E. C. Rauth Chats of His Eastern Trip—Valuable Letter from St. Louis University Praising the Favorite Grafonola—Exhibitors at the Household Show—Densmore Piano Co. Takes Victor Agency—Other Happenings.

(Special to The Talking Machine World.)

St. Louis, Mo., Feb. 8, 1913.

Local talking machine dealers have closed their books on the largest January business they have ever done, and all are optimistic for the year. "It is only natural that we should do a larger business than last year," said one jobber, "for ours is a growing business, growing at a rate that taxes the capacity of the factories that supply us with merchandise. We must go ahead each year or we are losing doubly. To simply equal last year's record would be a loss."

But judging by the humor and the freedom with which they discuss prospects, shipments and prospects, none of the local jobbers are in the danger zone of loss. Scarcity of some models of Victor machines, lack of records for the Edison discs, and the failure of the Columbia grands to arrive are the embarrassing points. January orders were ample proof that the Christmas trade left stocks depleted to the famine point. Splendid stock of smaller machines of all makes have made the jobbers able to satisfy customers who were inclined to grumble at need of special machines.

The Silverstone Music Co. is in its new store at 1124 Olive street, with all departments of business, pianos added to the old store stock, but is not entirely settled, and President Mark Silverstone asks time before he attempts to tell of his new advantages. That he has equipped himself for the better handling of executive affairs and his salesforce for handling the trade is apparent at a glance, although things are not yet in order.

Irby W. Reid is the new manager at the Columbia store. Mr. Reid was for thirteen years head accountant for the Columbia Co., but for the last two years has been associated with the Packard Motor Car Co., in Boston. This is his first residence in the West and he has not been here long enough at this writing to express himself on his surroundings. "I like the talking machine game," he says, "but thought myself out of it until Mr. Lyle made me an offer to take charge of this store that I could not afford to turn down. Of course, I understand Columbia methods as I installed their accounting system, but my experience in the sales department has been limited to manager pro tem of several Eastern stores during the interim of transfers, perhaps a few weeks.

"When I looked over the field here I realized the work cut out for me. I am very much in earnest, however, and do not intend to give up a fight that I have undertaken. I have a good many plans in forming for the immediate future, but I have hardly got settled enough in my job to have details worked out for these. I am feeling my way and hope to make a stir later."

Mr. Reid succeeds D. S. Ramsdell, who was transferred to Louisville to take charge of the Columbia store there. The change at Louisville, which opened the way for Mr. Ramsdell there also is of interest to St. Louis folk, as it was brought about by Manager E. B. Walthall leaving the Columbia service to take charge of the Wurlitzer store there. Mr. Ramsdell succeeded Mr. Walthall here when the latter left the Columbia service here to join the O. K. Houck sales force in Memphis. Later Mr. Walthall returned to the Columbia Co. and now he leaves it again and Mr. Ramsdell succeeds him.

The Thiebes Piano Co. have a sign that is attracting much attention. It is a framed square of piano felt on which small enamel letters tell of qualities of Victor machines. The white letters on the dark red surface command a second glance.

Mark Silverstone, president of the Silverstone Music Co., the rechristened Silverstone Talking Machine Co., is exhibiting a letter from F. K. Dolbeer, salesmanager of the Edison Co., that approves of the change of name. Mr. Silverstone wrote to the Edison Co. regarding his move and

stated that his reason was that he thought "Edison machines were now musical instruments above all doubt, and that it was a mistake to market them under the name of a 'talking machine company.'" Mr. Dolbeer wrote back his approval of the change and remarked that only two days before the receipt of Mr. Silverstone's letter, Mr. Edison had spoken to him on the same subject, voicing practically what Mr. Silverstone had written. The letter concludes: "Your appreciated action in all probability forestalls a request from us for you to make this move."

Kleekamp Bros. Piano Co., Victor dealers at Grand avenue and Arsenal street, have caused a good many smiles by putting a muzzle on the Victor dog. There has been a crusade here by the health department for the muzzling of all dogs and the stand taken by the doctors was so opposite to all previous notions of mad dogs and the like that there has been a bitter controversy which has ended in ungracious acceptance of an order to muzzle all dogs. To see the attractive little Victor dog wearing a muzzle brought smiles to every one who observed it.

E. A. Schriber, of the St. Charles (Mo.) Music House, was a first of the month caller on talking machine jobbers.

The Silverstone Music Co. is calling attention to the strong qualities of the new Edison records with a fragment of one that Mr. Silverstone broke with a hammer. He offers a machine free to the person who will again break the fragment of the record with his hands. So far no one has succeeded.

Harry Levy, manager of the Aeolian Co.'s talking machine department, is as optimistic as usual. "We have been having a nice run of business," he said, "and everything is in good shape except the supply of Victor XVI machines. I have made so many excuses to anxious dealers that they are beginning to make them to me. First thing Monday morning my telephone rang and Val. Reis, of the Val. Reis Piano Co., said: 'I've got the real excuse for those sixteens now. Heavy snows, trains cannot get through the tunnels.' You see that is the way it goes. The dealers understand and are taking their loss of business good naturedly and all are looking for big things when we are permitted to turn loose.

"We have been much gratified to open two accounts in splendid trade districts in St. Louis. The Densmore Piano Co. is removing from North Grand avenue to 3565 Olive street, which is regarded as the best trade district outside of the downtown shopping center in the city. This company will add the Victor line to its merchandise and should do well. Another new account is the Sanitary Sales Supply Co., 5012 Delmar avenue, which means another excellent store in the wealthy West end. I look for both of these firms to add considerable to the volume of business."

E. C. Rauth, secretary of the Koerber-Brenner Music Co., Victor jobbers, returned the first of the month from an extended Eastern trip, during which he visited the Victor factory and called upon a number of Eastern retailers and jobbers to catch up with the latest selling styles. Mr. Rauth is an enthusiastic talking machine man although he is engaged in jobbing all sorts of small musical merchandise.

"I found the East very enthusiastic over talking machines," he says, "and picked up some ideas. But I do not see that they render a better account for population served than does the West. One thing I liked there was the exclusive talking machine stores, and also I was impressed with the greater appreciation of the line shown by the department stores. To my mind, Western department store managers have failed to see the possibilities and the managers are not permitted to 'cut loose. Record business for January was excellent

and the machine trade surprised us. The smaller retail stores, those in the city outskirts, are showing great improvement as to record business and naturally with increased trade they are increasing stocks."

Salesmanager Byars, of the Columbia Co., recently sold a Favorite Grafonola to St. Louis University, the leading Jesuit institution of higher education in this section. He called at the college once afterward and was taken to various parts of the main building that he might hear how well the instrument fulfilled its mission. He knew that the faculty was delighted with the purchase, but he was much pleased to receive this letter: "Columbia Phonograph Co., St. Louis, Mo.

Gentlemen:—The Grafonola you delivered the other day is giving perfect satisfaction and our professors and students are unanimous in the opinion that it is the most marvelous talking machine they have ever heard.

"We were deliberate and careful in our selection of our instrument in preference to your competitors and the recent tests we have made with the Grafonola in our large auditorium exceeded our anticipation. The most artistic grand opera selections can be heard from one end of our large building to the other and even to the second and third floors. The tone is so clear and resonant that it has been mistaken for the artist himself by persons in other parts of the University.

"It is our opinion that the Grafonola is a most valuable asset in the educational field and should be in every public and private and parochial school or other institution of learning. We take pleasure in recommending the Grafonola to all who are interested in music in its highest forms and are confident that it will fill its mission whether it be entertainment or educational.

"Yours very truly,

"CHARLES DESNOYES, Secretary."

The Silverstone Music Co. and the Edison Co. are jointly arranging for a booth at the annual Household Show, one of the big industrial exhibits of the year here, for space in which to exhibit the Edison disk machines. They want the exclusive phonograph exhibition privileges if that is possible, but will have an exhibit at all odds. President Silverstone says the new machines are going nicely and that the \$225 model is proving the best seller. The handicap of a lack of a large library of records is not proving as serious as was feared since a liberal supply of the records already issued has been received.

Mr. Silverstone is perfecting a device whereby Victor and Columbia records can be played on the Edison machine despite the different fundamental principals of their construction. He had intended to keep this project a secret from the trade for a time, but already jobbers have heard of it, and recently an Indianapolis jobber called on him to arrange to buy such sound boxes. Mr. Silverstone has exhibited his device to several customers who insisted that while they wanted the Edison machines, they also wanted to play their present stock of Victor or Columbia records. He will not push the device or permit descriptions of it until he has investigated the patent possibilities.

A record saleswoman at the Silverstone Music Co. tells of a customer who selected four Edison records during the cut price sale. She was told that in half dozen lots they were sold at thirty-one cents, and that she could get six for less than she was paying for the four. She said that she did not want any more and cheerfully paid the \$2.40 when she could have gotten six for \$1.86.

Manager Reid, of the Columbia Co., has completed arrangements for a grand opera concert at Beethoven Hall, one of the largest chamber music halls in the city, at a date to be announced as soon as the Columbia Grand machines arrive. He hopes to be able to continue the concerts as an advertising feature.

Bollman Bros. are boosting their talking machine department by gifts of special needles to talking machine owners who will call at their store. During the holiday time this company found their booths entirely inadequate and permitted the talking machines to invade some of the piano rooms and the corridor of the office department.

The demand for the product itself is the most unmistakable indication that the Columbia line is the product that the public wants.

Columbia Graphophone Company
Tribune Building, New York

VICTOR CO. WINS THE "TONE ARM" PATENT SUITS.

Important Decision Handed Down in Two Infringement Suits Against Adolph Heinemann et al., and W. H. Hoschke on Victor Patents Covering the Tone Arm and Horn Construction—Important Statement from the Victor Talking Machine Co.

Horace Petit, general counsel for the Victor Talking Machine Co., announces that in two important suits, two patents of wide scope, numbers 814,786 and 814,848, both dated March 13, 1906, and granted to Eldridge R. Johnson, president of the Victor Talking Machine Co, and assigned to the Victor Co, have just been sustained by the Federal Court. On January 14, 1913, the United States District Court for the Southern District of New York, filed two opinions in two suits brought by the Victor Co. against Adolph Heinemann, et al, and against William H Hoschke, based on infringement of these patents, and held that each patent was valid and infringed. These are the patents which have become known as the "Tone-Arm" patents, and cover the tone arm and horn construction as broadly claimed in the patents.

Referring to this decision, Louis F. Geissler, general manager of the Victor Talking Machine Co., says:

"The significance of these decisions to the trade is double-fold; it is additional evidence that the Victor Co. does not make extravagant claims relative to its patent rights, and that following its practice, it has, with due deliberation, brought these suits and won them, and is a further demonstration that the Victor Co. is guarding the interests

of its dealers by preventing the importation of cheap infringing machines from foreign countries, as well as the unlawful manufacture and sale of infringing machines in this country. These two patents sustained are of a broad nature, and it is believed that they will give to this type of construction the protection which the Victor Co. so justly deserves.

"We regret to note that some of the older companies have recently seen fit to infringe upon our patent rights, and that we will be obliged to take the necessary proceedings in such instances. Victor dealers will readily appreciate that they also should be congratulated on the result of these suits.

"We further take this opportunity of informing our trade that there are now pending several other suits, brought on behalf of the Victor Co. against infringers, and that these suits will be prosecuted, as we believe, to successful issue, as have substantially all of the suits which have ever been brought by the Victor Co.

"It is unnecessary to state, as we have in former communications, that the efforts to protect our trade and to enjoin infringing goods will not only be directed against the manufacturer, but against all dealers as well."

HAS ATTRACTIVE SHOWROOMS.

The McArthur Furniture Co. Giving Special Consideration to Talking Machines.

(Special to The Talking Machine World.)

Boston, Mass., Feb. 10, 1913.

The A. McArthur Furniture Co., which recently completed arrangements to handle the line of the

Columbia Graphophone Co., has fitted up one of the most attractive and comfortably furnished talking machine warerooms in this city. The accompanying illustration portrays a small corner of their show rooms devoted to the Columbia line, with Manager Frohock busily engaged in figuring how large he should make his next Columbia order. The McArthur Co., is one of the largest

furniture establishments in the New England States, and their decision to handle a talking machine line was reached only after lengthy discussion of the pros and cons of the situation. They finally decided to become exclusive Columbia agents, and although they have only represented the Columbia Co. for the past six weeks, they have already laid their plans for a profit-paying clientele who are well pleased with the service the house is giving, in addition to the merits of the Columbia products.

Corner of McArthur Co.'s Columbia Warerooms.

APPEALING TO THE CHILDREN.

Good, Effective Victrola Advertising That Is Worthy of Emulating.

"Make an appeal to distinctive personal desires" seems to be the slogan of many active talking machine dealers in New York at the present time, and, as a result of this motto, there have been some exceptionally interesting advertisements of talking machines in New York newspapers the past few weeks. One of these appeared last week under the heading "To be reared in the atmosphere of Victrola music," and portrayed two small children listening with evident appreciation to a Victrola in their home.

This appeal to the rearing of children in an atmosphere of music is one that has not been overworked, and the James McCreery Victrola departments who inserted the advertisement attract a clientele that appreciates the importance of the surroundings of children. The dealer in a small town can also utilize this idea to good advantage, for there are certainly many parents in these towns who will become possible talking machine purchasers if interested by some appeal to their intimate home surroundings or personal life. The argument advanced by the McCreery stores was as follows:

"Think what it means to a child to be reared in an atmosphere of superb music—Victrola music. The inspiration of it all—great soul-stirring masterpieces, the variety of which can be had in no other way. That is one reason—a sufficient reason—why a Victrola should come to your home. There are just as many other reasons as there are other members of your household. We are all children—more or less grown up—and we all love great music."

EDISON REFUSED \$1,000,000.

Rejected Offer Made by Cleveland Financiers for Talking Films.

A dispatch from Cleveland to the New York papers says that "when a certified check for \$1,000,000 was offered to Thomas Edison by P. J. Brady, representing Cleveland and Chicago financiers who wished to obtain a controlling interest in the new Edison talking picture machine, the inventor laughed."

"He turned us down, saying he intended to operate the machines and market them himself," said Mr. Brady."

RECUPERATING IN TENNESSEE.

V. W. Moody, assistant manager of the New York Talking Machine Co., 81 Chambers street, New York, who is at present in Memphis, Tenn., spending a well-earned pre-holiday vacation, will probably return to New York about the 15th of the month. He is taking advantage of the southern climate to regain his customary vigor, which was put to an unusual strain by trade demands during the past few months

(Special to The Talking Machine World.)

London, England, Feb. 6, 1913.

The December trade-storm is a thing of pleasant memory compared with conditions of the moment. After the storm, a lull! For most traders, too much of a lull the last few weeks, although at the time of penning my last report prospects were good. Perhaps as a result of gramophone or phonograph demonstrations at private gatherings during the festive season guests became possessed of a desire to emulate the excellent example of their host and install a machine at home, much to the satisfaction of dealers, who made many sales about that time. The depression that followed fortunately bids fair to be of a temporary nature, for already trade is on the mend and prospects improving each day. In the more prominent makes of records sales are now of a satisfactory volume and this condition of things is closely identified with the renewal of advertising expenditure in the public press.

A strong feature of the situation here and one that has obtained for some time, is the increasing tendency among dealers of establishing local talking machine societies. The plan, adopted apparently, is to enlist the sympathy of customers with a view of obtaining sufficient support justifying the calling of a meeting whereat an exchange of ideas usually result in agreement to issue an invitation to all local enthusiasts to become members. The dealers' efforts, more often than not, meet with remarkable success. Quite 25 per cent. of talking machine men are only too glad to embrace any opportunity that will afford them free and instructive discussion appertaining to tests of various new devices, inventive handiwork in relation to little ideas and machine improvements, choice of records and a hundred and one other things of interest to the user. The whole thing is inaugurated upon a proper and tested footing, the election of a president, vice-president and secretary, and the drawing up of membership rules, amongst other preliminaries, keeps the members busy the first few meetings, after which attention may be centered on the examination of future methods of procedure. Anent which, I do not need to labor here, suffice it to say that conducted upon the lines roughly indicated, these societies are an undoubted success and of so much usefulness that prominent members of record firms take an active interest therein. From the dealers' viewpoint the sole object is of course a business one. Obviously, he needs to exercise much tact in his attitude towards the members, and this point was concisely expounded in conversation with a dealer friend of mine, who successfully presides over a society of talking machine enthusiasts. He said, "As you know, I am president of the _____ Society, and have provided a suitable room at my business premises, where we all foregather once a fortnight. I make no charge for this accommodation and always avoid even the very suggestion of importuning the members to buy from me. As you rightly remark, were I to succumb to the many temptations to sell them goods during the meeting nights, I should soon lose the respect in which I believe I am

held. Do not mistake me. If, after our discussions, a member asks definitely for so and so, I, of course, supply it, but more often than not will ask him to pop in the next day, when it shall be ready. It just depends on circumstances, but when reasonably possible, I find it good policy to avoid sales on meeting nights, when it is best to be the president, not the dealer. I am in a position to say that my attitude has never lost me a sale: on the contrary, it has had this effect—practically every member buys all he wants at my shop, and practically every member is a walking advertisement for me. I charge full prices, but pride myself on having attained a reputation for straightforward and fair dealing. Since my connection with the _____ Society, I can honestly say that my trade has increased 200 per cent. The membership is but 31, so you see, the view I take, confirmed in other ways, that the increased business is not all direct from members is pretty correct."

The obvious inference to be drawn from this statement is very important, and as suggesting the policy to be adopted in these matters, should prove of instructive value to those who would embark upon the formation of a local talking machine society.

Sidney W. Dixon Convalescing.

Quite a number of talking machine men have been on the sick list the last week or so. Since the beginning of January Sidney W. Dixon, sales-director of "His Master's Voice Co.," has been seriously ill, but fortunately is now in the convalescent stage. He will recuperate at the seaside and is expected to be at the office again within a few weeks. The general sympathy expressed in trade circles is striking evidence of his popularity.

The Columbia Co. in New Quarters.

Since the year 1909, when commerce in general, the world over, suffered under a cloud of depression, trade has fortunately been on the upward trend all the time. No index is more pertinent, perhaps, than the contrast furnished by the Board of Trade returns for that year compared with 1912. The difference is really remarkable, and in no section more so than that dealing with the musical instrument industry. Here, the retailers' prosperity manifestly depends upon the spending-power of the masses. Last year certainly provides ample proof in support of this statement. General trade was excellent, the percentage of unemployment the lowest for some 20 years back, and altogether, conditions were of the best. There lay the foundations of good trade, but not every talking machine company made the most of it. To drift with the tide is nice; to pull with the tide is better. Of the two, the latter is the more profitable, as is reflected by the aggressive policy of the Columbia Phonograph Co., general in the sense indicated. During last year their business developed amazingly by reason of several important attributes, perhaps the most pertinent being the grant of additional letters patent covering their process of manufacturing records. The importance of this is inestimable, since the selling of a Columbia record below the established price now constitutes, in the eyes of the law, an infringement of the company's patents and affords still further protection against price-cutting. Use of this has been made to such good purpose that apart from any question of quality, assured of a good profit, dealers feel absolutely safe in handling a record so protected.

But this is by no means the only inducement. In the immediate issue of topical hits, the Colum-

Messrs. Marcus Clark & Co., Ltd., Talking Machine experts of Sydney, N. S. W., will always be pleased to hear of anything new in Talking Machines, Records, or Novelties with view to agency. Particulars to D & W. MURRAY, LTD., 28 Finsbury St., London.

bia Co. deserves the utmost praise, but their policy of recording the original song or selection, in a great number of cases, by the original artist, has won them an influential position with the trade and public alike that counts for much these competitive days. As may be imagined, these advantages have been made known very widely in the public press, with the result that Columbia trade increased to such an extent that facilities for coping with it became somewhat restricted. The result is almost too obvious. The removal came about during the early part of January, immense premises being taken at 102 to 108 Clarksenwell road, which is but a few minutes' tram ride from City road. Here is housed the whole staff from the

Columbia Co.'s New Quarters.

High Holborn and City road premises, and the building is now regarded as the London headquarters of Columbia for a long time ahead. At the time of my call things were just getting ship-shape, but it was very evident that the scheme of furnishing and decoration had been carried out in a most artistic and pleasing manner. There is no call here for a description of the offices, showroom and departmental arrangements; suffice it is to say that excellent provision has been made in every section to ensure the utmost convenience and efficiency in facilitating the respective work of each. Some idea of the spaciousness of the new building may be gleaned from the fact that the letters and music-notes trade mark on the front are close upon six feet in size.

The World tenders its hearty congratulations to the Columbia officials upon such evident and healthy signs of trade progress; may it long continue!

Telegraph Rates Reduced.

Further reductions have been made in the charges for telegrams to Canada, Newfoundland, United States, Australia, New Zealand, the South African Union, Rhodesia and British Central Africa. These rates came into force on Jan. 1 and full particulars can be obtained at any post-office.

Edison Blue Amberol Records Announced.

One of the first public announcements of the Edison blue amberol record was made by our Belfast friend, Thomas Edens Osborne. They appeared in the form of chatty editorial para-

FROM OUR LONDON HEADQUARTERS—(Continued from page 38).

graphs in the leading Irish papers, and doubtless the great interest aroused among phonograph enthusiasts has resulted in many sales now that Mr. Osborne's stock preparations are complete.

Edison Clerical Staff Moves.

Advice reaches me from Thomas A. Edison, Ltd., of the transfer of their clerical staff from the Willesden factory to the city offices at 25 Clarksdown road, E. C., where all orders and correspondence should now be sent. Until further notice returns of records should be made to the factory.

Now Under New Direction.

The transfer of the old National Gramophone Co. to the hereby registered concern—National Gramophone Co. (1913), Ltd.—has now been completed. Big developments are contemplated, and I am given to understand, some important announcements in this regard will be made very shortly. An interesting item of news is that Thomas Beecham, of the Beecham Opera Co., whose performances at Covent Garden this season have literally taken London by storm, has joined the board of directors. The company may well feel some little pride in having secured the services of so prominent a leader in the operatic world, whose definite association with talking machine interests must tend to place the industry on a still higher level in relation to music in its best sense. Another prominent gentleman, who has just joined the board, is G. B. Elkington, J. P., who is the head of a large London firm of silversmiths.

Latest Columbia-Rena Titles.

An especially attractive list of titles is that just issued by the Columbia-Rena Co. In point of originality it ranks among the best yet issued, the topical nature of the titles suggesting the exercise of a discriminating choice closely identified with the public taste. A record that will certainly make a wide appeal is Bransby Williams' great burlesque, "The Showman," which, by the way, is a Columbia copyright. The title is more or less

self-explanatory, but it is difficult for the reader to conceive, unless he be gifted with the power of imagination, the amount of delightfully healthy humor expounded in this faithful study of real life. In listening to the records it is one long laugh from beginning to end. Described as the top "C" tenor of the day. Morgan Kingston contributes two pleasing selections, viz.: "Love Lily" (Jack Edwards and Bothwell Thompson), and "Vesti la Giubba," from Leoncavallo's "Pagliacci." The one and only Mark Sheridan appears for the first time on Columbia-Rena records and his delightful rendition of "Who Were You With Last Night" and "They All Walk the Wibbly-Wobbly Walk," is just "Mark" to a T. In addition, there are a number of attractive issues in the special mention of which it would be invidious to particularize; let the list speak for itself: "It's a Long, Long Walk" (Geo. Arthurs and Fred Leigh), George Lashwood; "I Forgot the Number of the Door" (Geo. Arthurs and Fred Leigh), George Lashwood; "Cancel that Wedding March" (Ted Snyder), and "King of the Bungalows" (Greene and Straight), Gene Greene; "I Want a Girl Just Like the Girl" (Wm. Dillon and H. von Tilzer), Miss Dorothy Ward; "Patrica" (Weston, Barnes and Scott), Miss Dorothy Ward; "I'm Going Back to Dixie" (Berlin and Snyder), duet by Collins and Harlan; "There's a Girl in Havana" (Stone), duet by Irving Gillette and Caroline Vaughan; "Jewel Song from Faust," Gounod; "Il Bacio" (Arditi), Miss Violet Essex; "Alexander's Ragtime Band" (Irving Berlin), and "I'm Going Back to Dixie" (Berlin and Snyder, concerted solos), Alexander Prince; "Nearer My God to Thee" (Mason), and "Lead, Kindly Light" (Dr. J. B. Dykes), Trinity chimes of New York; "Ragtime Medley," Part I and Part II (Arranged by A. W. Ketebe), Band of H. M. Scot's Guards; "That's What the Rose Said to Me" (Leo Edwards), and "My Heart is With You To-Night" (Bennett Scott), Cornet solos by Sergeant Leggett; "Brass Band Ephraim Jones" (Meyer), and "Hitchy

Koo" (Muir and Abrahams), duets by Collins and Harlan.

Interesting History of Carl Lindstrom, S.A.

One of the most striking indications of the growth of this industry during the last 10 years is furnished in an attractively illustrated brochure, issued by, and containing a short historical account of the firm of, Carl Lindstrom, S. A., Berlin, covering the years 1902-12.

On November 30, 1912, under the style of Salon Cinematograph Co., a small concern was established for the manufacture of cheap home cinematographs and as a side line, they embarked upon what was then regarded as a doubtful proposition—the sale of talking machines. To harp back 10 years and see in imagination the crude and imperfect productions for the reproduction of sound is enough to make one feel exceedingly glad that those days are over for compared with the finished mechanical musical instrument of to-day it must have inflicted real torture upon sensitive ears. But evidently the scientific nature of the article was responsible for sufficient sales to justify the company starting a wholesale trade in talking machines. In those times the turnover of 1,000 machines a year was considered a not unsatisfactory figure, but with the advance of science coupled with reduction in price, an ever-increasing sale of machines obtained. In 1904 the company took over the mechanical workshop of Mr. Carl Lindstrom, then employing about 40 workmen. Business rapidly expanded and a limited company was then formed under the title of Carl Lindstrom, G. M. B. H. From this date the conquest of the world's markets began and with increased factory facilities the new company's goods were produced in sufficient quantities to allow of exportation to all parts of the world. By 1908 their staff had increased to 700 and their yearly turnover to £300,000. With a capital of 1,000,000 marks the Carl Lindstrom Co. was floated during that year and in 1910 and 1911 was further aug-

HIS MASTERS VOICE

FROM OUR LONDON HEADQUARTERS—(Continued from page 39).

mented by the absorption of the Beka Record Concern, whose share capital amounted to £50,000, and of Fonstipia, Ltd., and its daughter companies, including the Odion-Werke. The Carl Lindstrom Co. (capital, £175,000), alone in 1911 did business to the extent of £625,000. To-day the Lindstrom Co. employs something like 800 workmen, the Beka Record Co. and the Odeon-Werke each about 500. Perhaps the best illustration of Messrs. Lindstrom's factory facilities is found in the statement that their yearly production of talking machines reaches the huge total of 500,000. Such a record of progress is absolutely unique in the annals of this business, and to say the least bespeaks a wonderful organization. We cannot refrain from congratulating the management upon their untiring energy and business acumen to which alone must be ascribed the unqualified success that is obviously theirs.

Whilst upon the subject a meed of praise is due to the progressive activity of Messrs. O. Ruhl, Ltd., who exclusively represent the Beka and Lindstrom interests in the United Kingdom. Under their guidance trade has reached such marvelous proportions as to necessitate the erection of a large record factory, reference to which was made in my last report.

The First List of Edison Blue Amberol Records.

Those traders who have been privileged to hear the advance samples of Blue Amberol records declare enthusiastically in their favor. The company are in receipt of substantial initial orders and prospects of business are particularly good. Of course the records having yet to make their public debut, I am not in a position to dwell upon, except by anticipation, their reception in that direction. I shall be able to do this more effectively in my next report, mentioned as examination of the first list of somewhere about fifty titles, discloses an unusually comprehensive range of selections, practically every phase of music being represented. The following examples chosen at random from the list will convey a pretty good idea of the excellent fare provided: Concert series—"One Sweetly Solemn Thought" (R. S. Ambrose), Thomas Chalmers; "Love's Old Sweet Song" (J. L. Molloy), Christine Miller; "Believe Me, if all Those Endearing Young Charms" (Thomas Moore), Anna Case; "Angel's Serenade" (Gaetano Braga), Margaret Keyes; "I Hear You Calling Me" (Charles Marshall), Orville Harrold.

Ordinary Series—"Poet and Peasant" Overture (Suppé), National Military Band; "Thora" (Adams) Peter Dawson; "Roamin' in the Gloamin'" (Lauder) Harry Lauder; "Poppies and Wheat," barn dance (banjo solo) (Hucke); Olly Oakley; "Take a Pair of Sparkling Eyes" (Sullivan), Ernest Pike; "Keep on Swinging Me, Charlie" (Long and Scott), Florrie Forde; "March, Strathspey and Reel" (Traditional), Highlands Bagpipe Band; "The Kangaroo Hop" (Godfrey and Williams), Billy Williams; "My Heart is with You To-night" (Mills and Scott), Hardy Williamson; "The Singer was Irish" (Murphy and Castling), Peter Dawson; "I Must Go Home To-night" (Hargraves), Billy Williams; "The Broken Melody" (Van Bierre), Jean Schwiller; "Breakfast in Bed" (Lauder), Harry Lander; "Joshiah" (Arthurs and Lee), Stanley Kirkby; Trio from "Faust" (Gounod) (In English), Agnes Kimball, Reed Miller and Frank Croxton; "Serenade" (A. Emil Tell), Florentine Instrumental Trio; Quartet from "Rigoletto" (Verdi) (in English), the Frank Croxton Quartet; "Abide With Me" (William H. Monk), the Frank Croxton Quartet; Count of Luxembourg, "Are You Going to Dance?" (Lehar), Elizabeth Spencer and Irving Gillette; "Bells Solo, from 'The Magic Flute'" (Mozart) (Bells Solo), Charles Daab; "Minuet, op. 14, No. 1 (Paderewski), American Standard Orchestra; "Lustspiel Overture" (Keler-Bela, op. 73), Edison Concert Band; "O, Dry Those Tears" (Teresa Del Riego), Mary Carson, and "Wonderful Peace" (Rev. W. G. Cooper), R. Festyn Davies.

Based on the three for one principal, several record exchange schemes are in force during February. An eighteen penny record manufacturer an-

nounces that he will accept any record in exchange. Is the dealer expected to return for credit a half disc which has cost him 1s. 6d. or more likely 1s. 8d., and in addition order and pay for two others at 1s. to sell at 1s. 6d.?

Death of Noted 'Cellist.

Admirers—and they are legion—of August Van Bierre, the celebrated 'cellist, will learn with regret of his sudden death at Brighton, January 23. He died in harness, so to speak, for just after his performance he fainted and expired, apparently due to heart failure, shortly afterward. Actor, composer and musician, Van Bierre was perhaps best known for his performance in "The Broken Melody," a drama which was produced for the first time in London at the Prince of Wales' theater, on July 28, 1892, and in which he appeared over 6,000 times. He was by birth a Dutchman, but immigrating to London at the early age of seventeen, with no knowledge of English, and practically friendless, was reduced to playing in the streets. The story of his fortunate discovery by Sir Michael Costa, the then conductor of the Covent Garden Opera Orchestra, and his immediate installation therein, is well known. For charitable purposes Van Bierre used to celebrate the day each year by playing in the streets, as of old. On zonophone record, A 60, Van Bierre recorded "The Broken Melody," with which is coupled "Kol Nidrei," also by the popular 'cellist. Only a fortnight ago, too, he was recording for the Edison Bell Co., who secured four titles, including "The Broken Melody" masterpiece.

Kept Accounts on Shop Wall.

Under public examination in the courts recently, a bankrupt stated that although he had had several branch businesses, he had never kept any books of account, but he used to make occasional notes on the wall of one of his shops. One way of doing it.

New Leipzig Messe Next Month.

The famous Leipzig Messe commences on March 3. There is an autumn gathering, but the spring fair is the more important and attracts buyers from all parts of the world. Those who should know, anticipate an exceptionally interesting series of talking machine exhibits, the chief continental firms having secured large accommodations some time ago. Inquiries reveal the fact that representatives and heads of British houses will attend in force, an unusual number having intimated an intention of visiting the fair.

New Colonial Copyright Legislation.

Replying to a member in the House of Commons, L. Harcourt said that the Commonwealth of Australia and Newfoundland had passed legislation adopting the copyright act, 1911.

Heavy Fine for Song Pirate.

For an infringement of the musical copyright act of 1911, a printer, who it was stated had printed something like 700 gross of pirated music, was mulcted in a fine of £5 and 1 penny per copy for the 7,000 copies found on his premises, and in addition an order was made for the confiscation of the plates, etc., or one month's imprisonment.

New Artists on "His Master's Voice" List.

Two or three new artists contribute to the latest "His Master's Voice" list, notable amongst whom is that popular music hall comedian, Wilkie Bard, whose services I understand, will be exclusively retained by this company. His first issue, "The Night Watchman," teems with humor from beginning to end, and the enunciation being exceedingly clear, the record is certain of a big demand. The list under review is a particularly long one, and contains a further batch of double-sided instrumental issues, among which are several entrancing rag time numbers rendered as orchestrally perfect as one could wish. As sung by Madame Eleanor Jones-Hudson, His Master's Voice Co., are to be congratulated upon the issue of perhaps the two most popular pantomime numbers, "My Heart Is With You To-night," and "Take Me Back to the Garden of Love," both of which are magnificently rendered by the lady in question. The famous New Symphony Orchestra is responsible for: *Lyrische Suite*, No. 1, "Shepherd's Boy," No. 2, "Norwegian Rustic" march (Grieg), and

other records in the single-face list are: "Petite Suite de Concert," Demand et Response (Coleridge-Taylor); and "Petite Suite de Concert," Un Sonnet d'Amour (Coleridge-Taylor), Imperial Philharmonic Orchestra; "Grizzly Turkey Trot" (Roth Roberts), Pryor's Band; "Wearin' o' the Green" (Hall), John McCormack; "Stars May Forget" (R. Groome), Thorpe Bates; "The Bosun's Lament" (W. H. Squire), Harry Diarth; "Blow, Blow, Thou Winter Wind" (Sargeant), Robert Radford; "Tarrystock Goozey Vair" (Trythall), Charles Tree; "She Wandered Down the Mountain Side" (Clay), Miss Percival Allen; "Thora" (S. Adams), Ruby Helder; "My Ain Folk" (Lemon), Mme. Edne Thornton; "When Hands Meet" (Pinsuti), quartet, Miss Percival Allen, Mme. Edna Thornton, Messrs. John Harrison and Robert Radford; "Gems from 'Mignon'" (Thomas), Grand Opera Company; "Scherzo" (Dittersdorf-Kreisler) (Ciolin), Fritz Kreisler; (a) "Waltz in G Flat," and (b) "Waltz in E Minor" (Chopin) (piano), Herr. Wilhelm Backaus; "Gems From 'The Girl in the Taxi'" (Jean Gilbert), Light Opera Company; "I Can't Refrain From Laughing, 'The Geisha'" (Lambelet), Clara Evelyn; "She's the Lass for Me" (Lauder), Harry Lauder; "I've Got My Eye on You" (Arthurs and Leigh) Clarice Mayne (accompanied by "That"); "Mysterious Moon" (Brown-Ayer), Edna Brown (and chorus); "That Mysterious Rag" (Berlin-Snyder), American Quartet; H. M. V. Double-Sided Records: "La Duchess Chermante" and "British Imperial Chimes" (Walter Partridge); "Suite from 'The Mirecal Procession and Children's Dance,'" and "Suite from 'The Miracle,' the March of the Army of Dead Motif" (Humperdinck, arranged by F. Winterbottom, the Band of H. M. Coldstream Guards; "Ragtime Violin" (Irving Berlin), and "The Wedding Glide" (Hirsch); "There's a Girl in Havana" (Goetz and Sloane), and "All That I Ask Is Love" (Ingraham), Jacob's Tracadero Orchestra; "The Grasshoppers' Dance" (Bucalossi), and "Three Irish Dances:" first dance (Ansell), Metropolitan Orchestra; "Nights of Gladness Valse" (Ancliffe), Mayfair Orchestra, and "Dance of the Little Feet," gavotte (de Breville), De Groot's Orchestra; "The Ghost of the Violin," two step march (Kalmer and Snyder, arranged by W. Schulz), the Ragtime Orchestra, and "The Popinjay," one or two step, De Groot's Orchestra.

New Ragtime Issues on Zonophone.

It would be difficult to find a phase of music that has experienced such a vogue as ragtime. It is just as popular as ever, and although there are some who think one can have too much of a good thing, the talking machine dealer at least cannot be accused of that belief. It is even within the pale of probability that ragtime has moved many people to the purchase of a machine and records, where otherwise they would have remained indifferent. Any way, distributors have reaped a rich harvest of sales, and the boom is still on. Ragtime will certainly be responsible for a large business during the coming spring and summer months, for it is a type of light, fragmentary music eminently suitable for the days ahead when light entertainment in the home or garden is preferable.

This brings me to the latest zonophone ragtime issues. With their usual enterprise, the company have exerted every effort and spared neither time nor expense in the production of a really comprehensive list covering practically every known ragtime issue of merit.

New Companies.

Combinophone Co., Ltd., talking machine manufacturers. Capital, £250. Office, 22 Chauncery Lane, London, E. C.

Diploma Gramophone & Record Co., Ltd. Capital, £100. Office, 220 Old St., London, E. C. From the same address is registered: Victory Sound Productions, Ltd. Capital, £100; Kalliope Co., Ltd. Capital, £100.

National Gramophone Co. (1913), Ltd. Capital, £250,000. Office, 15 City Road, London, E. C. The company has been formed to take over the present National Gramophone Co., Ltd.

YSAYE DELIGHTED WITH RECORDS OF HIS PLAYING.

The Famous Violinist Pays Great Tribute to Columbia Co. in Connection With the Records Recently Made of His Playing—To Have Won Such a Tribute Is Something to be Proud of, For Ysaye Ranks as One of the World's Masters of Tone—First Records Containing Many Well-known Numbers, to Be Issued Late in March.

In this busy age we do not often stop to think of the wonderful blessings we enjoy musically. Just think of the pleasure—the educational value—of being able to hear within one's home the instrumental and vocal works of the greatest musicians of the world interpreted by the most famous artists.

This has been made possible through the talking machine which is fulfilling an artistic mission as a stimulator of musical art and appreciation in America that is bound to win in due course proper recognition from writers of musical history.

Only last month we announced in *The Talking Machine World* that Eugen Ysaye, the world's greatest violinist, had made a lifelong contract with the Columbia Graphophone Co. to reproduce Columbia records exclusively.

Just think what this means! Ysaye's playing not only for to-day, but for posterity!

Here stands a violinist in the very maturity of his art—not merely a master technically, but a musician of breadth, dignity and power, who is enabled to transmit the very soul of what he plays to his hearers—who inspires and elevates, for he is a master of phrasing and of all those beauties of detail that express temperament and that indescribable something called "genius" which moves and enthuses those who love music in its best and highest forms.

It was a great achievement on the part of the Columbia Co., and a matter of satisfaction to thousands, to so arrange that Ysaye's art may be perpetuated through Columbia records, thus enabling him to entertain and delight forever his millions of friends and admirers throughout the world.

That the Columbia Co. has been eminently successful in reproducing the wizard-like playing of this famous artist in record form is apparent in the sincere letter of appreciation which Ysaye has written the company after hearing his first records and in which he expresses satisfaction at their excellence and the perfection of the Columbia recording apparatus.

In addition to this tribute to Columbia mechanical and artistic ability, Ysaye personally autographed the label of each record before it left the laboratory. Every selection was marked either

"very good" or "excellent" by the master, after he had thoroughly tested each record, and convinced himself that they were true reproductions of his artistic talent. This personal approval of his records

Copyright by Underwood & Underwood, New York.

Ysaye Making a Columbia Record of a Brahms Number—Piano and Accompanist to the Left.

by the illustrious Belgian violinist is of considerable import to the public, as with this O K by

Ysaye himself, every purchaser of a Ysaye record is assured of musical reproduction that is true in every detail.

Since the announcement by the Columbia Graphophone Co., a few weeks since, that Eugen Ysaye had signed a lifelong contract with them for the making of Columbia records, the company has been deluged with letters of congratulation from musicians, laymen and members of the talking machine trade in every section of the country. The company well deserves this praise, for, in adding Ysaye to its list of talented musicians, it has captured

a most eminent violinist, a musician whom critics agree is without a peer, and whose playing furnishes an example well worth emulation by younger generations. By his production of Columbia records, Ysaye hands down to posterity a faithful record of his remarkable talent and strengthens his hold on the affection and admiration of music lovers.

The testimonial sent by Ysaye to the Columbia Graphophone Co. is one which is a source of pride to the officials of the company. As he states in his letter, Ysaye never accepts any proposition that involves the use of his name without mature deliberation and thorough investigation. His evident appreciation of Columbia recording perfection is a certain proof of his enthusiasm when recording. This testimonial pays a tribute not only to the mechanical excellence of the records, but as Ysaye states: "I recognize in every note my individual manner of expression."

The testimonial from Ysaye reads as follows: "It is my custom to consider deeply any and every proposition with which it is suggested that

my name be associated. The contract I made with you was the result of mature investigation. It is my belief that Columbia records are the finest made by anyone anywhere in the world. A word as to the records of my playing recently made by you—one thing is certain—in the recording and reproduction they are the best I have ever listened to. Your method of perpetuating the characteristic tone of the violin unquestionably excels all others. I recognize in every note my individual manner of expression. The records occupy a unique place in my esteem as artistic and scientific achievements. Accept my sincere congratulations and good wishes. (Signed) EUGEN YSAYE"

The first records of the world-famous violinist are listed in the advance list of Columbia April records, which are scheduled for sale on the 25th of March. Conservative members of the trade predict that they will prove to be the best selling records ever introduced. This success is well deserved, as they represent the playing of a violinist who will go down in history as a master musician and pre-eminently first in his chosen field. These first initial Ysaye records are as follows: Scherzo Valse (Chabrier); Berceuse (Lullaby) (Faure); Concerto in E Minor, Finale (Mendelssohn); Mazurkas, Op. 19 (a) Obertass (b) Menetrier (Wieniawski); Rondino, Op. 32 (Vieuxtemps); Hungarian Dance No. 5 in G (Brahms); Caprice Viennois, Op. 2 (Kreisler); Albumblatt (Wagner).

To those who have been fortunate enough to attend Ysaye's recitals the above numbers are familiar, and in view of his extended tour of the United States it can easily be realized what tremendous possibilities exist for the dealer in a sales way when these records are introduced.

Wanted—Live Dealers

There are about 1000 talking machines to every Sesco Stop in the country. There will soon be one Sesco to every 100 machines. Who is going to sell them in your city? The dealer who does should make a great deal of money.

We desire to allot exclusive territory to aggressive, ambitious dealers.

Write for interesting booklet.

ANNUAL BANQUET OF THE EDISON CLUB

Held Recently at the Lyceum in Orange, N. J., Attended by Thomas A. Edison and Three Hundred Others—Musical and Prandial Exercises Interesting—Letter to Members from Thomas A. Edison Enthusiastically Received—The Menu a Work of Art.

The second annual banquet of the Edison Club, which is composed of employes of the Thos. A. Edison Co., Inc., was held at the Lyceum, East Orange, N. J., the closing week of January. There were about three hundred present, with Thos. A. Edison as the guest of honor. With him on the stage were the Mayors of Orange, East Orange and West Orange. There was an interesting musical program interpreted by the various artists who make records for the Edison Co., and each and all seemed to do their best to make the great inventor realize that they were singing in his honor and for his benefit.

This was particularly true in the case of Miss

annual banquet is approaching, thus marking a milestone in the progress of your club.

"It is a source of much gratification to us to know of your success and to realize that the wholesome fraternal principles under which you organized have been so well observed that your club in the past year has grown from healthy infancy to lusty childhood.

"We extend our hearty congratulations, together with good wishes, for your future prosperity and usefulness."

The menu, by the way, was a work of art, and consisted of twenty pages of original matter, which was full of "hits" cleverly written and

McChesney, in which he spoke of Edison as "the greatest man living." The members of the entertainment committee having charge of the program were: W. F. O'Connor, chairman; Frank E. Evans, E. L. Walker, Fred Pullin and J. E. Sease.

Herbert R. Leisk is president of the Edison Club, William Courtney, treasurer, and Daniel J. Laushway, secretary. As may be inferred the Edison Club is composed of the employes of the big corporation which is under the management of Thos. A. Edison, and their annual reunions are always a source of enjoyment that are looked forward to with pleasure by the members.

AN ATTRACTIVE WINDOW

Arranged in Store of M. W. Waitt & Co., Ltd.,
Vancouver, to Celebrate Golden Jubilee.

M. W. Waitt & Co., Ltd., Vancouver, B. C., in order to celebrate the golden jubilee in business, arranged a special window display that attracted a

Great Gathering of Members of the Edison Club at Annual Banquet Held Recently, with Thomas A. Edison as Guest of Honor.

Elizabeth Spencer, the well known soprano, whose various numbers were sung with great feeling and were apparently enjoyed by Mr. Edison, for his expression with his hand to his ear taking in the sound, was strikingly like that in which he has been pictured in the now familiar trade mark.

The singing of the "Dixie Girls" quartet was also delightful; and the entire musical program was one of enjoyment. As is customary Mr. Edison made no speech to the "boys," but addressed them through a letter as he did at the last banquet, and a facsimile of which was printed in the menu. This communication, which was received with enthusiasm, also bore the signature of Carl H. Wilson, vice-president and general manager of the works, and was as follows:

"As we stand upon the threshold of another year we are reminded that the time of your second

abounding in quips largely of a local flavor. There were also several illustrations, one in particular, a double-page cartoon by Ray Morris, one of the entertainers, who featured just what happened on January 2d, when Edison assumed control of his various enterprises. It pictured Edison standing in his characteristic attitude, with hands in pocket, listening to the plaint of his chief subordinates, while everybody from the porter to the heads of the departments is hustling under the eye of the new "boss."

Thos. J. Leonard was master of ceremonies, and fulfilled his responsibilities most admirably. In addition to announcing the numbers on the program, he read a number of telegrams that were hits on the members of the club. One "real" telegram was that sent from Denver, Col., from the former president of the club, Leonard W.

great deal of attention. As the occasion was near Christmas, the window took on much of the holiday spirit and was decorated to represent a snow scene. The foreground showed a large sleigh drawn by a Cariboo elk, loaded with a piano, Edison Opera, and Victor IX, while two sacks filled with records had scattered over the snow on the ground. The sides were fenced in and tufted with snow, making the display very realistic.

The background showed a house with Santa Claus getting down the chimney, with an Edison Gem, and through the window could be seen a little boy and a Victor dog looking into the red fire. The window had extra lights, all told about 720 candle power, and so was very bright and attracted attention even from the crowds across the street. A noticeable result was the number of Edisons and Victors that the display sold during the week.

TO FILL ALL DEMANDS FOR EDISON DISCS SOON.

Perfecting of New Electro-Plating Process Will Enable Company to Fill Long Delayed Orders—Enormous Demand for Edison Disc Phonographs and Records in All Parts of Country—Frank K. Dolbeer Enthusiastic Over Popularity of the Edison Products—Many Visitors to Factory Recently Who Place Orders and Want Early Deliveries.

Those new gray hairs one sees on the heads of various executives in the phonograph sales department of Thomas A. Edison, Inc., can be directly traced to the new disc records and the standard set for them by "the Old Man." Long ago the recording experts and the members of the sales department and representatives of the jobbing and retail branches of the trade tried out the latest bunch of records and declared them to be perfect and well worthy of being placed on the market without a single apology. Then Mr. Edison stepped in and said they wouldn't do for his O. K., with the result that shipments were again held up, while further mechanical experiments and improvements were made.

The sun is beginning to shine again, however, for a week or so ago Mr. Edison declared that he had perfected a new electro-plating process which had begun to work smoothly and would soon be taking care of records fast enough to meet all demands. In the new plant, which is declared by experts to be a marvel of ingenuity, there are no chances taken with the danger of having foreign substances find their way into the record material, for all the materials and even the air which enters the room is filtered and cleansed with particular care.

With the new plant working smoothly and the pressing department going at full speed the prospects are that the trade will begin to receive records in satisfactory quantities at a very early date.

Meanwhile through the medium of letters, telegrams, telephone messages and even personal calls, the jobbers and dealers all over the country are making strong appeals for records to supply those who have already bought machines, to say nothing of records for stock. The sale of machines, even without records, has reached wonderful proportions, and the machine plant, already busy with current and stock orders will be completely swamped when the records are turned out in quantities, according to those connected with the selling end. One New England dealer has succeeded in placing over a dozen machines, though his entire stock of records consists of two, which he holds on to for demonstrating purposes, and other dealers have met with the same experience.

Meanwhile the representatives of the sales department are giving demonstrations of the new

machines and records at various points throughout the country and although the new contracts are such as will ensure the dealer paying strict attention to business if he is to make good, each demonstration is followed by applications for agencies from dealers who attend and hear the results of the new Edison products.

Frank K. Dolbeer, manager of sales, is thoroughly enthusiastic regarding the manner in which the Edison disc phonograph has been taken up by the trade and the interest shown in it by the public, the most difficult work at present being to select those best qualified to handle the line in certain sections from among those anxious to secure the agency.

Among the visitors to the Edison Phonograph Works in Orange during the past month were:

THEO. HARDEE APPOINTED CHIEF

Of the Liberal Arts Department of the Panama-Pacific Exposition—Appointment Pleases Piano Men, as Mr. Hardee Was for Some Time Connected with the Trade.

Members of the talking machine trade on the Pacific coast are especially interested in the announce-

Theodore Hardee.

ment of the appointment of Theodore Hardee as chief of the department of liberal arts of the Pan-

C. B. Haynes, Richmond, Va.; H. G. Stanton, Williams & Sons' Co., Toronto, Ont.; H. Phillips, Greenwich, Conn.; Carl E. Peck, J. H. Parnham and Fred. H. Lohr, Hardman, Peck & Co., New York; C. N. ama-Pacific exposition, to be held in San Francisco in 1915, in view of the fact that Mr. Hardee was formerly connected with Eilers Music House. It is expected that his former connection with the trade will result in adequate arrangements for the display and proper exploitation of the pianos and other musical instruments at the exposition.

Mr. Hardee, moreover, has had wide experience in exposition work and has spent much of his time recently traveling in Europe in the interests of the Panama-Pacific exposition, on which mission he has met with great success.

RECORDS FOR POSTERITY.

Prof. Ferdinand Brunot, of the Sorbonne, Paris, is establishing a museum of voices or "archives of oratory," with a view to preserving for future generations the voices and words of today. He believes the phonograph as wonderful an invention as Gutenberg's printing.

Beginning with a small donation from a private individual and \$400 from the university, he made a tour collecting French dialect discs. Now he is making a collection of 800 discs on a tour of the world from Pekin by way of America, including even Sioux Indian legends.

This collection he means shall embrace every spoken language of the world. He hopes to make it as complete as the National Library. Every dialect representing every national character, statesman, preacher, actor or orator is to be collected in this vast phonographic museum.

RECORDS OF STANDARD SELECTIONS BEST SELLERS.

This Is Demonstrated by the Increasing Demand for the Old-Time Operatic and Standard Musical Numbers—A Natural Reaction from the Ragtime Craze—Use of Fibre Needle Grows in Favor—The Detroit Trade Viewpoint—Dealers Assisting Patrons.

(Special to The Talking Machine World.)

Detroit, Mich., Feb. 10, 1913.

A feature of the talking machine business in Detroit recently has been a gain in the sale of the standard records of back catalogs. "We sell about 20 per cent. more of them than we formerly did," said K. M. Johns, manager of the Columbia jobbing and retail house here. The managers of other stores made estimates varying but little from this.

The Columbia people are making a special campaign on the best records of the earlier output. With every catalog of new records they send a circular entitled, "Standard selections that ought to be in every collection." In it are listed the songs and other renditions that go on from year to year and from generation to generation—the kind that live forever because of their intrinsic worth. The name of the artist does not matter so much with these records, if he or she was a good one. It is the music that counts.

"The trouble with practically all parties, upon buying their first talking machine, is that they select a lot of the songs of the day for their first assortment and soon tire of them," said Mr. Johns. "They buy another lot and tire of them also. Then they wonder why. They begin to select more carefully, asking the advice of the salesman. The latter offers them the music of quality. They try it and get wise and begin to build up a library worth while. They pay more attention to the old catalogs than they do to the new ones. From the new ones, of course, they take whatever standard productions may be offered.

"It is less difficult to educate the public to the best music in talking machine records than in sheet music. In the sheet music the lower grade, the so-called popular productions, have a low-grade

price. But a talking machine record can't be bought for 10 cents, or a quarter. If it has rag time on it, played by some one well known, it costs as much as though it carried grand opera. Few ears and few brains are so dull that they cannot soon distinguish between the classes, and the price being equal they take the superior music."

"Caruso's best selling record is his first one, from the opera "Martha," said Manager Harry Rupp, of the talking machine department of Grinnell Bros. "Quality counts in talking machine records, not age. Caruso has made dozens of records since, all good, of course, but it happened that his selection for his first record was his best. The public recognizes this and continues to buy it, year after year. Records of Sembrich, Calve and others go in a similar way. They are all good, and they all sell continuously, but their best ones sell in greatest quantities, even if made years ago."

Another thing upon which the public has, too, become educated is in the use of the fibre needle. Some of the talking machine buyers are too impatient, and get disgusted with the fibre needle before they learn wherein lies its best value. A record does not play as well in its first time over with a fibre needle as with a steel point. It must be played three or four times. Then it will render beautiful, soft music. It is plainly evident, from the results of demonstrations, that most people like soft music, but a large number of them get disgusted with the fibre needle before they learn how it works. The dealers are teaching them this. They sell them records that have been "broken in," as examples. So the use of the fibre needle is increasing, in spite of the fact that it costs more originally. As it can be repointed, however, users who have the patience to do so can make them cost less than steel points.

DISC RECORD ALBUMS

ARE WHAT EVERY

Talking Machine Owner

NEEDS AND MUST HAVE

With the index they make a complete system for filing away all disc Records, and can be added to, Album by Album, as Records accumulate, like books in a library.

The dealers are assisting their patrons by issuing classified lists of records. Their customers who like opera songs can find the titles bunched; likewise the people who like sacred music, comic music Southern melodies, or any other sort. It saves them searching catalogs and assists business by speeding it along. This is of more consequence than might appear on the surface in view of the large demands made upon the salesmen of all stores for demonstrations.

HOW VICTROLA WAS SELECTED.

Music From Talking Machine Store While Thaw Was Attending Court in White Plains, N. Y., Results in Purchase of Victor Outfit for His Own Amusement.

The Victrola, which, as announced in the daily newspapers, was secured by Harry K. Thaw, for his entertainment while confined at Matteawan, came from Hunt's Leading Music House, White Plains, N. Y. When Thaw was in White Plains some time ago for the purpose of appearing before the court in an action to secure his freedom, he was entertained by the evening Victrola concerts given in Hunt's music house, near which his rooms were located. When he returned to Matteawan, Thaw received permission from the authorities to have a talking machine in his quarters and the order to Hunt's Leading Music House resulted. It is said that the music is having a most beneficial effect on Thaw.

DON'T GET THE HABIT.

The second doing of a thing is always a little easier than the first, and the tenth time it is easier than it was the second. This applies to losing your temper, driving nails, memorizing one of the psalms or learning to smoke. Whether the act in question is good or bad, whether it calls into use mind or muscles, each repetition makes the doing easier. Be on your guard against doing twice the thing you do not wish to continue indefinitely.

Columbia profits, whether on records or instruments, never give you a moment's uncertainty. They are positively fixed, and you know before you sign your contract what rate of profit will come to you.

From "Music Money"—a free book you ought to have.

Columbia Graphophone Company

TRADE CONDITIONS IN BALTIMORE.

Reorganization of the Sanders & Stayman Co., Inc., Enlarged With Ample Capital, One of the Important Items of the Month—Handles the Victor and Columbia Lines—Dealers Without Exception Well Satisfied Regarding Trade for January and the Outlook for This Spring—News of General Interest.

(Special to The Talking Machine World.)

Baltimore, Md., Feb. 5, 1913.

There has been no decided falling off in business during January as compared with December, but in a comparison of figures with January of 1912 the past month has shown a handsome increase. This is, in short, the substance of statements made by all the Victor and Columbia dealers, while the same old complaint of lack of sufficient machines is still prevalent.

Albert Bowden, who has charge of the talking machine department of The Sanders & Stayman Co., Inc., states that both the Victor and Columbia lines, which his concern handles, have been greatly in demand and that the prospects are excellent for an indefinite continuance of these good results. High-grade record trade is also good.

This old-time house has just been re-incorporated. It was formerly Sanders & Stayman, but by the reincorporation it is now The Sanders & Stayman Co., Inc. G. Wright Nicols, former president, has resigned in order to devote his time to traveling and his brother-in-law, Charles H. Dickey, a prominent business man of Baltimore, is president. Albert M. Doty is secretary and

William B. Turlington is treasurer and manager. Mr. Turlington will be the active head of the firm and has mapped out a most progressive campaign, both for the talking machine and piano departments, the firm also being local representatives for the interests of Steinway & Sons, of New York.

Thomas Gordon, proprietor of the Gordon Talking Machine Co., announces that January was a good month for the Victor and Columbia machines, which he represents, and that this month showed a substantial increase over the same month of 1912. Joseph Fink, head salesman for the Gordon Co., made a number of good sales, including a number of high-priced machines.

"Just say for me that there has been no let up in the good results that have been obtained for the past five months." This is the way Manager Denison, of the local branch of the Columbia Graphophone Co. states matters. Mr. Denison says that January has shown up remarkably well and there are enough prospects to keep his force going at a lively rate for an indefinite period.

At the local store of E. F. Droop & Sons Co., Victor representatives, Manager W. C. Roberts stated that the business has increased to such an extent that he finds it necessary to put in a number of new demonstrating rooms. This work will be started immediately and will be completed within a short time. Mr. Roberts will make a trip to the Victor factory some time this week.

M. Silverstein, who has charge of the talking machine department of Cohen & Hughes, handling the Victor line, is still kicking about his inability to get in enough machines to supply his customers.

January was a great month for the firm and a number of orders have not yet been filled because of the shortage of machines. Cohen & Hughes are making a number of changes in their store, including a re-surfacing of the floors and new papering of up-to-date patterns, including a number of musical figures on the borderings.

BUSINESS STEADILY GROWING.

Simplex Start and Stop Device Becoming Popular, According to Manager Kirkman, of the Standard Gramophone Co., Who Tells of the Company's Progress.

"Our business is progressing very nicely," stated Thomas W. Kirkman, manager of the Standard Gramophone Co., 173 Lafayette street, New York, in a chat with The World. "Our list of clients is increasing each day, and we are adding the names of firms and individuals prominent in the talking-machine and piano fields. The best part of this steady growth in popularity of our Simplex start and stop device is the fact that every user of our device is well satisfied with the results received, and we are in receipt of many letters from our clients commending the construction of the Simplex and stating that their customers are more than pleased with it.

"One of our traveling force recently returned from an extensive trip through New England, where he was successful to a marked degree. As a result of his trip in this territory we have placed our device with practically every jobber and dealer of importance in this part of the country. One of our road force is now in the Middle West where he reports excellent prospects in our field, while another one of our travelers is at present visiting the Southern trade. As a result of this road work, we feel that we are in a position to state that our device will be shortly on sale in every city in the country with a population of 50,000 or more. We are planning an extensive newspaper advertising campaign in order to assist our trade as much as possible, and the results of our first few weeks newspaper advertising have already convinced us of the desirability of enlarging our publicity plans in the very near future."

11,000 MILES OF FILMS.

Produced by Use of Moving Picture Theaters Last Year in the United States.

The United States is the largest producer of moving picture films in the world, according to figures which have just been compiled by the Bureau of Statistics. Besides the millions of feet produced for the thousands of moving picture theaters that dot the land, it produced last year for export more than 60,000,000 feet—approximately 11,000 miles—or almost half the circumference of the globe. More than three-fourths of the films exported went to the United Kingdom.

HANDLING TALKING MACHINES.

Layton Bros., of Montreal, Can., have recently opened a Columbia and Edison department under the management of R. S. Dudley. A complete line of machines and records will be carried in stock at all times.

The name describes the needle and the needle fulfills its tone— The PURITONE Needle.

FURNISHED in Puritone or your own envelopes packed in different sizes. Quality guaranteed. Price popular. Dealers can secure a sample package free. Send jobber's name with letter. Remember, a quality needle will help you; it means a profit and a following.

THE following is a new selling idea for needles, packed exclusively by us:

Instead of selling 100 or 200 needles at once, sell a thousand. We pack 1,000 assorted needles in a box, each box containing 200 of Extra Loud, Loud Opera, Medium and Soft. This is the "Special" Dean Packing. You can sell 1,000 instead of 100 and thus get 10 times the business.

Want the Puritone Needle samples?

BUSINESS CONDITIONS BETTER THROUGHOUT MICHIGAN.

Indications in the Leading Stores of Detroit Are for a Business This Year Far Better Than That of 1912, Notwithstanding the Colossal Record That Will Have to Be Eclipsed—Working to Put an Extinguisher on the Oldfield Bill—H. J. Turnell & Co. Has the Columbia Line—Sixty-four Per Cent. Increase in Grinnell Business—Other Items.

(Special to The Talking Machine World.)

Detroit, Mich., Feb. 10, 1913.

Sales of records always are brisk in January because of recipients of Christmas talking machines stocking up with operating material, but in the January just closed they were the best in history. The condition of business seems to be better throughout the State, also, for January collections were equal to or better than those of December in all jobbing houses. December generally is the star month for collections, as most dealers are in position, through active cash business, to discount all their December bills.

"Some people probably will ascribe the improved business conditions out in the State to the good crops of last year," said one manager. "That is the stock reason which generally is given for unusual business activity outside. But I think it is due to a more intelligent conduct of business. Any man can succeed in any good business with a little experience and a lot of intelligence. When we see firms in the talking machine business going to the wall, we can make up our minds that it is because the business is not conducted along intelligent lines. The phonograph business is a going one to such a tremendous extent that no sane person in it need fail."

The indications in all the stores are for a business this year far better than that of 1912, notwithstanding the colossal record that will have to be eclipsed. "We are getting unusually desirable inquiries by mail from business men up in the State who desire to take on talking machines," said Mr. Johns, of the Columbia Co. "This is as good evidence as I want of what is before us. When they come after us, instead of waiting for us to go after them, it is a pretty good sign.

"It doesn't make much difference what business a man is in, if he is capable he can make a success of the talking machine business. I think the ideal place for talking machine agencies is in piano stores, but the policies of the piano manufacturers prevent us placing them in piano stores in small cities. The chances are about ten to one that the piano dealer is handling consignment stock and isn't worthy of a line of credit individually. So we have to go to the furniture store, or some other place where the proprietor owns his stock."

The Columbia Co. made a promising connection in Jackson February 1, placing their line with H. J. Turnell & Co.

Grinnell Brothers almost doubled their purchases from the Victor Co. in 1912, as compared to the figures of 1911. The exact percentage of increase of business was not available, but the increase in the Grinnell branch store here on Monroe avenue was sixty-four per cent. The trade is of the pleasant, eager kind; no grumbling about high prices; no charges of "a trust," in spite of the aims of the Oldfield bill to forbid alleged price fixing. People buy talking machines because they like them at the price at which they are offered and think they are getting their money's worth. They don't care for a cheap foreign machine.

Detroit business men have done their share toward putting an extinguisher on that Oldfield bill. About every man of consequence in the city has written to the Michigan Congressmen urging opposition to the measure. It is believed that it is dead. Certainly it won't be brought up in the fag end of the present Congress, nor in the extra session. And it is believed that the new Congress will not bother much with the hobbies of the expiring one.

An old fad of musical critics, of saying, when a singer happens to be in poor voice, that she, or he, "sounded like a phonograph," was put to the bad here this week. A prominent concert singer gave a recital here, and having a slight cold, did not make a favorable impression. The talking machine dealers are now playing her records in demonstrations, and calling attention to the fact that if the real "best" of the singers is wanted, the place to go for it is to a talking machine, for a singer always is at his best when he sings for a record. If he wasn't, his services wouldn't be accepted. There are no disappointing "off nights" with the records.

DEMAND FOR FOREIGN RECORDS.

Accompanying its regular list of April records, the Columbia Graphophone Co. sent out to dealers this week the foreign record catalogs, which it now has ready for publication, and a special order blank.

The Columbia Graphophone Co. issues foreign records in twenty-nine different languages, or dialects, and this department has grown to such proportions that Anton Heindl, who is in charge of the foreign-record division, was obliged to move his office to the Columbia laboratory at 102 West Thirty-eighth street, New York, in order to be in close proximity to the actual production of the records.

Columbia dealers throughout the country are taking an active interest in the development of their foreign record clientele, and many dealers have found it profitable to devote a considerable part of their newspaper publicity to the presentation of foreign records. The 29 foreign languages that are now catalogued by the Columbia Graphophone Co. are as follows: Armenian, German-Austrian, Bohemian, Chinese, Croatian-Serbian, Cuban, Danish, Finnish, French-Canadian, Greek, Hawaiian, Hebrew-Jewish, Hungarian, Italian-Neapolitan, Japanese, Javanese, Lithuanian, Mexican, Norwegian, Polish, Portuguese, Roumanian, Russian, Ruthenian, Slovak, Swedish, Spanish, Turkish, Welsh.

SHORTAGE OF MACHINES AND RECORDS PREVAILS.

Is the Report of Cleveland Dealers, Who Closed an Excellent Business for January—U. S. Phonograph Co. Notes Increased Appreciation of Its Products—An Interesting Victrola Booklet—Columbia Co. Pushing Energetically After Business in Ohio—What Leading Concerns Have to Report Regarding Conditions Present and Prospective.

(Special to The Talking Machine World.)
Cleveland, O., Feb. 10, 1913.

General conditions in the talking machine trade are healthy and compare favorably with those in any other line of business. Most of the dealers are, as they have been, still handicapped by a shortage of both machines and records, but since the first of the year some relief has been afforded, as the desired styles have been coming forward more freely. Business continued good all through January and this month will prove quite as prosperous. The record business is good and growing to immense proportions.

At the time when the talking machine was crude, the industry in its infancy and just developing, Geo. J. Probeck started in the talking machine business and is the first and oldest dealer in Cleveland who has been continuously in the trade. He was the first to handle Columbia goods in this section, and since 1900 had sold these goods exclusively, either on his own account or as agent for the company, until two years ago. Since then he has had the management of Dictaphone, from which position he retired Feb. 1, but continues with the company in that department.

G. M. Nesbitt, of the United States Phonograph Co., reports business is moving along prosperously at the company's factory. Demand for the United States Royal and United States Rex machines continues unabated and the company is now confining its output to those two styles, which seem to meet all requirements. The products of the company are in high favor with dealers who are handling them.

President T. H. Towell, of the Eclipse Musical Co., wishes he were able to obtain more goods, sure that the sales will take care of themselves. The wholesale department, under the able supervision of P. J. Towell, is doing a prosperous business.

One of the most attractive and interesting uses that the Victrola has been put to in Cleveland is the lecture on "Musical Appreciation," given by Mrs. Parr, musical supervisor of the Cleveland public high schools. In these lectures F. E. Lane, of the Eclipse Musical Co., assists her by illustrating her ideas with the Victrola. These talks and demonstrations have proven so interest-

ing that social clubs, lodges and churches are very anxious to have Mrs. Parr give this fine illustrated lecture. In a school where Mr. Lane placed a Victrola a stereopticon is being used in conjunction, showing scenes from operas which the instrument rendered.

The Columbia Co. is energetically going after the business of Northern Ohio and is meeting with great success. In the wholesale, retail and educational departments trade is lively and continually improving. Mr. Madson, manager, says the retail business kept up remarkably well throughout January, making a very considerable gain, and he thinks February will show still further gains. C. A. Routh sold a Columbia machine to the Lakewood school last week. The principals here are enthusiastic and anxious to have Mr. Routh visit their schools. He has made a success of taking the schools, grade after grade, and showing the teachers how to lessen the arduous labor of their every-day work.

Conditions at the distributing Edison warerooms of Laurence A. Lucker are practically as have existed for some time. A. O. Peterson, manager, said: "Business is fairly good and would be fine if we could supply the demand, but we are seriously handicapped in that we are unable to obtain the disc records. We are also unable to supply the demand for Blue Amberol records, although we are taking all the factory can furnish. We have a fair supply of the disc phonographs in stock, but it would soon be exhausted if we had the records. Orders are coming in very freely and we have a large number booked for delivery as soon as the goods arrive."

T. A. Friedlander, manager of the Bailey Co. talking machine department, is very optimistic about the trade. He stated there had been no cessation in the volume of business since the first of the year, that in fact they had been as busy during the past month as they were in December. Sales of Victrolas VIII and X, and the Edison disc and Amberola, are especially good.

The talking machine trade of the Hart Piano Co. is steadily increasing and it is receiving the close attention of the company. The manager stated demand was excellent all along the line for Victor and Edison machines and records.

"Splendid business," is the terse expression of Miss Ethel M. Volk, manager of the talking machine department of the Macy Co. "The volume of our trade each month is exceeding that of a year ago."

Wm. Taylor, Son & Co. is building up a fine trade in the talking machine department. The manager reports large sales of Victor machines and records.

The Caldwell Piano Co. is doing a prosperous business in talking machines in connection with the piano trade.

Bessie M. Brabler, in charge of the talking machine department of the Collester & Sayle Co., said the demand for Victor machines and records was good, but that the company had been able to only partially meet it. Phil Dorn, manager, visited the Victor factory last week and secured a shipment of machines and records, which is now arriving and replenishing the denuded warerooms.

Charles I. Davis, music publisher and jobber, who conducts a chain of 15 retail stores, reports that he did the largest volume of business last year since he has been in the trade. The talking machine end especially has been more than satisfactory in the stores where he carries the Victrolas. He contemplates installing the Victrola line in several of his Eastern stores in the near future. His stores are all equipped in the most stylish and attractive form, and are located in the midst of the shopping districts. He finds that talking machines and records fit in most admirably with his other musical specialties.

You don't have to go down on your knees

and fairly beg us to send the goods when you give us an order. We won't put you off with promises; we won't keep you "up in the air".

There's never a bit of uncertainty about what will happen to any order you intrust to us. You can always measure our service by this invariable rule—all goods shipped the same day the orders are received.

Send us an order and you don't need to give it another thought. You can go right on tending to your business with the assurance that the goods will come in on schedule time.

That's what makes us so "solid" with our dealers. Our business is conducted along the lines of quick and efficient service, and our stock of Victors, Victor-Victrolas, Victor Records, record cabinets, needles, fibre cases, horns, repair parts and other accessories, is always kept up to the mark so we can instantly meet all demands that are made upon it.

Our catalog will be of interest to you. Write for it to-day and we'll also send you our booklet, "The Cabinet That Matches".

Tribune Building, New York

THE REPRODUCER AND ITS CONSTRUCTION.

Many Enlightening Facts of General Interest to the Talking Machine Dealer, and Others, Set Forth in Technical Description of New Columbia Reproducer—The Importance of the Diaphragm and the Care Necessary in Selection—The Creation and Reproduction of Sound a Marvelous Phenomenon and Its Reproduction Is Most Important and Vital.

Sound reproduction as applied to the talking machine is to many somewhat of a mystery. Too few have concentrated on this most vital feature of the talking machine, hence the value and importance of an article which appeared recently in the Columbia Record, and which, while referring specifically to the Columbia Co.'s new reproducer, treats in a broad way of its important functions. The data therein has an enlightening and educational value which makes it of exceeding interest, hence its reproduction in part as follows:

"Sound, generally speaking, is created by frictional rubbings or by a blow of some kind, the results of which are made manifest by certain vibrations, which in turn disturb the air and set up a wave movement, the air thus acting as a medium of travel for the sound so created. Different sounds are represented by a difference in the number of vibrations per second, with a resulting difference in the form of the sound wave.

"Sounds are audible to the human ear from about thirty vibrations per second to 16,000 or 20,000 per second, but in music, sounds are used only for about seven octaves; that is, from forty vibrations per second to a little over 4,000 per second. That is the range of vibration in sound that a reproducer has to reproduce. That means that the little needle-arm on every Columbia reproducer has to make anywhere from 4,000 to 40,000 vibrations or blows on the diaphragm every second and to jump from perhaps 40,000 to 4,000 in the thousandth part of a second. Wonderful as this fact in itself may seem, still more wonderful is the fact that all the different vibrations from the instruments in an orchestra are carried into one wave line on a record. One might suppose that as each instrument has a different tone wave and a different set of vibrations for each note that such a confusion of sound would be set up when they went through a recording instrument as would result in nothing but a conglomeration of noise. That is not the case, however; because when the sound of an orchestra is recorded it imprints on the wax record a single wave line corresponding to the complex sound wave formed. In other words, there is one general sound wave formed of all the other sound waves. That wave precipitates itself on to the diaphragm of the recording instrument and that produces in the wax record a single wave line corresponding to it. This in turn is used in connection with the reproducer in such a way that it throws off the same identical sound that was put into the original wax.

"This is brought about by putting a pointed needle in the groove of the finished record and allowing the record to rotate under the needle at the same speed at which the record was made. The wax groove causes the needle-arm to vibrate against the flexible diaphragm and this in turn agitates the air on the inside of the reproducer, but setting up vibrations, corresponding vibrations

and tone waves. The air into which those vibrations are shot has only one means of exit, and that is through the tone-arm and horn.

"In designing a reproducer amplitude must be considered; that is, the maximum and minimum length of stroke to be made in order to get perfect vibration for long or short tone waves. In other words, for loud or soft tones.

"Right here is where we come to one of the most difficult things in designing a reproducer. If the diaphragm is too thick there is not enough elasticity to give a full stroke. The result is a tubby sound. On the other hand if it is too thin we have a raspy or edgy sound. And at no point in the operation of a needle-arm must the diaphragm be subjected to any mechanical strain. The elasticity must not be hampered in any way. Also in order to get purity and volume of tone and freedom from blast the needle-arm itself must be unhampered by any useless inertia. In other words, it must be balanced on the pivoting or fulcrum point. The weight of the needle-arm from the needle point up to the fulcrum and the weight of the needle-arm from the fulcrum to the center of the diaphragm, including the diaphragm, must balance each other perfectly. To test this take our new reproducer and put a diaphragm upon it and then pivot it on centers and it will be found that we have practically obtained this balance which is a new feature in reproducers.

"One of the most important factors in the new reproducer is the needle-arm, which is nothing more or less than a section of a tuning fork. It is made of one solid, continuous piece of metal and there is nothing in the world that can make a needle-arm so perfect in its vibratory action as a piece of tempered steel for the simple reason that this has all the vibratory qualities of a tuning fork. This is exactly what is required, for we are using this needle-arm for the sole purpose of transmitting various vibrations at wide variations and it must be responsive and sensitive to every vibration that we want to reproduce, whether it be 4,000 or 40,000 a second. The fact that our new needle-arm is made out of one solid piece of dropped forged steel accounts in a large measure for its sensitiveness and also for the clearness and fullness of tone. So much for the method by which the reproducer gathers up the sound. Now for the method by which it disseminates it. Here we use a natural means to transmit the vibrations of the diaphragm to the open air of the room. Therefore every consideration must be given correct proportions. First, the air chamber under the diaphragm next to the tone-arm must be absolutely air tight. To secure this we have designed a moulded gasket cut of solid rubber, instead of using rubber tubing. This rubber carries a little groove near the bottom and in this groove the diaphragm is placed, being carefully centered. This gasket is a little smaller than the inside of the reproducer head so as to still

further insure freedom in centering the needle-arm in the diaphragm.

"When this gasket is put into the reproducer and a spring ring inserted on top, it makes a perfect packing for the air column under the diaphragm, and in this way we get not only no variations in the manufacture, but, at the same time, we are assured of the uniform tone quality to every reproducer made. The gasket also serves to insulate the diaphragm absolutely from contact with the metal of the sound box. The diaphragm, of course, must be absolutely free to receive vibrations or the taps from the needle-arm, which, as said before, run anywhere from 4,000 to 40,000 per second. If there is any mechanical strain on the diaphragm it will alter its tone according to the nature of the strain; therefore our diaphragms are assembled first into the rubber gasket perfectly free from all strain. The rubber gasket is then put into the reproducer head, which is a trifle larger than the gasket, so that before the needle-arm is attached there is a little movement obtainable from the diaphragm inside the rubber gasket and from the rubber gasket inside the reproducer head. This enables us to assemble our needle-arm on the pivot and then let the point of the needle-arm come down in the diaphragm absolutely free in the center hole without putting any strain on the diaphragm. In this position it is then soldered with a small drop of solder. After the assembly is complete the diaphragm lays absolutely free from any mechanical strain due to construction. In this way we get the full swing of the diaphragm with all the loud tones and absolute sensitiveness, for the weaker tones or notes of short amplitude. This center fastening is made possible by the use of a small frommet in the center of the diaphragm which is put on the diaphragm before it is assembled into the rubber gasket and is used to solder the tip of the needle-arm to the diaphragm after complete assembly has taken place.

"In addition to these improvements we have carefully figured out the weight of our new reproducer in conjunction with the new tone-arm so as to give freedom from blasting in this respect. The weight of the new reproducer being four and three-quarters ounces.

"One more point in connection with our new reproducer is the angle of the needle. We have found this of great importance, both from a reproduction point of view and from a record wearing point of view. For instance, if a needle is set at 35 degrees it will wear out the record a third faster than when it is set at 30 degrees. Therefore the angle of 30 degrees is now our standard."

"TALKER MUSIC" FOR CHOIR.

(Special to The Talking Machine World.)

Battle Creek, Mich., Feb. 6, 1913.

Learning that he would have no choir Sunday because the leader, Mrs. Maude Pike Alden, had resigned, the Rev. William H. Phelps of the First Methodist Church advertised music by prominent New York singers. The pastor used a talking machine. While some of those present went away talking adversely about "canned music" in church, most of them were well satisfied.

NEWS HAPPENINGS IN QUAKER CITY.

Business Activity Pronounced During January and the Outlook Excellent—This Applies to All Establishments and to All Makes of Machines and Records—Interesting Review.

(Special to The Talking Machine World.)

Philadelphia, Pa., Feb. 9, 1913.

The talking machine business in this city in January was most gratifying. The dealers all did more business than they had done the previous January, and the only complaint is about the difficulty in getting goods, and even that is being relieved as rapidly as possible. The handicap seems to have come with the big holiday business during which time the retailers were not able to supply by any means the demand made upon them. At every store there was a shortage. The better part of January was spent in trying to satisfy those who had made purchases in December, and naturally they were given the preference over January sales, so that when the month went out there was a number of orders held on the desks that could not be filled.

The dealers take a most hopeful view of the situation and believe that they will be able, during February, to catch up, although thus far the demand seems to be growing rapidly. The Philadelphia-Chicago Opera Co. returned to Philadelphia on Monday evening of last week. From this on for a number of weeks there will be five performances of opera each week, and already there is an increased demand for operatic records.

Manager Elwell, of the talking machine department of the Heppes, states that they have had plenty of business in January, but the great majority of the stock they were able to get has had to go towards filling orders which were held over from their Christmas business. Among the visitors to the Hepe department were Charles McLaughlin, of the Stall Blank Book & Stationery Co., Trenton, N. J.; Harry F. Cake, of Pottsville, and J. Harry Halt, of Pottsville, Pa. They all report that the talking machine business in their various cities has been excellent, but they complain of their inability to get sufficient machines and records.

Mr. Elwell says that the Victor people are doing very much better by the retailers than they did last year, but the business is growing with such rapid strides that it seems utterly impossible to keep up with it on the part of the manufacturers, and if things keep on as they have been increasing it may possibly be necessary for the Victor Co. to purchase the whole of Camden to get a plant sufficiently large.

The Pennsylvania Talking Machine Co. has been having quite a phenomenal business. It is very much larger than it was last year. Their new road man, Charles Gorham, has been doing most excellent work and has been able to establish a number of new dealers in the firm's local territory. Manager W. L. Eckhardt says that they started off the new year a little quiet, but after the first ten days business began to take a spurt and they finished up a very good month.

The Pennsylvania Talking Machine Co. has received the first shipment of the new Columbia Grand, which has been attracting all kinds of attention, not only from the public who are interested in instruments of this character, but from many competitors who desire to examine it.

Mr. Eckhardt says that when he came to Philadelphia he imagined that his company had too much room, but the way business has been increasing they find themselves constantly handicapped for space, and they have been compelled to still further double-deck the store to add to the room.

Manager Frank Butler, of the Strawbridge & Clothier house told me this week that they have been doing very well with the Columbia and that they are now adding a great many new racks to their stock department in order that they will be able to carry a full line of the Columbia records, as they have been doing the Victor.

Lit Brothers are planning two additional hearing rooms for their talking machine department, and have been given considerable additional floor space. The present manager, Harry Hovey, is

SHEIP & VANDEGRIFT, Inc.

PHILADELPHIA, PA.

likely to be transferred to the music roll department of their player business, which has been growing so rapidly and in which they have recently almost doubled their space in racks.

The manager of the talking machine department at Gimbel Brothers reports that they have been doing a very good business ever since the holidays and they made a big increase over their January business of last year, although last January they had the memorandum proposition at work. They have no complaint coming regarding their ability to get goods, but they are still short on the \$200 machines, upon which they have not yet been completely able to fill their holiday orders. David Davidson, who has been connected with the Gimbel talking machine department for some time, has left the city and has accepted a position in Montreal, with the Berliner Gramophone Co. He will travel for that company. They have found a renewed interest in the public school business, and just recently they closed with six schools.

Manager Walter Lipton, of the Estey talking machine department, is very well satisfied with January sales at that store, and while there is no

comparison to be made with other years, yet their January business ran ahead of what he had anticipated. The new organ is now installed in the concert hall and he expects to use that hall, in conjunction with other instruments, in a series of most attractive concerts for which he expects to be able to secure the Columbia grand as a feature.

Business has been very good with Louis Buehn & Bro. They are still having some difficulty to get a complete supply of both Victor and Edison goods. They have also had a most satisfactory business on the Edison dictating machine, are advertising it heavily, and are placing it in some of the largest firms here. They have added two new men to their selling force, Joseph R. Bradley and Raymond Stark. They are having a large demand for the remodeled records which were formerly single face and are now being made into double-face records.

Manager Doerr, of the Weymann talking machine department is spending several days this week in south Jersey and is meeting with very good success; like the other firms here, the Weymann house has enjoyed a busy January.

Columbia Double-Disc records A-1260, A-1268, A-1267 from the March list—six up-to-the-minute hits that Columbia dealers will find as easy selling as cashing a certified check.

Columbia Graphophone Company
Tribune Building, New York

BECOMES GENERAL SALES MANAGER.

E. P. H. Allen Assumes This Position with the Keen-O-Phone Co. of Philadelphia—Has Had a Wide Experience and Good Record in the Piano Trade—His Territory Embraces Both Domestic and Foreign Fields.

(Special to The Talking Machine World.)

Philadelphia, Pa., Feb. 8, 1913.

E. P. H. Allen, a well-known member of the music trade fraternity, has been appointed general sales manager of the Keen-o-Phone Co., of this city. Although a comparatively young man, Mr. Allen has had about fifteen years' experience in the piano field, having been associated with such well-known houses as the Aeolian Co., Lauter Co.,

E. P. H. Allen.

Schubert Piano Co. and others, where his training has been in the selling ends.

Mr. Allen's specialty, and wherein he will have a wider scope for his ability, is in sales organization. He is a firm believer in clean advertising, a one-price system and efficiency in selling. In his recent fields of endeavor his record has been good, not only in producing, but in carving a reputation for himself as one who knows how to solve problems.

With the launching of a new selling force there will be a lot of hard work for Mr. Allen, as the territory under his jurisdiction embraces both domestic and foreign fields. His business policy as outlined above is of character and of the type that is desired in commercial activity. In addition, Mr. Allen has the esteem of the present working forces of the Keen-o-Phone, and as these are augmented it is his intention to so deputize affairs and personalities that will assist toward a smooth but aggressive and resultful campaign.

"One price to all, reinforced by clean advertising, is the byword of to-day's business," commented Mr. Allen. "One price means treating all customers alike and no customer asks any fairer service. A proper presentation of our products in a dignified way through advertising channels will reflect itself by the law of averages. Take those two factors and augment them by a well-defined selling organization and it represents the acme of this commercial era. The next few years will show the correctness of the foregoing policy."

SERMONS FOR STAY-AT-HOMES

Will Soon Be Made Possible Through the Aid of the Phonograph—Connecticut Congregationalists Use This Popular Instrument to Bring Lazy Sinners to Grace.

(Special to The Talking Machine World.)

Meriden, Conn., Feb. 9, 1913.

Congregational churches in Connecticut may soon put out "canned" church services for the benefit of "shut-in" and other parishioners who may be prevented temporarily from attending church. The Board of Trustees of South Church of New Britain, one of the largest and most influential parishes in this section, to-day took the phonograph scheme under consideration upon recommendation of A. W. Upson, one of the trustees of the church.

Mr. Upson reported that he had investigated the plan, that it was practical and would not be costly, as one machine and the records could be loaned to more than one family. He said the "shut-ins" he had talked with were delighted with the prospect of hearing the pastor's sermon and the choir's music in such form.

There is little doubt that South Church's lead will be followed by other churches. The Rev. Albert J. Lord and the Rev. Thomas B. Powell, pastors of the First and Center churches, respectively, said some way must be found to reach the "stay-at-homes," and that the "canned" method seemed as good as any.

Some parishioners of First Church now have telephone connection with the church, so that on Sunday they can enjoy the services as much as though they were in their pews.

Business is a machine—and a mighty delicate one—and must be kept well oiled to get results.

NOW COLUMBIA GRAPHOPHONE CO.

Name Is Officially Changed as Above, Commencing February 1.

In accordance with the action taken by the stockholders of the Columbia Phonograph Co. at a special meeting held on January 6, the official name of the company, beginning February 1, is changed from the Columbia Phonograph Co., General, to the Columbia Graphophone Co.

A PHILADELPHIA INCORPORATION.

The Peerless Phonograph Sales Co., Philadelphia, Pa., has been incorporated with capital stock of \$300,000, for the purpose of dealing in all kinds of instruments, tools, machines and devices for the production of sound.

THE "DROP-TRAY REGENT"

Is the Title of a New Model Which Has Recently Been Placed on the Market by the Columbia Graphophone Co.

The accompanying illustration portrays the latest addition to the extensive machine line of the Columbia Graphophone Co. It is entitled the "Drop-tray Regent," to retail at \$210. In construction and appearance it is exactly the same as the popular "Regent" model, with the exception that the new type contains a set of drop-trays for the filing of records. These drop-trays are at present a part of the "Nonpareil" and "De Luxe"

The Columbia "Drop-Tray Regent."

types of machines, and they have proven to be so popular with Columbia owners that the company decided to incorporate them in the table type of instrument. The "Drop-tray Regent" is a valuable addition to the many attractive types of instruments put out by this company.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Special to The Talking Machine World.)
Washington, D. C., Feb. 8, 1913.

MULTIPLE PHONOGRAPH. Julius Roever, New York. Patent No. 1,049,923.

This invention relates to improvements in multiple phonographs in which a wheel is used, the said wheel carrying on its circumference a series of records which are brought in turn or as desired beneath the reproducing mechanism. Machines of this kind are used in public places and are operated after dropping in a coin, and it is necessary and desirable occasionally to change the records and give a new list of pieces or tunes.

The object of the present invention is to provide a device for supporting the records so that they may be easily and quickly changed, and so that when changed the machine may be assembled for operation again without any chance of jamming of the different parts so that there will be too much friction for the proper running of the mechanism. To this end is provided a rotatable record wheel carrying record holders near its periphery, the record holders being supported by the wheel only at one end of the holder and at right angles to the surface of the wheel. The records are changed by merely slipping them off and on the holder. In connection with the record wheel a disc rotatable

is provided with the wheel and having cards or other means secured thereto indicating the name of the tune or piece of the corresponding record on the wheel, and an indicator set at a point where it is necessary to stop in order to have a desired record brought under the stylus of the reproducer.

Figure 1 is a broken front elevation of a machine showing improvements, and Fig. 2 is a cross-sectional view through the center and the upper part of the same.

TONE ARM FOR TALKING MACHINES. John C. English, Camden, N. J., assignor to the Victor Talking Machine Co., same place. Patent No. 1,049,348.

This machine particularly relates to the means for connecting a sound reproducer with the swinging tone arm of a talking machine.

The principal objects of this invention are to provide a simple and efficient mounting for connecting the tone arm and sound reproducer, which is co-operative with said arm when said reproducer is in operative position to afford a smooth, uninterrupted, continuous conduit for the free passage of sound waves; and to provide a compact structure which when in inoperative position may be enclosed in a minimum space.

Further objects of this invention are to provide such a pivoted connection between said tone arm and sound reproducer as to permit the free movement of said reproducer relative to said arm, effected by possibly slight irregularities in the record disc, and to permit the movement of said reproducer from said record to its inoperative position; to provide means carried by said arm to support said reproducer in an approximately operative position, independently of the turntable of said talking machine; to provide means to support said sound reproducer in its inoperative position at the side of said arm, and extending below the top thereof; and to provide means to automatically close said conduit when said sound reproducer is disposed in its inoperative position.

The form of the invention hereinafter described provides a hollow tapered tone arm suitably mounted to swing on a substantially vertical axis,

and having its free end curved laterally and terminating in a flanged collar, to which is pivoted a similar flanged collar on the tubular mounting, upon the free end of which the sound reproducer is removably attached. The flange of the mounting is provided with a lug or hook operative to engage suitably disposed lugs on the flange of said arm, and respectively arranged to support the sound reproducer in approximately operative position, and in its inoperative position.

1; Fig 3 is a side elevational view of said tone arm supporting the reproducer in an approximately operative position, independently of the sound record disc; Fig. 4 is a fragmentary view similar to Fig. 3, but showing the sound reproducer inverted to its inoperative position; Fig. 5 is a plan view of the structure as shown in Fig. 4, exclusive of the casing; and Fig. 6 is a perspective view of the sound reproducer mounting per se.

RECORDING AND REPRODUCING DEVICE FOR PHONOGRAPHS. David H. Wilson, Chicago, Ill. Patent No. 1,048,924.

This invention relates to recording and reproducing devices for phonographs, and the like, and has for its object to produce a new and improved device of this description which may be used either as a recorder or a reproducer.

Figure 1 is a side view of a device embodying the invention; Fig. 2 is a sectional view of the device shown in Fig. 1; Figs. 3, 4 and 5 show the parts of the device of Fig. 2 separated; Fig. 6 is a sectional view showing a modified construction; Fig. 7 is a view showing a further modification.

COLLAPSIBLE PHONOGRAPH HORN. Gilbert Stiff, Ovid, Mich. Patent No. 1,049,166.

The invention provides a horn designed most especially for sound reproducing machines of the phonograph type, the purpose being the provision of a horn which will admit of its length being readily reduced so that the horn may be stored in a comparatively small space either for convenience of carrying or to be laid aside when not required for immediate use so as not to be in the way, the invention relating most essentially to the joint

formed between the horn sections whereby both the inner and the outer side of the horn are practically smooth and continuous.

Referring to the drawing, forming a part of the specification, Figure 1 is a side view of a horn of the type described embodying the invention, a part being broken away. Fig. 2 is a sectional view, the parts or horn sections being separated and the dotted lines showing the position of the sec-

tions when nested. Fig. 3 is an enlarged section of the point formed between adjacent sections. Fig. 4 is an enlarged view of a part of one of the horn sections.

PHONOGRAPH REPRODUCER. Frank L. Dyer and Peter Weber, Orange, N. J., assignors by mesne assignments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,049,216

This invention relates to phonograph reproducers, the object being more particularly to provide for the greater freedom of movement of the stylus lever, in order that a more faithful reproduction of the vibrations of the sound record may be made, and that undue wear upon the stylus and record may be avoided.

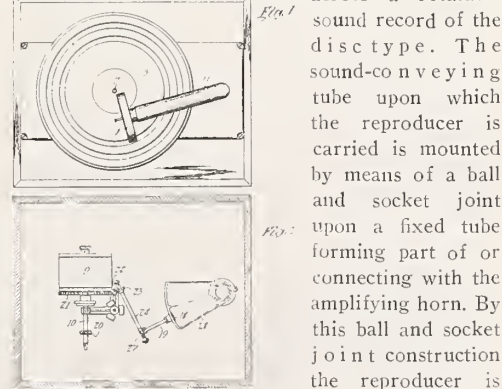

This invention relates more particularly to a novel means of mounting the stylus lever whereby greater freedom of movement of the same transverse to the record groove may be allowed.

Another object of the invention is the provision of means for aligning the stylus lever in a central position whenever the stylus is lifted from the record surface.

Figure 1 is a side elevation, partly in section, of a reproducer embodying the invention. Fig. 2 is a bottom view of the same showing the stylus lever and connections and the adjacent portion of the floating weight, and Fig. 3 is a detail view of the means for aligning the stylus lever centrally.

TALKING MACHINE. Frank L. Dyer, Montclair, N. J., assignor by mesne assignments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,049,215.

This invention relates to talking machines, and the object is to produce an improved device for feeding the reproducer and stylus carried thereby across a rotatable sound record of the disc type. The sound-conveying tube upon which the reproducer is carried is mounted by means of a ball and socket joint upon a fixed tube forming part of or connecting with the amplifying horn. By this ball and socket joint construction the reproducer is

free to be moved across the face of the record to give the feed, and also is free to be moved toward and away from the record surface. The movable hollow arm or tube carries a geared sector or other desired engaging means, which, upon the lowering of the reproducer to cause the stylus to engage a record, moves into mesh with a gear or other driving device connected with the motor. Thus, the feed may be engaged or dis-

(Continued on page 52.)

engaged at any point in the reproduction of a record by merely lowering the reproducing stylus into tracking position upon a record or raising it therefrom.

This invention also comprises an improved construction of a talking machine enclosed within a cabinet in which the sound amplifying horn is carried by the hinged cover of the cabinet.

Figure 1 represents a plan view of a reproducing talking machine embodying the invention. Fig. 2 represents a horizontal cross-section taken on line 2-2 of Fig. 3. Fig. 3 represents a central vertical cross-section through the talking machine shown in Fig. 1, certain parts being shown in side elevation.

Fig. 4 is an enlarged detail perspective view of certain parts shown in Figs. 2 and 3. Fig 5 is a vertical cross-section of a talking machine similar to that shown in Fig. 3, provided with a hinged cover carrying the amplifying horn, certain parts being shown in side elevation.

Fig. 6 is a front view of the machine and cabinet shown in Fig. 5. Fig. 7 is a plan view of the same, and Fig 8 is a side elevation, the cover being shown in raised position.

PHONOGRAPH. Newman H. Holiand, West Orange, N. J., assignor to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,049,237.

This invention relates to phonographs and more particularly to those adapted for use for commercial purposes, although obviously the invention may be used in connection with other types of phonographs.

The principal object of the invention is to provide an improved recorder and reproducer support, preferably carried by the traveling carriage or carrier arm, and provided with means for operating the same so as to bring either the recorder or reproducer into operative position with respect to the record surface, or for bringing the parts into such position that both the recording and reproducing styli are entirely clear of the record surface so that the record cylinder can be removed from or placed on its support without contacting with either of said styli, and the traveling carriage can be shifted without injury to either the record or the reproducer and recorder. A sound conveying tube to which an amplifying horn or other sound conveyor may be applied is provided, and the recorder and reproducer are connected with this tube in such a way that when the recorder is in operative position the interior thereof is in communication with the said tube, while the interior of the reproducer is entirely out of communication therewith, and vice versa. Means are also provided for rendering inoperative the mechanism for feeding the reproducer and recorder across the record surface when the support is being adjusted to place one stylus in operative position and remove the other therefrom.

Figure 1 is a central vertical sectional view of one embodiment of this invention, some of the parts being shown in elevation. Fig. 2 is a plan view thereof.

DISC RECORD AND THE PRODUCTION THEREOF. Victor H. Emerson, New York, assignor to the

American Graphophone Co., Bridgeport, Conn. Patent No. 1,050,932.

This invention relates to the production of commercial sound records of the disc form. Such records are now commonly made of a plastic material composed largely of earthy material and shellac. The surface of such records is, on account of the extremely hard particles present in the earthy material, comparable to a very fine emery wheel, and rapidly wears the point of the reproducing stylus. For this reason it is the practice to use very cheap reproducing needles, employing a fresh needle for each reproduction. Notwithstanding the use of very soft reproducing needles, records of this sort are comparatively short-lived, and the quality thereof begins to show signs of deterioration after a relatively small number of reproductions. This is due to the fact that the surface, though quite hard, presents numerous very fine points against which the stylus engages and changes the form of the undulations.

The object of the present invention is to produce records which will endure a greater number of reproductions without deterioration of quality, and having a surface which will not abrade the stylus, so that a permanent reproducing point may be employed therewith. It also aims to effect economy in production of the record, and to give a smoother reproduction of the recorded sounds free from scraping noises.

In the compositions now in use the shellac is needed in order to give the surface of the record a "glazed" character. The composition without shellac would be utterly unsuited to the purpose; and, as already stated, even where a large proportion of shellac is used the surface is characterized by the presence of numerous abrading particles. No satisfactory substitute for shellac for this purpose has yet been found, and its greatly increased cost has added largely to that of the sound records.

The inventor states that a record pressed in a continuous surface of shellac, while not so hard as that of the ordinary composition, is so smooth that a reproducing point will rub over the same with inappreciable friction, and with very slight wear to either record or point. For the same reason the scratching noises heard in the reproduction of ordinary sound records are much diminished.

The principle of the present invention is, therefore, the production of a sound record impressed in a continuous film of shellac to a minimum. The body of the sound record may be made of any suitable and cheap inferior stock which in itself may be unsuitable for a smooth record surface, but is capable of being rendered plastic, for example, by the earth compounds now in use, with an ordinary binding agent instead of shellac.

In carrying out the principle of the invention difficulty has arisen in obtaining a filmy, smooth surface, free from the gritty particles liable to be present in the stock, but this result has now been accomplished by employing a thin separator—preferably a sheet of fibrous material, as paper—between the shellac surface and the plastic stock composing the body of the tablet. Another difficulty has arisen in impressing the matrix into this shellac surface, in that air would be entrapped between the shellac surface and the matrix surface, resulting in a bad impression of the undulating record lines. This difficulty has now been overcome by applying the plastic stock to the rear surface of the sheet in the form of a lump placed in the center of the disc, the effect of which is that, as pressure is applied, the lump of stock spreads outwardly from the center whereby the air is driven out from between the matrix and the tablet.

In practicing the invention it has been found that linen paper of good quality and about five one-thousandths of an inch in thickness will answer the purpose in a satisfactory manner. A sheet of such paper may be coated by dipping into an alcoholic solution of shellac, or the latter may be applied with a brush, or otherwise. In this way the paper acts as a carrier for the shellac (permitting) the use of minimum quantity of the latter), as well as a separator from the material employed for the body of the tablet. To form the sound record the paper so treated is laid on the

warmed matrix and placed as usual in a suitable press; the stock, in the form of an approximately globular lump, is laid on the paper sheet at the center of the matrix, and pressure is then applied in the usual way. The stock is applied in a plastic state, being softened at a temperature of about 190 deg. F. A solid and strong tablet results, the union of the several parts thereof not being affected by expansion and contraction due to changes of temperature.

Although reference has been made above solely to shellac, which gives the best results of any material thus far tried for the purpose, it is obvious that other gums, celluloid or like materials may be employed in the same way. When shellac is used, it is preferable, after drying the sheet, to dip it in a very thin solution of celluloid, which protects the shellac and prevents it from sticking to the hot matrix.

In said drawings, Figures 1 to 6, inclusive, are side elevations. Fig. 1 shows a sheet of paper with a film of shellac thereon; Fig. 2 is the same as Fig. 1 with the addition of a celluloid coat on the shellac; Fig. 3 illustrates a matrix with a shellac-coated surface against the matrix; Fig. 4 is the same as Fig. 3 with the addition of a mass of inferior plastic composition placed in the center thereof; Fig. 5 shows the plastic composition in the act of being pressed out or flattened by a press and spreading from the center outward; Fig. 6 shows the plastic composition spread over the back of the sheet of paper, and the press in the act of forcibly pressing the plastic material, the paper sheet and the shellac together, and impressing the latter into the face of the matrix. Fig. 7 is a perspective view of a tablet with the plastic material, the sheet of paper, the shellac and the celluloid united together into a complete record tablet under the action of the heat and pressure in the press.

SOUND BOX FOR GRAMOPHONES. Ernest de la Rue, London, Eng. Patent No. 1,051,489.

This invention relates to what are known as "edge mounted" diaphragms, that is to say, diaphragms which are not nipped between two surfaces but are secured by their edges being pressed against elastic surfaces. With some diaphragms, and especially mica diaphragms, great difficulty is experienced in getting the diaphragm into place without either cockling or injuring it.

According to this invention the elastic surface is carried by the semi-circular halves of a split ring, and after the diaphragm has been put into place the ends of the halves of the split ring are drawn together by screws. Figure 1 is a plan and Fig. 2 a section on the line 2-2 Fig. 1.

SOUND RECORDING APPARATUS. Fordoonjee Dorajee Pudumjee, Bombay Presidency, India. Patent No. 1,051,513.

The invention refers to an improved method and apparatus for recording sound and is particularly applicable to the manufacture of gramophone records.

The method as at present used consists in cutting or engraving the vibrations produced by sound on a rotating disc of specially prepared hard wax by means of a sharp point or cutting edge attached in a particular way to a membrane which vibrates in unison with the sound produced in front of it. The vibrations are engraved parallel to the surface of the disc in the shape of a spiral, and the engraving thus forms the original record from which duplicates are made by pressing ebonite or similar composition discs on a matrix which is made from the original wax record by the process of electrotyping. The principal disadvantages of the process as at present worked reside in the fact that considerable resistance is offered to the engraving point by the substance engraved, so that the vi-

(Continued on page 53.)

brating membrane to which the engraving stylus is attached is not free to vibrate as desired, and to respond to the minutest variations of sound. Hence, the deformations due to the engraving are great enough to render the voice unrecognizable and, in most cases, not clear. Moreover, the amplitudes of the vibrations engraved on the wax plate are limited in extent, depending upon the character of all three—the membrane, the disposition and length of the engraving stylus, and the hardness of the substance engraved. These amplitudes cannot be increased beyond what has been attained in practice up to now, and so the intensity of the sound reproduced is limited. Again, the mechanical vibrations produced by the act of cutting or engraving on the surface of the wax plate are superimposed on the original vibrations due to sound and therefore the record is imperfect and is not free from disturbing and secondary or unnecessary scratching sound vibrations.

It is the object of this invention to remove the disadvantages above set forth, and this invention consists in the process of recording sound by the aid of light, a ray of light being caused to vibrate in unison with a vibrating membrane by means of a mirror attached thereto, and then allowed to impinge on a rotating photographic sensitized plate, whereby the vibrations due to the sound waves produced on the membrane are fixed on the sensitive plate by the chemical action of light, and the photographic plate after development by any of the known photographic methods carries a record of the original sound.

The process of recording will be explained clearly by Fig. 1 of the accompanying drawings, in which Fig. 1 is a diagrammatic view of a suitable apparatus for carrying out the method according to the invention. Figs. 2 and 3 are side and end views, respectively, of a constructional form of the apparatus above mentioned.

GRINNELL BROS. ANNUAL MEETING.

Old Officers and Directors Re-elected—Branch Store Managers from All Over the State and Canada Also Come Together and Indulge in an Interchange of Views—Enjoy Social Pleasures as Well—Entertained at Banquet.

(Special to The Talking Machine World.)

Detroit, Mich., Feb. 8, 1913.

The annual meeting of Grinnell Bros. was held Tuesday, Jan. 28, when all the old officers and directors were re-elected. The personnel is as follows: President, I. L. Grinnell; first vice-president, C. A. Grinnell; second vice-president, A. A. Grinnell; secretary, S. E. Clark; treasurer, C. I. Nye. There are no other members of the board than the five officers.

The annual gathering of the Grinnell Bros. branch store and department managers from all over the State and Canada also was held this week. The two meetings came in conjunction because many of the managers in other cities are stockholders. Altogether half a hundred piano men were at the two meetings.

The managers' meeting lasted throughout the week, owing to the large amount of business to be transacted. Reports on last year's business were duly made, account taken of stock on hand, estimates of what will be needed for the 1913 trade, etc. The cares of the business sessions were lightened by entertainments in the evenings. On Tuesday the convention went to the Automobile Show in a bunch. Wednesday evening there was a banquet at the Charlevoix, and on Thursday evening they all went to the Detroit Opera House.

TALKING MACHINE DEALERS MEET IN BERLIN.

Some of the Important Matters Discussed at the Recent Congress of the Talking Machine Dealers of Germany—Gives an Idea of Conditions Prevailing Across the Water.

(Special to The Talking Machine World.)

Berlin, Germany, Jan. 30, 1913.

At the close of the year a congress of German talking machine dealers was held in Berlin. Many important points were down for discussion. The first question taken up was that of public demonstrating salons for talking machines. In these handsome salons, of which, for instance, several are situated in Friedrichstrasse, the main thoroughfare of Berlin, the public for a trifling payment can listen to any disc, seated in comfortable settees in a handsomely furnished apartment. A salon of this nature is not only a source of revenue on account of the money inserted into the talking machines, but it is above all an advertisement calculated to further the sale of the discs and indirectly of the machines themselves. The dealers therefore proposed that the manufacturers should furnish them with machines for such demonstration purposes at specially low prices (say 150 to 200 marks) to assist them in opening up such salons.

Professor Reko spoke on the use of talking machines in teaching foreign languages. The speaker referred to the favorable experience he had had as teacher in Vienna in the use of talking machines equipped with proper "language" discs. He was successful in interesting the authorities in Vienna in the matter, so that a definite amount is set aside every year for this purpose. The ideal machine for teaching languages, especially in cases of self-instruction, must comprise a repeater and a recorder, both of which must be easy to handle and not too expensive.

Another speaker pointed out that the numerous vocal societies could probably be induced to purchase talking machines by demonstrating to them a few selections from their repertoires from records obtained from eminent choirs. In practicing new and unfamiliar pieces it would be a great help to the choirmaster to be able to first play the piece over on a talking machine.

Dictating machines are making but little headway in Germany. Their use entails a great strain on the typist especially if the record is at all in-

distinct. In certain exceptional cases, however, the machines are indispensable; for instance, if a man wishes to dictate letters in the evening when no stenographer is available, which letters can be transcribed the next day.

It is cited as a great drawback in connection with the talking machine trade that manufacturers use different velocities in making their discs. Every talking machine should at least be equipped with a velocity scale and each disc should bear a corresponding number. This is the only way in which dealers and private users can play each disc at the proper tempo.

The responsibility of dealers for the cutting of prices was the subject of a lengthy discussion. Many dealers make a practice of endeavoring to deceive the manufacturers into the belief that competing firms are selling at much lower prices. Cutting of prices is the result. But even among themselves the dealers often make the mistake of not adhering to the selling prices laid down for them. Above all, there is a great tendency to stock the cheapest possible kinds of discs. In many places discs are offered for sale at one mark and even at one-half mark. It is true that these discs emanate from manufacturers who soon went out of the business, but in view of the demoralizing effect which such inferior goods have on the market in general, it is very advisable that reputable dealers in talking machines should have nothing to do with such trash.

Apart from this, the far-sighted dealer will refrain from stocking discs of too many different makes. By dealing with only one or two manufacturers it is always possible, in return for comparatively large orders, to obtain better terms than if the orders are spread over ten or twelve firms.

Another speaker pointed out that the dealers suffered considerably owing to the manufacturers selling to their employes at reduced prices. The employes often resell to private users and thus become competitors of the legitimate dealers who adhere to the prices fixed for them.

The congress was very well attended, so that it will doubtless be repeated next year.

NEW QUARTERS IN TORONTO.

R. S. Williams & Sons Co. Hold Formal Opening of Handsome New Building in That City—Great Growth of the Company's Business.

(Special to The Talking Machine World.)

Toronto, Ont., Feb. 6, 1913.

The new building of the R. S. Williams & Sons Co., at 145 Yonge street, was formally opened to the public on Tuesday and Wednesday of this week. Special musical entertainment by prominent artists, including piano soloists, orchestras, string quartets and music produced by player-pianos, Victrolas and Edison disc phonographs served to attract a host of visitors and keep them interested.

The old Williams' home has witnessed a great measure of success. Over forty years ago the present five-story building was erected—when Canadian industry was in its infancy and musical instruments were a comparative luxury.

The announcements and progress of this firm during these forty years relate much of the history of musical instrument development in Canada. From a small local piano business the old home witnessed the development of one of the greatest musical instrument industries in the country. There has been assembled a wonderful collection of antique instruments, many of which are almost priceless, representing an investment of thousands of dollars, purely in the interests of art. In this old home was also collected one of the finest collections of rare and expensive old violins now in existence.

A REMINDER FROM IRELAND.

One of the most welcome holiday souvenirs received by The World is a calendar from Belfast

Ireland, with the compliments of T. Edens Osborne, the enthusiastic talking machine factor and trader of that city. The calendar bears a brilliantly colored scene of a New Mexican scene entitled "The Aztec Bride" and is most attractive.

QUALITIES OF A LEADER.

Features in the Make-up of a Man That Put Him in the Front.

If you want to lead men successfully in business you must have the qualities of a leader. You must be sympathetic—but inspiring. You must be patient—but firm. You must be fair—but in dead earnest. You must feel the weight of the responsibilities resting on you, and make your men realize the responsibilities that rest on them. You and they owe a common duty to each other and to your company. You should be fair to them—and see that they are fair to you. In that way you will do your duty by them, and they'll do their duty by you, by the company and by themselves.

GRAND OPERA IN DALLAS.

(Special to The Talking Machine World.)

Dallas, Tex., Feb. 1, 1913.

The approaching grand opera season in this city is attracting great attention, both in the music houses, the music lovers and the talking machine houses. The talking machine houses have window displays of Mary Garden, Tetrassini and other stars that will appear in Dallas, and many are enclosing folders announcing grand opera with their mail. Several of the talking machine companies have already made page advertisement reservations for the souvenir grand opera program and expect to do a great deal of advertising incidental to the coming of the grand opera stars.

RECORD BULLETINS FOR MARCH, 1913

VICTOR TALKING MACHINE CO.

- BLACK LABEL RECORDS. Victor Light Opera Company. No. Size. 31877 Gems from "Lady of the Slipper" V. Herbert 12

- non) (Act II) Massenet 12 Mme. Magrini—Titta Ruffo. (In Italian.) 89058 Rigoletto—Deh! non parlare al misero (Recall Not the Past) (Act I) Verdi 12

COLUMBIA GRAPHOPHONE CO.

- SYMPHONY DOUBLE-DISC RECORDS. First Records by Henri Scott, the American Bass. A5442 Requiem Mass (Verdi). Confutatis Maledictus. In Latin, with orch. Gloria (Buzzi-Peccia). In Italian, with orch. Hector Dufrance, the French Baritone.

Leading Jobbers of Talking Machines in America

You should get this sample package of Puritone Needles—sent free

Puritone Needles should pay you a good profit. It costs nothing to sell them because you have your organization.

To help you we will print special envelopes with your name and business; every envelope gives you profits and free advertising.

You will be advertised, too, by the satisfaction-qualities of the needles; owners of machines will regard yours as the best needle store; this will build your business.

Get this sample package, telling us who's your jobber, and find out the goodness of Puritone Needles, built of experience, material and brains.

The TALKING AND NOVELTY NEWS MACHINE WORLD

Published Each Month by Edward Lyman Bill at 373 Fourth Avenue, New York, March 15, 1913

Victor-Victrola XVI, \$200
Mahogany or quartered oak

The instrument by which the value of
all musical instruments is measured

The Vitaphone Reproducing Device

THE elimination of the offensive needle tone and nasal twang are sufficient to more than strongly commend the Vitaphone to every music lover, but the Vitaphone goes still further in rendering correctly every shading of the human voice and the individuality of each musical instrument, from the delicate tones of the harp solo to the grand ensemble of the complete orchestra. The soft dulcet tones of the lullaby are reproduced as the artist sang it, while the stentorian appeal of the Wagnerian selection thunders and reverberates the rising cadence in all the majestic strength conceived by the genius of Bayreuth.

The Vitaphone is new in construction and new in tone; a development of natural acoustical principles that enables the Vitaphone dealer to offer an instrument that stands squarely on its merit as a correct reproducer of every form of music.

The Vitaphone plays every cut of disc record, needle or permanent jewel of any kind, and the change is accomplished by one move of the hand.

BIG DISPLAY OF TALKERS

Made at American Woman's Exposition in Cleveland—Columbia, Edison and Victor Lines Strongly Featured and with Excellent Results—Many Sales Made of Machines.

(Special to The Talking Machine World.)

Cleveland, O., March 10, 1913.

The attractive event of the season was the American Woman's Exposition in the auditorium of the large Central Armory, held during the last week in February. Cleveland business men and women vied with the manufacturers in producing displays which daily attracted thousand of visitors. Among the thousands of exhibits the talking machine display was prominent, including all the different makes and styles. Crowds were constantly hovering about the two booths of the Columbia Graphophone Co., attracted by the varied demonstrations given, the musical program keeping up constant interest. The feature of the company's display was the Columbia Grand, electrically operated. The sale of four of the instruments on the first day of the exposition is evidence that it has struck a popular chord in the hearts of the people.

There was a fine display of the various types of Edison machines. The new disc phonograph, one of which gave concerts in the Oriental tea room, was acclaimed the acme of instruments by those who know and appreciate fine music.

The exhibit of Victrolas and Victor machines of the different types was one of the most attractive displays. The musical numbers of the great artists, from Caruso to Melba, furnished entertainment to the throngs who were clustered about the booth throughout the exhibit. A number of purchases of both machines and records were made.

GRAPHOPHONE ENLIVENS LECTURE.

Illustrated Discourse on Fleas Affords Opportunity for Clever Use of Records.

(Special to The Talking Machine World.)

Indianapolis, Ind., March 8, 1913.

The Columbia Company was a party to a ludicrous affair at the Columbia Club here the other night, the Indiana section of the American Chemical Society being the chief offender. The company supplied the society with a graphophone. Frank B. Wade, professor of chemistry in Shortridge High School, did the rest. While producing stereopticon views of fleas, the graphophone played that Missouri classic about "You Gotta Quit Kickin' My Dawg Around." A view of a mosquito brought "Way Down Upon the Swanee River"; the sand flea was pictured on the screen to the tune of "Till the Sands of the Desert Grow Cold." Waterbugs on the screen brought "The Old Oaken Bucket." And then there was the kissing bug with "Comin' Through the Rye."

E. F. SKINNER BECOMES THE OWNER

Of the Business of the Schafford Album Co., Manufacturers of Talking Machine Record Albums and Other Specialties in New York.

E. F. Skinner has purchased the interest of T. C. Schaffuss and will hereafter operate the business of the Schafford Album Co. as sole owner.

The Schafford Album Co. has been in business for a considerable length of time and is a large manufacturer of albums for talking machine records. This house also makes albums for prints and photographs, as well as a line of desk pads.

Mr. Skinner has a number of new plans in mind, for not only new styles of record albums but for the general featuring of the Company's products that will hold them in closer esteem with the trade.

The Schafford Album Co. is located at 126-128 Lisenard street, New York, where it has a large and complete organization for the efficient production of these goods.

BURBANK SELECTS VICTROLAS.

The Famous Horticulturist Selects Three Expensive Victor Instruments for Installation in the Fremont, Lincoln and Burbank Grammar Schools—Teachers and Pupils Appreciate the Gifts of This Famous Man.

(Special to The Talking Machine World.)

Santa Rosa, Cal., March 8, 1913.

The teachers and pupils of Fremont, the Lincoln and Burbank grammar schools are the proud possessors of modern Victrolas presented to them by Luther Burbank, Santa Rosa's famed horticulturist and plant breeder.

The gifts came as a complete surprise and teachers and pupils alike cannot express their gratitude and appreciation for the kind and thoughtful spirit which prompted the action on the part of Mr. Burbank.

The Victrolas are encased in handsome fumed oak cases and stand about four feet high, having a place under the apparatus for records. The teachers and pupils of the various schools greatly appreciate the gift and express the deepest gratitude to the donor. They feel the spirit which prompted the gift is one which is imbued with the welfare of the school children of the city deeply at the donor's heart.

The gift came through the Wiley B. Allen Co., of which J. E. Bradley is the local representative, and carried a characteristic note from the donor reading as follows:

"To the Teachers and Pupils of the Santa Rosa Schools:

"Believing that the emotions should be as carefully cultivated as the intellect and that music is of fundamental importance I take great pleasure in presenting you with a modern Victrola with the hope that it will be an inspiration toward the best in each of you. "LUTHER BURBANK."

NEW EDISON LINE IN CINCINNATI.

Demonstration Recital at Hotel Sinton Arouses Enthusiasm—John Arnold First to Sign Up in City—Starts Work Immediately.

(Special to The Talking Machine World.)

Cincinnati, O., March 8, 1913.

Local jobbers and dealers last week had their first peep at Thomas Edison's noted disc phonograph. Although the Middle West trade has heard much of this new invention on the part of Mr. Edison since it was first announced several months ago, it was up to the Kipp-Link Phonograph Co., of Indianapolis, to bring the instrument to Cincinnati.

The presentation took place at the Sinton Hotel last week under the direction of Walter E. Kipp, the Indianapolis Edison jobber, and his assistant, Eugene Beacham. John Arnold, the Elm street dealer, was the first to give an order for several of the diamond-pointed reproducing machines. It is also understood the Kipp-Link Phonograph Co. have negotiations on with one or two piano houses which have never heretofore featured talking machine goods. Kipp is enthusiastic over the prospects of the disc machine in his territory. While at the hotel the machine became a great favorite, causing many persons to believe there was a "live" recital going on in the parlor reserved for the use of the instrument. The staging helped to carry out this delusion, since the machine was hid behind portieres and all the audience could hear was the reproduction of the record. Arnold, as soon as he signed up, secured an emergency machine and gave concerts at his neat talking shop.

The United Talking Machine Co., Chicago, Ill., was recently incorporated, with a capital stock of \$2,500, for the purpose of manufacturing talking machines. The incorporators are: E. E. Johns, A. F. Johns and Robert Johns.

"DER ZIGEUNERPRIMAS" RECORDS.

How Henry Savage Came to Select for Presentation in America the Reigning Operetta Sensation of Vienna—Records Made of the Entire Opera and Sent to Him in New York.

Sitting in his New York office one day recently, Henry W. Savage listened to the music of "Der Zigeunerprimas" (the Gypsy Chief), the reigning operetta sensation of Vienna, and, finding it emphatically to his liking, cabled his American representative to buy for him the American rights to the production. Negotiations for the purchase had been in progress for a month between the American producer's agent and Joseph Weinberger, the Leipzig publisher who owns the operetta, but could not be concluded before, because Mr. Savage had made it an absolute condition before giving a final decision that he must hear the score. Anxious that Mr. Savage make the American production, Weinberger decided not to wait until the producer could find time to go to Vienna; he gathered his cast for a special performance and had all of the numbers sung into a talking machine. A set of the records was then dispatched to the United States. Thus while "Der Zigeunerprimas" has not been sung except in the Johann Strauss Theater in Vienna, Mr. Savage, having sent out for a machine which the records would fit, some four thousand miles away from the place of its performance, enjoyed the melodies which have made their Hungarian composer, Emmerich Kalman, famous. The producer has decided to follow the same plan before purchasing other European productions.

"Der Zigeunerprimas" has been running in Vienna for nearly a year, and according to predictions will be running at this time next year. The American production will be made next September.

CHANGES IN STEWART T. M. CO.

W. E. Ludlow Resigns as Manager and Is Succeeded by W. S. Barringer—To Move to New Location at 221 North Pennsylvania Street.

(Special to The Talking Machine World.)

Indianapolis, Ind., March 8, 1913.

The Stewart Talking Machine Co. not only announces a change in location at this time, but a change in managers as well. W. E. Ludlow, who was associated with Alexander M. Stewart when the latter owned the Wulschner-Stewart Music Co., and who became manager of the Stewart Talking Machine Co. when that company was organized by Mr. Stewart after he had disposed of his holdings in the Wulschner-Stewart Co., has resigned. W. S. Barringer, who was assistant manager, becomes manager, and W. M. English will act as his assistant. The Stewart store is being moved from 110 North Pennsylvania street to 221 North Pennsylvania street. Elaborate decorations mark the new quarters of the company, and an effort will be made to make them the most inviting in the city.

THE ART OF LETTER WRITING.

The writing of a good letter is perhaps the finest art in business. It is an art which comes with the development of the man. To convince and not dissuade, to attract and not repel, to please and not offend, involves first the mastery of self and then the fine art of expression. The letter is the measure of the man. His character shines through his words.

Letter writing is a matter of training and character development. The short-sighted, unprincipled and ungracious man will write the letters you would expect from such traits, and the happy, big-souled and big-minded man who has large experience and character will write letters that impel trade.

TRADE EXPANSION CONTINUES IN QUAKER CITY.

Trade in Records and Machines for February Exceeds That of January—Lit Bros. Changes and Improvements—Buehn Pleased with New Victrola Styles—Estey Co. Doing Enormous Business with Columbia Line—Pennsylvania Co.'s Good Report—Other News.

(Special to The Talking Machine World.)

Philadelphia, Pa., March 11, 1913.

The talking machine business in Philadelphia the past month has been excellent. It has shown a marked increase over January and has practically doubled over last year. It is remarkable the extent to which this business is growing, and again is heard everywhere the complaint that it is impossible to get instruments and records fast enough. There are very few firms in Philadelphia which are not always oversold on the Victor goods, and it is keeping the Columbia Co. busy trying to keep up with its supply with so many substantial establishments selling large quantities of these goods.

Even although Philadelphia has just closed a most successful grand opera season, there does not seem to be the demand for grand opera records which might reasonably be expected, but the records that are selling the most are the popular and the odd records. It would appear that the opera record business was being overdone, as the dealers have been flooded with these records and many of them, even by favorite artists, do not seem to sell well. They may do better later when the music-lovers have forgotten the impression of the real voice and will be glad to hear a favorite again on the record.

Harry Hovey, of the talking machine department of Lit Brothers, having been transferred to the music roll department, Alexander L. Munchweiler is in full charge and reports that their business is excellent. They have just added four more hearing rooms to the department, and have about doubled their floor space for the sale of these instruments. All of the hearing rooms have been gone over and are now finished in white and are most attractive. The firm has spent more than \$1,000 on the improvement of the rooms. The firm have been doing a great deal of advertising of the department and through an agreement with the house they are allowed a daily advertisement of the department in the newspapers, something no other department in town is able to get. They have a record club which is distinct with their house and it is a great source of revenue to them and of satisfaction to their customers. They used to have the club plan only on certain records but now all records in the catalog are included.

Louis Buehn & Bro. report that their business has been very good indeed, and ahead of last year by at least thirty per cent. Among their recent visitors were Morris Peters, of J. C. Aschbach, of

Allentown, who reports business as being very good in his section, and M. A. Carpell, of the Herzog Furniture Co.

Mr. Buehn is very much pleased with the new Nos. 8 and 9 Victrolas, which he says are a distinct improvement over the old instruments, the distinguishing feature being that they have been equipped with the concealed horn. He notes that the machines are coming along much more freely and he is able to keep his trade pretty well supplied. He further notes that there is a continued steady demand for the Edison Blue Amberol records and diamond-point reproducers.

The dictating machine business of Louis Buehn & Bro. has been exceptionally good. They have added to their force J. Frank Smith, as sales manager of the dictating machine department. There are three other salesmen in this department, C. J. Auerbach, Paul McCurdy and Howard Steele.

Manager Elewell, of the talking machine department of C. J. Hepe & Son, reports that they have been having a "boom" business. It is a great deal better than last year, and they have been having difficulties to get enough goods to fill their orders. Harry D. Ziegler has taken charge of the retail selling of talking machines at the Hepe house. A new salesman added to their force is F. D. Ferris.

Walter Linton, in charge of the talking machine department at the Estey house, where the Columbia is handled exclusively, has been doing very well, and is delighted that the new pipe organ has been erected in their concert hall and that that part of their building has been again thrown open to the public. Mr. Linton is arranging a series of attractive concerts in which the Grafonola and other instruments handled at the house will combine. Besides, when the concert hall is not occupied Mr. Linton is utilizing some of the space as additional selling room. Mr. Linton says the Ysaye records, the great violinist playing exclusively with the Columbia, will be big sellers, especially as Ysaye was here last week with the Philadelphia Orchestra and is coming here this week in a recital.

Manager Walter L. Eckhart, of the Pennsylvania Talking Machine Co., has spent several days this week at the Columbia factory. The Pennsylvania's business has been excellent all through February, and has been double what it was last year. The firm has already sold a number of the Columbia Baby Grand Grafonolas, in spite of the high price,

and they expect to do a big business on them this spring. They have been demonstrating them at a number of different points.

VICTROLA POOR THIEF BAIT.

B. L. Robbins, with the Eclipse Musical Co., and Ambitious Policeman Spend Several Nights Watching Case Supposed to Contain Stolen Machine and Waiting for Crooks to Return, to Find Only Firewood.

(Special to The Talking Machine World.)

Cleveland, O., March 10, 1913.

B. L. Robbins, with the Eclipse Musical Co., and an ambitious policeman were crestfallen and disgusted on a recent morning when they found that they had been guarding a box of kindling wood for nearly a week thinking it was a missing Victor machine which had been stolen from the store. Two machines were delivered at the rear of the store and within a half hour one had disappeared. The police were notified and began searching for clues, and the next morning a patrolman reported that the box had been found. "It's planted behind an empty storeroom, just two doors west of here," he said. "Now let's leave it there and when the thief comes to get it to-night we'll pounce upon him." Robbins went and looked at the box and agreed to the arrangement. After a vigil of several nights, Robbins and the policeman slinking about in the shadows of the moon, and the robber not coming for his loot, Robbins decided that the valuable machine couldn't be used any longer for a thief trap and the box was opened. It was filled with kindling wood, and the discovery made that it was an old box somebody had appropriated for storing fire material. The \$100 machine has not yet been found.

MUSIC BY WIRELESS 'PHONE.

Playing of Talking Machine at Sayville, L. I., Sent by Wireless 'Phone Heard on a Steamship Far Off the New York Coast.

In recent experiments in connection with the development of the wireless telephone it was demonstrated that "The Star Spangled Banner" played by a talking machine installed in the Sayville (L. I.) station of the Telefunken Co. could be heard on board the steamship "George Washington," while a long distance off the Long Island Coast on its way to Bremen. At the same time the wireless Telefunken station on the tower of 111 Broadway heard the music, and the operator there said that it sounded almost as if the band were in the next room. The Telefunken Co. states that recent experiments by wireless telephone have been most successful, and the ultimate aim of the company is to utilize the wireless telephone commercially.

Cash Your All the Year Round Loyalty

During the rush and time of shortage around the holidays have your name on our list of regular dealers and be in line to have your orders receive preference over the fellow's who "shops" during the rush season and who buys from his nearest jobber the balance of the year to save on freight and express, and maybe puts up with second-class service at that, sacrificing increased profits made possible by prompt and full-filling of orders for the sake of the "economy bug" working on his freight and express expense account.

FORGET THE SMALL DIFFERENCE IN EXPRESS

if there is a difference between your store and ours in favor of a jobber nearer you, and remember there are a lot of things about "Eastern Service" which will more than repay you.

Maine, New Hampshire, Vermont, Rhode Island and Connecticut Papers Please Copy.

EASTERN SERVICE IS GOOD SERVICE. BUT ABOVE ALL IT IS JUST.

EASTERN TALKING MACHINE COMPANY

177 TREMONT STREET, BOSTON, MASS.

FOR NINETEEN YEARS TALKING MACHINES EXCLUSIVELY

INDIANAPOLIS A GREAT TALKING MACHINE CITY.

Victrola Line Now Handled by Six Different Stores in Indianapolis—High Class Records in Demand at the Columbia Establishment—New Dictaphone Agencies—Changes in Terre Haute—Kipp-Link Co. Most Anxiously Awaiting Edison Products.

(Special to The Talking Machine World.)

Indianapolis, Ind., March 10, 1913.

With the announcement of the Rap & Lennox Co. that it will handle the Victor line of talking machines, the Victor output can now be obtained at six different stores in Indianapolis. The Stewart Talking Machine Co. is the Indiana jobber for the Victor machine, and besides this company the following handle the Victor line: Wulschner Music Co., Aeolian Co., Rapp-Lennox Co., Block's department store, and the Taylor Carpet Co.

Miss Lazurus, manager of the talking machine department of Aeolian Hall in North Pennsylvania street, left for Camden, Ark., Saturday afternoon, when she was notified of the serious illness of her father. C. C. Thomas, manager of the local branch, says Miss Lazurus' department has experienced an exceptionally good sale on records. The recent visit of Harry Lauder to this city was responsible for a large number of calls for his records. A special window display was put on by the Aeolian Co. in honor of the Scotsman's visit.

A. W. Roos, manager of the local branch of the Columbia Graphophone Co., announces that the store sold as many high-class records in the last five weeks as it had ever sold in any three months. He attributes this unusual sale to the visit of Orville Harrold, who sang here recently. Persons desiring the Harrold records would come into the store, and after selling them the Harrold records the salesmen would interest them in the records of other great singers.

C. P. Herdman, for two years assistant manager of the local Columbia store, goes to St. Paul March 8 to become manager of the St. Paul store. His successor here has not yet been appointed.

Mr. Herdman has made many friends while in Indianapolis.

Thomas Devine, manager of the Dictaphone department, announces the establishing of agencies at Lafayette, Anderson and Logansport. The Burt-Haywood Co. will handle the Dictaphone at Lafayette, Decker Bros. will handle the Dictaphone agency at Anderson, and the Harry Lux Co. at Logansport.

The Columbia Graphophone Co., of Terre Haute, has moved from its old quarters on Fourth street to space in the rooms of the Baldwin Piano Co. on Main street. L. A. Moeller, manager, now has a beautiful and commodious store and expects to make his store "felt" in the southwestern part of the State.

Albert Von Tilzer, who appeared at B. F. Keith's theatre recently, used the Columbia Grafonola advantageously in his act. He makes a call over the telephone, and the answer is made by the Grafonola hidden behind screens.

The Kipp-Link Phonograph Co., jobber for the Edison products, is still waiting for the Edison Co. to "come through" with the new disc machines and records. Samples are on hand and orders are plentiful; all that is needed is "the goods."

It is needless, perhaps, to add that the talking machine business is good in the Hoosier capital. The talking machine is a live article in this part of the world, and that species always makes business.

More men prove failures for want of courtesy, diplomacy and use of plain, ordinary common sense in dealing with men than they do for want of more technical knowledge about their particular business.

CHAUNCEY OLCOTT MAKES RECORDS.

Voice of Famous Singer of Irish Ballads Permanently Enshrined for His Many Admirers.

The Columbia Graphophone Co. recently arranged with Chauncey Olcott, the famous actor and Irish ballad singer, whereby this popular actor-singer will produce records exclusively for the Columbia Co. Mr. Olcott visited the Columbia laboratory the early part of the month, and, judging from the pleasure he expressed at the recording perfection of his trial records, the public will be given an exceptional treat when the new records appear.

Chauncey Olcott has been a prime favorite for many years. He has visited every corner of this country and his songs have been heard and admired by audiences in all walks of life. He al-

Chauncey Olcott.

ways has been and still is a prime favorite with those people who appreciate the beauty and sentiment of the Irish ballads and folk songs, and in this role of a popular sentimental singer Mr. Olcott has never been surpassed. He gives a human touch to his songs which seems to reach the hearts of all who listen to him.

In securing the services of Chauncey Olcott to produce records exclusively for its clients, the Columbia Graphophone Co. has succeeded in adding a popular artist to its lists whose records will be in tremendous demand from Chauncey's army of admirers.

THE RECORDS OF HUMAN LIFE.

A Philosophical Dissertation in Which the Phonograph Gives the Idea Which Editorial Writer Develops with a Moral.

The manufacture of "human records" was the subject of some philosophical reflections by the editorial writer of the Philadelphia Telegraph the other day, in which he pointed out that the talking machine has been so well developed that it is capable of well-nigh perfect reproduction of the human voice, and in this connection says:

"Voices are reproduced in all their softness, strength and naturalness. The artist sings into the receiving mechanism. The sound waves are recorded in the wax. Then the hard rubber disc is made, and on it for years, probably forever, is the message of the singer.

"You meet Jones and talk with him. While you talk Jones' brain is the receiving mechanism. You are the singing artist. Whatever you say to Jones (he being willing to receive it) is recorded in his brain. Memory is the reproducing needle that plays over the disc.

"For years, probably forever, your message is left there as a real thing—cut into Jones' brain.

"So we are all constantly making records which are being or will be reproduced in the great phonograph of human life.

"Are we not ourselves records as well as record-makers, reproducing constantly, as a sort of human concretion, the words and acts that have been spoken at or into us?

"Words and conversations are fraught with vital importance. They call for the exercise of the greatest care in their selection and use. We inscribe them as records to be reproduced in the life of those around us, and their effect must be to either inspire and encourage or to dishearten and discourage, to broaden and develop or to warp and destroy."

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

EXCITEMENT ATTENDS PHOTOGRAPHING OF ARTIST.

Pugnacious Bull Terrier Makes Things Interesting When Mme. de Cisneros' Voice Issues from Edison Disc Phonograph—Interesting Moments for Photographer and Edison Man—Despite Damage to Machine Grand Opera Star Is Pictured in Pleasing Pose.

It is no uncommon thing for a prominent artist who has sung for one of the big talking machine companies to be photographed in the attitude of listening to a favorite number as it is reproduced by the talking machine, but it is a question if the taking of the photograph of such an artist has been accompanied by such exciting experiences as attending the securing of the accompanying counterfeit presentment of Mme. Elenora de Cisneros listening to her own voice through the medium of one of the new Edison disc phonographs, for which she has made a number of excellent and interesting records.

Mme. de Cisneros has met with wonderful success in singing prominent contralto parts with the Chicago Grand Opera Company, and is to be listed among the comparatively few Americans whose voices have won fame for them in the higher musical circles both at home and abroad. She is the wife of a Spanish nobleman whose lineage dates back for centuries.

Arrangements for taking a series of photographs of Mme. de Cisneros were made some time ago, and in order to add color to the views it was decided to take the pictures in the singer's apartments in the Hotel Majestic, New York. The artist donned a stunning gown, assumed the proper attitude and announced to the photographer that all was ready, whereupon the machine was started playing.

Those engaged in the work, however, had not reckoned with the Madame's prize bull terrier pup, who remained an interested but quiet spectator until the voice of his mistress began to issue from the phonograph. At first the dog was puzzled and furnished considerable amusement for those present. In a moment, however, the bulldog instinct got the upper hand and the dog made a desperate rush for the opening in the phonograph through which the sound came. The grillwork covering the opening was soon wrecked, and the dog had begun to devote himself to the cabinet work at the work at the top before Mme. de Cisneros succeeded in calming his ruffled spirits.

When the fracas started the Edison representative and the photographer tried to head off the

canine cyclone and save the machine, but one good look at the onrushing pup convinced them that the top of a convenient piano had many more attractions for them at that time than the floor, and they at once worked on the mental suggestion, viewing the rest of the one-sided battle from

(Copyright by Underwood & Underwood.)

Mme. de Cisneros Listening to Her Own Record.

afar. The Edison representative declares that in future, when he is assigned to superintend the photographing of artists, he will carry as part of his equipment a guaranteed dog muzzle and a league baseball bat.

Meanwhile, Walter T. Miller, manager of the recording department of Thomas A. Edison, Inc., is displaying a mutilated cabinet in his office for the purpose of convincing the skeptical.

and accessories. There is a very attractive and costly recital room, and a large number of sound-proof rooms which afford the buyers all the necessary conveniences for purchases.

The Columbia Graphophone Co., 87 Chambers street, New York, reports a gain in its wholesale business of 50 per cent. over last year's January and February. Many new accounts have been closed since the first of the year, and the outlook is very bright for a banner year. R. H. Macy & Co. who recently completed arrangements to handle the Columbia products, has enlarged its talking machine department and placed a substantial Columbia order for immediate delivery.

SUPPORT MUST BE EARNED.

The Community Does Not Owe the Merchant Anything That He Has Not Won for Himself—Service the Real Factor That Arouses.

"The Community does not exist for Business, but Business for the Community."—President-elect Woodrow Wilson.

The gentleman who will occupy the White House for the next four years—or more—has a neat and striking way of dressing an old truth in a new garb, a happy example of which is above given. For the truth in his aphorism is as old as the trade caravans of Abraham, and yet so new that it is worth the while of any merchant, old or young, to take an hour off for its consideration. If any man in trade gets the idea that his town or city owes him its support, the sooner he relieves himself of that pleasant but dangerous delusion the earlier will he discover his proper relation to the life by which he is surrounded.

The community owes a man only for what he does in its behalf. In many cases he may be thankful that he can collect this much, says the Hardware Dealers' Magazine. The investment of capital in a store; the laying in of a stock of goods; a fine display,—these are no claims whatever on the community in which a man may resolve to do business. No one is coming into a store because the proprietor is in need of customers; no one will purchase an article because the seller hopes to make a profit on the sale; not a person in the town will consider it his duty to buy. The only reason why a man buys goods is because he needs—or thinks he needs—them. The only reason why a man goes to this store or that is one of convenience, perhaps, in the beginning, but one of service in the long run.

The sort of service he gets in that store is the one thing that makes him a permanent customer, and that holds him or drives him away. Into that essential element much enters; in fact, in its best sense it is a combination of all the business virtues. No merchant needs to be told what they are.

But many a merchant does need to be told that in these days people must be lured into the store not because they can do good to the merchant, but because he can do good to them. It is their interests that must come first; not his. It is their desire that must be excited; their attention won; their requirements, even their foibles, cared for attentively.

The merchant is wise who will occasionally go out into the street and look at the store from the standpoint of the customer rather than his own.

It is better salesmanship to help a customer buy something than to sell him something. In the first instance you have his assistance; in the second you must go it alone.

A recent addition to Columbia representatives in the "Blue-grass" State is Carl R. Kiener, of Paducah, Ky. Mr. Kiener has been a very successful piano merchant for a number of years, and his initial order with the Columbia Co. called for a representative stock of machines and records.

VICTOR LINE WITH STERLING CO.

The Well-known Brooklyn Piano House Opens Attractive Talking Machine Warerooms.

The Sterling Piano Co., which conducts magnificent quarters at 518-520 Fulton street, Brooklyn, N. Y., has installed the full Victor and Victrola line in its establishment, having just finished building and furnishing spacious quarters in the basement floor to make a very attractive home for these well-known products.

The department was formally opened Feb. 25 with one of the largest and most comprehensive assortments of Victor talking machines and records

NEW YORK, MARCH 15, 1913.

PPRICE stability is necessary to the maintenance of substantial business conditions, for with prices crumbling there will appear at once, as a natural sequence, a demoralization of conditions, which can have no other effect than to reduce the profits of the dealers in any line of trade.

Take an industry like talking machines, which creates a specialty and one which requires careful treatment. It will be seen at once that if we destroy price stability the trade structure which has been so carefully reared is liable to be seriously threatened. We have at once introduced certain elements which will have the tendency to shake the foundation.

There is no question about that, for one of the vital essentials to success in a special merchandising field is price stability; and because price stability has been maintained in the talking machine trade the business has remained in a splendid condition.

If dealers could, under financial pressure or under a desire to do business, slaughter prices on the standard machines what would the end be?

It is easy to predict. It would mean ruin, nothing else, and it would affect the entire trade and the earning capacity of every business establishment in the trade.

Suppose a man wishes to raise a certain amount of money quickly. He could place a talking machine stock on the market at slaughter prices. He could make sales and get his money, but at a frightful cost of not only future profits to himself but to the entire trade in his vicinage.

The dealers cannot appreciate too keenly what price stability means to them, not only in present-day profits but future profits.

A recent court opinion regarding the right of a manufacturer to control the prices at which patented articles may be sold has had a tendency to mislead many, particularly those not acquainted with the actual conditions surrounding the case.

The fact remains, however, that the leading judges of the country and the highest courts in the land have ruled time and time again in support of fixed prices based on patent rights.

In this connection, Louis F. Geissler, general manager of the Victor Talking Machine Co., Camden, N. J., points out elsewhere in *The World* that "The Victor contract has been carefully drawn, based on decisions of the United States Supreme Court. It has been sustained before the United States Court quite a number of times, and by the United States Courts of Appeals a number of times, which would seem to justify us in believing that it is pretty well seasoned legally." He also adds that "The Victor system can only be invalidated by an act of Congress changing the United States patent rights."

Elisha H. Camp, counsel of the Columbia Graphophone Co., in referring to the power of the owner of a patent to retain title in the article transferred sufficient to restrict the manner of its use, or the price at which it shall be sold, and so make the purchaser a mere licensee, says that this is recognized most emphatically in the following decisions, which have been widely quoted and ruled on: Columbia Graphophone Co. vs. Hill Piano Co.; Edison Phonograph Co. vs. Kaufman; Edison Phonograph Co. vs. Pike; Victor Talking Machine Co. vs. The Fair; National Phonograph Co. vs. Schlegel; Rubber Tire Wheel Co. vs. Milwaukee Rubber Works Co., and others.

The voluminous opinion handed down by Judge Ray in the suit of the Waltham Watch Co. vs. Chas. A. Keene, referred to, sets forth some conclusions that, according to eminent lights in the legal world, will not be maintained by the higher courts. He quotes copiously from copyright decisions, notably those which prevent publishers fixing prices on copyrighted books, as a basis of his discussion of patent rights, and, contrary to the general rulings of the higher courts, he would give the patentee no more privilege than the owner of a copyright.

But as this decision is to be reviewed by the higher courts it has no exact bearing on present-day decisions, for, as previously remarked, all relevant decisions handed down by the courts of last resort have been in favor of the power of manufacturers to fix prices on patented articles.

Every dealer and every jobber should realize the importance of the maintenance of prices, and every effort should be brought to bear to prevent the National Legislature from passing laws which, if passed, will have no other effect than to smash and disrupt stable conditions.

We are too prone nowadays to look with indifference upon measures which are up for consideration by State Legislature or National Congress. We defer action until obnoxious measures have become a part of the law of the country. Then it is too late for action. The time is past.

Take the Oldfield bill, which died a natural death with the last Congress. Its revival should be opposed by every business man in the country. We have given reasons in former issues, but the fundamental reason is this—it will destroy stable conditions. It will disrupt industry. It will reduce legitimate profits of labor and investment.

PPRICE maintenance is something which interests men in all trades, and on this subject W. H. Ingersoll, of R. H. Ingersoll & Bro., contributed an interesting article to a recent issue of *Leslie's*, entitled "Let the Buyer Beware—Need of One-Price System." He believes that price-cutting and so-called "sales" work a hardship on merchants doing an average business, and also draw trade from smaller towns to larger ones.

The tendency is, he says, through the influences improperly exerted upon the people, for city business to become concentrated in a few big stores and in the chain store system; the country surrounding each city is likewise drawn upon.

A frequent practise of large concerns is to take standard goods known by name and trade-mark to the public and offer them at an actual loss. They select a few articles which everybody knows to be reliable and worth a certain amount and offer them at astounding reductions, and in the same advertisement include many so-called reductions on goods which the people do not know and on which a large profit is made—the public drawing the inference that because the well-known goods are slaughtered the others are too. Of course, on the day of sale, matters are so arranged that very few of the "leaders" actually get sold. It is almost impossible for customers to resist the importunities of salespeople who press something else upon them. One New York establishment makes it a standing rule to discharge a clerk who sells more than one advertised "leader" a day.

Suppose, continues Mr. Ingersoll, one sees his favorite brand of coffee, breakfast food, bacon, candy or toilet soap, or wearing apparel, or watch or silverware that to him represents the best, advertised at prices radically below what he has always paid, what happens? The value of the goods is instantly lowered in his mind. He will never willingly pay the standard price again. He thinks, "What an exorbitant profit there must ordinarily be in those goods when they can be had through this source at so

much less." How can a buyer be expected to know that the goods are advertised at prices often below actual cost with the idea, not of selling them, but of drawing people in to buy something else?

The remedy proposed is to let the maker regulate the retail price at which his goods are sold. Since the price which he himself receives is in no way involved, his whole concern is in adopting measures which will result in the widest use of his products; this is exactly what legitimate retailers also want, and it is to the interest of the public. The benefit to the public is not so clear until one reflects that uniform prices mean uniform consumption, which in turn enables mills to run regularly and economically and permits plans to be made for months in advance, which allow the maker to put the most money possible into his quality.

Experience has forced us for the general good to establish uniform freight rates to all, uniform passenger rates and uniform insurance rates. Why not enjoy the same advantages on articles of national consumption?

THE value of the show window as a trade stimulator has been discussed so often in *The World* as to be a rather hackneyed subject, and yet there is no one feature of store management that is so productive of results as the window.

It is a mirror, so to speak, of a man's way of doing business. The dirty, slovenly, carelessly kept window is the surest indication of the slovenly, unprogressive business man—one who does not invite public confidence and support.

This is not a matter of theory, but a condition that is irrefutable. In certain sections of New York and other cities there are talking machine stores that do not reflect enterprise or progressiveness in their management, judging from their windows and the layout of the machines and records in the stores.

The writer happened to venture into one of these establishments some time ago, and in the course of a chat brought up the matter of window display and arrangement, and pointed out what a valuable stimulator of trade this owner was neglecting by overlooking keeping his window properly lighted and his stock clean and well arranged.

He accounted for the situation by stating that he was so busy that he had really not given this matter the consideration it merited, or view it from the standpoint now presented. He was a man, fortunately, who received these suggestions in the spirit intended. He inaugurated a new policy at once. The show window, which was of good size, was cleaned up and made as bright as a dollar. Powerful Tungsten lights were installed, and the talking machine stock and records were displayed in a manner to attract not only attention during the day, but particu-

larly during the evening. He arranged his stock in the store so that he had room to accommodate fifty people at recitals. The entire establishment was transformed into an up-to-date sales-room that attracted buyers, and it got them, too.

When the writer visited this place about a week ago he congratulated the owner on the improved appearance of his window and store, and was informed that this change had brought about marvelous results in increased business. He said: "I had really given this matter little consideration until you emphasized that business men and their methods were judged by their store windows and store display. That anybody should have this opinion of me pained me exceedingly. I awoke to the situation at once, and you see the result. What pleased me most, and what must please you, is that this move has brought me new business, a better class of customers than I have ever had in the past, and my experience proves conclusively that it pays to have a well lighted, attractive store."

ONE would think that in New York City, where window display has received more consideration than perhaps any city in the world, talking machine men would be alive to every opportunity to attract the attention of the public to their windows, and yet there are, we regret to say, some dealers in the upper part of New York who apparently pay little attention to the value of window display. These people would willingly pay a salary to a salesman, and yet there is no salesman who can bring better results than the window. It works day and night without overtime charges—it is a perpetual reminder of the dealer's enterprise or indifference.

These remarks do not apply alone to New York. Go where you will, whatever the city may be, and you will find that the talking machine dealer who has a well-lighted window, attractively displayed, and whose store stock is shown in a manner to invite the consideration of the public is winning out as against those who are neglectful and indolent.

In some lines of trade there is an excuse for a dealer overlooking window value, but in the talking machine trade there is none, for the talking machine manufacturers provide window displays that are out of the ordinary and which never fail to attract crowds to a store.

Modern merchandising must be conducted along progressive lines, and this means utilization of any and every means that will attract public attention to the products handled, whether it be through the advertising columns of the local papers, recital work, cleverly written circular letters, or unusually attractive window or store displays. Everything counts, and, mark you, the people who are making the most money are those who are putting this progressive policy into force.

RECORDS OF THE INDIAN TRIBES.

Great Gathering of Indian Chiefs in New York Recently Aroused Fresh Interest in the Red Men, Their Customs and Their Music—Records of Indian Songs Much Praised and May Some Day Form the Basis of a Distinct School of American Music.

It was a remarkable assemblage of chiefs of the various tribes of Indians, which are now fast disappearing, that gathered in New York on Washington's Birthday to help President Taft lay the cornerstone of the monument to the Indians, to be erected, thanks to the enterprise of Rodman Wanamaker, at Fort Wadsworth, overlooking the Lower Bay of New York. It afforded a great opportunity to moving picture men and talking machine recorders to secure pictures and records of these famous warriors, so that posterity may know of the achievements and history of these early occupants of this land, which is now peopled by the tribes of the world.

Indian music is fast winning consideration from many of our noted composers, and their work in this connection has been helped most admirably by the various talking machine records that have been made by the old-time war, love and hunting songs of the various Indian tribes.

The time is not far distant when these songs may form a basis of an opera that will be characteristically American, not based upon Ethiopian

themes, but rather on the songs of those red men who have been identified with the early history of the settlement of America, and who are now being swallowed by our modern civilization.

A well-known writer who had listened to phonograph records of a number of Indian songs which had been recently secured, said:

"From the standpoint of the scientific student of folk song, all these Navajo songs which I have had the opportunity to study are extremely interesting. This interest, too, is of several different kinds. The Navajoes, like all other makers of folk music, use their songs as a medium of poetic and emotional expression, and it is very interesting to note the quantity of melody they employ for this purpose. One may note the range and kind of intervals, the kind of rhythm and meter and the quality of tone which these people find appropriate to the expression of certain ideas and feelings in song. A comparison of the Navajo songs in these particulars with the corresponding songs of other tribes and races would be a most interesting ethnological study, especially as the innermost life of all our aboriginal tribes is embodied in their music. So far as I know, all their prayers and expressions of religious feeling find outlet in song. So do all the deeper social emotions, and the historical records of the tribes, the traditions of noble deeds, the memories of good and bad fortunes received at the hands of the gods, all are recorded and handed down in the songs of the various societies."

SAILS FOR SOUTHERN CLIMES.

George P. Metzger, the energetic and popular advertising manager of the Columbia Graphophone Co., sailed Thursday, March 6, on the steamer *Esperanto* for Progresso and Merida, Yucatan, Mexico. Mr. Metzger will probably be away about two weeks, and, according to his own statement before sailing, will take with him a bundle of work which would take up about two months of his time in the office to accomplish, but which he confidently predicts will be all finished at the end of his fortnight's trip. Yucatan is far removed from the scene of the Mexican war disturbances, so no fear need be occasioned as to Mr. Metzger's safety.

SUPPORTING THE LOCAL NEWSPAPER.

An important kind of advertisement should always be a loyal support to your local newspaper. This will not only help build up the community in which you live, but is the quickest and most up-to-date route of telling them what you have for sale. Always keep in touch with your local newspaper man, who does more to build up his community and for less money than anybody else except the hardware merchant.

Devote your energies to the man who can pay for what he gets.

He who can sell is a success—others may be.

TRADE CONDITIONS IN BALTIMORE.

Lenten Season and Inauguration of President Wilson Have Had No Effect on Business Activity in Talking Machine Trade in Monumental City, and the Outlook as Expressed by the Leading Establishments Is Excellent.

(Special to The Talking Machine World.)

Baltimore, Md., March 6, 1913.

The Lenten season and the arrangements which most Baltimoreans made to attend the inauguration of President Wilson seem to have had a slightly deterrent effect upon the talking machine trade during February. While business was not at all bad, it was not quite up to the performance of the fall months and January. The dealers, however, are just as confident and optimistic as ever concerning the future of the trade, and they predict that March and the spring months will show a great improvement over the good results obtained during the same period of 1912.

Manager W. C. Roberts, of E. F. Droop & Sons Co., said that the Victors had a comparatively good run during February, and considering the short month and other events that transpired, the results were very satisfactory. Mr. Roberts made a trip to the Victor plant during February.

"February held its own very well, when you take into consideration the several features that prevailed as against the other preceding months," is the way Manager F. A. Denison, of the local branch of the Columbia Phonograph Co., puts it. "It was a short month, and we must all consider that a great majority of Baltimoreans, like those persons of other States, were concerned with the inauguration of President Wilson, and, consequently, this was bound to have some effect on business. But withal, our sales for February showed up very satisfactory, and we passed the business for the same month during 1912."

"You can say for me that I am well satisfied with the business done during February. It is true that it was not quite so brisk as the several

months previously, but we must take into consideration the many things that had a tendency to keep the minds of the people off the spending or money for talking machines, etc." Thus Manager M. Silverstein, of Cohen & Hughes, puts it. This firm handles a big line of the Victors, and Mr. Silverstein simply says, "Watch me during March and the spring months."

The Sanders & Stayman Co., through Manager Albert Bowden, announce a fair business as compared with the previous months, and hold out bright prospects for results during March, April and May. The firm has a nice display of Columbia and Victor machines and records.

CATERING TO THE WOMEN.

Some Pointers for Dealers Who Are Neglectful of the Woman as a Buyer or as an Influence in Selecting Permanent Investment for the Home—Usually Chose Better Class Records.

As the woman is the buyer of what goes into the average home or is, at least, consulted about the purchase of what may represent a permanent investment such as a talking machine, it would seem quite logical that the dealer should cater to the woman. Formerly the retailing of talking machines seemed to be surrounded by a sort of undefined atmosphere of the dealings thereto belonging exclusively to men.

This is the idea expressed by one dealer recently, who stated that in thinking over his own business in talking machines and the possibilities of enlarging that branch, it suddenly occurred to him that his store had not been visited by many of the women of the town. Most of his sales of better class types had been made in the homes, the consent to a trial at the home having been invariably received from the man of the house.

This dealer's soliloquy led to his adopting means of interesting the women of the neighborhood, of so arranging and furnishing the department as to appeal to feminine instincts. His advertising was

Thomas Gordon, proprietor of the Gordon Talking Machine Co., handling the Victor and Columbia lines, says that there was a slight falling off during February compared with the other winter months, but notwithstanding this a number of good sales of high-priced machines were recorded and a number of good prospects are on hand. Joseph Fink, of the sales force, had several good sales of talking machines and records to his credit.

Similar reports concerning business and prospects were made by Proprietor Charles Strand, of the Lyric Music Co., who handles the Victor and Columbia machines.

directed to the women, and in various ways this dealer stated that he elicited the interest of women to an extent that sales were visibly affected for the better. One or two recitals given at afternoon teas in private homes, he found an excellent advertising medium. By playing on one of the best machines a number of the higher grade records of music especially suited to a gathering of women, most of whom claimed some musical taste, an interest was awakened, and inquiries from the better homes of the community resulted.

In this case a young woman from the store had charge of the machine, conveying, better than words, that a woman could easily take care of and play the talking machine. In many ways, this dealer stated, studious effort was made to get women interested and at the same time the men did not cease to be interested.

Another feature his experience brought out, says the Canadian Music Trades' Journal, was that, though in most cases harder to persuade to buy the better type of machine, women usually choose the better class records. It is also true that in dealing with women, the salesman is less prone to bring out the less staple titles.

A change has been made in the management of the O'Neill-Adams Victrola department, W. M. Hotaling taking charge this week.

Here's the Point

No. 417.

Height, 31½ in. Width, 20½ in. Depth, 16¾ in. Quartered Oak front and sides. Any Victor finish. Mahogany front and sides. Holds 272 10- or 12-in. disc records. Average weight, crated, 80 pounds.

For Victrolas IV, VI, VIII and IX.

No. 418.

Height, 30 in. Width, 22 in. Depth, 18 in. Mahogany. Quartered Oak. Any Victor finish. Average weight, crated, 70 pounds. Will hold 8 record boxes and each box has a capacity of 10 disc records. Also furnished with rack holding 136 disc records. Always shipped without record boxes or rack unless otherwise ordered.

For Victrolas IV, VI, VIII and IX.

The Best Selling Accessory In Talking Machine History

NOSET

The Autostartstop

MEANS AN EASY SALE to *every* new-machine-buyer and to most present owners. It means an unusual profit on every sale. It helps to sell instruments and it keeps owners pleased.

YOU CAN PROVE *every one of these statements.*

NOSET is the *only automatic start-and-stop device.* It starts the turn-table automatically when the tone-arm is moved to the right and stops it automatically when the record ends. It does this without fail, on every record, long or short, and

NOSET needs absolutely *no setting, no adjusting, no regulation.* It attaches instantly with the turn of a thumbscrew, and once attached need never be touched again. It cannot get out of order or wear out—no springs, gears, screws, triggers or batteries. Fool-proof, wear-proof, time-proof.

ASK YOURSELF whether **Noiset** won't help you sell instruments—by making the operation of the machine look supremely simple—by making the timidest prospect feel sure he can operate it.

ASK YOURSELF whether present owners won't welcome **Noiset**—won't be glad to have their instruments made self-starting and self-stopping.

ASK YOURSELF whether you couldn't use the unusual profit you'd make on every sale.

YOU'LL SAY: "YES, if **Noiset** really does all this."

LET Noiset itself prove that. Just get it from your distributor (if he hasn't it, we'll have your order filled for you), try it out as long and as hard as you please, and if you don't find every one of these statements absolutely true, send it back and get full credit for it, without argument.

THAT'S OUR GUARANTEE. TEST IT.

Nickel, \$4.50; Gold-plated, \$5.00. Discounts on Request.

Condon-Autostop Company

Manufacturers of Talking Machine Accessories

26 Front Street, New York

Columbia product to-day not merely produces bigger profits, per sale, or per dollar, or per hour, than almost any other line of merchandise now being sold, but it adds to the appearance of the store and to the prestige of the business.

From "Music Money"—a free book you ought to have.

**Columbia Graphophone Company
Tribune Building, New York**

TO MOVE TO LARGEST OFFICE BUILDING IN THE WORLD.

Headquarters and General Offices of the Columbia Graphophone Co. Will Be Located on the Twentieth Floor of the Famous Woolworth Building, New York, After April 15—Has 10,000 Feet of Floor Space at Its Disposal—Will Be Handsomely Equipped.

The Woolworth building, Park place and Broadway, New York, the tallest office building in the world, will be the home of the general offices of the Columbia Graphophone Co. by the 15th of next month. The company has leased one-half of the entire twentieth floor of this mammoth structure, and, according to present plans, will start moving into its new headquarters the last week of this month. Incidentally, the Columbia Graphophone Co. will have the honor of being the first concern to be established in the world-famous Woolworth building, unless its plans are unavoidably delayed.

Owing to business expansion, the administration and executive headquarters of the Columbia Co. have been inadequate for some time past. By leasing one-half of the entire twentieth floor of the tallest office building in the world, the Columbia Graphophone Co. will have at its disposal the use of 10,000 square feet of space, which should permit it to have plenty of room to expand when circumstances necessitate it.

In the new quarters, the general offices will all be grouped together as one family and on one floor, making necessary office intercourse an easy and simple matter, and saving much time which is now lost by the members of the staff being obliged to walk around halls, as is the case in its present quarters. The executive officers of the company and the various department heads are now busily engaged in laying out plans for the new offices, and owing to the ideal location of its new home and the architectural arrangements of the Woolworth building, every office, large or small, will be provided with unexceptionable lighting facilities. The present plans include the installation of considerable new furniture, and when finally pronounced ready for occupancy, the new offices will be unsurpassed as regards adequate working facilities, tastefully decorated reception rooms and comfortable and refined furnishings. The executive officer and heads of departments will all be located in individual private offices, thereby enabling them to receive and enter-

Woolworth Building, New York.

New Home of the Columbia Graphophone Co.

tain all visitors with a maximum of convenience, and every department now housed in the Tribune building, including the Dictaphone, legal and educational departments, will become members of one large family in the Woolworth building, on one floor and in one group.

The business of the Columbia Graphophone Co. has made such rapid bounds in the past few years that the company has often felt severely handicapped by its lack of sufficient room to carry out the detailed ideas of the staff in the proper handling of the enormous amount of correspondence and routine matters necessary in the conduct of such an extensive business as the Columbia Graphophone Co. is now doing. The remarkable increase in the past year in the company's business demonstrated more clearly than ever the imperative need of its removal to larger and more adequate quarters.

In finally selecting the Woolworth building as the location of its new home, the Columbia Graphophone Co. has chosen a building whose fame is world-wide as the tallest office building in the world. Situated in the heart of the most desirable business district of New York, and easily accessible to all modes of travel, the Woolworth building offers an unsurpassed location for such a widely known concern as the Columbia Co. Its handsome appearance and ideal working facilities have been the subjects of countless articles in the newspapers and national magazines. The building has every known convenience for tenants, including a swimming pool, shower baths, safety deposit vaults, and 28 high-speed elevators equipped with every known safety device.

UDELL SPRING SUPPLEMENT.

Illustrates and Describes Many Interesting Styles of Cabinets for the Talking Machine Trade That Will Doubtless Attract.

The Udell Works, of Indianapolis, Ind., whose cabinets are widely known and appreciated for their intrinsic worth, have just issued a spring supplement showing an exceedingly fine line of cabinets for talking machine records that should interest the trade.

The Udell Works are carrying a line of cabinets that supply the needs of people in all circumstances, and fit both in woods and finish the various machines on the market.

Judging from the way orders are reaching the Udell headquarters, it would seem as if the talking machine trade was looking forward to a very busy and successful year.

TO OPEN NEW QUARTERS.

The Minneapolis Phonograph Co. intends to open a branch store on Nicollet avenue, having leased the corner store at Ninth street in the Pierce-Walton block.

Work out your own formula for making good, but use this as a guide: "Just love the game with all your heart—and hustle."

Fishing for business is like fishing for fish. To be successful use good bait.

The Right Record

— WITH —

The Right Surface

Fit Any Phonograph

The demand today is for an indestructible record with a smooth playing surface. A record free from knocks and gratings. A record that will not break or wear.

U. S. Everlasting Records meet these conditions in every particular, and are the only records fulfilling this demand.

The construction of U. S. Everlasting records is indestructible throughout—not partially. Dropping them to the floor does no harm. They will not break in handling. They are true to name—everlasting.

We invite—yes challenge comparison—with any indestructible or semi-indestructible record on the market. Compare the surface of U. S. Everlasting Records with any other so-called indestructible records by playing them side by side. A trial will give you ample evidence—the results convincing as to the supremacy of U. S. Everlasting Records.

The April list of U. S. Everlasting Records will meet with the unqualified approval of the most critical. Your copy is ready for you—also our complete new record catalog. Ask for them today and make the comparison suggested above. It is to your advantage.

THE U. S. PHONOGRAPH COMPANY

ASSOCIATED WITH

THE BISHOP-BABCOCK-BECKER COMPANY

CLEVELAND, OHIO

THE TRADE IN BOSTON AND NEW ENGLAND

JOHN H. WILSON, MANAGER, 324 WASHINGTON STREET, BOSTON, MASS.

(Special to The Talking Machine World.)

Boston, Mass., March 10, 1913.

Thomas A. Edison's talking motion pictures have been making the hit of vaudeville the past fortnight. They were advertised simultaneously for Keith's Theater, the finest vaudeville house in the East, and the National, which is at the south end of the city, and which also is one of B. F. Keith's enterprises. On the first day hundreds of people were unable to gain admittance and almost the same story has been told each day since. Morning and afternoon both playhouses are jammed with eager audiences, and there is well-nigh breathless wonderment as the pictures are watched and the actors heard. As often is the case, advance information scarcely was adequate to prepare people for what they saw and heard. Everyone wonders how so large a volume of sound can be produced, sufficient to fill a theater, but when it is explained that the discs are very much larger than what one is accustomed to in the ordinary talking machine, then one better understands.

Endorsement from School Authorities.

In the report of the Boston School Committee just issued there is a hearty endorsement of the graphophone, reference to this Columbia outfit being made under the head of "Music." Here is what the report says: "In many of the schools the instruction in singing is supplemented by the aid of the graphophone. Not only is this instrument a practical and effective means of training boys and girls to sing well, but it also has a very great influence in giving them a love for, and an appreciation of, good music as interpreted by the great artists of the world." This is an endorsement that Manager Erisman is justly proud of. In the meantime this manager's emissaries are

hard at work on the school proposition, and many installations are constantly being made.

Piano for Eastern Associates.

When the members of the Eastern Talking Machine Associates have their enjoyable "get together" they will have the advantages of a fine upright piano, as Charlie Atwood installed a Hobart M. Cable instrument in the Associates' assembly hall the other day. Now the members can warble—those who can sing, of course—and play and dance to their hearts' content.

Visits Talking Machine Factories.

W. J. Fitzgerald, of the Eastern Talking Machine Co., has been enjoying a trip to Philadelphia, where he visited the Camden plant of the Victor Co., New York, and was entertained by several of the prominent dealers; and Orange, N. J., where he inspected the Edison plant. Mr. Fitzgerald was accompanied to New York by F. W. Bond, the Boston baritone, who made some records for the Victor Co. at its laboratory in the metropolis.

Boosting Edison Line on Road.

Tom Murphy, who is making himself solid with the talking machine trade on the road, is back in town after a very successful trip through the West in the interests of the Edison line. "Tom" is soon to start off on a cross-country trip, during which he will everywhere give demonstrations of the Edison disc machines. He will get as far as the Coast, probably. There is some talk of "Tom" being sent to San Francisco during the Pan-American Exposition.

Weingartner Making Columbia Records.

Manager Erisman is quite delighted over the prospects of some unusual records, both instrumental and vocal, through the presence in this country of the great Weingartner, the orchestra

conductor, and his singing wife, Mme. Weingartner-Marcel, as she prefers to be called since her marriage to the conductor. Both of these talented artists have been appearing at the Boston Opera House, and while here went over to the New York laboratories of the Columbia to make records, Manager Erisman having been instrumental in making the arrangements. Mr. Weingartner conducted the Columbia Orchestra and his wife sang some of her best numbers. Together they made about a dozen records, and the best of these will be put on the market.

Active Business with Steinert.

Manager Herbert L. Royer, when your correspondent called on him at the Arch street headquarters of the M. Steinert & Sons Co.'s Victor department, was getting ready to depart to New York and Philadelphia, where, of course, he will visit the Camden factory. Mr. Royer was over to Philadelphia only a fortnight ago, and in the meantime he has done a little traveling among some of the nearby New England cities. He reports business as unusually good, with the same old cry of difficulty of getting the goods.

Phenomenal Record Business.

Manager Erisman reports the business of the Boston office of the Columbia as having been something phenomenal the first two months of the present year. During January, he says, more than 78,000 records were sold by his able staff of salesmen.

School Concerts Most Successful.

Under the direction of the Boston School Committee, the Columbia Phonograph Co. continues to give largely attended concerts in the various city schools. One was given a few nights ago at the Roxbury Evening Center (Roxbury High School),

Since the introduction of the New Edison DISC Phonographs and Records

at the Boston Electric Show,
the interest is world wide

A large demand already exists and enormous sales are assured.

A limited number of Edison Disc Merchants have been appointed and the volume of business is phenomenal.

A few more Edison Merchants are being appointed in uncovered territory.

THIS IS YOUR MARKET

In New England and in Eastern New York State live 4,000,000 families, approximately 14,000,000 people. Every locality has its quota of music-loving people; people who have already heard of the wonderful merits of the Edison Disc Phonographs and Records.

These valuable prospects are easily turned into sales, meaning a Phonograph and some records at first, and some records every month thereafter.

The opportunities for building a large and profitable business are without precedent.

THIS IS YOUR "MAN MEASURE"

To be eligible as an Edison dealer requires a nominal capital, aggressiveness and clean business principles. You can easily acquire the routine details, and we will train you on the executive end. Co-operation and advice are included in our service without charge.

Most wanted are brains—brains mould quickly to new conditions.

We want picked men only, and only a limited number will be appointed.

Grasp this hint now!

This brief story should interest you. Write us for details.

NEW HAVEN, CONN.
96 State Street

THE TRADE IN BOSTON AND NEW ENGLAND

JOHN H. WILSON, MANAGER, 324 WASHINGTON STREET, BOSTON, MASS.

and a Grafonola de Luxe was used with splendid effect.

Henry Winkelman Reports Ditson Progress.

Henry Winkelman, manager of the Victor department of the Oliver Ditson Co., is the busiest man these days. Trade conditions during February were extremely good with this house, and the large staff of clerks have kept on the jump right along.

Edison Disc Phonograph Heard.

A number of invited guests seized the opportunity of witnessing a demonstration of the new Thomas A. Edison disc phonograph, which took place in Red Men's Hall, Central street, Winchendon, Mass., on an evening late in January. The audience included a number of the leading people of the town, and was eminently successful in every way.

Two Hustlers in Orange, Mass.

G. M. Pratt and E. B. Miller are having great success with the Edison disc phonograph in the town of Orange, Mass. Both men are hustlers, aggressive, and through close attention to business they have developed quite a business.

Many Victor Sales at Chickering & Sons.

Only constant activity is reported from Chickering & Sons, where Manager Ubert Urquhart's Victor department is the scene of great activity from morn till eve. Mr. Urquhart has made several notable sales of Victor outfits in the past fortnight.

Many Schools Install Talker Outfits.

The Eastern Talking Machine Co. reports good progress in its school installations of machines. Particularly active in this department of the company have been W. J. Fitzgerald and Edward A. Welch, who are hustlers in the trade. A number of out-of-town schools have lately had Victor outfits installed, and large consignments of records have been sent to these respective places.

Large Sales at Henry F. Miller Store.

Several large sales lately have been made of Victor outfits at the Henry F. Miller headquarters in Boylston street. The past few weeks have been unusually busy ones with Manager Francis T. White.

Rosen to Enlarge His Establishment.

Harry Rosen, whose establishment in School street always is a busy hive of industry, has lately been in New York, visiting the large dealers. Mr. Rosen called upon the leaders in the Victor, Columbia and Edison lines, and found business brisk everywhere. Mr. Rosen is planning to enlarge and rearrange his quarters, as the rapidly increasing business demands larger facilities.

Conditions in Lexington, Mass.

The town of Lexington, Mass., has developed quite a fever for the Edison blue amberol records, and A. M. Tucker has given palpable proofs of his ability to sell goods. Every day finds his place filled with prospective customers.

Gave Concert on Roof Garden of Hotel.

The roof garden of the Vermont Hotel, at Burlington, Vt., was used for a distinctively novel purpose recently, when a large crowd assembled there to listen to the new Edison disc phonograph. So large was the crowd that it was necessary to give two concerts. The Bailey Music Rooms, in Burlington, are handling this Edison line, and are most enthusiastic over what can be accomplished by these outfits. At the hotel the proprietor stated that he was contemplating installing a machine in his dining room, which certainly would prove popular with diners.

Large Crowds Enjoy Edison Disc Phonograph.

The demonstration of the Edison disc phonograph at Lockport, N. H., was the occasion of the assembling of one of the largest crowds that ever gathered for a concert. It was held at the Opera House, and every seat was filled long before the time for beginning. Though the hall was large, every one in the farthest recesses of the interior could hear every sound most distinctly.

About all the musical people of Montpelier, Vt., attended the concert of the Edison disc phonograph at the Kellogg-Hubbard library the latter part of January, and E. J. Seguin states that there is the keenest interest in the city over this latest style of phonograph.

Busy Reports from Worcester.

The Worcester Phonograph Co., at 11 Trumbull square, Worcester, is meeting with great success, and business in the past few weeks has gone along with a veritable boom. All the various outfits carried by this house are constantly being called for.

Movements of Columbia Men.

Manager Arthur Erisman, of the Columbia Phonograph Co., was over in New York a short time ago, visiting the Columbia laboratories. He expects to make another trip over in the course of the next fortnight.

H. A. Yerkes, the wholesale manager of the Columbia Co., was in town for a short time the past week, coming over here in regard to a big deal. Mr. Yerkes said that never in the history of the business has he seen such a shortage of products at the factory as at the present time. January and February were remarkably busy months, and the demand for disc records at times was heavier than the factory could supply especially on some of the most popular selections. Mr. Yerkes is looking for a remarkable year, far larger than the trade has ever known.

H. R. Skelton Exhibiting in Brooklyn.

H. R. Skelton, the traveling man for the Thomas A. Edison Co., Inc., is in Brooklyn, N. Y., for the fortnight, where he is in charge of the Edison disc machine exhibit at a local food fair. Mr. Skelton is giving informing and entertaining demonstrations of this wonderful machine the same way that he did when he superintended the exhibit that was given at the Mechanics Building last fall.

C. T. Shearer Co.'s Big Opening.

The C. T. Shearer Co. at Worcester, more widely known as The Star Store, had a big opening lately, and the public that inspected the establishment found one of the most conveniently arranged talking machine stores. There are three sound-proof rooms done in white and gold with leaded glass windows, and the Columbia goods that are

handled are exhibited in a very attractive manner. The Columbia department is in charge of Miss Gailbraith, who has been instrumental in building up a large business in Columbia outfits.

To Handle the Columbia Line.

The W. H. Berry Co., of Cambridge, has just closed a contract whereby it will handle Columbia machines and records. This company has an establishment conveniently located, and the prospects are good for a large business.

Mr. Schnitzer in Charge.

The O'Shea Furniture Co., of Laconia, N. H., one of the largest stores in central and northern New Hampshire, has just placed Mr. Schnitzer in charge of its Columbia department, and the latter went down to Boston a fortnight ago to spend a few days at the Boston office of the Columbia Co., where Manager Erisman gave him his personal attention in informing him as regards the fundamentals of the business.

Looks for Immense Business.

Manager Silliman, of the Pardee Ellenberger Co., reports a large call for the Edison products, and this is especially true about the new disc machines and records. All kinds of inquiries both in person and by letter and 'phone are daily being received at the Batterymarch street headquarters.

NEW DEALERS IN BANGOR.

Three Concerns Take on the Edison Disc Line
—Establishments Well Fitted Up.

(Special to The Talking Machine World.)

Bangor, Me., March 10, 1913.

Three new parties have entered the talking machine business in this city lately, taking on the Edison disc line. These are: Chandler & Co., Otis Skinner Optical Co. and the Arthur Guth Piano Co. Each has bought an initial order of \$2,500, which show their faith in the Edison goods is most pronounced. These establishments have fitted up special rooms to demonstrate the Edison disc machines, the Otis Skinner Co. especially having most attractively arranged display quarters, which is still located in the central part of the city.

NEEDLES

OF ALL STYLES, SHAPES AND SIZES

Chauncey Olcott, the greatest of all Irish ballad singers, is just now making his first records—exclusively for the Columbia. "Standing Room Only!"

**Columbia Graphophone Company
Tribune Building, New York**

TRADE OUTLOOK IN WISCONSIN NEVER BETTER.

Business Has Been of Remarkable Proportions Since Opening of the Year—Orders Reaching Jobbers Indicate That Stocks Are Light Throughout State—Gensch-Smith Co. Incorporated—McGreal's Move—Miss Emma Krech Married—Kinetophone Scores.

(Special to The Talking Machine World.)

Milwaukee, Wis., March 10, 1913.

If the talking machine business continues to improve during the remainder of the year as it did during January and February, it is certain that 1913 will break all previous records. Business received thus far in March is way ahead of that experience during the corresponding period a year ago, while the prospects for the future are unusually bright. Business conditions in general were never better in Wisconsin than at the present time. All the big industrial plants in this city have been operating full blast for several weeks, everybody is busy and money is plentiful. Out in the State there is plenty of prosperity as a result of the bumper crops harvested last fall and the high prices received all winter for dairy products and live stock.

Dealers all over this section of the Northwest are placing exceptionally fine orders for machines and records with local jobbers, proof that stocks in retail shops are lighter than is usually the case at this time of the year, and that dealers have plenty of confidence regarding the coming year's business.

The shortage in some types of machines which was experienced for several weeks after the opening of the new year has been overcome in most instances. Jobbers have caught up with their back orders and are now in a position to fill their new orders promptly.

A really enormous record business is being done at the local stores. Demand for records is increasing rapidly, only a natural result of the steady gain in the sale of machines. Dealers are all pleased with the March records in the Victor, Edison and Columbia lines.

The Kinetophone, Thomas A. Edison's new talking picture outfit, has taken Milwaukee by storm. The talking pictures first made their appearance at the Majestic Theater on February 24, and are still being featured at the vaudeville houses.

The wedding of Miss Emma Krech, a popular young lady connected with the McGreal retail store for some time, and Harry R. Fitzpatrick, manager of the Wisconsin Talking Machine Co., jobber for the Victor line, took place at the bride's residence on February 27. The ceremony was witnessed only by the relatives and intimate friends, but Mr. and Mrs. Fitzpatrick were given a send-off at the railway station by all the leading lights in the Milwaukee talking machine field. After a short wedding trip, Mr. and Mrs. Fitzpatrick are at home to their friends at 870 Forty-first street.

One of the interesting social events which preceded the Fitzpatrick-Krech wedding was a stag dinner given in honor of Mr. Fitzpatrick at the Gargoyle on February 18 by Joseph Gannon, assistant manager of the Wisconsin Talking Machine

Co. and now connected with the office of Sheriff Lawrence McGreal.

Among those in attendance, most of whom are connected with the talking machine business, were the following: Ernest Schefft, of Charles H. Schefft & Sons; Paul A. Seeger, manager of the Victor department at the Edmund Gram Music House; Leo Lange, of Lange & Kunz; W. P. Gensch, of the Gensch-Smith Co.; J. H. Becker, Jr., manager of the Victor department at Espenhain's; Mr. Kraus, of Kraus & Grau, Port Washington, Wis.; Lawrence McGreal, Harry McGreal, James Foley, Joseph Gannon and Harry R. Fitzpatrick.

The Gensch-Smith Co., recently incorporated to carry on a general Victor business, has opened a decidedly attractive retail store at 730 Grand avenue. The sound-proof booths are all finished in white enamel, while the furnishings are in mahogany. Both W. P. Gensch and Mrs. A. J. Smith, the members of the new firm, are enthusiastic over the manner in which business has opened up. During the first two and a half weeks that the store was open exactly \$1,000 worth of machines alone were sold. Mr. Gensch is calling on the outside trade, while the store is in charge of Mrs. Smith.

Business has increased to such an extent in the Victor department at Gimbel Bros. that Manager L. C. Parker has plans under way for installing several more booths during the coming year. Mr. Parker found at the close of the store's fiscal year on February 1 that his department had exactly doubled its business over the previous twelve months.

J. H. Becker, Jr., manager of the Victor department at Espenhain's, has plans under way for pushing his usual summer campaign in the sale of small Victrolas to the owners of Victrola XVI machines who spend most of their summers at the lakes. Mr. Becker has found that the owner of a large machine is always glad to purchase a smaller equipment which can be taken without trouble to the summer home. Mr. Becker's Victrola concerts at the Espenhain store are attracting large crowds daily and are doing much to increase business.

Paul A. Seeger, manager of the Victor department at the Edmund Gram Music House, and his associate, Ernest F. Leicht, report that business during the month of February was double that received during January. Business in both Victrolas and records is so good during March that, as expected, all previous records will be broken.

A. G. Kunde, Columbia jobber and dealer, 516 Grand avenue, is still looking for the new Grafonola brand, the new \$500 Columbia, as the Milwaukee trade has been much interested in the announcement of the new machine, and it is expected that some fine sales will be made. Busi-

ness at the Kunde store in machines and records is so good that both Mr. and Mrs. Kunde and the entire sales force are working overtime.

It is reported on good authority that one of the leading and oldest piano houses in Milwaukee is preparing to open a new Victor department within the near future. The deal has not yet been closed.

Miss Elizabeth Hughes, manager of the Victor department at the Edward Schuster & Co.'s department store at Third and Garfield streets, has been demonstrating the Victrola at various public meetings of late, with the result that she has doubled her sales for the past month. Miss Hughes recently gave successful concerts in several of the local churches and before various Epworth League societies, demonstrating drill and sacred music.

Mr. O'Neil, representing the Victor Talking Machine Co., and U. P. Gibbs, well-known traveling representative of the Wurlitzer Co., of Chicago and Cincinnati, were recent visitors.

Lawrence McGreal, sheriff of Milwaukee county, who recently disposed of his interests as Edison jobber to the new Milwaukee Phonograph Co., will open twelve credit clothing stores this year in Wisconsin and Michigan. Associated with Mr. McGreal will be the other members of the Lawrence McGreal Clothing Co., recently incorporated for \$100,000, but which has conducted a clothing store in Milwaukee for several years.

CONDITIONS IN SOUTH AND WEST

Remarkably Good, Says George W. Lyle, General Manager of the Columbia Co., Who Returns to the City This Week.

George W. Lyle, general manager of the Columbia Graphophone Co., returned to New York Monday after a four-weeks' trip through the important business sections of the South and middle West. Mr. Lyle speaks enthusiastically of conditions in the talking machine field, and states that the Columbia dealers are doing an excellent business. A feature of the current trade is the pronounced increase in the demand for the higher-priced machines over the high-grade business done any previous year.

Mr. Lyle noticed a steady demand in all sections for the high-priced "De Luxe" and "Regent" types of machines, which are rapidly growing in popularity. The Columbia "Grand" is admired and praised in all parts of the country, and many establishments in the South and middle West had disposed of their first instrument a few days after its arrival from the factory and were planning to quickly sell their next instrument as soon as it reached their stores. Mr. Lyle attributes the trade in the higher-priced styles in part to the elevating tendency of the Columbia Grand.

The keynote of modern business is service. You cannot put anything in your store that will yield the profit that good, first-class service will. A clean store, well arranged, everything plainly priced, everything to the front and on exhibition, means service. If an order comes over the 'phone, it does not make any difference if the man says "this afternoon will do"; send it at once.

“No. 14” The Dollar Needle Cutter

“No. 14” is guaranteed to make any fibre needle good for at least FOURTEEN records.

“No. 14” is guaranteed to give a perfect playing point—sharp, clean, even—every time.

“No. 14” is guaranteed not to get out of order or wear out—to be sharp and to stay sharp.

“No. 14” is supremely simple—just slip in the needle and snip—no directions needed.

“No. 14” is compact and good looking—leave it on the instrument, or carry it in a vest pocket.

“No. 14” sells for ONE DOLLAR, and leaves a very attractive profit for you. (Gold plated, \$1.25. Discounts on request.)

“No. 14” is the cutter you need, the cutter your customer needs, the cutter the needle needs.

Sold through distributors. If yours can't supply you, send us your order direct and we'll have it filled for you.

You've been waiting a long time for a perfect cutter at a reasonable price—don't wait any longer. Order “No. 14” to-day.

The Result of Long Experience

The many years that we have been wholesaling Disc Talking Machine Records have made us particularly well informed as to the best methods of handling them. After an extensive period of study we have evolved a Sectional Dealers' Cabinet for disc records, which we believe will do more to eliminate dealers' record troubles than anything ever before offered. Designed to help the dealer, all complications have been left out. It works on a principle as simple as the alphabet, and automatically keeps your stock complete and in perfect order.

CONVENIENT

Our Sectional Dealers' Record Cabinet may be placed in any convenient location, back of or on top of a counter—in fact, wherever it can be reached to best advantage. It takes up so little room that it will not be in the way anywhere. When a customer calls for a certain record, and it is in stock, it is located quickly by referring to index showing drawer number. If record wanted is one not kept in stock, the index will show the fact immediately without looking in the case. If record had formerly been in stock and sold, the empty special envelope in drawer shows when new one was ordered, and your customer may be informed exactly when he may call for it.

ECONOMICAL

Every dealer in disc records loses money every year through warping, scratching and otherwise spoiling of records. With a Sectional Dealers' Disc Record Cabinet in your store, all such waste is eliminated. To find a record which you always have means of knowing if in stock or not, there are only a dozen records to go through, and those are kept in orderly fashion. You can readily see how much more carefully you or your help will handle them than you would were it necessary to go through a disorderly mass of undesired records, searching for one which may not be in stock at all. Rough handling ruins records and means a loss to you.

CAPACITY

Section A consists of one Unit, one Top, one Base, equipped with drawer.

Each unit contains twenty-four spaces, each space holding twelve, 10 or 12-inch records, or total capacity of unity 288 records.

Section A and B contains two units; one top and base equipped with drawer. This gives a capacity of forty-eight spaces, holding twelve 10 or 12-inch records, or capacity of 576 records.

Sections A and 2B's contains three units, one top and one base, including drawer, the capacity of the three units being seventy-two spaces, each space holding twelve 10 or 12-inch records, or a total capacity of 864 records.

AN INEXPENSIVE NECESSITY

Our Sectional Dealers' Disc Record Cabinet was planned to aid dealers, and we want every dealer who handles disc records to have one. We have brought them within reach of all, the cost being very insignificant. It is a decided aid to dealers who do not carry a large stock, they can purchase single units and build them up with their business.

We have made these cabinets of the best material obtainable and finish them as ordered by dealer and every cabinet carries our quality guaranty.

LABOR SAVING

Our Sectional Dealers' Disc Record Cabinet does away with every unnecessary movement in locating any record desired. You can tell your customer in two seconds whether or not you have a certain record, and if you have, secure it for him in less than half a minute.

The Cabinet is easily cleaned, and your records are kept in perfect condition.

No warping, scratching, cracking or breaking.

FROM OUR CHICAGO HEADQUARTERS

ROOM 806, NO. 37 SOUTH WABASH AVENUE, E. P. VAN HARLINGEN, MANAGER.

(Special to The Talking Machine World.)

Chicago, Ill., March 8, 1913.

The talking movies are here, have been here for several weeks and the town is at their feet. The Chicago representative of The Talking Machine World has seen them and has pronounced them good. Great in present accomplishment and rich in still greater promise of still greater things in the future.

Here are extracts from a couple of the daily criticisms. All the papers devoted a great deal of space to the talking pictures; said, in effect, that they would still further enhance Mr. Edison's already great reputation.

Richard Henry Little, the humorously inclined critic of the Chicago Examiner, said:

"Vaudeville comes to the front this week with the real dramatic success of the season. It's extremely hazardous to make predictions about how long a new show will last, but I can cheerfully say, beloved hearers, without fear of contradiction, that here is a show that will run not only for weeks but months and also years. That's a pretty large order, but then you don't know what I'm talking about. I'm coming to that now.

"The new show, book and all, was written by Thomas A. Edison. While it is not the first success he has put before the public it is the one that is going to be most popular with theatrical audiences. The name of the piece is the 'Kinetophone.'

"We have had what were called 'talking pictures' before, but after seeing and hearing the 'Kinetophone' the old-time 'talking pictures' seem as archaic as an ox-cart, compared to an automobile. In the old 'talking pictures' two or three people stood behind the screen and spoke words more or less appropriate to the action that was being revealed on the screen in the moving pictures. One earnest athlete armed with guns, horns, sandpaper, a wave machine, an automobile horn and four hundred and seventy-five other different kinds of noise producers stood ready to give a realistic imitation of anything from the blowing up of the Maine to a bald-headed man slapping a New Jersey mosquito. But these 'talking pictures' lacked what we call in the drama 'convincingness.'

"For instance, over in one of the Halsted street 'talking picture' opera houses when a silk-hatted, elegantly attired gentleman on the motion picture screen spoke to the beautiful heiress and

said, 'Say, Gert, I'm clean dippy about you, and if you'll marry me I'll give you a swell flat an' you won't have to do your own washin'; how about it?' we failed somehow to be deceived into the idea that the pictures were talking.

"But the 'Kinetophone' is all that Mr. Edison has promised. The illusion is as nearly perfect as an illusion can be. The pictures do seem to talk. Every motion shown in the pictures that our eyes tell us should be accompanied by a sound is accompanied by just the sound our senses have taught us to expect. A man plays on the piano and we hear the notes as his fingers strike the keys. A violin bow is drawn across the violin, a book drops on the floor, a dog leaps into view, barking furiously, and the sounds come to us as naturally as though we were rewarding real people and animals and objects instead of a picture on a screen.

"The audiences looked as bewildered when the 'Kinetophone' began its performance as I imagine Hottentots in Equatorial Africa must look when some explorer shows them a watch or a phonograph. It does seem like black magic for a while. The talking is as natural as any talking can be and there are all the gradations of tone and inflections usually employed in speech.

"The audience at the Majestic Monday afternoon sat for the first five minutes of the 'Kinetophone's' performance in the most stupendous silence I have ever known on the part of an assemblage of sixteen hundred people. Then suddenly, as if in response to a signal, the applause broke out in deafening volume and continued for two or three minutes. The telegraph, the telephone, the phonograph, the X-ray, color photography, the automobile, the aeroplane, all within a few years! And now the Kinetophone! Next!"

Percy Hammond, in the Tribune, says in part:

"Thomas A. Edison is the 'headliner' at the Palace Music Hall this week, as he is also at the Majestic, and the temperamental stars of vaudeville are, it is presumed, not unperturbed thereby. Moving pictures in the honor place on the bill, with the erstwhile 'topnotchers' distributed humiliateingly on either side of them, is somewhat of an innovation, boding, it may be, no good to pride and prestige. The audience comes in for 'the picture' now instead of going out on them as has been the custom hitherto.

"Mr. Edison's contribution is the 'Kinetophone,' and in the words of the gentlemanly and eloquent photograph which makes the introduction it is

a synchronization of reproduced sound and sight. That is, a phonograph of heroic proportions suits the word to the action of the moving picture. That is, again, it is phonograph and camera in perfect combination. By way of emphasizing what a wonderful thing the 'Kinetophone' is, the exchequer of the Edison interests will be improved \$50,000 weekly—the amount of the toll to be paid by the vaudeville theaters which employ this wonderful apparatus."

Fred Schmidt in Town.

Fred Schmidt, of the Schmidt Music Co., Muscatine, Iowa, has been a "visitor within our gates."

Wurlitzer Have Pow-wow.

E. H. Uhl, manager of the Chicago house of the Rudolph Wurlitzer Co., is now on a trip to Panama, Cuba and thereabouts. He is on business and pleasure combined, as Wurlitzer automatic instruments have a wide distribution down in that neck of the woods. Before he left there was a general gathering one evening of the employes, literally everybody being present from the elevator man up to the dizzy heights whereon F. A. Siemon reigns in his iridescent gl-o-ory. Efficiency prizes were awarded and some mighty helpful talks indulged in.

Department H Travelers Gather.

The special representatives of the wholesale talking machine department of Lyon & Healy were in for three monthly conferences with Manager Leslie C. Wiswell the other day. There were F. L. Fritchie, Iowa; J. E. Meagher, Iowa, Wisconsin; A. D. Stone, Indiana and Michigan; and J. B. Ryde, Illinois. They are a fine lot of men, and are doing some mighty good work for the Victor department of the big house in their respective territories.

By the way, Mr. Dvorak on his recent Eastern trip took big orders from practically every jobber he called on for the Lyon & Healy fiber needle cutter.

The Reporters Were Interested.

During the celebrated Steger-Geppert case at Joliet which meant so much to the piano trade and to the cause of clean journalism, the boys on the Joliet dailies indulged in a lot of human interest stories. Here is one of them from the Joliet News, only the machines involved were Columbia Dictaphones.

"Every little movement has a meaning all its own," but nowhere do little movements have greater
(Continued on page 22.)

The Wade

Fibre Needle Cutter No. 1

The WADE FIBRE NEEDLE CUTTERS, No. 1 and No. 2, trim the needle at the proper angle, and the needle can be repointed from 12 to 15 times, producing clean, perfect playing points. This cutter is provided with a self-acting stop, which prevents cutting away more than enough to make a new point.

The Wade

Fibre Needle Cutter No. 2

The WADE CUTTERS have an upper and lower blade, the upper blade being loosely pivoted and pressed against the lower blade by means of a spring, making a perfect contact. These blades are made from the best Swedish Tool Steel, and are scientifically hardened by electricity, giving the most lasting and finest cutting edge that it is possible to produce, and seldom ever needs sharpening.

The construction of the WADE No. 2 affords the most powerful cut of any tool ever made, and the blades work parallel to each other, therefore it requires practically no exertion whatever to trim the needle.

We fully guarantee this cutter in every respect, and if the blade of this cutter ever gets dull we will give you a new blade upon the return of the old one.

LIST PRICES—No. 1, \$1.50; No. 2, \$2.00

Order from your regular Distributor—we sell to Jobbers only

WADE & WADE,

1227 East 46th Street
CHICAGO, ILL.

FROM OUR CHICAGO HEADQUARTERS—(Continued from page 21).

meanings than do those of the wax cylinders on the little phonograph machines that are working overtime daily in the office of Everett Shaw, official circuit court reporter.

"With the opening of the Steger case it was apparent that court reporters were in for a long siege of shorthand work and transcribing drudgery. "Necessity is the mother of invention," they say, but in this case it might be worded to better advantage by using the word expediency, at least that is what it amounted to, for Mr. Shaw, distantly connected with the great Shaw publishing house, which is world-famed for its efficiency ideas, had one of his own, and in came the phonographs.

"After taking down the evidence of the first part of a court session, he 'beats it' to the office at recess while his assistant takes his place at the reporters' table in the court room.

"Back in the office, and in the quiet of its confines, he unfolds the story of the trial as recorded in the curves, dots and dashes of his shorthand notes. But the tale is not imparted in the usual way.

"Only into the ever-open 'ear' of one of the machines does he tell his story. From one cylinder to another the story goes, as the smooth surfaces are scratched by the fine needle attached to the sensitive diaphragm of the recorder.

"Then the process is reversed. The 'governor' is adjusted and the phonographic story retold at a slower rate, and as it's retold Miss Nellie Harrington and Miss B. Helene Grosman are there to record it 'forever' with their trusty typewriters.

"And thus the phonograph has come to stay in Joliet stenographic fields, for Mr. Shaw is greatly pleased with the system, while his assistants are even more enthusiastic in their praise of it."

Visitors to the City.

Samuel Goldsmith, that distinguished member of the Victor sales forces who sort of headquarters in Chicago, has bobbed up again smiling and busy as usual after a tussle with the "grip."

M. P. Baukin, of the Baukin Music Co., Beloit, Wis., was a visitor a few days ago.

F. A. Smith, of Marshalltown, Iowa, was a recent visitor. Four years ago Mr. Smith bought out the Edie-Ward piano business at Marshalltown and has since conducted it under the name of the Central Music Co., while his son not long ago bought out the talking machine and small goods business formerly conducted by Mr. Schwietert, now one of the leading talking machine salesmen at the local house of the Rudolph Wurlitzer Co., and has since run it under the name of the Smith Music Co.

A Wonderful System.

J. R. Cadell, of the inspection department of the Victor Talking Machine Co., spent several days among the jobbers and dealers in Chicago this week. His principal purpose was to examine the machines as they came in from the factory to see how they withstood the rigors of the journey, especially as to the condition the motors were in after the journey. Furthermore, this gives him a final chance to know to a certainty just how they get away from the factory. Just another instance of the wonderful organization of the Victor factory and system and the ceaseless series of check-ups. "The Victor Co. is never satisfied with product or system," said Mr. Cadell. "It wants to better both whenever and wherever possible. Probably few people realize how thorough the Victor methods are. Why," he continued, "give me the number of a machine and I can tell you when and where it was built, who inspected it, the girl who played it, how many times it was played, who packed it, etc. Something like the same process can be gone through on the motor and the sound box. In fact, we know just what was done and who it was done by at every stage of progress."

Some Columbia Changes.

A. W. White, who has had charge of the St. Paul office of the Columbia Co., has been transferred to one of the other branch offices, while Mr. Herdmann, formerly of the Indianapolis office, has taken charge of the St. Paul headquarters.

A. W. Roos, for the past year or so traveling

auditor for the company, and who prior to that was for many years connected in important capacities with the Chicago offices, is now manager of the Indianapolis branch, while Thomas DeVine, who has been manager of the Indianapolis branch for some time, will now devote his attention to the Dictaphone exclusively in the Indiana metropolis.

O. C. Junge, who has been manager of the branch at Providence, R. I., has now traveled over half-way across the continent to take charge of the Columbia interests in Omaha, Neb.

Mr. Laurie Here.

P. A. Laurie, assistant auditor-in-chief of the Columbia Co., and head of the traveling auditing forces, is a Chicago visitor. As the result of a grilling direct, redirect and cross-examination by the representative of The World, Mr. Laurie admitted that so far he had found nothing on the Chicago office except "good business."

Keith's Exploring Expedition.

Roy J. Keith, sales manager for the Talking Machine Co., returned last week from a trip to Milwaukee, Madison and the Twin Cities. At the Wisconsin metropolis he witnessed arrangements made by the J. B. Bradford Piano Co. for the installation of a new Victor talking machine department. There will be fine demonstration rooms upstairs, and display on the ground floor. At the State Capitol Keith found that W. W. Warner, the pioneer piano dealer and talking machine man, is going to retire from business this fall. His son, Paul Warner, has so many outside interests in the way of real estate and investments of various kinds that he simply cannot attend to it all, and is therefore also compelled to give up the music business. The talking machine department of the Wisconsin Music Co. is making rapid progress under the direction of the capable manager, Mr. Holtman. They are giving recitals which are proving big business pullers, and are following up the good work with well-written and widely and judiciously distributed circulars. At Minneapolis, Mr. Keith says that W. E. Gylee, who has been manager of the Twin Cities stores of the Cable Company for years, but who was recently elected vice-president and director of the great corporation and who has now come to Chicago to assume the responsible position of sales manager, arranged before his departure for the installation of Victor departments in both the Minneapolis and St. Paul stores. The equipment will be unusually classy, booths and all that sort of thing. Mr. Keith also visited the various stores of the Twin Cities. Mr. Mathias is consolidating both his stores under one roof. He visited the departments of Foster & Waldo, of the North East Furniture Co.; Raudenbusch & Sons, Howard Farwell & Co. and others. Parenthetically he says that he saw some mighty fine stores, and saw evidences of a mighty prosperous business all along the line.

Within Our Gates.

Mr. Olds, manager of the Victor department of the M. M. Claypool Co., Crawfordsville, Ind., with branch music stores at Kokomo, La Fayette and other Hoosier cities, spent a couple of days in Chicago recently, visiting the various stores and departments, posting himself on selling plans, window displays, etc.

Paul Seeger, manager of the talking machine department of Edmund Gram, Milwaukee, spent a day or so with the Talking Machine Co., posting himself on the motor question.

Messrs. White, of the Milliken & White Music Co., Bay City, Mich.; H. Schmidt, of H. Schmidt & Sons, Davenport, Iowa, and Mr. Burg, of the Burg Piano Co., La Crosse, Wis., were all visitors last week.

Mr. Flenteye, who visits city trade for the Talking Machine Co., resides at Wilmette, Ill. He works while he sleeps, so to speak, and couldn't possibly let a good prospect in his home town get by, although legally his activities are supposed to be confined to the city of Chicago. He has just established the enterprising firm of A. H. Denamar & Son, of Wilmette, as Victor dealers.

Lyon & Healy's Good Month.

Lyon & Healy report that February was the

biggest month, both in wholesale and retail, in the history of the talking machine department. This in spite of the shortage in the new types present now in a continually diminishing degree.

The Victrola Muse.

Ye heaven 'spired poets, ye. Choice souls whose customary habitation is 'mongst the heaven and sun-kissed clouds! List, oh! list, to your Brother Sweet, of Malta, Ill., who, while he is not strumming his spiritually bedecked harp, is running the Malta Concert Hall, which is the name of his talking machine business. List, oh! list, to a few of his inspired warblings which recently made melodious the pages of one of the Malta papers. After reading, let the alleged inspired and shining ones go hide their heads and mourn in sackcloth and ashes. They will all get the sack if they have not a care or twain.

VICTROLA.

Among Malta's fair daughters, is the Queen
Of my heart's purest rest.
With grace, love and beauty supreme,
In motives chased in judgment best,
Guileless as sunshine, pure, lovable, clean
Is VICTROLA, my treasure, my love, my rest.

No soft southern zephyrs, more abundant in bliss
To the careworn, weary, lonely man,
Than the sweet confidence betrayed by a kiss,
That inspires peace, like a joyful wan,
In the thoughts, and ambitions of this
Creature, beset by an unholy ban.

No lake more tranquil, or brook more free,
Than would be life's long journey,
Sweetheart, in a cot or mansion with thee,
No planet more brilliant, no heaven so bright,
If together the journey we run,
No shadow, no sorrow, all beautiful sun.

But, VICTROLA, remember, if fortune or fate,
In its cold heartless torture and hate,
Should frustrate our dear cherished plan,
Cold winter blizzards, that ravish the land,
Would be as a May morning to compare,
With my disappointment, horror, despair.

New Talking Machine Company Organized.

The United Talking Machine Co. is a newly chartered corporation for the manufacture of talking machines to be located in Chicago. The incorporators are Robert Johns, A. F. Johns and E. E. Johns.

Opens Columbia Department.

The F. G. Smith Piano Co., on Wabash avenue, has just opened a Columbia Graphophone department, handling the complete line of both machines and records. There is a fine window and floor display made on the ground floor, and the main department is on the third floor, where handsome booths are now being fitted up. A. D. Herriman, long in the Columbia service and a salesman and manager of high degree, is in charge.

Another Piano Store in Line.

W. W. Pushee, who conducts on his own hook a piano store handling the Coté pianos in connection with the Western headquarters of the Coté Piano Co. in the Republic building, has just added the Columbia line. This is the only upstairs exclusive Columbia department in the city so far as the writer knows, and it will, no doubt, prove a big success.

Columbia Grand Grafonola.

The first of the Columbia grand grafonolas to reach Chicago was received here by the local office, and is now on exhibition at their handsome ware-rooms at Wabash avenue and Washington boulevard. It is of symmetrical proportions. When the grand lid is up a peep inside reveals a fairyland of beauty and, best of all, everybody goes into raptures over the tone. The general opinion is that the beautiful \$500 instrument more than justifies all anticipations entertained for it.

These Are Leading Sellers.

M. M. Blackman, who has charge of the retail talking machine record department of Lyon & Healy, says that two of the very best sellers of the month in the artistic class are the intermezzo from "The Jewels of the Madonna" and "Where the River Shannon Flows," sung by John McCormack.

Patrick with Phonograph Co.

W. C. Patrick will travel for The Phonograph Co., the new Edison jobber in Chicago. Mr. Patrick is exceedingly well known, especially in the Eastern talking machine trade. For a number of years he was city salesman for Edison phonographs, was later head of the Chicago branch of

Don't lose 40% or 40-10% profit on a Machine or a Red Seal Record sale, by not having, or not being able to get the goods.

Pay a little more freight or express than usual if necessary, *but get the goods.*

Let distance and freight be no object when retail profits, prestige and service are at stake. *Get the goods.*

The business arms of The Talking Machine Company stretch over the country from Maine to California and from Minnesota to Texas. They are the largest Talking Machine Jobbers in the world, and remember *they wholesale exclusively.*

The Talking Machine Company
137 N. Wabash Avenue, Chicago, Illinois

FROM OUR CHICAGO HEADQUARTERS—(Continued from page 22).

the Edison battery department, and later was with the U-S Phonograph Co. His many friends in the trade will be glad to see him again in the field under such favorable conditions.

Wurlitzer to Open Victrola Recital Hall.

The Rudolph Wurlitzer Co. is completing and will throw open to the public about March 15 one of the most attractive little recital rooms in the city. The room is tastefully decorated, well ventilated and seats about sixty-five people very comfortably. In it there will be given, every day, Victrola recitals. In the back of the hall, facing on Wabash avenue, there is a large show window in which is displayed a full line of Victor talking machines and accessories. The retail department of the Wurlitzer Co. reports a continuation of the favorable business with which it has been favored for some months past. The record department notes that "Apple Blossom Time in Normandie" is at present the best seller. E. H. Uhl, manager of the Chicago branch, is on a trip, partly business and partly pleasure, through the West Indies and Central America. He will make stops at Belize, in British Honduras; Barrios, Guatemala; Limon, Costa Rica; Kingston and Colon.

Wade & Wade Enjoy Good Business.

O. S. Wade reports that the demand for the company's fiber needle cutter continues to wax strong, with orders from jobbers constantly increasing in size. The wide use of the fiber needle has given the company opportunity to expand.

Good Demand for Record Cabinets.

The Salter Manufacturing Co., of Chicago, is enjoying an unprecedented call from dealers for Salter felt-lined cabinets of the most expensive type, showing evidently that the owners of phonographs are enjoying their instruments to such an extent that they are becoming more willing to give both instruments and records the care that they are rightfully entitled to.

Daughter of John Kurzenkabe Dead.

John E. Kurzenkabe, one of the oldest and best known of the local Rudolph Wurlitzer staff, received a telegram March 7 which announced to him the death of his daughter, Miriam, at Phoenix, Ariz. Death was caused by tuberculosis. Miss Kurzenkabe had just reached womanhood, and her untimely taking away will be the cause of much sorrow to many in the music trade who have had the privilege to meet her.

Purchase Harger & Blish Victor Stock.

The following letters are self-explanatory:

CHICAGO, March 1, 1913.

Dear Sir:—Your old jobbers, Harger & Blish, have sold out their Victor stock to us. The writer was in Des Moines yesterday and Mr. Blish was much interested in just how the dealers to whom he used to sell, would be taken care of.

Harger & Blish themselves have agreed to buy their retail stock at both Des Moines and Dubuque from the Talking Machine Co., of Chicago; in fact they have been so enthusiastic about the *Exclusive Wholesale Service* which we have been able to render, that they intend to write every one of their dealers, suggesting that they give us their business.

This letter is an earnest plea for that portion of your business which used to go to Harger & Blish. We beg to support that plea by these three statements:

The Talking Machine Company is the only exclusive wholesaler of Victor goods in the country. They are the Largest Distributors in the country. They carry on an average 150,000 records in stock.

We will challenge comparison with the way we are able to fill orders with any other distributors. At present we are filling Record Orders 97% complete. Another important fact—every dollar's worth of goods we receive is subject to our dealers' orders—nothing held back for retail purposes.

Enclosed please find our contract. We want you to sign up with us so you may be listed among our regular dealers, and receive our bulletins and trade information from time to time. As a matter of showing our prompt service, we are enclosing April advance List of Records—An exceptionally good list, and which we can ship to you the 26th day of this month. We should appreciate greatly having your advance order on this list.

Yours very truly,

THE TALKING MACHINE COMPANY.

DES MOINES, Feb. 27, 1913.

Dear Sir:—We have sold our entire jobbing Victor stock to the Talking Machine Co., of Chicago. The service that you will receive on your future Victor orders has given us some thought as you have been a contracted Victor dealer of ours. We have decided to place our entire future Victor retail business with them, and would suggest that if you have not already signed contract with them, that you do so, and thereby share in the splendid service given.

This concern is the largest exclusive Victor distributor in the country and can we are sure give you the service which we in the past have endeavored to extend to you. We have taken the liberty of forwarding your address to them as a prospective dealer, and sincerely hope that you will extend to them the same courtesy that we have always appreciated so much from you.

Sincerely,
HARGER & BLISH, INC.,
H. H. BLISH, Secretary.

A. D. Geissler, general manager of the Talking Machine Co., spent a day in Des Moines recently

going over the matter with Mr. Blish. The latter called up something like thirty of their dealers and introduced them over the phone to Mr. Geissler, who then and there took orders for something like \$7,000 worth of business over the phone, and also got assurances of future patronage.

George W. Davidson Is Ill.

George W. Davidson, of the Talking Machine Shops, has been taken quite seriously ill with a bronchial trouble that developed from a case of grippe. The "Shops" continue to find business very good along all lines, with "The Robert E. Lee" and other records designed for the present craze for tangoes in the lead.

U. S. Phonograph Co. Enjoys Good Business.

Mr. Lyons, of the United States Phonograph Co., reports that business with his company has been entirely satisfactory in every department during the past month and that the outlook for an even greater volume of business is decidedly good.

BUILDING OF THE PHONOGRAPH CO.

Headquarters of the Edison Interests in Chicago Admirably Equipped—Under the Management of C. E. Goodwin.

(Special to The Talking Machine World.)

Chicago, Ill., March 10, 1913.

The building of The Phonograph Co., Chicago's new Edison jobber, exhibits an entirely new setting for a commercial enterprise, and as such is worthy of comment in the pages of The World.

Edison Headquarters in Chicago.

It was the desire of the owners that the building should represent in a simple and dignified way the use to which the building was to be put, and to use in its construction and equipment the best materials that could be obtained.

The business of The Phonograph Co. is very special, yet the solution arrived at is a perfectly natural one, and although differing radically from anything in the city, it only represents the logic of the situation.

Every part of the design and plan was formed to

meet a special requirement and to represent special needs. The open loggia across the front, 9 feet wide by 26 feet long, is the chief attraction of the building from the street, giving it a sense of openness, of attractiveness and an unostentatious invitation to just come in and see what it is all about. The open loggia is unique in the city, and gets away from the endless glare and rigidity of the interminable line of glass that we are in the habit of seeing and expecting to see everywhere.

The Phonograph Co.'s building will be known, not because it is different but because it is rational, commercially wise and expedient in the best sense.

The outside is built of a delicate cream enameled brick with ornamental terra cotta in polychrome, not stuck on as useless decorations but a natural outgrowth of the structure. The floor of the loggia is a rich green tile and carries with it a kindly invitation.

The interior of the building is of a piece with the exterior, and represents the same process of thinking. It contains a recital hall, booths for private audition and display, a reception room and general offices for wholesale and retail purposes. The entire building is mechanically ventilated and heated, thus rendering it one of the most comfortable places in the city to visit.

The architects for the building are Purcell, Feick & Elmslie, of Chicago and Minneapolis. The interior was formulated by Walbridge & Niedecken, of Milwaukee.

LYON & HEALY IMPROVED CABINET.

New Rack in Unit Form That Makes Provision for Enlarged Stock.

(Special to The Talking Machine World.)

Chicago, Ill., March 11, 1913.

Dealers in disc records have for some time felt the pressing need of a system of cabinets that would provide for the inevitable increase in the amount of stock carried and at the same time maintain the uniformity of the racks with respect both to the size and style.

With the idea of satisfying this demand Lyon & Healy have produced and are placing upon the market a cabinet system that is based upon the well-known unit system which has been popular for so long among booklovers.

A single unit consists of two divisions of twelve shelves apiece, each shelf capable of storing twelve 12-inch records. Thus each unit will accommodate 288 records.

The makers have had the protection of the records in mind when designing the system, lining each of the compartments with felt. In addition to this each record will be encased in an envelope, further insuring it against scratches. Base units are fitted with two drawers designed to hold sound boxes, needle supplies and other small articles.

The drawers are numbered consecutively and correspond with the list of records maintained in the alphabetically arranged index book that is furnished with each cabinet. In this way, when a certain record is called for and it is in stock, it can be quickly located by referring to the index. If the record is not kept in stock the index will show this immediately. If the record had formerly been in stock and sold, the empty special envelope in the drawer shows when the new order was placed and when the customer may call for the record. This simple and systematic method obviates much unnecessary handling of records with consequent preservation.

These cabinets are finished in any style and can be furnished to match any interior.

NEW VICTOR LANTERN SLIDES.

In response to many requests, the Victor Talking Machine Co. has had prepared a series of lantern slides showing prominent opera artists in their principal roles and scenes from the grand operas, for the use of Victor dealers in their own stores or in the moving picture theaters in their respective cities. The slides are so arranged as to permit of the insertion of the name and address of the local dealer and are supplied at a nominal price.

"It's the Jewel that Does the Work and Oh, How Well."

"It's the Jewel that Does the Work and Oh, How Well."

10,000 Needles in 1

With 1 Phonograph Disc Needle you can play 10,000 operas, songs or pieces. The Permanent Disc Phonograph Needle does the work of 10,000 ordinary disc needles. Use it 10,000 times without changing. Made in three tones—Soft, Medium, Loud. Gives the tone you want to suit the occasion. Puts rich, tonal value in your records. Prolongs the life of your disc. Preserves the sweet and delicate tones. Every phonograph owner wants this Jewel Needle, because you don't have to change it.

Jewel Disc Needles

The demand for this marvelous improvement in disc phonographs is now here. Every owner of a disc phonograph wants this Jewel Needle as soon as he learns of its beautiful quality and its unrivaled merit. The demand is growing every day for the needle. Gives more genuine and artistic value to the phonograph. It saves records. It saves trouble. It saves money.

Special to Dealers Every dealer should have this Permanent Phonograph Disc Needle in stock. Every dealer should carry the three tones in this needle. The loud tone for public recitals, churches, etc., the medium tone for home gatherings and general use, the low tone needle for artistic requirements. Dealers should stock up on this needle and get the benefit of giving their phonograph customers a new delight and a greater value for the money than they have ever given before. Dealers! Help your own business by giving your customers of this marvelous Permanent Jewel Disc Phonograph Needle.

Write to-day for full description and all particulars of prices and terms, free to you. The demand is great and it is growing every day. Write to-day.

"It's the Jewel that Does the Work and Oh, How Well."

SPECIAL WINDOW DISPLAY

Important Addition to the Artistic Show Card Displays Sent Out by the Victor Talking Machine Co. Generally Admired by Trade.

The Garden Scene in "Faust" is the subject of Victor Show Card De Luxe No. 21, to be used in conjunction with the feature record in the April list of Victor records, entitled "Gems from Faust," which is to be offered for sale to the public on the 28th of the month. There will undoubtedly be a strong demand for this popular opera's record, and Victor dealers were more than pleased to observe its presence on the April list of records.

Show-card No. 21 is one of the most artistic and attractive display cards yet introduced by the advertising department of the Victor Co., and this means a whole lot, as some "beauties" have been presented to the trade recently. The figures used in the display are those of Farrar and Journet, the world-famous artists, dressed in costume as they played in the two roles of Marguerite and Mephistopheles.

When completed the card will measure 31 by 48 inches, and the Victor Co. suggests that it be placed in front of a solid background in order to obtain the best results. Victor dealers who carefully noted the description of the new show-card in the advance list of April records lost no time in placing their order for the card when completed, and judging from the orders already on hand, Show-Card De Luxe No. 21 will prove to be one of the most popular displays ever introduced by the Victor Co.

VIEWS ON DISC RECORD ALBUMS.

"The constructive qualities of our albums are our talking points in the merchandising of our disc record albums," states G. Bates, of the New York Post Card Album Co., 25 Lispenard street, New York. We are continually impressing on our trade the merits of a disc record album that is so constructed that every detail of manufacture can be easily demonstrated to a prospective purchaser, and, moreover, after this demonstration is completed, the sale is certain to be closed. We have worked assiduously on the perfecting of our albums, and with the aid of many years of experience in the album field have succeeded in introducing a really perfect disc record album."

NEW RECORDS BY BONCI.

Considerable interest is being manifested in the announcement of the Columbia Graphophone Co. that records by Bonci, the famous operatic tenor, will be featured in the May list of Columbia records. Bonci's reputation is worldwide, and the Columbia Co. is naturally elated at presenting his records to the trade. Bonci has personally approved his records, and this approval was couched in emphatic and sincere terms. A reproduction of a two-page spread appearing in this week's Saturday Evening Post, and featuring Bonci's records, is shown on another page of The World.

TRY THIS.—"Was your daughter's musical education a profitable venture?"

"You bet! I bought the house on either side of us at half their value."

WILL BUY.

CASH PAID for all kinds of old and new disc or cylinder phonographs, records, horns, boxes, motors and cabinets. Myron Greenberg, 247 So. First St., Brooklyn, N. Y.

POSITION WANTED.

POSITION WANTED by educated young woman with six months' experience as a Victor department manager during year 1912. References given. Write or telegraph to Miss Ida G. Jones, Luverne, Minn., Box 204.

FOR SALE.—5,000 Edison 2-minute records, 10c. each; 5,000 Zonophone 10-inch records, 15c. each; all new, clean stock. DENINGER, 335 North St., Rochester, N. Y.

THOMAS A. EDISON LISTENING TO HIS NEW DISC RECORDS.

One of the most interesting and characteristic portraits of Thomas A. Edison is that taken recently and showing "The Wizard" in the quiet of his laboratory listening intently to one of the new Edison disc records, to obtain perfection in which he has worked so long and earnestly. The hand

were not detected by the experts with their unblemished and acute faculties.

Despite the impatience of the phonograph sales department to meet the insistent demands of the trade throughout the country for records to go with machines that have been sold in many cases,

placed over his ear to enable him to hear better brings to mind the partial deafness of the great inventor, but despite that fact his hearing has been acute enough to permit him to detect hidden and generally slight faults in the early records that

there is not one who is not thoroughly in sympathy with Mr Edison in his efforts to make the records perfect without question or doubt, and enthusiastic over the results of his work, which has occupied so much of his time.

HIGH SCHOOL COURSE IN MUSIC

With Aid of Victor Records Laid Out in Anne Shaw Faulkner's New Book, "What We Hear in Music," Distributed by the Victor Co.

A most interesting and valuable addition to talking machine literature is the new volume, "What We Hear in Music," written by Anne Shaw Faulkner, organizer and director of the Program Study Classes of the Theodore Thomas Orchestra Opera Classes of the Chicago Grand Opera Co., and lecturer on music. The volume, handsomely printed and bound, has been prepared and will be distributed under the auspices of the Victor Talking Machine Co., and is designed to promote a real appreciation and more definite understanding of music among the musical pupils and high school pupils of the country.

"What We Hear in Music" provides a four-year high school course in music history and appreciation, and the entire course calls for 250 Victor records, though there is no doubt that many more will be used wherever the course is established. The book is practically a companion volume to "The Victor Book of the Opera," and sells at retail at \$1.

RECORDS BY FELIX WEINGARTNER.

Music-lovers will be glad to learn that Felix Weingartner, the famous composer and orchestra director, has made two orchestral records for the Columbia Graphophone Co. with a special thirty-six-piece orchestra selected by Mr. Weingartner himself. These records were emphatic successes, and will be ready for the trade in the near future.

VISITS COLUMBIA FACTORIES.

George L. Funnell, works manager of the Columbia Graphophone Co., London, England, has been visiting this country the past three weeks, and remained at the Columbia factories at Bridgeport, Conn., for the greater part of the time. This is Mr. Funnell's annual trip to America, and he plans to sail for England next Tuesday on the *Kaiser Wilhelm II*. He states that conditions abroad in the talking machine field are excellent, with every prospect for a splendid business.

Manufacturers and others in the talking machine trade who desire to get into close relations with Latin America will find El Mundo to be an excellent medium.

It is published wholly in Spanish, and covers comprehensively the music trade and talking machine fields.

COLUMBIA PRICE VIOLATORS PERMANENTLY ENJOINED

Judge Carpenter of United States Circuit Court Issues Permanent Injunction Against Two Chicago Cut Price Dealers—A Lesson for Those Who Think They Can Evade Contracts with Impunity—Trade Compliments Mr. Camp for Successful Results.

(Special to The Talking Machine World.)

Chicago, Ill., March 11, 1913.

Local members of the talking machine trade and officers of the Columbia Graphophone Co. were much elated to-day when Federal Judge Carpenter, of the United States District Court, issued permanent injunctions against Evan Lloyd & Co., proprietors of a Chicago department store, and Barney Olshansky, 1252 S. Jefferson street, prohibiting them from selling Columbia records at ruinously low rates to the retail trade.

Local dealers had been complaining to the Columbia Graphophone Co. for sometime that two or three firms had been offering Columbia records to the public for absurdly low prices and that their trade was being injured thereby.

Eli ha K. Camp, attorney for the Columbia Co., was accordingly sent on from New York and found

that Evan Lloyd & Co. were offering the records to the public from their State street department store and that Olshansky was doing a brisk business, both at 1252 S. Jefferson street and at 1111 Halstead street.

Mr. Camp carried the matter into court at once and pressed the suit with such vigor that Judge Carpenter issued immediate preliminary injunctions, and following an inquiry that consumed only a few days made the decision announced to-day which will effectually stop any future attempts to do business upon such a basis. Evan Lloyd & Co. was, in addition, forced to pay a sum of \$300 in damages and also the court costs.

The entire procedure lasted only a few days and the local trade is heartily congratulating Mr Camp upon his energetic and successful defense of his company's policies.

"TALKER" A CHURCH ATTRACTION.

Pastor of Pilgrim Congregational Church in Milwaukee Says He Has Solved the Problem of Getting People to Church and Tells How.

(Special to The Talking Machine World.)

Milwaukee, Wis., March 11, 1913.

Rev. Robert J. Locke, pastor of the Pilgrim Congregational church, Grand avenue and Twenty-eighth street, believes that he has found in the Victrola the solution of the problem of getting people to attend church on Sunday evenings. Rev. Locke recently conducted a "Victrola service" in his church, and the result was that the innovation brought out a congregation five times the size of the usual Sunday night gathering.

The entertainment was furnished by a Victrola under the guidance of A. F. Bennest, a talking machine expert with Manager L. C. Parker's Victor department at Gimbel Bros.' store. Robert W. Tait traced the history of musical instruments in a talk on "From the Drum to the Victrola," which he made unusually interesting by illustrating his talk with exhibits of musical instrument of the Alaskan Indians and the Chinese.

The program was as follows:

- Parsifal—Fantasia (Wagner).....Pryor's Band
- St. Paul—Be Thou Faithful (Mendelssohn).....E. Williams
- Old Cathedral Door.....Peerless Quartette
- Humoresque (Dvorak).....Mischa Elman
- St. Paul—But the Lord Is Mindful (Mendelssohn).....Schumann-Heink
- Elijah—It Is Enough (Mendelssohn).....Herbert Witherspoon
- Hark, Hark, the Lark (Schubert-Liszt).....Paderewski
- Beautiful Isle of Somewhere.....John Barnes Wells
- Offertory.....
- Tannhauser (Wagner), Parts 1 and 2.....Pryor's Band
- God My Father, from Seven Last Words of Christ (Dubois).....Gogorza
- Remarks.....
- Benediction by the Priests.....Sirota
- Like a Shepherd.....Sirota
- Inflammatum—Stabat Mater—Rossini (in Latin).....Lucy I. Marsh
- Crossing the Bar (Willeby).....E. Williams
- Lost Chord (Sullivan).....Witherspoon

The affair was such a success and the program

was appreciated to such an extent by the big audience that another talking machine service will be held in the church on the first Sunday in April.

Rev. Locke has plans in mind for various other innovations at his church. Among them will be the illustration of Sunday and midweek services with moving pictures. Films from all parts of the world will be shown by the pastor to acquaint his flock with the missionary work extension and to educate young and old in an entertaining manner.

"These services are not to amuse, but to instruct," said Rev. Locke. "The talking machine brings to us the greatest singers and musicians, and as a result a larger number come to the services. The children are as much interested in good music as their parents.

"I believe the introduction of the talking machine and the moving picture will arouse greater interest in the church work. We are leading the way for others to follow."

TO FEATURE TALKING MACHINES.

(Special to The Talking Machine World.)

Columbia, S. C., March 10, 1913.

The Barfield Piano Co., with headquarters in this city, has reorganized with W. A. Barfield as president; D. E. Milligan vice-president and general manager; D. R. Hand, secretary, and W. H. Barfield, treasurer, and J. K. Barfield, assistant treasurer. The company is operating stores, one in Columbia, S. C.; Charleston, S. C.; Jacksonville, Fla., and East Port, Ga. Special efforts are being placed on the player electric piano business in all the stores as well as on the Victor talking machine line. The prospects ahead are excellent.

Credit is the best thing in business—when it is extended to you.

FIRST LIST PRICE EDISON SALE

Made in December by the Pardee-Ellenberger Co. for Shipment to Santa Rosa—Letter from F. K. Dolbeer in This Connection.

The first list price Edison disc phonograph was sold by the Pardee-Ellenberger Co., Inc., Boston, Mass., in December, to an enthusiast who lives in Santa Rosa, Cal., the sale being made by F. H. Silliman, manager of the Boston headquarters. It was given by a noted Boston woman physician as a Christmas present to her father, Conrad Haub. The following letter to them from Thomas A. Edison, Inc., dated December 10, 1912, tells the story:

"The Pardee-Ellenberger Co.,

"55 Battery March Street, Boston, Mass.:

"Gentlemen—Your favor of the 9th inst. at hand, and would respectfully advise that immediately after our telephone conversation of yesterday I entered an order for one 'A' 250 Edison disc phonograph, mahogany finish, to be shipped to Conrad Haub, 638 Wright street, Santa Rosa, Cal., via Wells Fargo Express prepaid, and we now desire to acknowledge receipt of your confirming order.

"This is the first list price machine shipment of the new disc goods that we have made, and it is very interesting to know that this machine is going into the hands of an Edison enthusiast. Assuring you of my appreciation of this order, which in all probability will go forward to-day, we beg to remain, Yours very truly,

"Thos. A. Edison, Inc., Phonograph Sales Dept.

(Signed) "F. K. DOLBEER, Sales Manager."

Naturally the Pardee-Ellenberger Co., Inc., feel very much pleased at this signal honor, particularly so as the outline of the sale embraced both sides of the continent.

POSTCARD VIEWS OF ARTISTS.

Latest Addition to Advertising Aids Furnished to Victor Dealers—New Program Folder.

The latest aids to the Victor dealers prepared and supplied by the Victor Talking Machine Co. are the portrait series of the famous artists on post-cards, with attractive wording, and the specially designed program folder, bearing a trite phrase on the front cover, a Victrola XVI on the back and a portrait of the artist and his or her records on the inside. The folder is expected to be particularly useful in stirring up interest at times when prominent artists make their appearance in the various cities where Victor dealers are located. Both the postcards and the program folders should prove most effective in attracting attention to the Victor dealer's store. They are furnished free in limited quantities and upon request.

INCORPORATED.

The Talking Machine Accessories Co., Rochester, N. Y., has been incorporated by John A. Clark, Thos. E. Mykins and James Killeen.

ALBUM FACTS BY EXPERIENCED ALBUM MAKERS

The durability of a strong Record Album lies entirely in the way pockets are bound in, correct spacing of the envelopes and the quality of linen used in binding, together with the strength and quality of paper used in envelopes.

These cuts represent our standard Record Albums, covered in mahogany colored imitation leather, stamped gilt on face, with gold plated ring-pulls on backs. The paper used for pockets is a very strong dark green colored rope fibre material—tough in texture and not easily torn. The pockets are bound in evenly, making a perfect book. 16 or 17 pockets furnished as ordered.

Let us send you a sample Album to-day with our very moderate Price List.

Here's what will make on your

ONE of the biggest and strongest double-page advertisements we ever published appears this week in the Saturday Evening Post.

Great records, those of Ysaye!

The greatest violin records ever made and made by the greatest violinist this world possesses. Any man who has ever heard or heard of Ysaye will want Ysaye records. That's how good they are.

Great records, those of Bonci!

The most artistic tenor records ever made, sung by the world's most artistic singer; no wonder they are wonderful.

A splendid pair of no-competition Grafonolas, the "Regent" and the "Colonial"—they will sell to every inquirer who is ready to spend their price, and they will hold every inquirer to a *Columbia* purchase even if he won't spend over \$20.

THE SATURDAY EVENING POST March 15, 1913

YSAYE

The World's Supreme Master of the Violin

has made his long-expected records.
Exclusively for the Columbia Graphophone Company—
Yes, but if you happen to own a "Victor" talking machine, these matchless records will play on it (like all other Columbia records).
Any dealer in talking machines can supply you with these Ysaye records.
Any dealer can send a Columbia Grafonola to your home for free trial.
Write to us if you are not promptly supplied.

"The Columbia Grafonola" Colonial.
Combined table and Grafonola.
Price \$150 (including)
Send for Catalog

TO OUR FRIENDS who are not yet making money out of such trade winners, we don't need to ask if you are feeling the Columbia demand, for we know quite well you are.

Even if you were not, though, as a business house dealing in musical merchandise you are sacrificing something when you find yourself unable to sell a faultless record by the one violinist who is admittedly the master of any other in the world, or a wonderfully recorded selection by the world's most artistic singer, which Bonci certainly is.

Or a Grafonola so entirely outside of competition as the "Regent" or the "Colonial."

The Saturday Evening Post double-page reproduction for March 15th, shown here, is the first big featuring of those records coupled with those instruments.

But not the last.

FROM OUR EUROPEAN HEADQUARTERS

1 GRESHAM BUILDINGS, BASINGHALL STREET, LONDON, E. C., W. LIONEL STURDY, MANAGER.

Business Conditions of Satisfactory Nature, All Things Considered—British Record Making Defended—Important Removals and Changes in the Talking Machine Trade—Copyright Decision of Wide Interest—Record Lists of the Leading Companies Contain All the Latest Compositions—Santley Makes Records for the Columbia—Increased Cost of Materials Considered—Other Items.

(Special to The Talking Machine World.)

London, England, March 6, 1913.

Notwithstanding the half-hearted efforts which some sections of the trade are putting forth, talking machine business conditions this side are generally of a satisfactory nature, all circumstances considered. Having regard, however, to the excellent status of industry everywhere, musical instrument sales would undoubtedly be more consistently commensurate with the degree of prosperity of the masses generally were it not that quite a considerable number of dealers—particularly those of the cycle-trading class—about this period develop an indifference to the business totally at variance to the activity of the leading manufacturers. It is very evident they are more or less regulated by the calendar. As the season progresses, sales gradually decline in volume, it is true, and of course the cycle season will shortly open up; all of which is to our friends sufficient justification for the neglect of their old talking machine customers, and practically to abandon all interest until the time when music again supersedes the wheel. A pleasing set-off is the continued and strong activity of record manufacturers, who are devoting considerable expenditures in stimulating the public demand through liberal newspaper space. "His Master's Voice" and Columbia companies are particularly active in this direction, and their attractive publicity is recognized as exerting a beneficial effect on talking machine sales generally.

Ragtime Furore Still Obtains.

The ragtime furore still obtains on this side, despite pessimistic prognostications to the contrary. America certainly holds the field in this class of music, and your amazing productivity is becoming principally apparent in the seemingly never-ending stream of importations under which we suffer. We are ragtime satiated.

Now the Columbia Graphophone Co.

Coincident with the announcement on your side, I have received advice that the future Columbia title is to be Columbia Graphophone Co. The exclusion of the word phonograph in favor of graphophone is generally welcomed and approved in Columbia trade circles.

Defends British Record Making.

That a respectable journal should give publicity to ex parte statements evidently without taking the simple precaution of seeking verification, is to be greatly deplored. In this connection the Evening News recently imparted to its readers the information that graphophone records were actually being made in London, but to the manager of the Dacapo Co. was attributed the amazing statements that "no Englishman knows how to make master records," and that "the Germans alone hold the secret." This was crowned by the statement that the master records had to be sent to Germany to be manufactured.

Louis Sterling, British manager of the Columbia Graphophone Co., immediately repudiated these inaccuracies. In the course of his remarks to the journal in question, he says: "The Columbia Co. possesses two of the finest recording experts in the world, both Englishmen. English recorders are years ahead of the Germans, just as the manufactured records are. Our recorders make master records in various parts of the British Isles, in Milan, Vienna and even in Berlin, and so far from 'masters' having to be sent to Germany to

be transformed into commercial records, we have our own factory at Wandsworth, where millions of records for all parts of the world are produced each year by British labor." A timely rejoinder, that!

Staff Changes with National Gramophone Co.

An important staff change is to be noted at the National Gramophone Co. (1913), Ltd. A. N. Gray, who for some time occupied the somewhat onerous position of sales manager, has received due acknowledgment of his successful sales policy in the shape of promotion to the assistant general managership. The directors have secured the services of A. H. Anderson as sales manager. For over ten years with "His Master's Voice" company, Mr. Anderson possesses a unique and valuable experience of the trade, and he therefore enters upon his new sphere of activity under the best auspices.

Several Removals Announced.

What may reasonably be regarded as an index of prosperous conditions in the talking machine trade is the recent decision of several firms to enlarge their borders. Just at this period would appear to be the most propitious time for removing, after the season's rush. And during the few quietish months ahead the firms in question will have ample opportunity to complete alterations and make provision in their new quarters for increased dispatch and other facilities in good time for next season's trade. Messrs. Lockwoods, the great City road factors, have taken a huge building with a floorage space of some 10,000 feet, at 76 City road. In addition to their present premises at 77 City road, O. Ruhl, Ltd. (Beka records), have secured a large warehouse at 85 City road; Messrs. Craier & Staveidi are located in new premises further along in Bunhill Row; and, as reported last month, the Columbia Graphophone Co. is well established in a large block of buildings at 102-108 Clerkenwell road, E. C.

Important Copyright Action.

Two very important copyright actions were recently before the courts. Being the first of their kind under the Copyright Act, 1911, the result will be read with extreme interest by all engaged in the talking machine industry. The actions were heard together, and from their nature will doubtless be considered more or less in the light of test cases. Paul Rubens and Lionel Monckton, as plaintiffs, sought an injunction to restrain Pathé Frères from selling records of certain of the plaintiffs' musical compositions, to wit: Four songs from "The Sunshine Girl" and the "Mousme Waltz." The plaintiffs alleged that defendants were selling records of these compositions without the adhesive stamps prescribed by the Board of Trade to be affixed to all records of copyright pieces as the method of collecting the royalties. It was not denied that defendant had purchased a sufficient quantity of stamps to cover the number of records sold, but it appears they had not affixed them to the records sold. Counsel maintained that plaintiffs could not insist on the defendant purchasing the stamps or affixing them to the records, on the ground that the Board of Trade regulations in this respect were ultra vires.

In giving judgment, Justice Phillimore held that the Board of Trade regulations were within the scope of its authority.

Another point in the case of Mr. Rubens had reference to the date of publication and the effect of an agreement made by his agent with defendant. Under the provisions of the act, the royalties on records of musical works published before July 1, 1912, are calculated at 2½ per cent., but on records of works published after that date the royalties are raised to 5 per cent. after the expiration of two years; that is to say, from July 1, 1914. Mr. Rubens was advised as to the value of his rights, and did not wish to publish the songs until after July 1, 1912. It was found to be convenient, how-

ever, to have gramophone records made before that date, and in order that this might be done, the defendant gave an undertaking that if the music was published before July 1, 1912, they would not sell the records before that date, and that the composer should get the royalties. This agreement was made in March, 1912, before the Board of Trade regulations had been issued. He, the judge, considered that the contract between the parties was that the royalties should be paid and that the defendants so far had fulfilled the agreement, but that in future they must comply with the regulations of the Board of Trade.

In Mr. Monckton's case, the records made before July 1, 1910, were exempt from the payment of royalties until July 1, 1913, but if defendants sold any records made since July 1, 1912, they would have to pay the royalties by the purchase and affixing of stamps in accordance with the regulations.

Defendants contended that the action was not well founded in respect of the songs composed by Mr. Rubens, because the author of the words was not joined as plaintiff. The owner of the copyright in the music, His Lordship held, was entitled to sue for an infringement of the copyright in the music, notwithstanding that the owner of the copyright in the words might also sue in respect of an infringement. Judgment for defendants, without cost.

"His Master's Voice" Records for March.

Among "His Master's Voice" issues for March, special mention should be made of the New Symphony Orchestra's contributions, which, as usual, are a temptation to all music lovers. The records themselves represent the very highest form of musical art ever offered through the medium of a mechanical instrument, and under the baton of Landon Ronald, the New Symphony's presentation of Wagner's "Die Meistersinger," Part I and II, on a pair of 12-inch records, is a real treat from beginning to end. Another splendid record of Hubert Eisdell, "Come, Sing to Me," is to be noted, and his performance is such as to move one to "ask for more." Wilkie Bard's second contribution to "His Master's Voice" list is worthy of high praise, his "You've Got to Sing in Ragtime" being very contagious. 'Twere invidious, however, to discriminate. The March list teems throughout with attractive fare, and is as follows: "Unless" (Caracciolo), Peter Dawson; "A Dinder Courtship" (Eric Coates), Harry Dearth; "Will-o'-the-Wisp" (Cherry), Charles Tree; "Until" (Sander-son), Stewart Gardner; "So We'll Go No More a-Roving" (M. V. White), Gervase Elwes; "The Songs My Mother Sang" (Grimshaw), Miss Marion Beeley; "Homeland—Czardos," "Die Fledermaus" (Strauss), Miss Lucy March; "God's Garden" (Lambert), Mme. Lucy Thornton; "The Nightingale of Lincoln's Inn," "Songs of Old London" (Oliver), Miss Perceval Allen; "Gems from Gypsy Love" (Lehar), Light Opera company; "Mennett" (Porpora-Kreisler), (violin), Miss Marie Hall; "Larghetto" (Handel, arr. by Hubay), Jorka Szigeti; "Barcarolle—Tales of Hoffman" (Offenbach), Renard Trio; Fantasia brillante, "The Last Rose of Summer" (Flotow, arr. by Oberthur) (harp), John Cockerill; "Will You Promenade with Me" (David and Murphy), Miss Clarice Mayme (accompanied by "That"); "A Wee Hoose 'Mong the Heather" (Läuder and Elton), Harry Lauder; "You've Got to Sing in Ragtime" (David and Arthurs), Wilkie Bard; "The Way to Treat Your Parents" (Hanray), Tom Clare; "Fiddle-dee-dee" (Goetz-Berlin), Walter Van Brunt and Maurice Burkhardt. "His Master's Voice" Double-Sided Records: "Tannhauser"—"Pilgrims' Chorus," and "Lohengrin"—"Bridal Chorus" (Wagner); "Pizzicato" Gavotte—"Herz and Herz" (Latann), and Entr'acte—"Pizzicato" (Mathe), Band of H. M. Coldstream Guards; "The Turkey Trot," two-step (Daly, arr. by

FROM OUR LONDON HEADQUARTERS—(Continued from page 30).

Whiting), and "King Chanticleer," march and two-step (Brown and Ayer, arr. by Danmark), Ragtime Orchestra; "Ours, I Think Valse" (Ernest Shand), De Groot's Orchestra; "Oh! Oh! Delphine Valse" (Caryl), Mayfair Orchestra; "Valse Novembre" and "Valse Decembre" (Godin), De Groot's Orchestra; "Everybody's Doing It," Lancers, Fig. I and II and Fig III and IV (arr. by Karl Kaps), De Groot's Orchestra; "Everybody's Doing It," Fig. V (arr. by Karl Kaps), De Groot's Orchestra, and "My Sumurun Girl," two-step (Hirsch, arr. by Jurgensen), Mayfair Orchestra.

The Daily Mail's Record Review.

It is pleasant to observe the present-day attitude of the press to the talking machine as compared with a few years ago. One of the most important newspapers, the Daily Mail now allocates space to record reviews occasionally, and "His Master's Voice" and Columbia-Rena Records have recently come in for some nice notices.

New Dictaphone Quarters Opened.

Sir Herbert Marshall, J. P., of Leicester and Regent House, pianoforte manufacturer, formally opened on February 26 the extensive new premises of the Dictaphone Co., in Kingsway, W. C. Invited by Thomas Dixon, the managing director, a number of prominent London business men attended the ceremony, an interesting feature of which was the receipt by "wireless" of a congratulatory message from Commendatore G. Marconi, who has at Marconi House, in the Strand, one of the largest Dictaphone installations in the country. The company's new offices are equipped with all the latest business devices, which furnish striking evidence of an excellent example of the methods they advocate. The Dictaphone in question is, of course, the Columbia instrument, for which the Dictaphone Co. has the sole selling rights this side.

Sir Charles Santley Makes Records.

The Columbia Graphophone Co. is evidently out to make history. Its latest achievement in secur-

ing the services of Sir Charles Santley, the veteran baritone, to make records, is deserving of great praise from the trade and public alike. Sir Charles has reached the ripe age of seventy-nine and, as may be imagined, it required a deal of persuasion to move him from his well-earned retirement for the purpose of handing down to posterity a series of adequate and faithful records of his beautiful voice. It is said that he was satisfied to enthusiasm over his first record of his two great concert successes, "The Rosary" and "To Anthea," and we can well believe it; they are truly great! To the Columbia-Rena officials is due our hearty congratulations upon this exquisite memento of a great artist.

Other good records in the Columbia-Rena March list are: "Take Me Back to the Garden of Love" (Nat Osborne), Charles Holland and Quartet; "My Heart Is with You To-night" (A. J. Mills and Bennett Scott), Charles Holland and Quartet; "Waiting for the Robert E. Lee" (Gilbert and Muir), and "Be My Little Bumble Bee" (Stanley, Murphy and H. I. Marshall), The Two Bobs; "Hada" (Charles Mott), and "E Lucevan le Stelle," from "Tosca" (Puccini), Morgan Kingston. Columbia-Rena Ten-inch Records: "Hello! Hello! London Town" (Stanley, Murphy and H. I. Marshall), and "Ragtime Cowboy Joe" (Muir and Abrahams), The Two Bobs; "The Ragtime Jockey Man" (Berlin), Maurice Burton and Quartet; "Ragtime Soldier Man" (Berlin), Collins and Harlan; "The Gaby Glide" (Louis Hirsch), and "My Word!" (Jones of the Lancers) (T. C. Sterndale Bennett), Jack Manning; "The Ghost of the Violin" (Kalman and Snyder), and "The Zig-Zag Glide" (Tony Martin), Stanley Kirkby; "When That Yiddisher Band Played That Irish Tune" (Worton David and C. W. Murphy), and "My Rachel's Beautiful Eyes" (Weston, Barnes and Maurice Scott), Sam Stern.

Fourteen Minutes of Music on One Record!

A striking example of the "Marathon" fine-cut recording system is furnished this month in the issue of two 12-inch double-sided records, one

carrying Wagner's grand overture "Rienzi"; the other a complete selection of Bizet's "Carmen." The "Rienzi" overture is given absolutely in full, and represents close upon fourteen minutes of delightful music, as also does the "Carmen" record. Both issues are a triumph of interpretation, the recording being, too, of full volume, superb tone and of amazing detail generally. The National Gramophone Co. is putting out excellent records each month.

British Trade Prospects in South America.

The studied neglect of the South American field by British traders is notorious, but with the prospective completion of the Panama Canal, exporters are gradually awakening to the increased trade possibilities of the Latin-American markets. In musical instruments Germany and France have managed to secure quite a considerable proportion of the total exports from this side, but according to a contemporary the talking machine trade is largely in the hands of American manufacturers. Curiously enough, it is said that, while expensive machines do not sell so freely as the cheap variety, there is a surprisingly large number of operatic records sold. The demand, however, for records bearing popular selections is, of course, very great compared with any other class of music. The type of machine most favored is that of the concealed horn variety. Everything is more or less affected by the climate, and the packing and care of disc records calls for exceptional treatment.

Largely with a view of developing business in the countries which will be brought nearer by the canal, there is under consideration here a proposition for the establishment in London of a South American Bureau of Commerce, whose object will be to serve as an intermediary between Latin-American buyers and British traders, and generally to furnish information as to business openings. The issue of a monthly publication printed in Spanish, Portuguese and English is under contemplation. It is aimed to assist in the successful competition of British goods in a part of the world

where trade is certain to increase with the opening of the Panama Canal, and where German exporters have already shown remarkable activity.

I learn that the Beka Record Co. has already established itself there, and one of its directors is visiting South America with a view of gauging the trade possibilities and obtaining particulars of local conditions, etc.

A splendid medium for effectively linking up trade connection with Latin-American buyers is "El Mundo," which extensively circulates throughout the South American markets. Advertising terms and particulars may be obtained from any of The Talking Machine World offices.

Blue Amberol Records for April.

The third or April Blue Amberol list contains an important announcement of the issue of Grand Opera records, an innovation which will undoubtedly meet with a hearty welcome from trade and public alike. The first issue comprises five records, all gems of their kind, by such eminent artists as Carlo Albani, Blanche Arral, Marie Delma, etc., each being responsible for about four minutes of the most exquisite operatic music ever recorded on cylinder records. Other selections will be announced in due course. Mr. Edison is full of surprises of late, and this latest masterpiece—the Blue Amberol Grand Opera Record—is an achievement worthy to rank foremost with his best efforts in the science of sound reproduction.

Five new Blue Amberol concert records are also listed. Space precludes a mention of these titles; suffice it to say the dealer will find them of the right sort—the kind that are always in demand.

The Blue Amberol regular list is an especially comprehensive one, the titles indicating the exercise of a discriminating choice by the recording officials. The list is good enough to speak for itself: "Praeludium" (Armas Jarnefelt), National Military Band; "Wait Till I'm as Old as Father" (Godfrey and Williams), Billy Williams; "Evening Breeze" (Otto Langey), National String Quartet; "The Miner's Dream of Home" (Godwin and Dryden), Peter Dawson; "A Dream of Paradise" (Gray and Lyttleton), Hardy Williamson; "The Yacht I've Not Got" (Merson), Billy Merson; "Mister Cupid" (Weston), Stanley Kirkby; "In the Shadows" (Finck), Alhambra Orchestra; "Come Into the Garden, Maud" (Balfe), Charles Compton; "Hark! Hark! My Soul" (Smart and Faber), Williamson and Kinniburgh; "Keep Straight Down the Road" (Maynard and Wright), Miss Florrie Forde; "The Old Rustic Bridge" (Skelley), Pike and Dawson; "Mikado Waltz" (Sullivan), National Military Band; "The Ragtime Yokel" (Leigh), Jack Charman; "Nazareth" (Gounod), Alexander Prince; "Alice, Where Art Thou?" (Ascher), Ernest Pike; "The Deathless Army" (Trotire and Weatherley), T. F. Kinniburgh; "We're All Waiting for a Girl" (Murray and Godfrey), Billy Williams; "The Kilty Lads" (Milligan and Lauder), Harry Lauder; "Here, There and Everywhere," march (Bosc), National Military Band; "Roses Bloom for Lovers"—"The Rose Maid" (Granishstaeden), Miss Grace Kerns; "The Mocking Bird," fantasia (Winner Stobbe), Charles Daab (xylophone solo); "Just Before the Battle, Mother" (George F. Root), Will Oakland and Chorus; "Silver Bell" (Percy Wenrich), Miss Ada Jones and Billy Murray; "Dixie Medley" (banjo solo), Fred Van Epps; "Tell Mother I'll Be There" (Chas. Filmore), James F. Harrison and Edison Mixed Quartet; "Medley of War Songs" (New York Military Band); "Wedding Glide" (Louis A. Hirsch), Miss Ada Jones, Billy Murray and Chorus; "My Little Lovin' Sugar Babe" (Henry I. Marshall), Premier Quartet; "Where the Edelweiss Is Blooming"—"Hanky Panky" (A. B. Sloane), Miss Spencer and Irving Gillette.

Leipzig Fair Visitors.

British trade buyers going to the fair total quite a considerable number, even more than in the palmy phonograph days of long ago, when, comparatively speaking, the exhibits were much more interesting. So far as I am able to ascertain, the visitors from this side will include: John B. Cromelin, Louis Sterling (Columbia Graphophone

Co.); George Murdoch, R. J. Fulton (John G. Murdoch & Co., Ltd.); W. Manson (British Zonophone Co.); J. E. Hough (Edison Bell); O. Ruhl, A. Balcombe (Beka Co.); H. J. Cullum, E. Tyler, J. Favel (Lockwood); L. H. Kempe, A. N. Gray (National Gramophone Co., Ltd.); K. Harth (Favorite Co.); A. Ficker, Mr. Hertzog (New Polyphone Supply); Francis Nottingham (Lyric Co.); Morris and Sydney Woolf, H. L. Bosman (M. & A. Woolf, Ltd.); Christian Dewe (Manchester); W. Cooper (Cooper Bros.); George and Bernard Andres (Homophone); J. G. Graves and brother (Sheffield); J. Richardson and his Liverpool, Manchester and Blackburn managers; W. A. Johnson, (Liverpool); R. Appleton, P. Waldman and a representative from Craies & Stavridi (London).

Recent Visitors.

Mr. Strauss (Lindstrom Co.) and R. Bodansky (Beka Record Co.) recently made an extended business visit to O. Ruhl, Ltd., their London agent.

Record Pressing Plant Moved.

The Stockport record pressing factory of J.

Watson Hawd has been transferred to Harrow, London.

Increased Cost of Material.

During the last few weeks shellac has risen in price over 50 per cent., and record manufacturers are very naturally alarmed at the prospect of such inroads into their gross profits without being able to bring the retail price of their goods into alignment. And this is not the only direction where raw material is costing more. Motors, the best kinds of woods and other necessities in the manufacture of machines show a yeast-like tendency in cost, and some firms have under consideration the question of charging more for the complete machine. This will doubtless materialize with the issue of new catalogs, and one firm has already given advice of trade price increases owing to increased cost of material, labor and freightage.

Heavy Loss Through Fire.

A valuable stock of pianos, talking machines and other musical instruments was destroyed in a fire which broke out February 24 on the premises of John Strong & Sons, Ltd., Euston road, N. W. The damage is placed at several thousand pounds.

BIG DEAL IN CLEVELAND.

Lawrence H. Lucker Transfers Edison Phonograph Business in That City to H. D. Brener—Consideration Said to Be \$100,000—To Concentrate on Minneapolis Business.

(Special to The Review.)

Cleveland, O., March 10, 1913.

Laurence H. Lucker, through a deal consummated on March 7, has arranged to transfer his Edison phonograph business to H. D. Brener at 36 Taylor Arcade, the consideration being in the neighborhood of \$100,000. The formal transfer of the business will take place on April 1. Mr. Brener is most enthusiastic regarding the Edison line, especially the disc phonographs and records and is said to have ample capital at his disposal for developing the business. Mr. Lucker will concentrate his energies on his phonograph business in Minneapolis.

NEW EDISON DISC DEALERS.

Several Dealers Including the Tower Mfg. and Novelty Co. Take on Line in New York—St. Louis Piano House Places Big Order—Increasing Supply of Disc Records.

Within the past month several dealers in New York have qualified as retail distributors of the new Edison disc phonographs, the most important new connection being the Tower Manufacturing and Novelty Co., which has installed a large and well equipped department in its store at 326 Broadway.

F. K. Dolbeer, manager of sales for the phonograph department of Thomas A. Edison, Inc., stated to the World that the supply of disc records was increasing rapidly and would soon be sufficient to meet all the demands of the trade while the disc machines were being shipped from the factory as fast as they could be turned out. New dealers are being signed up constantly, among the more recent being the Thiebes Piano Co., St. Louis, Mo., who secured a Class A dealers' rating by placing an initial order for over \$5,000 worth of machines and records.

Mr. Dolbeer will leave in a few days for St. Louis to oversee an elaborate two weeks' demonstration of the new disc machines and records to be made at the Coliseum, that city, in connection with the Woman's Industrial Exhibition.

VICTOR AUTOMATIC BRAKE.

Announced as Latest Addition to Regular Equipment of Victrolas XI, XIV and XVI.

In a recent letter to the trade the Victor Talking Machine Co. announces the introduction of the "Victor Automatic Brake," which will be a

part of the regular equipment of Victrolas XI, XIV and XVI, beginning at once. About August 1 the Victor Co. will market the automatic brakes as a separate part, to retail at \$2 and \$3.

ECHO ALBUM CO. REDUCES PRICES.

In another part of this month's World appears an advertisement of the Echo Album Co., of Philadelphia, announcing a marked reduction in price on their album, which has been on the market for over six years and handled by jobbers through the country. In this connection they say:

"The business has grown to such dimensions that albums are now sold by the thousands. This has enabled the Echo Album Co. to profit by manufacturing them in huge quantities and enabling them to reduce the selling cost by virtue of savings in cost of labor and through buying the raw material in quantities.

"The Echo Albums insure safety and preserve the disc records against dust, careless handling, scratching or breaking. The index in every album facilitates instant location of any record. Every album is finely bound and holds sixteen single or

The Echo Record Album.

double-face records in heavy paper pockets having openings through which the labels are visible and enabling titles of records to be read without removing the record.

"The Echo Record Album is manufactured of the best materials. The covers are made of strongest bookbinders' board and covered with the best quality of cloth. The pockets, numerically indexed for the records, are made of extra strong tag-manilla paper and each secured to the flexible back of the album by means of extra heavy fabric. The album is collapsible and can be mailed flat.

The Republic of Colombia, S. A., has lowered the tariff on talking machines.

ARTISTIC TALKING MACHINE DISPLAY ROOMS.

Talking Machine Men Throughout the Country Will Be Interested in the Manner in Which McCreery & Co. Have Been Featuring Talking Machines in Their Handsome New Store in Pittsburgh—Talking Machine Window Display Also Attractive.

(Special to The Review.)

Pittsburgh, Pa., March 8, 1913.

On the eighth floor of McCreery & Co.'s store, Sixth avenue and Wood street, recently opened as the home of the Victrola and Victor products, large crowds are in attendance each day at the

products, and passers-by in the fashionable shopping district cannot fail to be impressed with the artistic appearance of the display. High-class publicity in the daily papers is extensively used by McCreery & Co., which is another store in the high-grade Claflin chain, and the results in the

Part of McCreery's Talking Machine Department

concerts being held in the beautiful salons. Arias and songs by celebrated artists in the musical world are heard and admired through the medium of the Victrola by enthusiastic audiences.

The talking machine department of the McCreery store is most beautifully furnished, and the attendance at these concerts has increased so rapidly during the past fortnight that larger quarters are imperative. A delightfully hospitable appearance is presented by the deep, luxurious chairs scattered about the showrooms, while the artistic

new department to date have exceeded all expectations. Expensive machines are featured in the company's publicity and the daily concerts are proving an irresistible magnet to Pittsburgh's music lovers.

CENSORSHIP OF FILM PLAYS.

Frank L. Dyer, president of the General Film Co., and well known in the talking machine trade through his connection with Thomas A. Edison,

McCreery's Window Display of Talking Machines.

atmosphere of the place is heightened by its beautiful pictures, tapestries and Oriental rugs.

The magnificent show window of the McCreery store contains a most attractive display of Victor

Inc., discussed the censorship question from the standpoint of moving picture men in last Saturday's Evening Sun, and protested against unfair statements by critics of film plays. He points out

that individual opinion is not a proper basis of censorship and says that lines should be drawn by law. He cites Mayor Gaynor in regard to decency of exhibitions and appeals for fair play and a proper consideration of this subject.

ACOUSTICS OF CONCERT HALLS.

Thomas A. Edison Makes Some Interesting Remarks in This Connection—Making Records to Relieve Imperfect Acoustics—How Singers Are Aided by Recognizing Imperfections.

The matter of acoustics in opera and concert halls has attracted the attention of Thos. A. Edison, who recently said that in the Metropolitan Opera House the force of sound is secured only in a few seats near the center aisles, back, close to the doors. "In front, on either side, and above, the music must of necessity be more or less unbalanced, and the cleverest acoustics cannot counteract this." Concert halls present the same disadvantages. "At concerts, now, the listener on one side of the hall hears too much bass. On the other side wood instruments or the strings are dominant. In playing for the phonographic records of the future, the orchestras will be so carefully distributed that each instrument will have its uttermost value in relation to the one spot where the phonograph is located and recording. Therefore, the person hearing music reproduced for them by this new instrument will have advantages which hitherto have been among the possibilities for but a small group at each concert."

Not only will our opera houses and concert halls be left in the lurch, but the singers and teachers will be startled by phonographic revelations of their shortcomings. Mr. Edison says in "Good Housekeeping" that he "was enabled to reproduce singers' notes exactly as they had been sung. This gave us all the beauties of the original rendition, but alas! it gave us all flaws as well. The latter were appalling, both in number and in magnitude."

But let us not despair. All this will help, not hinder, the best music:

"When the tiny dots which register the sound upon a phonographic cylinder can be subjected to a microscopical examination and exact measurement, the slightest falsity is at once scientifically and mathematically discernible:

"The influence of this advance will be to startlingly improve the singing of the world, because it will make possible the discovery of imperfections which in the past have been glossed by emotions. These faults, thus revealed, will undoubtedly be found subject to correction, and thus singing will improve. All this will enormously simplify the labors of anxious mothers and of teachers who strive to impart musical training to the young. I have been studying music with as much intensity of late as I ever gave to any task, and I find few instruments, and practically no human voices, without glaring imperfections. I have had a great number of teachers in my laboratory, and have found them all at sea. They have had no standards, no measurements. Music has been, like other things, unorganized. Its standardization, its measurement, its organization, were the first steps in our experimenting."

In addition to all this, Mr. Edison has during five months tried nearly a thousand tunes or songs in an earnest endeavor to learn why certain music dies, why other music lives. Well, if he can ascertain that phonographically and cylindrically, remarks Mr. Finck of the Evening Post, the musical critic—think of it!—will be proved superfluous.

LISTS ON BACK OF ENVELOPES.

A recent letter sent out by the advertising department of the Victor Talking Machine Co. called the attention of Victor dealers to the preparation of a new list of Victor records, which will hereafter be placed on the backs of record envelopes. The company observes that any lists of records which are specially listed by the Victor Co. invariably meet with a steady and profitable sale. The general list is divided into twelve smaller lists, and Victor dealers are asked to examine the records featured very carefully, and place their orders in time to reap the benefits of the envelope advertising.

UTILIZING HEART THROBS AS TRADE TICKLERS.

How Dealers in Talking Machine Field May Use to Advantage the Letters Received from Patrons in Their Advertising as Well as in Their Campaign of Publicity—Give a "Human" Touch to Ordinarily Dry Text Matter That Interests the Public.

The next time a customer goes off into ecstasies over a particularly beautiful selection, suggest to him that after his arrival home, and he has listened once more to the entrancing air (records always sound so much better by one's own fireside, you know; hence a stimulus to his already bubbling ardor) he give vent to his enthusiasm through the medium of a eulogistic letter to his dealer, the same to be used for publicity purposes.

Do you realize, Mr. Talker Man, that epistles with throbs in them—not materializing from your own futile brain, you understand, but emanating straight from the heart of a wonderstruck patron—make corking advertisements?

They must be the real thing, however, and you should always be in a position to place in brackets at the close of every throbbing ad. [Name on request.]

I will wager that the majority of persons who purchase a dozen records at your store, go into raptures over at least one. This being the case, if they can be induced to jot down for your special benefit just what effect the overture, song, recitation, or instrumental solo, has upon their nerves, you and the public will be the gainers.

Testimonials have been used with the greatest success since the day when advertising was an infant in swaddling clothes, and they always will be.

The talking machine is the eighth wonder of the world; even the skeptical admit this to be true. It is your duty, therefore, Mr. Talker Man, to emphasize the fact in every way possible. You see, it works out this way: The higher opinion the public holds of the talker, the better the prospects for good business.

Now, the gooseflesh letters I have told you about will answer this purpose admirably. They will supply the necessary force, and do it in a manner to demand undivided attention and vociferous applause.

To illustrate my point I will endeavor to give you an idea of the character of epistle that will do you the most good from an advertising standpoint; taking it for granted, of course, that it is authentic and can be verified.

Extract from an actual letter received by the writer:

"Last night I came home from the office unusually tired. After a lonely dinner, I threw myself down into my lounging chair and opened the pages of the evening paper, scanning the lurid headlines. They swam in a black blur before my aching eyes. I tossed the sheet from me in disgust.

"Sitting there with my eyes closed, listening to the patter of the rain against the library windows, I worked up a strenuous attack of blue devils.

"Nerves! I raved at myself. You cannot stand the pace as you did twenty years ago, old chap. You're a decrepid derelict and a menace to navigation—"

"The street door opened with a rush and there blew into the room, all wet and fragrant and gloomy from the rain, a dainty figure in a storm coat—my daughter Marjorie.

"The horrid old party at the Blakes is off, Daddy mine and we are going to spend a long evening together, just you and I—and the Amberola."

"I had never been very strong for the talking machine, but to please my little girl, I smiled resignedly and waited.

"She placed a record of 'I Will Love You When the Silver Threads Are Shining Among the Gold' upon the mandrel, and coming close behind my chair, ran her nimble fingers through my scanty locks.

"The orchestral introduction, it seemed to me, was particularly melodious, due to the new diamond point reproducer and blue amberol record, my daughter has since informed me. It soothed my frazzled nerves wonderfully, at any rate, and the

contact of these caressing fingers helped some, too, I guess.

"Then a lyric tenor, the one they speak of in vaudeville as 'the man with tears in his voice,' began to sing. All at once my mind rose upon enchanted wings and swung heavenward to the bosom of a rosy cloud.

"You have read tales about the effects of opium upon the nervous system—how it leads a fellow's senses into flower-strewn meadows where gay plumaged birds make love the day long, and the perfume of blossoms is overpowering?

"Well, Mr. Romain's song must have had a similar effect upon me.

"At the organ, dear, last evening,
You sang me that old time song,
Silver Threads Among the Gold."
* * * * *

"Time retraces itself for fifty years and I am young again.

"The evening shadows are gathering within the quaint New England parlor. At the square piano,

Soothing and Exhilarating.

with her snowy hands upon the keys, and her sweetness intoxicating me, sits my sweetheart of long ago. The reflected glory of a wonderful sunset illuminates her dear face as she sings 'Silver Threads Among the Gold.'

"That old time song enthralled me
With its plaintive melody,
And you seemed to ask me
Will I constant be;
Then with all my heart I answered,
Yes, through all eternity."
* * * * *

"She closes the piano, and we stroll hand in hand out into the fragrant night. The moon is climbing up the sky above the pines on Lone Mountain, and a great horned owl is screaming from the dead oak across the river.

"In a sylvan vista where the moonbeams gleam, we plight our troth.

"I will love you when the silver threads are shining among the gold

Just the same as when love's story first was told. I will always want you near me in my arms, dear, to enfold,

When the silver threads are shining among the gold."

"The golden orb of the night has winged its aerial way through space to the zenith where it swings like a mammoth lamp glorifying the celestial dome with its mellow radiance, and the great horned owl is 'whooping!' his mate.

"If life's summer days were over,
And upon your locks I'd see
"Silver threads among the gold."
I would be as true and faithful,
As I promised you to be
Long ago in days of old.
In my heart it's always summer
When love's flowers bloom anew,
And I'll always keep them

Blooming, dear, for you;
Tho' we both grow old and feeble
I will be steadfast and true
• Just the same, dear, as of old."

"I come back to realities with a start. The record is still playing, the silvery tones of the wonderful voice swinging gloriously through the second chorus.

"'Been dreaming, daddy mine? Why your eyes are wet! Don't you like the song?'"

"I gazed at my daughter through a mist of tears. When I could get a grip on myself I answered, 'I have been thinking of your mother, Marjorie.' Then remembering her anxious question, I added, and my voice broke a little I fear, 'The song is superb; let's have some more like it.'

"I fired up my old jimmie pipe and we passed a never-to-be-forgotten evening. Marjorie says the Amberola is a great institution, and, as in everything, her old daddy agrees with her." [Name on request.]

There are many records upon your shelves, Mr. Talker Man, which will bring out to even a greater degree the throbs and thrills than the one dealt with in this story, but if a simple ballad such as "I Will Love You When the Silver Threads Are Shining Among the Gold" will furnish material for a letter like the foregoing, you can readily see what a more dramatic selection would do.

Imagine a veteran writing you after listening to "Just Before the Battle, Mother," as sung on a blue Amberol record by Will Oakland, or others of that type. It would make good advertising, all right; would it not?

In conclusion, permit me to advise you to try out this proposition of gooseflesh letters and get some mighty cheap and effective advertising.

HOWARD TAYLOR MIDDLETON.

A BOON TO THE "SHUT-INS."

The following touching extract from a letter recently received by the Victor Talking Machine Co., reprinted from The Voice of the Victor, tells its own story:

"Will you allow a suggestion? My wife is a 'shut-in' and has been so for years. We purchased a machine (Victrola) for her enjoyment and to bring home to her hearing things she could not hear at all owing to her physical disability. I have often thought if you would, in your advertisements, call attention of the buying public to the fact that the Victrola is a comfort to the 'shut-ins' it would direct their attention to the matter. We did not realize in our home how much brighter we could make the days until the Victrola came into it. This is not for publication at all—just simply a quiet suggestion from one who is grateful for the comfort he has been able, through your instrument, to give another."

PHONOGRAPHISCHE ZEITSCHRIFT

SELLING VICTORS IN RICHMOND.

Great Business in Talking Machines Done by the Corley Co. in Virginia Capital Indicated by Size of Single Shipment, Pictured Below.

(Special to The Talking Machine World.)

Richmond, Va., March 10, 1913.

An idea of the tremendous volume of business in Victor talking machines transacted by the Corley Co., of this city, can be gleaned from a glance at the accompanying photograph, which shows only one of several shipments of Victor products received by this enterprising company within a recent date.

The Corley Co., which is capitalized at \$200,000, succeeding the Cable Piano Co., has long occupied a position of distinction in this city as representatives of pianos of national reputation, and since their incursion into the talking machine busi-

Big Shipment for Corley Co.

ness they have been equally as successful as Victor jobbers as with their line of pianos which is headed by the Mason & Hamlin, Conover and Cable.

The first months of the year have shown a greatly increased volume of business in Victor talking machines as compared with the same months of last year, and it would now seem as if there would be no let up in activity this year, judging from the way orders are coming in, provided, of course, sufficient machines can be had from the factories to meet the demand.

WHOLE BLOCK OF BUILDINGS

To Be Added to Victor Plant During Year—Work of Razing Many Structures to Make Room for New Factory Buildings Commences.

It is related that a Scotchman, on a visit to New York some time ago, viewed the work on the new subway, the many streets torn up and blocked as a result of building operations of various sorts, and remarked that it would be a fine city when it was finished. The same conditions exist in regard to the plant of the Victor Talking Machine Co. in Camden, N. J., with this difference, that though the plant is never completed, it seems, it nevertheless affords a handsome and impressive view, which grows more impressive as new buildings are added.

Although it seems only a matter of weeks since the last new buildings added to the Victor Co. plant were ready for occupancy, there now comes the announcement that work has begun on the demolition of an entire block of buildings, some of them four and five stories in height, to make room for several more additions to the Victor factory. The first of the new buildings, all of which will be six stories high and of concrete construction, is to be completed by August 1.

When you hit the ceiling, come down gracefully and carefully.

HOW HEAT AUGMENTS SOUND.

Member of Talking Machine Trade Suggests That Use of Hot Air Might Improve Reproductive Qualities of Machines.

A member of the trade calls the attention of the Talking Machine World to a recent item showing how the sound of a telephone may be augmented materially through the use of heat, and wants to know whether this idea cannot be applied to the talking machine for public purposes. The clipping referred to is as follows:

"In experimenting with telephones surprising results were obtained by a Danish engineer named Petersen by simply heating the transmitter. It was found that this increased the volume of sound very considerably. In fact, a transmitter thus heated so increased the volume of sound that the receiver, laid on the table on the other end of the line, delivered the speech so plainly that all at a far corner of the big room away from it heard every word distinctly. Before the transmitter was heated this was impossible.

"A Paris telegraph engineer named Germain made practically the same discovery some time before, but it was not put to use. Now Professor Hannover, of the Danish State Experimental establishment, has taken up the matter and finds that a simple apparatus may be made for heating the microphone transmitter of a telephone, and thereby enable messages to be

transmitted by telephone a much greater distance than is possible under ordinary conditions.

"The reason for this is simple enough. The heating of the microphone transmitter results in making the air about it rarified, and this naturally carries the sound better. For telephones extending over high and weather exposed mountain peaks and in such places where there is difficulty in making the sound carry well, this heating can be resorted to and the line made clear as a bell."

This is a matter entirely too complex and technical for even the editor to pass judgment on, and we prefer to pass it along to the acoustical experts and great inventive minds connected with the talking machine companies.

One thing is sure, that the amount of hot air that passes over the telephone at times, particularly when little attention is paid by telephone operators to the demands of customers, ought to augment, and does undoubtedly enlarge the sound, it not of the 'phone, of those who speak into it.

MAKING KNOWLEDGE PAY.

Salesman's Personal Stock in Trade Consists of Ideas Which Can Be Turned Into Money.

A salesman turns his knowledge into money. He sells his ideas just as the lawyer sells his knowledge of the law, the physician his scientific knowledge of the human body, the merchant his wares or the railroad president his ability to secure new traffic and to handle men, etc. All salesmen to a greater or less degree command the consideration that knowledge compels, and they all profit by this knowledge to the degree that they know what they have to sell.

Knowledge wins confidence, also customers, and the salesman who does not have a firm grasp on his line has double the task to perform that the other fellow has. He not only must sell his goods, but he must first give the customer confidence, and this, to a man without real knowledge, is a difficult proposition. Once stumble or falter—*bon soir!*

M. S.

Automatic Start and Stop

ONLY PERFECT AUTOMATIC STOP THAT HAS BEEN PRODUCED for the following reasons:

1. Simple to operate.
2. Always Stops.
3. Neat in appearance.
4. Price, Nickel-Plated, \$3; Gold-Plated, \$4 (Canada and Foreign Countries add duty).
5. Uses screw on tone-arm collar to fasten it (thereby not injuring cabinet of machine).
6. NOTHING to bump arm (thereby jarring wax loose on diaphragm).
7. NOTHING to weigh heavily on tone-arm (thereby wearing tone-arm out of alignment in tone-arm collar).

You owe your customers any knowledge that you may gain through trade papers of the latest improvements, therefore as a progressive dealer send your jobber an order for M. S. Stops, and your customers will commend you for selling so great a convenience as the M. S. Automatic Start and Stop.

Mr. Thomas Mykins, the inventor of the M. S. Automatic Start and Stop, has sold and repaired talking machines for nearly fifteen years. For the past three years he has devoted all his spare time to invent an automatic stop. Previous to the M. S. he discarded three designs which worked effectively, but were too large to be neat in appearance.

Mr. Mykins has resigned his position as manager of the Victrola Department at E. W. Edwards Department Store (Rochester, N. Y.) to personally supervise the manufacture of the M. S. Stops.

Mr. John A. Clark, Manager of Sales, has been associated with the talking machine business for a number of years, having conducted a retail talking machine business at Katonah, N. Y., and later was traveling salesman for the Columbia Graphophone Co., and recently for E. J. Chapman (Victor Distributor), Rochester, N. Y.

Mr. Clark has designed highly attractive literature regarding the M. S. Start and Stop, and will gladly ship whatever amount any dealer can use for his mailing list—TELL US HOW MANY? We do the rest.

OPPORTUNITIES IN FOREIGN RECORD TRADE.

Talking Machine Men Not Fully Alive to the Great Opportunities That Exist in Appealing to People of the Various Nationalities Residing in the United States to Whom the Songs of Their Native Lands Are Always Popular—Opportunity for Specialists.

"Does the average dealer appreciate the opportunities of the foreign record trade, is a question that often appeals to me as a very serious problem," states A. Heindl, manager of the foreign record department of the Columbia Graphophone Co., in discussing the possibilities of the dealer developing a profitable trade in foreign records. "There is no doubt but that the foreign record industry is in its infancy, and the active and 'live-wire' dealer is taking advantage of every oppor-

Neapolitan Trio in Stage Costumes.

tunity to push the sales of these records and bring them to the attention of his clients at every opportune time.

"The field in this special branch of the talking machine trade should particularly appeal to the small dealer with a comparatively small store in an energetic and thriving city, where the populace is what is colloquially termed 'the plain ordinary people,' and as a rule making comfortable salaries the year round. The dealer who takes the time to investigate the status of the foreign record trade will find in the great majority of such towns as I mention that a substantial percentage of the people is foreign born, and very seldom, if ever, forget their home love for their native land. In the mill sections of this country, in the mining centers and in all cosmopolitan cities or towns the possibilities for the

average dealer to promote the sale of the foreign record is the fact he does not specialize enough in presenting his stock to possible purchasers. For example, let us suppose there is a dealer situated in a small city where there is located a colony or a large number of people of the Hebrew race. Here is an opportunity to carefully solicit this trade in a thorough and essentially personal manner. It is not enough for the dealer to merely send his prospects for Hebrew records a general form letter telling of the arrival of some new Hebrew records. He should write individual letters to his clients, calling their attention to the fact that the best known Cantor in Europe has recently made records that are artistically perfect and unusually typical of a Cantor's art. Invite the prospect to hear the new records at his convenience, bring some friends with him who are also interested in Hebrew records, and gen-

Russian Accordeon Player in Native Dress.

erally impress the prospect with the fact that he will secure Hebrew records that are as perfect as can be produced, and musically and characteristically symbolic of his religious faith. Appeal to his home love and make your argument individual. You will be surprised at the excellent results that will materialize from the pursuance of these methods.

intensely musical Hungarian people, whose love of native land is traditional. Their favorite musical instrument is the cimbalon, and the sale of records featuring this instrument is invariably heavy, for the Hungarian parent takes delight in teaching his children the precepts of his native land and the music and customs that are favorites there. The foreign record plays a double rôle in a case like this, for it not only amuses the older folks, but educates the children in a broad and valuable manner.

"The dealer would be surprised in many ways if he would take the time to become fairly well

Celebrated Lithuanian Choir, Newark, N. J.

acquainted with his possible clients for foreign records. Among other things he would soon learn that many of the foreign people in his territory speak a dialect or uncommon language that is derived from some of the older tongues but differs in many ways. An instance of this may be found in the Lithuanian records that are now on the market. There are a surprisingly large number of Lithuanians in various parts of the country that speak this language, and it is natural to suppose that any records sung or played in the native tongue will find a ready market with these people. The dealer should become familiar with every language on the foreign record list, for he will discover many foreign tongues listed that he has overlooked when soliciting trade for his foreign record list.

"The talent for the production of foreign records is oft-times found in many peculiar places and under odd circumstances. Many of the best Neapolitan singers have been found in dark, ill-smelling basements where the light rarely enters and empty bottles bar the entrance. Cabaret shows, restaurants and music halls have all given their quotas to the foreign artist list, and no incident nor report, no matter how trivial, is overlooked in the search for talent. Alpine yodlers, Russian accordeon players and Scandinavian

Group of Famous Alpine Yodlers.

profitable sale of foreign records are immense, and I am sure that the dealer who gets after this trade in earnest will reap profitable results.

"The main drawback in the campaign of the

"It is often advisable that the dealer should impress upon the prospective purchaser how valuable the foreign talking machine record is from an educational standpoint. Take, for instance, the

Swedish Glee Club.

choirs are but a few examples of the extensive research necessary in the successful compilation of a foreign record library that will offer splendid opportunities for the dealer."

HENRY C. BROWN AS A NIMROD.

The Victor Publicity Manager Writes an Interesting Account of His Experiences After Big Game in the Canadian Wilds.

The many members of the talking machine trade who are personally acquainted with Henry C. Brown, advertising manager of the Victor Talking Machine Co., but who are not familiar with the manner in which he spends his leisure, would not imagine that the heart of a mighty hunter beats behind his mild and at times retiring exterior, but the fact remains that Mr. Brown counts among his hobbies that of going after big game in the Canadian wilds, and, what is more, getting it.

In the March number of Forest and Stream, the magazine for sportsmen, Mr. Brown recounts in a thoroughly interesting manner one of his experiences while on the trail of the moose in New Brunswick last fall. His story, which is entitled "The Bull Moose that Charged," tells of the tracking of the moose, the cleverness of the guides in bringing them to the call and of a fight between two bull moose for the possession of a charming lady of the moose family. The hunting party had trailed the moose and gotten within easy shooting distance when Mr. Brown balanced himself on a tree trunk and let fly at the larger of the bull moose. The recoil knocked Mr. Brown off the tree, and when he recovered his footing the moose was charging at a speed that made the Twentieth Century Limited appear like a slow freight in comparison. Only quick work with the rifle stopped the animal's rush and saved the hunters from injury.

H. C. Brown in Hunting Togs.

In his article Mr. Brown proves himself to be an excellent descriptive writer as well as an originator of telling advertising. The article is illustrated with a number of interesting pictures, one

showing the author in hunting togs and with a belt full of cartridges around him, reproduced herewith by courtesy of the publishers of Forest and Stream, that indicates his intention to add to his laurels as a Nimrod.

GRAND OPERA IN DALLAS.

Has Helped the Sales of Grand Opera Records —Many Noted Artists Heard—Columbia Managers Well Pleased with Conditions.

(Special to The Talking Machine World.)

Dallas, Tex., March 8, 1913.

The visit of the Chicago-Philadelphia Grand Opera Co. to this city the past week has aroused unusual interest in the sale of talking machines and records, as the majority of the members of the company have produced records which have been most popular with owners of talking machines. The various stores handling the Columbia and Victor machines and records capitalized the visit of the Grand Opera artists by featuring the various records which they have made, and to good purpose.

It is interesting to note that six members of the visiting opera company are on the Columbia roster of artists—Mary Garden, Margaret Keyes and Messrs. Sammarco, Daddi, Dufranne and Henri Scott. The Watkin house report the greatest activity with the Columbia goods. Recent visitors to the city were George W. Lyle, general manager of the Columbia Co., accompanied by Manager Fuhri, manager of the Chicago Columbia store. Both express themselves well pleased with conditions in this part of Texas.

CONVINCING ARGUMENTS FOR PRICE MAINTENANCE

Made by Senator Robbins Before the Judiciary Committee of the Senate of New Jersey Previous to the Passage of the "Seven Sisters" Bill—Quotes Interesting Letter of H. P. Ripley, of Leavenworth, Sent to D. D. Anthony, Member of Congress.

Prior to the passage of the "Seven Sisters" bill in the State of New Jersey the manufacturers of patented articles selling at a fixed price, and especially the Victor Talking Machine Co., made a strong fight against the particular bill prohibiting any agreements between two parties for the maintenance of stated prices. Though the objections did not accomplish the desired result, some interesting arguments were made before the Judiciary Committee of the Senate of New Jersey, as was the case in the hearing before the House of Representatives of Washington in the instance of the Oldfield Bill, when the many virtues of the fixed price were dwelt upon at length.

One of the most interesting and at the same time thoroughly convincing arguments offered before the New Jersey body by Senator Samuel K. Robbins was a letter written by H. P. Ripley, a dealer in talking machines and sporting goods of Leavenworth, Kans., to D. D. Anthony, a member of the House of Representatives. Mr. Ripley's letter, which made a strong impression upon those to whom it was read, was as follows:

I am in receipt of yours of the 20th, in which you express your opposition to monopoly, whether entrenched behind a patent, or unfair business methods. This may be all right, but does the right of a manufacturer to fix a retail price on an article of his own manufacture, so in-trench him?

I handle several lines in which the retail price is most carefully restricted, notably Victor and Columbia Talking Machines, and Eastman Kodaks. My contract with each of these parties is ironclad, no inducements of any kind being allowed, either by the distributor to me, or by me to the consumer. You cannot name a manufacturer in the country that goes to greater length to enforce these clauses in their contract with dealers. But do any of them enjoy a monopoly? Most decidedly not.

Though the Victor and Columbia factories, I suppose,

turn out 95% of the machines and records used in the country, I have opportunities to buy talking machines and records from others, at less price than I pay for these goods. So long as other factories can turn out goods at less than these people, in what manner is their business unfair, or wherein does their restricted price clause help them? The minute their goods come down in quality to the level of the machines offered at less money, that moment is a goodly number of their customers going to leave them.

The same applies to the Eastman Kodak Co. They have plenty of competition, by some very large concerns, but this company has done more to develop the industry, spends more money in experiments and investigations, and does more to educate the people in the art of photography than all others combined. Their goods are in demand everywhere, not because there are not others to be had, but because Eastman stuff is absolutely as fine as can be made, and they have spent I suppose millions of dollars in teaching the public, through the press, that this is the case.

As to the fairness of their business methods, I am willing to stake everything I have that the largest dealer in New York City cannot buy goods from these people any cheaper than I can, and when your children come in here to buy an Eastman film, or a phonograph record, you and they know that the smartest photographer, or the most expert judge of phonograph goods can go no where in the world and buy either article one cent cheaper, or not one bit better than they are getting it.

So much for patents, and unfair business methods, now for the good of our country, state and city.

Which is the ideal condition for these United States—that of having the merchandise distributed by mail order houses and the department stores, located in a few of the large cities, who exist by selling goods of doubtful merit at cut prices, or of having a multitude of such cities as your own, built up by the small merchant, like myself, who is handling the best, not the cheapest, merchandise that he can buy, and who is selling this merchandise to you, and to your children, at a fair profit, a profit mind you, that is not excessive, but one that enables him to live respectably, help build up the city, and incidentally the country, pay his bills and be a general credit and help to the community.

And this profit is assured him by the very fairness of the manufacturers of these patented articles, who are game enough to say to Marshall Field, Montgomery Ward and

others of that ilk, "You cannot sell goods of ours one cent cheaper than our smallest customer."

It strikes me that these very patent laws allow them to be absolutely fair in their business methods. Allow these large houses to sell these articles at cut prices, and as an advertising proposition to them it would be equal to their selling postage stamps at 75 cents on the dollar, the only difference being that the first would be at our loss, and the second at their own.

Give these people the right to cut prices on these articles of known value, and what is left for me to do? I can either buy goods of unequal quality, and at a lower price, and so compete with them, or I can, like the Arab, fold my tent and steal away, leaving a nice little store room at 406 Delaware Street vacant; one place less where you and your family can buy reliable merchandise, from a personal friend, at short notice; one less advertiser for the Leavenworth Times, one less member of the Commercial Club, one less taxpayer in the county, and one less customer for the butcher, the baker, and the candlestick maker. To offset that, there would, of course, be three more applicants to Montgomery Ward who, encouraged by the parcel post bill, are even now adding \$39,000,000 to their capital stock and putting up branch houses in San Francisco and New York, they can get help a little cheaper, and they will have a few extra thousands in dividends to spend, little of which, I imagine, will be spent in Leavenworth.

Vote for the Oldfield Bill and you will get your monopoly all right; it is simply a question of whether you want your monopoly to consist of the Mail Order Barons, and Department store owners, to whom the very thought of a "Live and let live" policy is obnoxious, or whether it is to consist of manufacturers, who are making such good goods, advertising them so thoroughly and treating all, customers and consumers, with such fairness that it is the dealer's greatest pleasure to handle their goods, and a consumers greatest pride that his camera is an Eastman, or his talking machine a Grafonola or Victrola, or, to get a little closer home, that his gun is an Ithaca, and his shells "Winchester." I cannot sell you a Field shell, you want that old reliable "Restricted Price" Winchester. Think it over, from the standpoint of "The greatest good to the greatest number."

Sincerely,
(Signed) H. P. RIPLEY.

J. H. Dodin, secretary of the Eastern Talking Machine Dealers' Association, spent a couple of days in Philadelphia last week for the purpose of conferring with the officers of the Talking Machine Retail Dealers' Association of Philadelphia regarding a combined campaign by various dealers' organizations with a view to securing a special list price for talking machines sold on instalments.

JOBBER TO HOLD CONVENTION AT NIAGARA FALLS.

Atlantic City Close Second in Favor of Members—Exact Date of Meeting Not Announced
—President Blackman Tells of Efforts to Defeat "Seven Sisters" Bills Recently Passed
in New Jersey—Secretary Buehn's Letter to Governor Opposing This Legislation.

The vote recently taken by Secretary Buehn, of the National Association of Talking Machine Jobbers, as to the place of holding the 1913 convention was decided by the members in favor of Niagara Falls. The detailed vote was as follows: Niagara Falls, 44; Atlantic City, 34, and Norfolk, Va., 4. Members of the association were notified of the result, and a banner crowd in point of numbers is expected at Niagara Falls this summer when the convention is called to order.

President Blackman calls the attention of the members of the association to the fact that they were represented at the recent hearings on the "Seven Sisters" anti-trust bills that were passed in New Jersey this month over the protests of the allied business interests of the State, who sent delegates down to Trenton to argue against them.

Mr. Blackman went down to Trenton, not only as a jobber interested in New Jersey trade, but as president of the National Association of Talking

Machine Jobbers. He made an excellent address in the Senate chambers, protesting against the passage of the bills, particularly No. 43, which has as its object the cessation of fixed prices, and makes it a criminal offense to fix the prices of goods. This bill was described in detail in last month's World.

The association went on record as protesting in conjunction with other business interests against the passage of the bills, and the following telegram was sent to the then Governor Wilson by Secretary Buehn of the association: "The National Association of Talking Machine Jobbers protests against the passage of Senate bills 43 and 44, which, I understand, come up before the House for consideration within the next day or two. We believe that these bills are highly injurious to the best interests of the business men of our country, as well as the consumers of the lines of goods affected. (Signed) LOUIS BUEHN, Secretary."

ward are showing substantial gains in sales over any previous years, and the commendation of our trade for these higher priced machines has demonstrated to us that they are giving universal satisfaction to their users."

NEW COLUMBIA REPRESENTATIVES.

During the past month the following additions to the list of Columbia Graphophone Co.'s representatives were noted: Atherton Furniture Co., Brockton, Mass.; Wm. J. Conbery & Sons, Trenton, N. J.; Economy Furniture Co., Scranton, Pa.; F. F. Krause, Cleveland, O.; Cleveland-Manning Piano Co., Atlanta, Ga.; George Lake, 1497 Madison avenue, New York; Globe Graphophone & Supply Co., 1462 Second avenue, New York; Walsh & Perry Co., Carthage, N. Y.; Dominick D'Antonio, 141 Fifth avenue, Brooklyn, N. Y.; Henry Taubman, St. Johnsville, N. Y.; Snellenburg & Co., Philadelphia, Pa.; Wise, Smith & Co., New Haven, Conn.; O. W. Wurtz Co., New York, N. Y.; Ernest Youngjohn, Norristown, Pa.; Walter C. Kantner, Reading, Pa.; Alex Gordon, Chicago, Ill.; Thomson-Felder Co., Barnesville, Minn.; Atherton Furniture Co., Lewiston, Me.; J. H. Styles, Oakland, Cal.; J. Raymond Smith, San Francisco, Cal.; Tiedemann & Woodburn, Everett, Wash.; Denver Dry Goods Co., Denver, Col.; Boggs & Buhl, Pittsburgh, Pa.; Rochester Furniture & Auction Co., Rochester, Pa., and Carl R. Kierner, Paducah, Ky.

WILL EXHIBIT IN NEWARK.

The products of the Columbia Graphophone Co. will be exhibited at the convention of the American Physical Education Association, to be held in Newark, N. J., the 26th of the month.

Prof. Goodwin, of the company's educational department, who will be in attendance at this meeting of the physical education teachers of the country, will deliver an address during the course of the convention. He states the Columbia machines will be used by the various lecturers at the convention to illustrate their talks.

SEEK TO HAVE SUIT SQUASHED.

American Graphophone Co. Files Motion to That Effect on the Statement That No Proper Service Was Obtained in Suit of National Talking Clock Co. Brought Against Them.

(Special to The Talking Machine World.)

St. Louis, Mo., March 10, 1913.

The American Graphophone Co. filed a motion in the Federal District Court here a few days ago to quash a suit for \$199,599.97, brought by the National Talking Clock Co., of this city. The motion was based on the statement that no proper service was obtained in the suit, as the service read to George W. Lyle, vice-president and general manager of the Columbia Co., at the office here was not sufficient. The papers in the case recite a good deal of history of the talking clock, which at one time was considerable of a sensation among promoters and advertising men here. The idea was that at every few minutes, as met the needs of advertising demands, the clock would by spoken words call attention to some business. The Graphophone company was engaged to manufacture the clocks at \$110 each, and it seems, did manufacture some 250, which were used in Brooklyn. More than 50,000 of the clocks were to be built, but those accepted by the Talking Clock Co. proved unsatisfactory in Brooklyn, where they were exhibited, and this suit is the result. The defendant claims that the clocks were faulty because of defective records and improper mechanical work. A supplemental contract figures in the complaint, but the damages asked appear to be the profits the promoters saw in the deal.

CREATES NEW VICTOR DEALERS.

Schmelzer Arms Co. Signs Up Two Prominent Kansas City Piano Houses as Victor Dealers —Place Large Initial Orders for Products.

(Special to The Talking Machine World.)

Kansas City, Mo., March 10, 1913.

The F. G. Smith Piano Co., in this city, which has been featuring the Columbia line of Grafonolas, has also added the complete Victor line of talking machines and Victrolas, through the efforts of the Schmelzer Arms Co. Four additional demonstration booths are being erected in the Smith store for the accommodation of the Victor goods.

Another recent deal that was particularly pleasing to A. A. Trostler, manager of the talking machine department of the Schmelzer Arms Co., was the signing up of the Means & Pearson Piano Co., of this city, as Victor dealers.

Both concerns placed large initial orders for both machines and records, and plan to give the Victor line active representation.

GREATEST TRADE IN FEBRUARY.

Remarkable Activity with the New York Talking Machine Co. in All Departments—What Manager Williams Reports.

"We have just closed the greatest February in the history of our business," states G. T. Williams, manager of the New York Talking Machine Co., 81 Chambers street, New York, Victor jobbers. "We are certainly well pleased with the steady continuation of our business, and the outlook for March and April is splendid. There was never such a demand for Victor goods as exists at the present time, and our dealers tell us that their business for this time of the year is 'way beyond all their expectations.

"The national publicity campaign of the Victor Talking Machine Co., which has been a feature of its co-operative policy for years, is certainly bearing fruit, and I do not hesitate to predict the biggest year in history for the sale of Victor products.

"The demand for Victor records is really something enormous. Grand opera, semi-classic and popular selections are all selling fine, and our customers are more than pleased at the comprehensive selections of new records that are listed each month by the Victor Co. One of our dealers recently remarked that there had not been the slightest falling off on his trade in records since last fall, and his opinion seems to be the general consensus of the trade's ideas, as our orders for records are coming in faster week after week.

"There has been a noticeable and constantly increasing demand for the higher priced types of machines since the first of the year, and Victrola No. XVI. is more popular to-day than it ever was before. The machines that retail from \$75 up-

RECENT COURT DECISION AND ITS BEARING

On Price Contracts Based on Patent Rights—Courts Have Always Upheld Talking Machine Manufacturers Against Contract Violations—The Views of Louis F. Geissler and Elisha K. Camp Are Interesting and Timely—Latter Quotes Many Supporting Cases.

The recent decision by Judge Ray in the United States District Court, New York, in the suit of the Waltham Watch Co. vs. Chas. A. Keene, a retail jeweler of New York, sustaining the latter's position, has caused quite some comment and resulted in some misunderstanding of the exact situation in the talking machine trade.

While the litigation was based on an allegation of an infringement of patents owned by the complainant in that certain watch movements had been sold in violation of the price contracts at which they were placed on the market to be sold by the retail trade, Louis F. Geissler, general manager of the Victor Talking Machine Co., when asked for an expression of opinion as to what bearing this decision would have on the talking machine trade, said:

"The conditions under which this suit was brought and decided differ in many respects from the grounds upon which this company would bring suits in cases of contractual violations. We believe the Victor contract system can only be invalidated by an act of Congress changing the United States Patent Rights. The Victor contract has been carefully drawn, based on decisions of the United States Supreme Court. It has been sustained before the United States Courts quite a number of times, and by the United States Court of Appeals a number of times, which would seem to justify us in believing that it is pretty well seasoned legally."

The legal advisers of the leading talking machine companies are of the opinion that the higher courts will reverse the Ray decision, it being absolutely opposed to all previous rulings on this question of fixed prices, particularly those recently given by Judges Lurton and Van Deventer of the United States Supreme Court, covering the right of fixing prices for resale. In fact, there have been a great number of decisions affirming the right of the owner of a patent to retain title in the article transferred sufficient to restrict the manner of its use or the price at which it shall be sold, and so make the purchaser a mere licensee. These have been enumerated by Elisha K. Camp, counsel of the Columbia Graphophone Co., as follows: Columbia Graphophone Co. vs. Hill Piano Co.; Edison Phonograph Co. vs. Kaufman; Edison Phonograph Co. vs. Pike; Victor Talking Machine Co. vs. The Fair; National Phonograph Co. vs. Schlegel; Rubber Tire Wheel Co. vs. Milwaukee Rubber Works Co.

Summarizing some of these decisions, Mr. Camp referred to the case of the Kaufman department store in Pittsburgh, which is most pertinent. This concern purchased Edison phonographs, but refused to sign an agreement. Later they found a small dealer who dealt with Thos. A. Edison, Inc., and from him they purchased phonographs. When they attempted to sell them at a cut price, however, an injunction prevented them.

In the case of the Victor Talking Machine Co. vs. The Fair, Judge Baker, of the Circuit Court of Appeals decided: "Within his domain the pat-

entee is czar. The people must take the invention on the terms he dictates or let it alone for seven-teen years. This is a necessity from the nature of the grant. Cries of restraint of trade and impairment of the freedom of sales are unavailing, because in the promotion of the useful arts the Constitution and statutes authorize this very monopoly. The owner of a patent who manufactures and sells the patented article may reserve to himself as an ungranted part of his monopoly the right to fix and control the prices at which jobbers or dealers buying from him may sell to the public, and a dealer who buys from a jobber with knowledge of such reservation, and resells in violation of it, is an infringer of the patent."

In the case of Bement vs. the National Harrow Co. the court decided: "The object of the patent laws is monopoly, and the rule, with few exceptions, is that any conditions which are not in their very nature illegal with regard to this kind of property, imposed by the patentee, and agreed to by the licensee for the right to manufacture or use or sell the article, will be upheld by the courts; and the fact that the conditions in the contracts keep up the monopoly does not render them illegal."

In Thos. A. Edison, Inc., vs. R. M. Smith Mercantile Co., the stock of an authorized dealer in talking machine records was damaged by fire. Later it was abandoned to an insurance company, which sold this stock to a salvage company. This salvage company, in turn, sold it to the defendant. It was held that defendant, having offered such records for sale at cut prices with knowledge of the restrictions under which they were originally sold, was subject to an injunction restraining a resale at less than the contract prices.

The decision of Judge Van Deventer, of the United States Circuit Court, in the case of the National Phonograph Co. vs. Schlegel, delivered when the judge was on the Circuit Court of Appeals bench, and which was quoted by Justice Lurton, of the United States Supreme Court, with approval, in part follows:

"An unconditional or unrestricted sale by the patentee, or by a licensee authorized to make such sale, of an article embodying a patented invention or discovery, passes the article without the limits of the monopoly, and authorizes the buyer to use or sell it without restriction.

"But to the extent that the sale is subject to any restriction upon the use or future sale the article has not been released from the monopoly, but is within its limits, and as against all who have notices of restriction is subject to the control of whoever retains the monopoly. This results from the fact that the monopoly is a substantial property right, conferred by law as an inducement or stimulus of useful invention and discovery, and that it rests with the owner to say what part of this property he will reserve to himself and what part he will transfer to others and upon what terms he will make the transfer."

In fact, all decisions of the higher courts so far

NYOIL

For polishing varnished woodwork it is extremely satisfactory. No oil is so clean.

Ask your watch repairer whose oil he uses on your watch.

have been in favor of the maintenance of fixed prices, and those talking machine concerns that have endeavored to disobey these rulings have been restrained by injunction. At the present time there are two or three concerns out West against whom action has been brought preventing them from selling below the fixed price.

"SIMPLEX" EXPLOITATION

Shown at Food Show in Brooklyn and Wins Much Attention—Clever Publicity.

The Standard Gramophone Appliance Co., 173 Lafayette street, New York, manufacturer of the "Simplex Start and Stop" device, is one of the exhibitors at the Food Show being held this week at the Thirteenth Regiment Armory, Brooklyn, N. Y. The company occupies space in the booth of the Pease Piano Co., and has on exhibition a number of Victrolas equipped with the Simplex device.

The company is distributing a large amount of literature at the show, and many inquiries have been received as a result of this publicity. A feature of the circulars and descriptive matter that is distributed from the booth is a two-page pamphlet illustrating a cartoon made by Maurice Ketten, the prominent cartoonist, especially for the Standard Gramophone Appliance Co. This cartoon illustrates a humorous article on the Simplex, and has created considerable interest. In order to attract people to the Pease and Simplex booth, a mirror attachment reflecting the workings of the Simplex on a Victrola was constructed, and as a result the booth is always filled with curious and interested visitors.

Dan W. Moore, road man for the company, returned to New York Monday after a very successful trip through the Middle and Northwest. Mr. Moore was away about six weeks, and during that time lined up a very large number of jobbers and dealers to handle the "Simplex Start and Stop."

BROADENS FIELD OF OPERATION.

Louis J. Gerson, buyer of the talking machine departments of the John Wanamaker stores at New York and Philadelphia, is also in charge of a new automobile department to be established in both stores. The line of cars to be handled will be the Buffalo Electrics, and Mr. Gerson is taking hold of the new department with the same energy that he devotes to the "talker" end of the business.

Ysaye, the violinist, who plays exclusively for the Columbia Co., is announced as a soloist with the Symphony Orchestra, of St. Louis, Mo., during March, and the Columbia Co. is arranging for a sharp advertising campaign for record business on the occasion of his visit.

"DUSTOFF" RECORD CLEANERS ARE A POSITIVE NECESSITY

"Dustoff" de Luxe

Made of finely finished wood fabric mounted on holder. Each in a two-color carton. Retail for 15c. each (in Canada for 25c.). Liberal trade discount.

MINUTE SHINE COMPANY, Sole Mfrs., 280 S. E. CANAL STREET, PROVIDENCE, R. I., U. S. A.

DEMONSTRATION OF PATHE FRERES PHONOGRAPHS

Which Occurred in New York Last Week, Attracted Attention of Talking Machine Men
—Several Interesting Styles Displayed—Machines and Records Will Be Presented to
the American Trade by the Pathe Freres Phonograph Co.—Detailed Plans Soon.

Invitations were recently sent out to many members of the local talking machine trade to hear private demonstrations of the products to be marketed by the Pathé Freres Phonograph Co. at temporary showrooms in the Delmonico Building, New York. The products displayed represent the entire line manufactured by Pathé Freres in Paris, France, and which have been introduced in all parts of the Old World.

The products shown include the "Pathéphone," "Pathégraph," "Duplex Pathéphone," "Pathé Reflex" machines and a representative stock of Pathé disc records in all sizes. These machines and records will be presented to the American trade by the Pathé Freres Phonograph Co., a company organized under the laws of Delaware with a capital stock of \$3,000,000, and the following officers: Emil Pathé, consulting engineer; J. A. Berst, president; T. E. Lamontagne, vice-president, and S. J. Shlenker, secretary and treasurer. Mr. Pathé's headquarters are in Paris, and Mr. Berst is vice-president and general manager of the Pathé Freres Moving Picture Co. in New York.

In response to the invitations issued by the company, a large number of visitors crowded the demonstration rooms and expressed pleasure and satisfaction with the performance of the various machines. The "Pathégraph," a special phonograph used in teaching languages, music and singing, reproduces not only the sound, but shows simultaneously each word in large letters in different languages as it is produced. It can be used in schools for teaching purposes and in illustrating lectures. The "Duplex Pathéphone," a double phonograph used for reproducing operas, plays

and lectures of several hours' duration, has been in constant use since the demonstrations commenced in New York.

In Europe this machine is used in connection with actors and actresses who do the acting while this machine produces the music and singing. This company controls a large repertoire of operas produced by the leading opera companies, and it is planned to develop this end of the business in America. The large sized records containing complete operas were listened to most attentively by enthusiastic audiences during the past week. The operation of the machine is continuous; all it requires is a feeding of the discs. There is no change or use of a needle, as in all the Pathé machines a sapphire ball is used, which need never be changed; where electricity is used no winding is required.

J. A. Berst, the president of the company, sailed for Europe the early part of the month, to be away about three weeks, and the actual presentation of the Pathé products to the American trade will probably be taken up in detail very shortly after his return from the other side.

In the course of an interesting chat with The World, an officer of the company was most enthusiastic over the outlook for the future, and stated that they have already enough orders on hand from American jobbers and dealers to keep them busy for a year. Detailed plans as to manufacturing arrangements, prices, etc., will be shortly ready for publication. "Our company is going ahead rapidly, and it is only a matter of a very short time before we start an energetic campaign," stated this official.

ASSOCIATION'S STRONG FIGHT

Against the Oldfield Bill Has Been Successful for a While Anyway—Both Jobbers and Dealers Carried on Active Campaign Against Bill Which Died with the Recent Congress.

While the change in the administration in Washington, D. C., has officially resulted in the death of the Oldfield bill, the many arguments over the bill and its passage, both in favor of the measure and against it, were of a nature that should insure careful study, in order that those interested in price maintenance may be in a position to assert their position in an intelligent manner should other legislation of similar character appear.

Following the suggestions of the prominent manufacturers, the various talking machine dealers and jobbers protested strongly against the passage of the bill, both by personal letters and through their organizations, to their representatives in the national legislature. In this connection the Eastern Talking Machine Dealers' Association rendered notable service. A strong resolution against the Oldfield bill was drafted by the dealers at a meeting in January and forwarded to every Congressman and Senator in the United States. Encouraging replies were received from Champ Clark, Speaker of the House of Representatives, and other members of the national legislature. One Congressman, whose name does not matter, however, took somewhat of a peculiar view of the resolution and wrote in part as follows: "Do you think it is the business of Congress to maintain the individuality of merchants or force them to or not to become the servants of somebody, whether

gigantic or otherwise? * * * Is it not the desire these days for many people to inaugurate a system of competition, either guerilla, cut throat or otherwise? As in the dark ages the people feel abundantly able to take care of this feature regardless of whether or not they are." The foregoing sentiments, together with others embodied in the Congressman's letter, brought forth a long reply from Secretary J. H. Dodin, in which the desirability of fixed prices as a protection to the manufacturer, his workmen, the dealer and the public were well and intelligently set forth.

With the menace of the Oldfield bill removed temporarily the Eastern Talking Machine Dealers' Association has again turned to the question of a fixed instalment price in addition to a fixed price for talking machines, and an active campaign in this direction has been started. It is the belief of the majority of the dealers that the instalment price should be fixed and advertised generally, with a fixed discount from that price allowed for cash. In other words, instead of running a chance of antagonizing a customer by adding 10 per cent. or \$20 to the cost of a \$200 machine on the instalment plan, the price of the machine should be \$200 on instalments and \$180 or so for cash. Just how the manufacturing companies view the proposal at the present time has not been stated.

TALKING MACHINE EXPORTS.

The Figures for November Presented—Reports Show Increase for the Month.

In the summary of exports and imports of the commerce of the United States for the month of January (the latest period for which it has been compiled), which has just been issued by the Bureau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies are set forth:

The total exports of talking machines, records and supplies for January, 1913, amounted to \$210,770, as compared with \$226,660 for the same month of the previous year. The seven months' exportation of talking machines, records and supplies amounted to \$1,685,956.

Simplex Automatic Start and Stop Device

The Victor tone arm is balanced and swung without friction about a steel pivot. The Simplex is not attached in any manner to the tone arm, and does not add weight or friction to destroy this balance.

Easily and accurately operated in the dark, without scratching the record, an actual condition which only the Simplex meets.

The price is right! The confidence of the customer who buys on the dealer's recommendation is not lost by a sale of the Simplex.

The first and original automatic start and stop device—defies imitation.

To prove absolutely to every dealer the universally recognized superiority and merit of the Simplex, here is

Columbia Graphophone Company

Tribune Building, New York

ST. LOUIS TRADE COMPLAINS OF STOCK SHORTAGE.

Certain Styles of Victors and New Edison Disc Machines Anxiously Awaited—Aeolian Co.'s Victor Activity—Columbia Men Making New Records—Silverstone Enthusiastic Over New Edison Disc Phonograph—Neglected Field of "Talker" Salesmanship.

(Special to The Talking Machine World.)

St. Louis, Mo., March 10, 1913.

The talking machine business in St. Louis is good, but it would be better if the jobbers had all of the machines they wanted or could get them. There is variation to this complaint this month, as all jobbers are complaining, not merely the Victor jobbers as is usually the case.

Victor jobbers are short of XIV. and XVI. models—very short, more so than at Christmas time if anything. Of course these models are the ones that are in demand.

The Edison line is short of disc machines, especially the \$250 model, and the shortage of records still is embarrassing, although the record feature is not as serious as was the case when no deliveries at all could be made.

Irby W. Reid, the Columbia manager, who took charge a month ago, has got step with the working of his force and says that he likes St. Louis, likes his new work and is more than pleased with the totals shown at the end of his first month.

Mr. Reid has moved his desk back among the accountants, where he is apart from the ordinary selling activities, leaving the front store to the supervision of Sales Manager Byars. He said:

"We have not yet carried out our plans for a grand opera record demonstration because the grand machine we want to use has not arrived. However, the concert plans are ready all but the date, and I soon expect to show St. Louis something about the Columbia and grand opera, or have St. Louis show me something. I think this field is one that we can afford to cultivate in this city."

General Manager Lyle was a caller at the Columbia store for several days, and expressed himself as well satisfied with the work being accomplished.

"This shortage of machines often gets on the nerves," said Harry Levy, of the Aeolian wholesale talking machine department. "Before Christmas we assured the trade all would be well after the holidays. The holidays are gone, but we are still explaining. The telephone is burdened with complaints, and the mail brings more. It seems during the last few days that we have convinced the trade that we are playing fair with everybody and that the factory is giving us a fair deal. I mean by that that jobbers everywhere are short of machines and that retailers everywhere are necessarily complaining. Several of our dealers have tried to buy elsewhere, and are convinced of this condition.

"The divorcing of the jobbing and retail departments of our local store had added to the troubles. Our retail department can kick just as hard about curtailed orders as anybody else, and so you see our house is divided against itself. As the Victor jobbing business for all the Aeolian stores is handled through this department, you see the kicks from our own system amount to considerable, and because of our being so close of kin they kick even

harder than the others who are outside the fold.

"One rift in the clouds, however, is the progress we are making with record sales through means of the parcel post. We preferred to try this new venture out quietly by tipping off small dealers before making a strong pull for that business. But we have organized for it now, and I am confident that it will mean a great deal to the small dealers. Our mail almost has doubled already, and we are just getting started. It is like this: Few small town dealers can carry a comprehensive record stock, and Mrs. Jones asks that six records be procured for her. Formerly the dealer would ask her for a few days' time in hopes that he could get other orders to lessen the percentage of express charges. Under the parcel post system he rushes that order along at slight expense and delivers the six records before the customer changes her mind, makes money on the sale and pleases Mrs. Jones. We are glad to aid the customer, and there is satisfaction all around."

Sales Manager Charles Byars, of the Columbia Co., was prompted to remark a few days ago on the greatly neglected field of talking machine salesmanship. "The line seems to require special adaptability," he said, "and only a few make good. A few days ago I put on a man who had successfully sold pianos and automobiles. He is allowed a fair salary and a percentage, but he has done nothing. In the several years I have been employing salesmen I have experienced a good many such disappointments. The trade always is seeking salesmen; possibilities equal to those on which a few men earn as high as \$175 a month always are few, yet men are very hard to find. I believe from talks with men employing salesmen in our line and others that a smaller percentage of applicants in the talking machine line really develop than in other lines, yet the prospect before them in this constantly growing industry is greater than in most other lines. Some of those who make the best success are those who give least promise, and it is hard to discover any common qualities in them. Hence I have concluded that there is some peculiar quality that makes for success that does not obtain in other lines."

E. C. Rauth, secretary of the Koerber-Brenner Music Co., Victor jobbers, who keeps closely in touch with local conditions, says that local and nearby trade is in a very healthy condition. Dealers generally are satisfied and optimistic. Improved record conditions have relieved embarrassments of a year ago and the satisfaction is general, orders are free, and customers are asking for quality goods.

Manager Robinson, of the Thiebes Piano Co. talking machine department, was off duty the first of the month because of illness.

The Bollman Bros. Piano Co. is making a combination of a \$50 Victor machine and a record cab-

inet the subject of a special advertising campaign.

President Mark Silverstone, of the Silverstone Music Co., is quite enthusiastic over his new Edison disc phonographs, his new store at 1124 Olive street and the new name of his company.

"Our greatest trouble," says Mr. Silverstone, "is in keeping in stock the styles of disc machines the trade is demanding. We telegraphed the other day for twenty of the \$250 machines, and that was in addition to mail orders. The records are coming in nicely, and we expect as soon as the machines now ordered get here, to catch up and keep even with the trade. I am congratulating myself daily on my removal to a larger wareroom. We could not have handled the business we now are doing in the old store."

Mr. Silverstone took advantage of the introduction of the Edison talking pictures in local theaters to advertise: "We have the same voice in our talking machines. It was the perfection of the disc machine that held Mr. Edison back so long in perfecting the talking pictures. Come to our store and be convinced that the voice is the same." In speaking of the advertisement, he said:

"The people accepted the invitation, and during the past week we have demonstrated the machine and records to more than 1,500 persons in our informal concert hall here on the first floor. A surprisingly large number of persons have stopped after the concerts and asked terms, and we are holding a number of sales for delivery as soon as the machines arrive."

In this same ad Mr. Silverstone announced that he had perfected an attachment for reproducing Columbia and Victor records on the machines. He sent a copy of this to the Edison head offices, and in immediate reply was asked to discontinue such advertising and also not to apply and such attachments on pain of losing the jobbing privileges. His attention was called to a notice on the machines that no attachments shall be put on them, also that only Edison records shall be played.

The Silverstone Co.'s new store is quite attractive. There are four demonstration booths on the main floor, and on the second floor are two more booths and a grand opera demonstration room. In keeping with his declaration that pianos were to be a side line, Mr. Silverstone is making them so in his store arrangements, and says that he is doing a satisfactory piano business. His arrangements for keeping the disc records are on the flat pigeon-hole order, each record in a box.

In connection with the opening of the disc phonograph trade, J. W. Scott, from the factory, has been here for several days and is demonstrating the machine at the Hotel Jefferson and interesting downtown merchants with a view of establishing retail agencies. E. D. Bostwick, also of the home office, is here in the interests of the dictating machines. Several good orders recently have been filled for these instruments, including the General Electric Co. local office, the Wabash railroad, the National Power & Light Co. J. K. Savage is manager of this department.

Robert Borland, recently of the Aeolian Co., is manager of the repair department, and Louis Horwitz has been engaged to travel in Missouri and Illinois in the interests of the jobbing trade.

HEALTHY CONDITIONS IN 'FRISCO'S RETAIL TRADE.

Business, Present and Prospective, in Excellent Shape—Central Phonograph Parlors Open in Oakland—W. S. Gray's Active Campaign—Agencies for New Edison Line Taken by Many New Concerns—Emporium Talking Machine Department's Activity.

(Special to The Talking Machine World.)

San Francisco, Cal., March 8, 1913.

January and February are usually rather quiet months in the sale of musical instruments, but this year business has kept up in good shape during both these months, with no great falling off after the rush of the holidays, and now with the regular spring activity near at hand prospects are very bright. The jobbers and distributors have been shipping out orders as rapidly as they could get the goods for delivery, which indicates a healthy condition in the retail trade.

Exclusive Columbia Shop in Oakland.

A new exclusive Columbia shop has been opened in Oakland by W. S. Styles under the name of the Central Phonograph Parlors. He is located at 388 Twelfth street, and has his place fitted up in first class shape. The quarters are commodious, having a large reception room and several sound-proof demonstration rooms. The walls are white enamel, with blue decorations artistically arranged, which produce a very pleasing effect. Mr. Styles is well known to the trade, having been manager of the Columbia Graphophone Co.'s Oakland retail store when it was in operation, and since its closing has been head of the talking machine department of the Madson Furniture Store in San Jose. Mr. Styles opened with a complete list of Columbia machines and records, and is very much encouraged by the interest that has been shown in his establishment the first few days it has been in existence. He feels that there is a good opening on that side of the bay, the only dealers in Oakland up to this time handling Columbia goods being Clancy & Le Clair at the Kohler & Chase store.

Finds Conditions Good Throughout State.

W. S. Gray, local manager for the Columbia Graphophone Co., is continuing his short visits to dealers in different sections of the State. He has made several trips the past month, and is now getting ready to go South. In all sections, he says, he has found that dealers are doing a nice business. When in Stockton recently he made arrangements with Treadway Bros. to take the agency for the Dictaphone in connection with their stationery and office supply business. Mr. Gray has been assured deliveries of the new Columbia Grand within the next few days, and in view of this fact several hundred announcements have

been sent out from the wholesale office in this city to prospective customers.

New Head for Davis Music Co. Department.

The talking machine department of the E. R. Davis Music Co., Stockton, Cal., is now under the management of Miss June Clark, who was with the California Music Co. prior to its removal to San Jose, and since that time has been with the Columbia Graphophone Co. here.

Lively Times with Edison Representatives.

The local Edison enthusiasts continue very active in the introduction of the disc machine. E. L. Sues, traveler for the Pacific Phonograph Co., is now calling on the trade in Nevada with very good results. J. E. McCracken is about ready to go on the road again after spending a few weeks at headquarters. A. V. Chandler, general representative of the Edison Co., is working the southern part of the State, being accompanied on some of his trips by O. A. Lovejoy, manager of the wholesale department of the Southern California Music Co., Los Angeles, Edison distributors for the Southwest.

New Agents for Edison Disc Line.

A. R. Pommer, manager of the Pacific Phonograph Co., says he has lined up several new dealers since the introduction of the Edison disc machine, who before did not handle talking machines at all. One of the largest of these is the John Breuner Co., of Sacramento, who has a large furniture house. Another is the Art Shop, 1600 Haight street, San Francisco. It is rumored that a large exclusive Edison talking machine store is to be opened in the retail district of this city, providing a suitable location can be obtained.

New Edison Machines Well Received.

The new Edison \$80 machine, which is being distributed to the jobbers, promises to fill a real demand on the Coast, also the new model school machine. Manager Baley, of Babson Bros., says the new Edison products have already stimulated trade to a great extent, the advantages of the diamond reproducing feature and the Blue Amberol records being a strong appeal.

The Santa Rosa Music Co., of Santa Rosa, Cal., conducted a special demonstration of Edison disc machines during the recent citrus fair held in Cloverdale.

Dealers from Interiors Placing Orders.

Among the country dealers in town recently placing orders for spring stocks were Robert Logan, of Logan's Music Co., Salinas; J. S. Riggs, from Santa Maria, and Ira Jones, manager of the talking machine department of the A. J. Pommer Co., Sacramento.

Burbank Gives Victrolas to Schools.

The Wiley B. Allen Co. received a pleasant surprise a few days ago, when Luther Burbank visited their talking machine department, listened to several selections on Victrolas, and left an order for five machines, to be supplemented by about \$500 worth of records. Later it was learned that the machines were gifts to the public schools of Santa Rosa.

Talker Man Prominent in New Association.

A. G. McCarthy, of Sherman, Clay & Co., is a member of the police and publicity committee of the newly organized Downtown Association, the nucleus of which was the former downtown committee of the San Francisco Chamber of Commerce. The association has for its object the development and improvement of the downtown district. Mr. McCarthy reports Victor business, both wholesale and retail, as showing decided gains over the month of February a year ago. The sale of Mischa Elman's records has been stimulated by his engagements here and in other cities along the Coast.

Eilers Music House in this city is offering to take talking machine outfits in part payment for pianos and players.

Attracting Bargain Hunters in Emporium.

Manager Morgan, of the Emporium talking machine department, has enjoyed a nice business the past month, especially the last days, when the formal spring opening was being held in the women's ready-to-wear departments. Among the people calling primarily to look at the fashions a good many responded to the invitation to visit the music department on the floor above.

H. S. Gutermute, who has a chain of stores in Sonoma County, has opened the New Music House in Sebastopol, and placed H. Freeman in charge.

HANDLE EDISON DISC PHONOGRAPH.

Thomas F. Morris Opens in Newton as Edison Distributer—Admirably Arranged Quarters.

(Special to The Talking Machine World.)

Newton, Mass., March 7, 1913.

Thos. F. Morris has opened an attractively arranged store at 297 Center (Nonantum square), this city, for the exclusive sale of the new Edison disc phonograph, for which he will act as a distributor. The fixtures throughout are in antique oak, and the majority of supplies in the store are furnished by the Globe-Wernicke Co. The furnishings of the private hearing rooms are of the Spanish leather craftsman style. The arrangement of the entire establishment reflects credit on Mr. Morris, who intends to go after business in a vigorous style.

MANY LETTERS OF COMMENDATION.

The National Publishing Co., of Philadelphia, Pa., is receiving many letters of commendation for its disc record albums. These albums are made in two sizes, to fit ten and twelve-inch records, and are admirably gotten up and finished. Among the commendatory letters recently received by the National Publishing Co. are those from the Wiley B. Allen Co., San Francisco, Cal.; the Aeolian Co., New York; the Oakland Phonograph Co., Oakland, Cal.; the R. S. Williams Co., Ltd., Toronto, Cal.; the Portland Phonograph Agency, Portland, Ore., and others.

If you don't feel enthusiastic, get up and rub against some fellow who does. Recharge your batteries and do the hard thing first; it will stimulate your nerve.

To gibe visitors, or to give fresh and flippant answers, even to stupid and impudent people, is a great mistake. Meet rudeness with unfailing politeness and see how much better you feel.

The name describes the needle and the needle fulfills its tone— The PURITONE Needle.

FURNISHED in Puritone or your own envelopes packed in different sizes. Quality guaranteed. Price popular.

Dealers can secure a sample package free. Send jobber's name with letter.

Remember, a quality needle will help you; it means a profit and a following.

THE following is a new selling idea for needles, packed exclusively by us:

Instead of selling 100 or 200 needles at once, sell a thousand. We pack 1,000 assorted needles in a box, each box containing 200 of Extra Loud, Loud Opera, Medium and Soft. This is the "Special" Dean Packing. You can sell 1,000 instead of 100 and thus get 10 times the business.

Want the Puritone Needle samples?

JOHN M. DEAN
PUTNAM, CONN.

FAMOUS RECORD ALBUMS

AT VERY LOW PRICES TO MEET COMPETITION

For Durability, Artistic Design and Finish, our Albums have no equal. They are made in the most substantial manner by skilled workmen.

Our Albums are first-class in every particular, and are sold at very low prices.

OUR SUPERB ALBUMS SHOWN OPEN AND CLOSED.

MADE IN TWO SIZES TO FIT ALL 10 AND 12-INCH DISC RECORDS.

These Albums contain 17 pockets made of strong fibre paper, each pocket having a hole in the center, as shown in the picture. These pockets are so made that they show very plainly both the single and double face titles on the Records. The Albums are bound in the finest quality of Brown Silk Finish Cloth, with gilt title on front cover. They are also bound in imitation leather. Write for sample and prices of our Albums, which are superior to all others.

Address NATIONAL PUBLISHING CO., 235 South American St., Philadelphia, Pa.

SOUTHERN CALIFORNIA NEWS.

Business Most Active—Sturgis-Bowring Change—Talking Machine Shop Closes Out—Movements of Talking Machine Men—G. J. Birkel in San Francisco—Other News.

(Special to The Talking Machine World.)

Los Angeles, Cal., March 5, 1913.

Business in the talking machine line has been very active during the past few weeks, and conditions show that there is nothing to hinder the continuing of this satisfactory condition, although a shortage on some types of Victor Victrolas still prevail. The Edison disc phonograph is still meeting with favor among many dealers, and large orders for this line are received daily by the jobbers.

Owing to the ill health of Jas. H. Sturgis, of the Sturgis-Bowring Music Co., 714 South Grand avenue, Geo. H. Bowring has purchased the interest of Mr. Sturgis and the firm is now the Bowring Music Co. A great success has been achieved recently in the talking machine department. Mr. Bowring states that the prospects for the Victor and Columbia lines look very gratifying.

Geo. J. Birkel, of the Geo. J. Birkel Co., of this city, is spending several days in San Francisco, where he and Mrs. Birkel are visiting relatives.

N. W. Schireson, of Schireson Bros., is the proud father of a baby girl. Now Mr. Schireson possibly has occasionally another kind of music furnished rather than a phonograph.

H. B. Henmann, manager of the talking machine department of the J. B. Brown Music Co., reports a wonderful increase in business as compared with 1912.

The Talking Machine Shop on West Fourth street has sold the entire stock of goods to the Southern California Music Co. Frank Moreno, proprietor, has rejoined the sales force of the talking machine department of the Southern California Music Co.

The T. J. Johnston Music Co., 415 South Main street, has enlarged its Victor stock.

Scott T. Allured, manager of the branch store of the Wiley B. Allen Co., of San Diego, Cal., was in Los Angeles a few days, and reported business in the talking machine field was on an upward bound. The special concerts given each month on the Victrola are causing much interest in that city. Mr. Allured makes this feature a dress affair, and engraved invitations are sent out.

Ralph H. Paulin, general manager of Brown's Music House, Santa Barbara, Cal., was a recent visitor to Los Angeles. The new branch store at Ventura, Cal., as well as the home store are enjoying an excellent trade.

NOW THE "TALKING" SIGN.

Latest Contribution to the Many Means of Attracting Public Attention—New Machine May Aid the Future Orator Lacking Lung Power or the Silver Tongue.

However one may feel regarding what Mrs. Gamp (if her lot had been cast in this electric age) would have called the "anæsthetics of the electric sign," there can be no question as to its practical effectiveness and mechanical ingenuity. It has been made to mimic pretty much everything in nature, from running horses to waterfalls and scurrying mice. It has, in fact, brought about a new era in street advertising, and its possibilities are far from exhausted. A new application, called the "talking" sign, has recently been devised. From the Electrical World the following details are taken:

The sign is operated by a perforated paper ribbon similar to the ones used by mechanical piano players. This ribbon is prepared by a keyboard perforating machine, working apparently on the same general principle as a typewriter. The work is rapid, and the ribbon is ready for use as soon as "run off," which admirably adapts the machine for night news bulletins. A fixed succession of sentences of any length can be displayed. It is called a talking sign, because, as ordinarily adjusted, the letters of light "form at the right, cross

the vision, and disappear to the left, enabling words and sentences of any length to be displayed."

It ought to be a relatively simple matter to apply this principle to a combination of bulletin board and typewriter, so that an operator at a machine indoors could announce the news as it came in over the wire, every letter and word flashing out on the bulletin board outside, as the corresponding keys were depressed. By some such direct electrical connection between a machine or a pen, and a large display board, the seventh rate orator with a puny voice, could talk to his thousands as easily as he of thunderous thorax. Silver-tongued orators would be at a discount, because everyone could be electric-tongued and write their messages in golden yellow letters for ten or twenty thousand at a time. Indeed, it calls for no very violent flight of imagination to picture a phonographic receiver connected with the luminous bulletin board, thus eliminating the pen or typewriter, the words being translated directly into light.

Such an invention would find many uses. For one thing, it might somewhat abate what that ancient victim of an overfed liver, Monsieur Guyot, called the "eternal bawling in church." Many an inherently good sermon thus freed from the oral hesitations, inaccuracies, and general vocal impediments of the author, would do its work—impress its lesson—more deeply and surely. And furthermore, it would unerringly expose those hibernating deacons who close their eyes during the sermon that "nothing may interfere with close attention to the minister's words"—or for some other generically similar reason. The illuminated sermon would leave the deacons no choice but to keep their eyes open.

The engagement is announced of Miss Gertrude G. Lyle, daughter of George W. Lyle, general manager of the Columbia Graphophone Co., to Richard H. Arnault, of Scarsdale, Westchester county, N. Y. The announcement was made at a Valentine party given to Theta Phi Sorority at the home of Miss Lyle in Hackensack, N. J.

DISC RECORD ALBUMS

ARE WHAT EVERY

Talking Machine Owner

NEEDS AND MUST HAVE

With the index they make a complete system for filing away all disc Records, and can be added to, Album by Album, as Records accumulate, like books in a library.

No recent announcement has a greater significance than this:

Felix Weingartner, famous musician and composer, guest conductor of the Boston Opera Company, and at different times conductor of most of the famous opera houses of Europe, has just conducted two famous orchestra selections for the Columbia.

CLEVELAND TRADE IN FLOURISHING CONDITION.

Activity in All Departments of Factory of United States Phonograph Co.—McNulty Exhibits Model of New Talking Machine—Activity with Columbia Co.—New Edison Kinetophone Interests—Increased Victrola Demand—News of Month Worth Noting.

(Special to The Talking Machine World.)

Cleveland, O., March 10, 1913.

There is great activity in all lines of trade and industry in Cleveland. Large appropriations by the city, the railroads and the steel interests are being made, amounting to millions of dollars. These large expenditures are permeating all classes of industry, and is quite as perceptibly manifest in the talking machine trade as in any other. The dealers are all busy, and would be still busier if they could obtain all the goods they could sell. The business is certainly in a most flourishing, healthy condition.

Local demonstrations of the new Edison kinetophone are daily attractions at the Hippodrome. This added feature of the vaudeville bill is proving the premier feature at that resort. It would seem that it is destined to revolutionize the moving-picture business.

The talking machine dealers generally are installing the Simplex automatic start and stop device on many of their demonstration machines. They recommend the device unreservedly, and it is meeting with the approval of the public.

G. R. Harris, formerly of Boston, the new Dictaphone manager, has taken hold of the business and is pushing it with vim and vigor. He is pleased with the outlook.

F. K. Dolbeer, general manager of sales of Thomas A. Edison, Inc., and G. H. Bolan, demonstrator of the company, were visitors here during the last week in February. They were daily visitors at the Woman's Exposition and were active co-workers with Laurence A. Lucker in demonstrating the Edison phonographs.

George D. Ornstein, of the Victor Co., Camden; Perry B. Whitsit, of the Whitsit Co., Columbus; J. C. Roush, of the Standard Talking Machine Co., Pittsburgh, and J. C. Flynn, of the Ohio Music Co., New Castle, Pa., were visitors with the talking machine trade during the past week.

At the annual banquet of the Technology Club of Northern Ohio—in commemoration of their loyalty to the old Massachusetts Institute of Technology—at the Hotel Statler on the evening of March 1, in the unavoidable absence of the president of the institute, he sent a record of welcome and congratulations, which was reproduced on a talking machine. The applause of the attendants attested their appreciation of his utterances and the manner of their delivery.

In his office at 352, the Arcade, H. B. McNulty is exhibiting a model talking machine of his invention. It is a combination disc machine, which plays all makes of disc records. The writer heard a number of records played, including the Columbia, Victor and Edison, one after the other in quick succession, the manipulation of the machine being very simple and effective. The model is of cabinet construction and operated by a spring motor.

R. M. Wertheimer has taken the agency for the United States, and is exploiting the German post-card phonograph record.

Activity in all departments prevails at the factory of the United States Phonograph Co. G. M. Nisbett, sales manager, stated that business was continuing remarkably good, and that sales were better than they had been, showing a continuous increase from month to month. The factory is, in steady, continuous operation, with a full complement of operatives.

A call at the office of the American Multinola Co. elicited the information that the machine had now been perfected in every detail and would soon be placed on the market.

Conditions at the Columbia store are entirely satisfactory. A large force is kept busy receiving and shipping goods. All the various types of machines are displayed in the large reception room, and the several demonstration booths are in constant use, while sales are daily increasing in both the retail and wholesale departments. Representatives of the Witt Music Co., Lorain; the Norwalk Piano Co., Norwalk, and Henry Martin, of Sandusky, O., were visitors at the store, and ordered the new Columbia grand to be included in a substantial list of other types and records.

H. D. Berner, Columbia dealer in the Taylor arcade, is having an excellent trade.

Very prosperous conditions exist at the store of the W. F. Frederick Piano Co. Norman H. Cook, manager of the talking machine department, said: "Business continues very satisfactory except for a shortage of the popular types of Victrolas, especially Nos. XI and XIV, which seem to daily become more popular. We find, however, that our increasing record business is, to a great extent, taking care of our lost trade. We are opening a new and complete Victrola department in Youngstown, from which we expect as great things as we are getting from our Canton store. The business coming from the Canton branch is far in excess of our expectations when opened nine months ago."

W. H. Buescher & Sons Co. report business fine, covering the entire line of Victor machines and records. The demand was said to be for the highest-priced instruments, which is constantly increasing, as well also for the higher type of records. Miss M. A. Brown, well and favorably known in talking machine circles, formerly with the Columbia Co., has accepted a position in the sales department of the Buescher Co.

The B. Dreher's Sons Co. report business in the talking machine line is keeping up well. The company is giving considerable attention to this department and is attracting a desirable class of customers.

At the Edison distributing store of Laurence A. Lucker business is reported extremely good by E. O. Peterson, manager. He said it was only a question of obtaining a sufficient supply of records, and

that sales of the new disc phonographs, the Amberola III, and the Blue Amberol records were constantly increasing. A number of sales of the disc machines were made at the exposition. Mr. Lucker said he was highly pleased with conditions at the local store.

The Eclipse Musical Co. is doing a very extensive business, especially in the wholesale department. P. J. Towell said that if all the goods could be obtained to meet the requirements of the demand the volume of business at the present time would be equal to that during the busy holiday season in both departments.

Since the company has been able to partially replenish the stock of machines and records, the Collier & Sayle Co. report trade quite active for Victors and Victrolas in both the retail and wholesale departments.

CONDON SPECIALTIES POPULAR.

New Talking Machine Accessories Introduced by the Condon Autostop Co. Meet with Excellent Demand—Special Price Rebate on Condon Autostop.

The Condon Autostop Co., 109 Broad street, New York, which recently introduced a number of new improvements in the nature of talking machine accessories, is more than pleased with the cordial reception accorded these products. These new accessories consist of "Noset," the Autostart stop, an improved fiber needle cutter, and "Dolce-tone," an article to be placed inside the sound box in order to produce a sweeter and more mellow tone. The "Noset" in particular has created a most pleasing demand, and the company is taxed to full capacity to fill the orders being received each day.

In a recent chat with The World, an official of the company remarked as follows on the condition of the company's business and its future policy: "The entire talking machine trade, dealer and jobber has been rebated on account of the reduction in price of the Condon Autostop. This article formerly retailed at \$3 in nickel plate and \$4 in gold plate, and the prices have been reduced to \$1.50 and \$2, respectively. An inventory was requested from each member of the trade throughout the country and a rebate allowed when the stock was reported to us. This rebate may be taken up by the dealer or jobber for any article we manufacture, including 'Noset,' the Autostart stop. Co-operation with dealers and jobbers has always been a pride with us and we have tried to facilitate the merchandising of our products with our many accounts by making it possible for the trade to enjoy a continual profit on the Condon Autostop whether they purchase their goods at the new or the old prices.

"There has been a surprisingly large trade with our 'Noset,' and although we had anticipated a good demand for this article, the call for the device has really exceeded our highest expectations. We are rapidly arranging the many details incidental to the allowance of our rebate, and judging from the expression of approval from our many clients, we will undoubtedly close a banner year with all our products."

STOCKS MELTING IN CINCINNATI.

February Business Heavy Enough to Clean Out
Surplus Goods Accumulated During January
Columbia Advertising Develops Big Business.

(Special to The Talking Machine World.)

Cincinnati, O., March 8, 1913.

Manager Dittrich, of the Rudolph Wurlitzer Co.'s talking machine department, appears to sum up the entire situation in the talking machine trade in this section when he said the sales were as heavy as the factory shipments would permit. He further stated: "February was all that could be expected in the way of machine sales. The month, however, exceeded its past reputation as a banner period for the sales of records. These were simply tremendous, and an immense stock, accumulated in January, melted away in a short time. Heavy reorders and prompt shipments on the part of the factory enabled us to meet the requirements of our customers almost in full. The machine situation remains about the same, however, in spite of increased shipments. Each increase in output is apparently counteracted by an increase in demand.

"From present indications, the usual spring slackening in business will not occur this year. There is every reason to believe that business will continue unabated through the summer. There is more business in sight now than there was before the holidays, and machines are now more plentiful. The dealers should not overlook this seemingly rare opportunity of doing business at a time when the talking machine line is ordinarily hard to move.

"The splendid March list of Victor records had an immense sale, and additional interest was stimulated by the list of turkey trots and the Masonic records, which aroused wide attention."

Joseph Krolage is not quite prepared to separate his talking machine business from the sheet music department. He has entertained this plan for several months, but is unable to get the accommodations which he wants. He has a plan for this in-

novation which he will carry out or continue as he is now doing.

Manager Whelen, of the Columbia Graphophone Co., says they have experienced the best February business in years, every department running far ahead of any previous February in the history of the Cincinnati store.

In talking over the situation, he stated: "The shortage of goods to supply this demand reminded us of the holiday trade. There is no way to account for this continuance of good business except that the talking machine business has to grow whether it wants to or not. The double page ad in the Saturday Evening Post about the middle of February of the \$20 'Eclipse' and the \$50 Grafonola 'Favorite' caused a real sensation in both the wholesale and retail departments, and the hardest proposition that we had to fight was to get the instruments to fill the bona-fide orders."

The new "Columbia Grand" is now on exhibition at the local Columbia store and is attracting considerable attention. "This instrument is the peer of them all, and the Columbia Co.'s factories are busy filling orders that are coming in from all parts of the country," says Mr. Whelen.

George W. Lyle, of New York, the vice-president and general manager of the Columbia Co., spent a day in Cincinnati the latter part of February.

The Dictaphone continues to keep the local salesmen on the jump, and many notable installations have been made during the past month. Business men are beginning to realize the advantages of the Dictaphone, and there has been a steady increase in sales all over the Cincinnati territory.

The Aeolian Co. says: "The Victor business is well up to our expectations for February. A remarkable number of Victrola XI's have been sold. This seems to be the most popular style at present, and we would like to have many more in stock. March should be a good month, as a splendid list of records is offered. These lists have been sent to all our customers, and we are looking forward to results."

WHY PEOPLE ADVERTISE.

Some of the Many Objects of Publicity as Carried on by Manufacturers and Merchants.

Advertising is done, among other reasons: To establish trademarks, good will, etc. To create acquaintance and confidence. To identify products and makes. To prevent substitution. To dominate the field. To insure against domination by others. To create an automatic demand. To increase sales, either by direct influence, or assist dealers, or both. To keep up sales that may be declining, due to depression, indifference or inroads of competition. To control and direct the demand to dealers, as against leaving them free to push favored goods. To own your own business and good will and control distribution. To tell your own story as you want it told. To discount or annihilate time in establishing a new or wider market.—Printer's Ink.

PILGRIM FATHERS REVISED.

That the moving pictures are a strong factor in the study of history is the opinion of a teacher in a primary grade, who relates this incident to prove it. She says that having read the story of the Pilgrims to her class, she asked the children to write it in their own words. The results amazed and astonished her, for in almost every case the Pilgrims—those grave, austere men whose very name makes us sit straighter even now—were described as cowboys, gay, dashing cowboys, making the welkin ring with their wild shouts and yells. Thinking it best to get an explanation of these highly imaginative productions, the teacher questioned one of the boys whose paper had been especially full of phrases of the "wild and woolly" West. The child looked at her in astonishment. "Why, don't you know, Miss ———, down at the movies the Indians are always being chased by the cowboys. Nobody else ever fights with them, so we all thought Pilgrims were just some particular kind of cowboys."

HOW TO MAKE THE TALKING MACHINE BUSINESS PAY.

An Impromptu Lesson in This Respect Which Has a General Application Given by Max Strasburg to a Visitor from Another City—Formal Opening of Strasburg's New Store a Tremendous Success—Recent Visitors to City Include Salesmen and Travelers.

(Special to The Talking Machine World.)

Detroit, Mich., March 8, 1913.

An impromptu lesson on how to make the talking machine business pay, and pay big, was given by Max Strasburg to a visitor from another port this week. The man has a big piano store in a city of a hundred thousand population—large enough to make almost any business pay if properly conducted. He dropped into the Strasburg store, wide-eyed at what he saw—long rows of demonstrating rooms in both stores, a great case of records, luxurious carpets, mahogany chairs, elegant decorations. "How on earth do you make it pay?" he almost gasped. "We can't, in our town."

Mr. Strasburg asked him why. "How many machines have you got?" he queried.

"We have a four and a six, and I guess an eleven; oh, five or six good ones."

"We have seventy-five or eighty here, and we wish we had fifty more, but we can't get them. How many records do you carry?"

"Oh, five or six hundred."

"There's about fifteen or sixteen thousand in that rack. Right there is the reason you don't make it pay. Suppose some one came in your store and asked for a Victrola XVI. You'd have to say you haven't it in stock, but will get one, wouldn't you? Well, do you think that will bring you trade? Same way with records. If you have them, you'll sell them, but people won't wait for them. They will go elsewhere. It's the firm that carries the stock that does business, in the talking machine business, at least."

And it is to that fact that Mr. Strasburg ascribes his big success. He carries everything. He has another pointer for talking machine dealers, also—the result of the formal "opening" he staged February 19, 20, 21. As told in The Talking Machine World last month, it was an invitation affair, ten thousand bids being sent out. The store was crowded during all three days, with nearly all visitors astonished at what they saw. They told their friends, who came to look also. The store was most pleasingly decorated for the occasion with flowers and palms. Their fragrance and the beauty of the music impelled people to look, listen and buy. Holders of invitations kept dropping in for two or three weeks, and business has been so great ever since that it has been hard

This shows a multiple of one of our Systems. For 10" or 12" records. Each tier holds about 250 records. Costs about \$2.00 a tier.

BUILT OF HEAVY STRONG WIRE, PLATED AND LACQUERED.

WRITE for 20-page catalog giving details and information on the best way of keeping your records.

The Syracuse Wire Works

SYRACUSE, NEW YORK

work to care for it. Saturday, March 1, was the greatest day in the history of the company, exceeding even the best of the Christmas shopping days. Every one of the demonstration rooms was occupied from morning until ten o'clock at night. "It pays to advertise," was Mr. Strasburg's comment.

The improvement in quality of records is helping to increase the talking machine business. The public is being educated to better music. The more they hear of it, the better they like it, and the less they want of ragtime and popular airs. Theatrical attractions also help the trade. If a good opera comes along there is a marked demand for the records made by the stars of the company for several weeks afterward.

There is another side to that matter. The records of the talking machine companies teach the public who the opera stars and the concert stars are, and when they appear here they draw much larger audiences than was the case a few years ago, before the talking machines became so universally used.

There was a discordant note encountered in one or two of the stores. It is said that certain dealers are giving ten or twelve dollars' worth of records free with a good machine. This is only a form of price cutting, and is frowned upon by the dealers who are living up to their contracts.

It also is said, on good authority, that the same dealers who are doing this are offering commissions to parties not in their employ, especially to piano salesmen. The offers run as high as 15 per cent. Just why these things are, is hard to guess. They are the first evidence in years that the talking machine business here is in anything but the very best of condition. The big houses still have more business than they can get machines for, without making any concessions in the way of free records or paying commissions. No one would name the guilty parties, on the plea that it would be unethical.

Quite a number of talking machine salesmen flitted through the city last week. Among them was W. S. Brannigan, of Indianapolis, who has just been made manager of the Stewart Talking Machine Co. He was on his way to Camden, N. J., to try to squeeze some much-needed stock out of the Victor Co. J. Frank Cadell, of the inspection department of the Victor Talking Machine Co., and Traveling Representatives Price, of the Indiana territory, and Enchengreen, of the Michigan territory, also called on the Victor folks here.

FISHING FOR BUSINESS.

Perseverance and Attention to the Bait Offered Through Medium of Advertising the Secret of Success.

You never heard of a really habitable stream or lake being fished dry, did you? You've heard lots of fellows say that this or that stream, wasn't any good—couldn't get a fish there—and then seen some other fellow come along a little later, drop his line into the same old place and pull out a fish, two, three and even more.

Queer, how those fish do act, isn't it? And how like those fish—and fishing streams and the fishers—are the retail stores and the various localities in which they are located!

You've fished and fished. You've advertised and advertised at what you think proper seasons. You've wondered and wondered why they didn't bite. You've seen some fellow down the street apparently playing the same game, but did you fail to notice that he never stopped fishing? That he advertised all the year round—that he changed his windows at least once a week—that his salesmen knew how to land 'em when his ads and windows brought them in?

He is a real, true sportsman. He's sticking right onto the job until they do bite. He's dangling bait all the time.

We practice what we preach

No one realizes the value of promptness better than we do. We know what it has done, is doing, for our business. You know as well as we do that being prompt with the goods goes a long way toward tying your customers up to you.

Promptness on the part of your jobber means promptness on your part for your customers—and we are in a position where we can preach "promptness", because we practice what we preach:

All goods shipped the same day the orders are received.

Our immense stock of Victors, Victrolas, Victor Records, record cabinets, horns, fibre cases, needles, repair parts and other accessories, is a good start for our promptness, and our quick service does the rest.

Don't you want to "get in" on this "shipped-the-same-day" service? Write to-day for our catalog and our booklet, "The Cabinet That Matches".

RECORDING ARTISTS IN MOSCOW AND ST. PETERSBURG.

An Impression of Moscow and Its People—The Artists Including Cossacks and Sarts—Life of the Artists in St. Petersburg—Other Interesting Data.

By T. J. THEOBALD NOBLE, a Prominent European Talking Machine Recorder.

(Continued from February World.)

My first artist in St. Petersburg was the best Russian tenor, Sobinoff. He possesses a magnificent voice and sang six numbers in splendid style, all being criticized and passed by him before being packed for manufacture.

At this stage a curious predicament arose, for I was informed that all the artists of note were under agreement with a company termed the Artistic, which was actually a company of artists who recorded without a fee but received a royalty on their sales. Unfortunately for the irresponsible man and woman of the company the whole concern was being managed by a man with a perfidious reputation—strong but unpopular. This man had been earning his living by copying Gramophone-Victor records and selling them at prices much under the Victor. The Gramophone Co. eventually bought him up on the condition that he undertook not to repeat the offense. He did not, but he utilized the money he received—anything over \$3,000—for starting his father in the same business, from which, too, he conceived the possibility of his own company of artists.

We were informed of a certain dissatisfaction among the artists because they had not received any royalties, and we decided to approach the men with a view of persuading them to loan us artists for a monetary consideration. Knowing the man's reputation, we had to act dexterously with the money in our pockets, for in such cases as this money talks. It did in this compromise, for after ten minutes' conversation he agreed—or I should say we agreed—to his proposal. He was to loan us the famous artists we desired, he receiving for each artist the sum of 100 roubles (\$50), and further he was to fix the price or fees for the artists. In this manner he received from us the sum of \$600, while from the artists he received 20 per cent., and must have benefited to the extent of \$1,500. From one artist whom we were pleased to pay \$250 per song for ten songs his commission was \$500. However, through his assistance we were able to record such well-known artists as Kousnetzova, Bragin, Gvosdetzkaye and Labinski, proving conclusively in this case that it was advantageous to hold the candle to the devil.

These famous Russian artists were exceedingly interested in the recording and I experienced no difficulty whatever. Through the poor packing of my recording wax I had some trouble with blinds, which was particularly annoying, having to record such important and expensive artists, and I was anticipating some trouble with the artists over this. I, however, was agreeably surprised, for not in a single instance did they object to sing again through bad wax. In fact, after the cause of the necessity of repeating a record was explained, I was asked after each record, "Does it look all right?"

The orchestra was above criticism, with the exception that they possessed the same trait as their Moscow confreres—lethargy. The conductor, however, was a man of keen perception, and there was no nonchalance while he was conducting. Davidoff was the most interesting artist of all—he sang the Russian gypsy songs with the accompaniment of the guitar; these songs are magnificent; the idiom is purely native and compares only with the Neapolitan songs, of which he has a thorough knowledge and of which I made four records. The beautiful Kousnetzova is already too well known in America for me to speak of her splendid voice and charming personality.

All these Russian artists spoke four languages, and in two cases spoke five, the fifth being English. I found them all decidedly more straightforward and truthful than any other European or American artists; for example, after listening attentively to a record being reproduced, a Russian will invariably acknowledge a mistake by voluntarily confessing it immediately the record has finished. Supposing he sings a trifle flat, he will, without comment or excuse, acknowledge his fault, apologize, and actually feel concerned over spoiling the wax. In other countries if a recorder explains apologetically that the artist is a trifle flat, he or she will immediately exclaim, "Oh! me; that is not possible—I never sing flat." On the second reproduction they will observe it in some cases, but will always say, "It certainly cannot be me; it must be the machine!"

I was sorry to learn that I should not be recording any choirs; the best of them had already been recorded in Moscow. There was, however, a choir of Asenish people from one of the Baltic provinces, a people resembling both the German and Russian type. They were Russian subjects, but their singing was certainly not in the least Russian, for a worse recording choir I have never met and hope never shall.

The military bands, of which I made three records, were all very good, especially the Imperial Guard Band. Here I experienced no trouble, and one of their principal boasts was the fact that they were never out of tune. The tenor Bragin is worthy of special note, for he sings with a tremendous power and at the same time retains a natural sweetness of quality. He is paying a visit to America in 1914 and should prove a big success.

During my stay in St. Petersburg (Petersbourg, the Russians call it) I had recorded twelve artists and three military bands. The cost had been, including my own expenses, interpreter, freight, \$11,500; or, having recorded 102 titles, a little over \$112 per record.

I left Russia with a feeling of regret, for here I had chanced upon a land of music and lovers of music. The artists were the best en masse that

has ever been placed together on a respective country's catalog.

From a talking machine recorder's point of view the chance the Russian market still offers for the trade is tremendous. Here is a population of nearly two hundred millions, the majority in the first stages of emancipation. In a few years Russia will be wide awake with reforms; at present she is merely stretching herself preparatory for the final awakening, when her masses will be clamoring for everything that is interesting and musical!

From Russia I left for India, where I encountered some curious experiences, and of which I shall write in my next article.

STORAGE BATTERY CAR SUCCESS.

Edison Invention Meets Every Test for Light Traffic in New York-Boston Run.

Officials of the New York Central Railroad have declared that the new storage battery car of Thomas A. Edison, tried out recently in a run from New York to Boston, had met every test and was a success. The trip of the car was the longest ever made under power from storage batteries and the car also established a record for speed, having attained forty miles an hour.

L. F. Vosburgh, general passenger agent of the New York Central, one of the officials who made the test trip, said to an Evening World reporter there seemed no doubt that the storage battery car was an economical and efficient means of travel.

"The car," he said, "will not serve in heavy traffic and will not be used in express service."

ISSUE SPECIAL DANCE NUMBERS.

Recognizing the country-wide demand for Turkey trots and Tango dances, the Victor Talking Machine Co. has just sent its dealers a list of six new dance numbers which will most assuredly prove profitable sales producers to the dealers. In addition to these six new dance numbers, the Victor Co. also publishes two more popular songs which are all included on their Second Turkey Trot Special order sheet. Accompanying the special list the advertising department of the company encloses a letter to the dealers calling attention to the demand for these new dance records, and suggesting that they take advantage of the current desire for this type of dance to reap a profitable harvest in record sales by means of active solicitation of their clients' needs and wishes.

POINTS TO REMEMBER.

When you reprimand a man (if you have to) do it in private; but when you commend him commend him in public.

Measure your work with a speedometer, not a clock. I don't care how long you took; I want to know how far you went.

FOUND VALUABLE IN SOCIAL AND ATHLETIC AFFAIRS.

Campaign to Place Columbia Talking Machines in Branches of Y. M. C. A. Throughout Country Proving Successful—Letters Which Demonstrate Efficiency of Talking Machine as Well as the Diversity of Purposes for Which It Can Be Utilized.

The Columbia Graphophone Co. is achieving considerable success in its campaign to place talking machines in the various Y. M. C. A.'s throughout the country. The many Columbia distributors have been paying particular attention to the development of this field, and in turn the dealers throughout the various territories are lending their hearty efforts to promote the sale of talking machines in their local Y. M. C. A.'s.

Although this campaign commenced but a short

branch, sent a hearty letter to the Columbia Graphophone Co. telling it of the pleasures derived from the use of the Graphophone. In part Mr. Workman said: "We are now using your machine in several different ways—during a recent informal entertainment; at our Sunday afternoon men's meetings, where we use sacred records, and at our shop meetings, where we use records of various types. * * * * At our meeting with the I. E. Palmer Co. yesterday the machine was

Used at Informal Entertainment in Y. M. C. A., New York City.

while since, the Columbia Co. has already received a number of unsolicited letters from Y. M. C. A.'s in different localities testifying to the merits of the Columbia Graphophone in its performances in many capacities. One of the illustrations shown

used, and where we formerly had 20 to 25 present we had about 75 in attendance to hear the address in connection with the machine."

The other illustration was taken at the 23d street Y. M. C. A., New York, where the Grapho-

Used with Success at Gymnastic Drills at Middletown Y. M. C. A.

herewith portrays the Columbia Graphophone Co. in use during gymnastic drills at the Middletown (Conn.) Y. M. C. A. In connection with the use of the graphophone in this particular instance, C. H. Workman, general secretary of the Middletown

phone is giving excellent results. In connection with the use of the machine at this branch, the Columbia Co. recently received an unusually interesting and most gratifying letter from Geo. J. Fisher, M. D., physical director of the interna-

tional committee, the governing body of the Y. M. C. A.'s throughout the country. Mr. Fisher's letter speaks in the highest terms of the efficiency and diversity of the talking machine when in use

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York for the Past Four Weeks.

(Special to The Talking Machine World.)
Washington, D. C., March 7, 1913.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

February 11.

Antwerp, 4 pkgs., \$151; Buenos Aires, 111 pkgs., \$44,807; Colon, 12 pkgs., \$613; Guayaquil, 4 pkgs., \$221; 15 pkgs., \$430; Havana, 42 pkgs., \$2,076; 28 pkgs., \$428; La Guaira, 6 pkgs., \$531; Liverpool, 7 pkgs., \$1,020; London, 16 pkgs., \$569; 170 pkgs., \$3,577; Montevideo, 2 pkgs., \$308; Port Antonio, 7 pkgs., \$259; Port Limon, 8 pkgs., \$214; Port of Spain, 1 pkg., \$133; Rio de Janeiro, 12 pkgs., \$1,944; Sydney, 37 pkgs., \$1,030; Valparaiso, 22 pkgs., \$916; 4 pkgs., \$108; Vera Cruz, 147 pkgs., \$6,159.

February 18.

Alexandria, 1 pkg., \$200; Cape Town, 9 pkgs., \$943; Colon, 5 pkgs., \$204; Guayaquil, 5 pkgs., \$184; Liverpool, 19 pkgs., \$1,213; London, 12 pkgs., \$1,450; 65 pkgs., \$3,343; Riga, 4 pkgs., \$733; Valparaiso, 33 pkgs., \$1,019.

February 25.

Berlin, 18 pkgs., \$452; Buenos Aires, 498 pkgs., \$34,233; Callao, 3 pkgs., \$136; Cape Town, 125 pkgs., \$2,150; Caracas, 26 pkgs., \$325; Colon, 2 pkgs., \$243; Guayaquil, 3 pkgs., \$183; Havana, 32 pkgs., \$1,183; Iquitos, 6 pkgs., \$953; Limon, 17 pkgs., \$350; London, 112 pkgs., \$4,103; Montevideo, 3 pkgs., \$187; Singapore, 34 pkgs., \$1,108.

March 4.

Buenos Aires, 7 pkgs., \$394; Callao, 4 pkgs., \$180; 2 pkgs., \$225; Cape Town, 5 pkgs., \$303; Chubut, 3 pkgs., \$157; Colon, 11 pkgs., \$286; 14 pkgs., \$381; Havre, 10 pkgs., \$139; Limon, 15 pkgs., \$114; London, 24 pkgs., \$952; Paea, 10 pkgs., \$501; Santiago, 4 pkgs., \$186; Trinidad, 4 pkgs., \$126; Valparaiso, 6 pkgs., \$438; Vera Cruz, 29 pkgs., \$290; Yokohama, 6 pkgs., \$374.

INVENTS NEW SOUND BOX.

Paul de Beaux, a well-known engineer, formerly of Leipzig and now residing in Wehlin-on-de-Elbe, makes an announcement regarding the perfection of the talking machine sound box, on which he has been working for some years. The system which he is improving consists of a special complicated connection between the diaphragm and stylus, by which all extraneous noises are to be eliminated, and the vibration of the diaphragm and stylus themselves muffled. His latest model, says a German paper, is a wooden box, and the diameter of the diaphragm is seventy-seven mm. The material of the diaphragm is just as uncommon as all other parts, namely, papier-mache, with a narrow steel band which passes over the middle of the diaphragm, and is glued on to it. The effect is excellent. It seems specially suited to certain kinds of records.

VICTOR PUBLICITY FOR MARCH.

The advertising department of the Victor Talking Machine Co. has just sent out to Victor dealers the usual set of proofs of advertisements to appear in the daily newspapers during the month of March. The headings of these advertisements are similar to those previously used, entitled "You don't have to wait until you feel you can afford a \$100 or \$200 Victrola—you can buy a Victrola for \$15, \$25, etc.," and "If you only knew what pleasure the Victor-Victrola brings into your home, you wouldn't be without it for a single day." Accompanying these proofs was the customary forceful letter to Victor dealers calling their attention to the value of strong publicity.

Fulfilling a promise is like filling a pail of water; you've got to be generous to come out even.

TALKER DEPARTMENT IN FAMOUS EMPORIUM STORE.

Talking Machine Department of the Largest Department Store on the Pacific Coast Is Featuring the Columbia Line in a Very Imposing and Artistic Way and Scoring a Large Measure of Success—J. J. Morgan as Manager Is Making Good.

(Special to The Talking Machine World.)

San Francisco, Cal., March 6, 1913.

Louis J. Gerson. Manager Morgan is a hustler in terior views of the "Emporium" department store in this city may give our friends in the East some idea of progressiveness on the Coast, and the beauty of our business establishments. The "Emporium," which is the largest department store on the Coast, is an aggressive and active business concern that is always on the look-out for any new methods of merchandising or any improved equipment that will tend to increase its efficiency. The growth of this store has been something fine, and all the residents of this city are proud of it. It was started many years ago in one of the best

Corner of Columbia Department.

locations of the city under the name of the "Emporium and Golden Rule Bazaar."

Manager J. J. Morgan.

The latter part of the name was dropped, however, about ten or twelve years ago, and since then it has been known as the "Emporium." Like all other business houses, it suffered considerably in the fire of 1906, the building being entirely demolished with the exception of the front wall. Since the re-establishment of the store downtown it has made a wonderful record, adding depart-

MARVELS OF KINOTOPHONE.

Edison's Latest Triumph in the Talking Picture Field Introduced in New York and in Various Theaters Throughout the Country, with the Greatest Success—Attracts Large Crowds Everywhere Who Are Greatly Interested.

During the past month in New York and other cities throughout the country Edison's latest invention, the Kinetophone, was introduced with the greatest possible success. That Edison's name and his inventions are of potential interest was apparent from the unusual crowds that attended every theater where the new talking pictures were produced. The perfect synchronization of the talking machine and moving picture as displayed in Edison's latest invention amazed those present. The apparently impossible was achieved, the audi-

San Francisco's Famous "Emporium."

ment after department, and is now constructing an addition to its present quarters.

The Columbia talker department, which it opened the latter part of 1912, is achieving a remarkable success under the able management of J. J. Morgan, who was formerly connected with the New York store of John Wanamaker under Louis J. Gerson. Manager Morgan is a hustler in every sense of the word, and his untiring efforts have certainly reaped results. The Columbia department is rapidly growing, and some idea of its activity may be gleaned from the fact that January business exceeded that of December, which was a banner month. The store takes advantage of every opportunity to strengthen its Columbia department by well-advised and opportune publicity, and as a result Columbia record sales are steadily increasing and keeping pace with the remarkable gains in machine sales.

tors hearing and also seeing a musical performance, a minstrel show and getting an explanation from an Edison lecturer of this latest marvel by the wizard, who first gave to the world the phonograph and the moving picture and now has combined the two into the speaking picture show.

The scene was set to represent a modern drawing room. Enter a man in evening dress, who explained the new invention, illustrating some of its possibilities by picking up a whistle and blowing it, the whistle sounding clear and sharp; then throwing down a plate, the audience hearing the crash at the moment the shattered crockery touched the floor. Next was introduced a man who played the piano. Down the stairway came a graceful young girl, who, after the usual professional bow, lifted her violin to her shoulder and played a familiar air. Another young girl, clad in white, stepped forward and sang "The Last Rose of Summer," to the accompaniment of piano and violin.

Two great dogs, prancing and barking, followed their master into the room, dashing out at his heels in response to a cherry whistle and his kindly call. The performance ended with a complete minstrel show, presented by the Edison Minstrels, with interlocutor, end men, soloists, orchestra and all the other appurtenances.

It seemed beyond belief, but the beginning is only in sight. Imagine what it will mean to future generations to have the greatest singers of the world appear in grand opera or concert numbers, the action accompanying the song; to have Bernhard and other dramatic stars immortalize their art, so that one gets the spoken word, the stage picture and the acting simultaneously!

Imagine, too, as the lecturer said, what it would mean to-day if George Washington's great speeches, those of Lincoln and other of the famous men in history could have been perpetuated by this new device, which actually reproduces both sound and sight at the same time! We are making history every day, and the kinetophone will give future generations the complete story in every detail conquering time and distance in its triumphant march.

At a recent concert given in the Presbyterian Church, Hastings, Neb., L. B. Klugh, who was heard as a soloist and accompanist through the medium of the player-piano, utilized the Victor Victrola to very excellent purpose in accompanying the noted singers whose voices were heard to such great advantage, thanks to the perfection of the Victor records.

IN the clinches you can rely upon the Ditson Victor Service. Profits are contingent upon *our fast work*—and we know it.

STOP saying to your customers: "We haven't got it," because you can get it from DITSON.

FAST Victor service is our aim and that we hit the mark is proved in our rapidly growing clientele of dealers.

ALL Victor styles, records and parts, with a complete line of albums, cabinets and needles.

WE specialize upon Victor goods exclusively, and correspondence with dealers desiring the best in Victor service is invited.

Oliver Ditson Company, Boston, Mass.

There are one hundred and eighty-four selections, including Ysaye's great records, in the Columbia list for April, making one hundred and eighty-four selling chances from each recipient—and millions of people will see this list.

Tribune Building, New York**

EDUCATIONAL VALUE OF THE TALKING MACHINE

The Subject of a Lecture Recently Delivered by Miss Frances H. Arnold, Supervisor of Music in Public Schools of Guthrie, Okla.—School Can Call to Its Aid One of the Most Entertaining Instruments Ever Invented, Says Prominent Educator.

Miss Frances H. Arnold, supervisor of music in the public schools of Guthrie, Okla., in a recent lecture referred to the educational value and importance of the Victrola in the school, as follows:

If the schoolmaster of 50 years ago were, by some miracle, permitted to spend a week in the schools of to-day, no doubt he would rub his eyes to test his vision, and then lose no more time in the effort to comprehend the great changes made in the vast scheme of education.

In the days when the three R's made up the total of schooling, the curriculum knew no such words as manual training, domestic science, physical culture, music, physiography and public speaking—but to-day these subjects play a very important part in education.

This paper is written to show how the school may call to its aid one of the most interesting, useful and entertaining instruments ever invented. It is not necessary to speak of the Victrola itself; we are all more or less familiar with its mechanics—but rather to open up new avenues of thought concerning its use; to show that through its inspiration a great world of riches, embracing the best of literature and the great masterpieces of music, is lying at our very doors, if we but listen.

The language of music is universal—it matters not whether we be American, German or Hebrew, all tongues can speak the emotions and translate the heart throbs of beautiful harmonies. The teacher of to-day shapes, to a large degree, the destiny of young people, and so of our country; they should open to their students glimpses of a world undreamed by them; they should awaken the minds by the use of noble example, and by placing before their pupils a high standard of things sought. To this end the educational world must take advantage of opportunities which stimulate the faculties, and which are sources of inspiration.

I wish to show you, by the use of a variety of records, in how many ways a Victrola may serve you, not simply as a feature of entertainment, but along many lines of school work.

The Victor Co. is furnishing a large number of records, suitable for use in many classrooms and in many subjects; in the lower grades the language stories, the little fables and the short rate songs are faithfully reproduced in clear, pure tones, in such a way that they are as clear as the teacher can give them, and the novelty of the production fascinates the little people into instant and tense attention; these may be tirelessly repeated, saving the voice of the teacher and leaving her free to suggest or to listen to the children themselves, as they repeat.

The intermediate grades are solving the problem of part music, and here the Victrola comes in strongly; the record of the Lullaby (No. 17,005) serves as a model—first the voices sing the two parts, then the 'cello plays the lower part alone, which may be hummed by the pupils, while the

violin plays the melody—finally allowing the children to sing in parts while the record is played. The best of literature is used in these songs, and the beautiful voices of Evan Williams, Alma Glück and Louise Homer fill the poems with more beauty.

As the grades advance in maturity of ear training, the quartets and choruses, the orchestras and military bands may be used to interpret the beautiful old folksongs, the ballads, the operas and symphonies, thus making the best of all great music as familiar to their ears as is the ever-present ragtime.

The influence of music is so broad and far-reaching that the wise teacher seeks its aid. To the supervisor who has every grade in its own rooms and upon different floors, and to the rural teacher whose conditions are exactly opposite, come the same perplexities and problems—for children are the same the world over—but with a Victrola some of the tense moments may be safely tided over with a stirring march or a game which calls for active rhythm, or perhaps just to listen to Whitcomb Riley recite his own "Raggedy Man" or "Out to Old Aunt Mary's."

In my schools the Board of Education sets aside every term a certain amount of money with which to buy records—we now have access to about 150 records and they are of a varied nature—a large number of violin, 'cello solos, many songs by Evan Williams, Lucy Marsh, Tetrizzini, a good many from the standard operas and, finally, the stirring music of the military bands and splendid orchestras.

My pupils know the essential and most interesting things concerning the masters of music—Handel, Bach, Haydn, Schubert, Beethoven, Wagner, Mendelssohn, Mozart—they recognize their pictures and are able to name many compositions and their composers; music is not a "dead" language to them by any means, but one which is at once entertaining and instructive.

The German teacher in high school uses the records of the "Lorelei," "William Tell" and other German songs, to see how quickly her pupils can translate or understand; the primary teachers use the same machine to reproduce "Three Billy Goats Gruff," and a little later the whole building echoes to the strain of a splendid march, and happy faces and lightly stepping feet testify to the enjoyment of perfect rhythm.

To the teacher in the country districts or the small town the Victrola should come as a "thing

of beauty and a joy forever," since it brings to offices in New York regretted to learn March 3 of singers and players in such an attractive and entertaining way that her standing in that town should be one of great influence for good.

On the other hand, in the cities where the great artists often appear, the Victrola will prepare the way for a better understanding of the opera or the solos on piano, violin or 'cello.

So, through the medium of this most wonderful machine, our school life should be greatly enriched, our work be made easier, our faculties more alert to distinguish sounds, our horizons widened, and to supplant the cheap and useless music with good wholesome material.

Place before young pupils the splendid records which will serve as models, and you will find your work uplifted by encouraging the best there is in your pupils, and let them know the joy of wholesome work in happy ways.

NOTE.—The following records were used at various places to illustrate the point:

Primary Grades—16998: "Baa, Baa, Black Sheep," "Little Shoemaker," "The Blacksmith," etc. Aesop's Fables, "Wolf! Wolf!" and "Three Billy Goats Gruff."

Intermediate Grades—17005: "Lullaby," two-part song. 64219: "Wynken, Blynken and Nod."

High School—35209: "Miller's Wooing." Bridal Chorus. 70052: Spinning Wheel Quartet from "Martha." Marching records and folk dances; No. 35204, No. 17002.

DEATH OF P. J. HURLBURT.

The staff of the Columbia Graphophone Co.'s offices in New York regretted to learn on Monday of the death of P. J. Hurlburt, connected for many years with the factory. Mr. Hurlburt died that morning after a sudden attack of heart trouble at his home in Bridgeport, Conn. He was, for over ten years, the official messenger between the factory and general offices, and often was intrusted with many important documents and all other matters requiring trustworthiness and special attention. He was about fifty-five years of age, and at one time was well known in the local retail trade.

TO HANDLE TALKING MACHINES.

Darius J. Stevens, who handles the Hallet & Davis line of pianos and player-pianos in Danbury, Conn., has enlarged his warerooms considerably and installed a talking machine department.

Wise, Smith & Co., a large department store of New Haven, Conn., have completed arrangements to handle the Columbia line of machines and records.

The O. W. Wuertz Co., the well-known Bronx piano house, has just arranged to handle the products of the Columbia Graphophone Co. in its two stores in the Bronx.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Special to The Talking Machine World.)

Washington, D. C., March 10, 1913.

Phonograph Reproducer. Thomas A. Edison, Llewellyn Park, West Orange, N. J., assignor to Thos. A. Edison, Inc., same place. Patent No. 1,052,656.

This invention relates to phonograph reproducers and has for its object the provision of means whereby the stylus lever may have greater freedom of movement in tracking the grooves of the sound record, and particularly in movements transverse to the record groove.

While great facility of movement of the stylus lever both in a direction parallel to and transverse to the record groove is important for reproduction from any sound record of the hill and valley type, it is particularly important in the case of a record having 200 threads or a greater number of threads per inch, owing to the thin walls between the record grooves which might be broken down or jumped across by a stylus, the parts moving with which have considerable inertia.

In phonograph reproducers as commonly constructed, any movement of the stylus lever transverse to the record groove moves or twists the link connecting the stylus lever to the diaphragm, and a certain amount of inertia of this link must be overcome during the movement. This difficulty is overcome in the present invention by pivotally connecting the stylus lever to a floating weight which is pivotally connected to the sound box body, the pivotal connection therefor being in the same plane at right angles to the diaphragm as the link connecting the stylus lever to the diaphragm.

By this means the floating weight, which is mounted to have a limited movement transverse to the record groove, may so move transversely together with the stylus lever without moving the link from its normal position or in any way stressing or distorting the same.

Fig. 1 is a central vertical section through a reproducer equipped with the invention, certain parts being shown in side elevation. Fig. 2 is a bottom plan view thereof.

Talking Machine. Frank L. Dyer, Montclair, N. J., assignor by mesne assignments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,054,096.

This invention relates to talking machine, particularly those of the so-called "hornless" type, and the object is to provide a simple compact structure in which the cover for the casing and reproducing mechanism may be adjusted when in open position to form a sound amplifying means for the reproducer. Preferably, a sound conduit or for the reproducer.

Preferably, a sound conduit or tube extends from the reproducer through the cabinet to one side of end wall thereof, provided with an opening in which the conduit ends. The cover has a properly proportioned sound conveying conduit formed therein, and the cover is so mounted upon the casing that when it is opened the sound conveying or amplifying surfaces within the cover are brought into alignment with the end of the conduit in the casing and caused to abut against the same so as to form a continuous sound passageway therewith. This is accomplished by means of movements, both of reciprocation and oscillation, of the cover with respect to the casing.

Fig. 1 represents a central vertical cross section through a cabinet and reproducing mechanism embodying this invention, certain parts being shown in side elevation and the cover being shown in closed position; Fig. 2 is a similar view showing the cover in open position, in which it forms a sound amplifier for the reproducer; Fig. 3 is a section on line 3-3 of Fig. 2 looking in the direction of the arrow, and Fig. 4 is a detail cross section taken on line 4-4 in Fig. 2.

Sound Reproducing Machine. Alfred R. Cummins, Brooklyn, N. Y., assignor of one-half to Lipman Kaiser, East Orange, N. J. Patent No. 1,054,395.

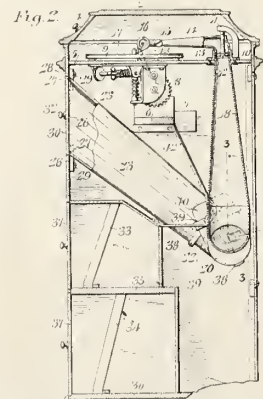

This invention has reference to improvements in sound reproducing machines, and relates more particularly to the cabinet type of sound reproducing machines where the sound amplifier is carried beneath the motor mechanism and the large end of the amplifier terminates at the front of the cabinet.

The object of the present invention is to materially increase the volume of sound produced by such type of machine.

In sound reproducing machines of the cabinet type the motive mechanism and the turn-table for supporting the sound record, as well as the sound box and the taper arm, or as it is sometimes called, the tone arm, carrying said sound box all follow the usual construction found in sound reproducing machines where the amplifying horn overhangs the turn-table, but the large end of the tone arm is turned downwardly and connects with a sound conduit which in turn is coupled to the small end of a sound amplifying horn or conduit housed in the cabinet and projecting forwardly from the rear

end of the cabinet to the front thereof where the large end of the amplifier terminates and is commonly closed in by doors, whereby the emitted sound may be modified at the will of the operator up to the full power of the machine. There is, however, a noticeable loss in volume as compared with the type of reproducing machines where the amplifying horn overhangs the tablet-carrying table, but there are advantages in the cabinet type of sound reproducing machine in that the reproduced sound has a softness and naturalness not found in the other type mentioned, and which for convenience of description may be termed the horn type. Moreover, the cabinet type of machine is provided with a cover for inclosing the revolving table, the sound box and tone arm, and the motor mechanism for driving the revolving table is housed in the body

of the cabinet, so that machine noises and the noise of the reproducing stylus upon the record tablet as well as such sounds as are caused by the reproducing diaphragm on the exposed face are all bushed, and only such sounds as travel through the sound conduit and are emitted through the large end of the sound amplifier

are observable by the listener, the freedom from extraneous noises materially contributing to the perfection of the reproduction of the sound record. By the present invention a very material lengthening of the sound conduit with corresponding increase in volume of the amplified sound is brought about, and, moreover, provision is made for a wide range of modification whereby the device is adapted to soft reproduction of sounds suitable for small rooms or a loud reproduction of the sounds suitable for large halls, or any intermediate degree of sound that may be desirable.

In the drawings: Fig. 1 is a front elevation of the cabinet embodying the present invention with

the controlling door of one of the sound amplifiers open and with one of the doors of a tablet-containing compartment open. Fig. 2 is a front to rear vertical section through the machine with some parts shown in elevation and some parts broken away. Fig. 3 is a vertical section on the line 3-3 of Fig. 2. Fig. 4 is a section in substantially the same part as Fig. 3 but taken through the small end of one of the terminal amplifiers and of the adjacent portion of the neck connected thereto, the scale being somewhat larger than that of Fig. 3. Fig. 5 is a section at right angles to that of Fig. 2 and taken through the sound conduit where joining the pivoted end of the tone arm, parts being omitted, and showing a somewhat modified form of the invention. Fig. 6 is a section on the line 6-6 of Fig. 5. Fig. 7 is a section on the line 7-7 of Fig. 5. Fig. 8 is a section in part similar to Fig. 5 and showing still another form of the invention. Fig. 9 is a plan view of a coupling used in the structure of Fig. 8.

Graphophone. Thomas H. Macdonald, Bridgeport, Conn., assignor to American Graphophone Co., same place. Patent No. 1,054,359.

As heretofore constructed, graphophones and similar talking machines using the cylindrical form of record have generally employed a reproducer resting approximately upon the upper surface of the record, so that the weight of the reproducer rises and falls in response to the irregularities of the record as a whole, and the reproducer was sup-

ported by the advancing carriage in approximately a horizontal plane. In case an amplifying horn was employed, such horn has been carried bodily on the front side of the reproducer carriage, to the end that the reproduced sounds might be directed by the horn toward the front of the instrument; or if a larger horn is employed, the same has been mounted upon a stand in front of the machine and connected to the top of the reproducer and on the front side of the carriage.

According to the present invention, the reproducer is mounted to the rear of the cylindrical record and rigidly fixed in the carriage, so that the reproducer as a whole is not capable of movement toward and from the record the reproducer stylus being pressed against the record by a spring tension. Furthermore, by the present invention the amplifying horn is mounted upon a rigid supporting bracket projecting to the rear of the machine, the horn, however, being so mounted on said arm

that it is capable of swinging so as to direct the open or mouth end of the horn to any point of the compass. Moreover, extending between the reproducer and the point where the horn is supported by the rigid bracket, there is a hollow sound-conveying tube preferably tapering in form, and so mounted upon the supporting bracket as to be capable of swinging in a horizontal plane, and also of more or less movement in a vertical plane,

though this last freedom of movement is not essential. The reproducer carriage, and hence also the reproducer, move in a right line past the cylindrical record, and in order that the union between the horizontal sound-conveying arm and the reproducer may be a continuous one (not with-

ing the increase of distance between the axis of said arm and the reproducer as the same is advanced along the record), the said arm is connected to the reproducer by means of an expanding or telescopic joint. The carriage is advanced along the slide or way supporting it by means of a suitable nut engaging the operating screw, and means are provided for simultaneously lifting said nut from the screw by overcoming the tension of the spring which holds it in operative position, and at the same time lifting the reproducer stylus from contact with the record, and likewise overcoming

the tension of the spring holding it against the record. Fig. 1 is a side elevation of this improved graphophone, parts being broken away for greater clearness of illustration; Fig. 2 is a top plan view with the amplifying horn removed, a portion of the same, however, being shown in dotted outline. Fig. 3 is a front elevational view with a part of the cylindrical record and supporting mandrel broken away in order to show the reproducer and connected parts. Fig. 4 is a broken perspective detail illustrating the nut by which the carriage is connected and operated by the advancing screw; and Fig. 5 is a perspective detail illustrating the telescopic joint between the reproducer and the connected tone arm.

CLERGYMEN AS TALKER PROSPECTS.

How Sales of Records and Machines May Be Made in This Special Field as Well as for Church Purposes Generally—Some Helpful Hints in This Direction.

Some helpful hints toward developing a wider avenue of distribution for the talking machine dealer are to be welcomed, and hence the following, which we cull from the Edison Phonograph Monthly, is worthy of consideration:

A promising field for a dealer to canvass is that of the clergymen of his neighborhood. Every church can profitably own at least one phonograph, if not several. Take the pastor himself. What better method to memorize his next Sunday's sermon than to talk it into the phonograph and then listen to his own delivery? It is the easiest and most expeditious way, for it obviates the necessity of writing out his sermon, or employing a stenographer.

Furthermore, he is enabled to judge his own sermon from the audience's standpoint, thereby

studying his own delivery and strengthening and emphasizing points that the phonograph makes apparent. The advantage of being able to dictate his sermon at any time, day or evening, to leave off where he must be interrupted, to take up the sequence again by starting the phonograph, are advantages that merit considerable attention, particularly by the young preacher desirous of acquiring a good delivery.

Then there is service that a phonograph may render to the sick, or the "shut in." A church that owns one or more phonographs can readily arrange to have them left on Saturday at the homes of the sick or aged, together with records containing the pastor's sermon (or parts of it) or a personal record from the pastor himself together with some religious selections, hymns or a solo. One of the largest and most influential churches in New Britain, Conn., has just inaugurated a service of this kind, and it is meeting with great success.

Then there is the church parlor that needs a phonograph as much as an organ or piano. It will entertain the various auxiliaries that meet

there, and add much to the enjoyment of their gatherings during the week.

Then, again, there is the Sunday school, particularly the primary classes. As an aid in teaching or a substitute for an absentee pianist, it will more than prove its worth.

It is a promising field as yet unworked. Who will be the enterprising dealer to start one church in his neighborhood to using the phonograph? Other churches will readily follow.

WAS A THOROUGH MUSICIAN.

When one is now asked if he is a musician he need no longer bow his head in shame and answer in the negative, if the conclusion of a witness in a recent court case is correct. He was being cross-examined.

"You're a musician, aren't you?" the attorney asked.

"Yes, I call myself that now and then."

"Well, what do you do in the musical line?"

"Oh, I can run a talking machine," the witness complacently answered.

SOLID WOOD (NOT VENEERED)

Mr. Dealer!

MUSIC MASTER
Solid Wood Horn

Better than ever
And still the best

Note This

It reveals **THE CHARM** of a singer's voice (the Public say). **IT IS PERFECTION; IT LEADS IN TONE.**

It has a national reputation and dates from the introduction of the Music Master; not the last change, but a good chance to try the much talked of

MACHINE SHOP FOR VICTOR CO.

(Special to The Talking Machine World.)

Philadelphia, Pa., March 8, 1913.

Ballinger & Perrot have completed drawings and specifications and awarded contract to Irwin & Leighton for a fire-proof machine shop for the Victor Talking Machine Co., on the east side of Front street between Market and Cooper streets, Camden. The new building will have a frontage of 86 feet on Front street and extend 170 feet in depth to connect with the present building of the Victor Co. It will be six stories in height.

ATTRACTIVE EASTER DISPLAY.

The New York Talking Machine Co., 83 Chambers street, New York, is showing this week a most attractive window display in the nature of the special Easter display recently sent out by the advertising department of the Victor Co. The records featured include a number of sacred songs that have proven to be unusually popular with Victor owners, and the scenery used, which portrays two choir girls and an organist, contributes to make the display typical of the sacredness of the Easter season. The text is printed in Old English type and the window's drawing powers are considerably enhanced by the use of the new display.

JUST INCORPORATED.

The Quincy Phonograph and Art Co., Quincy, Ill., has been incorporated with a capital stock of \$15,000 for the purpose of conducting a general business in talking machines and art specialties. The incorporators are: L. E. Caldwell, J. E. Caldwell and John F. Garner.

HANDLING THE EDISON LINE.

James L. Abbott & Son, of Fort Lee, N. J., are featuring the new Edison disc phonograph in their piano rooms at 25 Lemoine avenue.

The pupils of the Vineland (N. J.) High School, through the courtesy of the Victor Talking Machine Co., at the suggestion of Davies & Son, enjoyed a demonstration of educational and grand opera records one afternoon recently.

Leading Jobbers of Talking Machines in America

You should get this sample package of Puritone Needles—sent free

Puritone Needles should pay you a good profit. It costs nothing to sell them because you have your organization.

To help you we will print special envelopes with your name and business; every envelope gives you profits and free advertising.

You will be advertised, too, by the satisfaction-qualities of the needles; owners of machines will regard yours as the best needle store; this will build your business.

Get this sample package, telling us who's your jobber, and find out the goodness of Puritone Needles, built of experience, material and brains.

Victor

"HIS MASTER'S VOICE"
REG. U.S. PAT. OFF.

The best-known trade mark in the world

"The Victor talking machine's design, 'His Master's Voice,' has become a household word, and the quaint little fox terrier at attention before the horn is familiar to more Americans than any of the world's great masterpieces"—*Collier's Weekly*.

The Vitaphone

Vitaphone Cabinet Instruments.

COMMENCING with the May issue of the "World" we will illustrate two styles of cabinet Vitaphones each month, ranging in prices from \$12.50 to \$300.00.

The Vitaphone cabinet is the work of an artist. It is designed along the lines of the quaint and elegant furniture created by the old masters of the famous English and French art periods of the later middle ages.

The accurate tone of the Vitaphone reproducing device, perfect and silent motor, housed in an artistic cabinet, make up a musical instrument pleasing to both eye and ear.

The Vitaphone motor is built with the utmost mechanical precision, is absolutely noiseless, even running and requires a minimum of care.

NEW STYLE ROOM PROVES SUCCESS.

Wood Fiber Lining, Without Corners, Greatly Improves Tone Quality of Pianos in Phillips & Crew Co. Store, and Parlors on Same Plan Will Be Used for Victrolas.

(Special to The Talking Machine World.)

Atlanta, Ga., April 8, 1913.

A new idea in sound-proof rooms for the demonstration of player-pianos recently introduced in the store of the Phillips & Crew Co., the prominent piano and talking machine dealers of this city, wherein wood fiber is used instead of the usual plaster or composition for lining the walls of the rooms, has proven so successful that the company announces that other rooms will be constructed on the same principle and used for Victrola parlors.

In the construction of the first room a special kind of wood fiber was used for finishing the interior, and the side walls and the ceiling were joined together by means of a curve and with all sharp corners eliminated. After extensive tests the room was found to be thoroughly sound-proof, and through the use of the wood fiber and the elimination of curves the walls and ceiling of the room acted as a huge sound-board and greatly improved the tonal effects of the instruments played therein.

Much interest has been displayed in the new room by other dealers, and as the cost of building is but little, if any, higher than that of the ordinary style of room, it is expected that booths and rooms lined with the wood fiber will soon be built in other music and talking machine stores.

NAMES BABY VICTOR EDISON.

Proud Michigan Parents Thus Express Their Enthusiastic Regard for the Talking Machine—Satisfaction to the Salesman.

(Special to The Talking Machine World.)

Kalamazoo, Mich., April 8, 1913.

Some children have been named for presidents, governors and other statesmen, but the first child to be named for a musical instrument was christened yesterday by Mr. and Mrs. William Mulder, of 1614 North Burdick street, who have named their young son Victor Edison Mulder, after the Victor and Edison talking machines.

F. R. Shephard, of the local branch of Grinnell Bros., in discussing the interesting incident said: "The christening of a baby with the names of talking machines indicates to what degree we have the people in Western Michigan enthused over those instruments.

"It is seldom that a talking machine man gets any encouragement out of his business beyond that which comes with the closing of a sale, and such an expression of satisfaction as that of naming the young man after the Victor and Edison talking machines does even more than encourage the salesman. It makes him feel that he is doing the world some substantial good."

MORE SCHOOLS GET BURBANK GIFTS.

(Special to The Talking Machine World.)

Santa Rosa, Cal., April 7, 1913.

The Victrolas ordered by Luther Burbank for the South Park and Roseland schools have been received by the Sonoma Valley Music Co., and were delivered Monday morning. The other public schools of the city were provided with Victrolas recently, but the supply ran out and these two schools had to wait until more were ordered from the factory.

The Todd District School has also purchased a Victrola from the same firm, which has just been delivered.

TAKES OVER FREEMAN BUSINESS.

C. A. Fenn, of Bloomington, Ill., has just taken over the entire Victor and Edison stock of C. H. Freeman, who has retired from the talking machine business. Mr. Fenn at the present time is the only Victor and Edison dealer in that city.

BIG ORDER FOR TALKING MACHINES

For the New York Public Schools Placed by the Board of Education with the Columbia Graphophone Co.—The Makes Selected.

The talking machine as a factor in educational work has received its strongest endorsement to date from the New York Board of Education, which has in the last few days placed its first big order for talking machine equipment. Of the product selected, 94 per cent., including both instruments and records, was of the Columbia Graphophone Co.'s products. The type of instrument selected is the BII, with symphony horn, and each school is supplied with a large supply of the special school series of records, recently issued by the education department of the Columbia Graphophone Co.

This order for talking machine equipment in the New York public schools was placed by the New York Board of Education only after the members had made a thorough test of the talking machine's adaptability to schoolroom work. The board's ultimate decision is a pleasing one to the Columbia Graphophone Co.

TALKING MACHINE EXPORTS.

The Figures for February Presented—Reports Show Increase for the Month.

In the summary of exports and imports of the commerce of the United States for the month of February (the latest period for which it has been compiled), which has just been issued by the Bureau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies are set forth:

The total exports of talking machines, records and supplies, for February, 1913, amounted to \$218,603, as compared with \$228,342 for the same month of the previous year. The eight months' exportation of talking machines, records and supplies amounted to \$1,904,559.

KREBS WILL BUILD ANEW.

Talking Machine Man of Hamilton, O., Suffered Loss of \$20,000 in Flood—Shows Real Grit.

Writing to the Talking Machine World under recent date, George Krebs, who handles Victrolas and pianos in Hamilton, O., which city was a great sufferer in the recent flood, says: "My

complete stock of pianos and Victrolas is a total loss by the floods; also the larger part of my furniture department. My loss is between \$20,000 and \$25,000. I am happy to say that my family is safe, as well as my health. I am ready to build up anew." This illustrates that Mr. Krebs is a man of real American grit, and with such a spirit he will win out anew, and he certainly deserves to.

PLACING ORDERS FOR STOCK EARLY.

Detroit Dealers Are Determined to Have Ample Stock on Hand the Coming Fall—Grinnell Bros. Place Big Order for Victor Machines and Records, Covering Every Style.

(Special to The Talking Machine World.)

Detroit, Mich., April 11, 1913.

Detroit dealers already are placing their orders for fall and winter trade. They are determined this year to have the stock on hand, so they won't lose thousands of dollars worth of business simply because they can't deliver the goods, as was the case last year. Grinnell Bros. a few days ago gave an order to the Victor Co. which practically meant carte blanche to ship every machine of every style it could spare. The order didn't read that way, of course. It was for a specified number, for which cash will be paid, delivery to be made at once. The amount was so big that the firm prefers it be not made public, but the writer saw the carbon of the order, and it runs a long way into six figures—without annexing a couple of ciphers after a decimal on the end, either. Even if the "at once" actually is complied with, it will be welcome. But the demand for Victors keeps all Victor stores so well cleaned out that the company cannot fill the order all in one shipment. The machines undoubtedly will be disposed of in Detroit as fast as they arrive.

"In spite of such orders, we have been unable to accumulate anything that looks like a surplus of machines," said Manager Rupp. "The more machines we buy, the more trade they create among the friends of the people we sell them to. Actually, it seems as if every Victor sold causes a demand for two more. Our gross profits for the last week in March were three and a half times the amount for the corresponding week last year—and we were not exactly pikers last year.

"Business in records is just as remarkable. We never have anything for the transfer bureau. Musical tastes of Detroiters cover such a wide range that we have calls for every record that comes in."

VALUE OF COMPLETE STOCK OF MACHINES ON FLOOR.

How the Customer Is Impressed and the Business of the Dealer Augmented by Carrying a Complete Stock of Talking Machines—Many Customers Converted to a Purchase of High Priced Product After Examination of the Various Styles Represented.

The talking machine dealer has often been told of the benefits to be derived from having a complete or representative stock of machines on the floor at all times. He has been shown that the customer who is desirous of purchasing a \$100 machine in mahogany, or a special style of table machine, often does not appreciate the logic of an excuse that has for its object the justification of any delay of delivery for a short or indeterminate period of time. The dealer has been told all this convincingly and interestingly, and its truth and value is acknowledged by all up-to-date and aggressive dealers. As a result of this logical presentation of arguments, the majority of stores always endeavor to show a sufficient stock of machines at all times.

It is undoubtedly of material benefit to the dealer to have enough machines in stock, but he oft-times loses quite a number of his possible transient sales or sales of the higher priced machines if his stock is not displayed properly and attractively. This display does not only apply to the show window, which is a very important

factor, but also to the floor of the store where the machines are displayed.

It is of very little use to have a beautiful and attractive model in the basement of the store while a dusty, old-fashioned or scratched machine is given the place of honor near the entrance. A great deal depends on the dealer's display in his store, for many a customer has switched from the contemplated sale of a \$50 machine to a much higher priced model, primarily by the powerful attraction afforded by a well-arranged display of machines.

In many talking machine stores it is not an uncommon sight to see records that have been recently used lying around on the counters or placed in the machines where they have been recently demonstrated. This all tends towards detracting from the beauty and attractiveness of the establishment, and it certainly is not good logic for a dealer to spend hard-earned money on purchasing an extensive stock of talking machines and then failing to display it to good advantage.

PROFIT THROUGH OPERA SEASON.

Phillips & Crew Co. in Atlanta Gives Special Series of Opera Recitals for Benefit of Music Lovers—Cable Piano Company Also Features Victrolas and Operatic Records Strongly.

(Special to The Talking Machine World.)

Atlanta, Ga., April 8, 1913.

The Phillips & Crew Co. was a center for music lovers during a large part of the past month, as the advance sale of season and single tickets for the coming week of grand opera, April 19-26, was conducted in that store, and also in the store of the Cable Piano Co. The Phillips & Crew Co., is attracting further interest by conducting a special series of opera recitals and readings, in which the Victrola, with a large number of records from the seven operas to be given, figures prominently.

The Cable Piano Co. is also featuring the Victor line of talking machines and Victrolas, which it has only recently taken on, very strongly in connection with the coming opera season and with excellent results in the matter of machine and record sales.

GETTING AFTER THE FARMERS.

Some Interesting Facts and Figures That Point the Way to Big Money for the Enterprising Dealer in Talking Machines and Supplies.

The possibilities for talking machine trade among the farmers of the United States is not considered as seriously as it should be, and this is put very clearly by the editor of the Edison Phonograph Monthly when he gives the following interesting facts:

"There are 6,361,502 farms in the United States. Their income is approximately ten billion four hundred and twelve million dollars (\$10,412,000,000). This makes the average income \$1,636. Agriculture and manufacturing form the two principal sources of wealth in the United States. Two-thirds of the people gain their living by these industries. Agriculture takes the lead by three times the sum paid as wages to manufacturing hands!

"When you consider that the average income of the farmer of the Middle West is almost four times as great as that of the average city income, and that his cost of living is less than half that of the average city resident, the ability of the average farmer (and the resident of the smallest towns) to buy an Edison phonograph is self-evident. And he pays cash! He has cash to pay, for the average farm in the West is producing from \$20 to \$30 an acre.

"And then the farmer needs the phonograph after his hard day's work and his loneliness. His family needs the phonograph. It's the only pleasure possible oftentimes, and it's a pleasure as enjoyable

RECORDS BY WEINGARTNER.

The Famous Conductor's Records Made for the Columbia Co. Will Be Ready for June List.

The Columbia Graphophone Co.'s June list of new records will include, among other features, a double-disc record devoted to two selections by a picked orchestra conducted by the world-famous conductor, Felix Weingartner. These selections are entitled "The Liebestod," from Tristan and Isolde, and Weber's "Invitation to the Dance." Both of these are very popular selections with music lovers, and the sale of this record promises to be unusually heavy as soon as the public appreciates the musical worth of the selections.

Felix Weingartner's enviable reputation as a conductor has been acquired by his many years of orchestra leadership abroad, where he achieved a marked success. At one time he was conductor in the Imperial Theater at Berlin, and subsequent to

a disagreement with the Kaiser opened his own opera house eighteen miles out of Berlin, where his ability as a conductor of exceptional merit was suitably recognized by crowded houses at each performance. He was also accorded the honor of acting as guest-conductor of the Boston Opera Co., an honor accorded very few musicians. The new Columbia record is the first one of a series,

Weingartner and His Orchestra Making Records.

and is played by an orchestra of thirty-six men selected by Felix Weingartner from among the leading bands and orchestras of the country.

in a summer's twilight as before a winter's fire-side. The field has not even been scratched! Get after the farmers with an Edison outfit!"

HOW CARUSO TURNED THE TABLES

On a Newspaper Reporter and Incidentally the Talking Machine Comes in for a Boost.

A reporter who had orders to interview Enrico Caruso, of the golden voice, went to the Knickerbocker Hotel one day last week. He was told by the singer's valet that his master was taking a nap but would probably see him at 5 o'clock if he would give notice by telephone.

At 5 o'clock the reporter went to a telephone. The man who answered said: "About what do you wish to talk with Mr. Caruso?"

The reporter could hear the strains of "Celeste Aida" pealing through the room back of the man at the telephone. He had the assurance therefore that the tenor was at home.

"I will tell Mr. Caruso himself when he is at liberty to come to the telephone," he said.

"But I am Mr. Caruso," said the man at the other end of the telephone.

"I know better than that," said the reporter. "It is just because mutton-head servants like yourself lie like that that it is impossible to give messages through you with any satisfaction. Get off that line and ask Mr. Caruso to come to the 'phone or I'll come up there and make you into a salad dressing."

"But, sir, you must not talk to me like that. I am Mr. Caruso himself, no one else, and you are insulting me when I am trying to do you a favor." "Say," roared the reporter in exasperation, "are you so stupid that you can't understand that I can hear Mr. Caruso singing right in the room with you—you spaghetti-filled goat?"

"Ah! I see," said the voice. "Come right up." The reporter went up with a vast feeling of triumph. Signor Caruso opened the door himself, smiling wickedly. And on a stand in the center of the room was a phonograph from which was still issuing the strains of "Celeste Aida" in the singer's own voice. One of his favorite amusements is to hear himself sing.

The reporter after recovering from the shock went away wondering if he had really apologized enough.

Cash Your All the Year Round Loyalty

During the rush and time of shortage around the holidays have your name on our list of regular dealers and be in line to have your orders receive preference over the fellow's who "shops" during the rush season and who buys from his nearest jobber the balance of the year to save on freight and express, and maybe puts up with second-class service at that, sacrificing increased profits made possible by prompt and full-filling of orders for the sake of the "economy bug" working on his freight and express expense account.

FORGET THE SMALL DIFFERENCE IN EXPRESS

if there is a difference between your store and ours in favor of a jobber nearer you, and remember there are a lot of things about "Eastern Service" which will more than repay you.

Maine, New Hampshire, Vermont, Rhode Island and Connecticut Papers Please Copy.

EASTERN SERVICE IS GOOD SERVICE. BUT ABOVE ALL IT IS JUST.

EASTERN TALKING MACHINE COMPANY

177 TREMONT STREET, BOSTON, MASS.

FOR NINETEEN YEARS TALKING MACHINES EXCLUSIVELY

CONSERVATION OF THE MUSIC OF THE INDIANS

Geoffrey O'Hara, New York Composer, Appointed to Take Special Charge of This Work by Government—Will Utilize Talking Machine to Record Songs of the Various Tribes—Useful for Historical Purposes and Posterity Will Be Benefited and Enlightened.

Geoffrey O'Hara, the New York composer, has just accepted a strange and interesting job. He has been appointed by Secretary of the Interior Lane to attend to one of the many kinds of conservation carried on by our Government, the conservation of the music of the Indians.

"The work has in a limited way been done before," says Mr. O'Hara, "but only the surface has been scratched. No systematic effort has ever been made to study, develop and preserve the music of the red man.

"Part of my work will be to encourage the Indian to sing and love his own music—both vocal and other. This coming summer I shall go to Arizona and commence among the Navajos, who are richest in treasures of Indian music. How shall I go about my work? That must in a great measure be left to circumstances.

"But this I shall do. I shall make my home on the reservation, although this will not necessarily involve living in tents with them. I shall make friends with the superintendents, the teachers, the traders, and the other white people who know the Indian from daily contact. Through them I hope to become intimate with the tribe; mingle among them; become their paleface brother; encourage them to sing. I shall not have to tell them what I am there for—they will know."

"Then I will record their music. I will make phonographic records. But I hope to do more in a more unusual way. I shall try to get them to sing and take down their melodies note by note on paper.

"Of course, it may be difficult, and may necessitate frequent repetitions. But the old Indians—those who are rapidly becoming a memory—need not be urged to sing. Song is to them

an expression of the various occasions of life, of the wonderful phenomena of nature which holds the child's wonder for them still; it is the utterance they give to their religious emotions. Every act of their daily life is interpreted in song. Their music is a mosaic of all the passions, the doings, the strivings of the race.

"Why, even when they sailed over New York Bay on their way to the ground-breaking for the Indian memorial at Fort Wadsworth, they chanted a hymn expressive of new life—of a passing from one country to another. They are the most reverent people on the face of the earth—excepting, possibly, the Buddhists—and their music is to them the symbol of their religion. To it we must go for their history.

"Their music is all the tribe music handed down from mouth to mouth through generations and chanted in unison. They know nothing of part singing; everyone sings the melody. It will be interesting," added Mr. O'Hara enthusiastically, "to try to arrange their songs for four-part harmony.

"Another peculiar thing—it has been shown from experience that the Indians sing off pitch on two tones of the scale. Phonographic records show that as individuals they sing the same degree of pitch, although their singing is perfectly true.

"It is high time that this work was begun. The old Indian singers are dying off—the new generation which fills our Indian schools is not keeping up the music and traditions of the race with fidelity. They prefer ragtime and the turkey trot to their own expressive melodies. And it is going to be a part of my work to make them see the beauty and significance of their own songs, and

get them to sing them in preference to popular music. I shall also probably arrange the music for use in the schools, although I am not certain of this officially.

"But the old Indians need not be taught veneration for the tribal music. An incident at the ceremonies at Fort Wadsworth illustrates their attitude. While the flag was being raised the band struck up an Indian tune. When the banner reached the top of the pole the musicians broke off and switched to a patriotic air. Gravely the red men rose and requested that the interrupted Indian melody be finished. To break it off in that way augured bad luck, they said.

"How long will it take? The fact that Miss Dinsmore in three years' work collected several hundred songs from one tribe will give you an idea. A lifetime will hardly finish the task."

Mr. O'Hara began his work in this city recently, when three of the Blackfeet Indians who were brought here by Louis W. Hill, chairman of the board of directors of the Great Northern Railway, sang into his recording instrument.

The singing took place in the loft building at No. 61 West Thirty-seventh street. At first the Indians were inclined to be wary of the phonograph, but finally were induced to sing. A few minutes later they heard the reproduction of their own voices, and for the rest of the afternoon were eager to sing into the recording instrument.

Mr. O'Hara, who is a well-known tenor singer, and several musical critics who were present were particularly interested in the melody and rhythm of one of the Blackfoot songs known among the Indians as the "Song of Home."

Chief Big Top, who acted as interpreter for the Indians, said, in speaking of the "Song of Home": "It is the song my people have sung for ages when leaving home either for long trips on the hunting trail or on the warpath. They sing it because the words and music express the lonely feeling they have when they are away from the mountains, and it makes them think of home."

The records of the songs will be sent to Washington and filed in the Government archives.

UDELL CO. MAKING SHIPMENTS

As Usual—Not Affected by Flood Conditions in Indianapolis—Everything Fast Getting Into Shape in That City.

The flood conditions in Indianapolis, Ind., have been greatly exaggerated in the daily newspaper reports all over the country, and we are informed by Sales Manager H. T. Griffith, of the Udell Works, located in that city, that they have suffered no embarrassment because of the high water.

The Udell Works have not been inconvenienced in any way, and they are in shape to fill orders for talking machine cabinets with the usual promptness now as they were before the flood.

While parts of the city of Indianapolis have suffered great property loss, there has been practically no loss of life, and things are rapidly getting into condition. The only hold-up early in the month was on the part of the railroad freight depots in accepting freight only for certain points, but this has been straightened out. Fortunately, the citizens of Indianapolis have responded liberally to the call for help, and no outside money will be required to get things back into their regular channels.

ISSUE HELPFUL PUBLICITY.

By the time this issue of The World is published, the Columbia Graphophone Co. will have issued two new pieces of literature for distribution among Columbia dealers. One of these new publications will be a four-page folder devoted to a detailed description of the new Columbia reproducer No. 6, which will be found useful for salesmen. Another new publication to be issued by the advertising department of the company consists of a 16-page "stretcher" giving a partial list of the operatic and concert stars who are members of the Columbia recording staff, accompanied by a partial list of each star's records. This booklet shows illustrations of the various artists.

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

International Correspondence Schools
Box 918, Scranton, Pa.

Columbia product never disappoints. It is the product that the public wants—before they buy, and by the same token after they buy, too. More on that subject in "Music Money," a free book you ought to have.

DEVISING ADEQUATE RECORD STOCK SYSTEM.

Customers of the New York Talking Machine Co. Have Been Experimenting Most Successfully with a System Endorsed by That Institution Which Was Thoroughly Tried Out Before Being Presented to the Trade—The System Is Explained Herewith in Detail.

One of the talking machine dealer's most important problems in the handling of his daily business is to devise an adequate record stock system that will permit him to tell at a glance just which records are selling best and which records to place orders for when the proper time arrives. Many systems have been devised, having for their object the convenient and adequate keeping of the dealer's record stock, but the majority of these have failed when put to the test, while others have been too expensive or necessitated the dealer devoting too much time to their many details to prove of value to him in his year's work.

For some time Victor dealers who are clients of the New York Talking Machine Co., 81 Chambers street, New York, have been experimenting with a system endorsed by this firm, and which was thoroughly tried out by this company before being presented to its clients. Those dealers who have given this system a practical test are heartily enthusiastic over the results achieved by its use, and the moderate prices of the equipment used has contributed toward creating the general demand by Victor dealers for full particulars of this system and what it accomplishes.

V. W. Moody, assistant manager of the New York Talking Machine Co., who is in charge of this special work, has rendered valuable assistance to those Victor dealers who have inquired for details, and his explanation of the merits of the system has invariably resulted in a dealer expressing enthusiasm over the business possibilities and profitable features of the system.

Mr. Moody had promised *The World* some time since that he would explain his system in detail to the readers of this publication, but owing to the unprecedented rush of his business and his recent call as a juror, Mr. Moody has heretofore been unable to spare the time necessary to give a proper outline of this record stock system.

When a representative of *The World* called to see Mr. Moody this week, he found him busily engaged in dictating a letter answering an inquiry relative to this record stock system, and although Mr. Moody was averse to its publication and stated that his letter was a personal one, *The World* persuaded him to permit it to be published, as its contents would undoubtedly prove interesting and informative to our readers. This letter, dated March 20, and addressed to a personal friend, a Victor distributor in the West, is substantially as follows:

"I am attaching hereto a leaflet, which you probably have seen before, describing briefly the system which we have found best for all dealers, large or small. There is not one dealer in five hundred whose business is large enough to justify him in the expense or time of keeping his stock record in books. This system is entirely too cumbersome. Let us take, for example, a small dealer whose

initial order amounts to about 500 records out of the approximate 3,000 now listed. With my record stock book I can at a glance pick the 500 very best selling numbers in the catalog, and the selection is based entirely upon the actual selling merit of each selection. If a dealer sells 50 per cent. of his initial shipment without keeping a definite record of what he has sold, he has lost 250 of the best numbers in the entire catalog. Therefore we tell a dealer to buy the heavy stock envelopes and number a stock envelope for each selection that we

Rack Used in Record System.

have sent him, and as fast as he sells it, give us a replacing order, emphasizing the fact that it will not be possible for him to find other selections as good as those which we previously supplied him.

"Another argument: You sell a dealer a complete catalog of records and the volume of business which he subsequently does is not sufficient to justify him in continuing his investment of approximately \$2,000, and your opinion and his is that he should reduce his record stock. Unless some good distributor modernizes the Good Samaritan, the only way that this dealer can reduce his stock is through his record sales. The natural inclination of the majority of dealers having no actual knowledge of comparative record values would be to simply drop from his stock any records sold; but bear in mind that the records easiest sold are the very ones which he should by all means continue in his stock. The sensible and profitable thing for the dealer to do is to eliminate the dead wood. Now, then, how is he going to do it?

"The dealer has a stock envelope numbered for each selection. The record in this stock envelope

is in his rack. A customer enters his store, hands the dealer a list of a dozen selections he wants played. Taking from the rack the twelve envelopes, he removes the records, plays them for his customer, the customer buys some of the twelve played and some are left to be returned to the bags. The empty bags naturally are the dealer's order to be placed with the distributor. Assume that the dealer has fifty empty bags at the time of placing his order. What could be easier than to take a rubber dating stamp and place the date of his order on each bag? You see, he must handle his bags in making his order, and again when the records are received, as well as when demonstrating records for his customers. Consequently, there is nothing in his establishment that he bumps into quite so often as his stock envelopes. So I have tried to make that his Bible, prayer book and hymnal, concentrating all stock data there. By so dating his envelopes he will soon see where he was ordering five or ten of an old or standard selection in a month, and the wise dealer ultimately orders a thirty-day stock and is prepared to take care of his customers.

"A dealer should go through his stock periodically, looking at the face of each envelope with a view of ascertaining each number's worth. If there are no dates on the envelope showing orders, the dealer can easily see what the dead wood is, and I recommend that he buy a quantity of colored gummed labels to paste on the edge of the envelope, distinctly showing the dead wood. Either in demonstrations in his store or in sending records to his customers' homes on approvals, the wise man will offer 25 per cent. of A-1 selections and 75 per cent. of honestly good selections, chosen from the envelopes with the colored sticker on the edge. When reaching this point it is now an easy matter for the dealer to systematically and profitably eliminate records from his stock.

"Time and again I have challenged dealers and distributors to tell me the five best selling records in the catalog, and have proven that they were not in a position to know how good a selection was, and you can just bet that the same dealer or distributor was unable to know which are the poorest records in the catalog. Without a definite knowledge of this sort, how intelligently can a dealer or distributor balance and adjust his stock?

"I won't apologize for the length of this letter, as you have brought it upon yourself; but I trust that some of the things that I have said will prove of interest to you."

A prominent local dealer, when commenting on the merits of this system, remarked as follows: "This is the most opportune time of the year for dealers to avail themselves of the information given in outlining this system and look over their stock and put it in good condition, for heretofore the manufacturers have offered exchange privileges on "cut-out" records during spring and summer months. With a proper system, a dealer can place exchange orders to any amount with a certain knowledge of securing salable stock."

A splendid opening exists for some one to start a cold storage plant for the stocks of firms which do not advertise.

It doesn't take a trained ear to discover that

The Blue Amberol

is a four-minute record unequaled in tone, pitch and strength by any other record made.

It *shouldn't* require any particular keenness on the part of any phonograph dealer to discover that this record is developing a momentum in sale as remarkable as the record itself.

The combination of a rapid-selling product and a live business man means just this: Big profits.

NEW YORK, APRIL 15, 1913.

THE Oldfield Bill, according to reports from Washington, is to be introduced anew at the special session of Congress which convened this month. In view of the special nature of the matters before this session it is very likely to go over for consideration to the regular session of Congress which meets in December.

Representative Oldfield, as will be seen in some remarks made elsewhere in this issue, has experienced no change of heart in his efforts to render innocuous price maintenance based on patent rights and which has aroused unanimous opposition on the part of manufacturers throughout the country.

Talking machine men desiring to protect their interests must be on the alert in their opposition to this proposed legislation which would demoralize prices, and undermine the stability of the industry.

The same vigorous methods of procedure which helped to prevent this bill from receiving final consideration at the last session of Congress, must be pursued and legislators enlightened as to the damage which this Oldfield Bill would do toward demoralizing fixed prices and retailing methods generally.

It will pay to be constantly on guard.

SPECIAL reports received from various parts of the country indicate that the loss of life was not nearly as great as was first predicted in the great floods throughout the West.

The first reports stated that several thousands of lives were lost in the cities of Dayton and Columbus, but, in the last analysis, the deaths have been reduced to a comparatively small number.

Of course, the property loss is severe and it must necessarily be a hard jolt to the sections of the country directly affected. Also, the loss of so much property must have an effect upon interests outside as well.

The special reports which we have received from various parts of the country directly from talking machine men indicate a much less loss than was reported at the outset, and to all of those who have suffered The World extends sympathy.

However, with bright, sunshiny weather and everything back to normal shape the estimated losses will dwindle very materially.

In the meanwhile, there are thousands of people who have been made homeless, and to them immediate help must be given.

Of course, it will be sometime before business conditions readjust themselves so that things will move along on a normal basis, but the American spirit is well illustrated in the action of the residents of Dayton. They face the conditions with the same spirit which was shown in San Francisco after its visitation by earthquake and fire.

ONE of the chief assets of the successful salesman is a courteous bearing founded upon a generous fund of forbearance. Courtesy does not cost anything, and yet what great returns it brings! Everyone can readily pick out some certain instance where the courtesy of a salesman has prevailed upon them to purchase some article that they had full intentions of refusing when it was first shown, and such a sale can be made in any line of business no matter what the article offered may be.

In a talking machine store, not a thousand miles from Madison square, recently, a lady was endeavoring to choose a fresh assortment of records. The salesman, unfortunately, instead of aiding the lady, rather hindered her in her efforts to make a pleasing selection, and acted as though he had a three-year grudge to nurse. He'd put a record on the machine when requested, and then wander off to view the passing crowd from the doorway. When one record was finished, he put on another, with barely a remark to make. The result was that the lady decided she did not want any of the records and went out only to turn into another talking machine store down the street.

There the young salesman was all attention. He put the record on the machine, and while it was playing had frequent comments to make. If the customer did not seem impressed with the first verse, he took that record off and put on another one. In all he tested fully three dozen in less than an hour and succeeded in selling over two dozen of them, the lady stating as she went out that she would return within the week for more records to take to her country home.

The first salesman, asked for an explanation of his indifference, said: "Oh! What's the use. They have ears to hear the records, and if the music don't suit, all my talking won't change it. If I bring out more records than were asked for, it generally means only the work of playing them and then replacing them in the rack. Besides, when you offer advice to a woman, she is as liable as not to say you're 'too fresh.'"

We said nothing in answer, did not even remark what we had witnessed in the second store, but a smile enveloped our features as we thought of Bobbie Burns, when he wrote: "Would some power the giftie gie us, to see ourselves as ithers see us."

IN view of the increasing sales of talking machines on instalments, or time payments, it is obvious that the most persistent efforts should be made at all times in training purchasers so that they meet their payments promptly. It is certain if a customer feels that indifference is manifested towards him by the merchant from whom he makes a purchase he will very readily allow the regular instalment periods to swing by without a call at the warehouse to make his payment.

There is nothing like a perfect system which enables the merchant to rely with accuracy upon a certain amount of instalment money each month. He knows where he stands at all times. Then the man who insists upon prompt payments on the part of his customers is viewed by the manufacturers who sell him as a safe and sound business man.

Good collections invariably mean a good business and the man who compels his customers to live up to their obligations is adopting plans which will very materially ease for him the wearing strain of business.

In order to make good collections it is not necessary to be offensive to customers, but a fixed policy in the collection department is certainly one of the best features which a business can incorporate in its working system.

Good collections mean a good bank account, and that's a mighty convenient asset to have.

There is no department of the business which requires closer scrutiny and consideration than that of collections—if a business is to succeed.

IT is gratifying to acknowledge words of commendation from subscribers not only in this country, but from all parts of the world regarding the special merits and value of The Talking Machine World. Recently we have received a large number of communications appreciating the broad policy of The World as well as its uplifting and helpful tendencies in all branches of the

talking machine trade. One of the many letters received from faraway points expresses the general tenor of many—that from the Chivers Co., of Christchurch, New Zealand, which reads: "We congratulate you on the up-to-dateness of your journal. We find it contains almost everything we want to know in connection with the talking machine business. We extend our congratulations and good wishes." It is needless to say that such tributes please, for it has been the aim of *The Talking Machine World* from its inception to "spread the light" and to be of help to its subscribers in every way possible.

PIANO merchants throughout the country are manifesting keen and practical interest in the talking machine as an adjunct to their business, and those who have taken on this line and have placed it in the hands of a competent manager are well satisfied with the move.

We have long maintained that the talking machine department can be made a most profitable feeder for the piano merchant, for it brings to his house a line of prospects for pianos that it is difficult to secure in any other way.

This viewpoint is emphasized very effectively in a book recently gotten out by the Columbia Graphophone Co., entitled "Music Money," in which it is shown that piano houses that have well established talking machine departments have found that they do not detract from the piano business, but, on the contrary, aid it most materially.

This was demonstrated in a most emphatic way in the retail store of F. G. Smith, who handles the Bradbury pianos in Brooklyn, N. Y. It is announced that in one week recently the piano sales of F. G. Smith were increased something like six-hundred dollars, all of these sales being made to owners of Columbia instruments, whose presence in the store was due solely to the fact that they were there buying the Columbia product.

This is only one instance of a great many that have come under our notice recently where the talking machine department has proven a most potent trade builder for a piano house. The two departments work in harmony, and each will prove valuable and profitable where progressive methods of management and exploitation are enforced by those at the head of the business and their assistants.

THERE is a moral for the "talker" man as well as others—one that needs no elaborate explanation—in the following item clipped from a paper in a small town in Oklahoma:

"A farmer carrying an express package from a Chicago mail-order house was accosted by a local merchant. 'Why didn't you buy that bill of goods from me? I could have saved you the express, and besides you would have been patronizing a home store, which helps pay the taxes and build up this locality.' The farmer looked at the merchant a moment and then said: 'Why don't you patronize your home paper and advertise? I read it and didn't know that you had the stuff I have here.'"

The point is this: National advertising on the part of manufacturers of musical instruments is of little avail unless it is

supplemented on the part of the local merchant by advertising in his home paper. Merchants handling talking machines of national reputation should acquaint the people of their community with the standing and prestige of these products. With this added to the advertising campaign of the manufacturer in the national magazines there is bound to be created a selling force that must be prolific of best results to the local merchant if he takes advantage of it.

THE simplification of procedure in patent litigation is something long desired by manufacturers and inventors—in fact, by all who have to do with the initiation and development of ideas in the mechanical and manufacturing fields. The new equity rules which have been prepared in connection with patent causes will unquestionably reduce the cost and time involved in patent suits. One of the rules states that "in the trial of a patent cause, whether in open court or by deposition, or partly in each way, only one expert witness shall be allowed to each side, unless leave shall previously be obtained from the court on motion made and cause shown."

Whenever in the opinion of the court intricate technical or scientific questions of fact are involved in the cause, "the court will upon consent of all parties, appoint some disinterested person skilled in the art to act as an assessor." This assessor is to sit with the judge at the hearing of the evidence, and is to help the court in its deliberations. In this manner, the court will be able to appraise conflicting testimony properly.

The voluminous testimony which has been an unfortunate feature of patent litigation of the past is to be cut down. When testimony is taken by affidavit "the witnesses shall not give their opinion as to the meaning of any patent claim or specification, but their testimony shall be strictly confined to an explanation of the operation of relevant arts, processes, machines, manufactures, or compositions of matter, and of the meaning of terms of arts or science and of diagrams or formulae." This move will be heartily welcomed.

IN the business world the chief topic of discussion this month has been the new tariff bill introduced in Congress by Mr. Underwood in behalf of the Democratic Administration. In this measure many radical changes are made in the various schedules of the present tariff law. The duty on talking machines is reduced from 45 to 25 per cent., while musical instruments and parts are reduced from 45 to 35 per cent.

The most radical reductions, however, are on the necessities of life, and wool, sugar and leather have been placed on the free list. There will be strong opposition in behalf of the farmers and the sugar interests against the removal of this tariff, and it is not at all unlikely that before the bill passes both Houses there will be many changes made. President Wilson, however, is determined that the bill shall go through in its present form. So we shall see what we shall see.

The business interests of the country have taken the proposed tariff changes very calmly—in fact, they have been largely discounted.

See that you get 17 envelopes in your albums. A low price does not mean much if a lesser number of envelopes are used and if inferior materials and workmanship are used.

KEEN-O-PHONE

Keen-O-Phone Machines and Records Now

THE merits of the Keen-O-Phone are distinctive of leadership—the advantage of such an instrument appeals at once to the discriminating intelligence of the dealer. ORIGINALITY is the keynote of this instrument, it possesses a tone beyond comparison and unequalled in any other; it embraces the finest of mechanical skill and human ingenuity; its durability is not surpassed in any other instrument; its designs are the most euphonic and artistic ever brought out in talking machine construction.

The Keen-O-Phone Company manufactures every part that enters into the construction of this instrument and is manufactured under patents owned and controlled exclusively by it.

EXCLUSIVE FEATURES

The Keen-O-Phone will play any make of disc record. Keen-O-Phone records are playable with the Keen-O-Point needle only, thus eliminating the annoyance of changing the needle after each record has been played. The rasp and scratch so commonly found in talking machines has been admirably overcome in this instrument, the tone can be modulated to suit the composition or acoustics of a room by turning the key in the tone arm. The principle as used in the Keen-O-Phone construction of blending and clarifying the tones is a further development that places this instrument in a position unattained by others. The Keen-O-Phone sound box exerts a very light pressure on the record, thus eliminating the wear and tear on records; as a result, the records last longer and give better results.

Keen-O-Phone instruments are built exclusively in cabinet styles and it has been said by competent judges that they are the most artistic ever offered. In the smaller styles of instruments, the inverted horn construction is of special merit, the horn being held in position under tension. The principle is to produce resonance such as the sound board in a piano. The larger styles are featured with the horn contained in the lid of the casing. The principle followed is to drive the sound upward, according to the natural law of acoustics.

Travel the wide road, it spells success; the store that carries the latest things is always u
feel proud of the Keen-O-Phone products, as they are all, if anything, more than what the

Keen-O-Phones are built of the finest materials and are furnished in styles to meet all class

IMPORTANT VICTOR LETTER

Regarding the Quotation of a Confidential Discount by a Druggists' Paper in Connection with Sales of Victor Talking Machines.

The Victor Talking Machine Co., Camden, N. J., sent out to Victor dealers, under date of April 7, the following letter, which fully explains itself:

"With the March issue of 'The Voice of the Retail Druggist,' a trade journal published, as we understand, in the interests of the American Druggists Syndicate, was sent a green slip quoting a confidential discount of fifteen per cent. (15%) off the regular list prices of the Victor Victrolas.

"This is unauthorized, and if The Voice Publishing Co., which publishes The Voice of the Retail Druggist, or the American Druggists Syndicate, makes any sales at such a discount, it makes them liable for a suit for injunction and damages and profits, as such unauthorized sale will be an infringement of our various patents. Also, the people who buy these machines will make themselves liable for such a suit.

"When this unauthorized offer of a discount was brought to our attention we had our attorney call upon The Voice Publishing Co. and the American Druggists Syndicate, at Long Island City, N. Y., explaining the situation fully to them, and demanding that this unauthorized confidential offer of a discount be discontinued, advising them also that they were liable for a suit for damages and injunction. One of the officers of The Voice Publishing Co. referred our attorney to their attorney, and the matter was again discussed thoroughly, and The Voice Publishing Co. was advised by their attorney that the offering and selling the Victor Victrolas at such a discount was unauthorized and illegal, and could be made the basis of a suit for damages and injunction.

"We have their assurance that it will be discontinued at once, and that they will also send to the members of the American Druggists Syndicate a notice withdrawing and discontinuing such offer of a discount, and which notice will be given the same publicity as the offer.

"Please bear in mind that every purchaser of one of these machines at this discount from The Voice Publishing Co. is an infringer of the Victor Co.'s patents, as well as the seller. Do not let this circular bother you in the least, as it can do no real harm."

ANOTHER TALKING MACHINE DOG.

Gideon B. Welch, of Torrington, Conn., Judge of the Court of Common Pleas for Litchfield County, has a musical prodigy in Jack, an English bulldog, which is called to its meals by a selection played on the graphophone. The dog will no longer heed its master's whistle, but whenever the graphophone plays the "The Poet and Peasant" overture, Jack will respond if within hearing distance. Jack pays no attention to any selection except "The Poet and Peasant."

The Republic of Colombia, S. A., has reduced the tariff on talking machines and as a result many large export orders have been received.

MME. PASQUALI MAKES RECORDS.

Visits Columbia Laboratory in Toronto and Handles the Dies, Raw Material and Press Like a Veteran Record-making Expert.

(Special to The Talking Machine World.)

Toronto, Can., April 10, 1913.

A recent visit to this city was Mme. Bernice de Pasquali, the famous coloratura soprano of the Metropolitan Opera House, New York, who called at the laboratory of the Columbia Graphophone Co. Pictured herewith, Mme. Pasquale is pressing one of her exclusive Columbia records in the Columbia factory in this city. She displayed the

Mme. Pasquali in the Laboratory.

greatest interest in the manufacture of her records and was not content with merely having the photograph taken, but insisted upon working out every detail herself without any aid. She handled the dies, raw material and press like an experienced workman. Mme. Pasquali's records are exceedingly popular in the Dominion.

MISJUDGING ABILITY TO BUY.

Reflections of the Man of Experience That Are Worthy of Consideration.

"I have traveled for quite a number of years and have generally been considered a very successful commercial traveler," said one of the craft the other day. "But one of my shortcomings, as I see it now after years of experience, is that I misjudged my customers' ability to buy. I was afraid I would overload my friends, and instead of striking a man for a \$3,000 order, I would figure it out that he could not use half that amount!

"I recall a number of instances where I actually undersold merchants and lost business for myself. I recall one case where I sold a well-rated merchant \$1,800 worth of goods, spring delivery. What

was my surprise to discover later that a competitor had since visited him and sold him \$4,000 worth right in my line! In other words, he loaded that merchant up so he was obliged to make extraordinary efforts to unload. As a result he sold twice as much, and now my competitor has his exclusive patronage."

EDISON'S SON AN INVENTOR.

Floating Bomb Explodes in His Hands—Mother Intervenes.

Theodore Edison, the fourteen-year-old son of Thomas A. Edison, was experimenting with explosives one day last week in an effort to invent a bomb that would float about on the water and explode with tremendous effect whenever it happened to be touched by a hostile vessel. Friendly vessels would, of course, avoid touching the bomb.

To Theodore's mind the best way to shape up the device would be to enclose it in an air-tight bottle and put the bottle in a casing of cork, so that it would be sure not to sink. He had proceeded as far as mixing the explosive and depositing it in the glass bottle when the explosive went off. Theodore had the bottle in his hand and the pieces of glass penetrated his hand.

The boy is not going to suffer permanently from his wounds, but Mrs. Edison has decreed that his future experiments with explosives shall be under the supervision of his father.

RAGTIME CHARMS ELEPHANTS.

Verily, music hath charms not only to soothe but exhilarate the savage breast, judging from the following story from the New York Mail:

"A ship with a cargo of forty elephants was anchored off the coast of Zanzibar in a perfectly smooth sea. A phonograph belonging to the sailors began playing 'Everybody's Doing It.' Gradually the ship began to roll back and forth, and soon was dipping dangerously, as though in a violent storm. There was a general alarm on board, and the captain ordered an investigation of the remarkable phenomenon.

"It was found that the forty elephants were swinging their trunks in unison with the music and swaying back and forth. The huge beasts seemed to be enjoying it immensely. The ship was riding light, with no other cargo, and the rolling of the vessel became so great that there was danger of it turning clear over.

"The music was stopped, the attendants hurried down, and with much shouting and thumping managed to stop the dangerous amusement."

TALKER REMOVES FEAR OF OLD AGE.

In these days of canned singing carried to mechanical perfection old age must needs be robbed of much of its terror for the artist who sees approaching the fateful day of retirement. Sir Charles Santley, who recently celebrated his seventy-ninth birthday, has just made a new series of records for talking-machines. More than that, so pleased is he with the results that he has written to the manufacturers to say that he is quite willing that his art should be judged by these records.—Musical American.

GREAT ACTIVITY CONTINUES ON PACIFIC COAST.

Opening of New Tivoli Theater Helped Business—Edison Disc Line in Oakland—Pacific Phonograph Co.'s Big Trade—Shortage of High Priced Victrolas—Change in Stockton—Sherman, Clay & Co. Reports Increased Victor Business—Other Gleanings.

(Special to The Talking Machine World.)

San Francisco, Cal., March 29, 1913.

While some complaints have been heard in some lines of business the past month, the talking machine men have not been among the contributors. They report great activity in their lines. And not only is business active in the city, but in the country towns as well. The travelers continue to send in large orders from all over their territories. Things are looking brighter now than they did a month ago. Then some of the agricultural sections of the State were beginning to feel the effects of the continued dry weather when they were needing rain, but the heavy rainfall in the meantime has helped out wonderfully.

The opening of the new Tivoli Theater in San Francisco this month was an event of more than ordinary interest, and the grand opera season gave great impetus to the sale of operatic records, and probably to a certain extent stimulated interest in machines.

To Handle the Edison Disc Phonograph.

Several new departments have been opened on the Coast recently, and others are preparing to open in the near future. For instance, it has just been announced that Taft & Pennover, of Oakland, who operate one of the largest and most exclusive department stores in the West, are going to put in an Edison disc phonograph department. They have placed an initial order for machines, and as soon as a manager has been appointed, will send him East to make a study of the best equipped and appointed department, with the intention of making theirs compare favorably with the best departments of the kind in the United States. Special feature will be made of the Edison art styles, ranging in price from \$275 to \$450.

To Handle the Boston Co. Line.

The products of the Boston Talking Machine Co. of Boston are now being distributed in California by Peter Bacigalupi & Sons. A sample of the little wonder machine reached here some time ago and has attracted considerable attention on account of its size, price and the fact that it will play either Victor, Columbia or Phono-cut records. Peter Bacigalupi, Jr., expects the little wonder to appeal strongly to people who are going on outings and all kinds of trips, as it can easily be carried in a suit case. The Bacigalupi department has been greatly improved lately by re-arrangement and the installation of another demonstration room. Peter Bacigalupi, Sr., reports a steadily increasing demand for the Edison phonograph business.

Peter Bacigalupi spent several days the first part of the month on the Leon F. Douglass ranch in Sonoma County, which is one of the favorite retreats of local talking machine men.

Pacific Phonograph Co. Expansion.

A. R. Pommer, manager of the Pacific Phonograph Co., says they no longer need cry because of a shortage of goods. A shipment of 50,000 disc records has just arrived and no more difficulty in getting enough records to supply the demand is anticipated. Improvements are still in progress in the Pacific headquarters. Now a reception room is being built on the fourth floor between the offices and the stock rooms, which will improve the general appearance decidedly. The travelers for the Pacific Phonograph Co. are both on the road, sending very satisfactory orders. E. L. Sues is calling on the trade in Washington and J. E. McCracken is visiting the dealers in the San Joaquin Valley.

W. S. Gray's Energetic Campaign.

W. S. Gray, local manager for the Columbia Graphophone Co., is continuing his trips out of town in various directions, calling on the Columbia dealers, where there are any, and making arrangements for new agencies. He is in Sacramento this week, stirring things up a little. At headquarters Wholesale Manager F. R. Anglemeier reports as much business as he can handle. They are now

anxiously awaiting the arrival of a sample of the Grand Grafonola, a shipping receipt for which has already arrived, giving assurance that it will be here within a few days. Much interest has already been taken in the new machine, even before its appearance in this city, and while the price will naturally restrict its sphere of popularity for high-class trade it will undoubtedly fill a real demand.

Take on Columbia Line.

Merrill & Dow, of Sierra Madre, Cal., are now handling the Columbia products. They have fitted up a neat department and are having many calls for machines.

Sherman, Clay & Co.'s Victor Business.

A. G. McCarthy, of Sherman, Clay & Co., reports a splendid Victor business the past month, both wholesale and retail, neither machine nor record business having fallen off much since the holidays. He notes a tendency among dealers to stock up quite freely and to push the higher-priced goods.

Shortage on High Priced Victrolas.

Manager Scott, of the Kohler & Chase department, reports a shortage on higher-priced Victor Victrolas, the demand for which here is steadily increasing. He says record business has been fine the past month, especially operatic selections, since the opening of the grand opera season. He says Tetrizzini and Mary Garden records have taken the lead in number of sales.

Pleased with the Business Done.

J. J. Morgan, manager of the Emporium talking machine department, is well satisfied at the amount of business being done in his department. He feels that the location on the third floor is somewhat of a handicap, but he says, so far there are no complaints on his part. He is having very good success with the Wood push-button record cabinets which are made in Los Angeles by the Wood Manufacturing Co.

Davis Sells to Rogers & Schroeder.

E. R. Davis, of Stockton, Cal., has sold his exclusive Columbia business to Rogers & Schroeder, a new firm which has just been organized in that city. Mr. Davis has not made other connections as yet, but it is reported that he is looking around for a suitable location with the intention of re-engaging in business.

Warren Opens in Pendleton.

H. M. Warren recently opened for business in Pendleton, Ore., carrying a general stock of musical instruments, including talking machines.

S. D. Schoenfeldt, of Red Bluff, Cal., was a recent visitor in San Francisco.

SOUND CARRIES FAR.

"The Stentor" is the Name of a Talking Machine Which is Being Used for Open Air Concerts in England with Great Success.

A talking machine which can be heard at a distance of a mile has been much discussed in England. It is called "The Stentor" from the Greek

The "Stentor."

word, meaning "herald." In this connection the illustration herewith will be of interest. It appears that an ordinary talking machine disc is used, the sound being amplified to a great volume partly by using an immense horn and partly by using compressed air forced through the horn. A portable air compressor, driven by an electric motor, makes possible the giving of open-air concerts and lectures.

IN the clinches you can rely upon the Ditson Victor Service. Profits are contingent upon *our fast work*—and we know it.

STOP saying to your customers: "We haven't got it," because you can get it from **DITSON**.

FAST Victor service is our aim and that we hit the mark is proved in our rapidly growing clientele of dealers.

ALL Victor styles, records and parts, with a complete line of albums, cabinets and needles.

WE specialize upon Victor goods exclusively, and correspondence with dealers desiring the best in Victor service is invited.

Oliver Ditson Company, Boston, Mass.

THE TRADE IN BOSTON AND NEW ENGLAND

JOHN H. WILSON, MANAGER, 324 WASHINGTON STREET, BOSTON, MASS.

(Special to The Talking Machine World.)

Boston, Mass., April 10, 1913.

The employes of the Columbia Co. have organized a club for business and social purposes, and it will be called the Business-Building Club of the Columbia Graphophone Co. Its president will be Andrew T. Atwell, who is the manager of the Dictaphone department; James Halohan will be vice-president; Jack Shaughnessy, treasurer, and William E. Getchell, secretary. Last night the club held its first social meeting at the Hotel Thorndike, and the twenty-eight members had an unusually pleasant evening, several well-known entertainers being present to help out in the enjoyment of the occasion. The club has adopted a constitution and by-laws, and its prime purpose will be the study of the science of business building so that its members may have a clearer understanding of the natural laws governing success in life; also the promotion of social and athletic activities. Meetings will be held at 7 p. m. on each alternate Monday.

Remarkably Successful March.

Manager Silliman, of the Pardee-Ellenberger Co., says his office had a remarkably successful March and there are strong evidences that April will make an equally good showing. The Edison disc phonographs have taken immediate hold with the public and the new Amberola styles are in constant demand at the quarters.

Planning Baseball Team.

The boys of the Eastern Talking Machine Co., now that spring is about here, are planning for a good baseball team, and they soon will be ready to arrange competitive games with other teams.

Equipping Schools with Victors.

The school work of the Eastern Co. continues apace with no interruption, and more and more schools are being equipped with Victors. In many of the Brookline schools Alice Shaw Faulkner's text-book, "What We Hear in Music," has been adopted and Victors are used for illustrative purposes. Both Cambridge and Malden schools have lately received Victor outfits, and they are proving of great benefit to the pupils in enlarging their sphere of knowledge of music.

Good Time at Talks Club.

At a gathering of the Talks Club held the early part of the month at the rooms of the Eastern Talking Machine Co., 177 Tremont street, there was a most interesting program carried out. Walter J. Van Brunt gave a number of favorite songs and told some amusing stories. J. J. Quigley, Fred Bond and Miss B. Blair helped immensely in the entertainment with a collection of ballads, old and new. The playing of Eddie Collins, the king of the banjo, proved to be a great hit. Following the program, which was enjoyed by a good sized company, a near-by resort was visited for

the balance of the evening, and then it was that the company discovered what a fluent story teller Mark L. Read was.

Victor Outfit for Lepers.

The Victor department of the Henry F. Miller Co. had a very good March, most of the business coming in in a rush the first half of the month. A recent important sale was of a large outfit for the use of the lepers on Penikese Island, which will of course give a lot of pleasure to these isolated people. Another sale of interest was a complete outfit to Miss Theresa Maxwell Conover, of "The Governor's Lady" company, which played a successful engagement at the Hollis Street Theater a short time ago.

Some Celebrated Visitors.

Mr. Marshall and Mr. Pendorf, who are playing on the Keith circuit, dropped into the ware-rooms of the Eastern Talking Machine Co. a short time ago and entertained the sales force by playing a number of their popular numbers such as "Be My Little Baby Bumble Bee," "Teasing Moon," "Sugar Moon," "Sometime," and other pieces.

The great Caruso never misses an opportunity of visiting the Eastern's headquarters when in town, and when he sang lately at the Boston Opera House he paid his usual call. Other distinguished visitors about the same time were Zanatello and his wife, Maria Gay, who have made themselves immensely popular at the Boston Opera House this season, and Miss Edith Helena, prima donna of the Aborn Opera Company, which is just beginning its season at the Tremont Theater, next door to the Eastern headquarters. This company promises to have a splendid season.

Edison Business Moving Smoothly.

George Lincoln Parker, in the Colonial Building, has found a good sale not only for Victor goods this past month, but for the new Edison disc phonographs. The difficulty he met with for the past few months through inability to get enough records has been more or less overcome, and the Edison business accordingly is moving along more smoothly. Charles Trundy, who looks after the talking machine business for Mr. Parker, was over in Orange a short time ago inspecting the Edison plant.

Death of Noted Priest Regretted.

The late Mgr. Denis O'Callahan, the popular South Boston priest, will be considerably missed by the "boys" of the Eastern Talking Machine Co., for he was a regular caller. Several of them attended his funeral.

Largest School Business.

The school business of the Columbia Graphophone Co. was the largest in March that the company ever has had since the proposition became a

recognized feature of the Boston headquarter's business. About twenty-five schools around the suburban sections of the city lately have been equipped with phonographs, largely thanks to the Gibson fund, some of these schools having used all of their apportionment from this fund for machines and records. The gymnasium of the Girls' High School is one of the latest of the large schools to be equipped with an outfit.

David Broderick Married.

David Broderick, the traveling salesman for the Columbia Co., who before associating himself with this large concern was located in Brockton, was married lately to Miss Tyndall, daughter of Mr. Tyndall, of the large Brockton house of Cook & Tyndall.

To Popularize the "Grand."

James F. Kerr, lately of the Boston Opera House, has associated himself with the Columbia Graphophone Co., and he will give his entire attention to popularizing the \$500 "Grand." A neatly printed circular is being sent to all the leading Back Bay families announcing this instrument and proposing that a recital on it might be a welcome part of some forthcoming social function to be given under the supervision of Mr. Kerr.

A carload of Columbia goods was sent to the Bon Marche, a large department store at Lowell, the other day, and the large consignment of outfits attracted an immense amount of attention as it passed across the city. Every kind of a product was included in the consignment, from the new "Grand" to the revolving window discs. Once the goods were placed on exhibition there was the greatest interest manifested throughout the city of Lowell.

Chickering & Sons Activity.

Ubert Urquhart, manager of the Victor department of Chickering & Sons at the new Fremont street warerooms, is getting his share of trade. Some of the more expensive outfits lately have been installed in Back Bay homes.

To Become a Benedict.

Fred R. Erisman, of the Columbia Graphophone Co., is soon to follow in the matrimonial wake of his brother Arthur, the manager of the Boston branch. On April 26 Fred will take a life partner in the person of Miss Nellie Brown, of Wilmington, Del. Just now Fred is looking around the suburbs to find a suitable place to begin house-keeping.

Producing Good Results.

Andrew Y. Atwell has now been at the head of the dictaphone department of the Columbia Co. for about two months, and during this period this department has produced more business than at any other similar period since the dictaphone business was inaugurated. This has grown to be a very important adjunct of the Columbia's business

New Edison DISC Phonographs and Records

A large demand already exists and enormous sales are assured.

A limited number of Edison Disc Merchants have been appointed and the volume of business is phenomenal.

A few more Edison Merchants are being appointed in uncovered territory.

**THIS IS
YOUR MARKET**

In New England and in Eastern New York State live 4,000,000 families, approximately 14,000,000 people. Every locality has its quota of music-loving people; people who have already heard of the wonderful merits of the Edison Disc Phonographs and Records. These valuable prospects are easily turned into sales, meaning a Phonograph and some records at first, and some records every month. The opportunities for building a large and profitable business are without precedent.

**THIS IS YOUR
"MAN MEASURE"**

To be eligible as an Edison dealer requires a nominal capital, aggressiveness and clean business principles. You can easily acquire the routine details, and we will train you on the executive end. Co-operation and advice are included in our service without charge. Most wanted are brains—brains moulded quickly to new conditions. We want picked men, and only a limited number will be appointed. Grasp this hint now!

This brief story should interest you. Write us for details.

THE PARDEE-ELLENBERGER CO., Inc.,

BOSTON, MASS., 65 Batterymarch Street

NEW HAVEN, CONN., 96 State Street

THE TRADE IN BOSTON AND NEW ENGLAND

JOHN H. WILSON, MANAGER, 324 WASHINGTON STREET, BOSTON, MASS.

and Manager Atwell is to be congratulated at the results attained.

Has Built Up Substantial Business.

Arthur C. Erisman, the Boston manager of the Columbia Phonograph Co., is one of the best-known men in the talking machine trade, and in his four years in Boston he has built up a large and substantial business. He has been in the talking machine business fifteen years, and, quick to recognize that there was a great future in this line, he bent all his efforts toward popularizing these wonderful reproducers of vocal and instrumental sound. Previous to coming to Boston Mr. Erisman was in Toledo, O., where he had been

Arthur C. Erisman.

sent to open up a new store. This was accomplished with such pronounced success that he was selected by the Columbia Co. as just the right man to manage the Boston office.

E. M. Chase Co. Activity.

The E. M. Chase Co., of Manchester, N. H., is one of the largest customers of the Boston headquarters of the Columbia Co., and its representative frequently comes up to Boston to purchase goods of Manager Erisman. Lately the Chase Co. has inaugurated a wholesale advertising system and it is using at frequent intervals a half-page advertisement in the Manchester papers. The company has sold a quantity of outfits since it established this department, and it has grown to be one of the biggest features of its furniture business.

H. R. Skelton in Vancouver.

H. R. Skelton, the traveling man for Thomas A. Edison Inc., who makes his headquarters in Boston, having a pleasant home at Roslindale, is at this writing at Vancouver, B. C., whither he was sent by the Edison Co. a while ago on a special business trip. He will take in several places before turning his face to the East, and his homecoming is not looked for before July 1.

Preparing for "Field Day."

The Eastern Talking Machine Associates are getting ready even thus early for their usual field day, which comes off on June 17. When it is time to announce plans more in detail the Associates will extend an invitation to their "rocking horse" friends to join in the day's festivities.

Victor Helps "Old Favorite Week."

The neighboring city of Melrose has called for an "old favorite week," and at the Globe Theater in that city a Victor machine has been installed so that the citizens might enjoy the wonderful singing of Geraldine Farrar, who is a Melrose girl, and who always has maintained her popularity there. The happy idea of giving the public

an opportunity to hear the friend of their youthful days was thoroughly appreciated by audiences that taxed the capacity of the picture house. The management used for records all the famous arias with which Miss Farrar is accredited, and the outbursts of applause after each number told the story. The machine was furnished by the Eastern Co., and operated by John Maguire.

TO HANDLE TALKING MACHINES.

The Bon Marché Department Store of Lowell to Feature Columbia Machines and Records.

(Special to The Talking Machine World.)

Lowell, Mass., April 9, 1913.

The Bon Marché, one of the leading department stores in New England, and occupying handsome quarters in this city, is now constructing a number of sound-proof demonstration rooms for the display of the products of the Columbia Graphophone Co. The Boston headquarters of the Columbia Co. closed this deal last week, and both parties are enthusiastic over the probable results to be derived from the exploitation of Columbia machines and records.

Particular attention is given to the construction and furnishing of the department that will display the Columbia line, as the Bon Marché caters to a fashionable clientele. This store is capitalized at over \$1,000,000, and to date its success has been emphatic in practically every line of merchandise. Extensive publicity in the Lowell newspapers will be used by the store, and a complete stock of machines and records will be on hand at all times. A Columbia "Grand" will be prominently displayed, and an energetic campaign for the new Columbia department has already been approved.

VOICE OPERATED TYPEWRITER.

A recent invention which is full of possibilities is the voice-operated typewriter, the invention of John B. Flowers, a young electrical engineer. By means of this invention it will be possible to dictate direct to the typewriter, the words being printed as fast as repeated to the machine. In other words, one will be able to record any thoughts desired to be expressed, without an intermediary.

EFFICIENCY DEPENDS ON THE MAN.

Systems Alone Do Not Ensure Success of Scientific Management—Human Qualities That Are Essential—No One Dominant Factor to Insure Perfect System.

James H. Collins, who has been about as vigorous and stirring an advocate of systems and efficiency ideas as any one, has lately been discounting some of what we might take to be his own logic. In a recent article in the Saturday Evening Post, on the net value of efficiency, he frankly admits that complete systems of scientific management, capable of improving any business, simply do not exist; that there is no universal pink pill for pale industries, and that none of the systems of scientific management will in themselves run a business.

There must be added experience, executive ability, knowledge of human nature, and quite a lot of what we used to call old-fashioned horse sense, to make things go right. In other words, we are beginning to open our eyes to the fact that a lot of this system and efficiency talk we have been swallowing is somewhat akin to the nature of the talks put up by patent medicine men—there are a lot of wild claims and extravagant assertions which attach an altogether too high a value to these elements, and do not give enough credit to the man behind the work.

It is the man behind it all, the personal equation, that is the big factor, after all, view it as you will. Business and industry are made up of many contributing factors. System is one, efficiency another, but neither of these is really a dominant factor, however important they may seem at times. The real dominant factor is man, and, without a man of the dominating kind behind it, no business will grow or prosper conspicuously unless it is by accident. Man is the big thing, while system and efficiency are but tools to help him along with his work.

After all, there are worse things than the friend who tells you about your faults. He does it to your face; your enemy keeps pecking at you behind your back.

FLOODS AFFECT CLEVELAND TALKING MACHINE TRADE

Although Not So Seriously as Was First Expected—Mrs. Mona Collister Dead—Eclipse Musical Co.'s Series of Monthly Recitals—Opera Season Helps Business in High Class Records—H. D. Berner Now Edison Jobber—Personal Items of Interest.

(Special to The Talking Machine World.)

Cleveland, O., April 10, 1913.

The recent floods in this section of the state affected business to a certain extent, and very seriously in many industrial lines. The talking machine trade felt its effect, but it was not so great as had been expected, in fact some dealers assert they noticed no difference in the volume of their business. Business was unusually good all through March, some dealers reporting a large per cent. of increase over that month of last year. The spring trade is opening very satisfactorily and the dealers all prognosticate a prosperous season.

Mrs. Mona Collister, widow of George W. Collister, who was of the firm of Collister & Sayle, and who died a year ago, was killed by an automobile while crossing a street, March 14. Mrs. Collister was a stockholder in the firm of the Collister & Sayle Co., talking machine dealers, organized after the death of her husband. The business of the firm, will be continued as heretofore.

Forest Cheney, of Chicago, on his way to Boston, stopped off here and visited a couple of days with Mr. Madson, at the Columbia store. To a few friends he showed a new talking machine of his invention.

Bessie M. Brabler, for a long time in charge of the Collister-Sayle Co.'s talking machine department, has married and resigned her position in the store.

O. E. Kellogg, manager of the talking machine department of the H. E. McMillin Co., is on a business trip West. In his absence, J. J. Anderson, his assistant, is in charge.

The Eclipse Musical Co. have inaugurated the plan of giving a complimentary concert each month in the reception room of the store, where the choicest of the new records are played, affording an opportunity to hear the new Victor records as they are issued. At the concert on the evening of April 2, when the room was filled to overflowing, the program consisted of twenty odd selections, accompanied by Ruth McTammany Lane, soloist, and Miss Ruby Gall, accompanist. The piano used was from the B. Docker's Sons Co. Mrs. Lane is the wife of Fred. E. Lane, manager of the Eclipse retail department.

The Edison distributing business of Lawrence A. Lucker, which was sold last month to H. D. Berner, has been transferred and the trade completed. Mr. Lucker was in the city the first of the month, closing the deal. For the present the jobbing business will be continued in the warerooms occupied by Lucker, and the retail trade at Mr. Berner's store in the Taylor arcade. E. O. Peterson will continue with Mr. Berner and there will practically be no change in the staff of employes.

"There is a steadily increasing demand for both machines and records," said G. R. Madson, manager of the local Columbia store. "Our wholesale

business, and our cash retail trade, increased during the past month 100 per cent. over the same period a year ago. All of our different types of instruments are selling well, and we are unable to obtain a sufficient supply of the Grafonola Grand to meet the demand. With the Columbia reproducer No. 6, the Grand is the last word in talking machines.

At the Victor distributing store of W. H. Euescher & Sons Co. conditions are such as to justify the prediction of Mr. Buescher that this year would be the most prosperous in the history of the trade. The business of the company is continually expanding, both in the wholesale and retail departments, and a larger force than ever is now busily employed.

The H. M. Brainard Piano Co. reports an excellent business in the Columbia line.

Business is reported very good, in both the wholesale and retail departments of the Eclipse Musical Co., although Mr. Towell stated, the recent floods had resulted in a deterrent effect on trade. The concerts given at the store are attracting hundreds of patrons and are highly appreciated. A thorough spring cleaning and re-furnishing is under way but with all the attending inconvenience, it is plain to be seen the company is doing a large business. The Metropolitan Opera House, a large and beautiful theater, has just opened, and the Eclipse is planning a series of lectures describing the operas with illustrations of the complete scores on the Victrola. The lectures, at the store, will prove very valuable to opera goers who are as yet unfamiliar with the story and music of the different operas that are to be given.

An interesting announcement of disc records in foreign languages is made by the Bailey Co. The list comprises all the records so far produced in foreign tongues. E. A. Friedlander, manager, says that in this line of records, alone, he is having a splendid trade.

R. W. Schirring, manager of the Victor department of the Caldwell Piano Co., reported business very satisfactory. The company is well pleased with results in the talking machine line to which Mr. Schirring is devoting assiduous attention.

Usual activity prevails at the music store of H. E. McMillin & Son Co., especially in the talking machine department. The business of the past month was reported to have been fine, and that it had continued right up to date.

N. H. Cook, of the Frederick Piano Co. reported business was moving along very prosperously, in the talking machine department. He said the Victrola department in the company's Youngstown store had been auspiciously opened and was in charge of A. S. Hawks, formerly in the Pittsburgh store.

The Hart Piano Co. is gratified with the success it is meeting with in the talking machine department. Since its establishment, the company has

twice been compelled to add to the demonstration rooms, and the manager states the sales of machines and records is increasing with steady regularity.

George B. Stacey, who was employed by the Columbia Graphophone Co. in this city, has been transferred to the Dictaphone department. He reports business is very good. Two of the most recent purchasers of Dictaphones were the Cleveland Chamber of Commerce and the Geo. Worthington Co.

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines Shipped Abroad from the Port of New York for the Past Five Weeks.

(Special to The Talking Machine World.)

Washington, D. C., April 8, 1913.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past five weeks from the port of New York:

March 11.

Buenos Aires, 7 pkgs., \$394; Callao, 4 pkgs., \$180; 2 pkgs., \$225; Cape Town, 5 pkgs., \$303; Chubut, 3 pkgs., \$157; Colon, 11 pkgs., \$286; 14 pkgs., \$381; Havre, 10 pkgs., \$139; Limon, 15 pkgs., \$414; London, 24 pkgs., \$952; Para, 10 pkgs., \$501; Santiago, 4 pkgs., \$186; Trinidad, 4 pkgs., \$126; Valparaiso, 6 pkgs., \$438; Vera Cruz, 29 pkgs., \$290; Yokohama, 6 pkgs., \$374.

March 18.

Berlin, 5 pkgs., \$140; Callao, 7 pkgs., \$357; Colon, 9 pkgs., \$205; Guadaloupe, 3 pkgs., \$161; Hamilton, 3 pkgs., \$63; Havana, 21 pkgs., \$2,123; Limon, 3 pkgs., \$120; 2 pkgs., \$215; London, 58 pkgs., \$3,684; 61 pkgs., \$1,965; Nassau, 2 pkgs., \$325; Singapore, 27 pkgs., \$996; Vera Cruz, 39 pkgs., \$2,744.

March 25.

Berlin, 48 pkgs., \$3,500; Buenos Aires, 7 pkgs., \$2,000; Dublin, 6 pkgs., \$123; Guayaquil, 10 pkgs., \$1,170; Havana, 19 pkgs., \$1,473; London, 51 pkgs., \$1,444; 14 pkgs., \$515; Santos, 3 pkgs., \$485; Savanilla, 19 pkgs., \$509; Singapore, 17 pkgs., \$550; Sydney, 13 pkgs., \$1,071; Tampico, 12 pkgs., \$748; Vera Cruz, 38 pkgs., \$1,665.

April 1.

Berlin, 34 pkgs., \$1,375; Buenos Aires, 300 pkgs., \$22,709; Demerara, 3 pkgs., \$177; Hamburg, 2 pkgs., \$253; Liverpool, 6 pkgs., \$408; London, 3 pkgs., \$165; Maracaibo, 12 pkgs., \$565; Manaus, 8 pkgs., \$123; Port au Prince, 3 pkgs., \$158; Puerto Barrios, 6 pkgs., \$170.

April 8.

Berlin, 18 pkgs., \$1,012; Buenos Aires, 160 pkgs., \$1,830; Cape Town, 8 pkgs., \$222; Guayaquil, 3 pkgs., \$148; Havana, 63 pkgs., \$3,030; 23 pkgs., phonographic goods and material, \$1,777; Havre, 17 pkgs., \$517; 5 pkgs., \$140; Kingston, 2 pkgs., \$212; London, 3 pkgs., \$135; 9 pkgs., \$960; Manila, 39 pkgs., \$5,228; Matanzas, 2 pkgs., \$150; Port Antonio, 8 pkgs., \$2,948; Singapore, 16 pkgs., \$547; Vera Cruz, 20 pkgs., \$1,143; Vienna, 3 pkgs., \$254.

Make of your head something other than a thing to hang your hat on.

SEES PROMISING FUTURE FOR TALKING MACHINES ABROAD

George W. Funnell, Manager of the London Works of the Columbia Graphophone Co., on Recent Visit to This Country, Tells of Conditions in Europe—Impressed With Many Innovations at Bridgeport Factory—Business Showing Big Increase in Europe.

George W. Funnell, manager of the London works of the Columbia Graphophone Co., who visited America last month, and sailed for England March 18 on the Kaiser Wilhelm II, is most optimistic in his predictions for the expansion of the talking machine abroad. While here Mr. Funnell spent most of his time visiting the Columbia factories at Bridgeport, Conn., and found many interesting improvements and innovations that had been installed since his last visit to America a year ago. He also visited the Canadian factory of the Columbia Co. at Toronto, and was more than pleased at the splendid progress of the Canadian branch. Before sailing for England, Mr. Funnell outlined to a representative of The World the general status of the talking machine business throughout Europe, and the outlook for the future.

"The past year has been a splendid one from every standpoint," stated Mr. Funnell. "The talking machine progress in 1912 was simply remarkable, and we closed the best year in our history. The general industrial condition of England is very satisfactory, and many lines of business are booming. This is especially true of the talking machine field. We showed a very substantial increase over the business we closed in 1911, and up to the time of my leaving England were far ahead of the first part of 1912, with every prospect of continuing this gait throughout the year. Our figures showed that 1912 was the best year we experienced since establishing a disc record business.

"The horn machine has been the general favorite in England until the last year or two, and its popularity has been so well established that it has required strenuous and energetic educational work to convince the people of the merits of the hornless machine. Local and national publicity has been extensively used in this educational campaign, and as a result the hornless talking machine has made very rapid bounds in public favor recently. Of course it has not yet reached that stage of popularity that it occupies in this country, but in a very short while the hornless machine will be just as generally popular in England as it is in America.

"I notice that the newspapers, national and trade magazines in this country are devoting considerable space to discussions of the tendencies of Eng-

lish people toward popular and ragtime music. A few of these articles are somewhat overdrawn, but on the whole the tenor of the discussions is absolutely correct. There is at the present time a noticeable and powerful trend of public opinion in favor of the ragtime song. This popularity is unusually prominent at the present moment, and ragtime records are selling far better than any other class of music. As an illustration, I may point to the fact that 'Alexander's Ragtime Band' was the most popular and best-selling record ever presented to the English people.

"There is a fondness abroad, especially on the Continent, for a louder record than the average record introduced in America. This leaning toward loud-toned music is not so noticeable in England as in other European countries, but we are effectively educating European people to appreciate the various degrees of tone and not merely seek for the loudest toned record obtainable. This educational work is producing excellent results, although in Milan, for example, it is well-nigh impossible to sell a soft-toned record.

"There is no gainsaying the fact that competition abroad is very keen, much more so than in this country. The competition in the sale of cheaper machines is exceptionally sharp, although the demand for high-priced machines is increasing all the time. The introduction of our new 'Grand' will go a long way toward impressing England and the Continent with the value of the talking machine, and is certainly an important step in the cultivation of high-class trade.

"The Columbia 'Favorite' machine is the most popular machine ever presented to the trade abroad, and the demand for this type continues to break all records. We carry on an extensive advertising campaign in the daily papers, and the results are very satisfactory. Our 'Regal' reproducer has been generally commended by Columbia clients, and our records are proving more popular each year. In addition to an excellent business in England, our Scotch business is steadily increasing."

You must exert exceptional energy. You must exhibit trained intelligence. You must be honest with yourself. You must persevere and persist if you would win.

KEEN-O-PHONES READY FOR TRADE.

New Philadelphia Company Overcomes Many Delays and Hindrances in Perfecting and Preparing Its Product for the Market—Interesting Introductory List of Records—One Price System—New Catalog Now Ready.

(Special to The Talking Machine World.)

Philadelphia, Pa., April 9, 1913.

Keen-O-Phones and records are now ready for delivery. At last the result of a number of years hard work is to be presented to the trade. Many things have hindered the progress of this company; things that will retard anyone who attempts to enter the talking machine field with new ideas. To-day, not only is the Keen-o-Phone Co. ready to market its products, but it has a modernly equipped factory in the Frankfort section; it has an up-to-date laboratory at 12th and Walnut streets, with wholesale offices and salesrooms at 227 South Broad street. The organization for manufacturing and distribution is increasing under the able management of the executives, and according to present plans, it bids fair to become a large one. One important factor that has kept the company from marketing its products is the matter of records. But this has been eliminated as several hundred master records have been made. The first list will comprise 150 selections, each record

having two numbers. It is the intention of the company to issue monthly lists of approximately twenty-five records. These records will retail at 75c, \$1 and \$1.25. Several artists from the Boston Symphony orchestra have made quite a few of the Keen-O-Phone records, as well as a number of singers and other professional talent.

A new catalog is nearly ready. This will be handsomely illustrated, showing all models and giving the entire story. The record lists will be issued separately. Good discounts on both machines and records will be given legitimate trade.

E. P. Huylar Allen, general sales manager, in a chat with a representative of the Talking Machine World, says: "We are now prepared for deliveries and are now booking orders in large quantities for both machines and records. While we were ready to ship machines sometime ago, we believed it advisable to withhold the announcement until we could offer the records to go with them. Now that we are ready to offer the proper co-operation to both the jobber and dealer, we are starting a vigorous selling campaign. In the territory about Philadelphia, we have made a number of dealers, while here and there about the country we are constantly adding new devotees.

"One positive thing is that we will maintain prices. We believe that a 'one-price' system is the only logical method of merchandising and selling, and it is only upon this plan that we will operate. Any trade member violating his agreement with us will naturally have to be suspended. The prospects for a tremendous amount of Keen-O-Phone business are big, and we will gradually extend our operations until we cover all civilized countries."

Emile Bauer, widely known in the musical instrument field and who has been with this company for several years, is in charge of the selling staff, working hand in hand with Mr. Allen.

The name describes the needle and the needle fulfills its tone— The PURITONE Needle.

FURNISHED in Puritone or your own envelopes packed in different sizes. Quality guaranteed. Price popular.

Dealers can secure a sample package free. Send jobber's name with letter.

Remember, a quality needle will help you; it means a profit and a following.

THE following is a new selling idea for needles, packed exclusively by us:

Instead of selling 100 or 200 needles at once, sell a thousand. We pack 1,000 assorted needles in a box, each box containing 200 of Extra Loud, Loud Opera, Medium and Soft. This is the "Special" Dean Packing. You can sell 1,000 instead of 100 and thus get 10 times the business.

Want the Puritone Needle samples?

The Result of Long Experience

The many years that we have been wholesaling Disc Talking Machine Records have made us particularly well informed as to the best methods of handling them. After an extensive period of study we have evolved a Sectional Dealers' Cabinet for disc records, which we believe will do more to eliminate dealers' record troubles than anything ever before offered. Designed to help the dealer, all complications have been left out. It works on a principle as simple as the alphabet, and automatically keeps your stock complete and in perfect order.

CONVENIENT

Our Sectional Dealers' Record Cabinet may be placed in any convenient location, back of or on top of a counter—in fact, wherever it can be reached to best advantage. It takes up so little room that it will not be in the way anywhere. When a customer calls for a certain record, and it is in stock, it is located quickly by referring to index showing drawer number. If record wanted is one not kept in stock, the index will show the fact immediately without looking in the case. If record had formerly been in stock and sold, the empty special envelope in drawer shows when new one was ordered, and your customer may be informed exactly when he may call for it.

ECONOMICAL

Every dealer in disc records loses money every year through warping, scratching and otherwise spoiling of records. With a Sectional Dealers' Disc Record Cabinet in your store, all such waste is eliminated. To find a record which you always have means of knowing if in stock or not, there are only a dozen records to go through, and those are kept in orderly fashion. You can readily see how much more carefully you or your help will handle them than you would were it necessary to go through a disorderly mass of undesired records, searching for one which may not be in stock at all. Rough handling ruins records and means a loss to you.

CAPACITY

Section A consists of one Unit, one Top, one Base, equipped with drawer. Each unit contains twenty-four spaces, each space holding twelve, 10 or 12-inch records, or total capacity of unity 288 records. Section A and B contains two units; one top and base equipped with drawer. This gives a capacity of forty-eight spaces, holding twelve 10 or 12-inch records, or capacity of 576 records. Sections A and 2B's contains three units, one top and one base, including drawer, the capacity of the three units being seventy-two spaces, each space holding twelve 10 or 12-inch records, or a total capacity of 864 records.

AN INEXPENSIVE NECESSITY

Our Sectional Dealers' Disc Record Cabinet was planned to aid dealers, and we want every dealer who handles disc records to have one. We have brought them within reach of all, the cost being very insignificant. It is a decided aid to dealers who do not carry a large stock, they can purchase single units and build them up with their business. We have made these cabinets of the best material obtainable and finish them as ordered by dealer and every cabinet carries our quality guaranty.

LABOR SAVING

Our Sectional Dealers' Disc Record Cabinet does away with every unnecessary movement in locating any record desired. You can tell your customer in two seconds whether or not you have a certain record, and if you have, secure it for him in less than half a minute. The Cabinet is easily cleaned, and your records are kept in perfect condition. No warping, scratching, cracking or breaking.

FROM OUR CHICAGO HEADQUARTERS

ROOM 806, NO. 37 SOUTH WABASH AVENUE, E. P. VAN HARLINGEN, MANAGER.

(Special to The Talking Machine World.)

Chicago, Ill., April 11, 1913.

The past few months one has heard a great deal about the shortage in certain types of talking machines. Many people have got an utterly erroneous idea as to the nature of this shortage. Some seem to be under the impression that the companies have been unable to fill the demand simply because they did not have faith in the future of the business and had not prepared themselves.

This is not true. They did have faith in the future and increased their facilities greatly as a result, but no human prescience could have been equal to the occasion.

As a matter of fact, the capacities of the factories are double those of two years ago, but the demand is four times as great as it was two years ago. Notwithstanding this great demand, a great proportion of it was for the high-priced goods. The situation is one which the piano merchant should study carefully with his own interests in view, especially as the manufacturing companies are beginning to get the advantage of the large additions made to their plants and the large shortage bids fair soon to be relieved.

Lecture Recital.

Many talking machine dealers the country over have recital halls in which daily or periodical talking machine concerts are given. The question is: Are these halls used to the best advantage? Concerts along the present lines are good and will probably always prove a necessity, but why not carry this thing a step further—in a word—give lecture recitals! Secure a good man, even from afar if no local man is available. Give a talk on some musical subject illustrated by records. The value of such a lecture recital should be very apparent. The Chicago representative has the details of such a plan well worked out, and if the trade is at all interested in the matter and will so express itself it will be treated more extensively in a future issue.

Changes Line of Business.

The tendency of the rural population to gravitate to the large cities, there to bask under the gentle radiance of the white lights, has been made the subject of many profound magazine articles. This tendency is still in force, as shown by the fact that W. A. Everly, who has for some years traveled successfully the States of Illinois and Iowa for the Columbia Graphophone Co., has come to Chicago and accepted a position as city sales-

man for the company, filling the position formerly held by Hyatt Lemoine, who resigned to go with the Columbia Shade Cloth Co.

A Little About Cabinets.

The Salter Manufacturing Co., of this city, has been making talking machine record cabinets almost since the year one—that is, the year one of the talking machine industry, and they have been making good cabinets—cabinets which from time to time have been made to incorporate some very marked and very distinctive improvements. The company also makes an exceedingly fine line of sheet music and music roll cabinets. Mr. Salter and Mr. Mortenson are capable gentlemen, who deserve the notable success they have achieved.

Tangoes Still Popular.

Local retail dealers and the big wholesale houses report that the demand for "tangoes" and "turkey trot" records continues unabated. The young people especially are taking advantage of the fact that with a few records, such as "Waiting for the Robert E. Lee," "Hitchy-koo" and "Down in Dear Old New Orleans," an informal dancing party can be arranged at any time that from the standpoint of fun is equal to the best of the regular orchestra. At one of the South Side hotels there is a family who have a daughter in high school who is exceptionally popular of late, due in a great measure to the fact that every afternoon after school she has a "crowd" up who move the rugs and practise the latest tango steps. The program was extended recently to include evening "hops," and the other guests in the hotel are beginning to wonder whether morning classes are to be instituted.

Dictaphone Used in Bennett Play.

Miss Horniman's Manchester Players, an English company which is playing in repertoire in America and which has been appearing for some time in Chicago under the auspices of the Chicago Theater Society, recently presented Arnold Bennett's "What the Public Wants," in which a Columbia Dictaphone is the most prominent of the properties.

The book is written around one "Sir Charles Worgan," who, by reason of "giving the public what it wants" in the way of news matter, becomes the owner of a number of daily papers and magazines and becomes one of the most influential men in England. The character makes one recall Alfred Harmsworth's meteoric career, and the part that efficiency in business methods played

in his success. The character of Sir Charles Worgan is one that is not entirely lovable, but an American audience is always pleased with progressive business men, and the sight of the dictaphone does more to impress the audience with the nature of the man than all of the explanatory lines in the first act. The machine does not enter into the plot of the play, as one would imagine when the curtain rises, but is used several times in the first act and is explained by Sir Charles to his English friends that enter his office. The second act opens with Sir Charles dictating into the machine, and the fourth and last act is closed with the dictation of a letter to the "other woman" by means of the dictaphone. While the machine can hardly be credited as having a "speaking part" production, it is, at least, always in the eyes of the audience, and the local offices of the Columbia Graphophone Co. are benefited thereby.

Visitors and Personals.

J. N. Freeman, the well-known dealer of Cedar Rapids, Ia., was a Chicago visitor.

F. G. Cook, representing the Columbia Chicago office, was down in Indiana when the water came up and the bridges went down and, strange as it may seem, captured quite a lot of business in the flooded districts.

Nick Worth, of Escanaba, Mich., and Henry Saak, of Milwaukee, were among the dealers who recently visited Chicago.

From Dixie to Nordland.

E. W. Graham, who has hitherto traveled out of the Dallas, Tex., branch of the company, will represent the Chicago office in Illinois and Iowa.

Talking Machine Business In Chicago.

E. F. Lapham, of the retail piano firm of Grosvenor, Lapham & Co., who is the chairman of the Music Trade Committee of the Chicago Association of Commerce, made a report recently in which he spoke of the talking machine business in Chicago as follows: "The talking machine business has developed into an immense business and has curtailed somewhat the guitar, violin and mandolin demand. There are retailed in Chicago each year \$1,500,000 worth of the machines and an equal amount is wholesaled, making the total amount of business done in this department about \$3,000,000—and the trade is increasing by leaps and bounds, it being claimed that the demand to-day is four times greater than two years ago."

A Young Department Head.

The talking machine department of Adam Schaaf

(Continued on page 22.)

The Wade

Fibre Needle Cutter No. 1

The WADE FIBRE NEEDLE CUTTERS, No. 1 and No. 2, trim the needle at the proper angle, and the needle can be repointed from 12 to 15 times, producing clean, perfect playing points. This cutter is provided with a self-acting stop, which prevents cutting away more than enough to make a new point.

The Wade

Fibre Needle Cutter No. 2

The WADE CUTTERS have an upper and lower blade, the upper blade being loosely pivoted and pressed against the lower blade by means of a spring, making a perfect contact. These blades are made from the best Swedish Tool Steel, and are scientifically hardened by electricity, giving the most lasting and finest cutting edge that it is possible to produce, and seldom ever needs sharpening.

The construction of the WADE No. 2 affords the most powerful cut of any tool ever made, and the blades work parallel to each other, therefore it requires practically no exertion whatever to trim the needle.

We fully guarantee this cutter in every respect, and if the blade of this cutter ever gets dull we will give you a new blade upon the return of the old one.

LIST PRICES—No. 1, \$1.50; No. 2, \$2.00

CHICAGO, ILL.

FROM OUR CHICAGO HEADQUARTERS—(Continued from page 21).

at 700 West Madison street has enjoyed a very profitable season and is carrying an increased stock. Louis Levin, who was formerly with the "Talking Machine Shops" and who is but eighteen years old, is in charge. He is probably the youngest department head in the business.

New Kimball Department Thriving.

H. F. Chubb, who has been placed in charge of the new talking machine department of the W. W. Kimball Co., reports that the first month of actual business is more than satisfactory and judging from the number of people who are making visits to this new Kimball institution, he has put it very conservatively. Two large pipe organ rooms on the second floor have been converted into demonstration rooms and equipped with a full line of Columbia and Victor machines.

Talking Machine Co.'s New Quarters.

The remarkable business of the Talking Machine Co., exclusively wholesale Victor distributors of this city, long since outgrew at 137 South Wabash avenue so that they were compelled to secure large storehouse space several blocks from their main headquarters. Even then they lacked room. Consequently they made arrangements whereby they will soon have larger quarters, enabling them to transact all their business under one roof. They have practically closed a lease for a term of years for the entire third floor of the building, to be known as the Montgomery Ward Annex, which adjoins the present Montgomery Ward building on Michigan avenue, between Washington and Madison streets. The entire building is being remodeled or rather reconstructed, and together with the Montgomery Ward building on the south and the magnificent new Jarvis Hunt building now in the course of construction immediately to the north on the corner of Washington and Michigan avenue, will constitute as handsome a trio of modern buildings as can be found in Chicago, or, for that matter, any other city.

The space to be occupied by the Talking Machine Co. will comprise 20,000 square feet. It will be very handsomely fitted up. The new quarters will be reached by three modern passenger elevators, and besides there will be two large freight elevators, one on one side of the building for receiving purposes and another on the opposite side for shipping purposes. There will also be a large canopied shipping platform in the alley, which will be unusually wide.

The Talking Machine Co.'s quarters will have a frontage of 140 feet on Michigan avenue, overlooking the lake. One hundred and four feet of this frontage will be utilized for the general offices and the balance for the record stock, giving them the benefit of natural light in filling orders. The balance of the great floor will be utilized for machine order filling, repair department, storage and shipping room.

Naturally with this concentration of the various branches of their big wholesale business the Talking Machine Co. will be able to improve even their present excellent service to the dealers.

The general manager, Arthur D. Geissler, is certainly to be congratulated upon his enterprise and progressiveness.

A Happy Trio.

V. B. Taylor, who travels for the Victor Co. in Illinois, will be married next Tuesday to Miss Brauns, a charming young Chicago woman, at the home of the bride's parents in this city. A conubial epidemic seems to have struck the Victor force. George Ornstein, general manager of salesmen, and his assistant, are both to be married in the East this month.

Good Record Lists.

The Talking Machine Co. has not only issued a revised edition of their list of 500 most popular selling Victor records in attractive pamphlet form, but also an entirely new classified list of 100 most popular Victor records. These lists will be supplied by the Talking Machine Co. in quantities at cost price to their dealers for distribution to their customers.

The Wade Fibre Needle Cutter.

Wade & Wade, manufacturers of the Wade fibre

needle cutters, have removed from 1227 East 46th street to 3807 Lake avenue, where they have the increased facilities demanded by their growing business. The Wade fibre needle cutter is handled by practically every jobber in the country. By its use the fibre needle can be efficiently re-pointed from twelve to fifteen times. It works like a pair of pliers and comes in two different models.

Returns from Central America.

E. H. Uhl, manager of the local Wurlitzer institution, has returned from his extensive trip through the Bahamas, Jamaica, Cuba and Central America looking and feeling well. He at once plunged into his work and accomplished much despite the numerous well-meaning friends who came to see and welcome him. He returned to hear that the March talking machine business was the best month in the history of the Chicago house with the exception of last December.

Inspecting Talking Machine Shops.

E. H. Beacham, a dealer of Indianapolis, has been visiting Chicago for a few days and inspecting the various talking machine shops.

Giving Hotel Recitals.

J. W. Scott, special representative of the phonograph sales department of Thomas A. Edison, Inc., is giving recitals every day and evening at the Hotel LaSalle in this city. Mr. Scott has rapidly proved the value of demonstrating the new Edison phonograph to the traveling public, and it is safe to say that the Edison machine is securing more valuable publicity through this than any other method that is proportionate in expense.

A Modern Talking Machine Shop.

A. P. Miller, who has been in the talking ma-

chine business for many years, has opened one of the best arranged stores of its size in the city. It is located at 1124 East Sixty-third street, and offers to the residents of that locality all of the facilities that are found in more pretentious establishments.

At the entrance one is greeted with a reception space that is at once refined and homelike. The well-chosen color scheme of creamy white and soft brown is enhanced by the semi-indirect lighting system and the velouria glass chandeliers. Soft rugs upon the floor make for further comfort.

There is a concert hall which will accommodate about forty-five and in which regular programs are to be offered to the patrons and prospective patrons of the shop. The hall contains all of the different styles and sizes of the most prominent lines, and are displayed in a most inviting manner. There is also an abundance of convincing literature placed on every hand. Two demonstration booths of plate glass and cream enameled wood are used to display the machines and demonstrate the new records.

There are several machines in each booth, still leaving room for the accommodation of three or four people in each. The show window contains a Grafonola de Luxe and a Baby Regent machine. A large bunch of roses in a bowl completes the window and confirms the artistic air that characterizes the entire store.

A Recent Visitor.

Albert Middleton, secretary of the Victor Talking Machine Co., was a recent and distinguished visitor.

WURLITZER'S NEW RECITAL HALL.

Just Been Thrown Open to the Public—Acoustically Perfect and Handsomely Equipped.

(Special to The Talking Machine World.)

Chicago, Ill., April 10, 1913.

The new recital hall of the House of Wurlitzer has been entirely completed and thrown open to an admiring public, that is already taxing its capacity.

The general idea suggests a French drawing room in semi-classic style, the color scheme being warm gray, rose, ivory and cream. The stage is ceiled by a paneled proscenium arch with a door at each end of the stage wall. The doors and trim are finished in French gray enamel. The walls of the hall have a three-foot paneled wainscoting finished to match the doors, the base of the wainscoting forming the face of the stage platform. Eight-inch, paneled, Ionic pilasters are placed at uniform intervals on the two sides of the hall. Paneled pedestals support these pilasters which, in turn, are surmounted by an Ionic cornice, which runs along three sides of the room. Between the pilasters at the back of the stage there will be canvas panels which have the appearance of tapestry, but which are more durable and sanitary. These panels will be of rose of two tones, which color is repeated in the draperies. The frieze and ceiling are of cream color.

Manager Cameron, of the talking machine department, is providing six programs—each of forty-five minutes duration—which will be either of an operatic or a popular nature, relieved by some

records of a semi-classical nature. Special concerts of Victrola, piano and Wurlitzer harp will be introduced and later—probably in May—there will be four special concerts, which will be participated in by some of the best-known artists in Chicago.

ISSUE SPECIAL OLCOTT BOOKLET.

In order that the trade may be in a position to properly introduce the new records by Chauncey

Wurlitzer's New Recital Hall.

Olcott, the Columbia Graphophone Co. announces the publication of a special four-page booklet devoted to a brief talk on Chauncey Olcott, the importance and possibilities of his new records, and a short discussion on the records themselves. This booklet is very attractively arranged, and is colored appropriately in green, as symbolic of the melodies featured on the new records. A characteristic portrait of Chauncey Olcott is shown on the front cover.

If you want an offer to attract the public make it such that it will appear attractive from the buyer's point of view rather than from the seller's.

HANDSOME HOME OF THE PHONOGRAPH CO., CHICAGO.

Interior Views on This Page Give Readers a Partial Idea of Beauty and Completeness of New Home of the Edison Phonograph in Western Capital—Business Under Management of C. E. Goodwin, Assisted by Capable Staff.

(Special to The Talking Machine World.)

Chicago, Ill., April 9, 1913.

In the last issue of The World there was presented an exterior view of the handsome building of the Phonograph Co.—the new Chicago wholesale and retail dealers in Edison phonographs at 229 South Wabash avenue. This month we are fortunate in being able to show several views of the interior. The photographs are excellent as photographs, but they fail in any sense to convey an adequate idea of the beauty of the warerooms, which is due not merely to the superb architectural arrangement, but also to the artistic, restful and logically conceived color scheme.

C. E. Goodwin, the manager of the company, has every reason to be proud of the handsome rooms, which were opened to the public three days ago. They have been crowded since by an admiring public that has gone into ecstasies not only over the beauty of the quarters, but over the remarkable tonal reproductive qualities of the new Edison disc. They have all declared it to be a musical instrument par excellence.

The development of the interior of the home of

Record Rooms, Second Floor.

the Phonograph Co. and the purposes that the various sub-divisions are put to. The designers were the Niedecken-Walbridge Co., interior architects, of Milwaukee. It is original in every sense of the word, and there has been no attention paid either to styles or conventionality.

The original development of the architectural lines are structural in every case, and form a decorative scheme in the general breaking up of the surfaces. All materials used have been employed in such a manner as to show to the best advantage their natural characteristics, both as to grain and texture. In no case has there been a misrepresentation or false adaptation of the materials. They are all typical of their characteristics and are not employed beyond their own limitations. Ornamentation, where it has been used as a decorative feature, has always been held subservient to the architectural lines, as is proper, and found in the pure types of architecture. The development of the color on the walls and wood is one which leads to restfulness. As the purpose of this building is to interest people in music and its perfect rendition by means of the Edison disc, it has been Geo. M. Niedecken's aim to have the colors in the interior augment the beautiful tone quality produced by the Edison instrument and avoid all foreign reaction on the brain, which color is so apt to do.

The general wood trim of the two principal floors of this building is of white birch, treated with a very

gray stain, with the exception of the auditorium, where the wood has been kept in its natural state. In order to give the light gray shade of the wood an added charm, black walnut in its natural color has been added in bands of varying widths.

To avoid any hardness either in color or tone, a

Lounging Room, Record Department, Second Floor, Edison Shop.

soft brown cork carpet has been applied to all floor surfaces.

The lighting for the building emanates from suspended, soft-toned, ground glass fixtures of the semi-indirect type. The dominating colors of the glass are white, light amber and soft iridescent, combined with dull silver metal work.

The general coloring of the walls, which maintain their natural characteristics, due to the fact that they are done to color scheme by luminous translucent pigments, is tan and russet tan, with a silver overglazed line. The upper walls of the auditorium are graced by a semi-mural decoration, floral in type. One of the chief characteristics of this room is the drawing together of the spherical lighting bodies with balancing circular forms of varying color interspersed throughout the decoration.

Wicker furniture of a simple type, and stained in a very soft tone, is placed in unconventional groupings about the room. Sections of both the first and second main floors are furnished with specially designed furniture and rugs, the chief

Reception Room, First Floor, Edison Shop.

intent of these spots being either a rendezvous for prospective buyers, or a place where prospective

buyers can have more privacy in their conversations with salesmen. The furniture is of a semi-lounging type, and the rugs are characteristic of the interior of the building, both in design and color, in some cases helping to develop the architectural lines. The other furniture used throughout the sales rooms for machines and Edison discs, offices, etc., are all of the same general type as the foregoing mentioned furniture, and is specially designed and developed in the gray birch so as to be in complete accord with the interior of the building.

Following a well-established policy, all sales of Edison talking machines are made on the first floor, where every facility is present to display the tonal beauties of the instrument, as well as every advantage in the display of the machine itself.

If the customer desires to purchase a supply of records at once he or she is invited into the elevator and taken to the second floor, where there are seven private sound-proof booths, each of which is large enough to seat three or four persons comfortably. These rooms are fitted with a second door, opening from the back of the booth and upon the long aisle that is lined with a row of shelves that hold a complete Edison stock. An abundance of ventilation is provided for in each booth and also an abundance of light. Outside of each is placed a gray birch desk that corresponds, of course, to the balance of the furniture, and at which the customer and the saleswoman can be seated and make up the list of the purchases and complete the sale.

The entire procedure of making a sale, whether of a machine of the most expensive style or a single record, is attended with such courtesy and comfort that one is impelled by the sheer fascination of the surroundings to make repeated visits and to tell one's friends of its beauties.

The general offices and wholesale stockrooms occupy the entire third floor of the building.

To describe the new home of the Edison machine in Chicago and to tell of the wonderful success that has favored its introduction into the Western field would be incomplete without a little sketch of the people who, under Manager C. E.

The Recital Hall, Edison Shop.

Goodwin's direction, have made that success so thorough.

The readers of the World have already heard much of Mr. Goodwin, and many of them are personally acquainted with him. This is due mainly to the fact that for ten years he was manager of the talking machine department of Lyon & Healy's, and while in this position became more or less acquainted with all of the prominent dealers of the Middle West. Four years ago Mr. Goodwin resigned and went East to join the Edison Co. In his new field he had much opportunity to meet and study the needs of the dealers of the East, making many friendships and acquiring a knowledge of the talking machine business that has been given to but a fortunate few. Mr. Goodwin was a student of Mr. Edison's experiments, and witnessed every step in the perfection of the new Amberol

(Continued on page 26.)

An Unprecedented Success

The Edison Disc Phonographs and Records have met with a reception by the public far beyond the fondest expectations entertained by the inventor, the manufacturers or the distributors.

“The most wonderful musical instrument in the world!”—“A faithful reproduction of the human voice at last!”—“Almost unbelievable!”—Are the expressions of the thousands who crowd our store daily.

Mr. Dealer: The point for you to consider is this: Are you going to miss taking advantage of the most revolutionary movement ever known in the talking machine industry?

New life to your business—increased sales—increased profits—all these are yours if you secure the new Edison Disc Line.

Dealerships are being rapidly taken up, they are valuable as only a limited number of dealers will be established.

A wise policy protecting the dealers' interests has been adopted. This increases the value of an Edison Disc Dealership and makes it incumbent upon you to take steps toward securing the line *at once*.

Remember: We carry a full line of Edison Cylinder Machines and Blue Amberol Records. Unparalleled Service—Orders filled the same day they are received.

THE PHONOGRAPH COMPANY

C. E. GOODWIN
General Manager

CHICAGO

227 So. Wabash Ave. between

TELEPHONE HARRISON 1503

FROM OUR CHICAGO HEADQUARTERS—(Continued from page 21).

records and the famous diamond point reproducer.

W. E. Clark is in charge of the retail department, and has conducted the opening of the new department with results that are most impressive and which mark him as one of the best retailers in the city. Mr. Clark's experience in the Chicago trade is quite extensive, having been with Lyon & Healy for over five years, and with the "Talking Machine Shops" for three years, in that time gaining an intimate knowledge of what the local trade requires.

With Mr. Clark in the conduct of the first floor is Arthur H. Thayer, who is comparatively a newcomer into the trade, but who has taken up his work with an enthusiasm that is rapidly making for success.

W. C. Patrick is in reality a wholesale man, but in addition to assisting Mr. Goodwin in the handling of the already important business in that department, he has aided materially in the opening of the retail department. Mr. Patrick comes from the West and is an old Edison man, having been with the company for about ten years. In addition to this he was with the United States Phonograph Co. for over a year. Mr. Patrick is now making his plans for a business trip in connection with the wholesale marketing of the new Edison phonographs that is decidedly extensive and which will necessitate his absence from his home for considerable time to come.

To Miss Florence Bell Underwood has fallen the responsibility of conducting the recitals. Miss Underwood was chosen for this work not only because of her knowledge of it, but because of her intimate knowledge of music. She is a pianiste of more than ordinary ability.

In choosing the head of the record department, Mr. Goodwin has wisely selected one who is entirely capable of exercising all of the tact and courtesy that such a department demands. She—for it is a she—is Miss Gladys Cundiff, a very charming and very young woman of Southern ancestry and Southern accent, who has all of the graciousness that we look for in women of the South. Miss Cundiff was also formerly with Lyon & Healy in the record department, and while there gained a thorough training which together with her talent and personality will enable her to cope with any problem that may confront her.

In explaining the large sales in the record department Miss Cundiff very generously gives her assistant, Mrs. Mary B. Davis, a large share of the credit. Mrs. Davis is a Pennsylvania woman who

has come into the employ of the Phonograph company with but a limited experience in this particular line, but with a knowledge of business methods and a love of music that has enabled her to accomplish all of the difficulties of the new work with a readiness that insures her success.

Lastly—and fittingly—we come to Joseph Hodock, who is the last to see the Edison goods as they leave the store and upon whose shoulders rest all of the responsibilities of the shipping department. Despite the big volume of goods handled during the opening weeks he has maintained his system and his temper perfectly and has yet to meet with any serious mistake. May his service never grow less!

Mr. Goodwin has all reason to be congratulated for he has a wonderful instrument, a thoroughly equipped store and a corps of assistants that is in keeping.

OFFERS PROMPT ASSISTANCE.

National Association of Talking Machine Jobbers, Through L. C. Wiswell, Gets in Touch with the Trade in the Flooded District.

(Special to The Talking Machine World.)

Chicago, Ill., April 10, 1913.

That the National Association of Talking Machine Jobbers is always "on the job" where the interests of its members are concerned is well evidenced by the prompt letter of assistance sent out by L. C. Wiswell, chairman of the traffic and transportation committee of the association. This letter, which was sent out on April 1 to the members of the association, came at a time when the floods in the Middle West were doing their greatest amount of damage and causing intense suffering.

Mr. Wiswell's letter of assistance is as follows: "The terrible catastrophe that has visited the States of Ohio and Indiana has demoralized transportation, which means that shipments are delayed and, in many cases, lost. Therefore, if you are being inconvenienced by delay or in danger of having losses en route in the shipments of Victor or Edison phonographs or records, the traffic and transportation committee places itself at your command.

"The committee has excellent railway connections at Chicago, and with this advantage would no doubt be of much help in locating shipments. If you wish to use the committee's services in

regard to loss or delay of shipments, please give in writing detailed information, namely, date of shipment, routing, what shipment consists of, number of pieces, etc. If possible, send duplicate copy of bill of lading governing shipment in question. The services of the committee are yours to command.

"National Association of Talking Machine Jobbers, Traffic and Transportation Committee."

SOMMERS CO. ADDS "TALKERS."

Prominent Furniture House in St. Louis Takes on Columbia Line—Handles Pianos Also.

(Special to The Talking Machine World.)

St. Louis, Mo., April 11, 1913.

The Sommers Furniture Co., of St. Louis, added the Columbia line to its merchandise stock April 10. This store, at Eleventh and Olive streets, is in the heart of Piano Row and has a piano department. It is one of the large instalment furniture stores of the city and means a considerable acquisition for the Columbia Co., which has been meagerly represented in St. Louis aside from the company store. Two piano stores were announced as taking up the Columbia line, the Denmore Piano Co., at Grand and Olive streets, on the edge of the great West End residence district, and Kleekamp Bros. Piano Co., at Grand avenue and Arsenal street, on the South Side.

These new dealers are carrying out a plan that Manager Irby W. Reid announced when he took charge of the local store.

EDISON CYLINDER MACHINES

Are Featured in a Special Catalog Just Issued by Thos. A. Edison, Inc.—Admirably Written and Illustrated—Many Edison Improvements.

Thomas A. Edison, Inc., has just issued a very attractive catalog devoted to the Edison phonographs, cylinder models, which is notable for its artistic make-up, and the attractive appearance of the machines described in its pages.

This new publication contains 28 pages, and first attracts the attention of all who see it by reason of its beautiful cover—an artistic and appropriate design in four colors. Throughout the volume are shown every model of cylinder machine introduced by Thomas A. Edison, Inc., with the exception of the three new types of Amberolas that were placed on the market the last few weeks.

The opening pages of the new catalog are devoted to "Edison Improvements," outlining briefly the accomplishments of Thomas A. Edison, Inc., in the realm of cylinder phonograph production. The Blue Amberol record and the diamond point reproducer are two of the subjects that are treated in this section in an interesting way.

The most important feature of this new publication is the attractive and artistic appearance of the various machines shown throughout the catalog. Each page illustrates a different type of phonograph, and is shown in an attractively furnished room in the home, the place that it occupies when in use.

Various rooms of the average home are illustrated, and the phonographs certainly make a pleasing appearance in the appropriate surroundings in which they are placed. At the bottom of each page is placed enough descriptive matter to inform the public just what is essential in the construction, tone and appearance of a talking machine. This combination of attractive illustrations with concise description cannot fail to favorably impress all persons interested in the purchase of an Edison cylinder machine.

The last few pages of this really excellent catalog are devoted to illustrations and descriptions of the Edison school phonograph, Edison home recording outfit, cylinder record albums, reproducers and horns.

The manner of greeting a customer has much to do with making sales. The grouch never makes a good salesman.

**"It's the Jewel that Does the Work
And Oh, How Well."**

10,000 Operas with 1 Needle

Greatest sensation in the improvement of phonographs. Does the work of 10,000 needles on any disc phonograph. Dealers welcoming with delight this Permanent Jewel Point Needle. Phonograph owners everywhere are clamoring for it. No more changing of needles. No more whittling of points. Use this needle 10,000 times without changing. Made in 3 tones—Soft, Medium, Loud. Gives the sweet tone you want. Puts rich tonal value in your records. Prolongs the life of your disc. Preserves the fine, delicate tones. Make friends with your customers by supplying them when they call for the Permanent Phonograph Jewel Point Needle. Sample orders sent on approval.

Jewel Disc Needles

The demand for this wonderful needle is spreading like wild-fire. Every owner of a disc phonograph wants this Jewel Needle as soon as he learns of its beautiful qualities and its unrivalled merit. Every owner who gets one tells his neighbors. Everyone is delighted with the improvement it makes in the music. Saves records. Saves trouble. Saves money.

Very Special to Dealers Hurry up with your order for the Permanent Phonograph Disc Needle. Put it in stock just as quick as you can. Order samples in three tones. The loud tone for public recitals, churches, etc. The medium tone for home gatherings and general use. The low, soft tone for artistic requirements. Dealers, act quick! Help your own business by giving your customers this marvelous Permanent Jewel Disc Phonograph Needle.

Write to-day for full description and all particulars, prices and terms, all sent postpaid, free to you.

It is better to give your customers what they want than to make them dissatisfied. Protect your own business by putting the Permanent Phonograph Disc Needle in stock. Write to-day.

Permanent Phonograph Disc Needle Co., Inc. Dept. 6338 CHICAGO

ARTISTIC VICTOR VOLUME.

New Illustrated Catalog of Victor Red Seal Records Most Attractive Publication—Contains Portraits of Leading Artists, and Selected Number of Records That Will Interest.

A really artistic publication, and one which represents the results of considerable time and expense, has been received from the advertising department of the Victor Talking Machine Co. This volume, entitled "Victor Red Seal Records," is worthy of careful examination by members of the talking machine trade, for it emphasizes the high plane the talking machine now occupies.

This new catalog is devoted to a partial list of Victor red seal records by artists whose names are famous all over the world, and who are under contract with the Victor Co. Over ninety of these artists are represented in this publication, and a partial list of each star's records accompanies a portrait and short biography of the artist featured. The completeness and value of this red seal catalog may be gleaned from the fact that the section devoted to Caruso and his famous records consists of five pages, all of which are interesting and informative. Other artists are treated with the same thoroughness of description, and apparently the main aim of the compilers of this new publication was to produce a catalog that would be the last word in the lists of records by famous artists. That they have succeeded in this endeavor must be conceded by the most critical expert of catalog production.

It seems unnecessary to state here that the appearance and typographical make-up of this artistic brochure is entirely in keeping with the high-class character of the records listed, as the Victor Co. never fails to present a publication with component parts not in complete harmony in every detail. The cover of this publication is worthy of special mention, as it is both unique and attractive. It is made up in an excellent imitation of dark red morocco leather, and the resemblance is startling, as the grain of the leather has been excellently reproduced. A copy of the famous Victor trademark is shown in gilt on the cover, and the effect in general is most pleasing to the eye. The complete catalog contains 125 pages, and has both an alphabetical index of artists and an index of the records listed, with the pages on which they appear. Victor dealers have expressed sincere admiration for this new publication, and intend to use every copy to good advantage instead of making a promiscuous distribution.

SILAS E. PEARSALL CO.'S NEW LEASE.

Chas. Bobzin Becomes Manager of Company and Plans Energetic Campaign Along Wholesale Lines with Victor Co. Goods.

The Silas E. Pearsall Co., the prominent Victor talking machine distributors, who for the past seven years have been located at 541 Fifth avenue, have leased the first floor and basement at 16-18 West Forty-sixth street at an aggregate rental of \$100,000, and will remove to the new location at an early date.

Charles Bobzin, who recently assumed the management of this company, is planning an energetic campaign in the interests of the wholesale department. Mr. Bobzin ranks with the most experienced men of the talking machine industry, and the aggressiveness with which he will enter the wholesale field will no doubt show excellent results. In the retail sphere the wholesale company has a very high class clientele. Mr. Bobzin recently spent several days in Camden, where he went into this matter comprehensively.

PRIZES FOR BEST SALES STORIES.

"The Voice of the Victor," the house organ of the Victor Talking Machine Co., announces an offer of three cash prizes to Victor retail salesmen for the best three stories of how difficult sales were made. This competition closes May 10, and is open to any Victor salesman employed by any properly qualified Victor dealer in the United States. The prizes consist of \$20, \$15 and \$10.

TOWER CO. "OPENING" ON APRIL 14.

New Edison Disc Line Displayed to Advantage by the Tower Mfg. & Novelty Co.

The Tower Mfg. & Novelty Co., 326 Broadway, New York, which recently arranged to handle the entire Edison line of machines and records, including the Edison disc machines, held the formal opening of its talking machine department, Monday, April 14. The new department, which is under the management of H. N. Purdy, formerly connected with Fred Kraft, 30 Church street, New York, is furnished most attractively and comfortably, and visitors the opening day were greatly pleased with the excellent way the machines are displayed. The decorations of the rooms are admirable, and the new disc models make a very pleasing appearance in their new home.

The Tower Mfg. & Novelty Co. is one of the best known manufacturing stationers in the country, and recently completed a six-story building for its exclusive use at the above address. The company caters to an extensive clientele, and expects to close a very profitable business with the Edison line in the territory which it controls.

RECITALS MUCH APPRECIATED.

Two sincere testimonials of appreciation were recently sent to O. W. Christian, manager for Steger & Sons Piano Manufacturing Co., Perth Amboy, N. J., for two Victrola recitals which were given by him a short while since. These letters came from the Mayor of Perth Amboy and W. H. Bowden, a prominent Baptist minister of Perth Amboy, N. J.

NEW TYPE OF REGAL MACHINE.

The Columbia Graphophone Co. announces the introduction of a new type of its popular "Regal" machine, to retail at \$50. This new machine embodies a number of meritorious features, including tone control levers, a lid, a new tone arm and the popular new No. 6 reproducer. The new "Regal" will be formally introduced to the public by the medium of a double page spread in the May 24 issue of the Saturday Evening Post. The letter announcing this new model particularly states that the popular \$40 "Regal" is not to be withdrawn from the market, but that Columbia dealers could avail themselves of an exchange privilege for the new model, receiving full credit for the \$40 type.

If some self-made men had had some assistance they might have turned out a better job.

IMPORTANT CASE ARGUED.

Patentees' Rights as to Fixed Prices the Basis of Argument Before United States Supreme Court in Patent Medicine Case.

Considerable interest is being manifested just now in the talking machine and other prominent industries as to the probable decision that will be rendered in the near future by the U. S. Supreme Court in the celebrated Bauer Chemical Co. or Sanotogen case. This suit, which was argued on an appeal before the highest court of the land April 7, will probably definitely decide the status of the patentee's rights as affecting the resale of a patented article.

In the Supreme Court of the District of Columbia this case was originally decided against the Bauer Chemical Co., the patentee, in its efforts to forbid the sale of Sanotogen by a Washington, D. C., druggist at less than the fixed price (\$1). Immediately after the decision was handed down in favor of the defendant and against the principle of a fixed price on the resale of a patented article, the Bauer Chemical Co. filed a notice of appeal in the U. S. Supreme Court, and it was this appeal which was argued April 7. Prominent attorneys in the talking machine trade state that this case is one of the most important and best outlined cases yet presented to the courts on the subject of the rights of patentees in the resale of patented articles.

TO MAKE TONE MAGNIFIERS.

The Stetson Mfg. Co., Inc., of Manhattan, was recently incorporated under the laws of New York State with a capital of \$25,000. This company will manufacture tone magnifiers for use with talking machines, and the incorporators are Cora S. Butler, Florence M. Hall and William A. Shepard.

CLEANRITE BRUSHES FOR COLUMBIA.

The attention of Columbia jobbers and dealers is directed to the announcement contained in an advertisement of the Blackman Talking Machine Co., 97 Chambers street, New York, regarding the No. 20 Cleanrite brush for the Columbia Concert Grand sound-box. Deliveries are being made now, and advertising matter will be furnished, free of charge, in the near future.

The Metola Talking Machine Co., Boston, Mass., has incorporated with a capital stock of \$150,000 to manufacture and deal in talking machines, etc. Incorporators are Wm. F. Stewart, P. Hunt and W. G. Moseley.

EDISON DISC LITERATURE.

Handsome Volume Illustrating and Describing the Various Disc Models of Edison Phonographs Just Issued—Interesting Publication.

"Edison Phonographs, Disc Models," is the title of a very artistic and high-class catalog just issued by Thomas A. Edison, Inc., Orange, N. J. As its name implies, this excellent new brochure is devoted to the new Edison disc machines, and incidentally it can claim the distinction of being the first piece of catalog literature introduced in behalf of this famous line of machines.

The new Edison publication certainly deserves to take a front rank in the realm of catalog production, as every one of its twenty-eight pages breathes quiet refinement, dignity and charm. Judging from the catalog's artistic perfection, the main thought in its production was to introduce a catalog that would be in every way worthy of the high-class machines portrayed in its pages, and the Edison advertising department has certainly succeeded in its work in this direction.

The cover portrays a very pretty scene in many colors, all in complete harmony and accord, and typographically the catalog is perfect. The first nine pages of the new publication are devoted to a talk under the heading "Edison's Masterpieces." It is not to be imagined for an instant that this discussion is a mediocre, ordinary selling talk. On the contrary, these nine pages contain information that is invaluable to every Edison disc dealer, salesman, customer or prospect. The history of the Edison phonograph, a valuable talk on tone, sound recording and many other similar valuable hints, are interestingly discussed in this section, which in itself is entitled to be called literature in the true sense of the word.

Following this excellent talk are clear and perfect illustrations of the various type of Edison disc machines. Adequate descriptions of the various types are given on each page, and the cuts are really remarkable in their clearly defined details. The last two pages of this artistic catalog are devoted to a short discussion of the Edison disc record, the Edison diamond point reproducer and the portfolio for Edison disc records. Considered in its entirety, this first catalog featuring the Edison disc machines is one that Thomas A. Edison, Inc., and Edison jobbers and dealers throughout the country can well afford to view with pride.

REDUCES DUTY TO 25 PER CENT.

The section in the new tariff bill of considerable interest to the talking machine industry is that paragraph which reduces the duty on phonographs from 45 to 25 per cent. Prominent members of the trade expressed the opinion that this reduction would not affect the present market to any appreciable extent as far as the introduction of foreign makes of machines is concerned.

Alphonzo Smith, who has long handled the Aeolian Co. line of pianos and Pianola pianos at Brooklyn, N. Y., has qualified as a "Class A" dealer in Edison disc phonographs and has installed a complete line.

NEW VITAPHONE ATTACHMENT.

Device Invented by C. B. Repp Is Attached to Reproducer and Is Designed to Absorb All Sounds of Scratching.

A little attachment has been created and perfected by C. B. Repp, inventor of the Vitaphone and president of the Vitaphone Co., to go on to the reproducer. No name has been designated for this little device, but its function is on the order of a "scratch absorber."

It is used for the same purpose on these machines as one puts a filter on his water faucet. The tonal purity secured is wonderful. So important is this device considered that the production for three weeks was held up so that machines might be equipped. Mr. Repp is considering several names for it, but he wouldn't object if a trade member struck something and submitted it. With the new attachment it is now called "the perfect Vitaphone."

Four patents in Germany have been granted to Mr. Repp, and another one is pending. This will make five German patents, and as patents secured in Germany mean a whole lot, it shows the broadness of the different principles used in the construction of the Vitaphone. This new Vitaphone—even the \$12.50 retail model—will play any record of any cut made anywhere on earth.

REPORTS AN EXCELLENT BUSINESS.

Demand for Bagshaw Needles is Steadily Growing, Not Only in the United States but in Foreign Countries—Many Orders Received.

(Special to The Talking Machine World.)

Lowell, Mass., April 10, 1913.

Business with W. H. Bagshaw, the well-known needle manufacturer, is reported to be in excellent shape. The demand for Bagshaw needles is growing not only in the American field, but with its export trade. The call for Duplexetone needles is tremendous also, and it is apparent that the output will exceed all expectations. C. H. Bagshaw, general manager, has several moves up his sleeve from a business promotion standpoint that are destined to add further to the wide reputation and prestige of the House of Bagshaw. The founder of this house was, in fact, the pioneer of the talking machine needle business, as he is accredited with making the first needles for that use.

Watkin's Art Store, 1091 Broad street, Bridgeport, Conn., is carrying some striking advertisements in the local papers bearing on the new Edison disc phonograph. The text matter is excellent and the display most effective.

One-half of the world doesn't know how the other half lives; but it is usually satisfied that honesty doesn't play an important part in that living.

"And what is the diplomatic corps?"

"The diplomatic core," remarked the man who takes a pun seriously, "is what the weaker nation is permitted to receive after the stronger one gets through eating the apple."—Exchange.

OPERA HELPS LOS ANGELES TRADE.

Operatic Productions Increase Demand for Records—General Business Satisfactory—Movements of Talking Machine Men.

(Special to The Talking Machine World.)

Los Angeles, Cal., April 7, 1913.

March marks the close of the most successful opera and concert season Los Angeles has ever had. The Chicago Grand Opera Company and many celebrated artists recently appearing in Southern California have stimulated talking machine owners to such an extent that the talking machine business has been very much increased.

H. B. Hinman, who has been manager of the Victor talking machine department of the J. B. Brown Music Co. for many years, will take a position with the Pacific Salesbook Co. Mr. Hinman will be very much missed among the trade.

A Graham Cook, manager of the Victor department of the George J. Birkel Music Co., states that the demand for Victrolas and records is still above the standard and doing a fine business.

The talking machine trade of the Southern California Music Co. has been so satisfactory that there has been several more salesrooms added to the department, thus giving them the entire third floor, and aside from this the entire department has been refinished and decorated, thus making it one of the most handsome of its kind.

Another unique treat was given the members of the Southern California Talking Machine Men's Association by a talk on Symphony by Harley Hamilton, leader and conductor of the Los Angeles Symphony Orchestra. This talk was very beneficial and much enjoyed by all salesmen and those interested in the talking machine business.

W. S. Grey, Pacific Coast manager of the Columbia Graphophone Co. General, visited Los Angeles a few days and complimented the phonograph department of the Fitzgerald Music Co. on its new quarters. Emma V. Kennedy, in charge of this department, has been very successful of late selling the Grafonola Regent.

The Wiley B. Allen Co. reports that sales of talking machine goods came up to its expectations for the month of March.

Charles S. Ruggles, local manager of Sherman, Clay & Co., Victor distributors, is much pleased with the showing of the past month, in fact the best month of the year.

Adolph Mayers, the New York Victor dealer, was given a most complimentary and flattering story in a recent issue of the Tammany Times. Mr. Mayer's business policies were held up as models of progressive, legitimate merchandising.

The CLEANNOTE Pad.

makes a \$25 machine sound like a hundred dollar one.

It cleans, burnishes and lubricates records. It is impregnated and automatically supplied with a dry lubricant absolutely free from grit, grease or oil.

It trebles the life of records, clears the tone and reduces scratch. Price, 25c. Discount to trade.

**VOX HUMANA TALKING MACHINE CO.
Nantucket, Mass.**

A SUCCESSFUL NEW YORK DEALER.

F. L. Steers Has Built Up Big Business in Washington Heights Section of the City—Recently Remodeled Store to Accommodate Growing Trade—New Demonstration Rooms.

F. L. Steers, the progressive Victor dealer at Broadway and 143d street, New York, who, by the way, was recently elected secretary of the Eastern Talking Machine Dealers' Association, before the holidays, had his entire store remodeled for the purpose of increasing his facilities to take proper care of his rapidly growing business. Mr. Steers found that considerable space in his store was practically wasted and, by transferring the record stock from the front to the back of the store, made room for the erection of two additional demonstrating booths, making four in all. Through the new arrangement, the facilities for handling customers have been doubled with a consequent improvement in trade.

All the woodwork in the store, including that of the booths, is finished in white. The walls are gray and the floor is covered with a grass green royal Wilton carpet, making a simple, yet effective environment in which to exhibit the Victor line to advantage.

May 1 marks the completion of Mr. Steers' third year as a talking machine dealer in the fashionable section of Washington Heights, during which time the business has increased steadily. He states that the business for the eleven months of his last fiscal year averages an increase of over 35 per cent., as compared with the business for the year preceding.

Among the prominent people to buy Victor outfits from Mr. Steers recently have been: Mrs. Jeffrey Farnol, whose husband is author of "The Broad Highway" and "The Amateur Gentleman;" Valerian J. O'Farrell, who has come into special prominence recently through his connection with the Becker and Thaw cases; Charles Dalton, who is playing the role of the hypnotist in Belasco's production of "The Case of Becky," and Charles King, best known to the patrons of vaudeville as a member of the team of Brice and King.

AMERICAN TALKERS FOR RUSSIA.

Consular Officer Reports Demand from That Country with Big Sales Guarantee.

(Special to The Talking Machine World.)

Washington, D. C., April 8, 1913.

An American consular officer in Russia reports that a resident of his district desires to get in touch with manufacturers of standard gramophones. He desires to arrange for the purchase of the sounding boxes and other mechanism and have the frames built in Russia. He would be willing to organize a company and erect a factory for that purpose provided he could interest American manufacturers. He will guarantee the sale of at least 15,000 yearly under such arrange-

EXPERT REPAIRMAN WANTED

WANTED TO BUY

WANTED TO BUY—Dealers' surplus stocks or close-outs of Zonophone Single Disc Records. Address "Zonophone," care The Talking Machine World, 373 Fourth avenue, New York City.

FOR SALE

FOR SALE—2,000 two-minute and 1,500 four-minute Edison Records. All new, clean stock. Give me your best offers. John Hindle, 324 Grove street, Jersey City, N. J.

ments, and thinks that perhaps two or three times that number could be disposed of per annum. American gramophones are now acknowledged to be much superior to the German makes and their reputation is gaining ground daily, while other foreign makes are losing the field which they hitherto held. The inquiry is filed under number 10,589.

RECORDING DICTAGRAPH

Perfected by K. M. Turner—Is Exciting a Great Deal of Interest in Many Circles.

K. M. Turner, the inventor of the dictagraph, has just perfected a recording dictagraph which not only overhears the conversation in the room where its presence is not suspected, but makes a full record of the conversation, whispers and all, on a phonograph cylinder located some distance away. This new and remarkable device of Mr. Turner has been on exhibition at his office at West 42d street, New York, the past week and has excited considerable interest.

Since the dictagraph was made famous by Detective Burns in his various investigations of criminal conspiracies, it has excited no end of interest and the secret of its construction has been sought diligently. Heretofore it was necessary to have a stenographer take down the conversation transported unknowingly from those within its radius, but the latest improvement obviates this, as a permanent phonograph record is made. This can be used in the law court, and the actual voice of the speaker duplicated to satisfy judge and jury of its accuracy. It is an interesting development.

CONDON PRODUCTS IN DEMAND.

"Our factory is working to full capacity to turn out our various new products," states an officer of the Condon Autostop Co., 109 Broad street, in a chat with The World. "Judging from the approval manifested by those members of the trade who already have seen our new automatic stop and needle cutter, these products will meet with an excellent sale in all parts of the country.

"The trade is particularly anxious to secure a sufficient stock of 'Noset,' the autostartstop, and we are doing our utmost to get this product in the hands of our trade at the earliest possible moment. At the present time the work is progressing very satisfactorily, and it will be but a very short while before we are in a position to take care of all the orders of our trade, no matter if they are large or small. Our new No. 14 fiber needle cutter is certain to meet with the hearty approval of our clientele, as all tests have pointed to it as being even better than the strong guarantee we give all purchasers."

JAP SUCCEEDS AS DEALER.

S. Yano Pays Particular Attention to Japanese Trade and Does Big Business in That Field.

An interesting visitor last week to the warehouses of the New York Talking Machine Co., 81 Chambers street, New York, was S. Yano, of 571 West 159th street, New York, an exclusive Victor dealer, and one of the clients of the New York Talking Machine Co. Mr. Yano, incidentally, is the only Japanese dealer in the eastern section of this country, and is known as "Graphophone Yano" by a host of friends in various parts of the country. He came East after the San Francisco earthquake in 1906, and has made a marked success in his special field of catering to the Japanese trade.

Mr. Yano has been connected with the talking machine industry for a number of years, and his wide knowledge of Japanese tastes and fancies has proven invaluable to the manufacturers in their choosing of Japanese record assortments and in labeling and cataloging these records. He carries a list of about 400 records always in stock, and solicits the Japanese trade in all parts of the country. Mr. Yano has a circular listing all his records, and distributes this to his trade to excellent purpose. His volume of business is surprisingly

heavy, considering his limited field, and each year's business shows a substantial gain.

Mr. Yano is a great believer in publicity, and advertises extensively in the publications that reach the Japanese people. In a chat with The Review, Mr. Yano pointed out that results from publicity in his field are somewhat slower than with American advertisers, as the Japanese people never do a thing hurriedly, but consider an offer carefully from all standpoints. An instance of this was noticed the other day, when Mr. Yano received an order for a Victor machine from a prospect who enclosed an advertisement taken from a 1907 paper. "Enterprise" is Mr. Yano's middle name, and whenever any Japanese imperial or touring party comes to these shores Mr. Yano is right there with a couple of Victrolas for demonstration purposes, and orders generally follow.

STORY WITH A MORAL.

Shows That Nobody Amounts to Much Who Doesn't Hustle.

There was a large Thomas cat that had its habitation in a store. It was reported to be a fine blooded animal from a family of distinguished rat destroyers. The cat was a beauty and everybody round the store took a turn at furnishing grub suited to the taste of a blooded cat.

It was observed, however, that there was no reduction of the rat or mice population, and the proprietor of the store commenced to inquire into the reason why. He first tried the cat on a rat that had been caught in a trap, but the feline expressed no interest or animation. He looked at the rat and then walked away. The storekeeper was disappointed, but not entirely discouraged. He thought perhaps that cat's specialty was mice, and as he had a mouse or two that had been caught alive in a trap, he turned them loose in front of the cat, but it paid no more attention to them than a sheep would to a rare done beefsteak.

"I think," said the storekeeper, "that I am onto this situation. I will fire the next employe who gives that cat anything to eat." For two days the Thomas cat did a good deal of howling and wore a look of injured innocence. He felt that he had been wronged, and was ready to start an insurrection, but as that didn't seem to get him anywhere, he turned loose on the rats and mice in a way that was surprising.

The second day after this change of programme the rats held a convention to consider what ought to be done. When the leading orator among the rats arose he said: "Fellow rats, this is no time for talk. What we want to do is to move. That cat hasn't any more natural ability than he had before, but he has concluded that he either has to hustle or starve, and I have discovered that when a cat gets in that frame of mind his neighborhood is no place for rats."

Many men and women, as well as cats, have never amounted to a whoop just because they never had to hustle.—Topeka Capital.

KESNER CO. IN TROUBLE.

The J. L. Kesner Co., which conducts a department store at Sixth avenue and 23d street, New York, went into the hands of a receiver on April 2 for lack of capital. A talking machine department was conducted, and few of the talking machine people are among the creditors. The liabilities are placed at \$870,000 and nominal assets at \$1,400,000. The business is being continued by the receiver.

The high school at Sac City, Iowa, was a recent purchaser of a Victrola XVI after an excellent concert had been rendered by the local Victor dealer, assisted by L. E. Gilbert, of Chase & West, Victor distributors at Des Moines, Iowa. Incidentally over \$40 was raised by the sale of tickets for the concert.

Some men are born good; some men acquire goodness; and others leave it to the kindly monument makers to find their virtues.

Every time you sell a \$20 "De Luxe" you have done

YOU have made a beautiful profit; you have made a certain and regular record buyer; and you have added one more completely pleased and *actively* interested customer, because, just as this reproduction of our April 19th Saturday Evening Post advertisement says:

"Only Columbia instruments have the true, round, natural tone; and when a man is investing \$200 that is the thing to make sure of."

"Only Columbia instruments have the features that make that tone possible; the perfect, sensitive, scientific reproducer; the continuous, uninterrupted increase of tone-arm and tone-chamber."

"Only Columbia instruments have the tone-control leaves, which control the volume of sound by precisely the same device as employed in the great pipe organs."

"Only Columbia instruments have the record compartments in the form of pivoted cradles."

So: These facts have produced such a demand for the "De Luxe" that it is now just where we want it—ready for a market that seems likely to make it even out-sell the "Favorite."

Columbia Graphophone Woolworth Building

Creators of the talking machine industry. Pioneers and leaders.
Largest manufacturers of talking machines in the world.

THE SATURDAY EVENING POST

April 19, 1913

No one thing gives so much pleasure, to so many people, for so long a time, at so little cost, as a Columbia Grafonola.

The world's greatest artists make records for the Columbia Company: Ysaye, Bonci, Destinn, Slezak, Fremstad, Hofmann, Zenatello, Nordica, Garden, Parlow, Harrold, Nielsen, Bispham, Scharwenka, Pasquali, White, Friedheim, Gay, Segurolo, Cavalieri, and scores of others.

Every great artist who has ever made records—without exception—can be heard on your Columbia Grafonola.

Demonstration at any time in the stores of all dealers in talking machines—or on approval in your own home. Write to us for catalogs and address of nearest dealer.

All Columbia Grafonolas will play Victor Records. Likewise, all Columbia Records may be played on Victor talking machines.

Columbia Graphophone Company, Box 384, Woolworth Bldg., New York

Toronto: McKinnon Building. Prices in Canada plus duty.
Creators of the Talking Machine Industry. Pioneers and leaders of the Entertainment Palace. Largest Makers of Talking Machines in the World. Dealers and prospective dealers, write for a complimentary letter and a free copy of our book "Music Money."

Half-a-thousand new Columbia dealers signed contracts last month—including about 80 of the largest and most active merchants handling furniture, musical instruments and general merchandise. Partly because they had read our book "Music Money" and we had proved every page of it. Write you for that book!

200 Columbia Grafonola one a good day's work

THE SATURDAY EVENING POST

Columbia Grafonola
"De Luxe"
Two Hundred Dollars
(Equipped with the new "No. 6" Reproducer)
Mahogany. Special oak finishes to order.
Caucasian Walnut, \$250.
There are fourteen other Columbia models
from \$17.50 up to \$500.
Convenient terms of purchase may be arranged.

Only Columbia instruments have the true, round, natural tone, and when you are investing \$200 that is a thing to make sure of.
Only Columbia instruments have the features that make that tone possible—the perfect sensitive, scientific reproducer, the continuous, uninterrupted increase of tone-age and tone-chamber.
Only Columbia instruments have the tone-control leaves, which control the volume of tone by precisely the same device as employed in the great pipe-organs.
Only Columbia instruments have the record compartments in the form of pivoted cradles.
Don't permit anybody's conversational pretensions to distract your attention from the above points. Check them up, one by one. It is your money.

WE want to ask you to digest those radical statements printed right under the picture of the Columbia "De Luxe" and which we have printed on the left hand side of this page.

Done it? All right, then—now one other thing for the good of your income: *Have* you had an opportunity to hear the records by Ysaye? Any of them—but say the Brahms "Hungarian Dance No. 5" for instance?

Mischa Elman says that Ysaye is "his master." And you can take your customer's money for those Ysaye records and feel that you are doing him a favor.

That is our aim—to enable the dealer to feel just that way in every Columbia sale he makes; and we are rapidly reaching it, clean through the whole line.

RECORDING ARTISTS OF ALL CASTES IN INDIA

Calcutta, Madras and Bombay—A Recording Expedition of Over 12,000 Miles, Recording Only Oriental Artists—A Most Interesting Experience in Far Off Lands.

By T. J. THEOBALD NOBLE, a Prominent European Talking Machine Recorder.

Whilst in Turkestan (Central Asia), I received cables to the effect, "Will you oblige the company in going from Tashkend to Calcutta? It is important that you reach Calcutta in time to record for this season's market. *Book from Tashkend directly to Calcutta; it is better than returning to Europe to embark only at Marseilles or London.*"

The emphasis is mine, for one only had to consult a map (physical) of Asia to see how impossible and ridiculous such a suggestion was.

Recording in Pyjamas, Madras.

I replied to the sender (an American, strange to say), "Send along a Zeppelin and I'll risk it," and followed that up with another saying I was returning to Moscow, there to enjoy a rest after recording in a territory such as Turkestan, where they have not yet even the rude forms of civilization such as are found in West Africa.

On arriving in Moscow I received cables from Monsieur "P.," entreating me to oblige him by leaving for India, as this was to decide definitely whether he would continue or not with his business in that country. I decided to waive my holiday and I looked up the most expedient route for Calcutta.

It will perhaps interest my readers to consult a map of Europe and Asia and follow my perigrinations, which commenced three months previous to my departure for India. Leaving Moscow, my first call was Rostoff on the Don, then in the following order: Armavia, Vladikavkaz, across the Caucassian Mountains by automobile, Tiflis, Baku, across the Caspian Sea, Krasnovodsk, Askabad, Merv, Bokhara, Samarkand, Khokand and Tashkend, thence returning to Moscow via Kazalinsk, Orenburg, Samara, Kazan. One day in Moscow, off to Warsaw, Vienna, Venice, Bologna, Brindisi on to the steamer Port Said, transhipped on to another steamer for Bombay, calling at Aden. At Bombay, entrained for Calcutta. Arriving in Calcutta I figured that I had covered so far 12,000 miles. After the unenviable existence in Turkestan and the constant traveling and changing I was not sorry to step on board the steamer at

Recording in Calcutta.

Brindisi; it was a mail boat and I intermingled with men (mostly army officers) who spoke my own language. We arrived after a most enjoyable trip at Port Said at 2 o'clock in the morning, and I transhipped on to the British mail steamer S. S. Arabia, bound for Bombay. Once again I

was with and amongst my own language and people and the voyage was therefore most pleasant.

Along the banks of the Suez Canal I had my first glimpse of the Arabs. I was immediately struck with their sensual, deceitful and almost fiendish faces. After twelve days from Brindisi we arrived outside Bombay on the first of July. It was pouring with rain (monsoon) and there was a heavy swell on, which certainly did not improve matters, and my first impression of Bombay was vague.

Of Bombay I shall have more to say later, for my immediate departure for Calcutta prevented me seeing the town. I did, however, notice the Victoria Railway terminus, a magnificent structure voted to be the finest, architecturally, in the world.

The traveling to Calcutta was comparatively fast, and the carriages extremely comfortable. The land is cultivated and fertile, and as the train passes the fields with the various natives of all castes working, presents a moving kaleidoscope of color.

My first impression of Calcutta was one of surprise at its enormity. Fine buildings, shops, roads, etc., all exceedingly clean.

It was not my intention to stay in India very

A Canarese Artist.

long, and of that I instructed our people, whom I asked to hurry things up. I was informed, however, that the word hurry is not in the native vocabulary. I therefore had a rumor circulated that I should only stay a few days in each town; this had the necessary effect of stimulating them to movement and hustle.

My first artist was an amateur, who called at the recording room to fix a date. He stated that he preferred me to bring the machine and record to his own residence, and as he sung better at night, the most convenient hour would be 10 o'clock. To this the manager for our agent, who was present, immediately acquiesced, much to my surprise. On remonstrating with him over the matter, he informed me that it was customary to record at the house of a "gentleman" and usual, too, at night. I peremptorily informed both the manager and artist that I maintained a principle of never visiting the house of an artist to record unless the exigencies of the case made it absolutely imperative. Furthermore, during my stay in India, I should hold to that principle; and I did. The following day I commenced adjusting my diaphragms to the room and the Indian climate.

My first artist was the amateur. He accom-

panied himself upon a diminutive harmonium; the left hand moving the bellows, the right hand playing the melody. There was a conspicuous absence of harmony in all the selections he sung, and I afterwards learned that harmony is unknown in India. All the accompaniment is with one hand playing of the harmonium, and chords are never used or understood.

There is also in Hindustani songs an absence of what is known and appreciated as melody in America. The singers appear to run up and down the harmonium ad lib, occasionally taking good

Girl Duettists in Bengalee.

notes and hitting a few notes giving spasmodic glimpses of real melody. I experienced greater difficulty in following the rhythm of these Hindu songs than even the Cossack chantings.

My next recording was another amateur who was accompanied by the harmonium and the proverbial tum-tum.

These instruments are very curious for, although the playing of them appears to be perfectly simple, they are in reality extremely difficult. Before deciding definitely on a tum-tumist, our agent heard eight of the accredited players. It was many days before I could follow even to a small extent—how the tum-tum was supposed to accompany the singer, and I do confess that to this day I cannot fathom how it is possible to accurately accompany an Indian song on such an instrument.

The artist sings up and down the keyboard, and to my mind there are no bars, rhythm or tempo, yet the tum-tumist crescendos, stops, commences and synchronises perfectly with the singing. It was and still is an enigma to me.

I can best describe the singing as a continual series of cadenzas which the harmonium synchronises with, whilst the tum-tum is giving out a continuous series of tappings, rising and sinking with the artist in a most mystifying manner.

At first I found it unmusical and weird, but eventually began to follow the songs with keen enjoyment and appreciation. My next artist was a woman; of pretty face and features, small of stature with a slender and well-shaped figure, timid and strangely childish in her mannerisms. She wore a small gold ring in her nostrils. She was, in short, the quintessence of daintiness.

Her singing was similar to the previous artist, but very much lighter, prettier and sweeter; she was singing in Bengalee, and the continuous series of cadenzas were most exhilarating and not too intricate to follow. She played the harmonium and was also accompanied by a tum-tum and joora.

The artist, unfortunately spoke no English, which was a pity, for our language from her lips must have been a pleasure.

A few days later I recorded the most expensive artist in India, Miss Cohar Jan, of Calcutta; we were compelled to pay the sum of £400 (\$2,000), for sixteen songs. She was able to sing in several languages, it was for that reason we paid her big money. Although in no way comparing with the charming artist who I had previously recorded, she was the most popular, and therefore the difference in fees was justified. The first and best voice, I had paid but £40 for eight titles, sung in Bengalee. Miss Cohar Jan had sung in Hindustani, Telegu and Persian.

Miss Jan was in the habit of singing for the rich Indian Princes, and at the weddings of rich merchants, and her fees averaged \$1,000 to \$2,000 per diem.

She is also the recipient of various kinds of jewels from her admirers, who lavish money and

presents on her to an amazing degree. She was accompanied by her own men on the tum-tum, harmonium and violin. The latter instrument is played in the same manner a carpenter saws.

She was everlastingly chewing the proverbial Indian *betal-nut, and it was the duty of one of her numerous retinue to carry round a large brass "spittoon" into which, before commencing to sing, she would expectorate. This was a nauseous procedure, but one that was consistently followed by all other artists in India. Miss Jan had an extraordinary control over her toes, and for our amusement would often beat time with them, needless to add the toes were all bejewelled with various trinkets. We were informed by her manager that the jewels which she was wearing possessed an intrinsic value of a lakh and a half of rupees (nearly fifty thousand dollars). During the recording of the female artists the important caste question arose and for awhile delayed us in recording. As in Turkestan, all female artists are looked upon as prostitutes, and are therefore casteless. The curious position arises that it is against the religion for a respectable man to touch, talk or do business with one of these so-called casteless women. Our broker, Mr. Bose, a man held in great respect in Calcutta, informed us that he could not be present, so also did his manager, with the result that we were in a quandary how to proceed, for neither our representative nor myself were able to criticise the singing, it was therefore absolutely imperative that some so-called "respectable" man was present. After a day's delay it was discovered that so long as no outside person was aware of the meeting, and that the respectable one was merely interpreting, all would be well. I may add that several "respectable Indians" took advantage of this and were present at the invitation of the manager. So much so that I was compelled to offend the manager by telling him I did not allow friends into the recording room.

Books in their scores have already been written on the caste question, and therefore I do not propose to write on its obscurities, other than give a few of my personal experiences encountered in recording the different castes.

About this time I recorded a man who played two instruments like diminutive clarionets, "with his throat." They were placed one on either side of the throat and the music that emanated from them was comparatively loud. The man evidently had complete control of the muscles of his throat,

*The betal-nut is chewed together with a powder which causes a crimson stain to appear in the mouth making a particularly offensive appearance to the teeth and lips.

these muscles acting as a reproducing diaphragm. Placing the instruments over the particular part which he was able to control in some mysterious manner, he produced the music. The performance was uncanny, strangely "Indian." The singing of the women was much more interesting than the men, without exception. Strange to say, amateurs were the best of the men, and the professionals the best of the women.

The "real" ladies, I was informed, sing only in the precincts of their own homes. I was to have recorded a "real lady," but absolutely refused to travel to do so; further, it would have been necessitous to dismantle the machine and fix it up again for a couple of hours, again dismantling and fixing it for the regular recording in Calcutta. This to please the whim of a native "lady," and to acknowledge the rule of a ridiculous and prehistoric caste indiosyncrasy. I have mentioned that diaphragms are affected by the different climates and atmospherical conditions. I began recording with the diaphragms constructed for Turkestan, but found them too sensitive for use in Calcutta, I tried my European diaphragms, these were too hard, I accordingly constructed a number to meet the exigencies of the Indian climate.

All the Indian artists preferred to sit whilst singing, and therefore caused a certain amount of difficulty in bunching around the horns in focus.

After recording 420 titles in Calcutta, I left for Madras, to record Canarese artists. Of Madras at this point, I shall have little to write, for immediately on arriving I was stricken down with malaria fever, and was in bed for three weeks, afterwards proceeding to the town of Bangalore to recuperate and incidentally take a few records.

When I was convalescent we experienced considerable difficulty in obtaining a recording room,

for the hotel was full and there were no other buildings in the vicinity with spare rooms. We eventually were compelled to record in a large building, which was a home of rest for the native paupers. A stone building full of unfurnished stone rooms—fortunately there were few natives staying at the place.

The Canarese singing and songs was very much easier to follow than the Hindu, and there was a more pronounced rhythm. It was here I recorded my only duetists, two sisters, whose singing was very pleasing and the melodies were easy to follow. They kept time by beating with their hands on their knees. They were accompanied as usual with the harmonium and tum-tum. The girls were quite young and were protected by their parents; they never allowed the girls out of their sight, for they will make a living out of them both by singing and prostitution. The girls were, I was informed, aware of the existence before them and appeared resigned to their fate. I was fortunate in securing a photograph of the girls together with the parents and the accompanist, in position in front of the horns.

We were fortunate in securing another Indian woman who sung in Canarese, and although we dalled over the price for a couple of days, we secured her. Of her there is little to say other than she possessed a voice as large and as powerful as herself; standing five feet ten inches, with a splendid figure, the tallest Indian woman I had met. In the photograph can be seen the little pet dog which she is holding in her arms. I found the Canarese singing simple to record and was not sorry, for I was still very weak from the fever. We left for Madras after having recorded 40 titles in Bangalore.

(To be continued next month.)

FACTORS THAT CONTRIBUTED TO BUSINESS GROWTH

Of the Columbia Graphophone Co. Set Forth Most Interestingly by George W. Lyle, General Manager of the Concern—Moving This Week to New General Offices in the Woolworth Building, New York City—Bridgeport Factories to Be Enlarged.

Coincident with the removal of the executive offices of the Columbia Graphophone Co. to their handsome new quarters on the twentieth floor of the Woolworth building, New York, next Friday (April 18), comes the announcement that the Columbia Graphophone Co.'s factories at Bridgeport, Conn., will be considerably enlarged in the very near future. The mere announcement of the construction of additional facilities at Bridgeport, Conn., is nothing unusual, as the factories have

been added to and enlarged continually for the past few years. The combination of both office and factory expansion at the same time, however, lends an unusually interesting aspect to the contemplated changes that forcibly impresses the trade with the remarkable advances in popularity of Columbia products.

George W. Lyle, general manager of the Columbia Graphophone Co., and a tireless worker in behalf of the progress of the company, is naturally exceedingly pleased with the status of Columbia business. "Our business since the first of the year has really been remarkable," commented Mr. Lyle in a chat with The World. "We had naturally expected that we would show a certain increase over last year, but the gains to date have far exceeded all our expectations. Our factories at Bridgeport, Conn., are working overtime, and the need has become imperative for the construction of additional facilities to assist in filling our orders.

"Many features of our business are contributing to this splendid increase over last year, but a few of the important ones are the introduction of the Columbia Grand, the splendid list of artists being added to the Columbia library, our continual and intensive publicity, and chief of all, the quality and value of all our machines and record products. The introduction of the Columbia Grand has been one of the greatest incentives to the development of high class trade, and since its presentation to the public our dealers all report substantial increases in the sales of the higher-priced types of machines. Our list of artists is being daily augmented by the addition of world famous singers and instrumentalists, whose selections are meeting with wonderful success. Our national publicity is impressing the public with the quality and merit of the entire Columbia line, and this publicity is of inestimable benefit in the development of our trade. The quality and value represented in our machines and records is a matter of general knowledge, and with all these features contributing to Columbia popularity, I feel safe in predicting that 1913 will be the greatest year in our history."

Bell-Hood Needles

The Needle with a "Sounding-Board"

Unqualifiedly accepted by many as the best. *We know it to be the best.*

There is money in handling our needle. Many dealers have increased their receipts materially. It draws in business.

NEW HAVEN, CONN.

THE TALKING MACHINE AS AN AID IN CARE OF DISEASE.

Insane Asylums, Almshouses and Hospitals Awakening to the Need of Good Music—A Rare Opportunity for the Talker Man to Open Up a New Field That Will Call Down Blessings on Those Engaged in This Good Work—Interesting Facts Worth Recording.

Within a few miles of the writer's home, situated among the fertile farms of central New Jersey, nestles the Burlington County Almshouse and Insane Asylum, and, if you care for a practical demonstration of the value of the talking machine among the aged poor and feeble-minded, I will be charmed to have you meet the visiting physician. We will call upon him at his home in Mount Holly, and, our errand explained, he will ring up his chauffeur, have his car brought round, and soon we will be flying up the South Pemberton road toward our destination.

Upon our arrival at the institution we are cordially welcomed by the superintendent, who assists the doctor in making our visit a memorable one.

"The advent of the talking machine in our midst has proved a great blessing," we are informed as we make our rounds.

"Mrs. Wm. C. Parry, a philanthropic woman of Hainesport, was the donor, and it must be a great satisfaction to her to realize how much cheer her gift has brought the human derelicts under our care here."

We pass from ward to ward in the asylum and everywhere peace and quiet and contentment reign. No dungeon cells meet our sight; no strait-jackets or other instruments of subjection one is so apt to associate with a place of this character are in evidence. In answer to our inquiries concerning them, we are told that in the most violent cases they are still occasionally necessary, but in most instances a warm bath and soothing music are sufficient to subdue the most unruly.

Hypodermic Syringe with Morphine Charge.

At the almshouse we find the inmates assembled in the living room, and a thrill of suppressed excitement circulates among them.

Mr. Dealer, did you ever attend an entertainment at the old town hall down home? If you did, and had pull enough with the management to be allowed to look at the rural audience through the peephole in the curtain, you gazed upon a similar picture.

Then, as we enter, the matron starts the phonograph. The record has engraved upon it one of Col. Stewart's funniest stories, and low ripples of laughter and subdued guffaws greet every witticism.

We linger through several selections, and never before have we witnessed a more attentive audience.

In a talk with the matron at the close of the concert we learn how much real enjoyment the talking machine furnishes these unfortunates.

"I do not know how we could ever do without it," she remarks by way of finale.

Hospitals, too, Mr. Dealer, are accepting the talking machine as a curative agent in certain forms of nervous diseases, and it is fast taking the place of drugs. Instead of resorting to the hypodermic syringe with its hellish charge of the devil's brew—morphine, which, while it soothes and exhilarates temporarily, floods the system of

the victim with the most seductive of all poisons—opium, the more advanced of the medical fraternity are experimenting with music as a harmless and effective substitute.

Dr. James E. McCambridge, a leading Poughkeepsie, N. Y., physician, has found music of great value in his battles with tuberculosis.

A Harmless and Effective Substitute.

Listen to what the Philadelphia North American has to say upon this interesting subject:

Poughkeepsie, N. Y., March 10.

Music, as an aid in the cure of tuberculosis, has proved its value at the Samuel W. Bowne Memorial Hospital in this city, one of the leading insti-

"THE LITTLE SARASATE."

Twenty Selections Played by the Juvenile Spanish Artiste Cristeta Goni for the Columbia Co.—Known as "Little Sarasate."

The Columbia Graphophone Co. will list in the very near future, both in domestic and export supplements, about twenty selections played by Cristeta Goni, the juvenile Spanish violinist, known abroad and in this country as "The Little Sarasate." These selections constitute a splendid repertoire of all the Sarasate Spanish compositions, and this is the first time this library has ever been recorded. Those present in the Columbia laboratory when the records were tested say Miss Goni has produced some remarkably successful records.

Cristeta Goni.

Cristeta Goni is only eighteen years of age, but she has already achieved noteworthy fame both here and abroad as a finished artist in every respect. She is a pupil of the world-famous maestro and composer, Ambrosio, professor of the Grand Conservatory in Paris, who has proclaimed her

tutions in the State for the treatment of pulmonary diseases.

The hospital, which was erected by Mrs. Bowne at a cost of more than \$200,000, closed its first year of the musical treatment to-day, and reported a fifty per cent. gain from that cause in the results obtained.

Dr. James E. McCambridge, one of the leading physicians of the local hospital, said to-day that the music, heretofore used only in the treatment of insanity, had benefited his patients almost as much as the fresh-air cure.

"Music relieves the strain in the mind of the sufferer, and, when that is done and the patient has other than his troubles to think about, he is on the road to recovery," said Dr. McCambridge. "Tuberculosis, properly treated, is far from being the dread disease it is generally thought to be.

"We have made it a rule to have concerts frequently at the hospital, which was easy to accomplish because of the willingness of local musicians to donate their services."

Now, Mr. Dealer, the idea I have endeavored to convey in this story is that there is an opening for your goods in the hospitals, sanitariums, insane asylums and almshouses throughout the land, and that by a systematic canvass of the above named institutions near you you can make some substantial sales.

It occurs to the writer that the doctor's office and the dental parlor should have talking machines as part of their equipments also, for what will make a fellow forget his stomach ache or throbbing molar like a good tale well told or a cheerful singing tune?

I am very sure, Mr. Dealer, if you put this matter in an interesting light before the M.D.s and D. of D.S.s they will agree with me and become your patrons.

Give them a go anyway.

HOWARD TAYLOR MIDDLETON.

to be one of his most talented pupils. Miss Goni was honored by being called to play before their Royal Majesties the King and Queen of Spain, who signally honored her by arising in their seats in the royal box after the first number, a distinction never before accorded an artist by members of the Crown. In her recent tours of this country Miss Goni scored emphatic successes, and her two recitals in Carnegie Hall were unanimously commended by the press.

George P. Metzger, advertising manager of the Columbia Graphophone Co., returned to New York March 21 after a two weeks' stay in Yucatan, Mexico. Mr. Metzger states that his short trip was a most pleasant one, and that he was enabled to take care of an enormous bundle of work that would have used up about two months of his time at the office.

ANNUAL DINNER OF TALKING MACHINE DEALERS' ASS'N

Held at the New Grand Hotel on April 9—Dealers Have as Their Guests Prominent Manufacturers, Representatives, Jobbers, Attorneys and Men in Other Walks of Life Addresses of Particular Interest Delivered—Affair a Credit to the Association.

The Eastern Talking Machine Dealers' Association added to its laurels on Wednesday evening, April 9, with its third annual banquet at the New Grand Hotel, New York, when it had as its guests talking machine manufacturers, jobbers, dealers and men prominent in other walks of life to the number of eighty. The gathering indicated that the dealers' organization was a live body with a real purpose, and that the members were starting on their fourth year full of purpose and enthusiasm.

Election of Officers.

Previous to the arrival of the guests of the evening the dealers held their annual meeting for the election of officers, and the following gentlemen were chosen to preside at the head of the organization for the ensuing year: J. G. Brenner, New York, president; R. Montalvo, Jr., New Brunswick, N. J., vice-president; F. L. Steers, New York, secretary, and Henry Rau, Jersey City, N. J., treasurer.

Henry C. Brown's Interesting Address.

The office of toastmaster at the banquet was assigned to V. W. Moody, of the New York Talking Machine Co. He opened the feast of reason by introducing Henry C. Brown, the popular advertising manager of the Victor Talking Machine Co., who gave the talking machine men assembled some excellent points regarding advertising in general and that of the talking machine business in particular. Mr. Brown emphasized the desire of the Victor Talking Machine Co. to co-operate with the dealers throughout the country and to receive on his part the co-operation of all the dealers on matters pertaining to the development of all branches of the talking machine business. He commented upon the enthusiasm of the dealers regarding new types and features introduced in the Victor line, and said that though the company was constantly spending millions of dollars increasing its facilities to take care of the demands of the trade, those demands increased in the approximate ratio of three to two.

In closing his address Mr. Brown referred to his own particular department, that of advertising, saying that there was no deep mystery about the science of advertising and no real necessity for being familiar with an abundance of type faces or other details of the printing trade. Advertising, he said, was simply a practical application of ordinary common sense in the exploitation of certain products.

Wm. C. Freeman on Co-operative Publicity.

The next speaker was William C. Freeman, advertising manager of the New York Evening Mail, whose advertising talks are read and advertising policy looked up to and admired throughout the country. Mr. Freeman was present at the invitation of President Brenner, of the association, for the purpose of outlining a plan whereby the talking machine dealers of Greater New York could co-operate with a view to securing the greatest amount of effective newspaper publicity at a minimum amount of expense to the individual. Mr. Freeman handled the subject in a concise and non-technical manner and suggested several plans for using the daily papers, morning and evening, with a view to reaching as many distinct sections of the population as possible.

Mr. Freeman suggested that about seventy dealers should combine and take a space of five columns in the daily papers under a special heading, the center of the large space to be taken up with a snappy talk on talking machines in general and to be surrounded with uniform announcements of various dealers. Mr. Freeman drew some interesting comparisons between honest and dishonest advertising and told of the ideals of the clean advertising man in a manner that made a strong impression on his audience. It is the desire of the officers of the association to have as many dealers as possible join in an advertising campaign, to be supported

on a pro rata basis and with the object of benefiting the local trade as a whole.

Oldfield Bill Still a Menace.

Walter B. Raymond, a prominent attorney and the legal representative of the L. E. Waterman Co., the fountain pen manufacturers, was the next speaker, and had for his subject the Oldfield bill, with which he is particularly familiar through his active work in Washington in opposition to the measure before the sub-committee on patents. Mr. Raymond explained the nature of the Oldfield bill, what it claims to accomplish for the benefit of the public in the matter of reduced cost of living, and what its passage would mean to dealers in articles the selling price of which is fixed. He brought home to many of those present for the first time the true significance of the bill and the danger that lurked in it for every established dealer of patented and standard priced articles, should the measure become a law.

As for the dealers themselves desiring freedom in the matter of making their own prices, Mr. Raymond stated that the Waterman Co. had received replies from nearly 13,000 dealers in answer to a query regarding their desire in that matter, and, with the exception of only five, they were all in favor of fixed price maintenance. The attorney emphasized the fact that at the last hearings on the bill members of the committee were for the most part hostile to the fixed price system, being thoroughly familiar with neither the patent laws nor the business of manufacturing. He stated that to influence legislators against the bill, provided it came up again, it would be advisable for dealers in articles of fixed price to rouse public sentiment against the bill and push that sentiment to the fore in place of their own desires in the matter, with a view to avoiding any charge of selfishness. Mr. Raymond in closing sounded a warning regarding the probability that the "Seven Sisters" bills of New Jersey, President Wilson's pet legislation, would be placed before Congress for transformation into federal statutes. The drastic nature of several of the bills, especially the second one, would prove ruinous to owners of patents and manufacturers in all lines.

A Message from George W. Lyle.

The toastmaster next read a letter from George W. Lyle, general manager of the Columbia Phonograph Co., regretting his inability to be present, and enclosing an optimistic message to the dealers regarding the progress made in the manufacturing and selling of the Columbia graphophones and Grafonolas and the bright future of that line. Mr. Lyle particularly emphasized the recent Columbia advertising, which was calculated not only to arouse the interest of the prospective purchaser, but to actually bring him into the dealer's store.

George P. Metzger Outlines Publicity Campaign

George P. Metzger, advertising manager of the Columbia Graphophone Co., next addressed the dealers, and outlined in a general way the advertising campaign of that company and what it was intended to accomplish. He stated that it was the desire of the company to make the campaign reach directly into the home town of the dealer, not only through national advertising but through especial assistance rendered the dealer in his advertising in his own territory. For this service the dealer can demand expert advice, tested copy, advertising experience of the members of the Columbia Co.'s advertising staff, while still free to operate his local campaign in the matter of space and general arrangement to suit his own special requirements if he desired.

J. Newcomb Blackman's Lively Speech.

The next speaker of the evening was J. Newcomb Blackman, president of the National Association of Talking Machine Jobbers, who in his usual direct and forceful manner emphasized a number of the points made by previous speakers regarding

the benefits derived from fixed prices, and made some suggestions as to methods for successfully opposing legislation calculated to nullify that privilege. Mr. Blackman stated that much of the opposition to fixed prices and so-called "patent monopolies" arose from the fact that the opponents did not take the trouble to study the situation and did not really understand it. He recommended strongly that the position of the farmer and mechanic and other divisions of the public should be closely studied if those bodies were to be convinced that it was to their benefit to pay fixed prices for fixed and known values in merchandise. He stated that the natural selfishness of many people would have to be overcome if they were to be convinced of the real benefits of price maintenance.

Clarence Axman next read a clever and humorous paper describing the sorrows and joys of the talking machine dealer, following which the guests were dismissed by the toastmaster.

Mr. Blackman, as did the other speakers of the evening, illustrated his remarks with pointed stories of humorous character, and as a result the speeches did not lack interest for a moment.

The success of the banquet arrangements reflects great credit upon ex-Secretary J. H. Dodin and the other officers of the Dealers' Association, who put forth strong personal efforts to secure the attendance of the desired ones, and who saw to it that everything ran along smoothly from the opening of the attractive menu, with the Victor and Columbia trade-marks on the cover and fastened together with a talking machine needle, to the toastmaster's words of dismissal.

Those Present.

Among those present or represented at the banquet were: W. C. Freeman, Walter B. Raymond, J. Newcomb Blackman, Geo. P. Metzger, V. W. Moody, Marion Dorian, R. G. Caldwell, New York; Henry C. Brown, Camden, N. J.; J. G. Brenner, Isidor Zion, New York; T. Avon Entress, Union, N. J.; Frank C. Storck, Red Bank, N. J.; F. L. Steers, New York; Henry Rau, Jersey City, N. J.; H. Phillips, Greenwich, Conn.; M. J. Roth, New York; J. B. Cohen, Brooklyn, N. Y.; O. Pagani, New York; Irwin Moses, Hampden, N. J.; Geo. W. Morgan, New York; H. P. Low, New York; Sol Lazarus, New York; A. Lasus, New Rochelle, N. Y.; H. Jaffee, Hoboken, N. J.; J. Hunt, White Plains, N. Y.; M. Goransky, Yonkers, N. Y.; Albert Galuchie, Jersey City, N. J.; J. J. Cavanaugh, Brooklyn, N. Y.; August Bauer, New York; Chester I. Abelowitz, New York; W. O. Brown, Dover, N. J.; Henry Mielke, New York; J. E. Cocker, Elizabeth, N. J.; M. W. Gibbons, Brooklyn, N. Y.; Chester H. Hoffman, Brooklyn, N. Y.; Theodore Lohr, New York; Mr. Loeffler, Union Hill; David Switky, S. A. Sherman, New York; Jas. T. Coughlin, New York; C. J. Iannell, New York; Fuller, Bagley & Beers, New York; R. Montalvo, New Brunswick, N. J.; A. H. Dodin, New York; Hom-luck & Newcomer, Elizabeth, N. J.; Leon L. Gumbiner, A. H. Jacot, Saul Birns, S. B. Davega, Lipman Kaiser, R. F. Bolton, Joseph F. Collins, New York; E. Paul Hamilton, R. H. Morris, Brooklyn, N. Y.; E. G. Schloss, New York; Mr. Goldsmith, N. Goldfinger, Emanuel Blout, I. Davega, New York; C. F. Bruno, Chas. Bobzin, New York.

EXHIBITING AT WOMEN'S CLUBS.

Edison Disc Phonographs Securing Splendid Publicity in This Way.

In the new plan of publicity for the Edison disc talking phonographs and records F. K. Dolbeer, general sales manager, has adopted a new policy, and that is of exhibiting at various women's clubs throughout the country. At the head of this department is Mrs. Ilsen, and at the present time she is in Washington giving Edison concerts at club meetings. A recital was held recently by her at the Willard Hotel in Washington, over 1,000 people being seated in the ballroom to hear the new products.

As this article is written, the Sorosis Club is being entertained by Thomas A. Edison, Inc., at its New York offices, 10 Fifth avenue.

TALKING MACHINES LOST AND DAMAGED BY FLOODS.

Disasters in Middle West Have Their Effect on This Trade as Well as Others—Some of the Cities and Towns That Suffered Heavily and the Dealers Located Therein—Some Late News Regarding the Present Situation—Endeavoring to Get Things to Rights.

(Special to The Talking Machine World.)

Cincinnati, O., April 11, 1913.

Since the last issue of The World, Ohio and other Western States have been visited by one of the most disastrous floods in the history of this section, causing a loss estimated by the Governor

and the business stores in Dayton that are habitable are being fitted up and new stock being secured. Some of the views which appear on this and adjoining pages will give an idea of the tremendous scope and damage caused by the flood.

The loss to the trade, from the standpoint of the

was practically untouched by the flood, it was a month of big business, a record business especially, showing an increase of 100 per cent. over the same month last year.

"Communication with the East was only cut off for one week, and our supplies were sufficient to run us a great deal longer than that time. Accordingly, as far as retail trade was concerned we did not suffer at all, and on the contrary the department made a most excellent showing.

"In regard to the recent flood, there were many locations which suffered, but to those who have had no experience with river floods the damage

of Ohio at \$300,000,000. Over one-half of Columbus was washed away, and at Dayton, O., the entire business district was under water from 10 to 15 feet, six thousand houses being destroyed, the entire property damage in that city being estimated at \$50,000,000.

In other towns along the big Miami River—that is, Miamisburg, Franklin, Middletown and Hamilton—the destruction was enormous. Hamilton was almost a total wreck, at least in that part of the town where the factories were located.

At the Wurlitzer store in Dayton the water went

talking machine industry, by reason of the flood, will not be great. The damage appears to have been principally confined to the houses specializing in small goods at Hamilton and Dayton. Cincinnati was not touched.

From reports, George Krebs, at Hamilton, and the Soward Music Co., at Dayton, will be the heaviest losers among the talking machine people. No

is apparently much greater than in reality. The towns which suffered from the overflow of small rivers and creeks are heavy losers. These waters raised almost in an hour or two, and there was no provision made for such an overflow.

"The stocks of dealers were affected to a small degree only, as the Victrolas could be handled very quickly; also records moved immediately in case

Extended River Bed at Dayton.

within a foot of the ceiling, but fortunately the biggest part of the stock was on the second floor, which was saved.

While the water was exceedingly high in Cincinnati, the loss was comparatively trifling, the business section wholly escaping. A great many piano houses were among the sufferers in the various

A House in the River District.

figures can be obtained. The losses there, it is known, are total.

The Aeolian Co. is credited with having 100 Victrolas at Dayton, and a majority of these were swept by water. The Dayton stock of the Rudolph Wurlitzer Co. is a total loss.

The deluge shows that the records will not stand water, for those recovered have been tried and found wanting in many respects. The question of exchange now comes up. The disposition of the factories in this respect is a matter yet to be settled.

The situation in the Ohio territory is fairly well

the racks were sectional and not built as permanent fixtures.

"The Ohio River was back in its banks a week after it had risen and trains were running. With the exception of the damage done to buildings, the communities along the river are practically as they were before."

Depot Union Station, Dayton.

cities, and it is expected that the total losses suffered by the piano and talking machine dealers will approximate between \$800,000 and \$1,000,000.

At this writing business men are making magnificent efforts to get into working harness again,

Showing High Pole Placed Between Houses by Flood.

explained in the following report from Manager Dittrich, of the talking machine department of the Rudolph Wurlitzer Co.:

"The month of March was an unfortunate month in many particulars, but in Cincinnati, which

Steinway & Sons Warerooms.

Fully ten pianos floated out the two front windows.

Manager Whelen, of the Columbia Graphophone Co., seems to be more than pleased with the March business. In speaking of the prevailing conditions, he said: "I have no complaint to make relative to the March business; it was good, very

good, in every department, wholesale and retail, as well as Dictaphone. Of course, the latter part of the month and the first part of this month business was at a standstill, owing to the dreadful flood catastrophe, but the balance of March

in the Cincinnati schools, purchased a Columbia Grafonola Mignonette and is delighted with the same. The Columbia Co. is making rapid strides in the educational field, and while the progress in this field is slow, the seed is well planted and something will happen

and happen big for the Columbia along next September when schools re-open.

The Seward Music Co., of Dayton, pioneers in the musical line, just recently took on the Columbia line with a large representative stock, but unfortunately were seriously crippled by the flood. Many

other Columbia dealers were damaged by the high water, but the factory was able to meet the demand for new stock, and conditions will soon be normal.

Wreck of Modern Bridge in Dayton.

made up for this paralyzed condition and the final showing was far ahead of March, 1912.

"In the machine line the \$50 Grafonola Favorite has been the leader, with the \$200 Regent and the

Inside Starr Wareroom.

First floor. Note water mark on wall. Starr Minum Grand in foreground.

\$150 Nonpareil close after the Favorite. The Columbia Grand has also been a great source of interest to the general public. We are proud of the record we have made this past month in taking care of our enormous sales, as we are able to make prompt deliveries on nearly all types, thus avoiding the disappointment coincident with delays in shipments—that is, up to the time that freight was going in and out of the city. But now matters are moving along again and we are making progress in getting out delayed shipments."

Prof. Carl Ziegler, director of physical culture

beautiful Grafonola department. We wish them every success in the new department.

BARS MUSICAL AUTO HORNS.

The musical automobile horns which threatened to fill the main streets of Paris with snatches of popular or classical airs instead of the usual "honk, honk," have come to a quick finish in France.

A test case was brought against two motorists of Douai, who enlivened the night trumpeting the leitmotiv of "Die Walküre," and it has been decided that these instruments are illegal. The decision brought out a judicial definition of the word "horn," which had hitherto been rather widely interpreted.

"The latter," said the judge, "must be a simple wind instrument for the purpose of sounding an alarm and used to warn the public, not to amuse

it. It must give forth a single note which should be grave, even sinister, in order to call attention to the impending danger. The new fanfare horns," added the judge, "lack seriousness, and are therefore outside the meaning of the act.

PERSISTENCE THAT WON OUT.

The Tactics of a Glass Cutter Salesman That Offer a Lesson for Salesmen in Other Lines of Business—Might Not Work in Every Case.

A lesson in the value of persistency is to be found in the following anecdote, which conveys a lesson to the talking machine salesman who often loses heart:

"The cheerful agent stepped into the business man's private office and set his grip on the floor.

"I have here," he said, "a patent glass cutter for 25 cents. It is known as"—

"Don't need any glass cutter," snapped the business man.

"Ah, you don't need a glass cutter! Well, then, I have here a vacuum cleaner that sells for \$40. It is now in use in thousands of homes. It is"—

"I don't need a vacuum cleaner."

"Well, perhaps not; but then I have something else here that will certainly interest you. It is a phonograph that retails for the small sum of \$11. There isn't another phonograph in the world that"—

"I wouldn't buy a phonograph on a bet!" growled the business man, getting red in the face.

"Well, I am surprised! But then, I have here a camera which sells for \$27. It will take the widest scope"—

"No camera to-day," yelled the business man.

"Well, then, I have a four-hundred-and-twenty-three-dollar automobile, which combines all the necessary points of the higher priced machines and —"

"For the love of Mike!" screamed the business man, "I'll take a glass cutter. Here's your quarter. Now get out!"

"Thank you," said the agent. "That's all I had to sell in the first place."

GODOWSKY SIGNS WITH THE COLUMBIA CO.

Celebrated Pianist Will Make Records of His Best Known Piano Pieces—Noted for His Marvelous Technique and His Authorative Interpretation—Scored a Great Success in Recital During Season Now Coming to a Close—Records Ready in Near Future.

The educational value of the talking machine is being recognized more widely every day by eminent musicians throughout the world, and every day men of international importance in the vocal and instrumental fields are acknowledging its artistic status.

Only last week Leopold Godowsky made arrangements with the Columbia Graphophone Co. to make records of a number of his selections which are so much admired by the music loving public, and he made his first "masters" at the laboratory in New York this week.

Lovers of good piano music are to be congratulated on thus being enabled to hear this famous artist, who has won a reputation as one of the most brilliant pianists of the age.

Godowsky is not only a composer and musician of wide attainments, but as an executant he ranks supreme. His technique is not only dazzling, but impeccable, and beneath his brilliancy there is a profound sentiment and a beauty in phrasing and tone coloring that fascinates those who are enabled to differentiate in those qualities that go to make up the best in piano playing.

Godowsky was born in Poland in 1870, and studied in Paris with Saint-Saens from 1887 to 1897. He visited the United States in 1884-5, and again in 1890, when his remarkable ability made a deep impression. He was again heard in this country in an extended tour during the past season, adding tremendously to his former triumphs. His playing, both with leading orchestras of the United States as well as in recital, evoked the plaudits of discriminating critics in this country, as it did in Europe.

Godowsky is a composer of considerable merit, and has to his credit more than one hundred MSS. works. In recognition of his supreme art, Godowsky, through the appointment of the Emperor of Austria, holds the position of head of the Master School for Piano at the Vienna Conservatory, and by virtue of his position as imperial and royal professor he holds the rank in Austrian civil service equal to that of a colonel in the army. Godowsky also stands high as an instructor. He is a man of wide sympathies musically, and an authority whose position is recognized throughout the world.

It goes without saying that the musical public will be intensely interested in the records made by this artist, as in this way Godowsky's individuality of "style" and his interpretations are placed on record permanently for the use of his many admirers in this country. The Columbia Graphophone Co. is to be congratulated on adding this celebrated artist to its list.

It will be interesting to those who have not had the privilege of hearing Godowsky in concert or recital to read what an eminent critic said regarding his playing. "Godowsky is the greatest technician who has ever been heard, and at the same time he remains a good musician," said the critic. "This is a rarity. Sovereign technic, an ability to which nothing seems impossible or even difficult to execute, is apt to mislead in all of the arts to a trifling demonstration of such powers. People who are possessed of a sufficient artistic seriousness not to fall into external show, when they have no fight at all with the material side of the question, are easily led into grouping and hyper-searching. Those who have not been born or educated up to such artistic seriousness arrive at playing allegro movements in prestissimo time and lose all respect for the art work. Every superfluity of power, every over-measure of ability must find an outlet. Godowsky also has a good deal of superfluous power, which through interior necessity he must emanate. And as he cannot get rid of it in playing the existing piano literature he has constructed for himself a particular field of piano literature. He has combined Chopin studies in such a manner that he is able to play always two of them at the same time. He has

trimmed and decorated Weber's 'Invitation a la Danse' with incredible difficulties. If the combinations which Godowsky has thus effected were only the artisan deterioration of works, which in their original form have become holy and beloved to us, then it certainly would be appropriate to be provoked over such misapplications. This, may, however, as Godowsky's Chopin studies evince a thoroughly refined artistic taste, never do violence to the spirit of the original; there is nothing in them

Leopold Godowsky.

that is provoking. Whoever was able to combine the originals in such an intellectual and sensuously refined style, to him they are certainly as holy as they can possibly be to the objecting party. He can perhaps conceive them even a good deal more profoundly, and has lovingly made them his mental property."

THE GRAFONOLA IN TEXAS.

Will A. Watkin Co., of Dallas Enthusiastic Over the Columbia Line and Its Possibilities—Used by Teachers for Demonstrating Voice.

(Special to The Talking Machine World.)

Dallas, Tex., April 7, 1913.

It would be difficult to find any one in the South more enthusiastic regarding the talking machine and its possibilities than those connected with the Will A. Watkin Co., the old established and prominent piano and music house of this city, who have been featuring the Columbia Co. line with flattering success. In discussing the success of that department of the company's business, Robert N. Watkin, treasurer of the company, said recently to The World:

"Five years ago we began the sale of the Columbia line of Grafonolas and records, and have never had reason to regret it, for the Grafonola has made good music possible to thousands of Texas homes. It can sing with the voices of the great artists whom you may never hear; it can give you the tone of the violin and even of the orchestra.

"Voice teachers associated with us have used the Grafonola in the Watkin studios for demonstrating the voice. Schools have adopted them. The president of our company played pipe organ accompaniments to solos on the Grafonola in the church. The Grafonola has great possibilities and we are glad to have a part in spreading its gospel."

THE JOBBERS CONVENTION.

Committee Having Charge of Arrangements for the Coming Convention of the National Association of Talking Machine Jobbers at Niagara Falls July 7-8 Are Busy Perfecting Plans Expect Banner Attendance.

As announced exclusively in last month's issue of The World, C. N. Andrews, of Buffalo, N. Y., was appointed chairman of the arrangements committee which will handle the many details incidental to the holding of the annual convention of the National Association of Talking Machine Jobbers. The other two members of this committee, who were appointed by President Blackman two weeks ago, are C. L. Wiswell, of Lyon & Healy, Chicago, Ill., and W. O. Crew, of the Elmira Arms Co., Elmira, N. Y.

Chairman Andrews of the arrangements committee has already started to do some active work for the success of the 1913 convention, and his first report, which should be carefully read by every member of the association and all who contemplate attending the convention, is as follows: "The annual convention of the National Association of Talking Machine Jobbers will be held at the International Hotel, Niagara Falls, N. Y., on July 7 and 8. The committee has been fortunate in securing special rates for the association's members and convention visitors from the hotel management. Accommodations will be on the American plan at \$3.50 per day without bath, and with bath, \$5 single or \$9 for two.

"The hotel has placed at our disposal during the days of the convention a large and well-furnished assembly room for meetings and gatherings of the association. At the present time the committee is not quite ready to announce a definite program, but it is probable that when the May issue of The World is published most of the program will be contained in it.

"Artistic and valuable literature advertising the attractions of the 1913 convention city, Niagara Falls, will be obtained by the committee and sent out by Secretary Louis Buehn of the association.

"Regarding the selection of July 7 and 8 as the dates of our next convention, it might be well to say that practically without exception all suggestions received as to the dates most desirable for the convention were July 7 and 8. Owing to the fact that most jobbers like to get their work settled about the first of the month and get out their bills, statements and checks before leaving for the convention, together with the desire of a considerable number of members who always like to be home on the Fourth of July, the 7th and 8th of the month seemed to be the most satisfactory all around.

"Those members coming from a long distance will have from four to seven days to travel in, visit the factories on the way to the convention or on the way back, and return in good season to their respective homes without taking much actual time from business. From information already received by the committee, it would appear that there is going to be a banner attendance at this year's convention, as the location of our meeting place is very central and Niagara Falls is one of the show-places of America from a scenic standpoint. The arrangements committee will certainly do all in its power to make the 1913 convention an emphatic success and a scene of pleasure and interest to all who attend."

Blessed is the man who has good friends to blow his horn.

FLOOD REPORTS FROM INDIANAPOLIS EXAGGERATED.

Talking Machine Men Say That Conditions Have Not Been as Bad as Printed in Newspapers—Much Damage Done by Flood in Residence Districts but Business Section of City Was Not Touched by Water—Flood Experiences of Talking Machine Men.

(Special to The Talking Machine World.)

Indianapolis, Ind., April 10, 1913.

Though many were the reports to the contrary, the Hoosier capital is still on the map and only a portion of it was flood-stricken. The talking machine men of this city desire the trade and their friends to know that conditions here are not as appalling as painted in some newspapers. The damage done by the flood, however, will be felt here for some time, and everybody is glad that it wasn't as bad as it might have been.

The business district of the city was not touched by water. West Indianapolis suffered the greatest damage, but the work of rehabilitation has been rapid and those living in the flooded district are "getting on their feet again." Broad Ripple, eight miles north of Indianapolis, was almost under water. The north half of the village was covered with water and several hundred were made homeless for a few days. In the territory between North Illinois street and College avenue and between Thirtieth street and Fall Creek, the water did considerable damage. The cellars of the houses in this part of the city were filled with water; a number of foundations were washed out and several houses have ruined hardwood floors.

As far as business is concerned, there is little at this time. Business was fairly good with some houses when the flood began, but all are now experiencing a lull in sales.

Employees of the local branch of the Columbia Co. had a variety of flood experiences. T. J. Lynch, whose home was in the flooded district of West Indianapolis, was cut off from the city proper, and during an absence of three days he gave succor to the flood refugees.

C. V. Weaver, who lives near a quiet, unassuming little stream in the southeast part of Irvington, a suburb east of the city, found that the "quiet little stream" could become quite obstreperous. The heavy rains increased its volume of water and in some manner it hurled a log out of its waters to Weaver's chicken shed, a distance of some thirty feet. The chicken house was partially demolished and a number of chickens were killed.

Clytus Earle, errand boy, lives in Broad Ripple. The water almost covered his home. He was unable to get to the city for about a week after the waters had subsided.

A. W. Roos, manager of the talking machine department, and Thomas Devine, manager of the Dictaphone department, received a large number of telegrams from business and personal friends and relatives inquiring as to their safety. "I didn't know so many people were interested in my welfare," remarked Mr. Roos.

C. A. McDougall, who spent several years in talking machine work on the Pacific Coast, has accepted the position of head retail salesman at the Columbia store here. His long experience in the business is proving of value to him in his new position.

Miss Lazarus, manager of the talking machine department of the local branch of the Aeolian Co., says she had more business this month than in March of 1912. Though the flood has interrupted some sales, the record business with the Aeolian Co. has been exceptionally good. Miss Lazarus recently returned from her home in Arkansas, where she went to attend the funeral of her father.

The home of W. S. Barringer, manager of the Stewart Talking Machine Co., was in the flooded district north of Fall Creek. The water only filled his cellar, however. To be on the safe side, he sent his family to the home of Alexander M. Stewart, owner of the company.

Willis M. English, assistant manager of the Stewart Co., was in Dayton, O., during the flood there. He was a captive in the Algonquin Hotel. The water came almost to the second story of this building, according to Mr. English. While watching the raging waters, Mr. English saw a Victor

machine floating along with a piano as a companion.

The Wulschner Music Co.'s talking machine department made a number of sales in the last week. One man who had bought a Victor machine there said the last he saw of it the machine was whirling around in the water.

The Kipp-Link Co. is sending the new Edison disc machine to dealers throughout the State. These machines are being placed with the dealers for the purpose of getting orders.

It is believed that the local talking machines houses will suffer most from the fact that persons in the flooded districts will not have money to invest in records or machines very soon. Very few machines will be water damaged, it is said. Up to date few reports have been made of damaged machines.

PORTABLE TALKING MACHINE.

Traveling men in Europe are displaying much interest in the portable talking machine called the Primaphone, which is being sold in London, Eng., with some success. It is a combination of a talking machine and a leather-covered case. The instrument sells in three models from \$25 to \$50. In the cheaper styles the case is oak. In the more expensive styles it is mahogany, with nut-brown

leather cover. The Primaphone is seventy-seven inches broad and long by nine inches high. It is collapsible and easy to carry. Nothing in tone is sacrificed, according to the promoters. The machine has a fixed or immovable tone arm, patent insulating rubber telescoping tube and patent guide rod, which governs the soundbox. It has three types of needles. It is designed for district offices, engineers and others who have a lot of traveling to do, especially in India and the colonies, who wish to take their instrument with them.

INCORPORATED.

Among the recent incorporations filed with the Secretary of the State at Albany, N. Y., was that of the Talking Moving Picture Co., Inc., of Syracuse, N. Y., for the purpose of producing talking moving pictures. The capital stock is \$50,000. The incorporators are: Richard S. M. Mitchell, Edward Newcome, Robert J. Cooney, of Syracuse.

EDISON JOBBER IN CLEVELAND.

(Special to The Talking Machine World.)

Cleveland, O., April 10, 1913.

H. D. Berner has succeeded Lawrence H. Lucker as the Cleveland jobber of Edison products. Both Mr. Berner and Mr. Bloom were recent visitors to the Edison factory.

DETROIT PIANO HOUSES TAKING ON "TALKERS."

Marked Development Along These Lines Recently—Some of the Largest Piano Houses Working Up Large Trade—American Phonograph Co. Featuring Edison Line—Victor Dealers Find It Difficult to Get Sufficient Stock—Mahogany a Favorite with Retail Trade.

(Special to The Talking Machine World.)

Detroit, Mich., April 11, 1913.

Another Detroit piano house entered the talking machine field this week—the Gersanbeck Piano Co., on Mack avenue, taking on the full Columbia line of machines and records.

More and more are the Detroit talking machine dealers and the piano dealers coming to realize that their interests are in common, and that the carrying of the two lines in one store creates business for both. The talking machine people have been aware of it for several years. The jobbers like to place agencies with piano houses. Practically all the people who visit a piano store are in some way interested in music. Therefore they are, in a degree, talking machine prospects.

If they already have pianos, perhaps they like a variety in their music, and it doesn't cost very much more to buy a talking machine too. If they cannot afford a high-priced piano, and don't relish one of the hundred to two hundred variety, the hundred to two hundred dollar talking machine is the happy solution, even if they prefer pianoforte selections, for nowadays there are piano records by the score, made by the very best artists. If they own a piano, and cannot play it very well, they may desire to trade it in and take a first-class talking machine. This is especially the case if they feel they cannot afford a thousand dollars or more for a player-piano. Many piano stores handle sheet music and small goods. The patrons who call for that sort of merchandise are the best sort of prospects for talking machines.

In almost every home where there is a piano, it is the young folks who use it. The older ones may have had a fine musical education, but they have practiced less and less as their years have advanced. It is very hard work to practice sufficiently to keep in trim, and aging energy does not respond to the necessity. Without the practice they cannot perform in a manner pleasing to their educated ears—so they drop it. But in the talking machine they can have the best of everything without the hard work of practice. Naturally, they buy it at the store where they have been acquainted for years as a piano buyer and music buyer.

"All it needs to sell a talking machine to the average person is to call his attention to it," said S. E. Lind, of the Columbia Co., in discussing this question with The World representative. "In a piano store the attention of musical people is called to talking machines because they practically can't escape it. This, alone, means hundreds of sales in a year."

The Farrand Co., Grinnell Bros. and the Cable Piano Co., three of the largest piano houses in the city, carry talking machines. Among the smaller ones are Adler's Music House, the Tin-

nette Music House and the Gersanbeck Piano Co. All of them agree that the combination is an ideal trade winner.

M. Adler was for many years with the Clough & Warren Piano Co., one of their best salesmen. Five years ago he resigned to go into business for himself. He started with pianos, and soon put in the Columbia line. The latter business has grown until it now occupies more than half the store.

A notable change in the field within the last month has been the retirement of Grinnell Bros. from the jobbing business of the Edison line here. This is now exclusively in the hands of the American Phonograph Co., who have been Edison jobbers for about as many years as Grinnell Bros. have. Grinnells will continue to handle the Edison in a retail way. "We did not feel that we could do justice to both lines in the jobbing field," said Manager Harry Rupp, of Grinnells' talking machine department, referring to the Victor and Edison competition. "Our relations with the Edison people have been of the very best. That is why we retain a retail representation."

For about two weeks one of Grinnell Bros.' show windows has been devoted to the "Victor Theater" advertisement, and there is an audience in front of it continuously. The scenery of the miniature playhouse is fine and realistic, luring the passersby to stop many minutes, until the rotation of acts is completed. It is a most effective means of calling attention to the talking machine and what it will bring into the home. Besides the theater, the window is loaded with records and machines.

The large Victor dealers, like the Farrand Co. and the Max Strasburg Co., have placed orders with Victor jobbing houses all over the country to send whatever Victors they can, of the higher priced styles, and send them whenever they can. They are thus getting a fair-sized stock, but none too many. The orders thus placed are standing orders, and there are no indications now that there will be any necessity of cancelling them—at least not before New Year's day.

The Victor automatic brake has just arrived and is creating a universal interest among talking machine owners. It undoubtedly will do a lot to further popularize the already much-sought machines. It is being furnished as part of the regular equipment on the styles costing \$100 and upward.

"I had a first-class example a couple of days ago, of the axiom that if you don't carry the stock you can't get the trade," said Max Strasburg to-day. "We had three golden oak Victrola cleavens on the floor. There is comparatively little call for golden oaks, and I thought we were stuck. Perhaps that's what the jobber thought who sent them to us. I was thinking about send-

ing them back, when in came three sisters, all wealthy and evidently of the same taste, for they took those golden oaks, one each, and paid the spot cash for them. They reside in different parts of the city."

Detroit demand in the high-priced machines is running almost entirely to mahogany.

OPEN EXCLUSIVE EDISON STORE.

Minnesota Phonograph Co. Open at 833 Nicollet Avenue Minneapolis With Lawrence H. Lucker in Charge—New Quarters for the Columbia in St. Paul—Manager Herdman a Hustler—Dyer Victrola Recitals Attract—Piano Houses Take on "Talkers."

(Special to The Talking Machine World.)

Minneapolis and St. Paul, April 10, 1913.

An exclusive Edison store was opened the other day at 833 Nicollet avenue, Minneapolis, by the Minnesota Phonograph Co. The old retail store and distributing headquarters at 525 First avenue S. will be retained without change. The company recently has given particular attention to the Edison disc machines with phenomenal success, according to Lawrence H. Lucker, head of the concern. "We are doing a greater business now in Edisons alone than the whole of our Victor and Edison business a year ago. The prospects for the talking machine trade never were better than at present. Everybody must have a machine, and a fairly good one."

C. P. Herdman, the new manager of the Columbia Phonograph Co.'s branch in St. Paul, is planning to inject a lot of ginger in the talking machine world of that city. He has arranged to get over on Music Row, namely, Sixth street, and has leased the premises at 17 East Sixth street, where he will have the Cable Piano Co. on one side and Howard, Farwell & Co. on the other, and in the next block the Raudenbush and Falk stores. Mr. Herdman, three weeks out from Indianapolis, is devoted to the phonograph business, and particularly as exploited by the Columbia Co. The new store will be occupied about May 1.

W. J. Dyer & Co. have been giving Hanky-Panky concerts and Harry Lauder recitals with the Victrola, and these demonstrations have been signally successful, particularly in selling records.

The first of the Columbia grands in the Northwest reached the Minneapolis branch this week, and the two instruments were disposed of at once. Four others on the way virtually are sold, in the opinion of Manager Wheeler. "You never saw anything like the enthusiastic interest these machines have excited. This surely is the phonograph age."

The piano houses must bow to the rule of the talking machine. The Cable Piano Co., which installed this modern department in the new St. Paul store, is about to make a similar innovation at its Minneapolis store.

Foster & Waldo, the Metropolitan Music Co. and the New England Furniture Co., general distributors for the Victor machines and records, report highly satisfactory trade, bountiful prospects for the future and collections good in every section of the Northwest.

RECOVERING FROM FRIGHTFUL TORNADO IN OMAHA.

An Interesting Account of Catastrophe From A. Hospe of the A. Hospe Co.—Business Center Not Affected, the Loss Being Confined to Residential Quarters—Great Loss of Talking Machines and Pianos Sold on Instalments a Severe Blow to the Dealers.

The people of Omaha with that indomitable courage which is characteristically American when confronting a great disaster, have been working like trojans for the past week, getting order out of chaos, relieving the wants of those in need, and are fast getting the city into ship shape.

A report from our correspondent at that point, just as we go to press, is most optimistically worded, and everyone is manifesting that spirit of Ne-

braska push that will overcome even as great a calamity as that caused by this fearful tornado, which swept a clean path of from two to four blocks wide and a distance of at least six miles through the city, causing great loss of life and property on Easter Sunday.

Looking Southeast from 23d and Lake Streets, Omaha, Neb.

The Schmoller & Mueller Piano Co., in a letter to The World, says: "No piano houses damaged by the tornado that we know of. Have lost considerable through damaged instruments out on rent and instalment."

A. Hospe, president of the A. Hospe Piano Co.,

is recovering. It happened to be a piano mover, who was dressed ready to leave the house, and when the tornado hit his house and him it denuded him of every vestige of clothing, and I understand they found him in the crotch of a tree, with the house rammed up against an adjoining building, together with all his belongings and a piano which was purchased from us. Then it was all destroyed by the fire which followed almost immediately.

"I imagine there are from 1,200 to 1,500 houses that are past salvage; some were burned and others partly so, and it took residences of the finest character and destroyed most of them. The death list so far is about 140 and the property loss about \$10,000,000.

"It started in the southwest corner of the city and landed diagonally across, about six blocks wide, toward the northeast end of the city.

"Our loss is an indirect one. We probably had about thirty-three pianos in the path on which we had claims, some partly paid for and others nearly so. We had a

great many talking machines that were destroyed, in which we are interested. Our loss will be very little compared with that of the many who lost everything.

REAL BLACKMAN EXPANSION.

To Occupy Reade Street Side of Present Building on May 1—Show Window Rearranged in Attractive Manner.

"We are all right inside, and with a man or a concern that's what counts," is the original text of a sign at present suspended over the entrance to the Blackman Talking Machine Co., 97 Chambers street, New York, Victor and Edison distributors. The entire front window has been demolished, plasterers and masons are as busy as bees, and the entire store front is "decorated" by means of carpenters' and contractors' equipment.

When asked the meaning of this unwonted demolition, J. Newcomb Blackman, president of the company, stated that the building authorities had discovered that his show window extended a few inches beyond the building line of Chambers street when they decided to widen Chambers street. Mr. Blackman took advantage of this opportunity to order an entire new construction for his show window, with the object of making it more attractive and commodious than ever before. When completed the window will have no steel girders in the middle, but be one artistic display.

Incidentally, Mr. Blackman remarked that by the first of May his store and warerooms will run all the way back to Reade street, thereby giving him two entrances and three floors from street to street. This additional room has been made necessary by the rapid growth of the Blackman business, which is steadily increasing year after year.

GRAFONOLA CO. IN ROCHESTER.

New Company Incorporated with Capital Stock of \$40,000 to Take Over Columbia Co.

(Special to The Talking Machine World.)

Rochester, N. Y., April 10, 1913.

A new corporation, known as the Grafonola Co., has been organized with an authorized capital stock of \$40,000 and has obtained from the Columbia Phonograph Co. exclusive selling rights in a territory bounded by Oswego, Syracuse and Elmira on the east and extending to Erie County on the west.

Officers of the Grafonola Co. are: President, N. E. Hutchins; vice-president, Herman B. Brown; secretary, Nelson A. Beardsley; treasurer, George P. Culp. The business of the Columbia Phonograph Co., General, at 38 South avenue, has been taken over by the new corporation.

DOLBEER'S VISIT TO THE WEST.

Held by Floods for Three Days in Columbus—Recent Visitors to Edison Factory.

F. K. Dolbeer, sales manager of Thomas A. Edison, Inc., Orange, N. J., has just returned from a visit to the Middle West. He left on a Monday on the "Twenty-four hour flyer" for St. Louis, but did not get into St. Louis until the following Saturday. He was held up for three days—Tuesday to Friday—in the station at Columbus because of the raging floods.

Mr. Dolbeer fared exceedingly well, as the dining-car had a full larder and plenty of water, while the train was electrically lighted and heated. Mr. Dolbeer and the travelers on this train probably fared the best of any during the flood.

Among those visiting the Edison factory recently were the following: W. O. Pardee, F. H. Silliman and H. L. Ellenberger, of the Pardee-Ellenberger Co., New Haven, Conn.; Louis Sloss, John Mullins & Sons, Newark, N. J.; Melville Clark, Clark Music Co., Syracuse, N. Y.; J. A. Clem, J. A. Foster Co., Providence, R. I.; C. B. Haynes, Richmond, Va.; Ernest Stiller, Stiller Photo & Supply Co., Green Bay, Wis.; Mrs. M. S. Gielow, Washington, D. C.; Edmund E. Buehn, Buehn Phonograph Co., Pittsburgh, Pa.

A LIST OF OPERA ARTISTS.

A book that has been issued by Thomas A. Edison, Inc. is called: "A List of Some of the Opera Artists Who Have Made or Will Make Records for the Edison Phonograph." It is a book of sixty-four pages, each page bearing the picture and a short history of one of the noted singers.

TO OPEN NEW STORE IN ALBANY.

(Special to The Talking Machine World.)

Albany, N. Y., April 10, 1913.

The American Phonograph Co. is contemplating the opening of a new talking machine store where Edison goods will be featured strongly. N. D. Griffin was a recent visitor at the Edison works at Orange, N. J.

NEW AGENCIES ESTABLISHED.

During the past month the Columbia Graphophone Co. has added the following representative houses to its list of agencies: Bell Bros. Piano Co., Muncie, Ind.; H. Fraiberg & Sons, Cleveland, O.; E. M. Chase Co., Manchester and Boston, Mass.; Clark & Jones, Birmingham, Ala.; W. A. Kulp, Braddock, Pa.; Continental Furniture & Household Distributing Co., New York, N. Y.; Gebrecht-Geyer Co., Norwood, O.; John L. Sherman, Westport, N. Y.; F. G. Smith, Newark, N. J.; Schmoller & Mueller Piano Co., Omaha, Neb.; Bon Marche Department Store, Lowell, Mass.; Taylor's Music House, Springfield, Mass.; Meakins, Packard & Wheat, Springfield, Mass.; Bernard Music Shop, Springfield, Mass.; Tamarack Co-operative Association, Calumet, Mich.; George Toth, South Bend, Ind.; Alfred Telfer, 631 Broad street, Bayonne, N. J., and Otto Dornyak, Perth Amboy, N. J.

Piano That Survived in Gibbs' Home.

gives some interesting details as to the extent of the tornado in the following letter addressed to Edward Lyman Bill, in which he says:

"Allow me to thank you for your telegram of sympathy. We are all unharmed and all those of our employes likewise, with one exception and he

Want Talking Machines and Accessories.

Messrs. Allan & Co., talking machine jobbers, Melbourne, Australia, would be pleased to hear of anything new in talking machines or accessories. When writing send catalog and prices. Where possible would be pleased to receive samples.

MAX LANDAY MARRIED.

The Popular Talking Machine Man and Miss Fox United in Marriage at the St. Regis.

A social event of the season was celebrated last Tuesday, April 8, at the fashionable and exclusive St. Regis Hotel, New York, when Max Landay, the popular Victor distributor, forsook bachelorhood and was married to Miss Ida R. Fox, of 45 West Ninety-first street, New York. One of the largest wedding halls in this sumptuous hotel had been set aside for the wedding, and many business acquaintances of the bridegroom were in attendance, in addition to a host of friends and relatives of the bride and groom. Telegrams of

Max Landay.

congratulation and felicitation were received by Max Landay from members of the talking machine industry throughout the country.

Mr. and Mrs. Landay are at present away on a fourteen days' honeymoon in the near vicinity, and on their return to New York, about April 22, will go to the summer home of the bride's father at Far Rockaway, N. Y. On June 7 they will take passage on the new and immense ocean liner, the "Imperator," to tour Europe for a period of about three months on their "real" honeymoon. Incidentally, this will be the first trip of the "Imperator" from New York to Europe.

While in Europe, Mr. and Mrs. Landay will visit the old home town of Mr. Landay, Glasgow, Scotland, where a married sister of Mr. Landay

still resides. The honeymooners intend to "take in" everything in Europe worth while, and will, of course, visit Paris, Vienna, Berlin and Switzerland. Subsequent to their return to New York, Mr. and Mrs. Landay will reside in one of the new apartment houses now going up in New York's best residential district.

CONDITIONS IN BALTIMORE.

Leading Establishments Make Satisfactory Reports and There Continues to be a Steady Expansion of Interest in the Talking Machine Line Judging From the New Concerns Taking on These Specialties.

(Special to The Talking Machine World.)

Baltimore, Md., April 8, 1913.

With but few exceptions all the dealers in this city and vicinity have very good reports to make concerning the March business. While there are one or two dealers who say that their showing for March was not what they expected, the remainder of them say that the receipts for the month show an increase over those for March of last year, and in some cases were better than the two previous months.

Manager F. A. Dennison, of the local branch of the Columbia Graphophone Co., has every reason to be pleased with March results. He says that the receipts for the month were the best that he has had for any month for a year, barring December, and they compared very favorably even with that month, and they were far ahead of last March. In fact, business has been so good that Mr. Dennison has augmented his force and has also put on one new wholesale man and two dictaphone men. Robert Johnston has been placed in charge of the dictaphone department, and he has as his assistants H. A. Jackson and W. Ruger.

The Columbia Graphophone Co., through Manager Dennison, has established an agency with Besche Bros., 1041 Light street, where he has put in a complete line of machines and records. Besche Bros. conduct a large department store in South Baltimore, and it is the aim to have them look after the South Baltimore business for the Columbia line, which is expected to add largely to prosperous business.

The Victor and Edison lines have more than held their own during the month, especially with regard to E. F. Droop & Sons Co., who handle both lines. Manager W. C. Roberts stated his entire force has been kept on the go all through the month and have come out with flying colors. He has had particularly pleasing results with the new Edison blue amberol records, which have been in big demand. The Victrolas have come in for their share of sales, and altogether Mr. Roberts says that he has no fault to find with the general results for the month.

The Victors have also been going good at Cohen & Hughes', according to announcement by Manager M. Silverstein, and he also predicts a continuance of the good things all during the spring, judging by the way prospects come in. Mr. Silverstein has had a number of pretty window displays, of which he makes a specialty and personally supervises, and these have attracted very favorable comment.

Columbias and Victors have also had a good run at the store of the Gordon Talking Machine Co., and Manager Thomas Gordon looks for a continuance of a good business during the spring. Joseph Fink, who is associated with the Gordon Co., has come in for several nice sales during the month.

Manager C. E. Stran, of the Lyric Music Co., says that he has no kick coming with the month's results with Columbia and Victor lines. While Mr. Stran is a newcomer in the business so far as conducting business on his own hook, he has built up a nice trade.

Hammann & Levin also make rosetate reports about the conditions of their Victor trade, and look for an uninterrupted run on the trade right through the spring months.

Trouble may be the true test of manhood; but it sometimes seems that the testing process is entirely too long!

NYOIL

For polishing varnished woodwork it is extremely satisfactory. No oil is so clean.

Ask your watch repairer whose oil he uses on your watch.

"GRAPHOPHONE GIRL" FOR LONDON.

Miss Adelaide Francis to Appear in Prominent English Music Halls Beginning Next Month.

Miss Adelaide Francis, known on the vaudeville stage as "The Graphophone Girl," and whose clever "sister" act, wherein she uses a Columbia graphophone to reproduce records of her own voice in

Miss Adelaide Francis.

duets and dialogues, was described at length in a recent number of The World, announces that she has been booked to appear for a number of weeks in some of the largest music halls in England, and will open in London on May 12. Miss Francis, who has been playing over the "big time" in this country, sails for England on the "Adriatic."

The talking machine is a subject of even greater interest in England than it is in this country, and the representative who booked "The Graphophone Girl" considered the act to be a novelty that was assured of success.

BISPHAM TO AUSTRALIA.

David Bispham, the prominent American baritone, whose records have proven to be among the best sellers every introduced to the trade, has just finished a most successful season of 105 concerts, and is about to start on a tour of fifty more recitals in Australia. Next season Mr. Bispham begins a contract with Werba & Luescher to star in Leo Fall's one-act operetta, "The Jolly Peasant."

The Columbia Graphophone Co.'s two-page spread in the April 19 issue of the Saturday Evening Post will feature the Columbia Grafonola "De Luxe" that retails at \$200. Incidentally, this unusually attractive advertisement will be one of the first general pieces of publicity to contain the new address of the Columbia Graphophone Co., the Woolworth building, its new home after April 18.

"DUSTOFF"

RECORD CLEANERS

Get into the minute sound grooves of the record as nothing else can because of the special processed high-nap cleaning fabric employed. "DUSTOFFS" cannot scratch the record and to use it is only necessary to simply brush across face of record a few times.

The use of "DUSTOFFS" before playing ensures a wonderfully clear and distinct tonal reproduction free from blurs, scrapings or harsh sounds, and moreover through the removal of the dust and dirt in the reproducing point track lengthens the life of the record.

Two models are made: "DUSTOFF" de Luxe, 50c. each, retail. (Shown above.) "DUSTOFF" (Regular), 15c. each, retail. (Shown below.)

A very liberal trade discount applies.

"DUSTOFFS" can be used on Victor or Columbia or any other records.

YOUR JOBBER CAN SUPPLY YOU or write us direct.

"DUSTOFFS" are excellently adapted for use as advertising media with your ad reproduced on labels or on boxes. Write for details.

ADDITIONS TO MILWAUKEE'S TALKING MACHINE HOUSES

Bradford Piano Co. Takes on Victor Line—Several Removals to Be Announced at Early Date—Business Good with Edison Line—New Columbia Grand Makes a Strong Impression—Trade Generally in Talking Machines Very Satisfactory—Other News.

(Special to The Talking Machine World.)

Milwaukee, Wis., April 10, 1913.

Spring weather of the finest variety has arrived in Wisconsin and is doing much to add life to the talking machine business. People are able to get about more readily and are more inclined to visit the talking machine shops. All the down-town stores, as well as those in the outlying sections of the city, seem to have caught the spring spirit, and most of them are showing fine window displays.

Local jobbers say that trade is much better than at this time a year ago, although business in 1912 was highly satisfactory. Most dealers about Wisconsin seem to be rather low on stocks and have been ordering well ever since the holiday season. Jobbers are finding little difficulty at this time in getting enough machines from the factories to meet the demands of the trade, although complaint is heard in some instances that it is hard to get records. The new April records have been taking exceptionally well.

Business in all lines in Milwaukee is highly satisfactory this spring, and this is bound to react favorably upon the talking machine trade. All the big machinery manufacturing concerns are operating full blast, everybody who wants to work can find a job, and there seems to be plenty of money in circulation. Conditions about the State are favorable. Farmers are prosperous, as a result of the bumper crops harvested last fall and because of the high prices which have been received during the past few months for live stock and dairy products. The soil seems to be in fine condition this spring and the outlook seems bright for another year of prosperity for the farmer.

Bradford Takes on Victor Line.

The J. B. Bradford Piano Co., 411 Broadway, Milwaukee's oldest piano house, established in 1872, has taken the agency for Victor machines and records. The initial order for machines and records was secured by Harry R. Fitzpatrick, manager of the Wisconsin Talking Machine Co. The Bradford house carries a strictly high class line of pianos and has an exceptionally good class of trade with people who are bound to buy Victor goods, so officials of the company are confident that they will meet with success in the new venture. The greater portion of the first floor of the Bradford building has been remodeled for the new Victor department, three handsome demonstration booths and two large display parlors have been opened in the quarters formerly occupied by the company's player department. The company is spending several thousand dollars in rearranging and remodeling the entire four-story building at 411 Broadway. Thomas DeSwarte, treasurer of the J. B. Bradford Piano Co., has general supervision of the new Victor department, although Miss Jule Steiner, a very capable young Milwaukee lady, recently secured by the Bradford house, is in direct charge. Mr. DeSwarte says that the Bradford house disposed of

several Victrolas during the first two weeks that the line was carried. The formal opening of the new department will not be held until the work of remodeling the entire building has been completed.

Another House May Fall in Line.

It is reliably reported that the Milwaukee branch house of a well-known Chicago piano concern is seriously considering the plan of taking up the agency for the Victor line. The fact that the Chicago retail store of the company recently took on the line and is meeting with such success is acting as a strong inducement for the company to follow the same scheme in Milwaukee. Despite the fact that most of the larger piano stores in Milwaukee carry the Victor line, all of them seem to meet with an excellent business.

Heller Piano Co. Removes.

The Heller Piano Co., which took on the Victor line some months ago, has moved from the Welch building, corner of Grand avenue and Seventh street, where the entire first floor is being occupied. The company has more than 10,000 square feet of floor space available in the new store, while the window display facilities are among the best in Milwaukee. Large and handsome quarters for the Victor department are being arranged.

Doing Well with the Edison Line.

The Milwaukee Phonograph Co., 349 Broadway, which took over from the Thomas A. Edison Co., Inc., some months ago the Edison jobbing business in Wisconsin, formerly conducted by Lawrence McGreal, now sheriff of Milwaukee county, is meeting with an excellent trade, according to William A. Schmidt, manager of the new concern. Many new dealers have been secured all over Wisconsin. The new Edison disc machine is meeting with a brisk demand and dealers are busy getting the new machine in stock. Both the new disc and the Amberol records are selling well.

Victrola Business Increases.

The Victrola business at the Edmund Gram Music House has been increasing so rapidly of late that Mr. Gram and Paul A. Seeger, manager of the Victor department, are seriously considering the proposition of moving the department onto the first floor, where larger quarters would be available. Should this be done, handsome booths of mahogany and ivory, conforming to the Roman Ionic interior of this floor, would be arranged. Both Mr. Seeger and his assistant, Ernest F. Leicht, report that trade in both machines and records is highly satisfactory.

Take on the Victor Line.

The Gross music house of Lancaster, Wis., has taken the agency for the entire line of Victor machines and records and is meeting with much success.

Enterprising Methods Pay.

J. H. Becker, Jr., manager of the Victor department at the Espenhain department store, is meeting with an unusually heavy business in records, due in

part, he believes, to the hundreds of circular letters which he has been sending out to the trade and to the regular daily concerts which are given at the Espenhain store.

Good Publicity Work.

Miss Elizabeth Hughes, manager of the Victor department at the Edward Schuster & Co.'s department store at Third and Garfield streets, is doing some very clever work in getting out special announcements and circular letters which are bringing results. Miss Hughes is giving daily concerts and the crowds which have been attending are sure proof of their popularity. Miss Hughes has been meeting with unusual success in the sale of Victrolas XI, XIV and XVI.

In the City.

Roy J. Keith, of The Talking Machine Co., of Chicago, and U. P. Gibbs, of Chicago, representing the Rudolph Wurlitzer Co., were recent visitors in the Milwaukee trade.

Columbia Grafonola Grand Admired.

The new Columbia Grafonola grand, the new \$500 instrument, has made its appearance at the store of A. G. Kunde, 516 Grand avenue, Columbia jobber and retailer. The machine is so entirely different from anything placed on the market before that everybody is taking an interest in it, and Mr. Kunde is confident that he will meet with a good demand for the line. General business is very good at the Kunde establishment in both machines and records. Mr. Kunde has secured several new Columbia dealers during the past month.

Mr. and Mrs. Kunde have just moved into their handsome new residence, which they purchased some time ago at 820 Forty-first street.

Miss Gannon's Father Ill.

Miss Gertrude F. Gannon, head of the Wisconsin talking machine, Victor jobbing concern, is visiting her former home in Dixon, Ill., where her father, Martin Gannon, who recently underwent an operation for appendicitis, is very ill. Her sister, Mrs. Lawrence McGreal, is also in Dixon.

To Occupy New Store May 1st.

Miss Gannon expects to move her retail Victor store on May 1 into the building at 312 Grand avenue, on which she recently secured a lease for a ten-year period. Miss Gannon has leased the two upper floors and will occupy the entire first floor, where she will have more than twice the space now available in the present quarters at 213 Grand avenue. The store will be entirely remodeled, handsome new booths will be installed and nothing will be left undone to make the place one of the finest retail Victor stores in Milwaukee.

SOMETHING ENTIRELY NEW.

(Special to The Talking Machine World.)

Cleveland, O., April 10, 1913.

The Union Manufacturing & Plating Co. announce in this issue of The World something entirely new and novel—the "Union No. 1 Attachment" for the Edison disc machine. A call at the company's factory found a large force of mechanics, under the direction of H. B. McNulty, busy constructing the attachments. A demonstration of its utility was made, and it works to perfection.

FROM OUR EUROPEAN HEADQUARTERS

1 GRESHAM BUILDINGS, BASINGHALL STREET, LONDON, E. C., W. LIONEL STURDY, MANAGER.

Talking Machine Trade Generally in a Healthy Condition—Strong Competition Enlivens Record Business—Low Prices on Exported Goods—Edison Goods to Be Shipped Direct from Orange, N. J., Plant After June 1—Bankruptcy Law Revised—Some Recent Record Lists and Their Contents—Talking Machine Societies Increasing in Popularity—Annual Beka Reports Most Satisfactory.

(Special to The Talking Machine World.)

London, E. C., March 31, 1913.

Talking machine trade this side is more or less in a state of transition from the rush time to that of the quiet period. Things are, however, shaping out well, though some complain of bad trade. Time of year considered, I am of opinion that the talking machine industry is generally in a most healthy condition. This is clearly emphasized in comparison with even time last year, which was not considered unsatisfactory. Sales have gone up despite, or rather because of, the keener competitive situation, for it is a fact without question that the more makes of records there are on sale—and the British market handles quite thirty—the more the public seem to respond and be influenced by the gigantic potentialities of the ubiquitous talker. About every firm is in the happy position of being able to say, "We have done better," and this is the tone and spirit which animates the whole trade to-day and is moving it to greater efforts than ever before. Future prospects are bright. In the industrial field labor is good, better wages are being paid, and the masses generally were never more prosperous. Industrial disputes are conspicuous only by their absence, and to say the least, given a continuance of these conditions, the record and machine trade bids fair to continue along a satisfactory and progressive path. The big houses will as usual maintain throughout the summer newspaper and other forms of publicity, and this, conjointly with their efforts in other directions, must insure a steady public demand and stimulate the increasing use of the talking machine for outdoor entertainment.

Export Trade Possibilities.

In the export field satisfactory business prevails, and of late some very nice orders have reached this country. A recent example was a shipping contract for 100,000 records—of course, for delivery as required over a stated period. But what of the price? In this particular instance I cannot speak, for I do not know; but according to certain figures disclosed to me on different occasions, the general method is to cut very low. I have in mind a case where a large export order was signed on terms which could not possibly have left a margin of more than one halfpenny profit per record. This keen condition of things coupled with the general practice of contracting through London shipping houses doubtless to some extent explains the seeming indifference of our manufacturers to modern methods of cultivating foreign or colonial trade. The medium of the press is not sought to the extent it should be. American and Continental houses do not neglect this channel, and the substantial orders they receive is eloquent testimony of its value. A conservative outlook, and in some cases lack of capital bars to the British record houses a share of this trade—more profitable direct than through the cut-price arrangements made with London shippers.

Edison Goods Direct from Orange Plant.

An important statement of extreme interest to all Edison traders was recently made public here by Thomas A. Edison, Ltd., to this effect: After June 1, 1913, the parent company, Thomas A. Edison, Inc., will take over the control and supply of Edison phonographs and records direct from Orange, N. J., U. S. A. Particulars of the change were given in a letter sent to the entire trade by

Thomas A. Edison, Ltd., in which the company thank the Edison factors and dealers for their support in the past, and request on behalf of Thomas A. Edison, Inc., a continuance of their favor under the new arrangement.

The foregoing is self-explanatory. In order to remove any misconception in the minds of traders, I have made inquiry of Thomas A. Edison, Inc., and am authorized to say that the supply service will be unaffected, arrangements having been made to insure prompt despatch of all orders. Recording will, of course, be continued in London, and the English travelers are due to make their round of the factors here as formerly. In adopting this new plan the parent company, Thomas A. Edison, Inc., is carrying out Mr. Edison's policy of concentrating the manufacturing and despatch departments at Orange in order to centralize the business and increase the service facilities.

A Welcome Revision of the Bankruptcy Law.

In Parliament last week the second reading of a new bankruptcy bill was moved by Mr. Sidney Buxton, president of the Board of Trade. It had the support of the various chambers of commerce. In effect the measure would simplify the laws relating to bankruptcy and make them more summary. It also, in various ways, sought to hit the dishonest, evasive and reckless debtor. Among the things that it did was to make it an offense for an undischarged bankrupt to engage in business under cover of an assumed name without disclosing his condition to his new creditors. With regard to the property of a bankrupt, if the person dealing with the bankrupt was aware of his bankruptcy, he would not be protected against the claiming trustee. In the case of second bankruptcies the law was to be modified so that, in regard to the assets, the creditors of the second bankruptcy would be allowed to rank equally with those of the first. The measure also contained a provision bringing married women engaged in trade, either separately or in conjunction with their husbands, within the scope of the bankruptcy law. In addition, it was proposed to extend the control of the bankruptcy court over foreign firms—where such firms had a branch or agent or partner here to treat the firm as an English firm. By still another provision of the bill the money-lender would, in future, be prevented from claiming exorbitant rates of interest in regard to bankrupt estate.

Growing List of Double Sided Records.

The number of records double-sided by "His Master's Voice" Co. is growing apace, and quite a substantial repertoire is now available, in which is included topical and popular selections covering every class of music appealing to a select public. This month the Gramophone Co., Ltd., offer an especially attractive batch of instrumental issues, and, as will be seen, a fine discrimination has been exercised in their choice of titles. All are really good records, characterized as usual by perfect recording, the balance and arrangement of the various instruments insuring absolute absence of discord. These double records are a treat to listen to, and typical examples may be found in the following: "Moonlight Dance" (Frick) and "The Belfry Serenade" (J. S. Howgill); "The Girl in the Taxi," selection, Clara Gilbert, and "Rose of Castille," selection (Balfe), Band of H. M. Coldstream Guards; "Der Rosenkavalier," waltz (Strauss) and "Felicité Valse," James Bowler; "Billy Possum's Parade" (E. Reeves) and "At the Devil's Ball," two-step-March (Irving Berlin), Gottlieb's Orchestra; "Milady Rosemary" (Roy Bernard) and "Forget Me Not," intermezzo (Macbeth), Mayfair Orchestra; "Laughing Love," two-step (Christine), and "Love's Dance," two-step (Karl Hochna), Palais de Dance Orchestra.

To the supplement of single records contributions by two artists new to "His Master's Voice" lists are to be noted. Mme. Alice Wilna possesses a

beautifully sweet soprano voice, the delicate shade of which is exemplified in a pretty little love song entitled "Nifanwy." The other artist referred to is Miss Florence Hinkle, whose first record, "Depuis le jour," from Charpentier's popular opera, "Louise," is most excellent. The complete list is as follows: "Die Meistersingers"—Dance of the Apprentices (Wagner); "Die Meistersingers"—Procession of the Meistersingers (Wagner), New Symphony Orchestra. "I Fear No Foe" (Pinsuti) Mr. Peter Dawson; "The Song of the Flea" (Moussorgsky), Mr. Robert Radford; "The Jolly Old Bachelor" (Morgan), Mr. Harry Dearth; "Molly Ochone" (Laura Lemon), Mr. Charles Trel; "Stars May Forget" (R. Groome), Mr. Thorpe Bates; "Bird of Love Divine" (Haydn Wood), Mr. Hubert Eisdell; "Birds in the High Hall Garden" (Somervell), Mr. Percy Whitehead; "Abide With Me" (Liddle), Mme. Edna Thornton; "Gems from 'Cavalleria Rusticana'" (Mascagni), Grand Opera Company; "Angels Guard Thee" (Godard) (cello solo), Mr. W. H. Squire; "Moonlight Sonata," Part I (Beethoven), Mr. Mark Hambourg; "The Girl in Brown" (J. W. Tate), Miss Clarice Mayne; "Don't Play in the Shadows" (David-Arthurs-Finck), Mr. Wilkie Bard. Celebrity Records: "Zigeunerweisen" (Sarasate) and "Canzonetta" (Tschaikowsky), both by Kubelik.

New Company.

Perfectophone (Northern), Ltd., manufacturer of talking machines. Capital, £1,000. Office, 30 Brown street, Manchester.

T. Edens Osborne Again Heard From.

The subjoined advertisement in the form of an editorial paragraph which recently appeared in a Belfast magazine is worth quoting. It reads thus:

"Those who reside in the country, village, on the farm, or far removed from the pleasures of town or city cannot now complain of quietude, dullness, or monotony of their lives, for just as the telephone annihilates distance and enables people to converse with each other, though separated by hundreds of miles, so the Edison phonograph, gramophone or zonophone records, which can be conveyed through the post without breakage, will enable those who possess 'talking' machines to enjoy the world's best musical talent in their own home, 'far from the madding crowd.' Records of celebrated bands, vocalists, etc., can be had from Mr. T. Edens Osborne, 4 Donegal square W., Belfast, who will send, post free, catalog of instruments and records to prospective purchasers. He holds the largest stock of these goods in North of Ireland."

It is an excellent method of cultivating postal trade, a field of activity frequently overlooked by dealers. By the way, Mr. Osborne advises me that he will take possession of more commodious premises as from May 1. The new address is 11 Wellington place, Belfast, Ireland.

Talking Machine Societies Popular.

An excellent business feature this side is the rapid expansion of the talking machine society movement all over the country, and soon practically every town of importance will, I venture to predict, glory in the possession of a local talking machine parliament. Nothing is better calculated to bring home to the owner the potentialities of his instrument or to sustain his interest therein. Record manufacturers themselves have accorded their whole-hearted support to the movement, and in some cases consented to occupy the presidential chair. The West London Phonograph and Gramophone Society claims the unique distinction of being the first of its kind, and your correspondent is proud of being the first to offer the movement encouragement in the press this side. But that by the way.

The West London Society has made a special feature of devoting an evening occasionally to a demonstration of one particular line of product,

which has proved a popular plan with the members. On February 27 it was an "All-Marathon" night, and on March 27 an "All-Columbia." Your correspondent filled the dual role of representing the British and American press. Quite a large number of members, some with their lady friends or wives, assembled at Bellowe's Restaurant, High road, Chiswick, and soon after 7:30 p. m. Mr. Laurie Craig, a prominent local dealer and president of the society, in a few choice words introduced Mr. Sidney Tootill, of the Columbia Graphophone Co., who had kindly consented to occupy the chair for that evening. He was ably supported by Mr. Herbert C. Ridout, who, as the Columbia advertising manager, enjoys a big reputation in talking machine trade circles. A few introductory words, and Mr. Tootill announced the first item on the program, on which records of every phase of music were represented. The Trinity chimes of New York, the British Army Quadrilles by the massed bands of the Guards met with signal marks of approval, while much praise was extended to most other of the records demonstrated. A long program was gone through, to the evident satisfaction of a large and critical audience of enthusiasts whose attention and interest never for one moment wandered. A tribute indeed to Columbia-Rena record quality and the thorough manner in which the company carried out their part of the evening's enjoyment. After the usual expression of thanks to the chairman, and his acknowledgment, another successful evening passed into the society's history.

It should be mentioned that the Columbia Graphophone Co. generously provided the machines and records, program and other literature.

A brilliant descriptive fantasia of military life, covering almost all the incidents of a day in a regiment on active service, is "The British Army Quadrilles" by the massed bands of the Guards, issued on two Columbia-Rena records this month. Feeling that so monumental a work should be treated on a scale as nearly as possible approxi-

imating to the recognized public performances, the Columbia Co. engaged special detachments of three great guards and massed them under the baton of Mr. F. W. Wood, the bandmaster of the Scots Guards.

No Break in Advertising.

The Columbia Graphophone Co. advise me that their advertising, which has for three years been conducted on the all-the-year-round principle, will be continued right throughout the summer as heretofore. Well may Columbia lay claim to "forcing the pace."

Make Excellent Annual Report.

After deducting working expenses, 133,152 marks, the directors of the Beka Record A. G. report a net profit for the past fiscal year of 450,444 marks. With the increased capital raised in 1912 several developments were made possible, and expenditures in that regard show a splendid result. The chairman is able to make the very gratifying announcement that their trading figures for January, 1913, are up about thirty per cent. in comparison with even time last year. After writing off 85,808 marks, and making allowance for eight per cent. on 500,000 marks new shares, a dividend of twelve per cent. is proposed. The reserve carried forward this year is 50,803 marks. The position of the company is regarded as very satisfactory, and the future is one of good promise from a trading point of view.

Preparing for Quarterly Report.

Notice is given by the Gramophone Co., Ltd., that their transfer books will be closed March 25 to 31, inclusive, for the purpose of preparing the quarterly dividend. The financial papers, by the way, report that "His Master's Voice" Co. intend issuing £300,000 of five per cent. debentures at par.

Blue Amberol Records for May.

The fourth, or May, list of Blue Amberol records is an exceptionally pleasing one in its excellent variety of titles, and may fairly be regarded as a typical example throughout of Edison quality.

In my previous report currency was given to the issue of the first new Amberol grand opera records, and in the list under review dealers will be glad to know that a further batch is included. It need hardly be emphasized that the introduction of records bearing excerpts of some of our most popular operas has met with such a reception as tending to indicate very clearly the extraordinary demand which exists even among the less educated class for the best music. In all there are five grand opera titles, as follows: "Pagenarit"—Masked Ball (Verdi), Melitta Heim; "Mi Chiamano Mimi"—My Name is Mimi ("Bohème") (Puccini), Lucrezia Bori; "Prologo"—"I Pagliacci" (Leoncavallo), Carlo Galeffi; Vissi d'arte, vissi d'amore—"Tosca" (Puccini), Adelina Agostinelli; "Dei mei bollenti Spiriti"—"La Faviati" (Verdi), Elvino Ventura.

The Blue Amberol regular list is notable for the inclusion of well-known selling titles, and attention is also directed to some pleasing ragtime issues by the famous comedians, Messrs. Collins and Harlan. The complete list is as follows: Selection from "Veronique" (Andre Messager), National Military Band; "Sally in Our Alley" (Henry Carey), Charles Compton; "I Dō Like You, Susie" (Murphy and David), Stanley Kirkby; "Catch Me if You Can," dance (Jocelyn Noel), Alexander Prince; "The Toreador's Song—"Carmen" (Bizet), Peter Dawson; "Finlandid," tone poem (Sibelius), National Military Band; "Jesus, Lover of My Soul" (Rev. J. B. Dykes), Williamson and Kinniburgh; "The Burglar Rag" (Brady, Mahoney & Ferguson), Jack Charman; "Patricia" (Weston, Barnes and Scott), Miss Florrie Forde; "It's Mine When You've Done With It" (Godfrey and Williams), Billy Williams; "In Sheltered Vale" (Gluck), T. F. Kinniburgh; "The Moon Has Raised Her Lamp Above" (Benedict), Pike and Dawson; "She's the Lass for Me" (Lauder), Harry Lauder; "With Sword and Lance March" (H. Starke), National Military Band; "I Want to

(Ivan Caryll), Walter Van Brunt; "Orpheus Overture" (Offenbach), American Standard Orchestra; "Take Me to That Swanee Shore" (Muir), Collins and Harlan.

Effect of the Value of Advertising.

Speaking at a meeting at the Hotel Cecil, held to inaugurate a national campaign to "advertise advertising," Mr. T. J. Barratt, chairman of Pear's Soap, quoting one of his own speeches, delivered in 1889, said: "There is yet a more exceptionally important fact to which I would draw your attention. It is commonly supposed that advertising necessarily increases the cost of the advertised article, but our very lengthened and extensive experience proves to be entirely to the contrary, for in consequence of that expenditure the greatly increased output has resulted in enabling us so to reduce all our costs of production that our specialty to-day is obtained by the public at over thirty per cent. less than the price charged without that advertising expenditure." Mr. Barrett added: "To-day, after twenty-three years' lapse of time, bringing my total to some three millions spent in advertising, my experience permits me to endorse that statement."

Sir Joseph Lyons is responsible for a very pertinent phrase—"Advertising is a good thing if you are advertising a good thing."

As Mr. Barrett truly remarks, the reduction of cost usually follows increased sales, and this very aptly illustrates the position in the cheap record field. Many of these would not have seen the light but for the remarkable state of trade prosperity. An eighteenpenny record at a profit is only possible by reason of the huge factory facilities of manufacture consequent upon a greatly increased demand for the parent product—due to publicity.

Strong Zonophone Record List.

A strong array of tip-top artists offer their best in the latest supplement of Zonophone records. Their contributions cover a wide field, and include all the best and most recent successes of the concert and music hall world. Agreeably with the usual excellent standard of recording maintained by this company, the following records call for special praise in that regard: "Hitchy Koo" (Muir and Abrahams) and "Gaby Glide" (L. A. Hirsch); "The Bonnie Blue 'Kerchief" (R. S. Barnicott) and "Mifanwy" (D. Foster), Esther Yunson; "None Shall Part Us" (Iolanthe), and "Stay, Frederick, Stay" (Sullivan), Mme. E. Jones Hudson and Mr. P. Dawson; "The Girl in the Taxi Waltz" (Gilbert) and "The Girl in the Taxi," selection (arranged by O. Fetras), Peerless Orchestra; "The King's Guard March" (J. H. Keith) and "The Red Marines March" (Germain), Black Diamonds Band; "A Tripoli March" (E. Arona) and "Allons y doucement March" (Vincent Scotto).

Interested In Democratic Tariff Plan.

Some little interest is evinced here in reports from your side that President Wilson will convene a special committee to examine and report upon the question of tariff revision. Should reductions be made in certain directions, there is no suggestion that musical instrument goods will receive any special favor in this regard. Even supposing some concession is made, talking machine exports from here are practically excluded by reason of the American patent monopoly, which seems to gain rather than diminish in strength. Again, your dealers appear to be more or less tied and do not care to risk their commercial existence, as they would do by importing Continental machine and record products.

New Columbia-Rena Records.

Billy Williams is always a sure card to play, and we congratulate the Columbia Co. upon their prompt issue of another new series of records by this laughter-making comedian. We noticed, by the way, considerable press advertising of these Columbia-Rena records by Billy Williams, and this must have assisted very greatly in the boom. Certainly, Columbia does the thing thoroughly. In which characteristic their general list speaks volumes. Here are some choice examples:

Twelve-inch Records—"Messmates" (Henry Newbolt and Herman Lohr) and "Land of Hope and Glory" (A. C. Benson and Sir Edward Elgar), Mr. Dalton Baker; "Fish Song" from "Merrie England" (Basil Hood and Edward German) and "Judge's Song" from "Trial by Jury" (Gilbert and Sullivan), both by Mr. Walter Passmore and chorus. Ten-inch Records—"The Laughing Curate"

(C. Penrose) and "Laugh and Grow Fat Like Me" (C. Penrose), Fred Arthurs; "A Lancashire Rumble," descriptive (F. Arthur) and "Standard Bearer March" (P. Fahrbach, Jr.), Band of H. M. Scots Guards; "Always Think of Mother" (Haller and Stafford) and "That's How I Need You" (Piantadosi), Manuel Romain; "Let Me Live and Stay in Dixie Land" (Bryce and King) and "When We Are Married" (George Cohan), Hedges Brothers and Jacobson; "The Wedding Glide," from "Hallo, Ragtime" (Louis Hirsch), duet by Ada Jones and Herbert Scott; "When Uncle Joe Plays a Rag on His Old Banjo" (Morse), Arthur Collins; "Call Me Early in the Morning" and "Oh, for Another Day at Margate!" (Godfrey and Williams), Billy Williams; "The Ragtime Wedding" and "The Worst of It Is I Like It" (Godfrey and Williams), Billy Williams—a mighty good list, truly.

EXHIBITORS AT THE RECENT LEIPZIG FAIR.

Trouble in Balkans Causes Drop in Visitors—English Buyers in Majority—Few Novelties Shown—Improvements in Cheap Instruments—Growing Number of Cheap Disc Records—Infringement Charged in Hornless Cabinets.

(Special to The Talking Machine World.)

London, Eng., March 31, 1913.

To the list of English visitors whose names were published in my last month's report I am now able to supplement some remarks as to the fair itself. The fair period this year unfortunately did not coincide with my latest date for mailing these dispatches, so precluding the possibility of any report prior to this issue. I trust, however, that interest will not have suffered in consequence, and with this preliminary statement will proceed to my subject.

In normal times the Leipsic Spring Fair attracts visitors from all parts of the world, but the near Eastern troubles have dried up the springs of commerce, and as a result visitors from the Balkan States were conspicuous by their absence. A few representatives from other countries were to be noted, but from the purely trade viewpoint it was an out-and-out English fair. While, of course, much foreign business was transacted, there can be no doubt that, in bulk, British buyers predominated, both in number and in the volume of orders placed with the German and Swiss exhibitors. For this condition of things the near Eastern war is to some extent responsible, and exhibitors were much perturbed in consequence, for in normal times Germany does much trade with the affected countries. This, however, was partly offset by the increased business from English buyers, whose contracts for next season's trade were for the most part considerably larger than in previous years.

Few Novelties in Evidence.

There were few novelties to be seen, at least of a practical order from the British standpoint, and, indeed, it may be said at once that real novelties in these days are few and far between. After all, on the present principle of reproduction, the construction of disc and cylinder machines is strictly limited in style, and only in case design is there scope for ingenuity. In which respect it was very obvious that manufacturers had exerted not a little effort to please. From an artistic point of view, the general display of machines was notably of superior design and construction, and altogether of better value than formerly. This partly accounts for the larger orders placed by English buyers. The highly decorated and fantastic cabinets which seem to find favor on the Continent are quite unsuitable for our market, to which, in their new designs, German manufacturers had obviously given proper recognition.

A feature of the cheap instruments, too, is their increased motor strength. Hitherto this class of machine did not possess a motor strong enough to run a twelve-inch record, the sales of which are of such proportions in England as now to call for consideration on the part of machine manufacturers. This consideration is found in the new models, most of which carry a motor strong enough to properly play a twelve-inch disc in one

Numerous Accessories Exhibited.

Exhibits of motors, horns, needles and accessories were, in number, about the same as last year. In this section particularly, trade was exceedingly good, despite the fact that complete machines being so cheap, a number of traders who formerly bought the parts and made up the machines to their own requirements did not trouble about it this time.

Cheap Discs Increase in Number.

In the record field a number of cheap discs made their debut. They were not unexpected, but having regard to the present keen state of competition in Germany, their appearance provoked comment among those traders who are desirous of placing the industry upon a firmer foundation. There really seem no limit to resources of our Teutonic friends, but they must have regard sooner or later to the price-cutting effects of this cheap overproduction, which, it is admitted already by some, is absolutely ruining the stability of the trade. Dealers naturally find it difficult to make headway against this "no price" class of trading, and at a meeting held during the fair week they were not slow to express disapproval. It was felt that manufacturers should fix prices and extend more generous terms to dealers, with the object of minimizing the "necessity" to undersell each other.

Claim Certain Hornless Machines Infringe.

In the hornless machine section exhibitors experienced an important trade setback by reason of the action of the Deutsche Gramophone Co. Certain hornless machines, it appears, were claimed as infringing the company's patents, and to enforce their rights they enlisted the aid of the authorities. This in consequence considerably affected business. Some amusement was caused by the exhibition of notices on some booths requesting plaintiff's representatives not to enter.

One of the largest exhibits was that of Carl Lindstrom A. G., whose wonderful range of instruments attracted more than ordinary attention. Enormous orders were placed with this company for export to all parts of the world. The Deutsche Gramophone Gesellschaft, the Bika Record A. G., Biedermann & Czarnikow, Zonophon G. M. B. H., Excelsiorwerke, Favorite and other companies report satisfactory business, and throughout the fair seems to have been highly successful.

NEW STYLE X VICTROLA SOON.

The Victor Talking Machine Co. recently sent out to its trade a letter announcing a new style X Victrola to be introduced in about 60 days. This new model will be of the enclosed cabinet design, and Manager Geissler suggests that Victor distributors and dealers make a special campaign on behalf of the present Style X Victrola. The Victor Co. will use considerable newspaper advertising featuring this type of machine for the benefit of those dealers who have a supply of this style in stock.

TRADE IN PHILADELPHIA NOT QUITE SO ACTIVE

During the Past Few Weeks as for the Same Period Last Year—Snellenberg's New Department—Heppe's Good Business—Buehn's Success with the Edison—New Columbia Moves—Lit Bros.' Victor Business Most Active—News of the Month Worth Noting.

(Special to The Talking Machine World.)

Philadelphia, Pa., April 10, 1913.

The talking machine business in Philadelphia for the past month—like practically all lines of business—has not shown the same gain over last year as was to be noted during the first two months of the year. The dealers do not seem in the least discouraged for they see brilliant prospects ahead. The factories are doing everything to encourage them in getting out the goods more promptly.

There have been no new dealers started in the talking machine business in Philadelphia during March, so far as the Victor is concerned, for that company has announced that it does not desire any more dealers in the heart of Philadelphia, feeling that the field is now covered sufficiently for all needs. This is a pleasing announcement to the regular Victor dealers, as it makes competition less keen.

The Columbia Co., however, is pushing ahead and is trying to make inroads wherever possible. It has been meeting with splendid success.

The Snellenberg store has arranged a new talking machine department entirely distinct from its piano department and at one of the best locations in its big building. R. B. Cope, who was formerly the Columbia representative at Omaha, Neb., has been placed in charge. Two new and up-to-date salesmen, James A. B. Franciscus and E. Hamilton Hislop, have been secured. The new department is admirably arranged with all modern equipment.

C. J. Heppe & Son have been having a most satisfactory business in their talking machine department. Manager W. J. Elwell was away from the department considerable time during the month on account of the illness of his mother, and the department was managed in his absence by M. Russell Maytrot. J. S. Janney and Fred Ferris, salesmen in the department, have resigned to go into other businesses. Among the visitors to the department store were J. Harry Jolt, of Mt. Holly, N. J.; Harry F. Cake, of Pottsville, and Charles McLoughlin, the later being manager of the talking machine department of the Stoll Blank Book Store, of Trenton.

Walter Linton, manager of the talking machine department of the Estey store, has been at home ill for more than a week. He has been threatened with pneumonia. The department has been looked

after in his absence by other members of the selling force, and they report having had a very good business.

Louis Buehn & Brother report that their business in March was just about what it was last year. They exhibited the Edison dictating machine at the business show which has just been held in Philadelphia, and they are quite well satisfied with the results. The show was held at the First Regiment Armory. The attendance was fine, and they believe the result will be big for them. They had two booths. During March they sold a large number of these dictating machines to the N. W. Ayer Advertising Agency.

Mr. Buehn, who keeps a close eye on the trade, says that he has noted a general tendency during the past six weeks for a slight slacking in the business, and he does not believe that the next few months are going to show any great improvement over last year. Nelson C. Durand spent a day in Philadelphia during the business show inspecting the exhibits and went away very much pleased, not only with the exhibit, but with the good outlook for business.

The Pennsylvania Talking Machine Co. has been doing splendidly in March. Manager Eckhardt has been in New York considerably of late trying to get sufficient goods to take care of the business here. Since Mr. Eckhardt has taken charge the Philadelphia business has gone ahead with all the stride possible. During March it fully equipped the Scranton Economy Furniture Co. with a full line of Columbias. The manager is Louis P. Octinger, who previously handled the Columbia in a small way.

William J. Convery & Sons, of Trenton, N. J., have put in a complete line of Columbia goods and will build a new department on the first floor. The Delaware Graphophone Co. entered the business on the 16th of March and will represent the Columbia line in that city. It has taken over the Columbia branch at that point.

The Pennsylvania Co. has already sold a number of the Columbia Grand grafanolas, and could have sold five times as many had it been able to secure them.

Lit Brothers have been doing twice the Victor business in their talking machine department in March of this year over last year, and it is well that they recently enlarged their whole department, otherwise they would not have been able to handle it. Their new sound rooms have all been filled practically the entire day during the month. The little opera house advertising the Victor, which they had in their window for some time, they now have in their department, where it is attracting a great deal of attention. They have been compelled to put on several new men in their department during March.

Gimbel Bros. report that they made a very nice gain in March over last year. They expect to start shortly a new Victor department in the basement of their store. They will give it a large space and will exhibit all the styles of machines they carry, and will also have a full line of records and will give continuous concerts.

SINGER CHARMS EDISON.

Miss Linnie Lucile Love Sings to the Inventor at His Home.

Thomas A. Edison declared as "unusually clear and even for reproduction and almost perfect in modulation" the voice of 18-year-old Linnie Lucile Love, when the young woman, who appears in "Romance," at the Maxine Elliott Theatre, sang before him recently at his residence in Orange, N. J. The girl was blind when she came to New York from Seattle, Wash., two years ago, but has had the sight in her right eye restored. Despite her many difficulties, she has made rapid strides in music.

The wireless call for help

We always have "our ear to the ground" listening for the distress signal of some dealer. And the minute we get it we're right off to the rescue.

We have gained quite a reputation as "life savers" and have helped out many a dealer when he was in a tight place with his customers clamoring for the goods.

It's easy for us to do because we're "tuned up" that way—we ship all goods the same day the orders are received.

Our stock is so complete that it will withstand any demands made upon it—whatever you want in Victors, Victrolas, Victor Records, record cabinets, needles, fibre cases, horns, repair parts, and accessories, is right here subject to your order.

Send us a letter, 'phone call, telegram, wireless—get in touch with us any way you please—and the goods will be started to you without delay.

Don't wait until you really need "help". Write today for our catalog and our booklet, "The Cabinet That Matches".

Victor foreign records

"If it's in the Victor catalog, we have it" applies to foreign records as well as all other Victor goods. The entire Victor foreign list is here—immediate delivery.

New York Talking Machine Co.

Successors to Victor Distributing and Export Co.

81 Chambers Street New York

This shows a multiple of one of our Systems. For 10" or 12" records. Each tier holds about 250 records. Costs about \$2.00 a tier.

BUILT OF HEAVY STRONG WIRE, PLATED AND LAQUERED.

WRITE for 20-page catalog giving details and information on the best way of keeping your records.

The Syracuse Wire Works

SYRACUSE, NEW YORK

FAMOUS RECORD ALBUMS

AT VERY LOW PRICES TO MEET COMPETITION

For Durability, Artistic Design and Finish, our Albums have no equal. They are made in the most substantial manner by skilled workmen.

Our Albums are first-class in every particular, and are sold at very low prices.

DISC RECORD ALBUMS

ARE WHAT EVERY

Talking Machine Owner

NEEDS AND MUST HAVE

With the index they make a complete system for filing away all disc Records, and can be added to, Album by Album, as Records accumulate, like books in a library.

OUR SUPERB ALBUMS SHOWN OPEN AND CLOSED.

MADE IN TWO SIZES TO FIT ALL 10 AND 12-INCH DISC RECORDS.

These Albums contain 17 pockets made of strong fibre paper, each pocket having a hole in the center, as shown in the picture. These pockets are so made that they show very plainly both the single and double face titles on the Records. The Albums are bound in the finest quality of Brown Silk Finish Cloth, with gilt title on front cover. They are also bound in imitation leather. Write for sample and prices of our Albums, which are superior to all others.

Address NATIONAL PUBLISHING CO., 235 South American St., Philadelphia, Pa.

WINS INTERFERENCE SUIT.

Keen-O-Phone Co. of Philadelphia Publishes Interesting Correspondence Received from Its Lawyers Anent Validity of Its Patents.

(Special to The Talking Machine World)

Philadelphia, Pa., April 12, 1913.

The Keen-O-Phone Co., whose general offices are at 227 South Broad street, this city, has just received notice of the decision in its favor in an interference action brought by the Victor Talking Machine Co. The following statements from the Keen-O-Phone Co.'s legal department explain the matter in full:

Philadelphia, April 5, 1913.

Keen-O-Phone Co., Philadelphia, Pa.

Gentlemen: We beg to advise you that we have received notice from the Patent Office that a concession of priority of invention to Browning has been filed by Johnson & English in the matter of interference No. 33,738, and that therefore priority of invention of the subject matter in issue is awarded to Mr. Browning. Right of appeal having been waived, no time for appeal is therefore allowed.

Very truly yours,

(Signed) ERNEST HOWARD HUNTER.

Philadelphia, April 7, 1913.

Keen-O-Phone Co., Philadelphia, Pa.

Gentlemen: The interference in the United States Patent Office between an application of John B. Browning, owned by the Keen-O-Phone Co., of Philadelphia, and an application of Johnson & English, of the Victor Talking Machine Co., has been decided in favor of Browning. The improvement relates to a cabinet talking machine, in which the sound arm is connected by a hollow hinged connection extending outside of the casing with a horn or amplifier in a cover, which may be either movable or stationary.

Yours very truly,

(Signed) ERNEST HOWARD HUNTER.

A member of the Keen-O-Phone Co. said: "The above verifies the stand taken by us last September, when we sent a general notice to the trade that we would successfully defend all charges of infringement brought against us concerning any of our products or parts."

"IT PAYS TO ADVERTISE."

An Illustration of the Success Achieved by John Wanamaker—Advertising Has Kept Hand in Hand with Business Growth.

John Wanamaker is credited with saying that "it pays to advertise." Then someone says, "I would advertise, too, if I had a great, big business like John Wanamaker." But wait a minute.

There was a time when the business of John Wanamaker was not "big," when the name did not bear the weight in commercial circles that it does to-day, when the store building occupied one street number instead of an entire city square, when the advertising was measured by inches instead of by entire newspaper pages.

How was this great business of to-day builded? Honest values and fair prices were two essentials, but there were many merchants who had been giving both for many years when John Wanamaker first started into business, merchants whose enterprises are now only history, enterprises that died with the generations which started them.

In every stride forward there is always one feature that proves itself of paramount importance. Mr. Wanamaker intimates what he considers was the paramount feature in the building of his present business when he says, "It pays to advertise." And the report comes from the Wanamaker organization that, while competent managers are now bearing many of the burdens formerly shouldered by Mr. Wanamaker, he still keeps in close touch with the department of advertising—that this department receives more of his personal attention than any other branch of the business.

But, as we set out to say, Wanamaker's store was once small; likewise the size of his advertisements. Nor did his advertising "copy" show the skill in preparation that characterizes the announcements now issued by this house from day to day.

With this article Better Business reproduced a John Wanamaker advertisement that appeared in an issue of the Philadelphia Press during the year 1875. In size and character it is representative of the advertising used during that year's campaign. Compared with his present-day announcements this little ad is insignificant in point of size and attractiveness.

But it shows that John Wanamaker had faith in the value of public appeal; that he advertised in proportion to what his business would warrant, and that he made those advertisements as attractive as a limited space and a limited experience in an art that was then new would permit.

No, little ads like the one illustrated did not build up John Wanamaker's present truly tremendous trade. But they served their purpose at the time, brought in a sufficient business increase to enable an advertising increase from time to time. In short, as the business increased, the advertising space increased, and, as the advertising space increased the business increased, until to-day "sky-scraping" stores are occupied.

Now, how about your own business? Does the public know that there's not another store in town that can equal the values you have to offer? Or that you can save them money on the prices they are now paying? Plan a publicity campaign in proportion to the size of your present business. Make your advertisements attractive; back them up with the right kind of goods at the right kind of prices, and this time next year you will be increasing your advertising appropriation in order to keep pace with the past year's business increase.

Remember, "It pays to advertise," even though your store does not begin to compare with the present size of John Wanamaker's.

The time has gone by when the public would buy a record by the name of the artist. Absolutely, the tone is what tells now. Which is a condition peculiarly satisfactory to us.

Tribune Building, New York**

NO LET-UP IN ACTIVITY IN TALKING MACHINE TRADE.

March Business in St. Louis Was of Large Proportions—Thiebes Piano Co. Takes on Edison Disc Line—E. C. Rauth Encounters Travel Difficulties—Baseball to the Fore—Silverstone's Natural Trade-Mark—Displays at Woman's Exposition—Items of Interest.

(Special to The Talking Machine World.)

St. Louis, Mo., April 11, 1913.

Talking machine dealers in and around St. Louis are greatly pleased with the March business, they say. "The biggest month we have had except December," is the word at the Columbia store. "Very satisfactory indeed," is the word from the Aeolian Victor department. "Our business is limited only by ability to deliver what the people want," says Mark Silverstone, Edison jobber. "We have had a fine trade and have excellent prospects," says Koerber-Brenner Music Co., Victor jobbers.

Thiebes Co. Takes on Edison Disc Line.

One of the surprises of the month was the Thiebes Piano Co.'s move in taking on the Edison disc line. This company already handles the Victor and Columbia line, and has been centering its selling force on Victors, and enjoys an excellent trade on this line. Of the new instrument Manager Robinson says:

"We have had the Edison disc on the floor two weeks and are more than satisfied with it. A machine in the window has brought us a good many inquiries and some excellent prospects, and we look for a nice business on them. Of course this house, which has been advertising Victor products heavily, cannot afford to drop that line and exploit the Edison at the expense of the trade we have built up, but I look to see a balance sooner or later. There are a good many individual points I like about this machine and the tone certainly is there. I predict it will be a good selling proposition.

"Generally, trade has been excellent and record business is exceeding expectations. We are looking for some nice record business to accompany the grand opera engagement in the city this month."

Sales Manager F. K. Dolbeer of the Edison general offices, was a recent caller in St. Louis, and visited the retail stores handling their machines to learn for himself how well posted dealers were on disc machine arguments. He was held up three days at Columbus, O., by the flood.

E. C. Rauth Imprisoned by Elements.

E. C. Rauth, secretary of the Koerber-Brenner Music Co., was found mapping a trip into Iowa, and this was the reason: Mr. Rauth started for Indiana and was headed off by the Terre Haute tornado, and before he could get his bearings and start into other territory, the Ohio and Indiana floods broke and he was trapped for two days in Danville, Ill. By the time he had spent two days there he concluded the people of the country to the east of him would have other things to think of than talking machines for the next few weeks, and he came home. Here he looked about and concluded Iowa was about the safest spot and he headed for there. "But despite storms and floods we have been doing a nice business," said Mr. Rauth. "The first quarter of the year runs well ahead of last, and we are in excellent shape for handling all business. The flood trapped our

freight shipment of April records, but we got others through and will not be embarrassed by the delay. Country trade has been excellent since the first year and the assumption after Christmas that country stocks were very low has been justified."

Harry Levy, of the Aeolian Co., said: "The flood will not hurt us in this city. We have some shipment tied up, but they will not prove very embarrassing."

Baseball Now a Live Topic.

The talking machine boys of the piano houses are much interested in the formation of the Piano Row Baseball League, which is under way. Last year the talking machine departments furnished a large proportion of the players and the captains of the two cup contenders in the persons of Manager Robinson of the Thiebes talking machine department and Mr. Hallahan of Val Reis Co. Mr. Hallahan is now with the Aeolian piano department, but the talking machine boys will claim him. The talking machine boys also figure in the Field-Lippman piano stores team.

Recent Trade Visitors.

R. L. Berry, of Springfield, Ill., was a recent talking machine visitor.

Col. Hollenberg, of the Hollenberg Music Co., Little Rock, Ark., was a recent visitor at the Aeolian Co., and he looked over their talking machine department with a view of gaining some pointers.

Edison Display at Woman's Exposition.

R. J. Bolan came here from the Edison general offices to take charge of the display of disc machines at the American Women's Exposition in the large Coliseum. This was formerly called the Household Show, which is a more expressive name, as the exhibits are useful and ornamental articles used in the homes. The Silverstone Music Co. had a booth display of the Edison machines, and while The World correspondent was at the show this booth was one of the centers of attraction. Much wonderment was expressed when a woman asked Mr. Bolan to play a certain selection, and he stepped outside the railing, and from under the feet of the crowd, picked up a record and placed it on the machine. The rough handling of the records and their excellent interpretation after being walked upon and thrown about was an unceasing wonder to those gathered about. Mr. Silverstone says he is getting some excellent prospects from the demonstration there. Mr. Edison's record descriptive of the machine was listened to with great attention.

Mr. Silverstone has been advertising in the daily papers that his machines are at the service of any person who cares to hear them play, and he says that he has been entertaining an average of 150 persons daily from 10 minutes to an hour, in his improvised concert hall in the corridor of his lower floor wareroom.

Preparing for Season of Grand Opera.

Manager I. W. Reid, of the Columbia Co., reports

that March was the biggest month that company has enjoyed in St. Louis, outside of holiday seasons, and that trade prospects are excellent. "We are making some great preparations for the grand opera season at the Coliseum," he said, "and we have a generous list of artists on our records. We will be able to advertise of the artists who appear here are the following: Hector Defranne, Mary Garden, Caroline White, Francisco Daddi, Henry Scott, Margaret Keyes and Olive Fremstead. We regard that as a very good showing, and we expect some business from the advertising we will do in connection with the great song meet."

New Columbia Wholesale Traveler.

J. J. Bennett, recently of the United States Phonograph Co., of Cleveland, and formerly in the talking machine business in Detroit, is a wholesale traveler in this city, Missouri and Illinois for the Columbia Co., and is lifting up new dealers in many towns and making an excellent showing in St. Louis, where the Columbia has not been generally represented in a very large way outside of the company store.

Makes Good Use of Name.

Mark Silverstone, of the Silverstone Music Co., has sprung another advertising novelty. The other day it struck him how appropriate to his business it would be if the middle "s" was not in his name, and he set about eliminating it without changing his name. He had a sign prepared which reads like this SILVERSTONE MUSIC CO. (except that he has an ornamental S and T), and he has had cards prepared in the same way. He has decided to further eliminate the "S" and make it Silver-Tone by using outline type for the middle "S." "It never had occurred to me before how narrowly my name missed being ideal," he says. "I do not want to give the impression that I am changing my name, but I want to get the benefit of the advertising novelty, and I believe that in this way I can do it without drawing adverse criticism. Already I notice that it has caught on and several recent customers have asked for 'Mr. Silverstone.'"

Grand Opera Model Attracts Attention.

The Columbia Co. is greatly rejoiced at receiving one of the grand opera machines for its exhibit booth at the American Woman's Exposition. The Columbia booth is always crowded and a generous amount of music is dispensed. The grand opera machine was not here for the opening of the show, but arrived later and was hurried to the Coliseum and immediately became the center of attraction and drew showers of compliments for its graceful lines. Mr. Duffy, of the Columbia sales force is in charge of the booth and is reporting a generous number of the prospects to the store.

Demonstrating New Edison Disc Machines.

J. W. Scott, of the Edison general offices, who created great interest in the Edison disc phonograph here by demonstrations at the Jefferson Hotel, has gone to Chicago. M. L. Holwitz, of the Silverstone Music Co. force is now in Kansas working towns in the same way. The method is to demonstrate the excellence of the machine at the leading hotel, and thus attract some live dealers who want to handle a popular instrument. Mr.

(Continued on page 50.)

M. S.

Automatic Start and Stop

ONLY PERFECT AUTOMATIC STOP THAT HAS BEEN PRODUCED for the following reasons:

1. Simple to operate.
2. Always Stops.
3. Neat in appearance.
4. Price, Nickel-Plated, \$3; Gold-Plated, \$4 (Canada and Foreign Countries add duty).
5. Uses screw on tone-arm collar to fasten it (thereby not injuring cabinet of machine).
6. NOTHING to bump arm (thereby jarring wax loose on diaphragm).
7. NOTHING to weigh heavily on tone-arm (thereby wearing tone-arm out of alignment in tone-arm collar).

You owe your customers any knowledge that you may gain through trade papers of the latest improvements, therefore as a progressive dealer send your jobber an order for M. S. Stops, and your customers will commend you for selling so great a convenience as the M. S. Automatic Start and Stop.

Mr. Thomas Mykins, the inventor of the M. S. Automatic Start and Stop, has sold and repaired talking machines for nearly fifteen years. For the past three years he has devoted all his spare time to invent an automatic stop. Previous to the M. S. he discarded three designs which worked effectively, but were too large to be neat in appearance.

Mr. Mykins has resigned his position as manager of the Victrola Department at E. W. Edwards Department Store (Rochester, N. Y.) to personally supervise the manufacture of the M. S. Stops.

Mr. John A. Clark, Manager of Sales, has been associated with the talking machine business for a number of years, having conducted a retail talking machine business at Katonah, N. Y., and later was traveling salesman for the Columbia Graphophone Co., and recently for E. J. Chapman (Victor Distributor), Rochester, N. Y.

Mr. Clark has designed highly attractive literature regarding the M. S. Start and Stop, and will gladly ship whatever amount any dealer can use for his mailing list—TELL US HOW MANY? We do the rest.

**Talking Machine Accessories
Manufacturing Co.**

306 Livingston Building,
31 Exchange St.,
ROCHESTER, N. Y.

ACTIVITY IN ST. LOUIS TRADE.

(Continued from page 49.)

Holwitz is meeting with considerable success. Here Mr. Scott drew several good newspaper write-ups.

Miss Helen Addis, recently with the Thiebes Piano Co.'s talking machine department, is with the Aeolian Co., in the same work.

H. A. Tunehorst, a talking machine dealer at Jerseyville, Ill., was a recent visitor.

Special Ads Bring Results.

President Piper, of Bollman Bros. Piano Co., says the results of the advertising campaign of small Victors in connection with special cabinets and a list of records at a stated price was very satisfactory. The customers freely expressed their appreciation of an ad that was different, although they did not seem to understand wherein it was different from others they had read. Perhaps the odd price was the attraction.

Field-Lippman Ads Still Prominent.

The Field-Lippman Piano Stores, which a few months ago created a stir among Victor advertisers by demanding the entire lower margin of the Victor Co. ad in the newspapers and then advertised that the newspapers had discriminated against them in not displacing the older advertisers for their benefit, has come into the list. The present advertisement of the Field-Lippman stores is the same L shaped ad that was at first proposed to fit into the mortise of the Victor ad, but between the Field-Lippman space and the Victor ad are the Thiebes Piano Co.'s ad in the upper mortise, and the Aeolian Co.'s ad in the second mortise.

Ysaye's Visit Welcomed.

Salesmanager Byars, of the Columbia Co. is greatly pleased over results of the Ysaye visit here. The great violinist came as a soloist for the Symphony Orchestra concert and the local store arranged its advertising to supplement that in the Saturday Evening Post, and Mr. Byars reports an extraordinary sale of records. "The greatest I have ever known for a single performer for a particular occasion," he says. Ysaye visited the Columbia store and remained an hour listening to all of his records in stock.

MARRIAGE OF A. C. REDEWILL.

(Special to The Talking Machine World.)

Phoenix, Ariz., April 6, 1913.

Augustus Cass Redewill, president of the Redewill Music Co., of this city, and one of the most prominent dealers in this part of the country, was married to-day to Miss Marie Louise Craven, daughter of Mr. and Mrs. G. W. Craven, of Kentucky. The romance which culminated in to-day's wedding had its beginning when Mr. Redewill met Miss Craven upon her visit with her mother to Phoenix some time ago. She has a very sweet soprano voice and is a decidedly good pianist. The Redewills are pioneers in Arizona and one of the best-known families in the State. Mr. Redewill is a graduate of the University of California and was the leader of the college band while a student there. He is a member of the Arizona, the Bachelors and the Elks' clubs and holds a commission as captain in the United States Army.

NEW VICTOR REPAIR CATALOGS.

The sales department of the Victor Talking Machine Co. has just mailed to Victor dealers new repair catalogs for Victrolas X, XI, XIV and XVI. These catalogs are complete and valuable to the trade, and in a letter accompanying the catalogs the Victor Co. suggests that the dealers order a patented spring binder in order to properly take care of the catalogs and have a complete file always on hand.

COLUMBIA LINE IN NEWARK, N. J.

Arrangements were completed this week whereby the Newark, N. J., branch of F. G. Smith, the well-known piano house, will handle a complete line of Columbia Graphophone Co.'s products. Booths are now being constructed and the new department will probably be ready for business within the next week or ten days. This F. G. Smith branch is another link in the chain of F. G. Smith branches handling Columbia products.

PROGRESSIVE SOUTHERN HOUSE.

Description of the Handsome Columbia Quarters in New Orleans—Admirably Arranged and Furnished—William F. Standke Is Manager.

(Special to The Talking Machine World.)

New Orleans, La., April 7, 1913.

Southern progressiveness and energy are exemplified in the attractive warerooms of the Columbia Graphophone Co. in the Audobon building, 933 Canal street, this city. These showrooms are very prettily arranged and furnished, making prospective purchasers feel perfectly at home and at ease from the first moment they enter the front door. And there are a number of well-ventilated and

Columbia Store in New Orleans.

artistically decorated demonstration booths along the side of the store. The booths are always crowded, and the store's patrons are well pleased with the service extended them.

The Columbia Graphophone Co., of this city, boasts of having one of the most popular talking machine stores in this section of the country, and its business is showing substantial gains month after month under the able management of William F. Standke. A complete stock of records is on hand at all times, which is located so as to be easily accessible to the salesmen, and at the same be invisible to the purchaser. Confusion in the demonstration and selection of records is thereby avoided.

NINE DEMANDMENTS

Which Are Built on Accumulated Wisdom and Experience in the Sales Field.

Here are nine good precepts that were built on the accumulated wisdom of a Columbia man with many years' experience in the service, which appear in The Record for April.

There is a solid sense behind every paragraph; and don't scoff because most of the advice seems obvious—so many good and necessary things are so obvious, and the obvious is so often neglected—people get used to it just because of its obviousness:

1—Treat customers promptly; if you are already busy with other customers, you can at least find time to say good morning and to ask the new one to have a seat and look over a catalog.

2—See that the instruments on the floor are in good running order every day; if they are not, report them to the repairman.

3—See that the literature racks are well filled with all kinds of instruments and record catalogs. Also see that your own name and address is stamped on each one.

4—Return all records to the racks immediately after playing them.

5—See that your machines are properly labeled with the retail prices—use the Columbia price cards.

6—Give careful attention to the appearance of the store—to the arrangement of the machines, the cabinets, the chairs, etc.

7—See that the porter does his work well.

8—Secure the name and correct address of all customers.

9—Have your manager or bookkeeper O. K. all charge sales and have the customer sign the stock requisition. The invoice should either be handed to the customer, put in the package or mailed.

It isn't always *price* that secures a great artist. Josef Hofmann, for instance, came to the Columbia laboratory because he had reason to know that we could record the piano faithfully.

OLDFIELD WILL RENEW FIGHT ON PRICE

An Interview with Representative of "Printers' Ink"—He Says He Will Reintroduce Bill at Special Session—Changes in Patent Committee Membership Which Favor Manufacturers—The Situation Reviewed as Presented at Time of Writing.

Representative Oldfield will reintroduce at the special session of Congress the bill which aims to render illegal price-maintenance based on patent rights and which has aroused unanimous opposition on the part of manufacturers.

There have heretofore been rumors and supposition to this effect, but the first definite assurance of the intentions of the member from Arkansas is conveyed in an exclusive interview given to Printers' Ink.

Said Representative Oldfield: "I expect to reintroduce my bill early in the special session, and it is my present intention to make few if any changes in the measure. I realize that there is little chance that I will be able to get action on this bill at the special session, but I will reintroduce it in the hope that circumstances may arise which will gain it consideration."

Asked whether he had undergone any change of heart regarding the subject of price-maintenance, and particularly as to how his opinions had been influenced by recent cases in the courts, Mr. Oldfield replied: "I must admit that I have suffered from no dearth of communications on this subject, but I have found no occasion to change the opinions I held when I drew the revised bill which was introduced in the last Congress and reported favorably by the patent committee, but which of course died with the final adjournment of that Congress on March 4.

"As for the cases in court involving this subject, I would say that the decision just announced by the United States Supreme Court in the case of the Fair vs. the Kohler Company is, as I construe it, a pronouncement in favor of the manufacturer's right to fix the resale price under his patent. The Fair took in that case just the position that I have always held—that price-cutting is a matter of the violation of contract and not one of infringement of patent. I contend that there can be only one form of patent infringement, namely, the counterfeiting of the patented article or process, and I don't believe that any jury of twelve men can ever be gotten together who will agree that to sell for \$1.25 an article placarded with a price of \$1.50 is an infringement of patent.

"None of the decisions thus far handed down by the Supreme Court would seem to cover this whole broad question definitely and absolutely, but in so far as the court held this recent case to be one under the patent laws, and not a question of structural relations, there would seem to be implied support of the theory of the right of the manufacturer to dictate resale prices. I hope that the position of the court will be made more clear by the decision in the Sanatogen case which is now before it. If the court denies the right of a manufacturer to fix the resale price under his patent there will, of course, be no need for the legislation I am advocating. I hope though that we may have the issue clearly drawn."

An unexpected news development, favorable in a way to the manufacturers who oppose legislation against price-maintenance, is found in the present proposal on the part of the Democratic leaders not to appoint at the special session any House committees except those actually required to give consideration to the business in hand, adds the special correspondent of Printers' Ink.

It is the theory of the leaders that if the full complement of committees is organized many members will absent themselves from the floor of the House in order to engage in committee work that is not necessary for the time being. Furthermore, if the committees are organized they can be counted on to bring in some bills, thereby complicating the situation.

If the caucus to be held early in the special session decides against the appointment of any but the needed committees the committee on patents will be one of those cut out and, with no committee to report a bill, it goes without saying that manufacturers will be in little danger from legislation of this sort at the extra session.

The same turn of affairs, if it comes, will confer a further boom on price-maintenance interests. One of the objects of the prospective reintroduction of the Oldfield bill at the special session has been to secure for it a good place on the calendar so as to insure its consideration in the House early in the regular session of Congress, which will convene next December, if it failed to get attention at the special session. But, of course, a measure cannot get a place on the calendar until it has been reported favorably by the proper committee, and if there be no patent committee to thus report it all action would be effectually blocked until an indefinite date next winter at the earliest.

Yet another development which gives a new aspect to this question of Congressional consideration of price-maintenance is that the patent committee when it is reorganized will have a very different complexion from the former committee which in a majority report gave its endorsement to the Oldfield bill. Representative Oldfield will undoubtedly continue as chairman of the committee, but no less than eight of the fourteen members of the committee—a clear majority—will be new appointees.

Four of the old members of the committee were defeated for re-election, whereas at least four others and possibly more will retire from the patent body as a result of that new policy, prescribed by a resolution passed by the House which

provides that no representative shall serve on more than one of the important committees. This rule will undoubtedly remove from the committee two or three of the men who were staunchest in their support of Chairman Oldfield in his effort to knock out price-maintenance and who were most active in cross-examining the manufacturers who appeared before the committee at the public hearings. But it will also remove, probably, Mr. Bulkley, the member from Cleveland who stood out against the Oldfield bill.

A new line up in the committee will open up all kinds of possibilities, and not the least important prospect is that it may make it necessary for manufacturers to thresh out the whole subject again at public hearings. When Chairman Oldfield was questioned on this point he said: "I expect that when the time does come for the committee to take up the reintroduced bill most of the members will want public hearings. I do not anticipate that the newcomers on the committee will be willing to form opinions from reading the printed testimony given at the former hearings. For one thing, it would be difficult to get them to go over that record carefully, for there are, you know, more than one thousand pages of it."

O'NEILL-ADAMS CO. EXPANSION.

More Demonstration Rooms for Victors and Victrolas Constructed—Business Is Active.

The business closed in the new Victrola department of the O'Neill-Adams Co., Twenty-first street and Sixth avenue, New York, which has only been open since last November, has increased so rapidly that an enlargement of the department's headquarters was found absolutely imperative the first of the current year. Although the department has had about a half dozen demonstration rooms since it first opened for business, this space was found totally inadequate, as the response to the continual advertising in the New York daily newspapers was far in excess of the available demonstration rooms at the command of Manager Hotelling and his staff.

In view of this crowded space and need for more room four new demonstration rooms were constructed the early part of this month, and are now completed and ready for use. These rooms are furnished attractively and comfortably, and the first six rooms have also been refurnished and decorated to harmonize with the new rooms. A special room, which has been set aside for the display of all the various styles of Victrolas that are carried in stock, is exceptionally large and roomy. A complete stock of records is kept in stock at all times, and with the new facilities the O'Neill-Adams Victrola department expects to break all records this year.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Special to The Talking Machine World.)

Washington, D. C., April 9, 1913.

DIAPHRAGM FOR TALKING MACHINES—Peter Weber, Orange, N. J., assignor by mesne assignments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,056,475.

This invention relates to an improved diaphragm for phonographs or other talking machines, and the object is to provide a very simple, cheap and effective diaphragm for the purpose, by means of which superior reproduction can be obtained.

It is now recognized that to secure the best results with a symmetrical diaphragm, the latter should vibrate as nearly as a whole as possible, and to this end the diaphragm should be comparatively rigid or stiff for its greater part, its rigidity preferably increasing toward the center. To secure this object it has been heretofore proposed to construct a diaphragm of a series of discs cemented together, but such a construction is expensive, the discs are likely to work loose, and the diaphragm is unduly heavy, so that it does not respond accurately to the record. It has been also proposed to construct a diaphragm in which substantially the result indicated will be secured by forming the same with a series of concentric shallow depressions, which are arranged nearer together toward the center, but such an arrangement is undesirable, for the reason that the diaphragm is provided with relatively extensive flat

portions in which independent vibration may take place. On the other hand, if the shallow depressions are arranged so as to occupy the entire surface of the diaphragm, its rigidity would be substantially the same throughout, and hence, the best results would not be obtained.

With the improved diaphragm a rigidity of practically its entire surface is secured, except at the outer edge, where it is clamped in place and at the center where connection is made with stylus, and at the same time is obtaining gradually increased rigidity toward the center without increasing the weight, so that the diaphragm is extremely sensitive and responsive to the record or sound vibrations.

To this end the invention consists of making the diaphragm of a disc of extremely thin metal, preferably hard rolled copper and in forming the main portion thereof with a series of concentric depressions or grooves immediately adjacent to one another and of gradually increasing depth toward the center, whereby the stiffness or rigidity of the diaphragm will be proportionately increased. Outside of the concentric depressions a sufficient surface is provided for accommodating vibratory movement.

Although a diaphragm characterized as described produces better results than previous forms, it is found desirable that the diaphragm be additionally stiffened as by indentations extending transversely with respect to the corrugations or grooves, or radially with respect to the diaphragm, and the invention therefore comprises diaphragms embodying this feature,

Figure 1 is a plan view on an enlarged scale of the preferred form of diaphragm; Fig. 2 is a section on line 2-2 of Fig. 1, the thickness of the diaphragm being exaggerated; Figs. 3 and 4 are views similar to 1 and 2 respectively of a modified form of diaphragm, and Figs. 5 and 6 are similar views of a second modification.

MEANS FOR REPRODUCING SOUND.—Thomas A. Edison, Llewellyn Park, West Orange, N. J., assignor to Thomas A. Edison, Inc., West Orange, N. J. Patent No. 1,056,517.

This invention relates to a method and means for reproducing sound from a record of the same upon a traveling tablet, and the object of the invention is to provide a novel and efficient method for propelling the means which is vibrated in accordance with the sound undulations of the record along the same, and a suitable apparatus for carrying out the said method.

This invention is particularly adapted to the feeding of a soundbox carrying a diaphragm or other vibratory means and the reproducing stylus for vibrating the latter across the spiral grooves of a disc sound record, although it may be adapted to correspondingly feed the same parts transversely of the record grooves formed on the surface of a revolving cylinder. Also, this invention is particularly applicable for use in connection with the reproduction from a sound record, the sound undulations of which are of the vertical or "hill and valley" type, although it also may be used in connection with a record having lateral undulations. For purposes of illustration, there is shown in the accompanying drawings an apparatus in which reproduction is made from vertical undulations formed on the surface of a rotating disc.

It is old in the art to vibrate a stylus by and in accordance with the lateral undulations of the record groove of a disc record and to propel the stylus along the record by and in accordance with the record groove itself. It is also old to propel a stylus across the face of a disc record having vertical sound undulations recorded thereon by means of a mechanical feed. It has not been feasible, however, to propel a stylus along the spiral track of a record having vertical undulations formed upon a disc or other record surface by the sole means of the engagement of the stylus itself with the record groove, because of the fact that the walls of a record groove having vertical undulations are so sloping that it is extremely difficult to keep the stylus with the groove while feeding the stylus by engagement with the walls of the groove. Because of the slope of the record walls, the stylus is very apt to jump across from one groove to the next if a mechanical

feed is not provided. This can be remedied to some extent by greatly increasing the weight upon the stylus, but this results in undue wear upon the record and upon the stylus. These difficulties are overcome by providing a plurality of bearing surfaces adapted to travel within the grooves of a sound record, which bearing surfaces are connected to propel the sound box and vibratory means carried thereby from the record groove, these bearing surfaces being provided only for the purpose of feeding the stylus along the groove, and not being connected to vibrate the diaphragm. By the provision of a plurality of these feeding devices, the difficulty experienced on account of the sloping walls of the groove when a single bearing surface following the groove is relied upon to feed the device, is overcome. The inventor uses for these feeding devices a plurality of sapphires

or other suitable bearing surfaces carried by the ends of the teeth of a comb supported in line with the stylus beneath the soundbox, this comb being connected to the soundbox to propel the same, and being adapted to contact the record yieldingly. The inventor also mounts these feeding surfaces to the rear of the stylus in the line of progression of the soundbox across the record grooves, providing a number of feeding grooves having no sound undulations impressed thereon in advance of the first record groove, so that the reproducing stylus may be placed in the first record groove when the reproduction is started.

Referring to the accompanying drawings, illustrating one embodiment of the improved apparatus whereby the above method may be carried out, figure 1 represents a partial plan view of the same; and Fig. 2 a corresponding side elevation partly in section.

REPRODUCER.—Thomas A. Edison, West Orange, N. J., assignor to Thomas A. Edison, Inc., West Orange, N. J. Patent No. 1,055,621.

This invention relates to reproducers for phonographs and other sound reproducing apparatus, and the principal object is to provide a device of this character whereby an improved quality of reproduction can be obtained.

It has heretofore been customary to connect the tail of the stylus lever to the diaphragm by means of a rigid metal link. This structure is objectionable in that the diaphragm cannot move quickly enough to permit the stylus to remain in engagement with the record groove so that the stylus jumps over the forward walls of the deep indentations and after striking the bottom of the indentations rebounds from the record and causes the production of sharp unpleasant sounds. Slight defects in the record furthermore cause the transmission to the diaphragm of objectionable weak sounds, and the suddenness or abruptness of the sound waves causes the emission of sharp metallic sounds. Furthermore, it is impossible to form a metallic connecting link perfectly straight; and as the weight used with reproducers is never sufficient to straighten out the flat bow commonly found in such a link, the vibration of the stylus lever produces therein local vibrations whereby the loudness and accuracy of the reproduction are greatly impaired.

It has been found that the above defects may be remedied by employing an elastic resilient connection, such as a cotton string to connect the stylus to the diaphragm. Such a connection is of very small weight, and therefore responds readily to the elastic power stored therein to hold the stylus continuously in engagement with the record groove. It also through its short elasticity absorbs the objectionable weak sounds mentioned above and diminishes the suddenness and abrupt-

ness of the sound waves so that a very pleasing mellow tone is obtained. By choosing a connection of proper elasticity and diameter, and properly adjusting the length thereof, the quality of the reproduction may obviously be varied at will. As the weight of small

mass is sufficient to hold the improved connection taut, the objections due to the curved form of metal links are eliminated.

This invention furthermore comprises an improved diaphragm of such lightness and flexibility that the weight of the reproducer and consequent wear on the record can be materially decreased.

Other features of this invention are an improved connection between the diaphragm and stylus lever whereby the distortion of the diaphragm during the reproduction of the record is prevented, and an improved mounting for the stylus lever whereby the same is caused to more readily and faithfully track the record groove.

Figure 1 is a side elevation partly in section

showing a reproducer embodying the invention; Fig. 2 is a bottom plan view thereof; Fig. 3 is a front elevation showing a detail of construction; Fig. 4 is an enlarged central vertical section showing another detail of construction; Fig. 5 is a view similar to that shown in Fig. 4 of a modification; and Fig. 6 is a side elevation of another modification.

ART OF AND APPARATUS FOR RECORDING AND REPRODUCING SOUND. Victor H. Emerson, New York, and George A. Manwaring, Bayonne, N. J., assignors to American Graphophone Co., Bridgeport, Conn. Patent No. 1,055,525.

This invention relates to talking machines and is based upon the use of the selenium cell. It has long been known that selenium possesses the peculiar property of becoming more electro-conductive in the presence of light—or stated reversely: its electrical resistance diminishes as the light increases. This property has been utilized by various forms of apparatus known as "selenium cells" which are inserted in an electrical circuit and provided with means for regulating the admission of light upon the cell. Such cells are very sensitive in responding to slight variation in the amount of light.

The utilization of the present invention comprises a talking machine employing the principle of the telephone and that of the selenium cell, namely: there is a diaphragm actuated by an electro-magnet; the electro-magnet in turn is actuated by an electric current; and this current is modulated in intensity by means of a varying resistance imparted to a selenium cell included in the circuit. This varying resistance is imparted to the selenium cell by means of a special sound-record—the latter being a sort of "stencil" which admits more or less light to the selenium cell, the amount

of light admitted corresponding to the sound waves. Consequently the electric undulations in the circuit, and the resultant audible vibrations of the diaphragm, correspond to the sound waves.

The present invention consists in the manner of producing the special sound record or "stencil" record for such service. The inventors have also originated the stencil record itself, and the apparatus for utilizing it, as well as the method of reproducing sound.

In the annexed drawings, Figure 1 represents, conventionally, but greatly enlarged, a portion of a stencil record such as may be used for the purpose indicated; Fig. 2 is a vertical section of a reproducing apparatus, embodying this invention; and Fig. 3 is a transverse section of a detail of Fig. 2.

ATTACHMENT FOR COUPLING AUTOMATIC PIANOS, OR ORGANS AND PHONOGRAPHS TOGETHER.—Jose Sampere, New York; Marie Sampere, administratrix of said Jose Sampere, deceased, assignor by

mesne assignments to the Aeolian Co., New York. Patent No. 1,057,458.

This invention relates to attachments for coupling together automatic pianos, organs or other pneumatically operated musical instruments and phonographs so as to secure a simultaneous and harmonious operation thereof for the purposes,

SOLID WOOD (NOT VENEERED)

Mr. Dealer!

MUSIC MASTER
Solid Wood Horn

for instance of producing a vocal selection on the phonograph with an accompaniment on the piano or organ, etc., and has for its object to provide a simple and effective attachment of this character, which will automatically regulate the operation of

and a talking machine. Fig. 2 is a sectional plan view of a portion thereof on the line 2—2 of Fig. 1 and Fig. 3 is an elevation of the sound record shown thereon in section.

TO OCCUPY NEW QUARTERS.

The Dictaphone department of the Columbia Graphophone Co., at present located in the Chambers street headquarters, 83 Chambers street, New York, will remove to the second floor of the Smith-Gray building, 261 Broadway, New York, about May 1. A large portion of the floor has been leased for the use of the Dictaphone department, and the increasing business of this department can be adequately taken care of in its new quarters. The removal of the Dictaphone division from the Chambers street store will enable Manager Bolton, of the talking machine end of the business, to considerably enlarge his available room, and construct additional demonstration and reception rooms.

There is still room at the top; but it takes a well-balanced man to stay there,

the two instruments so as to secure a perfect cooperation between the two.

Figures 1 and 1a represent a diagrammatic view partly in elevation and partly in plan showing the new attachment connected with a piano

SEVENTH EDISON SUPPLEMENT.

The advance list for the seventh supplement of Amberol records issued by Thos. A. Edison, Inc., will appear in a day or two after this issue of The World comes out, too late, we regret to say, to include in the advance list of records which appears on this page.

RETIREMENT OF MISS JESSIE BROWN

Private Secretary to George W. Lyle, General Manager of the Columbia Graphophone Co., Retires After Fourteen Years of Service.

After fourteen years' continuous service with the Columbia Graphophone Co., Miss Jessie Brown, private secretary to General Manager George W. Lyle, retired from active service March 22 in order to take a well-deserved rest at her home, in Mt. Vernon, N. Y.

Miss Jessie Brown is one of the few Columbia office employes who can relate in detail the phenomenal advances of the Columbia Graphophone Co. She was secretary for five years to the late M. E. Lyle, and nine years ago became private secretary to General Manager George W. Lyle, the position she retained until her retirement.

During these fourteen years Miss Brown witnessed the moving of the company's executive offices four times, and if she had remained a few weeks longer would have been present at its fifth moving into new quarters in the Woolworth building.

Miss Jessie Brown, in her fourteen years of service, has gained the admiration and respect of all the officials and office staff of the Columbia Co. Possessed of unusual business ability and always a conscientious and efficient worker, Miss Brown has been considered invaluable by the executive officers. As a personal token of their esteem and affection, Mr. and Mrs. George W. Lyle presented Miss Brown with a handsome gift, and the Columbia Co. did likewise. Miss Brown left the employ of the Columbia Co. with hearty wishes for her happiness from officers and employes.

Miss Jessie Brown.

Leading Jobbers of Talking Machines in America

You should get this sample package of Puritone Needles—sent free

Puritone Needles should pay you a good profit. It costs nothing to sell them because you have your organization.

To help you we will print special envelopes with your name and business; every envelope gives you profits and free advertising.

You will be advertised, too, by the satisfaction-qualities of the needles; owners of machines will regard yours as the best needle store; this will build your business.

Get this sample package, telling us who's your jobber, and find out the goodness of Puritone Needles, built of experience, material and brains.

SELLING TALKING MACHINE RECORDS AN ART.

Requires a Great Deal of Tact and Skill—Too Few Men Know the Extent of the Immense Library of Records at Their Command—This Lack of Knowledge a Serious Detriment to the Salesman Who Desires to Succeed—Suggestions Appreciated.

"Constant association for many years with the sales force of many talking machine stores and departments and a close study of the forces and their various methods of handling customers have proven this fact beyond dispute—less than one sales person out of seventy-five knows even a small part of the immense library of records at their command!" said a manager of a talking machine establishment the other day. He added further:

"A recent canvass of fifteen different sales people and managers brought out the fact that practically all of them used the same list of selections, numbering from 250 to 300 records out of over 4,000! And these sales people and managers are considered exceptionally good.

"What is the result of this lack of knowledge of the catalog? In every case it is the same. Customers prefer to have one particular sales person wait on them in selecting records at various times. To the average customer titles mean very little, except those of a very small part of the catalog, and invariably the suggestions of the sales person as to good numbers is a great force in the final decision to purchase

"After the record buyer has visited the department a sufficient number of times to have exhausted the two or three hundred titles the next question put to the salesman is, 'I want something good, but I don't know what.' The salesman usually is absolutely at sea. He names about 40 or 50

different things from his standard list, and gets the same answer, 'I have that' or 'I have heard that, but don't care for it.'

"Then the sales person aimlessly picks out several selections from the great mass of titles catalogued, but fails to interest the customer in any of them. To the average sales person no record seems capable of stimulating interest in the customer's mind unless it is a big selling or well-known popular number.

"At last, discouraged and disappointed, the customer decides to wait for some new records to be issued. He feels that he has exhausted the list of good ones in the catalog!

"Selling records is an art. It requires a great deal of tact and skill. It requires, first, a thorough knowledge of the immense libraries of records at the command of the sales people. Second, the ability to create an interest in a record and by a careful and proper demonstration a desire to own it.

"Nearly always the 'up-to-the-minute' salesman has some new suggestion—such as getting two tones from the half-tone needle by setting it close to the bottom of the needle socket or only just far enough to be held firmly by the screw. Few owners know this simple point. These little items carefully interspersed with record demonstration keep up an interest. They make the customer feel that you have an interest in him and know your business."

RECORDS BY CELEBRATED CANTOR.

Issued by Columbia Graphophone Co. Ahead of Date to Supply Demand.

Columbia dealers in all parts of the country have been much pleased with the announcement made a short while since that the celebrated Hebrew

A. Karniol is one of the best-known cantors in the world, and is possessed of a voice that particularly adapts itself to recording purposes. His reputation is international, and his new records are excellent reproductions of his wonderful art.

Cantor A. Karniol.

cantor, A. Karniol, had signed a contract to sing exclusively for the Columbia Graphophone Co. The foreign record department has been receiving many letters relative to the date of publication of these records, and in order to accommodate its dealers the company was obliged to issue the first instalment of these Hebrew records before the scheduled date.

A preliminary supplement devoted to these records features six well-known Hebrew songs sung by the prominent cantor, accompanied by a trained choir. These selections were chosen by the Columbia record department because of their great popularity with the Hebrew people, and the unlimited opportunities they offer Columbia dealers to close many sales.

Henry C. Brown, advertising manager of the Victor Talking Machine Co., was the chief speaker before the members of the Poor Richard Club, the prominent organization of advertising men in Philadelphia, following a luncheon given at the Clubhouse recently. Mr. Brown was introduced as the man who has one of the largest advertising appropriations in the United States to spend, and he opened his address by setting forth his definition of an advertising man and declared that he did not believe the manager foolish who spent several hundred thousand dollars with one publication annually. He declared the phenomenal growth of the Victor business was the result of the confidence in its products which its advertising engendered.

"That is the big thing," said Mr. Brown. "We made the public believe in the name of Victor. We never worked a confidence game. In all the time we have been advertising we have never told what is in our machine. It is not what it is made of that interests the public, it is what it is good for.

"Confidence is the thing. First in the goods, then in the men whom a manufacturer has around him, and then in the people. I cannot see that advertising is a mystery. It is the use of common sense. Advertising is simply selling goods to people on paper the same as they would be sold from the counter. The easier the language is the better, and the illustrations should be applicable to the text."

At this juncture Mr. Brown digressed for a moment to make an appeal for the support of the Washington administration. "We must all recognize that we are under a new administration," he

TALKING MACHINE EXPORTS.

The Figures for March Presented—Reports Show a Decrease for the Month.

(Special to The Talking Machine World.)

Washington, D. C., May 10, 1913.

In the summary of exports and imports of the commerce of the United States for the month of March (the latest period for which it has been compiled), which has just been issued by the Bureau of Statistics of the Department of Commerce and Labor, the following interesting figures relating to talking machines and supplies are set forth:

The total exports of talking machines, records and supplies for March, 1913, amounted to \$236,639, as compared with \$176,369 for the same month of the previous year. The nine months' exportation of talking machines, records and supplies amounted to \$2,141,198.

OPENS MUSIC STORE IN FLORIDA.

Frank Idner, formerly in partnership with his father in the firm of Idner & Son, West Palm Beach, Fla., has embarked in the piano and music business in that city on his own account. Mr. Idner has secured quarters in the Palms building, 105 North Narcissus street, and in addition to other lines, is handling the Victor and Edison talking machines and records and sheet music.

GRAVES CO. OPENS IN SPOKANE.

The Graves Music Co., Portland, Ore., has opened a Spokane, Wash., branch at the corner of Lincoln street and Riverside avenue. The place is being handsomely fitted up for a full line of pianos and talking machines, which the Graves Co. formerly handled exclusively.

The Diamond Phonograph Co., Wilmington, Del., has been incorporated with capital stock of \$50,000. The incorporators are: F. D. Buck, G. W. Dillman and B. M. Grawl, all of Wilmington.

IMPORTANCE OF AN ADVERTISING DEPARTMENT.

No Store Too Small to Have One—The Advertising Man Is a Creator of New Business and Often Knows More About Actual Selling Than a Sales Manager—So Says Henry C. Brown, the Victor Co.'s Publicity Manager, and He Ought to Know.

said, "and we owe it to ourselves and to the community to back it up with our confidence. We may not be in sympathy with it, but let us as business men do the best we can even if we be Republicans and protectionists. Let us try to avoid the closing of the factories which is being talked of. We owe it to ourselves and the community to make the best of conditions.

"The advertising man has other large responsibilities. He is an important factor in a large institution. The advertising man will dig up new avenues of business. You should preach the importance of the advertising man. No store is too small to have one. Even if the only employe is a clerk and the money to be spent on advertising is but five dollars a month, there should be an advertising man. He will find new business. The advertising man knows more about actual selling than a sales manager.

"The advertising men have a big work before them. The influence of the newspapers and the magazines is growing. And there is a decided tendency to advertise in the daily papers. The daily papers are coming forward swiftly. They are producing results and they are forcing the magazines. They can help you locally.

"We have been in the position heretofore of loading a twelve-inch cannon with dollar bills for advertising and shooting it out, hoping that some of the bills hit something. The day is coming when advertising will be aimed at a definite thing, when every dollar will count, and we will get everything we go after."

PUSHING EDISON BUSINESS.

Mark Silverstone Increases Selling Force—Two Well-Known Talking Machine Men Covering Southeastern Missouri, Parts of Arkansas and Kentucky—Demonstration Hall on the Second Floor of Building.

(Special to The Talking Machine World.)

St. Louis, Mo., May 10, 1913.

Mark Silverstone, president of the Silverstone Music Co., says the Edison business is about to the limit of present facilities. He has added O. A. Reynolds and William Byrd to his jobbing sales force. Mr. Reynolds, who recently sold his talking machine store in Springfield, Ill., to the Barnard Music Co. after a successful career of twelve years, will cover the Illinois territory handled from this store and parts of Missouri. Mr. Byrd, who was with the Columbia Co. here for a number of years and later went to Des Moines, will cover Southeastern Missouri, parts of Arkansas and Kentucky. He has traveled over this territory and predicts great business there for the Edison line. Mr. Silverstone says the country business is still well pleased with the cylinder machines and the blue records, and little attempt will be made to introduce the disc machines until an ample supply of lower-priced instruments are received. Mr. Silverstone has added Miss Katherine Fultz, recently of the Scruggs-Vandervoort talking machine department, to his retail sales force.

Mark Silverstone, president of the Silverstone Music Co., reports excellent trade on the Edison disc machines, with the \$250 style the favorite in the selling. "The feature of the trade," he said, "if there is a feature to the way things are going, is the way the buyers of the machines are taking hold of the records we have. Usually they look through the list and say, 'Send them all.' I consider this one of the greatest compliments to Mr. Edison's selection of records. After they hear a few, the prospective users are so thoroughly satisfied with the quality of those offered that they trust to his judgment on them all. And they are pleased when they get them home, too."

The Silverstone Music Co. has fitted a demonstration hall on the second floor of the building in a part of the space used for the piano warehouses. "When a business man comes in and says he is in a hurry, I demonstrate the machine in the informal demonstration hall on the first floor," says Mr. Silverstone, "but if the inquirer has the time, I bring him up here where it is quiet. Aside from this display floor for my pianos, I have the two demonstration rooms set apart for players, and this space is needed only to show styles, and this does not interfere." The recital hall, for such it will be when completed, will have improved opera chairs, rugs, a well-placed diaz and one of

the finest of the new Edison machines on display under a battery of lights.

Several of the new \$60 models have been received at the store, and one is on display, but so far no effort has been made to sell this style, for two reasons: Because there has seemed to be no danger of losing a sale on the higher-priced models, and because of the very slender stock received.

"Fortunately we were well prepared for the flood interruption of traffic," said Mr. Silverstone, "and this feature has caused us very little embarrassment. The freight embargo has been lifted in time to save us. All that was necessary for us to do was to cut down the advertising and do the business we gained in the regular course of affairs. We are well pleased with results and have not felt justified, by conditions of stock and other conditions, to undertake a very aggressive campaign."

A FIELD FOR SMALL TALKERS.

Pleasure Craft Offer Excellent Market for Talking Machines During Summer.

Motor boating is fast becoming one of the leading summer sports, and in other ways the advantages offered by lake and river in the matter of recreation do not lack for those to appreciate them and the summer, now soon here, is the season. The dealer who does not place one or more talking machines on the pleasure craft operating on bodies of water in his vicinity, or at least makes an energetic attempt to do some business in that line, is in the position of the man complaining because opportunity insisted on knocking on the door and disturbing his rest.

Visit any of the lakes or small streams where boating and canoeing is a pastime during the warm months, and keep your ears open. It's ten chances to one that you will hear talking machine music and plenty of it issuing from the boats, especially if it happens to be evening. A moonlight night and a talking machine in the canoe or launch will do much to make the banker's son (?) and the wealthy heiress (?) forget that in a few days they must go back to the ribbon counter and the typewriter, respectively. The luxurious cruisers, the comfortable houseboats and the smaller craft all present a field for the talking machine, especially the newer styles of small-size, hornless models that take up little more space than the handbag of the week-end guest, and have no horn to knock or stumble over. The wild waves have some interesting conversation for the talking machine dealer.

The New York Herald recently interviewed a number of people on the tariff situation, and among those who expressed their views was Ernest John, of the Victor Talking Machine Co.

TALKING MACHINES IN DRUG STORES.

Waldeck Bros., the Prominent St. Louis Druggists, Take on the Columbia Line—An Excellent Trade Opened in This Field—Mackey Furniture Co. Also Secures the Columbia Agency—Makes Artistic Displays.

(Special to The Talking Machine World.)

St. Louis, Mo., May 10, 1913.

An innovation in local talking machine business was announced by J. J. Bennett, jobbing salesman for the Columbia Co., in a stock order from Waldeck Bros., of 3625 North Broadway. While other cities have many talking machine agencies in drug stores, this is believed to be the first in St. Louis, and Mr. Bennett believes it will be an opening wedge to some excellent business. "For neighborhood trade we must have stores that are open nights and Sundays," he said, "and the drug stores meet that requirement better than any other class. In other cities talking machines have made an excellent side line for drug stores, and I am sure this store on the North Side will be a go, and that others will fall in line. There is no reason why the druggist should not handle this residence district trade and profit by it." A downtown store to take on Columbias since the report last month, which included the Sommers Furniture Co., is the Mackey Furniture Co., a Piano Row concern. Both of these stores are making liberal window displays to introduce the goods to their customers.

PITTSBURGH TRADE GOOD.

J. C. Roush Reports a Satisfactory Condition of Sales and Collections.

(Special to The Talking Machine World.)

Pittsburgh, Pa., May 10, 1913.

The talking machine trade in this city continues very good. J. C. Roush, of the Standard Talking Machine Co., has the following to say to The World: "Our business has been extremely good. In fact, we have been selling all the goods that we could get from the Victor Co. and have no complaint to make whatsoever.

"Our business is away ahead of last year, and we look forward to having one of the most prosperous years ever known for the Victor product. Collections are good and altogether we feel joyous."

Such sentiments are certainly indicative of a healthy state of business and shows that Mr. Roush is in a very optimistic frame of mind, regarding the trade outlook.

The talking machine dealers of Denver handling the Edison and Columbia lines advertised very heavily during the recent visit to that city of the Chicago Grand Opera Company. The records of the various prominent artists were featured in a manner to interest the public.

INCREASED WHOLESALE BUSINESS

During the year 1912 our wholesale business showed an increase over that of 1911 of 68%. Of this increase 28% was on what we are pleased to call "our dealers'" accounts, and the balance of 40% was from new accounts, about evenly divided between newly established dealers, and dealers who formerly purchased from another distributor.

Increased demand accounts for 48% of this increase. Efficiency and the Eastern Service is responsible for 20%.

If dealers realized fully the manifold advantages of Eastern Service the increase this year would double from this source.

A good thing is worth trying—take our word for it that Eastern Service is exceptional—and try it.

 Without albums, **\$75**

Victor-Victrola XI, \$100
 Mahogany or oak

The greatness of the Victor-Victrola as a commercial and musical power is more evident every day.

Its influence is reflected in the progressive and well-appointed salesrooms of Victor dealers the world over.

They have shared in the profits and prestige which have followed its universal recognition as the world's greatest musical instrument.

They have seen the refining influence of the Victor-Victrola uplift the entire music trade to a position of dignity in the community.

And with the continuous triumphs of this wonderful musical instrument has come to dealers a bigger conception of its future possibilities.

The Victor business of thousands of Victor dealers is gaining increased headway every day, and great has been the sale of Victors and Victor Records in the past, it does not compare with the new and greater opportunities now presented by the Victor-Victrola line.

GETTING AFTER SUMMER TRADE ON PACIFIC COAST.

Talking Machine Dealers Featuring Cheaper Outfits for Vacation Time—New Store to Be Opened in San Francisco by Clark Wise & Co.—Grafonola Grand Attracts Much Attention—Spokane Dealer in New Quarters—Good Demand for Edison Line.

(Special to The Talking Machine World.)

San Francisco, Cal., May 9, 1913.

The local talking machine dealers, as well as dealers in other lines, are beginning to cater to the summer vacation trade, with the result that more emphasis is being placed on the cheaper grades of machines than for some time past. During the winter and early spring months the demand ran largely to the higher-priced machines. Now the argument is to leave your high-priced instrument at home and get a smaller and cheaper one to take to the country for the summer. A good many machines were sold last year to that class of trade, and taking into consideration the steadily increasing popularity of the talking machine, it seems safe to predict that many more will be sold this year than last.

Wholesale business, according to the reports from the different houses, continues to run considerably ahead of the corresponding period of last year. Much new territory has been opened up within the past year, and the field of operation for the talking machine man seemed unlimited. One enthusiastic dealer said not long ago that owing to the great progress his company had made in perfecting its machines and the variety of styles offered, he could aspire to place one in any home in the city. He further stated that the talking machine is the one musical instrument which is available for rich and poor alike.

New Quarters for Clark Wise & Co.

Announcement was made here the past month that San Francisco is to have another fine downtown talking machine department, and preparations are well under way for its opening about the middle of May. It is to be located at 51-53 Geary street, in the new Bankers' Investment building,

which runs through to Market street, and will be operated by Clark Wise & Co., who have been connected with the local trade for many years. They have been in business in several different locations, but for the past two years have occupied comparatively small quarters on the second floor of the building at 334 Sutter street. Now they are going to open a first-class music store, the principal feature of which will be the talking machine department. The entire ground floor of their new establishment is being fitted up for this part of the business, the plans for which call for one of the finest departments in the city. Aside from the Wiley B. Allen Co., which has part of its talking machine department on the ground floor, it will be the only first-floor talking department in the downtown section. Mr. Wise says he will carry a full line of Columbia and Victor machines and records, and possibly the Edison.

Grand Grafonola Interests Trade.

The principal feature of the Columbia trade this month was the arrival of the Grand Grafonola. W. S. Gray, local manager for the Columbia Graphophone Co., says most every dealer around the bay has been in to see the \$500 machine, and that the expressions of praise have been most lavish. Others besides dealers have called to see the new machine. Among the most enthusiastic visitors was the music critic of the Examiner, who spent nearly two hours trying various records, studying the quality of tone, etc. F. R. Anglemeier, wholesale manager, is receiving inquiries from all over his territory in regards to the new product. Mr. Moore, traveling representative, is at headquarters for a short stay after a very successful trip down through the San Joaquin Valley.

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

International Correspondence Schools
Box 918, Scranton, Pa.

The Emporium department is also showing a Grand Grafonola, and J. J. Morgan, manager of the department, says it is attracting much attention. The plans for the permanent arrangement of this department have been delayed, but Mr. Morgan has had the promise that the work of enlargement will be started in the near future.

More Room for Pacific Phonograph Co.

The Pacific Phonograph Co., Edison jobbers, reports a fine month's business and has again made arrangements for more room. It has taken the third floor of the building in addition to the fourth and fifth, which it already occupied, the new floor to be used as a stock room for disc machines. A. R. Pommer, manager of the Pacific Phonograph Co., is elated over the orders coming in from the road. E. L. Sues, who is covering Washington and Oregon, sent word that he has signed up Meier & Frank, one of the large department stores in Portland, Ore., for an initial order of disc machines. J. E. McCracken, who covered the San Joaquin Valley the first part of the month, booked some nice orders and is now on his way to Reno, Nev.

New Quarters for Storms in Spokane.

Willis S. Storms is preparing to move to new quarters in Spokane, Wash. For the past two years he has been located with Kohler & Chase, but has decided to open an exclusive talking machine store. He has secured quarters at 818 Sprague avenue, and the place is being remodeled to suit the needs of the business. A new front of plate glass and marble is to be installed, and the place is to be fitted up with new fixtures. Four demonstration rooms are provided in the plans.

Activity with Sherman, Clay & Co.

A. G. McCarthy, of Sherman, Clay & Co., says wholesale business in Victor products has kept up splendidly the past month, and that retail business is fully normal for this time of the year. He is one of the boosters for the Portola Festival, to be held here in October, which has the endorsement of the trade in general.

Brieflets.

A. Roncovieri, superintendent of the public schools of San Francisco, has recommended the purchase of more talking machines.

Manager Baley, of Babson Bros., says that business continues to run a little ahead of last year. He is doing a fine business with the blue amberol records.

Eilers' Music Co. has enlarged the talking machine department at its Bellingham, Wash., store, and increased its facilities for handling a larger stock. The improvements include a new display room and a new record demonstration room.

J. W. Schenk, a dealer of Elmhurst, Cal., is a frequent visitor to the San Francisco trade.

MUSIC TO SPEED ATHLETES.

(Special to The Talking Machine World.)

Cambridge, Mass., May 10, 1913.

The effect of music in making athletes move faster is being tried at the big Harvard locker building on Soldiers' Field. A talking machine is in constant operation grinding out two-steps and other instrumental numbers to keep students at concert pitch.

Accommodations in the building are limited and it has been found difficult in the past to accommodate all who wished to crowd into it during the rush hours.

Under the spell of the music students are said to be much more speedy in going through the shower baths, putting on their street clothing and making way for other men.

VICTOR CO.'S "TONE" PUBLICITY.

The advance proofs of newspaper advertisements to be used in the daily newspapers of the Victor Talking Machine Co. during the month of May, which are unusually forceful and attractive, are devoted to Victrolas Nos. X and XVI. A somewhat different heading for the May 26 advertisement will, doubtless, attract considerable attention because of its unique appearance. This advertisement features the Victrola XVI and bears the headline "Tone, That's Where the Victor Victrola is Pre-eminent." The rest of the copy is in harmony with the strength of the heading.

The Columbia Grafonola has been formally adopted by the Board of Education for the New York Schools. This is the most important O. K. of the talking machine in the schools that has ever been given.

**Columbia Graphophone Company
Tribune Building, New York**

COLUMBIA GRAPHOPHONE CO. IN ITS NEW HOME.

"Columbia Graphophone Co., Woolworth Building, New York," is now the address of the executive and administration offices of the Columbia Co., the moving from the Tribune building having all been completed on the 26th of last month. Situated on the twentieth floor of the tallest office building in the world, the offices of the company now present an appearance that is completely in harmony with the energy that characterizes the company's employes.

The Columbia Co. had been located in the Tribune building for the past six years, but these quarters were outgrown a long time since, and more space was found absolutely imperative. In its new home the company has the space that it needed so badly, and, in addition, has plenty of room for expected expansion.

The work of moving was looked forward to with dread a few months ago, but when the day finally arrived it was soon apparent that there was

no cause for alarm, as there was very little to move, except the personal belongings of the employes. No furniture of any character was carried over from the old home in the Tribune building, as new mahogany office furniture had been purchased for the new home, and all was in readiness for the arrival of the employes. As a result of these detailed arrangements, the employes were all busy at their desks one day after they arrived in their new quarters, and the new offices were in "ship-shape" order by the first of this month.

In its new home the Columbia Graphophone Co. has an ideal arrangement and lay-out of offices that is conducive to the production of high-speed work by the members of the various staffs. A feature of the new quarters is the use of clear glass from one end of the offices to the other. From President Easton's handsome offices at the westerly end to the offices of the export department at the other, there is an unobstructed view of the officers and employes busy at their desks. This view is not only attractive, but affords a concrete example of modern efficiency in a successful business institution. Plenty of light and excellent facilities are among the other meritorious features of the new home of the Columbia Co.

"TALKER" USED TO SELL LAND.

California Land Development Co. Records Best Arguments of Head Salesmen and Delivers Them in the Form of Speeches to Gatherings of Prospective Investors—Best Salesmen Frequently Unable to Talk Convincingly.

(Special to The Talking Machine World.)

San Francisco, Cal., May 6, 1913.

The phonograph has been adopted by a California developing company in selling its property. The company has found comparatively few men who could get up and talk the property of the company in a convincing manner before a critical crowd of men and women who were hanging on every word and were keen with questions.

The best salesmen have proved failures when they got up to talk. In their offices or before small gatherings they had many convincing arguments to advance on the merits of their company's property.

To overcome this difficulty the company had the various head salesmen record their line arguments not only for the use of prospective buyers but for the education of budding young salesmen.

At large gatherings the phonograph was brought out and the recorded voice of the star salesmen flung at the people. There was no break in the talk nor any embarrassment, the trouble with most salesmen. Neither could critical persons ask questions of the machine. They listened to the well prepared speech, which did not overlook any good thing about the property.

The company is said to have increased their sales considerably since the innovation was introduced. It has also facilitated the work of instructing the new salesmen.

The man who takes life philosophically grows old gracefully, but seldom amounts to much.

Located on 20th Floor of World-Famous Woolworth Building, New York.

What would Edison's genius amount to without public appreciation? It would amount to no more than your business would without customers.

The inventions of Edison are great because the public has confidence in them. Your business has been successful for a similar reason — because you've sold legitimate goods at a legitimate profit.

The Blue Amberol Record is Edison's latest big contribution to the phonograph business and the public has shown its appreciation by buying it about as fast as it can be made.

Then why not turn the public's appreciation of Edison's genius right into your pocketbook by featuring the Blue Amberol?

The Blue Amberol

Its wonderful playing qualities, its long wear and sweetness of tone have swept enthusiasm throughout the country. Its rapid growth in popularity and volume of sales is having its effect upon every product of the Edison line.

Amberola V

a medium priced phonograph with concealed horn is the latest model to ride along on the wave of Edison business. Handsome in design, equipped with the diamond point reproducer and other Edison features its tones have that fullness and clearness that characterize the higher priced models : Amberola I and III.

The wise dealers are seizing this opportunity now. If you haven't done so write to your jobber without delay.

NEW YORK, MAY 15, 1913.

THE generosity and foresight of the Victor Talking Machine Co., manufacturers of talking machines in Camden, N. J., is manifested afresh and in a practical way, in its plans just announced, of looking after the interests of its army of employes, which now consists of more than fifty-four hundred people.

As announced elsewhere in this issue, the Victor Co. has organized a co-operative beneficial association in which all the employes are enrolled. Through the generous arrangement on the part of the company the employes in case of sickness or death will reap benefits greatly in excess of those they would receive were they themselves providing the entire support of the organization. The dues of members have been placed at twenty-five cents a month and the company will not only bear all maintenance expenses, but will pay into the association treasury each month an amount equal to the dues. The Victor Co. will also pay a death benefit of \$500 to the heirs of employes who have been in its service five years or more. It will also adopt a generous pension plan.

In view of the epidemic of strikes which have been brought about by the pernicious agitation of labor leaders bent on creating as much trouble as possible for employers, it is refreshing to find a body of workers who understand and appreciate the value and importance of co-operation between employer and employe, and who are fortunate in having the Victor Co. as employers.

Despite the radical utterances of professional labor agitators the interests of capital and labor are one. One without the other is powerless, and where both work harmoniously the best results accrue. The Victor Co. is to be congratulated on this generous move which means so much for the future of its employes.

IN these days when progressiveness and radicalism are dominant in governmental affairs it behooves talking machine men to be on the alert in opposition to the reintroduction of the Oldfield bill, or any other similar measure which threatens to undermine price maintenance.

The proposed patent revision bill which was engineered by Mr. Oldfield in the last session of Congress, and which was so strenuously and successfully opposed by talking machine interests and other prominent industries throughout the country, is the subject of a very illuminating analysis by Gilbert H. Montague, of the New York Bar, which appeared recently in the Harvard Law Review. It is a very able and exhaustive review of patent conditions and needs. Its closing sentences referring to the report of the Committee on Patents is worth quoting and studying:

"In its zeal to insure the non-enforcement of license restric-

tions, the committee proposes by the substitute Oldfield bill to enforce solely against patent owners a Draconian code of business practise which is not and never has been imposed upon any other class of property owners. Litigation under the Sherman Anti-Trust Act turns frequently, if not generally, upon close questions of law. By a salutary result of the existing law, property which is not in transit does not become forfeited, in the event that a combination in restraint of trade is found to exist. The substitute Oldfield bill, however, provides that under such circumstances all property in the form of patents involved in such litigation shall be forfeited, while all other forms of property shall remain unaffected. Under the provisions of the bill, the vendor of any patented article becomes a criminal, if he attempts to secure a year's business as a condition of selling to a retailer; if he attempts to hold the retailer to his agreement to buy his patented goods exclusively or to a certain extent; if he attempts to hold the retailer to his agreement to maintain a standard price on the patented goods; if he licenses the use of a delicate patented machine on condition that it be used only with specially prepared supplies or in continuity with specially adapted machinery necessary to insure perfect operation; if he avails himself of the quality of his patented inventions to induce licensees to use his machines, either exclusively or in part, for all their needs; if he agrees with a retailer in a town to sell his patented goods to no one else in the same town or to sell to other retailers only on less favorable terms, in consideration of which the retailer shall push the sale of the goods; or if he sells his patented goods in any particular territory at a less price than he sells elsewhere. Each of these transactions, which good morals and honorable business practise, to-day and from time immemorial, have always sanctioned, is made by the bill conclusive proof of the violation of the Sherman Anti-Trust Act. The fact that the transactions might reasonably be shown to have no tendency to restrain trade cannot save the unlucky patent owner, for the bill expressly provides that 'restraint shall be conclusively deemed to have been or to be unreasonable and to be in violation of the provisions of said act' (i. e., the Sherman Anti-Trust Act) as to any party who performs any of these transactions. The penalty which the patent owner may suffer for doing any of these things is the forfeiture of his patents, a fine of five thousand dollars and a year's imprisonment; and the payment of threefold damages and the costs of suit and attorneys' fees to anyone who comes in within three years thereafter and proves any damage.

"The substitute Oldfield bill forbids only patent owners to do these things, and expressly leaves the owners of every other form of property absolutely free to do any of them. Unlucky patent owners caught in the net may reflect that if they had only dealt in unpatented goods, instead of spending time and money developing new inventions, which their patents publish to the world, to the end that in seventeen years the world may use them without cost, they could have avoided all their misfortunes. Is this the way by which Congress seeks to 'promote the progress of science and useful arts?'

"Some amendments in the patent law are certainly needed. Few will disagree with the House Committee on Patents that some legislation, other than that proposed in the substitute Oldfield bill, is required, 'amendments, specifically in the patent law, and particularly some radical changes in the administration of the patent law, both in the courts and in the Patent Office.' The committee continues: 'As respects the courts: two vital changes are essential—the present method of trying patent cases must be abandoned for a new one and a court of patent appeals must be established. * * * Changes should be made in the equipment and organization of the Patent Office to increase its efficiency and to secure for the public and inventors whom it serves the best possible service.' By changes of this sort; rather than by the radical innovation proposed in the substitute Oldfield bill, will the patent system of the United States be improved."

As Mr. Montague very aptly says, the attitude of Congressman Oldfield and his associates is not one that tends to "promote the progress of science and useful arts." On the contrary, the passage of any measure similar to that proposed by Mr. Oldfield would demoralize business, undermine prices and work an injury to American art and commerce.

The Artistic Development of the Talking Machine.

WITH every year the artistic development of the talking machine becomes more apparent, and its mission as an uplifting factor in the musical world is being recognized in an impressive way. It is noticeable that lecturers on musical subjects throughout the country are paying tribute, in a very enthusiastic way, to the influence of the talking machine as a stimulator of musical appreciation.

If one were to have predicted ten years ago that the talking machine would have assumed its present artistic status he would be laughed at, for only the most optimistic and enthusiastic believers in the talking machine at that time deemed it would be anything more than a very satisfying musical toy. The comparatively few, who had faith, however, must be gratified at the wonderful work being accomplished by the talking machine in inculcating a love of the best in music.

To-day the most celebrated artists in the instrumental and vocal worlds deem it an honor to have their especial talents permanently recorded for the benefit and enjoyment of humankind. These artists are most particular, too, that the records of their voices, and of their playing, shall be absolutely perfect, and it is safe to say that many of our most noted singers are heard to greater advantage through the talking machine than in the opera house or concert hall.

Some noted artists who consider it a reflection on their prestige if asked to attend opera rehearsals are not averse to make several "masters" so that a perfect record of their singing may be secured. This in itself demonstrates how these artists value the talking machine as a means of bringing their voices and especial talents into the home.

Indeed, some of the most enthusiastic admirers of the talking machine are distinguished musicians. One of them recently said that he "learns something every time he plays a record." If it helps a teacher of the eminence of the man referred to—and he is an international figure—what a wonderful influence it must have on those young people who have scarcely ever heard a good song well sung, and who have little idea what a good orchestral organization sounds like, or the playing of a great pianist, violinist or 'cellist? To these people the talking machine is an educator, whose value is not always fully estimated. For the latent love for music must be stimulated in the home by some degree of knowledge of the works of the great masters, and this is made possible through the talking machine.

We venture to say that no other influence to-day is doing more to develop musical taste in this country than the talking machine, and we say this with a full appreciation of the wonderful work that is being done by our great orchestral organizations, musical clubs, singing societies and other musical artists that are bringing music to the people.

It is true there are still some critics who are fond of speaking of "canned music" and its "debasement influence," but it is notable that the people who buy talking machines, no matter what their

initial musical preferences may be, in a very short time buy the records of well-known singers who are heard in high-class musical numbers, and these records form a permanent library for their benefit and instruction.

It must be remembered that a love for music comes only through familiarity with the music itself, and herein the mission of the talking machine has been most effective. It not only pleases and entertains, but it enables those who hear music through this medium to comprehend it and so grow into a liking for it that is productive of results in an educational way that is truly remarkable.

It is not difficult to ascertain how powerful is the influence of the talking machine in the home. To-day, millions of people who never attended an opera, or heard great artists in concert or recital, discuss, with interest and intelligence, the singing, style and phrasing of the famous artists of the world. Their relationship with these singers is as intimate, thanks to the talking machine, as if they heard them in the concert hall or in the opera house.

This is a wonderful achievement—so great, in fact, that we wonder it has not received even a greater recognition than it has.

When the historian of American musical development gets busy in years to come he must record that no one factor has been so influential in stimulating a knowledge of and a love for music in this country as the talking machine.

It is the talking machine that has encouraged the desire among people in the smaller cities and towns for the hearing of operas and concerts. It has so developed their tastes that they want to hear in person those artists with whom they have become so pleasingly acquainted through the medium of the talking machine.

The directors of the opera companies should really pay a bonus to the talking machine manufacturers for the wonderful work they are doing in educating the American people to a greater appreciation of opera and the singing of the great artists who are under contract with them.

Of course the influence of the talking machine would be absolutely nil had not its manufacture been so improved and perfected that one is enabled to hear a reproduction of music that is satisfying.

In recording especially innumerable minor details have been given such attention that to-day one is enabled to hear some wonderful "photographs" of the voices of the great artists and orchestral organizations of the world.

While the talking machine has been steadily improved, yet it is bound to attain a still greater height in the artistic field, and all over the world many minds are working with the result that within a few years more it is not improbable the talking machine will have reached a new apex as a musical and artistic factor in the community.

THE announcement is made elsewhere in this publication that the American Graphophone Co. has voluntarily increased the rate of compensation of its employes eight per cent., and that half-holiday Saturday would in future be in order. It was, of course, welcome news for the employes of this big talking machine company.

Such an announcement emphasizes a desire on the part of the directors of this institution to share profits with employes.

The American Graphophone Co. has enjoyed an unusually heavy demand for its products in various sections of the country, and by taking this course and granting an advance in pay and a reduction of working hours a broad and generous spirit is shown, and if such a plan were followed generally it unquestionably would do away with many of the labor troubles which seriously interfere with the systematic movement of trade.

President Edward D. Easton and his associates have given the most gratifying kind of news to their employes, and without question it will mean a hearty co-operation on the part of the

Columbia working forces, because the men must show their appreciation of such substantial recognition on the part of their employers.

In discussing this matter with The World President Easton remarked that the growth of the Columbia business during the past twelve months had been surprising, and that he felt that this act would show an appreciation of these conditions and would develop a close relationship between the business and factory workers.

Last year the percentage of the increase in Columbia business was very large, and the first four months of the present year indicate a steady growth, and April scored the best record of any month of April during the existence of the business.

The increase is particularly noticeable in the higher-priced Columbia products, and with the splendid campaign of live, virile publicity which the Columbia Co. is effectively carrying on it is but fair to assume that the business will be materially augmented as the year advances.

VISIT OF GRAND OPERA CO. HELPS ST. LOUIS TRADE.

Affords Opportunity for Some Effective Advertising on the Part of the Leading Concerns—
Local Columbia Territory Augmented—F. K. Dolbeer a Recent Visitor—Silverstone
Music Co.'s Publicity—Shortage of Victor Machines Complained of by Aeolian Co.

(Special to The Talking Machine World.)

St. Louis, Mo., May 11, 1913.

Local talking machine trade is in excellent condition except as Victor dealers are affected by the shortage of machines. Record trade on all lines has been above par, according to reports. The tour of the grand opera company in the St. Louis trade district and the local visit served as a stimulant to both retail and wholesale trade. Practically every dealer shared in this trade.

Manager Reid, of the Columbia Co., remarked on the addition to the territory of the local store and the general increase of business without considering this added field. St. Louis has been awarded parts of Arkansas, Kentucky and Tennessee that previously were handled from the Memphis store.

Harry Levy, of the Aeolian Co., and the Koerber-Brenner Music Co., report Victor trade running to the limit of the supply of machines. Several applications for agencies in small towns recently have been denied because they could not be supplied.

Kleekamp Bros., Grand avenue and Arsenal street, have added the Edison disc line to their talking machine offerings.

Lairs Bros.' Furniture Co., of Charleston, Mo., recently have sent to the Columbia store here samples of a monthly bulletin service instituted by them that has increased their trade immensely.

On the occasion of the recent visit of J. T. Rogers, traffic manager of the Edison Co., to this city to meet with the Western rate-making committee, the Silverstone Music Co. supplied a disc machine and records for the entertainment of the railroad men during leisure moments of their extended session.

During the recent visit of F. K. Dolbeer, sales manager of the Edison Co., to St. Louis, Mark Silvertstone's little son came to the store. He watched for some time and became impressed that the visitor was of more than ordinary importance and his four-year-old brain tried to solve the identity of the newcomer. Finally it occurred to him that the Edison disc was the most important topic he had heard discussed recently, and he walked up to the visitor and announced: "I know who you are. You are the Edison disc." The identification made a hit with Mr. Dolbeer, who felt greatly complimented.

George R. Long, a Belleville Columbia dealer, was a recent visitor at the store here.

The advantage of high class advertising is shown by the number of persons who have visited the Silverstone Music Co. recently and have announced that they were induced to investigate the disc machine by reading the article printed in the reading pages of the Cosmopolitan Magazine, which is an advertisement only as it tells of Mr. Edison's achievement.

"We are feeling the effects of the recent flood now more than at any other time," declared Harry Levy, manager of the talking machine department of the Aeolian Co. "We have had more trouble with shortages of machines in the last few days than at Christmas time; the only difference is that the customer is more content to wait and the distressing shipping conditions makes explanations sound plausible. We are short of almost everything above IVs. We have no VIII or IX styles and XIV and XVI shortages are chronic.

"As to business we have no complaints. While trade has seemed a bit slow we have had all we could handle and have been forced to decline some orders from small centers, where it did not seem wise to establish agencies during the present condition of the supply of Victor machines. Of course we expect when the new models soon to be placed on the market come and freight traffic adjusts itself that we will be able to supply all comers. This condition should not continue."

The visit of the grand opera stars to St. Louis

gave an opportunity for some classy talking machine advertising, and the Columbia Co. grabbed its share of it. This company was very fortunate in having seven of the stars who sang here on their record list, and enjoyed a splendid sale during and after the concerts. By request Columbia machines were placed in the rooms of several of the singers at the hotels, and Messrs. Dufranne and Scott visited the Columbia store to hear records and to see the various machines. Mr. Dufranne first saw the new Columbia Grand on his visit to the store, and after looking it over and

VALUE OF WINDOW DISPLAY.

New York Talking Machine Co. Utilizing Space to Good Advantage to Interest Public.

In accordance with its desire to always have its show window represent the very latest ideas in window decoration, the New York Talking Machine Co. shows each month the Victor show card de luxe, featuring various selections by world-famous artists, or the artists themselves. This month's show card, No. 22, which has been on display in the company's show window the past ten days, has attracted considerable attention by reason of its artistic arrangement and well-balanced display.

This display card features the portrait of Caruso in the center, with the autographed testimonials and photographs of Farrar and Gadski on both sides. These testimonials from two famous operatic stars are entitled "What Farrar (or Gadski) says," and give brief talks on the merits of the Victor records and machines, as observed by these artists. These autographed signatures are in bold, clear type, which can be easily read by the passers-by and thereby hold the attention.

HEXT CO. OPENS IN GREELEY.

The Hext Music Co., of Denver, Col., has opened a branch in Greeley under the management of E. E. Harbaugh. In addition to a full line of pianos, it is handling the Victor and Edison talking machines and has established very attractive quarters.

hearing several of the other records on it, pronounced it an unparalleled success. "I never have heard anything like it," he said. Sales Manager Byars reports an excellent business in records and good general results from the advertising.

Manager Irby W. Reid, of the Columbia Co., is much pleased with the outlook so far. "On one Saturday during April we passed as much business as often has been done in one-half a month before," he said. "We closed last month far ahead of any previous March, and prospects are splendid. We sold 33 dictaphones to the Norvel-Shapleigh Hardware Co., one of the very large jobbing concerns of the West, an order of which we are very proud."

Mr. Reid reports a come-back sale on the Ysaye record sale after his concert here was regarded as a closed incident. The later sale rolled the total above 500.

"TALKER" PUBLICITY DOMINATED

In the Advertising Carried In the New York Newspapers During the Past Month.

A feature of the advertising carried by local newspapers the past month has been the preponderance of talking machine publicity, as compared with other lines of trade. Not only have department stores carried frequent and lengthy advertisements on the merits of the talking machine, but leading dealers throughout the city have been constant users of "printers' ink."

A most pleasing feature of this intensive advertising is the fact that the majority of copy exploiting the talking machine and records is unusually forceful for newspaper advertising and well qualified to bring excellent results. An example of this local advertising is furnished by the excellent copy that Landay Bros., the prominent Victor distributors, carry each day in the newspapers. This publicity is not only of benefit to the advertiser, but to the trade in general, for it assists in maintaining public interest in talking machines the year round.

MADE SPECIAL DISPLAYS.

The talking machine and piano dealers of Los Angeles, Cal., took advantage of the opportunity to make special displays of instruments in their lines during the recent Los Angeles Fashion Show, conducted under the auspices of the prominent department stores and dry goods merchants of the city for the purpose of acquainting the public with the latest spring styles in ladies' dress.

IN the clinches you can rely upon the Ditson Victor Service. Profits are contingent upon *our fast work*—and we know it.

STOP saying to your customers: "We haven't got it," because you can get it from **DITSON**.

FAST Victor service is our aim and that we hit the mark is proved in our rapidly growing clientele of dealers.

ALL Victor styles, records and parts, with a complete line of albums, cabinets and needles.

WE specialize upon Victor goods exclusively, and correspondence with dealers desiring the best in Victor service is invited.

Oliver Ditson Company, Boston, Mass.

You can't help selling

“No. 14” The Dollar Needle Cutter

People Want a cutter that does not waste the needle—“No. 14” is guaranteed to point any needle at least FOURTEEN times.

People Want a cutter that will give a perfect point—“No. 14” is guaranteed to produce a sharp, clean, even point every time.

People Want a cutter that will stand up to its job—“No. 14” is guaranteed not to get out of order—to be fool-proof and wear-proof.

People Want a cutter that is easy to use—“No. 14” is so simple that nobody can use it wrong—just slip in the needle and snip!

People Want a cutter that is compact and good-looking—“No. 14” is both. Fits the vest pocket—handsome, small, well finished.

People Want a cutter at a reasonable price—“No. 14” sells for ONE DOLLAR—\$1.25 gold-plated—and leaves YOU a handsome profit.

People Want “No. 14”—that's the solid truth of it, and you can't help finding it out for yourself if you'll make one experiment.

Give the People what they want—in a needle-cutter that means give them “No. 14”—a perfect cutter at a reasonable price.

Sold through distributors. If yours can't supply you send us your order and we'll have it filled for you.

Send in that order—delay is expensive.

Condon - Autostop Company

Manufacturers of Talking Machine Accessories

26 Front Street, New York

The Columbia supplement for June features records by Bonci, Felix Weingartner, Chauncey Olcott and Scharwenka. It would be a rather forgetful salesman who would let a customer out of his store without selling him records by every one of these artists.

**Columbia Graphophone Company
Tribune Building, New York**

NEW TYPE OF TALKING MACHINE

Called the Palmodian, "The Violin Which Sings," Introduced by H. O. Buffet, a Frenchman, and Which Contains Novel Features.

(Special to The Talking Machine World.)

Paris, France, May 1, 1913.

H. O. Buffet, Conde-Sur-Noireau (Calvados), is advertising a new type of talking machine called the Palmodian, "the violin which sings," which, as can be seen from the illustration, is something unique. It is made in three styles—Model A, alto; Model B, 'cello; Model C, violin. This talking machine has a carbon microphone, an apparatus for magnifying sounds of the faintest character by variation of pressure at loose contact. When the loose carbon is jarred by the sound to be magnified, there is a rapid variation of pressure pro-

The Palmodian.

ducing a similar, or louder, sound. This is along the lines of the principle employed in the ordinary carbon telephone transmitter.

The Palmodian has neither diaphragm, horn, nor tube for the ears. Disc records and sapphire are employed, and the reproduction is said to be marvelously true and lifelike of the voice, as well as the orchestral instrument it is fitted with in the different models.

This new instrument was presented for the first time at the Sorbonne during the fiftieth congress of the Learned Societies at Paris, and attracted considerable attention from the scientists who were in attendance.

FOLDERS FOR EXPORT TRADE.

Recent literature issued by the Columbia Graphophone Co. includes several Spanish folders for export trade and a sixteen-page folder for domestic trade, featuring a partial list of recordings in the Columbia library rendered by prominent operatic and concert stars. One of the folders for export trade is devoted to the new records recently in, made by Bonci. This folder is very attractive and artistic, and in keeping with the high-grade character of the records featured in its pages. The other folder for export trade consists of a twenty-eight-page supplement dated July of this year, and introducing to the Columbia Co.'s Spanish-speaking representatives the new records by Ysaye and Bonci. This supplement for export trade is one of the most complete of its kind ever presented to the trade and contain a comprehensive variety of records which are certain to appeal to the customers of the Columbia Co.'s export representatives and dealers. The partial list of the recordings by concert stars and operatic artists for domestic trade is valuable as a work of reference for Columbia dealers.

HOW CO-OPERATIVE WORK HELPS SALES TO SCHOOLS.

The Splendid Work Accomplished by Fred E. Lane, Manager of the Eclipse Musical Co., in Cleveland, and His Talented Wife Has Increased the Interest in the Talking Machine and Its Use and Appreciation in the Schools.

(Special to The Talking Machine World.)

Cleveland, O., May 10, 1913.

Fred E. Lane, manager of the Eclipse Musical Co., is greatly interested in educational matters and is making every effort to secure the attention and consideration of the teachers of Cleveland in the introduction of musical instruction in the schools.

Ruth McTammany Lane, the wife of Mr. Lane, has been instrumental in his placing Victrolas in the schools, when otherwise the sale would have been delayed, or not have been made at all. Mrs. Lane is gifted with a fascinating voice of genuine musical expression, and all who hear her are delighted and charmed.

In an interview Mr. Lane explained his plan of work as follows: "When calling upon a school I find that the principal most generally expresses herself with, 'Yes, I know about them, they are a fine thing and I wish we could have one, but you see we have no money.' It is right here that Mrs. Lane forms an important entering wedge in bringing about a sale. She shows dozens of programs of concerts that have been arranged and given in other schools successfully, and where the entertainments have netted the schools more than enough to buy a Victrola and all the records desired. I then arrange to come with Mrs. Lane on an afternoon set for the occasion, and with the pupils gathered together in an auditorium, each having paid five cents admission, which, with the school of 1,400 pupils, brings this item alone to over \$50 for the school. The scholars having all assembled, I play the Victrola while Mrs. Lane sings several groups of songs to the enjoyment of all the children. In the meantime I have planned a big concert, wherein the pupils' mothers, fathers and friends may attend. These evening concerts are planned and executed very easily. The school always has a good lot of talent ready to put in without any trouble to the teachers, and with Mrs. Lane's voice and the rendering of the Victrola,

makes an elaborate entertainment for ten cents, and with an 800 attendance makes \$80. This, added to the \$50, makes an ample sum for the school to secure the instrument. I am planning to

Ruth McTammany Lane.

call on the schools where I have sold Victrolas after six months, with the suggestion that another concert be arranged to obtain money to purchase records.

W. H. BYARS GOES TO CHICAGO.

Promotion for the St. Louis Manager of the Columbia Co., Who Has Made a Splendid Record in St. Louis.

(Special to The Talking Machine World.)

St. Louis, Mo., May 10, 1913.

W. H. Byars, retail sales manager of the Columbia Co. here, has been notified of his transfer to Chicago about June 1. The change is a marked advance for Mr. Byars, both as to salary and the force handled. Mr. Byars, since he took charge of the retail sales at the Columbia, has made that department noticed by every musical selling concern in St. Louis. While no figures are given, it is known that Mr. Byars is credited with trebling the sales in his department while connected with the store here.

ARTHUR D. GEISSLER IN NEW YORK.

General Manager of Talking Machine Co. Reports Excellent Business in Chicago.

Arthur D. Geissler, general manager of the Talking Machine Co., of Chicago, the prominent Victor distributor, was a visitor to New York last week. Mr. Geissler visited the Victor factories at Camden, N. J., and contemplates leaving for Chicago at an early date. He reports splendid business with the Victor products in Chicago, and reports that his company still has on file many unfilled orders for the various types of Victrolas. This shortage of stock particularly applies to the Victrola XVI at \$200. Mr. Geissler states that the demand for this model is a fair example of the general trend of trade in the Middle West toward the higher-priced styles of machines.

SOME ASPECTS OF MUSIC AND THE GRAPHOPHONE.

Selection of Records that Appeal to Public Taste No Light Matter for Consideration—
Approximates the Music Publisher's Line in Its Appeal to the People.

By G. C. JELL, Chairman of Record Committee, Columbia Graphophone Co., New York.

If you ask me what should be the guiding principle of musical selection and editorship as applied to recording affairs, I should say it largely harks back to the time-honored proposition that "the voice of the people is the voice of God." It is the great mass to which the record editor must address himself, a mass which, however inarticulate, has a certain means of making its desires known. The desire of the many for music that appeals to them must have the right of way over the desire of the comparative few whose interest is bound up in the academic forms—in the music of the intellect as distinguished from the music of the emotions, and, in short, such various forms of "classical" music as the average man understands to be music which he cannot understand, a statement with which he generally dismisses the subject. In the record business, as in many other situations in life, there is safety in numbers.

Generally supposed to be parallel with the concert platform, the opera, musical comedy and vaudeville, the record business as a matter of fact much more closely approximates the music publisher's trade in the manner in which it must respond to public impulse, while at the same time guiding and directing this impulse wherever it is possible. The problems of the concert manager, while no doubt serious enough to him, are decidedly different from and undoubtedly less complex than those of the record editor. A giver of concerts appeals to a certain distinct and well defined portion of the public. They go to hear an entire program by an artist, or a group of artists, some part of which program will please them and some part of which probably will not. If they do not like one number they can go on to the next, which will most likely please them better. It is all in the evening's entertainment, and the money is in the box office (or, at any rate, it ought to be). The same applies more or less to opera, vaudeville and every other grade of public musical production. In record making there is an entirely different problem to face. Each record standing as an entity to be accepted or rejected must be, so to speak, a program in itself. There is no taking away a part of it and leaving the rest. Hence a record of a song that does not please at least a certain portion of the public or an acceptable song by a singer who does not please is likely to lie on the shelf.

Between the record editor and the baseball umpire there should be traced a decided fellow feeling resulting from the fact that no matter what either of them does he is fairly certain to succeed in at least one thing, namely, that of not pleasing somebody or other. As for the former, he it is who is likely to be regarded by the highly cultured musician as a low-brow of the most villainous type, whose imbecility of judgment is equaled solely by the execrability of his musical taste, and whom, on the other hand, the man who regards our ancient friend, "Little Annie Rooney," as a gem of classic lore, is quite likely to anathematize as a prig and an upstart whose high flown notions are likely to work dire havoc with his musical diet. There is still another and even more extreme class represented by the man who admits with a shudder that the coon song, the turkey trot, vocal and instrumental, and the various other species of the ephemeral tunes of the day are unescapable, however evil, but that apart from these there should be nothing issued that does not conform to the standard of the Beethoven Symphonies or the Wagner Tetralogy.

In a broad view of the situation, such as must be adopted, all three, begging their respective pardons, are wrong. The graphophone and the sound record, like all other commodities of universal import and utility, must appeal primarily, mainly and all the time to the average man, to say nothing of the average woman, and the average man is neither a musical sharp nor altogether a musical dunce. He is, as a rule, not especially interested in majors and minors, tonics and dominants; the chord of

the diminished seventh may fairly shriek at him and he knows it not. He does know, however, that certain kinds of music give him pleasure. Through the medium of his emotions they appeal to him and cause the quickening impulse that everyone feels when strongly moved. He may recall songs that he learned at his mother's knee thirty, forty or fifty years ago—the simple tuneful airs that were played on the piano in his boyhood evenings at home—the ballads of his sweetheart days.

Briefly, what he understands as music to be sought for and enjoyed is melody—frank, free, unrestrained, singable, understandable melody, to which his pulse or his feet can keep time and on which his mind, wearied perhaps with many business affairs, can linger with satisfaction and comfort. Of the classics he accepts such as by their nature he can easily digest, and the more he can be made to hear of them the stronger and more avid his digestion becomes. But he is a brave man who would set before him in recorded form the

G. C. Jell.

complex tonalities of the "moderns" in anything but homeopathic doses. Outside of the jingles of the day, it is the melody that has stood the test of time that perennially interests and delights him.

And, after all, is he so very far wrong? Though my personal taste may not quite always coincide, I candidly admit my sympathy with his point of view. Proverbially and every other way life is short enough, and in the average sane, normal life there is a very great deal beside music to be thought of. When the time for music comes, in such a life, music is a matter of melody and the simpler harmonies, and who can say that it should not be?

To a great extent familiarity is the keynote in an appeal to public musical taste, and though to the professional musician the song that he sings for years on end, or a composition that he plays a thousand times over, may become trite, commonplace and banal, as a matter of fact, it may be and probably is nothing of the sort. It can be safely reckoned that in everything that has defied through the years the acid test of public forgetfulness, there is the germ of some inherently deep and lasting merit, however elusive, some invincible element of human interest, something that is close to the heart of humanity and stirs its mighty beat.

If in addition to this virility it has the elements of beauty, and in words or in sensuous melodic outline, a distinct emotional appeal to a public, which, in its off hours, feels to a much greater extent than it thinks, we need not go far to find an explanation for musical immortality and perpetual sale. The extent to which the professional musician realizes this and arranges his programs accordingly very often spells the difference between success and failure. There is this difference between the concert and record program, however: of what he hears, the concertgoer retains in

his mind that which he likes and forgets the rest, but pays for it all. Of the records he hears he takes away perhaps those that he likes, but he leaves the rest behind unpaid for.

Nevertheless, it is by opening up new avenues of musical appreciation that real progress is made, and such must be our object to every degree that business expediency will permit, and by inducing, however gradually, a permanent taste for what is truly great and enduring we build an asset for ourselves that grows with the years and makes for continuous advancement and prosperity. As before stated, it is in the end largely a matter of familiarity. Contrive to make a man listen to anything four or five times and almost invariably he will grow to like it if it is good. He may even come to tolerate it if it is bad, though not for long. To this end the classics that are nearest the heart of a majority of true music lovers must be drawn upon with more or less frequency.

For the most part, however, we are, it is true, more interested in giving the average man the airs that he has been humming and whistling since childhood than in telling him why Beethoven wrote the second movement of his Fifth Symphony.

ENTERPRISING COLUMBIANS.

Fletcher Bros. Pushing the Edison Line with Great Success in Nanaimo, B. C.

Fletcher Bros. conduct an artistically arranged store at Nanaimo, B. C., Canada, where they are at present featuring the Edison disc phonograph to splendid advantage. They have a large double store, and also a hall capable of seating 150 people about the store, where concerts are given once a month. H. R. Skelton, the Edison representative, who recently visited Fletcher Bros., is quite enthusiastic over the energetic manner in which this concern is pushing the Edison disc phonographs. They are catering to an expanding clientele.

The J. L. Hudson Co., which conducts a large department store in Detroit, Mich., has purchased the retail store of the Farrand Co., which handles pianos and Victor and Columbia talking machines. The company will continue to do business under the same name.

Learn to be a good loser. A reverse of fortune dismays the wise man no more than would a change of the moon.

"DUSTOFF" RECORD CLEANERS

Get into the minute sound grooves of the record as nothing else can because of the special processed high-nap cleaning fabric employed. "DUSTOFFS" cannot scratch the record and to use it is only necessary to simply brush across face of record a few times.

The use of "DUSTOFFS" before playing ensures a wonderfully clear and distinct tonal reproduction free from blurs, scrapings or harsh sounds, and moreover through the removal of the dust and dirt in the reproducing point track lengthens the life of the record.

"DUSTOFF" RECORD CLEANERS 15c. Each
(In Canada 25c. Each)

Each in Two Color Carton

A very liberal trade discount applies.

"DUSTOFFS" can be used on Victor or Columbia or any other records.

YOUR JOBBER CAN SUPPLY YOU or write us direct.

"DUSTOFFS" are excellently adapted for use as advertising media with your ad reproduced on labels on holders of cleaners. Write for details.

THE TRADE IN BOSTON AND NEW ENGLAND

JOHN H. WILSON, MANAGER, 324 WASHINGTON STREET, BOSTON, MASS.

(Special to The Talking Machine World.)

Boston, Mass., May 8, 1913.

The first banquet of the Business Building Club of the Columbia Graphophone Co., held at the Hotel Thorndike, was a pronounced success in every way and the twenty-five charter members all had a great time. The evening was ushered in by the taking of a group photograph in the reception room, and then the party adjourned to the dining-room, where the several courses were interspersed with a few minutes of jollity, Thos. Lanagan giving songs and humorous recitations in the Scotch dialect; John Riley, tenor; C. H. Hicks, baritone, and R. P. Dinsmore, baritone, also contributing to this part of the entertainment. A good word is due William Martin, who accompanied the singers on the piano. Mr. Coursen told some stories that

tative of the company, responded with some very pleasing remarks, as did H. P. Dinsmore and Warren Brown, of the local office.

Much credit is due to the efficiency of the Social Committee for the great success of the entire affair. A very fine spirit of co-operation was evidenced by the management of the Columbia Co. in defraying one-half of the expense of the banquet.

One of the delightful innovations of the occasion was the excellent reproduction of the voice of Edward D. Easton, president of the Columbia Co., who offered his best wishes and congratulations through the medium of the Dictaphone. A very enthusiastic letter from George W. Lyle, general manager of the company, was read and applauded.

After cheering and recheering the manager of

lena, Miss Ivy Scott and George Parsons, and they got well-deserved encores for their fine work.

Following the entertainment there were refreshments. The Associates are all agog over the summer outing, which will be held on June 17 at Crescent Park, R. I., just outside of Providence. Friend Chamberlain, manager of the wholesale department of the Eastern, has the program in charge and he is putting in a lot of good work looking to a successful outing.

Enlarge Talking Machine Department.

George Lincoln Parker's already large department devoted to Victor and Edison goods has had to be enlarged, and another good-sized room has been added to the suite which is ably managed by Charlie Trundy. The quarters now consist of four rooms, well furnished and admirably adapted to exploiting the qualities of talking machine goods. Mr. Parker is having considerable of a call for the Edison disc machine; and, fortunately, there is not as much scarcity of records now as there was a couple of months ago. The list is one: that Mr. Parker's patrons fell highly satisfied with

Working Out Window Display.

T. Norman Mason, to whom the credit is due for the tasteful window arrangements of the Columbia Co., is just now working out the details of a display which will include a nine-foot canoe which will float on real water, no glass or mirrored illusions, but the real thing for which the window has to be converted into a veritable tank. Of course there will be a happy couple in the craft and also a Grafonola, the picture being an exact reproduction of a scene that one may see any Saturday or Sunday afternoon on the Charles River.

School Proposition Looms Up.

The school proposition is looming up large with the Eastern Talking Machine Co., and W. J. Fitzgerald is hustling to install Victor equipments, and his efforts are meeting with the greatest success imaginable. He says that Cambridge schools are entirely equipped with Victors, and a concert given lately in Sanders' Theater, under the direction of John B. Whorisky, supervisor of music, was to defray the expenses of a Victor equipment in one of the large schools of that city. He also tells, in his usual interesting fashion, of a concert that was given under the supervision of Mr. Chase, the superintendent of music in the Malden schools, in the Malden High School by the pupils, to meet the expenses of a Victor outfit, and the result of the concert was that the school was able to purchase a \$200 Victrola and \$150 worth of records. Fitzgerald says that by the time the school term will have ended, his department will have some interesting data to show as to thoroughness of school equipments.

Charles F. Atwood to Remove.

Charles F. Atwood, who has had his Victor quarters at 207 Boylston street for about a year past, is giving up his lease at the end of this present month and going to take smaller quarters in the Walker Building, in Boylston street, where he has leased rooms on the third floor. Mr. Atwood's present quarters are expensive to run, and he will thus be able to conduct his business on a more economical scale.

Wedding Gift for F. R. Erisman.

Fred R. Erisman, of the Columbia Co., and his bride, who was Miss Nellie Brown, of Wilmington, Del., whose marriage was mentioned last month, have taken apartments in Jamaica Plain, where they are pleasantly located. The Columbia boys gave Mr. Erisman, as a wedding gift, a set of Flemish oak furnishings for his den.

Subway Building Hurts Trade.

The Victor department of the Henry F. Miller Co. had a very good business up to the time excavations began in front of this large Boylston street establishment for the subway which is to run under this thoroughfare. For some time the

Members of the Business Building Club of the Columbia Graphophone Co.

helped to get the company into a state bordering on hilarity. Following the dinner there was some speechmaking, the introductions being made by James S. Cahill, who acted as toastmaster.

The speakers included A. C. Erisman, manager of the Boston office of the Columbia Graphophone Co.; A. Y. Atwell, president of the club; F. R. Erisman, assistant manager of the company; James Holohan, vice-president of the club; J. T. Shaughnessy, treasurer; T. N. Mason, social director; W. E. Getchell, secretary, and the following members of the Dictaphone staff: W. Fred Hornsby, H. C. Golding, F. De Mond and A. B. Kierstead. J. F. Luscomb, the traveling represen-

the Boston office, the officers of the club and the many lady members of the staff of the Boston office who, unfortunately, are not included in the membership of the club, the event was brought to a close with a final cheer for A. C. Erisman, the manager.

Enjoyed Fine Entertainment.

The Eastern Talking Machine Associates enjoyed a fine entertainment a few weeks ago, the contributing talent being several members of the Aborn Opera Co., which was playing a successful engagement at the Tremont Theatre, next door to the Eastern's headquarters. Among those who entertained were: Dominico Russo, Miss Edith H -

P-E MONEY-MAKING SERVICE

THE TRADE IN BOSTON AND NEW ENGLAND

JOHN H. WILSON, MANAGER, 324 WASHINGTON STREET, BOSTON, MASS.

surface cars have been diverted from Boylston street for a distance of three blocks, but this was as nothing to the huge cavernous depth that one now sees directly in front of the store. It is the Victor department of the business that feels the condition the worst, and there has been a noticeable falling off in the calls for records in the past few days. Meantime Manager White of the department is hustling about to keep the business up to the normal standard of this house.

Visits Victor Factory.

Harry Rosen has made some advantageous alterations and changes in his School street quarters, and his patrons are now better able than ever before to be served. Mr. Rosen lately has been on a visit to Philadelphia and New York, spending considerable time at the Victor factory at Camden. He also is planning a trip to Chicago in a few weeks, so as to familiarize himself with the talking machine business at other leading cities.

Interested in "What We Hear in Music."

The New England Conservatory of Music sent down to the Eastern Talking Machine Co. a few days ago for fifty copies of "What We Hear in Music," referred to last month as a volume that has proved of immense value in some of the schools of the cities, especially in Brookline. There is such a demand for this book that the Eastern offices often run out of an adequate supply.

Exhibition of Test Record.

Visitors to the Eastern Talking Machine Co. have been interested the past few weeks in the exhibition of a test record made by Dominico Russo, of the Aborn Opera Co., singing next door. The record was Tosti's "Ideale," and the quality of the reproduction was likened by many visitors to Caruso.

Breakfast to Columbia Music.

At the May breakfast of the Boston Parliamentary Law Club, held at the Hotel Lenox on May 6, James F. Kerr, of the Columbia Graphophone Co., was one of the guests, and during the program of after-dinner speeches by more or less prominent people he directed an enjoyable musical program on a Columbia grand. Everybody voted the Columbia entertainment one of the best they ever had listened to.

Install Talking Machine Department.

Frank Ferdinand, Inc., house furnishers in the Roxbury district of Boston, is one of the latest establishments to install a Columbia department. The company has furnished a fine suite of rooms admirably adapted to demonstrating Columbia goods, and for the short time this department has been open there have been many outfits sold.

Pardee-Ellenberger Co. Increases Staff.

The Pardee-Ellenberger Co. has found it necessary to add another man to the staff, and just the right person has been found in Robert C. Peck, who will travel through New England, making his headquarters, when in this vicinity, at the Boston office in Battery-march street. Mr. Peck has had several years' valuable experience, having been with the A. S. Cook Co., of Woonsocket, R. I., who are large Edison distributors. Manager Silliman reports a fine business, especially in the Edison disc goods, and the only embarrassment is through the scarcity of records which are being called for faster than the agency can supply them.

To Interest Women's Clubs.

Miss Belle Jones, who has been associated with a talking machine department in one of the department stores, has been engaged by the Columbia Co., and will devote her time to enlisting the in-

terest of women's clubs and organizations in the Columbia proposition. Miss Jones already has made many friends and has made a good start.

H. L. Wilson, assistant general manager of the Columbia, is expected in Boston the latter part of this month, and will be entertained by Manager Erisman.

Great Concert in Montpelier.

Manager Arthur Erisman got an interesting account the other day of a concert that was given under the auspices of Buswell's Book Store at Montpelier, Vt., which was attended by 1,000 people. The entire concert was given by a Columbia machine, and for the dance that followed this instrument also furnished the music.

Ambassador Skelton Heard From.

H. R. Skelton, the able traveling man for Thomas A. Edison, Inc., is now in Butte, Mont., according to information just received from Manager Silliman, of the Pardee-Ellenberger Co. From Butte Mr. Skelton will go to Portland, Seattle, Victoria, B. C., and other places before turning his face homeward. He will be back about July 1. Everywhere he goes he finds business excellent.

Hurrah! for Baseball.

The Columbia boys played a great game of baseball on Franklin Field on April 19, which is a local holiday. The game was between the married and the single men, and the former won by 13 to 12. The boys were a tired-looking lot when the strenuous day was over, and Manager Erisman, in making home runs, got so used to lying down between bases that no one thought anything of it. They're all looking forward to the next game, which will be played on May 30, when the office will have a picnic which will be enjoyed at some near-by resort where there is a lake.

A few loud needle points recording BAGSHAW facts

First—OLDEST

The first talking machine needles were made in the Bagshaw factories at the beginning of the industry. 43 years manufacturing needles of various kinds.

Second—LARGEST

Over 63 million talking machine needles shipped in ten consecutive working days to customers in the United States. This is the world's record, and shows at a glance the magnitude of our facilities.

Third—BEST

Quality alone achieved this big business. While the first factor gave us our start, the "Best" reputation makes possible the "Largest" acknowledgment.

We guarantee Bagshaw-made Needles to be the best for any record

W. H. BAGSHAW, Lowell, Mass., U. S. A.
ESTABLISHED 1870.

If you want to know why the new Columbia Reproducer Number 6 was sure to bring about the revolution in the industry which it is bringing about, ask us to send you the new pamphlet we have just issued describing it in detail.

Columbia Graphophone Company
Tribune Building, New York

BLACKMAN HEADQUARTERS

On Chambers Street Being Reconstructed—
Front of Establishment When Finished Will
Afford Attractive Display Windows.

Contrary to its apparent resemblance, this cut below does not represent the beginning of any blasting or house-moving job, but instead the appearance of the front of the Blackman Talking Machine Co.'s headquarters at 97 Chambers street, New York, about the first of this month. By the time this issue of *The World* reaches its readers, the general appearance of the store will be doubtless considerably improved, but judging from this picture, it could stand this improvement, and then some.

Condition of Blackman Store May 1.

No, this wholesale demolition of the store-front was not caused by any desire of Mr. Blackman's to ascertain how perfect a representation his window could make of a scene in modern contracting "warfare," but due to the orders of the New York Highway Department to widen Chambers street. This necessarily meant a narrowing of the sidewalk, and Mr. Blackman took advantage of the offered opportunity to make plans for a much more artistic and attractive show window than he had before. The accompanying portrait hardly does the new window justice, for when completed it will be one of the most attractive windows in that district. No pillars will obstruct the view of the machines or displays shown, but a high and

deep window space will permit of the display of Victor and Edison products to the best possible advantage.

In addition to increasing the strength of its window display, the Blackman Talking Machine Co. is also increasing its available floor space by leasing the entire floor and basement it now occupies all the way back to Reade street, thereby increasing its area of floor space considerably. This additional room was badly needed, as the company had outgrown its present quarters some time since. A steady increase in business is the primary cause for the leasing of this additional area of space.

The special attention of readers of *The World* is called to the unique sign prominently displayed in the accompanying photograph. Further comment is unnecessary, as the sign proclaims a statement that permits of no argument, and should therefore be regarded as an axiom, not as a generality.

REMODELED VICTROLA VI.

Victor Talking Machine Co. Sends Out Important Letter to the Trade.

The Victor Talking Machine Co., under date of April 26, sent the following letter to its trade, notifying them that a new remodeled Victrola VI at \$25, embodying a number of improvements, is now ready for the market:

"We hand you herewith printed announcement of the remodeled Victrola VI, believing that the trade and public will appreciate very much the extra value which the Victor Co. is putting into this style. It will have, in the future, a twelve-inch turntable and is equipped with a suspended horn-amplifying compartment, the same as the higher-priced Victrolas, and the price remains at \$25.

"This offers you a fresh opportunity for a campaign throughout the coming summer months which will enable you to sell more instruments than ever before at this season. No matter if there already be a higher-priced cabinet Victrola in the home, every family can find good use in the nursery, in the summer home, aboard boat or in the country bungalow for a wonderful little instrument, such as this \$25 Victrola is. Think what it means to your record business to sell a quantity of this Victrola VI. Remember that anybody earning from \$10 a week upward can afford to buy one of these instruments, and these owners frequently prove more enthusiastic buyers of records than the owners of the higher-priced instruments."

OUR FOREIGN CUSTOMERS.

Amount and Value of Talking Machines
Shipped Abroad from the Port of New York
for the Past Four Weeks.

(Special to *The Talking Machine World*.)

Washington, D. C., May 9, 1913.

Manufacturers and dealers in talking machines will doubtless be interested in the figures showing the exports of talking machines for the past four weeks from the port of New York:

April 15.

Berlin, 9 pkgs., \$149; Callao, 20 pkgs., \$205; 1 pkg., \$110; Colon, 10 pkgs., \$228; Havana, 3 pkgs., \$167; London, 41 pkgs., \$424; 100 pkgs., \$5,142; Port Barrios, 2 pkgs., \$225; Progreso, 45 pkgs., \$1,191; Savanilla, 15 pkgs., \$557; St. John's, 100 pkgs., \$100; Yokohama, 11 pkgs., \$581.

April 22.

Berlin, 12 pkgs., \$144; Calcutta, 6 pkgs., \$120; Colon, 4 pkgs., \$246; Havana, 13 pkgs., \$381; Iquique, 5 pkgs., \$211; Iquitos, 5 pkgs., \$233; Manila, 13 pkgs., \$1,025; Rotterdam, 3 pkgs., \$204; Santod, 5 pkgs., \$167; Savanilla, 5 pkgs., \$134; Singapore, 16 pkgs., \$453.

April 29.

Acajutla, 4 pkgs., \$185; Berlin, 10 pkgs., \$200; Brussels, 6 pkgs., \$133; Buenos Aires, 157 pkgs., \$12,313; Callao, 2 pkgs., \$171; Colon, 11 pkgs., \$322; Guayaquil, 3 pkgs., \$180; Havana, 39 pkgs., \$1,280; Iquique, 26 pkgs., \$1,487; London, 56 pkgs., \$2,769; Montevideo, 4 pkgs., \$230; Para, 9 pkgs.,

New Victor Victrola VI.

\$823; Port of Spain, 12 pkgs., \$177; Valparaiso, 2 pkgs., \$500; Vera Cruz, 10 pkgs., \$450.

May 6.

Amsterdam, 1 pkg., \$150; Batavia, 3 pkgs., \$187; Berlin, 15 pkgs., \$260; Cartagena, 7 pkgs., \$170; Guayaquil, 8 pkgs., \$217; Havana, 6 pkgs., \$150; 11 pkgs., \$588; Kingston, 4 pkgs., \$189; Limon, 5 pkgs., \$234; London, 152 pkgs., \$3,604; 7 pkgs., \$815; Manchester, 2 pkgs., \$459; Maracaibo, 12 pkgs., \$694; Para, 10 pkgs., \$732; Port Madryn, 4 pkgs., \$251; Savanilla, 21 pkgs., \$885; Valparaiso, 3 pkgs., \$118; 3 pkgs., \$157; Yokohama, 4 pkgs., \$169.

FAST PROGRESS ON ADDITIONS.

New Structures for Victor Plant Will Be Ready for Occupancy Before Fall—Changing the Map of Camden at Frequent Intervals.

A resident of Philadelphia, in commenting upon the growth of the business of the Victor Talking Machine Co.'s business in Camden and the consequent necessity of adding to the extent of the

The available open land for the erection of Victor factory additions gave out long ago and it has consequently been the practice since that time to buy whole blocks of buildings and raze them for the purpose of making room for new additions to the talking machine plant.

The accompanying illustration shows the progress being made in the erection of the latest additions to the Victor plant on the blocks shown some time

Progress of Work on Addition to Victor Factories.

company's plant at frequent intervals, so frequent that the construction work on one building is not finished before that on another is started, remarked that the Victor Co. changed the map of Camden about two or three times each year and hadn't begun to slow down yet.

ago in the World with the old buildings, some of them substantial and modern structures, still standing. The newer Victor structures buildings are being rushed with all possible speed and will be ready for occupancy in the early fall, in time to help out in handling part of the holiday rush.

INTERESTING TO TRAVELERS.

Forty-five inches is the longest trunk that may be carried as free baggage on railroads after May 1.

New rules also frown on the trunk with bulging

side or bottom designed that it must stand in a certain position, so gowns and hats inside will travel right side up.

It may be some time, however, before "freak" trunks can be refused. Notice is required to reject them lawfully.

"TALKER" GROWTH IN TWIN CITIES.

Five Wholesale Houses and More Than Twenty Retail Stores Now Catering to the Needs of the People of St. Paul and Minneapolis—Piano Houses Fall in Line—Columbia Expansion—Exclusive Edison Store Doing Well.

(Special to The Talking Machine World.)

Minneapolis and St. Paul, May 10, 1913.

Five wholesale houses and more than twenty retail stores cater to the public demand for talking machines by residents of Minneapolis and St. Paul. And only a few years ago, less than ten, two houses had a precarious existence in trying to unload the old cylinder machines on a curious but not a purchasing public. The pioneer dealer in the Twin Cities after struggling for years to place the business on a paying basis became so involved that he was ruined just as the big wave of talking machine popularity, that should have landed him a competence, at least, overflowed the Northwest.

Four piano houses that for years dealt exclusively in pianos within the past six months now have Victrola departments, and four other old piano houses which also handle musical small goods deemed it advisable to add a talking machine line.

Let it be said that none of the piano men regret the innovation, and let it further be said that the success of the piano business in the Twin Cities has not cut into the profits of the exclusively talking machine concerns, for these, without exception, have redoubled their volume of sales.

"The Columbia machines are going out of here faster than ever," declared Jay H. Wheeler, general manager in the Northwest for that line. "Our wholesale business is extending in every direction and the Minneapolis and St. Paul stores are doing an excellent retail trade. Our old customers who were content with a \$50 machine a few years ago, are now investing in the higher priced instruments. A few years ago the mere suggestion of bringing a \$500 Columbia Grand to the Twin Cities would have appeared ridiculous, but we sell them right along now. Of course, the lower priced machines always will be the popular ones. We are having a great run at present on the new \$50 Columbia with a stand and the improved mechanism."

The new exclusive Edison store, opened last month in Minneapolis by the Minnesota Phonograph Co., is proving all that was expected. Lawrence H. Lucker, president of the company, contemplates also turning the old parent store into a simon pure Edison emporium. "We are having the greatest kind of success with the Edison disc machines, and if the success continues we will have all we can do with the other line."

The fortnightly Victrola recital in the big concert hall of W. J. Dyer & Bro., May 2, was attended by the largest audience of the season and was another indication of the spreading popularity of the newest musical instrument. The jobbing end of the Dyer business has assumed great dimensions.

The new Columbia store at 17 East Sixth street, St. Paul, under the management of C. P. Herdman, is one of the neatest retail shops imaginable. The arrangement of the booths and the record shelves are most advantageous while the decorations are highly pleasing.

Excellent Victrola business is reported by the two Cable houses, Foster & Waldo, and Raudenbush.

TO INCREASE CAPITAL STOCK.

(Special to The Talking Machine World.)

Jacksonville, Fla., May 7, 1913.

The capital of the Barfield Music House, Inc., of which W. A. Barfield is president, in this city, will be increased from \$10,000 to \$25,000 for the purpose of expanding the business. Mr. Barfield, who is general manager of the company, intends in the future to devote his entire time and capital to his local interests, as he is not connected in any way with the Columbia S. C. concern of somewhat similar name. The Barfield Music House, Inc., has attractive warerooms at the corner of Julia and Forsythe streets, and is handling the Packard and other pianos, and the Victor and Edison talking machines.

GET LYON & HEALY SERVICE WHEN YOU BUY VICTOR GOODS

The many years we have been wholesaling Victor goods have made us particularly well informed as to the best methods of handling Victrolas, Records and Record Cabinets, so that the Dealer will experience no delay in receiving his goods.

We have on hand at all times as complete a stock of

Victrolas, Records, Record Cabinets and Accessories

as factory conditions will permit ready for immediate shipment.

WABASH AVENUE
and ADAMS STREET
CHICAGO

FROM OUR CHICAGO HEADQUARTERS

ROOM 806, NO. 37 SOUTH WABASH AVENUE, E. P. VAN HARLINGEN, MANAGER.

(Special to The Talking Machine World.)

Chicago, Ill., May 10, 1913.

The readers of The Talking Machine World will be glad to read of the progress made in the introduction of the talking machine in the public schools of Chicago. Below appears an extract from the report of Agnes C. Heath, head special music teacher in elementary schools, in the fifty-eighth annual report of the Board of Education of the city of Chicago for the year ending June 30, 1912. While the report is not recent, and does not tell the whole story, it is very probable that future reports will have a still more encouraging state of affairs to relate. Still the important thing is the methods used, and certainly this report indicates the exercise of a good deal of enlightened intelligence in this regard:

"Last year many Victor talking machines were purchased by the schools. I am sorry to say that the true value of this machine is not appreciated. Being a novelty, at first it was received with great pleasure, but in many cases it is now relegated to some place where it is least in the way. The general cultural value of hearing good music as a matter of common intelligence is well understood. These machines bring into the schools the best possible music, giving great enjoyment and appreciative understanding. This year we issued a new catalogue of records, which can be had upon application to the music department.

"We have in a few of our schools, among them the Brownell, Tilton and Kershaw, a rather unique feature. Twice a week a morning concert is given in the hall, commencing at 8.40 and lasting until school calls. The programs for these concerts are written upon the blackboard the day before, and the authors and music are discussed previous to attending the recital. If any operatic music is given a brief and simple synopsis of the story or the plot is told, over-technical analysis being avoided. Request programs are also sent in by the children, and as far as possible all requests are recognized. No one is forced to attend, and it is surprising how constant the pupils are and with what respect and courtesy they listen to the music."

About Lecture Recitals.

In last month's World there appeared an article, or, rather, a brief item, concerning lecture recitals conducted under the auspices of talking machine dealers. The Chicago correspondent of The World has since received various inquiries for further details.

An article on this matter will appear in the Chi-

cago correspondence of next month's World. In the meantime it may be said that the writer can put dealers in communication with sources whereby lectures on a stipulated subject can be obtained for a very reasonable price indeed. These lectures, of course, can be read by the dealer or anyone whom he may select, and a list of records illustrating the points brought out will be submitted with the lecture, providing the dealer states which make of records he wishes to exploit.

The services of a competent lecturer can be secured for a reasonable fee and expenses from Chicago and back, including hotel expenses or entertainment otherwise.

Address on Sound Photography.

Dr. Dayton Miller, of the Case School of Applied Science of Cleveland, O., delivered a most interesting address on sound photography entitled "Sound Waves and How to Photograph Them" at the Studebaker Theater before the National Federation of Musical Clubs last Friday afternoon. The speaker gave a most interesting demonstration of his apparatus for reproducing on the screen the tracks of sound waves. He spoke, sang and played musical instruments into the horn of the device and the vibrations, causing the sensitive diaphragm to convey its motion to a revolving cubical mirror, caused instant variations in the ray of light thrown across the screen. The odd and bizarre forms thus produced caused many exclamations of wonder on the part of the audience. Through means of flexible wires on bars the speaker, or rather demonstrator, showed the shape of simple and compound tone vibrations.

Waxing pragmatical, the lecturer stated that he saw how the art of sound photography could come to the aid of the manufacturer of musical instruments. While the scientist probably could not judge of the tone quality, he could analyze tones which seemed pleasing and correct to the skilled pianist or other musician, and could then give the benefit of this analysis to the instrument manufacturer, who would then have a criterion to go by in his work.

Manifold Activities of the "Talker."

While Dr. Dayton Miller was delivering his lecture on "Sound Photography," copiously illustrated last Friday at the Studebaker, the talking machine in various forms was discharging a multitude of functions in Chicago. It was being used to make money for the dealer. In a few music studios it was being used to teach interpretation through the great artists—it was being used in

the schools not only in opening exercises, but in teaching music—in English literature classes and in other departments of school activities. Cylinder machines were being used in offices for dictation purposes, saving much time. They were being used by people intending to go abroad or by office men wishing to carry on a foreign correspondence in studying language. It was being used for entertainment and educational purposes in thousands of homes. Verily, the uses of the talking machines are many.

Change Floor Managers.

S. M. Field, who has for some months filled the position of retail floor manager at the Chicago office of the Columbia Graphophone Co. most competently, has resigned and has gone to New York to go with his brother, Ben Field, into the metal fireproof door firm of Howell & Field. His successor will be C. E. Byers, who comes from St. Louis, where he has been retail floor manager of the Columbia Co. there.

Chicago First Again.

C. F. Baird, manager of the Chicago office of the Columbia Graphophone Co., has been awarded the first cash prize of \$50 for the Columbia branch ranking first in cash receipts during the month of March.

In Charge of Language Work.

R. G. Winters, formerly in charge of the order and correspondence departments, is now taking up the work of placing the Columbia in the schools for the Chicago branch. He has already succeeded in placing graphophones in some Chicago schools.

Lyon & Healy's Big Year.

Lyon & Healy are just finishing the inventory incidental to the close of their fiscal year. In Department H as well as other departments it has been a very wonderful year, in Department H—talking machines especially. Lyon & Healy service is no doubt largely responsible for this. Its reputation of promptness and efficiency is country-wide and is of the very highest character. The house is certainly to be congratulated on the great showing it is making.

He Has Got a Girl.

B. F. Dvorak, manager of the talking machine department at Rothschilds, is the proud father of a petite mademoiselle.

Gets Charge of Department.

E. C. Behrens is in charge of the talking machine department of the big Wieboldt store on Milwaukee avenue.

(Continued on page 22.)

The Wade

Fibre
Needle
Cutter No. 1

The WADE FIBRE NEEDLE CUTTERS, No. 1 and No. 2, trim the needle at the proper angle, and the needle can be repointed from 12 to 15 times, producing clean, perfect playing points. This cutter is provided with a self-acting stop, which prevents cutting away more than enough to make a new point.

The Wade

Fibre
Needle
Cutter No. 2

The WADE CUTTERS have an upper and lower blade, the upper blade being loosely pivoted and pressed against the lower blade by means of a spring, making a perfect contact. These blades are made from the best Swedish Tool Steel, and are scientifically hardened by electricity, giving the most lasting and finest cutting edge that it is possible to produce, and seldom ever needs sharpening.

The construction of the WADE No. 2 affords the most powerful cut of any tool ever made, and the blades work parallel to each other, therefore it requires practically no exertion whatever to trim the needle.

We fully guarantee this cutter in every respect, and if the blade of this cutter ever gets dull we will give you a new blade upon the return of the old one.

LIST PRICES—No. 1, \$1.50; No. 2, \$2.00

Model Programs.

Here are several of the very excellent programs now being given at the Victor recitals in the concert room on the first floor of the Chicago house of the Rudolph Wurlitzer Co. They will be found highly suggestive to dealers who are now conducting or are considering the giving of talking machine concerts in their places of business:

PROGRAM No. 1.

- 1.—17284 Faust—Ballet Music—Waltz.....Vessella's Italian Band
 - 2.—88335 Bohème—Io non ho che una povera stanza.....Vessella's Italian Band
 - 3.—87101 Elegie. In French.....Caruso
 - 4.—88065 Good-bye. In English.....Alma Gluck
 - 5.—64138 Annie Laurie. In English.....Nellie Melba
 - 6.—64109 Absent (Metalf). In English.....John McCormack
 - 7.—64074 Souvenir (Drda)—Violin (Piano accomp.).....Evan Williams
 - 8.—31847 Gems from "The Quaker Girl".....Maud Powell
 - 9.—88354 Werther—Ah! Non mi ridestar (Ah! Do Not Awaken Me).....Victor Light Opera Co.
 - 10.—16960 Under the Double Eagle March.....Battistini
 - 11.—17173 Rose of Pyramid Land, from "Hanky Panky".....Sousa's Band
 - 12.—17189 Oh, Promise Me, from "Robin Hood".....Pryor's Band
- Dearie (Kummer).....Alan Turner
Elsie Baker

PROGRAM No. 2.

- 1.—70046 Liebestraum (A Dream of Love) (Liszt).....Herbert's Orchestra
- 2.—87044 Tosca—E lucevan le stelle (The Stars were Shining) In Italian.....Caruso
- 3.—87107 Whispering Hope. In English.....Gluck-Homer
- 4.—88138 Stille Nacht, heilige Nacht.....Schumann-Heink
- 5.—31856 Gems from "The Count of Luxembourg".....Victor Light Opera Co.
- 6.—74167 Serenade (Standchen)—Violin.....Mischa Elman
- 7.—64205 Macushia (Rowe-MacMurrrough). J. McCormack
- 8.—70073 Rigoletto Quartet, "Bella figlia dell amore".....Victor Opera Quartet
- 9.—17084 Moonlight Bay (Madden-Wenrich).....American Quartet
- 10.—17080 The Harbor of Love.....Van Brunt
- 11.—16967 The Herd Girl's Dream (Violin, Flute, Harp).....Neapolitan Trio
- 12.—95211 Lombardi—Qual volutta (Verdi).....Neapolitan Trio

PROGRAM No. 3.

- 1.—35270 Jewels of the Madonna—Intermezzo.....Victor Concert Orchestra
- 2.—70084 Merry Wives of Windsor Overture.....New Symphony Orchestra of London
- 3.—17236 Far Off I Hear a Lover's Flute.....Agnes Kimhall
- 4.—70053 My Little Lovin' Sugar Babe.....Heidelberg Quintet
- 5.—74321 Shamrock Belles (Mohaney-Wenrich).....Campbell-Burr
- 6.—70083 Badinage.....Victor Herbert's Orchestra
- 7.—17227 Love's Old Sweet Song.....Clarence Whitehill
- 8.—88339 Oh, for the Wings of a Dove.....Lucy Marsh
- 9.—60031 Glow Worm—Intermezzo (Lincke).....Victor Orchestra
- 10.—87082 In Lover's Lane.....Pryor's Band
- 11.—87082 The Rosary (Nevin).....John Barnes Wells
- 12.—35275 For All Eternity (Eternaments).....Alan Turner
- 13.—35275 Una furtiva lagrima—Elisir d'Amore.....Caruso
- 14.—60031 Italian Street Song—Naughty Marietta.....Lucy Marsh
- 15.—87082 Del Tempio—Pescatori di Perle.....McCormack and Sammarco
- 16.—35275 Andante from Beethoven's Fifth Symphony Op. 67.....Victor Concert Orchestra
- 17.—35275 Largo, from "The New World" Symphony.....Victor Concert Orchestra

Enlarges Store.

A. Glick, talking machine dealer at 2100 West Division street, has enlarged his store and improved it in many ways.

Move to Better Quarters.

Henry Horner, well known piano and talking machine dealer at 700 W. North avenue, has moved his store to 40 West North avenue.

T. M. Co.'s Notes.

The Talking Machine Co., exclusively wholesale distributors of Victor goods, are having a very remarkable trade both on Victor machines and records.

H. L. Flinteye, Jr., has increased his territory which hitherto has been confined to Chicago, so that it includes Kenosha, Waukegan, Racine and contiguous points.

A New Needle Arm.

A. L. Burke, a Chicago inventor, is showing a device to the trade that is attracting much attention and causing considerable comment. It is in the form of a composition arm which is designed to replace the steel arm on the reproducer of Columbia and Victor talking machines, and is said to eliminate the thin, sharp tones that are peculiar to the steel arms, reduces the noise of the needle and produces a tone that is rich and full. A company has been formed under the name of the Natural-tone Needle Arm Co., which will manufacture the device in Chicago and push the business energetically.

Salter Co. Designing New Cabinets.

The Salter Co. is planning a number of new designs to further enlarge its already complete line. This is made necessary because of the ever-increasing and wide-ranged demand that is being made upon the company for its products. The factory is running to full capacity and doing much overtime work in order to keep pace with the orders.

Mrs. Frances Clark in the City.

Mrs. Frances Clark, who has charge of the work in schools and playgrounds for the Victor Co., was one of the prominent delegates to the recent convention of the Federation of Musical Clubs held in Chicago recently. She made one of her inspiring addresses, which was keenly enjoyed.

New Wade & Wade Shops.

The increasing demand for the Wade & Wade fiber needle cutter has been such as to necessitate more room and, although the concern is now located in more commodious quarters at 3807 Lake avenue, it still is being pushed to the utmost to keep up with the orders that have been received from all parts of the country. A new two-story shop building is being erected by the firm on an adjoining lot.

Record Orders in Ragtime Records.

The Chicago Record-Herald recently printed the following despatch from London:—Since the ragtime bacillus crossed the Atlantic to England 2,000,000 gramophone ragtime records have been sold. And in round figures the public has paid \$750,000 for the pleasure of hearing the catchy numbers in their own homes. Popular taste gives first place to "Everybody's Doing It," and other favorites come in the following order, "I'm Going Home to Dixie," "Alexander's Ragtime Band" and "Waiting for the Robert E. Lee." No parallel is known in the annals of business to this sudden and great demand for one kind of music, which at present shows no sign of falling off. The London Times, too, has at last condescended to notice this widespread fashion and provides a diagnosis of the popular music. "Ragtime is absolutely characteristic of its inventors—it is the music of the hustler, of the feverishly active speculator, of the 'skyscraper' and the 'grain elevator.'"

Concerts at the Shops.

The Talking Machine Shops has instituted afternoon concerts that are attracting ever increasing numbers of visitors to that very delightful place and keeping G. W. Davidson and Miss Tischler, who are responsible for them, busier than ever. Miss I. C. Caldwell, formerly with Lyon & Healy, and who is now connected with the shops is away on a vacation. She is devoting most of her time to the record department.

A New Edison Man.

J. Russell Kittleman is a new man with The Phonograph Co., and a new man to the talking machine trade, but is following up the many prospects that have favored the company since the opening of the new store like a veteran.

T. M. Co. Gets Opening Order.

The Otto Grau Piano Co., of Cincinnati, one of the oldest and best known concerns in its line in the Ohio metropolis, has decided to add a Victor department, and has placed its order for opening stock with the Talking Machine Co., of this city. Mr. Mildner, who will have charge of the department, is here posting up.

Among the visitors to the Talking Machine Co. the past week or so were: Mr. Buck, of M. J. & B. M. Buck, Lansing, Mich.; Wm. Hemmenway, Sycamore, Ill.; Mr. Goodman, of the Goodman Piano Co., Cleveland, O.

The Talking Machine Co. has had an excellent trade of late, and is more than pleased with the prospects for the year.

On Western Trip.

E. F. "Doc" O'Neill, of the traveling forces of the Victor Co., was in Chicago recently in the course of a Western trip in the company's interest.

Will Handle Chinese Records.

John F. Monohan, laundry supplies, 22d and Wentworth streets, has opened a department for the sale of machines and Chinese records exclusively.

Takes on the Victor Line.

George Miller, a well-known druggist, corner of Montrose and Hermitage avenues, in Ravenswood has opened a Victor department.

South Opening Up.

M. Sohmers, who travels for the Victor Co., was in the city on his way to Iowa. He had just been on a trip through the South and says that on all hands there are encouraging signs that Dixie-land is opening up in a talking machine sense. Conditions are generally good down there except in a few localities, which have been affected by high water. He says that in a very few years the South will be giving the West and East a vigorous run for their money so far as the sales of talking machines and records are concerned.

Gets Promoted.

A. F. Scannell, who has been in the retail machine department of Lyon & Healy, has been promoted to the city wholesale sales department.

Tresch, Fearn & Co. Move.

Tresch, Fearn & Co. have moved their store directly across the street from their old location and have built comfortable demonstrating rooms and greatly increased their stock. The new address is 130 North Fifth avenue.

SUCCESSFUL SALESMANSHIP—WHAT IT IMPLIES.

Calls for Highest Order of Intelligence and Ability—Its Psychology Consists of Applied Commonsense and Experience Plus Honesty of Purpose, Optimism, Energy and a Hundred Per Cent. Common Every-day Hard Work, Says J. E. Linihan.

(Special to The Talking Machine World.)

Chicago, Ill., May 10, 1913.

An excellent address on "Salesmanship" was delivered last Friday at a luncheon of the Executive Club of the American Specialty Manufacturers' Association, by the president of the association, J. E. Linihan, who is general manager of the United Cereal Mills, Ltd.

While addressed to a special class, the principles laid down govern all lines of trade, wholesale or retail, and are so admirably and pertinently stated that the Chicago representative of this paper secured Mr. Linihan's consent to the publication of that portion of his address of general interest, and which follows:

Salesmanship is a profession, calling for the very highest order of intelligence and ability in the American business man of the present day.

There have been a great many essays, orations and sermons upon salesmanship by some of our brightest minds.

You have all of you been told about the psychology of salesmanship. I believe that the true psychology of salesmanship consists of applied commonsense and experience, plus honesty of purpose; optimism; energy, and 100 per cent, common, every-day, hard work.

You gentlemen, who represent in this city manufac-

turers located in different parts of our country, have a big responsibility resting upon your shoulders. In many instances you are the only representative of your company, with whom the wholesale grocer and retail grocer comes in personal contact, with the possible exception of an occasional flying visit made by some officer or member of your firm.

Remember this—that the opinion formed by your customers regarding your house is, to a great extent, the opinion they form of you personally.

How necessary then it is that you men so conduct yourselves, in your business relations with your wholesale and retail customers, that the impression gained be one of the highest value to the firms you represent.

True salesmanship enters more or less into almost every business transaction. If a man is a salesman in the highest meaning of the term he has gone a long way toward acquiring an education which will fit him to cope successfully with the most difficult problems in business.

I once heard Elbert Hubbard say in an address that salesmanship would never be reduced to an exact science until some genius had invented and perfected a process whereby the human emotions, sensibilities and heart-throbs could be placed under a glass and analyzed, catalogued, named and numbered.

I believe that he is right. We have, all of us, met at some time in our lives those men who by their splendid physical and mental equipment radiated an influence

(Continued on page 24.)

FROM OUR CHICAGO HEADQUARTERS—(Continued from page 22).

which won us almost instantly to their cause—for whom to do as they willed—was our greatest pleasure.

You, young men, who are representatives of your companies in this city, should remember that you are traveling along a road of great opportunities; salesmanagers, general managers and presidents of companies are often recruited from the ranks of salesmen. Make the most of your present opportunities. It is largely up to you.

One thing which we should all of us learn, as early in our business careers as possible, is to know thoroughly our own business; know the goods we sell. By this I do not mean that we should merely know our goods by their first name, and the price at which they sell—but that we should know how they are made; the combination of materials which enter into their manufacture where the materials are grown or assembled, the processes of manufacture—in fact everything of interest pertaining to them.

It is not possible for a salesman to know too much about the goods he is selling. Acquiring this knowledge and information, of course, requires some hard work and study upon our part, but it is well worth the effort. The great trouble with the most of us is that we want to take life too easy—we are not willing to work hard enough.

Have you ever stopped and thought, when you saw the splendid success being made by some man of the opportunities in his life, how far short the most of us come from working out the potential possibilities that are ours?

There is no royal road to success in business. Success for the great majority of us is gained over the rocky road of difficulties, and our only chance lies in being able, by hard work and steady application to the task in hand, to overcome these difficulties, and win success by putting to their best uses our natural and acquired abilities.

There is to my mind a great difference in the quality of salesmanship. By this I mean that there is something more to making the sale, than getting the order, and the signature of the buyer upon the dotted line.

A good salesman will so explain to the buyer the superior qualities of his goods and the advantages to be derived by the purchaser in buying these goods that he has—not only made a sale—but he has also made a salesman of the purchaser, with the result that when the goods are received they represent to the buyer desirable merchandise, in whose qualities he has confidence, and he immediately sets about recommending them and selling them to the retailer, or consumer, as the case may be.

There is a decided difference between a sale, made in one instance by intelligent, educational work, and upon the other hand, by bull-doing, brute-force and hypnotism. In the first instance the goods bought, represent in the buyer's mind desirable merchandise, to be enthusiastically recommended and resold. In the second place, a reaction sets in when the selling influence is removed, and the purchaser feels that he has been imposed upon and is very apt to take but little interest in the resale of the goods.

We should always encourage and sustain our salesmen, when they are doing right. We should be very careful, indeed, in regard to the letters that we write them. Many times good salesmen are discouraged and finally ruined on account of the salesmanager constantly writing them discouraging, nagging letters. Remember, that a type-written sheet is a cold, impersonal, thing. That the statements we can make face to face to these men, modified

by the expression of face and tone of voice, sounds cold and discouraging, when read from the typewritten page of a letter.

It is said that the great merchant, Marshall Field, had a motto: "The customer is always right." I believe that we salesmanagers should have a motto something like this: "The salesman is always right." By this I mean that we should always have confidence in our salesmen and never decide against them in any controversy that may come up, until we have thoroughly analyzed the situation and found that they are in the wrong.

Impress upon these salesmen of yours that they should always have the courage to walk out of a store, or place of business, without an order, rather than to secure the order by misrepresentation or dishonest statements.

To be a successful salesman the man should be a gentleman. The day of securing an order by buying a drink, or telling a questionable story, is a day that has gone in business circles—never to return.

Instruct your salesman that he should not oversell his retail customers. Let your salesman understand thoroughly that he should never run down his competitor, or his competitor's goods—that like the scandal monger in society—the man most thoroughly despised in business is the one who tries to sell his goods and build himself up by trying to detract and take from the reputation of his competitors. The knocker has had his day among American specialty salesmen.

It is of utmost importance that our salesmen take good care of their health, be of good habits, and so order their conduct the evening before that old—R. E. Morse—will not sit with them at the breakfast table the morning after, an unbidden and unwelcome guest.

We should all remember that there is no asset so valuable to a successful salesman as energy, optimism and enthusiasm, radiating from a pair of clear eyes, and a healthy, wholesome countenance made possible by being in "the pink of condition."

LETTER FROM KIMBALL CO.

Of Guthrie, Okla., Addressed to the Columbia Graphophone Co. Is Interesting in Its Appreciation of the Policy of This Establishment.

The following letter, received a few days since by the Columbia Graphophone Co., from the Guthrie, Okla. branch of the W. W. Kimball Co., is indicative of the broad and appreciative attitude adopted by the leading piano houses towards the talking machine. The W. W. Kimball Co. is one of the largest and best known piano manufacturers in the country. The headquarters of the company are in Chicago, and in its home offices, and in many branch stores throughout the country, talking machine departments have been established in order to cater to the demands of the company's clients.

This letter, sent from the Guthrie, Okla. store, under date of May 1, is unusually interesting, as an example of the high esteem that the Columbia line is held in by the W. W. Kimball Co., and reads as follows: "Just received your letter of

April 25, and I wish to congratulate you for raising the price of the 'Eclipse' to \$25, and agree with you that \$25 should be the bottom price of any good machine, for a factory can not do itself justice, neither can the dealer, and if the customer is worth any kind of a deal, he is able to purchase the \$25 machine.

"(Signed)

E. H. KNAUSS, Manager."

SOUGHT NO UNFAIR ADVANTAGE.

W. A. Lippman, secretary and manager of the Field-Lippman piano stores, St. Louis, Mo., writes as follows to The World under recent date, calling attention to an item which appeared in the St. Louis letter last month, in which he says: "This statement is not fair to us. We quote: 'Field-Lippman piano stores, etc., advertised that the newspapers had discriminated against them in not displacing the older advertisers for their benefit.' This is not correct. We did not ask to displace the older advertisers, nor did we ask for any privilege which we would not have been glad to see any other live dealer take advantage of.

"The dealers were all using small space—about 50 lines by two columns. Our aggressive advertising policy did not accord with this small space idea, and without disturbing other advertisers we offered the newspapers copy which extended clear across the bottom of the Victor ad, leaving it squared off, but naturally dominating the advertisement. There was no desire on our part to displace the other advertisers. Evidently some of them did not like it, but several papers accepted the copy, and one of them for the first insertion, and the other for several months.

"The Aeolian Co. afterwards took the same position in one of the papers, and the same space as used in other cities by different advertisers. There was no unfairness on our part, and we do not like to be spoken of as seeking an unfair advantage."

THE VICTOR LINE IN FORT WAYNE.

Fox Brothers & Co., who recently took on the Victor line in their store in Fort Wayne, Ind., have installed five handsome demonstration booths for the purpose of displaying the line and testing the records to advantage, and are also using a liberal amount of newspaper space for calling the attention of the public to their new department, which has met with success from the start.

PAY OR PUBLICITY.

He was a North Country small tradesman who had just set up business for himself, and it was his dearest ambition to restrict his customers to paying cash, and that promptly. But, alas! there were a good many good souls who insisted on taking out credit books.

He began to feel very keenly that this sort of thing must be stopped before it went too far, so he posted up the following notice just inside the door of his shop, where all could read:

"Please don't ask for credit, as a refusal often offends."

But, alas! this delicate hint direct had no effect whatsoever, and the struggling small trader nearly tore his hair in vexation.

Next morning this notice took the place of the former:

"The names and addresses of all those who buy goods at this shop and don't pay for them can be viewed in the credit ledger for the sum of five cents."

The result was little short of miraculous. The curious paid their nickels with avidity—just to see who owed—and inside a week every debtor had paid his account in full.

The clerk who waits on customers with an out-of-the-window look in his eyes is worth about half the pay he's getting. Selling goods takes every bit of a man's attention, and he will fail often enough then.

Keep out of the way of the knocker and his hammer; he may want you to serve as an anvil.

Free Test Offer To Jobbers and Dealers

Upon your request we will be pleased to mail to your address, for a free test, samples of each of the three-tone Permanent Jewel Needles, the marvel of recent improvements for the phonograph user's benefit.

The following are our frank and honest claims for the permanent needle:

- 1—Tone production, beautiful, clear and full.
- 2—Economy to the consumer.
- 3—You don't have to change the needle. Once in place, if not accidentally broken, it will play 10,000 records.
- 4—The needle is not harmful to the records.
- 5—We give a certificate of guarantee with each needle for one year. In other words, 1 year's service for \$1 to the consumer. "Can you beat it?"

It must appeal to you that there must and will be evolution in needles as in everything else. You will soon be confronted by keen competition on the new permanent needle machine, and no doubt the new permanent needle machines already on the market will give you a hard chase. "A word to the wise is sufficient." What is your salvation? Say to your customer: "I can furnish your machine with a permanent needle and the cost of the needle to the consumer is only \$1 each—a price within reason, and one that permits the consumer to buy the 3 tones and effect a big saving. Write for the samples on this free test offer.

Permanent Phonograph Disc Needle Co., Dept. 6339, Chicago

CONVENTION OF TALKING MACHINE JOBBERS IN JULY.

Completing Arrangements for Gathering at Niagara Falls—Many Important Subjects to Be Discussed—President J. Newcomb Blackman Tells of Developments—Important Edison Report to Be Made—C. N. Andrews Tells of the Program Outlined.

The past month has been a very busy one for the officials and committee members of the National Association of Talking Machine Jobbers. The coming convention of the association in July has necessitated the calling of a number of meetings of the executive and arrangement committees, and in addition the officers of the association have prepared letters and outlined plans that should prove of considerable assistance to the members in keeping track of the plans for the convention. Judging from present indications, the 1913 convention at Niagara Falls will be the banner one in the history of the association. An unusually large attendance is already assured, and the popularity of the Falls as a scenic and convention location is certain to play an important part in arousing the enthusiasm of the members of the association.

J. Newcomb Blackman, president of the association, gives a very interesting report on the progress achieved the past month in the matters in his jurisdiction: "In the very near future," states Mr. Blackman, "I contemplate addressing a letter to every member of the association asking them for any suggestions regarding the convention, and particularly requesting them to recommend subjects which it would be well to treat in papers to be read at the convention. If the members do not wish to write these papers themselves I would appreciate it if they would suggest someone who will be best fitted to treat the subjects they have in mind.

"The subjects we are real desirous of handling and which will be the most valuable to the members are broad, general subjects, not personal subjects in a narrow train of thought, or pertaining to any one company. These subjects should relate to the industry as a whole, and consequently would be of benefit to each individual member in the conduct of his own business. For example, they may be voiced along the lines of price maintenance, which is a very important topic, extension of credits, salesmanship, successful instalment methods, proper store equipment and other topics in a similar vein. These subjects should be presented in a concise form, so that if it is thought advisable, suitable action could be taken by the members at one of the association's meetings, either by resolution or otherwise, thereby taking advantage of the thoughts expressed in the papers previously submitted.

"During the past week Louis Buehn, secretary of the association, and H. H. Blish, a member of the executive committee, who with myself, constitute a special Edison factory committee to take up with the Edison factory certain matters referred to in a resolution presented by the association, had a conference with the Edison officials at the factory. While we are not in a position to state definitely the detailed outcome of this conference, we can say that it was very satisfactory and that very beneficial results will be the outcome of this conference.

"As such matters are of an executive nature, and cannot be publicly presented at this time, suitable information to members and a report of this conference's transactions will be made at the convention in July. This report will undoubtedly prove of considerable interest to every Edison jobber."

During the past few weeks Mr. Buehn and Mr. Blackman held a conference and went over the constitution and by-laws of the association very carefully, and the members in the near future will be notified regarding changes which should be made by amendment at the convention, to conform with the laws of the State of Illinois, thereby removing any question regarding the interpretation of same hereafter. This action will be based on the recommendations given by expert legal advice.

Louis Buehn, secretary of the association, sent out to the members this week the first official notice of the convention. This letter formally announced the dates of the convention as July 7 and July 8, with headquarters at the International Hotel,

Niagara Falls, N. Y. This letter will be followed by other letters urging upon members the importance of attendance and a general flow of publicity will be issued in the nature of post cards with views of the Falls, and catalogs and other printed matter, pointing out the scenic attractions of the Falls. Members are notified to inform either Mr. Buehn or Mr. Andrews, chairman of the arrangements committee, what they will require and suitable hotel accommodations will be arranged for them. Mr. Buehn states further that it is very important for all members to decide regarding attendance at the earliest possible moment, as this will aid materially in arranging the programs.

C. N. Andrews, of Buffalo, N. Y., chairman of the arrangement committee, states that everything is well under way for a very attractive program, and that reports indicate a very large attendance. L. C. Wiswell, Chicago, Ill., and W. O. Crew, Elmira, N. Y., the other two members of the arrangements committee, are planning to spend a Sunday in the near future with Mr. Andrews at the Falls, with a view of arranging for every detail that will insure the comfort and pleasure of those who will be in attendance. The executive committee will hold a meeting on Sunday, July 6, in order that any matter that should receive its attention before the opening session may be disposed of.

Mr. Andrews reports further that the meetings of the convention will be held at 9.30 in the morning on Monday and Tuesday, July 7 and 8, and on the second morning's session it is the purpose of the committee to arrange for the reading of the papers, which will be followed by the regular executive session, thus giving an opportunity to take any action which the papers should seem to justify. "If each member of the association," states Mr. Andrews in his report, "will only use the influence which he has among those in his territory it will do as much and probably more than anything else to bring out a large attendance. Those who have analyzed the business situation, particularly in view of the price maintenance uncertainty, will understand the importance of getting together with all the factors in the business, which will not only give added support to the industry, but enable each member to receive considerable help through learning the viewpoint of the most successful people in the line. I want every member to feel that he is a committee of one to work with the committee of arrangements and make suggestions, for very often the best ideas remain unknown, because members will not speak up. There is ample time and opportunity for members to give some serious thought to the convention and our aim will be to make our session not only help every individual member, but trade in general, and suggestions along these lines from the members should be sent to me at the earliest possible moment."

Recent additions to the membership of the National Association of Talking Machine Jobbers include the following concerns: W. H. Busher & Sons, Cleveland, O.; Hayes Music Co., Toledo, O., and H. B. Berner, Cleveland O.

BOUND TO SELL THAT RECORD.

Telephone and Victor Co.'s Record Department Called on for Aid When Customer Whistled Air of Selection Desired.

Not long ago a customer walked into a Victor dealer's store in Philadelphia to purchase a record, says "The Voice of the Victor." He had no idea of the name of the record, but "he could whistle it." He did, but the artistic achievement brought no ray of intelligence to the salesman. No one, in fact, recognized the tune. As a last resort, the record order department of the Victor Co., in Camden was called up and the tune whistled into the telephone. It was "In The Shadows." The customer got his record.

HANDLES TALKING MACHINES.

The Castner-Knott Dry Goods Co., Which Recently Opened a Piano Department in Nashville, Tenn., to Feature the Victor Line—Special Equipment Installed in New Department, of Which Edward J. Hayes Is Manager.

(Special to The Talking Machine World.)

Nashville, Tenn., May 19, 1913.

The Castner-Knott Dry Goods Co., of this city, which recently opened a handsome piano department, is announcing in the daily newspapers the fact that it is also handling Victrolas and Victor records. Attractive and forceful advertisements are being used in all the leading papers, and the copy is concentrated on the higher-priced types of machines.

The new Victrola department in this popular department store is under the management of Edward J. Hayes, formerly connected with the O. K. Houck Co., and familiar with the Victrola trade from every standpoint. Mr. Hayes is enthusiastic over the possibilities of the new Victrola department, and expects to close a splendid business both in machines and records.

A number of tastefully decorated and comfortably furnished demonstration rooms have been constructed in a prominent part of the store, and the display of machines is most complete and attractive. These rooms are sound-proof and well ventilated, and judging from the results of the first advertising of the new department, they will be used to good advantage.

The Castner-Knott Dry Goods Co., which is one of the leading department stores of the South, is a member of the Clafin chain of high grade department stores located in various parts of the country. It has always catered to a high-class and discriminating clientele, and its new piano and Victrola departments bid fair to become emphatic successes.

AN OPTIMISTIC REPORT

Made by H. A. Yerkes Regarding Columbia Wholesale Business for the Four Months of 1913—Big Gains Made in New England.

Optimistic to a marked degree are the reports of H. A. Yerkes, manager of the wholesale department of the Columbia Graphophone Co., in summing up the results of the first four months business of this year, and the outlook for the immediate future. In addition to being manager of the wholesale department, Mr. Yerkes is district manager of the New England territory, and is in very close touch with this part of the country. "Business at the present time in the New England territory is excellent," states Mr. Yerkes. "Talking machine dealers are enthusiastic in their praise of the quality of the products being turned out by our company, and many piano houses in New England state that their business in pianos has been considerably increased by their handling Columbia machines and records. A purchaser of a talking machine is very often in the market for a piano or player-piano, and the merchant handling a talking-machine line is in an excellent position to cater to this trade.

"Our business for the first four months of this year has really been remarkable, and this month will apparently be just as satisfactory. In New England in particular, our business has gained splendidly, and the month of April was the greatest month in New England territory that the Columbia Co. has ever experienced."

KEEPING TRACK OF ARTISTS.

Already the talking machine manufacturers are calling the attention of their dealers to the plans for next season of the great artists who have made records for the different companies. The Victor Co., for instance, advise their dealers that Fritz Kreisler, the famous violinist, has arranged to tour the entire country next season and appear with various distinguished organizations in over ninety concerts. Being forewarned, the dealers can do some effective advertising, locally, when the artist is scheduled in their own or a neighboring city.

Introducing an Upright

The Improved

HERE'S a small duplicate of a big announcement next week in the Saturday Evening Post.

You can't talk this way about an instrument like this new "Regal" at \$50 without getting things stirred up.

It is one beautiful \$50 worth. It has the Columbia tone-control leaves. It has a lid. It has the new Columbia tone arm and the new Number six Columbia reproducer. Mahogany or quartered oak—and fine cabinet work. We don't have to tell you where this *one* and only upright instrument at \$50 will stand in the market.

The principal trade that this new "Regal" is going to deflect will be the \$25 trade. There are enough *exclusive* good points worth talking about to make any \$25 prospect see the worth of another \$25.

You can leave it to the customer to decide for himself as to what the price looks like after he has seen what the instrument looks like—and listens like, too.

THE SATURDAY EVENING POST May 24, 1913

\$50 will now purchase

Special terms to introduce the Improved Columbia "Regal"

8500 dealers are ready to deliver for free trial at home—to be paid at \$5 a month after first payment is arranged.

NOTE THE NOTES

The cash price to hold good on these terms—not a cent of interest and no extras of any kind.

Your purchase money refunded if you find the "Regal" not exactly as represented.

IMPORTANT
This Columbia "Regal" Grafonola will play every record in the great Columbia catalogue—also every disc record on the market, of any manufacture.

The Tone-Arm and Tone-Chamber
One continuous uninterrupted passage accurately reproduced, sonically correct.

The Reproducer
Our new "Number Six"—the perfected product of many thousands of experimental models—moves of perfect ease, purity, brilliancy and resonance of tone.

The Motor Mechanism
A power plant that revolves the turntable in complete silence and so accurately even speed down to the last revolution.

Columbia Grafonola "Regal" in Quartered Oak
With lid down on tone-control leaves partially open. Steel plate for holding 8500 double disc records. 1120 keys. Model in black or mahogany or in record album.

Columbia Graphophone

Woolworth Building

Creators of the talking machine industry. Pioneers and leaders
Largest manufacturers of talking machines in the world.

Right \$50 Grafonola ed "Regal"

THE SATURDAY EVENING POST

an upright Grafonola

A 50 per cent increase in the buying power of 50 dollars

If you had made up your mind to wait until you could get a complete, enclosed, upright Grafonola at your price—this message is for you.

The Tone-Control
Why is the pleasure of the music—by the partial or complete closing or opening of the tone-control leaves.

The Speed Control
Equipped with the 18-needle tone lever—a simple, new and revolutionary device.

The Cabinet Work
Outstanding and unique in the industry—completely constructed and finished.

NOTE THE NOTES

In order to appreciate what this instrument at this price really signifies, you must realize that it is absolutely complete in itself, independent of any separate cabinet.

It has the latest Columbia features—the new bayonet-joint tone-arm; the new No. 6 reproducer, that is already bringing to talking machine owners an entirely new idea of pure, natural tone; and the same tone-control leaves that identify all Columbia Grafonolas.

You must own this Columbia Grafonola—the one incomparable musical instrument that brings into your home all the music of all the world.

If you do not locate a dealer who can deliver this instrument on these terms, write us and we will put you in touch with the nearest dealer at once.

Columbia Graphophone Co.
Box 000, Woolworth Bldg., New York

Columbia Grafonola "Regal" in Mahogany
With lid partly open and tone-control leaves in open position.
Shall require regular care and maintenance (see instructions) in their original envelopes or in related albums.

IF you have not already decided that there are *money reasons* for taking on the Columbia line, don't forget that the public sees through its own eyes. Every time our advertisements appear the Columbia slice in the market is being cut a little deeper.

This next week's advertisement enables us once more to make a definite Columbia suggestion to an enormous number of people—among them, the chances are, a good part of the people you have a right to consider your regular customers.

The Improved "Regal," a complete, enclosed, upright Grafonola at \$50, should not be regarded by you merely as a difficult thing for competing instruments at more money to meet, but as a market-reacher that you have an entirely different sort of interest in—one that can do *your* work and make money for *you* as well as for anyone else.

Notice we said "money reasons." There is, legitimately, a good deal of sentiment in this business. But the only ground we have any idea of getting together on is that of *money*—mutual profit.

Graphophone Company,
New York

in the talking machine art. Owners of the fundamental patents.
Write for "Music Money," a free book you ought to have.

NEW KEEN-O-PHONE CATALOG

A Very Complete Publication Containing Illustrations and Descriptions of the Company's Very Attractive Styles Just Issued.

The Keen-O-Phone Co., Philadelphia, Pa., has just issued a new catalog devoted to its products—a very excellent sample of the printers' art. It is a volume of twenty-four pages, each page being printed in black on a light tint block. The cover is of heavy stock, embossed in gold.

The first few pages are devoted to the special features of the Keen-O-Phone, an apt description being given of the Keen-O-Phone stationary spiral tone arm, all-metal sound box, the Keen-O-Point jewel-tipped permanent needle, the sound modulator, sliding turntable, double spring motor, amplifier, etc.

A description also follows of the various Keen-O-Phone models that are illustrated, together with some details of Keen-O-Phone records. The styles illustrated are: Style XXX, retailing at \$225; Style XXV, retailing at \$175; XX, retailing at \$125; IV, at \$85; VII, at \$75; V, at \$60, and I, at \$35.

Illustrations also appear of the two positions of the sound box, one when playing the Keen-O-Phone record and the other when playing other disc records.

It is a very comprehensive publication, and will be mailed to dealers upon application.

SALEMANSHIP TALK

Issued by the Steinert & Sons Co., Boston, Interests Dealers—Manager Royer Reports Unusually Active Victor Business.

(Special to The Talking Machine World.)

Boston, Mass., May 10, 1913.

Business at the Arch street Victor headquarters of the M. Steinert & Sons Co. is reported by Manager Herbert L. Royer to be unusually good for this time of year, especially in the sale of machines. Several improvements are under way at the headquarters which will considerably facilitate the handling of business. Manager Royer has just prepared a cleverly-worded leaflet on salesmanship which will be sent out to the various agencies and jobbers who have business relations with this house, and if the advice therein incorporated is followed unusually expert salesmen should result.

BLUE AMBEROL RECORDS POPULAR.

(Special to The Talking Machine World.)

Boston, Mass., May 10, 1913.

At the large salesrooms of C. E. Osgood & Co. Chester J. Sylvester, who manages the talking machine department, states that his business for April was \$1,000 ahead of what the same month of 1912 produced. The Blue Amberol Edison records, he says, are selling wonderfully well. The rack accommodations in the department have been considerably improved in the past few weeks, and the demonstration rooms have been enlarged.

Wanted—Talking Machines and Accessories

Rosefsky Installment House, talking machine dealers, Punxsutawney, Pennsylvania, would like to hear of anything new in machines or accessories. When writing send catalog prices and sample, if possible.

The CLEANNOTE Pad.

If owners of talking machines only knew that the use of the CLEANNOTE PAD would improve reproduction 50 per cent, reduce scratching to the same extent, and double the life of records, all would buy quickly. The Cleannote Pad dusts, polishes and lubricates. Money returned if not satisfactory. Price, 25c. Discount to trade.

VOX HUMANA TALKING MACHINE CO.
Nantucket, Mass.

A REAL TALKING MAN.

Designed to Exploit Certain Commercial Specialties Has Made His Appearance in France—This Machine Is Humanlike in Its Completeness and in Its Results.

Talking by machinery is not new, for we all know about the talking machine, and advertising by machinery is done in endless ways, but to have a "man" lecture on the advantages of a certain article, making the proper gestures and facial expressions, is a novelty that has made quite a stir in France where it was invented.

Talking dolls, with a small phonograph inside them, have been on the market quite a while, but this automaton is distinctly new. A great number of the movements are given to this body, which give it a life-like appearance, the mouth moves, the eyes also move, it makes many gestures with the whole arms, forearms, hands and fingers, all of which are operated by motor-driven mechanism in the base or platform on which this man stands.

The most remarkable thing about it is that it can be so adjusted that its movements will fit any "speech" that is placed in the talking apparatus for reproduction. In all it can assume 5,600 different positions. It can also sing, and it is now being used in Paris in several places to advertise songs and all sorts of articles that are demonstrated by lecturing about them.

Some of the phonographic records are songs which this automaton sings with proper gestures. It can be dressed in various costumes, and the inventors are now at work making the same thing in the form of beautiful women, with a view of having it serve as a model for new gowns and talk about the gowns at the same time.

Of course, it is available in any country, as the record can be made in any language. It can also be so arranged that the figure sits level with the floor by having the base that contains the mechanism sink into the floor.

BOSTON GIRLS' HIGH SCHOOL

Has Just Installed Two Columbia Talking Machines Which Are Used in the Gymnasium—Thirty-eight Columbia Machines Now Being Used in the Boston Public Schools.

(Special to The Talking Machine World.)

Boston, Mass., May 12, 1913.

The Boston office of the Columbia Co. is highly elated over the way that schools are taking hold of the idea of installing machines in the institutions of learning. Since February 11 thirty-eight Columbia machines have been placed in the Boston schools, and Manager Erisman reports that many highly-encouraging letters have been received as to the satisfaction that their machines are giving. In the Girls' High School two machines lately have been installed especially for use in the gymnasium.

JOINS KEEN-O-PHONE CO.

William Sibley Dowdell, a baritone of wide reputation in the East, is now connected with the Keen-O-Phone Co. in an executive capacity, having forsaken the artistic field for the commercial side. Mr. Dowdell's last church position was with Grace Church of Orange, N. J.

DISCUSS "TALKER" VALUE IN SCHOOL

Frederic E. Goodwin, manager of the Columbia Co.'s educational department, spent a week recently attending the National Convention of Supervisors of Music, held at the Hotel Seneca, Rochester, N. Y. The Columbia Co. exhibited its entire line, with the exception of the Grand, at the convention, and Prof. Goodwin delivered an interesting address at one of the meetings. The use of the talking machine in the school was discussed at length, and the supervisors of music in attendance were apparently deeply impressed by the demonstrations of the various types of machines on exhibition. Members of the new Grafonola Co., of Rochester, Columbia jobbers, were in daily attendance at the convention, and assisted in the demonstration of the Columbia line.

VERY DEAR TO US ALL.

"Some Day" the One of the 365 That We Couldn't Do Without.

"Some day" is the one day of the 365 that has no place in the calendar and is still the most popular day for making disagreeable engagements. It is the day that every idle dreamer chooses to begin the monumental work that is to make his fame and fortune. To-day is always huddled, crowded, too hot or too cold, too wet or too dry. To-day is out of the question. But "some day" lies in the far golden haze of the future that seems to have in it the infinite leisure of eternity. And so we defer, till the more convenient season that never comes, what ought to be done instantly, without talking heed of our own feelings, our plausible objections, and permitting the creeping paralysis of over-much debate that keeps the arm from striking while the iron is hot!

These prophecies that begin with "some day" and a good resolution are rarely converted into the past tense. The man of action makes his plans soberly and takes the facts where he can get them that will help him to decide what to do. But when his mind is once made up he goes ahead without telling you much about it. He does not boast. He is too conscious of his own fallibility to be cocksure of brilliant and secure results. He knows that human agents may fail him, if not his own wit or his own strength, and he does not greatly care to describe the deed till after the fruition of his thinking and his striving is the accomplished fact.

The lesser man overlooks "some day" with the tardy, heavy transmittendum of yesterday and today, serenely unmindful of the fact that the future has problems of its own; the future needs its own clear field and has no room for the heritage of procrastination.

GOOD CALL FOR VICTOR GOODS.

(Special to The Talking Machine World.)

Boston, Mass., May 11, 1913.

Ubert Urquhart reports a good call for Victor goods at the Chickering & Sons warerooms in Tremont street. This is a very convenient establishment, and the Victor apartments in the basement are admirably arranged and comfortably furnished for the accommodation of customers.

WHY WINKELMAN IS PLEASED.

(Special to The Talking Machine World.)

Boston, Mass., May 11, 1913.

Ask Henry Winkelman, manager of the Victor department of the Oliver Ditson Co., how business is, and his face becomes wreathed in a broad smile which tells the happy story. He reports a heavy call for some of the new records which have become the most popular.

Two suits have been instituted in the United States Court at Trenton, N. J., alleging large damages against the Victor Talking Machine Co. The plaintiffs are Samuel Levin, of Highland Park, Ill., and the Permanent Disc Needle Co., an Illinois corporation. The suits are based on a warning issued by the defendant company against the use of the jewel disc needle made by plaintiffs.

WANTED TO BUY

WANTED TO BUY—Dealers' surplus stocks or close-outs of Zonophone Single Disc Records. Address "Zonophone," care The Talking Machine World, 373 Fourth avenue, New York City.

FOR SALE—5,000 Edison 2-minute records, 10c. each; 5,000 Zonophone 19-inch records, 15c. each; all new, clean stock. Deninger, 335 North street, Rochester, N. Y.

which is easily and quickly adapted to the Victrola; does not get out of order and require adjusting or attention after installation. *It will materially increase your business and profits.*

90% of your machine owners will buy. Sold only to the trade. Retail price \$3.50. Liberal discounts

THE STETSON MFG. COMPANY

NEW YORK

CLEVELAND

THE ARTESTE TONE MAGNIFIER.

The New and Remarkable Device Invented by C. Stetson Butler to Perfect the Tone Quality of the Talking Machine Has Now Been Introduced to the Trade—Company Organized with Offices in New York and Cleveland—To Develop This Business.

The Arteste Tone Magnifier is a new and most remarkable device that has been invented by C. Stetson Butler after long and continued experiments in an effort to produce a means for the perfection of the tonal qualities of the talking machine and to produce the natural tone of the artist or instrument in a realistic manner and in such a way as to eliminate mechanical effects.

The marvelous progress made in the production of talking machines has left the main step for improvement in the reproducing of perfect music in the direction of the development of tonal purity and the natural pitching of the voices or instruments reproduced.

The Arteste Tone Magnifier is said to be remarkable for the success it has achieved in this direction. Some of the greatest authorities on tone production were consulted and advised with continually and were themselves astonished with the result. Artists who have heard their voices reproduced with the new magnifier in use have been extremely enthusiastic and have expressed themselves that the reproduction was as perfect as an individual rendition.

The Arteste Tone Magnifier is not complicated but on the other hand is quite simple. It very successfully eliminates, however, the grating and rasping noise of the needle and prevents the echoing or fluctuation of tone caused by too violent or continuous vibration of the diaphragm and prevents the blasting of the high notes or tones by offering a flexible cushion to the diaphragm which prevents excessive vibration and consequently true and distinct reproduction.

It is designed to truly reproduce in absolutely natural tones the consonants and vowels so frequently emitted from the instrument without being well defined, and also to bring out clearly the separate voices or instruments in concerted productions and orchestra renditions. This is considered most important because the diaphragm is apt in the transmission of this collection of various tones to vibrate so violently in giving forth one sound that it does not fully recover its normal position in time to send forth the next tone correctly. All of the true natural tone of the voice with the true quality is also given through the use of the magnifier.

The manufacture and sale of the Arteste Tone Magnifier was undertaken by The Stetson Mfg. Co., of New York and Cleveland, in April. The officers and directors are: J. L. Miller, New York, president; Henry Dreher, Cleveland, vice-president; George T. Cappel, New York, vice-president; J. P. Stetson, New York, secretary; H. A. Auer, Cleveland, assistant secretary; C. Stetson Butler, Cleveland, treasurer; Jay Dawley, Cleveland; Dr. F. S. Clark, Cleveland, and F. A. Hall, of New York.

The company has organized a large and efficient sales force, backed by sufficient capital and ability to insure the proper introduction of its product. R. W. Shirring, manager of the Victrola department of the Caldwell Piano Co., of Cleveland, has recently joined the sales force, and has been assigned to Western territory. An announcement from this company appears on page 29 of this issue.

SELLING A ROUGH DIAMOND.

Some time ago a man who had not been on good terms with his razor, his tailor or his bootblack for several days, entered the Victor department of a certain store in New York City. He asked to see a small Victrola, and the three salesmen (on commission) each waited for the other to demonstrate.

Finally the best man of the three took the rather rough looking customer in hand and eventually sold him a \$25 machine and, of course, a few records. The salesmen did not think it worth while to show

anything but band, instrumental and popular low-priced numbers.

The rugged customer declined to purchase on "time," saying, "No, I guess I'll pay for it. I want to liven things up aboard the boat. I want it tomorrow, sure, and if I have it charged I may never get it."

The sale amounted to \$31. As he left the store the salesmen failed to notice a Masonic emblem of high degree and two diamonds worn by the customer. Three times in two weeks the same customer returned, and each time he was shown only low-priced records.

The fourth time, about eleven weeks later, the department manager was at leisure and handled this customer's business. The result, a sale of fifty-six dollars' worth of records. The customer remarked that he had begun to think that the store did not carry the opera records, because he had never been shown any before.

During the summer this man purchased over three hundred dollars' worth of records. Most of these were damaged on the boat and in the fall he purchased a style XVI and over two hundred dollars' worth of records for his home.

The man was a large property owner, rated several times a millionaire, and the boat was a good-sized yacht.

TRADE WITH SOUTH AMERICA.

Exports Shown to Be Increasing Faster Than Imports.

(Special to The Talking Machine World.)

Washington, D. C., May 10, 1913.

Reports from the United States to the five principal countries of South America—Brazil, Argentina, Chile, Uruguay and Peru—increased almost 12 per cent. during the first nine months of the present fiscal year, as compared with the same period last year. Imports from those countries increased only 5 per cent.

The exports this year totaled \$94,300,000, against \$84,400,000 last year; the imports \$145,300,000, against \$138,500,000.

The imports from Brazil in the comparative nine-month period increased from \$95,700,000 last year to \$104,500,000 this year; Argentina, from \$19,000,000 to \$22,600,000, and Chile from \$13,500,000 to \$18,500,000. Exports to Brazil increased from \$22,900,000 to \$32,000,000, while those to Chile decreased from \$12,200,000 to \$11,800,000 and those to Argentina from \$40,400,000 to \$39,900,000. These figures are most interesting.

A WELCOME VISITOR.

In enclosing a subscription to The Talking Machine World the Johnson Talking Machine Co., Ltd., Liverpool, England, writes: "We are pleased to inform you that business is still keeping good with us at both our Liverpool and Birmingham houses. This last season has been the best of our 15 years' experience in the wholesale talking machine business, and trade has every appearance of keeping brisk with us during the coming summer months. We look forward to your valuable publication every month, as it is very interesting for us to read about dealers and factors in our line of business in U. S. A., although it is not possible for us to do much business in your country through the high tariff which you have against us. We wish your paper every success."

IN THE STILLY NIGHT.

Caruso bravely sang the "Grand Old Flag";

"In terra solo" Harry Lauder sang.

Pol Plançon warbled "That Italian Rag";

Gus Williams gave the "Prize Song" with a bang.

I heard the Sembrich pouring out "Poor John,"

And Melba, "You Are Just the Man for Me,"

And Eva Tanguay, with a smile, came on

And rang the changes on "Ah! fors' è lui."

De Pachmann wrung "Bill Simmons" from the flute,

And Elman beat the tomtom with much pride;

I heard Fritz Kriesler toying with the lute

And Damrosch playing on the ophicleide.

Ah, when you go to bed and slumber seek,

This is the sort of dreaming that you do

When regularly, seven nights a week,

Your friends grind out their phonographs to you!

—Nathan M. Levy in *Life*.

AUTOMATIC STOP DEVELOPMENT.

Discussed by an Officer of the Condon Autostop Co.—What This Concern Has Accomplished.

"The possibility of the development of the automatic stop was questioned by a few in the trade when we first marketed the Autostop," stated an official of the Condon Autostop Co., 109 Broad St., N. Y., in a chat with *The World*, "but it has taken only a year and a half to develop imitators without number. The active commercial plans we formulated and prosecuted after marketing the original Autostop gained a unique position for us, which the efforts of so many of these other people bringing out stops tendered to strengthen and improve. The wide sale enjoyed by the Autostop produced a demand upon us by jobber and dealer, almost without exception, for a stop that would be automatic in every meaning of the word; a stop requiring no setting, no regulation or adjustment. We felt the presence of this great demand and concentrated all our efforts to produce what has heretofore been but a dream. Upon the completion of our first manufacture, the public will be in possession of Noret—the autostartstop, which is the realization of the dream.

"The statements of insistence on the part of the trade have become an ensemble and is to-day a mighty chorus beating in unison all to one effect: 'Give us a stop requiring no setting or adjustment!' The efforts of every one here are combined and our plant is taxed to produce this accomplishment by making the earliest possible delivery of Noret.

"Eyesight varies in strength, and ability to make a fine adjustment, when records end at different points, is not possessed by all. Many times in using an adjustable stop it will be found that the record is stopped too soon, or it often happens that the adjustment is made so that the needle gets in the last line of the record and it doesn't stop at all. None of these annoyances happens when Noret is used, for it finds its own last line without any previous setting or adjustment, finding the last line in its own action which is secondary to the use of the machine. Any other beliefs tending to the idea that people can be made to adjust a stop, are untenable because impractical.

"From a commercial standpoint alone, it is easy to prove that Noret is the most logical article, for the talking machine store employe is unable in his busy times to take sufficient time to demonstrate and explain to the customer how a stop works and how it may be regulated, be it ever so simple and ever so easy—apparently. The customer will be attracted to, and won by the article that does not have to be explained to him and for the great mass of people using the talking machine—the stop that stops without any setting and works without explanations as to 'how' or 'why' it may work, is the one which will prove its own value on sight.

"Before *The World* is issued, our first run of 20,000, No. 14 Needle Cutters will have been completed, and will relieve in part an order situation which has taxed the patience of every one. The success of our cutter is immense and surpasses our greatest expectations. The splendid cut and many clippings of the needle which one gets—the amount being over twenty instead of fourteen, which was a conservative statement on our part—combined with the popular price of \$1.00, has produced an immediate demand for the article from the most prominent members of the trade."

COLUMBIA EXPANSION IN HAVANA.

A. E. Garmaize, traveling ambassador of the Columbia Co.'s export department, returned to New York recently after an extended Havana trip. Mr. Garmaize states that the Columbia Graphophone Co.'s products are doing remarkably well in Havana, and Frank G. Robins & Co., Columbia representatives in that city are steadily increasing their talking machine sales. This company recently constructed a new building, to be devoted exclusively to talking machines, and its success with the Columbia line is most gratifying. Mr. Garmaize reports a steady demand for the high-priced types of machines, with the Columbia "De Luxe" a prime favorite with the Havana people.

Godowsky! Our previous successes in piano recording have convinced the famous Polish pianist and the world's supreme technician that his art can be perfectly recorded, and he has just made his first Columbia Double-Disc records.

Columbia Graphophone Company
Tribune Building, New York

HOW TALKING MACHINES STIMULATE PIANO SALES.

Some Facts of Interest that Should Awaken the Curiosity and Action of Piano Merchants Who Are Not Now Handling Talking Machines—The Record Made by the Piano House of F. G. Smith in Brooklyn is Worth Studying and Consideration.

Piano merchants in all parts of the country were greatly interested in the recent announcement published in *The Talking Machine World*, relative to a startling increase in sales of pianos and player-pianos experienced by one well-known piano manufacturer, which was directly traceable to purchases of talking machines. The firm who reported this splendid record was the well-known Brooklyn, N. Y. piano house of F. G. Smith, who recently installed a Columbia department, and soon after its establishment, increased its sales something like \$1,600 in one week, all of these sales being made to owners of Columbia instruments, whose presence in the store was due solely to the fact that they were buying the Columbia product.

Interesting and valuable as this report was, a later statement from the same progressive piano house is to the effect that during the first week of

this month, the sales increased over \$2,500 from the same source as the first reported increase—namely, owners or purchasers of the Columbia product, who would not have been in the establishment if it were not for the fact that the Columbia line was displayed in the store.

In view of these encouraging and gratifying reports from representative piano merchants, who have established talking machine departments, it is not to be wondered at that piano houses in all parts of the country are expressing confidence and faith in the value of the talking machine department in conjunction with their business. With a competent manager in charge of his talking machine department, the modern piano merchant is offered an opportunity to reap additional profits in his own line of business, as well as from the talking machine end.

NEW LAWS DISTRESS THE FAKERS.

Legislation Enacted and Pending Against Misleading Advertising Already Has Effect on Business of Certain Class of Merchants.

The fact that six States have already passed laws against misleading advertising and that bills to that end have been introduced in the legislatures

He Delays Not the Order of His Going.

From the Pittsburgh Post.

of a number of other States and are expected to pass at an early date, has served to fill with alarm those who depend upon misleading advertising to sell their goods to the public. The predicament of the fake advertiser is well illustrated in the accompanying cartoon from the Pittsburgh Post. It is a case of "the tall timber" for the faker.

HIGHER PRICED MACHINES LIKED.

"Business for this time of the year is unusually gratifying," states G. T. Williams, manager of the New York Talking Machine Co., 81 Chambers Street, New York, the prominent Victor distributor "The call for the higher priced types of Victrolas keeps up most encouragingly, and the demand for records maintains a steady increase over last year. Our business for the first four months of 1913 was considerably in advance of the corresponding period of 1912, and the month of May to date, shows the same substantial gain over last May. There has been a noticeable increase in the call for Victrola X, at \$75, which we attribute to the concentration of publicity, which the Victor Co. has been bestowing on this particular type of machine."

THREE TIPS.

It's the way a man sticks to a thing that marks him as a success or a failure. Many a fellow has won out at the eleventh hour just because he wouldn't let go. Don't be a quitter.

Promptness is the essence of all good business, the lack of it the cause of most failure.

In buying, stick to a few firms and make them your friends.

Your opinions carry weight to just the degree that you are able to understand and appreciate the opposite opinion.

A GOOD INVESTMENT.

Commander-in-chief of the Massachusetts Consistory, S.P.R.S., Invests \$500 in Edison Disc Model and Records.

It is customary to present to the Commander-in-chief of the Massachusetts Consistory S. P. R. S. 32, when he retires from office, with a substantial purse or a substantial gift. This year \$500 was presented to Edward S. Benedict, 33.

Now, this is where the talking machine enters!

F. H. Silliman, manager of the Boston headquarters of Pardee-Ellenberger Co., sold Mr. Benedict a \$250 style of the new Edison disc model, and as fast as the new records appear Mr. Benedict will use the other \$250 to extend his repertoire. Probably there is not a more enthusiastic Edisonian than Mr. Benedict.

PRIZES FOR SALE EXPERIENCES.

Salesmen Should Take Much Interest in Competition Offered by Victor Talking Machine Co. for Stories of Difficult Sales.

The Victor Talking Machine Co. announces that the closing time of the competition for stories of difficult sales successfully closed by Victor salesmen in all parts of the country has been extended to May 30. With three prizes of \$20, \$15 and \$10, respectively, offered for the best articles based on actual and personal experience, there should be no lack of interest. With vacation time coming, \$20 or even \$10 should look mighty good to the average salesman.

As much energy as you spend in watching your competitor's business, just so much less will you have for pushing your own. And there are men who are going to take your chances away from you, unless you use them so effectively that they cannot.

CONCENTRATION DIDN'T PAY.

Too Much Concentration Often Costly, Says Edison, and Cites Incident.

An incident in the life of Thomas Edison, shows, curiously enough, that even the most practical genius of the age may sometimes be impractical, and that occasionally too much concentration is an expensive luxury in which to indulge.

While engaged in the perfection of many complex details in his first laboratory at Newark, N. J., Edison was notified that unless he paid his taxes on the subsequent day he would be compelled to pay 12½ per cent. additional. Nearly a hundred people were in the line ahead of him when he went to the City Hall to fulfill his obligations, and while he was awaiting his turn his mind reverted to the problem of the quadruplex telegraph upon which he was working, and when he reached the window, he had completely forgotten his surroundings.

"Well, well, young man," said the clerk impatiently, "what's your name?"

"I had lost my composure completely," said Edison, speaking of the incident, "and all recollection of my name as well, for I stared at the official behind the counter and answered in perplexity, 'I don't know!' Jumping to the conclusion, I suppose, that he had an idiot to deal with, the tax collector waved me aside, others poured into my place, the fatal hour struck, and I found myself saddled with the extra charge of 12½ per cent."

TALKING MACHINES FOR LEPERS.

A large order for Victor talking machines and records for the leper colony on Penikese Island, was recently filed by the Henry F. Miller Piano Co., Boston. It is stated that the talking machines prove a never failing source of entertainment to the victims of leprosy, who are cut off from the enjoyment of the every-day pleasures of life.

SALTER CABINETS

STRONG BUSINESS IN BALTIMORE.

April Proves an Excellent Month with the Talking Machine Trade—Plenty of Machines to Supply Demands—Many Changes of Locations—New Building for Columbia Co.

(Special to The Talking Machine World.)

Baltimore, Md., May 6, 1913.

It is the same old cry with the talking machine dealers in this section. With each month it seems to be a case of increased business with the result that April is reported to have surpassed previous months, barring December, of course. The Columbia people are crying for more machines so as to furnish all the demands, while the Victor people declare for the first time in a long while they have been able to get enough machines to keep them out of hot water with the customers.

Several changes in location are scheduled to take place among certain dealers within the near future. The local branch of the Columbia Phonograph Co., F. A. Dennison, manager, has outgrown its present headquarters and have leased the spacious building at 305 and 307 North Howard street which they will occupy May 15. This is a four-story building, handsomely fitted up with French gray fixtures. They will have more room for customers and better facilities for handling crowds. Five attractive demonstrating rooms are being put in the first floor and the show windows are fine large ones, affording room for pretty displays of the Columbia productions. Manager Dennison reports a big month for the Columbia machines and records and expects the good things to keep coming his way right along. The Columbia is also having good results with the Dictaphone trade.

W. C. Roberts, manager of the local store of E. F. Droop & Sons Co., is a happy man these days for the reason, as he reports, he has been able to get in one of the largest stock of Victor machines of every description since he has been in the business. He declares that April was a record breaker and judging from results the past six months or

more the big stock on hand will be necessary to keep up the good business results.

Mr. Roberts is preparing to put in front of his store two demonstrating rooms such as have been recently suggested by the Smith Co. of Philadelphia.

The Lyric Music Co. has been going some during April with the Victor and Columbia lines and Manager Stran looks for a good summer trade. Thomas Gordon, of the Gordon Talking Machine Co., makes similar reports concerning the two lines.

GRAVES CO. TO INCREASE CAPITAL.

The Well-Known Portland Piano House Leases Building on Fourth Street, Which Will Be Occupied as Soon as Extensive Alterations Are Completed—Also Recently Closed Lease for Handsome New Quarters in Spokane.

(Special to The Talking Machine World.)

Portland, Ore., May 6, 1912.

A deal has just been closed whereby the Graves Music Co. takes a 10 years' lease on the property on the west side of Fourth street, between Morrison and Alder, known as the Jones Market.

Under the terms of the lease the Graves Music Co. will make extensive alterations to the interior of the building, fitting it up for a first class wholesale and retail music house. Among other improvements to be installed will be an electric passenger elevator.

The ground and mezzanine floors will be used for the retail department and the upper floors for demonstration quarters and storage for musical instruments for the wholesale department. The rental is to be \$12,700 a year, or \$127,000 for the entire period. This sum is to be net to Mr. Jones.

The Graves Music Co. is one of the many prosperous mercantile institutions in Portland which had very small beginnings 15 years ago at 285 Alder street in a small shack of a building 16 x 50 and with a small stock of pianos, instruments, etc.

In 1905 they incorporated for \$10,000. In 1908 their Washington street location was torn down, which necessitated another move to their present location, 111 Fourth street, where they added ad-

ditional capital and incorporated their business for \$50,000. In 1910 they re-incorporated for \$100,000.

Now it is announced that the firm is about to increase once more, raising the incorporation to \$150,000 capital.

The Graves Music Co. have also just consummated a lease for large new quarters in Spokane, Wash., in the Empire State Building, which is the second most expensive absolutely fireproof building in Spokane. They handle talking machines.

HOW THE DEALER IS HELPED.

The National Publishing Co. Helps Along the Demand for Its Record Albums.

(Special to The Talking Machine World.)

Philadelphia, Pa., May 9, 1913.

The National Publishing Co., of this city, is experiencing a great demand for its record albums, and this is due not only to the values embodied in these specialties, but to the support which the manufacturers are giving the dealers in disposing of them. In this connection they have prepared very attractive circulars showing pictures of the record albums opened and closed. These can be furnished by jobbers to the dealers for the purpose of stimulating trade. Among other things, they point out that the index in every album facilitates the instant location of any record, for the labels are seen through the openings and the title of the records can be read without removing the records. The name and address, or card, of the dealer will be printed on 500 circulars and sent to him free of charge, and it will contain, upon request, the prices at which the albums are sold.

The National Publishing Co. will also be pleased to send out a sample album by express, prepaid, for examination. In other words, they will do all they can to aid the jobber and dealer develop business. The record albums made by this company are most attractive and durable, the covers being made of bookbinders' boards and covered with a fine quality of cloth. There are seventeen pockets for records made of extra strong tag manilla paper and firmly secured to heavy guards at the back of the album.

WISCONSIN TRADE OPTIMISTIC OVER OUTLOOK.

Crop Conditions Are Excellent and Milwaukee Merchants Are Planning for a Very Active Summer Trade—New Edison Agents Appointed—Bradford Co.'s Handsome Victrola Rooms—New Columbia Boomers—Talking Machine Co.'s New Establishment.

(Special to The Talking Machine World.)

Milwaukee, Wis., May 20, 1913.

There seems to be a temporary dulness in the retail talking machine trade, although jobbers say that their business is holding up at a remarkable rate. Local dealers are not worrying over the present situation and are more than pleased over the outlook. New life is always added to the retail trade with the opening of the summer resort season and this period is due to arrive just as soon as the schools close. Wisconsin and Michigan are dotted with lakes, ideally located for summer vacations, so most of the watering places boast of many summer homes. Milwaukee dealers awoke several seasons ago to the possibilities to be derived from the summer resort trade. The average family takes along a machine and a liberal supply of records with which to pass away the time during the summer. John H. Becker, Jr., manager of the Victor department at the Espenhain store, several seasons ago established the principle that summer resorters owning large Victrolas, or other machines, were likely customers for smaller machines which could be easily taken to the summer home.

Prospects for the ensuing year were never brighter than right at the present time. Crop conditions all over the Northwest are exceptionally favorable, and unless something entirely unforeseen happens, a bumper crop will be harvested again this year. Good crops in this section of the Northwest always mean prosperity in all lines of activity, the talking machine business included.

Bradford's Remodeled Quarters.

The J. B. Bradford Piano Co., which recently took the agency for the Victor line, has completed the remodeling of its four-story building at 411 Broadway. Several thousand dollars have been expended in making the building into one of the handsomest retail establishments in the Northwest. The talking machine department has been arranged on the first floor where attractive demonstration and display parlors and a large record room, equipped with new dustproof record cabinets, have been prepared for the Victor department. Thomas DeSwarte, treasurer of the Bradford company, has general supervision over the new Victor department, but Miss Jule Steiner, an attractive young Milwaukee lady, is in charge.

Many Edison Agents Appointed.

Wisconsin dealers seem to be alive to the possibilities to be derived from handling the new Edison disc machine and other lines offered by the Thomas A. Edison, Inc., judging from the big list of new dealers which has been secured by the new Milwaukee Phonograph Co., 349 Broadway, jobber for the Edison line. William A. Schmidt, general manager, reports new Edison dealers located in practically every section of Wisconsin. Demand for the new Edison disc machine is increasing daily. Mr. Schmidt says that some difficulty is being experienced in securing enough records to meet the demands of the trade, but that larger shipments are beginning to arrive from the Edison factory.

J. R. Chapman, of the J. R. Chapman Co., Oshkosh, Wis.; Anthony Stiller, of the Stiller Photo & Supply Co., Green Bay, Wis.; George W. Coppins, Whitewater, Wis., and E. A. Meckelburg, Two Rivers, Wis., were among the new Edison dealers who recently visited the Milwaukee Phonograph Co.

New Quarters in the Fall.

Paul A. Seeger, manager of the Victor department at the Edmund Gram Music House, 414 Milwaukee street, says that the plan of moving the talking machine quarters to the first floor of the handsome new store will be carried out this fall. Attractive booths of ivory tinted mahogany, conforming to the Roman Ionic interior of the Gram store, will be arranged. Good Victrola and record sales are reported by Mr. Seeger and his associate, Ernest F. Leicht.

New Columbia Agents.

Several new Columbia dealers in Milwaukee and about Wisconsin have been located by A. G. Kunde, 516 Grand avenue. He expects to be able to announce next month the name of a new dealer who intends to open a new store at the location on Fond du Lac avenue, formerly occupied by Mr. Kunde. Mr. Kunde says the new Columbia Grafonola grand, the \$500 instrument, seems to be taking well with the Milwaukee trade.

Wisconsin Co. Occupying New Store.

Miss Gertrude F. Gannon, head of the Wisconsin Talking Machine Co., Victor jobber for this State, has moved her retail store into the building at 312 Grand avenue, recently leased for

a ten-year period. Miss Gannon is occupying the entire first floor, which has been remodeled and made into one of the most attractive retail talking machine shops in the city. Seven new booths have been installed. The window display facilities are unusually fine, while the main exhibit floor offers fine display possibilities. Miss Gannon has twice as much space as was available at her former location at 213 Grand avenue.

Brieflets.

Otto Krause, manager of the talking machine department of the Hoeffler Manufacturing Co., 306 West Water street, has resigned and is now located in the East.

Manager Campbell of the Victor talking machine departments at the two stores of the Edward Schuster & Co., reports that Victor business is much better than at this time a year ago. This is also true of the Schuster department at the Third and Garfield street store.

Victrola Will Entertain.

The officials of the Espenhain Dry Goods Co. will give its annual banquet to the employees of the big store in its grill room on May 15, and an elaborate Victrola concert for the occasion has been arranged by John H. Becker, Jr., manager of the Victor department at Espenhain's. Mr. Becker followed a new scheme in the issuing of his circulars to the trade this month. On the back of each circular he had printed the best 100 Victor records. He has had printed an attractive letterhead, calling attention to the Victrola IV. as a machine especially desirable for summer homes and outings of all kinds.

To Record Passing Events.

For the purpose of securing records of local concerts that can be appreciated in later years when the organizations may have become extinct, Geo. Schuette, of Manitowoc, Wis., recently purchased a new recording phonograph in Chicago and is now collecting a fine series of records before the close of the present musical season in Manitowoc. Not only concert music, but band music, speeches and anything of local interest and worth preserving will be retained by Mr. Schuette.

Featuring Victrola Line.

L. C. Parker, manager of the Victor department at Gimbel Brothers, and Manager Abbot, of the Victor department at the Boston store, are featuring the Victor line in the advertisements of their respective stores, and both say that business is increasing as a result. Manager Parker expects to add several new booths to his department sometime during the next few months. An especially large stock of Victrolas is carried by Mr. Parker, who believes in having every possible type of machine on hand in order that customers may select just what they want.

Visitors.

W. P. Gibbs, of the Rudolph Wurlitzer Co., and Roy J. Keith, of the Talking Machine Co., of Chicago, were among the out-of-town visitors who recently called upon the Milwaukee trade.

W. BEEBE PRICE BECOMES MANAGER.

Sol Bloom, Inc., of New York, has secured the services of W. Beebe Price as manager of its Metropolitan Opera House branch, at Broadway and Fortieth street. Mr. Price is well known in the talking machine line, having been connected for over a decade with the house of Jacot when it was in Union Square, and since then with other firms in the same business. He brings with him a ripe experience and a large circle of friends. Sol Bloom, Inc., reports that its Metropolitan Opera House store has more than met its expectations. During the opera season it was the rendezvous of music lovers and artists, and the overflow of many operas found entertainment in its beautiful rooms.

VISITING THE TRADE.

Edward A. Borgum, now a member of the Woods Filing Cabinet Co., Los Angeles, Cal., is visiting the East, making his first stop at Chicago, and working his way to the Atlantic Coast in the interest of this house.

**Bell-Hood Needles****The Needle with a "Sounding-Board"**

Experts know BELL-HOOD SUPERIORITY. Why?

Because BELL-HOOD clarifies and amplifies the vibrations and consequently improves the TONE-QUALITY.

There is money in handling our needles. Many dealers have increased their receipts materially. It draws in business.

TALKING MACHINE MUSIC AS A COMMUNITY ASSET.

How the Summer Life of a Country Village Can Be Brightened Through the Medium of the Talking Machine—The Solution Lays with Enterprising Talking Machine Merchants Who Believe in Working Along Original Lines and in Getting Results.

How will Cyrus and Mirandy Perkins be able to satisfy their craving for the blare of a real brass band this summer, Mr. Dealer? Will they be compelled, as usual, to harness old Dobbin to the carry-all and journey to Willow Grove Park, a good twenty-five miles across the river, for their musicfest, or are you going to invade the precincts of Hainesport with the talking machine and allow Dobbin a well-earned holiday in the South pasture?

Our little village is music mad, Mr. Dealer. When Jim Bailey carries his Victor out on the front porch of an evening and puts on a record by Mr. McCormack or Signor Caruso, you can see the fellows running. Down by the Baptist Chapel, streaking by the tall maples in a cloud of dust, comes Numpy Cook enroute to the concert, and cussing a little for fear he has missed something. Across the fields, from the direction of the town hall, dashes Greeny, the veteran baseball catcher, and he too is mumbling imprecations at himself for being late. Up from Walther's store sprints George Boyarth, running his legs off to be in time for Celeste Aida.

This all proves that our taste for good music is highly developed and that the very best artists are none too good for us.

There is a picturesque little wooded dell directly back of the new ball grounds, and it is here, if the winter's dream comes true, that the world's greatest bands and orchestras will be heard on pleasant evenings throughout the coming summer. A miniature park it will be, with rustic benches distributed among the pines and spreading like an open fan round the phonograph stand.

Here we will listen to Victor Herbert, John Philip Sousa, Santlemann and Vessala. In fact, every great bandmaster and orchestra leader in the universe will flourish his baton at our command, and flood our souls with golden melody. The one

thousand dollars per night song birds will wing their way to our grove and warble their sweetest for us, and the dramatic celebrities will stalk among us, too.

Are we not to be envied, and should not every village far removed from the metropolis be offered a similar opportunity?

If you wish to create a sensation, Mr. Dealer, come to Hainesport ahead of your competitors, and bring your talking machine. Take this placard

The Awakening.

to Cyrus Perkins and ask his permission to tack it on the side of his barn:

AT HAINESPORT PARK
PHONOGRAPH CONCERT
TO-NIGHT.

and await results. I can assure you that the wait will not be long.

When our friend, Cyrus, informs Mirandy that their anticipated journey to Willow Grove across the river is entirely unnecessary, and that they can have a Gol dinged sight better time attendin' the musical doin's right to hum, your reputation will become firmly established among us. You see, Cyrus is an important personage in our midst, and what he tells Mirandy—goes.

Mr. Dealer, have I made myself sufficiently clear? Do you see my point? Are you able to realize after perusing my somewhat rambling tale that there is a chance for you to obtain some corking good advertising, and the good will of the countryman to boot, by invading a village in the good old summer time and giving concerts in the open air?

It will pay you to give this pet scheme of mine a tryout, I am sure. An enthusiastic audience will be yours from the very start—Jim Bailey will prove this to you most conclusively if you care to ask him—and then while the enthusiasm is at the zenith of its intensity, get busy with your trade talk and attractive literature.

Placard the village with big, healthy signs, insert an elaborately worded description of your aims and ambitions in the Hainesport Gazeteer, and O ye Gods and little fishes! how the orders will come rolling in.

An advertising campaign conducted through the medium of the magazine or daily paper is all right, Mr. Dealer, and generally speaking, conducive to good results, but if you want to reach Rube, you've got to show him. He has, in all probability, seen your ads before now, especially the illustrations, but his glance was a casual one, for his mind was centered upon the price of clover hay or some such matter dear to his heart.

When he comes to your open air concerts and hears with his own ears how wonderful the talking machine has grown to be, you've got him. Hearin's believin', Gol ding it!

Music as a community asset has been widely discussed in the public press of late, and as a fitting finale to my story I quote from an editorial in the Philadelphia Evening Telegraph upon this interesting and important subject:

Not a few cities in Europe and America are devoting some attention to municipal music. That is, they are attempting to bring music into the daily life of their citizens.

Throughout Germany, especially, the people have abundant opportunity to hear orchestra concerts and to attend opera for a very small sum. Band concerts in summer are not only a popular diversion, but a refining influence. That is a distinct asset in citizenship.

It has been pointed out repeatedly that the cities and towns in the United States are too busy commercially to give much attention to art and music. In refutation of this it may be pointed out that no country to-day is more commercially alive than Germany is, and yet its people, high and low, are a music loving race.

Many cities and towns in the United States are giving a special prominence to choral music. Festivals are inaugurated in which the townpeople participate as singers. In some instances the children of the public schools are included in the body of singers.

We are spending a large sum of money annually on public school music, and the effort to give the people pleasure through festival music in which children participate is logical.

Good music is at once stimulating and refining influence. In one prominent American city, famous for its festival music, the business men's club is actively interested in lending its support to the success of the effort, and it is distinctly successful, drawing attendance from far and near and often from European countries. Any country that can take steps to bring good music before the majority of its citizens has added a great asset to its working capital and power.

And any citizen that can find pleasure in good music has helped to raise the standard of his own life as well as the life of this community through that fact.

HOWARD TAYLOR MIDDLETON.

TALKING MACHINE MEN MAKE NOTE.

To achieve what the world calls success, a man must attend strictly to business and keep a little in advance of the times.

The man who reaches the top is the one who is not content with doing just what is required of him. He does more.

Every man should make up his mind that if he expects to succeed, he must give an honest return for the other man's dollar.

Grasp an idea and work it out to a successful conclusion. That's about all there is in life for any of us.—Edward H. Harriman.

OUTLOOK IN CLEVELAND MOST ENCOURAGING.

Business Generally Recovering from Effects of Recent Floods Throughout West—Mr. McNulty Winning Many Compliments for His Successful Attachment for Playing All Kinds of Talking Machines—Columbia Entertainment Wins Praise—Other News.

(Special to The Talking Machine World.)

Cleveland, O., May 10, 1913.

Business in the talking machine trade is of good volume and has continued very satisfactory, so far, all this season, and from the fact that general business is good, the outlook is of the most encouraging character.

The floods of a month ago did not result in very serious damage or loss in this section of Ohio, talking machine dealers feeling its effect but slightly, and that indirectly. The water did not in any case reach the storerooms of the dealers.

The U. S. Phonograph Co., of this city, has decreased its capital stock of \$1,000,000 to \$10,000. It is surmised the company will retire from business.

Forest Chancy, on his return from the East to his home in Chicago, stopped off for a few days visit with Mr. Madson, of the Columbia Co. His new concealed talking machine horn is favorably commented on by dealers and others of the guild.

The Union Specialty & Plating Co. are highly pleased with the favor with which the attachment for Edison disc machines to play Victor or Columbia records, has been received. H. B. McNulty, the inventor, and who is personally supervising the manufacture of the attachment, showed the visitors scores of orders and letters from various sections, covering the territory from Maine to California, and from Minnesota to Louisiana. There is a large local demand by dealers who have satisfyingly experimented with the attachment.

A new candidate for public favor in the talking machine line is the "Artiste Tone Magnifier." It is an appliance placed in the air chamber, against the diaphragm of the reproducer, to eliminate the grating noise of the needle, and to transmit the natural tone of the voice. The Cleveland offices of the manufacturers of the device, are firmly equipped and activity prevails in all departments.

An innovation in the way of an interesting entertainment was given on the evening of April 21, at the store of the Columbia Graphophone Co., in a recital by C. A. Routh, assistant manager of the local store. A player piano and grafonola were arranged side by side and Mr. Routh, who is a very fine violinist, also a player-piano expert, used this knowledge skillfully by playing his own accompaniments to the records on the Grafonola, comingling the strains of the two instruments most harmoniously.

Mr. Madson, manager, is well pleased with the large volume of business which, he says, is daily increasing, and for the higher grade of machines and records.

Ethel M. Volk, the active, energetic manager of the talking machine department of the May Co., stated business was fine, and that she was satisfied the May Co. was getting its share.

T. H. Towell, president of the Eclipse Musical Co., is a very busy man these days, but he stopped long enough to tell the World that business was good—entirely satisfactory. His brother, P. J. Towell, one of the most popular talking machine men in Cleveland, is suffering from broken down arches, and finds it difficult to get about. He, however, is looking after things closely, and said the wholesale trade was booming, surpassing in volume last year at this time by fifty per cent. Talking with F. E. Lane, manager of the retail department, he expressed himself pleased with the way business was moving. While conversing, he showed a program of the monthly concerts to be held in the store. He has secured the best baritone voice in the city to render songs that are found in the Victor catalogue, and with the playing of the clarinet of the new records, the concerts are a great success. They are becoming so popular that the local papers are taking notice of them and are giving them extended, write-ups. The Eclipse Co. has recently purchased a new Cadillac automobile truck, which will hold four large Victrolas.

and is a fine addition to the already large equipment.

Business is moving along prosperously at the Edison distributing store of H. D. Berner, successor to Lawrence H. Lucker. A. O. Peterson, manager, said trade was good, improving and very satisfactory. He said: "We are busy and have been right along all the month. We have just received our first shipment of the new Edison \$60 disc machine. They are fine and will prove to be very popular, although the tendency of demand is for the higher priced machines, \$200 and up."

There is an air of prosperity and contentment at the store of the W. H. Buescher & Sons Co. Trade was said to be fine in both the Victor distributing and retail departments, sales of both machines and records largely exceeding those of the same period a year ago.

The Frederick Piano Co. report business in the talking machine department of the Cleveland store quite as good as it was the month previous, and especially good in the record line.

O. E. Kellogg, of the H. E. McMillin & Son Co., reports business exceptionally good in all but the mail order department, which was affected by the floods and cyclones, but that the trade is gradually coming back. Both Edison and Victor machines, especially the higher grade instruments, he stated, were selling well.

Edison and Columbia goods are in excellent demand at the store of H. D. Berner, in the Taylor Arcade. He contemplates consolidating the Arcade and Lucky store in new quarters on Euclid avenue in the near future.

The Arcade talking machine dealers, The Hart Piano Co., are doing a splendid business. The manager reports fine sales of Victor and Edison disc machines.

"We are having a surprisingly large trade, covering the entire line of Victor goods," said the manager of the department of the B. Docher's Sons Co. "I ascribe it to the consistent, persistent advertising, and popularity of the company, coupled with the fact that the goods are worth the money."

GEORGE W. LYLE GOES TO EUROPE.

The General Manager of the Columbia Interests Visiting Principal Points Abroad.

George W. Lyle, general manager the Columbia Graphophone Co., accompanied by his son Harold, left Saturday, April 19, on the steamer George Washington for Europe. Mr. Lyle, of course, will visit the various Columbia headquarters throughout Europe, and will find time to enjoy a little rest at various stages of his journey.

His first call was to London, where he planned to meet the Columbia manager, J. A. B. Cromelin. From thence he will visit the principal points in Europe, including Berlin, Vienna and Venice, stopping a while at Luzerne. The Columbia business abroad is in splendid condition, and Mr. Lyle's trip will enable him to get in close touch with the various factors in Europe. He will return home on June 1.

General Outlook for Summer Business Encouraging—Many Disc Records of Cheaper Sort on Market—Talking Machine Men Interested in Coming Music Trades Convention—New Records Issued by Prominent Companies—Plans to Record Songs and Dialects of African Savages—Suffragettes Wreck Record Factory—The Amended Bankruptcy Law—English Record Company with New Selling Plan Fails—Gramophone Co. Announces New Stock Issue—News of Month.

(Special to The Talking Machine World.)

London, E. C., England, May 5, 1913.

As springtime progresses and we approach the trade prospects in store during the quiet summer months ahead, a little pessimism is apt to guide one's thoughts in dovetailing the various opinions expressed upon the trade situation. Undoubtedly business is slack; it is not usually bright at this particular period, and the question arises whether a comparison with last year's conditions is favorable or otherwise. After a careful survey of the situation, I feel convinced that the order of the day is progress. About this time last year the great trade-disturbing element was the coal strike. It held up almost every industry and seriously affected business for weeks. 1913 has so far experienced no similar trade-disturbing element, although the disquiet engendered by the near Eastern troubles is a factor for consideration. It has produced a great amount of uneasiness in business circles; nevertheless, general trading conditions are good so far, although orders have been held over in many directions pending the dispersing of the war clouds. With this general feeling of confidence absent, new enterprises and expenditures were for a time arrested. Fortunately, apprehension of the future is calming down; the conclusion of peace between the belligerents is, at the moment of writing, within sight; and, given an early adjustment of the allies' own difficulties, the future is undoubtedly one of bright promise.

Bright Outlook for Summer Business.

The position in the talking machine industry is, therefore, not unsatisfactory, and summer prospects would appear of good omen. Many dealers propose to specialize an outfit consisting of hornless machine and a dozen records—offered at an inclusive price. This policy, backed up by local publicity, has been found to be the line of least resistance, because such an outfit makes a very wide appeal these days of picnics, boating excursions and various other outdoor entertainment plans.

Market Flooded with Cheap Disc Records.

In the disc record field, competition is just as keen as ever, if not more so, for within the last week or so two or three new records have either made their appearance, or will do so shortly. It, of course, exercises a beneficial effect on the volume of trade, yet individually the dealer is, if anything, worse off. It may read somewhat paradoxical, but the solution is found in the fact that the market is flooded with cheap records sold at any old price. Profits are cut to the flimsiest possible margin, and what the dealer nets goes in fighting each other. Interrogated recently, a dealer friend of mine said that things were so bad in his neighborhood he was going to shut down. "It's suicidal to remain open any longer. I am losing money," was his parting remark. And, unfortunately, this is but one of many such cases.

Interest in Coming Music Trades Convention.

The third annual convention of the Music Trades will be held at Buxton from May 22 to May 27, both days inclusive, and from all reports it would appear certain of strong support. Inquiries elicit the information that every section of the music industry and profession will be in evidence, and many subjects of a practical and far-reaching nature are down for discussion. The talking ma-

chine trade will not be so strongly represented as it should be, but lack of numbers is, to some extent, counterbalanced by the pleasing knowledge that some of the troubles with which this trade is beset will be ventilated. The Music Trades convention at its previous meetings did not, I believe, afford an opportunity for debate on talking machine matters, and the present convention will, therefore, be the first at which our trade, in this sense, will be recognized. In the capable hands of H. J. Cullum, proprietor of Lockwood's, the big factors of City Road, we have no doubt that his paper, "The Necessity of Price-Maintenance and Agreements," will arouse a keen degree of interest and give birth to useful debate of a far-reaching nature. As a successful business man, Mr. Cullum has established for himself one of the few big reputations in the talking machine industry, and his wide experience eminently fits him for the task of introducing a subject of such supreme importance as the regulation and maintenance of fixed prices. To attain this consummation, whether by written agreement or otherwise, is the aegis upon which the future good welfare of the trade, for the most part, depends.

Big Demand for Edison Bell Products.

Messrs. J. E. Hough, Ltd., manufacturers of the well-known Edison bell disc and cylinder and other records, are experiencing considerable inconvenience at their factory. Those who know the place will concede it as one of the largest and most efficient in this country. Yet it is not large enough to cope with the remarkable demand upon its resources. And that is the trouble. It is really pleasant to report such a state of prosperity these times, and we congratulate the firm upon the increased dividend of 10 per cent., less income tax, paid on the ordinary shares for the third quarter—January to March—of their fiscal year, which is a splendid augury for the future.

Attractive List of "His Master's Voice."

Notwithstanding the advancement of the season, "His Master's Voice" monthly program of new records shows no sign of diminishing, and indeed it is not expected; for, despite the company's huge repertory, there yet remains a seemingly endless number of good things from which to make a choice each month, apart from the topical stuff in demand all the time. The patrons of the Gramophone Co., Ltd., represent a wide variety of taste, and to this consideration is due the issue each month of selections covering every phase of music. The May issues in their comprehensiveness emphasize, in this respect, a discrimination which calls for special mention. Be your mood gay, serious, or sad, there is a record to meet the situation, and we feel every confidence in recommending to the attention of dealers a supplement of exceptional merit. The full list is as follows:

Double-sided (twelve-inch.—"Il Trovatore," Miserere (Verdi, arranged by Franklin), and "Die Loreley, Paraphrase" (Nesvadba); "Princess Ida," Selection I and Selection II, (Sullivan, arranged by W. Winterbottom); Band of H. M. Coldstream Guards. "That Ripping Rag" (Collis Wildman), ragtime orchestra, and "Charm of Life Waltz" (H. Jaye), Mayfair Orchestra. Ten-inch.—"Danse des Aborigines" (C. le Thiere), and "Intermezzo—Endoria" (Andre), Band of H. M. Coldstream Guards; "The Wedding Glide" (Hirsch), and "How Do You Do, Miss Ragtime" (Hirsch, arranged by Neat); "My Honolulu Honey Lou" (Melville Gideon), and "Ragging the Baby to Sleep" (Muir and Miller), Hirsch's Ragtime Band; "Hedi Waltz," "Chauffeur In's Metropolis!" and "Lady, I Love You," waltz, "Chauffeur In's Metropolis!" (R. Nelson), Palais de Dance Orchestra; "The Girl on the Film," waltz and march (Walter Kollo), Palais de Dance Orchestra.

Single-sided Records.—"Marche Militaire" (Schubert), New Symphony Orchestra; "Take, Oh,

Take Those Lips Away" (Bennett), Mr. John McCormack; "The Lost Chord" (Sullivan), Mme. Kirkby Lunn; "Parted" (Tosti), Mr. Hubert Eisdell; "In Summertime on Bredon" (G. Peel), Mr. Thorpe Bates; "Drake Goes West" (Sanderson), Mr. Robert Radford; "O, Peaceful England, Merrie England" (German), Mme. Edna Thornton; "Minuet" (Mozart), violin, Mr. Francis Macmillen; Gems from "Oh! Oh! Delphine," Part I (Caryll); Gems from "Oh! Oh! Delphine," Part II (Caryll); Gems from "The Dancing Mistress" (Monckton), light opera company; "The Venus Waltz," "Oh! Oh! Delphine" (Caryll), Miss Dorothy Jardon; "Too Much Ragtime" (Zulueta), Mr. George Grossmith; "Everything's at Home Except Your Wife," "Oh! Oh! Delphine" (Caryll), Mr. Stanley Kirkby and chorus; "Temp Me Not" (from a woman's point of view) (Wise and Dean), Mr. George Robey; "Ragtime Gems" from "Hullo, Ragtime" (Hippodrome Revue) (Louis A. Hirsch), the Ragtime Quintet.

To Record Songs of African Savages.

Captain Steele (Royal Field Artillery), who is making a trip to Central Africa, includes among his equipment a complete phonograph recording outfit supplied by Messrs. J. E. Hough, Ltd. It is Captain Steele's object to secure records of native music, war songs, and other interesting data, which should prove of permanent scientific benefit. For purposes of easy transport by native bearers, the outfit was split up into cases, each of about forty pounds weight.

Oxford Diploma for Business Training.

Apropos the recent discussion upon the relation of science to commerce, it is interesting to observe that at the university town of Oxford a congregation to be held on May 13 will promulgate a statute establishing a diploma suitable for persons intending to pursue a business career. The granting of it will be entrusted to the Committee of Economics and Physical Science, and the diploma is to be called a "Diploma in Commerce and Economics."

A Self-Speaking Telephone.

We have already a telephone that receives and transcribes messages automatically, but the latest advance, as reported from Copenhagen, is a telephone apparatus that is self-receiving and afterward self-speaking. Evidently some form of recording outfit is attached. Experts are agreed that the invention is of practical utility.

Suffragettes Wreck Record Plant.

The Disc Record Co., late of Stockport, which recently opened up at Harrow, near London, has attracted the attention of some militant suffragettes. The new factory, it appears, was in course of preparation, and the chances of an early commencement of operations were good. But prospects are often deceiving; and, as if to remind one of the truth of the old adage, "There's many a slip," etc., the suffragettes descended in force upon the building. It is assumed they chose a dark night, under cover of which the chances of detection were infinitesimal. Not content with smashing the windows, pulling down the electric-light fittings, quarreling with the telephones, and destroying the boiler fittings, they must needs break off the water taps after seeing that the main was turned fully on. Of course the place was soon a veritable wreck and, aside from the annoyance and expense, loss of trade, etc., it will require a considerable time to make good all the damage.

Beka Meister Records.

There is no secret concerning the remarkable popularity of Beka Meister twelve-inch records. Of the latest Meister issues, we could scarcely say more than that they are really superb, and we accord this praise, feeling confident it will be endorsed by all who hear them. The records are: (M 106) "Light Cavalry," overture, Parts I and II (Suppé); (M 107) "Lohengrin," Selections I and II (Wagner), rendered by the famous Meister

FROM OUR LONDON HEADQUARTERS—(Continued from page 36).

Orchestra; and (M 108) "Don Juan's Serenade," and "The Lute Player," sung by Mr Jamieson Dodds, whose rendition is remarkably perfect. Only a few, but they are really choice examples of these records.

The ordinary ten-inch list embodies a comprehensive selection of pleasing titles of the popular order, which should find much favor with dealers and public alike.

George W. Lyle Expected.

George W. Lyle, general manager of the Columbia Graphophone Co., is reported to be on his way to Europe. Before visiting London headquarters, Mr. Lyle will, it is expected, look over the situation on the Continent, whence he goes direct from the States.

Death of Lord Gorell.

The death is announced of Lord Gorell, the eminent judge, in his sixty-fifth year. Apart from his activities in other directions, he will best be remembered in talking machine trade circles in connection with copyright matters. As chairman of the committee appointed by His Majesty's Government to inquire into and report upon the relation of our copyright laws with the findings of the Berlin Conference, and in so far as they needed revision accordingly, Lord Gorell, then Sir John Gorell Barnes, rendered distinguished service. It was largely upon his report that the present Copyright Act (1911) was drafted.

Changes in Bill Amending Bankruptcy Law.

Before being reported to the House of Commons, the Amending Bill affecting the bankruptcy laws underwent drastic alteration in committee. Of particular interest is the new clause, moved by Viscount Castlereagh and accepted by Mr. Sidney Buxton, president of the Board of Trade, which reads as follows: "Where the property of a bankrupt comprises the copyright in any work, or any interest in such copyright, and he is liable to pay to the author of the work royalties, or a share of the profits in respect thereof, the trustee in the bankruptcy shall not be entitled to sell, or author-

ize the sale of, any copies of the work, or to perform or authorize the performance of the work, except on the terms of paying to the author such sums, by way of royalty or share of the profits, as would have been payable by the bankrupt; nor shall he be entitled to assign the right, or transfer the interest, or grant any interest in the right by license, without the consent of the author, or of the court."

Markets New Needle.

The British Zonophone Co., Ltd., is justly proud of its new line of soft-tone needles, a sample box of which is to hand. Of the very best, finely tempered steel, British made, this needle is of the long-tapered style, and is claimed to bring all the best out of a record—a claim amply justified by results. It is an all-round needle of excellent merit, suitable in my opinion for any kind of record, the size of room in which the reproduction is heard being considered.

English Record Co. in Trouble.

The English Record Co., Ltd., is in voluntary liquidation, and a meeting of creditors has been called. Whether or not a reconstruction of the company is possible remains for the creditors and others in authority to decide, but it is a fact that the principle of their trading, of which they were the pioneers, has proved eminently successful, broadly speaking. The public were approached direct by agents of the company, who would install a disc machine and, I believe, three records upon a promise to purchase one record (2s. 6d.) per week until sixty records in all had been bought. The machine remained the property of the company until the records purchased were completed, after which it was presented free of charge to the customer. In three or four years something like 80,000 or more machines were put out which, unless the company were overcapitalized, should have panned out a good and profitable undertaking. What, then, is the cause of the company's present unfortunate position? I am not in a position to answer the question fully, but two contributory

reasons are within general knowledge. Firstly, the class of buyer interested in such a proposition was, for the most part, quite new to the talking machine. From the outset they accepted, without much question, any class of selection offered, but as their knowledge expanded they began to want this and that—topical songs, etc., heard at the music hall or other place of entertainment. And it is just here where the company's troubles began. They were dependent upon other manufacturers for most of their records—issued, of course, under their own label. These manufacturers were marketing their own records through the ordinary trade channels and, perhaps under the fear of alienating their own connection, were not prepared to supply the English Record Co. with topical and up-to-date titles, such an action obviously tending to raise competition and neutralize the sales of their own records. Customers of the English Record concern began to kick, and the many court cases that followed, a good percentage of which went against the company, had a very detrimental effect generally.

I now refer to the second trouble. This had relation to the poor quality of the machines. Incidentally I may mention these were stated in the contract to be of the agreed value of 3 guineas. They cost somewhere in the neighborhood of 20s., but a machine of about equal merit would to-day fetch only 12s. 6d. wholesale. No wonder they proved unreliable and a source of constant trouble to the unfortunate possessors. A large percentage of them were soon in the hands of repairers. It should be mentioned, however, that every machine was guaranteed for two years, the company undertaking to make repairs free of charge, broken mainsprings excepted, and fair wear and tear. Following the writer's suggestion, the English Record Co. ultimately installed better motors. It, however, came too late in the day to stem the tide of adversity.

As may be imagined, the company at first met

HIS MASTERS VOICE

"There is as much money for a Columbia dealer in your territory as there is in the other territories that are already yielding big, profitable business."

(From "Music Money," a free book you ought to have)

Columbia Graphophone Company
Tribune Building, New York

FROM OUR LONDON HEADQUARTERS—(Continued from page 37).

with great opposition from the trade, more especially from dealers who perhaps may be pardoned for thinking it would adversely affect their business. As a matter of fact, the operations of the English Record Co. resulted advantageously for the ordinary retailer. Almost in every town the company located itself, dealers found their trade increasing. Some persons wanted better machines than those provided by the firm, others who could afford it purchased additional records—of titles the English Record Co. could not supply. Three or four other firms now operate this system of trading, and are doing well. They have profited by the shortcomings of the pioneer company, whose present position has aroused sympathy in trade circles.

New Opera Records in Edison List.

A significant indication of the rapidly expanding taste for operatic music is the issue of a further six grand opera records by the Edison Co. These are listed on their fifth Blue Amberol supplement. Five are sung in Italian, and one in German, by world-renowned artists. The titles are: "La Tosca—E Luceran le Stelle" ("The Stars Are Shining") (Puccini), Leo Slezak; "Barbiere di Siviglia—Una Voce Poco Fa" ("A Little Voice I Hear") (Rossini), Selma Kurz; "Il Trovatore—Il Balen" ("The Tempest of the Heart") (Verdi), Carlo Galeffi; "Voci di Primavera Valse" ("Voices of Spring Waltz") (Strauss), Melitta Heim; "Tosca—Non la Sospiri" ("Our Cottage Secluded") (Puccini), Maria Labia; "Tannhäuser—O, Kehr'zurück" ("O, Come Back") (Wagner), F. Eginieff (sung in German).

In the concert section four new records are listed: "Nocturne," E flat (Chopin, opus 9, No. 2), violin, Kathleen Parlow; "Old Folks at Home" (Foster), contralto solo, Margaret Keyes; "My Dreams" (Tosti), Thomas Chalmers; and "Home, Sweet Home" (Payne), Elenora de Cisneros.

The Blue Amberol ordinary list is of a very comprehensive nature, and will interest every dealer. A glance through the list reveals a galaxy of talent—artists of high repute in their various fields of activity. A newcomer to the list is Mr. Hughes-Macklin, whose initial effort at recording justifies the belief that his records will find much favor with the public. A unique record is made by the Rev. William H. Morgan, D.D., and Edison mixed quartet. Dr. Morgan has had a very distinguished career, and is now pastor of the Central Methodist Episcopal Church of Newark, N. J., a position which he has held for the last sixteen years. The record which he has made is from the fourth chapter of St. Mark, verses 35 to 41, the last portion of the record containing the popular hymn, "Peace! Be Still!" The list complete is as follows: "Suite de Ballet, Les Deux Pigeons" (André Messager), National Military Band; "Beside You" (Hoare and Jones), G. Hughes-Macklin; "The Ragtime Wedding" (Godfrey and Williams), "Billy" Williams; "The Athol Highlanders' March" (traditional), Highland Bagpipe Band; "I Loved You More Than I Knew" (Simpson and Ketelby), Charles Compton; "The Butterfly" (Theo. Bendix), Alexander Prince; "Only a Faded Rose" (Cooke and Stroude), Stanley Kirk-

by; "In Gay Paree" (David, Lee and Fragon), Jack Charman; "The Bandolero" (Leslie Stuart), Peter Dawson; "Boys of the Old Brigade March" (Barri and Myddleton), National Military Band; "When I Met You Last Night in Dreamland" (Williams), Helen Clark and Edwin Skeddon; "I'll Love You Forevermore" (Frantzen), Harry Anthony (John Young); "Kiss Me, My Honey, Kiss Me" (Berlin and Snyder), Ada Jones and "Billy" Murray; "Belle of New York March" (Clark), and "Second Regiment, Connecticut N. G. March" (Reeves), New York Military Band; "Waltzing Doll" (Poldini), Venetian Instrumental Quartet; "Down in Dear Old New Orleans" (Conrad and Whidden), Premier Quartet; "Nearer, My God, to Thee" (Mason-Himmelreich), piano solo with chimes effect, Ferdinand Himmelreich; "Dixie" (Emmett), New York Military Band; and "Gipsy John" (Clay), Albert A. Wiederhold.

New Columbia Machine Introduced.

The Columbia Co. advises us of the issue of a new model, hornless graphophone—the Phœnix. This instrument is constructed on the same broad lines as the popular Crescent, but has square, instead of rounded, corners. The size of the cabinet is 15½ inches square, and it is made in both oak and mahogany. The oak Phœnix is listed at £4 10s., and the mahogany at £5. The Phœnix is, therefore, the lowest price model in current hornless graphophones; and, seeing that it is equipped with the new tone-control shutters, it is really remarkable value.

First Columbia Records by Colliery Band.

The first issue of Columbia records by the St. Hilda Colliery Band is announced. This famous band, the composition of which is entirely brass, was the winner of the 1,000-guinea trophy at the Crystal Palace last September. The test piece, "William Tell," together with four marches and two sacred selections, is listed. Other records in the latest Columbia list are:

Twelve-inch.—Selections from "Oh! Oh! Delphine!" Columbia Light Opera Co., and "Venus Waltz" from "Oh! Oh! Delphine!" (Caryll), Miss Grace Kerns, Mr. Craig Campbell and chorus; "Father O'Flynn" (arranged by C. Villiers Sanford), and "Simon the Cellarer" (J. L. Hatton), Sir Charles Santley; "Lily of My Heart" (Henry E. Geehl), and "Yes, Let Me Like a Soldier Fall" (Wallace), Mr. Morgan Kingston.

Ten-inch.—"Row, Row, Row" (Monaco), Arthur Collins, and "How Do You Do, Miss Ragtime" from "Hullo, Ragtime" (Louis A. Hirsch), Jack Manning; "I Was Holding My Coconut" (Collins and Burley), and "While I Was Licking My Stamp" (Wye and Champion), Harry Champion; "That Ragtime Dinnertime Band" (Haines and Chandler), and "If You Want to Please Suzannah" (Mills and Scott), the Two Bobs; "Old English Melodies": I.—"False Phyllis" (arranged by H. Lane Wilson); II.—"The Pretty Creature" (Edgar Coyle); III.—"When Dull Care"; and IV.—"The Happy Lover" (arranged by H. Lane Wilson), Edgar Coyle; "Contemplation" (Julian Kandt), and "Nights of Gladness Waltz" (Ancliffe), Casino Orchestra; "Entry of the Marion-

ettes" (P. Volpatti), and "March Past of the Riflemen" (patrol), the Milan Military Band.

New Gramophone Co. Stock Issue.

The prospectus of the Gramophone Co., Ltd., for issue at par of £300,000, five per cent. first mortgage debenture stock, appeared in public newspapers on April 26 and 28. From this prospectus we learn that the debenture stock and interest will be secured by a trust deed creating a specific first mortgage on the company's freehold and leasehold lands, buildings, and fixed plant and machinery in the United Kingdom and a floating charge upon the undertaking, and all other property and assets, both in the United Kingdom and in foreign countries and uncalled capital, both present and future, the company being precluded from creating any mortgage or charge in priority to or *pari passu* with this issue.

The debenture stock will be paid off on December 31, 1938, at par, or at option of the company, as mentioned in the prospectus. The proceeds of this issue will be used entirely in the business, and principally for the extension of buildings, plant and machinery, and for purposes connected therewith, including further working capital.

The average profits of the company for the twelve years of its existence are said to amount to the fine total of £166,404 per annum, sufficient to pay the annual interest on the debenture stock and the sinking fund more than seven times over. At the time of writing, "H. M. V." £1 ordinary shares are quoted on 'change at 32s. 6d.

ADVERTISING FOREIGN RECORDS.

Two St. Louis Concerns that Are Building Up a Profitable Trade by Pushing Records in Foreign Languages.

(Special to The Talking Machine World.)

St. Louis, Mo., May 10, 1913.

The Raigon Art & Music Co., of 1519 Franklin avenue, on the edge of the Jewish residence district, and the Home Phonograph Co., on the South Side, recently have opened profitable fields for themselves by advertising foreign records. Both firms handle the Columbia lines, and by giving publicity to Yiddish, Italian, Polish, Hungarian, Russian and German records have built distinctive trade that is surprising in its volume.

LATEST COLUMBIA AGENTS.

Many prominent piano merchants and well-known institutions in other mercantile lines joined the rapidly growing ranks of the Columbia Graphophone Co.'s representatives during the past few weeks. Among these houses were the following: Simon Hirschberg & Son, Boston, Mass.; Rosenstein Piano Co., Baltimore, Md.; Hub Piano Co., Baltimore, Md.; Hecht & Co., Washington, D. C.; Hecht Bros., Baltimore, Md.; W. A. Cantrell & Co., Charleston, W. Va.; Sidney Blumfield, Detroit, Mich.; Globe Furniture Co., Annapolis, Md.; Cort Sales Co., New York; Sigmund Pollack, Poughkeepsie, N. Y.; Stefan Gulecsy, Garfield, N. J.; A. W. Friemel, Ridgewood, N. J., and H. Rea Cornish, Turin, N. Y.

LANDAY'S LIMOUSINE WAGON

For Delivery Purposes One of the Finest In New York—A Great Advertisement—Max Landay Chats of Business.

Landay Bros., the prominent Victor distributors, have the distinction of owning the only limousine delivery wagon in New York, shown in the accompanying illustration. This handsome car, which is a powerful 60-horsepower Matheson, may be seen traveling along Piano Row at all times of the day, carrying records and machines from one Landay store to the other, as they may be needed.

Max Landay points with pride to this attractive delivery wagon as an example of the progressive and wide-awake methods of his firm, and states that he finds the car invaluable in daily work, as it very often happens that a special order is received at one of the four Landay stores for a machine or record that has just arrived at the main store. With this delivery wagon on hand, no time is lost in filling the order, as all of the Landay stores are in the fashionable shopping district and deliveries can be made in practically no time at all by means of the Matheson car.

In a chat with The World, Mr. Landay commented as follows on the healthy condition of his firm's business and the outlook for the future: "Our books all show substantial gains over last year, and in our new store we are more than

Landay Bros.' New Delivery Wagon.

pleased at the business consummated during the first four months we have been open. This store, which offers an unusual opportunity for the cultivation of a high-class clientele, because of its splendid location at the corner of Forty-second street and Broadway, is proving to be a Mecca for shoppers in that district, and our demonstration rooms are crowded each day with purchasers of machines and records. All of our stores are reporting excellent business for the first three months of this

year, and our continuous advertising in the leading local newspapers is bringing results in all our branches. The demand for the higher priced Victrolas is steadily increasing, and we expect that this year will be a banner year in all lines of our business, including Victrolas, Victor records, Landay playing-pianos and music rolls.

OCCUPYING NEW QUARTERS.

New York Headquarters of the Dictaphone Department Located in the Smith-Gray Building on Broadway.

May 1 was moving day for the New York headquarters of the Dictaphone department of the Columbia Graphophone Co., which has heretofore been located at the Chambers street store of the company, 87 Chambers street, New York. The Dictaphone department is now located on the second floor of the Smith-Gray Building, 261 Broadway, New York, where it has increased facilities

and accommodations that permit of necessary expansion. This change had been contemplated for some time, as the quarters that the department occupied in the Chambers street store were found inadequate some time since, and a change was made absolutely imperative, as the business closed in New York increased by leaps and bounds. In its new quarters the Dictaphone department will have plenty of light, and more room will be allotted to the demonstration quarters for Dictaphone operators, which is a feature of the Dictaphone department's co-operation plans.

This move of the Dictaphone department also worked to the advantage of the talking machine end of the business, as Manager Bolton, of the Chambers street store, has been badly handicapped by the lack of sufficient demonstration rooms for the dealers who visit the store. With the removal of the Dictaphone department, larger offices for the wholesale and retail departments were arranged, additional demonstration rooms constructed, and a general rearrangement of the store's facilities for taking care of its trade was carried out.

MUSIC ROOM DRAWS TRADE.

Excellent Quarters and Frequent Recitals Enables Columbus, S. C., Concern to Build Up Big Business in Victor Line.

(Special to The Talking Machine World.)

Columbus, S. C., May 10, 1913.

One of the most attractive settings for the sale of the Victor line of talking machines and Victrolas in the State is the Music Room in the store of L. B. Divelbiss, which is fast becoming one of the recognized musical centers of the city. Paul D. Ashmore, who is in-charge of the talking machine department of the house, is a firm believer in the efficiency of concerts in sales promotion, and on frequent occasions sends out numerous invitations to attend Victrola recitals in the Music Room to some of the leading people in Columbus and surrounding country. The invitations are printed on special notepaper of light blue color and bearing the Victor trademark embossed in gold.

In the Exchequer Court of Canada the Berliner Gramophone Co. recently won an important suit covering an infringement of patents brought against Gaston Labelle, who, it was alleged, imported and exposed for sale at his place of business, 392 St. Catherine street, East, Montreal, certain disc talking machine records known under the name of "Favorite."

"TALKER" TRADE STEADILY EXPANDING IN CANADA.

Financial Condition of Country Accountable for This Apart from Merits and Appreciation of "Talker"—Approval Privileges Abused—Record Trade of Big Proportions—Larger Columbia Factory in Toronto—Bell Co.'s Big Victor Trade—New Stores.

(Special to The Talking Machine World.)

Toronto, Can., May 11, 1913.

While a very noticeable tightness in the money market is, in many quarters of the Dominion, checking real estate speculation, legitimate enterprise proceeds uninterrupted. The talking machine trade in each of the provinces is reported in a healthy state and the attitude of the music dealers generally toward their talking machine departments speaks volumes for that industry and the basis on which it is conducted.

Customers and Approval Privileges.

Few complaints are registered by the retail merchants, but one subject cropping up frequently is the abuse of the approval privileges. One dealer stated that he considered the time was not far off when the talking machine departments would require their own association in order to protect each other against "dead-beats." For example, he tells of a well-to-do customer telephoning for a list of children's records from which purchases might be made. These were duly delivered but all of them returned the next day with the statement that none were suitable. A perusal of the next day's paper, however, discovered a description of a children's party held at that customer's home the night before. Other customers have a habit of securing a couple of dozen or so records on approval, keeping them a week or two and then returning all but one or two. Such business is, of course, unprofitable, but the trouble is that one dealer shutting down on such people will send them to a competing house. It requires concerted action.

Over against a few difficulties similar to the foregoing, however, are many admitted compensations. Throughout the country talking machines are well advertised. It has now become recognized that every season is talking machine season and the demand for the better class of records is a very encouraging factor to salesmen.

Confined to Music Stores.

Papers in the interests of various lines of merchandise including drugs, furniture, hardware, and even drygoods periodically endeavor to interest retailers on this continent in talking machines, advocating their readers selling them. In Canada the music dealers are handling the situation in such a manner that the retailing of these instruments is pretty much controlled by the music stores. Occasionally a merchant, in a line of business to which the talking machine is quite foreign, is found featuring the latter with an aggressiveness that many music dealers could well copy. The policy of the manufacturers to keep talking machines from becoming a mere adjunct to any miscellaneous line, is one that music dealers have not realized as promptly or as loyally as warranted by the interests at stake. No doubt it was selfish reasons that prompted the talking machine manufacturers to keep the line associated with music houses, for certain it is that the status of the line has been more firmly established by so doing, nevertheless agencies have been refused to merchants in other lines where the music dealer had even refused to take it on, though subsequently doing so and giving it better representation than a hardware merchant, for example, could possibly do. Music dealers who can see no profit or merit in talking machines have become scarce. People expect to find music in a music store, but they should not be left to find out by accident or by persistent hunting that the local music store carries a stock of talking machines and records. This fact should be, and is, so thoroughly dinned into their minds through the medium of the local papers that they could not forget it if they wanted to.

Large Sums Spent in Records.

Not long ago somebody estimated that talking machine owners spent on the average, five times as much on records as the machine cost. It would seem as if these figures now need revising. Only

the other day a layman told of a friend of his in a country town having purchased a sixty-five dollar instrument some time ago, since then his purchases of records have amounted to thirteen hundred dollars, just twenty times as much as his instrument cost, and he is still buying. An exceptional case, of course, nor does the informant state when the instrument was purchased, but it was less than two years ago. This man has made a hobby of his talking machine, having a bank account that permits him to do so. He buys the entire series of an opera at a time, and entertains his friends to musical recitals frequently. In fact his home has become an important unit in creating musical taste in his community. He enjoys his talking machine, so do his neighbors, while the dealer that is fortunate to have his patronage undoubtedly does. The average dealer may say this incident was greatly exaggerated in telling. Perhaps it was, but it is nevertheless not an improbable case.

A short time ago a certain Toronto business man was lugging home what appeared to be a heavy parcel. A friend accosted him on the street and wanted to know what he had. "Just seventeen dollars' worth of records," he said, "as many as I could afford," and he jokingly added "it costs a lot of money to own a talking machine," though he didn't call it a "talking machine." He is still buying records, and has half the people on the street wondering if they couldn't afford a talking machine. If anything were needed to show that people have developed a real appreciation of the line, the above incidents do so, and the fact is more prominent than ever, that no matter what music dealer is going to be the intermediary between the jobber and the public, the public is going to have more talking machines and more records this year than ever.

Trade News Notes.

Frank Dorian, general manager of the Dictaphone Co., New York, was a recent visitor to the firm's headquarters in Toronto where Mr. Wilson is in charge. The headway made by this branch is evidenced by the increasing number of dictaphones being used in this city. A recent sale was a battery of five machines to J. J. Gibbons, Ltd., the well-known advertising agency.

Among recent strong window displays by the T. Eaton Co., Ltd., Canada's largest departmental store, five window sections were given up to pianos and talking machines. These were shown side by side in model music rooms which is a silent yet powerful tribute to the talking machine as a musical instrument of high standing. The models exhibited included the various designs of Columbia Graphophones, Victrolas and Edison Phonographs.

The Bell Piano Co.'s warerooms on Yonge street, Toronto, present a splendid appearance since the recent alterations and improvements were made. Their eight demonstration rooms for the Victrola department are in charge of Mr. Whetzel. This department has developed from a very small one to one containing every record in the Victor catalogue and as many Victorolas as they can get.

Optimistic reports are current regarding the progress made by the latest distributing house of the Berliner Gramophone Co., Ltd., of Montreal. This is the Western Gram-o-Phone Co. of Winnipeg who look after the wants of the dealers in Manitoba, Saskatchewan and Alberta. They got under way the first of last March, the organization having been accomplished by W. R. Fosdick, manager of the His Master's Voice Gram-o-Phone Co., Toronto, the Berliner firm's Ontario distributors. The new concern is officered by J. M. Douglas, manager; Thomas Noble, accountant; Messrs. H. O. and C. Shuttleworth, road salesmen; Joe Symons, in charge of the repair department.

Passers-by collected in crowds the other day to watch demonstrations of the Edison Dictating Machine given in the large South show window of the R. S. Williams & Sons Co., Ltd., store, the

NYOIL

varnished woodwork it is
extremely satisfactory. No oil is so clean.

Ask your watch repairer whose
oil he uses on your watch.

new ten-story "Home of Music" at 145 Yonge street, Toronto.

As a result of the steady increase in the Canadian business on the Columbia Graphophone Co., it became necessary for that firm to secure much larger factory accommodation. This has been accomplished and they are now located at 363-367 Spadina avenue in the western part of Toronto. This will make possible having the factory and offices under one roof as well as furnish the additional floor space so much needed. Manager A. G. Farquharson and Assistant Manager Otis C. Dorian get a factory accustomed to turning out musical instruments, it having been a piano factory for some time.

Herbert S. Berliner, vice-president of the Berliner Gramophone Co., Ltd., Montreal, has returned from a four months' absence in Europe. During his absence the firm's new factory in Montreal has made good progress and its completion will mean a materially increased output.

The J. J. H. McLean Co., Ltd., Winnipeg, have opened up their new Victrola parlors with four sound-proof demonstrating rooms and a large and representative stock including 5,000 records for a start.

Among recent Ontario houses to take on the Edison line were the Toronto and Hamilton stores of Gerhard Heintzman, Ltd., and it is needless to state that any line up by this well known firm will receive strong representation.

At the last stocktaking of the Music Supply Co., Ontario distributors of Columbia products, they reported an increase in trade of 105 per cent. over the previous year's business. In the face of that little need be said of the popularity of the Columbia line in Canada.

SONORA CO. IN NEW QUARTERS.

The Sonora Phonograph Co. has removed to 57 Reade street, New York City, where it now occupies three floors. The main floor is being used as a wareroom, with four demonstration booths, while the mezzanine floor will be used for storing records. The factory is on the upper two floors of the building.

George E. Brightson, head of this company, has brought to these warerooms many valuable paintings that he loaned to the Brooklyn Museum of Art at the time he closed his Brooklyn home. One painting which Mr. Brightson values at \$150,000 still remains, however, on exhibition at the Art Museum. The others, valued at many thousands, form a very pleasing environment for the display of Sonora phonographs.

To get a raise where you now are means that you are making good; to be hired away from one firm on promise by another of a higher wage is the expectation that you will make good. And it's ten to one you won't.

Morgan Kingston, the gifted English tenor, and destined to become one of the great tenors of the age, has just made his first records for the American public, exclusively Columbia. Don't wait for a Columbia distributor to write you about these records—reach him first.

DODGING THE EXCHANGING OF MACHINES IN DETROIT.

E. K. Andrew Persuades Purchasers to Sell Their Old Machines Themselves—Some Attractive Window Displays—Demand for Talkers for Yachts, Summer Homes, Etc.—Device for Fastening Victrolas to Boat Decks—General Trade Conditions Satisfactory.

(Special to The Talking Machine World.)

Detroit, Mich., May 6, 1913.

The talking machine business was dull in Detroit the first part of April, but began to pick up again in the latter part of the month. As it was not as dull as it was last April, there is high hope for even a more successful year than the record-breaker of 1912.

Every year there seems to be a lull at about the time the baseball season opens. It is more likely that housecleaning and moving have more to do with it than baseball does, however. "Even the window display wouldn't bring them in for two or three weeks," said E. K. Andrew, manager of the talking machine department of the Farrand Co. "Generally when the window is devoted to talkers, it brings in a lot of people. But lately they only have stopped to look. However, they are coming good again now."

Mr. Andrew has introduced an innovation into the trade here which is working out very well. The object is to ward off second-hand machines. A good many prospects desire to turn in one of the old-fashioned box and horn machines as part payment for a modern, high-priced one. There are three objections: First, a second-hand machine of the old style will command a very low price in a store full of new ones, hardly enough to make it worth while to sell it if it were all profit. Secondly, if a prospect retains a lot of old records, that perhaps are worn out, besides being so familiar to the owner that they have begun to pall a little, the new machine will not make as good an impression as it would if operated with a bunch of brand-new records, and the purchaser is likely to think that he has not done a very wise thing in trading. He will tell his friends so; and, consequently, if they have been thinking of buying a new machine, they may change their minds. Thus the trading in of an old talking machine for a new one may kill some business.

The third reason is an amplification of this one—if the prospect sells his old machine and records, his purchase of a new one will mean the purchase of a lot of new records. It is easier to sell a second-hand talking machine from the home of the owner than from a store. People have a tendency to think that in buying anything whatever at a store, they have to combat some hidden wiles of salesmen, who are paid for selling goods and must get away with it. If they buy of some neighbor, they think the article has been tried out and found to be all right—provided the neighbor gives a good reason for selling.

It is this latter point that makes it possible for Mr. Andrew to induce the purchasers of new talking machines to sell their old ones themselves.

The particular window display to which Mr. Andrew referred in prefacing his discourse included the Victor dog in active illustration of what he is on earth for. He was sitting on the

turning table of a Victrola which was operated by electricity, and thus was constantly on the move throughout the day. He was a real "barker"—that is, he called the attention of the public to the Victor display in the window, and the cards conveniently placed told the public of the merits of the Victor line.

Since the warm weather arrived the Max Strassburg Co. also is putting on some fundamental advertising. One of the best machines in the store is kept at an open door and the most attractive records in stock are put on. Hundreds of wayfarers stop to listen; and, naturally, many of them go in to see about it either then and there, or, if they are in a hurry, some other time.

The early advent of summer has hastened the annual demand for machines and records for use on yachts and smaller boats. This class of trade is better than the steamboat trade, for the owners of yachts, launches and canoes want the latest and best, their entertainment being for themselves and friends. The steamship companies, entertaining the public at large and mostly strangers, are not so particular about having new and up-to-date numbers on hand. This remark applies largely to hotels also.

The means of keeping upright Victrolas attached to the floor of a cabin have bothered the local dealers some. Recently a scheme has been devised whereby a flat, steel frame with four upright, integral bolts is screwed to the floor and the bolts inserted into the legs of the Victrola, being held firmly by the castor which is left on the legs.

The demand for the Victor line here is so large that the company is not opening any new accounts in this city at present, its present representations here absorbing all the machines that can be spared for this territory. Three big retail stores, lined up by the jobbing department of Grinnell Bros., have been turned down by the Victor Co. for this reason within a short time.

The Columbia, however, is placing more agencies up-State and has two or three deals lined up for the city, one of them with a prominent music house, the name of which probably can be announced next month.

In Ann Arbor the Columbia has gone into a piano house—Eberbach & Son Co. It is an exclusive agency. There is one other talking machine store in the University City handling the Victor and Columbia both.

Columbia dictaphones are in big demand. Manager Johns, of the Detroit branch store, has just received an order for between forty and forty-five of them from the Michigan Central. All of them are to be used in the Detroit offices of the railroad. The order amounted to \$2,500. "It is a pretty good indication of the trend of general business," said Mr. Johns. "When a railroad is going ahead in this way, it shows that freight is moving, which means that all industries are active.

In spite of all the scare stories that have appeared in certain newspapers regarding the effect of the new tariff, there does not seem to be the slightest indication of a slackening of business in this section of the country.

"While there were the customary spring dull spots in April, the month, as a whole, beat March and, as I said a month ago, March was better than any of the Decembers we have known, except three. The first four months of the year brought more business than the first six months of last year, so we could take a vacation until the Fourth of July and still be ahead of 1912. But we don't figure on any vacation. The sale of records augments steadily. We sold a thousand more in April than in March."

The business in records is spread around a good deal in Detroit. Some classes of people deal exclusively with the house of which they bought their machine, but many others shop around among all the well-known stores, to ascertain what is in stock. This is one of the most potent reasons why the dealers who carry a liberal stock of records get the record business. Comparatively few of the talking machine owners stick to their favorite store for their ammunition.

Manager Johns, of the Columbia, has just opened three good dictaphone accounts in small cities of the State—Port Huron, Bay City and Calumet. The one in Bay City is with a music house, a rather queer place for such an agency, because the dictaphone is a business instrument, not a musical one. But the firm—the Milliken-White Music House—is an active one and already is sending in a good many orders. The Port Huron agency is the Riverside Printing Co., an office supplies concern. So is the house in Calumet—the Keweenaw Printing Co. All are going after the business "right."

PROGRESSIVE YOUNGSTOWN HOUSE.

The Columbia Music House Capturing a Goodly Share of Trade in that Section of Ohio.

(Special to The Talking Machine World.)

Youngstown, O., May 8, 1913.

The Columbia Music House, of which Austin C. Wilson is proprietor, is quite enthusiastic about the prospects for business in this territory. "The outlook for the talking machine," he said, "seems to be brighter each day. Youngstown has a population of about 100,000 people, and we are having splendid success with the Columbia line. The \$50 "Favorite" type is one of our biggest sellers with the table line a close second. We have recently sold several instruments of the former type, and last week installed the first machine ever used in the Youngstown public schools—a "Favorite" and cabinet.

"The Grand Opera House is using a \$200 Columbia in connection with its Sunday entertainments and has dispensed with the orchestra. We have also placed these machines in a majority of Youngstown restaurants, picture shows and ice-cream parlors of the better type.

"We take great interest in The Talking Machine World and anxiously await its coming every month, as it keeps in touch with happenings throughout the entire country and world."

FUTURE OF PRICE MAINTENANCE RESTS ON DECISION

That Will Be Handed Down by Supreme Court of the United States in Bauer-O'Donnell Suit Recently Argued—Some of the Important Points Involved—Of Interest to All Lines of Business Where Fixed Prices Prevail—Manufacturers Make Common Cause.

(Special to The Talking Machine World.)

Washington, D. C., May 10, 1913.

Musical instruments and talking machine interests, as well as those who sell accessories or supplies of any kind upon which a fixed re-sale price is maintained and enforced by virtue of our patent laws, will be vitally concerned by the outcome of a notable case now before the Supreme Court of the United States.

So important is this legal controversy, to many branches of the music trade, that the Victor Talking Machine Co. has caused its chief counsel, Horace Pettit, to volunteer as a participant in the case, in defense of the cause of price maintenance, although the Victor Co. is not a party to the litigation, in a fundamental sense. There is a rumor, too, that other progressive firms in the musical instrument field may follow the example of the Victor in joining issue or making common cause to safeguard one of the most valuable features of present-day systems of merchandising.

The Case at Issue.

The case on which hinges the future of the price restriction policy of the "square deal" manufacturers is what is known as the Bauer-O'Donnell patent suit, and has, in the course of its progress through the courts, several times been referred to in these columns. In a nutshell, the case constitutes a suit for infringement of patent brought by the Bauer Chemical Co., the manufacturers of Sanatogen, against James O'Donnell, a cut rate druggist, who has persisted in advertising and selling the above mentioned remedy at less than \$1 per package—the price at which it is placarded by the manufacturer. It will be appreciated that the commodity which forms the basis of this dispute is far removed from the field of musical merchandise, but the broad principle involved—that of the right of a manufacturer to protect his retailers by enforcing a uniform re-sale price, touches the very heart of this and every other trade which handles patent goods. And it is because this case seems to put the issue so squarely up to the court of last resort that the greatest significance attaches to it.

Discussing this sweeping application of the prospective mandate of the court in this case, the Victor Talking Machine Co., in its brief just filed at Washington, says: "The answer of the Honorable Court to the question will apply equally to the sale of all patented goods, machines, manufactures, and, in fact, to all patented specialties, as well as compositions of matter, and a decision adverse to the proposition thought to be so thoroughly established, would have a far-reaching and disastrous effect to trade in patented goods. This is especially true today when large industries have been built up in the manufacture of patented specialties having selling systems founded upon the doctrine laid down in a long line of decisions in the United States Circuit Courts and Circuit Courts of Appeal, such doctrine as enunciated in the case of the Victor Talking Machine Co. vs. The Fair."

Why Mr. Oldfield Awaits Decision.

And there is another side to this matter as it affects the maker of and dealers in musical instruments marketed under the fixed one-price system. Congressman Oldfield has confided to your correspondent that he is awaiting with the keenest interest the outcome of this, the most crucial of all the price maintenance cases which have ever been brought to the bar of the highest court in the land. It is known that the outcome of the case will influence the future actions of the author of the Oldfield bill, which is regarded as a serious menace to so many business interests. If the Court should, in its decision, knock out the principle of price maintenance under patent rights, Representative Oldfield's proposed legislation would be superfluous. On the other hand if the Court pronounces for the manufacturer's right to dictate retail prices in the interests of uniformity and justice it may be expected that Congressman Oldfield will prosecute his

"crusade" with renewed vigor and that he will use this very decision as the latest argument for need of a change of status in the market for manufactured goods.

Our readers are doubtless familiar with many of the arguments in favor of price maintenance which have been presented in this case because one or another of the attorneys (including some of the ablest patent lawyers in the country) have marshalled almost every fact and theory that has ever been cited as favorable to restricted prices and the manufacturers right to uphold them on pain of prosecution for infringement of patent. But there may be less familiarity with the arguments on the other side and, since an interested spectator should know something of both sides of a controversy—and because some of the contentions in this case are brand new in such litigation—it may be worth while to review the grounds on which price maintenance is being attacked, in this the first case of the kind that has been argued before the "full bench" of the Federal Supreme Court.

Arguments of Other Side Revealed.

The attorneys representing the cut rate druggist who sold Sanatogen at less than the stipulated price take as the text of their argument before the Supreme Court the question "When does the patentee's right to dictate the resale price of his patented article terminate?" They point out that prior to the year 1896 all the decisions of the Supreme Court seemed to indicate that when a patentee had manufactured and sold for a satisfactory price the article protected by patent, that article was thereafter "without the patent monopoly" and beyond the control of the patentee to dictate its resale price. But they go on to explain that the court decisions of the past 17 years have placed the whole broad question of price maintenance in "a cloud of doubt through which at the present day the vision of neither layman nor lawyer can safely penetrate." The situation was especially complicated, they hold, by the decision in the famous Dick-Henry mimeograph case, with which all our readers are, of course, familiar.

The essentially new feature of the defense presented on behalf of the price cutter is found in the argument that a manufacturer cannot use the patent laws to uphold a specified retail price so long as he himself grants concessions below the placarded price to the jobber and indirectly to the retailer. In other words the ingenious position is taken that the manufacturer himself is a price cutter and cannot proceed against other cutters.

The Argument of the Price Cutter.

Discussing this phase of the question the representatives of the cut rate druggist submit to the Court: "It was utterly impossible for plaintiffs to sell a package of the patented article to O'Donnell and reserve to themselves the right to sell that package to anyone else at any price. The argument is that the patentee, after having manufactured his patent device, after having sold that device at whatever price he chose, can, under his statutory patent right retain to himself the right to sell that particular article—the concrete embodiment of the patented invention—at some other or different price than that named in the label on the article.

"Or, to phrase it somewhat differently, the argument is that the patentee may part with the title to the concrete embodiment of the patented invention, receiving therefore the full price demanded for it, retaining no right to make any further profit out of it by virtue of the manner in which it is used or sold, but that under his patent, by means of the label affixed to the article, he licenses the purchaser of that article to sell that particular article at not less than the given price, retaining in himself the right to sell, not other embodiments of the patented invention at a different price, but to sell that particular embodiment of the invention at a different price. This argument can not be sound and it is only resorted to in an attempt to

apply the inapplicable doctrine of Dick vs. Henry to the wholly different situation presented by the price restriction cases."

Quote Bobbs-Merrill Co. vs. Straus Case.

Counsel for the cut-rate druggist lay great stress upon the decision by the Supreme Court of the United States, some time since, in the case of the Bobbs-Merrill Co. vs. Straus, and contend that it constitutes a precedent which should cause the Court to find for their client in the present case. This Bobbs-Merrill-Strauss case is, indeed, one which has lately been made the basis of much argument in the 25 or more price maintenance cases which are now pending in the various courts.

It resulted, many readers will recall, from the action of the proprietors of the department store of R. H. Macy & Co., of New York, in selling at cut price copies of copyrighted books upon which the publishers had fixed a definite resale price, just as the manufacturers fix a price upon patented talking machine records. The publishers sued the department store people, and when the case was carried up to the Supreme Court the decision was against the book publishers.

Difference Between Patent and Copyright.

However, the attempt to make out a parallel case between price cutting on copyrighted publications and price cutting on patented goods in order to justify the disregard of the resale prices on Sanatogen is not to pass unchallenged. The Victor Talking Machine Co., in its valuable contribution to the arguments in the case now before the Court has called especial attention to the fact that there are differences between the patent and copyright statutes in the extent of the protection granted by them. It backs this up by quoting from past decisions of the Supreme Court which prove conclusively that this, the highest Court, does not take the view that everything that is permissible under the copyright law is also, perforce, allowable under the patent system.

Taking up this, the very keynote of the present dispute, the spokesman for the Victor Co. says: "The main difference between the rights of a proprietor of a copyright and the rights of the owner of a patent, as far as the right to restrict the price at which the protected goods should be sold, resides mainly in the fact that the patentee is given by the statute the unrestricted right to regulate the 'use' of the patent product, as well as the right to make and vend, while the copyright owner under the statute is given only the right to multiply and vend.

"The main distinction is that the patentee, when he sells the patented article with a restriction as to use, can limit the use of the article within any bounds, and under any limitations which he sees fit (which are not contrary to public morals, and public health, etc.). This includes the right to limit the use of the patented medicine or device only to such of the public and only to such persons as shall have paid not less than a given price for the same."

Notable Companies Make Common Cause.

To what extent manufacturers of patented goods which are retailed under the restricted price system are making common cause in presenting to the Supreme Court their claims of rights conferred by the patent laws is shown by the fact that the Gillette Safety Razor Co., the Waltham Watch Co. and other makers of widely-sold articles have filed briefs just as the Victor Talking Machine Co. has done. The action of the Waltham Watch Co. is especially interesting because Judge Roy recently caused a good-sized sensation by deciding against the Waltham Co. in a case somewhat similar to the one now before the nation's highest tribunal. The Waltham Co. says that it believes that "price restrictions on patented articles follow the goods into the hands of every purchaser," and later, pleading for a definite pronouncement of the subject, says: "The Waltham Co. earnestly trusts that the Court will render a decision one way or the other which will settle the question for good."

This last is the sentiment of most manufacturers and merchants. No Supreme Court decision up to this time has been full and explicit enough to settle once and for all this question of price-fixing under patent laws.

The new folk-dance records recently issued by the Columbia Educational Department are played by full military band, not simply on a solo instrument. No wonder they are getting Columbia into the schools!

Columbia Graphophone Company

Tribune Building, New York

AMERICAN GRAPHOPHONE CO. INCREASES WAGES.

Rate of Compensation of All Factory Employees Increased Approximately Eight Per Cent. on May 1—Follows Recent Reduction in the Number of Working Hours—A Tribute to Clinton E. Woods, Factory Manager, and to Those Who Stand Behind Him.

The American Graphophone Co. gave its employes a pleasant surprise on Tuesday, the 29th ultimo, when it announced through Clinton E. Woods, the manager of its factory at Bridgeport, Conn., that beginning with the 1st instant the rate of compensation would be increased by 8 per cent. Simultaneously it was announced that a Saturday half holiday would in future be in order.

This step is the second one that has been taken by this company of its own volition, and which has been of the most gratifying kind to its factory people from the lowest to the highest. In 1903 the company took the unexpected course of giving its

No one can misunderstand his attitude toward those who are assisting him in the important work he is doing to the end that the product of the company shall be well made on economical lines and the sale of its goods thus made an easy as may be. Fortunately for employes, for the public and for the stockholders, the owners are men with clear heads. They do not expect something for nothing. They desire and are bound to possess the confidence of their employes, of the public and of each other. They recognize in Mr. Woods a master of the art of manufacturing, whose course is governed by a determination to extend the company's prosperity so that its workers shall share in it in a manner so substantial that there can be but one opinion as to the sincerity of those in control from the president down through the entire administrative and executive line to share the com-

Edward D. Easton

employes a nine-hour day. There had been surface indications for some months that the old ten-hour day was too severe for these modern times, and before even an informal demand for a reduction of working hours was formulated the company, at the instance of the late Thomas H. Macdonald, took the initiative and readjusted the schedule.

Of course, this was only made possible by the prompt compliance of President Edward D. Easton and his associates on the board of directors. And their alacrity in forestalling a possible request was repeated last month when Mr. Woods took the matter up and argued its justice and feasibility, in view of the unceasing demand for graphophones and records. In other words, Mr. Woods, who said to his employes a few weeks ago at a smoker in which the heads of departments participated, favors the policy of having the best men there are and keeping them permanently by paying them the highest wages compatible with a proper regard for changing circumstances in respect of sales, money conditions and the numerous other considerations that a manufacturer must take into account.

INDIANA TRADE LIVELY.

Much Interest Being Displayed in Shipments of New Edison Disc Machines Received in Indianapolis—Kipp-Link Co. Arranges Special Display—Stewart Talking Machine Co. Enlarging Wholesale Department.

(Special to The Talking Machine World.)

Indianapolis, Ind., May 11, 1913.

Shipments of the new Edison disc machine are being received now by the Kipp-Link Phonograph Co., distributors in Indiana for the Edison products. A great many persons had begun to believe that the new machine "just never would come," but now the machine is here, ready for the purchaser. The Kipp-Link Co. has exceptionally well arranged display rooms and the more expensive Edison disc machines show up well. Much favorable comment has been heard about the A-375, A-300, A-290 and A-275. The A-60 machine will also prove a favorite, it is believed. Machines are being shipped to dealers throughout the State by the Kipp-Link Co., and the company has started after buyers for the new machines in earnest. From the present outlook there won't be much need of "coaxing."

The talking machine department of the Rapp-Lennox Piano Co. is gradually being built up by the company. The Victor line handled by this company is being strongly exploited.

The Victor talking machine department of the Aeolian Co., in charge of Miss Lazarus, felt proud on the night of April 24, when the final recital of the season was held in Aeolian hall. A capacity audience applauded again and again when the Victrola selections were played. Business in the Victor department of the Aeolian Co. has been good.

The Stewart Talking Machine Co. is enlarging its wholesale department. A record room which will exclude dust and dirt is being constructed. A first-class repair department is also being installed

pany's success with employes and to convince them that their cause and that of all others in interest are identical and that absolute harmony is a fundamental requirement.

The situation which prevails in the factory of the American Graphophone Co. will be impossible without an intelligent and sympathetic head of the factory, and even with that much gained his efforts would be neutralized and his results imperfect but for the spirit of fairness and liberality which characterizes those at headquarters who stand behind him and give him their helpful and unwavering support. There can be no greater force in the realm of causation than a combination which brings together a competent and intelligent manager with a clear head and a warm heart, an earnest and unprejudiced corps of working people—foremen, clerks and mechanics—and a set of fair minded and progressive owners to attack their problems with a sympathetic determination to conquer victory over all vicissitudes at any hazard. This kind of a force is the predominant one within the official family over which Messrs. Easton, Lyle and Woods and their numerous coadjutors preside so successfully, and with a measure of distinction that wins universal recognition.

and the company will be able to take care of its repair work in the city and State. The Stewart Co. reports an excellent business.

A. W. Roos, manager of the local branch of the Columbia Co., has a new automobile and a wrist which is out of commission. The two are closely connected, according to Mr. Roos's version of the affair. His friends are charging that the crank "back-fired," but Roos avers he did not receive his injury in that manner. He blames it on another automobile owner. Anyway, he says, he did not get it knocking the goods of a competitor. Roos was "petting" his machine one evening and as he was standing along the side next to the street the driver of another machine "side-swiped" him. Roos slipped and his hand fell on the hood of the machine. Examination developed that he had a wrenched wrist. "In view of the recent flood," said Mr. Roos, "business in April was much better than expected. Things are about normal again." The arrival of a sample Grafonola Grand, it is expected, will stimulate trade. The salesmen at the local store have been busy showing the new machine to interested parties.

Thomas G. Devine, manager of the Dictaphone department, succeeded in rounding out an April business in excess of any past April record made in his department. He has a number of real live prospects for May.

The Victor talking machine department of the Wulschner Music Co. is to be "raised up" in the world. Up to this time this department has occupied attractive quarters in the basement at the Wulschner store, but now it is to be placed on the first floor along with the company's finest pianos. The Wulschner Co. is remodeling its first floor.

Mr. Baldwin, of Cincinnati, connected with the Edison Business Phonograph department, has been in Indianapolis looking after old business and scouting around after new. He is making a special effort to increase the trade in this city and his agents are working accordingly.

CINCINNATI TRADE RECOVERING FROM FLOOD EFFECTS.

As Conditions in Flooded Districts Get Back to Normal Jobbers and Dealers Find Much Improvement in Business—Activity with Columbia Co. Branch and Outlook Encouraging—Deep Appreciation for Generous Attitude of Manufacturers—Recent Displays.

(Special to The Talking Machine World.)

Cincinnati, O., May 9, 1913.

The trade is in an expectant mood. Normal conditions are being restored, but it will be some time before the jobbers will proclaim themselves to be satisfied with conditions. The railroads are taking only small shipments, and this with no promise of prompt delivery. Consequently but little has been accomplished in the way of supplying the dealers in the flood sections.

Manager Whelen, of the local Columbia store, stated, when interviewed, "that business was very good during the past month in both wholesale and retail, considering the way the month opened up, as there is no doubt in the minds of dealers not only in the talking machine line, but in all the various industries that the floods had a damaging effect on business in general. Still, dealers in the Cincinnati territory who suffered flood losses showed the usual American grit by restocking in preparation for the spring and summer trade." He further stated: "The past few months there has been quite a shortage in certain types of machines, but this is not due to the erroneous idea of quite a few people that there is no future in the talking machine business and that the manufacturers have lost faith, but to the fact that even the manufacturers did not foresee the phenomenal increase in the business; and, while we have more than doubled the producing facilities of our factory during the past two years, the output was unequal to the demand, which is four times as great as it was two years ago. It is very gratifying to note that the largest increase is in the higher-priced instruments and the symphony records. The grand opera season here last month was a great stimulus

to record business, and there was a great demand for Carolina White, Olive Fremstad and Mary Garden records. The Chauncey Olcott (the great Irish tenor) records, which were put on sale recently, have proved to be wonderful sellers."

W. S. Givler, traveling representative of the local Columbia branch, was kept "on the jump" during the past month, closing with new dealers throughout the Cincinnati territory.

Prof. Frederick Goodwin, manager of the educational department of the Columbia Co., spent a few days in Cincinnati to attend the Y. M. C. A. convention and to personally investigate the Cincinnati school question.

Manager J. H. Dittrich, of the Rudolph Wurlitzer Co., makes the following newsy comments: "The topic of to-day in all business circles is, of course, the aftermath of the flood and naturally in considering the trade conditions during April, this item is uppermost in our minds. Upon investigation the flood losses in the Ohio Valley, exceeded the amount first expected because of the erroneous information given regarding the high water in the great flood of 1884. Much stock which could have been saved was lost because it was thought to be located above danger line.

The lot of these dealers which, in many cases, was absolutely hopeless was changed by the generous attitude assumed by the Victor Talking Machine Co., and throughout the flood zone Victor dealers find words inadequate to express their gratitude for the magnificent generosity of the Victor Talking Machine Co. From all the flood zones the most optimistic letters are being received, and the orders that are coming in from these points speak more eloquently than the let-

ters of the courage and spirit that prevails in the desolated district.

While the history of the Ohio flood is brightened by many deeds of heroism and self-sacrifice, the action of the Victor Talking Machine Co. in helping their dealers as they did will forever illuminate the dark memory of those terrible days.

The memory of the flood will only be incidental in the minds of Victor dealers, for the magnitude of their loss only helps to magnify the vastness of the gift extended to them. As one Victor dealer expressed it, "I might forget the flood, were it not for the fact that my stock will be a daily reminder of the gift I received from the Victor Talking Machine Co., and that it is the greater part of the flood history."

The H. & S. Pogue Co. during the past week has had an interesting joint display of Columbia Gramophones and some Victor Victrolas. Jointly it has been the most interesting display of its kind in Cincinnati. The settings are interesting and the whole has been built up in a manner as to compel notice on the part of pedestrians.

The Aeolian Co., as usual, appears to be having trouble in getting stock. It has a Victor display of small instruments in the show window, the Victors forming the center of attraction, with pianos on both sides for weight.

The Otto Grau Piano Co. will soon blossom forth with a Victor department, carrying the complete line. Goods have already been ordered from the Talking Machine Co., Chicago, and should reach Cincinnati in time for the opening, to take place about May 15. Two soundproof booths have been installed in the rear of the wareroom.

John Arnold, the Elm street dealer, reports good business in the Edison disc instruments.

News comes from Cleveland that the United States Phonograph Co. has decreased its capitalization from \$1,000,000 to \$10,000.

J. C. Poorman, who has been without a regular line since the troubles of the Zonophone, is said to be negotiating for the rights as jobber of either the Keen-O-Phone or the Vitaphone.

VICTOR TALKING MACHINE CO. TO PENSION EMPLOYEES.

To Look After an Army, Consisting of 5,400 People, in Their Old Age—Co-operative Beneficial Association Designed to Aid Members Whose Income Is Cut Off on Account of Sickness—Cost of Maintaining Business of the Association Borne by Victor Co.

So that its employes may be provided for in their old age, the Victor Talking Machine Co., of Camden, within a short time will establish a pension system. The company employs 5,400 men and women. The pension plan has not yet been perfected, it was announced recently by officials of the company, but will be similar to that of the Pennsylvania Railroad Co.

Every one of the 5,400 employes who remain with the Victor Co. a certain number of years will be

E. R. Johnson, President of the Victor Co.

retired with a pension, the amount to be a percentage of the monthly earnings of the employe when retired. The percentage and required time of service have not yet been decided.

In connection with the establishing of the pension system, the Victor Co. has announced that a co-operative beneficial association, designed to aid members whose income is cut off on account of sickness, will be formed.

Every employe who has been in the company's service thirty days is eligible to the association. Members pay 25 cents a month dues. In case of illness the association will pay members \$1 a day

for 100 days. There will be a death benefit of \$150

The company announces that the cost of maintaining and carrying on the business of the association will not be placed upon the employes, but will be borne by the company itself.

As a further incentive to faithful and continued service on the part of its employes the Victor Co. has announced that it will give persons dependent on any employe the sum of \$500 in the case of the death of the employe after five years' service.

The sum of \$500 will not be taken from the funds of the co-operative beneficial association, but will be a gift of the company.

Officials of the company said recently that it is part of the scheme of efficiency in force at the Victor factory to provide for its employes in all cases of sickness or want. Heretofore they have provided in all cases where their attention was called to such cases. Under the new system of co-operative benefices, the company hopes to keep in touch with its employes in every case of illness or death.

TEACHERS FAVOR "TALKERS."

Louisiana Music Teachers' Association Favorably Inclined Toward Talkers and Players.

(Special to The Talking Machine World.)

New Orleans, La., May 10, 1913.

"Canned Music" was one of the principal topics of discussion at the meeting of the Louisiana Music Teachers' Association at the Hotel Grunewald last week. Opinion was divided as to whether the advent of the talking machine and the mechanical piano player will result disastrously to the perpetuation of appreciation of musical artistry. Many of the members expressed the belief that interest in classical music will be stimulated by the contrivances for the reproduction of the singing and playing of the stellar lights of the musical firmament, while others contended that a fondness for the classics is being vitiated by such instruments.

The general opinions of the teachers were entirely favorable to the cause of mechanical music both by means of the talking machine and player-piano, and echoed the opinions of music teachers in other sections of the country on the subject.

DAVEGA MOVING TO NEW QUARTERS.

The S. B. Davega Co., Victor and Edison jobber, is now moving from its former home at 126 University place, New York, to larger and more adequate quarters at 831 Broadway, New York. The new home of the company will be furnished attractively, and the talking machine departments will be considerably larger than heretofore. A number of demonstration rooms are now being constructed, and the company will be in an excellent position to handle its trade to good advantage.

REVISED ESTIMATES OF LOSSES

Prepared by Dayton Business Men Place Figures on Pianos at \$800,000.

(Special to The Talking Machine World.)

Cincinnati, O., May 9, 1913.

A committee of Dayton real estate men and other citizens who have been making estimates on the losses in the Gem City, on Saturday issued a revised statement, which shows that the loss on pianos in homes was approximately \$800,000. Other figures follow: Buildings, \$15,200,000; furniture, \$9,440,000; merchandise, \$18,000,000; live stock and autos, \$1,000,000; churches and property, \$2,068,100; fire losses over insurance, \$975,236; wages, \$4,045,000; losses in production, \$747,000; leaf tobacco in warehouses, \$900,000, and the grand loss to real estate, in the event of the Government not aiding the city, is placed at \$55,000,000.

Some men come up to the mark they have set for themselves, but it was placed low.

The man behind the gun

You are the "man behind the gun" with your customers, and they look to you to hit the mark every time—to give them what they want when they want it.

But what good is the man behind the gun if some one holds back the ammunition on him! With customers wanting this, that, and the other thing, and firing questions at you to find out when they will get their goods, you're in anything but an enviable position.

That's where an AI jobber "saves the day"—by giving you all the ammunition you need; by getting to you promptly whatever you want in Victors, Victrolas, Victor Records, record cabinets, horns, needles, fibre cases, repair parts, and accessories of every sort.

Promptness is one of our strong points and around it centers every other desirable business attribute; and promptness with us means all orders shipped the same day they are received.

If that's the kind of service you want, we can give it to you—always. Drop us a card for our catalog and our booklet, "The Cabinet That Matches".

RECORDING ARTISTS OF ALL CASTES IN INDIA

Calcutta, Madras and Bombay—A Recording Expedition of Over 12,000 Miles, Recording Only Oriental Artists—A Most Interesting Experience in Far Off Lands.

By T. J. THEOBALD NOBLE, a Prominent European Talking Machine Recorder.

The weather was so oppressively hot in Madras that I was compelled to record with only my pajamas on, and those of the thinnest silk obtainable. I was to record only native artists, and their was no fear of "shocking" their modesty.

Of the artists, I will mention but one; the one that I had come to Madras to record. Miss Godavari, the first artist in the Tamul language. We visited this woman's house for the purpose of discussing terms (this is always a tedious and worrying business.) The house was a great surprise, for the interior was constructed of marble and a faint glimmer of a blue-shaded light cast an interesting and warm sensation over the interior that was at once fascinating and seductive. It was presented to her by an admirer and had cost 180,000 rupees (\$60,000). We were compelled to pay two visits before ultimately coming to terms. We secured her for sixteen titles for the sum of 300 rupees* per song. I may add that she held out consistently for two days for 900 rupees per record.

The trouble we discovered was through the agents, who are a most arbitrary set of men. They persuade most of the artists to ask for large fees in order to swell their commission and at the same time advise us that such and such a price is usual for a particular artist.

She came to the hotel to record, accompanied by a retinue of seven servants, including two accompanists. One of the instruments for accompanying was the most extraordinary musical (?) instrument. I should imagine, in the world; it is best described as a large earthenware pot, which is held in the lap of a man who plays it by beating a series of taps on the periphery, certain parts of which given out various tones. (This was not perceptible to the writer.) The accompanist's fingers have to be particularly hard and dexterous for to continually beat on such a hard surface sufficiently loud for recording purposes requires an appreciable amount of strength and adroitness. A clearer impression can be observed in the photograph.

The other accompanist was a young girl playing the harmonium, whilst the artist herself was playing another instrument bejeweled in most elaborate fashion. The instrument was valued at 12,000 rupees (\$4,000). She was covered with gold and precious stones of great value. It was for the express purpose of guarding these jewels that she possessed a guard of four men. An Indian artist by-the-bye, invariably dons her finest jewelry in the presence of a white. Round her throat she wore a necklet of English sovereigns,

Making Records by Miss Godavari.

the clasps holding each to the other were studded with diamonds. There being in all fifty sovereigns and fifty clasps, the value can be appreciated. On the toes she wore platinum and gold rings. I secured a photograph but she insisted on removing from her person all jewels, for what reason I was never able to comprehend. In the photograph nevertheless, can be seen the rings on her toes and the large diamonds in the ears.

She sang exceptionally well, her high cadenzas being particularly loud and clear, which is always a great necessity and advantage for recording.

It may be interesting to state here that the broker present was so enraptured with the singing that he immediately ordered three thousand of

each title. She, herself, ordering from the broker, fifty of each title for distribution amongst her friends. Having made records before, she was little troubled and in fact, was a great assistance, for it was that instructed the accompanists exactly what to do and where to sit, explaining to me that the position in which she placed the men was the best position, for the so-and-so company had already experimented with the placing and had lost two days before ultimately succeeding. I therefore left it to her and the result proved eminently satisfactory.

After having recorded Godavari, I visited another woman at her home in the native quarter of Madras, but this time the house was not constructed of marble. In the worst part of the town we were compelled to climb a flight of stairs into a dirty, evil-smelling room, where one or two men were squatting, smoking and talking, which at our approach diminished into murmurs of surprise. We were conducted through the room

Mahomedan Priest, Bombay.

into another (certainly cleaner), where sitting on the floor was the artist. With her were two Indians with diabolical and satanic faces, who regarded us with invidious glances which seemed to infer "We own this female, don't touch her without first displaying your gold." We stated our business and they were a little more agreeable and regained less vindictive countenances.

We listened to the young girl sing a couple of songs, and found her voice sufficiently good for recording. We accordingly arranged terms; not with the artist, however, but with the men who were apparently her body guard, with the emphasis on the body.

The girl was retained by the men as a business proposition, and she was compelled to obey all their desires and instructions, both as regards singing and otherwise. She was but sixteen years of age, with a perfect figure, large sympathetic eyes and a charm of manner.

The following morning she arrived at the hotel, accompanied by her two guards and accompanists. The former, I immediately dismissed from the recording room and out of the hotel, bidding them return after three hours for their charge.

During the recording she regained her vivacity and sung with appreciable amount of enthusiasm, and appeared to wish the recording would continue for time indefinite. She beseeched us not to give her fees to the men in full, but to tender but half, and with the other buy bracelets and trinkets. A proposition in which we readily acquiesced.

I afterwards learned that the Indians were incensed against us for buying the bracelets, for they only received half the amount they anticipated. They dare not strike or ill-treat the girl,

for they were cunning enough to conceive that under such circumstances the poor girl's attractions would immediately disappear. I often think of and pity that poor little Indian girl in Madras.

I here returned to beautiful Bombay for the final recording. My first duty was to visit the native theatre, in order to her the artist of most importance, a Miss Cohar, of Bombay. To my surprise, I afterwards learned that there was but one female in the performance and that was Miss Cohar, the other female parts were played by young men, and the difference was imperceptible to the uninitiated.

Miss Cohar is the most beautiful of all the Indian artists, and her voice the sweetest, but unfortunately the latter is very weak and I was a little dubious as to whether a commercial record could be secured. I constructed specially sensitive diaphragms and succeeded in obtaining a number of satisfactory commercial records. She was intensely nervous, and it was over an hour before she regained her self-possession after first hearing her voice reproduced.

Miss Cohar, Bombay.

As with most Indian women, she was reserved, timid and exceedingly dainty. She was the wife of a prosperous Bombay merchant, and has one son. The theater is her own concern and is filled every night of the year. She spoke English in a manner which made our language appear strangely musical and fascinating. (This artist was the first I had recorded in India that was not ostracised socially.)

I next recorded a Mohammedan priest; he recited a number of verses from the Koran, with much feeling, and made a very clear, fine record.

An incident illustrating the depth of the Eastern mind is worth recalling. The priest, being short of stature, it was necessary to requisition a few books for him to stand on. To my surprise, he apologetically refused, and gave for his reason one of the multifarious commandments in the Mohammedan decalogue, "It is a sin to look invidiously or treat with contumely—'knowledge in all forms.'" I was amazed, but who cannot appreciate such wonderful tribute to knowledge?

A Parsi orchestra was my next recording. It was constituted of three dilapidated clarionets, two split cornets, a flute which had been broken and repaired with glue, a trombone of such obvious antiquity, tone and shape, that I am inclined to believe it to be the original ancestor of the trombone family which entertained the "Ark." Drums, tum-tums and bells galore. With these things they attempted to play native music. Fortunately, the indescribable slaughter and heartless massacre of music which I was compelled to record, can be better imagined than described—or, better still, not heard at all. The brokers informed me that the records would certainly sell, so I went ahead and made a dozen, afterwards retiring to my hotel to partake of a bath in a vain endeavor to eulm my sorely wounded imagination of music.

The next day I received a similar worrying gruelling, which, nevertheless, has caused considerable since. I was to record an artist four songs and anticipated in getting through in an hour or so. After giving careful instructions as to where to finish, also when to commence, explanations which occupied fully fifteen minutes, I began to record. As an example, in one he would commence perfectly correct, but after a minute's singing, would suddenly stop and shout across the horn, "Is that enough?" Another time, just after the start, he stopped and asked: "What is the hissing noise I can hear?" Again halfway through

another record he exclaimed: "Did you say four or five verses?"—and then he attempted to continue. I eventually succeeded in obtaining the four records of him in three hours, and spoiled fifteen master blanks in the attainment.

His imbecility was so provoking that I actually threw a record at him. It was at the third attempt of his third song, and he was within half a minute of the finish, when he again stopped and with a most tantalizing stupidity, observed, "I shall not sing the last verse, I may make it too long." (We had already timed it five times. In momentary disgust I threw the wax record at his feet, smashing it into a hundred pieces. Strange to say, it had a most exhilarating effect, for he made the next round perfectly and the fourth song at his first attempt. Possibly he thought if he committed another mistake the record would be thrown higher up. In Bombay, other than Miss Cohar, there was no one of note, but she was compensation for all. Her beautiful voice was fascinating and I believe she would prove interesting to an American audience, as did Miss Jan, of Calcutta prove to a London audience in 1910.

I experienced the same trouble in India as in Turkestan, with mercenary artists who dally and shillyshamble around for days over their fees.

The usual customs is to fix a price, they (the artists) then leave and the following morning send word that their price is so much, generally twice the amount you have virtually agreed on. You naturally refuse and they will send another message in the afternoon reducing their price somewhat, again you refuse, and once again they reduce until they ultimately arrive at the recording room and without speaking, commence to make preparations for recording at your price. Half-way through the numbers they will again commence asking for more money. A more arbitrary and perverse man of business than an Indian would be hard to find, and if found, would certainly be in the Orient.

After having recorded approximately 850 records, I left India for Paris on the ill-fated steamship, the Oceana.*

During my stay I often witnessed curious happenings, examples of caste distinctions, religious customs and funeral rites. Of these, I will write in my next and last article, together with one or two incidents, amusing and otherwise, which happened to me in recording in Europe, Caucasus and Turkestan. I shall also outline the expenses during the whole of my recording for the last three years, artists fees, waxes used and persons met.

(To be continued next month.)

*The P. & O. Liner Oceana it may be remembered collided with another vessel and sunk in the English Channel in March, 1912. She sunk with \$3,750,000 in bullion. The latter was afterwards recovered.

NEW QUARTERS IN LOUISVILLE.

Franklin Building, That City, Especially Remodeled for Accommodation of Wurlitzer Co. Branch—E. B. Waithall is the Manager.

(Special to The Talking Machine World.)

Louisville, Ky., May 8, 1913.

The local store of the Rudolph Wurlitzer Co., is now located in new quarters in the Franklin Building, at 652 Fourth avenue, the building having been remodeled and handsomely decorated to meet the requirements of the various departments of the company's business. It is stated that when everything is completed and in readiness for the formal opening of the new quarters they will be among the handsomest and most conveniently arranged of any music store in the city.

Special arrangements have been made for the display of the company's line of pianos, player-pianos, electrically operated instruments and Victrolas. The new store is in charge of E. B. Waithall, who has for eight years been manager of the store of the Columbia Graphophone Co., in this city, and who is therefore well known locally. The date for the formal opening of the new establishment has not yet been announced.

The man who spends two minutes meddling with other people's business loses two minutes from his own.

TO DEAL IN TALKING PICTURES.

(Special to The Talking Machine World.)

Wilmington, Del., May 9, 1913.

The Webb Talking Picture Co., of this city, has been incorporated with capital stock of \$6,000,000 for the purpose of manufacturing, selling, dealing, leasing and renting all kinds of machines for vibration of sounds, either vocal or instrumental. The incorporators are: S. S. Adams, Jr., John G. Gray and M. B. F. Hawkins, all of Wilmington.

SELF-SATISFACTION A HINDRANCE.

Means That the Possessor Has Gotton Into a Rut That Prevents Progress.

There are several characteristics in men that run directly counter to success, but it is doubtful if there is any trait in human nature that stands out so conspicuously as the enemy to everything that is naturally progressive as the condition of smug self-satisfaction that so many persons assume. Once fitted firmly into this position in life

there is no hope that they will ever be able to do anything that is really worth doing. They have got themselves into a rut from which it is practically impossible for them to extricate themselves, and, like the dead bugs in amber that they are, they must remain in the quarters they have chosen for themselves until some more energetic fellow comes along and digs them out.

PARCELS BY POST C. O. D.

(Special to The Talking Machine World.)

Washington, D. C., May 10, 1913.

Postmaster General Burleson is at work on a plan for improving the parcel post system by establishing July 1 a collect-on-delivery service. This, it is believed, will mean tremendous increase of business, especially on rural routes. Farmers everywhere, as shown by hundreds of letters coming to Mr. Burleson, are anxious to make greater use of the parcel post service. At present the use of the parcel post is far greater in the cities than in the country.

Since the installation of the parcel post the Post Office Department has had 300,000 sets of zone maps and rate books printed to satisfy the demand.

“No talking machine dealer can make up his mind in this matter from any opinion he might have had even as recently as two years ago. Don't miss out on this business. The Columbia proposition is too good a thing to be 'slept over.'”

Tribune Building, New York**

LECTURES ON RECORD MAKING.

Clinton E. Woods, General Manager of the Columbia Graphophone Co.'s Factories at Bridgeport, Conn., Speaks Before Lotos Club and Demonstrates Columbia Grand.

Clinton E. Woods, general manager of the Columbia Graphophone Co.'s factories at Bridgeport, Conn., demonstrated the "Columbia Grafanola Grand" before the members of the Lotos Club, New York, on Tuesday evening, April 24, accompanied by an interesting lecture given by Mr. Woods on the manufacture of records.

From the beginning to the end of Mr. Woods'

Clinton E. Woods.

remarks the members of the club and their guests in attendance were enthusiastic in their applause at frequent intervals, as Mr. Woods illustrated certain features of his lecture by playing specially selected records on his invention, the Columbia "Grand."

It is very unusual for the Lotus Club to permit lecturers or entertainments in their club rooms after April 1, but the members have taken such a keen interest in the development of the talking machine that all precedents were waved aside and the lecture took place before a crowded house. Two dozen selections, specially selected for Mr. Woods' lecture, were played on the Columbia "Grand," and these records ranged all the way from humorous to operatic selections. At the close of the meeting the members and their guests carefully examined the mechanism of the "Grand."

The talking machine has received official recognition at the hands of the Cincinnati Board of Education. At a meeting of the School Board superintendents, held recently, Superintendent Condon, who arrived recently from the East, recommended the purchase of the "most improved style of phonograph" for the purpose of assisting in music education in the Sixth District school. If the innovation proves a success, the same will be tried in the other public schools.

TALKING MACHINES IN JAPAN.

Recent Meeting of the Nipponophone Co., Ltd., Held in Yokohama, Throws Some Interesting Light on the Development of the Business in that Country—Control Stores—Fight the Copying of Records by Irresponsible Firms.

The Nipponophone Co., Ltd., which is extensively manufacturing talking machines in Yokohama, Japan, recently declared a semi-annual dividend of 20 per cent. Its directors and managers are entirely American. It has a plant capable of turning out 4,000 talking machines and 200,000 records per month. The Japanese employed under American expert direction and supervision give satisfactory service at an initial cost of slightly more than one-third of the wage rate paid in the United States for similar services.

The company in 1912 increased the number of its agencies throughout the Empire from 106 to 306. These agents sell its products exclusively goods being consigned to them against security on condition that they sell only machines made in Japan. During 1912 sales increased over 1911 by nearly \$200,000.

At a recent meeting of the American directors and shareholders the president, F. W. Horne, made the following statements regarding the copying of records without consent and the question of advertising with a view to meeting competition of talking machines imported from other countries:

"Your directors for some time past have felt that the copying of records without the consent of the artist or owner of the original matrix would be declared illegal in Japan, copyrighted or not copyrighted, as it has been so held in America, England, France and Germany. Had we been able to secure this protection we could have reduced the selling price of all records not protected by copyright to a point at which it would be unprofitable for the dishonest dealer in or manufacturer of this class of goods to compete, while at the same time we would be able to make a reasonable profit because of our large output. With the view of protecting our rights we have now employed a capable attorney who will devote his entire time to our interests, and it is our intention to bring criminal suit against all parties infringing our copyright records. At present there are about 20 concerns throughout the country engaged in this copying business, with capital varying from \$500 to \$5,000 each.

"In this connection I would especially call your attention to a very important judgment recently given in one of the Tokyo higher courts, holding that the copying (which is generally known as 'dubbing') of a record is illegal, making the directors and officers of corporations, as well as manufacturers and dealers in such, subject to imprisonment and fine and also liable to suit for damages.

"In introducing our product to the trade in com-

petition with the well-known foreign goods, it was not only necessary to advertise freely, but to establish our own branches throughout Japan, Formosa and Chosen. At present we own 40 stores which have been managed by capable, honest young Japanese. We believe the time has now arrived when we can afford to reward these employes in a substantial manner. Your directors have approved a plan of your general manager which permits the manager and his assistants at each branch office to purchase such branch on a time basis with a guaranty that our goods exclusively shall be sold. The conclusion of each sale will naturally relieve the company of all charges attaching to such branch and will finally leave the company as a manufacturing concern only. This plan will eventually allow us to give ordinary agents who deal exclusively in goods of our manufacture even more advantageous terms than at present. We shall continue to advertise freely in the future, as we have in the past. In 1911 we spent about \$18,150 and in 1912 \$38,600 for advertising, and hope to increase it to \$50,000 for this year."

WHAT A WISE MAN DID

In the Recent Flood at Parkersburg, W. Va.—E. N. Smith Anticipated the Deluge.

There was a wise man in Parkersburg, W. Va., and his name is Smith, for when the flood began to rise this wise man, E. N. Smith, proprietor of Smith's Music Store, decided to move his stock, which was located on Market street.

Many of his neighboring merchants laughed and thought he was getting very nervous, but the wise

E. N. Smith's Store on Market Street.

man continued to move out his pianos just the same and the laugh of his fellow merchants cost them anywhere from \$2,000 to \$20,000.

Now Mr. Smith laughs and says that he did not lose a piano. His store is the one over which a cross is indicated, and it will be seen from the picture that the water was at least piano high.

LATEST PATENTS RELATING TO TALKING MACHINES AND RECORDS

(Special to The Talking Machine World.)

Washington, D. C., May 9, 1913.

PHONOGRAPH.—Adolph Schwer, Buffalo, N. Y. Patent No. 1,058,911. One of the features of the invention has reference to a disc record mechanism and a cylinder record mechanism, each of which is complete in itself and independent of the other, a driving mechanism and means for connecting the driving mechanism with either the disc record mechanism or the cylinder record mechanism.

Another feature has reference to the mounting of the disc record mechanism, the cylinder record mechanism and the driving mechanism on a mov-

able base or support so that said mechanisms may be quickly and conveniently exposed for adjustment or repair.

Another feature has reference to the manner of starting and stopping the driving mechanism, regulating the speed and shifting from the disc record

mechanism to the cylinder record mechanism or vice versa.

The principal objects of the invention are to provide for almost instantaneously changing from one record mechanism to another, to perfectly control and regulate the speed at will, to start and stop the

mechanism when desired, and to arrange the various mechanisms, so that they are quickly accessible for adjustment or repair.

Fig. 1 is a top plan view of the improved phonograph. Fig. 2 is a vertical transverse section through the upper portion of the box of the ma-

chine, with a front elevation of the various mechanisms attached to the same. Fig. 3 is a fragmentary perspective view to illustrate the toggle

clutch operating mechanism and one member of one of the clutches. Fig. 4 is a fragmentary horizontal section through the box with a bottom view of the driving mechanism. Fig. 5 is a fragmentary vertical section through the box on line 5 5 Fig. 4, to illustrate the starting and stopping friction brake mechanism. Fig. 6 is a fragmentary section through the box on line 6 6 Fig. 4, to illustrate the ratchet and dog locking device of the spring driving mechanism. Fig. 7 is an enlarged fragmentary section through one of the clutch mechanisms. Fig. 8 is a vertical longitudinal section through the box, the driving mechanism being omitted.

TALKING MACHINE NEEDLE.—Richard H. Jones, Chicago, Ill. Patent No. 1,058,754. This invention relates to improvements in talking machine needles and has for its object the production of a device by means of which the sound may be accurately produced. A further object is the production of a needle that will not wear the record. A further object is the production of a needle that may be used an indefinite number of times without appreciable deterioration.

Fig. 1 represents a side elevation of the rough material from which this device is made. Fig. 2 represents a plan view of Fig. 1. Fig. 3a represents a plan view of a completed needle. Fig. 3b represents a side elevation of Fig. 3a. Fig. 4a represents a plan view of a modified form of needle. Fig. 4b represents a side elevation of Fig. 4a. Fig. 5 represents a perspective view of a talking machine equipped with this device.

PHONOGRAPH.—Peter Weber, Orange, N. J., assignor by Mesne assignments to Thos. A. Edison, Inc., West Orange, N. J. Patent No. 1,058,284. In order to secure the best results from a phonograph it has been found necessary to make use of horns of relatively large dimensions. Such horns are usually supported from the phonograph cabinet by some form of horn crane so that they extend outward in front of the phonograph to a considerable distance. The objections to this form of apparatus are numerous; for example, a horn so supported takes up a large amount of room, and it has a tendency to upset the phonograph or to twist and bend the parts thereof. Such a horn can only be partially supported from the horn crane, and it is necessary in order to secure stability that a considerable portion of its weight be borne by the reproducer or recorder of the phonograph, and this to a considerable extent interferes with the movements of the phonograph carriage, and imposes wear on the fine feed screw. The horn extending out to the front is often in the way of the operator, and it is difficult and almost impossible to direct such a horn so supported toward any given point without turning the phonograph bodily around. Again, it is difficult to replace the cover upon the cabinet, after the instrument has been used, as the horn is always more or less in the way, and it is often found necessary to entirely remove the horn from the phonograph and crane before the cover can be placed upon the cabinet.

It is the object of the invention to do away with the objections which are present in the horns and supports thereof now in common use, and these results are obtained by making the improved horn of such form that it may be supported above the phonograph instead of extending out in front thereof, as is the common practise. By making the horn of the improved form the inventor is enabled to support it from a point vertically above its center of gravity without the resulting instability which would be caused if the horns now in use were so

supported. It is possible to do this with the improved horn for the reason that its center of gravity is at a relatively considerable distance beneath the point of support. This improved horn is loosely connected with the reproducer and none of its weight is borne thereby, as has been the case with horns supported in the old way, and it therefore does not interfere in any way with the movements of the carriage. The horn being entirely supported from above at a point vertically over its center of gravity, can readily be turned in any direction so that the sound may be directed to any point without the necessity of turning the phonograph about to a new position upon the table or other support, and the horn being suspended above the cabinet takes up but little space in a room, and need not be removed in order to replace the cover upon the cabinet, but may be readily pushed to one side to permit the placing of the cover in position, and the horn need not be removed from its crane when the phonograph is out of use, but may remain suspended from its crane at all times, and when it is desired to operate the phonograph it is only necessary to remove the cover and connect the lower end of the horn to the reproducer.

In the accompanying drawing, forming a part of this specification, and wherein the same reference numerals are uniformly used to designate the same parts, Fig. 1 is an end elevation of a phonograph provided with the improved form of horn and horn support, the connection between the tube of the reproducer and the horn being shown in section, and Fig. 2 is a view partly in section and partly in side elevation of the reproducer, and a portion of the means for connecting the horn thereto.

SOUND RECORD FOR TALKING MACHINES.—Clarence S. Wickes, Merchantville, N. J., assignor to Victor Talking Machine Co., Camden, N. J. Patent No. 1,059,418. The main objects of this invention are to provide a durable and efficient disc sound record of minimum thickness and having a substantially flat recorded surface and sufficient rigidity for commercial purposes; to provide an improved sound record comprising a relatively thin body portion and having a ribbed and recessed back; to provide a disc sound record having a central depression in the face thereof for a label and having a corresponding projection on the back thereof; and to provide other improvements.

It has been discovered after numerous experiments that a compressed disc record having a relatively thin body portion provided upon its back with a marginal rib and with radial or transverse reinforcing ribs extending from the central portion of the record and connected with the marginal rib at their outer ends, tends to warp as it cools after being taken from the press in the process of manufacture, and is liable to warp during its subsequent use. This warping appears to be due to the fact that the outer ends of the radial or transverse ribs are connected to the marginal rib, whereby as the record cools the rim of the record is drawn slightly rearwardly, and the face of the record is caused to assume a convex shape.

One of the objects of this invention is to overcome this tendency to warp, which is found in the ribbed back record as heretofore constructed, during its process of manufacture and during its subsequent use, and it has been found that when the marginal rib is omitted in a record of this kind and the radial ribs are retained, that this tendency of the record to warp is eliminated. This omission of the marginal rib, however, obviously deprives the record of some of its strength at its edge.

It has been also discovered after various experiments that a thin ribbed-back record having the desired qualities of rigidity and strength and having a flat recorded surface, may be provided by con-

(Continued on page 52.)

structing the record with a marginal rib and also with radial or transverse ribs extending from the central portion of the back of the record outwardly, and the outer ends of which are not connected with the marginal rib.

Furthermore, it has been discovered that in the latter construction and also in the construction in which the marginal rib is omitted, or in other constructions, transverse or radial ribs which have their outer ends connected to the marginal rib or extending from the margin of the record, and their inner ends spaced from the central portion of the record, may be used to advantage to strengthen the record and to prevent warping.

In the accompanying drawings Fig. 1 is a diametrical section of a sound record constructed in accordance with this invention; Fig. 2 a fragmentary bottom plan view or rear elevation of the same; Fig. 3 a fragmentary top plan view or front elevation of the same; Fig. 4 a diametrical section of a modified form of this invention; Fig. 5 a fragmentary bottom plan view of Fig. 4, the top plan view of Fig. 4 being the same as shown in Fig. 3; and Figs. 6, 7, 8 and 9 are fragmentary bottom plan views of various other modified forms of this invention.

PHONOGRAPHIC SOUND BOX.—Pliny Catucci, Newark, N. J., assignor to A. F. Meisselbach & Bro., same place. Patent No. 1,059,345. This invention relates to that class of sound boxes wherein the reproducing stylus is caused to follow a helical groove in a cylindrical phonograph record, and its particular purpose is to so construct the stylus holder and its connected parts as to permit of a universal movement of the stylus point, as it follows such groove; that is to say, if at any portion of the record groove it should deviate from a true helix, as is often the case, the stylus point will bear directly into the groove and not upon the sides thereof; resulting in a more perfect reproduction of the selection upon the record.

A further object is the material simplification of the structure of the parts and a consequent reduction in the cost of manufacture, at the same time preserving all of the requisites of a perfect sound box. Another object accomplished by this improvement is the simplifying of the means for throwing the recording or reproducing stylus out of action during the replacing of a blank or record.

In the drawings Fig. 1 is a side elevation, partly in section, of the box with the stylus out of action. Fig. 2 is a side elevation with the stylus in action. Fig. 3 is a rear view of the supporting bracket, showing one form of shifting device in position to throw the stylus out of action. Fig. 4 is a similar view with the stylus in action. Fig. 5 is a similar view of a modified form of shifting device. Fig. 6 is a perspective view of a detached shifting device such as shown in Fig. 5. Fig. 7 is a perspective view of the supporting bracket. Fig. 8 is a plan

of the bracket head before bending the same to shape. Fig. 9 is an edge view of the stylus holder.

GRAMOPHONE SOUND BOX.—Pliny Catucci, Newark, N. J., assignor to A. F. Meisselbach & Bro., same place. Patent No. 1,059,346. The object of this invention is to provide an improved construction in and relating to the sound boxes for talking machines.

The essential parts of this invention are most elementary; a one-piece stylus lever retaining the removable stylus, which is under pressure between one flat surface and the keen edge of a blade. The keen edge of the blade with its plane transverse to that of the stylus lever offers a rockerlike resistance in the transverse direction; but permits the free oscillation of the stylus lever, which is sensitive to most minute oscillations. The portion of metal of the stylus lever which extends on each side of the pressure exerting edge, acts as a restraining member, and eliminates all costly, cumbersome, adjustable springs which can only be properly adjusted by persons well versed in the art of manufacturing sound boxes. This restraining action is of great importance. Without it (in the high soprano notes) the stylus, impinging on one abrupt wave of the sound grooves, would impart to the stylus bar a sharp movement that would carry the diaphragm end of the bar beyond its intended limit of amplitude; the next wave would have to overcome the momentum of the stylus and would repeat the excessive movement in the opposite direction. This behavior of the stylus lever produces discordant chattering; on the other hand, if the mounting of the lever is too rigid, the lever will not be sensitive to the micro-oscillations and the volume of the sound will be greatly reduced. It is, therefore, of great importance to mount the bar on an almost mathematical axis, to achieve great sensitiveness; but it is also essential to provide restraining controlling means that work in conjunction with its free movement. Fig. 1 is a front view of a sound box showing improvement. Fig. 2 is a side view showing the improvement in elevation. Fig. 3 is a view similar to Fig. 1, but with the fastening bar removed. Fig. 4 is a front elevation, and Fig. 5 is a plan view of the fastening bar. Fig. 6 is a front elevation, and Fig. 7 is an end elevation of the equalizing bar. Fig. 8 is a side elevation of the stylus lever. Fig. 9 is a cross section of the stylus lever through its supporting arms.

SOUND CONTROLLER FOR TALKING MACHINES.—Charlie Emery Kenyon, Newark, N. J. Patent No. 1,059,939. This invention relates to sound controllers for phonographs and talking machines; the objects of the invention being to reduce the unmusical scratching sound produced by the action of the needle as it moves over the record, and to provide means for controlling the volume of sound emitted from the horn.

When operated in small rooms, phonographs generally emit such a large volume of sound as to produce harshness, and thereby mar the enjoyment of the listeners. This is especially notable when band records or records of powerful voices are employed. By the use of this invention the volume of sound emitted can be so nicely graduated and controlled as to make any record adaptable for successful use in any sized room. Moreover, it is susceptible of use in connection

with any type of phonograph and talking machine.

In the accompanying drawings forming part of this specification Fig. 1 is a longitudinal sectional view of a phonograph horn having improved controller connected thereto; Fig. 2 a cross sectional view of a phonograph horn having improved con-

vertical sectional view of a cabinet; or hornless variety of phonograph, having improved controller inserted therein; Fig. 4 a sectional plan view taken on the line 4-4 of Fig. 3; Fig. 5 a similar view, drawn on an enlarged scale, and illustrating a modified means for operating the controller; Fig. 6 a perspective view of a plug for attaching the device; Fig. 7 a side view of one end of the device showing a modification of valve operating means; Fig. 8 an end view thereof; and Fig. 9 is a longitudinal sectional view illustrating a further modification.

AUTOMATIC NEEDLE FEEDER FOR PHONOGRAPHS.—Elmer C. Jordan, Sacramento, Cal. Patent No. 1,060,551.

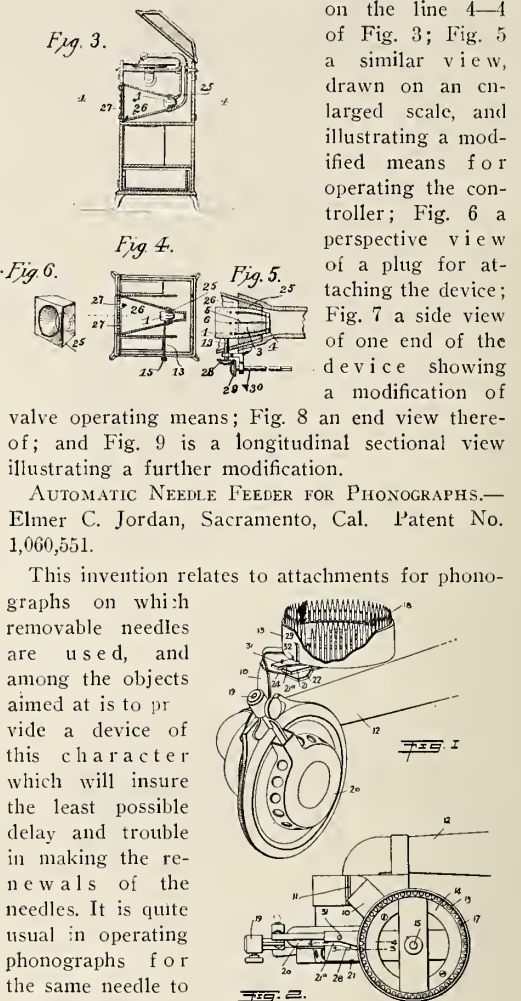

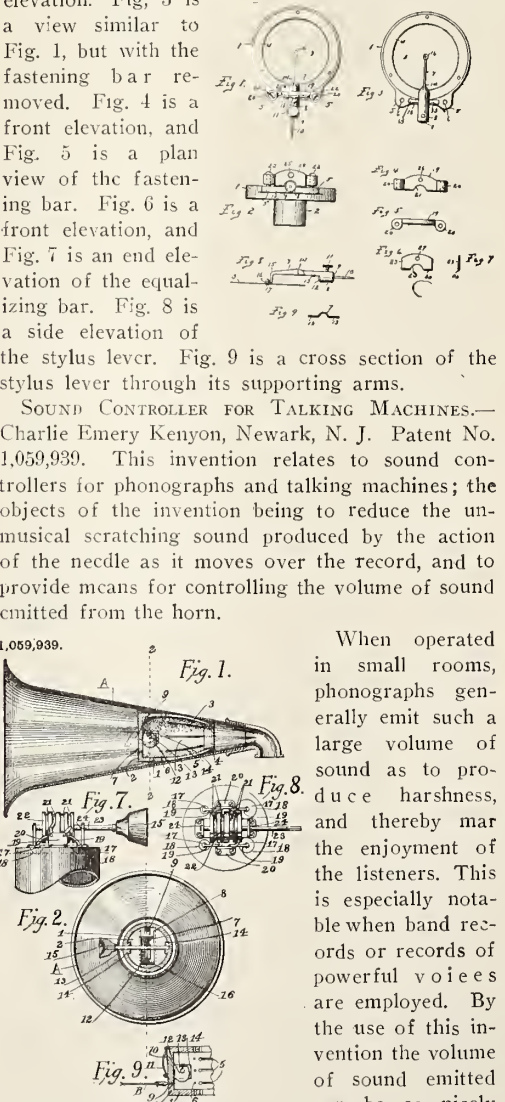

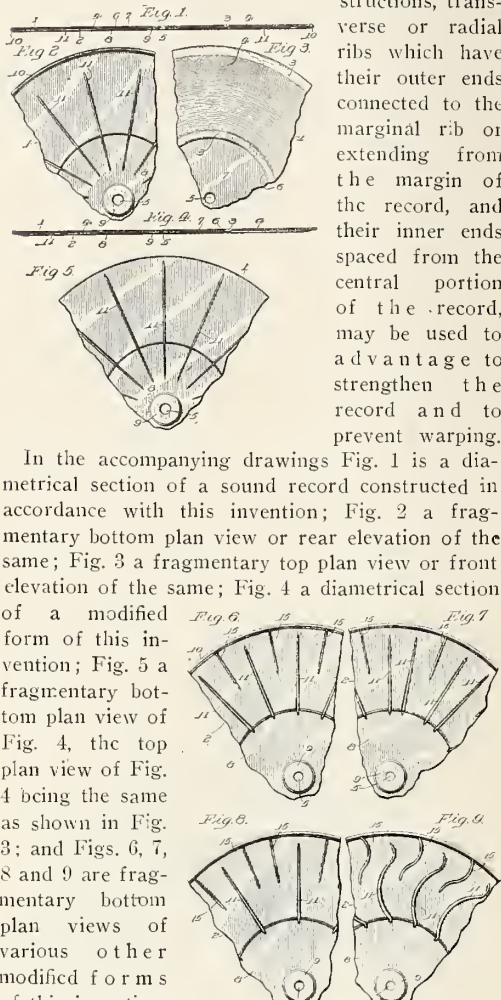

This invention relates to attachments for phonographs on which removable needles are used, and among the objects aimed at is to provide a device of this character which will insure the least possible delay and trouble in making the renewals of the needles. It is quite usual in operating phonographs for the same needle to be used repeatedly when the best results can be received only when a fresh needle is used on each record. By the use of a device of this character there is little or no excuse for not renewing the needles according to highest demands.

Fig. 1 is a perspective view of the device attached to the tone arm of a standard phonograph, a portion of the magazine being broken away; Fig. 2 is a plan view of the same; Fig. 3 is a vertical section on the line 3-3 of Fig. 2, the parts being in normal position; Fig. 4 is a similar view on the line 4-4 of Fig. 2, the parts being in position for receiving a needle into the chuck; Fig. 5 is a bottom plan view; and Fig. 6 is a fragmentary detail of the parts shown in Fig. 2, the toothed wheel being omitted.

You can't plant pigweed and harvest corn. Nor can you, in merchandising, sow indolence and reap success.

Slipshod methods make slipshod men, and slipshod men make slipshod methods. Hitch your wagon to the system star, and then keep it hitched.

Gimp is backbone, energy, determination. It is what keeps people everlastingly at it. It is what pulls success out of failure. Cultivate gimp.

EXCELLENT TRADE REPORT FROM PHILADELPHIA.

This Is Due in a Measure to the Fact That Factories Are Supplying Stock Most Satisfactorily—Lit Bros. Complete Improvements in Warerooms—Progress of Keen-O-Phone Co.—Big Columbia Business in April—Reports from Talking Machine Companies.

(Special to The Talking Machine World.)

Philadelphia, Pa., May 9, 1913.

The talking machine business in April has been excellent. The dealers usually expect it to drop off a little bit this month but this seems to have been the case less this year than heretofore. There has probably not been a month in a year that there have been so few complaints forthcoming as during the past April. The dealers have not only enjoyed a good business, but they have been able to do it with more than the usual ease. For this the factories are responsible and they seem to be turning out the stock faster than ever before and seem to be fully meeting the demand.

There was much complaint against the factories by the dealers that they could not fill the orders, but such a condition has existed among talking machines during the past year or two as has never been experienced in any other line of business. The anxiety of the dealers is readily understood when orders came rushing in upon them without the goods on hand, but it is for them to remember that it is easier to sit down and write a letter requesting a shipment than it is for the manufacturer to make up the goods, pack and ship them. The business has grown to such proportions that the manufacturer has stood aghast, and he has tried to get out of his dilemma by building addition after addition to find that he was still taxed for room, until now he seems to have finally gotten himself into shape wherewith he can meet all requirements.

Louis Buchn & Brother report that their April business showed an increase over last April by about forty per cent. Machine shipments have been coming considerably better than they were, and particularly on certain of the most popular types. The only shortage he finds at present is on the Victor 14s.

The trade generally has received the announcement of the new Victrola No. 6 with much pleasure. It is to be equipped with an amplifying compartment and a good sized turn-table. In other words, the makers have again increased the value of the machine, yet leaving it to be sold at the old price.

Out-of-town visitors to the Louis Buehn & Bro. store recently were Harold Ely, of Huntingdon, Pa.; A. S. Wilson, of Woodbury, N. J., and Frank Waldron, of Salem, N. J. They have just closed two very large orders for the Edison dictating machine, one of which was the Wilmer-Atkinson Co., the publishers of the Farm Journal, and the other with the A. H. and F. H. Lipincott Co., of Twenty-fourth and Locust streets.

Lit Brothers have finally completed all the improvements in their talking machine department. The six hearing rooms are decorated in white and handsomely furnished, with especially attractive lighting effects. This has facilitated their work materially, and they not only have been allotted this addition, but they have been given more than double their former floor space which shows beyond question that the department has made good. In a department store when a manager of a department asks for more space the boss of the house says, "You must show me." Evidently the manager of the talking machine department at Lit's has been able to "show" them.

Walter Linton, manager of the talking machine department at the Estey store, who has been ill for the past four weeks, is said to be rapidly recovering. In the meantime the business has not suffered, for Manager Henderson of the Estey Piano Co. has been looking after the work and a good April business is reported.

Mr. Comerer, who looks after the talking machine as well as the piano end of the business at John Wanamaker's, says that business in "talkers" has been fine—a great deal better than last year.

The Keen-o-Phone Co. has now arrived at the position where it can advertise its business heavily and it has been doing so with good results. It has placed a road force at work who state that the

trade is alert to recognize the special features possessed by the Keen-o-Phone. The Keen-o-Phone Co. announces that it has placed its entire line with a number of representative houses. Emil Bauer, of the sales department, who is away at present, is sending in gratifying reports. A considerable amount of new machinery is being installed at the factory at Frankford, Pa., which has been especially constructed for Keen-o-Phone purposes. The company's record catalog is now being mailed to the trade and it contains 150 very fine selections, and new artists of reputation are being added regularly. The retail headquarters at 227 South Broad street, is doing a very gratifying business. E. P. Huylar Allen is general sales-manager of the Keen-o-Phone Co.

The Talking Machine Co. is doing a splendid business at all three of its local stores. H. A. Ellis is in charge of the store on Broad street near Walnut; P. G. Spitz is the manager at Broad street and Columbia avenue, and Newton Bacharch is in charge of the West Philadelphia store. Mr. Ellis tells me that business was exceptionally good in April, surprisingly so, being away ahead of last year. Sales of grand opera records have not fallen off ten per cent. from the height of the season, in spite of the great popularity of Turkey Trot music. Other firms have noted a great falling off, but then the South Broad street Talking Machine Co.'s store has, in a measure, the cream of the high-class patronage of the city, being the store closest to the fashionable residence section. Their rooms are specially attractive at present. The Columbia avenue store of the firm is undergoing renovation—a number of new booths added to this store.

Manager Elwell reports that Heppe & Son business is good and they have no complaint to make. The April business was far ahead of last year. Among their visitors the past week were Harry F. Cake, of Pottsville; J. Harry Halt, of Mt. Holly, N. J., and William C. Staiger, Jr., of Atlantic City, N. J. The latter notes that the seashore business is opening up satisfactorily. Mr. Elwell thinks very well of the new Victrola 6 and believes it is going to be a very good seller. He notes a great demand for the ragtime and tango music at present,

but there is also quite a sale for the high grade records—the Red Seal type.

Manager Eckhardt, of the Pennsylvania Talking Machine Co., has just moved into his new home at Overbrook and is delighted with it. He has quite a lot of ground about the place and being a lover of nature spends much of his spare time cultivating flowers and otherwise decorating the outside of the place.

Mr. Eckhardt says that the business of his company in April has been quite remarkable. "We made such a great percentage in gain over last year," says Mr. Eckhardt, "that I consider it useless to make a comparison. It is pleasant to state that all the Columbia dealers are enjoying a similar gratifying business. We have at present two very important deals pending and expect, before long, to announce the Columbia machine in these two most busy marts of the trade." This concern has found it necessary to add a four-ton Autotruck to its delivery system in order to facilitate deliveries and to satisfy the promptness demanded by its customers.

EFFECTIVE PUBLICITY.

The Double Spread of the Columbia Co. in the Saturday Evening Post for May 24 Will Be Unusually Striking.

The May 24 issue of the Saturday Evening Post will contain a two-page spread of the Columbia Graphophone Co. that will present a number of novel and distinctive points relating to talking machines, that have been very seldom published in national magazines during the past few months. This excellent example of Columbia advertising methods will be devoted to the new \$50 Columbia Regal machine.

In addition to a very strong headline, stretching across both pages, and two clear illustrations of the "Regal," one showing the lid partly open and the other with the lid down, there will be two columns of illustrations devoted to the distinctive constructive merits of this new Columbia product. These pictures show the tone-arm, tone-chamber, No. 6 reproducer, motor mechanism, tone-control, speed-control, and cabinet work. Underneath each illustration is a brief and interesting talk on individual parts of the machine, which cannot fail to impress readers of the magazine.

Accompanying the advance proof of this advertisement, each Columbia dealer will receive a suggestion for a very attractive window display, constructed with "Regal" machines, assisted by a copy of the two-page spread.

The name describes the needle and the needle fulfills its tone— The PURITONE Needle.

FURNISHED in Puritone or your own envelopes packed in different sizes. Quality guaranteed. Price popular.

Dealers can secure a sample package free. Send jobber's name with letter.

Remember, a quality needle will help you; it means a profit and a following.

THE following is a new selling idea for needles, packed exclusively by us:

Instead of selling 100 or 200 needles at once, sell a thousand. We pack 1,000 assorted needles in a box, each box containing 200 of Extra Loud, Loud Opera, Medium and Soft. This is the "Special" Dean Packing. You can sell 1,000 instead of 100 and thus get 10 times the business.

Want the Puritone Needle samples?

FILMS FOR POSTERITY.

Thos. A. Edison Preserves Mayor Gaynor and Others in Records for Centuries.

Thomas A. Edison, who recently perfected his kinetophone, formally presented to the Modern Historic Records Association at the City Hall recently the talking-motion-picture records that were lately made of Mayor Gaynor and other department heads of the city government. The records, including both the motion picture films and the phonographic cylinders, were received by William George Jordan, managing director of the Modern Historic Records Association, in the presence of Mayor Gaynor and others of whom records were made.

Mr. Edison also presented a piece of parchment on which there was an inscription explaining that the records were intended to be preserved for centuries, and below the inscription appeared the signatures of those whose records were made, certifying their genuineness. Until the Modern Historic Records Association builds its own home the records will be deposited in the New York Public Library. At a demonstration a few days ago in the Union Square Theater the records were approved by the Mayor and his associates. In addition to Mayor Gaynor, there are records of his secretary, Robert Adamson, Police Commissioner Waldo, Fire Commissioner Johnson and Street Cleaning Commissioner Edwards.

Why should we ever go abroad, even across the way, to ask a neighbor's advice? There is a nearer neighbor within, who is incessantly telling us how we should behave. But we wait for the neighbor without to tell us of some false, easier way.—Thoreau.

The Bellini Phonograph Co., of which F. Corsaro is general manager, has opened quarters at 25 Baxter and 170 Worth streets, New York.

REMARKABLE VICTOR ACTIVITY.

Factory Capacity Oversold and the Establishment of New Dealers Temporarily Suspended—Interesting Figures Regarding Output.

The following official announcement made this week by the Victor Talking Machine Co. furnishes food for thought on the remarkable growth of the talking machine industry and the phenomenal increase of the Victor business: "Factory capacity over-sold. The establishment of new dealers temporarily suspended. Victor business for the first five months of 1913 exceeds that done in the last six months of 1912, inclusive of an unusually large holiday trade. There are more Victors on order at this date from our distributors than we can manufacture during the balance of the year."

This announcement then goes on to state that the Victor travelers were instructed some three months ago not to sign up any new dealers, and that several weeks since, the Victor contract department was ordered to cease authorizing the establishment of any new dealers.

Attention is called to the fact that Victor dealers should not consider that this condition is permanent, but it is the desire of the company to give them evidence of the fact that it is inclined to do everything in its power to serve the interests of its present representatives. It is also stated that new representation will be placed as soon as factory facilities are sufficiently increased to take care of the demand without interfering with the success of the established Victor representatives.

For every sale that is lost through lack of information or specificity on the part of salesman, two sales are lost through lack of tact—discourtesies, over anxiety to close or a wrong attitude.

INTERESTING AND NOVEL USE OF THE PHONOGRAPH.

(Special to The Talking Machine World.)

Topeka, Kan., June 7, 1913.

At the recent sessions of the Kansas State Legislature, several evening meetings were called during the closing week. Many of these evening sessions extended into the early morning hours and in order to provide some entertainment for the members of the Legislature during the lulls in business two beautiful Edison disc machines were used at frequent intervals.

Placed on the platform, these two machines

Edison Disc Phonograph in Kansas State Legislature.

played patriotic selections and many other records of popular interest. Lincoln's Gettysburg address, Patrick Henry's famous speech, Washington's farewell address and other similar selections were given to enthusiastic audiences. At the close of the session the members were most enthusiastic in their praises of the machines and the music ren-

CARUSO'S VOICE CHARMS NEGRO.

So Impresses Colored Brother That He Steals Talking Machine and Lands in Jail.

(Special to The Talking Machine World.)

St. Louis, Mo., June 7, 1913.

Talking machines got on the front page of the papers another day when Alexander Cole, a St. Louis negro, pleaded with the East St. Louis police judge that his appreciation of Caruso's music caused in him an irresistible impulse to steal a \$25 machine and six records belonging to his cousin, William Hobson, of 2316 Scott avenue. "Why, boss, I went clear out of my haid when I heard Caruso sing 'Rudolph's Narrative' from 'La Bome,'" he declared. And the strange part of it was that Cole took only Caruso records when he took the machine without permission. He had heard a Caruso interpretation for the first time the night before when invited to his cousin's house. He furthered his defense by whistling several of the Caruso airs and declared that after he had taken the machine early in the morning he went home and played the records all day. This part of his story was supported by neighbors. Their gathering in the street in front of Cole's house alarmed him and then he took the machine to St. Louis. This sidewalk interest in the music also gave to the police a clew that led them to follow Cole and arrest him on the Illinois side of the river.

USED VICTOR AUX-E-TO-PHONE.

At the Nixon & Zimmerman Theater, Baltimore, Md., a Victor Aux-e-to-phone furnished by the Victor distributors in Baltimore, Cohen & Hughes, is being used between the acts with marked success.

dered, and members of the House urged that a telegram of congratulation be forwarded to Thomas A. Edison congratulating him on his latest invention and assuring the famous inventor of the members' appreciation of his wonderful achievements.

The machines for the entertainment of the Legislature were furnished by the Santa Fe Watch Co., of this city, Edison representative in this territory. A. S. Thomas, manager of the store, assisted by Bert Woodard, handled the detailed arrangements

of the performance, and certainly did a good job. The Topeka papers devoted adequate space to this unique phase of law making affairs, and the publicity given the Santa Fe Watch Co. by this newspaper attention is being turned to excellent account by the aggressive members of the talking machine department.

PITTSBURGH DEALERS ACTIVE.

W. F. Frederick Piano Co. Installs Talking Machine Departments in Several Branches—Holding Special Series of Victrola Concerts—Good Business with Columbia Branch—J. C. Roush Preparing for Convention.

(Special to The Talking Machine World.)

Pittsburgh, Pa., June 8, 1913.

George S. Hards, manager of the talking machine department of the W. F. Frederick Piano Co., is gradually adding this line to all the branch stores. The following towns have been taken on: Beaver Falls, Butler, Ambridge, Greensburg, Groves City and Meadville.

The W. F. Frederick Piano Co. is conducting a series of Victrola concerts Tuesdays and Thursdays of each week. Large crowds attend. The admission is free and the music is the work of the highest priced opera records. The concerts are advertised in the daily newspapers and a success in the way of sales.

The Columbia Graphophone Co.'s Pittsburgh branch reports an increase in May business of nearly 100 per cent. over May, 1912. This does not include about two thousand dollars of unfilled orders owing to the inability of the factory to supply the demand of certain makes of machines.

J. C. Roush, of the Standard Talking Machine Co., Victor distributors, located at 802 Penn avenue, report that the dealers in the territory covered by that company are apparently enjoying an excellent business, especially in the more expensive models of machines and grand opera records. Mr. Roush is now preparing to attend the forthcoming convention of the National Association of Talking Machine Jobbers, of which he is a prominent member.

CANADIAN COLUMBIA DEMAND.

Show Splendid Increase, and Outlook for Future Expansions Good.

J. A. Sabine, of the Music Supply Co., Toronto, Canada, which has the jobbing representation for the Columbia graphophone for the Province of Ontario, was in town this week. While chatting with The World, Mr. Sabine emphasized the fact that his business had shown enormous increase during the past year and he thought that the conditions were most favorable for still further growth.

The object of his visit to New York was to get in closer touch with the factory organization and to discuss plans for a larger and more aggressive campaign which he proposes to inaugurate in his territory within the near future.

INCORPORATES IN DELAWARE.

Articles of incorporation were filed with the Secretary of State at Delaware yesterday by the Patescope Co., of New York City, to manufacture, sell and deal in apparatus for reproducing sounds. Capital stock, \$100,000. Incorporators: H. O. Coughlin and Joseph F. Curtin, both of New York.

ATTENDED PIANO MEN'S CONVENTION.

Among the talking machine men in attendance at the convention of the piano merchants held in Cleveland June 2-4 were H. A. Yerkes, manager of the wholesale department of the Columbia Graphophone Co., and Clifford R. Ely, special traveling representative of the company. The location of the Columbia store, within a few doors of the Hotel Statler, convention headquarters, was very convenient.

A Victrola XVI was played at the funeral of John W. Jones, vice-president and treasurer of the Marion National Mill, Marion, Ohio. In life, Mr. Jones had been a Victor enthusiast, and at his request two records that had been his favorites, were played at his funeral.

GERSONS ENTERTAIN AT BROOKDALE.

Talking Machine Manager Has Old Fashioned Outing at Country Place.

On Decoration Day Mr. and Mrs. Louis J. Gerson gave an "Ye Old Fashioned Country Outing" to the Victor section of the employes of John Wanamaker at their country residence, Brookdale, Palisades, N. Y. An elaborate program for the day was arranged. This included outdoor games of all kinds and special sports which lasted until

Klinger, Miss Anna Deady, Miss Agnes C. Matthews, Mrs. M. Livingston, Mrs. George Leitner, Miss Cecilia Leitner, Miss Mary Ford, H. B. Bertine, R. M. Fitz, Joseph Fonte, John P. Rice, John Lathrop, Martin Lynch, James Nolan, Edward J. Kiernan, Edward Sasse, John Curran, Howard Arnold, William Beers, James Livingston, Richard M. Huber, Sidney E. Lane.

It will be observed that the illustration here shows a highly pleased audience, save, perhaps, some of the gentlemen are looking with somewhat jealous eyes upon Mr. Gerson, who sits surrounded

Guests of Mr. and Mrs. L. J. Gerson at Their Residence, Brookdale, May 30.

after 12, when a sumptuous spread was given under the huge spreading trees.

After that the guests were taken to inspect the natural beauties of Mr. Gerson's farm. Upon their return light refreshments were served and dancing and games were in order. About forty-three guests were present, including the following:

Mr. and Mrs. James G. Martin, Mr. and Mrs. George M. Boyce, Mr. and Mrs. J. H. D. Rehberger, Miss Mary Rehberger, Mr. and Mrs. Samuel Terry, Master Terry, Mr. and Mrs. Charles J. Collins, little Miss Collins, Miss Alice M. Dillon, Miss Charlotte S. Conroy, Miss Sadie Davidson, Miss Bertha Johnson, Miss Theresa Hagan, Miss Anna Noseson, Miss Julia Oscar, Miss Theresa M. Kessler, Miss Yetta Klinger, Miss Tina

by a bevy of fair young ladies, but Louis is not in the least bit disturbed by the jealous glances that are cast his way.

CANAL COST \$290,110,000 TO DATE.

Colonel Goethals' report for the ninth year of American jurisdiction over the Canal, made public last week, shows that the total expenditure has been \$290,110,000, that 90 per cent. of the concrete work has been completed, and that only 20,000,000 cubic yards of earth remain to be excavated. It is likewise shown that the work of excavation is going on at the rate of about 2,500,000 cubic yards monthly to date, and that the expense of fortification will amount to \$2,600,000.

GOOD TRADE IN THE SOUTHWEST.

Big Orders Taken by the Schmelzer Arms Co. for Victor Goods.

(Special to The Talking Machine World.)

Kansas City, Mo., June 7, 1913.

The Field-Lippman Piano Stores, with four stores in Missouri and three in Texas, have just signed up for three complete stocks of Victor machines and records for San Antonio, Ft. Worth and Dallas. They now carry a complete line of Victor machines and records in all of their branch stores.

A. A. Trostler, manager of the talking machine department of the Schmelzer Arms Co., through whom the order was placed, said: "We feel they will do a tremendous business. In fact, our business this year has been considerably greater than last. It is increasing every month, and from all indications this will be the biggest year in the history of the Victor line."

BIG MONEY IN SHOW WINDOWS.

Do you know, says the Talking Machine Merchant, that window trimming is one of the best paid professions in the world? Of course, you do—especially if you have had to pay for the services of a first-class window trimmer. Do you know what a well trimmed window means to the success of your own business? Think of the capital you have tied up in merchandise, from which you expect ready returns, and often do not get them.

Do you happen to be a merchant who is not getting the quick returns he is entitled to? What is the reason for your failure, while your competitor who carries about the same line you do succeeds? Most likely your competitor has given more attention than you have to the display of goods.

Probably you do not realize that your show window is your best medium for making quick profits. If you are a merchant who has not realized the value of his show window, just get this fact well digested—that most people buy what is thrust upon their notice and pleases their fancy.

This is an extravagant age; even the small boy who cries newspapers on the street corner cannot resist the call of the show window on whatever happens to please his fancy; and the fancy would not have been touched had not the articles been attractively displayed in the show windows.

Once upon a time people bought only such articles as they needed; and in that day most of the merchandise was carefully put away in green boxes on shelves, quite out of sight. To-day well displayed goods sell themselves. People buy because they are attracted by a thing which pleases, rather than because they need the article itself.

Don't forget this fact—your well trimmed show window is one of the best mediums of advertising.

INCREASED WHOLESALE BUSINESS

During the year 1912 our wholesale business showed an increase over that of 1911 of 68%. Of this increase 28% was on what we are pleased to call "our dealers'" accounts, and the balance of 40% was from new accounts, about evenly divided between newly established dealers, and dealers who formerly purchased from another distributor.

Increased demand accounts for 48% of this increase. Efficiency and the Eastern Service is responsible for 20%.

If dealers realized fully the manifold advantages of Eastern Service the increase this year would double from this source.

A good thing is worth trying—take our word for it that Eastern Service is exceptional—and try it.

EASTERN TALKING MACHINE COMPANY

177 TREMONT STREET, BOSTON, MASS.

FOR NINETEEN YEARS TALKING MACHINES EXCLUSIVELY

THE EFFECT UPON PRICE MAINTENANCE

Of the Recent Decision of the Supreme Court of the United States Discussed by G. Waldon Fawcett, The World's Washington Correspondent—The Judges' Opinions Analyzed and Some Conclusions Therefrom—The Manufacturers Will Meet the Situation.

The decision recently handed down by the Supreme Court of the United States in the case brought by the manufacturers of the tonic known as Sanatogen, is of far-reaching significance. To an extent, it upsets all the calculations of manufacturers and merchants who sell any line of patented, price restricted goods.

Most of our readers are probably more or less familiar with the history of this case. There has been extended reference to the matter in these columns while the suit has been pending and business men generally have realized that it was a test case, although it is safe to say that not one business man in a hundred anticipated that the highest court in the land would decide the way it did.

On the face of the thing, the controversy represented in this case may seem rather far removed from the interests of the music trade. It originated as a suit for infringement of patent, commenced by the manufacturers of Sanatogen against a cut-rate retail druggist, who persisted in disregarding the patent license under which the product was sold to him, and disposed of the goods at retail at less than the fixed or placarded price stipulated by the manufacturer.

Similarity to Talking Machine Interests.

What brings this home to so many interests in the music trades is that packages of Sanatogen, being protected by patents, are in the eyes of the law in exactly the same position as patented talking machines and phonographs, patented playcr-pianos, patented records and rolls and patented musical novelties of all kinds. What can be done, under sanction of law, in the case of one can presumably be done with equal safety in the case of the other. Furthermore, as all our readers know, many musical instrument manufacturers, particularly the makers of talking machines and phonographs, have been among the most zealous of manufacturers in fixing and enforcing definite, uniform resale of retail prices. This policy of absolute equality for customers everywhere may indeed be said to be the foundation stone on which has been reared the exceptional prosperity of this branch of the industry.

No wonder then that manufacturers and retailers and jobbers have been seriously disturbed during the past fortnight by the sensational headlines in the newspapers which have been proclaimed this latest Supreme Court decision as a radical and revolutionary declaration calculated to fling the doors wide open for the price cutters. Some of the reports, unquestionably, exaggerate the import of the decision, at least in so far as it is applicable to the musical instrument field, but even taking the most optimistic view of the situation it may as well be admitted that it weakens the average manufacturer's defenses against price cutting. It may not upset business as some of the alarmists have predicted, but it is liable to ultimately render it advisable to make some changes in the method of marketing goods.

Summary of Decision.

In a nutshell, the present decision says that the manufacturer of patented goods may, by virtue of his patents control the price and the conditions under which his goods are sold in the first instance, but he cannot extend his dictation of terms and prices to subsequent transactions involving the same goods after he has received his pay for them and they have passed out of his immediate control. To illustrate, the manufacturer of a talking machine may, in selling his instruments to a jobber quote any price he chooses and he can lay down any conditions he chooses. He may stipulate that only needles of his own manufacture shall be used with the instrument, or he may, if he sees fit, insist that only the records which he manufacturers shall be played on the instrument. He could enforce the same conditions—that is, the manufacturer could, if he sold to a retailer or if he sold direct to a private consumer. In other words, the manufacturer can enforce any conditions he

chooses in connection with the original sale of his goods.

But, according to the latest court decision, the manufacturer cannot have his conditions follow the goods, so to speak. If the maker is paid his full price by the jobber and the transaction is definitely closed, then, says the new decision, that puts an end to the power given to the manufacturer by the patent laws and he has no further control over the goods. To continue the same line of illustration we will suppose that a jobber who has purchased talking machines from the manufacturer sells them in turn, observing, all the while the manufacturer's restrictions—to a retailer. Under the interpretation of the patent laws heretofore in force the retailer, or the third party, became a party to the original contract and had to abide by the manufacturer's conditions and was not allowed to resell his wares except at the price set by the manufacturer, lest he render himself liable to a suit for damages for infringement of patent. However, under the present decision, this last is no longer the case. If a storekeeper has purchased goods indirectly and not direct from the manufacturer the latter can have no say as to how they shall be sold. Presumably no far-sighted retailer, with an eye to his own best interests, will indulge in the ruinous pursuit of price slashing, but if a retailer is so foolish the manufacturer can no longer bring him to book under the patent laws. Thus in effect, says the United States Supreme Court in its latest interpretation of the law.

Halts Former License Plan.

One of the most radical features of the decision that has just come from the Supreme Court is the manner in which it knocks out the plan, heretofore in use by so many manufacturers, of licensing the use of patented products only in the event that they are sold at a stipulated price, marked on the article itself. Talking machine records, for example, all bear a notice of the price and warning that they are licensed for use only when sold at retail at the placarded price. The package of Sanatogen, which was made the subject of price cutting bore just such a notice and in passing on this phase of the subject the Supreme Court says:

"It is contended in argument that the notice in this case deals with the use of the invention, because the notice states that the package is licensed 'for sale at a price not less than one dollar,' that a purchase is an acceptance of the conditions and that all rights revert to the patentee in the event of the violation of the restriction. But in view of the facts certified in this case, as to what took place concerning the article in question, it is a perversion of terms to call the transaction in any sense a license to use the invention. The jobber from whom the appellee purchased had previously bought at a price which must be deemed to have been satisfactory, the packages of Sanatogen afterward sold to the appellee. The patentee had no interest in the proceeds of the subsequent sales, no right to any royalty thereon or to participation in the profits thereof. The packages were sold with as full and complete title as any article could have been sold in the open market, excepting only the attempt to limit the sale or use when sold for not less than one dollar. In other words, the title transferred was full and complete with an attempt to reserve the right to fix the price at which subsequent sales could be made. There is no showing of a qualified sale—no transfer of a limited right to use the invention and to call the sale a license to use is a mere play upon words."

Patent and Copyright Question.

One thing that this present decision does—to the infinite surprise of many manufacturers—is to place patented articles on the same plane as copyrighted works, when it comes to enforcing fixed price. All publishers of music have realized for some time past that they could not invoke the copyright law to help them compel retailers to observe a stipulated price. That was settled by the

Supreme Court several years ago when deciding a case brought by leading American book publishers against the proprietors of R. H. Macy & Co., the New York department store, who were charged with cutting prices on copyrighted novels. The Supreme Court held in that case that a publisher, once having sold a book had no right to qualify the title of future purchasers, even if he did affix to the book a printed notice to the effect that the price was one dollar; that no dealer was licensed to sell it for less; and that a sale at a less price would be treated as an infringement of copyright.

Manufacturers of patented articles have not, in the intervening years, been disturbed by that decision limiting the usefulness of the copyright as a vehicle for price maintenance because they have all along believed that a patent gave much greater powers in this direction than does a copyright. Now comes the Supreme Court and says it does not. The court takes the position that although the wording of the patent law may be somewhat different from the copyright law, the protection conferred by both is the same. Says the decision: "In both instances it was the intention of Congress to secure an exclusive right to sell and there is no grant of a privilege to keep up prices and prevent competition by notices restricting the price at which the article may be resold. This being so the case is brought within that line of cases in which this court from the beginning has held that a patentee who has parted with a patented machine by passing title to a purchaser has placed the article beyond the limits of the monopoly secured by the patent act."

Situation Not Hopeless by Any Means.

But, whereas, on the face of it, this new decision seems to rob the manufacturer of what has been his most effective weapon in fighting price cutters and in compelling the universal observance of uniform established prices, there is no reason why the trade should regard as hopeless the situation with regard to price maintenance. There is every reason to believe that means will be found to sustain prices even if the patent laws cannot be employed for this purpose—and it is obvious from the above quotations from the decisions that the patent laws may yet be utilized to this end if only manufacturers can devise ways in which to make "qualified sales" of their products.

However, the patent license system is not the only influence that can be employed to standardize and sustain prices. The book publishers have been able to maintain their retail prices just as effectively since they were denied the right to use copyright protection for this purpose as they did before. And there are many manufacturers of unpatented products—including many well-known makers of musical instruments—who have found means to prevent ruinous price competition without having recourse to any laws except the common law of unfair competition, which may be invoked by any interest.

Talking Machine in Strong Position.

Perhaps the best means of price control of all that are open to the manufacturer—unaffected by this present decision—is the simple expedient of refusing to sell goods to a price cutter unless he give assurances that the manufacturer's resale price will be observed. By this means it has been proven possible in many instances to completely shut off the supply of a price slasher. Or, at least, such a disturber of trade conditions can be made to find it so difficult and costly to get goods and such a hardship to obtain them except in the most limited quantities that he will speedily conclude that the game is not worth the candle.

Of all the industries affected by this new Supreme Court decision, the talking machine trade is unquestionably in the best position. This is due to the fact that a talking machine, as sold to the ultimate consumer, is useless without certain supplies and accessories—the records to play on the instrument and the needles with which to bring forth the reproductions. Now all these are patented and inasmuch as all court decisions, even this latest one, recognize a manufacturer's right to prescribe how his patent product shall be used and to control conditions within reasonable bounds, it does not require a very vivid imagination to foresee the evolution by energetic, resourceful manu-

“The Present Day Music Machine” by Walter P. Phillips—a mighty interesting book for those dealers who desire more thorough information on the talking machine industry. Write us for a copy. It’s free.

facturers of some scheme whereby prices may indirectly be sustained through the instrumentality of the restrictions that can be legally and consistently imposed upon the use of the patent-protected product.

TRADE IN LOS ANGELES.

Talking Machine Dealers Look for Excellent Summer Business—Heavy Demand for Victrolas in Fumed Finish—Southern California Music Co. Doing Well with the Edison—New Display Rooms for Columbia—Brown Co.’s New Manager—Other Items of News.

(Special to The Talking Machine World.)

Los Angeles, Cal., June 6, 1913.

Another month closes and the talking machine business is very active for this time of the year. Dealers have every reason to expect a good summer trade, the demand being great enough to assure all future business. The new Edison disc is proving very worthy of its place in the field.

The Baxter-Northup Co., 514 South Hill street, has made some noted changes in its store, especially in the talking machine department, which has been enlarged to a much greater capacity. A complete line of Victor machines and records have recently been added, thus making the department complete with both Victor and Columbia goods. Lorenz A. Dorsey, manager of the talking machine department, states business has been very good in this new added line and can now cope with any concern and get their share of the business.

Chas. S. Ruggles, local manager of Sherman Clay & Co., reports Victor business is still keeping pace with the times. The heavy demand for Victrolas in the fumed finish cannot be supplied, owing to the fact that the great number of homes are being furnished with this popular finish.

Earl S. Dibble, talking machine manager of the San Diego branch of the Southern California Music Co., was in Los Angeles for several days. Business is reported to be on the upward climb in the southern city. The company has recently presented Mr. Dibble with a new automobile for the purpose of covering the surrounding country, which could not be covered in any other way. Mr. Dibble states that his systematic method of visiting the rancher or farmer has proved a far greater success than was expected.

O. A. Lovejoy, manager of the talking machine department of the Southern California Music Co., is very much pleased with the Edison business being done. The Edison disc machine is winning many friends despite the present condition of fewness of records which does not seem to hinder the future placing of orders by the dealers throughout the country. F. J. Hart, president of the Southern California Music Co., has just returned from an extended trip through the South.

Among many talking machine dealers who have visited Los Angeles within the past few days are: O. P. Brady, Redlands; W. A. Manson, San Bernardino; G. P. Austin, Oxnard, and Mr. La Sabre, of Avalon, Catalina Island. All express their satisfaction with the Edison line.

E. E. Holland, a live Edison disc dealer, has been featuring concerts on the new disc machine

at his phonograph parlors, 1044 E. Vernon avenue, this city.

The Columbia Graphophone Co. has opened up a new display room showing samples of all styles of gramophones. This room is furnished in the most exquisite fashion, making a beautiful display room for this line. The gramophone grand is causing a great deal of enthusiasm as the dealers are very anxious to get their orders filled just as quickly as possible.

The Geo. J. Birkel Music Co. reports through its talking machine department manager, A. Graham Cook, that business is very prosperous, the month just closed leading far ahead of the month previous.

Barker Bros., 724-738 South Broadway, the leading furniture house of the West, is now handling a complete line of Columbia gramophones and records. Several sound-proof rooms are nicely equipped in all the up-to-dateness possible. Geo. S. Barnes, who has been with the Geo. H. Barnes Piano House, is now in charge of this new department.

Schireson Bros., 369 N. Main street, has been so successful with the phonograph line in connection with other musical instruments, that they have just obtained the agency for the Curtis piano which will no doubt be a quick seller.

Virgil B. Chatten, the new manager of the talking machine department of J. B. Brown Music Co., has been making things hum. The recent sales of this department have been very satisfactory in every way. The new Edison disc machine is demanding the attention of many and a number of sales worthy of note have been made through this able manager.

N. W. Schireson, one of the most prominent talking machine dealers of the city, was married to Miss Grace Siegel, of this city. The couple spent their honeymoon at Santa Barbara, Cal.

R. E. Daynes, formerly of the Daynes Music Co., of Salt Lake City, is now connected with the talking machine department of J. B. Brown Co., of this city.

CECIL A. PECK MARRIED.

Cecil Albert Peck, manager of the Victor department of Taylor’s Music House, Springfield, Mass., was married to Marion Estelle White at Reading, Mass., on the 22d of May. Otto Piesendel, of the Oliver Ditson Co., Boston, was best man. After August 1 Mr. Peck and his bride will be at home at 96 Central street, Springfield, Mass.

Before Mr. Peck’s connection with the House of Taylor he was for several years with the Oliver Ditson Co., specializing on the exploitation of the Victor. Although a young man, Mr. Peck ranks as one of the few in the front rank of Victor specialists.

THE REASON.

Jack—“Can your father sing?”

Mary—“No, but he could before he went to prison.”

Jack—“And why can’t he sing now?”

Mary—“Oh, he’s behind a few bars and can’t get the key.”

AN INTERESTING SOUVENIR

Of the Cyclone Which Visited Terre Haute, Ind., Some Months Ago Is Being Preserved by Mr. Coleman, of That City.

(Special to The Talking Machine World.)

Terre Haute, Ind., June 5, 1913.

Although the cyclone that hit this city a few months ago did not cause a very serious loss of life and did not do the vast damage that some of the Eastern newspapers have popularly painted, it certainly performed some curious stunts while on its course of devastation. A cyclone or tornado invariably includes freak performances, and the one that visited this city was no exception, as a number of weird and uncanny feats have been pub-

lished in the local newspapers, some of them within reason; others without.

A concrete example of one of the within reason feats is shown here in the nature of a Columbia phonograph that passed through a number of thrilling and exciting experiences before finally coming to a halt. This machine is the property of George E. Coleman, 2000 South Third street, which is in the heart of the cyclone struck district. When the cyclone arrived in Mr. Coleman’s vicinity it tore up the house and everything in it. The phonograph was included in the general moving, and was carried through the air for several blocks with a force calculated to tear it asunder. However, it withstood this onslaught successfully, but to add to its trouble the wind picked up a two-foot strip of timber and speared the machine through the horn. The result must have disappointed the elements, for when picked up, instead of being ready for the junk heap, the machine was in perfect working order and played a record with all its original powers.

GETTING NEWSPAPERS TO HELP.

In line with the printed stories of each month’s records that the Victor Co. sends out to its dealers, the Trafford Co., of Mason City, Ia., states that these stories are gladly accepted by local newspapers for free insertion. Good results are achieved by this publicity, as in the news columns the record notices attract favorable attention.

The Edison Blue Amberol

When a record can be played thousands of times without affecting the clear sweetness of its tone—

when it is made so that it's practically unbreakable—

when it offers the widest possible range of selections—

when its playing time is long enough to play *all* of every selection—

then you've got facts so compelling that a demonstration means a sale not only of the records but also of an

Edison Phonograph

The Diamond Reproducer

When you back up the Blue Amberol argument with a Diamond Reproducer that brings out fully the beautiful tones of the record—

that doesn't wear the record out—

that is a permanent reproducer always ready—

that does away forever with the bother of changing needles—

then you've got mighty important reasons for convincing your customers of the value of these great features applied to the greatest of all machines—

The Edison Phonograph

Ask your jobber about the details to-day

THOMAS A. EDISON, Inc., 59 Lakeside Ave., Orange, N. J.

NEW YORK, JUNE 15, 1913.

EARLY next month Niagara Falls will be the scene of the annual meet of the Talking Machine Jobbers' National Association.

It is understood that an interesting program has been prepared by a competent committee whose object it will be to make the gathering an important one from various viewpoints. In the first place, Niagara Falls possesses many natural powers of attraction, and early in July it is most inviting, so while it may be warm elsewhere it is certain to be cool and enjoyable at that scenic resort.

While the social features will not be overlooked, it is proposed by the arrangement committee to make this gathering more than ordinarily interesting from a business viewpoint.

It is intended to have a number of topical subjects up for discussion which have a direct bearing upon the trade in its various departments.

The meeting, therefore, will have its serious features as well as those in lighter vein and the two will be happily and tactfully blended.

The Talking Machine Jobbers' Association occupies somewhat of a peculiar relation to the trade and it is possible that it may wield either a vastly increasing or a greatly diminishing influence. As it stands to-day, its membership roll is limited to the members who handle the products of two of the great producing houses. Now, will these conditions continue, or, will the association membership be augmented by the jobbers without reference to what particular lines they handle, or, will there be a separation? That is a question which has been frequently asked.

One thing is certain that the association will continue to exert a strong influence in the talking machine affairs of the country simply for the reason that the jobbers themselves can see that they can accomplish many more betterments by holding together than if they were separated.

There has been in the past and is to-day a distinct feeling favoring harmonious work in the talking machine trade. It is different in this respect from many other trades, in that feuds and jealousies which have crept in have been infinitesimal. The talking machine jobbers formed an association for the promotion of the general good of the trade and that its members have accomplished considerable cannot be successfully denied. It is presumed with the trend towards legislation which is distinctly harmful in both our State and national affairs it should be necessary to have the association governed by men who are in touch with legislative work and who appreciate and realize what the passage of harmful laws have upon the selling branches of the industry.

To our mind the association can accomplish a good deal of good as a police force in watching the introduction of bills which are calculated to work an injury to the legitimate trade interests.

It is going to be more and more a growing necessity among our trade associations to throw what influence they possess to prevent the passage of harmful measures being enacted into laws, because it must be admitted that there is a force in the political life of this country which seems bent on destroying trade stability.

This fact must be apparent to every thinking man and each State is trying to go a little better than its neighboring State in the passage of some legislative measures which have the effect to throttle trade rather than aid it.

The governing powers of the association, therefore, should be in the hands of men who are in touch with the needs of the hour, both in an administrative and legislative sense.

It is difficult to find men who are at all times willing to make the great sacrifices of time and money which is necessary to successfully accomplish association work. Intelligent work must be performed in order that association strength be augmented in ways which will benefit the trade.

It is fair to say that during its existence the Jobbers' Association has exerted a helpful influence for the interests of the trade. It has worked harmoniously with the factories to accomplish betterments in various ways. During the past year the officers have actively opposed legislation which appeared to be detrimental to the talking machine interests, and full credit for constructive work should be given them. They have worked harmoniously with the factories, so that the two departments of the business—the manufacturing and distributing ends—have been developing along peaceful lines. It is well that such a feeling should be preserved. The jobbers are bending their energies to the sale of goods, through the dealers, to the great consuming public, and the ultimate end of all industry and commerce is the retail consumer.

THE decision which has recently been handed down in the Supreme Court in a case brought by the manufacturers of a patent medicine will have a far-reaching effect upon a variety of trades wherein patented price restricted articles cut an important figure.

In a five to four decision, the highest legal tribunal in the land draws a close distinction between the right of the maker of a patented article to prescribe conditions upon the sale and use of the article and the right to limit retailers as to their selling price.

This opinion was approved by a bare majority, and in taking this action the Supreme Court in some degree reversed the policy adopted by it in the famous "mimeograph case" decided a little over a year ago, when only seven justices were on the bench, but allowed that case to stand so far as it goes. In the "mimeograph case" four justices upheld the right of patent owners to place restrictions on the nature of the article to be used or the patented article sold. In the "mimeograph case" the court explained it was sold on a strict construction of the patentee's rights to the use of the patented article. The mimeograph machine was sold at less than cost, the entire profit of its manufacture coming from the sale of unpatented articles like ink and blotting paper which the acquirer of the machine was licensed to use with it.

That constitutes a distinction by which the last opinion is a reversal or modification of the Dick decision.

The decision was in the case of Bauer & Co. and the John Bauer Chemical Co. vs. James O'Donnell, on certificate from the Court of Appeals of the District of Columbia. Bauer & Co. are a corporation of Berlin, Germany, having a contract with F. W. Hehmeyer, of New York City, operating as the Bauer Chemical Co. in manufacturing and selling a patented medicine. The company issued its product in packages, warning druggists that it must sell at not less than \$1 a package, and that sales at lower prices infringed its patent rights and would render the seller liable to injunction and damages. The court now decides to the contrary.

Justice Day announced the majority decision, which held that while the patent law gave the owner exclusive right to "vend" articles, that was not the same as a right to "keep up the price," over which the patentee had no jurisdiction after he had sold the article and received his own price.

Many manufacturers had joined the manufacturer of the nerve

tonic in his fight. All decisions in the lower courts with the exception of one have been in favor of the manufacturers.

Justice Day declared that the right to make, use and sell was not derived from the patent law. This right, he said, existed before and after the passage of the law.

"The real question," continued Justice Day, "is whether in the exclusive right secured by the statute to 'vend' the patented article there is included the right, by notice, to dictate the price at which subsequent sales of the article may be made. Upon such facts as are now presented we think the right to vend secured by this statute is not distinguishable from the right guaranteed in the copyright act. In both instances it was the intention of Congress to secure the exclusive right to sell, and there is no grant of privilege to keep up the price and prevent competition by notice restricting the price at which the article may be resold."

This court decision upholds cut rates on patented goods and declares the seller of the patented article cannot dictate the selling price after it passes into the purchaser's possession. The final owner may sell on such terms as he desires.

In the opinion of many this decision will work an injustice to some, prominent among whom are the talking machine manufacturers.

It is the view of some who have studied this matter carefully that the decision opens up the larger question of the necessity of fixing the prices of commodities generally.

An interesting phase of the question is presented in the suit now pending, which the Government brought against the Kellogg Toasted Corn Flakes Co. This company made contracts with its jobbers not to retail its product except at a certain price. Certain retailers cut the price and the supply was withheld by the company. Complaint of violation of the Sherman Anti-Trust law was made and the Government brought suit. In this case, however, the patent was not on the corn flakes, but upon the box in which they were sold, and the attempt was made to use the patent as a lever to hold the price for the article which the consumer bought.

It can be readily seen that this decision will have a far-reaching effect upon price maintenance in every trade, and in the talking machine industry particularly price stability has been possible through the maintenance of fixed prices.

In other words, legitimate trade has been encouraged by the fact that it is impossible for price cutters to injure the business by their unfair practices.

We have been in receipt of a number of communications from readers asking opinions concerning the new conditions created by this important legal decision.

We should say that our friends in the talking machine trade should not be seriously disturbed by the sensational reports which have appeared in a good many of the newspapers anent this decision. Some of them affirm that the doors are flung wide open for price cutters and the importance of the decision has in many cases been greatly exaggerated.

Of course, the new conditions will have to be met and it may be decided to make some changes in the marketing of goods, for, the manufacturer cannot lay down conditions which shall govern the future sale of his products.

In a trade as compact as the talking machine trade it would be folly and even suicidal for the retailer to indulge in a price slashing campaign; and, there is every reason to believe that effective means will be found to sustain prices even if the patent laws cannot be employed for this purpose.

It is fair to assume that manufacturers will not sell their products to price cutters without the assurance being given that prices will be carefully observed, and men who desire to secure stock for price slashing purposes will undoubtedly find it difficult to obtain goods to begin such a campaign.

Probably the talking machine trade is in the best position of all industries to eliminate price cutting. There are certain supplies and accessories which are necessary and all of these articles are patented and, inasmuch as former court decisions recognize the manufacturer's right to prescribe how his patented products shall be used and to control conditions within reasonable bounds, it does not require a very vivid imagination to foresee a plan in force so that restrictions can be legally and consistently imposed in the use of a patented product.

If it were possible to indulge in indiscriminate price cutting

among the ten thousand talking machine dealers in the United States, of course, conditions would be materially upset, but talking machine manufacturers have had in force consistent price agreements which have effectually prevented price annihilation.

They have held that goods of standard quality shall be sold to the public in all parts of the United States at fixed prices so that discrimination is impossible.

The small dealer has enjoyed the same opportunities as the large dealer under this form of protection, for, the man with large capital has not been able to successfully outbid the small merchant with limited funds at his disposal.

Talking machines have been sold at prices which have been consistent with the values offered and price maintenance has worked out to the business advantage of the entire jobbing and retail trade, and in our opinion it will simply be a question of fair adjustment to the new conditions and demoralization will not ensue.

Talking machine dealers should not lose their heads when calmness and reasonableness are prime essentials.

It is reasonable to assume that the men who have developed this trade along safe and sane lines will demonstrate their ability to meet any emergency which may arise, and that there will be no conditions introduced which will savor of demoralization to any extent.

ON the 15th of last month, the Victor Talking Machine Co. announced the introduction of a pension system in its business which shows a generosity in dealing with employes which is remarkable, and instead of following the usual custom of allowing pensions on the basis of average salary and years of service, the Victor Co. has decided on a flat sum calculated to enable its retired employes to live in comfort.

Men and women will be treated exactly alike so far as the pension allowance is concerned, with the exception that the women are allowed to retire after twenty years or more continuous service and after reaching the age of 55, whereas, men are not permitted to retire on pensions until after twenty years or more of continuous service and after reaching the age of 65 years. The Victor Co. has thus discarded the usual custom of figuring pensions on the basis of an average salary and years of service. It has determined on a flat sum and employes who have served continuously for twenty or more years will be retired on a pension of \$30 per month.

This will apply to all whose monthly compensation at the time of discontinuance of active service does not exceed \$200 per month.

The Victor Co. employs 5,500 workers and no one of these will be assessed to provide for the pension fund as all of the expenses in connection therewith will be borne by the company.

We have referred in a former issue to the establishment by the Victor Talking Machine Co. of a Co-operative Beneficial Association designed to aid the members whose income is cut off on account of sickness. Every employe who has been in the company's service thirty days is eligible to membership.

Members will pay 25c. a month dues and in case of illness the association will pay members \$1 a day for one hundred days. As a further incentive to faithful and continuous service on the part of its employes, the Victor Co. has announced that it will give persons dependent on any employe the sum of \$500 in case of death of the employe after five years' service.

This sum of \$500 will not be taken from the funds of the Co-operative Beneficial Association, but will be a gift of the Victor Co.

These plans show in a practical way the desire on the part of this great corporation to provide in a substantial manner for its employes and such action gives the lie to the statement that great corporations are not earnestly interested in the welfare of their workers.

THE business man is the king bee of the epoch, and his worst enemy could not call him a drone. He might, under constant temptation, be a drone in political matters, but he is now learning how much good money this is sure to cost him in the end. It is mere business prudence that the merchant should keep his eye on legislation.

The business man has the future of the country in his hands—the business-banker, the business-farmer, the business-manufacturer, the business-man-merchant—these are the men whose counsels and thoughtful influence must be the safeguard of confidence.

TRADE CONDITIONS EXCELLENT IN SAN FRANCISCO.

Past Month Has Shown Tremendous Activity in Business—First Five Months of Year Break Sales Records—This Applies to Both Wholesale and Retail Lines—Leading Talking Machine Houses Carrying on Active Campaigns to Interest People.

(Special to The Talking Machine World.)

San Francisco, Cal., June 7, 1913.

According to the reports from the various talking machine dealers, both wholesale and retail, business has kept up in splendid shape the past month, and even now with the vacation period just at hand there are no indications of it dropping off very materially. Stocks are in better shape than they have been in this section for months; all the new models of machines having arrived in sufficient quantities to supply the demand in good shape, and some large shipments having been received of particular styles of machines on which there had been a shortage here for several months.

J. A. Black, manager of the talking machine department of the Wiley B. Allen Co., says that business has been steady since the first of the year with sales to date showing a substantial increase over the corresponding period of last year. He finds the new small Victor Victrolas meeting with a good deal of favor, and for a time experienced a little difficulty in supplying the demand for the No. IX machines. Record business has been good the past month. During the month Mr. Black made a trip to Portland, where he found things in satisfactory condition. F. B. Corcoran, city retail man of the department, is leaving right away for a trip in the northwest, expecting to stop in Seattle, Tacoma, Spokane, and probably going on up into British Columbia. He will be accompanied by Mrs. Corcoran and their little daughter.

A. G. McCarthy, of Sherman, Clay & Co., says all there is to be said is that business is good. He received some large shipments of Victor products during the month, which enabled him to catch up on his orders, and he anticipates no difficulty in supplying the demands of his trade from now on.

E. W. Muller, formerly a dealer of Klamath Falls, Ore., has taken up a little different phase of work in connection with the talking machine business. He has enlisted with the Pacific Phonograph Co. of this city to act as its special representative. His work, like that of the rest of the company's travelers, will be among dealers of Edison products, but he is not to solicit orders. Instead, he is to devote his attention to the promotion of business for them. Having been a dealer himself, he is conversant with the trials and tribulations of dealers, and ought to be in position to help out considerably.

The trade here and in the other Bay cities has been visited recently by A. V. Chandler, special representative in this section of the phonograph sales department of Thomas A. Edison, Inc. He came in from the southern part of the State after spending some time there and reports Edison products in better demand in that section than in this part of the State.

The travelers for the Pacific Phonograph Co. are both out on the road. J. E. McCracken touched at headquarters the first part of the month after a visit to the mining districts of western Nevada, but did not stay in town long. He is now calling on the trade in the San Joaquin Valley. E. L. Sues, who covers Oregon, Washington, Idaho and Montana, has been out for a couple of months, and continues to send in very good reports. Manager Pommer says they have both taken lots of orders for the Amberol V and VI machines.

W. S. Storms, manager of the Columbia Graphophone Co., in Spokane, Wash., paid a visit to San Francisco recently, while in California as a delegate to the convention of the Coast division of the Ad Men's Club, which was held in Sacramento.

W. S. Gray, manager of the general office here, will spend next month in the East on a combined business and pleasure trip, being accompanied by his wife and family. Mr. Gray has not been disappointed in the least in his expectations for the Grand Grafanola.

C. J. Moore exploited some new territory this month in the interests of the Columbia Graphophone Co. with very good results. He called on dealers in Mendocino and Humboldt counties, among whom he booked some fine orders.

Merrifield & Son, of San Luis Obispo, Cal., have purchased the stock of phonographs formerly owned by C. D. Blaine, who sold out a short time ago to Mrs. M. K. Lowe. They have removed the same to their store and will continue the business in conjunction with their piano establishment. A complete stock of Victor, Columbia and Edison will be carried, according to E. M. Merrifield.

Clark Wise & Co. have opened their new store at 51-53 Geary Street, where they have devoted practically the entire ground floor to talking machines. They have the place fitted up in first class shape, the store having been finished to suit the needs of the business as they are the first tenants. Special attention has been paid to provide the best possible display facilities. Mr. Wise says his aim is to have everything in talking machines and records, and therefore has stocked up with Victor, Columbia and Edison products. A Columbia Grand Grafanola graces the window and a fine showing of Victrolas and Edison disc machines has been arranged. Opening sales have been very encouraging.

J. J. Morgan, manager of the Emporium department, says he has no complaints to make, as business is keeping up in first class shape. He is now conducting an active campaign with the \$500 Columbia machine, devoting particular attention to hotels and clubs.

Manager Baley, of Babson Bros., reports business in Edison products for the past month ahead of the same period of 1912. He says the new small disc machines have stimulated trade.

A recent visitor to the trade was Arthur Logan, a dealer of Salinas, Cal.

Mr. McDowell, of Petaluma, Cal., was also here placing orders for talking machines.

THE RIGHT TO ARGUE.

Should Be Accorded to Americans Before Senate Committee.

President Woodrow Wilson, in his condemnation of what he terms "the lobby" that is opposing some features of the tariff bill now before the Senate, said:

"The newspapers are filled with paid advertisements calculated to mislead the judgment of public men and also the public opinion of the country itself."

Does President Wilson deny to the opponents of the proposed reductions in the tariff, sugar and other commodities the right of free speech? Have they not the privilege of openly buying advertising space in the newspapers and presenting their arguments against what they consider objectionable measures? Is there anything underhanded about such a course? Isn't it the most natural way in the world for placing before the Senators and the Representatives their views in the hope that they will be influenced by them?

It is to be presumed that these men, to whom is intrusted the task of making the nation's laws, are open-minded and ready to listen to arguments in behalf of or in opposition to any bill that is proposed for enactment, and then to decide whether the bill should receive their support.

The advertising columns of the daily newspapers are open to all who have legitimate goods to sell or a just cause to promote. If the sugar men can prove to the satisfaction of the Senators that the adoption of the proposed schedule affecting their business would be detrimental to the country's best interests, why should they be censured for setting forth those arguments in an open and frank way in the newspaper? Those who favor the schedule have the same mediums at their command if they care to use them.

Won't You Have a Lesson in Spanish?

It's so easy to learn by the I. C. S. system—and a knowledge of Spanish is so useful nowadays.

The I. C. S. system of language instruction by means of the phonograph makes easy the mastering of a foreign language, and appeals with compelling power to thousands. The dealer in phonographs who does not carry I. C. S. Language Outfits is neglecting a quick and sure way to increase his business. The new \$35 Language Outfit of the I. C. S. is a marvel. It represents the highest art in the teaching of languages, and embodies a method that has won the warmest praise of thousands qualified to speak authoritatively. The Spanish, French, and German Embassies at Washington, as well as the leading colleges, have cordially indorsed the I. C. S. method of teaching languages.

The I. C. S. Language Outfit consists of an Edison Gem Phonograph made especially for language work; small horn; headband hearing tube; oil can; and 25 Conversational Records teaching pronunciation guaranteed to be absolutely correct, with native intonation and inflection. In addition to these Conversational Records there are pamphlet Instruction Papers teaching the theory of the languages. The new Outfit is at one and the same time the best and cheapest ever offered—the price being only \$35.

If you want to increase your business, write to-day for full particulars.

International Correspondence Schools
Box 918, Scranton, Pa.

Are You Going To Attend The Talking Machine Jobbers' Convention at Niagara Falls?

See Niagara and attend the 7th Annual Convention of the National Association of Talking Machine Jobbers, held at Buffalo July 6th, 7th and 8th.

It is intended to make this meeting more than ordinarily interesting.

A number of important matters of direct interest to every talking machine jobber in this country will be taken up for discussion. A get-together policy will be cultivated, and it is to be hoped that all talking machine jobbers will plan to be present.

An interesting program for the session, including business and social attractions, has been prepared.

Be sure and visit Niagara Falls Convention time!

It will do you good and your business will profit by your attendance.

CONDITIONS IN EUROPEAN COUNTRIES PLEASE MR. LYLE.

General Manager of Columbia Graphophone Co. Returned End of May from Visit to Europe Where He Found Columbia Interests Rapidly Forging Onward—Expansion of London House—Long Drawn Out Balkan War Having Harmful Effect Upon Trade.

George W. Lyle, general manager of the Columbia Graphophone Co., accompanied by his son, Harold, returned to New York May 26 after a five weeks' trip abroad. During this comparatively short space of time Mr. Lyle covered a considerable area of ground, as among the places he visited were London, Paris, Vienna, Budapest, Milan, Venice, Rome and a number of points of particular scenic interest in Switzerland.

While this tour of Europe was taken primarily for business purposes, Mr. Lyle embraced the opportunity of introducing the old world to his son, Harold, who caught his first glimpse of Europe on this trip. Needless to say, Mr. Lyle, Jr., was considerably impressed by the many points of interest to be observed, and the entire journey for Mr. Lyle and his son, both from a business and a pleasure standpoint, was most satisfactory and enjoyable.

In a chat with *The World*, Mr. Lyle stated that he was considerably surprised at the prosperous condition of the talking machine industry abroad, for, notwithstanding the general trade depression apparent in other mercantile lines, the talking machine business is holding its own, and in certain sections showing steady gains.

Columbia interests abroad are rapidly forging onward, and the manner in which the various types of machines are being received by the European public pleases Mr. Lyle considerably. The higher priced machines are rapidly gaining in public favor, and each succeeding year shows a substantial increase in the sales of the better class of machines. This gratifying condition is due considerably to the educational and development work being done by the leading manufacturers, particularly the American houses.

One of Mr. Lyle's business transactions, and one, incidentally, which afforded him great pleasure, was the authorization of a very substantial sum for the extension and development of the London house of the company. The Columbia product in England has been achieving noteworthy success under able management and the gratifying reports given Mr. Lyle prompted him to express his hearty approval and pleasure at the manner in which the Columbia Co. is advancing in England. With the additional extension work that is made possible by Mr. Lyle's authorization and the noticeable gain in prestige that the Columbia Co. is experiencing in this part of the world, 1913 for the London office will undoubtedly be the banner year in the history of the company.

A keen observer of business conditions, Mr. Lyle commented on the general disturbance apparent abroad in business conditions. This Mr. Lyle attributes to the long drawn out Balkan war, which has been disturbing trade matters for a long time. In addition to the vast sums of money expended by the countries actually interested in the wars, there has always been the imminent danger of some one

or the other of the powerful countries being concerned in the war, which would have caused endless trouble and losses.

In the course of his conversation with *The World* Mr. Lyle remarked that he liked Europe very well indeed, but that he was glad to be home again. He states that taking advantage of his temporary absence, the sales organization doubled the sales for May as compared with the total for the corresponding period of last year, and if the same occurrence should again be recorded during another

George W. Lyle.

absence he might be asked to spend the balance of his days in traveling.

As is usual when Mr. Lyle returns from an extended trip either in this country or abroad, he found an accumulation of work awaiting his attention. This mountain of letters, important memoranda, etc., are already fast disappearing under Mr. Lyle's indefatigable efforts, and in the very near future he will probably announce some interesting plans for the Columbia Co. during the coming fall and winter.

CHRISTMAN SUCCEEDS PETERS.

Morris J. Peters, who for fourteen years has been in the service of the G. C. Aschbach Music House, in Allentown, Pa., has just resigned to enter another line of business. He was manager of the talking machine department and had built up an excellent trade. He was very systematic and is credited with devising the racking system of records at the Aschbach store, which is a model of its kind. E. A. Christman has succeeded Mr. Peters as manager of the talking machine department of the Aschbach establishment.

ON SUMMER ADVERTISING.

Canadian Press Association Shows Merchants a Thing or Two.

The Canadian Press Association campaign to advertise advertising is presenting to the business men of Canada some excellent arguments for continuing their publicity efforts during the summer months. Here are a few of them, taken at random from the advertisements that are to appear during the next few weeks:

Some business men in Canada pay an unfitting homage to a superstition—the superstition that hot weather justifies letting the fires of business energy go out. They stop advertising in the summer months. By paying homage to tradition, custom, superstition, they have allowed summer to become their "dull" season.

You know how dull it can be when you don't advertise. Do you know how brisk it can be made by advertising? Do you realize how much momentum you now lose in the summer that must be regained in the fall?

Don't let your advertising fires die out this summer.

The business world is flat to some men. Their profit-bearing shores of opportunity stretch only so far as their grandfathers trod. Custom, superstition and apathy have set them confines which they may not pass.

For instance, they believe the business year is a flat one—not an all-year round of trade, with East joining West, with spring merging into autumn—but just two distinct seasons, with sawed-off edges gaping into space.

They confine their activities to a spring trade and to a fall trade. To them there is no intervening continent with stores of waiting wealth. Their world is flat. They have not explored the mid-year months of summer trade.

Surely this conception of summer as a "dull" season is as fallacious as the delusion that the earth was flat. People have just as much money in the hot weather and spend quite as freely as in spring and fall.

MANUFACTURERS SHOULD BE COMPELLED TO MAINTAIN PRICE.

The only way to insure fair dealing between the manufacturer and his patrons lies in the control of the retail price by the manufacturer, according to Henry B. Joy, president of a motor company. On this subject he said recently:
