Unfortunately, my amendment No. 204 met the same fate as so many previous efforts to improve conditions for the miners by Federal legislation. My amendment to remove discriminatory tax treatment operating to the disadvantage of the mining industry was strenuously opposed by the same Treasury Department that is enthusiastically championing other provisions of this legislation designed to aid other industries. This opposition of the executive branch of the Government effectively killed the amendment; it was not approved by the Finance Committee and there is now no opportunity for the Senate to vote on it with the backing of committee approval.

It is my intention to introduce a revised version of amendment No. 204 in the near future in a form which will, I hope—being an optimist—be, at long last, acceptable to the Treasury Department and in consequence to the Finance Committee. It is my hope that the chairman of the Finance Committee, whose courteous cooperation I deeply appreciate, will, at an appropriate time, give a prompt hearing to the new amendment which I shall introduce to provide the mining industry with a measure of tax equity.

The minimum standard deduction provision of the present bill is one I believe to be a move in the right direction of tax relief for those at the very lowest income levels. Certainly, the policy that those at the very lowest level of sustenance in our affluent society should not have to bear burdens of taxation is right, and I believe should be followed. As I have stated, it is my own view that the most effective reform of the revenue laws would be an increase in personal ex-

emptions; thus spreading the benefits of tax reduction to midincome brackets to a greater degree than does H.R. 8363. However, as an alternative, I believe the minimum standard deduction should be increased, possibly by $400 for a taxpayer and by an additional $200 for each dependent. I am also in agreement with his proposal that any reduction in revenue caused by an increase in the minimum standard deduction may well be made up by a decrease in the unnecessarily generous cuts in corporate tax rates allowed by H.R. 8363. Again alluding to the testimony before the Finance Committee of the able economist, Mr. Leon Keyserling, there would appear to be ample justification for the proposition that additional cuts in corporate taxes will not necessarily lead to increased economic growth, but that a decrease of tax liability of the average taxpayer will provide a certain stimulus to the economy through increased and exercised purchasing power.

These are the major provisions of H.R. 8363 to which I believe we must give our most careful attention and vote in a manner that will give us as good a tax law as we can get at this time.

In a measure as complex and as far reaching as the Revenue Act of 1964, every provision demands careful study to determine where lie the best interests of the people of the United States. In addition to the aspects of the bill I have discussed, I believe the bill as passed should include other reforms, including a provision for taxation of capital gains on property transferred at death at a rate reflecting the basis of the property to the decedent; the inclusion in taxable income of the value of group life insurance premiums purchased by employers—certainly, and at a minimum, acceptance of the provision of the House that would make taxable premiums in excess of those on the insurance in excess of $30,000 instead of the $70,000 limitation so generously allowed by the Finance Committee; the repeal or, at least, the reform of stock option provisions to establish more equitable standards of taxation; and, finally, the repeal of excise taxes on certain low cost and necessary commodities such as toilet articles, pocketbooks, inexpensive jewelry, and cosmetics.

These are but a few of the specific provisions of the Revenue Act that should be changed, lacking a full fledged reversal of tax policy, which, as I have said, is thoroughly justified.

The bill reported by the Finance Committee has already been improved by amendments adopted on the floor. I believe we can make it a great deal better by further action on the floor of the Senate, and I urge that the Members of this body make every effort to achieve this goal.

The PRESIDING OFFICER. By unanimous consent the following 10 minutes will be divided equally between the Senator from Vermont and the Senator from Louisiana.

Mr. GRUENING. Mr. President, I ask unanimous consent that I may have 1 additional minute in order to make an insertion in the RECORD.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that the Senator from Alaska may proceed for 1 minute, the time being charged equally to both sides.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GRUENING. Mr. President, a pertinent editorial from the February issue of the Progressive gives its view that the pending tax bill, as proposed originally, "represented a reasonably balanced, if modest, effort to combine a reduction in taxes with tax reforms designed to remove some of the more glaring inequities in the present tax structure," but that it has been "so mauled and mutilated" that it has now become "a monstrosity." I commend this editorial, entitled, "Unfair Tax Bill," to the attention of my colleagues. It sounds a challenge and a warning which will have its echoes and repercussions in the months and years ahead. I ask unanimous consent that it be printed at the conclusion of my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNFAIR TAX BILL

President Johnson has sought to hasten passage of the tax bill by urging prompt Senate acceptance of the House-approved measure, but we are not convinced that haste is nearly so important as a more careful look at what a monstrosity the tax measure has become.

When the Kennedy administration first presented its tax proposal a year ago, the measure represented a reasonably balanced, if modest, effort to combine a reduction in taxes with tax reforms designed to remove some of the more glaring inequities in the present tax structure. Even in its original form, it provided more relief for corporations and for upper-income individuals than for those of lower incomes, but it compensated for this weakness, in some degree, by including provisions designed to close, at least partially, some of the gaping loopholes now open to higher income taxpayers. The proposal was aptly described by Senator PAUL DOUGLAS as "in some respects ambitious, and in other respects timid. But it was an effort at tax reform."

Seven months later the House had so mauled and mutilated the measure that Leon Keyserling, who was President Tru-

man's chief economic adviser, told the Senate Finance Committee that if he had been assigned to write the worst possible tax bill, he would not have surpassed the efforts of the House. Practically every reform feature had been knocked out and many inequities made worse. The only reform of consequence that survived the slaughter in the House was the repeal of the 4 percent dividend tax credit. So glaring are the tax loopholes that in a recent year a score of millionaires were able to make such effective use of them that they paid no income tax at all.

With little reform left at which to back away, the Senate Finance Committee, under the chairmanship of Virginia Democrat, HARRY BYRD, proceeded to riddle the tax measure further by carving out even more loopholes for the benefit of those citizens with substantial incomes.

What is left of the bill for consideration on the floor of the Senate is tax reduction and little else. But it is a tax cut that is grossly unfair. The bill would provide a $2.5 billion plum for business, which has already enjoyed tax relief amounting to $5 billion annually since 1954. The cut is needed, it is argued, to encourage business and to enable industry to expand production. But Senator ALBERT GORE, Tennessee, Democrat, has ridiculed this argument by reminding the Senate that last year produced all-time records for corporate profits, dividends, cash on hand, savings, and investment capital. Furthermore, said the Senator, there is a surplus of productive capacity in existing industrial plants.

As for tax reductions for individuals, Senator ERNEST GRUENING, Alaska Democrat, pointed out that the cut in the $2,000 to $4,000 income bracket is 13.6 percent, but at the $200,000 income mark, the tax saving soars to 23 percent. The 12.5 percent of taxpayers with incomes of $10,000 or more would harvest 45 percent of the total tax cut. "It seems to me," said Senator GRUENING, "this is a mistaken way of improving our sick economy."

Leon Keyserling has estimated that so much of the tax cut will go to high-income individuals that perhaps $8 billion of the $11 billion reduction will go into savings and investment rather than into immediate consumption, thus measurably frustrating the basic purpose of the bill to stimulate the economy and reduce unemployment.

Senators GORE, GRUENING, DOUGLAS, and others who are gravely disturbed by the im-
[*P. 1772*]
plications of the mutilated tax bill have one last chance in the Senate to fight to correct some of the worst features of the measure, and to restore some of its original reforms. And the Nation has one last chance to listen to their debate and become better informed before hastily approving a law the country may come to regret bitterly.

The PRESIDING OFFICER. By unanimous consent, the following 8 minutes are equally divided between the Senator from Vermont [Mr. PROUTY] and the Senator from Louisiana [Mr. LONG].

Mr. LONG of Louisiana. Mr. President, at this moment the junior Senator from Louisiana has nothing further to say about the amendment.

Mr. MILLER. Mr. President, will the Senator from Louisiana yield for a question?

Mr. LONG of Louisiana. I yield.

Mr. MILLER. The Senator from Iowa and the Senator from Vermont have had a colloquy during the absence of the Senator from Louisiana. The Senator from Iowa suggested that the amendment of the Senator from Vermont be modified to provide for the elimination of section 151(e) of the Internal Revenue Code insofar as the special provision respecting an exemption for a student is concerned. The Senator from Vermont would prefer not to modify his amendment, but he recognizes that the Senator from Iowa may have a point. The question I should like to ask the Senator from Louisiana is as follows:

If the amendment offered by the Senator from Vermont should be agreed to, would the conference committee have the discretion to consider a modification along the lines the Senator from Iowa suggested with respect to section 151(e) of the Internal Revenue Code, so that the two provisions would be harmonized?

Mr. LONG of Louisiana. The Parliamentarian is not present to advise me on the question. The answer would depend in some respects on the House rules and what the House would regard as being in conference between the Senate and the House. My impression is that it would be within the power of the conference to reduce the effect of the amendment but not to expand upon it. I do not believe that anything that is not a part of the amendment or the section of the code that might be affected one way or the other that is not in the amendment could be considered.

The Senator from Delaware [Mr. WILLIAMS] is present, and perhaps he could answer the question better than I am able to.

Mr. WILLIAMS of Delaware. Since the amendment would not be contained in the House bill, it would be in the conference by action of the Senate. The conferees could modify the amendment but could not expand it beyond the scope of the language contained in the amendment as adopted by the Senate.

Mr. MILLER. So it is the opinion of the Senator from Delaware that if the conference recognized the lack of harmony between the amendment proposed by the Senator from Vermont and the Internal Revenue Code in its present state, the conferees would be powerless to harmonize the two, and they would

either have to reconcile themselves to going along with the lack of harmony or reject the amendment offered by the Senator from Vermont.

Mr. WILLIAMS of Delaware. It would depend on the question of whether, in harmonizing the two, the scope of the amendment would be expanded. If it would, we could not take such action. In conference, we can negotiate only within the framework of the outside limits of the versions of the bill passed by the two bodies. In the present instance the House has passed no provision relating to the subject. If the Senate adopts the Prouty amendment the conferees would have to work within the outside range of the action of each body. Without knowing the substance or the nature of what the Senator has in mind, I could not answer the question further at the present moment.

Mr. LONG of Louisiana. I believe the Senator contends that the amendment as drafted would conflict with a section of the Internal Revenue Code.

Mr. MILLER. I would rather not say "conflict." I would rather say that they are not in harmony, because the provision of section 151(e) relating to students was placed in the act by Congress for the same purpose that lies behind the amendment of the Senator from Vermont. The Senator from Iowa contends that there would be a doubling up of exemptions if the amendment offered by the Senator from Vermont were agreed to. I believe the Senator from Louisiana expressed the same opinion, unless section 151(e) is taken out concurrently with the amendment offered by the Senator from Vermont. The Senator from Vermont would rather not modify his amendment, but he is most amenable to having the conference consider the problem of trying to harmonize the code so that if there is a lack of harmony, and the conferees should recognize it and still want to retain the amendment of the Senator from Vermont, they could do something about it.

The PRESIDING OFFICER. The 4 minutes allotted to the Senator from Vermont have expired.

Mr. LONG of Louisiana. Mr. President, as a practical question, this is one of the subjects that should be considered in the consideration of the amendment. If the Senate wishes that position to prevail, it ought to vote that position. I doubt very much that the Senate conferees could agree to such a position in view of the fact that the section of the code which provide a $600 deduction is already a part of the law. I doubt very much that a section which would provide an additional deduction could be repealed in conference if that section were not in conference with the amendment. I believe the amendment would have to be modified in order to take the problem to conference.

Mr. MILLER. I should like to ask one further question, since the ranking member of the committee and the acting chairman of the committee are present on the floor of the Senate.

Suppose the Prouty amendment were not amended as I would like to have it amended, and the Prouty amendment were agreed to. It would then go to conference. Suppose it were then accepted by the conference. The Senator recognizes that there is a lack of harmony. I wonder if Senators would look with favor upon an amendment to another House-passed tax bill later in the session which would harmonize the sections.

Mr. WILLIAMS of Delaware. I do not quite understand what the Senator is attempting to do. Does the existing code provide an exemption of $600?

Mr. MILLER. Section 151(e) of the existing code provides, in effect, that a parent will not lose the $600 exemption available to him should his son or daughter be a full-time student.

Mr. WILLIAMS of Delaware. The Prouty amendment would allow an exemption up to $1,500.

Mr. PROUTY. Fifteen hundred dollars for a graduate student; $1,200 for an undergraduate student.

Mr. WILLIAMS of Delaware. Then the conferees could reduce the $1,200 provided in the Prouty amendment to a basis at which it would not exceed the total $1,500 exemption. If they had to leave the two sections in the act, I am not at all sure that they could not reconcile them. It has been the position of the conference that if an amendment went to conference and it was utterly impossible to reconcile the sections affected, the amendment would have to be dropped no matter what the conferees thought of it.

Mr. LONG of Louisiana. The junior Senator from Louisiana is of the opinion that the conferees could find a way to reach the result that the Senator seeks, if that is what they wanted to do.

Mr. PROUTY. I believe that is what the Senator from Iowa desires.

Mr. MILLER. I thank the Senator from Louisiana and the Senator from Delaware.

Mr. LONG of Louisiana. The whole question should be studied further and brought before the Senate as a separate measure. I believe the question could be resolved by the conference in line with the result which the Senator from Iowa would like to see.

69-108 O—66—pt. 3——35

Mr. PROUTY. Mr. President, I yield back the remainder of my time.

Mr. LONG of Louisiana. Mr. President, I suggest that both sides yield back their remaining time. I suggest the absence of a quorum.

The PRESIDING OFFICER. All time has expired. The absence of a quorum has been suggested. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that further proceedings under the quorum call be terminated.

The PRESIDING OFFICER. Without objection, it is so ordered.

The hour of 1:30 p.m. has arrived. By unanimous consent, the vote will be taken. The question is on agreeing to the amendment offered by the Senator from Vermont [Mr. PROUTY] as modified. The yeas and nays have been ordered, and the clerk will call the roll.

[*P. 1773*]

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from Arkansas [Mr. McCLELLAN], the Senator from Arizona [Mr. HAYDEN], the Senator from Nevada [Mr. CANNON], and the Senator from Oregon [Mrs. NEUBERGER] are absent on official business.

I also announce that the Senator from California [Mr. ENGLE] is absent because of illness.

I further announce that, if present and voting, the Senator from California [Mr. ENGLE] and the Senator from Oregon [Mrs. NEUBERGER] would each vote "nay."

On this vote, the Senator from Arizona [Mr. HAYDEN] is paired with the Senator from Nevada [Mr. CANNON]. If present and voting, the Senator from Arizona would vote "nay," and the Senator from Nevada would vote "yea."

Mr. KUCHEL. I announce that the Senator from Illinois [Mr. DIRKSEN] is necessarily absent and, if present and voting, would vote "yea."

The result was announced—yeas 47, nays 47, as follows:

[No. 16 Leg.]

YEAS—47

Aiken	Dodd	Kuchel
Allott	Dominick	Lausche
Beall	Fong	Magnuson
Bennett	Goldwater	Mechem
Boggs	Hickenlooper	Miller
Brewster	Hruska	Morton
Carlson	Jackson	Moss
Case	Javits	Mundt
Cooper	Jordan, Idaho	Muskie
Cotton	Keating	Nelson
Curtis	Kennedy	Pastore
Pearson	Ribicoff	Smith
Pell	Russell	Tower
Prouty	Saltonstall	Williams, Del.
Proxmire	Scott	Young, N. Dak.
Randolph	Simpson	

NAYS—47

Anderson	Gruening	McNamara
Bartlett	Hart	Metcalf
Bayh	Hartke	Monroney
Bible	Hill	Morse
Burdick	Holland	Robertson
Byrd, Va.	Humphrey	Smathers
Byrd, W. Va.	Inouye	Sparkman
Church	Johnston	Stennis
Clark	Jordan, N.C.	Symington
Douglas	Long, Mo.	Talmadge
Eastland	Long, La.	Thurmond
Edmondson	Mansfield	Walters
Ellender	McCarthy	Williams, N.J.
Ervin	McGee	Yarborough
Fulbright	McGovern	Young, Ohio
Gore	McIntyre	

NOT VOTING—6

Cannon	Engle	McClellan
Dirksen	Hayden	Neuberger

So Mr. PROUTY's amendment, as modified, was rejected.

Mr. JAVITS. Mr. President——

The PRESIDING OFFICER. The Senator from New York is recognized.

Mr. KUCHEL. Mr. President, I move that the vote by which the amendment was rejected be reconsidered.

Mr. MANSFIELD. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. MANSFIELD. Who was recognized first by the Chair?

The PRESIDING OFFICER. The Senator from New York.

Mr. KUCHEL. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. KUCHEL. Mr. President, I move that the Senate reconsider the vote by which the last amendment was defeated. I ask for the yeas and nays on the motion.

Mr. MANSFIELD. I ask for the regular order.

Mr. HOLLAND. Mr. President——

Mr. MANSFIELD. I ask for the regular order.

Mr. HOLLAND. A point of order.

The PRESIDING OFFICER. The Senator will state his point of order.

Mr. HOLLAND. Is the Senator from California in position to make his motion?

Mr. LONG of Louisiana. How did the Senator from California vote?

Mr. KUCHEL. I make my motion. I voted in the affirmative.

Mr. LONG of Louisiana. The Senator is not in a position to make his motion.

Mr. KUCHEL. I renew my motion.

Mr. LONG of Louisiana. Mr. President——

The PRESIDING OFFICER. The Senator from California voted in the affirmative. The Parliamentarian informs the Chair that the Senator from California, therefore, is not in a position to make his motion.

Mr. MANSFIELD. Mr. President, I ask for the regular order.

The PRESIDING OFFICER. The Senator from New York has the floor.

[*P. 1774*]

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

The PRESIDING OFFICER (Mr. INOUYE in the chair). The bill is open to further amendment.

If there be no further amendment to be proposed, the question is on the engrossment of the amendments and the third reading of the bill.

Mr. KUCHEL. Mr. President, I suggest the absence of a quorum; I shall help my Democratic brethren.

The PRESIDING OFFICER. The absence of a quorum has been suggested; and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LONG of Louisiana. Mr. President, I move that the vote by which the Prouty amendment, as modified, was rejected be reconsidered.

Mr. SMATHERS. Mr. President, I move that the motion to reconsider be laid on the table.

Mr. JAVITS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. KUCHEL. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. NELSON in the chair). Is there objection? Without objection, it is so ordered.

Mr. KUCHEL. Mr. President, on the question of agreeing to the motion of the Senator from Louisiana, I ask for the yeas and nays.

Mr. SMATHERS. Mr. President, my motion to lay that motion on the table is the pending question.

Mr. KUCHEL. Mr. President, I renew my request.

Mr. MANSFIELD. Mr. President, on this question, I ask for the yeas and nays.

Mr. SMATHERS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Florida will state it.

Mr. SMATHERS. Is it not true that the pending question is on agreeing to my motion to lay on the table the motion of the Senator from Louisiana that the vote by which the Prouty amendment, as modified, was rejected be reconsidered?

Mr. MANSFIELD. Mr. President on this question, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

Mr. KUCHEL. Yes, Mr. President, there is.

Mr. LONG of Louisiana. For what?

The PRESIDING OFFICER. There is not a sufficient second.

Mr. KUCHEL. Mr. President, I renew my request; but, first, I rise to propound a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from California will state it.

Mr. KUCHEL. What is the pending question?

The PRESIDING OFFICER. The question is on agreeing to the motion to reconsider the vote by which the Prouty amendment, as modified, was rejected. On this question, the yeas and nays were requested; but there was not a sufficient second.

Mr. SMATHERS. No, Mr. President; after the motion to reconsider was made, I moved that the motion to reconsider be laid on the table.

Mr. ANDERSON. No, Mr. President; that did not happen.

Mr. SMATHERS. Yes, Mr. President; I did make that motion. Let Senators examine the RECORD, and they will be able to ascertain for themselves that I did make that motion.

Mr. KUCHEL. Mr. President, I renew my parliamentary inquiry.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Louisiana to reconsider the vote by which the Prouty amendment, as modified, was rejected. On this question, the yeas and nays have been requested. Is there a sufficient second?

Mr. KUCHEL. Mr. President, I join in the request for the yeas and nays.

The yeas and nays were ordered.

Mr. SMATHERS. Mr. President, I move that the motion to reconsider be laid on the table.

The PRESIDING OFFICER. The question is on agreeing to the motion of

the Senator from Florida that the motion to reconsider the vote by which the Prouty amendment, as modified, was rejected be laid on the table.

Mr. LONG of Louisiana. Mr. President, on this question, I ask for the yeas and nays.

Mr. PASTORE. Mr. President, I join in asking for the yeas and nays on this question.

The yeas and nays were ordered.

Mr. KUCHEL. Mr. President, I rise to propound a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from California will state it.

Mr. KUCHEL. Am I correct in my assumption that the roll will now be called for the yeas and nays on the question of agreeing to the motion of the Senator from Florida [Mr. SMATHERS] to lay on the table the motion of the Senator from Louisiana [Mr. LONG] that the vote by which the Prouty amendment, as modified, was rejected be reconsidered?

The PRESIDING OFFICER. That is correct.

Mr. MANSFIELD. Mr. President, let us vote.

[*P. 1775*]

The PRESIDING OFFICER. The question is on agreeing to the motion to lay on the table the motion to reconsider. On this question, the yeas and nays have been ordered; and the clerk will call the roll.

The Chief Clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from Nevada [Mr. CANNON], the Senator from Arizona [Mr. HAYDEN], the Senator from Arkansas [Mr. McCLELLAN], the Senator from Oregon [Mrs. NEUBERGER], the Senator from North Carolina [Mr. JORDAN], the Senator from Wyoming [Mr. McGEE], and the Senator from New Jersey [Mr. WILLIAMS] are absent on official business.

I also announce that the Senator from California [Mr. ENGLE] is absent because of illness.

I further announce that, if present and voting, the Senator from Arizona [Mr. HAYDEN], the Senator from California [Mr. ENGLE], the Senator from New Jersey [Mr. WILLIAMS], and the Senator from Oregon [Mrs. NEUBERGER] would each vote "yea."

On this vote, the Senator from Nevada [Mr. CANNON] is paired with the Senator from Wyoming [Mr. McGEE]. If present and voting, the Senator from Nevada would vote "nay," and the Senator from Wyoming would vote "yea."

Mr. KUCHEL. I announce that the Senator from Illinois [Mr. DIRKSEN] is necessarily absent and, if present and voting, would vote "nay."

The result was announced—yeas 46, nays 45, as follows:

[No. 17 Leg.]

YEAS—46

Anderson	Gruening	Metcalf
Bartlett	Hart	Monroney
Bayh	Hartke	Morse

Goldwater	Muskie	Young, N. Dak.

NOT VOTING—9

Cannon	Hayden	McGee
Dirksen	Jordan, N.C.	Neuberger
Engle	McClellan	Williams, N.J.

So the Senate agreed to the motion to lay on the table the motion to reconsider the vote by which the Prouty amendment, as modified, was rejected.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. GORE. Mr. President, I offer an amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment of the Senator from Tennessee will be stated.

The Chief Clerk read as follows:

On page 2, beginning with line 14, strike out all down to line 1 on page 8 and insert the following:

"TITLE I—INCREASE IN PERSONAL EXEMPTIONS; ADJUSTMENT OF CORPORATE INCOME TAX RATES; AND RELATED AMENDMENTS

"PART I—INDIVIDUALS

"SEC. 111. INCREASE IN AMOUNT OF PERSONAL EXEMPTIONS.

"(a) IN GENERAL.—Section 151 (relating to allowance of deductions for personal exemptions) is amended by striking out '$600' each place it appears therein and inserting in lieu thereof '$1,000'.

"(b) TECHNICAL AMENDMENTS.—Section 6012(a)(1) (relating to persons required to make returns of tax) and section 6013(b)(3)(A) (relating to assessment and collection in the case of certain returns of husband and wife) are each amended—

"(1) by striking out '$600' each place it appears therein and inserting in lieu thereof '$1,000'; and

"(2) by strikng out '$1,200' each place it appears therein and inserting in lieu thereof '$2,000'."

On page 11, begininng with line 11, strike out all through line 12 on page 12.

On page 12, line 13, strike out "114" and insert "113".

On page 12, strike out line 15 and insert

"SEC. 121. ADJUSTMENT OF CORPORATE NORMAL TAX AND SURTAX RATES."

On page 13, line 13, after "1964," insert "and".

On page 13, strike out lines 1 through 13 and insert the following:

"(2) 30 percent in the case of a taxable year beginning after December 31, 1963.

On page 24, beginning with line 8, strike out all down to line 4 on page 25.

On page 25, line 4, strike out "(c)" and insert "(b)".

On page 26, line 24, strike out "and".

On page 27, line 3, strike out the period and insert a comma.

On page 27, strike out lines 4 through 8, and insert the following:

"(C) the change in the tax imposed under section 3 shall be treated as a change in a rate of tax, and

"(D) the change in the amount of the deduction for exemptions under section 151 shall be treated as a change in a rate of tax."

On page 352, beginning with line 11, strike out all through page 362 and insert the following:

"In lieu of the tax imposed by section 1, there is hereby imposed for each taxable year beginning after December 31, 1963, on the taxable income of every individual whose adjusted gross income for such year is less than $5,000 and who has elected for such year to pay the tax imposed by this section, a tax as follows:

(Insert tables corresponding to the tables on pages 279, 280, 281, 282, and 283, but reflecting the amendment to section 111 of the bill increasing the amount of each exemption to $1,000 and eliminating the changes in the rates of tax on individuals.)

On page 362, beginning with line 12, strike out all through line 16 on page 290 and insert the following:

"(2) Except as otherwise provided in this subsection, in the case of a husband or wife filing a separate return, the tax imposed by section 3 shall be the lesser of the tax shown in table IV or table V of such section.

"(3) Table V of section 3 shall not apply in the case of a husband or wife filing a separate return if the tax of the other spouse is determined with regard to the 10-percent standard deduction; except that an individual described in section 141(d)(2) may elect (under regulations prescribed by the Secretary or his delegate) to pay the tax shown in table V of such section in lieu of the tax shown in table IV of such section. For purposes of this title, an election under the preceding sentence shall be treated as an election made under section 141(d)(2)."

On page 364, lines 22 and 23, strike out "neither table V in section 3(a) nor table V in section 3(b) shall apply" and insert "table V of section 3 shall not apply".

On page 365, in the matter following line 7, strike out "in section 3(a) and table V in section 3(b)" and insert "of section 3".

On page 366, beginning with line 7, strike out all through line 6 on page 379 and insert the following:

"(a) PERCENTAGE METHOD OF WITHHOLDING.—Paragraph (1) of section 3402(b) (relating to percentage method of withholding income tax at source) is amended by striking out the table therein and inserting in lieu thereof the following:

"Percentage method withholding table—Payroll period and amount of one withholding exemption

Payroll period	Amount
Weekly	$22.00
Biweekly	43.00
Semimonthly	47.00
Monthly	93.00
Quarterly	278.00
Semiannual	555.00
Annual	1,110.00
Daily or miscellaneous (per day such period)	3.00".

(b) WAGE BRACKET WITHHOLDING.—Paragraph (1) of section 3402(c) (relating to wage bracket withholding) is amended by striking out the tables therein and inserting in lieu thereof the following:

(Insert tables corresponding to the tables on pages 293, 294, 295, 296, and 297, but reflecting the amendment to 302(a) of the bill increasing the amount of each withholding exemption and eliminating the reduction of the rate of the withholding tax.)

(c) EFFECTIVE DATE.—The amendments made by subsections (a) and (b) of this section shall apply with respect to wages paid after December 31, 1963.

Mr. GORE. Mr. President, the amendment which I have offered would raise the personal exemption for each taxpayer and each of his dependents from the present rate of $600 to $1,000, as a substitute for the rate reductions contained in the bill—H.R. 8363—for individuals and corporations. It is not a substitute for the entire bill. Upon adoption of the amendment there would remain in the bill the changes made in normal and surtax rates for small business; second, the minimum standard deductions for taxpayers contained in the bill; and, third, the structural changes made in the Internal Revenue Code.

I know that Senators will immediately have in mind the revenue effect of the amendment. I ask unanimous consent that an estimate by the Treasury Department contained in a letter from Assistant Secretary Surrey be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TREASURY DEPARTMENT,
ASSISTANT SECRETARY,
Washington, D.C., December 6, 1963.

Hon. HARRY F. BYRD,
Chairman, Committee on Finance,
Washington, D.C.

DEAR MR. CHAIRMAN: This is in response to a request for a report from this Department

[*P. 1776*]

on amendment No. 208 to H.R. 8363. Amendment No. 208 would substitute for the individual and corporate tax rate reductions provided in H.R. 9363 an increase in the deduction for each personal exemption from $600 to $1,000.

The individual income tax is the most important single source of Federal revenue. The revenue productivity of the tax depends to a large extent on the level of personal exemptions. The income tax is now paid by most income recipients in the United States who now claim about 187 million personal exemptions. An increase in the amount of personal exemption is extremely costly; it would reduce substantially the individual income tax base and the revenues therefrom. The $400 increase in amount of the personal exemption provided in amendment No. 208 would result in annual revenue losses of $11.7 billion at current rates. (In fact, a $100 increase would cost $3 billion annually.)

The $11.7 billion revenue loss that would be occasioned by this feature of amendment No. 208 is comparable to the $11.66 billion revenue loss that would arise from the individual and corporate rate reductions provided in H.R. 8363. Amendment No. 208 would not change the present 52-percent corporate tax rate on income over $25,000, but like H.R. 8363, would reduce the rate on the first $25,000 from 30 percent to 22 percent. This would add $440 million to the $11.7 billion revenue cost of amendment No. 208, for a total of $12.14 billion. The result would be a tax reduction almost half a billion dollars greater than that provided for by H.R. 8363.

H.R. 8363 embodies a balanced tax reduction program for both individuals and corporations that would not only increase purchasing power but would also stimulate incentives to work and invest. It would provide tax reduction at all income levels with the largest proportionate reduction going to low-income groups. The bill not only includes substantial rate reduction for lower income groups but also a minimum standard deduction of $300 for each taxpayer, plus $100 for the spouse and for each additional exemption. The minimum standard deduction would cost $320 million annually and would concentrate the tax savings among the lower income taxpayers. Amendment No. 208 would retain the minimum standard deductions along with the proposed increase in personal exemptions to $1,000. This would increase very substantially the amount of income that could be received by individuals without tax. For example, a married couple with two children would not be subject to income tax until income exceeded $4,600 as compared with the present $2,666.

Amendment No. 208 would not reduce individual tax rates, which are currently at a level almost universally agreed to be too high. Existence of individual rates ranging up to 91 percent adversely affects the marginal incentive for earning and investing and leads to repeated pleas for special relief tailored to particular circumstances. Moreover, amendment No. 208 would provide inadequate tax reduction for medium and large corporations. The reduction of the 52-percent corporate rate provided in H.R. 8363 is essential if the bill is to achieve its objective of stimulating the economy, reducing unemployment, and increasing economic growth.

In summary, amendment No. 208 would reduce revenues by an additional half billion dollars but is unbalanced and inadequate since it does not provide for overall corporate tax reduction or for reduction in individual rates.

In view of these considerations, the Treasury Department opposes adoption of amendment No. 208.

The Bureau of the Budget has advised the Treasury Department that there is no objection from the standpoint of the administration's program to the presentation of this report.

Sincerely yours,

STANLEY S. SURREY,
Assistant Secretary.

Mr. GORE. The pending bill embodies a loss of revenue to the Treasury of $11,700 million. If the amendment which I have proposed were adopted, the revenue loss of the bill as amended would, in accordance with the estimate of the Treasury, be $12,200 million.

To put it another way, if the personal exemption for each taxpayer and each dependent were raised from the present legal exemption of $600 to $1,000 as a substitute for the rate reductions contained in the bill for both individuals and corporations, the loss in revenue would be $500 million greater.

I am not one of those who believe that we ought to reduce governmental revenue by such enormous proportions. However, I suggest that if such a reduction in governmental revenue is to be enacted, the choice is easy for me to make as between the very large, and, I believe, inequitable reductions in the higher brackets of personal income, and also the reductions for the large corporations which are now enjoying the highest profits in the history of the country on the one hand, and an increase in the personal exemption on the other.

Those who would resist the amendment on the grounds that it would result in loss of revenue to the Treasury should bear in mind that the advocates of the pending bill list that as its greatest virtue. The bill would lose revenue to the Treasury in the amount of $11.7 billion. It is said that the result would be that the budget would be balanced in the near, but as yet indefinite, future.

I suggest that, if this theory be true,

it is of questionable advisability to lose only $11.7 billion. Why stop there? Why not make it $22 billion, and balance the budget more quickly? Indeed, we might make a substantial payment on the public debt.

Obviously, I do not endorse this theory, because it has been tried unsuccessfully. Some of the proponents of the bill speak of the theory as if it were new. It is not new at all. It is as old as Andrew Mellon. Almost everything the present Secretary of the Treasury, Mr. Dillon, says in support of this bill can be found in Mr. Mellon's book in the 1920's. It was tried with drastic adverse results. Surely, it stimulated the stock market. The balloon grew bigger and bigger. But it burst in the crash of 1929.

It has also been tried within the past decade. In 1954, for the same reasons now advocated for the passage of this bill, some persons endorsed passage of the 1954 tax cut bill. The 1954 bill brought about a tax reduction of approximately the same percentage of gross national product as would be accomplished by the pending bill under present circumstances.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. GORE. Let me finish this point. Then I shall yield.

But since then we have enacted additional tax reductions, for example, investment credit and accelerated depreciation. These two taken together amount to a tax reduction of $5 billion, annually, principally for the investing segment of our economy.

I yield to the distinguished senior Senator from Ohio [Mr. LAUSCHE]. Then I shall undertake to examine the economic results of those reductions.

Mr. LAUSCHE. Mr. President, attempting to fortify the argument made by the Senator from Tennessee, that tax reductions do not necessarily produce stimulated business, I wish to read a tabulation relating to times when tax cuts were made in past, beginning in 1919, through 1954, showing the results. I read from U.S. News & World Report, the issue of July 30, 1962:

February 1919. Substantial cut—for individuals and business. By April, business began to climb out of recession.

November 1921. Major cut—affecting individuals and business. Business upturn had begun in August 1921, went on 2 years.

June 1924. Big cut for individuals. Recovery from mild recession began in following August.

We now come to February 1926:

Major cut for individuals. Minor recession started in November 1926.

In other words, 6 months later, the recession began.

May 1928—

And that year ought to cause everybody to tremble a little—

Minor relief—personal and business income. Business, rising, continued to rise.

But in December 1929:

Major relief for individuals. Recession deepened into great depression of 1929–33.

November 1945. Major postwar cut—personal and business incomes. Same month marked start of pickup that followed short postwar recession.

April 1948. Sizable relief for individuals. Moderate recession started in December 1948.

There was a major tax cut in 1954, sponsored by President Eisenhower. But in 1958 it was claimed we ran into a terrific depression.

The point I make with these figures is that it does not necessarily follow that when taxes are cut it is assurance that business will be stimulated.

The major cut of 1929 produced the worst depression we ever had. It probably did not produce it, but the depression followed, and was of a violence unequaled in the history of our country.

I thank the Senator for allowing me to place these figures in the RECORD.

I ask unanimous consent that the tabulation from which I have been reading be printed in the RECORD.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

[U.S. News & World Report, July 30, 1962]

TEN TAX CUTS OF THE PAST—AND THEN WHAT HAPPENED

February 1919: Substantial cut—for individuals and business. By April, business began to climb out of recession.

[*P. 1777*]

November 1921: Major cut—affecting individuals and business. Business upturn had begun in August 1921, went on 2 years.

June 1924: Big cut for individuals. Recovery from mild recession began in following August.

February 1926: Major cut for individuals. Minor recession started in November 1926.

May 1928: Minor relief—personal and business income. Business, rising, continued to rise.

December 1929: Major relief for individuals. Recession deepened into great depression of 1929–33.

November 1945: Major postwar cut—personal and business incomes. Same month marked start of pickup that followed short postwar recession.

April 1948: Sizable relief for individuals. Moderate recession started in December 1948.

March 1954.[1]

August 1954:[1] Substantial relief—personal and business taxes, also excises. Recovery from recession started in September 1954.

Mr. GORE. I appreciate the contribution of the able senior Senator from Ohio.

Mr. President, this bill had its genesis a year and a half or so ago, with a prediction by Dr. Heller and others that there would be a recession in 1964. Senators will recall that this bill was called, in so many words, insurance against recession in 1964.

All of us have made miscalculations. I certainly cannot claim any record of infallibility in that regard. But this bill was based upon a miscalculation. We are now in the second month of 1964, and all the economic indices with which I am familiar show that activity is at a record high, except that there is much unemployment. Employment is at an alltime high. Profits are at an alltime high. Production is at an alltime high. Distribution of dividends is at an alltime high. Retained earnings in corporations are at an alltime high. Cash reserves in corporations, banks, and insurance companies are at an alltime high. So are personal income and personal savings.

We are at the peak of any prosperity this Nation has ever known, and yet, paradoxically, we are today considering a bill to insure against a recession in 1964.

Is there no way that we can stop, look, and listen, and read the clear signs? Has our democratic process become so ponderous, so inflexible, that we are unable to stop when we see that we have a bill that is based upon a miscalculation.

Surely, the U.S. Senate is not incapable of examining the economic facts as they are in 1964, instead of passing a bill based upon a miscalculation of a year or more ago as to what the conditions would be in 1964.

Mr. LAUSCHE. Mr. President, will the Senator yield for a question?

Mr. GORE. I yield.

Mr. LAUSCHE. Is it not a fact that the original proposal for the tax cut was predicated upon the assumption that the tax cut would stimulate business to the point that unused productive capacity would become useful and that people would be put to work; and that subsequently a change in thought occurred, and a new reason was assigned? The new reason was that we must stop a recession. Therefore, there were two reasons assigned. At this time I do not know which of the reasons is the one that the present proposal is predicated upon. If it was intended to stop a recession that was on top of us in December of 1963, how is it that that recession has not come, while the accurate recitation which the Senator from Tennessee has made about business conditions is being reached today?

Mr. GORE. I believe the answer to that question can perhaps be supplied by a return to one of the facts to which the distinguished Senator himself has referred. In 1954 we passed a very large tax reduction bill, largely for corporations and for those who own large amounts of corporate stock. There was a temporary pickup in 1955 and 1956. A pickup of what? A pickup in plant improvement, a pickup in productive capacity, a pickup in investment. But in 1957 and 1958 there was a recession, and a rather serious one. Why? Because there was not sufficient demand to meet the increased productivity of plant and facility.

We ought to examine the whole fabric of our economy to see where stimulation is needed, if any is needed.

Is this bill the way to insure us against a recession in 1964, or to stimulate the economy? I have undertaken to answer the first part of the question. Obviously we do not need to pass a bill now to stop a recession when we are at the peak of prosperity. If we must pass a bill to provide a stimulation to our economy, then the question ariess, Where is the stimulation needed and in what part of our economy? Is it general or is it specific? Is there need for more productive capacity, or is it for consumer demand?

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. LAUSCHE. The Senator from Tennessee has raised a very interesting point dealing with the 1954 tax cut of more than $7½ billion. There was a slight rise in 1955 and 1956, but in 1958 there was a great recession.

Mr. GORE. It began in 1957.

Mr. LAUSCHE. Yes. Now I should like to read the testimony of Secretary Dillon. He contends that it will take 4 years for the tax cut to have a stimulating impact. If he was correct in that judgment, then in 1958 and 1957, instead of having a recession, we should have had the full impact of the benefits to be produced by the tax cut of 1954.

Mr. GORE. In other words, if that is a valid fiscal theory, then by now we should have had a balanced budget.

Mr. LAUSCHE. As a result of the 1954 cut; yes. This is what Secretary

[1] Also, Korean war rates on personal income and the wartime excess-profits tax expired automatically Jan. 1, 1954.

Dillon said in answer to the question of the Senator from Virginia [Mr. BYRD]. Secretary Dillon had said that there would be a $9 billion deficit in 1965. Then he tried to make the statement that we would pass out of that deficit in 1966. The Senator from Virginia asked him this question:

If you have a deficit of $9 billion in 1965, you certainly will have a deficit in 1966, will you not?

Secretary Dillon answered:

I would expect so. We have said that with stringent expenditure control, and allowing for the growth of the economy, the earliest possible date we foresaw for a balanced budget for this tax bill was 1967, and that it might be 1968.

Secretary Dillon said it will take 4 years to produce prosperity and balance the budget.

In 1954, at the end of 4 years, after a $7 billion tax cut, we did not have prosperity and a balanced budget in 1958. We had a $12½ billion deficit. So, at the end of 4 years, let us say in 1968, if we are still in a deficit, are we going to make another tax cut? Where do we head then?

Mr. GORE. I am not one of those who, like the distinguished and able senior Senator from Virginia, the chairman of the Senate Finance Committee, believe that we must have a balanced budget every year. The distinguished and able Senator from Virginia has urged a balanced budget every year. There have been times and conditions under which I though it was inadvisable to have a balanced budget. But I am certainly not one of those who think that there can never be a time or any circumstances under which it would be advisable to have a balanced budget.

We are asked deliberately to adopt a fiscal policy for a planned deficit for a period of years. It is proposed that at a time of prosperity we borrow money to provide tax cuts. I say that is not sound fiscal policy.

However, that is by no means the only reason why I oppose the bill.

I wish to return now to the question which the distinguished Senator from Ohio raised. He spoke of the tax cut in 1954, the temporary stimulation, and the recession that followed. What has happened in the last decade? We have experienced improvement of plant and facility. Some questions have been raised as to the validity of the argument that that is the way to increase jobs. Automation is a controversial term. Some people believe it to be an abomination to mankind. Other people think it is a mark of progress. So far as I am concerned, I would not stop automation. However, I resist the argument that this is the way to increase employment. In part because of the investment credit, rapid depreciation, and the tax cut off 1954 there has been a very rapid improvement in plant facility and a very rapid increase in productivity per man. What is the result? Our factories are producing vastly greater amounts of goods and products, including many new products. But how many people are employed in our factories? Almost 1 million more people were employed in our factories 7 years ago than are employed today. Yet where are the shortages? All one needs is the money or the credit, and he can buy everything from a button to a bulldozer.

Are there any shortages? I have asked repeatedly in the hearings before the Committee on Finance for the citation

[*P. 1778*]

of one product that is in short supply. None has been supplied.

I apologize to the distinguished Senator from Nebraska. I fear that I was carried away by my answer to the senior Senator from Ohio and neglected to yield to the Senator from Nebraska.

Mr. CURTIS. I thank the distinguished Senator from Tennessee. I assure him that I was interested in his discussion.

I share the concern of the distinguished Senator from Tennessee about the advisability of reducing taxes by borrowing money. It is my expectation to oppose the passage of the bill, as I opposed its favorable reporting by the Committee on Finance.

I also share the view of the Senator from Tennessee that people in the lower income brackets are in need of tax relief. With today's purchasing power, people living on modest amounts do not have much to spend.

There is one thing about the amendment offered by the distinguished Senator from Tennessee that troubles me. It is the proposal to raise the personal exemption to $1,000. True, that would reduce taxes for everyone, but it would remove from the tax rolls about 8 million returns. I represent, in part, a State of very fine and humble people. Many of them, I daresay, if the Government could reduce spending, would like to have their taxes reduced. Individuals in the lower income brackets should have a more favorable reduction than anybody else. But I have not had taxpayers come to me and say, "Take me off the tax rolls." I think a more generous reduction should be made in the lower income brackets; but if that is to be done exclusively by a sizable raise in the per-

sonal exemption, some persons would be entirely removed from the tax rolls.

My point is this: In this time of great stress, in this time when we are facing a Communist threat around the world, and a financial burden to defend the Republic, to care for our veterans, and to pay taxes for the national defense, there is more equity in saying to most people, "You should pay something, even though you are entitled to a generous reduction," than to say to 8 million, "You need pay no more taxes." Especially in times like these, citizens want to pay something. That is what disturbs me about the Senator's amendment.

Mr. GORE. I thank the distinguished Senator from Nebraska. In response to his point of view, any answer to almost any question raised about a 300-page-plus bill must be complicated. I should like to begin by acknowledging to the Senate, quite frankly, that even if my amendment were adopted, I would still vote against passage of the bill. Let me explain that statement.

I have said earlier that I thought there were times when economic conditions under which it was inadvisable to have a balanced budget. I am not one of those who thinks that the sole and only purpose of taxation is to meet governmental expenditures. I believe a fiscal policy can be used, and should be used, for the implementation of economic and social policies. When we are experiencing recessionary conditions, one of our most effective weapons is fiscal policy. If it is desired to describe it by an ugly word, call it deficit financing; call it spending.

But I do not think we are now in the kind of circumstances when a general, massive deficit financing program is justified. There are problems in our society, such as structural unemployment, which need specific treatment. There is the problem of vocational training of teenagers who are coming into the labor market without skills. But the bill does not provide for them. This is scattergun treatment, and such treatment is not called for.

The bill is tailored for economic recessionary conditions which do not prevail. The rationale on which the bill was based has vanished into thin air. That is why I say that even though my amendment were adopted, I would not then vote for passage of the bill, a bill which would make such a gigantic reduction in governmental revenue at this time.

Suppose, as a result of the hoped for stimulation, there were a repeat performance of the 1954–57 period. Suppose we used this great weapon of fiscal policy, and then find, 18 months from now, that consumer demand is not sufficient to utilize plant and facilities which are already in existence, and which would be augmented by the bill. What weapon would then be used? Would we cut taxes again, in order to balance the budget at some other time in the even more indefinite future?

I say that this is unsound fiscal policy. A tax cut is a powerful weapon, but it is being used at the wrong time and in the wrong way.

The distinguished Senator from Nebraska [Mr. CURTIS] cites the need for tax relief for persons in low-income brackets; but he says they are not asking to be removed from the tax rolls. I ask every Senator to examine his mail and see if he can determine any demand for the passage of the bill. Where does the demand come from? It comes from those who would be the principal beneficiaries or the inequitable reductions in taxes that would be made by the bill.

Mr. ERVIN. Mr. President, will the Senator from Tennessee yield for a question?

Mr. GORE. I yield.

Mr. ERVIN. Did not Lord Keynes, the English economist, teach that government can justify spending more than it receives in income in time of depression in order to relieve the economic conditions, but that in times of prosperity the government should collect in revenues more than it expends? Was not that the theory he advanced?

Mr. GORE. I believe it can fairly be said that that is basic Keynesian theory.

Mr. ERVIN. Is the Senator from Tennessee aware of the fact that many theoretical economists have now amended that theory, to this effect: that in times of depression the Government should spend more than its revenues, in order to relieve economic conditions; and that in times of prosperity the Government should also spend more than it receives, in order to forestall any future possibility of a depression?

Mr. GORE. I prefer to have economists who take that position spell it out themselves.

I think the Senator from North Carolina has reasonably stated their contention; but I point out that yesterday I placed in the RECORD an article—from the New York Times—in which it was stated that many of the leading economists are now having sober second thoughts about what they had recommended and about what they had stated in regard to the effects of this bill. Now they are wondering whether it is advisable for Congress to proceed to enact this bill, because it is feared that one of the effects of this massive deficit financ-

ing at a time when we are at the peak of prosperity might be overstimulation which would be followed by a recessionary condition which might be severe.

Mr. ERVIN. Mr. President, will the Senator from Tennessee yield further to me?

Mr. GORE. I yield.

Mr. ERVIN. A moment ago the Senator from Tennessee referred to the fact that about 1953 Congress enacted a tax cut bill. As I recall, it took effect on January 1, 1954. Did not the same siren voices that we now hear sing the same siren song to Congress at that time—namely, that if Congress would make that tax reduction, it would stimulate the economy, so that there could be a period of prosperity and a balancing of the budget?

Mr. GORE. That is correct. In that connection, I might point out that four steps were taken in cutting taxes in 1954. First, the bill, H.R. 8300, cut $1,500 million from the taxes of individuals and corporations. Second, the excess profits tax was repealed—and that action amounted to a further cut of $1,600 million. Third, there was a 10-percent across-the-board reduction in individual taxes, which amounted to $3 billion. Fourth, the excise taxes were reduced by $1 billion. Total tax reduction in 1954 was more than $7 billion. As I have already said, that reduction amounted to approximately the same percentage of the then gross national product as does the pending $11,700 million bill.

The Senator from Ohio has cited the results: stimulation of certains portions of the economy in 1955 and 1956. But let us consider what followed.

During the course of what followed, it was my lot to lead the fight on this floor in endeavoring to obtain an acceleration of the highway program and in endeavoring to obtain a public works program. I did that because I found that in my State and in other States, thousands of persons were in breadlines because they were unemployed. A serious recession existed. Not only did I lead the fight for public works bills at that time, but President Eisenhower signed those bills into law.

I do not predict that a recession would soon follow the enactment of the pending bill; but I say that those who predicted a recession in 1964 certainly made a mis-

[*P. 1779*]

calculation; and I question the wisdom of having Congress proceed to enact the pending bill as insurance against a recession in 1964, when, instead of a recession, we have the very opposite.

I also question the assertion that enactment of the pending bill would result in a general stimulation of the economy, inasmuch as the problems confronted by our society are not general, but are specific. In a moment, I shall discuss that point further; but at this time I am glad to yield further to the distinguished Senator from North Carolina, if he so desires.

Mr. ERVIN. Yes, Mr. President. I wish to ask the Senator from Tennessee whether it was predicted—as a basis for the cutting of taxes in 1954—that that action would be a prelude to congressional action in balancing the budget.

Mr. GORE. Yes.

Mr. ERVIN. However, instead of action by Congress in the intervening years to balance the budget, will not the Federal Government by the end of the next fiscal year have operated in the red to the extent of $46.4 billion additional, since the time when that tax cut was made?

Mr. GORE. That is correct. The distinguished senior Senator from Virginia [Mr. BYRD] referred to this point in the course of the first speech made during the debate on the pending bill. Instead of having the predicted effect, that tax cut has had the very opposite effect.

Mr. ERVIN. And has not the Secretary of the Treasury joined the ranks of the financial prophets, and predicted that even with the enactment of the pending bill, we could not look for any possibility of a balanced budget before the fiscal year 1967?

Mr. GORE. That is correct.

Mr. ERVIN. Mr. President, will the Senator from Tennessee yield further?

Mr. GORE. I yield.

Mr. ERVIN. Will the Senator from Tennessee engage in a surmise on the following point: If the Federal Government is not willing to limit its expenditures to its income, at a time when Federal officials brag that the Nation has the highest gross national product in history, can the Senator from Tennessee predict when the Federal Government will place such a limitation on its conduct?

Mr. GORE. I shall answer that question by asking a question which has previously been asked on the floor of the Senate—as follows: Unless the United States can have a balanced budget when its prosperity is at an alltime high, when can it have a balanced budget? Does that question answer the question the Senator from North Carolina has asked?

Mr. ERVIN. Yes; and I thank the Senator from Tennessee for yielding and for his very informative and illuminating answers to my questions.

Mr. GORE. I thank the Senator from North Carolina.

Mr. PROXMIRE. Mr. President, at this point will the Senator from Tennessee yield briefly to me?

Mr. GORE. I yield.

Mr. PROXMIRE. I wish to state that the Senator from Tennessee is absolutely correct when he says that if we cannot have a balanced budget in a period of unparalleled prosperity, we can never have a balanced budget.

I also point out that we are now enjoying a period of unparalleled prosperity in peacetime. Certainly in time of war, all the Nation's resources must be working full time on the war effort, and at such a time we cannot expect to have a balanced budget, but at that time must make the very heaviest expenditures of all.

Therefore, if we are ever to have a chance to come close to balancing the budget, we should do it in the coming year. Does the Senator from Tennessee believe that is true?

Mr. GORE. Yes, I do.

Mr. LAUSCHE. Mr. President, at this point will the Senator from Tennessee yield to me?

Mr. GORE. I yield.

Mr. LAUSCHE. I wish briefly to supplement the statement the Senator from Wisconsin has made. Our debt will rise to $330 billion before this year is over. We are in the height of prosperity, even though we recognize that a considerable number of persons are out of work. Three million of the people of the United States are holding two jobs; and in 11 million families, both the husband and the wife are at work. Deposits almost unparalleled in size have been placed in the savings banks and the building and loan companies and in investments in bonds, and almost unparalleled purchasing power is prevalent throughout the country.

If, during a period of prosperity; we do not put ourselves in shape economically to develop a reserve on which to draw in the event of war, where will we be? What will we have to draw upon if our debt is $330 billion and inordinate demands are made upon us? There will be no reserve. There will be no fat. It will be a tragic day when we begin to sell savings bonds to face the problem that will then confront the country.

I should like to ask the Senator from Tennessee a question: What is the Senator's recollection of the words that were spoken by Dr. Heller and Secretary Dillon as to the absolute need of immediate passage of the bill in 1963 so as to avoid a financial debacle?

I know what the answer is. I have read the testimony. Every word cries out, "Pass it quickly. We cannot wait."

Mr. GORE. I do not recall any instance in history when a President of the United States or the chief executive of any State had great difficulty persuading its legislative branch to reduce taxes. Indeed, most Governors and most Presidents have great difficulty persuading their legislative branches to raise enough revenue to make ends meet.

We have a paradoxical situation in which the Chief Executive of the United States—both President Johnson and the late and beloved President Kennedy—has been going over the heads of Congress for months, telling the American people that what they really need is for that pesky Congress to reduce taxes.

Obviously, those of us who serve in the legislative branch, and who must seek the approval of our constituents, could not enjoy a greater political luxury than voting to cut taxes.

Why has Congress been reluctant? Why has the Senate Finance Committee been reluctant? It is because, in my humble judgment, very few Senators have been sincerely convinced that this is a sound thing to do.

Mr. LAUSCHE. Mr. President, will the Senator from Tennessee yield?

The PRESIDING OFFICER (Mr. WALTERS in the chair). Does the Senator from Tennessee yield to the Senator from Ohio?

Mr. GORE. I am glad to yield.

Mr. LAUSCHE. I have not heard this point raised before, but it is a paradoxical situation that with the normal trend of legislators to reduce taxes, there has been difficulty on the part of those in charge, and those recommending reduction, to convince Congress that it is sound. The ordinary political impulse would be, "Let us cut taxes, and then go back home and tell the people we have made the cuts, and thus emerge triumphant from the next election."

But, the Congress does not want to do that. And why not? Because there are many who believe that if these expectations go wrong, and the product is not such as has been promised, there may be calamitous repercussions throughout the country.

Mr. GORE. Lest the extent of my remarks upon the fiscal policy involved tend to obscure my views as to the inadvisability of the bill, let me say, before yielding further, that even if such tax reduction as is now proposed is deemed advisable, we have the wrong kind of bill. It does not provide stimulation to the economy where stimulation is needed. It gives most relief to those who need it least and provides no solution whatsoever for the most pressing problems of our people.

What are some of those problems?

Do we face the problem of higher corporate profits? I do not believe so. I believe the greatest and most pressing needs of our people can be found in the inadequacy of education, in the need to complete our highway program, in the need for more hospitals, for housing for people of low income, for the elimination of unemployment, for public facilities, for purification of our streams, for vocational education for youngsters who are coming into the labor market by the millions without any skills.

All these things cost money. So, instead of providing a solution for the pressing problems of our people, the bill would seriously impair the capacity of the Government to provide a solution by reducing the percentage of gross national product that would go into governmental revenue.

Mr. SMATHERS. Mr. President, will the Senator from Tennessee yield?

Mr. GORE. The Senator from New Mexico [Mr. ANDERSON] has been on his feet for some time. and I should like to yield to him first. if I may.

Mr. SMATHERS. Most certainly.

Mr. ANDERSON. I thank the Senator from Tennessee. The Senator from Tennessee has mentioned the question of

[*P. 1780*]

reluctance on the part of Congress as expressed in committee, to pass the bill. The Senator knows that the vote in the Finance Committee was 12 to 5 to report the bill. The Senator would not regard that as reluctance, would he?

Mr. GORE. I would not regard the vote as an expression of reluctance, but I would so regard the expressions of many of my colleagues in the executive sessions as questioning the wisdom and advisability of the policy.

Mr. ANDERSON. The Senator has an amendment pending. Would that increase the tax deficit, or would it decrease it?

Mr. GORE. It would increase the deficit.

Mr. LAUSCHE. Mr. President, will the Senator from Tennessee yield at that point?

Mr. SMATHERS. If the Senator from Tennessee will yield to me, I should like to state that the Senator has been most cooperative and helpful. I wonder if we might enter into some agreement as to when the Senate could vote on this particular amendment, inasmuch as the Senator has another amendment to offer later.

Mr. GORE. I am in flight right now, and I do not wish to come down to earth quite so quickly.

Mr. SMATHERS. I understand.

Mr. LAUSCHE. Mr. President, will the Senator yield to me at this point?

Mr. GORE. I yield.

Mr. LAUSCHE. Earlier in the discussion, the Senator from Tennessee made the statement that if a cut of $11.7 billion would help to put everyone to work, stop the outflow of gold, insure the usability of the maximum capacity of manufacturing concerns, and balance the budget, we probably could achieve all these things still more quickly by increasing the deficit. I concur in that view.

If the more we spend and the less we tax the better off we are, we might as well accept that principle now and place no limitation upon how far we will go in reducing the taxes.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. GORE. I am glad to yield.

Mr. PROXMIRE. The Senator from Tennessee yields at an appropriate and propitious time. The Senator from Ohio and the Senator from Tennessee are taking part in what I believe to be an important colloquy on the bill, because the impact of the bill is not confined to what will happen next year and the year after; the impact of the bill may primarily flow from the abandonment of principle which is involved. For the very first time in a period of prosperity, Congress is deliberately reducing revenues so that we shall not have a balanced budget, on the economic theory that the Government has a responsibility and a duty to the economy to run a deficit as long as we have 4 percent or more unemployment.

Once that theory is accepted, it seems to me that we have a principle well established, namely, that Congress should consistently plan not to raise sufficient revenue to balance the budget in the future—in 9 years out of 10 or more.

I call to the attention of the Senator from Tennessee the fact that we have had unemployment exceeding 4 percent almost every year during the last 50 years of peacetime, with the exception of 3 or 4 years. In wartime we have had less than 4 percent unemployment but of course the huge Federal spending in those years immensely increased our deficits and unbalanced the budget. That means that we are in this tax cut bill adopting the deliberate, calculated policy and principle that we should have an unbalanced budget pretty much indefinitely. I submit that the Senator from Tennessee is correct in his statement that if the bill would solve our problem of unemployment, the argument for it would be very strong, indeed. But as the Senator from Tennessee has shown so well, the bill does not go to

the root cause of unemployment at the present time. The proposal is not the best or most efficient way to solve the kind of unemployment which now exists. The bill would not put any unskilled person to work if he did not have the skills which are needed.

The proposal would not put any unemployed person who is out work because he belongs to a minority to work. The bill would not help others who cannot qualify for employment. Certainly of all the groups in America that are sure to be left out of the tax cut—at least the direct consequences of it—the unemployed are No. 1. They do not have a paycheck.

Mr. GORE. Mr. President, I concur in the statement of the distinguished Senator from Wisconsin. The bill is proposed as a solution for problems which we do not have, but it is no solution for the problems which we do have. Our people have many pressing problems. The problem is not profits, bigger dividends or a higher stock market, which is full of air now in anticipation of greater dividends as a result of the proposed tax cut. Do we need to stimulate the stock market more?

I shall now leave at rest, if I may, the advisability of passing an $11 billion tax cut as insurance against recession in 1964. I shall proceed now to discuss the second theory on which it has been advocated, which was referred to earlier by the senior Senator from Ohio, and that is that we need to pass the bill to provide stimulation for our economy.

I ask, Where do we need stimulation? Do we need to stimulate the production of automobiles? We do if there is a demand for more automobiles. But is anyone suggesting that there is a shortage of capacity to produce automobiles? Do we need to stimulate greater productive capacity in the manufacturing industry? I would say yes, if we can stimulate the demand for the product of our industry.

The fact is that about 15 percent of our plant capacity is now idle. Our problem is not lack of productive capacity; it is lack of demand to utilize the productive capacity that we have. Therefore I ask again, What kind of stimulation do we need? Do we need the kind of stimulation that will bring more overtime work for the highly skilled workers who are already in great demand?

The President of the United States has suggested to the Congress that we pass a bill which would grant to the executive branch of the Government the power to impose double time for overtime. Do we need a stimulation of demand for that scarce commodity, which is the technically skilled labor force?

I believe that we need to stimulate demand if we need to stimulate anything. But there again the problem is specific. I am not sure that Mr. Henry Ford needs the stimulation of consumer demand. I am not sure that the vast benefits that would be given under the bill to people in the high brackets is the kind of consumer stimulation which would provide either social justice or economic well-being. If we need stimulation of our economy in a general way—which I question—the kind of general stimulation that we need is in consumer demand.

How do we stimulate consumer demand? By giving employment to those who are unemployed. If we attempt to do so by the tax route, we should provide tax reduction to the people who spend everything they can get for food, clothing, shelter, transportation, and education for their children.

I come now to the pending amendment.

Mr. PROXMIRE. Mr. President, before the Senator does so, will he yield?

Mr. GORE. I yield.

Mr. PROXMIRE. What the Senator has said is true. His argument, as I understand it, is that we have plenty of capacity to produce what is needed by the American people. I should like to call to the Senator's attention some statistics with which he is probably familiar. The internal sources of funds for American corporations have become so great that it is no longer necessary—and has not been for the last 3 or 4 years—for American corporations to borrow money in the open market or to sell securities in order to finance virtually all their needs.

I point out to the Senator that as a result, in part, of the accelerated depreciation regulation which the Treasury decided upon a year ago and the 1962-passed investment credit, which added another $1 billion tax cut for corporations, and because our depreciation policy has been adequate, we had a situation in 1963, according to the just released annual Economic Report of the President in which the total investment in plant and equipment was $33.5 billion.

Mr. LAUSCHE. Mr. President, I should like to ask the Senator what he is reading from.

Mr. PROXMIRE. I am referring to page 285 of the President's Economic Report. The internal sources of funds were $37.6 billion. In other words, corporations had far more than enough—$4 billion more from their own internal

sources—to provide all they needed to construct all of the plant and equipment which they needed in 1963 without borrowing a single dollar and without selling a single share of stock in the market. [*P. 1781*]

Mr. GORE. Or without a single tax cut.

Mr. PROXMIRE. That is correct. The Senator's point is that the argument that we need a corporate tax cut in order that corporations may have more money to build plants flies in the face of the statistics from the Council of Economic Advisers, which has provided this information.

With the Senator's permission—and I will do it only with his permission—I should like to place in the RECORD at this points a table from page 285 of the President's Economic Report.

Mr. GORE. Mr. President, I ask unanimous consent that it be included at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE C–66.—*Sources and uses of corporate funds, 1952–63* [1]

[Billions of dollars]

Source or use of funds	1952	1953	1954	1955	1956	1957	1958	1959	1960	1961	1962	1963 [2]

Mr. GORE. What the Senator has illustrated is that there is one other thing that is not in short supply, and that is investment capital. Indeed, the Secretary of the Treasury, in a speech to a bankers association a few months ago, said that our times are characterized by excess savings. Those were his exact words.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. GORE. In a moment.

There is no shortage of investment capital. To use a colloquial phrase, it is running out of our ears. Cash reserves are the highest in history—not only those of manufacturing corporations but of financial institutions. Personal savings are at an alltime high, as the Senator stated and illustrated from the President's Economic Report.

So, once again, we have a bill that is proposed as a solution for problems that do not exist, and it is the wrong kind of solution for the problems that do press upon our people.

Now I yield to the Senator from New Mexico.

Mr. ANDERSON. I was not concerned with what the Senator from Tennessee was saying as I was with what the Senator from Wisconsin was saying. It seems to me the Senator from Wisconsin was suggesting that there is no need for special financing on the part of corporations. I wish he would check into the corporations that have been in the market, and are now in the market, to borrow money. Perhaps they do not know what they need, but there they are just the same.

Mr. PROXMIRE. Mr. President, will the Senator from Tennessee yield?

Mr. GORE. I yield.

Mr. PROXMIRE. First, I call attention to the fact that the Senator from New Mexico has in his hand a copy of the Wall Street Journal.

Mr. ANDERSON. Yes.

Mr. PROXMIRE. If he will look at the Dow-Jones index, with which I am sure he is familiar, he will find that stock prices are at very nearly an all-time high; that the corporations of America have never been in a better position to raise money on the market than they are today. There has never been a better time to raise money on the equity market. The market is valuing common stock at twice the level of 1929.

Mr. ANDERSON. If the Senator is following the Dow-Jones average, he will recall that some of us made that mistake as far back as 1929. I hope we are not going to make it again. It is not necessarily an index of how well off we are.

Mr. PROXMIRE. The Dow-Jones average is overweighted in favor of the blue chips. Nevertheless, it is a rough, but general, indication of the availability of investment funds.

Mr. GORE. Mr. President, I should like to cite to the distinguished Senator from New Mexico the record of the past 12-month period, 1963. For an expansion of plant and facility of approximately $35 billion, corporations went on the open market to sell only about $1 billion in common stock. Surely, the tendency toward internal financing has been galloping. The corporations collecting funds from two sources, from profits and from tax reduction. They are not only financing their expansion internally, but are succeeding in distributing dividends at an alltime high.

Several years ago, the rule of thumb, for want of a better term, has been that corporations would distribute in dividends 50 percent of their after-tax income. They are now distributing 66 percent of after-tax income in dividends—much of which has come from the tax reductions of the last 10 years—which are annually now at a rate of $5 billion a year.

So I believe the point made by the Senator from Wisconsin is not only valid, but is amply proved by the facts.

I raised the question a few moments ago as to what kind of stimulation our economy needs. Mr. Henry Ford came before the Senate Finance Committee and testified. He was chairman of a committee organized for the purpose of lobbying for a tax reduction bill. He came before our committee and urged us to pass a bill, and pass it quickly, in order to give the mass of our people an increase in take-home pay.

I was delighted when he used that term, because I had been trying to bring the Treasury up to that trough for quite a while, but they did not want to drink at that trough. The Secretary of the Treasury and his assistants ran from measuring this bill in terms of take-home pay as if it had been a dog with hydrophobia. But Mr. Henry Ford came right up and drank at that trough. He urged the committee to pass the tax bill to give the American people an increase in take-home pay.

I thanked him, and I asked him—and I am paraphrasing the colloquy; it will be found in exact terms in the hearings—if he knew about what percentage increase in take-home pay would be provided for the average industrial worker. He said, no, he had not figured that out. I remarked that, as a Senator undertaking to represent all the people, I had figured it out.

Mr. LAUSCHE. Mr. President, will the Senator yield so I may inquire with whom the Senator was discussing this matter?

Mr. GORE. Mr. Henry Ford, who, a few weeks ago, opened another plant in Portugal, where several hundreds of people will be employed, and whose company, before it opened that plant, already employed abroad many thousands. Yet he came and asked us to pass the bill to increase the take-home pay of the people who still have jobs.

I related to him that the increase for the average worker in our country would be 5 or 6 percent, or about $3 a week. He

[*P. 1782*]

did not comment upon that statement particularly. Then I asked if he knew what the increase in take-home pay, the after-tax income, would be for a corporation executive with a salary and bonus of $200,000 to $300,000 a year. I did not say that that was about his landmark, but I knew I was looking at him. He said, no, he had not figured that out. I told him I had. The increase in take-home pay for a corporation executive in this bracket of taxable income would be about $1,000 a week.

I asked him if he thought that was fair. I asked him if a Senator who represented all the people would be acting fairly, in undertaking to stimulate the economy where it needed stimulation, if he voted for a bill to increase the take-home pay of the president of a corporation by $1,000 a week or more, and that of the average worker in a plant by $3 a week or less. He said, yes, he thought that was fair, if one had worked up in his company.

I did not say anything, but I leaned

back in my chair and wondered how long it had taken him to work up.

Mr. MILLER. Mr. President, will the Senator yield for a question?

Mr. GORE. Not just now. I will yield later. In case Senators wish to examine this question from the standpoint of social justice, from the standpoint of the increase in take-home pay—and I may say that I am complimented that so many of my colleagues do me the honor of their attention—I ask them to turn to page 190 of the committee report. There they will see a table, prepared at my request, with the approval of the Committee on Finance, by the technical staff of the Joint Committee on Internal Revenue Taxation, headed by a very able and distinguished gentleman, Mr. Colin F. Stam.

If Senators will look at column 8 they will see the percentages of increase in take-home pay. Column 1 is taxable income. "Taxable income," let me explain, is income subject to taxation after personal exemptions and deductions have been taken off. This is a term that is recognized by tax lawyers and officials of the Treasury. I am talking about taxable income. That is the kind of income on which the ordinary citizen pays his taxes at the stated rates. In the high brackets, more is said about capital gains and alternative rates. I am talking now about the kind of income on which people calculate their taxes and to which they apply the ordinary income rates in the law.

Mind you, Mr. President, the people who get it in the neck, so to speak, by our tax law are the people on salaries and wages and fees, or who receive other normal income. I am talking now about taxable income against which ordinary rates are applied. I wish to nail that down.

In column 1 is taxable income. Let us look at the taxable income of $4,000. That is not very far from the average. It may be a little above the average. This is after the exemptions and authorized deductions.

A man with a taxable income of $4,000 a year, as is shown in column 8, receives an increase in his take-home pay of 5.6 percent. Now let us look at the taxpayer who has a taxable income of $8,000. He receives less than a 5-percent increase in his take-home pay, or 4.7 percent. We are approaching now the man in rather comfortable circumstances, one who has a $12,000 taxable income. He receives an increase in his take-home pay of 5 percent. Let us come to $20,000. That is 6.1 percent. Let us come to $40,000. That is 9.3 percent.

I will not tax the patience of Senators too much. Let us consider the man with a taxable income of $100,000 a year. We find that he has an increase in his take-home pay of 18.2 percent. Then let us go to the $200,000-a-year man. Now we are getting up where we really need to stimulate consumer demand. These people need that third or fourth automobile. We need to stimulate these people by this bill. That is why they want relief so badly. That is why Mr. Ford organized his committee. That is why the Secretary of the Treasury asked him to organize a political pressure committee. Of course they want it. They can already taste it.

However, does the Senate want to vote it? That is what I am asking Senators.

A person with a taxable income of $200,000 a year gets an increase in his after-tax income of 36.2 percent.

Let us come now to a person with a $600,000 income a year. This will really stimulate the economy. This man can build another yacht in Europe. That is what he may be doing. His increase in take-home pay will be 100 percent. That is exactly double.

Do Senators wish to go home and say to the average worker who toils, and who has a tax bite on his salary check every week, that his take-home pay has been increased by 5 percent and that the corporation executive's take-home pay has been increased by 100 percent?

As I said yesterday, what we have is an increase in the take-home pay of small percentages on small amounts, and an increase in take-home pay of large percentages on large amounts. This is the direct reverse of social justice. This is in inverse ratio to the needs of our people and the traditions of the Democratic Party.

How did we come to this point? I will not go further with this table, but there is a higher increase than 100 percent in after tax income. What kind of bill do we have?

To answer the table which was prepared by the technical staff of the Joint Committee on Internal Revenue Taxation, the Treasury Department prepared another table. It undertook to show that there was no one who had a 100-percent increase in take-home pay. Secretary Dillon said the highest actual increase he had come upon was an 84-percent increase in take-home pay. I would not argue with him as to the social justice measured by an 84-percent or a 100-percent increase in take-home pay. I thought both were out of all proportion to what we were doing for the average American. When the Treasury got around to explaining that not many people would have this kind of increase in

69–108 O—66—pt. 3——36

take-home pay, what was the explanation?

It was said that people in the higher income brackets do not pay a very high rate of taxes. I ask the Senator from Illinois if that is not a fair interpretation of the answer.

Mr. DOUGLAS. That is correct.

Mr. GORE. Let the RECORD show that the Senator from Illinois nodded affirmatively and said, "That is correct."

I have just cited the statistics prepared by the staff of the joint committee, my staff, and me. Now I wish to cite the Treasury's table. I ask Senators to turn to page 181 of the committee report. On this page are two tables. If Senators will do me the honor of following my statement, the first table was prepared by the Treasury Department; the second table was prepared merely by using the statistics of table 1.

Senators will notice that the basis used here is not "taxable income" but "adjusted gross income." What does "adjusted gross income" include? Perhaps I should answer the question by saying, first, what income is excluded from "adjusted gross income." Tax exempt interest income is not included; that is, income from municipal bonds; taxpayers do not even have to include that income. Depletion allowances are not included in "adjusted gross income." Intangible drilling costs are not included. Business expenses are not included. One-half of capital gains and one-half of profits, which by law are treated as capital gains, are not included. I believe that is not all of the income that is not included in "adjusted gross income," but these are the principal items that are excluded from "adjusted gross income."

But after excluding all of these, and then having an adjusted gross income of $1 million a year, the tax payment, under the bill as it has come to the Senate, would be, for the typical taxpayer, less than 16 percent. That is what we have been asked to vote for.

The present law is almost that bad. Under the present law, instead of 15.9 percent, the effective rate would be 17.4 percent. I am trying to make two points: First, the present tax law is grossly unfair. It is a sieve of loopholes, of which only people having vast financial resources can take full advantage. They take full advantage of it. They take advantage of it so fully that the Treasury tells us of a taxpayer having an income of $28 million in 1 year on which he did not pay 1 single cent in taxes. Why? Because the law did not require him to pay.

Second, instead of improving that situation, which is highly inequitable and unfair, the pending bill would make it worse. The political immorality of the bill, according to my view, is that instead of proceeding to enact tax reform that would require all taxpayers to pay in accordance with their ability to pay, and that would promote social justice and economic fairness, we proceed, or I fear we are proceeding, to pass a bill that will make our tax laws more inequitable and give greater benefits to those who are already getting by with the payment of only a small percentage

[*P. 1783*]

of their income, even though that income is very great. That is what the Senate is asked to vote for.

I took the table on page 181 and the second table, which is a calculation from statistics contained in table 1, and asked the Library of Congress to make a chart of effective tax rates. What are effective tax rates? Effective tax rates are the rates that taxpayers pay on their realized income.

I have used another term which I had not used before in this discourse—"realized income." What is included in "realized income"? This is income after tax exemptions, after depletion allowances, after intangible drilling costs, after business expenses. Really, the essential difference between adjusted gross income and realized income is that adjusted gross income includes only one-half of the profits made from capital transactions. Realized income includes capital gains as well as other income.

With that explanation, let us look at the chart and see how steeply graduated the effective tax rates are in the lower brackets. I should say for the benefit of Senators who may not be able to read the figures at the distance from the chart at which they sit that the amounts increase on the horizontal line. Effective tax rates are shown on the perpendicular columns at both the left and right of the chart.

The effective rate of taxation rises almost perpendicularly in the lower brackets, and is graduated steeply to the high point of $100,000 a year of realized income.

What is the effective rate of the "typical" taxpayer in that bracket? Mr. President, before I answer that question, I wish to state that the word "typical" was chosen by the Treasury Department, which undertook to show—as I have already stated—that not many persons would have a large increase in take-home pay because the "typical" taxpayer in the high brackets simply did not pay normal tax rates on the income he realized. So the word "typical" was selected by the Treasury Department.

Later, in executive session, in considering the question of what the word "typical" means, I believe it was stated that it related to the average taxpayer—I believe that was the statement—within a given income bracket.

Mr. President, the American people have entertained the view that we have a steeply graduated, progressive income tax system. We do have, according to the law as it was first written; but since that time, the law has been so riddled with loopholes as to make a mockery of the progressive income tax system.

Yet when the pending bill—for which the Senate is asked to vote—was referred to the committee, it was found that under the provisions of the bill as it then stood, the highest payment by the "typical" taxpayer—one in the $100,000 realized income bracket—would be, following enactment of the bill, not 70 percent, the highest rate stated in the bill, not 50 percent, not even 30 percent, but only 26.2 percent.

The amazing thing is that from there on, as the income rises, the effective tax rates go down, until—as Senators will find when they examine the second table on page 181—a realized income of $1,500,000 would be subject to a tax of less than 16 percent—actually, it would be 15.9 percent—on that income.

I appreciate the attention of the senior Senator from South Carolina [Mr. JOHNSTON]. I dare say that most of the people of his State—as I believe would be the case with the people of the State I have the honor in part to represent—would think that a person with an income of $1,500,000 a year would be paying these confiscatory taxes. But according to the Treasury Department, the "typical" taxpayer in that income bracket pays only 15.9 percent.

Mr. LONG of Louisiana. Mr. President, will the Senator from Tennessee yield?

Mr. GORE. I yield.

Mr. LONG of Louisiana. If that taxpayer gave all of his annual income to charity, he would not owe any tax, would he? The chart is based on the assumption that the typical taxpayer would be paying approximately 17 percent. However, if he gave all his income to charity, he would not have to pay an income tax.

Mr. GORE. Or if he gave all of it to a family foundation, which might or might not be a charity, he would not pay any income tax, either; and that is but one of the loopholes in the law.

Mr. LONG of Louisiana. But let us assume that he gave all of it to a church.

Mr. GORE. But we are not now discussing only income. He would not have to give any of his income to charity; he could give a painting—at an appreciated value—or an estate with an old house that no one wanted to heat any more, but with a high estimated market value. The Treasury Department officials told us, in executive session, that such items with an appreciated value receive, when given to so-called charities, an average tax valuation 45 times greater than their cost. Yet, even though the painting cost $1,000, on the average the taxpayer would receive credit for a charitable donation valued at $45,000.

Mr. LONG of Louisiana. Mr. President, will the Senator from Tennessee yield further?

Mr. GORE. Yes, but first I wish to complete my statement.

So, Mr. President, when I am asked whether the taxpayer would have to give all of his income, in order to avoid an income tax that year, the answer is that he would not have to give his income; he merely would have to give to charity an article which had an estimated market value equal to his income, and then he would be scot free of taxes.

Mr. President, I yield now to the Senator from Louisiana.

Mr. LONG of Louisiana. I thank the Senator from Tennessee.

Mr. President, I believe the Senator from Tennessee knows that inosfar as he is able to cite cases in which the charitable contribution deduction is being abused, he can expect some support from me.

Mr. GORE. I know that, and I appreciate that fact; and I compliment and honor the Senator from Louisiana because of it.

Mr. LONG of Louisiana. On the other hand, it seems to me that we should be fair to what I believe to be the majority of those who make such gifts to charity. Perhaps the overwhelming majority of them are not trying to use their charitable contributions as schemes by which to defraud the Government of taxes. I think I know of some persons who fall in the one category, and of some who fall in the other.

My impression is that the great majority of those who make charitable contributions are really sincere, at least in their own hearts, in believing that they are trying to benefit society and their fellow men by making those contributions to charity. I was given examples of a number of contributions or gifts to charity—cases in which the present value of the gift would be as much as 1,000 times the amount paid for the article when it was originally acquired. For the most part, in those cases the present value of the gift was 1,000 times what it had been at the time of acquisition. Perhaps

stocks and bonds were involved in some of those cases; at any rate, the item had been held by the family for a long period of time.

From a consideration of the effective tax rate in effect, one can gain the impression that such a person did not pay a substantial income tax. However, the reason why, he did not pay a tax was that he gave away an article valued at an amount equal to a huge percentage of his income in a single year.

I ask the Senator from Tennessee if he is outraged over the type of situation in which a taxpayer does not make an improper assessment of value—where the donated item is assessed correctly but has greatly increased in value, as in a case in which stocks were given which had greatly appreciated in value over 30 or 40 years.

Mr. GORE. If a taxpayer receives a tax deduction on a capital asset, I believe he should pay taxes on the appreciation of that asset; else we will leave the door wide open to the abuses to which the able Senator has pointed.

It is true that some people may be properly motivated in so doing, but we do not enact laws to curb the good but to curb or regulate the bad. There are widespread abuses, and this chart illustrates the abuses. The point I make is that the bill would not corrct them. It would make them worse. I am offering a substitute.

Mr. LONG of Louisiana. Mr. President, will the Senator from Tennessee yield further?

The PRESIDING OFFICER (Mr. Ribicoff in the chair). Does the Senator from Tennessee yield to the Senator from Louisiana?

Mr. GORE. I yield.

Mr. LONG of Louisiana. Will the Senator from Tennessee inform me as to where the bill makes it worse?

Mr. GORE. I have just pointed out that under the bill as passed by the House, the Secretary of the Treasury states that the "typical" taxpayer with an income of $1,500,000 a year would pay

[*P. 1784*]

15.9 percent in taxes. Under present law, the same table, shows on page 191, that it is 17.4 percent.

The situation is made worse by reducing the effective tax rate of a person affluent or fortunate enough to have an income of $1,500,000, from an effective rate of 17.4 percent to 15.9 percent. I say that is considerably worse.

Mr. LONG of Louisiana. Was not the table to which the Senator referred prepared prior to the time the Senate committee acted to strike out the capital gains treatment provided by the House?

Mr. GORE. It was, and I was about to point that out next. I appreciate the Senator's calling it to my attention. That would make the bill a little less bad. I applauded the action of the committee in that regard. I was one Senator who insisted that there be a separate roll call vote on that amendment. I supported it, as did the Senate by more than a 2 to 1 majority. I am proud of that action, but that is by no means the only provision in the bill by which the inequitable situation is made worse. If it finally stands up in conference, this would bring the effective rate, according to the technical advice I have received, somewhere between 16 and 17 percent—still worse than the present law.

Mind you, there are many individuals involved, from the high point of 26 percent to the lower point of 15.9 percent. But the overall situation for the "typical" taxpayers is that as income goes up beyond $100,000, the effective rate goes down, under present law. It is made worse by the pending bill.

Mr. LONG of Louisiana. Mr. President——

Mr. GORE. If I may continue for a moment, what I am trying to do is offer the Senate a choice between a bill which makes this highly inequitable situation worse, which gives the most tax relief to those who need it least, which provides stimulation where it is not needed, on the one hand, and an increase in personal exemption on the other. I would give the most tax relief to those who, in my opinion, need it the most; namely, the parents of the largest numbers of children.

Now I am glad to yield to the Senator from Louisiana.

Mr. LONG of Louisiana. May I suggest to the Senator from Tennessee that at least in one respect, according to my judgment, the Senator's chart is substantially in error. The way the chart works out it treats the charitable contributions that individuals have made as though they were income which they had enjoyed, and which should be taxed. I have some doubt that the Senator from Tennessee really wishes to tax that at all.

In the second instance, if the Senator will look at the table which I had printed in the Record a few days ago on page 1675, he will see that I placed it in the Record in support of my argument that the capital gains provision of the House should be stricken. The Senator from Tennessee supported that view. The table shows that individuals having an income of $2 million against an adjusted gross income could be divided into two categories: those who had a high percentage of capital gains, and those who had a low percentage of capital gains.

Those who had a low percentage of capital gains were found to be paying about 46 percent of their income in taxes.

Mr. GORE. Is that the adjusted gross or realized income?

Mr. LONG of Louisiana. The table will speak for itself, but I believe it is realized gross. Those who had a high percentage of their income in capital gains were paying an effective rate of about 21 percent. Those who had a low percentage of their income in capital gains were paying about 46 percent of their income in taxes.

The House bill would have treated both groups similarly, so that their tax reduction as a percent of present law tax would be relatively close. But that is not how the Senate bill does it. The Senate bill would give those people paying about 46 percent of income in taxes approximately the same tax reduction they would have had in the House bill, but the Senate bill would actually increase the taxes on those people paying a lower rate of approximately 21 percent of their income in taxes. That being the case, it would seem to me that if we look at the people really getting away with the kind of thing the Senator from Tennessee is against, those people would pay more taxes after enactment of the bill. They will not enjoy the benefit of this tax reduction.

It will be those people paying a high percentage of their income in taxes, or those in the lower-income brackets, who will enjoy the substantial tax benefits that are provided for in the bill.

It seems fair to me. One of the things we tried to do was to tighten up on the tax advantages that we felt favored the privileged few, and to provide tax relief in those areas where it was most justified.

I hope the Senator studied the table I had printed in the RECORD, because it illustrates that point.

Mr. GORE. I did.

The table to which I referred, and from which the chart was made, was supplied by the Treasury Department. The Treasury Department supplied the tables to which the Senator referred. It supplied them to him. The distinguished junior Senator from Florida [Mr. SMATHERS] received certain tables. They were based on somewhat different hypotheses. Likewise, the senior Senator from Illinois had supplied to him other tables. They all pretty well prove the same thing.

The distinguished majority leader, the Senator from Montana [Mr. MANSFIELD], is on his feet. I see his handsome presence. He is looking, not hungrily, but rather longingly, at the senior Senator from Tennessee. I can tell from the twinkle in his eye that he is hoping that I am in good humor and that a vote may be reached pretty soon. I yield to him.

Mr. MANSFIELD. Mr. President, will the distinguished Senator from Tennessee, who I must admit is a mindreader, consider the possibility of a time limitation on the pending amendment or on other amendments which he may offer?

Mr. GORE. To be perfectly candid with the Senator, I realize that I do not have sufficient support to have adopted my amendment, which would raise the personal exemption to $1,000.

I shall ask for a voice vote on that amendment. Then, if it is defeated, and if it is agreeable, I shall offer an amendment which would provide an increase in the exemption to $800. I would then ask for a yea-and-nay vote on the amendment and, so far as I am concerned, I would then agree to a vote after I had 10 minutes to speak following a quorum call.

Mr. MANSFIELD. Would one-half hour, 15 minutes to a side, on the next amendment be sufficient?

Mr. GORE. That would me satisfactory to me.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. CURTIS. Will there be a yea-and-nay vote on each amendment?

Mr. GORE. There would be a choice vote on the amendment now before the Senate and a yea-and-nay vote on the amendment I shall offer next.

Mr. CURTIS. I have no objection.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Tennessee [Mr. GORE].

The amendment was rejected.

Mr. GORE. Mr. President, I offer an amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment of the Senator from Tennessee will be stated.

The LEGISLATIVE CLERK. On page 2, beginning with line 14, it is proposed to strike out all down to line 1 on page 8 and insert the following:

TITLE I—INCREASE IN PERSONAL EXEMPTIONS; ADJUSTMENT OF CORPORATE INCOME TAX RATES; AND RELATED AMENDMENTS

Part I—Individuals

SEC. 111. INCREASE IN AMOUNT OF PERSONAL EXEMPTIONS

(a) IN GENERAL.—Section 151 (relating to allowance of deductions for personal exemptions) is amended by striking out "$600" each place it appears therein and inserting in lieu thereof "$800".

(b) TECHNICAL AMENDMENTS.—Section 6012(a)(1) (relating to persons required to make returns of tax) and section 6013(b)

(3)(A) (relating to assessment and collection in the case of certain returns of husband and wife) are each amended—

(1) by striking out "$600" each place it appears therein and inserting in lieu thereof "$800"; and

(2) by striking out "$1,200" each place it appears therein and inserting in lieu thereof "$1,600".

On page 11, beginning with line 11, strike out all through line 12 on page 12.

On page 12, line 13, strike out "114" and insert "113".

On page 12, strike out line 15 and insert

SEC. 121. ADJUSTMENT OF CORPORATE NORMAL TAX AND SURTAX RATES

On page 13, line 13, after "1964," "and".

On page 13, strike out lines 1 through 18 and insert the following:

(2) 30 percent in the case of a taxable year beginning after December 31, 1963.

On page 24, beginnnig with line 8, strike out all down to line 4 on page 25.

On page 25, line 4, strike out "(c)" and insert "(b)".

On page 26, line 24, strike out "and".

[P. 1785]

On page 27, line 3, strike out the period and insert a comma.

On page 27, strike out lines 4 through 8, and insert the following:

(C) the change in the tax imposed under section 3 shall be treated as a change in a rate of tax, and

(D) the change in the amount of the deduction for exemptions under section 151 shall be treated as a change in a rate of tax.

On page 352, beginning with line 11, strike out all through page 362 and insert the following:

In lieu of the tax imposed by section 1, there is hereby imposed for each taxable year beginning after December 31, 1963, on the taxable income of every individual whose adjusted gross income for such year is less than $5,000 and who has elected for such year to pay the tax imposed by this section, a tax as follows:

(Insert tables corresponding to the tables on pages 279, 280, 281, 282, and 283, but reflecting the amendment to section 111 of the bill increasing the amount of each exemption to $1,000 and eliminating the changes in the rates of tax on individuals.)

On page 362, beginning with line 12, strike out all through line 14 on page 364 and insert the following:

(2) Except as otherwise provided in this subsection, in the case of a husband or wife filing a separate return, the tax imposed by section 3 shall be the lesser of the tax shown in table IV or table V of such section.

(3) Table V of section 3 shall not apply in the case of a husband or wife filing a separate return if the tax of the other spouse is determined with regard to the 10-percent standard deduction; except that an individual described in section 141(d)(2) may elect (under regulations prescribed by the Secretary or his delegate) to pay the tax shown in table V of such section in lieu of the tax shown in table IV of such section. For purposes of this title, an election under the preceding sentence shall be treated as an election made under section 141(d)(2).

On page 364, lines 22 and 23, strike out "neither table V in section 3(a) nor table V in section 3(b) shall apply" and insert "table V of section 3 shall not apply".

On page 365, in the matter following line 7, strike out "in section 3(a) and table V in section 3(b)" and insert "of section 3".

On page 366, beginning with line 7, strike out all through line 6 on page 379 and insert the following:

(a) PERCENTAGE METHOD OF WITHHOLDING.—Paragraph (1) of section 3402(b) (relating to percentage method of withholding income tax at source) is amended by striking out the table therein and inserting in lieu thereof the following:

Percentage method withholding table

Payroll period	Amount of one withholding exemption
Weekly	$22.00
Biweekly	43.00
Semimonthly	47.00
Monthly	93.00
Quarterly	278.00
Semiannual	555.00
Annual	1,110.00
Daily or miscellaneous (per day of such period)	3.00

(b) WAGE BRACKET WITHHOLDING.—Paragraph (1) of section 3402(c) (relating to wage bracket withholding) is amended by striking out the tables therein and inserting in lieu thereof the following:

(Insert tables corresponding to the tables on pages 293, 294, 295, 296, and 297, but reflecting the amendment to 302(a) of the bill increasing the amount of each withholding exemption and eliminating the reduction of the rate of the withholding tax.)

(c) EFFECTIVE DATE.—The amendments made by subsections (a) and (b) of this section shall apply with respect to wages paid after December 31, 1963.

Mr. MANSFIELD. Mr. President, will the Senator yield without losing his right to the floor?

Mr. GORE. I shall yield, but first I should like to ask for the yeas and nays on my amendment.

Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. CURTIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that 30 minutes be allocated to the pending amendment, 15 minutes to be under the control of the Senator from Tennessee and 15 minutes to be under the control of the Senator from Louisiana [Mr. LONG].

The PRESIDING OFFICER. Is there objection?

Mr. KUCHEL. Mr. President, reserving the right to object—and I shall not object—I wonder, for the information of the Senate, if some time later consideration might be given to a unanimous-consent agreement with respect to any amendments other Senators might wish to offer to the bill.

Mr. GORE. That arrangement would be agreeable to me.

Mr. KUCHEL. I thank my able friend. I thank the majority leader.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GORE. Mr. President——

Mr. MILLER. Mr. President, will the Senator from Tennessee yield for a question? As he knows, I have been trying to obtain the floor.

Mr. GORE. I yield. I apologize to the Senator. I have been speaking and yielding. I should have yielded to him before now.

Mr. MILLER. That is quite all right. The Senator from Tennessee has made a very fine presentation of some of the defects in the revenue impact and the tax impact of the pending bill. The Senator from Iowa is inclined strongly to agree with much of what has been said by the Senator from Tennessee.

However, that does not necessarily lead us to the solution which the Senator from Tennessee has stated. I am sure that all of us would like to have an increase in our personal exemption.

I note that under the pending bill a taxpayer in the $150,000 to $200,000 taxable income bracket would have $200 skimmed off the top for tax purposes as a result of the increase of his personal exemption from $600 to $800. He would be in the 90-percent bracket, and that would give him a tax savings of $180.

Then we drop down to the $50,000 to $60,000 bracket. Those in that bracket would have a tax saving of $150, because the top amount that would be skimmed off by the amendment of the Senator would be in the 75-percent bracket.

In the $25,000 bracket 56 percent would be the tax rate, and applying that to the top $200 skimmed off, the savings would be $112.

In the $10,000 bracket the top amount, the $200 skimmed off, would be subject to a 38-percent rate, resulting in a tax saving of $76.

We get to the bottom bracket, about which the Senator from Tennessee has been expressing such great concern, and we find that the tax bracket is only 20 percent, and the tax saving would be only $40.

So it seems to me that under the pending amendment there would be for those in the low income bracket area a small percentage of saving on the increase of $200 per exemption, and in the high brackets there would be a big saving on the same amount of money. So it seems to me the Senator is advocating a regressive amendment.

If the Senator from Iowa misinterprets the impact of this amendment, he would like to be so advised. It seems to me the Senator from Tennessee has criticized this bill legitimately for its tax impact, but he has offered an amendment which proposes to do about the same thing, perhaps not in the same degree. It would give the top bracket taxpayer the greatest saving, because the tax that would be saved under the amendment would be off the top amount, say, 90 percent or 70 percent or 60 percent, and the people in the low bracket would get the amount skimmed off only at the 20-percent level.

Mr. GORE. I get the Senator's point. He has made a valid point. However, I think he has overstated it.

Let us suppose a taxpayer is in the 50-percent bracket and he receives a $200 increase in his personal exemption. This would mean he would have a $100 tax reduction. If a person were in the 20-percent bracket, it would mean he would have a $40 tax saving.

I suggest to the Senator that in this case we are talking about the difference between $40 and $100, whereas the bill deals with the difference between $3 and $1,000 a week or more.

I know it is very difficult to achieve an exact formula for social justice in taxation. Perhaps the only perfect way to do it would be to reduce everybody's taxes by the same amount of dollars, but that would be of little benefit to some persons and would remove vast numbers entirely from the tax rolls on the other hand, and I do not think it would be acceptable.

[*P. 1786*]

It seems to me, under the principles of the tax law which we have, about the most democratic way to provide tax relief is to increase the exemption for a taxpayer and his dependents.

It is very true, as the Senator has said, and as I have just acknowledged, that the taxpayer in a higher bracket will get a larger benefit; but we are talking here in terms of relatively small amounts of dollars per taxpayer.

Mr. MILLER. Mr. President, will the Senator yield for a question?

Mr. GORE. I yield.

Mr. MILLER. The Senator is absolutely correct, that the degree of disparity and equity under his amendment is much less than that which exists under the bill; but the Senator has put his finger on the very point I think his amendment should cover—and I am sorry he passed it over—when he said that perhaps the best way of doing equity would be to give everyone the same kind of tax cut. There is only one way to do it, and that is to have a tax credit, rather than have a $600 or $800 exemption subject to fluctuating rates.

If the Senator wants to have equity across the board, and say that everybody shall have the same kind of deduction, he might offer this amendment by changing it to a credit approach, and I think it would be much more equitable.

Mr. GORE. The suggestion of the distinguished Senator has much merit. I hope he will later offer it.

It is true that an increase in the personal exemption would be of more dollar benefit to taxpayers in the high brackets than to those in the lower brackets. I would not, however, violate reason, logic, and equity on that account.

We have set up a tax system which is so riddled with loopholes of favoritism and special gimmicks to take care of certain interests that we have lost sight of the logic of the personal income tax.

Although I have never regarded the income tax as a "soak the rich" system of taxation, I have always regarded it—and I think it was always so intended—as a system of taxation which should be applied against income above the decent subsistence level.

The income tax should not become a weapon against the poor, as in the case with the excise and sales taxes.

The income tax system has a certain logic to it—if we can bore beneath the debris of gimmicks.

We start with gross income, from which we deduct legitimate business expenses; that is, the expense the taxpayer underwent to earn his income. This gives us adjusted gross income.

At this point we decide what is a decent subsistence level of income so that we do not tax poverty. So, we set up a personal exemption which will keep the taxpayer and his family free from income tax on their daily bread.

Beyond that point we allow certain deductions which, hopefully, will encourage or permit certain socially worthwhile activities to be carried on by individual taxpayers. We allow a deduction for reasonable contributions to charity, for personal interest, for State and local taxes, and so on. In my view, we have gone overboard on deductions, and these deductions, coupled with capital gains gimmicks, and such items as depletion and intangible drilling costs which cause income to disappear from the books even before it is entered as adjusted gross income, account for most of the erosion in our tax base.

Even so, and with all its imperfections, there is still this basic logic to our individual income tax system.

Having arrived at taxable income, then, we must decide on a fair rate scale to be applied against this taxable income to produce the amount of revenues we need from this source.

In a sense, then, the personal exemption and the rate scale are two independent, separate, and distinct items.

We should then consider, if we cannot afford to make changes in both at this time, which one has priority.

Is it more important, particularly in view of the recently launched war on poverty, to raise the personal exemption to a point where we do not impose a tax on poverty, or should first priority go to the reduction of rates which will enable the rich—who have already reduced their taxable income to a low level by virtue of the gimmicks available to them—further to escape meaningful and necessary taxation?

The question is just that simple.

We are told that it is necessary for the country to deny itself some $11 billion or $12 billion of revenues—a view I still stubbornly resist. But let us say we will deny the Government this needed revenue. Shall we do this by raising the personal exemption so as to avoid taxing poverty, or shall we do it by lowering the rates against taxable—one could almost say excess, that is, excess above subsistence level—income?

The rich already pay a low effective tax rate. The poor, exen in their poverty, pay a high tax rate in other forms—sales and excises, particularly.

Mr. President, will the Chair advise me as to the time situation?

The PRESIDING OFFICER. The Senator has used 7 minutes of his time.

Mr. GORE. I yield myself 3 minutes.

The amendment which I have now proposed, and on which the roll will be called, would raise the personal exemption from the present legal figure of $600 for each taxpayer and each of his dependents to $800.

I should like to have the attention of the distinguished chairman of the committee, who has just entered the Chamber.

The PRESIDING OFFICER. The attention of the Senator from Virginia [Mr. BYRD] has been requested by the Senator from Tennessee.

Mr. GORE. The pending amendment would raise the personal exemption from $600 to $800 as a substitute for the changes in tax rates for corporations and individuals, but would leave the structural changes in the bill intact, would leave the minimum standard deduction in the bill intact, and would leave intact the surtax and normal tax change for the benefit of small businesses.

As to the revenue effect, if the amendment is adopted there will be a revenue loss by adoption of the bill of about $7 billion. This means that the revenue loss would be some $5 billion less by the adoption of my amendment than the bill as presently written would entail.

Is $600 an adequate amount for a personal exemption? What is the theory of a personal exemption? It is that a taxpayer or a family unit will have a subsistence level of income before the Federal Government starts levying a tax on that income. The present law allows a $600 exemption for a child. I ask any father in this Chamber if that is adequate.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. GORE. I yield myself 1 additional minute.

Moreover, it is not only inadequate now. Measured by what it was previously, it is revealed to be even less adequate.

In 1940 a man and his wife had a personal exemption of $2,000. Now the cost of living is more than twice as much as it was in 1940, and the exemption is down to $1,200.

My amendment would not restore it to $2,000, but would raise it to $1,600.

By this amendment we could have a revenue reduction of only approximately $7 billion a year, and balance the budget next year.

Mr. HARTKE. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Who yields time to the Senator from Indiana?

Mr. GORE. I yield 1 minute to the Senator from Indiana.

Mr. HARTKE. Mr. President, although I am an ardent supporter of the present tax bill, I think, in fairness, I should say I am in sympathy with the approach advocated by the Senator from Tennessee. I introduced such a measure in 1961, proposing practically the same thing the Senator from Tennessee now proposes, the original amount going to $1,000.

I want the Senator to know that I am wholeheartedly with him in his viewpoint, although I have agreed to take the other route. I am not too sure at the moment how I shall vote.

Mr. GORE. Mr. President, I hope the Senator will soon reach his conclusion.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. GORE. I yield a minute to the Senator from Alaska.

Mr. GRUENING. I wholeheartedly support the amendment of the Senator from Tennessee. I was in favor of the Hartke amendment when it was offered. I believe this is a sound method of giving a tax reduction to the people who need it instead of giving a tax reduction to the people at the top. The figures of the Senator from Tennessee graphically show that the pending bill is a bill to make the rich richer, and not a bill to help the economy in the sector where help is needed. The amendment the Senator from Tennessee proposes would go far to rectify that situation.

Mr. LONG of Louisiana. I yield 5 minutes to the Senator from Florida.

[*P. 1787*]

Mr. SMATHERS. I wish to take up where the Senator from Alaska ended. He says it is a bill to make the rich richer and does not help the consumer. I would like to point out that the bill actually calls for a tax reduction of $11.6 billion. Of that amount, approximately $9 billion will go to individuals.

The amendment offered by the Senator from Tennessee would cost about $7 billion.

Contrary to what the Senator from Alaska has said, the amendment would not help the people in the low income groups—77.4 percent of the benefit would go to people with incomes of over $5,000. Those are the Treasury figures and those are the staff figures. Contrary to what the Senator from Alaska says, the Gore amendment would not help those it seeks to help or those it is said it would help. It would drop 4 million taxpayers from the tax rolls.

If we are to proceed in this particular area of trying to assist the low-income

group, we should do it by using the so-called minimum standard of deduction, which gives a $200 deduction plus a $100 additional deduction for each dependent. However, there is a $1,000 limit at the top. That provision will cost $320 million, but 84 percent of that benefit will go to persons who earn $5,000 or less.

The Senator from Tennessee still continues that provision in the present proposal, but I repeat that 77.4 percent of the benefit of his amendment would go to relieve taxpayers who have an income of $5,000 or more.

The proposal of the able Senator from Tennessee does not represent what in our opinion is a balanced approach to tax reduction. We have had chronic deficits. We have had deficits for 24 years of the last 36. We have more than 5.5 percent of our labor force unemployed. It seems that no matter what we try to do, and no matter how high profits get, or no matter how large the amount of savings in the banks—and one reason for the large savings is that there is not much incentive to take that money out of the bank and invest it—we still continue to have deficits.

We believe our approach is the better approach to provide an incentive by decreasing taxes on individuals as well as decreasing taxes on a certain part of the business community.

We believe ours is a much sounder approach. Whereas the Gore amendment leaves the heavy tax rates as they are in the present law, from 20 percent up to 91 percent, we would reduce them in our proposal from a 14-percent low to a 70-percent high.

Our is a better approach to the whole program of trying to bring about tax relief and at the same time stimulating the economy. Although the Senator's proposal is presented in a very attractive fashion, in truth and in fact it does not help those it is supposed to help as much as is purported—77.4 percent of the benefit goes to those with incomes of $5,000 or more.

We are looking for a balanced bill. It has been said that a tax reduction bill does not stimulate the economy. The fact is that it does. After we reduced taxes in 1954, we found that within 2 years we had a balanced budget. That was one of only 2 years in which we had one in the previous administration. The reason we think this bill is even better is that it reaches into every segment of the economy. Not only does it reach the low income man, who has a percentage reduction of some 38 percent, but it also reaches up to help the man who is paying high taxes.

I cannot dispute the able Senator's presentation of the effective tax rate in the very top brackets. There are some loopholes. However, some of them have been closed. The Senator from Tennessee started his presentation with a $50,000 income. The great bulk of the taxes are paid by people with less income.

I conclude by saying that what we need is a balanced bill. The bill has been approved by the AFL–CIO, at one end of the spectrum. It has been approved by the chamber of commerce, on the other end of the spectrum. While it is not what everyone wants, it seems to be the most efficacious bill that we can get. I sincerely hope that the Senate will reject the Gore amendment.

Mr. LONG of Louisiana. Mr. President, how much time have I remaining?

The PRESIDING OFFICER. The Senator has 9 minutes remaining.

Mr. LONG of Louisiana. Mr. President, the Senator from Tennessee proceeds on the assumption that the pending bill is unfair to the workingman. The arguments that he has made about the take-home pay and that sort of thing are the traditional arguments of the AFL–CIO. I am happy to say that the AFL–CIO is satisfied with the provisions of the bill—and I have particularly in mind the minimum standard deduction. These rate reductions will help the workingman. The AFL–CIO, looking at the bill in terms of what it means in increased take-home pay, says it is a good bill.

The bill is supported by those who speak for labor, by those who speak for banks, and those who speak for commerce. Persons in the lower bracket would receive a tax reduction of about 38 percent.

There is something to the argument that if we make it profitable for a businessman to build a plant and invest his capital, it will actually result in someone getting a job and making some money.

As the Senator from Michigan has pointed out, the bill has the support of those who represent people in the low income brackets. It has the support of those who represent middle income people. It has the support of those who represent small business. It has the support of those who represent large business. It has the support of those who speak for investors and bankers.

It seems to me that when we are able to produce a bill that satisfies all these groups, there is no reason to accept an amendment which would strike out the incentive provisions that will create new jobs and help commerce, and benefit the businessman and the workingman.

If it is desired to pass a bill merely to benefit those in the lower income

brackets, amendments can be offered that will accomplish that purpose better than the pending amendment. Amendments could be offered—I could draft some myself—to provide that a person would not get any new benefit if he made more than $10,000. But if such an amendment were adopted, a large number of taxpayers who are paying taxes at high rates today, because they have large incomes, would then be unfairly and unjustly treated.

The bill is the product of 10 years of study by the Treasury and by other experts on this subject. It is the result of consultation with labor and management and others representing every segment of economic life in this great Nation.

I urge the Senate to maintain the balance in the bill, rather than to say that we will try to benefit a certain class, leave out corporations, leave out this group, or that group, and end with a substantial segment of the American economy feeling, quite justly so, that they have been unfairly treated, and with large numbers asking to have the bill recommitted.

I reserve the remainder of my time.

Mr. GORE. Mr. President, I hope I may be pardoned for being a bit amused at the arguments we have just heard. On the one hand, my amendment, it is alleged, would do too much for those in the low-income brackets; yet, on the other hand, it is said that it would not do much. That is a strange sort of paradoxical argument. I suggest to Senators that they ask any mother or father if $600 is an adequate amount, if it is commensurate with the cost of rearing and educating a child. I do not believe that even $800 is, and I have some reason to know—I have children.

What I have offered as a substitute for the grossly unfair rate reductions in the bill is an increase in the personal exemption from $600 to only $800. That would result in a loss of revenue $5 billion less than the proposal for which I offered it as a substitute.

Do we want to add more to the public debt by passing a bill to make a bad tax law worse? Or do we want to add less to the public debt and do more justice to the people who need tax reduction the most—the parents of the largest numbers of children?

Senators may be able, by obfuscation, to confuse the issue; but no parent will be confused by this issue, because the amendment would lift an utterly inadequate personal exemption of $600 to a more nearly adequate, though still inadequate, amount of $800.

The PRESIDING OFFICER. The time of the Senator from Tennessee has expired. The Senator from Louisiana has 4 minutes remaining.

Mr. LONG of Louisiana. Mr. President, I yield 3 minutes to the distinguished Senator from New Mexico.

Mr. ANDERSON. Mr. President, many of us believe the amendment is an extremely bad one. If the exemption were made $800, it would cost $7 billion. I do not know of any easy way that that amount could be restored to the bill. Certainly we do not want to reduce the

[*P. 1788*]

bill $7 billion more than it has already been reduced. Where would we find $7 billion if it were removed by this amendment?

The amendment would remove 4 million persons from the tax rolls by exemptions. I do not think that is a good idea. According to information which I have obtained, 77.4 percent of the reduction would be received by those having incomes or more than $5,000.

It has been said that the minimum standard deduction is focused on persons having incomes below $5,000, and that 90 percent goes to those having incomes below $5,000. Under the amendment, 77 percent would go to persons having incomes above $5,000. So the difference between the two proposals can easily be seen.

I am very happy that the Senator from Louisiana has said that the proposal of the Senator from Tennessee presents some difficult problems. It would not be at all easy to restore the bill to its original condition if the amendment were adopted. I am hopeful that the amendment will be defeated.

I merely move that the amendment of the Senator from Tennessee be tabled. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from New Mexico to table the amendment of the Senator from Tennessee.

Mr. LONG of Louisiana. Mr. President, on this question, I ask for the yeas and nays.

The yeas and nays were ordered.

The PRESIDING OFFICER. On this motion, the yeas and nays have been ordered, and the clerk will call the roll.

Mr. KUCHEL. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from California will state it.

Mr. KUCHEL. Is the vote that is about to be taken a vote on the motion to table the amendment of the Senator from Tennessee?

The PRESIDING OFFICER. That is correct.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER (Mr. RIBICOFF in the chair). The Senator from Montana will state it.

Mr. MANSFIELD. Is it in order at this time for the Senate to vacate the motion to lay on the table the last amendment of the Senator from Tennessee, so that the Senate may have an opportunity to face squarely the question of agreeing to his amendment?

The PRESIDING OFFICER. No; because the yea-and-nay vote on the question of agreeing to the motion to lay on the table is in progress; and, under the rule, nothing is allowed to interrupt a yea-and-nay vote once it has been begun; it must be completed.

Mr. HUMPHREY. I announce that the Senator from Nevada [Mr. CANNON], the Senator from Arizona [Mr. HAYDEN], the Senator from Arkansas [Mr. McCLELLAN], and the Senator from Oregon [Mrs. NEUBERGER] are absent on official business.

I also announce that the Senator from California [Mr. ENGLE] is absent because of illness.

Mr. KUCHEL. I announce that the Senator from Illinois [Mr. DIRKSEN] is necessarily absent and, if present and voting, would vote "yea."

The result was announced—yeas 61, nays 33, as follows:

[No. 18 Leg.]

YEAS—61

Allott	Hickenlooper	Monroney
Anderson	Hill	Morton
Bartlett	Holland	Mundt
Bayh	Hruska	Pastore
Bennett	Humphrey	Pearson
Bible	Inouye	Pell

Goldwater	Morse	Yarborough
Gore	Moss	Young, N. Dak.
Gruening	Muskie	Young, Ohio

NOT VOTING—6

Cannon	Engle	McClellan
Dirksen	Hayden	Neuberger

So the motion to lay Mr. GORE's amendment on the table was agreed to.

Mr. MANSFIELD. Mr. President, I am about to make an unusual request because of unusual circumstances. The Senator from Tennessee [Mr. GORE] agreed to have a vote on his amendment in 10 minutes. After debate got underway, we finally settled, at my suggestion, on a 30-minute limitation, with 15 minutes to each side.

In order to clear the air and to keep any faith which may have been inadvertently broken, I ask unanimous consent—and I hope the Senate will bear with me at this time—to vacate the vote which was taken on the question of tabling, and to have a yea-and-nay vote on the question directly.

Mr. KUCHEL. Mr. President, will the Senator from Montana yield?

Mr. PASTORE. Mr. President, reserving the right to object——

The PRESIDING OFFICER. The Senator from Rhode Island is recognized.

Mr. PASTORE. No Member of this body has more respect and affection for the Senator from Tennessee than I. If I could find it in my heart and conscience to go along with this request, I certainly would do so. I believe that the motion to table is in perfect parliamentary procedure, and if the Senator from Montana had not done so, I would have made the motion myself.

I believe this amendment is untimely. I do not believe it belongs in the bill. The Senator from Tennessee has stated that even if the amendment did carry, he would vote against the bill.

Under those circumstances, I do not believe any Senator will feel that he should be called upon at this time to vote on the merits, but would vote to table. I believe that this is an unreasonable request at this time, and I object.

The PRESIDING OFFICER. Objection is heard.

Mr. DOUGLAS. Mr. President——

The PRESIDING OFFICER. The Senator from Illinois is recognized.

Mr. LONG of Louisiana. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield briefly to the Senator from Louisiana.

Mr. LONG of Louisiana. Mr. President, the Senate usually saves time by trying to accommodate itself to the wishes of 100 Senators. Unanimous-consent requests are often difficult to obtain, and a single Senator, feeling that he has not been treated properly in the Senate, has a perfect right to object to

a unanimous-consent request and often impedes the progress of the Senate.

The problem involved is something that happened in my presence. The Senator from Tennessee said that he would like to have a vote on his amendment, and there was agreement that the Senate would vote on the amendment at a certain time.

I would doubt that any majority leader of the Senate would be wise in agreeing to a vote on an amendment and foreclosing himself the right to make a motion to table after all debate had been heard. It seems to me this is a very useful motion that any majority leader would wish to reserve to himself.

Perhaps there was a misunderstanding on this question. However, the Senator from Tennessee can certainly offer an amendment in a slightly different fashion if he wishes to do so, and have a yea-and-nay vote on it in any case. It is for that reason that I hoped there could be a unanimous-consent agreement to have a direct vote on the amendment. Of course, the Senator from Tennessee can have a vote on his amendment by offering it with a change of a single comma or a semicolon, any time he wishes to do so hereafter.

Mr. ANDERSON. Does the Senator from Louisiana wish to change some of the rules? I have in mind some rules that I would like to change. Does the Senator wish to change the cloture rule in the same way?

Mr. LONG of Louisiana. The only point I had in mind was the suggestion that we might agree by unanimous consent to have a vote directly on the amendment.

Mr. ANDERSON. But we did not.

Mr. LONG of Louisiana. As they say in Kentucky, that is what makes a horse race, a difference of opinion. Some Senators thought that, and others did not.

Mr. MORTON. Mr. President, the Senator from Kentucky wishes to speak on another subject.

Mr. LONG of Louisiana. I have no objection to a direct vote on the amendment, but I believe the majority leader probably should have the right to make a motion to table after all debate had been concluded, if he felt that is what he should do.

[*P. 1790*]

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

Mr. KUCHEL. Mr. President, will the Senator yield 1 minute and a half to me?

Mr. DOUGLAS. I yield a minute and a quarter to the Senator from California.

Mr. KUCHEL. Mr. President, while Senators are present in the Chamber, I should like to make an observation to the distinguished majority leader. It is my understanding that the distinguished senior Senator from Illinois desires to discuss a proposed amendment to the tax bill, at not too great length, and that he contemplates asking no vote on the amendment until tomorrow. It is further my understanding that the distinguished junior Senator from Kentucky desires to offer an amendment which would provide a 4-percent dividend exclusion, an amendment which the minority leader had offered in committee, and he would ask that a time limitation tonight be placed on the amendment so that the Senate, in a little over an hour, could have a yea-and-nay vote on the amendment.

I should like to inquire of the majority leader whether, if what I have said transpires, he contemplates any additional labor this evening?

Mr. MANSFIELD. Mr. President, will the Senator yield me 1 minute?

Mr. DOUGLAS. Certainly.

Mr. MANSFIELD. That sounds very good to me, too. In addition to this amendment, I hope there will be others, and that the Senate will be in business until 10 o'clock tonight to get the tax bill on its way toward bringing its consideration to conclusion, one way or the other. So the more amendments, the better.

[*P. 1791*]

Several Senators addressed the Chair.

Mr. DOUGLAS. Mr. President, I do not want to yield any more, because I have been, I think, quite generous with my time, and I would like to discuss the tax bill, rather briefly. Then Senators can discuss this fascinating subject later.

INCREASE OF $100 IN MINIMUM STANDARD DEDUCTION

Mr. President, I am about to offer an amendment which would accomplish some of the things the Senator from Tennessee was trying to accomplish, but would remove some of the objections to his amendment.

Very briefly, my amendment provides for an increase of $100 in the minimum standard deduction for each taxpayer and dependent, as compared to the present bill.

REDUCE CORPORATE CUT

Second, nine-tenths of the cost of the amendment would be paid for by reducing the cut in the corporation tax.

At present, the corporation tax is scheduled to go from 52 percent to 50 percent, and then to 48 percent next year. My amendment would reduce it to 51 percent this year, and 50 percent next year. So, roughly, the amendment is neutral so far as revenue is concerned. There would be a loss of about $90 million.

BENEFIT TO LOW-INCOME GROUPS

The amendment would increase the tax reduction for individuals and particularly for those in the lower income groups. At present, the minimum standard deduction is $300 for a taxpayer and $100 for each dependent. This means there is a minimum standard deduction of $600 for a family of four. This, added to the $600 per capita exemption, means, roughly, that a family of four has the first $3,000 of income exempted from taxation.

Under my amendment, the minimum standard deduction would be increased to $400 for the taxpayer and $200 for each dependent, so that a family of four would have a minimum standard deduction of $1,000, which, when added to the exemption of $2,400, would provide that the first $3,400 would be exempt from taxation for a family of this size.

Instead of costing $6,700 million, as the amendment of the Senator from Tennessee would cost—and for which, incidentally, I voted—it would cost $960 million.

But one of the great advantages of the arrangement is that it would increase the amount given to the lower income groups.

BENEFITS TO THOSE WITH $10,000 OR LESS

All but $35 million of the $960 million, or a total of $925 million, would go to taxpayers with incomes below $10,000 a year; $385 million would go to those with incomes below $5,000 a year; $540 million would go to those earning between $5,000 and $10,000 a year.

This amendment would favor relatively low income taxpayers and families.

Under my amendment the minimum standard deduction is continued up to and including the sixth child, so that a family with six children would get a minimum standard deduction of $1,800, instead of the present $1,000 in the bill.

I ask unanimous consent that a table giving the distribution effect of my amendment be printed at this point in the RECORD.

The PRESIDING OFFICER. Without objection the table will be printed at this point in the RECORD.

The table is as follows:

Adjusted gross income class	Revenue loss (millions)		
	Under minimum standard deduction in H.R. 8363	Under proposal	Increased loss due to proposal
0 to $3,000	$170	$320	$150
$3,000 to $5,000	100	335	235
$5,000 to $10,000	50	590	540
$10,000 to $20,000	0	30	30
$20,000 to $50,000	0	5	5
$50,000 and over	0	(1)	(1)
Total	320	1,280	960

1 Less than $2,500,000.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. AIKEN. How would the Senator's proposal compare with a flat deduction of $700?

Mr. DOUGLAS. Does the Senator mean an increase in the exemption?

Mr. AIKEN. Yes.

Mr. DOUGLAS. Each $100 increase in the exemption costs roughly $3⅓ billion. So this proposal would cost about 30 percent of that.

Mr. AIKEN. What is wrong with a $100 exemption increase?

Mr. DOUGLAS. I would vote for it. I voted for the $200 exemption increase, of from $600 to $800, but a motion was made by the Senator from New Mexico to table, and it carried. I am now proposing this amendment to increase the minimum standard deduction rather than to raise the amount of the exemption. If another amendment is offered to increase the minimum from $600 to $700, I shall vote for it. At present, I am offering my amendment, which would cut taxes approximately $1 billion for the low income groups, but would offset that loss of revenue by diminishing the cut in the corporate taxes.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. HUMPHREY. Would there be any loss of revenue under the aggregate provisions of the amendment?

Mr. DOUGLAS. Ninety million dollars. We would lose $960 million through the increase in the minimum standard deduction. We would gain $870 million through the diminished cut in the corporation tax. So there would be a loss of $90 million, but that is a relatively minor amount in a tax bill that would reduce revenues by more than $11 billion.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. PROXMIRE. Is it not true that the Senator will offer another amendment, the oil depletion amendment which would recoup $400 million?

Mr. DOUGLAS. Yes.

Mr. PROXMIRE. Also, I intend to offer another amendment which would increase revenues between $245 million and $725 million a year, which I understand the Senator will support.

Mr. DOUGLAS. That is correct.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. AIKEN. Is it not true that the $600 exemption, when it was adopted some years ago, would buy far more than a $700 exemption would today?

Mr. DOUGLAS. Yes.

Mr. AIKEN. How would the purchasing power of the $600 exemption when it went into effect some 15 years ago compare with the purchasing power today? What would be its equivalent in purchasing power today?

Mr. DOUGLAS. I think there has been an increase of about 25 percent in the cost of living during the past 15 years.

There was an increase from 92 to 107 in the consumer price index in the last 12 years, which is an increase of approximately 17 percent; but there was an increase in the period prior to 1952.

Mr. AIKEN. But the tax bill as it is now written would put a further squeeze on the lower income people, would it not?

Mr. DOUGLAS. I would not say it would put on a further squeeze.

Mr. AIKEN. As far as exemptions are concerned.

Mr. DOUGLAS. As far as the past is concerned, every increase in the cost of living diminishes the real value of the $600 exemption.

One of the great advantages of an increase in the minimum standard deduction which I am proposing, as compared with an increase in the exemption, is that a larger proportion goes to the lower income groups.

Mr. AIKEN. Yes.

Mr. DOUGLAS. There is already a 10-percent standard deduction, but with an upper limit of $1,000.

Mr. AIKEN. Does the Senator from Illinois believe that it is possible to dump $11 billion into the purchasing power of the country without increasing prices at all?

Mr. DOUGLAS. I am not discussing the general theory of the bill. I am discussing the question of the transfer of some of the cuts from the upper income groups to the lower income groups. Those with incomes of over $50,000 a year own approximately a third of the stock of the country, and get about a third of the distributed profits. Those with incomes of over $25,000 get over half the dividends. Under my amendment we are cutting down on the amounts that would go to the higher groups, and giving that to the groups that have less than $10,000 and less than $5,000.

Mr. AIKEN. Would not the increase in the cost of living, due to the $11 billion being dumped into the purchasing power of the Nation, be greater than the tax benefits which are given to a family, say, earning less than $3,000 a year?

Mr. DOUGLAS. I am not discussing the merits of the bill as a whole. My amendment would not affect that situation one way or the other.

[*P. 1792*]

Mr. AIKEN. That is important.

Mr. DOUGLAS. I think it is, and I welcome a discussion of the bill later. In the meantime I will discuss my particular amendment. My amendment does not change the overall effect of the tax bill. What it does do is to take approximately $900 million from those in the income groups above $10,000 and $25,000 and $50,000.

Mr. AIKEN. Who would they be?

Mr. DOUGLAS. Only 1 family out of 10 has an income of over $10,000, roughly. About 2 percent of the families have income over $20,000. Two-tenths of 1 percent or 1 in 500 have incomes of over $50,000. What my amendment would do would be to diminish the tax benefits given under the bill to the upper income groups and increase the tax tax benefits given to the lower income groups.

Mr. AIKEN. What percentage goes to those of $50,000?

Mr. DOUGLAS. Of the corporate protfis, they get about 50 percent of the corporate profits.

Mr. AIKEN. I thank the Senator from Illinois. The whole thing is very clear now.

Mr. DOUGLAS. I thank the Senator.

Mr. President, I think that this is the best possible way, now that the Gore amendment has been defeated, of insuring a larger proportion of the tax cut going to the ordinary people of the country.

There are numerous arguments for the amendment. Time and again Members of the Senate have expressed the view that a larger proportion of the tax cut should go to relatively low income individuals or to those of modest incomes. The amendment would give a larger share of the cut to those below $10,000.

In fact, 95 percent of the cuts in my amendment would go to those with incomes below $10,000 a year.

MORE OF CUT WOULD BE SPENT

It would also have the effect of giving a greater stimulus to the economy than in the present bill, because those with relatively low incomes and those with large families tend to spend a much higher proportion of their income than those with high incomes. Therefore, we can expect that a greater proportion of the tax cut will be spent for the necessities of life and, hence, have a greater stimulative effect on the economy than the cuts in the present bill.

CORPORATIONS HAVE HAD LARGE CUTS

A third argument for the nature of this cut is that corporations and their stockholders since 1954 have already had tax cuts equivalent in amounts to $5 billion a year. In 1954 the provisions for rapid depreciation and fast tax writeoffs went into the code. In that same year the dividend credit was passed. Together, these amounted to about $2½ billion on an annual basis which went to corporations or to the holders of corporate stocks.

In 1962 we passed the investment tax credit. This was worth slightly more than $1 billion a year to corporations. To be more precise, it was $1,200 million. In addition, in 1962 the Treasury revised Bulletin F, which meant an additional $1.3 billion per year to the corporations. Thus, corporations and their stockholders have had a tax cut of almost $5 billion a year since 1954, while the ordinary taxpayers have had no Federal income tax cut whatsoever.

Thus, there is great merit in increasing the amount to go to low income individuals in the bill and decreasing the amount which goes to corporations. This is precisely what my amendment would do.

STATE AND LOCAL TAX INCREASES REGRESSIVE

There is a further argument in favor of the amendment; namely, that the amount of State and local taxes have risen by very large amounts over recent years. These taxes are regressive and fall much more heavily proportionately on low income groups than on high income groups.

For example, from 1954 to 1962, State and local property taxes rose from $9.9 to $19 billion a year. State and local sales taxes and gross receipts taxes rose from $7.3 billion to $13½ billion. Between 1954 and 1962 the total amount of State and local revenues doubled from $29 billion to $58 billion. All of this occurred in a period when individuals have had no tax relief from the Federal income taxes, and while corporations have had the equivalent of a $5 billion decrease in corporation taxes.

BIG CUTS TO HIGH INCOME GROUPS

Let us see who have benefited from the $5 billion of Federal corporate tax cuts since 1954.

An indication of who received the bulk of the Federal tax cut since 1954 is shown by the distribution of dividend income. Those with incomes of over $20,000 a year—which are less than 2 percent of all taxpayers—received 54 percent of all dividends. Those with incomes over $50,000 a year—who number only two-tenths of 1 percent of all taxpayers—nonetheless received 31 percent of all dividends.

CORPORATE FUNDS NOT INVESTED

I may say, also, that insofar as the corporations have retained their earnings and not distributed them in dividends, which is about 40 percent of the profits after taxes, they have not reinvested this full amount. In fact, the investments of corporations are appreciably less than the retained earnings, plus depreciation, plus money raised externally.

In the period of 4 or 5 years approximately $25 billion in liquid funds have been accumulated and not invested in plant. There is no shortage of money on the part of the corporations of the country. They have funds running out of their ears. They do not invest these funds because, due to the prices charged, there is insufficient demand.

The bill before the Senate would do something in this direction, but it would not do as much as it would under my amendment.

Mr. President, I send the amendment to the desk and ask that it be printed, and also printed in the RECORD. And I ask unanimous consent that it may be the first order of business tomorrow morning.

The PRESIDING OFFICER. Without objection the amendment will be received and printed and will lie on the table; and, without objection, the amendment will be printed in the RECORD, and will be the first order of business tomorrow morning.

The amendment (No. 411) is as follows:

On page 8, line 8, insert "10-percent" immediately after "The".

On page 8, line 10, insert "10-percent" immediately before "standard".

On page 8, line 11, insert after the period the following new sentence: "The minimum standard deduction shall not exceed $1,800, except that in the case of a separate return by a married individual the minimum

standard deduction shall not exceed $900."

On page 9, line 3, strike out "$100" and insert "$200".

On page 13, line 14, strike out "28 percent" and insert "29 percent".

On page 13, line 17, strike out "26 percent" and insert "28 percent".

On pages 353 through 362, revise the tables contained therein so as to reflect the changes made by this amendment with respect to the minimum standard deduction.

AMENDMENT NO. 412

Mr. PROXMIRE. Mr. President, I send to the desk an amendment to lift the single greatest excise discouragement to employment—the so-called cabaret tax.

When this tax was reduced from 20 percent to 10 percent in 1960, employment rose by 35 percent, and incomes rose by 33 percent for musicians alone.

This tax is also one of the most discriminatory excises. Public clubs pay the tax but private clubs do not. Places which have musicians pay the tax but places with jukeboxes do not. If customers pay their checks before entertainment begins, there is no tax but payment during the entertainment means a tax.

The tax is extremely difficult for the courts, the Internal Revenue Service, and taxpayers to interpret. Substantial administrative costs will be eliminated by my amendment.

On the solid basis of the experience when these taxes were reduced from 20 percent to 10 percent, no revenue loss will occur from this amendment. The encouragement that will be provided to customers, to employees and to smaller establishments generally will more than offset any direct tax loss.

Estimates by the Treasury that this amendment would reduce revenues completely ignore the proven stimulus this particular tax elimination can give.

This is one of the taxes that were introduced in the wartime period to discourage consumption and to discourage this kind of activity. We all know that the war is over. We all want to encourage consumption and encourage employment. Therefore, it seems to me it is long past due for this amendment to be considered.

Mr. President, I submit the amendment and ask that it lie on the table.

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table.

Mr. MORTON. Mr. President, on behalf of the junior Senator from Illinois [Mr. DIRKSEN], the minority leader, I send to the desk an amendment and ask for its immediate consideration. I ask

[*P. 1793*]

unanimous consent that the reading of the amendment be dispensed with; it can be easily explained.

The PRESIDING OFFICER. Without objection, the reading of the amendment will be dispensed with; and without objection, the amendment will be printed in the RECORD.

The amendment is as follows:

On page 28, beginning with line 2, strike out all through line 2 on page 32 and in lieu thereof insert the following:

"SEC. 201. DIVIDENDS RECEIVED BY INDIVIDUALS.

"(a) LIMITATION OF CREDIT TO $300.—Section 34(b) (relating to limitation on amount of credit for dividends received by individuals) is amended—

"(1) by striking out 'the lesser' and inserting in lieu thereof 'the lowest';

"(2) by striking out 'or' at the end of paragraph (1);

"(3) by striking out the period at the end of paragraph (2) and inserting in lieu thereof '; or'; and

"(4) by adding after paragraph (2) the following new paragraph:

" '(3) $300 ($150, in the case of a married individual filing a separate return).'

"(b) DOUBLING OF AMOUNT OF PARTIAL EXCLUSION FROM GROSS INCOME OF DIVIDENDS RECEIVED BY INDIVIDUALS—Section 116(a) (relating to partial exclusion from gross income of dividends received by individuals) is amended by striking out '$50' each place it appears and inserting in lieu thereof '$100'.

"(c) EFFECTIVE DATE.—The amendments made by subsections (a) and (b) shall apply with respect to taxable years beginning after December 31, 1963."

Mr. MORTON. Mr. President, how many Senators are required to second a request for the yeas and nays?

The PRESIDING OFFICER. Nineteen.

Mr. MORTON. Mr. President, before proceeding further, I ask for the yeas and nays on the amendment I have offered.

The yeas and nays were ordered.

Mr. MORTON. Mr. President, with the understanding that I will not lose my right to the floor, I yield to the junior Senator from Florida.

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that on the pending amendment there be a limitation of debate of 1 hour, the time to be equally divided, 30 minutes to be controlled by the distinguished Senator from Kentucky [Mr. MORTON] and 30 minutes to be controlled by the distinguished Sen-

69-108 O—66—pt. 3——37

ator from Minnesota [Mr. McCARTHY].

The PRESIDING OFFICER. Does the proposal include all amendments thereto?

Mr. MANSFIELD. Yes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MORTON. Mr. President, one of the more vexing problems confronting the Senate is the treatment of tax dividends received by investors. I should like to develop this point, but before doing so I yield to the distinguished Senator from California.

THE FORGOTTEN ONES

Mr. KUCHEL. Mr. President, the Senate is now debating the Internal Revenue Act of 1964, a landmark piece of legislation generally described as providing an across-the-board tax cut for

[*P. 1794*]

all American taxpayers. Today I would like to talk about a sizable group of taxpayers who will not receive a significant tax cut under this bill.

These people who have been left out of the tax cut are retired persons and widows with dependent children living principally on dividend income of less than $6,000 a year. Since dividends from private business corporations often are these taxpayers' main source of income, they are the group that is hit hardest by the elimination of the 4-percent tax credit on corporate dividends. For most of them, the tax saving which they will receive as a result of the reduced tax rates in the tax cut bill will largely be taken away by the accompanying repeal of the 4-percent dividend credit.

Some actual examples will illustrate this. Take for instance a widow who is 61 years old and living on $5,000 in dividend income from common stocks inherited from her husband. Under the present law, which includes the dividend credit, her income tax bill is $659. Under the tax cut that will go into effect in 1965, however, her tax bill will be $658, a saving of only $1. This occurs despite the fact that the new tax bill increases the dividend exclusion from $50 to $100 and lowers the overall tax rate.

This case comes into clearer perspective when we realize that a wage earner paid $5,000, the same amount as the widow received in dividends, will get a tax cut amounting to $147 under the new law. Clearly there is something wrong when a tax cut bill provides a $147 cut for a healthy young workingman but provides no cut at all for an elderly widow living on exactly the same amount of dividend income.

There are many other examples of unfairness to elderly people living exclusively on small amounts of dividend income. The tax for a retired couple—both over 65 and living on dividend income of $6,000 a year—will be reduced only $48 under the new bill. A working couple living on $6,000 in wages, however, will receive a whopping cut of over $150. To look at it another way, the elderly couple living on dividend income will receive a cut of only 10 percent whereas the wage earning couple will receive a cut of 25 percent—almost 2½ times as great.

There will be a double hardship under the so-called tax cut bill for elderly persons who receive a retirement income credit as well as the dividend income credit. Under the proposed law, these people will not only lose their 4-percent dividend credit but will also have their retirement income credit reduced from 20 percent this year to only 15 percent in 1965. Take the case of a single taxpayer aged 65 whose gross income is $3,500—all from dividends—and who is entitled to the maximum retirement income tax credit. His tax liability this year, with the dividend credit and the full retirement credit, is $5. His tax liability in 1965, however, would be $51—an increase of $46.

After studying cases similar to this, it is my opinion that every American taxpayer living principally on dividend income of less than $6,000 a year should study the tax cut bill very carefully. They may find that, for them at least, unless at a minimum the 4-percent dividend credit is maintained this is really a tax stabilization bill or even a tax increase bill. It seems strange that at a time when many Members of Congress profess to be very concerned about the financial problems of the elderly, the Senate Committee on Finance has reported out a tax cut bill which is so grossly unfair to elderly persons living on small amounts of dividend income.

I support the amendment offered by the distinguished Senator from Kentucky. I do so because I believe it is in the public interest. I oppose the theory of double taxation of the same dollar of profit. I have opposed the repeal of the 4-percent dividend credit each time that this has been attempted in the Senate. It would seem to me, Mr. President, that this is a minimum amount of relief from double taxation. The credit should be continued.

Mr. President, I ask unanimous consent to have printed in the RECORD as a part of my remarks the mathematical computations on which the examples I

have cited, and several other examples, are based.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

Widowed taxpayer, age 61 [1]

	Present law	1965
Gross income (all from dividends)	$5,000	$5,000
Less dividend exclusion from gross income	50	100
Adjusted gross income	4,950	4,900
Less personal exemption	600	600
Total	4,350	4,300
Less deductions (minimum standard deduction applies in 1965)	495	490
Taxable income	3,855	3,810
Tentative tax	813	658
Less dividend credit (4 percent of taxable income)	154	0
Total	659	658
Difference (net tax reduction)	----------	−1
Percentage reduction	----------	0
Difference between 1963 tax and 1965 tax for equivalent wage earner	----------	−$147
Percentage reduction for wage earner	----------	18

[1] This table illustrates what would happen to a widow, age 61, living on $5,000 in dividend income from common stocks inherited from her husband. Her net tax reduction would be only $1, whereas a wage earner in the same bracket would receive a reduction of $147, or 18 percent.

Single taxpayer, age 65 [1]

	Present law	1965
Gross income (all from dividends)	$3,500	$3,500
Less dividend exclusion from gross income	50	100
Adjusted gross income	3,450	3,400
Less personal exemption	1,200	1,200
Total	2,250	2,200
Less deductions (minimum standard deduction applies in 1965)	345	400
Taxable income	1,905	1,800
Tentative tax	386	280
Less dividend credit (4 percent of taxable income)	−76	0
Total	310	280
Less retirement income credit	305	229
Tax liability	5	51
Difference (net tax increase)	----------	+46

[1] This table illustrates what would happen to a single taxpayer, age 65, living on dividend income of $3,500, who is entitled to the maximum retirement income tax credit (which is reduced under H.R. 8363 along with the elimination of the 4-percent dividends received credit). Instead of being reduced under the so-called tax cut bill, this man's taxes would be increased by $46.

Married couple, both over 65 [1]

	Present law	1965
Gross income (all from dividends)	$6,000	$6,000
Less dividend exclusion from gross income	−100	200
Adjusted gross income	5,900	5,800
Less personal exemption	2,400	2,400
Total	3,500	3,400
Less deductions (minimum standard deduction applies in 1965)	590	600
Taxable income	2,910	2,800
Tentative tax	582	418
Less dividend credit (4 percent of taxable income)	116	0
Total	466	418
Difference (net tax reduction)	----------	−48
Percentage reduction	----------	10.3
Difference between 1963 tax and 1965 tax for equivalent wage earner	----------	−$150
Percentage reduction for wage earner	----------	25

[1] This table illustrates what would happen to a married couple, both over 65, living on dividend income of $6,000 a year. Their net tax reduction would be $48, or 10.3 percent, whereas a wage-earning couple in the same bracket would receive a reduction of $150, or 25 percent.

Married couple, both under 65 [1]

	Present law	1965
Gross income (all from dividends)	$5,000	$5,000
Less dividend exclusion from gross income	100	200
Adjusted gross income	4,900	4,800
Less personal exemption	1,200	1,200
Total	3,700	3,600
Less deductions (minimum standard deduction applies in 1965)	490	480
Taxable income	3,210	3,110
Tentative tax	647	474
Less dividend credit (4 percent of taxable income)	−$128	0
Total	519	$474
Difference (net tax reduction)	----------	−45
Percentage reduction	----------	8.7
Difference between 1963 tax and 1965 tax for equivalent wage earner	----------	−$159
Percentage reduction for wage earner	----------	24.1

[P. 1795]

[1] This table illustrates what would happen to a married couple, both under 65, retired for reasons of health or disability and living on dividend income of $5,000 a year. Their net tax reduction would be $45, or 8.7 percent, whereas a wage-earning couple in the same bracket would receive a reduction of $159, or 24.1 percent.

Single taxpayer, age 63 [1]

	Present law	1965
Gross income (all from dividends)	$3,000	$3,000
Less dividend exclusion from gross income	50	100
Adjusted gross income	2,950	2,900
Less personal exemption	600	600
Total	2,350	2,300
Less deductions (minimum standard deduction applies in 1965)	295	300
Taxable income	2,055	2,000
Tax from tax table	415	312
Less dividend credit (4 percent of taxable income)	82	0
Total	333	312
Difference (net tax reduction)		−21
Percentage reduction		6.3
Difference between 1963 tax and 1965 tax for equivalent wage earner		−$94
Percentage reduction for wage earner		22

[1] This table illustrates what would happen to a 63-year-old man, retired due to illness or disability, living on dividend income of $3,000 a year. His net tax reduction would be only $21, or 6.3 percent, whereas a wage earner in the same bracket would receive a reduction of $94, or 22 percent.

Mr. KUCHEL. Mr. President, I thank my able friend, the Senator from Kentucky, for yielding to me.

Mr. MORTON. Mr. President, the investments which have been made by the more than 17 million American investors have financed the creation of the world's mightiest industrial economy, and have permitted the United States to lead the world in both output and efficiency.

One of the most important factors affecting the future expansion and modernization of our industrial machine is the manner in which the dividends received by those investors are taxed. If we are to maintain our supremacy abroad and create more jobs at home, we must provide for both expansion and modernization.

The late President Kennedy commenced his tax message of January 24, 1963, by stating:

> The most urgent task facing our Nation at home today is to end the tragic waste of unemployment and unused resources—to step up the growth and vigor of our national economy—to increase job and investment opportunities—to improve our productivity—and thereby to strengthen our Nation's ability to meet its worldwide commitments for the defense and growth of freedom. The revision of our Federal tax system on an equitable basis is crucial to the achievement of these goals.

Mr. President, in dealing with the provision of the House version of the bill which would reduce the 4-percent dividend credit received by individuals to a 2-percent credit for dividends received in the calendar year 1964, I wish to say that the amendment I have submitted on behalf of myself and the Senator from Illinois [Mr. DIRKSEN] would not continue the provision of present law as it now stands, but would continue the provision of present law, plus a limit of $300.

Under existing law, one can take a direct tax credit, without limitation, of 4 percent of the dividends he has received. Under the amendment which I have proposed in behalf of myself and the Senator from Illinois [Mr. DIRKSEN], one can take a tax credit of 4 percent of the dividends he has received, but with a $300 limitation. Under this amendment, one who received dividends in the total amount of $7,500 a year could take a total dividend tax credit of only $300; he would not receive a tax credit on his dividends which were in excess of $300.

Mr. President, this issue has been debated again and again; and at this late hour I see no use in laboring the point which is stressed in connection with this provision of existing law; namely, double taxation. Both the Senate and the American people as a whole understand this problem. Under existing law, before a U.S. investor receives a return from a corporation in which he has invested, $52 of each $100 earned by the corporation has, in most instances, been paid in taxes, before any dividends at all are paid. A part of the remaining $48 is paid to the investors, in the form of dividends; and the balance can be used by the corporation for its corporate purposes. Indeed, Mr. President, in addition, 91 cents may be taken out of each dollar of dividends paid.

Mr. President, we speak of regressive taxes. Perhaps the dividend credit cannot be properly classified in that way, either one way or the other; but certainly it can be said that if we are to move forward in building additional job opportunities for individuals, who thus will be employed by U.S. corporations, and if we are to enable the corporations to invest the $200,000 or $250,000 of capital which must be invested in order to give one, two, or three more men work, this amendment is the way to proceed.

Mr. President, I ask unanimous consent that the remarks the Senator from Illinois [Mr. DIRKSEN] had prepared for delivery on this subject be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR DIRKSEN

One of the more vexing problems confronting the Senate is the tax treatment of dividends received by investors. The investment

that has been made by these more than 17 million investors has financed the creation of the world's mightiest industrial economy. It has permitted us to lead the world in output and efficiency. One of the most important factors affecting the future expansion and modernization of this industrial machine is the manner in which we will tax the dividends received by the investors; and we must have both expansion and modernization if we are to maintain our supremacy abroad and create jobs at home.

President Kennedy in his tax message on January 24, 1963, began by saying:

"The most urgent task facing our Nation at home today is to end the tragic waste of unemployment and unused resources—to step up the growth and vigor of our national economy—to increase job and investment opportunities—to improve our productivity—and thereby to strengthen our Nation's ability to meet its worldwide commitments for the defense and growth of freedom. The revision of our Federal tax system on an equitable basis is crucial to the achievement of these goals."

He recognized the necessity for industrial expansion and modernization, pointing out in his message that:

"Investment and productivity improvement will be spurred by more intensive use of our present productive potential; and the added incentives to risk taking will speed the modernization of American industry."

Inherent throughout the message was the necessity of providing greater incentive for investment. For without investment there will be no expansion, there will be no modernization, without investment we would not have the national economy we have today, and, without incentive there will certainly be no investment.

Before an investor receives a return from a corporation in which he has invested, $52 of each $100 earned by the corporation has been paid in taxes in most instances. A part of the remaining $48 is paid to the investor in the form of dividends, the balance being used by the corporation for corporate purposes. Are we now, by changing the tax treatment of dividends, to force the investor, after the corporation has in effect withheld at the 52-percent rate, to be subjected to double taxation? We will do so by requiring a full inclusion of the dividends he receives as taxable income except for the small amount of exclusion permitted. Will this provide the incentive to invest which is so essential to the well-being, not to mention the expansion, of our national economy?

There are four ways in which to approach the problems. They were outlined by Dan Throop Smith, professor of finance, Harvard University, before the Ways and Means Committee in 1959. They are:

1. Elimination of the corporate tax;
2. Elimination of any tax on dividends;
3. Some adjustment in the corporate tax for dividends distributed, in recognition of the individual tax to be paid on them; or
4. Some adjustment in the individual tax for dividends received, in recognition of the corporate tax previously paid.

The first alternative above noted has never been acceptable because among other things retained earnings would never be taxed. The second alternative has also been unacceptable particularly since individual rates go above corporate rates. If dividends were deductible by the corporation, then the corporate tax would become a tax on retained earnings, and retained earnings are the most important source of equity capital for industry in this country. This type of relief for dividends paid would become a penalty on retained earnings.

Our approach has been to give recognition to the fact that the income has already been taxed to the corporation and to provide some partial relief for individuals on their dividend income.

When the individual income tax was adopted in 1913, dividends were exempted from the normal 1 percent because they had already been taxed by the corporation at a rate of 1 percent. But this changed in World War I when the corporate rate moved well above the normal individual rate and it has remained so since then. Avoid-

[*P. 1796*]

ance of full double taxation was maintained until 1936 by exemption of dividends from the individual normal tax but then this relief completely disappeared and complete double taxation of dividends became effective in 1936 in principle and fact. They were taxed at the full corporate rate and again at the individual rate.

In 1954 we recognized the need for incentive to invest and partial relief from double taxation was provided through the $50 exclusion and 4-percent dividend credit.

As Dr. Smith pointed out, "Though it apparently is not self-evident, a credit of a given number of percentage points against the tax is exactly the same thing as the exemption of dividends from that same number of percentage points of the individual income tax." And, as he indicated, in order to emphasize the modest amount of relief that this affords, it might be advisable to provide that dividends being paid from income that has already been taxed at 52 percent should be taxed at 4 percentage points less than other income in the hands of individuals.

The $50 exclusion was designed to provide full relief for those with small amounts of dividend income and can be considered as granting exemption to the low-income group from the entire 20-percent first bracket tax, recognizing the 52-percent corporate tax previously imposed on corporate income.

But on dividend income above $50, increased to $100 in the bill, the relief is only 4 percent or one-fifth of the 20-percent bracket. The proportionate relief becomes smaller as the effective tax rate increases. The 4-percent credit amounts to one-tenth of the tax for a stockholder in the 40-percent bracket and less than 4½ percent of the tax for a stockholder in the top 91-percent bracket.

Are we not to deny this amount of relief to those taxpayers who must provide the investment so urgently needed to create jobs, to expand our productive capacity? Are we to set the brake on the very forces we intend to put into motion? The major purpose of this measure is to create jobs, expand

production, expand industry; investment must be provided in order to achieve this end. A proposal to eliminate the credit on dividends flies in the face of this very purpose. It would, if adopted, defeat the very objectives we strive for.

Many regarded the full double taxation of dividend income in 1936 as symptomatic of a primitive attitude toward private enterprize. The repeal of the 4-percent credit would symbolize to many a revivial of this punitive attitude toward the sort of risk capital and equity funds for business, which is of such vital importance for continued economic expansion.

Mr. President, the 4-percent credit must be preserved if we are to attract investment capital. The incentive to invest must be encouraged. Perhaps with the modest reduction in individual and corporate rates provided in H.R. 8363, together with a retention of the 4-percent credit, sufficient incentive will be provided if the objectives we have set for our economy are to be realized. If it is not provided and H.R. 8363 adopted, there might be a temporary spurt in consumption, but expansion and modernization will not come about nor will jobs be created. Approximately $25,000 must be invested in order to create one new job. Simple arithmetic shows that $50 billion of new capital will be required to create two million new jobs a year: the very minimum required to provide jobs for the new workers entering the labor force and those displaced by automation. Logic tells us that $50 billion a year will not be invested unless sufficient incentive is provided. Elimination of the 4-percent credit will remove that incentive.

Mr. President, I offer an amendment to H.R. 8363 which will retain the 4-percent credit if it is adopted, but with one modification from present law. My amendment would impose a limit of $300 on the amount of credit which an individual would realize by use of the 4-percent credit on dividends. This limit would be met at $7,600 of dividend income, $100 exclusion leaves $7,500 and 4 percent of $7,500 would produce a credit of $300, the maximum allowable under this amendment. I submit that if we are to realize our objectives of an expanded economy and the creation of more jobs, then this provision represents the minimum of incentive that must be provided to stimulate the investment that will be required to reach our goals.

Mr. MORTON. Mr. President, for the moment, I reserve the remainder of the time available to me.

Mr. McCARTHY. Mr. President——

The PRESIDING OFFICER (Mr. INOUYE in the chair). How much time does the Senator from Minnesota yield himself?

Mr. McCARTHY. Five minutes.

The PRESIDING OFFICER. The Senator from Minnesota is recognized for 5 minutes.

Mr. McCARTHY. Mr. President, the proposed repeal of the dividend credit provision of existing law has been considered twice since 1959 by the Senate. On those occasions, the Senate acted to repeal the dividend credit.

This question was later taken up as more or less of a separate issue; that happened in 1962, I believe. At that time the Senate again acted to repeal the dividend credit provision of existing law.

The arguments now made on this subject were, I believe, considered by the House Ways and Means Committee and by the House itself, and certainly by the Senate Finance Committee, in connection with its consideration of this matter.

Really the only justification for allowance of the dividend credit was that it was a device to reduce the amount of taxes paid by those in the high income brackets.

I submit that the only substantial argument in support of the inclusion of the dividend credit provision when first it was adopted was that some investors were perhaps paying 90 percent of their incomes in taxes. However, the pending bill will reduce the top bracket from the 90-percent rate to a rate of 70 percent, and will correspondingly increase the rates to be applied to those in the higher brackets which are short of the top bracket.

It also was argued that it was necessary to provide an incentive for taxpayers to make investments; but since 1954, when this provision was first included in the law, we have taken action to provide for guideline depreciation, and that action resulted in reducing business taxes by $1,500 million annually; and we have provided for the investment credit, which resulted in a reduction of $1,500 million in business taxes; and in the pending bill we shall reduce corporate taxes by $2,200 million, and at the same time it is proposed that individual income taxes be reduced by approximately $9.5 billion.

This provision of the pending bill would remove a very special provision of law which has very limited application, and which benefits very few taxpayers, insofar as any substantial benefits are concerned.

However, it is argued that the existing dividend credit constitutes a great incentive for investment in American business enterprises. But, Mr. President, when we set the $200 million involved in the amendment the Senator from Kentucky [Mr. MORTON] is proposing against the $2.2 billion of proposed reductions of corporate taxes, plus whatever percentage of the $9.5 billion reduction of individual income taxes could be expected to flow back, in addition, into investments in American busi-

nesses—in other words, into the U.S. private enterprise system—I suggest that the pending amendment should not be adopted. It is true that it involves approximately $200 million; but it would perpetuate in the code an inequity which should never have been put into it in 1954.

As the pending bill now stands, it will increase from $50 to $100 the dividend exemption. That will mean many of the 17 million investors to whom reference has been made—I refer to those who have only small investments in corporations—would be in a better position under the provisions of the pending bill than they would be under the provisions of the pending amendment, if we thereby continued the $50 deduction allowed by existing law, and then, under the amendment, increased the dividend credit deduction to a maximum of $300.

Mr. President, I reserve the remainder of the time under my control.

Mr. MORTON. Mr. President, I yield myself 2 minutes.

The PRESIDING OFFICER. The Senator from Kentucky is recognized for 2 minutes.

Mr. MORTON. First of all, Mr. President, if it was an inequity to write the dividend credit provision into existing law, why does the pending bill provide for an increase of the dividend credit from $50 to $100, as an exclusion from the income on which the income tax is to be paid? Therefore, Mr. President, it is clear that this provision of existing law is not an inequity.

The amendment I have offered in behalf of the minority leader [Mr. DIRKSEN] and myself will not decrease at all the $100 limit provided in the pending bill. In short, Mr. President, if it is wrong to include in the law any provision for a credit for dividends, a provision to exclude either $50 or $100 is wrong.

Mr. McCARTHY. I think it probably would be wrong even to allow the $100 exclusion provided by the bill as it now stands.

Mr. MORTON. Then why does not the Senator from Minnesota submit an amendment to eliminate that part of the pending bill?

Mr. McCARTHY. However, I point out that this provision of the pending bill is not as wrong as the amendment the Senator from Kentucky is proposing would be.

Mr. MORTON. Mr. President, the amendment I have submitted on behalf of the Senator from Illinois applies to

[*P. 1797*]

dividend income up to a total of $7,500. I believe it is a fact that those who receive as dividends part of the $48 remaining after the corporations pay, as corporation taxes, $52 on each $100 of their earnings, are actually subject to double taxation when they are required to pay a tax on the dividends they receive. Certainly that system results in piling one tax on top of another..

Therefore, Mr. President, I believe the pending amendment is equitable.

The PRESIDING OFFICER. What is the will of the Senate?

Mr. McCARTHY. Mr. President, I have no further request for time.

Mr. MORTON. Mr. President, I yield 5 minutes to the Senator from Kansas [Mr. CARLSON].

The PRESIDING OFFICER (Mr. MANSFIELD in the chair). The Senator from Kansas is recognized for 5 minutes.

Mr. CARLSON. Mr. President, we discussed the 4-percent dividend exclusion. I believe it is important to remember that we need to encourage and not discourage people to put their dollars to work in equity investments in our domestic enterprise, thereby creating more jobs, boosting our productivity, and greatly strengthening the competitive power of American industry in world markets.

There is general agreement that the demands for funds for new capital formation will be very great over the next decade. For the 10-year period from 1960 to 1970, $500 billion of funds must be forthcoming to take care of the new construction which is necessary.

To finance this huge construction program, the cash needed can come from only three sources:

First. Cash generation from the day-to-day operations of business through depreciation reserves and retained earnings.

Second. Debt financing.

Third. Equity financing.

Debt and equity securities—the latter, preferred and common stocks—must be sold in the free market. New capital formation must be developed, in order that these securities can be marketed at reasonable rates. Equity financing is especially important as it forms the base upon which the credit of the enterprise is established and thus is necessary so that debt securities can be marketed at reasonable cost.

The record of equity security financing for all corporations during the 5-year period ended in 1962 shows an average of $2.4 billion per year. It is evident that a construction program of $500 billion will require a large increase in equity

security sales and presents industry with a great task.

The need to provide incentive for venture-type investments was clearly recognized at the time the 1954 Tax Act was passed by Congress as the key to modernization of our productive capacity. At that time, it was proposed that $50 of dividends received by individuals would be excluded in 1954 and $100 thereafter, with a 5-percent tax credit for 1954 and then 10 percent in subsequent years. Later passage of the bill lowered these amounts to the present $50 exclusion and 4-percent tax credit. Yet, in spite of the claim that this has not met the objective of stimulating investment in equities, the record shows that even with the slightly beneficial changes then adopted the number of people owning stock has risen 162 percent from 6.5 million in 1952 to the present total of over 17 million. So, given encouragement to invest in job-creating economic growth equity measures, effective results have ensued from the judicious congressional forethought exercised in the passage of the 1954 legislation. It may be, therefore, reasonably expected that the greater this form of tax adjustment, the greater will be the numbers of people willing to provide capital funds for the growth of the economy.

It seems to me that the Treasury could well afford to commit $221.7 million for additional tax relief, especially with much of this directed to the low- and median-income taxpayers who are investors, of the total of $11.1 billion reduction in taxes effective under H.R. 8363. Tax exemption of dividends is a powerful inducement to individuals for investment in equity securities. It would be most constructive, when making income-tax revisions, to give some added advantage to low- and median-income taxpayers who are also investors.

What results were obtained by the dividend taxation relief granted by Congress in the 1954 act?

The 1960 records of the U.S. Treasury Department show a reduction resulting:

From the $50 exclusion of	$91,333,000
From the 4-percent tax credit of	301,672,000
Total	393,005,000

Mr. President, I ask unanimous consent to have printed in the RECORD a table confirming these figures.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

How do the income groups receiving the benefits of these two relief measures compare? Analysis shows the following picture:

Adjusted gross income classes	Amount of tax loss to the Treasury Department by reason of—			
	$50 dividend exclusión		4 percent tax credit	
	Amount	Percent	Amount	Percent
Below $5,000	$12,200,000	13.4	$16,664,000	5.5
$5,000 to $10,000	25,030,000	27.4	38,083,000	12.6
$10,000 to $20,000	28,729,000	31.5	61,778,000	20.5
$20,000 to $50,000	19,173,000	21.0	81,393,000	27.0
Over $50,000	6,201,000	6.7	103,754,000	34.4
Total	91,333,000	100.0	301,672,000	100.0

Mr. CARLSON. Mr. President, these figures show, by income groups, the relief that the recipients of the two tax benefits received. Note that 40.8 percent of the total benefits from the $50 dividend exclusion were realized by those whose returns showed adjusted gross income of less than $10,000, compared with 18.1 percent from the 4-percent-tax credit. But, also to be noted is that these lower income groups benefit dollarwise substantially more from the 4-percent credit than from the $50 exclusion.

This suggests that while an increase in the dividend exclusion would be of great help to the taxpayers in the lower income brackets, they also have a very real interest in the retention of the 4-percent credit.

While substantial increases have taken place in the number of taxpaying stockholders, there is a vast number of people who remain as potential investors.

Chart I shows the number of people who do not report dividends, broken down by adjusted gross income classes. There were 78,847,301 people who filed taxable income returns in 1960; 69½ million did not report dividends. Of this group, there were 63,575,382 who had taxable incomes of less than $10,000. These do not now own stock.

Evidently, the big field for potential investors in equities is the over 63 million people with taxable income of less than $10,000 who do not now own stock.

If a better tax incentive were provided, a substantial number of these noninvestors would be stimulated to use some of their savings to buy equity securities in a cross section of industry. There is no doubt tax exemption of dividends is a powerful influence for equity investment by the small investor.

I sincerely hope that the amendment will receive the approval of the Senate.

Mr. CURTIS. Mr. President, will the Senator from Kentucky yield me 3 minutes at this time?

Mr. MORTON. Mr. President, I yield myself 2 minutes and shall then be glad to yield to the Senator from Nebraska.

The PRESIDING OFFICER (Mr. INOUYE in the chair). The Senator from Kentucky is recognized for 2 minutes.

Mr. MORTON. With regard to the tax reduction bill, for those who have a taxable income of $3,500, the tax relief amounts to 3.86 percent. For those who have taxable incomes of $4,000, the tax relief amounts to 3.75 per cent. At $6,000 it is 3.84 percent. It reaches 4 percent at $7,000.

I should like to point out that at the lower level, a person having a taxable income of $500, the reduction is 6 percent. But there is a bracket between $3,500 and $6,500 of taxable income where the reduction under the bill is less than 4 percent.

I point out that there will be thousands of retired people, widows, and others, now living on dividends who will be denied the 4-percent credit and will receive only a tax reduction of less than 4 percent.

Therefore, under the bill, unless this amendment is passed, these people will actually be paying higher taxes than they are paying today.

The purpose of the amendment is to protect not the rich but the group in the area from $3,500 to $6,500 of taxable income who today are getting the dividend tax credit, but who will have less money after taxes, if we pass this bill, than they have now.

As I read the President's message, and as I understand the purpose of the bill, it is to reduce taxes—which it will not do.

[*P. 1798*]

Now I am glad to yield to the Senator from Nebraska for such time as he may desire.

Mr. CURTIS. I shall support the pending amendment but I do so because it has some relationship to double taxation and dividends which to my mind means taxing the same income twice and is not conducive to a health economy and the creation of jobs.

Mr. McCARTHY. Mr. President, for the sake of the RECORD, I think we ought to note the effect of the provisions of the bill which the Finance Committee has had before it with regard to taxes to be paid by people with dividend income. Those effects are described in the report, but I should like to summarize them briefly.

Repeal of the dividend credit would have the following effect on the taxpayers who receive dividend income. Let us consider the case of the small investor whose income from dividends does not exceed $50 or $100, if married. He is already completely excluded from income tax.

Second, consider the 2 million medium investors who would have their taxes reduced by the changes, because the increase in the dividend exclusion would more than offset the loss of dividend credit. That would include not only investors whose dividends would be completely excluded under the bill, but many others with more than $100 or $200 in dividends.

I ask unanimous consent to have printed at this point in the RECORD tables marked 1 and 2, which state examples of the manner in which the changes in the law would apply.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

TABLE 1.—*Taxpayers deriving more tax savings from additional dividend exclusion than their loss of tax savings from repeal of the dividend credit—single persons*

[Assumes House bill rates]

Taxable income [1]	Tax savings from additional $50 dividend exclusion will exceed the loss of tax savings from repeal of dividend credit if—	
	Dividend income is less than—	Stockholdings are valued at less than [2]—
Under $500	$225.00	$7,031
$500 to $1,000	237.50	7,422
$1,000 to $1,500	250.00	7,812
$1,500 to $2,000	262.50	8,203
$2,000 to $4,000	287.50	8,984
$4,000 to $6,000	325.00	10,156
$6,000 to $8,000	362.50	11,328
$8,000 to $10,000	400.00	12,500
$10,000 to $12,000	450.00	14,063
$12,000 to $14,000	500.00	15,625
$14,000 to $16,000	537.50	16,797
$16,000 to $18,000	575.00	17,969
$18,000 to $20,000	612.50	19,141
$20,000 to $22,000	650.00	20,313
$22,000 to $26,000	675.00	21,094
$26,000 to $32,000	712.50	22,266
$32,000 to $38,000	737.50	23,047
$38,000 to $44,000	775.00	24,219
$44,000 to $50,000	800.00	25,000
$50,000 to $60,000	825.00	25,781
$60,000 to $70,000	850.00	26,563
$70,000 to $80,000	875.00	27,344
$80,000 to $90,000	900.00	28,125
$90,000 to $100,000	912.50	28,516
$100,000 to $150,000	925.00	28,906
$150,000 to $200,000	925.00	28,906
$200,000 and over	925.00	28,906

[1] Taxable income excludes personal exemptions and deductions. Subtract exemptions and deductions from adjusted gross income to determine taxable income.

[2] Assumes a 3.2 percent return on investment.

TABLE 2.—*Taxpayers deriving more tax savings from additional dividend exclusion than their loss of tax savings from repeal of the dividend credit—married persons*

[Assumes House bill rates]

Taxable income [1]	Tax savings from additional $100 dividend exclusion will exceed the loss of tax savings from repeal of dividend credit if—	
	Dividend income is less than—	Stockholdings are valued at less than [2]—
Under $1,000	$450	$14,063
$1,000 to $2,000	475	14,844
$2,000 to $3,000	500	15,624
$3,000 to $4,000	525	16,406
$4,000 to $8,000	575	17,968
$8,000 to $12,000	650	20,312
$12,000 to $16,000	725	22,656
$16,000 to $20,000	800	25,000
$20,000 to $24,000	900	28,125
$24,000 to $28,000	1,000	31,250
$28,000 to $32,000	1,075	33,594
$32,000 to $36,000	1,150	35,938
$36,000 to $40,000	1,225	38,281
$40,000 to $44,000	1,300	40,625
$44,000 to $52,000	1,350	42,188
$52,000 to $64,000	1,425	44,531
$64,000 to $76,000	1,475	46,094
$76,000 to $88,000	1,550	48,438
$88,000 to $100,000	1,600	50,000
$100,000 to $120,000	1,650	51,563
$120,000 to $140,000	1,700	53,125
$140,000 to $160,000	1,750	54,688
$160,000 to $180,000	1,800	56,250
$180,000 to $200,000	1,825	57,031
$200,000 to $300,000	1,850	57,813
$300,000 to $400,000	1,850	57,813
$400,000 and over	1,850	57,813

[1] Taxable income excludes personal exemptions and deductions. Subtract exemptions and deductions from adjusted gross income to determine taxable income.
[2] Assumes a 3.2 percent return on investment.

Source: Office of the Secretary of the Treasury, Office of Tax Analysis, Jan. 30, 1964.

Mr. McCARTHY. Third, there are the large investors, numbering 2.5 million. They would find that the loss of dividend credit is not fully offset by the increase in the dividend exclusion. However, the disadvantage to those large investors occasioned by the dividend provision of the tax bill would be more than offset by the individual rate reductions. So there is no investor who really would not be well served by the tax reductions which are proposed in the bill which the Finance Committee has sent to the floor of the Senate.

Mr. MORTON. Mr. President, will the Senator yield?

Mr. McCARTHY. I yield.

Mr. MORTON. Let us consider a widow who has $3,950 of taxable income.

Mr. McCARTHY. The Senator has stated one example. She would pay 50 cents more than she is paying now. Moreover, she must be receiving the retirement income credit and the only income she may have in excess of deductions and exemptions is dividend income. The narrow problem which exists arises because there is a double allowance for retirement income and dividend income under present law.

Mr. MORTON. The bill is a tax reduction bill.

Mr. McCARTHY. The Senator is correct. I believe that we can take care of all the widows that would be affected in that manner by separate proposed legislation. The Senator has presented one unusual example involving a combination of tax law relating to dividend income and retirement income. This would, at the worst point, result in an increase of only 50 cents in taxes. But that case should not require the Senate to move to back up and lose $200 million in revenue and in special tax consideration for people who are best able to pay income taxes and who are benefiting in terms of the individual benefits more than anyone else as a result of the proposals contained in the tax bill.

I would suggest that in the case stated by the Senator, if we consider the consequences of a reduction in corporate rates which would result in greater dividends, depending on the particular portfolio, even the single case presented would be better off through bigger dividends and more income after tax, even through required to pay the additional 50 cents.

Mr. MORTON. Mr. President, I yield myself 3 minutes. I do not wish to take the time of the Senate. I thought the purpose of the bill was to encourage corporations to plow back more money into investment and give more people work, and not necessarily pay out the savings and dividends.

Mr. McCARTHY. We did not specify that. The investment credit measure had that purpose in mind. But so far as the reduction in corporate rates was concerned, the judgment of the Senator from Minnesota was that the corporate directors and officers should be left free to use the benefits that would result from that provision as those directors and officers thought best. If that would involve the payment of dividends, dividend payment would be in order.

Mr. MORTON. The Senator has referred to the 1.7 million people who would be affected by the $100 credit and another 2 million that would have the benefit of the same reduction. Another 2½ million would be at some disadvantage. But there are 17 million investors in corporations. It is clear to me that for all those who fall in the income class of between $3,500 and $6,000, based on what groceries cost today, that is not a great deal of money. If we fail to adopt

the amendment, they would actually pay more taxes than they are now required to pay. To me that seems unconscionable. If the bill is a tax reduction bill, I believe that group should also have their share of the reduction.

Mr. McCARTHY. I would be glad to give them their share. But I do not think we should give to so many a greater share than we are now giving in order to take care of those one or two cases.

Mr. MORTON. Seventeen million is not one or two cases.

It could be. I do not know how many would be involved. I presume most investors fall in the class of those who receive between $5,000 and $6,000 in dividend income.

Mr. CARLSON. Mr. President, will the Senator yield at that point?

Mr. MORTON. I yield.

[*P. 1799*]

Mr. CARLSON. The people with large and substantial resources would not benefit greatly from that particular proposal. They are people who, if they wish to do so, could put their funds into tax exempt securities. It is the smaller investor that would receive some benefit, not the financially able people. It seems to me that the group of older citizens in our country and many of the less able could and would benefit. They are doing so at the present time. Some with great financial resources are turning to tax exempt securities, and I regret to see it.

Mr. MORTON. I thank the Senator. It should be pointed out also that we must have in this country 2 million new jobs each year. It is estimated that it will cost $25,000 per job. As a result, $50 billion a year will somehow be required from the private sector of the economy. We would look to those who can invest and take the risk and then, unless the amendment is agreed to, we would compel them to be subject to double taxation all the way through.

The amendment is not a rich man's amendment. We put a limit of $300 on it. A taxpayer could only take off $300. The taxpayer who has an income of $100,000 from dividends would only get $300 off his tax. But the person who is receiving only $5,000, $6,000, or $7,000 from dividends, and that is all he receives—and they live on it—then indeed I think he is entitled to that $300, because otherwise that person would pay more tax after the bill becomes law than he pays today.

The President of the United States has been speaking about poverty. He has stated that those in the $5,000 class are near poverty. Under the bill the person in the $5,000 class would have his tax increased 0.14 of 1 percent.

Has the Senator any more requests for time?

Mr. McCARTHY. I have no more requests for time. The Senator is using a highly unusual table, which shows a person who has a particular size of income, has income only from dividends and is receiving the retirement income credit. It is hard to find people in that situation.

Mr. MORTON. Mr. President, I yield 2 minutes to the Senator from Maryland [Mr. BEALL].

The PRESIDING OFFICER (Mr. WALTERS in the chair). The Senator from Maryland is recognized for 2 minutes.

Mr. BEALL. Mr. President, I was disappointed that the Senate Finance Committee saw fit, in reporting the new tax bill of 1964, to alter the existing provision relating to dividend credit. This provision was enacted to encourage investment and to give relief from double taxation on income from shares in corporations.

The bill as reported would reduce the 4-percent dividend credit to 2 percent in 1964 and repeal the credit in toto in subsequent years. The Finance Committee report justifies its action by virtue of the proposed 4 percent reduction in corporate tax rates from 52 to 48 percent. The fact is that double taxation would continue to exist and would not be eliminated by any part of the revised bill. The committee agrees that there was justification for enacting the dividend credit in 1954. There is equal justification for it today.

In addition to encouraging investment, the 4-percent dividend credit has been beneficial to our retired citizens who rely on dividend income for their support. These are people whose incomes are fixed and have not kept pace with the rising costs of living. The existing provision, which I would like to see retained, is challenged on the basis that it helps only the rich. It has been shown that many thousands of stockholders in corporations are people of moderate means and small incomes, dependent upon their dividend checks for their livelihood. I am deeply concerned with the great number of small investors who would be hurt should we permit the committee change in this respect to prevail.

I shall vote to delete this committee amendment because of the injury which the committee amendment would place on our elderly citizens who are small investors and because of the unfairness of double taxation on corporate earnings.

The PRESIDING OFFICER. The time of the Senator from Maryland has expired.

Mr. MORTON. I yield 1 more minute to the Senator from Maryland.

The PRESIDING OFFICER. The Senator from Maryland is recognized for 1 additional minute.

Mr. BEALL. Mr. President, it is not only the small investors but the elderly citizens about whom I am concerned. It is people of moderate circumstances who invest in corporations, who invest in stocks, who try to do it on their own, without any help from the Federal Government or from anybody else.

We hear stories about big investors and big corporations. They are all supposed to be rich capitalists. Actually, in the Bell Telephone System there are over 2 million shareholders. There are a million shareholders in General Motors. There are over 1 million shareholders in Standard Oil of New Jersey. Do Senators think for 1 minute that they come from the rich? No. I have seen the analysis. I am sorry I do not have it with me. When those figures are broken down, they show many little people, like the average person who started a long time ago to put his savings in corporations. These people have been the backbone of our country. Their investments have made us the world's greatest nation. After all, the corporations have been taxed. Why should we tax those people if they have had the foresight to think ahead about what they are going to do? I think we should help them.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. BEALL. I thank the Senator from Kentucky for yielding to me.

Mr. MORTON. Mr. President, I yield myself 2 minutes.

I refer to page 30 of the committee print which is the staff description of H.R. 8363, the Revenue Act of 1963, as passed by the U.S. House of Representatives.

I do not think there is any question about the competence of this staff. The committee looks to it for more reliable estimates than the Treasury can come up with. I quote from page 30 of that committee print:

Some retired taxpayers (whose income is primarily from dividends) will pay more under the bill than under existing law. This may be illustrated by taking the case of a single taxpayer 65 years of age whose entire gross income (all from dividends) is $3,500 and who is entitled to the maximum retirement income tax credit. It is assumed his deductions amount to 10 percent of his adjusted gross income under present law. The computation of tax under existing law and under H.R. 8363 in 1965 and thereafter is as follows:

I ask unanimous consent that the table appearing on page 30 of the committee print of the staff description be printed in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Single taxpayer, age 65	Present law	H.R. 8363 (1965 rates)
Gross income (all from dividends)	$3,500.00	$3,500.00
Less: Dividend exclusion from gross income	50.00	100.00
Adjusted gross income	3,450.00	3,400.00
Less: Personal exemption	1,200.00	1,200.00
Total	2,250.00	2,200.00
Less: Deductions (minimum standard deduction under H.R. 8363)	345.00	400.00
Taxable income	1,905.00	1,800.00
Tentative tax (before credits)	386.00	280.00
Less: Dividends credit (4 percent of taxable income)	76.20	0
Total	309.80	280.00
Less: Retirement income credit	304.80	228.60
Tax liability	5.00	51.40

Mr. MORTON. The table shows that today the man or woman, single, 65 years of age, with an income of $3,500, pays $5 in income taxes under the present law. Under the bill without the Dirksen amendment, he would have to pay $51.40.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MORTON. I yield myself 1 additional minute.

The present bill provides a tax increase, not a decrease—not of 3, 4, or 5 percent, but a tax increase of tenfold, of 1,000 percent. So a 1,000-percent tax increase is being put on the 65-year-old person who is receiving an income of $3,500 a year, and this is supposed to be a tax cut bill.

For that reason, I feel the Senate will adopt the amendment.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. MORTON. I yield.

Mr. HOLLAND. My own files show thousands of communications from people in the State which I represent in part—Florida. Many of them, who have to rely upon modest incomes from stock dividends, would pay more under this bill than they now pay.

I think the amendment is a proper one, and I shall certainly support it.

Mr. MORTON. I thank the Senator.

The PRESIDING OFFICER. The time of the Senator has expired.

[*P. 1800*]

Mr. MORTON. I yield myself 1 additional minute.

I am sure the Senator's State has many thousands, as do other States which are blessed with such a climate that people go there to spend their remaining years, and who live on a fixed income, for the most part, as a result of the great American free enterprise system, which we all want to support and see maintained.

Mr. McCARTHY. Mr. President, I have no further requests for time. I think the case has been well made. Apparently the Senator argues to give $200 million in special tax benefits to those who for the most part are among the wealthiest people in the country in order to prevent a hypothetical person from getting a 50-cent tax increase—and I do not know of a single person who would be affected to the extent of the 50-cent increase in taxes that the Senator is talking about. It is a theoretical person who did not appear at our hearings or who was not reported upon by the staff. It is possible that such a person would pay an increase of 50 cents. The price we would have to pay to take care of him would be $200 million in the way of a tax loss.

The record shows that the top 10 to 15 percent of the taxpayers of the country receive 80 or 90 percent of all the dividends paid.

I will rest my case on that.

Mr. MORTON. Mr. President, will the Senator yield?

Mr. McCARTHY. I yield.

Mr. MORTON. The tax would go from $5 to $51. How many people with an income of $3,500 who are living in St. Petersburg, Fla., are going to spend money to come to Washington and testify before a senatorial committee?

Mr. McCARTHY. How many people in St. Petersburg, Fla., have an income of $3,500 all of which is dividend income?

Mr. MORTON. Plenty.

Mr. McCARTHY. I do not think so.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. McCARTHY. I yield.

Mr. PASTORE. If a person received $3,500 exclusively from stock dividends, how much would the stock be worth?

Mr. McCARTHY. He would have stock worth nearly $90,000 assuming a 4-percent rate of return.

Mr. PASTORE. Then, the people we are talking about are worth $90,000?

Mr. McCARTHY. Yes; the example which has been given is theoretically possible, but in fact impossible to find.

Mr. PASTORE. Anyone who accumulated $90,000 would not be living exclusively on income from dividends, would he?

Mr. McCARTHY. There may be a few cases, but they would be rare. The $300 credit limit would apply to dividends of $7,500, which would mean an investment base of $180,000.

Mr. PASTORE. Has the committee determined what the average taxpayer in the United States, who has an income of $10,000 to $15,000 a year, or even less than $10,000 a year, would hold in stock? A great many Americans invest in stock. What is the holding of the average taxpayer?

Mr. McCARTHY. The figures are available, but we do not have them here. In general, about 90 percent of the dividend income goes to 10 to 15 percent of the income earners of the country. Then there is a scattering on down to include the lowest income group at the bottom.

Mr. PASTORE. Let us take an individual who over the years has bought stock and has accumulated about $20,000 worth of stock. About how much difference would the committee amendment make as against the amendment proposed by the Senator from Kentucky?

Mr. McCARTHY. What the committee proposes would recapture about $300 million. We would lose about $200 million if we accepted the $300 million dividend credit which is proposed by the Senator from Kentucky.

Mr. PASTORE. What I am trying to find out is not the gross amount that is involved. I have received a considerable amount of mail on this subject, and I am a little disturbed about it. A great many American wage earners buy stock. Let us assume that a person has acquired about $15,000 or $20,000 in stocks over the years. I do not know what the figure is, but computing it at about 6 percent——

Mr. McCARTHY. Four percent.

Mr. PASTORE. Four percent. That would amount to about $800, as I figure it, in dividends. How would he be affected by this discussion today? What is the difference between the committee proposal and the amendment offered by the Senator from Kentucky?

Mr. McCARTHY. Under existing law, the first $50 would be excluded from income, and it would be $100 for a married couple. That would leave him with $700. He would have a 4-percent tax credit, which would give him $28. Assuming the benefit of the $100 exclusion is at about a 25-percent rate, the exclusion would be worth about $25 in tax savings, a tax savings of $53 altogether.

Under the bill we would give him $200, which would mean he would save $50. Therefore in the case that the Senator cites, in terms of taxes paid, and without taking into consideration the other tax cuts, the taxpayer under the dividend provision of the bill would be breaking

even. That is so because we increase the exclusion from $50 to $100 in the bill, even though we repeal the 4-percent dividend credit which benefits, in most cases, the people in the high-income brackets.

So far as the little investors are concerned, they are better off under what we are proposing than under existing law.

Mr. PASTORE. So far as the exclusion is concerned, that is more beneficial with the smaller percentage of 2 as against the 4, if a man owns about $20,000 of stock. Is that correct?

Mr. McCARTHY. The example the Senator cites would break even. If the dividend income were lower, say, on $10,000 worth of stock, the man would be better off under the terms of the bill than under existing law.

Mr. PASTORE. Has it ever been determined how many people in the United States over 65 years of age live exclusively on income from dividends?

Mr. McCARTHY. I do not have those figures available.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. McCARTHY. I yield.

Mr. CARLSON. I have before me a statement from the Treasury which shows the number of taxpayers 65 years of age and over. Their adjusted gross income in 1960 was $24,273,073,000. The dividends received by them after exclusions amounted to $4,328,514,000, or 17.8 percent of their income.

This is for the 5,214,000 returns with at least one taxpayer 65 years and over.

I have before me a distribution of the dividends from a table submitted by the Bureau of Internal Revenue, for the year 1960. The number of taxpayers having dividend receipts in 1960 was 6,385,299. That was in 1960. It is estimated that now it is 17 million.

The number of taxpayers who were excluded in 1961 by the $50 deduction was 1,452,349. That leaves 4,932,950, after exclusion, with some dividend income represented in the taxpayers' adjusted gross income—7.3 percent of those people had an income of $5,000 or more—9.9 percent had an income of $2,000 but under $5,000; 11.2 percent had an income of $1,000 but under $2,000; 13.8 percent had an income of $500, but under $1,000; 10.6 percent had incomes of $300 but under $500; 7.9 percent had incomes of $200 but under $300; 13 percent had incomes of $100 but under $200. That is income from dividends; 26.3 percent had incomes of under $100.

Mr. McCARTHY. Those who received under $100 are in good shape under the bill. They are in much better shape under our bill than under existing law.

If I may have the attention of the Senator from Rhode Island, we have a figure which gives the Treasury estimate as to the recapture of taxes on dividends under the bill. We would recapture about $300 million. Of that, $10 million would come from people who are in the adjusted gross income class of $3,000 to $5,000; $30 million from those who have $5,000 to $10,000; $50 million from those who are in the $10,000 to $20,000 class; $85 million from those who are in the $20,000 to $50,000 class; $125 million will come from those whose adjusted gross income is $50,000 and more.

Mr. PASTORE. Mr. President, when the Senator speaks of adjusted gross income, is he speaking about income solely from dividends?

Mr. McCARTHY. No. This is in the general income class.

Mr. MORTON. That is without reference to the $300 limit.

Mr. McCARTHY. Yes. That would move it down somewhat.

Mr. MORTON. Somewhat? It would move it out of the area entirely.

Mr. McCARTHY. I am talking about $300.

Mr. MORTON. I suggest, before we fall out about this, that we vote.

Mr. HRUSKA. Will the Senator yield?

Mr. MORTON. I yield to the Senator from Nebraska.

Mr. HRUSKA. Mr. President, the dividend credit provision in our tax laws

[*P. 1801*]

was enacted in 1954 to provide stockholders with some small measure of relief because of the double taxation of dividends. The decision reached at that time was based on correcting an inequity which had existed for more than 20 years.

It is my considered opinion that elimination of this credit provision would be a step backward, and I am unalterably opposed to its elimination.

The provision here sought to be eliminated has been of great benefit to our country, its economy and to the investor.

Risk capital must be made available for new plants, new enterprises and for a wide variety of purposes. Through increased investment our Nation expands. Its gross national product increases and in short—we grow.

The investor looks to his dividend as his return on his investment and he is primarily concerned about the means by which his income is taxed. The incentive to invest is based on the tax break he receives. Since 1954 increasing

public participation has been achieved in stock offerings. The public—investors, large and small, are willing to make available new equity investment funds.

Many individuals will suffer if this provision is eliminated from our tax laws. Those on fixed incomes from dividends and those persons who are retired. They should not have to bear a hardship. Indeed, it would be a harsh penalty on them, should we eliminate the dividend credit provision found in our tax law.

The Dirksen-Morton amendment should be adopted.

The PRESIDING OFFICER. Do Senators in control of the time yield back the remainder of their time?

Mr. MORTON. I yield back the remainder of my time.

Mr. McCARTHY. I yield back the remainder of my time.

The PRESIDING OFFICER. All time has been yielded back. The question is on agreeing to the amendment offered by the Senator from Kentucky for himself and on behalf of the Senator from Illinois [Mr. DIRKSEN]. On this amendment, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. On this vote I have a pair with the distinguished minority leader [Mr. DIRKSEN]. If he were present and voting, he would vote "yea"; if I were at liberty to vote, I would vote "nay." I withhold my vote.

Mr. HUMPHREY. I announce that the Senator from Indiana [Mr. BAYH], the Senator from Nevada [Mr. CANNON], the Senator from Arkansas [Mr. McCLELLAN], the Senator from Oregon [Mrs. NEUBERGER], and the Senator from Georgia [Mr. RUSSELL] are absent on official business.

I also announce that the Senator from California [Mr. ENGLE] is absent because of illness.

On this vote, the Senator from Nevada [Mr. CANNON] is paired with the Senator from Georgia [Mr. RUSSELL].

If present and voting, the Senator from Nevada would vote "yea," and the Senator from Georgia would vote "nay."

I further announce that, if present and voting, the Senator from Indiana [Mr. BAYH], the Senator from California [Mr. ENGLE], and the Senator from Oregon [Mrs. NEUBERGER] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from Illinois [Mr. DIRKSEN] is necessarily absent and his pair has been previously announced.

The Senator from North Dakota [Mr. YOUNG] is detained on official business.

The result was announced—yeas 44, nays 47, as follows:

[No. 19 Leg.]

YEAS—44

Aiken	Fong	Morton
Allott	Goldwater	Mundt
Beall	Hickenlooper	Pearson
Bennett	Holland	Prouty
Boggs	Hruska	Ribicoff
Byrd, Va.	Jackson	Robertson
Carlson	Javits	Saltonstall
Case	Jordan, N.C.	Scott
Cooper	Jordan, Idaho	Simpson
Cotton	Keating	Smith
Curtis	Kuchel	Thurmond
Dodd	Lausche	Tower
Dominick	Long, Mo.	Walters
Eastland	Mechem	Williams, Del.
Ervin	Miller	

NAYS—47

Anderson	Hayden	Moss
Bartlett	Hill	Muskie
Bible	Humphrey	Nelson
Brewster	Inouye	Pastore
Burdick	Johnston	Pell
Byrd, W. Va.	Kennedy	Proxmire
Church	Long, La.	Randolph

Douglas	McCarthy	Sparkman
Edmondson	McGee	Stennis
Ellender	McGovern	Symington
Fulbright	McIntyre	Talmadge
Gore	McNamara	Williams, N.J.
Gruening	Metcalf	Yarborough
Hart	Monroney	Young, Ohio
Hartke	Morse	

NOT VOTING—9

Bayh	Engle	Neuberger
Cannon	Mansfield	Russell
Dirksen	McClellan	Young, N. Dak.

So the amendment offered by Mr. MORTON for himself and Mr. DIRKSEN was rejected.

Mr. LONG of Louisiana. Mr. President, I move that the vote by which the amendment was rejected be reconsidered.

Mr. McCARTHY. Mr. President, I move that the motion to reconsider be laid on the table.

Mr. MORTON. Mr. President, first, I wish to know the result of the vote; I should like to be informed of that before the vote is taken on the question of agreeing to the motion to lay on the table the motion to reconsider.

The PRESIDING OFFICER. The amendment was rejected by a vote of 44 yeas to 47 nays.

The question now is on agreeing to the motion to lay on the table the motion to reconsider.

The motion to lay on the table was agreed to.

THE RIBICOFF AMENDMENT

Mr. McGEE. Mr. President, I rise to speak not only as a Senator, but also as an educator. It might be expected that I would support the Ribicoff amendment, which seems to propose to give a tax "break" to parents with children in college. With that principle, I could not agree more fully. But I hasten to sug-

gest that it is more fancy than fact, in this instance.

We have under consideration a bill which has the basic purpose of cutting taxes. Let us not lose sight of that point. This is not a higher education bill. This is not a student tuition bill. This is a tax-cut measure. Therefore, it is a serious mistake to attempt to slip in any kind of higher education proposal under whatever guise. In fact, the proposal, in my judgment, would have the effect of destroying the major impact of the tax-cut proposal. By reducing the amount of money going into the Treasury of the United States by hundreds of millions of dollars, at the same time that we seek to cut taxes, would seem to be self-defeating. The point of the one would automatically dull the point of the other.

Let us be forthright about our efforts to help American parents who are paying high tuition costs for their children in our universities, by passing specific legislation to achieve that end. Personally, I oppose the efforts of those who would use our deep emotional and personal desires to strengthen our higher educational program as a cloak for defeating the purposes of a tax-cut measure.

A second reason for opposing the Ribicoff amendment lies in its approach to the problem of high tuition cost. It would provide the major assistance at the top among the highest income groups, perhaps in the hopes that this kind of subsidy to those who are best able to pay tuition would eventually trickle down to those least able to meet those same costs. What the proposed amendment would do is supply the most aid to families whose children are attending Smith, Vassar, Harvard, Yale, or Princeton. In effect, it is a disguised subsidy for the Ivy League schools. If we want to be forthright about this, I would propose legislation aimed at tuition assistance for the lower income families; for the parents least able to send their children to college. Let us build this kind of help from the bottom of the economic scale up, rather than having it trickle from the top of the tuition ladder downward.

A third reason for opposing the Ribicoff amendment is that it discriminates against the land-grant colleges and universities such as the University of Wyoming. By favoring the rich, private institutions, it would detract from the competitive strengths of our State universities. Representing as I do a State with a strong land-grant institution; namely, the University of Wyoming, I could not possibly support a bill that would be "loaded" against the State university.

Mr. President, I would like to mention in these remarks a telegram which I have received from the president of the institution where I was a professor of history for many years, Dr. G. D. Humphrey. In his wire to me he says:

> Urge that you oppose tuition tax credit proposal. Bill is highly discriminatory against public institutions and low-income students and families. Believe it would be detrimental to University of Wyoming.

I say to my colleague, let us get on with the business at hand which is that of legislating a constructive tax cut for the purpose of stimulating the national economy. Then, let us turn to the problem of financing the costs of higher education as a separate item of legislation. [*P. 1802*]

The importance to parents and students of cost relief for higher education should not be diminished by burying it in the pending bill. This urgent need deserves separate but speedy consideration on its own merits.

TAX REDUCTION FOR ELECTRICAL CONSUMERS

Mr. METCALF. Mr. President—

> For as far ahead as almost anyone would dare to look, the investor-owned electric utility industry should maintain its preeminence as the most consistently growing business in the United States.
>
> Other industries have grown faster in shorter periods of time but over a period of 60 years none can match the remarkable record of the electric utilities. This historical growth rate has been almost 6 percent a year, one year after another. Even more impressive is the fact that since 1950 there has been acceleration of this pace to a point where some utilities match or surpass the records of pace setters in other industries.

Mr. President, those introductory paragraphs which I just read are not my words, nor those of other opponents of section 203(e) of the bill under discussion.

Those paragraphs came verbatim from a brochure published last year by Merrill Lynch, Pierce, Fenner & Smith, Inc. This report concludes by asking and answering a question:

> What's your investment objective? Relative safety? Income? Growth? If so there are a large number of electric companies to choose from.

Does anyone seriously believe that this preeminent, pace-setting, "growth" industry needs another subsidy, that the Congress should prohibit electrical consumers from sharing in tax reduction.

Let me quote further from the Merrill Lynch report:

> Net income (for electric utilities) has advanced from 14.5 cents out of every revenue dollar in 1952 to 18.1 cents in 1962, a gain of almost 25 percent. Recently, particularly beginning in 1962, there have been some

moderate forms of tax relief in the form of new guidelines and the investment tax credit.

And then, the report adds:

> Such relief has not redounded completely to the benefit of the stockholder.

Another way of phrasing that last point would be to say that most of the relief did benefit the stockholder. And now it is proposed that Congress write legislation which would virtually assure that only stockholders, and not ratepayers, would benefit from yet more tax favoritism for an industry already fabulously wealthy.

One of those rare companies which does believe in passing on tax savings to consumers is American Electric Power. During the past decade, according to the Merrill Lynch report, this company's revenues have increased 80 percent, which is "fairly typical of the industry in general."

I submit, Mr. President, that the regulators should be left free to consider the matter of flow through, that we heed the counsel of Chairman Swidler, of the Federal Power Commission.

Mr. President, the August 1963 issue of Fortune carried a summary of the assets, operating revenues, invested capital and net income as percent of invested capital of the 50 largest utilities.

They have had, Fortune says and the figures show, a "good year." Some of the smaller companies not listed, including the company upon which most of my constituents are dependent, have done even better. The Montana Power Co. extracts the most exorbitant profit of any of the major electric utilities.

This Fortune list may be helpful to Members, to determine how utilities—telephone, gas, and electric—in their area are getting along, and I ask unanimous consent to insert the tabulation at this point in the RECORD.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

The 50 largest utilities (ranked by assets)

Rank 1962	Rank 1961	Company	Assets [1]	Operating revenues [2] Amount	1962	1961	Net income Amount	1962	1961	Invested capital [3] Amount	1962	1961	Net income as percent of invested capital [4] Percent	1962	1961

[P. 1803]

[1] Total assets employed in business net of depreciation, Dec. 31, 1962. Consolidated subsidiaries included.

[2] Gross receipts from operations during calendar year 1962, including nonutility revenues from manufacturing, transportation, etc.

[3] Capital stock, surplus, and retained earnings (i.e., net worth) as of Dec. 31, 1962.

[4] Figured on the invested capital as of Dec. 31, 1962.

[5] Excludes manufacturing subsidiaries.

[6] Preferred stock of subsidiaries, held by the public, is included in invested capital, but dividends on these stocks have been deducted before arriving at net profit; as a result, the ratio of profit to invested capital for these holding companies is understated in relation to other companies on the list.

[7] Not on last year's list.

NOTE.—After a below-par performance by the 1961 group, the 50 largest U.S. utility systems in 1962 had a good year. Their combined operating revenues were 7 percent higher than the 1961 group, and their combined profits were 7.7 percent higher. For the second straight year, Panhandle Eastern Pipe Line had the highest return on invested capital, 16.2 percent. The median return on invested capital was 9.8 percent, up from 9.5 percent in 1961.

Mr. METCALF. Mr. President, early last month I brought to the attention of the Senate the organized effort of private power companies to manipulate public opinion in behalf of "investor-owned utilities" through the medium of an artificially stimulated letter-writing campaign labeled "Project Action."

Last week I placed in the CONGRESSIONAL RECORD for the further information of the Senate additional documentation of the propaganda published by these IOU's in the form of a Project Action newsletter. Volume 1, No. 1 of this newsletter included the following statement:

> When Government promises subsidy from crib to crypt, it is easy for the public to forget the undergirding free enterprise concepts of our American heritage.

It is apparently equally easy for the IOU's to forget.

Section 203(e) of H.R. 8363, the tax revision bill now before the Senate, would give private power companies a potential $1 billion in cold cash over the next 10 years—a gift from the Government of the United States taken out of the pockets of consumers.

I have seen no statement from the IOU's—who are ever active in attacking Federal multiple-purpose water projects and the REA program—indicating that they have decided to decline this gratuity, which represents one more in a series of subsidies and special tax benefits accorded privately owned electric systems over the last decade. The most recent figures available show that private power companies have accumulated $1.5 billion in "deferred income taxes"—phantom taxes which the companies collected from their customers but did not pay to the Federal Government—as a result of accelerated amortization and liberalized depreciation.

Mr. President, I ask unanimous consent to insert at this point in my remarks a list of private power companies who are currently beneficiaries of these federally certified interest-free contributions.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

AMOUNTS COLLECTED BY POWER COMPANIES FROM CONSUMERS FOR TAXES BUT NOT PAID AS TAXES

Privately owned electric utilities, classes A and B—Accumulated deferred taxes on income as of Dec. 31, 1962

Company	Attributable to accelerated amortization (sec. 168 of 1954 Internal Revenue Code)	Attributable to liberalized depreciation (sec. 167 of 1954 Internal Revenue Code)	Total

Mr. METCALF. Mr. President, now electric utilities are in line for a new dispensation. Section 203(e) of H.R. 8363 would prohibit the Federal Power Commission from requiring private power companies to "flow through" to income the 3-percent investment tax credit they received under 1962 tax legislation.

Section 203(e) is but the latest bonanza for these companies through tampering with the tax laws. That portion of section 203(e) dealing with public utilities forbids all Federal regulatory agencies—including the Federal Power Commission—from reducing the income tax allowance of private power companies in fixing rates by more than a share of the investment tax credit prorated over the average useful life of the property—unless the utility involved consents.

What is the effect of this proviso?

First. It means a possible $1 billion windfall profit to private power companies over the next decade, if applied nationally—with more to come in future years.

On the basis of recent investment, the Federal Power Commission estimates that the tax credit is presently worth about $86 million a year in tax savings to private power companies. However, burgeoning demands for electricity mean larger annual future investment in plant and equipment, and for each $100 spent, the utilities can subtract $3 from their tax bill. A conservative approximation indicates that investment will compound at the rate of 6 percent per year. The result: Tax cuts totaling $1 billion for private power companies over a 10-year period—which could be just the beginning of this lucrative take from the Treasury.

Second. It means a $2 billion contribution by consumers by 1975—just as a starter.

Since private power companies collect about $2 in rates to net a $1 rate of return due to the doubling effect of the income tax, consumers will pony up twice the amount retained by the companies if the benefit of the investment tax credit are not flowed through to utility customers.

Under section 203(e), private power companies can keep two sets of books—one for rate purposes and one for tax purposes. Thus they can simultaneously take advantage of the investment tax credit and cut their tax bill while charging consumers at a level which presumes only a small fraction of the actual tax cut.

Third. It means turning over Federal rate regulating functions regarding the investment tax credit to the people who are supposed to be regulated—and opens the door for a whole era of "regulation in reverse."

This is nothing but a proposal for licensed larcency of the consumers' pocketbook. It is similar to suggesting that advertisers be allowed to determine whether or not the Federal Trade Commission can issue sanctions against deceptive practices. It is like permitting railroads to determine when and where the regulations of the Interstate Commerce Commission should apply. If this approach were standard among Federal regulatory agencies, we would give manufacturers the right to veto determinations of the Food and Drug Administration.

Should Congress impose this restriction on the Federal Power Commission, State public utility commissions will face heavy pressure to follow suit in their handling of the investment tax credit—to the further detriment of the consumer and the regulatory process. The concept of rates based on actual costs would receive a crippling blow.

Private power companies represent legal monopolies, sheltered against risk and guaranteed a reasonable rate of return which assures access to needed capital. Despite this fact, they have succeeded over the last decade in obtaining Federal financial favors at the expense of the Nation's taxpayers and ratepayers which must cause Bluebeard to wiggle enviously in his grave. I see no reason to perpetuate this special treatment in H.R. 8363.

If the private power companies think they have a case, let them come before the appropriate legislative committees and ask for amendment of statutes defining the duties of the Federal regulatory agencies instead of tucking their special pleading into the tax bill where it does not belong.

I hope that when this matter comes to a vote in the Senate that section 203(e) will be eliminated from H.R. 8363.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. MORTON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MORSE. Mr. President, I ask unanimous consent that the order for the quorum call may be rescinded, so that I may ask unanimous consent to place certain material in the RECORD, and then if the Senate so desires another quorum call can be suggested.

The PRESIDING OFFICER (Mr. Mc-

INTYRE in the chair). Without objection, it is so ordered.

TAX REDUCTION RESULTING FROM INVESTMENT CREDIT

Mr. MORSE. Mr. President, section 203(e) of the tax bill favors the private utilities. This demonstrates once again that their greed is only surpassed by their shortsightedness. It is a brazen attempt to circumvent the regulatory process, to erode a part of the responsibility of the regulatory agencies to determine a fair rate of return, and to enable the utilities to pocket the tax reductions which they are enjoying as a result of the tax credit, without any interference from regulators.

I do not understand why the administration is not speaking out on this issue. Papers are full of reports of Presidential Advisory groups on consumer problems,

[*P. 1805*]

the appointment of executive branch staff to advance consumer interests, and messages to Congress calling for new consumer legislation.

Section 203(e) is a matter of considerable importance to consumers. If it is approved, gas and electric utility customers may be robbed of $1 billion annually that could go to purchase other goods and services.

Despite the adverse effect that this proposal would have on consumers, the administration has not spoken out in vigorous fashion. In fact, if we listen to the Treasury Department, the administration does not even have a position on this matter. During hearing in the Senate Finance Committee, Secretary of the Treasury Douglas Dillon was asked:

> Do you support section 203(e)?

He answered:

> This was not a Treasury recommendation and, in fact, it is not a matter of basic concern to the Treasury as to how regulatory agencies handle their own job.

Joseph Swidler, Chairman of the Federal Power Commission, spoke out against this outrageous rape of the consumer, but no word came from the White House to back him up.

Mr. President, regardless of what the administration does or does not do, I think we should knock out section 203 (e) and refuse to reinstate it in conference.

If the loudest spokesmen for the utilities are to be believed, the tax credit is not a tax reduction at all. At least, this was the position taken during Senate hearings by Walter Bouldin, president of the Edison Electric Institute.

Happily, there are a few leaders in the utility industry who can look beyond tomorrow's dividends and recognize the fact that good utility service at low rates is good business for stockholders as well as for consumers.

One of these is Donald C. Cook, president of the American Electric Power Co., Inc., reportedly a close personal friend of President Lyndon B. Johnson. Mr. Cook has called upon Congress and the utilities to recognize the tax credit for what it is, a tax reduction, and to make use of the reduction to reduce electric rates to consumers.

Mr. Cook addressed a gathering of State regulatory commissioners last June 21, urging them to take a realistic view of the tax credit.

It is refreshing indeed to read Mr. Cook's declaration in that speech, that at his company:

> We believe that an efficient and economical operation resulting in the lowest possible rates and in a superior service, not only is our duty to our customers, but is the best way of conserving and enhancing the investment of our shareholders.

With this public-spirited approach to the utility business, it is not surprising that Mr. Cook favors passing along the benefits of the investment tax credit to consumers in the form of lower rates.

A year ago, American Electric Power directed its five operating subsidiaries to apply for rate reductions on the basis of congressional approval of the 3-percent credit. The company declared in a telegram to officials of its subsidiaries:

> The reduced rates have been made possible by the reduced Federal income taxes. These lower rates will serve to increase our sales of electric power, lead to construction of additional facilities to meet increased demand for power and thus stimulate business expansion in areas served by AEP system and the entire country.

Mr. Cook demonstrated his progressive approach to utility operation throughout consideration of the tax bill. In his speech to the commissioners, he traced the history of the investment tax credit from the earliest consideration of the issue by the Treasury, showing that throughout consideration of the bill, his company adhered to the position that the tax credit was, in fact, a tax reduction, and that the opportunity to pass the tax reduction on to consumers "would in itself be an incentive for utilities, and in addition, such rate reductions would increase the sales of electric energy and require the construction of additional facilities, thus accomplishing in the fullest measure the objectives of the legislation."

In taking what I regard as a public-spirited position on the tax credit, Mr. Cook raised objections to the finagling of certain public accountants on this issue,

and accused them of trying to obfuscate a basically simple issue.

> The problem of accounting for the tax reduction resulting from the investment credit is one of great simplicity—

He said—

> but more than a few people are working very hard to have it appear complex.

In conclusion, after a step-by-step summary of events leading up to controversy over regulatory treatment of the tax credit—events in which he was a personal participant—Mr. Cook declared:

> These facts seem to me to demonstrate beyond peradventure of a doubt that the Treasury and the Congress clearly intended the tax credit to be a tax reduction, that it is, in fact, a tax reduction; that only as a tax reduction can it accomplish the stated purposes of the legislation.

Mr. President, I ask unanimous consent to have printed in the RECORD an address by Donald C. Cook, president, American Electric Power Co., Inc., before the Great Lakes Conference of Railroad and Utilities Commissioners.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PANEL DISCUSSION: THE GREAT LAKES CONFERENCE OF RAILROAD AND UTILITIES COMMISSIONERS

(By Donald C. Cook, president, American Electric Power Co., Inc., the Greenbrier, White Sulphur Springs, W. Va., Friday, June 21, 1963)

The problem of accounting for the tax reduction resulting from the investment credit is one of great simplicity. But more than a few people are working very hard to have it appear complex. Thus, from the time the tax reduction was first proposed, certain companies and certain public accounting firms, including Arthur Andersen & Co., of which Mr. Spacek is managing partner (but, I should point out, not including Haskins & Sells, of which Mr. Powell is senior partner), have sought to obscure the fact that we were dealing with a tax reduction. Instead, they have sought to characterize the tax reduction as some sort of a Government subsidy or a tax postponement. On that basis they have tried to find ways to avoid a reduction in reported operating expenses.

In addition, considerable efforts have been made by some, including Arthur Andersen & Co. particularly, to try to establish in the public utility field the proposition that the lawful requirements of public service commissions and other regulatory bodies with which they disagree may not be reflected in published financial statements but must, instead, either remain hidden in the commission archives or be branded as improper and misleading.

The fact is that Mr. Spacek does not have a very high opinion of either the ability or devotion to duty of commissioners and commissions. He does not think they have the ability or the desire to protect the public interest, and he would remedy this deficiency by setting up Arthur Andersen & Co. and the AICPA as the supervisor of the commissions to ensure that they do their duty. I will have more to say about this later and then will quote some of Mr. Spacek's published language on this point.

I have said that the problem of accounting for the tax reduction resulting from the tax credit is one of utmost simplicity. I will now outline why this is so.

The control of accounting by commissions is recognized as fundamental to the proper regulation of public service corporations. This is true above all else in connection with the regulation of rates.

Public service corporations carry on a business affected with the public interest. For the right to carry on such business they must submit themselves to comprehensive regulation by both State and Federal agencies. The most important aspect of the regulatory scheme is that rates and charges for service must be fixed by the commissions at a point permitting the utility to earn a fair return, after allowance for all operating expenses, on the fair value of the property devoted to the public use.

It was inevitable that many accounting questions would arise both as to what constitutes the rate base and as to what constitutes allowable operating expenses for rate purposes.

In order to enable the regulatory process to be carried out in an orderly way, to minimize controversy, and to insure fair and equitable treatment for consumers and owners alike, the uniform system of accounts was born. The right to a regulatory body to promulgate accounting requirements in the form of a uniform sysem of accounts and the duty of a public utility to follow it have long since been judicially established. Of course all of this is elemenatry to this group, but it needs to be emphasized because of its fundamental importance.

Uniform accounting records are not an end in themselves. They are merely a means to other ends, the most important of which is to assist commissions in the exercises of their ratemaking functions. Since the prime purpose of a uniform system of accounts is to produce definitive data to be used for rate regulation, it is normal to expect that decisions on accouting questions made by regulatory bodies, even though not made in rate proceedings, will foreshadow the treatment later to be accorded for rate purposes. Here, then, is the real reason why accounting controversies flare so quickly, continue so interminably, and die so painfully. This is why we so often hear, as we have heard today from Mr. Spacek, the voice of accounting speaking the words of ratemaking.

There are three principal interests to be served by the regulatory process—the interest of consumers, the interest of investors, and the general public interest. In theory at least, and much more often in practice than is generally supposed, regulatory bodies do a good and faithful job in balancing and accommodating these interests. It is to be ex-

[P. 1806]

pected, however, that the regulatory bodies, either through their staffs or through their

commissioners, will place primary emphasis on the interests of consumers. It is also to be expected that representatives of the owners will fill the equally proper role of attempting to protect the interests of investors. I am happy to say that in my experience most commissions, regardless of their point of primary emphasis, have been thoroughly alive to their obligation to be fair to investors, and most utility companies have been equally alive to their obligations to consumers. In the American Electric Power system we believe that the best way to serve our stockholders is to do the best possible job for our customers. We believe that an efficient and economical operation resulting in the lowest possible rates and in a superior service not only is our duty to our customers but is the best way of conserving and enhancing the investment of our shareholders.

As I have stated, it is inevitable that what a regulatory body requires as a matter of accounting will have an important—indeed, almost inevitable—impact on the rates charged consumers and on the return to investors.

Since this is so, the most meaningful financial statements for investors to have as the basis for determining the financial condition and results of operations of a regulated utility are those reflecting the lawful accounting requirements of the regulatory body having primary rate jurisdiction which, in turn, are translated into the lawful ratemaking requirements of such body. Thus, if a commission having the major rate jurisdiction requires an item to be classified in a uniform system of accounts as an operating expense, the most meaningful financial statements are those that reflect the item as an operating expense. Similarly, if a particular item is held not to be an operating expense and is not permitted to be classified as such, the most meaningful financial statements are those that do not reflect that item as an expense. To do otherwise would arbitrarily lead to the preparation and dissemination of financial statements not reflecting the economic realities of the enterprise.

An investor needs to know what the facts are, and in the public utility field the lawful requirements of the regulatory bodies having primary rate jurisdiction establish the facts, Arthur Andersen & Co. and Mr. Spacek to the contrary notwithstanding.

There are among public accountants some who feel they are answerable to no one but themselves and, being excessively confident of their own wisdom and virtue, think that they should have the final say on these important matters. Mr. Spacek, for example, says in effect that if in his opinion the commissions do not make their accounting decisions on the basis of what he believes to constitute generally accepted accounting principles, he has the power to overrule them, to try to force another treatment or, if unsuccessful in doing so, to brand financial statements prepared on the basis of the lawful requirements of the commissions as unsound and misleading.

And who, may I ask, has set up my good friend Mr. Spacek as chief justice of the supreme court of accounting? The answer is that he is self-appointed. And where can an appeal be taken from one of his decisions? Nowhere, absolutely nowhere.

As I said earlier, Mr. Spacek does not have much confidence in commissions and commissioners. He thinks they are not, for the most part, very able, and beyond that he feels that they really have no proper conception of the public interest. This is not merely my opinion—this is what he publicly states.

In a recent article in Investment Dealers' Digest entitled "Significance of Controversy Over Accounting for Tax, Depreciation Benefits," in criticizing the accounting requirements of certain commissions, Mr. Spacek states that "* * * It will be recalled that many of the accounting abuses that led to a lack of public confidence in the 1920's and 1930's were ordered by regulatory commissions," and he clearly and categorically states that the present commission requirements—the requirements in the year 1963 with which he disagrees—are abuses. This is strong language. In this same spirit of high regard for regulatory bodies and referring to present requirements, he continues: "We thus see utility commissions enforcing a substandard brand of accounting as they did prior to the 1930's."

And what is the basis of this charge against utility commissioners? It is merely that in doing their job as they see it they have refused to classify as an operating expense an amount equal to a tax reduction—a tax that has not been assessed, is not owing, and never will be owed.

And against whom does he level this charge? He levels it against the New York, California, Vermont, Connecticut, Kentucky, Ohio, Wisconsin, Virginia, West Virginia, and Tennessee commissions among the State commissions, and against the Interstate Commerce Commission and the Securities and Exchange Commission among the Federal commissions. This is quite a list of distinguished bodies to be maligned, and I cannot help but recall the words of Cassius in "Julius Caesar":

"Upon what meat doth this our Caesar feed that he is grown so great?" Shakespeare, "Julius Caesar," act 1, scene 2, line 148.

Now perhaps you understand more fully why it is that I would prefer to have power and authority in the hands of commissions, which are necessarily subject to judicial restraints, rather than in those of self-appointed accounting czars answerable to no one.

And what is the basis for this sweeping judgment that following the lawful requirements of regulatory bodies and accounting for the facts as they are, for recognizing a tax reduction for what it is, for not charging customers for taxes that do not have to be paid, is bad accounting and does not produce accurate financial statements? The answer can only be found in the amorphous phrase "matching costs and revenues," the most overworked accounting cliche of modern times, that remarkable accounting Mother Hubbard that covers everything and reveals nothing.

What is this concept of matching costs and revenues? It merely means that against the revenues received in a particular period there should be charged all the costs associated with the production of those revenunes. But

I ask in all sincerity, isn't it rather foolish to speak of an income tax reduction as representing a cost? And if no cost is involved, how can the "matching costs and revenues" doctrine be used to support a charge to operating expense when no expense has been incurred? Further, whatever abstruse accounting theory might be spun to justify departing from the facts, once a regulatory body having primary rate jurisdiction has made a determination of the character of an accounting item and that determination has become final as a matter of law, the character of the item has become fixed and the most meaningful financial statements that can be prepared and disseminated are those reflecting that determination. There is no better example of this than the regulatory requirement that plant and property must be stated at original cost regardless of its actual cost. I do not say this is the way it should be; I merely say this is the way it is.

Mr. Spacek makes much of the requirement of consistency, stating that "it is in the best interests of the U.S. economy and utility customers that all investors be provided with financial reports that are * * * consistent from company to company."

It seems rather late in the day to have to observe that the law of public utility regulation varies from State to State and from the several States to the Federal Government. The applicable law in each jurisdiction determines the facts, and it is the obligation of accountants to reflect the facts, not to distort or change them.

In view of Mr. Spacek's preoccupation with consistency. I thought it would be of interest to see whether he was practicing what he was preaching. I was particularly interested in whether he was grinding a special ax in the utility field, where accounting and ratemaking are so intimately tied together, or whether he was consistently following his same theories in other fields where accounting had no effect on the price at which products were sold. I knew, of course, that Arthur Andersen & Co. certified to the financial statements of a large number of oil and gas companies, presenting analogous accounting problems, so I selected this group for study. I would like to report the results to you.

Company A. engaged in the oil and gas business and whose accounts are certified by Arthur Andersen & Co., presented an income statement for the year 1962 showing a net income of $6,038,000 before income taxes. The income statement indicted that no Federal income taxes whatsoever were payable by the company; so, net income after Federal income taxes was identical with that before Federal income taxes. I think you will agree that this is a rather startling income statement and that it requires an explanation. That explanation is found in a footnote in which it is stated:

"Intangible development costs and dry hole costs applicable to producing properties are capitalized for financial accounting purposes but deducted for income tax purposes as incurred. * * *" It was also stated that Federal income taxes of approximately $2,300,000 were eliminated in 1962 by reason of the deduction for tax purposes of certain items capitalized on the company's books and utilization of operating-loss carryforwards resulting from such deductions taken in prior years.

How does Mr. Spacek square this result with his avowed requirement of matching costs and revenues? How can he assert on the one hand that reflecting a tax reduction arising from the investment credit as a decrease in operating expenses should be branded as improper and misleading while, on the other hand, certifying that financial statements in which expenses actually incurred and deducted for tax purposes are set up in the balance sheet as an asset, have been prepared on the basis of good accounting practice—on the basis of matching costs and revenues?

Company B, whose financial statements are also certified to by Arthur Andersen & Co., showed net income before taxes of $30,102,000 and Federal income taxes of only $610,000, or 2 percent of taxable income. Here again the explanation is given that "the company follows the policy of capitalizing items that are deductible for Federal income tax purposes in the year in which the expenditures are made."

Company C, also having its financial statements certified to by Arthur Andersen & Co., presents an income account showing net income before Federal income taxes of $27,775,000 and Federal income taxes of only $3,925,000, or 14.1 percent. How come? The explanation is again that the company deducted various items for tax purposes but capitalized them on the books for financial reporting purposes.

Company D, also having its accounts certified to by Arthur Andersen & Co., presents an income statement showing net income before Federal income taxes of $546 million

[P. 1807]

and Federal income taxes of only $10 million, or less than 2 percent. Once again the explanation is that various costs have been capitalized for financial reporting purposes, whereas they have been deducted in the same period for Federal income tax purposes.

It will be remembered that when the accounting principles board voted to approve a bulletin expressing the view that the tax reduction resulting from the investment credit should be normalized, eight of the largest public accounting firms in the United States split on the question four to four. The public accounting firms voting for the bulletin were Arthur Andersen & Co., Lybrand, Ross Bros. & Montgomery, Arthur Young & Co., and Touche, Ross, Bailey & Smart. The companies dissenting from the bulletin were Haskins & Sells, Price Waterhouse & Co., Peat, Marwick, Mitchell & Co., and Ernst & Ernst.

Since all of the firms supporting the bulletin relied upon the concept of matching costs and revenues, I thought it would be useful to determine how consistent they have been in the application of what now seems to be this rather flexible principle.

I have found that, just as in the case of Arthur Andersen & Co., which I have just described, Lybrand, Ross Bros. & Montgomery, Arthur Young & Co., and Touche, Ross, Bailey & Smart have all certified to financial statements of companies in which many

items were capitalized for financial reporting purposes whereas such items were deducted for tax purposes, with the result that disproportionately small amounts of Federal income taxes were paid for the year under review.

I suggest, therefore, that the record conclusively shows that in treating an identical problem, one theory of accounting is being applied by these firms to regulated public utility companies, where the choice of the method of accounting has an impact on rate regulation, and another theory of accounting is being followed in connection with nonutilities where the pricing of the product is not affected by the method of accounting followed.

I have used a substantial portion of my time to develop only one phase of this matter, but it is the vitally important phase, and an understanding of it is essential to gaining any real insight into the problem before us. In the time remaining I propose merely to list what seems to me to be the rather self-evident reasons for the view that the tax reduction resulting from the tax credit should be reported in the accounts of public utilities for what it is—a tax reduction:

1. The tax credit bill as originally prepared by the Treasury Department excluded public utilities other than natural gas pipelines from tax relief.

2. The stated purpose of the bill was to reduce the taxes of those who made a contribution to the economic growth of the country by building qualified productive facilities.

3. Utilities were excluded from relief because two young economists in the Treasury Department had advised Secretary Dillon and Assistant Secretary Surrey that (a) the tax credit would not stimulate construction by utilities because they would have to build facilities regardless of any tax reduction, and (b) the benefits would have to be passed on to consumers in the form of lower rates and the tax reduction would therefore not operate as an incentive.

4. Representatives of American Electric Power Co., including myself, had discussions with Secretary Dillon and other Treasury officials, including the two economists who had incorrectly advised the Secretary, in which we demonstrated that (a) the tax credit would do more to encourage construction in the utility industry than in any other industry (because it would make many marginal projects economically feasible), and (b) the opportunity to pass the tax reductions on to customers in the form of rate reductions would in itself be an incentive for utilities and, in addition, such rate reductions would increase the sales of electric energy and require the construction of additional facilities, thus accomplishing in the fullest measure the objectives of the legislation.

5. While the bill was under consideration in the Treasury, officials of the American Telephone & Telegraph Co. sought to induce Assistant Secretary Surrey to urge the House Committee on Ways and Means to make it clear that the accounting for it should be such as to provide only a moderate effect on corporate earnings and not an immediate and substantial effect. This is the Arthur Andersen & Co. view.

6. In response to this effort Mr. Surrey advised the telephone company that the investment credit would in fact constitute a reduction in tax liabilities for the year in which the qualifying investment was made and that the inclusion of utilities for tax relief would have added disadvantages if it entailed prescribing accounting procedures which tended to dampen its stimulus. This is the American Electric Power Co. view.

7. Thereafter Mr. Alexander Stott, comptroller of the telephone company, appeared before the Senate Finance Committee and testified against the bill although the telephone company, and therefore its customers, would clearly be the largest beneficiary under the terms of the bill if it were applicable to utility companies and it became law.

8. Mr. Spacek also testified before the committee and urged his accounting views on the committee.

9. The Senate committee, and thereafter the Senate itself, disregarded the position of both the telephone company and Mr. Spacek, included utilities as eligible for the tax reduction, made it clear that the tax credit was a tax reduction, and refused to prescribe the accounting procedures to be followed to reflect it.

10. I presented a 30-minute prepared statement before the Senate Finance Committee during its hearings on the bill, but upon the completion of the statement I continued on the witness stand for over 2 hours, exploring with the Senators the ramifications of the bill. In response to a question, I stated the view that, under all then existing systems of accounts which would be applicable, the tax credit would be reflected as a reduction in current income taxes.

11. During the Senate Finance Committee hearings it became clear that one of the Senators was confused about the basic character of the tax credit bill, not recognizing clearly that the proposal was for a tax reduction to be measured by the amount of eligible construction done and thinking, since depreciable property was being used in the process as a yardstick, that unless the tax base of the yardstick property was reduced by the amount of the tax credit, depreciation equal to 106 percent of the cost of the property could be deducted for tax purposes.

12. To meet this Senator's interpretation the Senate committee amended the bill as it came from the House to reduce the tax basis of the property by the amount of the tax credit but refused to prescribe the Arthur Andersen and telephone company method of accounting for it.

13. The whole legislative history of the statute makes entirely clear that a tax reduction in each successive fiscal period was intended by the Treasury and by Congress. There has been a good deal of emphasis on the intention of Congress—and the quotation of isolated segments from the legislative reports—to support the normalization concept. But to one familiar with the origin and legislative history of the tax credit legislation, the one clear purpose intended by both the administration and the Congress

was to provide an immediate stimulus to the economy; and it is equally clear that the normalization concept, which is nothing more or less than an effort to dilute the current effect of the tax credit, is completely inconsistent with that congressional purpose.

14. Following passage of the legislation, Mr. Spacek immediately began a campaign within the American Institute of Certified Public Accountants to cause the accounting principles board to issue a bulletin prescribing the method of accounting urged by Arthur Andersen & Co. and the telephone company which had been rejected both by the Treasury and by the Congress.

15. The board, by only a one-vote margin over the required two-thirds vote, proposed to issue such a bulletin and, contrary to its long-established practice, intended to do so without circulating an exposure draft for comment.

16. Only after the Federal Power Commission and others protested the proposed dark-of-the-moon action was a draft bulletin circulated to interested persons.

17. The only members of the board who had any substantial public utility accounting practice and experience were representatives of six of the eight large public accounting firms to which I earlier referred. These six do the bulk of the public accounting work for utilities in the United States.

18. These six firms split three to three on the nature of the bulletin to be issued, with Arthur Andersen, Lybrand, Ross Bros. & Montgomery, and Arthur Young & Co. voting for it.

19. Lybrand, Ross Bros. & Montgomery are the public accountants for the telephone company, and Arthur Young & Co. are the public accountants for the Western Electric Co., the manufacturing subsidiary of the telephone company.

20. Since the bulletin of the accounting principles board was issued, the Securities and Exchange Commission has repudiated it as controlling the accounting applicable to public utility companies.

21. This is the first time in the 29 years of the SEC's existence that it has repudiated an accounting bulletin issued under the aegis of the American Institute of Certified Public Accountants.

22. Some of these same accounting firms who voted for the repudiated bulletin recently sought to induce the Internal Revenue Service of the Treasury to hold that the tax credit should not be regarded as a tax reduction in determining earnings and profits for dividend purposes. They failed in the attempt and the Internal Revenue Service held, instead, that the tax credit gave rise to a tax reduction in the fiscal year in which it was obtained.

With all the stress which these accounting firms have placed on congressional intention as supporting their views, it is, I think, of great significance that the Government agency most intimately involved with the legislation, its history and the congressional intention in adopting the legislation, reached precisely the opposite conclusion to that urged by these accounting firms.

These facts seem to me to demonstrate beyond peradventure of a doubt that the Treasury and the Congress clearly intended the tax credit to be a tax reduction, that it is in fact a tax reduction, that only as a tax reduction can it accomplish the stated purposes of the legislation, that the accounting proposed by Mr. Spacek and Arthur Andersen & Co. has been consistently rejected by the Treasury and the Congress, and that its application to public utilities results in overstating expenses and understating income to the obvious detriment of the interests of investors, consumers, and the gen-

[*P. 1808*]

eral public interest—the very interests public service commissions are sworn to protect.

Mr. MORSE. Mr. President, I understand that the Senator from Wisconsin [Mr. PROXMIRE] has an amendment whereby he seeks to eliminate what I consider to be the undue and unjust enrichment that this section seeks to hand out to private utilities in this country to the detriment of consumers. I do not believe I use mild language—particularly for me—when I say that the best that can be said for it is that it is economic rape, and that is bad enough. Mr. President, we ought to eliminate it. I wish the Senator from Wisconsin [Mr. PROXMIRE] to know that I shall wholeheartedly support him when he offers his amendment, which I understand will be some time tomorrow.

I yield to my friend the Senator from Alaska [Mr. GRUENING].

Mr. GRUENING. Mr. President, I call to the attention of the Senate an editorial published in this morning's New York Times entitled "Gift to Utilities," which begins with the following statement:

> There are many questionable provisions in the tax reduction bill now being considered in the Senate, but none is more unconscionable than the gifts proposed for the utility industry.

I ask unanimous consent that the text of the editorial be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GIFT TO THE UTILITIES

There are many questionable provisions in the tax reduction bill now being considered in the Senate, but none is more unconscionable than the gift proposed for the utility industry.

The gift is in the form of an amendment forbidding the Federal Power Commission and other regulatory agencies from exercising any control over the investment credit provided for public utilities. The regulatory agencies are supposed to set rates that insure a fair return on utility investments. The proposed amendment means that the FPC could not take the tax credit into account in setting rates. As a result, electric and gas companies would receive a windfall

estimated at $300 million, which would not be passed along to consumers.

The size of this windfall alone should give pause. Yet big as it is, it is not the most disturbing element in the proposed amendment. By limiting the power of the FPC in setting rates, Congress will increase the cost of utility services to consumers. And it will encourage the utility lobby, and pressure groups representing other regulated industries, to press for new restrictions on the rate-setting function of the regulatory agencies.

Even so, there could be a case for the amendment if it were to spur corporate spending and cut costs to consumers, which were the original objectives of the investment credit. But utilities will not have any extra inducement to spend and consumers will not be benefited. This is not the kind of gift that the Congress should be bestowing.

Mr. MILLER. Mr. President, the Time's editorial presents serious distortions of fact. First, it implies that the amendment applies equally to all regulated industries and utility companies. The fact is the law provides a 3-percent credit for utilities subject to a minimum of competition and 7 percent to transportation companies which are subject to competition from nonregulated industries. In the case of those companies receiving a 3-percent credit, the amendment provides that the benefits may flow to the company's earnings over the life of the plant resulting from the investment. It may, therefore, flow proportionately over the life of the plant to customer as determined by the regulatory body. Thus, the regulatory agencies do have control over the treatment of the investment credit. The amendment is intended to prevent regulatory bodies from thwarting the intent of Congress. This intent was expressed in the conference committee report as follows:

It is the understanding of the conferees on the part of both the House and the Senate that the purpose of the credit for investment in certain depreciable property, in the case of both regulated and nonregulated industries, is to encourage modernization and expansion of the Nation's productive facilities and to improve its economic potential by reducing the net cost of acquiring new equipment, thereby increasing the earnings of the new facilities over their productive lives.

The editorial states that one of the objectives of the investment credit was to cut costs to consumers. An examination of the legislative history beginning with President Kennedy's original proposal reveals that the entire purpose was to stimulate construction, increase productivity and increase the profitability of the American economy. There is no word of a direct purpose to lower costs to consumers. It is, of course, obvious that such an improvement in plant modernization as sought through the investment credit would redound to the benefit of the consumer.

If the regulatory bodies were permitted to carry out their announced intention and to take the investment credit from the company immediately and flow it through in the form of reduced rates, not only would the intent of Congress be frustrated but the incentive factor would be completely eliminated.

I ask unanimous consent that an article published in this morning's issue of the New York Times, which sets forth quite accurately the background of the problem, be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UTILITY TAX CREDIT IN QUIET BATTLE

A private, almost silent, war is going on between the Finance Committee of the U.S. Senate and the Federal Power Commission. It revolves about the FPC's interpretation of how gas pipelines and electric utilities should use investment tax credits.

The FPC reiterated yesterday its opposition to retention by the utilities of savings from certain tax benefits given them by Congress.

The agency's latest decision was that interstate natural gas and electric power companies must pass on to their customers any money saved under depreciation laws enacted over the last 9 years. The decision involved the Alabama-Tennessee Natural Gas Co. of Florence, Ala.

The Kennedy administration included in the 1962 Internal Revenue Act a tax credit for investments in certain depreciable property. The amount of credit varies, but for electric utilities it amounts to 3 percent of the cost of certain additions to plant and equipment after December 31, 1961. For natural gas companies, it ranges from 3 to 7 percent.

The utilities have argued that the original intent of these credits was to stimulate plant expansion, but the FPC has voted that "any benefits from the investment credit should 'flow through' immediately to the consumers."

The utility spokesmen also asserted that they could not have extra funds with which to build plants and at the same time give them away. They urged that Government agencies get together with Congress and come up with a consistent course of action.

Mr. MANSFIELD. Mr. President, I should like to make an inquiry of the Chair. It is my understanding that unanimous consent has been granted to the Senator from Illinois [Mr. DOUGLAS] to have his amendment made the pending business tomorrow when the Senate convenes.

The PRESIDING OFFICER. The Senator is correct.

Mr. MANSFIELD. In the interest of getting on with the tax bill, would it be possible to have the Dirksen amendment on the abolition of the retail sales tax, which will be presented by the distinguished Senator from Kentucky [Mr. MORTON], follow consideration of the Douglas amendment under a unanimous-consent agreement?

The PRESIDING OFFICER. Under unanimous consent that could be done.

Mr. MANSFIELD. Would it be possible to have consideration of that amendment followed by the amendment to be offered by the Senator from Wisconsin [Mr. PROXMIRE] under a unanimous-consent agreement?

The PRESIDING OFFICER. The Senator is correct.

Mr. MANSFIELD. Would it be possible at this time to ask unanimous consent that there be 1 hour on the Douglas amendment, to be equally divided between the Senator from Illinois [Mr. DOUGLAS] and the Senator from Louisiana [Mr. LONG]?

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LONG of Louisiana. Mr. President, with regard to the Douglas amendment, I should like to request that the unanimous-consent request be amended to the extent that germane amendments to that amendment would be in order, with the time limited 15 minutes to each side, to be controlled by the Senator offering the amendment and the Senator from Illinois.

The PRESIDING OFFICER. Is there objection to the amendment to the unanimous-consent agreement? The Chair hears none, and it is so ordered.

The unanimous-consent agreement, subsequently reduced to writing, is as follows:

UNANIMOUS-CONSENT AGREEMENT

Ordered, That on Wednesday, February 5, 1964, upon the convening of the Senate, it proceed to the consideration of the amendment (No. 411) relating to standard deduc-

[*P. 1809*]

tions, intended to be proposed by Mr. DOUGLAS to H.R. 8363, the Revenue Act of 1964; that the debate on said amendment be limited to 1 hour, to be equally divided and controlled by Mr. DOUGLAS and Mr. LONG of Louisiana for the proponents and the opponents, respectively; that any amendment proposed thereto must be germane to such amendment, and that debate upon any such amendment shall be limited to 30 minutes, to be equally divided and controlled by the mover of such amendment and Mr. DOUGLAS.

Ordered further, That following the disposition of the Douglas amendment, amendments intended to be proposed, respectively, by Mr. DIRKSEN, Mr. PROXMIRE, and Mr. HICKENLOOPER, be taken up for consideration.

Mr. HICKENLOOPER. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. HICKENLOOPER. What is the unanimous-consent agreement? Three or four have been proposed as being potentially possible, but I did not know that a request for unanimous consent had been made. I do not wish to be frozen out.

Mr. MANSFIELD. First, the Senator from Illinois received unanimous consent eariler today to have his amendment considered the first thing tomorrow.

Mr. HICKENLOOPER. I understand that.

Mr. MANSFIELD. There will be 1 hour on that amendment, 30 minutes to each side, and 15 minutes to each side on any amendment thereto.

Mr. HICKENLOOPER. Was a unanimous-consent request made in respect to that amendment?

Mr. MANSFIELD. Yes; and granted.

Mr. HICKENLOOPER. I have no objection.

Mr. MANSFIELD. After that would come the Dirksen amendment, which would abolish the retail excise tax. After that would come the amendment to be proposed by the Senator from Wisconsin [Mr. PROXMIRE].

Mr. HICKENLOOPER. Reserving the right to object—and I have no intention of objecting to the request—I have an amendment which I expect to offer on behalf of the Senator from Illinois [Mr. DIRKSEN] and myself having to do with writing instruments. It is at the desk and will be printed. I do not wish to be foreclosed on the amendment in any way, shape or form. I have no objection to the order of priorities which the majority leader has stated.

Mr. MANSFIELD. I wish to say to the Republican policy leader that no Senator will be foreclosed from offering an amendment. The effort is made to get a little continuity, which I thought the Republicans had agreed to, in the meantime.

Mr. HICKENLOOPER. Following the pattern of the inquiry of the distinguished leader, would it be in order to ask that the amendment to which I have referred be put in the line of progression?

Mr. MANSFIELD. There is nothing to stop it.

Mr. HICKENLOOPER. May I ask that there be added to the Senator's list of developing programs the amendment relating to writing instruments to which I have referred so that it will follow the three or four amendments to which he has already referred?

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Dirksen-Hickenlooper amendment be considered sometime tomorrow.

Mr. HICKENLOOPER. Mr. President, reserving the right to object, that is not what I asked. I asked if the amendment could follow the succession of amendments which the majority leader has outlined.

Mr. MANSFIELD. If the Senator wishes to make such a unanimous-consent request, it is satisfactory with me.

Mr. HICKENLOOPER. I hoped that, out of the charity of the Senator's heart, he would include the amendment in his request.

Mr. KEATING. Mr. President, reserving the right to object, I have an amendment——

Mr. MANSFIELD. I give up. It is my understanding that amendments will be offered tonight by the distinguished Senator from Kansas [Mr. CARLSON], the distinguished Senator from Indiana [Mr. HARTKE] and the distinguished Senator from Minnesota [Mr. MCCARTHY]——

Mr. McCARTHY. No; I will merely defend against one.

Mr. MANSFIELD. There will be at least two additional amendments. I suggest that we get away from unanimous-consent requests and return to consideration of the bill. I shall feel a great deal better.

Mr. HARTKE. Mr. President, I offer an amendment which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment of the Senator from Indiana will be stated.

The LEGISLATIVE CLERK. At the proper place in title II of the bill it is proposed to insert the following new section:

SEC. , ADDITIONAL EXEMPTION FOR DEPENDENT WHO IS BLIND.

(a) ALLOWANCE OF ADDITIONAL EXEMPTION.—Section 151 (relating to allowance of deductions for personal exemptions) is amended by adding at the end thereof the following new subsection:

"(f) ADDITIONAL EXEMPTION FOR BLINDNESS OF DEPENDENT.—An additional exemption of $600 for each individual who is blind and with respect to whom the taxpayer is entitled to an exemption under subsection (e) for the taxpayer's taxable year. For purposes of this subsection, the determination of whether a dependent is blind shall be made at the close of the taxpayer's taxable year; except that if the dependent dies during such taxable year such determination shall be made as of the time of his death."

(b) TECHNICAL AMENDMENTS.—

(1) Section 151(d)(3) (relating to definition of blindness) is amended by striking out "For purposes of this subsection" and inserting in lieu thereof "For purposes of this subsection and subsection (f)".

(2) Section 213(c) (relating to maximum limitations on deduction for medical, dental, etc., expenses) is amended by striking out "subsection (c) or (d)" and inserting in lieu thereof "subsection (c), (d), or (f)".

(3) Section 3402(f)(1) (relating to withholding exemptions for income tax collected at source on wages) is amended—

(A) by striking out "and" at the end of subparagraph (D);

(B) by striking out the period at the end of subparagraph (E) and inserting in lieu thereof "; and"; and

(C) by adding at the end thereof the following new subparagraph:

"(F) an additional exemption for each individual with respect to whom, on the basis of facts existing at the beginning of such day, there may reasonably be expected to be allowable an exemption under section 151(f) for the taxable year under subtitle A in respect of which amounts deducted and withheld under this chapter in the calendar year in which such day falls are allowed as a credit."

(c) EFFECTIVE DATES.—The amendments made by this section (other than by subsection (b)(3) shall apply to taxable years beginning after December 31, 1963. The amendments made by subsection (b)(3) shall apply with respect to wages paid after December 31, 1963.

Mr. HARTKE. Mr. President, what the amendment would do can be very simply explained. The amendment would provide that a blind taxpayer would be granted one additional exemption of $600. In other words, in addition to the usual exemption of $600, he would be granted a $1,200 exemption.

The number of people who are really blind in the United States of America today does not comprise an exceptionally large number.

In my own State of Indiana, for example, there are 800 who are qualified at this time to take advantage of such an amendment. I think, of all of the handicapped people in the world, those with the loss of sight are probably suffering one of the most severe handicaps. The blind people do not expect handouts. What they want is an opportunity to make their own way. But frequently, they find roadblocks in their way. The social security laws restrict the amount of money they can earn. The special assistance they receive from certain organizations frequently requires them to pauperize themselves. In some cases they are supporting families. In some cases they are supporting families the members of whom have sight. Sometimes that is helpful; other times it is not.

The blind people have come before Congress and have said, time and time again, that if we give them an opportunity to make their own way, to be self-supporting, to be upstanding citizens, that is all they want. In line with that

request, they have tried to go into businesses to which they are particularly suited.

Mr. RANDOLPH. Mr. President, will the Senator yield?

Mr. HARTKE. I am glad to yield to the distinguished coauthor of the amendment.

Mr. RANDOLPH. The Senator from Indiana, in his humane yet practical manner, has correctly stated the philosophy of most of the blind population of the United States. He has indicated that the blind desire, in so far as possible, to help themselves. An apt illustration can be cited. In 1937 a law was enacted which gave the blind certain valid preference in operating vending stands in Federal buildings throughout the United States, including post offices.

The legislation was later broadened to give advantage to the cooperative effort, through State agencies, which would encourage the blind in State, county, and

[*P. 1810*]

community locations which were conducive to business, to serve the public.

Mr. President, there are today more than 2,400 blind persons in the United States who are operating these small business units, vending stands in Federal buildings and other locations throughout the Nation, including national forests and parks.

During the last year these diligent people did a gross business of approximately $45 million and earned for themselves approximately $5.5 million. They are self-supporting. This is so in contrast to relief and charity. They are responsible citizens contributing to our economy.

So I emphasize what the Senator from Indiana [Mr. HARTKE] so well said—that the blind desire the opportunity to help themselves. The illustration I have given is proof positive of this fact. The amendment which is offered, which I am delighted to cosponsor, is a further attempt to encourage the blind of our country to help themselves. I believe it to be a worthy and reasonable approach, and it is my hope that Senators will approve the proposal.

Mr. HARTKE. I thank the distinguished Senator. Also attention should be called to the fact and credit should be given to our colleague the Senator from West Virginia [Mr. RANDOLPH] for being the author of the legislation which made it possible for the blind people to conduct vending stands in public buildings. His efforts over a constructive career in both the House and Senate are well known by the blind.

Most of the members of the Finance Committee who heard the presentation made by Mr. John Nagle, with his use of braille, as he presented his case before the committee, could not help but be impressed with the sincerity of these people. Yet in many cases we drive them into a helpless situation. On the one hand we ask them to degrade themselves by looking to their parents. On the other hand we ask them to degrade themselves by being taken care of by their children. They do not want to be taken care of by their parents or their children. They want to go by themselves and live a normal life.

Those people, under the best of circumstances, will have a difficult opportunity to find a higher place in life. Some of them will. There are exceptional cases. Some of them become lawyers. We have in Indiana Mr. Albert Hahn, who is the administrator of one of the largest hospitals in our State. But these are exceptional cases.

Those individuals would like to have this one opportunity to say to the rest of the world, "We do not want handouts. We do not want sympathy. All we want is an opportunity to take care of ourselves in the world."

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. HARTKE. I yield.

Mr. ANDERSON. Did the Senator present this amendment to the Finance Committee?

Mr. HARTKE. I did not present it. I presented it to the Finance Committee last time, and took such a terrific beating on it that I thought I would take it directly to the floor of the Senate. I thought they would treat me more kindly.

Mr. ANDERSON. I appreciate that statement. We appreciate the interest the Senator from Indiana has had in this subject, but I suggest to him that the creation of a new class of dependents is a dangerous thing. One might suggest that people past 65 years of age should receive a special class of dependency.

I hope the Senator will not press the amendment, which should have been presented to the committee. I apologize to him for the committee's not accepting it, but I point out that creating a separate class like this would jeopardize the whole bill. We have tried hard to keep the bill from being unduly amended.

I hope the Senator will not press his amendment. I recognize there may be justification for it. There probably is justification for it. If it had been presented to the Finance Committee this time, it might have been again rejected, but that does not mean it is bad. The Senator knows that many good amendments fail because the Senate is pressed for time and because of circumstances.

We want to get out of committee a bill that is reasonably balanced. That is the situation at this time.

The Senator has been a fine member of the committee and a fine advocate of this measure, with the Senator from West Virginia [Mr. RANDOLPH]. I hope they will not press this amendment too vigorously, because many of us would take a position on it which we might not take if it were presented in the regular way before the committee.

I cannot compel the Senator to do it; I can only plead with him not to press too hard for it.

Mr. HARTKE. I understand the situation, but at this time my conscience would not permit me not to do so. We presented this amendment in committee in 1962. I have no feeling of animosity toward any individual Senator who did not support it. I felt at this time that it was useless to go through it again. Rather than embarrass the committee and have the committee make a vigorous fight against it because it had been rejected in committee, and therefore should not be approved on the floor of the Senate, I thought I would take my chances with the fine Members of the Senate who are concerned with the welfare of making blind people self-supporting, and not dependent.

Mr. ANDERSON. With his fine fellowship, would the Senator agree to having a voice vote on the amendment?

Mr. HARTKE. Usually I take orders from the Senator from New Mexico, whom I respect and love. I hope he has not been offended because I have not done so this time. I shall not insist on a yea and nay vote on the amendment. I hope the voices in favor of the amendment will be heard loudly. I hope that Senators who have expressed sympathy with it will not make their voices heard too loudly against it.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Indiana for himself and other Senators. [Putting the question.]

Mr. MANSFIELD. Mr. President, I ask for a division.

On a division, the amendment was rejected.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. CARLSON. Mr. President, I offer the amendment which I send to the desk (No. 406) and ask to have stated.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. At the proper place in the bill it is proposed to insert the following:

That section 162 of the Internal Revenue Code of 1954 (relating to trade or business expenses) is amended by redesignating subsection (d) as (e) and by inserting after subsection (c) the following new subsection:

"(d) PREMIUMS FOR FLOOD INSURANCE.—The ordinary and necessary expenses referred to in subsection (a) include amounts paid or accrued for premiums for insurance against losses arising from floods."

SEC. 2. The amendment made by this Act shall apply to taxable years beginning after December 31, 1953, and ending after August 16, 1954.

Mr. CARLSON. Mr. President, I modify the amendment by adding in line 5 after "premiums for flood insurance" the words "notwithstanding the last sentence of section 832(6)(4)."

Mr. President, this amendment would clarify the deductibility of premiums paid for policies of flood insurance, including such premiums paid by subscribers to a reciprocal interinsurance exchange. On July 24, 1956, and again in 1957, the Internal Revenue Service ruled that such premiums were deductible, but it reversed its position in 1960 and began disallowing premiums which had been paid under the only State licensed and regulated plan for flood insurance in existence. In an action by a policyholder to recover income taxes paid as a result of this disallowance, the Circuit Court of Appeals for the Eighth Circuit held in *United States* v. *Weber Paper Company*, 320 F. 2d 199, that the Commissioner was in error and that the deduction should have been allowed. The Solicitor General has announced that certiorari will not be requested.

In the Revenue Act of 1952 this plan was specifically recognized and sections 831 and 832 of the Internal Revenue Code amended by that act made repeated references to subscribers to mutual flood insurance companies. The conference committee even inserted a sentence to provide that subscribers to mutual flood insurance companies should be treated the same as policyholders in factory mutual companies writing fire insurance. This purpose is stated in the conference committee report C.B. 1962–63, page 1155. This provision was designed to encourage this type of insurance, not to defeat it.

Instead of permitting the deduction of such premiums, however, the Treasury Department has now promulgated a proposed regulation, section 1.832–6, which, in effect, allows a deduction to the policyholder only if his premium is absorbed in losses or expenses during the year of payment. Inasmuch as flood losses are already fully deductible in the year they

[*P. 1811*]

occur it is obvious that this regulation would render this type of flood insurance

an economic waste and impractical. When it is considered that flood disasters in any area exposed to flood risks may occur only once or twice in a generation, it is obvious that to prohibit deduction of the premiums unless a loss occurs within the year is, in effect, to deny the deduction altogether except in the year the catastrophe occurs. Insurance departments of the various States require the maintenance of reserves equal to the face amount of the policies because of the catastrophic character of flood losses. In mutual or reciprocal insurance these reserves can be created only out of premiums, and if a tax deduction for the premiums is denied in a newly organized flood insurance mutual or reciprocal company, the mutual insurance company or reciprocal exchange is effectively prevented from establishing the necessary reserves or giving any insurance protection against these catastrophes. No other plan of flood insurance, either publicly or privately sponsored, is presently available.

For these reasons, the amendment which I propose makes it clear that as to all years covered by the Internal Revenue Code of 1954, insurance premiums of this character incurred in a trade or business are deductible as ordinary and necessary expenses. Any attempt to misuse such a deduction is prevented by two safeguards: One, the amendment makes it clear that if any portion of the premium is subsequently refunded, it is to be included in the policyholder's taxable income in the year in which it is refunded; and, the other, the deduction is limited to a maximum in any year of 10 percent of the value of the property exposed to flood hazard. With these safeguards, I believe that not only will there be no tax loss to the Government through this provision, but, by preventing the financial destruction of small businesses in catastrophic floods, where, in many instances there is no profit or gain to charge the casualty deduction against, the general economy—and the revenue—will be benefited since businesses which might otherwise have been wiped out will be able to contribute their share of income taxes. Congress, as well as Presidential messages to Congress have repeatedly emphasized the necessity of making flood insurance available to the citizens of the United States. The inclusion of this amendment in the pending bill will be a long and sound step in that direction.

I sincerely hope, in view of the difficulties that we have had in our section of the country in establishing flood insurance, which is badly needed not only in our area but in other areas of the country also, that the amendment will be approved.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. CARLSON. I am happy to yield.

Mr. ANDERSON. I only say to the Senator from Kansas that this comes as no surprise to me, because the Senator presented his amendment to the members of the Finance Committee. We discussed it twice. We had a very interesting and animated discussion of it in committee, and we had two votes on it.

The interesting point is that the Senator from Kansas has a real case. He made it very effectively before the committee. The difficulty is that this is not truly insurance in this particular instance. What is put up by these people for flood protection is an advance from which the cost of the catastrophe is to be paid. There was considerable difficulty with this question, because people ordinarily cannot get a deduction for deposits they have made, but only for contributions which they have paid out for the cost of insurance.

The Senator from Kansas is quite right in saying that this is similar to mutual and reciprocal insurance. The Senator from New Mexico, as the Senator from Kansas knows, has been identified with the mutual insurance companies for more than a quarter of a century. Therefore, I appreciate the problems we face. The difficulty is that when we start to permit deductions to be made for reserves for flood insurance, which is really not insurance, but merely a protective fund, we run into all sorts of problems.

I believe the Treasury Department should handle this situation administratively, and should have handled it in that fashion long ago. The Senator has been trying hard to have this question settled by the Internal Revenue Service. I do not know exactly all the difficulties connected with a settlement of it, but as I said to the Senator from Kansas in the committee, I believe it should have been settled long ago by the Internal Revenue Service. They should have set up guidelines under which this type of mutual insurance could properly have been put in the category of mutual insurance, and deductions allowed.

I only wish to express to the Senator from Kansas my belief that he would be somewhat premature in asking for the adoption of his amendment, because I do not believe the Treasury would rule that these are premiums. I believe the Treasury Department would say, "We have to ignore this case, because these are nothing but mutual protection funds." I pledge to the Senator from Kansas that

I would be happy to associate myself with him in continuing his efforts to get this on a basis on which it can be properly handled.

The people involved do have a flood hazard. As we know, there was a very serious flood in Kansas City several years ago, which caused millions of dollars of damage. These people should have been able to do something about it, and they should be able to protect themselves against a recurrence of such a disaster.

I am sympathetic with the problem. I say also, and say it with real sincerity, that the Senator made a very fine case in the committee. At one point most of us in the committee felt that we ought to vote for the amendment. However, it was then pointed out that these are not insurance premiums, but deposits, and that to adopt the amendment would jeopardize the whole cause of reciprocal and mutual companies, and their taxation.

If the Senator from Kansas will not press his amendment at this time, I believe there is a possibility that the Internal Revenue Service will look with some interest on the proposal he has made. I have no power to make him do it, and if he presses his amendment, we shall have to vote on it. He has done a good job, and I wish the Internal Revenue Service would do as well.

Mr. CARLSON. I appreciate very much the remarks of the distinguished Senator from New Mexico. In the first place, this matter was discussed in the committee. I would be less than frank if I did not state that the distinguished Senator from New Mexico has had many years of experience in the insurance field. With regard to these deductions, there have been one or two court cases in which the court held that they were deductible. It seems to me that on the basis of court decisions and the statement of the Senator from New Mexico, the Internal Revenue Service would make a ruling which would assist us.

Mr. ANDERSON. I agree with the Senator. I do not contradict him at all.

The Internal Revenue Service should find some way of working out the problem. As I said to him in committee, and as I say to him now on the floor of the Senate, there is a great deal of justice in his contention. I hope that the problem may be handled administratively.

Mr. CARLSON. In view of the fine statement of the Senator from New Mexico, and with his assurance that he will help me get some assistance from the Internal Revenue Service, I shall not press the amendment. After wrestling with this problem for 4 or 5 years, I hope that the Internal Revenue Service will rule that the company involved can at least carry out some contracts and some policies that they have made with citizens in the Middle West.

On that basis, Mr. President, I withdraw the amendment.

Mr. ANDERSON. I thank the Senator. I again say to him that I shall be happy to work with him, because I believe his cause is just.

Mr. CARLSON. I thank the Senator.

The PRESIDING OFFICER. The Senator withdraws his amendment.

[*P. 1812*]

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

Mr. MANSFIELD. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Montana will state it.

Mr. MANSFIELD. Is it correct to assume that on the basis of the Senate's taking a recess tonight, the time limitation on the Douglas standard deduction amendment will begin immediately upon the convening of the Senate tomorrow morning?

The PRESIDING OFFICER. The Senator is correct.

[*February 5, 1964*]

[*P. 1933*]

REVENUE ACT OF 1964

The ACTING PRESIDENT pro tempore. The Chair lays before the Senate the unfinished business, H.R. 8363.

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

The ACTING PRESIDENT pro tempore. Under the unanimous-consent agreement of yesterday, the Senate will now proceed to the consideration of amendments numbered 411, relating to standard deductions, to be proposed to the pending bill by the Senator from Illinois [Mr. DOUGLAS], upon which there is a limitation of debate and control of time.

Without objection, the amendments will be considered en bloc.

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

Mr. DOUGLAS. Mr. President, I agreed to the unanimous-consent agreement, but with the understanding that there be a quorum call some time in advance of the taking of the vote, and that the quorum call be a live quorum call, so that we may have an opportunity to explain the amendments to the Senate as a whole.

There is nothing more discouraging than to explain an amendment to an empty Chamber, and subsequently have Senators enter the Chamber and vote without having heard the explanation. So I wonder whether the majority leader will be so gracious—for I intend to speak for about 15 minutes, in presenting my preliminary explanation—as to then have a quorum call, perhaps 15 minutes in advance of the taking of the vote on my amendments. If that is done, I shall appreciate it very much.

Mr. MANSFIELD. That will be agreeable.

Mr. HRUSKA. I have no objection.

The ACTING PRESIDENT pro tempore. Without objection, the unanimous-consent agreement will be modified accordingly.

Mr. MANSFIELD. Mr. President, I ask that the attachés on both sides notify all Senators that in approximately half an hour there will be a live quorum call, and request Senators to make their plans accordingly.

Mr. President, I believe the Senate is now proceeding under controlled time.

The ACTING PRESIDENT pro tempore. That is correct.

Mr. DOUGLAS. Mr. President, a parliamentary inquiry.

The ACTING PRESIDENT pro tempore. The Senator from Illinois will state it.

Mr. DOUGLAS. Is there to be a morning hour?

The ACTING PRESIDENT pro tempore. No.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that there now be a brief quorum call, before the time limitation under the unanimous-consent agreement goes into effect.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered; and the clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. INOUYE in the chair). Without objection, it is so ordered.

Mr. DOUGLAS. Mr. President, I yield myself 15 minutes.

The PRESIDING OFFICER. The Senator from Illinois is recognized for 15 minutes.

INCREASE MINIMUM STANDARD DEDUCTION

Mr. DOUGLAS. Mr. President, the pending amendment was described by me last night, and Senators will find the description on pages 1790 to 1792 of the CONGRESSIONAL RECORD.

Very briefly, the amendment would increase the minimum standard deduction by $100 for each taxpayer and person in a taxpayer's family, and would pay for that by reducing the cut in the corporation tax, so that for the first year, instead of being 50 percent, it would be 51 percent; and in the second year, and thereafter, 50 percent, instead of 48 percent.

LOW INCOME FAMILY OF FOUR

Let me illustrate briefly how this would work: The minimum standard deduction can be used by the lower income groups as a substitute for the 10-percent standard deduction. At present under existing law, a family of four with income of $3,000 a year, will receive a $600 exemption for each person, or a total of $2,400. Then the family can take the 10 percent standard deduction upon the total taxable income—which means, in effect, that the first $2,700 will be exempt from taxation. Thereafter, the family will pay at a 20-percent rate, although it now costs a family of four approximately $3,500 to live on a standard of living, a subsistence-plus standard, which in itself is extremely low.

The pending bill attempts to improve this situation by introducing—instead of the 10 percent standard deduction—a provision for a $300 minimum standard deduction for the taxpayer, and $100 for each dependent, up to a total of six children. This means that a family of four with a $3,000 income would receive minimum standard deductions of $600, and therefore, would have the first $3,000 instead of $2,700 of its income exempt from taxation, but would pay the tax on any amount over $3,000.

An income of $3,000 is sufficient only for a bare poverty level of existence. I suggest that, at a very minimum, a family of four needs $3,500, and some persons think such a family of four needs $4,000. This is shown abundantly by the various budgetary studies which have been made.

Nevertheless, under the pending bill, although it is an improvement on the present practice, families with incomes as low as $3,500 would still pay appreciable amounts in taxation.

FOUR HUNDRED DOLLARS PER TAXPAYER PLUS $200 PER DEPENDENT

My amendment would provide that a minimum standard deduction of $400 for the head of the family plus $200 for each dependent would mean that there would

[*P. 1934*]

be a $1,000 addition to the $2,400 exemption and taxation would not begin on income below $3,400. Such low income families would therefore receive a minimum reduction of somewhere between $60 to $80 in taxes owed.

COST VIRTUALLY RECOUPED

This would cost approximately $960 million, but we would virtually pay for it by reducing the rate of reduction in the corporate tax. This would bring in to the Treasury approximately $870 million more, so that the net loss would not be more than $90 million. This is a small sum in a total tax cut of nearly $12 billion. Therefore, I believe I can properly claim that the amendment is virtually neutral so far as the total tax cut is concerned. What it does do is to shift the distribution of the cut from the upper income groups more nearly in favor of the lower income groups.

Mr. MANSFIELD. Mr. President, will the Senator from Illinois yield that I may ask unanimous consent to suggest the absence of a quorum, with the understanding that the time necessary for the call of the roll not be charged to the Senator from Illinois?

Mr. DOUGLAS. I yield, with that understanding.

The PRESIDING OFFICER. Is there objection to the request by the Senator from Montana? The Chair hears none, and it is so ordered.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call may be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DOUGLAS. Mr. President, so far as the benefits of the corporation tax reduction are concerned, we should realize that those with incomes of $50,000 a year, who form only one-tenth of 1 percent or two-tenths of 1 percent of the population, receive approximately one-third of the dividends and therefore get the benefits, immediate or ultimate, of the cut in the corporation tax. Those with incomes of $20,000 a year who form only about 2 percent of taxpayers receive approximately 60 percent of the dividends and get the benefit of the cut. On the other hand, those with incomes under $5,000 a year receive only 7 percent of the benefits from dividends.

BENEFITS TO LOW INCOME GROUPS

Under the amendments which I am offering, 95 percent of the benefits would go to those with incomes below $10,000 a year, and approximately 40 percent would go to those with incomes below $5,000 a year; so the measure would provide a shift in benefits from those with incomes of $20,000 to $50,000 a year to those with incomes under $10,000 a year.

I believe this is highly desirable, because the present tax system is really loaded against the lower income groups. We delude ourselves if we believe that the rates of progression on the upper Federal income taxes are actually paid by many taxpayers.

The Senator from Tennessee [Mr. GORE] and I, in preceding days, have hammered this point home: That those with incomes of over a million dollars a year actually pay less than 20 percent of their income in taxes, because of the loopholes.

LOOPHOLES BENEFIT UPPER INCOME GROUPS

The Federal system is shot through with loopholes which in the main benefit those in the upper income groups. In addition, we should remember that State and local general property and excise taxes amount to approximately $33 billion a year, and that there are $13 billion more in Federal excise taxes; so the excise and general property taxes, State, Federal, and to some degree now local, comprise almost as large a total amount as Federal income-tax receipts.

PROPERTY, SALES AND EXCISE TAXES REGRESSIVE

The excise, sales and general property taxes are highly regressive. Certainly this is true of sales taxes. It is also true of general property taxes. We have produced testimony indicating that the percentage valuation attached to workmen's homes is much higher than that attached to estates of the wealthy or to the industrial properties of corporations.

Therefore, a large degree of progression is needed in the Federal system to offset the regressive nature of sales taxes, and the systems of State and local taxation. In practice, the degree of progression does not really exist to anywhere near the extent claimed. I believe, if we examine the entire system of taxation after we get over the exemption limits, we shall probably find it to

be somewhat regressive. Therefore, even in interest of a simple proportional tax system, and certainly in the interest of a progressive tax system—which I believe in, and in which I believe the mass of the American people believe—we need some shift in the benefits of the tax cut from the upper income groups to the lower and lower middle-income groups. That is precisely what my amendments would accomplish.

FACTS ON INCIDENCE OF TAXATION

Mr. President, in corroboration of my statement that the excise taxes are highly regressive, I call attention to a publication of the Joint Economic Committee issued in 1955 on Federal Tax Policy for Economic Growth and Stability. That publication showed that for those with incomes under $2,000 the Federal excise taxes took 5 percent of their income, but only 1.9 percent—or about 2 percent—of the income of those with incomes over $10,000.

So far as State and local taxes are concerned, the excise and sales taxes for those with incomes under $2,000 cost them 5.7 percent, but for those with incomes over $10,000 it was only 2.2 percent, or a combined total of 10.7 percent for those with incomes under $2,000, as compared to 4.1 percent for those with incomes over $10,000.

LOW INCOME GROUPS PAY TWICE AS MUCH OF INCOME THAN HIGH INCOME GROUPS

Similarly, if we consider State and local property taxes, there is a downward shift in the incidence as income goes up from 4.8 percent for those with incomes under $2,000 to 3.4 percent for those with incomes over $10,000, or combining these, we arrive at a figure of a 15.5 percent incidence of taxation for those with incomes under $2,000 and only a 7.5 percent for those with incomes over $10,000 or only one-half has high as the proportion borne by those under $2,000.

In other words, the system of sales taxes and general property taxes is highly regressive. So far as Federal income taxes which are actually paid, they really do not offset the regressive nature of the rest of the tax structure.

We need to shift income from the upper groups to the lower groups if we are to get even an approach to justice.

TAX REDUCTION TO LOW INCOME GROUPS WILL BE SPENT

In addition, there is another advantage to the proposal. The gains to those in the lower income groups would be almost entirely spent. There would be a direct increase in consumption, and therefore a direct stimulation to production.

Senators might ask, "Will not the amounts going to corporations be invested and hence spent, so that there would be no net change? Do you not merely take from one pocket and put it in the other?"

A LARGE PROPORTION OF CORPORATE PROFITS NOT INVESTED

That statement is not wholly true. A large portion of corporate earnings are not now invested. They are made but not invested. I have computed figures showing that in the past few years—between 1959 and 1963—corporations raised $244 billion from depreciation, depletion allowances, retained earnings, and such external sources as new issues. They spent only $154 billion for new plant and equipment. The net increase in inventories, cash, other assets and receivables, $16 billion, is unaccounted for. So in practice approximately $90 billion is either unaccounted for or put into Government securities, real estate, inventories and cash. It is probably safe to say that approximately $50 to $60 billion went into cash, the purchase of short-time Government securities, or real estate, which did not add to the productive equipment of the company.

So we would not be subtracting an equal amount of productive resources from the corporations to that which we would be adding in the way of consuming power to the low-income groups.

BOTH JUSTICE AND EFFECTIVENESS PROMOTED

From the standpoint of justice, the amendments are needed. From the standpoint of economic efficiency, they are needed. It is difficult for me to see how the administration forces can oppose the amendments. It is difficult for me to see how any member of the Democratic Party who believes in the principles of our party can oppose them.

Yesterday we heard piteous cries that the Ribicoff amendment would not help those in the low-income groups—that it would not help those who live on "red beans and rice," so to speak.

The Senate now has an opportunity to provide the administration forces with

[*P. 1935*]

e ability to help the poorer groups. ıe proposal would really be an aid to ose in the lower income groups.

Mr. GRUENING. Mr. President, will ıe Senator yield?

The PRESIDING OFFICER. The me that the Senator has allotted himːlf has expired.

Mr. DOUGLAS. I yield to the Sentor from Alaska 2 minutes on his own .me.

Mr. GRUENING. Mr. President, I ould not more heartily approve of any .mendments than those which the disınguished senior Senator from Illinois ıas offered. They are modest, but to a

imited extent designed to rectify one of he basic evils in the bill, which is that nost of the proposed tax reduction vould go to those in the higher income brackets and to those who least need it. My judgment of the tax bill in its present form may seem harsh, but I fear, true. It is essentially a bill to make the rich richer. It does little for the working man, for the small businessman, for the salaried employee, for the people with modest incomes and large families. It believe it is time for the Senate to realize that, and at least adopt the very moderate amendments offered by the Senator from Illinois, which aim to rectify that situation to a slight degree.

Senator DOUGLAS' amendments would help the people in the lower income groups, the people with large families, those with small or moderate incomes, those very people who need tax relief. I hope the Senate will agree to the amendments. I shall support them.

Mr. LONG of Louisiana. Mr. President, I yield myself 5 minutes.

The general purpose of the amendments is to strike from the bill certain of the reductions and tax incentives for business, and to increase the tax reductions for those in the lower income brackets.

The committee has brought forth a balanced bill. The bill was approved by those who speak for the laboring groups and those in the low income groups.

It also comes to us with the approval of those who speak for the business community.

Two types of testimony were offered to the committee. We heard those who spoke for the laboring groups state, "This is a good bill, but we think we can show you how you can improve it. If you would like to improve it, we would suggest that you take out the tax reductions which business would get and take out the provisions which would be an incentive to businesses to build new plants, hire additional people, expand, and increase their activity.

"We are not much impressed by the argument that incentives for profits make jobs. Take out that part of the bill, or cut down drastically on that provision, and give a greater reduction to those in the lower income brackets."

Then the business representatives would come before the committee and say, "This is a good bill. We recommend the bill. Like organized labor, we were consulted in putting it together. We were heard before the committees, and we think our case has been reasonably considered. But we think we can show you how you could improve the bill. There is too much tax reduction frittered away by eliminating from tax liability to their Government completely those people who now pay a small amount of taxes. The tremendous reductions which would be given to those in the lower income brackets would really wind up as money spent on tobacco and frittered away on relatively unimportant items. The best way to proceed is to give that money to us and let us use it to build plants, to create jobs, more employment; and as tax incentives, we think we can show you how we can employ a great deal more people. Instead of giving a person a greater tax cut, we will get him a better job at more pay."

Mr. DOUGLAS. Mr. President, will the Senator yield, on my time?

Mr. LONG of Louisiana. I shall yield to the Senator in just a moment or two, after I have completed my thought.

The committee heard both sides and wound up by saying "If we pass the bill the way it is, they are all going to be happy. Labor is going to be happy. The low-income groups will be happy. Business will be happy. There will be more jobs, and more prosperity. We shall have incentives for business on the one hand and incentives for consumers on the other hand."

So we brought forth a bill that has the best balance we thought we could reach. We had the assistance of 400 good economists. I know the Senator from Illinois [Mr. DOUGLAS] is a good economist, but there are 400 economists in about 43 universities who think this is a good bill. If we pass the bill the way it is, when we go home we ought to be happy. If we pass it the way the Senator from Illinois says it should be, the business community will say that it has been unfairly treated. We think it is better to pass a bill over which the low-income groups and labor and business groups are happy. Why pass a bill over which half of America is happy and half is unhappy? To sweeten the bill for labor or for the low-income groups would make it sour for the other groups.

I think the bill is a good balance. This is the bill the President wants. This is the bill President Kennedy wanted. This is a bill that business and labor are willing to agree to.

I now yield to the Senator from Illinois.

Mr. DOUGLAS. Mr. President, I yield myself 45 seconds on my time.

The PRESIDING OFFICER. The Senator from Illinois.

Mr. DOUGLAS. First, let me say that the total number of persons removed from taxation under this amendment would be approximately half a million. The present bill would take out a million and a half. These amend-

ments would take out only 1 percent of the taxpayers that the Senator from Louisiana referred to yesterday in opposing the Ribicoff amendment. Yesterday the Senator from Louisiana wept copious tears for those who had only red beans and rice to eat. Today he would not permit them to have the benefits of these amendments.

Mr. LONG of Louisiana. Before this session is through, I shall offer my friend from Illinois a chance to demonstrate how much he is in favor of people who are in need. I am going to introduce a welfare amendment. Sometimes the Senator from Illinois votes for it; sometimes he does not. The Senator may be sure that I will offer such an amendment and give him an opportunity to demonstrate whether he is for those people.

Mr. DOUGLAS. His amendments often provide that most of the welfare goes to Louisiana and to people who will vote as the Senator from Louisiana wants them to vote.

Mr. LONG of Louisiana. The reason we do so well in Louisiana is that we do not do what some of the penny-pinching Scrooge-like governments in other States and other legislatures do. When the Congress provides certain money, those States cut back on appropriations when the Federal Government gives additional help.

Fifty-six percent of the tax reductions proposed by the Senator's amendments would go to people with a gross adjusted income of between $5,000 and $10,000. If the Senator wants to help the poor, that is not the way to do it. Those with an income of between 0 and $3,000 would receive only 16 percent of the benefits of the amendment of the Senator from Illinois; meanwhile his amendment would be taking away a great proportion of the tax incentive for business which would help these people get better jobs, not in the long run, but in the short run, because the bill would help business expand and modernize, which would mean more capital equipment and more jobs.

When we look at the remainder of the Senator's amendments, 56 percent of the benefits of the Senator's amendment would go to people with an income of between $5,000 and $10,000. The largest segment of the benefits would go to those making between $5,000 and $10,000.

The committee has sought to produce a balanced bill. The biggest tax cut goes to people in the lower income brackets—1,500,000 Americans would be removed from the rolls of income-tax payers under the bill. A single man making $1,000, with no dependents, would have his tax reduced from $62 to $16, a 75-percent cut. For all tax returns in the 0 to $3,000 adjusted gross income class, the percentage of the tax cut is 39 percent.

Some Senators have suggested that we are not able to provide as much of a dollar tax cut for those people as we provide for someone who is paying $50,000 in taxes. That is beyond our ability. If a man is paying only $60 in taxes, the most we could do is reduce his taxes by $60. If we really want to help, we ought to increase the minimum wage. We shall have an opportunity to vote on that proposal before this session is over.

The Senator's amendment is not the way to help those people. The way to help them is to provide more jobs and better jobs. That is a better approach than to increase taxes on industry on the one hand, and, in the second instance, to distribute the benefits among

[*P. 1936*]

those who pay relatively low taxes or no taxes.

Mr. RIBICOFF. Mr. President, will the Senator yield for a colloquy?

Mr. DOUGLAS. Mr. President, I yield to the Senator from Connecticut. Then I shall ask that a live quorum be called.

Mr. RIBICOFF. I have been interested in the discussion between the Senator from Illinois and the Senator from Louisiana. First, when we propose a tax credit for college education; we are told not to do anything now. We are told to wait for an education bill. When the distinguished Senator from Illinois, with the able assistance and collaboration of the Senator from Tennessee, wants to do something for the lower income groups, the suggestion is made that we wait for a welfare bill. When the issue is pressed further, the suggestion is made that we wait for a minimum wage bill.

I have always found the distinguished Senator from Illinois and the distinguished Senator from Tennessee deeply concerned with all welfare measures, and those who are in need.

I believe the distinguished Senator from Illinois and the distinguished Senator from Tennessee have always voted for minimum wage legislation.

I was very much interested in the colloquy between the Senator from Illinois and the Senator from Louisiana when the Senator from Louisiana said, "Do not jar this bill. Let us take it as it is. The AFL–CIO is for it. The Manufacturers Association is for it." As if that is the answer.. I think the question should be, What is the Senate for? There are 100 Members of this body who should decide the answer.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. DOUGLAS. I yield 1 more minute to the Senator from Connecticut.

Mr. RIBICOFF. We are Members of the U.S. Senate. I do not believe we should take orders from outside groups but should do what we think is right. We have an opportunity to establish priorities here and now. The time to establish priorities is when a distribution of $11.6 billion is being made. This is an opportunity for the Senate to determine how the tax savings shall be distributed.

The Senator from Illinois is right; and I shall support his amendment.

Mr. DOUGLAS. Mr. President, I shall suggest the absence of a quorum, unless the Senator from Louisiana wishes to speak.

Mr. LONG of Louisiana. Mr. President, I wish to say a few more words.

Mr. President, the amendments would cut the corporate rate in half or makes the 1964 rate 50 percent instead of 48 percent. It takes the revenue from this and increases the minimum standard deduction. Under the bill, the minimum standard deduction is $200 plus $100 per exemption but never more than $1,000. Under the Douglas amendment, the minimum standard deduction will be $200 plus $200 for each exemption with a ceiling of $1,800 instead of $1,000.

First. This amendment is undesirable because it creates an imbalance between corporations and individuals. The bill taking into account reductions made in 1962 for corporations distributed the tax reductions over the period 1962–64 two-thirds to individuals and one-third to corporations. This is roughly in the same relationship as their contribution to tax collections. This bill will upset this balance.

Second. The bill by reducing the corporate rate below 50 percent to 48 percent would have provided an important business and psychological incentive in making Uncle Sam a junior rather than a senior partner in every business enterprise. This amendment loses this incentive and psychological advantage by making them equal partners—50 percent for the Government and 50 percent for the businessman.

Third. The bill provides a tax reduction with those with adjusted gross incomes of under $3,000 of 38.6 percent; for those with incomes between $3,000 and $5,000, the reduction is 27 percent; for those between $5,000 and $10,000, 20.9 percent. This tapers off until the reduction above $50,000 is 13.5 percent. Moreover, as is indicated on page 162 of the report under your committee's bill the reductions keep on tapering off above $50,000 down to a reduction of above 5.5 percent for the top incomes. This is a balanced distribution of the reduction the Douglas amendment would overbalance this on the consumption side.

Fourth. One of the advantages of the present minimum standard deduction is that it tends to be especially beneficial to single taxpayers who are discriminated against by the present uniform per capita exemption. Their discrimination at the present time arises from the fact that costs of living do not go up uniformly as the size of the family increases. The minimum standard deduction in the bill gives $300 with respect to the first individual and only $100 additional for the second individual. The Douglas amendment provides $400 for the first individual and $200 additional for the second. Therefore, it gives greater benefit for additional exemptions. In addition, it breaks the line as to the maximum standard deduction allowable. It will allow a maximum standard deduction of $1,800 in the case of those using the minimum deduction while discriminating against those who use the 10-percent deduction in that that will remain limited at $1,000.

Mr. MORTON. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. Does the Senator from Illinois yield back the remainder of his time?

Mr. DOUGLAS. Mr. President, I do not yield back any time. I ask that there be a "live" quorum call.

Mr. MORTON. Does the Senator wish to have the call now?

Mr. DOUGLAS. Yes.

Mr. MORTON. On the Senator's time?

Mr. DOUGLAS. No. The agreement that was reached was that the time for the quorum call should not be charged to me. If the Senator from Kentucky wishes to speak before the live quorum is called, that is satisfactory.

Mr. LONG of Louisiana. How much time do both sides have remaining?

The PRESIDING OFFICER. The Senator from Illinois has 11 minutes remaining; the Senator from Louisiana has 16 minutes remaining.

Mr. LONG of Louisiana. I yield 5 minutes to the Senator from Kentucky.

Mr. MORTON. Mr. President, I rise in opposition to the Douglas amendments. I agree with the Senator from Connecticut [Mr. RIBICOFF] that we should not make decisions on the basis of who is for or who is against any particular amendment, or who is for or who is against any other part of the bill, or the bill itself. I agree with him that we should make up our own minds and fulfill our responsibilities as Members of the

Senate, and come to the best conclusion by using the best judgment we can.

I believe that the Senator from Louisiana, in the statement he has just made, goes to the very heart of the matter. What was the basic purpose of the bill? The basic purpose of the bill was to stimulate the economy. How was that to be accomplished? It was to be accomplished in two ways. First, it was to be accomplished by lowering the tax on individuals, poor as well as wealthy, so as to generate more consumer spending. Second, it was to lower corporate income tax rates, which had gone to an unconscionable figure as the result of World War II and the Korean conflict, so that industry could modernize and expand, and in this way, first, compete with the rest of the world more effectively. This would lead to more jobs. Second, through the expansion, which would be brought on by the increase in consumer demand, more jobs would be generated for Americans throughout the land.

Mr. President, this subject has been carefully studied, not only by the Committee on Finance of the Senate, but also by the Ways and Means Committee of the House. The bill was sent to Congress in January of 1963. However, even prior to that time the Ways and Means Committee of the House was holding preliminary hearings on the subject.

Some people, however, said that the Finance Committee and even the Ways and Means Committee were dilatory in studying the measure and holding hearings, and that they engaged in delaying action. That is not true. That charge has been adequately refuted.

The tax bill touches every phase of American life. It was only proper that we should study it as carefully as we did.

The point covered by the amendment offered by the Senator from Illinois was studied by the committee. It was debated. Testimony was received on it.

I believe the committee has reported a balanced bill in supporting the House in the rates for individual income taxes and corporate taxes. I appeal particularly to Members on my side of the aisle to reject the pending amendments. I trust that the Senate will stand by the committee on this matter.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. MORTON. I am happy to yield.

Mr. LONG of Louisiana. I am sure the Senator is aware of the fact that what would be done, so far as distributing the tax reduction which would be

[*P. 1937*]

taken from the business community is concerned, would be that more than half of it, or 56 percent, would be distributed to those making between $5,000 and $10,000 a year. Theoretically, the purpose is to help low-income individuals. However, generally speaking, one hardly regards a person who makes between $5,000 and $10,000 a year as being a needy person. A person in those brackets, it is usually agreed, is in the middle-income bracket, or perhaps a little below the middle for some persons. I have always regarded the $10,000 bracket as being an upper middle-income bracket. At least that is true in Louisiana. I cannot speak for Kentucky, of course.

Mr. MORTON. I can speak for Kentucky. I believe our per capita income is below that of the State of Louisiana.

The Senator from Louisiana makes a good point. Of course, if we really wished to do something for the lowest income bracket, we could increase the personal exemption by $100. That would be much more effective than the proposal made by the Senator from Illinois.

However, I believe we have a problem. Let us not lose sight of the basic purpose which the late President Kennedy spelled out in his message to Congress. That was to get the American economy moving. Subsequent messages and statements by President Johnson have indicated that we should pass the bill in order to keep the expanding economy expanding, going ahead, opening up job opportunities.

Mr. LONG of Louisiana. The Senator from Kentucky is well aware, is he not, that a majority of the Senate, contrary to the way the Senator from Kentucky felt, voted to eliminate the dividend tax credit? Thus, many people throughout the country will be paying more taxes when the bill goes into effect because of elimination of the dividend tax credit than would otherwise be the case and the result will be, overall, that the Government must rely upon certain reductions in the corporate tax in order to offset what the corporate stockholders will lose because of the elimination of the dividend credit.

Mr. MORTON. The Senator is correct. The Senator who yesterday successfully opposed my amendment in connection with the dividend credit, the junior Senator from Minnesota [Mr. McCarthy], said in his argument that the reason for eliminating the dividend credit was that the corporate tax rate would be reduced from 52 to 48 percent.

Mr. LONG of Louisiana. That is correct.

Mr. MORTON. If we chop that in half, we should then restore at least 2 percent of the 4-percent dividend credit, if that logic prevails.

The PRESIDING OFFICER. The time of the Senator from Kentucky has expired.

Mr. DOUGLAS. Mr. President, I suggest the absence of a quorum, with the understanding that the time consumed in the call of the quorum be not subtracted from the time of either the proponents or the opponents of the amendment.

The PRESIDING OFICER. That is a part of the unanimous-consent agreement.

Mr. MORTON. Mr. President, will this be a live quorum?

Mr. DOUGLAS. Yes.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

[No. 20 Leg.]

Aiken	Hartke	Moss
Allott	Hayden	Mundt
Anderson	Hickenlooper	Muskie
Bartlett	Hill	Nelson
Bayh	Holland	Pastore

Mr. HUMPHREY. I announce that the Senator from Nevada [Mr. CANNON], the Senator from Pennsylvania [Mr. CLARK], the Senator from Arkansas [Mr. McCLELLAN], and the Senator from Oregon [Mrs. NEUBERGER] are absent on official business.

I further announce that the Senator from California [Mr. ENGLE] is absent because of illness.

Mr. KUCHEL. I announce that the Senator from Illinois [Mr. DIRKSEN] is necessarily absent.

The PRESIDING OFFICER. A quorum is present.

The Senator from Illinois has 11 minutes remaining under his control, and the Senator from Louisiana [Mr. LONG] has 7 minutes. Which Senator yields time?

Mr. DOUGLAS. Mr. President, I yield myself such of my remaining 11 minutes as I may need.

The PRESIDING OFFICER. The Senator from Illinois is recognized.

Mr. DOUGLAS. Mr. President, last night, at a time when only a few Senators were in the Chamber, I explained these amendments; and earlier today, when still fewer Senators were in the Chamber, I explained the amendments again.

At this time, when an approximate quorum is in attendance, I wish to explain the amendments once more.

INCREASE MINIMUM STANDARD DEDUCTIONS

They would increase the minimum standard deduction by $100 for each taxpayer and his dependents, and will approximately replace the amount lost by means of that change by decreasing the cut in the income tax on corporations—for the first year, to 51 percent; and for the following years to 50 percent, instead of 48 percent.

The increase in the standard deduction would cost the Treasury $960 million, of which $870 million would be recouped on the corporate tax side.

REDISTRIBUTE TAX BURDEN

I believe that the merits of these amendments are very clear. In the first place, they would effect a needed redistribution of the total tax burden; they would transfer to the lower income groups—those with incomes of less than $10,000—approximately $935 million, or over 97 percent of the total tax cut in the amendment. On the other hand, they would reduce the tax benefits going to those in the groups with incomes of more than $10,000, $20,000, and $50,000.

At present, those with incomes of over $50,000 receive approximately one-third of the dividends paid by corporations; those with incomes of over $20,000 receive approximately 60 percent of the dividends paid by corporations; and those with incomes of over $10,000 receive approximately 80 percent of the dividends paid by corporations.

Therefore, these amendments would help the lower income group; and this is the group which suffers most under our total system of taxation.

STATE AND LOCAL TAXES REGRESSIVE

We should remember that the total of State and local excise taxes, general property taxes, and the Federal excise taxes is nearly $50 billion, or approximately the same amount as is collected under the total Federal income tax. But the excise taxes—whether Federal, State, or local—and the general property taxes weigh most heavily upon the lower income group.

I have already submitted for the RECORD figures which show that approximately 15.5 percent of the income of those with incomes under $2,000 is paid in these taxes, as compared to approximately 7.5 percent of the incomes of those in the brackets above $10,000.

While definite statistics are lacking for those with incomes over $50,000, there is little doubt that they pay less than 7½ percent. Moreover the absolute amount of these regressive fares has increased in these last 10 years, so the degree of regression has increased.

I ask unanimous consent that a table showing these figures be printed in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Percent of income going to taxes by income groups, 1954

Income class	Federal excises	State and local sales and excise taxes	State and local property taxes	Total sales, excises, and property taxes
0 to $2,000	5.0	5.7	4.8	15.5
$2,000 to $3,000	4.5	5.1	4.3	13.9
$3,000 to $4,000	4.1	4.6	4.1	12.8
$4,000 to $5,000	3.9	4.4	4.1	12.4
$5,000 to $7,500	3.6	4.2	3.8	11.6
$7,500 to $10,000	3.3	3.8	3.6	10.7
Over $10,000	1.9	2.2	3.4	7.5

Source: Joint Economic Committee: "Federal Tax Policy for Economic Growth and Stability," p. 98.

[*P. 1938*]

TOTAL TAX STRUCTURE NOT PROGRESSIVE

Mr. DOUGLAS. Since we know of very large loopholes already existing in the total Federal income tax structure, it is clear that the total tax structure is not progressive—although many persons believe it to be; instead, the tax structure is probably actually regressive, in that those in the upper income groups actually pay smaller percentages of their incomes in taxes, as compared with the percentages of their incomes which those in the lower income groups pay in taxes.

From the standpoint of justice, these amendments would help correct that very evil feature of the total tax structure.

WOULD STIMULATE DEMAND

It is said that the changes which would be made by means of these amendments would not stimulate industry. However, I point out that so far as a decrease in the tax on those in the lower income groups is concerned, virtually all the money made available to them by means of the decreased tax would be spent on consumption. Additional funds in the hands of those in the lower income group would act as a stimulant to demand, to spending, and to employment. On the other hand, increased funds in the hands of those in the upper income groups—if such funds were made available to them by means of a decrease in the tax they had to pay—would not help increase investment to the same degree.

SIXTY BILLION DOLLARS OF CORPORATE PROFITS NOT INVESTED

Previously, I have placed in the RECORD data showing that from 1957 to 1963, the profits, after taxes, of American corporations amounted to $244 billion. But only $154 billion of this was spent on plant and equipment, leaving a $90 billion surplus. Some of this was used for inventories and for receivables from customers but my estimates show that probably $60 billion of the corporate profits was not invested in productive enterprises, but was put into cash, Government securities, real estate, or other ventures which did not add to the productive investment of the country.

I believe we can say, therefore, that approximately a quarter of the increased corporate profits is not used productively and does not constitute a stimulus to greater efficiency or greater employment. But almost the entire 100 percent which would be transferred under the amendment I have offered would stimulate consumption and therefore, on that theory, production and employment.

Mr. LAUSCHE. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. LAUSCHE. What would be the net impact upon the loss in revenue?

Mr. DOUGLAS. Approximately neutral.

Mr. LAUSCHE. Approximately neutral.

Mr. DOUGLAS. However, not completely so. There would be a net loss of $90 million in a total tax loss of $11,600 million, or less than 1 percent.

Later today or tomorrow, I intend to reduce the oil depletion allowance by $400 million, which would more than offset this loss and give a governmental surplus of over $300 million in addition.

Mr. ANDERSON. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I am glad to yield on the time of the Senator from Louisiana.

Mr. SMATHERS. Mr. President, how much time remains?

The PRESIDING OFFICER. Does the Senator from Louisiana yield to the Senator from Illinois?

Mr. SMATHERS. Mr. President, I will speak for the Senator from Louisiana and inquire how much time is left to the Senator from Louisiana.

The PRESIDING OFFICER. The Senator from Louisiana has 7 minutes remaining.

Mr. SMATHERS. I am happy to yield to the Senator from New Mexico.

Mr. ANDERSON. Mr. President, I wish to try to get the Senator from Illinois [Mr. DOUGLAS] to correct the statement he just made. He said that today or tomorrow he intended to reduce the oil depletion allowance by $400 million. I believe what he really means is that he will try to do so.

Mr. DOUGLAS. Yes, what I meant was that I would try.

Mr. ANDERSON. The Senator from Illinois [Mr. DOUGLAS] has tried and tried for many years, so he should not bank on $90 million that we know will not be there.

Mr. DOUGLAS. It will be a test of sincerity, if one is worrying about the budget.

Mr. SMATHERS. Mr. President, I yield 1 minute to the Senator from Kentucky [Mr. MORTON].

Mr. MORTON. Mr. President, I trust the Senate will support the committee on this question and oppose the Douglas amendment. As I pointed out a few moments ago, it has taken us over a year to work out the bill and we have achieved a fair bill. We would reduce individual taxes to help the consumers' increased spending. We would reduce corporate taxes in order to increase job opportunities. That is the basic purpose of the bill. I would dislike to see half the corporate reduction transferred to the consumer segment of the economy because I believe, should the Douglas amendment be adopted, it would be self-defeating in its purpose.

I trust that all Senators will strongly oppose the amendment.

Mr. BENNETT. Mr. President, will the Senator from Florida yield?

Mr. SMATHERS. I yield to the Senator from Utah for 1 minute.

The PRESIDING OFFICER. The Senator from Utah is recognized for 1 minute.

Mr. BENNETT. I wish to ask one question of the acting majority leader. Is it not true, on the consumer side, which is the individual's side, that the tax return will be approximately $8 billion, and the corporate side would represent approximately $2 billion?

Mr. MORTON. That is absolutely correct. From the 50-percent benefits to individuals, under the so-called Douglas amendment, it would go to those in the area of $6,000 to $10,000.

Mr. BENNETT. So the effect would be to cut the potential job-producing impact of the bill in half; and it is already only about a quarter on the consumer side?

Mr. MORTON. That is absolutely correct.

Mr. SMATHERS. Mr. President, I yield myself 3 minutes.

The PRESIDING OFFICER. The Senator from Florida is recognized for 3 minutes.

Mr. SMATHERS. Mr. President, what is proposed by this amendment is to take $870 million away from corporations and give $960 million to the consumer, which would result in a net loss to the Treasury of $90 million.

Fifty-six percent in the proposed Douglas amendment goes to those who have incomes between $5,000 and $10,000. So, instead of helping those "poor" people, it would help those in the brackets between $5,000 and $10,000. Therefore, it would not go to the lower income groups the way the Senator from Illinois thought it would go.

There is already in the bill a minimum standard deduction of $200, and $100 extra for each dependent, which would cost the Treasury $320 million. Eighty-four percent of that amount would go to those who have incomes below $5,000.

I believe that the committee has handled the distribution of the tax burden in a most equitable way. The Senator from Illinois says that corporate profits are high and that not much is being done with them. We agree with that statement. We say that the way to get corporate profits out of the bank and into the business community is to give corporations some incentive.

When the Government takes 52 percent, it is a senior partner in everyone's business. What the bill proposes to do is to reduce the Government's part in every business operation to that of a junior partner, or to 48 percent. The Douglas amendment would reduce it only 2 percent, so the Government would be a 50–50 partner with every businessman. That is not a sufficient incentive to get corporate profits out into the economic lifestream, modernizing equipment, buying new equipment, and providing jobs thereby.

We believe that the proposal offered by the Senator from Illinois, while it is well intentioned, would actually upset the balance now in the bill. It would destroy the incentive which we are trying to achieve. It would not reduce corporation taxes sufficiently. We trust that the Senate will support the committee.

The PRESIDING OFFICER. The time of the Senator from Florida has expired.

Mr. SMATHERS. Mr. President, how much time remains?

The PRESIDING OFFICER. The Senator from Louisiana has 2 minutes remaining, and the Senator from Illinois has 5 minutes remaining.

Mr. ERVIN. Mr. President, will the Senator from Florida yield?

Mr. SMATHERS. I yield.

Mr. ERVIN. I should like to ask a question to make the issue more under-

[*P. 1939*]

standable. How many extra dollars would the amendment put into the pockets of the individuals in the lowest income group?

Mr. SMATHERS. Nine hundred and sixty million dollars; but the bill already——

Mr. ERVIN. Dividing it among the individuals in the lowest income group, how many dollars——

Mr. SMATHERS. Fifteen percent of that goes into the income group below $5,000, but in the entire bill—I do not have time to go into detail on it—we give $9,200 million in total tax relief to the consumers of the country.

Mr. DOUGLAS. Mr. President, to answer the question of the Senator from North Carolina [Mr. ERVIN], my amendment would give $150 million to those with incomes of less than $3,000, and $235 million to those with incomes from $3,000 to $5,000, or a total of $385 million to those with incomes under $5,000. It would give $540 million to those with incomes between $5,000 to $10,000. Only $35 million would go to those with incomes over $10,000.

My time is too limited to go into more detail, but in brief, under the corporate tax, 80 percent of the benefits would go to those with incomes of over $10,000, 60 percent would go to those with incomes of over $20,000, and one-third of the benefits would go to those with incomes of over $50,000. So my amendment would effect a needed and beneficial redistribution.

This is the best and most effective way to redistribute income, if we wish to help the lower income groups below $10,000. It is better than increasing the exemptions for which I voted yesterday.

So far as corporations are concerned, I invite the attention of the Senate to the fact that since 1954 we have already granted them approximately $5 billion a year in tax relief in the form of, first, accelerated depreciation, then higher depreciation ratios than in the investment credit of last year.

The proposal would effect a needed change, particularly in view of the fact that our system of excise taxes—our State, Federal, and local taxes and our general property taxes—is highly regressive, and we need some shifting of income if we are to make our total tax structure even proportionate.

Mr. President, I ask for the yeas and nays on the amendments.

The PRESIDING OFFICER. Is there a sufficient second?

The yeas and nays were ordered.

Mr. SMATHERS. Mr. President, how much time remains?

The PRESIDING OFFICER. The Senator from Louisiana has 1 minute remaining, and the Senator from Illinois has 3 minutes remaining.

Mr. LONG of Louisiana. Mr. President, I yield my remaining time to the Senator from New Mexico.

Mr. ANDERSON. Mr. President, I wish to second what the Senator from Kentucky [Mr. MORTON] said a moment ago. He said that the amendments would throw out of balance a bill that we have been trying to work out. A short time ago there was a vote on a proposal relating to dividend credit.

I voted against the proposal to restore the dividend credit. I and other Senators voted in the way we did because we have been trying to obtain a balanced bill. If we are to vote with that objective in mind, we ought not to agree to the amendments. I point out again that we are trying to produce a balanced bill.

The amendments would remove from the tax rolls entirely about 2 million people.

That is not the only benefit which would be given. The amendments would persuade many people who now elect to itemize their contributions to change their approach and adopt the standard deduction. There has been a great advantage to people who have accounted for their deductions. Most people have done so. The proposal would permit greater use of the standard deductions.

People could merely claim the deduction and not make contributions to charities or things of that nature. It would be a bad thing, though all right for a few. It would be wrong to add a few million people to those in that category.

Mr. President, that is not the way to obtain a bill. We have worked hard on the bill. We could easily change it around. As has been pointed out, the proposed distribution of tax reductions which would be divided $9 billion to individuals and $2 billion to corporations would be a fair distribution. Now the suggestion is made that the income tax reductions for individuals be increased by $2 billion, and that we eliminate the $2 billion of proposed reductions which would be given the corporations. That is not the way to get a bill through the Congress.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. DOUGLAS. Mr. President, I yield a minute and a half to the Senator from Alaska.

Mr. GRUENING. Mr. President, I think the amendments of the Senator from Illinois [Mr. DOUGLAS] would vastly improve the tax bill. There is a growing feeling abroad that the bill would do far too much for those in the higher income brackets to the detriment or to the nonassistance of those in the lower income brackets.

Yesterday the able Senator from Tennessee [Mr. GORE] recalled his conversation with Henry Ford who had organized a committee to lobby for this bill and testified before the Finance Committee. It was brought out in the colloquy with Mr. Ford that the increase in takehome pay of the average worker would be a mere $3 a week under the bill, whereas in the case of executives receiving $150,000 or $200,000 a year, the takehome pay increase would be $1,000 a week. That is symptomatic of the grave disparities that exist in the bill. It will be said—and it will be said not untruly—that the bill is essentially one which would make the rich richer and do relatively little for the vast majority who are barely getting along. We assume that nearly all favor a tax reduction, although some of us feel that it is not particularly needed at a time of great prosperity at the upper levels. But the assistance in the form of tax reduction in this bill would go to the wrong end of the economic spectrum—the upper end. It should instead go to the lower income groups and the middle income groups. To the extent that the modest amendments of the Senator from Illinois would do that, they are an improvement of the bill. I hope that the amendments will be accepted, for they would be received with great enthusiasm by the overwhelming majority of the people of the United States when they understand what is really involved. As it now stands these people, the majority of our citizenry, having heard so long of and waited so long for tax relief, will wonder where it is. To paraphrase a famous remark of Winston Churchill, it might be said that never will so many have waited so long for so much and received so little. That will not be true of the affluent minority. They will be the great beneficiaries of this legislation.

The PRESIDING OFFICER. The time of the Senator has expired. The Senator from Illinois has a minute and one-half remaining.

Mr. DOUGLAS. Mr. President, I do not wish to labor the point. Under my amendments a married man having a wife and four children, with an income of $5,000, would receive an added $600 in exemptions, and would therefore under present rates be spared a tax of approximately $120. That is a group which needs relief the most. I believe that not more than half a million would be removed from the tax rolls and these are fellows who ought not to pay income taxes. I hope that some of the copious tears which were shed yesterday for the poor in trying to defeat the Ribicoff amendment may materialize in votes for the amendments today.

The PRESIDING OFFICER. The Senator's time has expired. All time has expired.

The question is on agreeing to the amendments of the Senator from Illinois. On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from Nevada [Mr. CANNON], the Senator from Pennsylvania [Mr. CLARK], the Senator from Arkansas [Mr. MCCLELLAN], and the Senator from Oregon [Mrs. NEUBERGER] are absent on official business.

I also announce that the Senator from California [Mr. ENGLE] is absent because of illness.

I further announce that, if present and voting, the Senator from Nevada [Mr. CANNON], the Senator from California [Mr. ENGLE], and the Senator from Oregon [Mrs. NEUBERGER] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Illinois [Mr. DIRKSEN] is necessarily absent and, if present and voting, would vote "nay."

The result was announced—yeas 23, nays 71, as follows:

[*P. 1940*]

[No. 21 Leg.]

YEAS—23

NOT VOTING—6

Cannon	Dirksen	McClellan
Clark	Engle	Neuberger

So Mr. DOUGLAS' amendments were rejected.

The PRESIDING OFFICER. By unanimous consent agreement, following disposition of the Douglas amendment, an amendment intended to be proposed by the Senator from Illinois [Mr. DIRKSEN] will be taken up for consideration. The Chair is advised that the Senator from Kentucky [Mr. MORTON] will present it.

Mr. MORTON. Mr. President, first I move to reconsider the vote by which the Douglas amendments were rejected.

Mr. McCARTHY. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. MORTON. Mr. President, I call up, on behalf of myself and the minority leader [Mr. DIRKSEN], who is unavoidably absent today, amendment No. 380.

The PRESIDING OFFICER. The clerk will state the amendment.

The legislative clerk read the amendment (No. 380), as follows:

At the proper place insert the following new section:

"SEC. —. REPEAL OF RETAILERS EXCISE TAXES ON JEWELRY, FURS, TOILET PREPARATIONS AND LUGGAGE.

"(a) REPEAL.—Effective with respect to articles sold on or after the first day of the first month which begins after the date of the enactment of this Act, the following subchapters of chapter 31 (relating to retailers excise taxes) are repealed:

"'(1) Subchapter A (jewelry and related items).

"'(2) Subchapter B (furs).

"'(3) Subchapter C (toilet preparations).

"'(4) Subchapter D (luggage, handbags, etc.).'

"(b) CLERICAL AMENDMENT.—The table of subchapters of chapter 31 is amended by striking out the following:

"'SUBCHAPTER A. Jewelry and related items.

"'SUBCHAPTER B. Furs.

"'SUBCHAPTER C. Toilet preparations.

"'SUBCHAPTER D. Luggage, handbags, etc.'"

Mr. MORTON. Mr. President, in 1941, excise taxes were imposed at the retail level because of an emergency. When they were levied in 1941, Congress gave as its objective "Revenue, and other purposes." In that wartime atmosphere the "other purposes" were clearly to divert consumer spending from some articles that did not contribute directly to the war effort. The intent of Congress on this all-important point is clear. Included in these taxes were those on luggage, jewelry, furs, and toilet preparations.

For instance the components of luggage and leather goods are leather, wood, brass, steel, rayon, and cotton linings—all material that was so badly needed during the war. It is beyond the shadow of a doubt to say that Congress placed an excise tax on luggage and leather goods to curb their sale, not because they were luxuries, but because the components consisted of vital war materials. The excise tax was used as a power to control, retain, and divert the use of defense materials.

Jewelry was one of these products. The tax did help divert money to war bonds; but it also helped to divert labor and materials away from those products and it helped to convert the taxed industries to war production. Their effect as a business depressant was substantial.

The same is true of furs and toilet preparations.

These items were not necessarily selected because they were in the luxury category. They were selected because they posed a minimum of collections and administrative problems for the Bureau of Internal Revenue. The fact that the selection of these few industries was highly discriminatory at the time was regarded as justifiable in those critical emergency days. The Congress clearly recognized that such a selective tax could only be justified in time of great emergency. The Congress therefore, as a part of the bill, provided for the termination of these taxes immediately after the cessation of hostilities.

Notwithstanding this commitment for termination, the taxes remain today. And, the tax continues to divert consumer spending from the taxed articles, just as the Congress intended that it should.

There are few who could maintain the justification that these items are today luxuries. Congress even in enacting the Revenue Act of 1941 did not levy retail excise taxes on luxuries only and refrain from taxing nonluxuries. The classification that was adopted in the Revenue Act of 1941 was unrealistic then and is unrealistic today.

It might well be wise to consider these various categories and their applicability to the description of a luxury item.

No excise tax is collected on the suit a man wears on his back, or on his under-

clothing nor on his shoes, but there is an excise tax on the bag in which he must carry his clothes and on the wallet in which he carries his money. Luggage and leather goods are not luxuries nor were they so considered by the Congress when they enacted the Henderson Security Act in which luggage and leather goods were included. What justification is there for this tax on luggage? When considered in the light of many hundreds of items which are not taxable, the answer is obvious, there is no justification.

When a tax is put on some business and not on others, those businesses which are taxed are burdened with a special penalty. Can anyone deny that this is a discrimination by the Government? A business which is punished by a special tax cannot compete on fair and equal terms for the consumer dollar. But even more distressing is the impact this tax has had on the industry itself that furnishes luggage. Since the year 1948, more than 75 manufacturers of luggage and leather goods have discontinued operations. In the main this has been because the businesses that were conducted are no longer profitable and could not continue operation while still being subjected to the 10-percent excise tax.

One of the more disastrous effects of the 10-percent tax on furs has been the drastic reduction of the number of workers who have been employed in the manufacturing field alone. It was at a peak of 14,000 workers, but the union membership now stands at about 7,200. In the correlative field of dressing and dyeing of fur skins there has been a similar drastic drop. This has not been brought about by automation, for this is a handcraft industry, probably the last one of such industries, it is not possible to cut, sew, nail, or finish fur garments in bulk, for each garment has to be handled individually, from the raw state to the finished product.

The glaring inconsistency in respect to the tax on furs are readily apparent. Fur wearing apparel is subject to tax, whereas garments made of other material, comparable in use and appearance, and sold in competition with such fur articles is not subject to tax. A fur trim on a garment subjects it to the tax, and in many cases the trim serves no other purpose than ornamental.

Research in the textile field has made great strides in response to the consumers' growing demand for untaxed cloth garments, as against taxed fur garments, the textile industry has produced high pile fabrics which look like fur and feel like fur and are described as imitations of fur, and which yield garments that resemble fur garments, but which are not subject to tax.

Some of these fabrics actually consist of fur hairs incorporated in a woven backing material, so that garments made therefrom are actually fur garments for all practical purposes, but since the fur is not on the hide or pelt they are tax free. An even greater distortion occurs in the case of a working girl of limited means who buys a moderately priced fur coat, say from $100 to $200, which is subject to a 10-percent excise tax. But, a cloth coat which sells for three or four times that amount, and even more than that, is tax free even though it is obviously a luxury item. This injustice is even compounded in the instance of coats with fur trims. Here it is difficult to determine any justification whatsoever in regulations that prescribe the treatment

[*P. 1941*]

for this particular type of garment. An even more ridiculous situation occurred in the case of the Davy Crockett hats which were sold in the country for a number of years and were made of fur and which sold for $1.50 or $2. Many youngsters throughout the country wore Davy Crockett hats and imitated its creator. These hats were subject to tax. However, a lady's hat selling for $150 or $200 is tax free.

An even more difficult situation arises in the case of jewelry. The regulations that have been issued respecting jewelry are most difficult to interpret by interested members. It becomes a major problem for the retailer, large or small, to know what is and what is not taxed. A nonjewelry product which contains the fine gold equivalent of seven-millionths of an inch in thickness is taxable, if it contains a lesser amount, it is not taxed. The measurement of precious metal to millionths of an inch can only be accomplished in specialized laboratories. Even larger manufacturers have no such facilities.

Congress even in the severe throes of war, did not levy retail excise taxes on luxuries only and refrain from taxing nonluxuries. Many articles of jewelry, as well as other products which are taxed, cannot be regarded as luxuries—the simple gold wedding band, the watch, a silver-plated bowl. Their widespread use and modest price deny this categorization, yet they are taxed. Conversely, numerous articles that some regard as luxuries have never been taxed at retail—yachts, objects of art, high Paris fashions, and so forth.

Most jewelry is sold to retail jewelers, haberdasheries, and other outlets that are small business in every respect—

69-108 O—66—pt. 3——40

many are family owned and operated. Over the years, excise regulations on jewelry have developed into a complex maze of technicality. Simple accurate compliance with the tax is a near insurmountable task for the average retailer. The collection of retail excises is an expensive cost of doing business for the average retailer of taxed products. The jewelry retailer, for example, must insure that in all his advertising, prices either say "plus 10 percent tax" or "tax included." They must figure the tax on each sale, be it a 10-cent sale or a $1,000 sale. Separate bookkeeping entries must be made for taxes collected. Separate tax reports and remissions must be made quarterly. Periodic tax audits are made. Certain sales and certain types of products must be accompanied by tax exemptions certificates which the retailer must be able to produce during audit. Some retailers refuse to handle taxed products because of the expense of being a tax collector. Repeal of excise taxes will relieve retailers, mostly small business, with the complex problem of tax determination and the expense and time-consuming problem of tax administration, collection, and mission. This effort and expense can be diverted from nonprofit, uneconomic tax collection work to profit-producing, employment-producing selling, with its subsequent revenue-producing results. What purpose can be gained in a free peacetime economy in attempting to penalize the purchase of one type of product versus another? Certainly some regulations are essential where public health and safety may be a factor; but if the retail sale of any product in which these factors are not present is penalized by Government, the economy is not free. The discriminatory features of the present retail excises represent unfair and undue Government influence on the free choice of the consumer. Where selective action discriminates against certain products to the advantage of others, it works to the detriment of all in its interference with the free working of the laws of supply and demand.

Mr. President, no greater issue can be raised than that of attempting to assess a luxury tax on toilet preparations. Included in this category are such items as perfume, toilet waters, cosmetics, hair restorers, hair dyes, toilet powders, and any other similar substance, article, or preparation, by whatever name known or distinguished, which are used or intended to be used for toilet purposes. I would not be the one, Mr. President, to insist that these are luxuries. Although the beauty of our ladies seldom needs the assistance of these products. Nonetheless their addition frequently enhances the beauty already existing. Of all the items that are included in the so-called luxury taxes levied in World War I days, none in my opinion works a greater hardship than the imposition of a tax on these products classified as toilet preparations.

Mr. President, these excise taxes have now been collected for a whole generation. These taxes have been permitted to stand, but with repeated promises that they would be repealed. Every time the question of repeal has arisen the excuse has been offered that more time is needed to study this type of tax. The same argument was repeated again this year in the Finance Committee. It now appears that the House Committee on Ways and Means intends to begin another study on the possibility of repealing these excise taxes as well as other excise taxes. Mr. President, no further study is necessary. In all fairness the commitment that was made, that was contained in the original act, must be kept and the time to keep it is now. It must be honored now by repealing these remaining taxes.

One of the arguments against repealing has been the amount of revenue that is received from this source. In fiscal year 1963 a total of $443,559,000 was collected from these four taxes. Luggage yielded $74,019,000; jewelry yielded $181,902,000; furs produced $29,287,000; and toilet preparations counted for $158,351,000 of this total.

In testimony before the Finance Committee both the Secretary of the Treasury and the chairman of the Federal Reserve Board testified that we could manage a $9 billion deficit which would be incurred through reductions in taxation. At the time of their testimony it was assumed that this would be the deficit that we would have to contend with for fiscal 1965. Now, however, we are promised a budget that will have a deficit of only $4.9 billion. Certainly there is enough room in the new budget to include the repeal of the excise taxes. Such repeal would not create an unmanageable situation from the deficit standpoint.

In addition, Mr. President, there are certainly many areas where further economy can be practiced and the savings would be sufficient to offset the loss in revenue that would be experienced through a repeal of these excise taxes. I need only to refer to a few areas where such economy can be practiced: The Domestic Peace Corps, the Conservation Corps, the making of loans for the construction of motels under the ARA program. The Symington report on the International Development Association program for loans to India points to an area where hundreds of millions can be

saved. Several similar possibilities exist in the entire foreign aid field. I submit that there is only one reason that repeal of these taxes is opposed and that is the loss of revenue. That situation will not change, that argument will still be sounded regardless of whatever other acts might be taken.

On January 14, 1963, President Kennedy in his state of the Union message observed:

For it is increasingly clear—to those in Government, business, and labor who are responsible for our economy success—that our obsolete tax system exerts too heavy a drag on the private purchasing power, profits, and employment. Designed to check inflation in earlier years it now checks growth instead. It discourages extra effort and risk. It distorts the use of resources. It invites recurrent recessions, depresses our Federal revenue, causes chronic budget deficits.

I agreed with that observation at the time it was made and I agree with it now Mr. President and in line with carrying out the purposes of the President's recommendations to remove the drag that our obsolete tax system exerts, one of the best places to begin is by repealing the excise taxes that still remain from the 1941 act.

A repeal of these excise taxes would certainly result in increased purchasing by the consumer. This would apply to all consumers but more particularly probably to the new families being established daily. Thousands of young people are getting married every day of the year. They represent probably the largest single market for the sale of most consumer products. Most of these young people have a real struggle. Every dollar that they can lay their hands on goes to buy something they need when they set up housekeeping. These excise taxes reduce the amount left for buying the many things they need for their home. If retail excise taxes are repealed then surely these young people would spend the extra money right then. Of that you can be certain. Although in each case the amount of tax would be relatively small and the amount to be spent would be relatively small, in the aggregate the amount of new spendable income available for immediate and daily use would be sizable and important. And the effect would be immediate.

The effect on the industries whose products are subject to the retail excise

[*P. 1942*]

tax would be felt immediately. These industries estimate that they could increase their present sales by 10 to 15 percent if the taxes were repealed. This could only result in more jobs and larger payrolls and increased benefits to the whole U.S. economy. The result of excise tax repeal I submit creates a priority to this form of stimulus to the economy fully as urgent and fully as deserving as the other form of reduction being considered.

Consider for a moment, Mr. President, the burden that is placed upon the small merchants who make up for the most part the jewelry and luggage, the small drug stores, and the small department stores. The Treasury Department does not have available the number of retailers who file returns for excise taxes which they have collected. This lack of information amazes me but nonetheless the Treasury does not have it available.

The Department of Commerce advises me that the 1958 census of manufacturers showed 56,232 drug stores, 23,751 jewelry stores, 1,416 luggage and leather shops, and 3,157 department stores. But add to this the thousands upon thousands of small and large groceries who may sell many of these taxed items. These are small family-owned businesses for the most part. The collection of retail excise taxes by the retailers is an expensive cost of doing business.

This measure was considered in committee two separate dates. When first considered it was adopted—the amendment was adopted by the committee by a vote of 9 to 6. However, as the hearing progressed that day, certain changes were indicated on the voting list and final result at the end of the day showed that the amendment had been rejected by a vote of 10 to 7.

But this was not the only effort. Subsequently the amendment was offered in modified form. On this second trial when the first vote was taken, the vote was 10 to 5 to remove excise taxes from the toilet preparations. The vote was 10 to 5 to remove excise taxes from luggage. On jewelry the vote on the modified amendment which would exempt the first $100 in sales was approved by a vote of 13 to 2. The same $100 limitation was included in the amendment to remove the tax on jewelry, and this was approved by the same vote, 13 to 2. These substantial majorities seem to reflect the conviction of the committee. They were impressive.

However, the final session of the afternoon produced an amazing demonstration. The committee has resumed consideration of the measure during the afternoon of January 23. I was on the floor at the time the committee went back into session. When I returned to the floor for the final vote I was advised that a motion had been made to strike all of

the amendments which had been adopted to repeal excise taxes and that the motion had carried by a vote of 9 to 8.

What had happened, Mr. President? In the interval between the time that the vote was taken on these four items during the morning of the 23d and the time that the committee went back into session in the afternoon the "Texas twist" had been applied, and it had its effect. It is no secret that the President called members of the committee. This information was given to me by members who were called. This is a fact. The telephone calls produced the results that had been desired. I have no quarrel with the President, however, I do contend that this matter of raising revenue is a function that is the prerogative of Congress. The executive department of Government is given no authority by the Constitution to raise revenue. The Congress is the sole responsible department of Government that the Constitution charges with this responsibility. It is time that the Congress assumed its responsibility. This can be done without assistance or coercion from the executive branch of the Government. It is time the Members of Congress accept this responsibility and demonstrate their willingness to carry out their duties. This is the time for Members to stand up and be counted on this issue. Are we to repeal excise taxes or not? Are we to honor the commitment that we have made and overlooked year after year for the past 18 years?

Now, Mr. President, this is far too long for the promise that the Congress made when it enacted these taxes not to be carried out. This is an election year, I may remind the Members. The women consumers in our country pay far more of the excise taxes than do the men, and they can become very explosive. They, combined with the retailers who collect the tax, can also apply the twist. I say, Mr. President, that it is time for us to honor our commitment, it is time for us to repeal this wartime emergency excise tax.

It is time to give the American consumer and the American retailer a break. Let the consumer keep the $443 million of revenue instead of dumping it into the Treasury, and, if there is any logic to the tax bill he will spend it. This is one of the principal purposes of this measure.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. MORTON. I yield.

Mr. JAVITS. Mr. President, when this matter was presented to the Finance Committee, a limitation of $100 was placed on jewelry and furs. Is that provision still contaned in the amendment?

Mr. MORTON. The amendment does not contain any limitation. The amount that the Treasury would keep if that $100 limitation were included is less than 10 percent of the total amount involved.

It was felt that the burden placed on the retailer by making him a tax collector in this case is a substantial burden. If we put a $100 limitation on furs and jewelry, the amount that the Treasury will recover is inconsequential compared with the total involved. It would still leave the small retail department store and, in fact, all retail department stores, with the burden of collecting the tax. This would apply to all stores, even the small store handling coats if a coat has a small piece of fur on it. Therefore it was decided not to include the $100 limitation. I had a conference by telephone with the minority leader yesterday, and it was decided that we would go ahead and make a clean repeal.

Mr. JAVITS. The principle is important with me. It is the principle that luxuries be taxed and necessities be not taxed. I should like to ask the Senator from Kentucky a frank question. I would be minded to offer an amendment to his amendment providing for a $100 limitation. I would not do that if the Senator from Illinois would find it obnoxious to him were I to do so. Therefore I say to the Senator that I would be prepared to vote for the amendment if it contained a $100 limitation. I am not prepared to vote for it without such a limitation contained in it.

I realize that one vote does not mean much. However, the principle is very important to me. I ask the Senator frankly this question: Would he consider it disagreeable to the sponsor of the amendment, the Senator from Illinois [Mr. DIRKSEN], who unhappily for all of us is not present, if I were to propose such an amendment to his amendment?

Mr. MORTON. I feel sure that it would not be disagreeable to the Senator from Illinois [Mr. DIRKSEN]. In fact, he at one time had introduced such an amendment. Such an amendment was adopted. Then the committee, later in the day, reversed itself. Therefore, I am sure it would not be disagreeable for the Senator to offer such an amendment. The vote may be close, and his vote is important. It he wishes to offer his amendment to the Dirksen-Morton amendment, he is, of course, at liberty to do so, and his action will be perfectly understood.

Several Senators addressed the Chair.

Mr. JAVITS. Will the Senator permit me to make a parliamentary inquiry before he yields to other Senators?

Mr. MORTON. I yield.

Mr. JAVITS. At what point in the

proceedings could I offer an amendment to the pending amendment?

The PRESIDING OFFICER. If the Senator from Kentucky yielded to the Senator from New York for that purpose, the Senator from New York would be in order to do so at this time.

Mr. JAVITS. And if the Senator from Kentucky refused to yield at this time for that purpose, when would it be in order to do that?

The PRESIDING OFFICER. As soon as the Senator from Kentucky had yielded the floor the Senator would be able to do so if he were recognized.

Mr. JAVITS. When the Senator's time has expired?

The PRESIDING OFFICER. There is no time limitation.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. MORTON. I yield.

Mr. DOUGLAS. I am very glad that the Senator from New York has raised this point, because this was the precise amendment to the Dirksen amendment which I submitted in the committee, as the Senator from Kentucky will remember. I am prepared to support the amendment if it has a $100 limitation in it. I shall be compelled to vote against it if it does not have that limitation in it. I believe that the amendment

[*P. 1943*]

in its general outline is correct. However, I do not believe we should grant an exemption from taxes for a $10,000 diamond ring or for a $9,000 royal mink coat. Therefore, I hope the amendment to the amendment will be found to be acceptable by the Senator from Kentucky when such an amendment is offered.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. MORTON. I yield.

Mr. PASTORE. First I wish to compliment the Senator frem Kentucky for bringing up the amendment. I am inclined to agree with the distinguished Senator from New York and the distinguished Senator from Illinois that if we place ourselves in the position this afternoon of trying to defend the removal of the excise tax on a $10,000 diamond ring or a $9,000 fur coat, the amendment in those high brackets will not get very far. I am sure, unless we put a limitation on it, we shall give the amendment the kiss of death. I strongly urge the Senator from Kentucky not to let us reach a vote on the limitation, but that he accept it as a modification of his amendment.

Such an amendment was adopted in committee. The amount of $100 is reasonable. We are discussing the matter of jewelry and other so-called luxuries, items such as handbags. The housewife whose husband makes about $4,000 a year should not be forced to pay an excise tax on a modest handbag.

A handbag today is as much a part of a woman's accessories as are her shoes. Why should we regard a handbag as an extravagance or a luxury? If a man buys 100 shirts, why should not 75 of those shirts be considered a luxury? This matter of the measurements of luxuries can lead us to a rather ridiculous argument.

Some jewelry items are considered to be more or less accessories and a part of a person's attire. I hope the limit will be $100, because I think that would offer a practical chance of having the amendment adopted.

In conclusion, let us not forget that the excise taxes were imposed during the war, when goods were in scarce supply and money was in abundance. The object was to slow down the purchase of certain articles.

Now the reverse is true. We want bigger business. The argument that has been made for an $11 biliion reduction in taxes is that it would stimulate the economy; that it would put more money into the pockets of the consumer, so that the consumer would buy more and thereby create more jobs. If that is the philosophy behind the bill, if it is desired to create jobs in Rhode Island, if it is desired to create jobs in the centers of manufacture of articles that are not out-and-out luxuries, and if we limit the amount to $100, the time has come when this removal is absolutely necessary. It is an integral part of the bill and is in accord with the philosophy of the bill. It is actually in line with the genesis of the bill. If we want to do the right thing today, let us remove this excise tax, which was imposed as a business brake. If one wants to accelerate once more, he takes his foot of the brake and steps on the accelerator. If we want to help to accelerate the economy this afternoon, let us take off the brakes by taking off the excise tax.

I thank the Senator from Kentucky.

Mr. MORTON. Mr. President, in view of the persuasive remarks I have heard in the last few minutes, I should like to alter the amendment to read as follows:

> At the end of the bill insert the following:
>
> "TITLE IV—EXCISE TAXES
>
> "SEC. 401. RETAILERS EXCISE TAXES.
>
> "(a) LIMITATION OF TAX ON JEWELRY AND RELATED ITEMS.—Section 4001 (relating to imposition of tax on jewelry and related items) is amended by inserting after '10 percent of the price for which so sold' the following: ', to the extent such price exceeds $100'.

"(b) LIMITATION OF TAX ON FURS.—Section 4011 (relating to imposition of tax on furs) is amended by inserting after '10 percent of the price for which so sold' the following: ', to the extent such price exceeds $100'.

"(c) REPEAL OF TAX ON TOILET PREPARATION.—Chapter 31 (relating to retailers excise taxes) is amended by striking out subchapter C (relating to toilet preparations).

"(d) REPEAL OF TAX ON LUGGAGE, HANDBAGS, ETC.—Chapter 31 (relating to retailers excise taxes) is amended by striking out subchapter D (relating to luggage, handbags, etc.).

"(e) TECHNICAL AMENDMENTS.—

"(1) The table of subchapters for chapter 31 is amended by striking out:

"SUBCHAPTER C. Toilet preparations.

" 'SUBCHAPTER D. Luggage, handbags, etc.'

"(2) Section 4003 (relating to exemptions from tax on jewelry and related items) is amended by striking out subsection (b).

"(3) Subchapter B of chapter 31 is amended by striking out section 4013 (relating to exemption of certain auction sales).

"(4) The table of sections for subchapter B of chapter 31 is amended by striking out:

" 'Sec. 4013. Exemption of certain auction sales.' "

"(f) EFFECTIVE DATE.—The amendments made by this section shall apply with respect to articles sold on or after the first day of the first month which begins after the date of the enactment of this Act."

Mr. DOUGLAS. Mr. President, I congratulate the Senator from Kentucky for agreeing to make this change, which has also been suggested by the Senator from New York [Mr. JAVITS] and the Senator from Rhode Island [Mr. PASTORE].

The junior Senator from Illinois [Mr. DIRKSEN] and I proposed it in committee. I am happy to support it. It will in the main remove taxes from purchases made by persons in the lower income groups.

Mr. MORTON. I thank the Senator from Illinois. He has correctly stated what occurred in committee.

Mr. JAVITS. Mr. President, I, too, wish to thank the Senator from Kentucky. His action is most statesmanlike. I am most happy to support the amendment.

Mr. CARLSON. Mr. President, will the Senator from Kentucky yield?

Mr. MORTON. I yield.

Mr. CARLSON. I appreciate the situation that has confronted the Senator from Kentucky. After all, he is presenting the amendment on behalf of the distinguished minority leader. As a member of the Committee on Finance who supported both Senators from Illinois on the amendment, I am delighted that the Senator from Kentucky has agreed to accept the $100 limitation. I hope the amendment as modified will be approved by the Senate.

I am completely in accord with the statement of the Senator from Rhode Island that we want to do something to put money in the hands of the consumer. This is the part of the tax bill where that can be done. I hope the amendment will be agreed to.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. MORTON. I yield.

Mr. HUMPHREY. Can the Senator from Kentucky give the Senate any idea of what the total revenue cost of his amendment would be? Does he have an estimate?

Mr. MORTON. Yes; the total cost originally was estimated as $443 million. The $100 exclusion would bring that figure down to around $400 million.

Mr. HUMPHREY. Does the Senator propose to substitute this particular amendment for any other provision in the bill?

Mr. MORTON. No; this would be a new section.

Mr. HUMPHREY. So it would be an additional tax reduction on the aggregate figure in the bill?

Mr. MORTON. The Senator is correct; it would be an additional tax reduction. But, as the Senator from Rhode Island so eloquently stated, this is a wartime tax, imposed to discourage the sale of items which are not luxuries in any sense of the word. It is about high time the wartime taxes were repealed.

Mr. HUMPHREY. I am not arguing that point. The Senator from Kentucky makes a valid point that in many instances the articles are not luxuries. For example, there are people engaged in the retail business who find it most disagreeable to act as tax collectors for the Federal Government.

I wondered why we should not include light bulbs, for example. The tax on light bulbs is a manufacturer's tax. On that, a profit is built. When one is in the retail business and handles an item that is shipped to him by a wholesaler, that item includes a tax in the wholesale price. When the retailer makes his regular markup, he makes it on that tax as well as upon the cost of the item. That is standard retail practice. A light bulb is about as important for the average householder or average citizen as any item of clothing; it is as important as the tires on the car of a worker who drives to work. There is a tax on tires. I might add that there is a tax on the tax, so to speak, because when a tax is imposed at the manufacturer's level, there is also a markup upon the wholesale price of the commodity, plus the tax.

There is also a tax upon radios, and even a tax upon automobiles themselves.

I am concerned about any amendment

to the bill that would substantially increase the overall tax reduction, because it seems to me that we arrived at a sort of consensus as to how much of a tax reduction there could be in terms of the budget problems and in terms of the needs of the economy. I believe the Senator from Kentucky should give some

[*P. 1944*]

consideration not merely to the items which have been discussed.

I have some familiarity with these particular items from a business point of view as well as from a legislative point of view. The Senator from Rhode Island is eminently correct. When a woman buys a $10 purse or a $8 purse, or whatever it is, that article is taxed. But that is hardly a luxury item; I could not agree more with the Senator.

We all know that these are wartime taxes. However, most of the taxes we pay today are related to wartime costs. That is why we pay heavy income taxes, corporate taxes, and other kinds of taxes. We should take a good, hard look at the kind of discrimination that the removal of the tax obligation by this amendment would incur. It is difficult to differentiate, for example, between a toiletry item, upon which a 10 percent tax is levied and a light bulb, because the same woman who buys a bottle of cold cream and pays a 10 percent tax also buys a light bulb on which there is a tax. Should we remove the tax from one item and leave it on the other?

Let me summarize several important points that we must not lose sight of when considering this particular amendment dealing with excise taxes on a few items. These items are only a very small proportion of all the merchandise on which the Federal Government collects excise taxes. Altogether, excise taxes are levied on 50 major categories of retail goods, including literally thousands of different kinds of articles. The entire Federal excise tax structure is interconnected. Cutting taxes on a piecemeal basis would clearly be discriminating against the manufacturers, retailers and consumers of all the other items subject to excise taxation.

Yet if we begin cutting excise taxes on the Senate floor, we will be opening a Pandora's box. This is not the time or place to give adequate consideration to the many thousands of separate products that are involved in this very complicated area. If we limited ourselves to a few items without proper consideration of all the rest of the field, we would be acting neither responsibly nor fairly.

At the same time, we should remember that excise taxes are a vital part of the total Federal tax structure. In the 1964 fiscal year all Federal excise taxes will bring in to the U.S. Treasury revenues of $10.2 billion. This is almost as much money as is involved in the present income tax bill. Can we afford to cut Federal revenues by another $10 billion? Clearly there is a limit to the amount of tax reduction the Treasury can take.

Literally years of planning and deliberation lie behind H.R. 8363. All this planning has assumed stability in other parts of the Federal tax structure. Having deliberated so long on H.R. 8363, will we not jeopardize all this forethought by heedless cuts and slashes on a few haphazardly chosen items of merchandise?

The pending income tax bill will make substantial reductions in the taxes of every consumer and retail merchant. All in all, it will reduce taxes by $11.6 billion. It is estimated that 93 percent of all individual tax cuts will be quickly reflected in consumer spending. Moreover, the largest tax reductions go to the people about whom some speakers this morning have expressed so much concern—the poor and the small shopkeeper. Taxpayers with incomes below $3,000 will have their taxes cut by 39 percent, and small businessmen will get a 27-percent tax reduction. This is a very substantial amount of tax relief.

Mr. President, I have suggested that cutting excise taxes, no matter how politically appealing it may be, is not something that we should rush into on the spur of the moment like this. The distinguished chairman of the Ways and Means Committee has announced that hearings on the entire Federal fiscal tax structure will be held this spring. This is a far better approach than trying to make piecemeal changes. For this reason I oppose this amendment as an ill-considered attempt to tinker with fiscal policy. I urge that we wait until we can deal with this subject in a judicious manner.

Mr. PASTORE. Mr. President, will the Senator from Kentucky yield?

Mr. MORTON. I yield.

Mr. PASTORE. Senators would be surprised to learn how many women can do without light bulbs, but cannot do without lipstick.

Mr. HUMPHREY. If they do not have light bulbs, they cannot see the lipstick. The Senator from Rhode Island is one who knows that women really like to look at themselves.

Mr. PASTORE. They can always use gas or candlelight.

Mr. HUMPHREY. I suggest that the Senator from Rhode Island tell them to use gas. However, there is a tax on it.

Mr. PASTORE. The Senator from Minnesota makes a good point. We have

reached a point where all excise taxes should be reviewed and considered seriously. However, we are being very moderate today. This is a moderate approach.

I do not think a woman's purse can be included in the same category as a set of tires. There is some distinction.

I admit that I am somewhat provincial in my position. I am interested in jewelry because Rhode Island is the jewelry center of the world. It irks me to have someone say that if a girl wishes to buy a small piece of jewelry, costing $5 or $6, she is buying a luxury item, when it is merely something that she can wear to complement her dress. Or perhaps it might be a set of buttons part and parcel of her dress; yet it is considered as a luxury item. That is no luxury—that is a necessity. We are a long way from the luxury line.

The amendment offers a moderate approach. I realize that many arguments can be made to expand the proposal, expand it wider and higher, but I think this is a good start. I hoped that the distinguished Senator who offered the amendment would accept the modification and take it to conference. At least, let us get the amendment moving. What we are trying to do is to stimulate the buying power of the people. Never underestimate the power of women—especially their buying power. How better can that be realized than to have the girls buy lipstick or cold cream, or buy themselves nice handbags? Let us make our women beautiful. Let us not tax that beauty. Let us adopt the amendment.

Mr. MORTON. Mr. President, on the amendment, as modified, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. MORTON. Mr. President, now I yield to the Senator from Florida [Mr. SMATHERS] to enable him to accept my amendment. [Laughter.]

Mr. SMATHERS. Mr. President, I am pleased to be yielded to; and I regret that I am unable to accept the amendment.

I wish to reply to the remarks of the Senator from Rhode Island. He said this is a moderate amendment. He also said that his attitude about it is somewhat provincial. Perhaps—unhappily—many Senators have a provincial interest, and perhaps I am one of them. However, if this amendment were enacted, its direct cost would be $455 million, even without the enactment of the provision one sought to be added by the Senator from Rhode Island.

On the other hand, this amendment would, in the long run, cost about $10 billion, because similar amendments would be added—as the Senator from Louisiana [Mr. LONG] said in the committee, when we were debating this measure there. He said:

> This will not cost $455 million; it will cost $10 billion, because in that event the Members of Congress from other States would be able to persuade Congress to remove the excise taxes from the articles manufactured in their States. For instance, the Senator from Michigan would like to have the excise taxes taken off automobile tires and automobiles. We from Florida, where everyone has a telephone, would like to have that excise tax removed. In fact, the Senator from Kansas has proposed an amendment to that effect. If we were to start by removing the excise taxes from light bulbs and automobiles, finally the able Senator from Washington—a leader in the transportation field—would decide that he would like to have the excise tax taken off transportation; and when that was done, the Senator from Indiana would want the excise tax removed from horns, bugles, and other musical instruments, because they are made in his district.

At that rate, Mr. President—and I say this with great respect for the Senator from Rhode Island, and there is no one for whom I have more respect—when Congress got through taking off all those excise taxes, the excise taxes would have little or no application.

Mr. PASTORE. Mr. President, will the Senator from Florida yield?

Mr. SMATHERS. With all due respect to the Senator from Rhode Island, I wish to finish my statement before I yield.

So, Mr. President, when we finished removing the excise taxes from all those items, this amendment would have cost $10 billion.

We consider and continue these excise taxes on June 30 of every year or prior thereto, or else most of them automatically expire. It is interesting to observe that this excise tax was not first imposed in time of war. It was first imposed in 1932, and was continued until 1936. The country was not in a war

[*P. 1945*]

then; and the tax was just a way to obtain revenue for the Treasury.

The House Ways and Means Committee has begun to consider proposed legislation to repeal these excise taxes, and is wondering how practical it would be to remove them; and in due course the Senate will also consider that proposal, in accordance with the regular procedure and—by law—the chairman will have to have our committee consider these excise taxes, and the Senate will have to decide whether it believes that some of the excises should be continued or should be repealed. That consideration will occur under our regular procedure.

In short, the Senate must regularly consider the question of continuing or repealing the excise taxes. However, if the Senate now starts to repeal some of them, by means of this bill, and does so to the extent of $10.7 billion, and then adds to that the $11 billion, we shall have—roughly—a $22 billion tax-reduction bill; and I do not believe such action would be very responsible.

The Senator from Connecticut would like to have the excise tax on ballpoint pens removed, because they are made in Connecticut, and he says we would contribute to ignorance if we did not act to make it easier for the children to obtain the pens. He has a good point, because we want the children to use the ballpoint pens as they progress with their education. So the Senator has a good point there. [Laughter.]

But when we start considering all of these excise taxes—which we shall have to do if we act to eliminate one of them—then, instead of causing a $455 million loss to the Treasury, the final cost to the Treasury will be $10 billion. That is why almost all members of the committee have at some time or other favored the removal of the excise taxes, and that is why we finally started to act to eliminate them. Of course, we could not do so in this particular bill; but the committee will consider that subject later in the year, as it must.

So, Mr. President, I cannot accept the amendment.

Mr. MORTON. Mr. President, will the Senator from Florida yield?

Mr. SMATHERS. I yield.

Mr. MORTON. Today, the Senator from Florida has, in his usual charming way, kicked an awful lost of dust around in this Chamber. [Laughter.]

These are retail excise taxes, and they are collected from the retailers. There are also manufacturers' excise taxes, but these are the retail taxes. A person who goes into a supermarket, to buy groceries or one who wishes to buy something at a drug counter or a cosmetic counter, has to wait while a separate tape is run up and this tax is imposed on his purchases.

I agree that the excise tax on light bulbs should be studied, and also the excise taxes on tires and the other commodities; but I point out that the excise taxes in this particular category are collected at the retail level, and are a burden on consumers generally, and are especially a hardship on the low-income consumers, and also a great hardship on the whole retail industry.

Mr. SMATHERS. Mr. President, at this point, will the Senator yield for a question?

Mr. MORTON. I yield.

Mr. SMATHERS. Does the able Senator from Kentucky believe that the average citizen in Paducah, Ky., believes there is any great difference between whether it is a retail tax or an excise manufacturer's tax?

Mr. MORTON. The nature of the tax is clearly stated on the label, which must show whether the price of the article is shown with or without the tax; and the consumers understand that. I do not live in Paducah, and I do not shop there, so I do not know what the average citizen there would say; but I do live in Louisville, and I say that the average citizen there understands it.

Mr. PASTORE. Mr. President, will the Senator from Kentucky yield?

Mr. MORTON. I yield.

Mr. PASTORE. There is a difference—and this information may come as a surprise to the Senator. These taxes do have an effect on the consumers or purchasers. The Senator from Minnesota was formerly in the drug business, and he will admit that when a person goes into a drugstore, his decision to buy or not to buy depends entirely on whether the excise tax is going to be written on that sales slip, right under his nose. So the tax does have an effect.

I am saying that the whole philosophy of this tax reduction bill is to accelerate purchasing. So let us remove these taxes, which were imposed in the first place as a brake.

If we mean to do what we started out to do, the correct way to do it is to do it directly.

The Senator from Florida said I was being provincial in my attitude about the tax on jewelry. That is correct; but I say we should do all we can to help the women of America purchase aids to their beauty, which is universal and eternal.

Mr. CURTIS. Mr. President, I shall support the amendment; but the question of whether the taxes will be reduced by $11 billion will have to be determined at the time of the final rollcall.

I stress the point that these taxes are imposed on a relatively few manufacturers, who are required to assess the taxes, collect them, do the necessary bookkeeping, and make the returns to the Federal Treasury.

These taxes are a nuisance to people all over the country. When a woman buys five or six items in a drugstore, she will find that perhaps two or three of them are subject to the Federal excise tax, and the others are not. Often the payment of the tax is not recorded, or perhaps the sales clerk becomes confused in attempting to ascertain the correct amount of the tax, with the result

that the customer is required to pay a few cents too much.

The excise tax division of the Internal Revenue Service has had much difficulty collecting the retail excise taxes.

I daresay that every Senator will find in his office files complaints from honest businessmen about the handling of excise taxes. I know of one instance in which a druggist's records were challenged by the Internal Revenue Service, which questioned the number of articles subject to the Federal retail excise tax he had sold. The Government agents said to him, "Your gross sales amount to x dollars, and therefore—by our rule of thumb—we believe you sold x dollars' worth of merchandise which was subject to the Federal retail excise tax"; and he was required to pay that amount, or else engage in litigation over it.

Furthermore, Mr. President, these excise taxes are very widely applied; they must be applied in thousands of places of business in the United States. On the other hand, if the tax were levied at the manufacturers' level, relatively few persons would have to be contacted in regard to it.

I do not say the manufacturers' taxes should not be reviewed and reduced; and perhaps some of them should be reduced today. But the question of the repeal of the manufacturers' taxes should not be confused with the question of the enactment of this amendment, which deals with the retailers' tax.

In answer to the proposal of the distinguished Senator from Florida, I reply that if it is true that the adoption of this amendment would cause a chain reaction which would result in an eventual revenue loss of $10 or $11 billion, certainly it would also be true that a similar reaction and a similar loss would result if the amendment were to be placed in effect a few months later. In short, that argument is an old gimmick which is trotted forth in an attempt to oppose the needed repeal of these excise taxes.

I believe that should be repealed if we are to have a tax reduction of approximately $10 billion.

I did not intend to take so much time. I thank the distinguished Senator for yielding to me.

Mr. MORTON. Mr. President, I yield 2 minutes to the Senator from Oregon.

The PRESIDING OFFICER (Mr. NELSON in the chair). The Senator from Oregon is recognized for 2 minutes.

Mr. MORSE. Mr. President, I agree with the Senator from Kentucky and the Senator from Rhode Island in the arguments they have advanced in support of the amendment.

Since 1947 I have offered amendments on the subject of excise taxes. I have looked into the recommendations of the Committee on Economic Development, composed of a group of outstanding industrial leaders, which has submitted report after report since 1947, calling for drastic revisions of the excise tax program and the abolition of many excise taxes. I have placed those recommendations in the RECORD time and time again.

I do not believe we can avoid these three reasons:

First, that the leaders of Congress pledged, when they levied excise taxes during World War II, that they would

[*P. 1946*]

be removed. During the past 15 years or more, I have placed the statements of those congressional leaders in the RECORD from time to time.

Second, in my judgment, there is no answer to the economists of the Committee for Economic Development as to the restrictive effect of excise taxes on purchasing power. I thought our objective in the bill was to stimulate the economy, to induce people to buy, and thus create the many jobs that would flow from such purchases.

Third, I am not persuaded at all by the argument of the Senator from Florida that this proposal might lead the way to the elimination of excise taxes. That is one of the main reasons why I urge support of the amendment. I believe that is exactly what it would do. If the Senate adopts this amendment today, it will set a precedent so that next May or June we may be able to get rid of other excise taxes, but that is a long day off.

I thank the Senator from Florida for making that argument, because I believe it is the best argument in support of the amendment; because if this amendment is adopted, it will set a precedent, and will pave the way to do what we should have done a long time ago, namely, get rid of most of the excise taxes.

Mr. BENNETT. Mr. President, will the Senator from Kentucky yield?

Mr. MORTON. I yield 2 minutes to the Senator from Utah.

The PRESIDING OFFICER. The Senator from Utah is recognized for 2 minutes.

Mr. BENNETT. I should like to follow up the comments made by the Senator from Kentucky and the Senator from Nebraska as to the difficulties the excise tax creates, not only for the buyer, but also for the seller.

The Senator from Kentucky referred to the brother who operates a supermarket, and has to have two tapes.

I have in mind a personal friend in a small town in my State who operates a one-man drugstore. Each time he sells a taxable item, he must stop and get out a pencil and notebook and write down a description of the item, the price the customer paid for it, and the amount of the tax, because that is the only device by which he can protect himself when the Internal Revenue inspector comes along. This slows the situation down, and it also slows down his ability to serve his customers. It is an eternal burden to the little man who is trying to operate a small business. I believe this is one of the most potent reasons why we should get rid of taxes of this kind. They are purely nuisance taxes, not only to the buyer, but also to the man who wishes to serve his customers well.

Mr. HARTKE. Mr. President, will the Senator from Kentucky yield?

Mr. MORTON. I yield.

Mr. HARTKE. I should like to inquire of the Senator from Kentucky whether this includes all of the sales taxes.

Mr. MORTON. Federal retail sales taxes.

Mr. HARTKE. It includes all of the retail excise taxes. Does it exclude diesel fuel oil?

Mr. MORTON. This includes leather goods, furs, toilet preparations, and jewelry, with a $100 limit——

Mr. HARTKE. As I understand, that leaves only one retail excise tax which is not included——

Mr. MORTON. It does not touch the gasoline tax.

Mr. HARTKE. That is the only one left.

Mr. JAVITS. Mr. President, will the Senator from Kentucky yield for a correction? It leaves the tax on theater tickets, and I am about to offer an amendment on that subject.

Mr. HARTKE. That would leave only the diesel fuel oil tax. If we are to have a uniform ticket on retail taxes, we must take that out; but, if not, I should like to make a brief statement on behalf of schoolchildren.

At the present time, if one plays a musical instrument in an orchestra or a band in an institution, and the institution buys the instrument for the child's use, there is no excise tax, but an exemption is allowed. But, if the parent buys the musical instrument for use in the same orchestra or the same band in the same institution, an excise tax is levied. The Senator from Kentucky and I were both subject to an adverse editorial, so I wonder whether he would be willing to include this textbook, so to speak, on musical instruments only for schoolchildren.

Mr. MORTON. That is a manufacturer's tax.

Mr. HARTKE. There is no question about it; it is a manufacturer's tax.

Mr. MORTON. I cannot complicate the amendment. To get into this area would be to open up Pandora's box. The Senator from Indiana and I were the joint targets of an unfavorable editorial, so I wish to stop agreeing with the Senator from Indiana. I ask the Senator not to get me into that jam again. I cannot accept the proposal.

Mr. HARTKE. So far as I am concerned, there is great interest in encouraging the beauty of women, and I believe that children should also be encouraged, in the cultural field, to further their musical education and not to inhibit it.

Mr. MORTON. I am for furthering the musical education of children, but I cannot open up the amendment any further. I am sorry.

Mr. BEALL. Mr. President, will the Senator from Kentucky yield?

Mr. MORTON. I yield 3 minutes to the Senator from Maryland.

Mr. BEALL. Mr. President, I have for some time advocated the repeal of the wartime excise taxes. In line with this, I shall support the pending amendment, as well as any other amendment designed to repeal excise taxes.

Excise taxes were enacted during a wartime period to discourage the use of transportation and communications facilities and to discourage the purchase of luxury items. The war is over. There can be no justification for further discouraging the use of these facilities or purchase of these goods.

There is general agreement on the need for expanding our economy. An expanding economy requires increasing investment in services and goods, and anything which discourages investment in services and goods in an obstacle to an expanding economy.

I am convinced that tax reduction is necessary. However, there is a segment of our population which will not benefit from a tax cut. I refer to those low-income people who are not taxed, as well as those who are unemployed. Under the provisions of this bill, these individuals will continue to pay excise taxes on products and services which have become necessities. These people are entitled to participate in the lightening of the tax burden.

In today's economy, it does no make sense to classify as luxuries clocks, watches, and ladies' handbags, and yet, in this bill, these items are listed as luxuries and are subject to an excise tax. A lady's handbag is every bit as necessary as the pockets in a man's trousers.

The thousands of retail and manufacturing taxes fall on all citizens alike, but they fall heaviest on those who can least afford them. This tax bill, we are told, is designed to stimulate the economy and place additional purchasing power in the hands of the consumer. In view of this, we should start by repealing the excise taxes.

I intend to support the pending amendment, and any others which promise to relieve our people of obnoxious and illogical excise taxes.

UNANIMOUS-CONSENT REQUEST

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that debate of the Morton amendment be concluded at 1 o'clock, and that the time be divided, 15 minutes for the sponsor of the amendment, and the remainder of the time to the opponents, the time to be divided and controlled by the Senator from Louisiana.

The reason I request that the opponents have control over the majority of the time is that, so far, the proponents have held the floor for the most part.

Mr. JAVITS. The Senator from Louisiana should make one proviso, and that is that the amendment can be amended. I do not expect any, but I do not believe a unanimous-consent request should preclude amendments to an amendment.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that time on the amendments be limited to 10 minutes on each side.

The PRESIDING OFFICER. Is there objection?

Mr. LAUSCHE. Mr. President, reserving the right to object, I should like about 7 or 8 minutes.

Mr. LONG of Louisiana. I yield to the Senator that amount of time.

The PRESIDING OFFICER. Is there objection?

Mr. MAGNUSON. Mr. President, reserving the right to object, I wish to make a parliamentary inquiry.

The PRESIDING OFFICER. The Senators will state it.

Mr. MAGNUSON. Is the Morton amendment subject to amendments pertaining to excise taxes that would not relate to the retail collection of taxes?

[*P. 1947*]

The PRESIDING OFFICER. Germaneness of amendments is not required.

Mr. SMATHERS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. SMATHERS. Does the ruling of the Chair then mean that there could be added to the Morton amendment an amendment which would reduce the excise tax on light bulbs, automobile tires, automobiles, ballpoint pens, musical instruments used in high schools, and transportation?

The PRESIDING OFFICER. The Senator is correct. Is there objection to the unanimous-consent request?

Mr. GORE. Mr. President, I object.

The PRESIDING OFFICER. Objection is heard.

Mr. PROXMIRE obtained the floor.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. PROXMIRE. I am happy to yield to the majority leader.

Mr. MANSFIELD. Mr. President, has a unanimous agreement been entered into?

The PRESIDING OFFICER. No agreement has been entered into.

Mr. MANSFIELD. I express the hope that there will be none, because I have been notified by at least one Senator that he would object. If any unanimous-consent requests are made, I believe they should be made while that Senator is present in the Chamber, and he should be given some notice.

Mr. LONG of Louisiana. Mr. President, I understand that, but I believe that if a Senator desires to keep the Senate from voting, he should remain in the Chamber to see that the Senate does not vote, or find some other Senator who will remain here to see that the Senate does not vote. I do not believe that a single Senator who wishes to impede the movement of the Senate should have the privilege of delaying the activities of the Senate in absentia. I think he should be present to do it.

Mr. MANSFIELD. If I had known that the request was to be made, I would have objected in the name of that Senator, because I believe that every Senator is entitled to that consideration. I believe the Senator from Louisiana feels the same way.

Mr. LONG of Louisiana. That is more consideration than the majority leader has ever accorded the Senator from Louisiana in absentia.

I have negotiated with the Senator in relation to subjects that I did not want considered when I could not be present, but it has been my impression that if a Senator wished to keep the Senate from acting, he would be required to be present or to find some Senator who would take the responsibility of keeping the Senate from voting.

Mr. PROXMIRE. Mr. President, who has the floor?

The PRESIDING OFFICER. The Senator from Wisconsin has the floor.

Mr. SMATHERS. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. SMATHERS. I believe that all Senators who might have some interest in objecting to a unanimous-consent request are now in the Chamber. I wondered if, while Senators are present, we might not explore the prospect of having a vote at 1 or 1:30 p.m., which I think would give every Senator an opportunity to be heard.

Mr. MANSFIELD. Mr. President, will the Senator yield further?

Mr. PROXMIRE. I yield.

Mr. MANSFIELD. There is nothing I would rather do, because several Senators have engagements of peculiar significance to them this afternoon. But I feel I would have to object unless I could get the "go ahead" from Senators who have come to me. I believe the Senate can vote on the amendment very shortly anyway.

Mr. McCARTHY. Mr. President, will the Senator yield?

Mr. PROXMIRE. I am happy to yield to the Senator from Minnesota.

Mr. McCARTHY. I should like to ask the majority leader if it would be agreeable to him, since it is apparently the amendment now before the Senate on which Senators have requested delay, to consider other amendments, temporarily laying aside the present amendment.

Mr. MANSFIELD. I believe the Senate can reach a vote on the amendment in a reasonable time. I would hope so.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PROXMIRE. I am happy to yield to the Senator from Tennessee.

Mr. GORE. In view of the remarks that have been made, I believe I am justified in asking the indulgence of the Senate for a moment. I have no objection to voting on the amendment. I am ready to vote now. So I am not delaying the Senate.

I am not angry at anyone. We operate here as a body of Senators in the most exclusive and important legislative body in the world. Gentlemen's agreements are entered into and kept. The leadership has always acted—and in the present case is so acting—as the agent of the Democratic majority. The minority leader acts as the agent of Senators on his side of the aisle.

The distinguished junior Senator from Louisiana states that a Senator must be on the floor of the Senate in order to have his rights protected. In the 12 years that I have been in the Senate the leadership has always undertaken to protect the rights of every Senator on his side of the asle with respect to a unanimous-consent agreement.

Yesterday, though I felt I had a good deal more wisdom to impart, the majority leader suggested a time to vote. Perhaps he thought I had talked long enough. I am sure I had talked too long. I readily agreed to have a voice vote on the pending amendment immediately and then to offer a similar amendment proposing a smaller increase in the personal exemption, and to ask for a yea-and-nay vote on the second amendment. I agreed to a 10-minute limitation of time for debate.

The majority leader himself suggested that the time be 30 minutes, to be divided 15 minutes to each side. I agreed to that arrangement.

But suddenly there was a motion to table. That is a procedural motion. I believe that procedure has been resorted to entirely too often recently. It is the most oppressive parliamentary tactic available. True, every Senator has a parliamentary right to make a motion to table, but if Senators will reflect, the motion has been regarded as a procedural motion which is the prerogative of the leadership.

Perhaps I am in error, but until there is some better understanding and until there is some clarification of what the rights of Senators are and how fully agreements entered into in good faith should be complied with, I felt the necessity today, not out of anger, but out of regard for Senate procedure and the rights of every Senator, to ask the leadership to refrain from entering into unanimous-consent agreements for the time being.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. MANSFIELD. I should like to express the hope that the Senate can reach a better understanding of the use of the tabling motion, so that its meaning will be absolutely clear to all Senators concerned.

Mr. GORE. Mr. President, will the Senator yield further?

Mr. PROXMIRE. I yield.

Mr. GORE. I should like to inquire of the majority leader whether I have in any way misstated the understanding which he, I, the Senator from Florida [Mr. SMATHERS], and the Senator from Louisiana [Mr. LONG] had yesterday.

Mr. MANSFIELD. Insofar as I can recall, the Senator has stated the situation correctly.

Mr. President, I express the hope that, in view of the fact that we cannot have a unanimous-consent agreement on the amendment now before the Senate, the Senate will be able to come to a vote shortly, because of some especially diffi-

cult circumstances affecting certain Senators.

That does not mean that the Senate is not going to remain in session late. I know of no dinners tonight that Senators must attend. I hope we may proceed with the bill and with the amendments expeditiously.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield to the Senator from Louisiana.

Mr. LONG of Louisiana. Let me say, for the benefit of the Senator from Tennessee, that I regret exceedingly that there was a misunderstanding yesterday with regard to the amendment offered by the Senator from Tennessee. On an informal basis, the Senator from Tennessee stated that he wanted a vote on his amendment and that he was willing to limit time on it on any reasonable basis. That was agreed to. There was no written agreement. I regret to say that there was a misunderstanding in that there was no meeting of the minds.

[*P. 1948*]

The Senator from Tennessee felt that there would be a direct vote on the amendment. The Senator from New Mexico, if he was on the floor at the time, did not understand that to be the case, and the Senator from New Mexico moved to table the amendment.

The standard unanimous-consent agreements that have been entered into in the Senate have been agreements merely to limit debate.

Such an agreement is actually a substitute for a motion to table. It is an agreement to limit debate so both sides may have equal time to be heard, at the conclusion of which time the Senate will vote on whatever the proposition may be. When the time has expired, Senators may do any one of many things. They may move to amend the amendment, to table the amendment, or to refer the whole matter back to the committee. All sorts of motions are in order when the time has expired on the proposal. That has always been so under the unanimous-consent agreements. They have been merely agreements to limit debate, and have not foreclosed Senators from other rights when the debate has been limited.

Some Senators would like to have it agreed that, in limiting debate on their amendments, there would be no motion to table their amendments. That is a new twist or a new problem we have not contended with before. Prior to this time, when any Senator wanted to make a motion to table—and it was usually the leadership or the Senator in charge of the bill—he waited until such time as he felt there had been adequate debate before making the motion.

We have seen times when we thought some Senator was treated unfairly. I recall a time when the then majority leader moved to table an amendment offered by the Senator from Oregon before he had had an opportunity to discuss or debate it. I thought that was an oppressive motion.

I regret what happened yesterday. I think the Record will show that yesterday the Senator from Tennessee felt he had an agreement that there would be a direct vote on the amendment, rather than a motion to table. If he thought there was such an agreement, so far as I am concerned, and so far as the leadership is concerned, we would like to have accommodated him. But there is no rule to foreclose a Senator from making a motion to table at any time he wishes to make such a motion.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. PROXMIRE. Mr. President, I have the floor. I yield to the majority leader.

Mr. MANSFIELD. Mr. President, to confirm what the distinguished Senator in charge of the bill has just said, he was the one who anticipated me in asking that the action on the motion to table be vacated. I was the one who made the suggesttion, but he was the one who made it first.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PROXMIRE. Mr. President, I shall yield only once more, because the majority leader has urged me to get on with my statement on the amendment.

Mr. GORE. Mr. President, I am appreciative of the fact that not only the majority leader, but the Senator in charge of the bill and the Senator from Florida, attempted to have the action of the Senate rescinded, and to comply with what I, at least, understood to be the spirit of the agreement. So the Senator from Tennessee is not angry at anyone, but he feels there should be a clarification of this matter for the protection of the procedures of the Senate and the protection of Senators who enter agreements in good faith.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. PROXMIRE. For 10 seconds.

Mr. LONG of Louisiana. If the Senator from Tennessee still wants a direct vote on the amendment, I hope very much that the Senator from Tennessee will offer it, because if that is what he thought the understanding was, I would like to accommodate him.

Mr. PROXMIRE. Mr. President, I support the amendment offered by the Senator from Kentucky [Mr. MORTON] for two reasons. In the first place, in my judgment, the bill, if it is passed, will be inflationary. I think most economists agree, whether they support the bill or not, that there is danger it may be inflationary.

The tax bill should certainly not be approved unless the Federal retail sales taxes on a number of items which many people regard as essential is repealed. The proposal is to remove the tax, up to $100 on furs, also the tax on jewelry, cosmetics, and other articles.

I have visited many retail establishments in Wisconsin. Businessmen are having a hard time keeping their heads above water. In my judgment, it would be very helpful to them to remove these taxes, as proposed. It would mean their profits would be helped a little, and they could perhaps decrease retail prices a little, which would help the battle against inflation.

The second point I should like to make is that a large number of Americans are left out of the tax bill. Eighty percent of those over 65 years of age will get no benefit from the tax cut, because they do not have enough income to pay tax. The majority of American farmers are left out, because they do not have an adequate income to pay tax. As the Senator from Maryland pointed out, the unemployed are left out because they do not have an adequate income to pay tax.

However, those people buy inexpensive cosmetics, furs, clothing, and so forth. It will be at least a little help to them if the retail tax repealer passes.

Finally, the main objection to the amendment is that it would cost about $425 million. I intend to offer an amendment a little later today that would save, on the basis of Internal Revenue taxation estimates, some $725 million. The Senator from Illinois [Mr. DOUGLAS] will offer an amendment that would save $400 million. I think we can responsibly support this proposal without a significant net, overall loss to the Federal Treasury.

Mr. MORTON. I yield to the Senator from Wyoming [Mr. SIMPSON].

Mr. SIMPSON. Mr. President, out in the hinterlands, in the tall country in the wonderful State of Wyoming, equality of women was recognized before Wyoming became a State in 1890. Adoption of this amendment would represent a recognition of equality of women by taking the obnoxious tax off wearing apparel as has been done for men. I am sure they would be appreciative of it.

Mr. LONG OF Louisiana. I yield to the Senator from Ohio [Mr. LAUSCHE].

Mr. LAUSCHE. Mr. President, I do not contemplate supporting the amendment because I think in principle it is in conflict with the entire program which is sought to be adopted by the Congress.

When President Kennedy made his recommendation for a tax reduction, he confined it to the income tax.

The theory of the proposal was that excessive income taxes operated as a repressive influence upon the full exercise of corporate capacity and individual capacity to create. No mention was made in his proposal about cutting excise taxes. The bill as it has come before us deals with corporate and personal income taxes, and not excise taxes.

Experts who testified before the committee, and economists who testified before the committee and who have written articles for magazines, have repeatedly used Europe as an example of how to stimulate growth. They agree it should be done by reducing income taxes, but not reducing excise taxes. I cannot be too vigorous in pointing out that if we make a study of the methods with which revenues are collected by Western nations and those in the Western Hemisphere, especially Canada and the United States, we find that excise taxes are the sources through which revenues are collected. Income taxes, both for corporations and individuals, have been reduced.

In Austria they were reduced probably three or four times. On each occasion the theory was to take away the restraint that tells an individual to quit working because he has earned more than he can possibly save because of the tax imposed on him.

On Monday I introduced into the RECORD a tabulation of the taxes in European countries. Since a number of Senators are present, I would like to read what that tabulation shows. The United States is at the bottom of the totem pole in collecting excise taxes—83 percent of its revenues are derived through income taxes, and 17 percent through excise and other indirect taxes.

Canada collects 65 percent in income taxes and 35 percent in indirect and excise taxes; Japan, 64 percent in income taxes and 36 percent in excise taxes; the Netherlands, 64 percent in income taxes and 36 percent in excise taxes.

Coming to the Socialist countries, if I may call them that, an astounding aspect of the statistics is that Norway collects 60 percent of its revenues in excise taxes and 40 percent in income taxes. Denmark collects 54 percent in excise taxes and 46 percent in income taxes.

[*P. 1949*]

I now get back to the United States. It collects 84 percent in income taxes and 16 percent in indirect and excise taxes.

What would this amendment lead to? It has already been said that hearings will be held to reduce our excise taxes. How far are we going to go? If we reduce taxes on jewelry and on the other items embraced in the amendment, where will we stop?

If calamity is portended by this unprecedented entry into a new field of Government finance, the theory being that the less we tax and the more we spend the better off we will be, where are we going to stop?

I would like to ask the chairman of the Committee on Finance whether there is any item in the bill dealing with excise taxes?

Mr. BYRD of Virginia. None whatsoever.

Mr. LAUSCHE. There is none whatsoever. Will the Senator tell us whether there is any design or purpose, so far as he knows, confined to the bill to income taxes, and whether it was accidental that excise taxes were omitted?

Mr. BYRD of Virginia. Amendments were offered in committee, and the excise tax amendment was finally defeated—by a small margin, it is true, but it was defeated. In the bill itself as it came to the committee there is no mention of excise taxes. As it came out of the committee there was no mention of them.

Mr. LAUSCHE. Does the chairman contemplate, in the Committee on Finance, taking up the subject of excise taxes as a separate item?

Mr. BYRD of Virginia. We will if and when a bill comes from the House. The chairman of the Ways and Means Committee of the House has made a public statement to the effect that he intends to start hearings on the whole program of excise taxes. When the bill comes from the House, if it does, the Senate Finance Committee will promptly meet and give consideration to whatever the House passes.

The Senator from Ohio knows that matters of this importance have always originated in the House.

Mr. LAUSCHE. I point out one aspect of this problem which I believe to be exceedingly important. In the bill now before the Senate we are blocked in trying to adopt what we think are acceptable proposals, because the framework has been finished, and it is not desirable to add to it. With respect to jewelry, is it not better to take up the whole field of excise taxes at one time so as to determine whether preferential treatment is being given to one item over another because it may fall outside the category of luxuries?

If we exempt jewelry today, it is out. If there are other items more meritorious than jewelry, will they be excluded because later we shall have to say that we cannot make any more cuts?

This is much more than a mere $40 million item. This goes to the whole structure of the problem. If it were only $40 million, no one would worry about it.

Mr. LONG of Louisiana. Four hundred and forty million dollars.

Mr. MANSFIELD. Four hundred and forty-five million dollars.

Mr. LAUSCHE. It is a good thing that I did not know that before I started, or I would have been higher up in the air than I am now. So it is $400 million.

Mr. MANSFIELD. Four hundred and forty-five million dollars.

Mr. BYRD of Virginia. Four hundred and forty-five million dollars.

Mr. LAUSCHE. What are we going to do later when other items are presented? I cannot see it. I close by saying that running through the discussion are ripples of the evidence of what lies ahead. Arguments are already being made about other items that will be put forward. It forebodes black days.

Mr. LONG OF Louisiana. Mr. President, I wish to address myself briefly to this subject. When the late President Kennedy proposed his tax cuts in his address to the Economic Club in New York, he said that everyone would have his own tax bill and his own ideas of how the taxes should be reduced. In some respects, we have seen that situation develop on the floor of the Senate. We have heard Senators say that they would vote for the bill, but would like to rewrite the entire bill more in keeping with the way they would like to have it passed.

In an election year, it would perhaps be asking too much that we might escape politics completely. I suppose the Democrats who expect to run for office hope to tell the public, "Yes; I voted for a responsible tax cut."

If this is to be a partisan issue at all—which I hope it will not be—perhaps it would not be bad politics for our Republican friends to offer their own tax cut bill and say, "Yes; we voted to cut individual income taxes."

But then it could be asked, "What did you do to remove the excise tax from ladies' handbags?" Or, "Yes, it is true that you voted to reduce corporate tax rates, but you ignored the excise tax on

low-cost jewelry. See what you failed to do."

In some States, it might not be bad politics for those who might want to differ with the wisdom of a tax cut to take the attitude, "While we did vote to reduce income taxes by $11.6 billion, we are responsible for maintaining $10 billion of excise taxes."

The Committee on Finance resisted all efforts to change the excise tax system. The Senator from Indiana [Mr. HARTKE] offered an attractive amendment designed to remove the excise tax from musical instruments for children who play in their high school bands when they themselves buy the instruments. If the band buys them, no excise tax is imposed now. But the amendment of the Senator from Indiana would have removed the tax, if the band could not afford to buy the instrument and the child bought his own horn.

Originally that amendment was defeated by a substantial voice vote. But subsequently an amendment was offered by the Senator from Arkansas [Mr. FULBRIGHT], recognizing the distress of the legitimate theater, to remove the excise tax imposed on it. As I recall, such removal would have resulted in a revenue loss of $5 million.

At that point the minority leader, one of the most distinguished members of the committee, proceeded to move to remove the tax from ladies' handbags. That motion carried. That opened the door to proposals to remove the excise tax on jewelry and everything else.

In a half hour, not only did those amendments carry, but the amendment that was originally defeated by a substantial voice vote, to take the tax off musical instruments—and I voted against it—was agreed to by a unanimous vote, because Senators did not want to be considered "meanies," who would not vote to remove taxes on musical instruments used in high school bands.

Everything else was cut then. In the half hour between 12 and 12:30, our committee had voted a $455 million reduction in excise taxes, not only at the consumer level, but also in the field of the manufacturers' tax, removing the tax on ball-point pens and other such items. The only reason why we did not repeal $10 billion of excise taxes was that we had to quit for lunch.

If we are going to enter into the field of excise taxes, and start taking them off one by one, we are going to set the stage to take them all off. If we start by taking off the tax on furs, how can we insist on maintaining the tax on light bulbs? After all, the lady will have to have some light in the house to find her furs. If we begin by removing the excise tax on jewelry, how can we insist on maintaining the tax on telephones for someone who cannot afford jewelry?

If it is proposed to remove the excise tax from other items sold by merchants, why is it proposed to maintain it on business machines used by business?

What about matches? Why not remove the excise tax on matches? If a man cannot afford a cigarette lighter, should he not have the benefit of the removal of the tax on matches? What about sporting goods and sporting equipment? What about fountain pens? What about firearms used by the man who takes his little boy out to teach him something about the great outdoors?

Every time we got into one excise tax subject, we got into another. We finally managed to get nine votes together, including those of Democratic Senators who had been successful in having amendments agreed to. The distinguished Senator from Arkansas [Mr. FULBRIGHT] was willing to agree to forgo his amendment if other Senators would forgo theirs. So we managed, by a vote of 9 to 8, to vote ourselves out of the trap that we had voted ourselves into.

Mr. MORTON. This was after lunch.

Mr. LONG of Louisiana. Yes.

Mr. MORTON. After lunch and some telephone calls, we undid what we did that morning.

Mr. LONG of Louisiana. I did everything I could to try to persuade the committee to return to a point of respon-

[*P. 1950*]

sibility. After lunch, we managed to get out of the trap.

So far as I was concerned, I talked with those whom I could reach, including Treasury officials, recognizing that we would enter a bottomless pit once we got into it. However, we managed to get out of the trap.

Then the Senator from Kansas [Mr. CARLSON] proposed an amendment to exempt "camper coaches" and "slide-in cabins" from the automotive manufacturer's excise tax. He said it would not cost more than about $1 million. Some Senator asked, "What is the revenue-loss estimate?"

As I recall, the staff gave us an estimate that the cost to the Treasury would be $1 million.

I said, "No; the cost would be $5 billion, because if we vote to remove this tax, we shall have to vote to remove many others. The result would be a loss of $5 billion."

The House Committee on Ways and Means intends to study the entire subject, and will take action on it. We shall

69-108 O—66—pt. 3——41

have an opportunity to vote later on the question of extending or removing excise taxes this year, when $1.9 billion are due to expire. We shall have to face this subject at that time.

The Senate now has to measure up to the issue as to whether we shall retain the excise taxes and try to maintain a balanced tax bill which seeks, eventually, to reach a balanced budget, although not in the first year or so, or whether we shall vote for a tax bill that will be irresponsible and that will end with a fantastic budget deficit to the extent that we might even have to recommit the bill and forget the whole thing.

Mr. FULBRIGHT. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. FULBRIGHT. In that connection, as the Senator has said, I offered in committee an amendment which would have repealed the excise tax on theater admissions. I appreciate the Senator's reference to the reason why I was willing to forgo the amendment. I was absent that morning, as was the Senator from New Mexico [Mr. ANDERSON]. When we heard about what had happened in committee, we returned and saw the wisdom of the Senator's position.

I offered the amendment in committee which would have repealed the excise tax on admissions to the living theater and certain musical concerts. The amendment was adopted on its merits, but, unfortunately, a few days later it became a victim of extraordinary circumstances—not related in any way to its merits—which resulted in repeal of all the excise tax amendments adopted earlier by the committee.

I sponsored this amendment in hopes that it might have the effect of pumping some life into the faltering legitimate theater. There is no great ground swell of support from my constituents for repealing the tax and the few of them who will ever benefit from its repeal will do so only in the form of lower priced tickets. But this action should be taken to preserve and promote the living theater for the Nation—not merely for Broadway.

I regret that I find myself in the position of having to vote against my own proposal because of the complications that would arise now if any excise tax amendment were included in this bill. But I hope that a legislative record that has been made will insure that this tax is one of those included in the first general excise tax repeal bill to pass the Congress.

Concern was expressed in some quarters that repeal of the tax would only result in increasing profits to producers and that the benefits would not be passed on to theatergoers. I was assured by many leading representatives of the theater industry that they intended to pass on the benefits of the tax repeal and that they would work to insure that this approach was followed generally throughout the industry.

I ask unanimous consent to have printed at this point in my remarks a statement by the National Association of the Legitimate Theatre and the League of New York Theatres, which discusses the plight of the theater industry and the reasons why repeal of the tax is so important.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF THE NATIONAL ASSOCIATION OF THE LEGITIMATE THEATER, INC. AND THE LEAGUE OF NEW YORK THEATERS, INC., SUPPORTING ELIMINATION OF THE FEDERAL TAX ON THEATER ADMISSION

The National Association of the Legitimate Theater, Inc. is a national association comprised of the country's leading theater producers and theater owners. The League of New York Theaters, Inc. is comprised of the leading theater producers and theater owners in New York.

It is a vital public concern to foster and stimulate cultural development throughout the Nation. Cultural development is essential because it gives breadth and richness to each of our lives. It is equally important to demonstrate to others the intellectual achievement possible in a free society. In the current struggle for the minds of men, keen observers have indicated that we will not win by material means alone. We must demonstrate that a free society can be a creative society as well.

A keystone in the cultural arch is the living theater. Indeed, it has been one of the areas of most significant cultural achievement in our country. It is a deep and important expression of our national life, of our aspirations, folkways and values. The 30-odd theaters in New York are the core of our theatrical world. Spread across the country and in virtually every one of the 50 States, there are more than 190 year-round theaters, in which live dramas, comedies, and musicals are presented. In addition, there are an even larger number of summer stock theaters, which likewise are located throughout the Nation.

The 50 to 75 new plays produced each season by the core of our theater in New York spread out across the country through openings in other cities and through subsequent tours. They provide the source material for our widespread summer theater operation and for the more than 75,000 non-professional groups spread over the United States.

We must assure the continued vitality, creativity, and variety of our contemporary contribution to culture through theatrical productions. These productions provide an important outlet for the imagination which abounds in our Nation. In our society, as it has been in every great society throughout

history, the health of the theater has been a measure of cultural quality. If it languishes, something is deeply wrong in the Nation's mind and spirit.

The theater in our country is the product of the free enterprise system and exists by that enterprise. It does not have, nor has it sought governmental assistance. In this sense, our theater is almost unique; this is a most important reason for assuring its continued vitality.

The theater industry in practically every other country of both the free world and the nonfree world is subsidized by government. Even England has resort to a partial subsidization of its theater. The subsidized theaters are used by these countries as an important part of their international programs to spread their culture abroad. We have seen numerous instances of the export by the Iron Curtain countries of theatrical groups of such high quality as the Bolshoi and Brecht companies, to convince others that the Communists are people devoted to cultural endeavor, and therefore are freedom loving people—a most dangerous error in logic.

We must meet these efforts with the best of our own. Our theater must continue to be one of our most effective and proudest displays of the cultural values which can he attained and maintained by a free enterprise system. It has been, and can continue to be, a most valuable conduit for the export of ideas.

The need for support of the theater has never been more critical than at present. The living theater has been on a continuous decline for the last 30 years. Over the last decade, the plight of the living theater has become extremely grave.

The theater is caught in a serious cost-price squeeze which could prove fatal unless some relief is found. Radically increased costs and staggering financial losses have brought about a steady diminution of productions. Already certain forms of dramatic entertainment, highly estimable as cultural products, are no longer financially feasible. In the past several years, there has been increasing difficulty in raising the venture capital necessary to continuation of our free enterprise system in presenting theatrical production. Indeed, this season, several plays have gone up to the point of rehearsal without sufficient capital even to permit initial opening, no less the ultimate opening on Broadway. The cultural weathervane has given us warnings which we cannot ignore.

A detailed statement of the desperate situation of the living theater is contained in the pamphlet entitled "Crisis in the Free World Theater" prepared by John F. Wharton, Esq., an eminent member of the New York Bar. This pamphlet was submitted to each Member of Congress in 1962 and forms the basis and background for my statement. A copy of that pamphlet is attached and made a part of this statement.

The theater has never sought, nor does it now seek, governmental support in terms of subsidy to alleviate the pressure and bring about the necessary revitalization. It merely seeks the cessation of governmental burdens, the most critical of which is the excise tax on theater admissions. Instead of supporting theatrical endeavors, the Government, through this unnecessary and discriminatory tax, has placed a backbreaking burden on an already declining and weakened industry.

There is no justification for the continued fettering of the living theater with this tax. It is both harmful and discriminatory. In the last season for which complete figures are available, 77 percent of the new plays produced failed to earn back the venture

[*P. 1951*]

capital invested in them, the combined loss being about $5½ million. At the same time the Federal Government took, in admission taxes: $6 million—more than the total losses of the failures. Already this season, 15 of the 33 shows that have opened are now closed at considerable loss; of those still open many have yet to prove profitable.

Undoubtedly, this Federal excise tax on admissions is the most significant burden imposed by the Government on theatrical productions. Some slight relief was provided in 1954 when the Federal tax was lowered from 20 to 10 percent, but a 5-percent New York City tax was imposed almost immediately thereafter. Experience demonstrated the extremely burdensome nature of this tax and, as a result, it was removed by New York City in 1961. The burden of the higher Federal tax, however, continues.

No other form of cultural endeavor is subjected to this or any similar form of the Federal excise tax. There is no such tax on literature. And the tax normally does not even apply to the exhibition of motion pictures which, because of the nature of their production and exhibition, can be shown to audiences at a much lower admission price than the living theater and often below the $1 exemption from the Federal admission tax. Likewise, television does not suffer from this harsh and discriminatory tax.

An excise tax is always a burden. A booming industry, or even a healthy one, may be able to readily absorb the tax, but a financially declining industry cannot. The excise tax merely accentuates the decline and eventually may prove fatal. Moreover, the imposition of an excise tax on a cultural and educational medium would appear contrary to public policy.

When one contrasts the serious impact of the tax on the weakening theater enterprises with the revenue derived, it becomes even clearer that relief is fully justified. The 10-percent admissions tax yields from the living theater not more than the insignificant amount of 0.0007 percent of Federal revenues. In the fiscal year ending June 3, 1962, the total amount derived from the tax as imposed on the theater was $4½ million, an additional $1.4 million was obtained from admissions to band and other concerts. The need for the tax, thus, is highly dubious. It contributes an insignificant amount of revenue to the Federal Government, yet the burden on the theater of this inconsequential revenue-producing device is significant.

If the promises to aid cultural development and achievement are to be put into deeds, a matter of first priority is the removal of this burdensome, inequitable, and unnecessary excise tax on admissions to the

living theater. The theatrical industry is in urgent need of revitalization. Repeal of the 10-percent admission tax is one of the most effective immediate steps that can be taken to assist in the revival of theatrical endeavor on a sufficiently broad scale to ensure the full utilization of this vital and creative artistic outlet. While elimination of this tax is not a panacea, it would be a significant step forward.

The serious plight of the theater readily demonstrates the destructive consequences of the admissions tax. The following is a brief summary of the significant facts:

THE STATE OF THEATRICAL ENTERPRISE

That the theater is in a state of serious financial decline is clearly shown by the decline in the number of plays produced, a decline in the available theaters in which to exhibit the plays, a drop in attendance, and a continuous lowering of the profit per dollar invested. The last is, of course, of overwhelming importance in an area of endeavor so constantly dependent on new sources of venture capital.

PRODUCTION

The number of new theatrical productions has been continuously declining from the high in the 1927–1928 season of 264 plays to a low of 46 plays in the season ending the spring of 1961. Even during the 1930's the average number of new productions annually remained above 140. In the 1950's, the average was slightly under 60 new plays each year. In the decade of the 1960's, the average already is under 50 new productions a year and continues to decline.

A high level of new productions, of course, is essential to the dynamics of the theater. The vitality of the theater depends on the new crop of talent—playwrights, directors, actors, producers, composers, lyricists—that come forward each year. To obtain this talent, it is necessary that they have an opportunity to learn their trade. If they are to be tested and we are to be assured that the very best talent available reaches the top, everyone must be given an opportunity. Moreover, only by expanded production activity can the theater have the constant vitality, vigor, and incentive that raise the quality of its attractions and bring stabilization to its economy.

THEATERS

In 1931, there were 66 theaters available for major new productions in New York City. This number likewise has declined to less than half and is now just slightly over 30. The newest legitimate theater in New York was built in 1927. This 34 barren years as far as capital facilities is concerned is virtually unique in the American scene.

The decline in physical facilities has not been limited to New York City. The number of legitimate theaters elsewhere in the Nation has declined even more dramatically—from a high of 560 in 1921 to only 193 in 1960. This represents a decline of more than 65 percent over the 40-year period. Again, there are few, if any, new facilities, so that the decline is likely to continue.

ATTENDANCE

Accurate figures for attendance are difficult to obtain. The decline, however, is obvious from the decrease in the number of physical facilities of 55 to 65 percent and the decrease in the number of productions of more than 80 percent.

During the period of this substantial decline in the legitimate theater, the population of the United States increased 46 percent, the per capita disposable personal income (in dollars of constant purchasing power) rose more than 78 percent, and the increased efficiency of public and private transportation brought the theater centers into considerably easier reach.

PROFITS

The theater perhaps as much as any other area of endeavor has been caught in an increasingly serious cost-price squeeze. It suffers from a variety of weaknesses in this regard: (a) it must rely on personal services to a major extent and wage and salary rates are high; (b) it constantly requires new productions which have a relatively short period of productivity; (c) it has met more than average public resistance to increased prices for the product; and (d) it has limited outlets of distribution.

Every play involves the organization of a new enterprise—new sets are bought, new costumes are made, new props secured, often in a rush and hence at overtime rates. The rise in these costs have been tremendous. In the 1930's a musical comedy could be, and often was, produced for $75,000 to $100,000. Today, the costumes may cost more than that alone. A musical comedy is likely to cost somewhere in the range of a half a million dollars. Even in 1949, "South Pacific" was produced for $225,000; 10 years later, the production of "Camelot" cost $600,000.

The increase in cost of dramas is equally as great and even harder to obtain a return on investment, because of the normally shorter runs, lower average houses, and the lesser prospect of the sale of motion picture rights. It is this area of theatrical production that is suffering the most. In 1938, as an example, "Life With Father" was capitalized at $25,000. It is estimated that it earned over $60 for each $1 invested. Ten years later, the same producer presented a sequel by the same authors, "Life With Mother." This sequel was capitalized at $100,000 and would have required earnings of $6 million to provide the same return. More recently, the production costs of dramas has risen to the $100,000 to $150,000 range.

The increasing costs have cut the potential for profit drastically, and an investor today has no more than a 50-percent chance to recover his investment. As stated in the May 1960 article in Fortune magazine by Daniel Seligman, "for every $2 invested in shows, $1 comes back." As the author goes on to point out, this is not even as good as the racetrack where the return is $1.70 for the same $2 invested. To expect investors to continue to support theatrical productions with this rate of return is folly. It is true that most of the investors are in essence patrons of this partciular form of art. Their numbers, however, are sufficiently limited that they cannot be expected to continue to pour money into theatrical productions at the very high rate required with the current loss picture.

Thus, it is not surprising that venture capital for theatrical productions is becoming increasingly difficult to find, even with the continuing growth of our economy. It is not surprising that today a number of highly qualified productions move into rehearsal without sufficient capital to assure their opening on Broadway. The plight of the theater indeed is serious and becoming graver each year.

CONCLUSION

The plight of the theater is serious. The profit squeeze has reached the point that new investment may shortly become impossible to obtain, particularly since the investors come from a relatively small group and the size of the overall loss in the dollars invested is staggering. The price of tickets has risen so that the upper end of the demand curve has been reached. We do not ask for governmental support but we do say that the living theater will perish if it is not relieved of the present unfair tax burden. There must, therefore, either be some form of support or the living theater will perish.

The theater can be proud of the fact that, despite lack of help and encouragement from the Government, despite financial harassment, despite the imposition of discriminatory taxes, it has maintained, artistically, a vital dynamic theater. But vitality cannot survive financial disaster forever. The theater is on the brink of a cascade. However, it still does not seek subsidization nor special aid. It only asks that it be treated fairly and not be impeded by governmental control.

Elimination of the crippling admission tax would be a most effective immediate measure in moving toward the revitalization of the living theater. It would be a concrete demonstration of recognition of the importance which we place on cultural achievement. It is an essential step if the living theater is to be saved from its present distressingly rapid decline.

Mr. ALLOTT. Mr. President, I support the amendment offered by the Senator from Kentucky on behalf of the

[*P. 1952*]

distinguished minority leader. I believe that at some time in the consideration of these matters we must consider removing from certain industries the burden which was placed on them under wartime conditions and under the belief that they were supposed to be luxury taxes.

The Senator from Kentucky has included in his amendment an exemption of $100 for jewelry and furs; or, if one wishes to state it in another way, the tax would not apply to jewelry and furs that cost under $100.

I heard a Senator say yesterday that he could not buy a watch for $100. I am surprised to know that, because I have worn one for 15 years on my wrist, and it cost two-thirds of that amount. I do not anticipate that I shall go over the $100 mark soon.

Certain industries have been hurt year after year by these retailers' excise taxes. I frankly confess, in behalf of my constituents in Colorado, that I am interested in the luggage industry, because the luggage industry in my State, while small, perhaps, in relation to the industry over the whole United States, is one of the largest industries in our State, and happens to be one of the largest units in the United States. Yet it has to cope unfairly, year after year, with the retail tax upon its sales.

If it can be said in this day and year, when people have to travel from one end of the country to the other constantly in the course of their business, that a tax should be imposed upon a piece of luggage because luggage is a luxury, we had better reevaluate our thinking. I cannot understand such distorted thinking.

I wish the distinguished Senator from Ohio had not stepped outside the Chamber. He based his argument a few moments ago upon the fact that the United States is at the bottom of the totem pole on excise taxes.

Perhaps he has not stopped to consider the fact that in Europe the base of the retail excise taxes is a much broader spectrum of commodities than is the case in the United States. If a broad spectrum were covered by the U.S. excise taxes, perhaps there would be justification for raising more revenue from taxes in the excise field.

However, when these taxes are applied at the retail level to a comparatively few commodities and businesses, as is the case in the United States, they are penalized and their growth is stopped. Heaven knows enough has already been done in this country to hinder the development of small businesses. Perhaps one of the things which has contributed most greatly to that development has been the so-called progressive income tax—which is supposed to be progressive and is supposed to have exactly the opposite of its actual effect. However, at every turn it gives an advantage to big business, rather than to small business.

It has been argued that the Senate must not adopt this amendment, for the reason that its adoption would involve not only an immediate tax loss of $443 million, but also, as a result of a chain reaction, a final tax loss of perhaps $10 or $11 billion.

On the other hand, Mr. President, I point out that the President has submitted a $97.9 billion cash budget for this year. I have studied it and I have also studied the obligational authority which would be required this year. According to my estimate, the actual amount of

money we shall obligate and spend during the coming year will exceed $103 billion.

Mr. President, if the Government continues deficit spending year after year and if Congress is to be so irresponsible as to cut the taxes for the next year to the extent of $11 billion, I maintain that the amount of tax relief which would be provided by this amendment can be given to small businesses all over the country, which sell luggage, small articles trimmed with fur, or jewelry. Those in the business of selling those commodities must sell them if their proprietors and employees are to make a living. However, at the present time those businesses must devote a considerable portion of their overhead costs to the bookkeeping work they do for the Government—for the Government, Mr. President, not for their own businesses.

Therefore, Mr. President, with these facts in mind, I believe the Senate should adopt this amendment.

I am sorry to disagree with the Senator from Louisiana. It has been said that hearings on the entire excise tax field will be held. However, we must distinguish between those taxes at the manufacturers' level and those at the retail level. By means of this amendment, we would begin to repeal those at the retail level, and thus decrease the burden which today is placed on small businesses. Perhaps such hearings will be held, and I am sure that the Senators who have stated they will be held have good intentions. I believe what they tell us. On the other hand, I know that no broad attack will be made upon the general excise tax field, because I am sure the statement they made was made for the purpose of drawing the fire from the support for this amendment.

Let us not delude ourselves: Either this amendment will be adopted today by the Senate, or else no reduction of the excise taxes in these fields will be made this year.

Mr. President, for these reasons, I sincerely hope that the Senate will vote to give this break to the small business people who have to collect these taxes and have to explain to the International Revenue Service the details in connection with their collection, and who have to bear the burden of these taxes. Certainly it is time that—finally—Congress give them this break.

The estimate of the immediate, direct cost of the pending amendment is $433 million; and it is also estimated that, in the long run, the final cost, as the result of the ensuing chain reaction, might be $10 or $11 billion. But, Mr. President, what would that $11 billion amount to, after all, in view of the very great deficit which now exists and which is constantly being increased?

If Senators really believe that the $11 billion cut contemplated as the result of enactment of the pending bill will really stimulate the Nation's economy until it is jiving down the road at 100 miles an hour, then let us make this small additional cut, and thus provide a little additional jive, and really make our economy travel.

Mr. HRUSKA. Mr. President, I speak in support of the amendment to eliminate certain excise taxes which were imposed originally as wartime taxes under emergency conditions.

At that time, everyone was willing to do his utmost to contribute to the need for increased taxes and to give maximum support to the Government's objectives during that emergency period. The need to continue these taxes has long ceased and no justification can be made for their continuance.

Today these taxes are applied on a discriminatory basis. Some industries have felt a considerable loss in sales and as a direct result over the years many workers in those industries were displaced.

To justify these taxes on the basis that the articles taxed are luxuries is simply not the fact. There is no basis for telling a woman that toilet articles and cosmetics are luxuries. Leather goods such as handbags, purses, and luggage are necessities in today's way of modern living. Jewelry sales, of course, cover many items, with the majority of sales falling into lower cost items, much of which is costume jewelry. To continue to exact these taxes under these circumstances is simply not justified.

Because of the high tax rates on these articles, many persons forego purchases and as a result, sales are lower.

We are told that the pending bill is a tax incentive bill designed to stimulate the Nation's economy. I can think of no greater way to provide the stimulus for purchases than to remove these taxes and permit the consumer's voice to be heard. I am certain that the response will be surprising to many.

Every time an effort is made to reduce any excise taxes, Treasury officials argue that we are undermining our tax structure and that great disaster will befall us because of the loss of revenue involved. Having received these dollars over many years, I believe Treasury officials consider these taxes to be permanent rather than temporary and their arguments are not persuasive to me.

One of the most neglected groups of businessmen in our Nation is the small businessman who in most cases represents a family enterprise. Usually, there are few outside employees and the burdens of running the business fall upon the owner and his immediate family. Recordkeeping is a constant chore and failure to comply will subject him to Federal penalties. We have too many burdens on business today which are of a Federal nature. Whenever we have an opportunity to release such onerous tasks, we should seek to accomplish it.

Mr. President, I can think of no better way to stimulate our economy than to eliminate these taxes. The revenue loss will be small in comparison to the benefits which will be derived by such action. This is one means by which we can achieve a higher level of prosperity and

[*P. 1953*]

growth. This money will remain in the hands of the taxpayer and he will have an incentive to spend it. This amendment should be adopted.

Mr. President, I ask unanimous consent that several letters I have received on this subject be printed in the RECORD at this point.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

J. M. MCDONALD CO.,
OFFICE OF THE PRESIDENT,
Hastings, Nebr., January 30, 1964.

Hon. ROMAN HRUSKA,
U.S. Senate,
Washington, D.C.

MY DEAR SENATOR HRUSKA: I noticed that Senator EVERETT DIRKSEN has introduced an amendment, No. 380, to the tax reduction bill (H.R. 8363) which would have the effect of repealing the wartime excise taxes on such items as jewelry, furs, toilet preparations, and luggage.

I hope you will lend your important support toward the passage of this amendment. I hope that it will be included in the tax reduction bill and certainly with the support of men like yourself this is a possibility.

It seems to me that there has long been a great interest on the part of the general public, and certainly on the part of a very large portion of those in the retailing business to "have done" with these excise taxes which served a purpose during the war years but which were never considered as a continuing source of tax revenue.

It would seem to me, and I hope you would agree, that a tax reduction in the form of repeal of these wartime taxes would be in the general best interests of our country, as well as being in the specific interests of both business and consumers.

There are several reasons why this is so. Repeal of these excise taxes would:

1. Raise our standard of living by making possible, and actually encouraging, increased purchasing of goods now so taxed.

2. Create more jobs in both the manufacture and retailing of this presently taxed merchandise, due to an increase in sales and production of these items.

3. Because of the increased business resulting as above, there would be additional revenue provided through other forms of taxation—more than offsetting the loss of revenue from present excise taxes.

4. Develop increased production of items. presently carrying an excise tax which would, in turn, benefit all purchasers because of the lowered costs of such goods to customers.

The present excise taxes, which were at one time referred to as "luxury taxes" have long been a source of irritation to our customers. There is no present justification for their continuance, and I am certain you feel, as I do, that although we must certainly have taxes, they should be justifiable and with a logical reason for being.

It seems that I write you frequently soliciting your help or consideration in this area or that—and wonder how you find time to consider all the tremendous volume of correspondence you do receive. So I thank you Senator for considering this request—and for using your influence in this matter.

Sincerely yours,

C. E. BLAIR.

RETAIL MERCHANTS ASSOCIATION,
Lincoln, Nebr., January 29, 1964.

Hon. ROMAN L. HRUSKA,
U.S. Senate,
Washington, D.C.

SIR: At a special executive committee meeting of the Retail Merchants Association of Nebraska held in Columbus yesterday, a unanimous decision was reached regarding repealing of Federal excise taxes.

First, that the Dirksen amendment meets with our approval and we seek your support of it. Second, a telephone poll was taken and a unanimous positive response was voiced by 39 key retailers spread across the State of Nebraska. Third, that the Retail Merchants Assoication executive be directed to contact the Nebraska Senators in the name of Nebraska Retailers. Fourth, that retailers not bombard Senators with wires and telephone calls, but let the association speak for retailing generally.

We feel confident your thinking is in line with ours, and offer our support to you.

Very truly yours,

M. J. "BUB" GRAHAM,
Exective Vice President.

NORTH PLATTE, NEBR.,
January 29, 1964.

Hon. ROMAN HRUSKA,
Senate Office Building,
Washington, D.C.

DEAR SIR: I am wiring to you and asking you to support the Dirksen repeal amendment when it is presented for action on the Senate floor. This is tax bill H.R. 8363. This is very definitely an unfair and discriminatory tax. You cannot imagine the heavy burden this puts on a small business to collect and handle this tax. It costs us and other businesses hundreds of dollars each year. All this besides the fact that

most items taxed are not luxuries. Please do what you can in our behalf to correct this situation.

Yours truly,

NORMAL L. HOUSE,
House Platte, Nebr.

BURKE DRUG,
GRAND ISLAND, NEBR.,
January 30, 1964.

ROMAN HRUSKA,
Senate Office Building,
Washington, D.C.

DEAR SENATOR: I understand that Senator DIRKSEN has proposed an amendment to the tax bill to repeal Federal excise tax. I certainly support this action myself and urge you to vote in favor of this amendment.

This is a tax that is applied against just a few people and not the population as a whole. Certainly it is one that causes the retailers across the United States many problems because it is a tax that is added at the time of purchase and the customer draws resentment from the tax; they are buying an 89-cent item and all of a sudden it turns into a 98-cent item because of the Federal excise tax. A few years back they finally got halfway sensible about this specific tax and removed the baby products from the list which were classified as luxury items. But certainly, the majority of items under the classification I would not classify as luxury items. For example, I would hate to see a woman without lipstick and her hair set into place with different types of hair spray. I don't think any of us would appreciate the woman in our life if they didn't attempt to make themselves beautiful, so I wouldn't consider beauty, in this particular case, a luxury. I would imagine that you could make your appointments on time fication cards in just a paper sack in your pocket, but I don't think that a billfold is a luxury item—it is a necessity to every man and woman that carries one. The watch on your arm; I don't know how you could make your appointments on time, without something to remind you of just what time it is. This is not a wartime situation any more; this tax was imposed originally as a base tax to be used in the necessity of war and it was imposed against so-called luxury items. The American public very readily accepted it as such in the time of necessity, but the same "of necessity" is over and I hope that with the Dirksen amendment, the Federal excise tax on so-called luxury items is over, too.

Sincerely yours,

WILLIAM A. BURKE.

YARGER JEWELRY,
West Point, Nebr., February 1, 1964.

DEAR SENATOR HRUSKA: We appeal to you to give your complete and wholehearted support to the bill to repeal the Federal retail excise tax on jewelry and to support Senator EVERETT M. DIRKSEN in every way possible when he brings this fight to the Senate floor.

We have been in the retail jewelry business here in West Point for the past 16 years and know better than most what the bill would mean to all customers and those in the retail jewelry business.

We feel that it is very unfair that we have to struggle to operate a business under this severe handicap when so many other businesses which sell items of merchandise just as luxurious (or more so) than ours do not have to collect the tax or spend the many hours every year keeping track of all of the extra bookwork.

We will appreciate all the support you can give this bill.

Sincerely,

Mr. and Mrs. LAMONT YARGER.

BRISTOL JEWELRY,
Burwell, Nebr., January 30, 1964.

Hon. ROMAN HRUSKA,
Washington, D.C.

DEAR SENATOR: I am asking your support to Senator DIRKSEN's repeal amendment—a measure to repeal the excise tax. I am a retail jeweler in Burwell, Nebr., and I have long contended that the excise tax is unfair because it is levied on just certain items, many of which we jewelers sell.

What was once a war measure, passed with the promise that it would be repealed as soon as the war was over, has become a permanent fixture; or so it seems, for it has been in effect for 20 years. The tax which was levied on so-called luxury items also covers a good many items which are necessities such as alarm clocks, billfolds, and even the plainest of wedding rings.

It is unfair to the consumer and unfair to the merchant that sells these items, for it tends to limit his sales and discriminate against a legitimate business. A lifting of this tax would promote business by encouraging the purchase of many items that people have held off buying as long as they could to avoid the tax. Such a measure would stimulate business and bolster the economy, which would be good for us all. Besides that it would put taxes on a more fair basis.

I am sure that other businessmen feel the same way about this measure and we will all appreciate your support of the tax repeal.

Yours truly,

W. W. BRISTOL.

Mr. GORE. Mr. President, I shall not detain the Senate for more than 5 minutes, for I know that Senators wish to proceed to vote on the pending amendment.

I rise in support of the amendment.

The Senator from Indiana said adoption of the amendment would open the floodgates; but a moment earlier he advocated enactment of the pending bill, because, so he said, the economy needs stimulation.

I am among those who believe the deficiencies in the economy, to the extent they exist, require specific treatment; but I am not among those who believe

[*P. 1954*]

that under present circumstances the economy needs major general stimulation, particularly in view of all the economic indices, which now stand at all-time highs.

I would prefer to have this amendment offered as a substitute for some of the inequitable tax provisions included in the pending bill.

The pending amendment proposes that certain excise taxes be repealed. In my opinion, the Federal excise taxes can be repealed with more economic justification, more social justification and more general benefits than would result from enactment of the present provisions of the pending bill, which in my opinion constitute a major attack upon the progressive nature of the Federal income tax. The pending bill would make our tax law far less progressive, and in many respects would make it more regressive.

I know of no more regressive type of taxation than a Federal sales tax; and, Mr. President, in this instance we are speaking of the tax on articles which millions of the American people buy, but for whom the pending bill provides no tax relief whatever. A woman who buys a handbag for $5 may not receive any tax reduction at all by means of the bill as it now stands. Unless this amendment is enacted into law, there will be continued in the law a tax which will cost her 50 cents on that $5 handbag; or if she buys a $50 cloth winter coat with a fur collar, the value of the fur collar must be estimated and the excise tax on it must be paid. There are many working girls who have not yet achieved a level of income for which this bill would provide any tax relief. A young working girl might buy an economically priced dress of a particular color, and might want to buy some costume jewelry to wear with it; and if she does, she must pay the excise tax upon it. There are millions of the American people who will receive no tax reduction whatever by means of the reduction of the corporate income tax rate.

Mr. President, unless more Senators start to speak against regressive taxation, we shall be headed toward a massive Federal sales tax or manufacturers' excise tax. I think now is a good time to begin resisting such a course by repealing some of the excise taxes which now are imposed on the articles which the great mass of our people buy.

Therefore, I support the amendment.

Mr. CARLSON. Mr. President, I did not wish to let this debate close without expressing my views on repealing excise taxes.

For a number of years I have had the privilege of serving on committees dealing with taxes, in the House Ways and Means Committee for 8 or 10 years, and presently in the Senate Finance Committee. I believe it is generally agreed that excise taxes are regressive taxes. Repeal of such taxes would, in my opinion, do several things. I believe that would be more beneficial than many of the other items we might pass in the bill; and I do support the tax bill.

I become concerned when Senators who are defending the bill talk about $11.2 billion and then adding $400 million to the $11.2 billion because it would completely bankrupt the Nation's economy and destroy our Federal fiscal system. I believe that is going a little too far.

I believe there is some immediate effect on this question. One effect would be an immediate increase in consumer expenditures. I believe that is the purpose of the tax bill that we shall be voting for. It gets money out to the people immediately.

I favor repeal of retail excise taxes still imposed on sales of furs, luggage and handbags, cosmetics, jewelry, and silverware. Such repeal will further every objective of the proposed tax reduction program.

In addition, retail excise tax repeal contains several unique advantages; it would: First. Immediately increase consumer expenditures. The faster consumer spending is increased by tax reduction, the more rapidly the goal the President has set would be reached. Repeal of retail excise taxes would provide money for increased purchases, immediately on enactment of the bill.

Over $400 million is now collected annually in retail excise taxes—in the fiscal year, 1962, it was $415 million. This sum was all collected at the final point of sale. It is collected on daily purchases of products by consumers in every State of the Union. Obviously, it is presently reducing by 10 percent the money available for purchases of other goods. Equally obvious, when these taxes are repealed, that amount of money is immediately available for increased consumer spending.

Second. Maintain price stability. Little good can come from any tax relief of this kind unless prices to the consumer are actually reduced by the amount of the present tax. I assure you that competition within industries is so severe that repeal of the 10-percent excise tax will in fact be passed on to the consumer. The present, before tax, price level will be maintained. To the consumer, the repeal of retail excise taxes will mean a 10-percent reduction in cash outlay at the point of sale, providing that much more for immediate added purchases.

Third. Reduce retailer's cost of doing business. Collecting retail excise taxes is a very real and costly burden to retailers. A great deal of bookkeeping and

record-keeping is necessary. To the small retailer it is a nightmare, to the large retailer it is a headache of sizable proportions. The tax on each sale must be collected, recorded, audited, and eventually paid to the Government, whether it be 5 cents on a 50-cent purchase, or $50 on a $500 purchase. Unfortunately, there are thousands of 50-cent sales for every $500 sale and obviously, as the unit of sale decreases, the cost of collection increases. The cost of collection is a tax-deductible business expense by every retailer involved, which in the aggregate can substantially affect corporate tax revenues.

Fourth. Beneficial to industries and to the economy. I sincerely believe that repeal of retail excise taxes will be of direct benefit to the whole U.S. economy for it will free immediately and daily, a substantial sum for the purchase of any product of the consumer's preference. However, the importance to industry cannot be overemphasized. Repeal will, for the first time since pre-World War II, place its products on an equal base with other products now competing for consumer preference, and will remove the Government from the untenable position of influencing consumer selection of the types of goods and services for which he wishes to spend his money.

It is conservatively estimated that if retail excise taxes are repealed, the annual sales of these products should increase by 10 to 15 percent from present levels. This can only result in more jobs, larger payrolls and increasing benefit to the whole economy. The results of excise tax repeal claim priority over this form of stimulus to the economy fully as urgent and fully as deserving as other forms of reduction being considered.

Retail excise taxes were originally imposed in 1941 in the amount of 10 percent of the retail price on the sale of furs, luggage, cosmetics, and jewelry. In 1943, as the war progressed, these taxes were raised to 20 percent. In 1954, Congress reduced the rate to 10 percent, where it remains today.

I submit, aside from the beneficial effects of the reduction of individual and corporate taxes, and the reversing of corporate normal and surtax rates, that the repeal of retail excise taxes at the Federal level will accomplish additional and most needed results:

First. Retail excise tax repeal will furnish the quickest flow of additional spendable income into the economy of all the various forms of tax reduction proposed.

Second. Excise tax repeal will pass the savings on to the consumer because of strong competitive forces within affected industries.

Third. Excise tax repeal will relieve the tax collectors and retailers of an oppressive and costly administrative burden, thus offering both added incentive and the prospect of compensating tax revenue.

Fourth. The products affected by excise taxes will be in a position to compete with other nontaxed products on an equal basis.

Fifth. Unlike income tax reduction, excise repeal will have none of its effects dampened by increased State income taxes.

Sixth. The affected industries cannot fully discharge their responsibilities toward furthering America's economic growth, burdened as they are by the discriminatory, wartime-imposed levy, which had, as was one of its original purposes, the depression of business in the affected industries.

I sincerely hope the amendment offered by the Senator from Kentucky will be approved. I believe it is in the interest of the Nation's economy. It is in the interest of the taxpayers, and in the interest of the consumer.

The PRESIDING OFFICER. The question is on agreeing to the amendment, as modified, offered by the Senator from Kentucky [Mr. MORTON].

[*P. 1955*]

On this question the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

The rollcall was concluded.

Mr. MANSFIELD (after having voted in the negative). I have a pair with the distinguished minority leader, the Senator from Illinois [Mr. DIRKSEN]. If he were present and voting, he would vote "yea"; if I were at liberty to vote I would vote "nay." Therefore I withdraw my vote.

Mr. HUMPHREY. I announce that the Senator from Indiana [Mr. BAYH], the Senator from Nevada [Mr. CANNON], the Senator from Pennsylvania [Mr. CLARK], and the Senator from Arizona [Mr. HAYDEN] are absent on official business.

On this vote, the Senator from Arizona [Mr. GOLDWATER] is paired with the Senator from Nevada [Mr. CANNON].

If present and voting, the Senator from Arizona would vote "yea" and the Senator from Nevada would vote "nay."

I further announce that, if present and voting, the Senator from Indiana [Mr. BAYH] and the Senator from Ari-

zona [Mr. HAYDEN] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Illinois [Mr. DIRKSEN] and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent.

The pair of the Senator from Illinois [Mr. DIRKSEN] has been previously announced.

On this vote, the Senator from Arizona [Mr. GOLDWATER] is paired with the Senator from Nevada [Mr. CANNON]. If present and voting, the Senator from Arizona would vote "yea" and the Senator from Nevada would vote "nay."

The result was announced—yeas 45, nays 48, as follows:

[No. 22 Leg.]

NOT VOTING—7

Bayh	Dirksen	Hayden
Cannon	Goldwater	Mansfield
Clark		

So Mr. MORTON's amendment, as modified, was rejected.

Mr. LONG of Louisiana. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. HUMPHREY. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. PROXMIRE. Mr. President, I call up my amendment, No. 387.

The PRESIDING OFFICER. The amendment offered by the Senator from Wisconsin will be stated.

The LEGISLATIVE CLERK. An amendment (No. 387) on page 38, beginning with line 7, to strike out all through line 9, on page 39, as follows:

(e) TREATMENT OF INVESTMENT CREDIT BY FEDERAL REGULATORY AGENCIES.—It was the intent of the Congress in providing an investment credit under section 38 of the Internal Revenue Code of 1954, and it is the intent of the Congress in repealing the reduction in basis required by section 48(g) of such Code, to provide an incentive for modernization and growth of private industry (including that portion thereof which is regulated). Accordingly, Congress does not intend that any agency or instrumentality of the United States having jurisdiction with respect to a taxpayer shall, without the consent of the taxpayer, use—

(1) in the case of public utility property (as defined in section 46(c)(3)(B) of the Internal Revenue Code of 1954), more than a proportionate part (determined with reference to the average useful life of the property with respect to which the credit was allowed) of the credit against tax allowed for any taxable year by section 38 of such Code, or

(2) in the case of any other property, any credit against tax allowed by section 38 of such Code,

to reduce such taxpayer's Federal income taxes for the purpose of establishing the cost of service of the taxpayer or to accomplish a similar result by any other method.

Mr. PROXMIRE. Mr. President, I hope Senators will be able to hear the debate on this amendment. It is very important. There has been placed on the desk of each Senator a brief argument in favor of the amendment, which I hope Senators will peruse.

Mr. President, the bill as now drafted, as submitted by the committee, provides that the investment credit for utilities will not be passed through to consumers. Regulatory bodies will by law not be allowed to recognize the increase in after-tax income which the investment credit provides. They cannot adjust the fair rate of return on this basis and thereby reduce rates.

Two kinds of utilities are affected by this provision: first, transportation utilities; and, second, other public utilities.

Under present law, transportation utilities now enjoy a full 7-percent investment credit. The committee bill as now drafted changes present law to provide that a regulatory body will not be permitted to recognize any of this benefit in setting rates. The law also provides a 3-percent investment credit for those utilities which are not transportation utilities.

The bill as reported by the committee provides that a regulatory body can only recognize the benefit of the investment credit for the nontransportation utilities in setting rates over the life of the asset.

I think I can demonstrate a little later that both these provisions in the bill as reported by the committee represent a windfall gain for stockholders of public utilities, and a very substantial loss for consumers.

My amendment would eliminate the most directly inflationary section of the bill. If the amendment is defeated, estimates by Prof. Robert Eisner, of Northwestern University—a noted and very competent and careful authority—indicate that the bill will cost the general public as utility customers $630 million in 1964, and more than $1 billion a year by 1972, on the basis of estimating a growth rate of 8 percent a year, which is the growth rate which has taken place for the last 20 or 30 years.

This loss to consumers is more than twice the investment credit benefit for utilities. It works out this way because with a 50-percent corporation income tax, the regulatory body can reduce rates by more than twice the investment credit, and maintain the fair rate of return to the utility at the same level or without the investment credit.

In this calculation the assumption is made that State regulatory bodies will do what has been done in the past, which is to follow Federal regulatory practice. Some State regulatory agencies—including the one in my State—are against the treatment in the bill; but there is great pressure to follow what the Federal Government, through the Federal Power Commission, has done by practice, and what Congress has established as a precedent. It is the logical assumption that this would be the result.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. MAGNUSON. I am quite concerned about this section of the bill. I have some mixed feelings and conclusions about it, because, after all, this is a bill to give tax relief to business and individual income tax payers.

Mr. PROXMIRE. As the Senator remembers, Congress passed that bill in 1962, and at that time we discussed whether or not a passthrough should be permitted.

Mr. MAGNUSON. I remember.

Mr. PROXMIRE. There was a conflict in the testimony.

Mr. MAGNUSON. I remember that. I believe the distinguished late Senator from Oklahoma, Mr. Kerr, agreed at one time that it should be passed through.

Mr. PROXMIRE. Yes.

Mr. MAGNUSON. The conferees went to conference; and when they returned they had not agreed on the passthrough, and gave good, justifiable reasons on both sides of the question.

Does the Senator interpret the section as it now reads to be mandatory on a State agency?

Mr. PROXMIRE. I do not so interpret it. It is not mandatory on a State agency. It is mandatory on the Federal agencies. However, it is my contention that a State agency will follow the Federal agency under many circumstances, and eventually probably under all circumstances in all States.

[*P. 1956*]

Mr. MAGNUSON. One other feature has bothered me. There is a great deal of merit on one side of this question. Many potential customers want to be served by a gasline or a pipeline. There are not too many hydro lines involved any more, because they have been spread out pretty well. However, I refer to gaslines and other means of transportation. Whether it be a pipeline, an airline, a bargeline, or whatever, it may want to make a capital investment in order to serve many people who now are not served.

Does the Senator interpret that to be one of the objectives of the provision?

Mr. PROXMIRE. No. In the judgment of the Senator from Wisconsin, there is no question whatsoever that if a utility wishes to serve additional customers, it will be in a position to make an investment in equipment to permit it to do so and take advantage of the investment credit; and the regulatory body will permit the utility to raise its rates to a level necessary to permit it to finance the equipment which is necessary. That has always been done.

Mr. MAGNUSON. Let us assume the situation of a gasline in my part of the country. This is a competitive industry.

Mr. PROXMIRE. In the 3 percent range, the Senator is correct. It is correct when it has reference to transportation utilities.

Mr. MAGNUSON. So we are not talking about monopolies. A company goes before the State regulatory body in Idaho, or Washington, or Oregon, with an application to make a capital investment to serve a new area. It is invariably accompanied by a proposal to raise the rates because of the capital investment to be made.

One argument has been proposed on the other side of this question, also, and the Senator from Louisiana can point this out, I am sure; namely, that they would have no standing if this pro-

vision were in the bill, and they had made a capital investment to serve new areas, when they came before the State agency and asked for increased rates. The net result would be to stimulate more capital investment and to keep the rates at the same level, or to lower the rates, if they had a figure to support a greater revenue. I know that I am speaking as a lawyer, on both sides, but that is what is bothering me about the provision in the bill. Does the Senator from Wisconsin consider that there might be that possible effect?

Mr. PROXMIRE. There is no question, the way the bill is drafted, as it comes from the committee, first, that any utility that needs to raise money in order to expand its facilities to serve additional customers is in a position to do so; and if the committee bill remains as it is, they will be in as just a strong position to ask for an increase in rates for this purpose as they are at the present time. They might even be in a stronger position.

Mr. MAGNUSON. The utility commission would take into consideration the fact that they have had a tax credit and therefore the justification for a raise in rates would be rather temporized.

Mr. PROXMIRE. That is true under the present law and under my amendment, but it is not true if the bill stands as it is.

Mr. MAGNUSON. I cannot agree, if the bill stands as it is, that a State utility regulating body would not, under any circumstances, take that into consideration.

Mr. PROXMIRE. I say to the Senator from Washington that this is the entire issue. Under the bill as it is presently drafted and reported by the committee, a Federal regulatory agency cannot, but a State agency may. The State agency will often follow the Federal practice. There will be tremendous pressure for it to do so.

Mr. MAGNUSON. I know that our commission feels very strongly on the subject.

Mr. PROXMIRE. So does ours in Wisconsin.

Mr. MAGNUSON. Wisconsin has probably the most independent regulatory body of any State in the Union. It has pioneered in this field.

Mr. PROXMIRE. We are very proud of that fact. Our regulatory body has strongly protested this provision in the bill. It has indicated that the pressure is to follow the Federal practice, and that pressure will be built up and will become stronger, even though the Commission disagrees.

Mr. MAGNUSON. I am directing my discussion primarily to the hydro side of this subject. I am not too knowledgeable about the figure, but when the tax credit reaches a certain figure—I believe it is 3 percent, or something like that—regardless of what any law provides, any profit from such tax credit must be passed on.

Mr. PROXMIRE. What it provides for the electric utilities is that a regulatory body will not consider the investment credit in full in the year in which the investment credit is earned. It will have to be spread. Let me explain that. Let us take, for example, a utility firm which invests, say, $10 million in 1 year. The investment credit then is $300,000. Under present law, in accordance with the amendment, the regulatory body would have to take that $300,000 increase in after-tax income into consideration. Does the Senator follow me?

Mr. MAGNUSON. Yes.

Mr. PROXMIRE. Under the bill reported by the committee, if the equipment were depreciated over a 20-year period, the regulatory body would be able to take only the $15,000 reduction into consideration in establishing rates. In the case of A. T. & T., this would amount to $22 million each year, and the loss to the people who use the telephone service would be $22 million from this one utility. This is true because of the fact that, first, the amount is spread over a period of years, and we would never catch up; second, the equipment investment is growing each year as the Nation grows and as the need for the services grows.

Mr. MAGNUSON. I understand that. It seems to me that if we are to give a tax benefit to a corporation—and I do not care which corporation it is—it is useless to say, "We will give you a tax benefit, but you cannot have it; you must pass it on." We might as well let things stand the way they are.

Mr. PROXMIRE. I believe I have an answer for that point. The utility industry is divided on that issue. However, there are important, knowledgeable, and experienced people in the industry, including the head of A. T. & T., and Mr. Donald Cook, president of the American Electric Power Co., who say that the real benefit to the utility will be through passing the credit on. If it is passed on, the people will need more service and more equipment. As a result, the utility will make a bigger investment in equipment than if it were not passed on. It would be foolish for the stockholders to buy equipment merely

because they took advantage of the investment credit, if they could not use it. While they might gain a little by taking advantage of the investment credit, they would lose by buying an asset they could not use.

Mr. MAGNUSON. Some of the credit would ultimately be passed on, regardless of what is in the bill.

Mr. PROXMIRE. No. I believe that ultimately some of it will be passed on for the 3 percent; none of it for the 7 percent.

Mr. MAGNUSON. The officials of the regulatory body of my State say they will compel the utilities to pass it on.

Mr. PROXMIRE. That is the State regulatory body; but the State regulatory body does not have jurisdiction over the long lines of A. T. & T., for example.

Mr. MAGNUSON. I am concerned more about the hydro part and about the pipelines.

Mr. PROXMIRE. In the case of a utility that covers many States, the FPC would have jurisdiction. In such a case it could not be passed on.

Mr. MAGNUSON. I am in somewhat of a dilemma. I believe other Senators will find themselves in it also. The last vote proved it. I do not suppose there is any greater advocate of the repeal of excise taxes than I. I go on the theory that we get more money in the Treasury by repealing nuisance taxes than we do by collecting them.

We have repealed the transportation tax and the theater tax. If it had not been for the fact that excise taxes will be considered between now and June, and that we shall have a complete look at the subject, I would have gone along with the other amendment. I did not think it was fair to have only one segment taken care of.

This provision might affect the private utility which is in competition with a public power body. It would apply as an incentive, I hope, to the whole field of transportation. If there is any segment of the American economy that needs that kind of incentive, it is transportation, because it is the most sensitive part of our American economy. Most people do not realize it, but it represents one-fourth of our gross national product.

Mr. PROXMIRE. The Senator is correct. The policy of the transportation

[*P. 1957*]

industry, as established by the ICC—that is the prime regulating body—is to pass the credit through. There is some ambiguity, but the latest official statement of the Commission is that the investment credit should be recognized for what it is—an opportunity for a utility to reduce its taxes—and that therefore it should be considered as an element of income, and should be passed on.

This would benefit not only the consumer, but also the utility and the country. It would persuade the utility to buy more equipment, because the equipment would be bought for only one reason, that is, to provide more service.

Mr. MAGNUSON. If there is a bigger gross income, the rates, in some cases, ought to be lowered. I have heard that this action might put to rest a large number of applications—for small amounts, it is true—for increased rates, if the bill can be passed, because the reason for the applications is the difficulty some utilities have in raising money to provide improved service. I do not know how true that is.

Mr. PROXMIRE. The applications have been made on the assumption that the law will be changed. My proposal would keep the law as it is at present.

Mr. MAGNUSON. I am glad the Senator offered the amendment. I think the subject should be clarified. Much can be said on both sides of the question. But if this provision were to apply to a monopoly in hydroelectric power, I would go even further than does the Senator from Wisconsin. But the question is not so simple.

I have found over the years that competition in the field of energy, whether it be gas, oil, or hydro, is becoming quite keen throughout the country. There is very little monopoly anywhere any more. There may be in some isolated areas. When the utilities are stimulated to provide better service and expand their service to the consumer, the result might be that rates could be kept as they are or lowered, and the consumer would receive better service because of the fierce competition involved.

Mr. PROXMIRE. The investment credit in competitive industry will be passed on because of the forces of competition. The regulatory agencies should perform the same function for utilities.

Mr. MAGNUSON. Sooner or later.

Mr. PROXMIRE. Sooner or later. But where there is a monopoly, or a utility has a monopoly, and a provision exists in the law that a regulatory body cannot pass the benefit on unless the utility consents, there will be a situation in which the benefit will not be passed on, and the consumer will not get the benefit. The whole purpose of Congress in passing the investment credit was to expand the economy, through investment

in needed equipment. The committee version will frustrate this purpose.

Mr. MAGNUSON. Out in my part of the country, some 25 years ago hydroelectric power was somewhat of a monopoly. It was produced at the lowest cost. It was new; it was fine; people liked it. But over the years, even though we have low-cost hydropower in our area, as the Senator from Idaho [Mr. CHURCH] knows, competition from gas, oil, and other means is becoming stronger and stronger. I do not know what effect nuclear power will have on hydropower, in the long run. It is not noncompetitive any more, as it used to be.

Surely the point of the Senator from Wisconsin is well taken, as it relates to the nature of a monopoly. I agree with him on that point. But the amendment covers a broad field.

Mr. PROXMIRE. Where there is no monopoly, I argue that competitive forces will result in a substantial pass-through.

Mr. MAGNUSON. I thank the Senator from Wisconsin. I did not mean to take so much time.

Mr. PROXMIRE. The Senator from Washington has been very helpful.

Mr. President, before I yield to the Senator from Vermont—and I shall yield to him in a moment—I ask unanimous consent to have printed at this point in the RECORD a table that explains why it will be possible, if the investment credit is maintained in its present form, and as it will be if my amendment is agreed to, to reduce rates by twice the value of the investment credit.

I also ask unanimous consent to have printed at this point in the RECORD a table compiled by Professor Eisner, which shows $630 million of benefits to the consumer, under my amendment, rising by 1997 to $6.348 billion in the lower rates, assuming the estimates he makes are realistic.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

TABLE I

	No investment credit	Investment credit (without flow-through	Investment credit (with flow-through
Net income before taxes	200	200	186
Taxes	100	100	93
Investment credit	0	7	7
Net income after taxes	100	107	100

TABLE II.—*Potential costs to consumers of regulatory provision regarding investment credit (sec. 202(e)) in H.R. 8363,*[1] *if rate of growth of investment per annum is 8 percent*

[In millions of dollars]

Year	Annual	Cumulative
1964	630	630
1965	653	1,283
1966	693	1,976
1967	735	2,711
1968	783	3,494
1969	834	4,328
1970	889	5,217
1971	950	6,167
1972	1,016	7,183
1973	1,088	8,271
1974	1,164	9,435
1975	1,248	10,683
1976	1,340	12,023
1977	1,438	13,461
1978	1,545	15,006
1979	1,661	16,667
1980	1,785	18,452
1981	1,921	20,373
1982	2,067	22,440
1983	2,224	24,664
1984	2,394	27,058
1985	2,578	29,636
1986	2,776	32,412
1987	2,991	35,403
1988	3,223	38,626
1989	3,473	42,099
1990	3,743	45,842
1991	4,035	49,877
1992	4,350	54,227
1993	4,691	58,918
1994	5,058	63,976
1995	5,455	69,431
1966	5,884	75,315
1997	6,348	81,613

[1] Note following major assumptions underlying calculations:

1. Effective total corporate profits tax rate will be reduced to 50 percent in 1964 and 48 percent thereafter.

2. Costs to consumers in all regulated industries will be adjusted to give "fair rate of return" after taxes.

3. Investment tax credit in 1962 in regulated industries equaled $279,000,000, which was the sum estimated in the "Survey of Current Business," July 1963, p. 4, for corporations in transportation, public utilities, and communication.

4. Half of investment credits are assumed to relate initially to "public utility property" on which a partial current flowthrough is permissible (subpar. (1)). This flowthrough is estimated at 3 percent per year.

5. The requirement in existing law for reduction in depreciation basis (the Long amendment) is not removed. If this requirement is eliminated the actual costs to consumers would rise by about $30,000,000 per year by 1974 in the case of 4-percent growth and rise gradually thereafter. In the case of 8-percent growth, repeal of the Long amendment would increase the cost to consumers of the regulatory provision by some $40,000,000 per year by 1974 and reach an amount of increase equal to $200,000,000 per year by 1997.

Mr. PROXMIRE. Mr. President, I now yield to the Senator from Vermont.

Mr. AIKEN. Mr. President, I desire to ask the Senator from Wisconsin a few questions. Before doing so, I should like to refer briefly to the colloquy which took place between the Senator from Wisconsin and the Senator from Washington, during which the Senator from Washington referred to the fierce competition that exists among utility companies today.

Has the Senator from Wisconsin observed, as I have, that today, apparently, a fiercer effort is being made on the part of the utilities to eliminate competition than during the past 25 years?

Mr. PROXMIRE. The Senator from Vermont is correct. There is no doubt that in many areas utilities having monopolies will not be challenged. It is true, to some extent, of gas and oil pipelines. In my State, one firm, until recently, supplied about 95 percent of the natural gas. That is a monopoly.

Mr. AIKEN. The adoption of this provision of the tax bill would not lessen the efforts of utilities to eliminate competition.

Mr. PROXMIRE. The Senator is absolutely correct.

Mr. AIKEN. Does the Senator know whether the President approves the provision of the bill as reported by the Committee on Finance?

Mr. PROXMIRE. It is my understanding that the administration has not taken a position for or against. The Senator from Oregon [Mr. MORSE] yesterday supported the amendment vigorously and said he had been attempting to obtain a statement from the administration; but there has been no commitment from the administration either way.

Mr. AIKEN. Next, I refer to the President's message on consumer interests

[*P. 1958*]

that was sent to Congress today. I refer to the statement on page 3, item No. 4:

> Federal Power Commission orders on gas rates have channeled millions of dollars of refunds of past overcharges to American families who use gas for cooking and heating.

Does the Senator from Wisconsin contend that this provision of the bill, which he is seeking to eliminate, would affect the power of the Federal Power Commission to order refunds of past overcharges to American families?

Mr. PROXMIRE. The Senator is absolutely correct.

Mr. AIKEN. I asked the Senator a question. I do not know what the correct answer may be.

Mr. PROXMIRE. The Senator's question should be answered in the affirmative. The provision in the bill would interfere with the power of the Federal Power Commission to reduce rates.

Mr. AIKEN. If the President decided to favor the provision of the bill as reported by the Committee on Finance, it would be quite inconsistent with this statement in his consumer message to Congress, would it not?

Mr. PROXMIRE. Yes. It is very helpful to have the Senator from Vermont bring up this excellent consumer message of President Johnson's. It is one of his finest messages. It is one of the few times a President has addressed himself to the entire problem of consumer interest. It seems to me that my amendment fits in with the spirit of the President's message. It means that the consumer will have an opportunity to benefit from this tax credit.

The important thing is that it is the most effective way to develop an increase in the purchases of equipment by the utilities industries, through the transportation and electric utilities. Demand will be increased. There is no realistic basis for increasing rates.

Mr. AIKEN. I thank the Senator from Wisconsin.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator from Wisconsin yield?

Mr. PROXMIRE. I yield to the Senator from Delaware.

Mr. WILLIAMS of Delaware. I intend to support the amendment offered by the Senator from Wisconsin. I have a similar amendment at the desk; however, I will withhold it and join in support of the amendment of the Senator from Wisconsin.

Mr. PROXMIRE. The Senator from Delaware spoke to me about the amendment. I deeply appreciate that. It was a most cooperative and helpful gesture. He is a member of the Committee on Finance. I am moving into his territory. He told me he intended to offer an amendment, but I happened to have submitted mine a few hours before he had his ready. He graciously deferred to me, and I appreciate his kindness.

Mr. WILLIAMS of Delaware. I shall support the Senator's amendment. To keep the record straight, I think it should be made clear that the administration supported the language in the bill as it was presented to the Committee on Finance. I regret to have to say that. But I believe it should be clear so that there will be no misunderstanding when Senators vote.

Personally, I disagreed with their reasoning. I took the position that the section should be stricken because, in fairness to all taxpayers and particularly from the standpoint of consumers, I cannot understand why anyone would

support such a provision. If the section is allowed to remain in the bill it will specifically provide that the regulatory agencies cannot under any circumstances pass through any of the benefits of the investment credit to the consumers. That is spelled out in clear language. I cannot understand that reasoning, particularly in light of the President's message in which he said he wanted to do something for the consumers.

Mr. PROXMIRE. It is my understanding that while the administration initially took that position, its present position is one of not taking sides either way on this particular amendment. It is true that initially the administration supported this provision in the bill; but the Senator from Oregon [Mr. MORSE] and others have tried to learn the present position of the administration, but the administration will not disclose it. The Senator from Delaware is correct; the administration will not disclose its present position.

Mr. WILLIAMS of Delaware. The administration may be trying to back away and not take a position at this time. But when the proposal was first presented to the committee the administration endorsed it as a part of the program, and there is nothing in the record to show any official change in its position. That point should be made clear as Senators vote. I hope the Senate will vote that provision out of the bill.

The language in the bill which the pending amendment proposes to strike, is definitely an anticonsumer proposal.

Why would the administration or anyone else be so determined that under no circumstances can the American consumer get some of the benefits under this tax-reduction proposal?

When the Congress passed the investment credit in 1962 it specifically provided that the regulatory agencies were free to pass these benefits on to the consumer.

The language in the pending bill, however, changes that and provides that unless the corporate taxpayer agrees, the regulatory agency cannot establish rates wherein any of this tax reduction can be passed on to the consumer.

That was not the intention of the Congress in 1962 when the investment credit proposal was first adopted and I hope the Congress will repudiate the rights of the consumer here today.

The Proxmire amendment striking this section from the pending bill should be adopted.

Mr. PROXMIRE. I thank the distinguished Senator from Delaware, the ranking minority member of the Finance Committee, and an outstanding expert on taxes. Certainly all of us recognize that he lets the chips fall where they may and he represents extremely well the public interest.

Mr. MAGNUSON. Mr. President, will the Senator from Wisconsin yield?

Mr. PROXMIRE. I yield.

Mr. MAGNUSON. I hope the Senator from Vermont [Mr. AIKEN] did not think I said the Commission was trying to help the utilities avoid competition. To the contrary, I say that in these utility media there is more competition than ever before.

Mr. AIKEN. But I point out that their executives are using the same procedures that were being used 30 years ago in the effort to eliminate competition.

Mr. MAGNUSON. Yes, they have not changed.

Mr. AIKEN. I had hoped the younger generation, which is taking over, would be more public spirited. However, I still find the same school of thought in charge of the management, and in their attempts to eliminate competititon they still use the same practices that were used many years ago.

Mr. MAGNUSON. Yes; and the Senator from Vermont and I have joined for many years in this fight.

Mr. AIKEN. Yes.

Mr. MAGNUSON. Mr. President, I wish to ask a question or two of the Senator from Wisconsin.

First, let me say that it seems to me it is not good policy for Congress to set up the Federal Power Commission and expect it to do a good job as between the consumers and the utilities, and give it sufficient authority for that purpose, and then include in a tax bill a provision which would prohibit the Commission from doing certain necessary or desirable things. It seems to me the proposed tax credit should be provided; I think that will be wise. I believe it should be provided to the utilities throughout the country, for I believe the effect will be good for the economy. But I also believe the Congress should allow the Federal Power Commission to decide whether the tax credit is to be passed on—in short—permit the Commission to order what it believes to be equitable in a particular case in which an application for a rate increase or a rate reduction is made.

Mr. PROXMIRE. I think it very significant, Mr, President, that the Chairman of the Commerce Committee, who is responsible more than any other Member of the Senate is for the congressional directions given the regulatory bodies and commissions, particularly the Federal Power Commission, has made that statement. His position—and I believe it makes all the sense in the world—is that the regulatory body should have

authority to decide for itself whether the tax credit should be passed on. That is the way the law now reads, and that is the way my amendment would leave it.

Mr. MAGNUSON. Yes, leave that provision in the bill, and leave that authority with the Commission, which then could say to a particular utility, "You are doing a good job, and are better serving the consumers, and are doing so more efficiently and cheaper."

I cannot assume that in every case the Commission would require that the tax credit be passed on. Perhaps the finances of a particular utility company would not justify a requirement that the

[*P. 1959*]

credit be passed on at this particular time. The Commission might say to such a committee, "Keep the tax credit proceeds now; it will be in the interest of the consumers that you do so"—whether in the case of one of the pipelines or one of the bargelines or some other utility.

So, for that reason, I am in sympathy with the purpose of the amendment.

Furthermore, I do not believe the Finance Committee should determine that policy; I do not think the Finance Committee should, after Congress has directed that a tax credit be given, take the position that Congress should instruct the Commission exactly what should be done with the tax credit. In other words, neither do I think Congress should say to the Commission, "You must see to it that the tax credit goes to someone else."

I believe Congress should say to the Commission, "Prescribe rules and regulations by means of which the tax credit will be given, and then see how it works out, and then determine what should be done in the public interest." In other words, we should permit the Federal Power Commission first to determine the revenues received, the rates charged, and so forth.

I think there is some merit in following such a procedure, and I believe that many members of the Finance Committee feel the same way.

Mr. PROXMIRE. I thank the Senator from Washington for his statement, which is extremely helpful.

I point out that unless this amendment is enacted into law, the pending tax bill will include a wholly unprecedented congressional dictation to regulatory bodies, by prohibiting them from deciding the best use to be made of this tax credit, and thus will fail to permit the Federal Power Commission, the Interstate Commerce Commission, and other Government regulatory commissions to decide whether this tax credit should be passed on, and if so, how much.

Mr. President, I support the principle involved in allowing that discretion to the regulatory commissions.

I hold in my hand certain papers in docket No. 14850, before the Federal Communications Commission. This is a report and order which was adopted. It is dated July 31, 1963; and from page 6, I read the following:

> In this connection, if the investment tax credit is viewed as a reduction in taxes, it would appear that the only appropriate accounting method would be "flow through."

Mr. President, that quotation comes from docket No. 14850. Thus we find that the view of the Federal Communications Commission, as firmly established in that docket, is that the tax credit should be recognized for what it really is—a reduction in cost.

The Federal Power Commission took the following position in a very brief docket—No. R–232, dated January 23, 1964—only about 10 days ago:

> The Commission has reached the conclusion that on the basis of existing law the accounting treatment to be prescribed should be to flow through the credit to income.

This is the established position of the Federal Power Commission; but the pending bill, as it now stands would result in action by Congress to flout and reverse that position of the Federal Power Commission. The members of the Commission are appointed by the President, and their nominations are confirmed by the Senate, and their entire public careers are devoted to the study of regulatory matters.

The Senator from Washington [Mr. MAGNUSON], who is an outstanding authority in this field, has said—and said it very well—that Congress should delegate this discretion to the Commission, so as to enable it to decide just what amount of the tax credit should be passed on.

Finally, Mr. President, I shall quote from a February 1, 1963, decision of the Interstate Commerce Commission in docket No. 34178, "in the application of uniform system of accounts, actual Federal income taxes payable for each year"—that is after credits.

> When an available depreciation allowance produces a reduction in Federal income taxes, no matter how temporary the benefit may be, the effect on net income should be the same as a reduction in taxes produced by lower tax rates. Possible income taxes to be assessed in the future are not an element of tax expense for the current year.

And so forth. The Commission concludes, as follows:

> We have carefully considered the diver-

gent views and all of the arguments presented by the respondents in this proceeding and affirm the ultimate findings contained in our preliminary notice herein that no sufficient justification has been presented to warrant a change in our present accounting rules and the statement of policy previously announced under date of February 9, 1959.

In other words, after the investment credit provision was enacted into law, and in direct consideration of that fact, the Interstate Commerce Commission said it was not changing the accounting rules.

I ask unanimous consent that these documents or dockets pertaining to the investment credit, from the Federal Power Commission, the Federal Communications Commission, and the Interstate Commerce Commission—the major regulatory bodies of this Nation—be printed at this point in the RECORD.

There being no objection, the documents were ordered to be printed in the RECORD, as follows:

EXHIBIT II–A

BEFORE THE FEDERAL COMMUNICATIONS COMMISSION, WASHINGTON, D.C.—DOCKET NO. 14850 (RM–377) (RM–381)

(In the matter of amendment of pts. 31 and 35 of the Commission's rules (Uniform Systems of Accounts for Class A and Class B Telephone Companies and for Wire Telegraph and Ocean-Cable Carriers, respectively) concerning accounting for investment credits made available by the Revenue Act of 1962. Possible like amendment of the Uniform Systems of Accounts for Class C Telephone Companies and for Radiotelegraph Carriers (pts. 33 and 34 of the rules, respectively).)

REPORT AND ORDER OF JULY 31, 1963

(By the Commission: Commissioner Hyde dissenting with a statement; Commissioners Lee and Ford dissenting.)

1. On November 21, 1962, the Commission adopted a notice of proposed rulemaking in the above-entitled matter which was published in the Federal Register on November 29, 1962 (27 F.R. 11773) in accordance with section 4(a) of the Administrative Procedure Act. This notice presented for comment on or before December 26, 1962 (with allowance for reply comments on or before January 8, 1963), proposals of the American Telephone & Telegraph Co. (A.T. & T.) and the Western Union Telegraph Co. (WU) with respect to accounting for investment tax credits made available under the Revenue Act of 1962. By order dated December 13, 1962, the closing dates for filing comments and reply comments were extended to January 28, 1963, and February 18, 1963, respectively. Pursuant to the Commission's order released June 7, 1963, oral argument directed to the respective merit of the three basic approaches of accounting for the investment tax credit set forth in the notice of proposed rulemaking was heard by the Commission on July 15, 1963.

2. The Revenue Act of 1962 provides for the deduction of "investment tax credits," relating to the construction or acquisition of certain facilities, in the determination of Federal income taxes due from taxpayers for 1962 and subsequent years. The investment tax credit is computed by applying certain percentages to the cost of qualifying plant placed in service during the taxable year. Telephone companies and domestic telegraph companies are allowed a maximum of 3 percent of the cost of qualifying property with a useful life of 8 years or more. Lesser percentages are applicable to qualifying plant with a useful life of 4 years or more but less than 8 years. Nonutility industries generally, as well as international telegraph companies, gas pipeline companies (other than local distribution systems) and transportation companies are allowed a maximum of 7 percent credit rather than the 3 percent maximum allowed for telephone and domestic telegraph companies. The property base for computing depreciation for tax purposes over the life of the property is reduced by the amount of the investment credit which the taxpayer is eligible to receive.

3. Under the proposal for amendment of part 31 submitted by A.T. & T., the plant accounts would be reduced by the amount of the investment tax credits and an offsetting amount would be added to operating taxes. The proposed amendment to part 35 submitted by Western Union would permit 52 percent of the investment tax credit to be set up on the books in a deferred tax account with an offsetting amount added to operating taxes. The remaining 48 percent of the credit would be permitted to "flow through" to income. The deferred taxes under Western Union's proposal would be used over the life of the property to absorb the calculated additional taxes in subsequent years resulting from the lower property base used for tax depreciation allowance.

4. The notice pointed out that the Commission's uniform systems of accounts, as presently worded, permit charges to the tax expense accounts only for the taxes actually payable and, with minor exceptions, arising out of operations during the current accounting period. If either A.T. & T.'s or Western Union's requests were to be granted, it would involve a departure from this fundamental theory which underlies the present systems of accounts.

5. The notice listed the following basic ways to reflect investment tax credits in the accounts:

[P. 1960]

(a) "Flowthrough" accounting, which would permit the investment credits to "flow through" immediately to net income. This would require no change in any of our systems of accounts.

(b) "Flowthrough" accounting for 48 percent of the investment credits and normalization of 52 percent of such credits by setting up a reserve for deferred taxes. The contra entry to establish the reserve would be a charge to operating taxes. (WU's proposal).

(c) Normalization by entering the investment credits as a credit to the plant accounts [1] and charging operating taxes. (A.T. & T.'s proposal.)

The notice incorporated as appendixes A.T. &. T.'s and WU's requests for rule making and asked for comments concerning the propriety of those proposals as well as any alternative accounting proposals which were deemed to be appropriate. Comments and briefs were also requested with respect to the intent of Congress in enacting the investment credit provisions of the Revenue Act of 1962 and the extent to which this Commission should recognize such intent in considering amendment of its accounting rules. Comments were also requested on whether, if we were to amend our telephone and wire-telegraph and ocean-cable systems of accounts, like amendments, in principle, should be made to the uniform systems of accounts for small telephone companies and for radiotelegraph carriers. The notice also stated that whether or not amendments are made in our accounting rules as a result of this proceeding, we intend to amend our common carrier annual report forms (forms M, O and R) to the extent, if any, necessary to disclose clearly therein the amounts of the investment credits received and how they are being accounted for.

6. Twenty-six comments were received. Six comments, representing the views of five State commissions and the Administrator of General Services, favored "flowthrough" accounting. One carrier, in addition to the original request of WU, favored partial normalization which would allow 48 percent of the credit to "flow through" and defer the remaining 52 percent. Eighteen comments favored full normalization but did not all agree on the method of accounting to accomplish such normalization. Some of these 18 favored a direct credit to plant, 1 favored crediting a deferred credit account, several did not specify the method of accounting they favored to accomplish the full normalization, and others were agreeable to either a direct credit to plant or a credit to an account offsetting the gross plant investment. Of the 18 favoring full normalization, 5 were from carriers or groups of carriers, 10 were from State commissions, 2 were from public accounting firms, and the other was from the American Institute of Certified Public Accountants. One State commission favored uniformity of accounting by Federal agencies consistent with accounting previously prescribed in similar situations. The six comments favoring "flowthrough" accounting were from the Wisconsin Public Service Commission, Alabama Public Service Commission, California Public Utilities Commission, New Hampshire Public Utilities Commission, New York Public Service Commission, and the Administrator of General Services. The comment favoring 48-percent "flowthrough" and 52-percent normalization was from RCA Communications, Inc. The 18 comments [2] favoring full normalization were A.T. & T., American Cable & Radio Corp., General Telephone & Electronics Corp., Hawaiian Telephone Co., United States Independent Telephone Association, Arizona Corporation Commission, Delaware Public Service Commission, Florida Railroad and Public Utilities Commission, Massachusetts Department of Public Utilities, Minnesota Railroad & Warehouse Commission, Montana Board of Railroad Commissioners, New Mexico State Corporation Commission, North Dakota Public Service Commission, South Dakota Public Utilities Commission, Virginia State Corporation Commission, American Institute of Certified Public Accountants, Arthur Andersen & Co., and Lybrand, Ross Bros. & Montgomery. The comment favoring uniformity of accounting was from the Washington Utilities and Transportation Commission. The only comment received in reply to the original comment was received from A.T. & T. This comment was primarily a rebuttal of the arguments for "flow through." The comments that were submitted were quite extensive and no detailed summary of such comments is incorporated herein. However, the arguments included in such comments have been fully considered.

7. The comments have dwelt at some length on the so-called legislative intent behind the investment tax credit and many of them have implied that the Commission is precluded by such legislative intent from judging the appropriate accounting on the merits in accordance with sound public utility regulatory principles. We do not agree with this implication. It appears to us on the contrary that Congress fully intended that the tax legislation here involved should fit into the normal regulatory scheme. In this connection, analysis of the legislative history in light of the comments referred to is indicated. Under section 220 of the Communications Act, the commission is given plenary powers to prescribe accounting procedures for carriers subject to its jurisdiction. It is axiomatic that amendment or repeal of a statute by indirect implication is not favored. *Georgia* v. *Pennsylvania Railroad Co.*, 324 U.S. 439, 456–7; *Swettman* v. *Remington Rand*, 65 F. Supp. 940; 82 C.J.S. section 419. The necessary inference to be drawn from those comments which would preclude the Commission's judgment of the regulatory treatment to be accorded the tax credit is that Congress intended by the tax statute to amend or repeal that portion of the Communications Act which gives the Commission authority to prescribe accounting methods. Aside from the fact that there was no such express statement either in the statutory enactment itself or the record of the legislative proceedings leading up to such enactment, there are several clear indications in the legislation and its history leading to a contrary conclusion. One clear indication of Congress thinking stems from the fact that several parties testifying in the congressional hearings (most of whom filed comments in favor of full normalization in this proceedings)

---

[1] Another method of accomplishing full normalization would be to credit an offsetting reserve.

[2] The Illinois Commerce Commission, while not filing comments, appeared at the oral argument in favor of full normalization.

advocated that the legislation contain express provisions requiring that the tax benefits conferred be spread over the entire life of the assets which provided the measure of such benefits. Congress did not see fit to include such provisions.

8. Another clear indication that Congress intended the tax credit to be compatible with, and not in derogation of, the existing regulatory scheme is found in the House Ways and Means Committee Report wherein it explains the reason for the difference in the percent of credit allowed most regulated public utilities versus other enterprises. The report states:

"The investment credit in the case of most regulated public utilities is in effect 4 percent rather than 8 percent. The smaller credit is provided in such cases because much of its benefit in these regulated industries is likely to be passed on in lower rates to consumers, thereby negating much of the stimulative effect on investments. Moreover, the size of the investment in regulated public utilities, such as electric companies, local gas companies, telephone companies, etc., will in large part be determined by the growth of other industries, rather than their own." [3]

A.T. & T., which is the only one of those favoring full normalization to take note of this statement in its comments, attempts to explain this statement by suggesting that the House committee really meant that ratepayers would obtain the lower rates mentioned by virtue of the fact that the credit would reduce the rate base and thus increase the rate of return. We believe, however, that if the committee had had in mind only this indirect effect, it would have stated it as such and would not have couched its explanation in terms of "passing on" the benefit of the credit in lower rates to consumers. The only possible way in which much of the benefits of the credit can be passed on immediately to consumers is by the "flow through" technique.

9. The comments favoring full normalization would have us interpret literally the several statements contained in the legislative history that the tax credit in effect reduces the cost of the new plant. The fallacy of such a literal reading is, of course, apparent since the cash outlay for new plant is the same with or without the tax credit. No benefits of the credit are realized until taxpaying time and then only as a reduction in the total amount of the tax paid. The real benefit and incentive to investment are the extra dollars made available at this time for, as will be pointed out later, such purposes as extra dividends, corporate growth through reinvestment, et cetera.

10. The question may well be asked as to how Congress intended the tax credit to be an investment incentive to utilities if the entire amount is to be passed along to consumers in the form of lower rates. The answer, of course, is that in most cases it will not all be passed on even under the "flow through" principle. Only in the case of a utility which has already reached the upper limits of a reasonable rate of return is such a result possible, and even then rates cannot be reduced to give immediate effect to the reduction in taxes. In the case of marginal utilities, such as some railroads, for example, it may well be that none of the amount will be passed on to the consumer. It is this factor, present to some degree in the case of most utilities, of providing the means of increasing earnings and making it easier to obtain capital, both directly through retained earnings and indirectly through rendering its securities more attractive to investors, that constitutes the real incentive. It is worthy of note in this connection that the comptroller of A.T. & T., one of the petitioners in this proceeding, testified in opposition to any tax credit of this nature for utilities on the ground, inter alia, that it was not necessary to encourage the Bell System to construct additional plant. He pointed out that the Bell System has a duty to construct such plant as is necessary to provide service to its customers and that the Bell System companies had been successful in the past in raising sufficient capital to finance the additional facilities required. Representatives of other utilities, including Western Union, however, spoke in favor of the legislation.

11. While not directly indicative of congressional intent, it is interesting to note the interpretation placed on the legislation by the agency most concerned. The Internal Revenue Service in construing section 38 of the code states as follows:

"Under these circumstances, it would be inappropriate in computing earnings and

[*P. 1961*]

profits to allow as a decrease thereto the gross amount of Federal income tax liability before reduction by the amount of the investment credit. Similarly, the adjustment to basis required by section 48 of the code for the year the property is placed in service may not be reflected as a reduction in earnings and profits for such year." (Rev. Rul. 63-63, IRB No. 1963, 15, p. 7.)

12. One statement contained in the conference report (H. Rept. No. 2508, p. 14) requires comment. The statement is as follows:

"It is the understanding of the conferees on the part of both the House and the Senate that the purpose of the credit for investment in certain depreciable property, in the case of both regulated and nonregulated industries, is to encourage modernization and expansion of the Nation's productive facilities and to improve its economic potential by reducing the net cost of acquiring new equipment, thereby increasing the earnings of the new facilities over their productive lives."

The proponents of a "normalization" approach urge that this language indicates a congressional intent to require the treatment of the tax credit which they advance. We disagree. The language quoted is, of course, one way of describing the general effect which Congress hoped to achieve. The suggestion, however, is that this description implies a congressional intent that the credit granted should never, in any circumstances, be passed on to the consumer in the form of lower rates, except by way of reduced depreciation charges and reduced earnings re-

[3] H. Rept. No. 1447, supra, p. 8.

quirements over the life of the plant involved. No language preceding or following in the conference report suggests such an interpretation. And the other pertinent indications of legislative intent, including the failure of Congress to include specific statutory language on the point although requested to do so, are to the contrary. In light of all the circumstances, we do not think such a drastic construction is warranted by a single detached statement.

13. In view of the foregoing, it appears that Congress did not intend to tie the Commission's hands in carrying out its regulatory functions. One of those functions, imposed by section 220 of the Communications Act, is the prescription of the accounts to be maintained by carriers subject to its jurisdiction. It appears that the Commission is free to consider the proper accounting for the investment tax credit on its own merits with due regard for sound accounting and regulatory principles. Here it is appropriate to emphasize that this is an accounting, rather than a ratemaking, proceeding.

14. Extensive arguments were included in the comments received and/or in the original requests for rulemaking in favor of each of the three basic methods of accounting that were offered for comment. After considering all of the comments received, we believe it appropriate to analyze the true nature of the investment tax credit as a persuasive guide in deciding the proper accounting to be followed. In this connection, if the investment tax credit is viewed as a reduction in taxes, it would appear that the only appropriate accounting method would be "flow through." If the investment credit is viewed as a tax deferral which can be accurately determined, then only 52 percent of the investment tax credit represents a deferral of taxes. Under this theory, the remaining 48 percent would be a reduction in taxes and could be appropriately accounted for only by letting it "flow through" to income. However, if the investment tax credit is viewed as a reduction in the cost of plant resulting from either a contribution by the Government toward the construction of plant or a reduction in taxes applicable to construction that should be capitalized negatively, then the only accounting which would seem appropriate would be full normalization by a credit to plant or a variation thereof such as by a credit to a deferred credit account or to an offsetting reserve.

15. It is our view that the investment tax credit represents a reduction of income taxes and should be so recorded in the accounts. The Revenue Act of 1962 specifically provides that the Federal income tax liability shall be reduced by the amount of the investment tax credit. The amount of the tax due the Government is determined after deductions of the credit. The deduction of the investment tax credit does not appear to be any different than other deductions such as the foreign tax credit, the dividends received credit for individuals, and the credit from regulated investment companies which are deducted to determine the income tax liability. The qualified property on which the credit is based is merely a convenient tool used to compute the dollar amount of the tax reduction intended by Congress. The same effect, that is, the reduction of the amount of the income tax, could have been accomplished by some other means such as a reduction in the income tax rates. The fact that the basis of the property is reduced to compute depreciation for tax purposes is merely a method adopted by Congress to avoid duplication of a portion of the tax reduction derived from the investment tax credit over future years.

16. The avowed purpose of the investment credit, to encourage the modernization and expansion of productive facilities and thus to stimulate the economy, is accomplished by reducing the taxes payable by those taxpayers who construct or acquire such qualifying plant. The reward for adding such plant is actual cash in hand as the result of the lower income tax which must be paid. The benefit is received currently in fewer dollars paid out in taxes, thus providing more stimulation for reinvestment than is spread over the life of the property. The law, however, does not restrict the manner in which the tax reduction should be used. It can be used to pay dividends, reduce prices, build additional plant, or for whatever other purpose the taxpayer wishes. The increased earnings resulting from the tax reduction will tend to stimulate the economy however they are used. If paid out in dividends, the recipient of the dividends can buy additional goods or reinvest the funds received as dividends. If used to reduce prices, the consumer can use the amount of the price reduction for the same purposes. If retained by the taxpayer, the funds can be reinvested in additional plant facilities and the increased earnings reported in the financial statements may also tend to stimulate the economy. Thus it appears to us that the true nature of the credit is best reflected by the increased earnings resulting from the tax reduction.

17. The foregoing view is also in accord with this Commission's position, which is a well settled one over the years in commission and court decisions, that the actual results of operations should be reflected in the accounts. For ratemaking purposes, it may be necessary at times to make adjustments to the reported results of operations to remove the effect of abnormal or unusual occurrences. This can and should be done without altering the records of actual results reflected in the accounts. However, we cannot agree that the Federal income tax account or any other expense account should contain amounts for income tax liabilities not actually incurred. Likewise, the net income resulting from this tax reduction, which, like the rest of the net income from operations is not restricted, should not be obscured by including in the accounts, amounts for taxes or other expenses not actually paid or incurred.

18. It is argued by some that inasmuch as the investment tax credit must be deducted from the cost of plant in computing depreciation expenses for tax purposes in future years, provisions for such future taxes should be reflected in the accounts currently, on the theory that the income taxes may be higher in future years as a result of the reduced tax basis of the plant used to compute deprecia-

tion for tax purposes. However, it is not possible to predict what the actual amount of such higher taxes will be over the future life of the plant. A number of factors can change the effect of this aspect of the law. If the tax rate is changed the amount of the tax effect of this part of the law will change. Changes in the tax rates are currently being discussed by Congress. If a taxable loss is suffered by the taxpayer in future years, the lower amount of depreciation for tax purposes may not result in any more taxes being paid. If there is a decline in profits, a lower tax rate may be applicable to the taxable income arising from the lower depreciation expenses computed for tax purposes. With continued plant expansion, any higher taxes due to lower depreciation expenses are likely to be more than offset by the investment tax credit in future years as additional qualifying property is constructed or acquired. The theoretical higher taxes which are supposed to result from the investment credit would thus be postponed indefinitely into the future. Even without continued plant expansion, which is and for the foreseeable future will be typical of the industry, the average life of communications property is so long that it is inconceivable that an accurate prediction of the ultimate future tax effect could be made. We do not believe that current taxes actually paid and the resulting net income should be altered on such speculative possibilities of higher taxes in the future years. At most, the prospects of such higher taxes in future years is a contingent liability which we do not believe should be reflected in the accounts.

19. Inasmuch as we are convinced that the investment credit is a reduction in the total amount of income taxes and should be so reflected in the accounts, it follows, of course, that we do not believe the plant accounts should be reduced by such credit. We consider the property constructed or acquired as merely a measuring device used to compute the reduction in the income tax liability. Furthermore, the actual original cost of equipment with respect to which an investment tax credit has been received, is no different from the original cost of identical equipment purchased in prior years at the same cost with respect to which no investment tax credit has been received. Likewise, the original cost of equipment qualifying for the investment tax credit is no different, for comparable units, from the original cost of plant additions which do not qualify for the investment tax credit. Moreover, we do not believe that the original cost of equipment recorded in the accounts should reflect the fluctuation which may result from any subsequent changes which may be made in the formula used to compute the amount of the investment tax credit. We are convinced, therefore, that our original cost concept should be preserved and no reduction should be recorded, either directly or indirectly, in the plant accounts with respect to the investment tax credit.

20. It is also argued that the accounting in the books should be consistent with the tax treatment required in connection with the future depreciation of the qualified property. We recognize that it is more convenient to have the prescribed accounting for book purposes the same as that required for

[*P. 1962*]

tax purposes. However, we do not consider this feature of sufficient importance to affect our basic concept of the proper accounting which should be accorded the investment tax credit. If in all other respects, the arguments for two approaches to accounting were equal, then we might be persuaded by the desirability of consistent treatment because of the savings in work and recordkeeping. In the instant case, however, we are firmly convinced that the original cost in the property accounts should be maintained. We are also mindful of other instances where the prescribed accounting treatment on the books differs from the treatment for tax purposes, such as, capitalization of interest during construction, payroll taxes and other labor costs connected with construction. It does not appear, therefore, that the argument of consistency of treatment between book and tax accounting is of sufficient weight to affect our decision herein.

21. Also, while it may be desirable to prescribe accounting which will coincide with the ratemaking treatment to be accorded items affecting income and the balance sheet, such procedure is not always practicable, particularly where ratemaking decisions have not yet been made. In such circumstances, we believe that the accounting should be prescribed on its own merits in such manner that full information will be available for any rate treatment which may be deemed appropriate when ratemaking decisions occur. This proceeding is purely an accounting matter and the Commission is not deciding at this time what ratemaking treatment will be accorded by this Commission to investment tax credits. In view of the differences of opinion among the State commissions who filed comments in this proceeding, it appears that different rate treatment will probably be accorded the investment tax credit in various jurisdictions. We believe that flowthrough accounting will provide more useful data and require the maintenance of less supplementary records than either of the other basic accounting methods herein considered. It offers the further advantage of simplicity in accounting since no special entries are required. Any regulatory authority having rate jurisdiction may order such supplemental records to be maintained as it sees fit, which may involve reservations of surplus to implement the ratemaking policy.

22. In view of the foregoing and after full consideration of all the comments received as well as other information which is available to the Commission, we conclude that the proper accounting with respect to the investment tax credit arising from both owned and leased property is to account for it as a reduction in income taxes and let such reduction flow through to operating income. As stated in the notice of proposed rulemaking in this proceeding, we have interpreted all of our uniform systems of accounts as presently requiring flowthrough accounting. Consequently, no amendments to our systems of accounts will be ordered herein.

23. Separate instructions will be issued with respect to disposition of any amounts

carried in the "other deferred credits" accounts that were accrued therein with respect to investment tax credits under the waiver of our rules for which permission was granted in order released November 20, 1962.

24. In view of the foregoing, it is ordered, that the proceeding in docket No. 14850 is terminated with respect to proposed changes in the uniform systems of accounts.

FEDERAL COMMUNICATIONS COMMISSION.
BEN F. WAPLE,
Secretary.

Adopted: July 29, 1963, released: July 31, 1963.

DISSENTING STATEMENT OF COMMISSIONER HYDE

I dissent to the order adopting the 100 percent or initial year "flow through" method of accounting for investment tax credit. In my opinion, the tax credit operates as a reduction in the cost of plant and should be spread over the service life of plant giving rise to the credit (service life flow through method).

The order which has been adopted is not consistent with accounting regulations previously approved by the Commission, is inconsistent with accounting principles supported by a preponderance of opinion in the accounting profession, is contrary to the legislative intent of the investment credit law, and results in accounts giving a substantial distortion of income for the initial year, as compared to the remaining years of the life of the property.

Part 35 of the Commission's rules, which is its prescribed system of accounts for wire-telegraph and ocean-cable carriers, contains in section 1–3, Components of Construction Costs, under subparagraph (d), a mandatory provision that any amounts earned during the construction period incidental to the construction, less correlated expenses, shall be credited to the cost of construction. "Correlated expenses" includes income taxes allocable to the amounts earned during the construction period. Thus, we find in the Commission's most recently promulgated (and consequently presumably its system most up to date and responsive to modern accounting thought) complete system of carrier accounts, that if the conduct of construction activities is the proximate cause of the incurrence of an income tax liability, the amount thereof must be used to increase the cost of plant. I submit that if this is sound accounting, and I believe it is, when the conduct of construction activities is the proximate cause of a reduction in income taxes, the amount thereof should be used to reduce the cost of plant. This principle, applied to the investment tax credit, means tax normalization, balance sheet method or service life flow through—all of which are the same thing under differing titles.

Now, let me carry the above income tax analogy, taken from part 35 of the Commission's rules, a little further. Suppose Congress were to decide to encourage American telegraph companies to "buy American" when adding to their communications plant. Suppose that the method adopted by Congress to accomplish this were to provide that the income tax bill of any telegraph company purchasing foreign-made plant and equipment would be increased by a 3 percent of the cost of such plant and equipment, but not in excess of 25 percent of the income tax liability as calculated without considering the foreign purchases penalty. It seems to me that this would be an "investment penalty," the exact reverse of the investment credit we have in the Revenue Act of 1962. I imagine we could all agree that this investment penalty would be required to be capitalized. If so, why is it not equally logical that the investment credit be given "negative capitalization" treatment?

The majority does not deny that there are deferred income taxes involved in the investment tax credits. Deferred income taxes are involved in any case when a situation is created wherein book depreciation expense, i.e., that recorded in the accounts for the future, is going to be greater than the depreciation expense which is available for income tax purposes. The investment credit fits this definition exactly since the tax depreciation base of eligible property is reduced by the amount of the credit while the accounting depreciation base is not. The adoption of initial year flow through accounting for the investment credits may be misinterpreted as an indication of policy for ratemaking purposes even though the majority insists that it is deciding an accounting matter only. Such an interpretation would be inconsistent with ratemaking policies adopted by the Commission just recently in the Private Line case. In this connection, reference is made to paragraph 265 of that decision reported in 34 FCC 217, 356. A like ratemaking policy was followed by the Commission involving a more substantial amount of money in fixing rates for Western Union's DATACOM. The failure of the Commission's accounting rules to keep in step with its ratemaking policies is the subject of an accountant's certificate of exception on page 20 of the Western Union report to shareowners for 1962.

There are those who would argue that income taxes, either positive or negative, cannot get into cost of construction under part 31 of our rules because section 31.2–22 in subparagraph (b)(8) mentions taxes on physical property only. Such argument overlooks interpretation case 2 in Appendix A of part 31 wherein the Commission ruled that social security taxes should be charged to construction "so as to apportion the total tax equitably among the costs of rendering public utility service, of construction of telephone plant, and of other operations of the company." This is an excellent statement of principle. Its application to the investment credit most surely calls for the service life flow through method of accounting as well as ratemaking for the investment credit. Equitable apportionment calls for attention to timing as well as amount and the service life method takes care of the timing whereas initial year flow through does not.

Studies submitted by the United States Independent Telephone Association illustrate the fluctuations in recorded earnings created by initial year flow through accounting for the investment credit. I would be the last one to suggest that accounting should be so performed as to minimize legitimate

fluctuations in recorded earnings. The function of accounting is to present the facts and let the chips fall where they may. However, where the investment credits are concerned, earnings fluctuations created by initial year flow through accounting are not legitimate, and when accounting does not meet this test of legitimacy, it is requiring the publication of distorted earnings results. I deplore this backward step in public utility accounting where so much progress has been made since the scandals of the twenties in obtaining financial statements that can be relied upon by regulatory bodies and investors alike.

EXHIBIT II–B

UNITED STATES OF AMERICA, FEDERAL POWER COMMISSION—DOCKET No. R–232

(Investment tax credit under 1962 amendment to Internal Revenue Code; accounting treatment by public utilities, licensees, and natural gas companies. Before Commissioners Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.)

INTERIM ORDER

(Issued Jan. 23, 1964)

The Commission has under consideration in this docket[1] an order prescribing the accounting treatment to be accorded under the Commission's Uniform Systems of Accounts to the investment tax credit provided by the Revenue Act of 1962.[2]

[*P. 1963*]

The Commission has reached the conclusion that on the basis of existing law the accounting treatment to be prescribed should be to flow through the credit to income. We recognize, however, that legislation is pending in the Congress dealing with the investment credit and that it is not now possible to determine whether such legislation as might be adopted would require a different accounting treatment for the credit.

In order to enable affected companies to close their books of account for the year 1963, the Commission hereby notifies all public utilities, licensees, and natural gas companies that the interim accounting prescribed for the investment tax credit under order No. 261, docket No. R–231, issued January 9, 1963,[3] continues in effect for calendar year 1963 and in accounting for income taxes until further notice or order of the Commission.

(By the Commission: Commissioners O'Connor and Woodward dissent as to the statement of the accounting treatment which is appropriate under existing law. Commissioner O'Connor believes decision should be deferred until Congress has acted on the pending legislation. Commissioner Woodward favors deferred tax accounting.)

JOSEPH H. GUTRIDE,
Secretary.

INTERSTATE COMMERCE COMMISSION

No. 34178

ACCOUNTING FOR FEDERAL INCOME TAXES UNDER NEW DEPRECIATION GUIDELINE LIVES AND INVESTMENT TAX CREDIT: DECIDED FEBRUARY 1, 1963

(In the application of uniform systems of accounts, actual Federal income taxes payable for each year, based on the effective tax regulation for the year, shall be recorded in the tax accounts. Change in present accounting regulations with respect to tax reductions resulting from tax-depreciation guideline lives and investment tax credit, found to be not necessary. Appropriate order entered.)

Report of the Commission, Division 2, Commissioners Freas, Webb, and Herring, by Division 2

By notice of proposed rulemaking published in the Federal Register on November 8, 1962 (27 F.R. 10909), we initiated an investigation with respect to carriers in all modes of transportation subject to the Interstate Commerce Act concerning the matter of accounting rules to be applied for Federal income taxes in connection with (1) the new shortened tax-depreciation guideline lives authorized by the Internal Revenue Service in Revenue Procedure No. 62–21, July 1962, and (2) the investment tax credit authorized in the Revenue Act of 1962.

The material facts bearing on the issue here presented are not in dispute, and a public hearing or oral argument would serve no useful purpose. In view of the close proximity to the closing of the carriers' books for the year 1962, a preliminary notice, dated December 17, 1962, to all carriers subject to the Commission's accounting rules, embodying our ultimate findings on the issue before us, was served on December 20, 1962.

The new tax-depreciation guideline lives authorized in Revenue Procedure No. 62–21 is a significant development in income tax methods and procedures. This tax revenue procedure authorizes substantial reductions in the lives of depreciable property effective with tax returns for the year 1962. For example, the tax regulation specifies depreciation guideline lives for railroad locomotives, freight and passenger cars, and other similar equipment as 14 years, compared with presently used service lives averaging 15 to 25 years for locomotives, and 25 to 30 years for other equipment; for bridges, trestles and culverts, elevated structures, shops and engine houses, and similar structures, the guideline life is 30 years, compared with presently used service lives averaging about 50 to 70 years, depending upon the structural material. Similar substantially shortened guideline lives are specified for many other classes of property.

The tax-depreciation guideline lives so authorized may be used by taxpayers for 3 years without being questioned by Internal Revenue Service, regardless of the taxpayers' past experience with respect to life-of-service performance in replacing property. The guideline lives so used for tax-depreciation deductions are subject to adjustment in later years if conditions prescribed in the tax regulations as to replacement performance

and formula for depreciation reserve ratios prescribed in life adjustment tables are not met. After the expiration of the 3-year period prescribed in the tax regulations, ending with the year 1964, the shortened guideline lives must be justified by demonstrating a replacement performance policy through the reserve ratio tests. If the prescribed tax guideline ratio tests are not met, the service lives used for tax depreciation will be lengthened percentagewise annually.

The Revenue Act of 1962 contains an important provision known as the "Investment Tax Credit." Under this provision the taxpayer is allowed a credit against taxable net income equal to 7 percent of the cost of new property acquired during the taxable year, provided the property has a life of 8 years or more. The credit for property with a life between 4 and 8 years is somewhat less than 7 percent. This tax credit is to be applied to offset tax liability up to a specified amount and a percentage of tax liability in excess thereof. The investment tax credit is to be deducted from the base upon which tax-depreciation deductions are to be allowed. For example, a taxpayer purchasing new property for $100,000 becomes entitled to a tax credit of $7,000 against his tax liability for the current year; this credit is then applied to reduce the base to $93,000, upon which current and future tax-depreciation deductions are allowed.

In recording depreciation in the corporate books of account under our accounting rules, as distinguished from Federal income tax returns, carriers are required to use the straight-line method of depreciation applied to the estimated useful life, based on past experience and informed judgment as to probable future service, for each class of property. The initial estimated useful life is revised and rates of depreciation are adjusted as may be found necessary from time to time as a result of changes in conditions. Depreciation procedures are so prescribed by us in uniform systems of accounts for financial accounting of carriers, notwithstanding unlike depreciation methods and other special provisions authorized by the Internal Revenue Service for tax purposes.[1]

Tax-depreciation deductions, based on the tax-depreciation guideline lives, will be much larger in amount than book depreciation computed under this Commission's accounting rules in the early years of the service lives of facilities. Question therefore arises, (1) should the actual Federal income tax expense of each year, based on taxable income reported in the tax return for the year, be recorded in the corporate books of account and in financial statements to the Commission; or (2) should the tax reduction realized because of tax depreciation in excess of book depreciation be treated as tax deferment and included in a suspense or reserve account to provide for taxes that may have to be paid in later years to offset the earlier tax reductions, under a continuing procedure for year-by-year equalization of tax charges in computing net income, without regard to actual tax liability in each year's tax return.

Essentially the same question arises as to whether tax reduction realized from the investment tax credit should be included in the corporate income reports and financial statements each year or be treated as tax deferment under a continuing procedure for year-by-year equalization of tax charges. Such income equalization procedure could be accomplished in the same manner as tax reduction realized through use of the tax-depreciation guideline lives, or by regarding the investment tax credit as a reduction in the cost of property and the depreciation base.

Carriers in the several modes of transportation, public accountants, and others filed responses in this proceeding pursuant to our Notice of Proposed Rule Making inviting views and comments. The responses contained divergent views on the question of proper accounting for the tax reductions hereinbefore discussed. Respondents expressing views in favor of treating the reduction in tax payments resulting from use of depreciation guideline lives and the investment tax credit as tax deferment and then equalizing the distribution of such payments to income by a process of interperiod tax allocation, assert that this procedure is essential for a proper matching of revenues and expenses for each year, and would result in equitable allocation of income taxes to expenses each year in relation to earnings for the year even though the amount so allocated is different from actual tax payment for the year. Some respondents assert that the investment tax credit is a true reduction in cost of property, the purchase of which gives rise to the credit. These respondents declare that unless allocation or equalization of tax payments in the accounts is authorized in order to compensate for the differences between tax depreciation and book depreciation, and also for the investment tax credit, the reported net income from year to year will be distorted and unrealistic.

These proponents of deferred-tax accounting propose that, accountingwise, the excess of normal income taxes (taxes that would have been payable without the benefit of depreciation guideline lives and investment tax credit) over actual tax payments should be placed in a suspense or equalization account for later year-by-year allocations, so that taxes reported in financial statements each year would agree with the taxes that would otherwise be payable each year on the basis of the straight-line depreciation recorded in the corporate accounts.[2] In advocating this tax-deferral or tax-equalization accounting

[1] Uniform systems of accounts for carriers in the several modes of transportation, Code of Federal Regulations, title 49. The rules for motor carriers provide that the straight-line method of computing depreciation shall be employed, except that the mileage method may be used for automotive equipment in which event the rate per mile shall be applied to the number of miles traveled each year.

[2] Of the investment tax credit realized, some of the respondents would treat 52 percent of the amount as deferred taxes and the remaining 48 percent as a true reduction of taxes for the year in which the tax credit is obtained.

procedure, they point out that such method of accounting has the approval of public accountants as being in accordance with "generally accepted accounting principles," and request us to modify our rules and authorize that procedure. The term "generally accepted accounting principles" is commonly used to denote broad basic principles which have received general business acceptance, with considerable tolerance for variation

[*P. 1964*]

among different industries because of special conditions or long-established usage.

On the other hand, most of the responses filed by respondents are in opposition to tax-deferrment or tax-equalization procedure. They express the view that actual taxes payable for each year, based on the effective tax regulations of the year, is the only liability to the Government and the true amount to be recorded in the corporate accounts and financial statements each year for tax expenses; and that when taxes so computed are reported in the tax return for a year no deferred-tax liability remains unpaid for the year and no amount should be recorded in the accounts and financial statements for unpaid taxes or for tax-liability contingency. These respondents assert that tax-deferment or tax-equalization procedure, whereby payments would be allocated over a period of years and not recorded as tax expenses in the year for which the payment is made, would obscure the true tax expense for each year and obliterate the tax consequences of transactions and events within each year.

In opposing tax-deferral or tax-equalization accounting procedures the opponents declare that the ever changing tax system does not lend itself to interperiod tax allocation because of uncertainties associated with such allocation; and that tax reductions resulting from tax-depreciation guideline lives and investment tax credit are just as real as though statutory tax rates were decreased.

The question presented in this proceeding with respect to accounting for the tax effect of tax-depreciation guideline lives and the investment tax credit is essentially an extension of the matter of accounting for tax consequences of accelerated depreciation pursuant to provisions of section 167 of the Internal Revenue Code of 1954, previously considered by us, and which resulted in our statement of policy dated February 9, 1959, wherein we stated that the actual Federal income tax expense of each year, based on taxable income reported in tax returns, shall be recorded in carrier's books of account and in financial statements to the Commission. Accounting for Federal Income Taxes, 24 F.R. 1401.[3] That statement of policy contains the following conclusions:

"When an available depreciation allowance produces a reduction in Federal income taxes, no matter how temporary the benefit may be, the effect on net income should be the same as a reduction in taxes produced by lower tax rates. Possible income taxes to be assessed in the future are not an element of tax expense for the current year. As to depreciable property with an expected life of 30 years, or even less, it is illogical to expect that tax reductions resulting from accelerated depreciation allowances can be matched with tax increases of the future. New property units acquired in the future will provide increased depreciation allowances to offset decreasing allowances for older units. Furthermore, income tax rates and tax procedures are subject to change from year to year, and the computation of income taxes differs as between carriers, and for any carrier differs as between years, in too many respects to justify special provision for a fluctuation in taxes resulting only from depreciation allowances.

"After consideration of the views for and against normal income taxes, different in amount from the income taxes actually payable, it has been decided that the charge to income each year for that year's Federal income taxes should be the amount produced by application of the effective tax regulations to transactions within the year. The present-day shipper should not be required to provide from current freight rates for possible increased taxes of the indefinite future."

We have carefully considered the divergent views and all of the arguments presented by the respondents in this proceeding and affirm the ultimate findings contained in our preliminary notice herein that no sufficient justification has been presented to warrant a change in our present accounting rules and the statement of policy previously announced under date of February 9, 1959. We reach the same conclusions set forth in that statement of policy, that actual Federal income taxes payable for each year, based on the effective tax regulations for the year, shall be recorded in the tax accounts of the carriers' books of account, and in financial statements.

Carriers are presently required to disclose, in explanatory notes in their annual reports to us, reductions in income taxes because of accelerated depreciation pursuant to section 167 of the Internal Revenue Code. The requirement for disclosure will be extended to apply to tax reductions attributable to tax-depreciation guideline lives, as well as the investment tax credit, and appropriate procedural rules will be issued to implement this requirement.

An appropriate order will be entered discontinuing the proceeding.

Appendix: Interstate Commerce Commission

(February 9, 1959, Notice to All Carriers Subject to Prescribed Accounting Rules—Accounting for Federal Income Taxes)

The Commission has given consideration to provisions of section 167 of the Internal Revenue Code of 1954, which permit allowances for depreciation to be computed by accelerated methods. The election to use such allowances reduces Federal income taxes thereby increasing net income during the early life of property newly acquired but, by decreasing depreciation deductions in later years, permits no more to be deducted for any unit of property than would be available under straight line depreciation.

This optional income tax treatment presents a problem in administering prescribed accounting regulations. It has been studied by other Federal agencies which regulate ac-

[3] Reproduced as appendix to this report.

counts, by State commissions in connection with the ratemaking function, and by the accounting profession. One approach has been to charge to operating expenses the same amounts that are claimed as depreciation allowances for income tax purposes. This has the advantage that depreciation charges within net income are comparable to the basis on which income taxes are computed. Another view has been that income should be normalized by including therein the amount by which taxes are reduced when depreciation allowances are high to create a reserve which would be reversed as depreciation allowances diminish.

The Commission has repeatedly held that depreciation by the straight line method best serves the purpose of assigning the service loss on transportation property to income of the years in which the property is in revenue service. The use of other depreciation methods for income tax purposes is not an acceptable reason for changing our depreciation accounting requirements. Accelerated depreciation allowances available under the revenue code provide an earlier recovery of an investment with resultant tax advantages, and are not intended to be a standard for measuring the rate at which service loss is incurred.

When an available depreciation allowance produces a reduction in Federal income taxes, no matter how temporary the benefit may be the effect on net income should be the same as a reduction in taxes produced by lower tax rates. Possible income taxes to be assessed in the future are not an element of tax expense for the current year. As to depreciable property with an expected life of 30 years, or even less, it is illogical to expect that tax reductions resulting from accelerated depreciation allowances can be matched with tax increases of the future. New property units acquired in the future will provide increased depreciation allowances to offset decreasing allowances for older units. Furthermore, income tax rates and tax procedures are subject to change from year to year, and the computation of income taxes differs as between carriers, and for any carrier differs as between years, in too many respects to justify special provision for a fluctuation in taxes resulting only from depreciation allowances.

After consideration of the views for and against normal income taxes, different in amount from the income taxes actually payable, it has been decided that the charge to income each year for that year's Federal income taxes should be the amount produced by application of the effective tax regulations to transactions within the year. The present-day shipper should not be required to provide from current freight rates for possible increased taxes of the indefinite future.

The amount of reduction in Federal income tax payments realized for each year and the accumulated sum for the current and prior years due to the use of accelerated depreciation in tax returns will be disclosed by explanatory notes in reports filed with this Commission. Carriers are urged to disclose this information in their reports to stockholders and in financial statements released to the press.

As a statement of policy this notice will be served on all carriers subject to prescribed accounting regulations, and notice will be given to the general public by depositing a copy in the office of the secretary of the Commission in Washington, D.C., and by filing it with the Federal Register.

HAROLD D. MCCOY,
Secretary.

Mr. PROXMIRE. Mr. President, the precedent which the pending bill would establish in the absence of the inclusion of this amendment would constitute an initial breakthrough for utility lobbyists, and thus would enable them to exert pressure upon Congress to act to prohibit other regulatory bodies from ordering that other tax credits, amounting to cost reductions, be passed on. After all, if we are to make an exception in the case of this investment credit, where shall we draw the line?

We know how active the lobbyists are. They do a thorough job, and they are necessary and desirable. But a failure by Congress to include this amendment in the law would be a negation of the existing policy and would be a clear indication to the lobbyists—if the pending bill, as enacted into law, did not contain this amendment—that in connection with other situations of this sort, they would be able to succeed in attempts to have the entire amount of such a fair tax credit or return retained by the utility companies, and thus result in negating and ending the present fair-return concept.

Mr. President, what sense would the fair-return concept make if it could be changed into a superfair return—which would be the result of the proposed investment credit, in the absence of this amendment.

Mr. President, I submit that this principle is plainly ridiculous.

I am happy to yield to the Senator from Iowa.

Mr. MILLER. The Senator's amendment is appealing to me with respect to a part of the matter proposed to be de-

[*P. 1965*]

leted and with respect to another part with which I am concerned. Insofar as the Senator's amendment would repeal or delete that part of the bill which provides that no pass through is necessary "in the case of any other property"—and I am reading now from lines 5 and 6, page 39, "any other property" relates to the nonregulated public utility—except for what is included in subparagraph 1 on page 38, line 18.

The Senator's amendment seems to have a great deal of equity, because it would make sure that customers would share the benefits. But insofar as the Senator's amendment would repeal sub-

section (1) on line 18 on page 38 of the bill, as I understand the position of the Senator from Wisconsin, he wishes to permit the Federal Power Commission to require a passthrough in the case of certain public utilities in the year in which the tax credit is achieved. That is the position of the Federal Power Commission. The Senator from Wisconsin wishes that position to be maintained.

On the other hand, the position of a good many utilities is that they are willing to pass through to the customer but they wish to pass through over the life of the property.

Mr. PROXMIRE. There is a good answer to that——

Mr. MILLER. May I make one point? Not only is this position of a good many utilities, but I am sure the Senator from Wisconsin knows it is also the position of the Accounting Principles Board of the American Institute of Certified Public Accountants, as set forth in opinion No. 2, entitled "Accounting for the Investment Credit."

Mr. President, I ask unanimous consent to have this opinion printed in the RECORD.

The being no objection, the opinion was ordered to be printed in the RECORD, as follows:

The Accounting Principles Board (American Institute of Certified Public Accountants) in opinion No. 2, entitled "Accounting for the Investment Credit":

"We believe that the interpretation of the investment credit as a reduction in or offset against a cost otherwise chargeable in a greater amount to future accounting periods is supported by the weight of the pertinent factors and is based upon existing accounting principles.

"In concluding that the cost reduction concept is based upon existing accounting principles we attach substantial weight to two points in particular. First, in our opinion, earnings arise from the use of facilities, not from their acquisition. Second, the ultimate realization of the credit is contingent to some degree on future developments. Where the incidence of realization of income is uncertain, as in the present circumstances, we believe the record does not support the treatment of the investment credit as income at the earliest possible point of time. In our opinion the alternative choice of spreading the income in some rational manner over a series of future accounting periods is more logical and supportable.

"We conclude that the allowable investment credit should be reflected in net income over the productive life of acquired property and not in the year in which it is placed in service."

Mr. PROXMIRE. May I say to the Senator from Iowa that in the argument that the credit should be passed through over a period of years over the life of the assets, he overlooks how utilities operate. Utilities rarely, if ever, will have one isolated year in which they will make vast purchases of equipment. In virtually all cases they will purchase similar amounts of equipment each year. So there is rarely an occasion during which the utility would take a large credit one year and suffer the risk of a disproportionate cut in rates so that the utility might suffer in the future.

Furthermore we should have some faith in regulatory bodies. After all, they are appointed to establish equitable rates fair to all. And I am convinced, from the experience I have had with such regulatory bodies, that they are not going to have punishing reductions in rates because of one year's unusual circumstances in which the utility buys a great deal of equipment.

Furthermore, over the great spectrum of utilities, 9 out of 10, or 99 out of 100, will have somewhat the same amount of investment—a little more or a little less, year after year. Furthermore, if we adopt the proposal in the bill for 3 percent utilities and permit a spread-over, it means a loss of more than $20 million to American phone users alone. The A.T. & T. opposes this provision. It takes the statesmanlike position that the provision in the committee bill is wrong. It recognizes that its stockholders will receive more than $20 million in windfall gains, which they recognize does not make sense.

Mr. MILLER. Mr. President, will the Senator yield further?

The PRESIDING OFFICER (Mr. RIBICOFF in the chair). Does the Senator from Wisconsin yield to the Senator from Iowa?

Mr. PROXMIRE. Before I yield, let me give the Senator from Iowa an example.

Mr. MILLER. If they pass it through over the life of the property?

Mr. PROXMIRE. Each year the A.T. & T. now buys about $2½ billion worth of equipment subject to investment credit. Obviously the impact with this single utility on consumers is very great. Let us take a simple example, a firm which would buy $10 million worth of equipment on which it earns an investment credit of 3 percent. It would get a $300,000 credit. Now, if the passthrough is required that year, it will have to be a passthrough rate reduction of $300,000.

Mr. MILLER. For only 1 year?

Mr. PROXMIRE. But if it is spread over a number of years, the first year it will provide only a rate reduction, if it is 20 percent of its life, of $15,000.

Mr. MILLER. I understand that, but they will have to give their customers the benefit of that $300,000 either this year or next year or over a series of years. I do not understand where the windfall is going to come from, whether the customer will get it in 1 year or over a period of 10 years.

Mr. PROXMIRE. There are two reasons for it. One is the interest rate factor, the fact that they will have $285,000 to work with, interest-free, which they would not otherwise have. The other reason is that utilities in this country grow as the population grows, and the utilities have grown at an 8-percent rate—they never catch up. I have placed in the RECORD a statement showing hundreds of millions of dollars involved with all the utilities accounted for in the country. It is a substantial advantage. This was carefully calculated by a professor of Northwestern University, who has devoted his life to this subject and is an expert in the field. There will be a substantial advantage for utilities because they are growing and because they will have this interest-free money.

Mr. MILLER. With all deference to the professor to whom the distinguished Senator from Wisconsin referred, when the Senator from Wisconsin talks about a windfall and uses that example, and in effect says there is a windfall of $300,000, I believe we must be careful because, first of all, the fact that utilities are growing seems to me to be irrelevant. I recognize that utilities are growing and that is one reason why I voted against the investment tax credit. I still believe it is a bad law, but I do not see the relevance between that and the windfall to which the Senator from Wisconsin refers.

The Senator pointed out there is an interest factor. To that extent, possibly, we might say the stockholders of the corporations would benefit, because the $300,000 has to be paid out only over a period of 10 years, or in 1 year; and the utility could not invest the extra money.

Mr. PROXMIRE. The interest factor becomes important when this vast amount involved is considered.

Mr. MILLER. With a growing investment in equipment——

Mr. PROXMIRE. Let me make one further point. I believe the Senator from Iowa is absolutely correct, that for the 3-percent utilities it is not a question of a comprehensive windfall to the stockholders under any circumstances. Why not share the benefit as a prominent utility spokesman, Donald Cook, head of the American Electric Power Co., has argued, by passing it on? Then the utility would benefit. It would grow and develop, and its stockholders would benefit in the normal way. The customer would also benefit. So, why not let the regulatory body which has the responsibility and the competency decide whether or not the credit should be passed on?

Mr. MILLER. I am not going to argue with the Senator from Wisconsin about the desirability of passing it on. I believe where we part company is that I believe the American Institute of Accountants, which is a practical group of people, a realistic group of experienced people who know far more about the accounting problems in this field than anyone in the Chamber, might well follow the suggestion that the passthrough be over the life of the property.

[*P. 1966*]

Would the Senator from Wisconsin consider dividing his amendment into two parts, so that the Senate will have an opportunity to vote with respect to deleting subparagraph 1, which I do not wish to do, and vote with respect to deleting subparagraph 2, which I believe is responsive to most arguments that the Senator from Wisconsin has advanced? The case is certainly much stronger with respect to subparagraph 2, and I know the Senator from Wisconsin recognizes that we both wish to have a passthrough. Under subparagraph 2, there would be no passthrough, so there should be no argument between us on that. We are together on the amendment in so far as that is concerned.

Mr. PROXMIRE. Mr. President, my understanding is that the Senator from Louisiana has at least strongly opposed any amendment that would strike out the 7-percent benefit than he is in relation to the 3-percent provision. I feel that perhaps a stronger argument can be made against the section relating to the 3 percent to be spread over a period of time than can be made against the section relating to 7 percent, which would apply only to transportation facilities, in order to afford some element of competition. Is that correct?

Mr. LONG of Louisiana. In the opinion of the Senator from Louisiana, if the Senator from Wisconsin desires to strike any section of the bill, he ought to move to strike the entire section 203. I believe it is unfair to heap more and more tax benefits on some segments of industry without affording an opportunity to other segments of industry to enjoy the same ability to compete and have the same incentives that are available to the industries differently situated.

I believe that the Senator has an

amendment which would strike section 203(a) which he proposes to offer before the debate is over. If section 203(e) were deleted, the Senator from Louisiana would be inclined to feel that section 203(a) should be deleted also.

Mr. PROXMIRE. The Senator from Iowa is posing a different kind of question. He wished to divide the pass through amendment into two parts, so that there would be one vote on the portion of the amendment relating to the 7-percent compulsion against passing through, and a separate vote on the requirement relating to the 3 percent applying to transportation facilities, the benefit to be spread over the life of the asset. The Senator feels that two separate questions are involved.

Mr. LONG of Louisiana. If any Senator hopes to arrange things so that every carrier except the pipelines would obtain the benefit of the tax credit, the Senator from Louisiana serves notice that he is against such a proposal. If any Senator wishes to arrange things so that, as between utilities, every utility except the electric companies and the gas pipelines would receive the benefit, he is against that, too.

The whole transportation industry believes that the fair and proper way to handle the situation is to not require a "flowthrough."

But if the proposal is to be one under which one segment of industry would be benefited and others would be discriminated against, the Senator from Louisiana would be against it. He would be against the inclusion of section 203(e) (1) unless paragraph (2) were also included. If subsection (e) is eliminated, the Senator from Louisiana would like to see the entire section taken out. Incidentally, I believe that is what the Senator from Wisconsin would like as a second best. As the Senator knows, the provision was sent to us by the House. We did not originate it.

Mr. PROXMIRE. I have some answers to the argument which he has made. The Senator from Louisiana has stated that the transportation utilities should all be treated alike. I believe that is exactly what my amendment would do and what the present law provides. Nothing requires a regulatory body to permit the pass-through. Furthermore, if a competitive phase of the transportation industry were involved, the investment credit would be passed through by force of competition, because competition would keep the price down. We need the regulatory body only where there is no competition. As the Senator from Louisiana knows, the whole justification for a regulatory body is that the public needs protection from excessive rates. Otherwise the rates would go higher than they would otherwise go. It is a substitute for competition. Therefore, the amendment of the Senator from Wisconsin would keep the present law, which would put utilities on the same basis as other business which is not regulated except by the regulatory power of competition.

Mr. LONG of Louisiana. The Senator from Louisiana will state his argument when he obtains the floor. He feels that it would not be helpful to state his argument in colloquy with the Senator from Wisconsin.

Mr. MILLER. Mr. President, will the Senator from Wisconsin permit the Senator from Iowa to ask a question on this subject of the Senator from Louisiana?

Mr. PROXMIRE. I yield for that purpose.

Mr. MILLER. I should like to ask the Senator from Louisiana the following question: The Senator has indicated his opposition to enacting section 203(e) subsection (1) without subsection (2). It seems to the Senator from Iowa that if section 203(e)(1) were in the bill, and section 203(e)(2) were not in the bill, the regulating agencies would have to take into account the competitive situation which the regulated and the nonregulated utility under section 203(e)(2) would face. If they do not, they are not really regulatory agencies. Why is the Senator so worried?

Mr. LONG of Louisiana. I do not agree with the Senator on that point. When I can obtain the floor, I shall explain my views.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. PROXMIRE. Before I yield to the Senator from Vermont, I should like to make it clear that my amendment would not abolish, reduce, or affect the investment credit at all—not in any way—except to provide that the regulatory body shall have the power it has today, to decide, if it thinks it is right, that the benefit of the investment credit may be passed on to the consumer. That is all it does.

Mr. MAGNUSON. "May."

Mr. PROXMIRE. "May," not "shall." The discretion is left in the regulatory body.

I yield to the Senator from Vermont.

Mr. AIKEN. I have heard the provision of the bill referred to as a "windfall" to the utilities many times this afternoon.

Mr. PROXMIRE. I should like to interrupt at that point by saying that in 1962, when I debated the subject with the Senator from Oklahoma, I said that

the investment credit would be a windfall to the utility stockholder. He said it would not be for one reason, and that was because the amount received would be passed through to the customers of the utility. That was his whole defense. He had no other.

Mr. AIKEN. That is the point I was leading up to. Would not the Senator from Wisconsin consider referring to the proposal, at least part of the time, as an attempted raid upon the consumers and the taxpayers of our country? I think that might be a better category for it to fall into than the category of a windfall, because whether the amount is $300 million or $1 billion, we know for a fact that it will not be passed on to the consumers. So why not call it by its right name?

Mr. PROXMIRE. I agree with the Senator from Vermont wholeheartedly.

With relation to the 3-percent item, which troubles many Senators who have a solid knowledge of the subject and feel very strongly about it, I think we should recognize what the 3-percent item would do in providing a spread over the life of the asset. The committee bill provides an entirely fictitious hypothesis, which does not exist. It is said, "Let us assume that the utility, instead of buying the asset in 1 year, paying for it in 1 year, and having it 1 year, buys it over a period of 20 years, pays for it in 20 years, and has it only for 20 years." I say that is a fiction which has no connection with reality at all.

Furthermore, if the regulatory body wishes to regulate in that way, it is perfectly free to do so under my amendment. Therefore, it seems to me that the amendment, which applies to both the 7-percent and the 3-percent credit, makes sense, because it is the only way in which discretion can be left in the hands of the regulatory body completely.

Mr. CHURCH. Mr. President, will the Senator yield?

Mr. PROXMIRE. I am happy to yield to the Senator from Idaho.

Mr. CHURCH. I should like to ask the Senator if he does not feel that it would be well for us to remind ourselves as to why we treat utilities differently than we treat other forms of business? Is it not true that the regulatory commissions were established in the first place, either because of the monopoly character of utilities or because their central role in the economy was so great

[*P. 1967*]

that all other businesses depended on them?

Therefore, it was found to be necessary to establish regulatory commissions in order to regulate utility rates, to assure them of a fair return, but to protect the general consumer interest against overreaching or excessive profiteering?

Mr. PROXMIRE. The Senator could not be more correct. The ultimate objective was, as he has stated so well, to protect the consumer interest. That is correct.

Mr. CHURCH. And, in order to protect the consumer interest, while giving the utilities a fair return, we found it necessary, as a matter of good policy, to permit the regulatory agencies, whether they were State or Federal, to have broad discretionary power in determining a fair rate of return for each utility, based upon its fiscal situation in the community it served.

Mr. PROXMIRE. Yes, indeed. It is my understanding that in Wisconsin the electric utilities are allowed to earn about 6 percent on their capital investment. In Ohio it is 9 percent. The rate varies in other States. Regulatory bodies will permit the utilities to have large earnings in certain years because of unusual circumstances, and not enforce rates on utilities that might be upsetting to them.

Mr. CHURCH. The Senator's amendment is addressed to a single provision in the bill which interferes with the kind of discretion which the regulatory commissions have always had. In other words, it seeks to give to the regulated, a measure of control over their regulators, which they have never enjoyed before?

Mr. PROXMIRE. That is correct.

Mr. CHURCH. This is unprecedented so far as Federal law is concerned. Is that correct?

Mr. PROXMIRE. Within the knowledge of the Senator from Wisconsin, it is.

Mr. CHURCH. If all this is so, is not this a matter of public policy that properly should be considered by the legislative committee which is charged with such responsibility?

Mr. PROXMIRE. The Senator is correct. That is what my amendment would do. It would eliminate from the bill the provision in question. It would eliminate from the bill a matter which I believe comes under the jurisdiction of the Commerce Committee, and provides that this shall be a tax-cut bill, and only a tax-cut bill. Other committees which have responsibility over regulatory bodies could decide whether or not a change in policy was justified, on the basis of examination into the subject through committee hearings.

Mr. CHURCH. I agree that this is a legislative matter which should be considered by the Commerce Committee. It is a very important departure from what

has been established policy in the past. Therefore, I think the Senator's amendment is well designed. It ought to be adopted. I hope it will be.

I should like, with the Senator's permission, to ask unanimous consent to have printed here in the RECORD a more extended statement of my reasons for supporting the Senator's amendment.

Mr. PROXMIRE. I have no objection.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR CHURCH

Section 203 (e) states that no Federal regulatory agency shall take certain actions to flow through the tax savings from the investment tax credit to the utility's customers without the consent of the utility. This section says quite openly that it is to be the utility—not the regulatory commission—that determines finally how the tax savings from the investment tax credit shall be handled.

But the first part of section 203(e) says that in passing the investment tax credit in 1962, Congress intended "to provide an incentive for modernization and growth of private industry (including that portion thereof which is regulated)."

The assumption is clear: the only way to assure modernization and growth of regulated utilities is to make certain that the utilities keep the tax savings from the investment tax credit. Obviously a dire emergency exists if the utilities are compelled to ask Congress to get into the details of the regulatory business. According to Federal Power Commission Chairman Joseph C. Swidler—this would be the first time that Congress had prescribed the details, the specifics, of rate treatment of costs by any utility commission so far as I am aware.

A drastic step, this unprecedented attempt to bypass the Federal regulatory agencies. But the evidence is substantial that Congress' aim—to spur modernization and growth—might be just as successfully achieved if the tax savings from the investment tax credit were passed on to utliity customers.

FPC Chairman Swidler, testifying before the Senate Finance Committee, said: "There is much to be said for the position that in the case of public utilities and natural gas pipelines it is the rate of growth in the use of their product or service which controls their investment in new facilities, and that the rate of growth is in turn largely affected by the level of rates which their customers must pay. In this view, utilizing the credit as a basis for reducing rates, and increasing consumption might well achieve the objectives of the statute far better than either of the specific formulas it prescribes."

This statement, and a similar one by President Donald Cook of American Electric Power Co., a major private utility, show that there are at least two ways in which the tax savings from the investment tax credit might be used to stimulate modernization and growth of regulated utilities:

1. The dollars of tax reduction from the investment tax credit could be kept by the utility and invested in new facilities. It is this alternative that the utilities have asked Congress to write into the law of the land, leaving no other route open.

2. These dollars of tax reduction could be used by the utilities to lower their rates, thus encouraging more use of utility services, and thus stimulating added utility growth to meet the increased demands.

There is more than one way to stimulate utility modernization and growth (which is the Congressional aim), and it would be most unwise to write into law a provision which prevents alternative approaches.

But there is another matter that cannot be overlooked, even if those who favor Section 203 (e) would like to overlook it. Where does the money come from in the first place? Where do the regulated utilities obtain the extra funds that result from the tax reduction available through the investment tax credit?

The fact is that these funds come from the utility customer. The utility customer pays the utility for services on the basis of rates set to include normal Federal income taxes. But when the utility does not pay these taxes—because the investment tax credit permits the utility to reduce its tax payments to the Federal Government—the customer has paid phantom taxes—takes which are not paid by the utility to the Federal Government.

In the interest of fairness and equity, the utility should return this money to the customer through reduced rates. If, on the other hand, the utility keeps the money, then the customer has contributed interest-free capital to the utility, without the knowledge of the customer that he has made an interest-free loan to the utility.

This is what the regulated utilities are asking Congress to do—to put its OK on an arrangement through which the utilities will be guaranteed the right to keep the money which the utility customers have paid in phantom taxes to the utility; and to prevent any Federal regulatory commission from taking action to see that the utility customer gets his money back, in some way or other.

I say we should vote down this proposal, which Senator DOUGLAS has called the worst single feature in the bill. Section 203(e) puts the wolves in charge of the henhouse, giving the private utilities regulatory authority which should belong to the Federal regulatory commissions. Section 203(e) writes into law a single solution to the problem of using investment tax credit savings to stimulate utility growth, although there are obviously other approaches that would produce more growth, and at the same time produce more consumer benefits. Section 203(e) would legalize the utility's attempt to take money from the consumer and slip it in the pockets of the stockholders.

If we believe in the regulatory process, let us protect it from this attack by the utilities, rather than permitting the utilities to control the regulatory commissions with the approval of Congress. I urge my colleagues to vote down this anticonsumer provision, and vote it down by a decisive margin.

Mr. CHURCH. Mr. President, one further point. I take it, from the Senator's lucid explanation of his amendment, that if it is adopted, it will do nothing other than strike from the bill the particular provision we have been discussing.

Mr. PROXMIRE. The Senator is correct.

Mr. CHURCH. Investment tax credit would remain available for utilities; but this deliberate interference with the discretion we have customarily given to regulatory commissions would be the only part stricken from the bill. Is that correct?

Mr. PROXMIRE. The Senator is correct. I thank him very much.

Mr. McCARTHY. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. McCARTHY. Generally I am in support of the position of the Senator from Wisconsin, but I think the case is not as clear and simple as some Members of the Senate would like to make it. If we go back to the basis on which investment credit was approved by the Congress, we start on a somewhat different basis. Some of us opposed it. The Senator from Tennessee and I proposed a simple reduction in corporate taxes at that time as an alternative to investment credit, on the ground that a corporation could then decide how it wanted to use its tax savings, whether to invest it for
[*P. 1968*]

capital equipment or otherwise, depending on what the particular circumstances might be. But the investment credit was approved; and the theory was that it would have the effect of encouraging both the utilities and other businesses and industries to invest in capital equipment, and thereby stimulate the economy. That was the argument made for it. We now see that the provision that the tax credit should not pass through to the consumers is not inconsistent with the justification for adopting investment credit.

The argument which could be made for the position of the Senator from Wisconsin [Mr. PROXMIRE] is that eventually this advantage should be reflected in rates in any case, and it should be assumed that regulatory agencies will exercise discretion early in the administration of their offices with reference to the tax credit, so that the ultimate effect would be the same as if we had approved the language proposed.

Theoretically a case could be made against adoption of the provision but practically, the case is not particularly good.

Mr. PROXMIRE. May I say to the Senator from Minnesota, who speaks with very expert knowledge as a member of the committee, and who has studied this subject, that on the record made by Donald Cook and others, the only way the investment credit can expand expenditures for equipment purchase is for the investment credit to be passed through. There may be other ways, but this is one way to promote expansion. Therefore, the practical argument is on the side of permitting a passthrough if the regulatory body thinks it is appropriate.

Mr. President, the Senator from South Dakota [Mr. McGOVERN] has been patiently waiting a long time, and I yield to him.

Mr. McGOVERN. Mr. President, I wish to support, as best I can, the amendment offered by the Senator from Wisconsin, because I think it is the most valuable and compelling amendment that has been offered to the tax bill. Those of us who are supporting the tax bill have been sold the tax bill mainly on the ground that it is a device that will help consumers; that passing on tax reductions to consumers will stimulate the whole economy; and this is supposed to have a favorable impact on such problems as unemployment. But in the section of the bill which the Senator from Wisconsin is trying to correct, the tax-writing committee provided a device that would bring about the opposite result. It would prevent the regulatory agencies that have been established to protect consumers and the public from exercising their prerogatives, by preventing the passing to consumers of the tax savings called for in the bill.

Mr. President, there is probably no provision in the tax bill before us which has more far reaching implications and importance than section 203(e).

I find myself in agreement with Senator PROXMIRE and others who oppose this section on the grounds that it permits licensed, or franchised, public service institutions, acting as agents of the Government in the performance of public functions, to gain windfall profits in excess of the fair return for which they agreed to render the public service. Prof. Robert Eisman of Northwestern University, a leading authority in this field, has made a compelling case for the Proxmire amendment and his conversations with me have given me a keen appreciation of the public's stake in this amendment.

I am in agreement that we should not, in a tax bill, attempt to legislate the manner in which utilities should be regulated. But I have a deep concern beyond

those very basic considerations as to the effect on our whole economy of this new concept of higher profits for suppliers of energy and transportation.

If our concept of a fair return to suppliers of electricity and transportation is to be increased from 6 percent to 8 or 10 or 12 percent a rise in consumer costs results. And if the costs of energy and transportation are increased, this increase will spread throughout our economy and retard the economic development of the Nation.

As a result of the discussion of section 203(e), I recently reviewed the report of the Paley Commission, "Resources for Freedom," issued in 1952. That distinguished Commission included Edward S. Paley, then president of the Columbia Broadcasting System; George R. Brown, president of Brown & Root, large Texas contractors; Arthur H. Bunker, president of American Metals Climax Corp.; Eric Hodgins, of Fortune magazine; and Edward S. Mason, of Harvard University.

Throughout their discussion of energy, and particularly of electricity, the Paley Commission emphasized the importance of the cost of energy to the whole economy.

The general economic objective of keeping costs of all materials as low as possible applies with particular force to electricity—

This distinguished Commission reported—

because it enters into the cost of practically all goods and services produced in the economy and into the budget of nearly every family.

Even though electricity typically represents only a small fraction of total production costs for most items, a substantial increase in its real costs, reflected in correspondingly higher prices for industrial and other consumers, could have a considerable retarding effect on economic growth.

The Commission then points out the especially serious effect that higher power costs would have on the electrochemical industries, illustrating by citing the fact that each 1 mill increase in power cost increases the price of aluminum by 5 percent.

I ask unanimous consent, Mr. President, to include in the RECORD a table from the Paley Commission report showing the electric energy used per ton of product by certain electrochemical industries, illustrative of the importance of electricity costs.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE V.—*Power requirements for selected electro-process materials*

[Appropriate kilowatt-hour requirement per ton of product]

Material	kWh per ton
Titanium metal[1]	40,000
Aluminum metal	18,000
95 percent silicon metal	17,500
Electrolytic magnesium	16,000
35 percent hydrogen peroxide (100 present basic)	16,000
Electrolytic manganese	10,200
Silicon carbide	8,600
70 percent ferrotungsten	7,600
Sodium chlorate	5,200
Rayon	5,200
Phosphoric acid (via electric furnace)	3,900
Electrolytic zinc	3,400
Chlorine	3,000

[1] Kilowatt-hour per pound of titanium from the President's Materials Policy Commission staff report on titanium.

Source: Adapted from chart of "Process Power Requirements," Chemical Engineering, March 1951, p. 115.

Mr. McGOVERN. The Commission then states:

Changes in production technology will probably increase the number of electro-process materials and will enlarge the power requirements of many other materials by 1975. Broadly and over the long run as important materials like copper become more difficult to obtain, the Nation will need to develop substitutes to replace them. Moreover, as high grade ore reserves of important minerals dwindle, more electric energy will be needed in some cases to use lower grade ores. To mine and concentrate the low grade ore of the Lake Superior region will require 75 to 80 kilowatt hours per ton of concentrates as compared to 3 kilowatt hours per ton of useable high grade ore.

Unless sufficient electric energy is available at favorable costs the expansion of substitute materials and of output from low-grade ores will be retarded.

The Commission points out that many scientific processes are dependent entirely on economic feasibility, and that with increases in costs—including electricity and transportation involved in the amendment before us—many otherwise feasible processes—and resources—are denied to us.

Mr. President, this is only a glimpse into one field at the potential serious effect of adopting, in this tax measure, an inflated profits policy for the provision of public services.

The provision proposed is too far reaching, too dangerous to the economy of the Nation, to be adopted casually.

By prohibiting any of the benefit of the investment credit extended to public service companies to be passed on to consumers, we may very well jeopardize rather than increase economic growth.

Housewives buy appliances when energy costs are low—when it is cheap to let an appliance do the work.

Industries adopt new processes, build new plants and employ new work forces, when lost cost energy makes new processes feasible.

The new, high-profit utility policy inherent in section 203(e) could potentially do more harm over the years to the economy of this Nation than the good done by other portions of the bill.

In this connection, the New York Times yesterday carried an editorial which I ask unanimous consent to have

[*P. 1969*]

printed in the RECORD at this point, as well as an editorial in today's Washington Post.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York (N.Y.) Times, Feb. 4, 1964]

GIFT TO THE UTILITIES

There are many questionable provisions in the tax reduction bill now being considered in the Senate, but none is more unconscionable than the gift proposed for the utility industry.

The gift is in the form of an amendment forbidding the Federal Power Commission and other regulatory agencies from exercising any control over the investment credit provided for public utilities. The regulatory agencies are supposed to set rates that insure a fair return on utility investments. The proposed amendment means that the FPC could not take the tax credit into account in setting rates. As a result, electric and gas companies would receive a windfall estimated at $300 million, which would not be passed along to consumers.

The size of this windfall alone should give pause. Yet big as it is, it is not the most disturbing element in the proposed amendment. By limiting the power of the FPC in setting rates, Congress will increase the cost of utility services to consumers. And it will encourage the utility lobby, and pressure groups representing other regulated industries, to press for new restrictions on the ratesetting function of the regulatory agencies.

Even so, there could be a case for the amendment if it were to spur corporate spending and cut costs to consumers, which were the original objectives of the investment credit. But utilities will not have any extra inducement to spend and consumers will not be benefited. This is not the kind of gift that the Congress should be bestowing.

[From the Washington (D.C.) Post, Feb. 5, 1964]

LOOPHOLE TO BE CLOSED

We hope that the Senate, which struck down a reduction in the tax rate on capital gains because a crucial loophole was not closed in the House version of the tax bill, will also eliminate an obscure rider which would hamper the Government regulation of gas and electricity rates and add billions to the burden borne by consumers.

Section 202(e) of H.R. 8363—the Revenue Act of 1964—would bar the Federal regulatory agencies, notably the Federal Power Commission, from taking into account in rate determinations the tax savings granted under the "investment credit" provisions of the 1962 tax act. Permitting a utility to include in its rate base taxes which it never paid would burden consumers with between $300 and $600 million in extra charges during 1964, and costs of this tax morsel would increase sharply over time. Moreover, a dangerous precedent would be established for direct congressional intrusion into the ratemaking process.

Public utility regulation has been traditionally based on the premise that cost savings are to be passed on to the public in the form of lower rates. But this principle will be subverted and public utility regulation left in a state of shambles unless the Senate deletes this devious provision from the tax bill.

Mr. LONG of Louisiana. Mr. President, who has the floor?

Mr. PROXMIRE. Mr. President, I have the floor. I yielded temporarily.

The PRESIDING OFFICER. The Senator from Wisconsin had the floor, and yielded.

Mr. LONG of Louisiana. Mr. President, can a Senator yield for other than a question?

The PRESIDING OFFICER. If the regular order is called for, a Senator may yield only for a question.

Mr. LONG of Louisiana. Mr. President, I have no objection to having the Senator place in the RECORD what he requested, but under the conditions that exist at this time, I do think we should follow the regular order.

The PRESIDING OFFICER. The Senator from Louisiana has asked for the regular order.

Mr. PROXMIRE. Mr. President, I think the Senator from Louisiana will agree that what I have been doing in answering questions asked by the Senator from Idaho [Mr. CHURCH], the Senator from Vermont [Mr. AIKEN], and the Senator from Minnesota [Mr. MCCARTHY].

I ask unanimous consent that the Senator agree to let me yield 2 minutes more to the Senator from South Dakota.

Mr. LONG of Louisiana. Mr. President, I ask for the regular order.

Mr. PROXMIRE. Does the Senator object?

The PRESIDING OFFICER. The regular order has been called for.

Mr. McGOVERN. Mr. President, will the Senator yield for a question?

Mr. PROXMIRE. Mr. President, may I yield for a question to the Senator from South Dakota?

The PRESIDING OFFICER. The Senator has that right.

Mr. McGOVERN. I should like to ask the Senator from Wisconsin a question. Even if we were to assume—which I do not think we should assume—that it might be desirable to change the powers of the regulatory commissions, should that be done in a tax bill, or should it be done after careful consideration and review by the Commerce Committee, which properly has jurisdiction over this field?

Mr. PROXMIRE. That is a crucial element in the debate, and one of the prime reasons for offering the amendment. We should not, in a tax bill, decide legislative policy with regard to regulatory bodies. That is something which is the responsibility and function and duty of the Committee on Commerce. I am happy that the distinguished chairman of the Committee on Commerce, the senior Senator from Washington [Mr. MAGNUSON], has said exactly the same thing. Although he thinks there is some merit in what the committee has done, I hope he will support my amendment. However, he, too, feels that the policy should be decided by his committee on the basis of hearings and committee discussion. They are the experts in this area, and they should be accorded due courtesy, and the opportunity to decide this policy.

Mr. McGOVERN. This is the first time that I have had an opportunity to take the floor during the discussion of the bill.

Mr. LONG of Louisiana. Mr. President, I call for the regular order.

The PRESIDING OFFICER. The regular order is asked for.

Mr. McGOVERN. I thank the Senator from Wisconsin for yielding to me.

Mr. PROXMIRE. I shall conclude very quickly. I have referred to the fact that Mr. Donald Cook, who is the president of the American Electric Power Co., has taken a very strong position on the investment credit, and that he feels it should be passed through. Who is Mr. Donald Cook? Mr. Donald Cook is such a prominent spokesman of the utility industry that he is one of two or three utility representatives who were asked by the Finance Committee to testify in 1962 on the investment credit, so that the committee might gain a practical understanding of whether or not the investment credit should be adopted and, if so, how it would work.

The American Telephone & Telegraph Co. is opposed to the investment credit. It has been against it. It has said that it would not accept it. Even though it meant a benefit of $75 million to them, it said it would not take it, and is opposed to it.

I wish to quote in part what Mr. Donald C. Cook said before the Finance Committee in 1962 in favor of the investment credit for utilities. He said:

> From the point of view of whether the tax credit would apply as an incentive to construct additional plant and equipment, it is almost a matter of indifference as to whether the tax reduction is passed on to customers or not.
>
> This is true because as indicated above, it is the reduction in fixed charges with the resulting decrease in revenues necessary to support the expenditures for plant that operates as the incentive to build, not the receipt, and retention of cash resulting from reduced expenditures for taxes.

In other words, if there is an investment credit and it is not passed on, it means that more cash is available for stockholders.

Why should they invest in equipment unless it is needed to service customers? What makes customers want and need more service? Lower rates. There is nothing else. Lower rates. It is a matter of arithmetic. A little further on Mr. Donald Cook said, in his testimony:

> What I have tried to say to the committee, Senator, is that reduction in taxes will reduce our fixed charges, and by reducing the fixed charges, it will make marginal projects feasible. We do not need the cash that would become available—although some industries may, we do not need the cash that would become available from this tax reduction in order to finance the additions to our plant. If we can reduce our fixed charges, we would be in a position to finance out of our own resources or by going to the capital markets all of this plant and any other plant that we need to construct.

On January 3, Mr. Donald Cook wrote a letter to the chairman of the Finance Committee, in which he supported his position very eloquently. I ask unanimous consent that the letter may be printed in the RECORD at this point in my remarks.

[*P. 1970*]

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

> AMERICAN ELECTRIC POWER CO., INC.,
> *New York, N.Y., January 3, 1964.*
>
> Hon. HARRY FLOOD BYRD,
> *U.S. Senate,*
> *Washington, D.C.*
>
> DEAR SENATOR BYRD: My attention has recently been called to a statement, dated November 15, 1963, filed with the Finance Committee in behalf of Edison Electric Institute by Walter Bouldin, its president. The statement supports the enactment of section 202(e) of H.R. 8363, relating to the treatment of the investment credit by Federal regulatory agencies.

The statement argues that (1) the investment credit does not have the characteristics of a reduction of tax expense, and (2) the investment credit's objective of stimulating capital expenditures will not be attained by passing on the benefit of the credit to utility customers.

Although American Electric Power Co. is a member of EEI and I am a member of the EEI board of directors, the statement was not seen by me or by any representative of my company prior to its submission. I strongly disagree with the above arguments. Since I expressed contrary views in testimony before the Finance Committee in April 1962, when the committee was considering the investment credit provisions of H.R. 10650, and to remove any implication that the statement reflects the views of all EEI member companies, I feel impelled to write you to set the record straight.

It is my view that the investment credit does in fact represent a reduction in current Federal income tax expense, and therefore a reduction in current operating expenses; that the investment credit will stimulate capital expenditures by utilities even if all or part of the tax saving is passed on to customers, or if the tax saving forestalls or reduces an otherwise necessary increase in rates; and, indeed, that the use of this tax saving to reduce or avoid an increase in the price of the taxpayer's product is best calculated to increase demand and in turn to stimulate plant investment, and thus to carry out the basic objectives underlying the adoption of the credit.

It is my understanding that these views are also shared by a number of other utility companies and are advocated by many Federal and State regulatory agencies.

I am sending a copy of this letter to each member of the Finance Committee.

Sincerely yours,

DONALD C. COOK,
President.

Mr. PROXMIRE. Mr. President, I have almost concluded my remarks. Before I yield the floor, I should like to call attention to the fact that the utilities not only have the investment credit advantage, but they are also in the position if they need capital, to go to the regular financial markets to obtain it.

The 50-utility index by Standard & Poor's, which includes gas, electric, and telephone, was 21.1 for September 1963.

I believe anyone who has studied this subject knows that it is an excellent ratio. There used to be a rule of thumb that if the price-earnings ratio on a stock goes above 17, it is time to sell the stock. The average in the industry is far above what the rule of thumb would indicate for high-priced stock. The utilities are in an excellent position to get all the money they need.

The 25 utility price-earnings index by FPC—which is all electric utilities—was 20.8 for December, 1963.

A few of the latest available price-earnings ratios from FPC are:

Baltimore Gas & Electric	21.2
Commonwealth Edison	22.2
Consolidated Edison	20.4
Detroit Edison	20.4
Florida Power & Light	29.4
Virginia Electric & Power	27.7

The Standard & Poor's railroad index for September was 11.3.

Senators who vote against the amendment, in my judgment, are contradicting the policy of their own State regulatory bodies, which those bodies have arrived at after very careful study. They are the most competent people in their States in this area. They have devoted their whole lives to this field.

Mr. President, the New York Times editorial, which strongly supports the amendment, has already been placed in the RECORD. I should also like to call attention to an editorial published in this morning's Washington Post.

I ask unanimous consent that the editorial may be printed in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LOOPEHOLE TO BE CLOSED

We hope that the Senate, which struck down a reduction in the tax rate on capital gains because a crucial loophole was not closed in the House version of the tax bill, will also eliminate an obscure rider which would hamper the Government regulation of gas and electricity rates and add billions to the burden borne by consumers.

Section 202(e) of H.R. 8363—the Revenue Act of 1964—would bar the Federal regulatory agencies, notably the Federal Power Commission, from taking into account in rate determinations the tax savings granted under the investment credit provisions of the 1962 Tax Act. Permitting a utility to include in its rate base taxes which it never paid would burden consumers with between $300 and $600 million in extra charges during 1964, and costs of this tax morsel would increase sharply over time. Moreover, a dangerous precedent would be established for direct congressional intrusion into the ratemaking process.

Public utility regulation has been traditionally based on the premise that cost savings are to be passed on to the public in the form of lower rates. But this principle will be subverted and public utility regulation left in a state of shambles unless the Senate deletes this devious provision from the tax bill.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. PROXMIRE. I am happy to yield.

Mr. DOUGLAS. First, I commend the Senator from Wisconsin for the

amendment he has offered. It is very much needed. I should like to ask the Senator one or two questions, if I may.

Yesterday, as shown at pages 1802 and 1803 of the CONGRESSIONAL RECORD, the Senator from Montana [Mr. METCALF], referred to earnings figures for the 50 largest utilities in the country. This compilation shows that they had invested capital of $34,952,933,000. They made a profit of $3.145 billion. If my arithmetic is correct, that is an average rate of earnings of 9 percent. Does not the Senator think this is a very good profit?

Mr. PROXMIRE. I believe the figure indicate very clearly that any further advantage to stockholders who get the benefit of this figure is wholly unnecessary. I could characterize it as notice to the customer.

Mr. DOUGLAS. Is it not correct to say that what the bill does, so far as the federally regulated utilities are concerned, is to prohibit the federally regulated utilities from passing any of these amounts to the consuming public; that it does not allow them discretion, but prohibits them, actually?

Mr. PROXMIRE. Yes. This is a crucial point. I believe it should be understood by the Senate. If we pass the bill as drawn, we compel the public utility commissions not to pass on this reduction in taxes and this increase in income. Instead we prohibit them from passing it on.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. GRUENING. Has the Senator from Wisconsin, who is very properly fighting this provision in the bill, ever heard of a provision in the tax bill which compelled people not to pass their profits on?

Mr. PROXMIRE. There are two elements in the Senator's question.

First. This provision should not be in the tax bill. If it should be anywhere, it should be in a bill reported by the Committee on Commerce dealing with regulatory policy.

Second. Congress should not dictate that a fair return is not enough, and that utility stockholders should receive more than a fair return.

That is what the provision in the bill would require. On top of a fair return, the utility would receive more. It would receive more on top of the 9 percent. As the Senator from Illinois has said, get their 9 percent and then some by law. If the utility regulatory body decided that 9 percent was a fair return, that would be the amount the utility would receive.

Mr. GRUENING. Is there any understanding as to the origin of this strange provision? Was a lobbyist working on the program? It sounds like the days of Sam Insull.

Mr. PROXMIRE. I do not know the origin of it. I presume there are those who would directly benefit. I am sure they made their views and convictions plain before the Committee on Finance.

Mr. DOUGLAS. Is it not true that what the Senator from Wisconsin is trying to do is to give Federal regulatory bodies discretion as to whether or not they will pass on the benefit?

Mr. PROXMIRE. I am trying in this amendment to maintain the discretion which the regulatory bodies now have. This would mean that present law would remain as it is, as it has always been in the past, and as we hope it will be in the future. The regulatory body would decide what is a fair return.

Mr. DOUGLAS. Is it not true that possibly in the case of some railroads—I am not certain that it would hold true for every railroad—the Interstate Commerce Commission may find that the rates at present are inadequate to enable them to earn a fair return on the fair value, and that in those cases the

[*P. 1971*]

Interstate Commerce Commission may say that the benefit should not be passed on?

Mr. PROXMIRE. Yes; furthermore, there is nothing in the amendment or in present law that would prohibit regulatory bodies from not passing the investment credit on and establishing a rate over and above a fair return, if they desired to do so.

So far as the Interstate Commerce Commission is concerned, I quoted from its latest order or determination, in which it said that it thought this factor should be a consideration.

As the Senator from Illinois knows, many railroads are not doing well financially. In those cases, the benefit would not be passed on. The railroads would always be entitled to earn a fair return.

Mr. DOUGLAS. But in cases in which the present rate of return was fair, or more than fair, the Senator would give to the regulatory bodies the power to say that the benefit should not be passed on but should be retained?

Mr. PROXMIRE. That is correct. The regulatory agencies have power to do that, but are under no compulsion to do it.

Mr. DOUGLAS. Is it not true that the accounting forms which the various State commissions prescribe for the regulation of electric utilities are largely modeled upon the forms prescribed by the Federal Power Commission?

Mr. PROXMIRE. The Senator from Illinois is correct. This is one of the transparent reasons why, if the Federal Power Commission is compelled to act as the bill provides—that is, to give all the benefit of the credit to the stockholders, and none to the consumers—the regulatory agencies of the States will almost inevitably follow such a procedure. Some States will resist. Wisconsin will resist temporarily; so, perhaps, will Illinois. But as other States adopt such a procedure, eventually all States will adopt it.

Mr. DOUGLAS. In other words, the gains which the electric and gas utilities may make as the result of the benefit from not passing the profits through will not show up in the statements prescribed by the Federal Power Commission, and therefore will not show up in the statements prescribed by State utility commissions. Is not that true?

Mr. PROXMIRE. The Senator is correct. That accounting idiosyncrasy or peculiarity is something that has been overlooked. One of the arguments made by the Committee on Finance is that this requirement would not be effective for State electric utilities because they are not regulated by a Federal regulatory body. The accounting procedures forms are the same, and this is one of the big elements that would put all utilities in the same position.

Mr. DOUGLAS. As I understand, the Senator from Wisconsin believes that if this practice spreads into the States, the initial cost—or, I should say, the initial windfall—would be around $600 million.

Mr. PROXMIRE. Yes. Estimates made by Professor Eisner—and they were made carefully—are that the benefit to the consumer would be twice the size of the investment credit because the credit is against income tax—the income could drop by twice any investment credit. Without passthrough, the initial loss to consumers would be about $630 million; by 1972, there would be a loss of $1 billion; and by 1997, on an estimated 8-percent growth assumption, the loss would be around $5 billion or $6 billion a year.

Mr. DOUGLAS. That would be at previous growth rates?

Mr. PROXMIRE. That is correct.

Mr. DOUGLAS. I thank the Senator from Wisconsin.

He has thrown much light on the question. I hope his amendment will be agreed to. It seems to me that it would be scandalous if it were rejected.

Mr. KUCHEL. Mr. President, will the Senator yield?

Mr. PROXMIRE. Mr. President, I yield to the Senator from California.

Mr. KUCHEL. I object to the provision in the bill. I shall support the Senator's amendment.

Mr. President, the Senate is being asked to accept a very dubious "hitchhiker" to the tax bill in the form of a proposal to weaken the utility regulatory process.

I refer to section 203(e), which would instruct the Federal regulatory agencies on how to treat for ratemaking purposes the reduction in taxes for public utilities resulting from the investment tax credit.

This "hitchhiker" is dangerous—and that he has a lot of friends down the road who are even more dangerous.

It has been recognized by many that section 203(e) is not a tax proposal at all—it is a regulatory proposal, and thus it should not be in a tax bill.

I have been impressed by the testimony given the Senate Committee on Finance on section 203(e) by California Utilities Commissioner George G. Grover, speaking as official representative of the entire State commission.

Commissioner Grover declared at the outset that section 203(e) has only an "incidental connection" with tax legislation and is, in reality, a regulatory proposal. He explained:

> Suppose the regulatory commissions were called upon to pretend that wages are more than they are, or that pencils cost more than they do. You would not feel that that was anything but a regulatory proposal. But because it is put in a tax bill, and because Congress happens to have, in addition to its regulatory jurisdiction, tax authority, it tends I think to give the impression that Congress has a special power over taxes as utility expense, which it does not have over wages as utility expense.

Federal Power Commission Chairman Joseph C. Swidler also made the point during the hearings that section 203(e) is not a revenue section, and he hinted that more hitchhikers are waiting down the road for future tax bills if Congress sets this precedent of legislating the details of the treatment of the items of cost for ratemaking purposes.

Public utility commissions were created in the first place because legislative ratemaking had proved to be infeasible. If Congress now prescribes the specifics of rate treatment of costs by the regulatory agencies, Congress henceforth in Swidler's words, "will be beseiged on both sides to allow more or less for this item or that until, I think, one can visualize, the decline of the regulatory process progresses to the point where it could no longer produce just and reasonable rates in the current legal sense of that term."

Commissioner Grover, speaking for the California Commission, made it clear that in our State the regulatory body is

insisting and probably will continue to insist that the benefits of the tax incentive be "flowed through" to consumers. He said, however, that in some States the commissions may be expected to follow the Federal lead, if Congress insists upon prescribing ratemaking criteria for the Federal agencies.

Commissioner Grover noted that while section 203(e) ostensibly provides equal treatment for the utility and nonutility industries, it does not in fact provide equal treatment. At the same time, he said, Congress does not in this section recognize the fundamental differences between utilities and nonutilities.

> Utilities are regulated—directly comprehensively, continuously regulated—

He told the Finance Committee.

> If profits are too high, rates are reduced; if profits are too low, rates are increased; it is unlawful to charge more, or less, than the rates fixed by public authority.

He stated further that utility construction may be ordered if the regulatory authority finds its facilities to be inadequate.

All of this, in the judgment of those most familiar with this field, is different in the case of nonregulated companies. Since Government control is limited in nonutility situations, the taxing power can be used as an indirect method of control—as in the investment tax credit. While section 203(e) ostensibly would treat utilities the same as nonutilities in providing the tax credit incentive it would, in reality, not treat them alike.

In the case of a manufacturing company, the tax saving would increase net profit, or to put it another way, would "flow through" to profit. The manufacturer then could decide whether to use the additional profit to reduce prices, to build new facilities, or to increase dividends.

For the regulated utility, this "flow through" to profit would be highly desirable from the regulatory standpoint, Commissioner Grover said. The California Commission wants this tax saving to "flow through" to profit in the case of regulated utilities, because it accurately records the financial facts about the utility.

The utilities, on the other hand, do not want to record these financial facts in the same way as an unregulated company, because their profit is subject to regulatory control. Commissioner Grover declared that section 203(e) "is nothing more nor less than a proposal to remove a portion of the profits of public utilities from the jurisdiction of Federal regulatory agencies. As such, it is a direct assault upon the integrity of the regulatory process."

While section 203(e) affects directly only the Federal regulatory agencies, [*P. 1972*]
Commissioner Grover predicted that its passage will create difficulties both for the State commissions and the regulated utilities.

With the California commission holding fast to its present requirement for "flow through" of the tax incentive benefits to consumers, and the Federal Power Commission required to take an opposite position, many utilities in California would be placed under a dual system of control which would force them to maintain two accounting systems. The very fact that the FPC had not taken a position on the investment tax credit at the time of Commissioner Grover's appearance before the Senate committee had rendered the California commission's job more difficult, he reported. One large California utility, he said, has had to keep the amount of the credit in a special suspense account, and because of the uncertainty the California commission had not sought to reach that account for rate reduction purposes. Millions of dollars each year are involved in connection with this one company alone, he added.

The purpose of the investment credit, of course, is to stimulate the economy. Commissioner Grover made it clear in his testimony before the Senate committee that he favors extending the credit to regulated utilities and, in fact declared that he personally favors giving such utilities the full 7-percent credit rather than 3 percent.

At the same time, he opposes giving the utilities the right to say how this tax saving will be used, on grounds that this is properly the responsibility of a regulatory commission.

In some cases, he said, the commissions will permit the utilities to keep all or part of the tax saving, where earnings have fallen below reasonable levels. In other cases, where profits are at reasonable levels, the regulatory commissions will use all or part of the investment tax credit to reduce utility rates.

This is a very important point. If utility rates are reduced, that stimulation of the economy which is intended by Congress will, in fact, take place. As Commissioner Grover put it:

> Like taxes, the cost of buying utility service is very close to a necessity for most people. Utility rate reductions, like tax reductions, therefore, have the effect of improving public purchasing power and stimulating economic activity. These rate reductions are not at the utilities' expense, and the net

result is to spread the tax reduction more widely over the economy.

Where utility consumers are manufacturing industries and commercial establishments, these rate reductions will be particularly effective in stimulating business.

Regulated utilities themselves are by no means unanimous in their eagerness to obtain this regulatory concession from Congress. It has been noted earlier that the American Electric Power system has proposed to pass along its tax incentive savings to consumers in the form of lower rates, on grounds that it will stimulate greater use of electricity and, in the long run, result in stronger financial position for the electric companies.

Another group of forward-looking electric utilities, represented by Cameron F. MacRae, of the New York law firm of LeBoeuf, Lamb & Leiby, submitted testimony at FPC's hearing on accounting treatment of the tax incentive in favor of "flowthrough" of the benefits to consumers:

> We regard it as a tax reduction and we think that is the commonsense view of it, and there we stand—

Mr. MacRae stated, explaining that he spoke for Consolidated Edison Co., Niagara Mohawk Power Corp., Orange & Rockland Utilities Co., Portland General Electric Co., and Pacific Power & Light Co.

Reluctantly, I have come to the conclusion that section 203(e) represents an attempt to use Congress as an instrument by which to erode the regulatory wall which was created simply because the public interest demanded it. I want to see a continuance and a strengthening of an American public utility industry dedicated to providing American consumers with the best possible service at the lowest possible cost.

I urge the Senate to delete section 203(e) from the pending bill.

Mr. PROXMIRE. I thank the distinguished Senator from California. His support means a great deal. He is a man whose reputation has been hard won. It is a reputation that is very high in Wisconsin, as it is in California and throughout the country. His support for my amendment means much, both personally and, I am sure, in terms of his influence on other Senators.

Mr. KUCHEL. I thank the Senator from Wisconsin.

Mr. JAVITS. Mr. President, will the Senator from Wisconsin yield?

Mr. PROXMIRE. I am happy to yield to the Senator from New York.

Mr. JAVITS. There is one thing that I believe has not been made sufficiently clear by the Senator from Wisconsin, namely the relationship between State and Federal regulation. I see much merit in the Senator's amendment, and I am sympathetic toward it. But I should like to have this point clarified.

Does the Senator contend that there are areas in which there is both State and Federal regulation?

Mr. PROXMIRE. In fairness, it should be said that my amendment would have no direct effect on State regulatory bodies. A State regulatory body would be free to ignore it.

The Senator from Illinois [Mr. DOUGLAS] has pointed out that because of uniform accounting forms used and because of the general pattern followed by Federal agencies, especially in matters of Federal taxation, it is his expectation, as it is mine, that many States will immediately follow Federal policy and do the same thing. Within a few years, virtually all States will be following that practice.

The Senator from New York is correct in saying that there are cloudy areas where the situation is confusing. I should think that would add force to my amendment. Obviously, if there is one policy on a statewide basis and a sharply conflicting policy on a national basis, that would tend to complicate the administration of the law and result in inequities.

Mr. JAVITS. Can the Senator from Wisconsin give any illustration of how his proposal would force a State to adopt the same rule?

Mr. PROXMIRE. It would not be forced to do so, but that great pressure would be exerted on the States.

I am sure the Senator from New York knows, from his wide experience as attorney general of his State and in other public positions, the pressure that a public utility regulatory body is under from the utilities it regulates. The pressure is intense to raise rates. But the pressure to lower rates is very slight.

Really, there is virtually no pressure from or on behalf of the consumers, except from a few public-spirited officials. The result is that, on a national basis, if this provision of the pending bill goes into effect, the concentrated power of the public utility lobbyists will be very great, and, in that event, in my opinion, it will not be very long before the State commissions will be subjected to similar pressures and will proceed to follow the Federal practice.

Mr. JAVITS. The Senator from Wisconsin has stated the facts in regard to action by the Federal Power Commission on this tax credit and in regard to the question of passing the credit

through; and he has also discussed the situation in the case of the Interstate Commerce Commission. Does he have other examples to cite?

Mr. PROXMIRE. I now quote from the January 23, 1964, order of the Federal Power Commission:

> The Commission has reached the conclusion that on the basis of existing law the accounting treatment to be prescribed should be to flow through the credit to income.

That is a very clear statement by the Federal Power Commission.

In my judgment—although I anticipate that this will be contested by the Senator from Louisiana—it is also clear that the Interstate Commerce Commission has taken the same position in its order of February 1, 1963.

Mr. JAVITS. What about the ones who regulate the aircraft companies, and so forth; does the Senator from Wisconsin have information from them?

Mr. PROXMIRE. I have none from the Civil Aeronautics Board, although I understand that this would be a fairly academic question at the present time, because I think most of those companies are not earning in excess of a fair return.

Mr. JAVITS. I should like to pursue another line of questioning, and I hope the Senator from Wisconsin will join me in exploring it: Apparently the argument in regard to the 3 percent for the public utilities is very different from that for the forms of activity subject to the 7 percent, the basis for the distinction being that the prohibition now contained in the pending bill would absolutely prevent a pass-through, whereas for the other utilities it would still require amor-

[*P. 1973*]

tization over the life of the asset or the utility.

Mr. PROXMIRE. In other words, for the transportation utilities which would be permitted a 7-percent tax credit, the prohibition would be absolute and certain; for the utilities which would be permitted the 3-percent tax credit—the American Telephone & Telegraph Co., the electric utilities, and so forth—the passthrough would have to be over the life of the asset.

Mr. JAVITS. The Senator from Wisconsin has referred to the competitiveness in other areas, especially in connection with the truck transportation industry, and similar ones. Can he qualify the amendment as being an effort to equalize the competition? In other words, if the pass-through is prohibited, competition is equalized for all truck transporters and the others in that area, where there is a heavy competitive factor.

Mr. PROXMIRE. Yes, indeed; and I think that is an excellent point, because some have tried to argue the other way. The Senator from Louisiana said that the other firms, which are outside public-utility regulation, are in a position to hold on to the investment credit. I say they are not, because the competition itself requires—on the basis of any understanding or practical comprehension of how the tax credit operates—that it will pass through.

So I say the tax credit would be passed on in competitive industries. My amendment would make the pass-on of the tax credit apply to noncompetitive regulated industries.

Mr. JAVITS. Or the converse would be that if the pass-on were prohibited in the case of the regulated transportation companies, the other companies might figure that all of them would hold on to it, too; and, in that event, the competitive situation would not affect at all the question of whether the credit was passed through. So the question could be as broad as it is long.

Mr. PROXMIRE. It could be, if the competition were imperfect—as it often is in the United States.

Mr. JAVITS. But thereby the public utilities would be put to a disadvantage, by means of this mandatory requirement.

Mr. PROXMIRE. That is correct.

Mr. JAVITS. Has the author of the amendment considered the possibility of a plan somewhat more adaptable to specific situations than the pending amendment, with its rather broad sweep?

Mr. PROXMIRE. In reply to that question, I say that I feel that this amendment is exactly as it should be, for the reason that it leaves this matter completely to the discretion of the regulatory body—which is the way it should be. If we permit Congress to give a little direction as to rates, I think we shall lose the main argument in regard to the version of the bill the committee has reported.

Mr. JAVITS. Will the Senator from Wisconsin, the author of the amendment, now say that if his amendment is enacted into law, the legislative intent of the amendment will not be the negative one of attempting to deprive any board of that discretion—thereby indicating the attitude of the Senate or the Congress—but that he understands that there are situations in which the pass-through may not be required, either in whole or in part.

Mr. PROXMIRE. I think I must state my own position on the amendment, as

its author—namely, that it would maintain the present policy on the part of the regulatory bodies. The purpose of the amendment is not to change that in any way or to say that the tax credit must be passed through; but my position is that the regulatory bodies—which, in my judgment, have said they intend to pass the tax credit through; and I have placed in the RECORD documentation to show that—should be permitted to continue this policy, without dictation by Congress; and I think the Senator from Washington [Mr. MAGNUSON], the chairman of the Commerce Committee, contributed greatly to the legislative history in this connection when he said that is his opinion, discretion on the pass-through should be left with the regulatory bodies.

Mr. MAGNUSON. Yes. If there were to be included in the bill a requirement that the companies must pass the tax credit through, that would be as unfair as the others, for then Congress would be saying to the utilities, "You cannot keep the tax credit; you must pass it through." In that event, the Commission could do nothing.

Mr. JAVITS. I take it that the Senator from Wisconsin has in mind the policy of the regulatory agency for the time being.

Mr. PROXMIRE. The whole point of the amendment is to let them—not Congress—determine their policy.

Mr. JAVITS. I thank the Senator from Wisconsin.

Mr. PROXMIRE. I thank the Senator from New York for his very helpful questions.

Mr. GORE. Mr. President, will the Senator from Wisconsin yield?

Mr. PROXMIRE. I yield.

Mr. GORE. Is it not true that the intent of the Senate, in the first place, in voting for the investment credit to the regulated utilities was—and at the time was made perfectly clear—that the benefits should be passed through and would be passed through to the consumers?

Mr. PROXMIRE. When I voted on that bill in 1962, that was certainly my understanding; and it was corroborated and emphasized by the Senator from Oklahoma, who, in debate with me, stated exactly that.

However, it is true that the conference report and the House took a different point of view. Therefore, I think the legislative history is not explicit, express, and clear.

Mr. GORE. Mr. President, will the Senator from Wisconsin yield further to me?

Mr. PROXMIRE. I yield.

Mr. GORE. Lest someone impute to the author of the amendment some unusual power to interpret the legislative intent, I wish to ask the able Senator from Wisconsin whether it is true that he, the senior Senator from Illinois [Mr. DOUGLAS], the senior Senator from Tennessee, and other Senators agreed, in concert, in conference among themselves, that certain amendments would be offered by various members of that group.

Mr. PROXMIRE. Yes, indeed; and I am certainly a junior member of the group, if ever there was one.

Mr. DOUGLAS. But the Senator from Wisconsin is a very valued and valuable member of it.

Mr. PROXMIRE. Certainly the Senator from Tennessee [Mr. GORE] and the Senator from Illinois [Mr. DOUGLAS] were the leaders; and they made the suggestions, and they have done all the work on this matter.

Mr. GORE. But the Senator from Wisconsin is a very able and very respected member of any group of which he is a part.

This amendment was one of the key and important amendments which the group considered.

Incidentally, the press has been wont to dismiss those of us who have been waging the battle for what we regard as the public interest, as "a little band of liberals."

I must suggest that before the fight is finally over in both committee and in the Chamber, this so-called little band will leave a little footprint on the bill including, I believe, the adoption of this amendment. Therefore, I suggest that the intent of the amendment which the senior Senator from Wisconsin offers embodies the legislative will and intent of many Senators, and that intent is to preserve the law as it is with respect to the pass-through of benefits from the investment credit.

Mr. PROXMIRE. That is absolutely correct. To preserve the law as is. There is no question about that.

Mr. GORE. The question has been raised here as to whether it would be proper to give the benefit and then to take it away. That is not the case at all. As I shall try to demonstrate later, taxes are considered by regulatory agencies as a part of the cost of providing services. The regulatory agencies, by decisions which I shall read, have ruled that the amount of taxes actually paid, which is the tax liability less the investment credit, is the proper item of cost.

Is it not true that what the bill would do would be to require the Federal regulatory agencies to treat the investment in equipment, for purposes of determin-

ing fair and reasonable rates, at 100 percent, rather than the actual effective cost, which in one instance is 97 percent and in the other 93 percent of purchase price.

Mr. PROXMIRE. I can answer the question which the Senator from Tennessee asked before: clearly and emphatically, "Yes." That is why we wish to preserve the law as it is now. But as I understand, we have to recognize that it was the full and complete legislative history of the 1963 investment credit with regard to utilities that was confusing and ambiguous. I am happy that that the Federal Power Commission and

[*P. 1974*]

the Federal Communications Commission have taken a clear and unequivocal position that the tax credit should be passed on. I think the ICC has taken the same position, but there is some dispute about it. All I can say, in complete honesty, is that what I am purporting to do is to keep the present law as it is. On the basis of what I have said before—and I must be consistent—this leaves discretion with the regulatory bodies. I am satisfied that that discretion will be exercised, as it always has been in the past, and that the full tax liability, and only the tax liability, will be taken into account, and no more.

Mr. LONG of Louisiana. Mr. President, will the Senator from Wisconsin yield for a question?

Mr. PROXMIRE. I am glad to yield.

Mr. LONG of Louisiana. Assuming that some agencies are not required to pass through the benefits of the credit, as I am certain they are not; and inasmuch as the Senator from Wisconsin is saying that he believes in passing on the credit, why does he not offer his amendment to require that they all pass it on? The Senator says that he believes in a pass on. If he believes it is evil not to pass it on, why does he wish to condone anything less, such as a pass on in some cases and not in others?

Mr. PROXMIRE. The answer to that is easy and simple, and has been given by the Senator from Washington, the Senator from New York and other Senators, and that is that we strongly believe that the regulation of utilities should be left to the regulatory bodies. That is why Congress created them. It is not up to the Senate to tell them how to regulate utilities. It is not up to the Senate to say what is a fair return and what is not a fair return. That is the job of the regulatory bodies. If they are not doing a good job in that regard we should not approve the appointees the President appoints to these commissions.

Mr. LONG of Louisiana. Do we not tell them how they are to regulate when we enact the statutes that created them? We instruct them how to regulate not only in the statutes which create them, but also in subsequent laws which we have passed which relate to them.

Mr. PROXMIRE. We do, indeed. We tell them that they should represent both the producer and the consumer, and that they should permit a rate which would provide a fair return; but we do not go so far as to say that a fair return must ignore a definite and clear gain which they can get by reason of a provision in a Federal income tax; or we have not done that until today. This will be the first time we have ever done anything like that.

Mr. LONG of Louisiana. If there is to be an investment credit, is the carrier to receive the benefit of the credit, or not? The issue is just that simple. When we passed the statutes, which did we intend?

Mr. PROXMIRE. Let me say to the junior Senator from Louisiana that in my judgment the carrier will get the benefit of the credit if it is passed on. That is a position that has been taken by the leaders of the utilities.

Mr. LONG of Louisiana. I am satisfied that the ICC does not require any carrier to pass on any of the credit. If the Senator from Louisiana is correct, it would be outrageous to require the carrier to pass it on.

Mr. PROXMIRE. No, indeed.

Mr. LONG of Louisiana. Why does not the Senator from Wisconsin speak to that point, instead of making legislative history that would indicate that the present practice of spending to require passing on should continue?

Mr. PROXMIRE. Because the most important argument which I have made is that we should not dictate that kind of policy. It is up to the regulatory bodies to decide, with some legislative committee established by the Senate itself, such as the Commerce Committee, headed by the Senator from Washington, not the Finance Committee, which deals with taxation, what kind of regulatory policy there should be.

Mr. DOUGLAS. Mr. President, will the Senator from Wisconsin yield?

Mr. PROXMIRE. I yield.

Mr. DOUGLAS. I should like to clarify the situation with a homely illustration.

Suppose there were two men, one of whom ate only two meals a day and the other ate four meals a day, and we gave the equivalent of a meal a day in tax credit. The regulatory body says, "The man who has only two meals a day deserves it so that he can get three meals a

day." He gets his three meals a day through the investment credit.

Are we then going to say, because we give an extra meal to an underfed man, that we must "superstuff" a man who is already getting four meals?

Mr. PROXMIRE. The point the Senator from Illinois makes is logical, and it follows directly from what the Senator from Louisiana has said. Of course, the ICC permits the investment credit to be passed on, but many of these industries are not earning a fair return, in some cases. Under the circumstances, they should receive full value as stockholders of the investment credit with no passthrough.

Mr. DOUGLAS. What about the gas pipelines? Are they doing badly?

Mr. PROXMIRE. The Senator from Illinois is more expert in that area than I am, but they are doing very well.

Mr. DOUGLAS. Yes. Nevertheless, they will get the 7-percent credit and cannot be ordered to pass it on. Are our electric utilities as a whole doing very well?

Mr. PROXMIRE. The Senator from Illinois recently mentioned that they were earning 9 percent on their investment capital.

Mr. DOUGLAS. Yes, on the average. Is it necessary to "stuff" them with an "additional meal" a day when they are already at least comfortably fed, and some of them are overfed?

Mr. PROXMIRE. The record shows that this provision would not accomplish the objective that the Senate had in mind for the investment credit, because it would not mean that they would purchase more equipment. The way to induce them to purchase more equipment is to lower the rate and increase their market so as to make necessary the purchase of additional equipment.

Merely because the company can save 7 percent in the price of equipment does not mean that they are going to buy unnecessary, useless equipment.

Mr. PELL. Mr. President, will the Senator from Wisconsin yield?

Mr. PROXMIRE. I yield.

Mr. PELL. The original study of the 7-percent investment credit was designed to encourage new investments. Will not the amendment run against the thrust of the general purpose, in that the regulatory agencies will be applying set rates in such a way as to keep profits uniform? I should like to see investment credit even larger than it is, from the standpoint of the growth of our Nation, so that there will be capital construction. I am thinking particularly of the railroads, and the money that is spent in new construction or in capital equipment. To my mind, anything we can do to increase such investment is important. Would not the amendment go against this theory?

Mr. PROXMIRE. It would not, for several reasons. In the first place, a utility which is earning a fair return each year is able to earn more when its customers are able and willing to buy more because rates are lower.

The utility can always go to the regulatory body and obtain higher rates if such higher rates are necessary for the company to finance the purchase of additional equipment. As Mr. Donald Cook said, they have plenty of cash. They can always get the rates they desire if they need them in order to obtain additional equipment.

In a situation such as that of railroads which are not earning a fair return, the investment credit would automatically be passed through because they would be allowed to earn up to 6, 7, 8, or 9 percent. As the Senator from Rhode Island knows, most railroads are losing money or making only 1, 2, or 3 percent on their investment. So there is no question that the program could work to stimulate railroad investment.

Furthermore, the greatest tragedy for the investment credit in terms of frustrating congressional intent—I have made the statement several times, but I shall say it again—lies in the fact that if the investment credit is merely kept in cash by the utility, or if it is paid out in dividends to stockholders, it is not used to buy equipment. If instead the money is used to lower rates, and those rates can be lowered twice as much as the credit, on the basis of the calculation I put into the RECORD, the customers would be likely to buy more. If customers would buy more, more equipment would be required, and the utility would expand its purchases of equipment. That is the way to make the investment work the way we want it to work.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PROXMIRE. I am happy to yield to the Senator from Tennessee. I have

[*P. 1975*]

held the floor much too long. I shall yield the floor after the Senator from Tennessee has asked his question.

Mr. GORE. I shall have some additional remarks to make later, but it seems to me that this is an appropriate time to point out that the railroads are not generally seeking higher rates. In almost all cases, the railroads are seeking to lower rates. So we have an entirely different situation as between a

natural gas pipeline, which is seeking to raise rates, and a railroad which is seeking to lower rates. In fact, we have two separate regulatory agencies, each with proper jurisdiction, and each with a mandate under the law to protect the public interest. I do not believe that the ICC and the FPC could be merged into one agency and be expected to reach the same conclusion on an application by a railroad which seeks to lower rates as it would on an application by a pipeline company which seeks to raise rates. The problem is complicated. It is not a simple question of why give them the benefit and then take it away? That is not the case. I shall seek to develop this point in my own remarks.

Mr. PROXMIRE. I thank the Senator from Tennessee. He has stated a helpful correction. His superior knowledge of the railroad industry is very helpful, because that was not my understanding. I did not appreciate the fact that railroads have been seeking overall and generally lower rates.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. MAGNUSON. I dislike to prolong the debate, but I do not wish the two Senators to let the RECORD stand in respect to what it shows about railroad rates. Railroads seek to lower rates for some commodities only. They seek to raise rates on other commodities. Some railroads desire to lower rates; some want higher rates. It is a complicated field. I suggest that the RECORD not show that railroads generally desire low rates. They would like to lower rates if their financial position would permit them to do so. But a great game of chess goes on about lowering rates between modes of transportation. Generally speaking, there are some areas in which the railroads would like to lower rates.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. GORE. One should not undertake to make absolute statements in that regard. A general statement has exceptions. The statement I made has exceptions. I believe it is generally true that the overwhelming proportion of railroad petitions before the ICC is directed toward a lowering of commodity rates.

Mr. MAGNUSON. Bulk commodity rates.

Mr. GORE. Bulk commodity rates. But what the Senator said, and what I now acknowledge, seems to me to illustrate that the question is one which should properly be vested in a regulatory agency, a quasi-judicial agency, that could take proof, hold hearings, and would be charged with the responsibility of the public interest. It does not lend itself to detailed legislative action.

Mr. PROXMIRE. Mr. President, I yield to my colleague from Wisconsin.

Mr. NELSON. Mr. President, I wish briefly to commend the senior Senator from Wisconsin for a remarkably able presentation of an overwhelmingly persuasive case on behalf of his amendment.

What I am about to say has been repeatedly said this afternoon, but there continues to appear to be some confusion on the part of some Senators about the function of regulatory bodies. As the senior Senator from Wisconsin has said, it is the function of the regulatory bodies to protect both the public interest and the legitimate private interest of the utility. The test is that they should set rates to be paid by the consumers which assure the company a fair rate of return. Every single item that goes into constituting a part of that profit is a part of the fair rate of return.

Every single item that constitutes a part of that profit is a part of the fair rate of return. The present bill would provide a fair rate of return plus. The regulatory agencies are not in the business of giving cost-plus profits. They are in the business of assuring a fair rate of return and protecting the public interest.

Wisconsin has a great and distinguished tradition through its regulatory bodies. David Lillienthal was the chairman of our public service commission in Wisconsin back in the 1930's.

He went from there to the Tennessee Valley Authority, where he became Chairman of the Authority. Today we have as chairman of the public service commission in Wisconsin a man whom, I am proud to say, I appointed as chairman of that commission—Leonard Bessman—who seeks as conscientiously and as ably as any man we have ever had in history to protect the public interest.

But I point out that the public service commission in Wisconsin is not typical of regulatory bodies in all the States. There are only a few exceptions, in which consistently the regulatory bodies have been regulating in behalf of the public interest. If the public service commission should decide not to pass on the benefit to the consumer, it might, by the calculations of our public service commission, cost the consumers a total of over $10 million per year in Wisconsin.

Mr. PROXMIRE. That is in Wisconsin alone.

Mr. NELSON. In Wisconsin alone. There would be a $10 million a year loss to the consumers in a State with 4 million

people. That means that hundreds of millions of dollars are involved when this is added up for all the States of the Nation.

The senior Senator from Wisconsin has said the State agencies will not be compelled to pass this tax saving on or to hold it back. I am confident, however, that when we get into something involving hundreds of millions of dollars, we shall see the most fantastic lobbying of the regulatory agencies, in all the States of the Nation that has ever occurred. It will be unlike anything we have seen before in history. The utilities are not going to pass up an opportunity to influence their own regulatory agencies. They will use the argument that the Federal agency cannot pass on the benefit so therefore they have some status on which to argue that the State should not pass on the benefit to the consumer.

With the support they will get, they will lobby against the consumer's interest, successfully, over the country, and only a handful of regulatory agencies will stand up for the consumer's interest.

The day will come in my State when we shall not have a regulatory agency that is as interested in the public interest as the present one is, because all the Governors in the future will not appoint to the commission those who have the same public interest at heart. So there is at stake hundreds of millions of dollars, and in a decade billions of dollars, of the consumer's interest. That interest should be protected by adoption of the amendment offered by the Senator from Wisconsin.

In conclusion, Mr. President, there are at least five good reasons for supporting this amendment.

First. The provision would interfere with the whole history and tradition of independent regulatory operations.

Second. The provision is contrary to the intent of the Senate when it approved the Revenue Act of 1962.

Third. The provision would represent a direct subsidy of millions and perhaps billions of dollars to the private utilities by the consumer.

Fourth. The provision, by forcing the regulatory agencies to maintain artifically high rates, would directly contribute to inflation.

Fifth. The provision, contrary to the whole intent of the Revenue Act of 1962 and the bill we are now considering, would not stimulate investment. In fact, by maintaining artifically high rates, it may even reduce demand, therefore, reduce investment in the utility industry.

This last point deserves emphasis. There is very little evidence to suggest that the investment credit encourages the utilities to increase their plant and investment. The whole purpose of the Revenue Act of 1962 was to stimulate investment. Last year the utilities were not forced to flow through the tax credit. But a report published by the Department of Commerce in the Survey of Current Business stated that the public utility investment plans for 1963 were little changed from the plans in 1961 and 1962. In fact, according to the Edison Electric Institute, as reported in Newsweek magazine, the utilities cut back their investment plans by 19 percent for the second and third quarters of 1963. Last week's January 27 issue of Electrical World showed that 1962 capital expenditures for the entire electrical utilities industry had not yet reached the level of 1957, 1958, 1959, 1960, or 1961—and they were only slightly above the 1962 level for this industry.

Sometimes it is argued that the utilities need this extra benefit in order to attract capital. Nothing could be further from the truth. I have before me the Bear, Stearns & Co., monthly comparison of electric utilities common

[*P. 1976*]

stocks for January 1964. This indicates that the average gross income as a percent of total capitalization is 6.8 percent for the private utilities. In my own State of Wisconsin, the most important companies all had earnings in this range.

The Wisconsin Electric Power Co. earned 6.1 percent.

The Wisconsin Power & Light Co. earned 6.4 percent.

The Wisconsin Public Service Corp. earned 7.2 percent.

These are well-managed, successful companies that have no difficulty in attracting capital.

In sum, there is little evidence that the utilities have been encouraged to expand their investment by the tax credit provision of the Revenue Act of 1962. Moreover, the evidence suggests that when and if the utilities wish to expand their investment, they have no need of the provision: They have no difficulty in getting capital. Thus the basic argument that this benefit is required to stimulate investment and thereby stimulate the economy seems false. In fact, we find the utilities simply coming before the Congress asking us to direct the regulatory agencies to force the consumers to increase the profits of the utilities. Indeed, there are a number of enlightened members of the industry who recognize that this attitude is bound to hurt the industry itself. The utilities are divided on this question.

There is ample evidence, for example, in a speech by Mr. Donald C. Cook, president of the American Electric Power Co., at the Great Lakes Conference of Railroad and Utilities Commissioners on June 21, 1963, that a major fight is raging within the industry. There are many in the industry like Mr. Cook who realize the need for moderation. They understand that they cannot continue to demand undue benefits at the taxpayer's expense. Moreover, they realize that flowing through the tax credit in order to lower rates is the best way to stimulate demand.

In fact, Mr. Cook has been fighting an uphill battle against many other representatives of his own industry. Mr. Cook rightly notes that the congressional intent of the tax credit to utilities was that this should be treated as a normal tax reduction; that is, it should be flowed through to the consumer. Others in his industry, such as Mr. Walter Bouldin, president of the Edison Electric Institute—an organization of private power companies—argue incorrectly, I think, that the legislative history does not indicate an intent to treat the tax credit as an ordinary tax reduction.

Thus, the industry itself is split on this issue. It is divided between those who feel it both prudent and profitable to flow through the credit and reduce rates—and between those who want to take everything they can at the expense of the taxpayer and the consumer.

The implications of section 203(e) for the Wisconsin consumer are only too obvious. For one thing, Wisconsin is an area greatly dependent upon rural electric systems. Throughout the Nation nearly one half of the energy purchased annually by the rural electric systems is purchased from the private power companies. During fiscal year 1963, the total power purchased from commercial power companies by REA-financed systems was $109,200,000. In Wisconsin, the total was $1,647,936.

We in Wisconsin have a direct stake here. The exact extent of that stake is difficult to measure for we must predict how much of the credit thus should be passed on to the consumer. Having made this prediction, we must analyze what would happen if section 203(e) is approved and the regulatory agencies are directed not to flow through the credit to the consumer. Furthermore, we must make some assumptions about the way State regulatory agencies will act once the Federal agencies set the precedent.

There are many aspects to this problem. I have asked the Federal Communications Commission to estimate how much the tax credit for investment in interstate telephone services might be kept or passed on to Wisconsin consumers. Mr. Robert E. Stromberg has provided a very rough estimate that the investment credit related to interstate service in Wisconsin in 1963 amounted to about $350,000. Assuming that the corporate Federal income tax rate is reduced to 50 percent, this means that a rate reduction of approximately $700,000 could have been flowed through to Wisconsin consumers.

I have asked the Federal Power Commission to estimate a rough measure of the impact on Wisconsin gas consumers of section 203(e). Mr. Joseph E. Swidler has provided an estimate of $1,600,000 a year cost to the Wisconsin consumer.

Finally, if the Wisconsin Public Service Commission were to follow suit and adopt the pattern of the Federal regulatory agencies in its own operation, there would be a further cost to Wisconsin consumers due to local service of approximately $8,160,000 per year. I ask unanimous consent to insert at this point a statement provided by Mr. Leonard Bessman, chairman of the Wisconsin Public Service Commission. It should be noted that Mr. Bessman forecasts an annual amount of investment credit of $4,080,000. Assuming a 50-percent corporate tax rate, if this investment credit were passed on in the form of rate reductions, the reductions would amount to $8,160,000.

If section 203(e) is approved and if the Wisconsin Public Service Commission follows the Federal precedent, the Wisconsin consumer will be forced to pay an additional $10 million each year to the private utilities. In 10 years, the most conservative estimate is that he will have been milked by the utilities for more that $100 million.

Mr. President, I urge that this provision be deleted from the bill we are now considering. I hope it is deleted and that the House of Representatives will agree with such action. However, if the Congress does not agree to remove this unwise and inequitable provision, I would strongly urge the State regulatory agencies to stand together and refuse to follow the Federal precedent in their own operations. There will, however, be tremendous pressure upon the State agencies to follow the Federal precedent. There will be lobbying with the regulatory agencies unlike anything we have even seen before in history because of the hundreds of millions of dollars at stake.

There is no doubt that the present Wisconsin Public Service Commission will stand up for the public interest, but what will happen to the Wisconsin con-

sumer when we have a commission, as we sometime surely will, that is not so concerned with the public interest?

Mr. President, I ask unanimous consent to have printed in the RECORD at this point the following: a chart which specifies the cost to the Wisconsin consumer due to higher rates if the tax benefit is not "flowed through"; a statement by Robert E. Stromberg; a letter written by Mr. Joseph C. Swidler, Chairman of the Federal Power Commission; and a breakdown of the Wisconsin class A privately owned electric, gas, water, and telephone utilities forecast of investment tax credit.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

Cost to Wisconsin consumer due to higher rates if tax benefit is not "flowed through" (sec. 203(e))

	1963	Minimal 10-year estimate
Interstate telephone service cost	$700,000	$7,000,000
Interstate gas pipeline cost	1,600,000	16,000,000
Wisconsin electric, gas, water, and telephone costs	8,160,000	81,600,000
Total	10,460,000	104,600,000

Interstate telephone services in the United States had a total investment credit in 1963 of about $17 million. The total telephones in Wisconsin amount to about 2.1 percent of the total telephones in the United States. On this basis it is estimated that the investment credit related to interstate services in Wisconsin in 1963 amounted to about $350,000.

Wisconsin Telephone Co. and General Telephone Co. of Wisconsin in 1962 had investment credit for the two of them combined of about $900,000. This amount should not change much in 1963. Since the two named companies combined account for about 90 percent of the telephone business in Wisconsin as measured by plant investment and revenues it is estimated that all telephone companies in Wisconsin will receive investment credits in 1963 totaling about $1 million.

So, if the Wisconsin Public Service Commission were to go along with "service life flow through" of the investment credit for telephone companies as required of Federal regulatory agencies (specifically FCC) by the tax bill the total amount kept from being flowed through to telephone users in Wisconsin in the initial year by the tax bill would be on the order of $1,350,000 per year. In terms of giving the telephone companies $1,350,000 additional net income by means of a rate increase or reducing their net income by means of a rate reduction a factor of 208.33 must be applied to provide for the effect of a 52-percent corporate Federal income tax rate. On this basis $1,350,000 becomes $2,812,500.

ROBERT E. STROMBERG.

FCC, *February 1, 1964.*

[*P. 1977*]

FEDERAL POWER COMMISSION,
Washington, D.C., February 3, 1964.

Hon. GAYLORD NELSON,
U.S. Senate,
Committee on Interior and Insular Affairs,
Washington, D.C.

DEAR SENATOR NELSON: This is in response to your letter of January 31, 1964, asking for any information we have available of the impact on consumers in Wisconsin of section 202(e) of the Revenue Act of 1964, H.R. 8363 (sec. 203(e) of the Senate bill).

A rough measure of the impact on Wisconsin gas consumers can be obtained from the attached computations with respect to Michigan-Wisconsin Pipe Line Co. which is the principal wholesale supplier of gas to consumers in Wisconsin. The attachments indicate that on the basis of the investment tax credit reported by Michigan-Wisconsin in 1962, the impact on Wisconsin consumers if section 202(e) is enacted could be approximately $800,000 per year. If the estimate is based upon the investments of Michigan-Wisconsin over the past 5 years, the figure would be approximately $1,600,000 a year.

Sincerely,

JOSEPH C. SWIDLER,
Chairman.

Dollar impact on Wisconsin consumers if investment tax credit of Michigan-Wisconsin Pipe Line Co. is allowed, in cost of service for future dates basis—Investment tax credit reported for 1962

Investment tax credit reported in FPC form No. 2 for year 1962	$800,000
Portion applicable to Wisconsin consumers	400,000
Impact on Wisconsin consumers if investment tax credit is allowed in future rates	800,000
Revenues from Wisconsin (50 percent)	58,634,421
Total revenues	116,475,122

$800,000 × 50 percent equals $400,000.

Dollar impact on Wisconsin consumers if investment tax credit of Michigan-Wisconsin Pipe Line Co. is allowed in cost of service for future dates basis—Average additions for years 1958–1962

Additions as reported in FPC form No. 2:	
1958	$6,389,406
1959	36,071,254
1960	70,852,418
1961	8,737,922
1962	14,157,515
Total	136,208,515
Less 15 percent of nonqualified property	20,431,277
Qualified property	115,777,238
Average for 5 years	23,155,447
Investment tax credit at 7 percent	1,620,881
Effect if investment tax credit is allowed in future rates	3,241,762
Impact on Wisconsin consumers if investment tax credit is allowed in futures rates (50 percent of line 19)	1,620,881

Wisconsin class A privately owned electric, gas, water, and telephone utilities forecast of investment tax credit, 1963–67

[In millions]

Year (a)	Actual qualified plant additions (b)	Smoothed plant additions (c)	Forecast of plant additions (d)
1956	$91	$107.1	
1957	118	110.3	
1958	111	113.5	

Wisconsin class A privately owned electric, gas, water, and telephone utilities forecast of investment tax credit, 1963–67—Con.

[In millions]

Year (a)	Actual qualified plant additions (b)	Smoothed plant additions (c)	Forecast of plant additions (d)
1959	$136	$116.7	
1960	121	120.0	
1961	130	123.1	
1962 [1]	110	126.3	
1963			$129.5
1964			132.7
1965			135.9
1966			139.1
1967			142.3
Total	817	817.0	679.5

Total qualified plant additions forecast for 5 years, 1963–67	$680,000,000
Investment tax credit at 3 percent	20,400,000
Forecast of average annual amount of investment tax credit	4,080,000

[1] Estimated.

NOTE.—(1) Smoothed additions in col. (c) are least squares smoothing of amounts in col. (b). (2) Amounts in col. (d) are extension of smoothed amounts in col. (c).

Mr. PROXMIRE. Mr. President, I point out that my colleague was Governor of Wisconsin for 4 years. He made a distinguished record. One of the fields in which he distinguished himself was in his appointments to the public utility commission of persons who had a deep understanding of the necessity of being devoted to the public interest and who had the fiber and strength to resist unjustified importunities which they always undergo from the public utilities they are regulating.

I thank the Senator for his eloquent and most effective statement.

I yield the floor.

Mr. TOWER obtained the floor.

Mr. TOWER. Mr. President, I ask unanimous consent that I may suggest the absence of a quorum without losing my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that further proceedings under the quorum call be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. TOWER. Mr. President, I yield the floor.

Mr. LONG of Louisiana. Mr. President, any Member of this body is privileged to take a self-righteous attitude with regard to any legislation in which he thinks he is not only right, but a hundred percent right, and thinks that the other person is not only wrong, but a hundred percent wrong and that such a person is little short of being a robber baron.

On occasion I have taken that attitude. and have spoken on a matter, having difficulty staying within the rules of the Senate. I can remember when Senators were conducting a filibuster against the satellite communication bill, which the Senator from Louisiana contended would give at least 50 percent of that monopoly to a private telephone company. The Senator from Wisconsin voted for it. It was all I could do to say what a horrible bill he was voting for, in giving the biggest monopoly in the world an even bigger monopoly.

There is before the Senate a relatively simple proposal. If we brush aside all the complicated arguments and look at what we are really talking about, we find that 2 years ago Congress passed the bill providing for the so-called investment credit.

When it adopted the investment credit provision, Congress provided that there would be a 3-percent investment credit for regulated utilities that were regarded as being monopolistic in character to the extent that they had no competitors for the service. In other words, the 3-percent investment credit would apply to a telephone company on the theory that people had to have telephones, and therefore the utility had captive customers whether the public wanted that situation or not. This would also apply to an electric company, which although people do not have to heat their homes by electricity, nevertheless they have to have electric lights in their homes.

So Congress made a distinction in regulated utilities which are regarded on the one hand as being locked-in monopolies, and allowed them only 3-percent investment credit, while it looked at the transportation industry and regarded it as being a competitive industry. Railroads were competing with other railroads. All the railroads were competing with the trucking lines. Both types of carriers were in turn competing with pipelines for customers. Even pipelines were competing with other pipelines.

They were all competing with the barge lines, which were in turn competing with tanker fleets.

We recognized the competitive nature of the industry which existed, for example, in New York, where pipelines carrying gas are trying to take customers away from railroads carrying coal. Both of them are fighting the trucking lines for customers carrying coal or oil. All of them compete with the enormous tankers, some with a draft of 70 feet, some having twice the tonnage of the *Queen Elizabeth,* which carry the lowest cost fuel of all; namely, residual oil. So here they were all trying to get business, and all are competitive.

Congress took the attitude at that time that the carriers were entitled to the 7-percent tax credit just as other manufacturing industries were entitled to it. For the reasons that these industries were in competition with one another in seeking to do business with others, Congress took the attitude that if we were to provide the 7-percent tax credit to encourage industry to have the latest machinery and the most efficient operation, we would not want to work toward the day when we had a space age manufacturing industry and a horse and buggy transportation industry, but that we would let them go forward together.

The legislative history as made on the floor of the Senate by the late Senator Kerr of Oklahoma, who was the Senator

[*P. 1978*]

in charge of the bill, suggested, when the bill was initially considered, that it was the intention of the Senate that the tax credit be passed through. When the matter went to conference, the House and Senate conferees reached an agreement. The understanding between Senator Kerr and the House managers was that the tax credit would not be passed through.

Apparently the House had one thing in mind and the Senate another. It is clearly stated in the report of the managers for the House that it was intended by the managers and by those who drafted the report that it was not to be passed through. This is also what Senator Kerr said. He was speaking for the conferees of the Senate when he said:

> It is the understanding of the conferees on the part of both the House and Senate that the purpose of the credit for investment in certain depreciable property, in the case of both regulated and nonregulated industries, is to encourage modernization and expansion of the Nation's productive facilities and to improve its economic potential by reducing the net cost of acquiring new equipment, thereby increasing the earnings of new facilities over their productive lives.

That would suggest that what Senator Kerr said on the floor when he was managing the bill was no longer the opinion to which the conferees agreed when he spoke for the conferees of the Senate on returning the conference report to the Senate.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. TOWER. Apparently speaking for the administration, Secretary Dillon, on May 3, 1961, in his testimony before the Ways and Means Committee, in speaking of the transportation industry, said:

> Although subject to various forms of regulations of their charges, are in fact highly competitive businesses with varying rates of return on investment. Many of these enterprises are not only competitive among themselves at given regulated prices, but also must compete with private truck fleets, private airplanes, and other transportation facilities operated by industrial corporations which would be eligible for the credit.

Mr. LONG of Louisiana. The Senator is correct. When the Senator from Oklahoma made the statement on the floor that the utilities—not only the utilities, but the transportation industry as well—would be required to pass the tax credit through to their customers in reduced prices, he was in large measure relying upon the testimony of Mr. Donald Cook, to whom reference has been made, but as I have said, his position was changed after the conference.

The House, in considering this legislation in 1963, recognized the difference between the problem involved with the electric utilities and that with respect to the transportation industry. Recognizing the complete monopolistic situation with regard to the electric utilities and telephone companies, the House had said that these companies would be required to pass the credit through, but only over the life of the asset. That would mean that the companies could benefit from the interest on the money during the time that they were passing it through to the users, and no longer.

Mr. McNAMARA. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. McNAMARA. In relation to passing through on the part of the utilities—the telephone companies and electric companies—it is true, is it not, that they are regulated generally by State agencies? Would they be forced under the Proxmire amendment to pass it through immediately, or could it be done over the life of the asset?

Mr. LONG of Louisiana. The State agencies would not be affected. They could do as they wished.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. McNAMARA. Does that satisfy the Senator from Wisconsin?

Mr. LONG of Louisiana. If the Senator will permit me, I would rather settle that point later. I would like to explain my position.

Mr. McNAMARA. The Senator bases his argument on what was adopted 2 years ago when the 7-percent tax credit was created.

I voted against it. The Senator lost me to start with, and he will have to pick me up, because I am sure he needs my vote.

Mr. LONG of Louisiana. So far as the law stands today, I believe it would make no difference as to State regulation if the Proxmire amendment were agreed to, or if the committee amendment were retained. In any event, what we are talking about is the federally regulated commissions established by Congress, which are regarded as arms of Congress. We are talking about how those agencies would handle their responsibility. This has no reference at all to how a State agency would handle its decision to regulate.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I know that the Senator will disagree. I know the Senator will suggest that someone in the State agency might say that this is the Federal practice, and that they would want to adopt it. They may if they so desire, but they do not have to do so.

Mr. McNAMARA. I am not impressed by the "fallout" argument.

Mr. LONG of Louisiana. The Interstate Commerce Commission takes the position that Congress intended this credit to be an incentive. In its letter of September 26, 1963, it takes the position that in its judgment Congress intended the tax credit to be an incentive for modernizing and improving and expanding the services of the carriers that they regulate. Therefore the Commission says that it is not attempting to take this credit back from the carriers, and does not propose to do so.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. Mr. President, I listened to the Senator from Wisconsin. I would appreciate it if he would let me finish my argument. I know he will disagree. I should like to state my case in chief.

The letter to which I have referred, on page 3, makes it very clear that the ICC took the exact attitude that was expressed by he House managers, and by Senator Kerr after the conference, in unequivocal terms, that it was intended as an incentive to modernize the railroads, the bargelines, and the trucklines.

So far as the CAB is concerned, that regulatory agency does not fix the rates of the airlines. Those rates are fixed by competition. Therefore, so far as that agency is concerned, this does not make any difference.

So there is no real reason why that agency should become involved one way or the other. We have heard much debate to the effect that if we do not let the Federal Power Commission require the utilities to give up their investment credit, there will be higher rates. Those who make that argument completely overlook the value of competition.

Let us look for a moment at the car riers of persons. Which carrier is it that is making all other carriers more efficient? It is the airlines; and the airlines are the carriers whose rates are not regulated. The airlines have taken away practically all the long-distance transportation of railroads and buses. Airlines have taken step after step to buy new equipment, even when they were losing money, and have gone head over heels in debt, year after year, to buy new equipment, knowing that by providing better service to the public, they would be enabled to compete more strongly with the railroads and buslines. It is the airlines that are battling the railroads and buses and are causing the railroads to face the problem of featherbedding and to face a strike by labor, in order to eliminate unprofitable service.

Airline fares are not regulated by a regulatory agency. They provide faster and better service. I can now go to my hometown in Louisiana in one-third of the time it took me to go there when I first came to the U.S. Senate. Why? Because the airlines did what the House is suggesting that the Senate do for air carriers; that is, encourage them to invest money to improve equipment and provide better service.

There has been much unfavorable talk about pipelines, as though they were robber barons. I have heard that said before. Some years ago, the public in this area was served with manufactured gas. It is no longer served with manufactured gas. Years ago, gas was manufactured from coal. That gas left a residue in the pipes, which meant that over a period of time the pipes had to be taken up and replaced. Furthermore, those who used the gas manufactured from coal were well advised to wash down their walls from time to time because of the residue that was left inside the house.

Today, the atmosphere in Washington, D.C., is cleaner than it was before the coming of natural gas. The atmosphere in Washington is cleaner than it is in New York City, where large quantities of residual fuel oil are still used. The reason is that the gas pipelines coming to this area supply a cleaner, better, more efficient, cheaper product, at a low-

[*P. 1979*]

er price. Everyone who uses natural gas has a lower priced commodity and has been saved substantial value.

That would have no impact one way or the other, except to this extent: One of these days, if the gas suppliers find new customers and new uses for their products, it may become necessary for them to build additional pipelines. If so, they will be able to make a tremendous saving by what is called looping the pipelines. A line already exists; an organization is in being to do business. Pumping stations are already operating; the cost is much less to lay a new pipe alongside an existing pipe than it is to condemn a route and engage in all the processes necessary to lay the first pipeline initially.

As the law stands today, it provides credit for the enormous new tanker fleets that carry residual fuel oil from Venezuela to New York City. On a B.t.u. basis, residual fuel oil is cheaper than natural gas. That is one reason why the atmosphere in New York City is not so clean as it is in Washington. The apartment house owners in New York use large amounts of residual fuel oil for heating purposes. The fuel oil carrier obtains an investment credit to encourage him to modernize and improve his fleet. Congress provides such investment credit for the barge lines and the railroads, to encourage them to improve and modernize their facilities, which they are doing. Congress provides such investment credit to enable the airlines to do the same thing.

What would happen if the committee amendment were not adopted? The Federal Power Commission is the one agency that stays always at loggerheads, always at dagger points, with the utilities it regulates. I think I know why that happens to be the case. It is because the railroads seem to have a little influence concerning who is appointed to the Interstate Commerce Commission. The railroads seem to have a commission that is somewhat friendly to their point of view.

Similarly, the airlines seem to have some influence as to who is appointed to the Civil Aeronautics Board, because the airlines seem to have a commission that is friendly to their problems.

But the pipelines have no influence as to who is appointed to the Federal Power Commission. The Federal Power Commission would drink the blood of the pipelines, and vice versa, with the result that the pipelines are regulated by a majority recommended by Drew Pearson, and the like. So the Federal Power Commission now proceeds to wage its war on the pipelines. It says, in effect, "We want to make you give up your investment credit, because you have had a tax saving that we want to have you give up for the benefit of the consumers."

The pipelines say, in reply, "If you do that, we cannot borrow money in the money market in New York in competition with the fellow with whom we are competing."

Ordinarily, one would think the railroads would like that. The railroads can obtain an investment credit; the pipelines cannot. By the time the railroads have finished fighting their case through the Supreme Court of the United States, trying to decide what Congress meant in the first place, and they finally get a decision, what happens? Assuming that the Federal Power Commission wins its case against the pipelines, then the Interstate Commerce Commission might well undertake similar action against the railroads. So the railroads begin to see the threat down the road if they were to have their investment credit taken away from them. That, of course, would be a threat to all industries.

As the President said in his state of the Union message, nothing bothers a businessman like uncertainty. The businessman who plans to use his investment credit to improve his business is uncertain whether he can keep it or not.

Mr. SALTONSTALL. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield to the Senator from Massachusetts.

Mr. SALTONSTALL. I have listened attentively to the Senator from Louisiana. Two questions occur to me. One is with respect to utilities, which receive a 3-percent investment credit. If the committee is sustained and the Federal Power Commission has no power to regulate, will there not be different systems in the various States? In Massachusetts the utilities commission might do one thing, and in Louisiana the commission might do another thing. That is one question that occurs to me, if the committee's action is sustained.

The other question relates to the 7-percent credit, in cases of competition, as the Senator has mentioned.

Do we not have to rely on the integrity

and intelligence of the Interstate Commerce Commission and the various other Federal regulatory commissions to decide what is fair and to pass it through, to use the expression, or to permit it to be used for investment? Those two questions occurred to me as I listened to the Senator from Louisiana.

Mr. LONG of Louisiana. As the bill stands before the Senate at this moment, it does not, quite correctly, in my judgment, attempt to tell a State regulatory agency how that agency shall conduct its business. That agency is privileged to require the carriers to set up its books as the Commission directs it to. It is privileged to regulate the utilities' profits, and to include anything else the Commission desires to have included, and to leave out anything the Commission wants left out. As a strong believer in States rights, I believe that is the way State regulatory agencies should act. State commissions will vary on that point.

So far as Federal commissions are concerned, they are created by Congress and are regarded as an arm of Congress. We establish them and say how they are to do business. We prescribe the general standards that are to be used in determining what a fair return is.

When we vote a tax cut, a big question is raised. So far as ordinary competitive industry is concerned, industry that is not subject to regulation, it is very clear that we intended it to get the benefit of the tax cut which is an investment credit.

But Congress also voted a similar tax cut for regulated industries. Are we to leave the Commissions in doubt as to whether that credit should be recouped from the carrier or the utility? Should we not have the responsibility of instructing them and saying, "Yes; we intended that they should have this tax cut as an incentive to modernize and expand"?

Mr. SALTONSTALL. In other words, the Senator from Louisiana is saying that the Federal Power Commission, with respect to pipelines, the Interstate Commerce Commission, with respect to railroads, and the CAB, with respect to airlines, should not have any discretion with relation to the tax investment credit?

Mr. LONG of Louisiana. It seems to me we should tell them, one way or the other. We should say, "This is a tax cut that we will provide you. We will give you an investment credit if you will modernize your service."

It seems to me we should say, "Here is an investment credit. We propose that you should keep it because it will be profitable for you to modernize your business and reduce your rates."

Incidentally, a friend has just handed me a picture of a Southern Pacific mammoth freight car which has just been put in operation. That enormous freight car is being placed in service by the Southern Pacific Railroad, and the result will be to reduce costs and modernize the service and provide better and more efficient transportation service. That company is one of those which will get the tax credit.

The question is whether we want all these utilities to be treated alike. Secretary Dillon said—according to his lights—that he wants that to be done; and I say so, too. All who compete should be treated alike; and we think that those who later on will compete should receive the same treatment.

So, Mr. President, this is what the House thinks, and this is what the administration seems to think.

I have before me a memorandum which gives the position of the administration. The Treasury says it thinks this is consistent with the tax policy of the investment credit because these are competing carriers, and that if we are to do this for one of them, we should do it for all. However, the Treasury deferred to the regulatory Commissions on the overall policy.

As to the regulated carriers, the Treasury says we should consult the regulatory Commissions. But among some of the Commissions there is great uncertainty. The Interstate Commerce Commission says none of the carriers should be allowed to keep the tax credit.

Mr. TOWER. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. TOWER. Were the regulatory agencies originally given the power to compel the transportation companies to flow through the credit, in the first place? Was that authority conferred on them

[*P. 1980*]

by the original bill? I understand it was not.

Mr. ANDERSON. Just the reverse was the case.

Mr. LONG of Louisiana. The Senator says just the reverse was the case; and he was one of the conferees. He says just the opposite intention was expressed.

Mr. TOWER. But we are informed that that power is not conferred by this measure.

Mr. LONG of Louisiana. The Senator is referring to the statement made by the House, in connection with its consideration of the bill, before the House version of the bill was referred to the Senate committee.

Mr. TOWER. But the bill contained no such provision; therefore, we would not now be removing from the regulatory agencies a power Congress previously gave them.

Furthermore, is not a regulatory agency possessed of quasi-executive and quasi-judicial powers given it by Congress; and is it not a creature of Congress; and should not its policy be determined by Congress, or else Congress would have unlawfully delegated away that much congressional authority?

Mr. LONG of Louisiana. That is correct.

Mr. SIMPSON. Mr. President, let me ask whether the Senator agrees that this is a case in which Congress should reach its decision, after careful deliberation, as opposed to a decision by the regulatory agencies as to what should be done?

Mr. LONG of Louisiana. I agree. But I submit that if the bill as it now stands is not enacted and if the existing situation is allowed to continue, the confusion will continue, for I am told that even the members of the Federal Power Commission cannot agree on this point, and that a majority of the Commission takes the position that a passthrough should be required, but that a substantial minority takes the opposite view; and I understand that the Interstate Commerce Commission takes a different view, and that all of its members are arguing about what Congress intended. In that case, Congress should state what it intended and what it means.

Mr. TOWER. In the FCC, the vote was 4 to 3; and in the Federal Power Commission, the vote was 3 to 2.

Mr. LONG of Louisiana. Yes. Imagine that, Mr. President—such a determination by a 3-to-2 vote. The Federal Power Commission decided, by that close vote, that it believed Congress required it to make the passthrough; the others say just the opposite. If the present situation is allowed to continue, the argument will continue for years and years, and the members of the commissions will still be confronted with the question, "What did Congress want us to do?" That is why I challenged the position taken by the Senator from Wisconsin and by other Senators who support his point of view. I say to them that if they do not agree with me and if they think the passthroughs should be required, why not have Congress tell the commissions what Congress wants done. But those Senators do not want that to be done; they want to do what President Johnson has said should not be done. But he has said that about the worst thing Congress could do in this situation would be to refrain from telling the businessmen what Congress believes should be done.

I challenge Senators who disagree with me in regard to the proper point of view for Senators to take: If they do not agree with my view of this matter, let them offer an amendment to require the passthrough to be made.

Mr. SALTONSTALL. Mr. President, will the Senator from Louisiana yield to me?

Mr. LONG of Louisiana. I yield.

Mr. SALTONSTALL. Is it not true that the 3-percent pass-through would be regulated by the State regulatory commissions? I point out that, as the Senator from Louisiana has said, no doubt different regulations would be established in different States. Is it not true that the utilities subject to the 7-percent tax credit would not pass it through? In that event, should not a separation be made?

Mr. LONG of Louisiana. Mr. President, I believe I understand the point the Senator from Massachusetts is making, although I believe he slightly misunderstands the situation.

Subsection (e)(1) directs what procedure shall be followed in the case of the regulated interstate carriers, so far as they are being regulated by the Federal Power Commission. It would direct the Federal Power Commission as to how it shall exercise its activities in regulating the interstate transmission. When power is transmitted across a State line, the interstate transmission is regulated by the Federal Power Commission; but the transportation within a State is subject to regulation by the agency having jurisdiction of the local service area—for example, let us say, the Massachusetts Public Service Commission. So the Federal Power Commission is instructed as to how it should exercise its responsibilities over the interstate transmission lines; and it would be entirely up to the local agency to determine how it would regulate the carriers and distributors in the intrastate service—the portion it regulates.

Let us consider the situation in the case of a natural gas pipeline: The Federal Power Commission would determine how it would exercise its responsibility in connection with the transmission of the gas from Texas to Washington, let us say, or from Washington to Virginia. The Virginia Public Service Commission would have its own procedures, and it would have authority to require that they be followed in connection with the intrastate transportation of the gas—within the State of Virginia. The Virginia Commission could either follow the Federal Commission practice or it could

require an entirely different practice, both in connection with accounting and profitmaking, for the distribution systems for the purely intrastate functions which are regulated by the State public service commissions.

Mr. SALTONSTALL. I understand that the basis of the argument the Senator from Louisiana is making really is that unless Congress adopts the position which has been taken by the Finance Committee, the existing law will remain in its presently completely uncertain position, as has been the case for a considerable length of time.

Mr. LONG of Louisiana. Yes; and it is now completely uncertain.

Some argue that Congress should let the commissions decide. However, it is clear that the commissions cannot agree; so even if Congress were to decide to let the commissions decide, it is clear that the commissions would be unable to decide, and eventually would take the matter to court; and in the court case, the principal basis of the argument would be, "What did Congress mean, in the first place?" Then, 2 or 3 years later the case would come up in the Supreme Court of the United States, and no doubt finally some relief would be provided. But throughout that long, tedious process, the uncertainty and the debate would continue.

Mr. MILLER. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. MILLER. I think this is the point the Senator from Wisconsin was trying to make earlier today. It seems to me we could very properly divide the amendment of the Senator from Wisconsin, or perhaps we could modify it, so as to have it do one or another of several things. Perhaps we could have it provide whether subsection (e)(1) would remain in the bill by itself or whether both subsection (e)(1) and subsection (e)(2) would remain in the bill.

Of course, if Congress voted to have subsection (e)(1) remain in the bill and to have subsection (e)(2) go out of the bill, then what the Senator from Louisiana has been saying about the uncertainty and the problems of the various regulatory agencies would continue to be the case. On the other hand, it seems that we are getting ourselves into an inconsistency here by the way the committee bill is presented. There is a difference in treatment under (e)(1) and (e)(2). Under (e)(1), we say in the case of electrical energy, water sewage disposal services, gas through local distribution systems, telephone and telegraphic services, that we are not going to have a passthrough more than a proportionate part over the life of the property unless we want to, regardless of what the regulatory agencies have to say about it. But with respect to other types of pipeline companies, we are saying, "You do not have to pass through at all." Why the difference? Perhaps there should not be a difference, but perhaps the Senate should be permitted to vote on whether they will be treated the same or not.

Mr. LONG of Louisiana. The Senator from Iowa may not agree, but the House Ways and Means Committee drafted this language. As far as I can determine, the electric utility companies and the telephone companies are completely satisfied that this is a fair distinction between the two. Various companies have a locked-in monopoly, and they are not under the competitive pressure that exists in the transportation industry, so

[*P. 1981*]

that the transportation industry has a better claim on retaining its tax credit because of the competitive nature of those industries.

Mr. MILLER. Mr. President, will the Senator from Louisiana yield further?

The PRESIDING OFFICER (Mr. McGovern in the chair). Does the Senator from Louisiana yield to the Senator from Iowa?

Mr. LONG of Louisiana. I yield.

Mr. MILLER. This is exactly the reason why Congress said, "You are only going to have a 3-percent investment tax credit instead of 7 percent." Now we come along and say, "We gave you too much with the 3 percent. You must cut that down and pass it through to your customers."

First we go up the hill and now we go down.

Mr. LONG of Louisiana. That is how we got into the hiatus to begin with. Someone representing the electric utility says, "As far as we are concerned, we propose to pass this through anyhow," and that is Mr. Cook they are talking about. He proposes to pass this on now. That is just dandy with us. That is what we try to do. Someone says, "Mr. Cook is speaking for a monopoly that has a locked-in advantage, which has the public as its complete captive. It is fair and proper that we should reduce rates and pass them on through over the life of the asset, or even sooner."

Then those who are in a competitive situation come forward. Some of the railroads do not know what it is to be out of bankruptcy because of competition. Perhaps one day the pipelines will be knocked out of business by the supertankers. Perhaps someone will come along and pass atomic energy through

an electric wire in a most efficient way, which will put them both out of business. These people are in a competitive industry. Both carriers and manufacturers of competing commodities make the point that competition is good for the public, and that we will get better rate reductions by competition and by encouraging competition than we will by the dead grasp of regulation seeking to freeze every last nickel out of the transportation industry. So capital and the best management finds its way into other industries rather than into their industry, so that their industry tends to become backward and does not keep up with the times, while other industries of a competitive nature surge ahead.

Mr. MILLER. If that is so—and I believe what the Senator from Louisiana has just enunciated is sound economic philosophy—why do we not provide in the bill for any pass through with respect to subsection (e)(1)? Why do we not say the same as we do with (e)(2) regarding competition to take care of it?

Mr. LONG of Louisiana. If the Senator from Iowa wishes to strike that section, (e)(1), so far as I know——

Mr. MILLER. The Senator would not suggest striking section (e)(1), but I would suggest——

Mr. LONG of Louisiana. I do not wish to do that either.

Mr. MILLER. I would suggest making (e)(1) read the same as (e)(2), if we wish to be consistent.

Mr. LONG of Louisiana. My best understanding of it is——

Mr. MILLER. This will tie in with the statement of the Senator from Louisiana about the flow-through coming about through competition.

Mr. LONG of Louisiana. My understanding is that, as far as the telephone company and the electric utilities are concerned, they expect a flowthrough, and they want the flowthrough. I believe it would be a disservice to strike section (e)(1). They would not like that. If the Senator from Iowa thinks they are doing us a favor, they would not regard that as a favor at all.

I believe one thing they are trying to do is to get prices down so that they can compete more effectively in the field of household heating, so that to a considerable degree they are trying to make competition more vigorous against the pipelines and the users of residual fuel oil and coal, which of course will eventually cause the other industry to find ways to bring its costs down below the cost of the electrical household heat, if they can get the cost down below the cost of residual fuel oil.

Mr. TOWER. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. TOWER. Is not the whole purpose of this legislation to stimulate economic growth? Is that not the original concept behind it? Is that not why it is being offered as it is with a substantial reduction in tax liability? Does it not embody the philosophy of economic growth, the trickle-down theory and the trickle-up theory? Is it not the intent to produce balanced legislation so that the incentive will go both to consumer and to business? Is not section 203(e) an incentive to business; and should it not, therefore, remain in the bill?

Mr. LONG of Louisiana. The Senator is correct. Some sections of the bill, such as the minimum standard deduction, are intended primarily to put more spending power into the pockets of the consumer, to benefit people in the lower income brackets. There are certain sections which are designed to put more money into the pockets of the consumer. That is where most of the tax impact goes in the bill. But certain other sections are designed to encourage more investment, modernization, and expansion. This section is based on the theory that we will give a person a tax cut if he will do something that we wish him to do. What we wish him to do is to modernize, to improve his service, to build new plants and new equipment; and if he will do something in the public interest we will give him a better tax break than he would otherwise receive. This is where we do something for someone provided he does something which is believed to be in the national interest.

Section 203(a) would repeal the Long amendment of 2 years ago. That was my amendment. That was an amendment to depreciate the 7 points of investment credit which had been allowed under the law. Section 203(a) would repeal the Long amendment that would permit depreciation which from one point of view was something never really paid for, that is, to make investment credit even more attractive than it is now. I believe it will be a big incentive to business to go even further toward providing more modernization and better services.

Section 203(e) also applies to the transportation industry. In this subsection in paragraph (1) there is spelled out the passthrough with regard to certain industries—the electrical industry, and the telephone industry. They are completely satisfied that they have a locked-in monopoly; that they do not have to worry about a competitor putting them out of business; and that these are, therefore, adequate incentives, as far as they are concerned.

Mr. GORE. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. GORE. Mr. President, we have heard a great deal of debate about the legislative intent of the Congress in 1962. It is beyond the power of the present Congress to determine or to alter the legislative intent of the 1962 period. The legislative intent of 1962 has been interpreted by quasi-judicial bodies.

The question before the Senate is not what the legislative intent was in 1962. It is not what the intent of the late beloved Senator Kerr was.

The question before the Senate is whether it will approve a certain provision in the bill or whether it will strike from the bill, as proposed by the pending amendment, the provision which would prohibit a regulatory agency from taking into consideration the benefit of the investment credit in determining what it is charged by law to determine, that is, fair and reasonable rates for consumers to pay.

Even without the provision in the pending bill, not all of the benefit of the investment credit is passed through. Only in the cases of utilities whose earnings have reached the upper limits of what is determined to be a fair and reasonable return on investment is the pass-through effective. In the case of the utility which receives an investment credit on its taxes, thereby reducing its tax payment, but which nevertheless does not in its operation show a reasonable return upon investment, under the existing situation the pass through is not required, and is not effective.

Why? Because the overweening direction of the law to the regulatory agencies is to protect the public interest and to fix rates which are, first, fair and reasonable to consumers and, second, which will provide a reasonable return on investment for the utilities concerned.

We have heard a considerable amount of extraneous debate. Lest this be interpreted only as the opinion of the senior Senator from Tennessee, I should like to refer to a decision.

Before doing so, I hope Senators will permit the observation that the debate today and for the last few days demon-

[P. 1982]

strates the great difficulty which one faces in serving in this body, and particularly for a member of the Senate Finance Committee. He must be a lawyer, a scientist, an accountant, an engineer, a tax specialist, and an expert in many respects. Unfortunately, not many are possessed of such talents. I sometimes think least of all the senior Senator from Tennessee. Our limitations therefore dictate the burning of the midnight oil.

That aside, I should like to refer to a decision of the Federal Communications Commission dated July 31, 1963. I read from page 4 of the copy of the decision which I have:

> Point 7. The comments have dwelt at some length on the so-called legislative intent behind the investment tax credit and many of them have implied that the Commission is precluded by such legislative intent from judging the appropriate accounting on the merits in accordance with sound public utility regulatory principles. We do not agree with this implication. It appears to us on the contrary that Congress fully intended that the tax legislation here involved should fit into the normal regulatory scheme.

I now turn to point 10.

> The question may well be asked as to how Congress intended the tax credit to be an investment incentive to utilities if the entire amount is to be passed along to consumers in the form of lower rates.

I digress from the quotation to say that that bears directly upon the point which has been raised repeatedly in debate today. Why would Congress give the benefit with one hand and take it away with the other? I have tried to say that the question is not that simple. I now return to reading from the decision:

> The answer, of course, is that in most cases it will not all be passed on, even under the "flow through" principle. Only in the case of the utility which has already reached the upper limits of a reasonable rate of return is such a result possible, and even then rates cannot be reduced to give immediate effect to the reduction in taxes. In the case of marginal utilities, such as some railroads, for example, it may well be that none of the amount will be passed on to the consumer.
>
> It is this factor, present to some degree in the case of most utilities, of providing the means of increasing earnings and making it easier to obtain capital, both directly through retained earnings and indirectly through rendering its securities more attractive to investors, that constitutes the real incentive. It is worthy of note in this connection that the comptroller of A.T. & T. one of the petitioners in this proceeding, testified in opposition to any tax credit of this nature for utilities on the ground, inter alia, that it was not necessary to encourage the Bell System to construct additional plant.

I digress to recall that I was present the day the official of the A.T. & T. testified. He opposed investment credit for regulated utilities, and very eloquently made the point that a regulated utility is not only regulated as to rates, but is beneficially regulated, too, and protected from competition, thus being given a monopoly supplier position.

The overall requirement was that the utility was to serve adequately the service area for which it had a franchise, and with respect to which the laws and orders of regulatory commissions of both the Federal Government and the States protect the position of the monopoly supplier. Therefore, he opposed it.

Earlier today reference was made to the opposition of Mr. Donald Cook, president of a large electric utility, opposing the provision in the bill.

So it is not a simple question of whether Congress is going to force the passthrough or prevent the passthrough.

The question is whether we will permit the regulatory agencies the freedom and the latitude to take into consideration, in the individual cases that come before them, the true financial position of the utility in arriving at what is a fair and reasonable rate of return on investment and what are fair and reasonable rates for consumers to pay.

I should like to read again from the decision:

> It is our view that the investment tax credit represents a reduction of income taxes and should be so recorded in the accounts. The Revenue Act of 1962 specifically provides that the Federal income tax liability shall be reduced by the amount of the investment tax credit. The amount of the tax due the Government is determined after deductions of the credit.

Lest I take too much time, I hurry now to read the conclusion in the decision:

> We conclude that the proper accounting, with respect to the investment tax credit arising from both owned and leased property, is to account for it as a reduction in income taxes and let such reduction flow through to operating income.

I digress. It is this operating income that is the key factor in determining what is a reasonable rate of return upon investment; and it is the adequacy of a reasonable return upon investment that determines whether or not the rates charged to customers are fair and reasonable.

This is the simple issue. I should not say simple; but it is the issue before the Senate stated as simply as I can state it.

I read further from the conclusion:

> As stated in the notice of proposed rulemaking in this proceeding, we have interpreted all of our uniform systems of accounts as presently requiring flow-through accounting. Consequently, no amendments to our systems of accounts will be ordered herein.

Mr. President, the very able, the very engaging, lovable junior Senator from Louisiana [Mr. LONG], has made an able argument. For him I have deep affection and great respect. He recalled the fight in which he and I engaged with respect to the Communications Satellite Corp. I shall not refer to it at length. I point out that one of the key points in the debate on that bill was that the Government reserved to itself the right to establish its own satellite communications system for the use of the armed services. But now we see the hand of Esau. The Government is taking the position that it will not do so, but will use, instead, the facilities of the satellite corporation. Please pardon the reference. Lest I get into flight on that subject, I shall say no more about it. I shall return to the junior Senator from Louisiana. I can speak more pleasantly, if not more eloquently, about him.

He read a portion of a letter from the Chairman of the Interstate Commerce Commission which bore the date of September 26, 1963.

I did not have an opportunity to read the full letter, but I have a letter dated January 13, 1964, in response to a letter which I directed to the Director, Bureau of Accounts of the ICC on January 10, 1964, which I think bears more specifically upon the question at issue. This letter to me, bearing the date of January 13, in reply to my letter of January 10, bears the signature of Mr. Paolo, Director of the Bureau of Accounts.

I ask unanimous consent that the full letter be placed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JANUARY 13, 1964.

Hon. ALBERT GORE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR GORE: This refers to your letter dated January 10, 1964, and the memorandum attached thereto, requesting a very brief memorandum concerning guideline and liberalized depreciation, investment tax credit, and related annual income tax reductions realized by carriers regulated by this Commission; and including, also, tax reductions realized in filing consolidated returns.

The information referred to in the memorandum attached to your letter cannot be assembled from the financial reports of the several thousand regulated carriers in time to send the information to you today, as you request. We are therefore sending you herein the available information concerning the annual amount of tax reductions realized by railroads, together with an explanation of the accounting and rate-making treatment of depreciation and income taxes in this agency. This is in line with the suggestion in the note in your memorandum. The accounting and rate-making treatment is uniform for railroads, motor carriers and car-

riers in the other modes of transportation regulated by this agency.

Annual reports for the year 1962 filed with us by railroads indicate that tax reductions resulting from guideline and liberalized depreciation, combined, amounted to about $164 million; and tax reductions resulting from the investment tax credit amounted to about $27 million. Annual reports for the year 1963 are due to be filed by March 31, 1964.

We do not have assembled at this time sufficient information to enable us to furnish you with a reliable estimate of tax reductions realized by motor carriers and carriers in the other modes of regulated transportation, but, of course, the sum is substantial.

The following is a brief description of the accounting and ratemaking treatment of the tax reductions:

For accounting and financial reporting purposes, we require regulated carriers to use the so-called flow through method of treating the tax reductions, including the full amount realized from the investment tax credit. This means that the reductions are applied to reduce the tax expense thereby increasing net income shown in financial statements. This Commission decided that financial statements should show the actual income tax payments for each year based on the taxable income reported in tax returns. This accounting and financial reporting regulation, however, has not been controlling in our ratemaking work.

[*P. 1983*]

Present-day ratemaking in this agency consists, not so much in broad overall percentage increases in rates, but in case-by-case consideration of applications made for changes in individual rates published by carriers for transportation of commodities between designated points of origins and destinations. These involve principally minimum rates. In determining the cost to carriers of furnishing transportation in these cases, we use straight-line method of depreciation and generally compute the tax expense on the same basis. Thus, the tax reductions realized from accelerated and liberalized depreciation are not used to reduce transportation rates. This applies also to the tax reduction realized from the investment tax credit.

Tax savings realized by filing of consolidated returns has not been a matter of much consequence in accounting and ratemaking in this agency. For accounting purposes we expect carriers to allocate the total payment to the participating companies in an equitable manner. For ratemaking, we determine the tax expense on the basis of the statutory tax rate applied to the income derived from transportation service. Under this procedure tax savings not assignable to transportation service are not used to reduce rates. We have no information available at present on which to determine the annual tax savings from filing of consolidated returns by regulated carriers.

A separate statement is attached setting forth certain information concerning depreciation of property authorized under income tax regulations, including guideline lives, and depreciation methods prescribed by this Commission under our regulations.

Very truly yours,

M. Paolo,
Director, Bureau of Accounts, ICC.

Information Concerning Depreciation Authorized Under Income Tax Regulations and Methods Authorized by Interstate Commerce Commission

The tax regulations specify depreciation guideline lives for property much shorter than those authorized by this Commission. In addition, larger depreciation deductions are authorized under fast writeoff tax procedures in the early years of the useful life than we authorize under our uniform straight-line method. For example, the tax regulations specify guideline lives for railroad locomotives, freight and passengers cars, and similar equipment as 14 years, compared with ICC prescribed service lives, based on past experience of each individual carrier, averaging 15 to 25 years for locomotives, and 25 years for other equipment. For bridges, trestles, and culverts, elevated structures, shops and enginehouses, and similar structures, the guideline life is 30 years, compared with ICC prescribed lives averaging about 50 to 70 years, depending upon the structural material. Similar substantially shortened guideline lives are specified in the tax regulations for many other classes of property.

Mr. GORE. Mr. President, I should now like to read two paragraphs from the letter which I think are pertinent. Lest someone think they are taken out of context, I shall leave the letter on my desk for all Senators to read until it goes to the Public Printer.

I read:

For accounting and financial reporting we require regulated carriers to use the so-called flowthrough method of treating the tax reductions, including the full amount realized from the investment credit.

Whence does the argument come, that only the Federal Power Commission is looking to the public interest with respect to the pass-through of the investment credit?

I continue to read:

This means that the reductions are applied to reduce the tax expense thereby increasing net income shown in financial statements. This Commission decided that financial statements should show the actual income tax payments for each year based on the taxable income reported in tax returns. This accounting and financial reporting regulation, however, has not been controlling in our ratemaking work.

Present-day ratemaking in this agency consists, not so much in broad overall percentage increases in rates, but in case-by-case consideration of applications made for changes in individual rates published by carriers for transportation of commodities between designated points of origins and destinations. These involve principally minimum rates. In determining the cost to carriers of furnishing transportation in these cases, we use straight-line method of de-

preciation and generally compute the tax expense on the same basis. Thus, the tax reductions realized from accelerated and liberalized depreciation are not used to reduce transportation rates. This applies also to the tax reduction realized from the investment tax credit.

I ask unanimous consent to have printed in the RECORD at this point letters which I received from the Federal Power Commission, the Federal Maritime Commission, and the Civil Aeronautics Board, and a copy of my letter to these Commissions, and also to the Interstate Commerce Commission, of January 10, 1964, requesting certain information.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

FEDERAL POWER COMMISSION,
Washington, D.C., January 29, 1964.

Hon. ALBERT GORE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR GORE: This supplements our response to your request of January 10, 1964, for information concerning the tax savings to utilities subject to our jurisdiction.

The actual 1962 investment tax credit reported in the 1962 annual reports by 62 interstate gas companies, mainly pipelines, with gross sales of 10,560,170,829 thousand cubic feet, amounted to $26,054,132.

The list of companies and the amounts of investment tax credit reported to the Commission for each are contained on the attached list.

There are an additional 19 interstate gas companies, over which the Federal Power Commission has jurisdiction, which filed 1962 annual reports showing no investment tax credit taken.

A sampling of the investment credit taken by the natural gas pipelines for 1963 indicates that the amount of the investment credit in 1963 is substantially the same as the amount taken in 1962.

It should be kept in mind that the amounts taken in 1962 and 1963 do not represent the full amount of the credit available to the pipelines because many of the pipelines made large refunds pursuant to Commission order during these years and, therefore, had no income tax against which to apply the investment credit. The investment credit can be carried back 3 years and forward 5 years and any residue can be deducted from Federal income taxes in the sixth year. It should also be kept in mind that the effect of the investment credit on the rates consumers pay is approximately double the amount of the credit taken.

The total amount of the investment tax credit will undoubtedly increase for 1964 and for a number of years beyond, not only for the jurisdictional companies listed on the attached sheet, but for the entire industry. This is true because the investment tax credit is geared directly to plant additions and the official forecasts of the American Gas Association show increases in the annual plant additions of 6.1 percent for 1963, 5.9 percent for 1964, 6 percent for 1965, and similar increases, none less than 5 percent, for each year through 1972.

The Commission approved $812 million of new pipeline construction in 1963. The investment credit from this new construction is approximately $57 million, which is a fair estimate of the amount the natural gas pipelines will eventually save. The potential savings to consumers is thus in the order of $120 million a year, as I testified before the Senate Finance Committee.

Inquiries have been received from Senator PAUL H. DOUGLAS and Senator GAYLORD NELSON concerning this matter and similar replies have been made.

Sincerely yours,

JOSEPH C. SWIDLER,
Chairman.

Schedule of pipeline companies reporting investment tax credit in annual report, form 2, for the year 1962

Company	Amount
Algonquin Gas Transmission Co	$121,153
Amere Gas Utilities Co	4,867
American Louisiana Pipeline Co	100,000
Arkansas-Louisiana Gas Co	590,000

FEDERAL MARITIME COMMISSION,
Washington, D.C., January 13, 1964.

Hon. ALBERT GORE,
U.S. Senate,
Committee on Foreign Relations,
Washington, D.C.

DEAR SENATOR GORE: I am pleased to furnish the following information in reply to your letter of January 10, 1964 and the accompanying outline of "Information to be supplied." In keeping with your needs as indicated in the outline, time has not permitted the development of all data which may be available in the files of the Commission. The replies are limited, therefore, to information which is readily obtainable.

While the Federal Maritime Commission has certain regulatory responsibilities in connection with offshore foreign water carriers and other related persons, its authority to prescribe just and reasonable maximum rates is limited to those common carriers by water who operate in the various domestic offshore services, (section 18, Shipping Act, 1916, as amended), i.e., between continental United States, Alaska, Hawaii, any territory, and possession of the United States; and between places within the same territory or possession (except intrastate commerce in Hawaii and Alaska). Financial and operating statements are required only from those carriers operating in the domestic offshore services pursuant to the authority contained in section 21 of the Shipping Act, 1916, as amended.

Vessels are the significant assets owned by the domestic offshore carriers which are subject to depreciation. None of the vessels owned by these carriers were purchased new. The majority of the vessels in the domestic offshore fleet were acquired from the Federal Government pursuant to provisions of the Merchant Ship Sales Act of 1946, as amended. Other used vessels have been acquired from American corporations operating in offshore foreign trades. Therefore, vessels in this segment of the industry are not acquired new and are not provided for in the accelerated depreciation rates provided by section 167 of the Internal Revenue Code. Generally, these carriers have depreciated their vessels, on a straight-line basis, over a period of 20 years. The Bureau of Internal Revenue has permitted, in some instances, carriers to extend the economic life of particular vessels as a result of major alteration or conversion. The Commission has recently held, in one rate proceeding, that for rate making purposes, the domestic offshore vessels of the carrier are to be depreciated on a straight-line basis over a period of 25 years. Experience reveals that vessels in the domestic offshore services are used for 25 years or more.

The following replies are enumerated in accordance with your outline of "Information to be supplied by the Federal Regulatory Agencies."

1. The Commission, except as noted above, has not prescribed depreciation rates to be used by carriers subject to its regulation. The Commission has developed no statistics which would enable it to compare depreciation rates used for tax purposes with those used by the carriers in regulatory proceedings before the Commission. Consequently, it is unable to state the difference between average book depreciation rates and rates permissible if guideline rates were used. The Commission, to date, has not issued any prescribed accounting procedure for carriers subject to its regulation with respect to rate treatment for such tax savings.

2. The Federal Maritime Commission, at present has no established policy as to the treatment of liberalized depreciation tax savings, nor does it have a reporting system whereby this data could be obtained. However, it appears that under the instant circumstances, the effect of this provision upon its domestic offshore carriers is probably minimal. This is dictated by the following:

The domestic offshore trade utilizes a relatively small number of vessels, to which the liberalized depreciation provisions of section 167 do not apply, since predominantly all vessels in the trade were built by the Government prior to 1947, and are categorized as secondhand assets. If increases in value arising from recent purchases or vessel betterments and conversions were eliminated, virtually all of these vessels have exceeded, or in the near future, will exceed, the prescribed guideline life of 18 years.

Under these circumstances, the Commission has not been required to consider the question of liberalized depreciation, and the amount of savings, if any, is not available. If however, unknown to the Commission, carriers have availed themselves of the provisions of section 167, the funds resulting from such savings have been included in the Commission's rate base calculations and allowed the same return as other assets employed in the service.

3. The Commission has generally ignored tax savings realized from the filing of consolidated returns. In some cases, however, the Commission has recognized a reduction in tax liability of a carrier in a regulated service when another service or division of

the same carrier is operating at a loss. The net effect of such a determination might be said to result in reduced rates. The Commission has no means of estimating the amount of the tax savings resulting from such decisions, nor the consequent reductions in rates, if any.

4. The Commission has been unable to accumulate any statistical financial data. In the limited time allowed by your request, no investment tax credit has been found in the financial statements for 1962 of carriers reporting to the Commission. In connection with an investigation of an increase in rates, one carrier has indicated an investment tax credit of $7,000 for 1963. This claim has not been investigated or verified other than superficially.

As stated herein, no industry statistics are accumulated by the Commission and the aggregate gross investment in 1962 and 1963 is not available. Neither the Commisssion nor any of the examiners on the staff have issued any decisions in which investment tax credit has been an issue. The Commission,to date, has not issued any prescribed accounting procedure for carriers subject to its regulation with respect to investment tax credit provisions.

I am sorry that I cannot furnish more complete replies to your inquiries, but this is all that is available under the conditions of your request.

Sincerely yours,

JAMES L. WALLACE,
Director, Bureau of Financial Analysis.

CIVIL AERONAUTICS BOARD,
Washington, D.C., January 14, 1964.

Hon. ALBERT GORE:
U.S. Senate,
Washington, D.C.

DEAR SENATOR GORE: This is in reply to your letter and attached memorandum of January 10, 1964, with regard to guideline tax depreciation, liberalized depreciation, and the investment tax credit as they affect the air transportation industry. Each item is numbered in the sequence reflected in the attached memorandum.

1. The Board does not have the authority under its act to prescribe or approve depreciation rates of the carriers for accounting purposes. However, the Board for ratemaking purposes set a 10-year life for jet aircraft and 7 years for large piston aircraft. The carriers have generally conformed their accounting to these rates although longer lives, up to 14 years, are used by some carriers for jet aircraft. This compares with the 6-year life permitted by the depreciation guidelines. We are enclosing herewith an information memo dated December 16, 1963, which indicates the extent of the use of guideline depreciation by the route carriers in their tax returns for 1962. The reported flight equipment depreciation expense of the 9 carriers included in the summary attached to the memo was 44 percent of such expense for the industry. Accordingly, assuming that the nine carriers reflected in the summary are representative of the industry, depreciation for the industry under the guidelines would have approximated $447,500,000 as compared with $342,900,000 under prior tax policy, a net increase of $104,600,000 in depreciation for tax return purposes. The Board has not formulated a specific policy on the accounting or rate treatment for tax amounts associated with guideline depreciation; however, when tax and accounting depreciation do not agree the substantive import would be the same as for liberalized depreciation discussed below.

2. Air carriers generally depreciate property and equipment on the straightline basis for book purposes. Where liberalized depreciation under section 167 of the Internal Revenue Code is used in the tax returns a related tax amount may be deferred for both accounting and rate purposes thus normalizing reported income taxes from year to year. During the calendar year 1962, the form 41 reports for the industry indicated provisions of $65,517,319 in the deferred income tax account which had a cumulative balance at December 31, 1962, of $168,639,730. At September 30, 1963, the latest information available, the cumulative balance of the deferred tax account was $216,457,105.

The Board does not consider that the higher depreciation expenses which are permitted for tax purposes under section 167 of the Internal Revenue Code reflect tax savings. Rather, the Board considers that the effect of section 167 is to produce a tax saving with respect to the early years which is offset by increased taxes in the later years.

The Board's rate policy with respect to the treatment of liberalized depreciation expenses under section 167 of the Internal Revenue Code is set forth in its opinion in the *General Passenger Fare Investigation,* docket 8008, et al., order E-16068, dated November 25, 1960. In concluding therein that the income tax allowance should be normalized, the Board found that the denial of normalized taxes would be contrary to the intent of Congress to grant all taxpayers what amounts to an interest-free loan to assist business in the modernization and expansion of industrial capacity. The Board does not recognize any balance in the normalizing account as funds upon which a rate of return should be allowed. (The Board found an overall 10½-percent rate of return as a fair and reasonable rate of return for the net working capital, net operating property and equipment after deductions for depreciation and overhaul reservation, and other used and useful assets including equipment purchase deposits.)

3. As a general rule, air carriers do not file consolidated tax returns. The existence of conditions which would permit or be

[*P. 1985*]

conducive to the filing of such returns is extremely limited in the industry. Therefore, the Board has not established any policy in respect to tax savings which could result from the filing of such returns.

4. Based upon reports by the carriers the amount of investment tax credit actually taken in reduction of tax liabilities in 1962 is estimated to be $1,732,600. The Board has not completed a rulemaking proceeding on accounting for the investment tax credit. However, on January 25, 1963, all carriers were informally requested to defer the full

amount of the credit actually taken in 1962. The deferred tax element of the credit (52 percent) would be amortized to income tax expense over the service life of the related equipment and the income element (48 percent) would be amortized to income tax expense over the statutory periods set forth in section 46(c)(2) of the Internal Revenue Code. A proposed rule was issued October 2, 1963, which corresponded with the informal request except that the 48-percent portion for nonsubsidized carriers would be taken into income when realized and 100 percent of the credit would be taken into income by subsidized carriers when realized. Final action on this matter has been deferred pending disposition of House Resolution 8363.

We trust the foregoing meets your needs. If you have further questions we will be happy to answer them.

Very truly yours,

WARNER H. HORD,
Chief, Office of Carrier Accounts and Statistics.

CIVIL AERONAUTICS BOARD,
December 16, 1963.

To: The Board.
From: Chief, Office of Carrier Accounts and Statistics.
Subject: Use of depreciation guidelines by certificated route carriers.

Because of the expected impact of the depreciation guidelines and rules issued by the Internal Revenue Service upon actual income tax expense, the route carriers were requested to inform this Office as to the extent of use of the method.

Under the guidelines carriers can, for income tax purposes, depreciate aircraft over a period of 6 years which is generally shorter than the periods previously used. Nine carriers using the guidelines for computing depreciation in their tax returns indicated an increase of $46 million over the amount which would have been reported for depreciation in 1962 under prior tax policy. The impact of the increased depreciation for the nine carriers would be to reduce actual 1962 income tax of the nonsubsidized carriers by approximately $23.6 million and of the subsidized carriers by $0.3 million, thus temporarily freeing such funds for other uses.

However, the use of guideline depreciation for tax purposes would have little impact upon reported net earnings of the nonsubsidized carriers since they generally follow the practice of accounting for deferred income taxes. In view of the Board's actual tax policy for determining subsidy, the subsidized carriers are not permitted to record deferred income taxes associated with guideline depreciation. Therefore, its use by subsidized carriers would ordinarily result in their reporting lower income taxes and higher net earnings.

A 10th carrier, Trans-Texas, apparently used the guideline depreciation period but the data submitted was incomplete and therefor was not included in the attached summary. Also, the information submitted by Chicago Helicopter, one of the nine carriers, is questionable since depreciation under the guidelines is indicated as being lower than depreciation expense under prior tax policy.

It will be noted from examination of the attached summary that there is no pattern among the carriers using the guidelines.

WARNER H. HORD.

Certificated route carriers—Income tax depreciation allowed by IRS guidelines

Carrier	Depreciation prior policy	Depreciation IRS guidelines	Guidelines increase (decrease)
1. Allegheny Airlines	$2,425,177	$2,786,616	$361,439
2. American Airlines	34,636,438	55,889,666	21,253,228

JANUARY 10, 1964.

CHIEF ACCOUNTANT,
Civil Aeronautics Board,
Washington, D.C.

DEAR SIR: I would appreciate it very much if you could supply me with a very brief memorandum setting forth answers to the questions outlined in the attached memorandum.

Sincerely yours,

ALBERT GORE.

INFORMATION TO BE SUPPLIED BY THE FEDERAL REGULATORY AGENCIES

1. Please prepare a brief statement showing the difference in average book depreciation rates prescribed or approved by the agency and the maximum depreciation rate permissible under guideline tax depreciation and the annual tax savings if the guideline rates were used (to be computed by applying the differential in depreciation rate to the total gross investment of the industry concerned). If available, supply any data already collected concerning the extent of the use of guideline depreciation by such regulated industries. Has the agency formulated any policy on the proper accounting and rate treatment of such tax savings? If so, please describe them.

2. Describe your agency's present rate and accounting treatment of liberalized depreciation tax savings, under section 167 of the Internal Revenue Code, and advise as to the amount of such tax savings in 1962 and 1963, if available. If these tax savings are normalized, what is the present cumulative balance in the normalizing account? What rate of return, if any, does the agency allow on such funds?

3. Does your agency have any policy concerning tax savings realized by the filing of consolidated tax returns? If such savings are used to reduce rates, please estimate the annual amount of such tax savings for the industry concerned.

4. If available, what was the amount of investment tax credit actually taken by the regulated industry in 1962? Otherwise, what was the aggregate gross investment in 1962 and 1963, if available. Assuming that 85 percent of such investment was eligible for the credit, what were the tax savings in those years. Has your agency formulated any policy on the proper accounting and rate treatment of such tax savings? If so, please describe them.

NOTE.—Information is needed as soon as possible. If answer to any question will delay full reply beyond Monday, January 13, omit such answers.

Mr. GORE. Mr. President, I shall not detain the Senate further. This is a complicated issue on which one could speak at great length if he were sufficiently informed. I close by calling the attention of the Senate to the message of President Johnson, which was received in the Congress today. He expresses great concern for the consumer interest, and indicates the appointment of a special assistant and a new consumer committee. I applaud the President. I hope there will be greater activity in the protection of the consumer interest. I respectfully suggest that the pending amendment would be a good place at which to start.

On page 2 of the President's message he refers to action to assure fair rates in transportation, power, fuel, communications, and the like.

Then he says:

What is new is the concern for the total interest of the consumer, the recognition of certain basic consumer rights.

What are some of those rights? He lists them:

The right to safety, the right to be informed, the right to choose, the right to be heard.

Consumers have a right to have their representatives in Congress heard. The full profit position of the utilities should be revealed and the consumers should be informed in that regard.

I do not wish to go at length into a discussion of the President's message, which I applaud. I should like to read this paragraph:

Our record of overall price stability in recent years has been excellent. But the trend of consumer spending for services has been constantly rising; and the safeguarding of the consumer's interest in the area of services is comparatively weak.

The provision in the pending bill would make it weaker.

Briefly, I suggest the advisability of adopting the amendment now pending, because it would preserve for the regulatory agencies, quasi-judicial as they are in nature, the power, the authority, and the responsibility to regulate in the public interest, in the interest of the consumers, and in the interest of the utilities over which they have jurisdiction.

This regulation, as I have indicated by the decision cited, is done in some respects according to broad general principles, but in large measure by decisions upon individual cases, one utility having one situation, another having another, a fair rate appearing to be one thing in one part of the country, but quite another in a different part of the country, because of the differences in operating costs and in return on investment. This involves all costs, including tax costs, which, of course, are affected by the investment credit.

Mr. TOWER. Mr. President, I have no desire to prolong the debate. Therefore I ask unanimous consent to have

[*P. 1986*]

printed in the RECORD my statement in opposition to the amendment.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR TOWER

INVESTMENT CREDIT

In 1962, Congress was concerned about the failure of American industry to expand and modernize plant and equipment. Accordingly, it considered means of increasing investment by domestic industry. Among the means considered were corporate rate reduction, increased depreciation allowances, and the provision of a credit directly against tax liability. The investment tax credit was chosen in preference to other incentive devices primarily because the credit was believed to be a more potent stimulus since it confers the tax benefit directly upon the company making the qualified investment.

Throughout the procedures leading to the enactment of the investment tax credit, distinctions were made between investments which qualified for the maximum credit, investments which qualified for a partial credit, and nonqualifying investments. At all times, it was recognized that investments made by the transportation industry should qualify for the maximum credit. Participation by the transportation industry in the tax incentive program was correctly believed to be essential to the program's success since transportation expenditures constitute more than 20 percent of gross national product, since transportation generates about 20 percent of all taxes collected by the Federal Government, and since transportation provides 14 percent of the Nation's civilian employment.

When the investment tax credit was first proposed by President Kennedy in his tax

message to Congress, he specifically recommended that investments by regulated transportation companies be eligible for the credit.

The President's position was explained in greater detail by the Secretary of the Treasury in May of 1961 while testifying in support of the President's then proposed investment tax credit. In a detailed statement before the Ways and Means Committee on May 3, 1961, Secretary Dillon recommended that the proposed investment credit be made applicable to regulated transportation companies (other than subsidized merchant marine companies), and that the credit not be made applicable to "regulated monopoly industries." The reason for the proposed distinction was stated to be that "investments by these regulated monopoly industries are largely governed by determined public requirements and are subject to regulated consumer service charges designed to provide a prescribed after-tax rate of return on investment." On the other hand, the Secretary testified that enterprises in the transportation field, "although subject to various forms of regulations of their charges, are in fact highly competitive businesses with varying rates of return on investment. * * * Many of these enterprises are not only competitive among themselves at given regulated prices, but also must compete with private truck fleets, private airplanes, and other transportation facilities operated by industrial corporations which would be eligible for the credit."

Thus, as proposed by the administration, transportation companies would be fully entitled to the benefits of the investment credit just like nonregulated companies, while noncompetitive public utilities would not qualify for the credit.

Secretary Dillon's distinction was adopted by the Ways and Means Committee which recommended that transportation companies subject to regulation be treated like other competitive industries as fully qualifying for the credit. However, instead of completely excluding regulated public utilities from the benefits of the credit, the Ways and Means Committee provided a 4-percent credit for such companies. As one of the principal reasons for giving noncompetitive public utilities a smaller credit, the committee stated:

"The smaller credit is provided in such cases because much of its benefit in these regulated industries is likely to be passed on in lower rates to consumers, thereby negating much of the stimulative effect on investments."

Thus, it was made clear that the full benefit of the investment credit was intended for regulated companies qualifying for the 7-percent (then 8-percent) credit.

While the Finance Committee recommended that the maximum investment credit be reduced to 7 percent for taxpayers generally, and to 3 percent for noncompetitive public utilities, it also recognized the validity of the distinction made by Secretary Dillon.

Finally, the distinction between competitive transportation companies and noncompetitive public utilities was enacted into law as section 46(c)(3) of the Internal Revenue Code of 1954.

As was made clear initially by Secretary Dillon, transportation companies which are engaged in a highly competitive industry should be entitled to the full benefits of the investment credit using such benefits as their management sees fit. However, as previously indicated, there are reasons for providing regulated noncompetitive industries with a smaller credit and for allowing regulatory agencies having jurisdiction with respect to such companies to pass a proportionate part of the credit on to consumers.

Nevertheless, since the enactment of the credit, a majority of the commissioners of some Federal regulatory agencies have taken the position that companies subject to their jurisdiction should not retain any of the benefits of the investment tax credit.

For example, on July 29, 1963, the Federal Communications Commission decided by a 4-to-3 vote, "that the best method to reflect investment incentive tax credits made available by the Revenue Act of 1962 is to permit the investment credits to 'flow through' immediately to net income * * *"

Specifically, the majority of the Commission concluded that "the proper accounting with respect to the investment tax credit arising from both owned and leased property is to account for it as a reduction in income taxes and let such reduction 'flow through' to operating income. As stated in the Notice of Proposed Rule Making in this proceeding, we have interpreted all of our uniform systems of accounts as presently requiring 'flowthrough' accounting. Consequently, no amendments to our systems of accounts will be ordered herein."

Under the majority's decision, noncompetitive public utilities would receive absolutely no benefit from the credit in spite of the fact that Congress specifically provided a partial credit for such companies.

More recently, in an order issued January 23, 1964, the Federal Power Commission, by a 3-to-2 vote, announced its conclusion that "on the basis of existing law the accounting treatment to be prescribed should be to 'flow through' the credit to income." Other decisions have indicated that this accounting treatment will be followed for rate purposes.

These commissions have not acted with unanimity. As is evident from the illustrations previously given, a strong minority of each commission favors the treatment under present law which section 203(e) would clearly prescribe. In the case of the one commission, only one vote separated the majority favoring a "flowthrough" interpretation of present law from the minority opposed to the "flowthrough" interpretation. Nor was this commission able to present its views regarding section 203(e) unanimously to the Finance Committee. To prevent such a narrow majority of commissioners from frustrating congressional intent, section 203(e) would prescribe the permissible limits of Federal regulatory agency treatment.

Those opposing the enactment of section 203(e) have taken the position that the investment credit should "flow through" to ultimate consumers, that regulated companies do not need the incentive effect of the investment credit, and that retention of the benefits of the investment credit will result in an unintended windfall to regulated taxpayers. I do not believe that Federal regu-

latory agencies should be the sole arbiters of whether the benefit from the investment credit should be retained by regulated companies.

These arguments in opposition to section 203(e) are based upon basic misconceptions regarding the purpose of the investment tax credit, the role and power of Federal agencies, and the benefits of "flowthrough."

The truth is that the investment credit was intended to stimulate investment, not consumption. That interference by Federal regulatory agencies would upset the balance achieved by the administration's bill between measures designed to stimulate consumption, and measures designed to stimulate investment, and would require a reappraisal of the relative size of the rate reduction going to consumers.

That even if the maximum amount of the attempted "flow through" ever reached consumers, it would be insignificant in amount—less than $1 per year per consumer.

That the transportation industry, like nonregulated industry, is a highly competitive industry which is not required to expand by law, but which will be stimulated to modernize plant and expand facilities and services if permitted to retain the benefits of the investment credit.

That enactment of section 203(e) will not result in any increase in rates to consumers; it simply will not work to decrease them at extra cost to the Treasury and to the investment incentive which was intended.

These facts, together with the other facts outlined above, clearly require the enactment of section 203(e) to assure that the original intent of Congress will be executed by Federal regulatory agencies and to obtain the participation of regulated transportation companies in the growth of the economy.

Mr. TOWER. Mr. President, I believe that a mistaken impression is being conveyed by the debate; namely, that there is some great dichotomy of the American people which divides them into two classes, producers and consumers. I maintain that no such dichotomy exists. We are all consumers. Every one who works is a producer of a product or a service. I reject the notion that the consumer interests and the producer interests are always in conflict. That is not true. I believe that what is good for business is good for everyone. The bill was designed as a stimulant to economic growth. If business prospers, everyone prospers. The bill assaults the problem from two directions. It helps the wage earner, the income earner, and the consumer, and also helps business. It makes the benefits both trickle up and trickle down, according to the two classic theories.

I reject the notion that the amendment is properly a matter for consideration by the Commerce Committee, rather than by the Finance Committee. After all, this is a tax measure, designed to

[*P. 1987*]

stimulate economic growth and to give full effect to the full concept of the bill. It was fully within the purview of the Finance Committee to include section 203. I hope that the amendment proposed by the Senator from Wisconsin will be rejected.

I commend the Senator from Louisiana for his comprehensive presentation of the case against the amendment and associate myself with his remarks.

Mr. LONG of Louisiana. Mr. President, I hold in my hand a list of all the pipeline company investment tax credits for the year 1962. The amount involved is a grand total of $26 million. So far as I know, the other carriers are not being required to flow this credit through.

Something was said to the effect that that was a case for the ICC. It is my impression that the ICC, perhaps, requires the information for accounting purposes, but not for ratemaking purposes. So the figure $26 million is at rate variance with the $600 million, or, I believe, even the $6 billion figure, that was mentioned on the floor of the Senate. It is like some of the things that, when boiled down to what one is acutally talking about, mean that we are talking about $1 for every $100 someone else is talking about.

Mr. SIMPSON. Mr. President, will the Senator from Texas yield?

Mr. TOWER. I yield.

Mr. SIMPSON. I associate myself with the remarks of the Senator from Texas and with the colloquy between the Senator from Louisiana [Mr. LONG] and the Senator from Massachusetts [Mr. SALTONSTALL], as well.

I shall not labor the question at length, because I know the Senate is ready to vote. However, the reason why the 1962 Revenue Act allowed monopolistic utilities a 3-percent tax credit, but allowed the transportation industry a 7-percent credit was the substantial competition the transportation industry faces. After the Committee on Finance acted, the Federal Power Commission, on January 23, 1964, ordered, for accounting purposes, "flowthrough" to consumers of all the incentive of the tax credit.

Mr. President, I ask unanimous consent that that order be printed at this point in the RECORD.

There being no objection, the order was ordered to be printed in the RECORD, as follows:

INTERIM ORDER ISSUED JANUARY 23, 1964

United States of America, Federal Power Commission before Commissioners Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

Investment tax credit under 1962 amendment to Internal Revenue Code; accounting treatment by public utilities, licensees, and natural gas companies—Docket No. R–232.

The Commission has under consideration in this docket[1] an order prescribing the accounting treatment to be accorded under the Commission's Uniform Systems of Accounts to the investment tax credit provided by the Revenue Act of 1962.[2]

The Commission has reached the conclusion that on the basis of existing law the accounting treatment to be prescribed should be to "flow through" the credit to income. We recognize, however, that legislation is pending in the Congress dealing with the investment credit and that it is not now possible to determine whether such legislation as might be adopted would require a different accounting treatment for the credit.

In order to enable affected companies to close their books of account for the year 1963, the Commission hereby notifies all public utilities, licensees, and natural gas companies that the interim accounting prescribed for the investment tax credit under Order No. 261, Docket No. R–231, issued January 9, 1963,[3] continues in effect for calendar year 1963 and in accounting for income taxes until further notice or order of the Commission.

By the Commission. Commissioners O'Connor and Woodward dissent as to the statement of the accounting treatment which is appropriate under existing law. Commissioner O'Connor believes decision should be deferred until Congress has acted on the pending legislation. Commissioner Woodward favors deferred tax accounting.

JOSEPH H. GUTRIDE,
[SEAL] *Secretary.*

Mr. SIMPSON. Mr. President, this was in defiance of the House action and the action of the Committee on Finance, as shown by their actions.

I ask unanimous consent that a summary of my argument be printed at this point in the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

SUMMARY OF ARGUMENT IN SUPPORT OF SECTION 202(e) (2)

1. The purpose of the 1962 tax provision authorizing the investment tax credit was to stimulate the expansion of the Nation's productive facilities. It was intended for the use of industry and not for the direct benefit of the consumer. (See TAA statement, pp. 1, 3, 10, 16, 17.) The consumer is being provided for in the present tax bill through reduction in individual income tax rates.

2. The reason the 1962 Revenue Act allowed monopolistic utilities a 3-percent tax credit but allowed the transportation industry a 7-percent credit was the substantial competition the transportation industry faces. (TAA statement, pp. 2, 3, 10, 11.)

3. The conference report on the 1962 tax bill made clear that the investment tax credit applies to "both regulated and nonregulated industries." (H. Rept. No. 2508, on H.R. 10650, 87th Cong., 2d sess., p. 14.) (TAA statement, pp. 16, 17.)

4. Section 202(e) (2) of the present tax bill was passed by the House and approved by the Senate Finance Committee. It assures that the incentive effect of the investment tax credit will not be denied the transportation industry as certain Federal regulatory agencies are attempting. (TAA statement, p. 15.)

5. After the Senate Finance Committee acted, the FPC on January 23, 1964, ordered, for accounting purposes, "flow through" to consumers of all the incentive of the tax credit. A copy of the order is enclosed. This is in defiance of the House and the Senate Finance Committee actions on section 202 (e) (2).

6. The foremost private advocate of section 202(e) (2) is the Transportation Association of America whose panels of air, oil pipelines, freight forwarders, highways, water carriers, investors, and users support its position. Certain elements are attempting to tag the provision as a "natural gas pipeline" measure only. Although the competitive pipeline industry has a valid interest, the allegation that it is just a pipeline amendment is false and misleading. (TAA statement, pp. 7–10.)

7. The transportation industry asks only for equal treatment with other industries.

8. The transportation industry is not required by law to expand, but must have the same incentives to expand and improve service as all other industries have. Certain elements are erroneously stating that the industry can be required to meet new demands and furnish better service, and, therefore, needs no incentive.

9. By attempting to thwart the intended effect of the tax credit, certain regulatory agencies are interfering with the Nation's tax policy and attempting to superimpose their will on Congress. Nevertheless, certain elements claim that Congress is interfering with the regulatory scheme. The opposite is true, for after Congress announced the policy of stimulating the American economy by means of the investment tax credit, some Federal agencies seek to eliminate that tax incentive by not allowing its use to industries subject to their jurisdiction. Certain regulatory agencies are the ones interfering with the tax policy; once they interfere, they claim that any prohibition on their unlawful action is interference with the regulatory scheme. Section 202(e) (2) is an obvious tax measure and not a regulatory measure, for it enforces the tax policy that all industries should receive the stimulation of the credit.

10. Consumer costs will not increase when this provision is approved. Rates to consumers will not be affected by permitting transportation companies to retain this tax incentive. Granted, if the consumers get all the benefit, their rates will decrease, but this

[1] Notice issued Jan. 15, 1963, published in 28 F.R. 528 of Jan. 19, 1963.

[2] 76 Stat. 960, Public Law 87–834, sec. 2, adding new secs. 38, 46–48, 181, to and amending certain existing sections of the Internal Revenue Code of 1954.

[3] 29 FPC 62, 28 F.R. 402.

would thwart the intent of the tax credit to stimulate industry. If industry keeps the incentive, consumer prices will not change. (TAA statement, p. 2.)

11. If the transportation industry should not receive this incentive, revenues to Treasury from the transportation industry will be reduced by more than twice the anticipated loss in tax revenues. This loss would have to be recouped from all American taxpayers, including the consumers. Assuming the figure of $600 million, which some elements say would be the consumer benefit, is accurate, then Treasury would collect $600 million less from the transportation industry, and the American taxpayer would have to make up this loss. (TAA statement, pp. 3, 14.)

Mr. SIMPSON. Mr. President, those who oppose the recommendations of the Finance Committee on the investment tax credit issue raise a question which should concern the entire Nation. It goes to the heart of our governmental processes.

This debate poses a fundamental moral question—is the law what the Congress determines that it is by majority action after careful deliberation—or is the law what an appointed agency or commission decides it should be?

We all bear witness to fundamental truths about our Government—the principles that separate us in history as a nation in which the interests of our people move forward in freedom.

One of these tenets is that we are a government of law—not a government of men in which whim and caprice can rule.

The question involved in the investment tax credit provision of the Revenue Act is one of reaffirming to the Nation that the legislative process has integrity—that when the people act through their Congress they can be confident such action will not be distorted or negated.

[*P. 1988*]

It is not my purpose to set up a pattern of moral conduct for anyone in this honorable body. My purpose is to suggest with firmness that where the will of Congress has been deliberately expressed through law, that law should not be subverted by any agency of Government.

If we fail to reaffirm the legislative supremacy of the Congress, any agency in effect can be its own congress and the work of the people will have been thwarted.

A brief review of the history of this legislation demonstrates the importance of the principle involved.

The Revenue Act of 1962 specifically authorized a 3-percent investment tax credit for certain classes of utilities which have little or no competition and a 7-percent credit for those which are subject to competition.

The law is specific and clear.

When the act was adopted, after a conference, this statement was made on the floor of this Senate:

> It is the understanding of the conferees on the part of both the House and Senate that the purpose of the credit for investment in certain depreciable property, in the case of both regulated and nonregulated industries, is to encourage modernization and expansion of the Nation's productive facilities and to improve its economic potential by reducing the net cost of acquiring new equipment, thereby increasing the earnings of new facilities over their productive lives.

Despite the specific provisions of the law—despite the language of the report to the Senate—despite current action by this Congress to reaffirm the intent of the law—regulatory agencies have seen fit to thwart the will of Congress by denying the investment credits specifically authorized.

In effect, they are flouting the law of the land. They are establishing rule by men rather than rule by law.

Have the independent agencies become so independent of Congress that they can subvert the law with impunity? Do they not have the same obligation to support the law that is demanded of every citizen? Is it they or Congress which sets tax policy?

These are the fundamental, the moral, questions involved today.

The Revenue Act of 1963 simply reaffirms the intent of Congress in 1962 as expressed in a law which is unequivocal and not subject to misinterpretation.

Those who are fighting against the investment tax provision of the 1963 act opposed it in 1962. Having lost their case in 1962, they are today using the back-door method of regulation to negate a law adopted by a majority of Congress. This is a tremendous disservice to the democratic process, the type of action which destroys public confidence in our system of government.

It is interesting to note that in acting on the investment tax credit question here is no unanimity of opinion within the independent agencies. A simple majority of the membership on various commissions have acted to negate the will of Congress. There is strong minority opposition within the commissions themselves.

This means that the national tax policy can be flouted by a handful of men in defiance of the Congress. Such power in the hands of a simple and transient majority constitutes a danger to the fundamental principles of the American system.

Those who oppose the investment tax

credit provision of the bill now under consideration should, I suggest, direct themselves to the original law. They should not seek to perpetuate government by men through a back-door method.

The concept which they seek to establish could have far-reaching effects in all areas of Government activity.

The question today is not one of whether investment tax credit for regulated industry is right or wrong. That was debated in 1962 and this Congress determined that it was right. The question today is whether the law will be recognized and applied as written. That is what the legislation now before this body seeks to accomplish.

In my opinion, Congress must act to uphold the law. Any other course would be a negation of our very reason for existence and in effect would place congressional blessing on the concept of government by men rather than government by law.

Mr. PROXMIRE. Mr. President, it is my understanding that the distinguished Senator from Georgia [Mr. TALMADGE] wishes to exercise his right—and certainly he has that right—to divide the amendment and have the Senate vote on the 3-percent section and then vote on the 7-percent section. I yield to the Senator from Georgia for that purpose.

Mr. TALMADGE. Mr. President, I am grateful to the Senator from Wisconsin for yielding.

The amendment offered by the Senator from Wisconsin proposes, on page 38, beginning with line 7, to strike out all through line 9 on page 39.

What is proposed to be stricken by the Senator from Wisconsin involves two different propositions and two different treatments of the two different propositions. Therefore, under the rule XVIII, I request that they be divided.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. TALMADGE. Will the Senator from Wisconsin wait for the ruling of the Chair? Then I shall be delighted to yield. Or does the Senator wish to make an argument before the Chair rules?

Mr. PROXMIRE. I shall not make an argument on the parliamentary situation; I am satisfied that the Senator from Georgia is within his rights, though I deeply regret that he is exercising them.

The PRESIDING OFFICER (Mr. McGOVERN in the chair). Under rule XVIII, the Senator from Georgia has a right to demand a division of the question.

Mr. LONG of Louisiana. Mr. President——

Mr. PROXMIRE. Mr. President, I think I have the floor; I yielded temporarily to the Senator from Georgia.

Mr. LONG of Louisiana. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Louisiana will state it.

Mr. PROXMIRE. I yield to the Senator from Louisiana for that purpose.

Mr. LONG of Louisiana. In either event, would a Senator have a right to move to table the whole amendment?

The PRESIDING OFFICER. A Senator would have that right.

Mr. TALMADGE. I thank the Senator from Wisconsin for yielding to me. If he desires me to yield to respond to a question from him, I am delighted to do so.

Mr. PROXMIRE. I should like to have the Senator from Georgia reconsider his action. I am hopeful that the motion to table can be defeated. If it can be, then there will be three yea-and-nay votes on the basis of the Senator's motion to divide the question. I think this question can be decided on two yea-and-nay votes.

While the Senator has an excellent point—there is a difference—there is no question about it—I submit that the basic principle involved is the same. That principle is this:

First, should Congress dictate to a regulatory body that it must permit a return greater than a fair return? This would be true whether it was a 7-percent utilities return, for which the investment credit must be ignored, or 3 percent, where the investment credit must be spread over the life of the asset.

This is because in the 3-percent instance, as the Senator knows, there is free interest during the life of the asset; and if the utility is growing, the concession to the utility is substantial.

The second and last point I should like to make in this connection is that the argument for any benefit to the locked-in monopolistic electric utility is virtually all at the maximum rate of return. The argument that they should get any benefit out of the investment credit is very weak, indeed.

Therefore, I think we could make almost an equally strong argument against both sections. If one disagrees with the Senator from Louisiana and his supporters, I think an equally strong argument can be made on that side.

Therefore, in the interest of expediting the business of the Senate, I hope the Senator from Georgia will reconsider his motion to have the question divided.

Mr. TALMADGE. The Senator is entitled to his opinion, of course. However, I think Congress has the right and the duty to pass laws that affect regulatory bodies. I should much prefer to have the origin of that legislation come before the appropriate committee that has legislative jurisdiction thereof.

The Senate is dealing with a tax matter that originated in the Committee on Ways and Means and was referred to the Committee on Finance. That matter was in the bill at the time it came before the committee, and hearings were held on it. The Senator from Wisconsin is not a member of the Committee on Finance, but I made the same request in the committee. We are voting on two different proposals, one that I can

[*P. 1989*]

support, and one that I will not support. Under those conditions, I have requested that they be divided. Such a division is authorized by the rules. I regret that I cannot withdraw the request, because I am not prepared to vote on two different proposals, one with which I agree, and one with which I disagree.

Mr. PROXMIRE. I understand that the Senator from Georgia is insisting on his right.

Mr. TALMADGE. That is correct.

Mr. PROXMIRE. The Senator has every right to do so. For less than 3 minutes, I shall try to summarize my position.

Primarily, the argument of the Senator from Louisiana is that if we do not agree with the committee's position, we penalize the utilities or transportation companies that are in competition. Our argument is that if a company is in competition, the investment credit is virtually certain to be passed on. Of course, it will be passed on. It will be passed on because competitive forces will see to it that prices are competitive. Either through freedom of entry or other methods, the investment credit eventually will be passed on. However, it will not be passed on in the case of a utility which is a monopoly and the regulatory body has been instructed by Congress not to permit a pass-on.

The Senator from Louisiana also said that the Federal Power Commission—and I hope the Senator from Illinois [Mr. DOUGLAS] will listen to this—is always at loggerheads with the oil and gas utility it regulates.

The President of the United States has made some very sympathetic appointments to the Federal Power Commission, including that of Lawrence O'Connor, whose nomination I opposed on the floor of the Senate for 27 hours, a man who was a lobbyist for the oil industry, a man who certainly represents the interests of the oil industry and oil pipelines.

It seems to me that the regulatory body should not necessarily be totally and completely sympathetic to the producer interests, but should also represent the consumer interests.

Therefore, the basic argument made by the Senator from Louisiana boils down to this very simple issue: He says that the discretion as to whether the investment credit should be passed through or not should be left with the utilities.

I say it should be left with the regulatory body. That is the entire issue.

It is my position that the regulatory bodies which represent the whole public—both the utilities and the consumers—should decide whether the tax credit should be passed through. The Senator from Louisiana argues that only the utilities should decide whether or not to pass through the investment credit. That is the issue.

Mr. President, I earnestly hope the motion which I anticipate the Senator from Louisiana will shortly make—a motion to lay this amendment on the table—will be rejected.

Mr. DOUGLAS. Mr. President, I hope very much that the Senator from Louisiana will not make a motion to lay the amendment on the table. Yesterday, a motion was made to lay on the table the amendment of the Senator from Tennessee. But I think the Senate was entitled to vote, yesterday, on the amendment of the Senator from Tennessee; and likewise I think the Senate is entitled to vote, today, on the amendment of the Senator from Wisconsin.

Mr. LONG of Louisiana. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. LONG of Louisiana. So far as I am concerned, I shall state my position very clearly: I do not think Congress should do these things for one industry and not do them for the competitors of that industry.

This proposal is satisfactory to both the 3-percent utilities and the 7-percent carriers. It is my feeling that we should determine where we stand on this issue.

I was not in favor of the motion to divide the amendment; but if some Senator is going to insist that the amendment be divided, I believe I have no choice but to move that the amendment be laid on the table, so the Senate can subsequently deal with the entire package.

Mr. DOUGLAS. Very well, Mr. President, I would not object to the making of a motion to lay the proposed Tal-

madge motion on the table since that is a technical issue but I do object to the making of a motion to lay the Proxmire amendment on the table which is substantive in nature. These tabling motions give an opportunity for equivocal voting.

Mr. LONG of Louisiana. Mr. President, if the Senator from Illinois will yield further, let me say that if the motion to table is agreed to, the entire section will still be subject to amendment; and then the Senator from Georgia or any other Senator can move to strike out any part of the amendment.

But under the present circumstances—because I believe the Senate should be allowed to vote the entire section either up or down—I have no choice but to move that the pending amendment be laid on the table.

Mr. DOUGLAS. Mr. President, it will be satisfactory to me to have a motion to lay the Talmadge motion on the table agreed to—since that is a procedural issue but not a motion to lay on the table the Proxmire amendment which is substantive and highly important and which deserves to be considered on its merits and voted up or down.

Mr. CARLSON. Mr. President, I wish to speak for only 2 or 3 minutes before the debate on this issue closes.

Apparently section 202(e) is greatly misunderstood.

First of all, section 202(e) does not interfere with or prohibit regulatory agencies from performing their proper functions. It does provide, in the case of public utility property—property of utilities receiving the 3-percent investment credit—that Federal regulatory agencies are not, without the taxpayer's consent, to require that the full effect of the credit be flowed through to the benefit of users of utility services in the year in which the credit was received. The agencies are, however, authorized to flow the effect of this credit through in proportionate amounts, over the life of the public utility property which gave rise to the credit. Thus the sole question is one of timing. We want the effect of the investment credit to be a lasting one and not merely a shot in the arm.

I was a member of the committee of conference between the Senate and the House on the amendments of the Senate to the Revenue Act of 1962 (H.R. 10650) which created the investment credit. The report of that conference endeavored to make clear the intent of Congress respecting the purpose of the investment credit when it said:

> It is the understanding of the conferees on the part of both the House and the Senate that the purpose of the credit for investment in certain depreciable property, in the case of both regulated and nonregulated industries, is to encourage modernization and expansion of the Nation's productive facilities and to improve its economic potential by reducing the net cost of acquiring new equipment, thereby increasing the earnings of the new facilities over their productive lives.

I, for one, believed we had made it clear that the investment credit was not to be considered a simple reduction in taxes but its purpose was to reduce the cost of providing new productive facilities, thereby increasing the profitability of such facilities and, of course, the incentive to create them.

In the months following the enactment of the investment credit it became painfully apparent we had not been sufficiently specific. At least one Federal regulatory agency, after reviewing the legislative history of the Revenue Act of 1962, cited the language from the conference report which is quoted above and found that this did not mean that Congress intended the effect of the credit be spread over the life of the plant. This agency specifically found that the investment credit represents a reduction in income taxes that should immediately be flowed through to earnings.

Section 202(e) simply makes certain that these Federal regulatory bodies will not further misunderstand what the Congress intended and still intends, namely, that the investment credit is to make the construction of plant more profitable over its life and that it is not a mere tax reduction to create an apparent, but not real, increase in net earnings.

Business makes money through the use of its productive facilities. Business does not make money by constructing new plant. The investment credit recognizes this fact. The credit is not intended to cause an artificial increase in profits in the year in which it is received. It is intended to make it possible for a business to have higher earnings over the period in which it uses the plant it constructs. There is nothing in section 202(e) which prevents a regulatory body from recognizing, for any regulatory purpose, the increased earnings which are realized as the property constructed is used in providing service.

When the investment credit was first proposed it was not intended to be ex-

[*P. 1990*]

tended to public utilities. However, in many instances, public utility service is in competition with privately provided service. For example, electric power

companies must compete with privately built and operated generating plants. It obviously would be unfair to provide a credit that would reduce the cost of privately provided facilities at the expense of utility services. Provision, therefore, was made for the public utilities to receive a 3-percent credit.

The real difficulty seems to be that some regulatory agencies would change the investment credit from an incentive to public utilities to improve and expand their facilities into a bonus to the users of the utility service. Regulatory zeal to protect and benefit the public is admirable, but regulatory attitudes that do not recognize congressional purpose and intent is a matter of concern.

The Federal Communications Commission, in a letter to Congressman JOHN W. BYRNES last September, disclaimed any intention that the credit "should flow through immediately to the customers" in all cases. It stated it would require immediate flow through only so that the Commission could, at its discretion, select when the credit should be used to stimulate investment and when it should flow through to customers in the form of rate reduction. The Commission's position is that the credit is not needed to stimulate investment in profitable companies and should in those cases be passed through to the customers by immediate rate reductions. The legislative history of the statute gives no basis for such discrimination. It was the intention of the Congress that the investment credit was to be applied as an incentive to improvement and expansion of productive facilities. Any arbitrary ruling by a Federal regulatory agency requiring immediate flow through would eliminate any incentive for further investment. Any prudent management of a business enterprise would think twice about investing under circumstances which reduce to a minimum, or eliminate, the incentive to invest. It certainly was not the intention of the Congress that companies making a satisfactory rate of return should be precluded by regulatory authorities from using the credit for further improvement and expansion.

The Federal regulatory agencies under section 202(e) retain their rightful responsibility to regulate the real earnings of any company under their jurisdiction. Nothing in section 202(e) would interfere in the slightest respect with the authority of a Federal regulatory agency to recognize, in determining a fair rate of return to the utility, the earnings arising out of use of public utility property in providing service.

Mr. President, for this reason I believe the Senate should not adopt the amendment offered by the Senator from Wisconsin, but should support the position taken by the Finance Committee on this situation.

Mr. LONG of Louisiana. Mr. President, in summary, let me say that when Congress passed the investment credit provision, it made the legislative history in that connection, which was, in the opinion of those of us who were members of the conference committee, that all the carriers were to have the benefit of the investment credit, as a stimulus to modernization.

In some areas—particularly in the railroad industry—one can observe what this provision of law has meant. The Interstate Commerce Commission has permitted the railroads to have the benefit of the tax credit, and the Commission has said it does not intend to have the tax credit taken away from the railroads; and the railroads are engaging in a massive effort to make their industry competitive with other transportation industries.

The Federal Power Commission has decided, by a vote of 3 to 2, that it does not believe that Congress meant the pipelines to have the benefit of the tax credit.

Mr. President, unless Congress states clearly what its decision is in connection with this matter, the transportation industry will continue for years to be in doubt about what is to be done. In short, now is the time for Congress to clear up the uncertainty.

One of the worst situations I can imagine would exist if the railroads, the pipelines, and the other transportation industries had to remain in doubt for the next number of years as to whether they are or are not to obtain the benefit of the tax credit.

In my opinion, it would be better for Congress to state that they cannot keep the tax credit, rather than to permit the existing uncertainty to continue.

Consider the situation in the Federal Power Commission, Mr. President: At the present time, the Commissioners have divided by a vote of 3 to 2; three of them want to have the tax credit taken away from the pipelines and the electric transmission companies, and two of the Commissioners want them to have the tax credit. A mere change of one in the membership of the Commission by means of one presidential appointee could result in a reversal of that decision.

Furthermore, if the matter went to court, it would take years for the courts to decide what Congress intended.

In my opinion, these carriers should have the benefit of the tax credit.

The significance of many of the figures which have been cited has been greatly exaggerated. In my opinion, Congress should now decide whether the pipelines should or should not have the benefit of the tax credit, because they are the ones who are about to become involved in litigation over this question. This entire industry was involved in controversy before the Commission in 1962. That year, the entire amount of the investment credit for them was $26 million—which is a far cry from some of the figures which have been cited during the course of this debate; in fact, one Senator even referred to $6 billion as the correct figure for the entire item.

Mr. President, I regret that a motion to separate the amendment was made. Personally, I would have much preferred to have the Senate take a direct vote on the entire section; and I shall seek to arrive at that result by following the only course now open to me—namely, to move that the Proxmire amendment be laid on the table; and I shall make that motion when other Senators are ready to have it made.

Mr. MONRONEY. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. MONRONEY. As I understand, there is no way in which the trucklines or the railroads or the pipelines could possibly pass back their 7-percent credit to their customers who already have used their services and facilities. Under these circumstances, that branch of the transportation industry must retain the entire 7-percent tax credit, must it not? Is that not correct?

Mr. LONG of Louisiana. Well, at least, it would be very difficult for them to make such refunds at this time.

Mr. MONRONEY. After all, who can now determine who were the owners of freight which was carried some time ago? I believe it would be an utter impossibility for such a determination to be made, and therefore it would be impossible for a refund of the tax credit to be made.

Under these circumstances, the result would be that the only industry thus regulated, among all those in the 7-percent group, would be the pipelines, which are competitive in their rates.

Mr. LONG of Louisiana. Perhaps that is true insofar as past operations are concerned; but I assume that in the future it would be possible for the railroads to be required to reduce their rates for future business—in other words, to require them to forgo the benefit of the tax credit which was accorded them.

Mr. MONRONEY. The rates are filed and then they are approved or suspended. There is no question of return on investment. I am trying to find to whom the pipelines would pass back the money. Would the long gas lines refund it to the Washington Gas Light Co., or would they refund it to the consumer? Is there anything in the amendment that would require the money to go to the consumer or to the central distribution system that is locally controlled by the local regulatory agency and not by the Federal Power Commission?

Mr. LONG of Louisiana. I assume that they would remit to the local company.

Mr. MONRONEY. We have done it without any power Congress can exert for having the benefit filter down, perhaps to the customer or perhaps to enrich or add to the profits of the local distribution system. Is that correct?

Mr. LONG of Louisiana. That is correct, though it perhaps could go to them.

Mr. President, Senators who wish to vote for the tax credit should not vote for it all unless they believe that competition is the great leveler of prices. If we believe that by modernizing industry or by modernizing five different competing carriers, or by modernizing five different competing industries, and modernizing the carriers within those industries, or if they can compete more effectively with them to make more effective the competition they will give one another, prices will be brought down, we should vote to sustain the position of the committee.

[*P. 1991*]

If we believe that any one of these competitors by becoming more competitive and more efficient, can bring prices down, we should vote to sustain the position of the committee.

Mr. President, if we wish to be fair to the carriers, we should not provide—as the Senator from Wisconsin has suggested—a tax advantage to one carrier that would not be provided to the other. We have to give them the same tax credit, and let them compete for business. If we want them to compete according to terms, we should vote for the position that the committee has recommended, which is the position that the House accepted.

Mr. PROXMIRE. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Wisconsin will state it.

Mr. PROXMIRE. If the Long motion to table the Proxmire amendment carries, will it be possible to amend the bill with either the first section of the Proxmire amendment with regard to the 7-percent credit, or its second section with regard to the 3-percent credit; or will the whole situation then be out of the

way so that the Senate will proceed with other amendments?

The PRESIDING OFFICER. It would be subject to further amendment at that point.

Mr. PROXMIRE. It is subject to further amendment in this regard?

The PRESIDING OFFICER. That is correct.

Mr. PROXMIRE. Mr. President, I thank the Chair.

Mr. LONG of Louisiana. Mr. President, I believe that Senators who desire to make speeches have made them, and I now move to table the amendment of the Senator from Wisconsin.

Mr. PROXMIRE. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Louisiana [Mr. LONG] to table the amendment of the Senator from Wisconsin [Mr. PROXMIRE]. On this question, the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia (when his name was called). I have a pair with the Senator from Illinois [Mr. DIRKSEN]. If he were present and voting, he would vote "yea"; if I were at liberty to vote, I would vote "nay." I therefore withhold my vote.

Mr. PROUTY (when his name was called). On this vote I have a pair with the distinguished Senator from Arizona [Mr. GOLDWATER]. If he were present and voting, he would vote "nay." If I were at liberty to vote, I would vote "yea." I therefore withhold my vote.

The rollcall was concluded.

Mr. HUMPHREY. I announce that the Senator from Nevada [Mr. CANNON] and the Senator from Alabama [Mr. HILL] are absent on official business.

I further announce that, if present and voting, the Senator from Nevada [Mr. CANNON] would vote "nay."

Mr. KUCHEL. I announce that the Senator from Illinois [Mr. DIRKSEN] and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent.

The respective pairs of the Senator from Illinois [Mr. DIRKSEN] and that of the Senator from Arizona [Mr. GOLDWATER] have been previously announced.

The result was announced—yeas 42, nays 52, as follows:

[No. 23 Leg.]

YEAS—42

Allott	Brewster	Curtis
Anderson	Carlson	Dominick
Beall	Cooper	Eastland
Bennett	Cotton	Edmondson
Ellender	Jordan, N.C.	Pastore
Ervin	Jordan, Idaho	Pearson
Fong	Long, Mo.	Saltonstall
Fulbright	Long, La.	Simpson
Hartke	Mansfield	Smathers
Hayden	McGee	Sparkman
Hickenlooper	Mechem	Stennis
Holland	Miller	Symington
Hruska	Monroney	Tower
Johnston	Morton	Walters

NAYS—52

Aiken	Jackson	Neuberger
Bartlett	Javits	Pell
Bayh	Keating	Proxmire
Bible	Kennedy	Randolph
Boggs	Kuchel	Ribicoff
Burdick	Lausche	Robertson
Byrd, Va.	Magnuson	Russell
Case	McCarthy	Scott
Church	McClellan	Smith
Clark	McGovern	Talmadge
Dodd	McIntyre	Thurmond
Douglas	McNamara	Williams, N.J.
Engle	Metcalf	Williams, Del.
Gore	Morse	Yarborough
Gruening	Moss	Young, N. Dak.
Hart	Mundt	Young, Ohio
Humphrey	Muskie	
Inouye	Nelson	

NOT VOTING—6

Byrd, W. Va.	Dirksen	Hill
Cannon	Goldwater	Prouty

So Mr. LONG's motion to table Mr. PROXMIRE's amendment was rejected.

Mr. PROXMIRE. Mr. President, I understand the parliamentary situation now to be as follows: The amendment which I offered has been divided, at the request of the Senator from Georgia [Mr. TALMADGE]—which is his right—so that the Senate will now vote on whether or not it should eliminate the section of the bill which provides that the 3-percent investment credit must be spread over the life of the asset and that the regulatory agencies cannot require the utility to reduce its rates to take into account all of the 3-percent investment credit in the first year in which the utility makes the purchase. Is that correct?

The PRESIDING OFFICER. The Senator is correct. The question is on agreeing to the first branch of the amendment, which proposes to strike out language in paragraph (1), which the clerk will read——

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the reading be dispensed with. It merely refers to the lines. I shall be very brief.

Mr. ANDERSON. Mr. President, may Senators know what they are voting upon?

The PRESIDING OFFICER. The clerk will state the language proposed to be stricken.

The LEGISLATIVE CLERK. On page 38, line 7, it is proposed to strike out the language beginning on line 18, down to and inculding line 4 on page 39, which reads as follows:

(1) in the case of public utility property (as defined in section 46(c)(3)(B) of the

Internal Revenue Code of 1954), more than a proportionate part (determined with reference to the average useful life of the property with respect to which the credit was allowed) of the credit against tax allowed for any taxable year by section 38 of such Code, or

Mr. MILLER. Mr. President, will the Senator yield for a question?

Mr. PROXMIRE. I shall yield in a moment.

Mr. MILLER. The Senator from Iowa is still not clear as to what he is to vote on. Is the point before the Senate the amendment of the Senator from Wisconsin to delete the matter which has just been read?

Mr. PROXMIRE. The Senator is correct. That is the understanding of the Senator from Wisconsin. The amendment has been divided, so the question before the Senate is whether or not the language which has been read shall be deleted. If the vote is "yea," the vote is that the language shall be deleted.

Mr. MILLER. Mr. President, will the Senator yield further?

Mr. PROXMIRE. I yield.

Mr. MILLER. I wonder if perhaps the Senator might propose the second part of the amendment first, because if the Senator's amendment with respect to the first part prevails, it will be almost impossible for us to support the second part; but if the second part prevails, I think some of us can support the first part. Would the Senator object to having the second part voted on first?

Mr. PROXMIRE. I appreciate the advice of the Senator from Iowa. I know he has a sincere interest in this question, but it does not make much difference which part is taken up first. If the Senate voted for the first part, frankly, I think the case for the second part would be made stronger. Therefore, I am inclined to go ahead with a vote on the first part.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. PASTORE. Do I correctly understand the Senator from Wisconsin to be opposed to the first part?

Mr. PROXMIRE. The Senator from Wisconsin has offered an amendment which would strike the first part.

Mr. PASTORE. And the reason for that is that the credit is to be spread over a period of years.

Mr. PROXMIRE. The reason for the amendment is that I want to leave it in the discretion of the regulatory body. If the amendment fails, the regulatory body will have no discretion. My argument is that the determination should be made by the regulatory commissions—the Federal Power Commission, the Interstate Commerce Commission, and so forth—and not by Congress in this particular way. It can be spread if the regulatory bodies want to spread it. They have a perfect right to do it, but it is up to them to do it.

Mr. PASTORE. The reason why I asked the question is that I am amenable to a retention of the first part, but I am against the second part. The Senator says that is what would take place.

[*P. 1992*]

Mr. PROXMIRE. As I have said, many persons may feel that way.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. MONRONEY. As the Senator's amendment is now before the Senate, it would strike the first part, which refers to utilities which have a monopolistic position in the service areas in which they operate.

Mr. PROXMIRE. The Senator is absolutely correct. It affects the so-called locked-in monopolies, which are utilities that are in a position to earn a favorable rate of return. They are monopolistic in every sense. They are not really in competition. The same argument cannot be made as regards some of those in the 7-percent category.

Mr. MONRONEY. Can the Senator guarantee that any of the money saved on the 3 percent or anything in his amendment would act on any regulatory body other than the Federal Power Commission or other Federal agency? This provision cannot reach agencies which are operated by State governments.

Mr. PROXMIRE. My judgment is that it would reach the State agencies, because the State agencies will do what they have almost always done in the past; namely, to follow Federal regulation, especially when it comes to a tax matter on which Congress has declared itself. In addition, there are national accounting forms used which will help persuade State agencies to follow the practice of the Federal agency. They are not required to do so.

Mr. MONRONEY. There is nothing in the Senator's amendment that would require any of the agencies in any of the 50 States to follow the pattern he seeks to put in.

Mr. PROXMIRE. I will put it the other way—there is nothing in the bill that requires a State agency to follow the Federal agency, but, as a matter of practice, many State agencies will do so, and in time most, if not all, of the State agencies will do so.

Mr. MONRONEY. The Senator knows that the State agencies adopt different regulations, different periods of writeoff, and different returns on investment. So there is nothing uniform about State regulatory agencies. So it is a pious hope that the States will follow the dictates of the Federal agency.

Mr. PROXMIRE. The pious hope is the other way; the Senator from Wisconsin hopes that the State agencies will not follow the Federal practice and will not feel that it must not pass on this benefit.

Mr. MONRONEY. On the assumption that the Senator wins, it is his pious hope that that will be done.

Mr. PROXMIRE. My position is that I do not think the Congress, the Senator from Oklahoma, or the Senator from Rhode Island, or any other Member of Congress, should dictate to a regulatory body what it should do. That is what this fight is about.

Mr. PASTORE. Is the Senator saying that insofar as a public utility in Rhode Island is concerned, the Senator's amendment is dictating or does he say it is not dictating to Rhode Island what its responsibility to its consumers may be?

Mr. PROXMIRE. I am saying that the bill as reported by the committee, in its present form, would set a Federal pattern which I think may well be followed—it does not have to be; it can be, but it may well be followed—in Rhode Island and other States.

Mr. PASTORE. The point I wish to make to the distinguished Senator is that when I was Governor of my State I fought the telephone company for the benefit of the consumers in a rate case, and I did not have to come to Washington to be told how to do it. That is why I say I am amenable to the first part of the amendment. I refer to the part which relates to interstate commerce and which comes under Federal regulation. So I am willing to go along with the Senator from Wisconsin. But if we are talking about local bodies, it is the prime responsibility of those bodies to protect the consumer.

Mr. PROXMIRE. The Senator is correct. A Governor would be in a stronger position if my amendment were adopted.

Mr. PASTORE. The Governor is strong enough without it. If a Governor is worth his salt, he has power enough to do it without Congress telling him what to do.

Mr. PROXMIRE. We are not telling him.

Mr. PASTORE. We cannot do that—that is the point that I am making.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. HUMPHREY. It seems to me that perhaps the cart has been put before the horse. The bill as written tells the regulatory agencies at the Federal level what to do.

Mr. PROXMIRE. The Senator is absolutely correct.

Mr. HUMPHREY. The proposal before the Senate involves not a matter of tax policy, but a violation of the independence of the regulatory agencies.

Mr. PROXMIRE. The Senator is correct.

Mr. HUMPHREY. I recognize that some States have regulatory bodies for their utilities, and that some do not. For example, in my State of Minnesota, there is no State regulatory body with jurisdiction over the rates of the utilities. There are local regulations in local communities. The investment tax credit pertains to Federal income taxes. It is considered in the rate base of any regulated utility. In the formulation of the utility rate the law at the State level, where there is a State regulatory body, requires that the State commission take into consideration operating costs, fixed costs, a reasonable profit, capital for financial expansion, and other matters. There are many things to be taken into consideration.

It is fair to say that there is nothing in what the Senator is offering which will dictate to any State regulatory agency what it ought to do.

Mr. PROXMIRE. The Senator is absolutely correct. My amendment would retain the present law. It leaves the policy decision up to the regulatory body, because it provides that the Federal agency may pass through the full investment credit. Therefore, the result is going to follow, and follow very quickly in many cases, that the regulatory body, especially if it is a municipal body, will follow the Federal body on Federal tax law.

Mr. HUMPHREY. Things will happen if the bill remains as it is. Everyone knows that it means that the utilities will not take into consideration the tax benefits that accrue under the investment tax credit for utilities.

Mr. PROXMIRE. Yes. Let me explain this important point in the way in which it affects the consumer and the utility stockholder. According to the calculations of Professor Eisner, if this spread-over system is applied to the 3-percent utilities, the pass through will be about 30 percent of the investment credit. The stockholders will receive 70 percent of the investment credit. I submit, on the basis of all the discussion this afternoon, that there is no question that the investment credit does not result,

and almost cannot result, in the purchase of more equipment for locked-in, monopolistic utilities.

If the first part is defeated, it means that only 30 percent will be passed through, and 70 percent will be kept within the utilities.

Mr. HUMPHREY. I must say that the great benefits that the Senator believes will accrue will not necessarily come to pass. However, there is no doubt that if the bill remains as it is it will set a Federal precedent. It is bound to set a Federal precedent. I support the investment tax credit. However, this provision has less effect on monopolistic industries than it has upon a free enterprise industry, where the price is always in doubt. The purpose of the investment tax credit is to encourage investment by highly competitive industries. Private utility companies have a guaranteed market for their product, and therefore their profits are assured.

Mr. PROXMIRE. That is essentially true with respect to the first part. This is a locked-in, monopolistic, noncompetitive public utility. The decision is whether the tax credit should be passed on in part to the consumer.

Mr. HUMPHREY. Mr. President, now everyone knows that, by the very nature of their business, most public utilities inevitably are monopolies. The common practices of American free enterprise do not restrain these utilities, which are free from normal competition. In order to protect the public from an unrestrained exercise of monopoly power, we have established independent regulatory commissions to limit the utilities. The most important job these commissions do is set utility rates.

We all are aware of the pressures that are exerted on Government agencies with this kind of responsibility, and therefore when Congress established these agencies it specifically intended that they should do their job free from outside political pressures.

Section 203(e) in the tax bill would do away with all this. It would interfere with the regulatory process by giving

[*P. 1993*]

orders to the agencies that are supposed to be independent. It would do this by forcing the agencies to abstain from taking their enormous tax savings into account when setting utility rates. We have already given important tax concessions to public utilities. Now, if this provision becomes law, we will force the regulatory agencies to pretend that these concessions do not really exist for purposes of setting rates.

This proposal is a major breach in the dike of utility regulation. Unless we eliminate this section, it will be not only a gross injustice to utility customers, but an invitation to further erosion of the consumer protection supposedly provided by the regulatory process. Under this section the public utilities, not the State and Federal regulatory agencies, would decide who benefits from the enormous tax reductions enjoyed by the utilities as a result of the investment tax credit.

This section prevents agencies from lowering utility rates, even though utility costs are slashed. This is an abandonment of the whole principle of utility regulation as we have known it for generations. It establishes the principle that a utility can grow only by keeping rates high. What an irony, Mr. President, if we passed a tax cut and then approved a section that encouraged high utility bills—a key item in every taxpayer's budget.

The U.S. Congress should stay out of the details of private utility regulation. This is not the sort of detail that we should involve ourselves in. Doing so is only an invitation to concern ourselves with other details in the future, until we, rather than the regulatory agencies, will be doing their job of governing public utility costs.

Furthermore, I consider it vital to the best interests of private utility companies themselves that they not be put in the position of passing judgment on matters traditionally handled by regulatory agencies. If we give them the decision-making power on tax credits, why not also let them set the corporate income tax rates?

When we ask for the rationale behind section 203(e) we are told that the utilities need this help if they are to attract the investment they need in order to finance continued expansion. On Tuesday the distinguished junior Senator from Montana drew our attention to this prediction:

> For as far ahead as almost anyone would dare to look, the investor-owned electric utility industry should maintain its preeminence as the most consistently growing business in the United States.

This optimistic picture of the outlook for private power comes from the well-known brokerage house of Merrill Lynch, Pierce, Fenner & Smith. I do not believe that companies with such rosy prospects need the help of a further tax subsidy.

Mr. GORE. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. GORE. I am asking the Senator to yield because, as a member of the committee, I have done a great deal of

work on this section. The overall principle of both parts of the provision which the Proxmire amendment in its original form would have been stricken, but which now, upon the motion of the junior Senator from Georgia [Mr. TALMADGE], has been divided, is legislative interjection into the regulatory function of a quasi-judicial, independent agency.

Even if both parts of the amendment are defeated, all of the funds will not pass through. If the amendment is adopted in both parts, all of the investment credit will not pass through. That is so because what determines the rate structure is the profit position and the rate of return on investment by the utility. In the case of a utility which even with the investment credit does not earn a fair return, the Proxmire amendment would not require a pass-through, because the present law would not require it.

In response to the senior Senator from Rhode Island, if as Governor of his State he could operate effectively in the regulating of the intrastate utilities, the present Governor could do so without benefit of the provision in the bill.

It is not the Proxmire amendment which seeks to change the law. It is the provision in the bill that seeks to change the law.

If I may be specific, if Senators will turn to pages 38 and 39 of the bill, I believe I can state what the first branch of the amendment would do.

The branch of the amendment now pending would strike from line 7 on page 38 through line 4 of page 39. The second part would likewise strike from line 7 on page 38 through line 17. Then it picks up on line 5 on page 39 and goes through line 9.

If I may state the case briefly, what is provided in the first part is this: It will be understood that lines 7 to 17 are prefatory both to Nos. 1 and 2. So what we are about to vote on is the provision which would require that in the case of utilities that receive a 3-percent investment credit, the pass-through is required by the regulatory agency. This can be applied only on an annual basis, depending upon the assumed life of the equipment or utility, rather than in the year in which the benefit is received.

Mr. PASTORE. Mr. President, will the Senator yield exactly at that point?

Mr. PROXMIRE. Mr. President, I have the floor.

The PRESIDING OFFICER. Does the Senator from Wisconsin yield; and if so, to whom?

Mr. PROXMIRE. I yield to the Senator from Rhode Island for a question.

Mr. PASTORE. When the Senator from Tennessee speaks about a regulatory agency, is he not referring to a Federal agency?

Mr. GORE. Yes.

Mr. PASTORE. There is nothing that affects the right of a State public utility authority to protect the consumers. No matter what we may write into the bill, it is the responsibility of the chief executive of each individual State to protect the consumers of his State against the locked-in monopolies that operate intrastate. That is the argument I make. The argument is being made that we would be setting a precedent.

Mr. GORE. The Proxmire amendment does not aim to change the law.

Mr. PASTORE. I do not think we have a right to change the law.

Mr. PROXMIRE. The Senator is absolutely correct when he says the bill does not require the State regulatory body to do anything.

Mr. PASTORE. That is correct.

Mr. PROXMIRE. But from a practical standpoint, when Congress interprets the Federal tax law and directs a Federal agency to act in a certain way with regard to it, what does the Senator from Rhode Island really expect many regulatory bodies to do? They want to do the right thing. They say that Congress has acted in this way; and that other regulatory bodies have acted in this way. All the pressure is in that direction. The chances are in favor of most State regulatory bodies following the same practice. I do not say all of them would. The Senator from Rhode Island was a wonderful Governor of his State, just as he is a wonderful Senator. He could probably put some steel into a regulatory body.

Mr. PASTORE. I take it the Senator means s-t-e-e-l.

Mr. PROXMIRE. Steel is right. There is no s-t-e-a-l in the Senator from Rhode Island's heart, soul, or mind. So from a practical standpoint, if we want to protect the consumer, we can insist upon the present law and make no change in the law. That means we should vote for the first part of the Proxmire amendment.

Mr. PASTORE. So far as the protection of consumers is concerned, with respect to public utilities that operate within a State, it is the responsibility of the Governor to protect the people of his State. He has the authority to do it through his appropriate State agencies. There is nothing we can do here today that would affect that right. That is what I mean. We cannot divest a Governor of his rights and his responsibilities.

Mr. PROXMIRE. I think the proposal has been debated. The Senator from Rhode Island is entitled to his viewpoint. But it is my conviction that in a matter of this kind, when Congress acts, as it will act if the bill is passed in its present form, most regulatory bodies would feel that this was a Federal pattern, set by Congress, and would regard it as a Federal tax, as if the tax were not in effect, which is what it amounts to.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield for a question.

Mr. AIKEN. I should like to ask a question, after making a short preliminary statement.

I am sure that no Members of this body desire to place in the hands of electric utility companies an instrument that would enable them to weaken or destroy their competition. I cannot help feel-

[*P. 1994*]

ing that this provision of the law is aimed directly at the rural electric cooperatives and the municipal power systems throughout the country. I may be mistaken, but the rural electric cooperatives feel that this proposal is aimed at them. The municipal lighting systems feel that it is aimed at weakening or destroying them. I shall not explain their reasons here; it would take too long to do so. Instead, if the Senator from Wisconsin will permit, I should like to ask unanimous consent to have printed at this point in the RECORD a letter from Mr. Clyde T. Ellis, general manager of the National Rural Electric Cooperative Association, setting forth reasons why this provision of the tax bill would be extremely damaging to them; and also a letter from Mr. Alex Radin, of the American Public Power Association, setting forth the harmful effects of this provision of the tax bill upon the municipal lighting systems of the country, of which there are about 1,200. There are about 1,000 rural electric cooperatives.

We know that some of the private electric utility companies have been waging war against them and are accentuating that war at present. I do not believe any Member of the Senate wishes to weaken or destroy the competitive power that the REA's or the municipal lighting systems exert in many States.

Mr. LONG of Louisiana. Mr. President, I ask for the regular order.

Mr. PROXMIRE. The Senator from Louisiana has asked for the regular order.

Mr. President, has the Chair ruled on the request of the Senator from Vermont to place certain material in the RECORD?

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION,
Washington, D.C., February 3, 1964.

Hon. GEORGE D. AIKEN,
U.S. Senate,
Washington, D.C.

DEAR SENATOR AIKEN: Rural electric systems buy more than $100 million worth of wholesale energy annually from the investor-owned utilities.

The wholesale energy bills we pay include, of course, the tax dollars which investor-owned utilities in their role as a tax collector collect from all consumers.

We are opposed to having any part of the taxes we pay as a part of our wholesale power bills pocketed by power company tax collectors. When we pay a bill computed at rates which include a Federal income tax component, we believe that we have a right to insist that the collector turn all of our tax dollars over to the Federal Government, or that these dollars not paid as taxes be returned to the consumers who put them up in the first place.

Section 203(e) of the tax bill now before the Senate prohibits the Federal Power Commission from requiring power companies, except with their consent, to pass on tax savings to consumers. State commissions generally adopt FPC accounting procedures and can be reasonably expected to follow FPC practice in this instance.

Such a procedure makes a mockery of the regulatory process. If the purpose is to stimulate the economy, lower electric rates to consumers are certainly more effective than giving a subsidy to investors.

We respectfully urge you to oppose section 203(e) of the tax bill.

Sincerely yours,

CLYDE T. ELLIS,
General Manager.

AMERICAN PUBLIC POWER ASSOCIATION,
Washington, D.C. January 31, 1964.

Senator GEORGE D. AIKEN,
Senate Office Building,
Washington, D.C.

DEAR SENATOR AIKEN: American Public Power Association, a national trade organization representing more than 1,200 local publicly owned electric systems in 45 States and Puerto Rico, opposes section 203(e) of H.R. 8363 as passed by the House of Representatives and reported to the Senate.

Enactment of section 203(e) would prohibit Federal regulatory agencies in accounting or ratemaking activities from requiring that utilities "flow through" tax savings from the investment tax credit unless the utility concurs. Such a prohibition would have an adverse effect on the interests of APPA members, and purchasers of electricity generally, because it would severely hinder efforts to pass on to consumers "cost of service" reductions resulting from tax cuts and would encourage the imposition of "phantom taxes" on utility customers.

More than 900 local publicly owned electric utilities in 43 States purchase wholesale

power from private power companies. Implementation of section 203(e) would permit charges in excess of those which may be fair and reasonable—without the benefit of review by Federal regulatory agencies in those areas where they have jurisdiction. This proposal would foster and further practices which have allowed private power companies to accumulate more than $1.6 billion in Federal subsidies and to hand out in excess of $600 million in "tax-free" dividends—despite the fact that private power companies have no need for such aid, hold monopoly rights, are sheltered against risk, are provided a guaranteed rate of return, and possess ready access to capital.

Adoption of this measure would endorse utility practices of keeping two sets of books—one for rate purposes and one for tax purposes. Weakening of the ability of Federal regulatory agencies to keep power costs down may boost costs of residential users and manufacturers—to the detriment of the total economy, and at a time when lower rates can significantly increase our ability to compete abroad. Capability of Federal regulators to aid in controlling private utility companies' rates and earnings—reported by the Federal Power Commission to be nearly $500 million above a 6-percent return in 1961—would be seriously lowered if the regulatory agencies cannot enforce their decisions without the consent of the utility involved—a reversal of roles contemplated by the proposal in question.

While there is no question of the right of Congress to amend the law related to these matters, it would appear to be opening a Pandora's box by taking such action; if all difficult questions of regulation must be settled by Congress, not only is the purpose of regulatory agencies placed in doubt, but the Congress is likely to find itself in the role of a quasi-judicial organization before whose committees parties to any dispute will try their cases.

Sincerely,

ALEX RADIN.

Mr. PROXMIRE. I shall take less than a minute to sum up. The point of the Proxmire amendment in its present form is this: The present law should be kept as it is. The Federal regulatory bodies should not be told by Congress whether they can pass the investment credit through in the first year or at any other time.

Finally, the facts are that if the first part of the Proxmire amendment is defeated, for the lock-in monopolistic utilities, 70 percent of the benefit of the investment credit will remain with the utility, and only 30 percent will be passed through.

I yield the floor.

Mr. LONG of Louisiana. Mr. President, I have been insisting on the regular order because I believe Senators are entitled to know what they are voting on, rather than to have to explain to their constituents why they voted wrong. In my judgment, if the Proxmire amendment is agreed to, it will be outlawed, although some Senators will strongly believe this should be done.

When there are yea-and-nay votes, Senators are in the Chamber. After the vote, a Senator will obtain the floor and parcel out the time, back and forth, until most Senators have left the Chamber. When they return, without having heard the debate, they vote for something that they may not have wanted to vote for had they heard the debate. The result is that they have to explain, "I did not understand."

This is a request by Mr. Clyde Ellis and his public power associates. They support the position of the Senator from Tennessee [Mr. GORE], in whose State is located the great Tennessee Valley, where the Government spent hundreds of millions, billions of dollars of Federal money, to provide power.

I have made my position known with respect to the generation of power.

I am in favor of generation if it can deliver power cheaper than the private power companies are doing it now. The private companies, of course, are entitled to make a fair profit after taxes.

We voted for a 7-percent tax credit. After we voted the 7-percent credit, we said that the regulated power companies would get the benefit of a 3-percent credit.

All they are asking is to be permitted to make interest on the money while they are passing it through to their customers. That would be about the same as a 1 percent tax credit for them. But they are competing with public power interests, which every year need more and more Federal funds.

There is a definite place for REA in this country, but I would not like to see it extended to industries that the Congress did not intend. This would hurt their real mission. At the same time I would like to see their competitors get any tax credit to which they are entitled.

Mr. President, that is the issue; and I am ready to have the Senate vote.

Mr. AIKEN. Mr. President, I thank the Senator from Louisiana for so clearly defining the issue; he did so much better than I could have done.

However, I wish to make clear that in speaking on this issue, I am not speaking of Mr. Ellis. Sometimes I agree with him; sometimes I do not.

But I am speaking of the 5 million rural families who are members of the REA cooperatives. I earnestly hope the Senate will not approve any section of the pending bill which would put them in a very unfortunate position.

[*P. 1995*]

Mr. GORE. Mr. President, I shall take only 1 minute.

I wish to call attention to the fact that the principal utilities here involved are the telephone and the electric utilities. All of the long-distance interstate rates are subject to Federal regulation and the interstate electric utilities are subject to Federal regulation. This provision does not touch the intrastate ones; but it does touch, in a very inadvisable way, the operations of the Federal Communications Commission in this case and the operations of the Federal Power Commission in the other case, because it would not leave the Commissions free to exercise their responsibility to establish rates which are fair, equitable, and reasonable to the consumer and to provide a fair and reasonable return upon the investment. Instead, this part of the pending bill would fix, legislatively, an arbitrary standard for the determination to be made with respect to the investment credit—a very large and very specific benefit.

So this issue involves the principle of legislative injection into the functions of a regulatory agency specifically charged, under laws enacted by Congress, with arriving at and regulating rates fair to the consumers and providing a fair return on the investment.

Mr. PROXMIRE. Mr. President, on the question of agreeing to the first branch of my amendment, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. MORTON. Mr. President, I cannot see anything wrong with having Congress tell the regulatory agencies what Congress meant 2 years ago when it passed the 1962 bill. That is what the language of the committee's version of the bill would do. So I hope the pending amendment will be rejected.

Mr. MILLER. Mr. President, will the Senator from Louisiana yield for a question?

Mr. LONG of Louisiana. I yield.

Mr. MILLER. In Iowa there are a large number of rural electric cooperatives, and I am concerned with having them take a proper part in the economy. I think they have been doing a good job.

The Senator from Vermont [Mr. AIKEN] has raised the point that this provision is, somehow or other, directed at the REA's. I cannot find in it any provision which relates either directly or indirectly to the REA's.

Does the Senator from Louisiana interpret this provision in the way the Senator from Vermont does?

Mr. LONG of Louisiana. Insofar as the 1-percent tax credit—which is all the net a power company would make—this might constitute an incentive for the construction of a new generating plant. I do not believe the REA is involved.

On the other hand, if the investment credit does what it is designed to do; namely, provide more incentive for investments in plant construction—and if such investments are made in electric generating plants, to that extent that would be in conflict with the interest of the REA's.

Mr. MILLER. If that is the case, when Congress enacted the 3 percent tax credit, Congress must have been "taking a crack" at the REA's; to be consistent, we would have to interpret that measure in that way.

Mr. LONG of Louisiana. If the tax credit were passed back immediately, perhaps the effect would be that they would not receive any benefit.

Mr. MILLER. But Congress did not decide that, in that connection.

Mr. LONG of Louisiana. Some say it is obvious that the purpose was left obscure. It is on that point that at this time we are seeking the enactment of legislation.

The PRESIDING OFFICER. The question is on agreeing to the first branch of the amendment offered by the Senator from Wisconsin [Mr. PROXMIRE]. On this question, the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD (after having voted in the negative). Mr. President, on this vote I have a pair with the distinguished minority leader the Senator from Illinois [Mr. DIRKSEN]. If he were present and voting, he would vote "nay." If I were permitted to vote I would vote "yea." I withdraw my vote.

The rollcall was concluded.

Mr. HUMPHREY. I announce that the Senator from Nevada [Mr. CANNON], the Senator from Louisiana [Mr. ELLENDER], the Senator from Indiana [Mr. HARTKE], the Senator from Arizona [Mr. HAYDEN], the Senator from Alabama [Mr. HILL], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

I further announce that, if present and voting, the Senator from Arizona [Mr. HAYDEN] would vote "nay."

On this vote, the Senator from Nevada [Mr. CANNON] is paired with the Senator from Louisiana [Mr. ELLENDER]. If present and voting, the Senator from Nevada would vote "yea," and the Senator from Louisiana would vote "nay."

Mr. KUCHEL. I announce that the Senator from Illinois [Mr. DIRKSEN] and the Senator from Arizona [Mr. GOLD-

WATER] are necessarily absent.

The pair of the Senator from Illinois [Mr. DIRKSEN] has been previously announced.

If present and voting, the Senator from Arizona [Mr. GOLDWATER] would vote "nay."

The result was announced—yeas 43, nays 48, as follows:

[No. 24 Leg.]

YEAS—43

Aiken	Johnston	Nelson
Bartlett	Keating	Neuberger
Bayh	Kennedy	Pell
Burdick	Kuchel	Prouty

NOT VOTING—9

Cannon	Goldwater	Hill
Dirksen	Hartke	Mansfield
Ellender	Hayden	Yarborough

So the first branch of Mr. PROXMIRE'S amendment was rejected.

Mr. LONG of Louisiana. Mr. President, we now proceed to consider the second branch of the amendment, which I should like to explain briefly. The Senate has agreed—and I think quite correctly—to do what it tried to do initially when the Senate attempted to make clear to the regulatory agencies what it had in mind when it passed the bill pertaining to tax credit. If we do not tell the regulatory agencies what we are trying to do, the regulatory agencies themselves will be divided. The Federal Power Commission is divided. I understand that there is a division in the Interstate Commerce Commission. We should instruct them as to what we meant. If we instruct the regulatory agencies that we meant either that the utilities should have the advantage of the tax credit or should not have the advantage of the tax credit, they will understand what Congress intended. The utilities will either keep the benefit of the credit or they will flow it through.

I should like to explain what is involved in the second branch of the amendment now before the Senate. Congress voted 2 years ago that the regulated carriers, whether they be the railroads, the airlines, the bargelines, the pipelines, or the trucking lines—the entire transportation industry—would all be treated alike, in that they would all have the benefit of the 7-percent credit.

At present the Interstate Commerce Commission does not take away the benefits of the tax credit from the railroads, the bargelines, or carriers which compete directly with the pipelines, nor does it propose to do so. No one is proposing that the benefit of the tax credit be taken away from the shipping lines which carry residual fuel oil to the eastern coast. They are able to provide a cheaper service on a B.t.u. basis than their competitors, the pipelines and the railroads, provide.

The proposal would treat all carriers alike. They would all receive the benefit of the 7-percent tax credit.

There is a legislative history on the subject in the House and in the Senate. It might be subject to dispute, but if Congress does not adopt the amendment, lawsuits will be filed. The question will be in litigation for years, and when it finally reaches the Supreme Court of the

[*P. 1996*]

United States, the question will still be as follows: Did the Congress intend that the regulated carriers—the railroads, the bargelines, the pipelines, and the shipping lines—should have the full benefit of the credit as an incentive to modernize their equipment; or did Congress intend that they should be required to give it back as a reduction in rates? That is the question.

As the matter stands now, if we do not adopt the committee recommendation, the FPC may proceed against the pipelines. If they should win that lawsuit, the Interstate Commerce Commission might well be under the burden of proceeding against the railroads, the bargelines, and other carriers.

The argument of those of us who support the House bill—and the section to which I refer was sent to us from the House—is that the provision was intended as an incentive to modernize the railroads and the other carriers. The railroads have accomplished a great deal of modernization, depending upon that provision of the law. It was our intent that the same benefits should be available to the pipelines which are competing with them, to enable them to mod-

ernize and obtain new equipment, and that the bargelines should have the same incentive to modernize. The shipping lines with which they are competing should have the same incentive, on the same basis. If we desire a space age manufacturing industry, we must remember that one quarter of our gross product is the transportation industry, and we should not attempt to achieve full modernization of the manufacturing industries without having a space age transportation industry to go along with it.

Mr. McCLELLAN. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. McCLELLAN. I do not understand why the provision does not apply equally now.

Mr. LONG of Louisiana. The reason is that on the commission level the question is asked, Does Congress intend that the carriers should be permitted to have the tax credit that was voted as an incentive to encourage them to make a profit by building more pipelines, modernizing the railroads, and building more facilities, or did Congress intend that the incentive should be passed on through as a reduction in rates?

It can be argued—and I contend it to be true—that if the transportation industry is modernized, the competition factor will bring rates down. On the other hand, if we consider the position of the opponents and the position of the majority of 3 to 2 on the Federal Power Commission, we would argue that the purpose intended was to make the carriers reduce their rates by the amount of the benefit from the investment credit.

The Senator from Louisiana contends that 2 years ago, when the Senate approved the tax credit provision, we deliberately made it more profitable for business if it would do what we wanted it to do—which was to modernize, to improve, and to expand its services; and we intended that business should make a profit if it did something we thought was in the national interest; namely, to modernize, improve, and expand facilities.

If that is what we desire to do, is what we do for all the rest of industry—making it profitable for all to modernize—we should permit the transportation industry to have the same incentive as the others. On the other hand, it can be contended—and those who take the opposing point of view contend—that we intended it, for example, an industry should receive a $70,000 tax credit, it should be immediately required to reduce rates by $70,000, thereby eliminating the profit motive to modernize or to put in new facilities.

Mr. McCLELLAN. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. McCLELLAN. Do I correctly understand, then, that if the pending amendment is adopted, it would take away from transportation and utilities all profit and incentive for them to make the investment to begin with?

Mr. LONG of Louisiana. They would still be permitted to make the same profit that they were permitted to make before. But the point is that, so far as the pipelines are concerned, they would be required to flow the tax advantages of the tax credit through. So we would be discriminating between these and other carriers not having to flow the benefit through.

Mr. McCLELLAN. Do those who support the amendment agree that discrimination would result between various carriers.

Mr. LONG of Louisiana. The Senator from Louisiana is opposed to the Proxmire amendment.

Mr. McCLELLAN. I understand that. The subject is complicated. Senators who are members of the Committee on Finance have been devoting many weeks and months to the bill, and they understand it. It is somewhat difficult for me. Perhaps it is not for others, but it is for me. I should like to see all the utilities treated alike. At the same time, I would not wish to take away the incentive that I believe Congress had in mind when it first granted the credit.

Mr. LONG of Louisiana. The Senator would vote to take away the incentive if he should vote to agree to the Proxmire amendment. He would be permitting them the incentive that we intended for all industry if the Senator votes down the Proxmire amendment and stays with the House bill.

So if the Senator wants to treat them all alike and see that they get enough credit and benefit from it as a means of modernizing and expanding their investment, he will vote against the amendment.

Mr. McCLELLAN. What is the argument against treating them all alike? The Senator says this provision would treat them all alike. I would like to hear the argument on the other side of the question.

Mr. LONG of Louisiana. Then I will yield the floor.

Mr. GORE. Mr. President, the senior Senator from Arkansas has asked a question. I think I am prepared to answer. There is some question about the legislative intent in 1962. I participated in the debate at that time as a member of the committee. The late and beloved

Senator Kerr made it perfectly plain, when the bill was before the Senate, that if the 7-percent investment credit were given to the gasline utilities, the benefit would be passed through to the consumers.

Mr. McCLELLAN. Mr. President, will the Senator yield at that point?

Mr. GORE. I yield.

Mr. McCLELLAN. But the law does not require it to be done. Was that merely the statement of a Senator that it would be done? I am trying to get the facts.

Mr. GORE. So far as the law is concerned, the bill did not require it. It was a revenue measure. But what we have in the present bill is a legislative measure in a revenue bill. This provision in the pending bill, which the Proxmire amendment now seeks to strike out, prohibits the Federal Power Commission from taking into consideration the vast benefits of investment credit in arriving at fair and reasonable rates for consumers to pay or a fair and reasonable return on investment.

Mr. McCLELLAN. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. McCLELLAN. Let me see if I understand. The law gives them the 7-percent credit.

Mr. GORE. The tax law.

Mr. McCLELLAN. As it is now.

Mr. GORE. Yes.

Mr. McCLELLAN. Am I to understand that the bill now before the Senate, as it passed the House, would prevent the Federal Power Commission, or whatever other utility commission had jurisdiction, from taking into account the extra profits and benefits that accrued to the investor, in fixing the rates?

Mr. GORE. That is correct.

Mr. McCLELLAN. I thought all of those factors were properly taken into account.

Mr. GORE. So did I. I do not know why this provision is in the bill. This is a legislative proposal inserted in a revenue measure. It has no place in the bill.

Mr. McCLELLAN. The point I am trying to make is why the regulatory agency which has the ratemaking authority should not be permitted to take into account the investment which has been made in fixing reasonable rates and also whether or not some of the benefits of that should be passed on to the consumers.

Mr. GORE. I know of no reason why they should not.

Mr. McCLELLAN. That is the fair way to do it. We leave it to the regulatory body to make the decision.

Am I to understand that the language in the bill would take away from the regulatory body the right to take into account the benefits and profits that accrued in making the rate structure? Would that right be entirely elminated?

Mr. GORE. That is correct.

Mr. McCLELLAN. Is that correct?

[*P. 1997*]

Mr. GORE. That is the provision in the bill which the Proxmire amendment seeks to strike out.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. ANDERSON. The Senator from Tennessee quoted what the Senator from Oklahoma said when the bill was on the floor of the Senate. Will the Senator quote what the Senator from Oklahoma said when it came back, which completely reversed that statement?

Mr. GORE. It is not within the power of this body to determine the legislative intent of Congress in 1962. Various independent agencies have already reached decisions with respect to the investment credit. The ICC, the Federal Power Commission, and the Federal Communications Commission have done so. Now it is proposed that Congress legislatively inject itself into the functions of these regulatory agencies, which, as the Senator knows, are quasi-judicial in nature, and prohibit the consideration of hundreds of millions of dollars in benefits which Congress has voted, in reaching, as the Senator has said, fair and reasonable rates for the consumer to pay and a fair and reasonable return on investment.

Let me go one step further. This flowthrough is not automatic. If as a result of these benefits the return on investment should go above a ceiling which the regulatory agency considers fair and reasonable, it would operate to reduce the rates. But in the case of a utility that was not in a very strong profit position and for which this investment credit did not provide a profit in excess of what was considered to be a fair and reasonable return on investment, the flowthrough would not occur.

But what the present law permits, and indeed what the statute requires, is that the Federal Power Commission take into consideration all the operating costs and operating revenues and determine what is a fair rate of return on investment on the one hand, and, in consequence thereof, what is a fair and reasonable rate for consumers to pay, on the other.

Mr. McCLELLAN. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. McCLELLAN. As of now, are not the regulatory agencies which have supervision of rate fixing required to take into account the basic investment involved, together with operating costs, in fixing a rate that will yield a fair return on the basis of that investment?

Mr. GORE. That is true.

Mr. McCLELLAN. How would this provision change that? They are the ones to look into each case. Congress cannot do it. I do not want to change that rule. That is what I am talking about.

Mr. GORE. To answer the Senator's question, let me answer it, not in my words but in the words of the bill:

> Accordingly, Congress does not intend that any agency or instrumentality of the United States having jurisdiction with respect to a taxpayer shall, without the consent of the taxpayer, use—
>
> (2) in the case of any other property, any credit against tax allowed by section 38 of such Code, to reduce such taxpayer's Federal income taxes for the purpose of establishing the cost of service of the taxpayer or to accomplish a similar result by any other method.

That means the regulatory agencies are prohibited from taking into consideration the tax benefits from the investment credit in arriving at what is a reasonable and fair return on investment or what are fair and reasonable rates for consumers to pay.

Mr. McCLELLAN. I merely wished to make the observation that I do not want to change the present practice, the present rules, the present standards of measurement.

Mr. GORE. Nor do I.

Mr. McCLELLAN. I believe they are right as they are. If the bill seeks to change them, if it seeks to change that practice, I would have to look with disfavor upon it.

Mr. GORE. The Senator reaches the same conclusion that I have reached.

Mr. McCLELLAN. I do not want to see discrimination practiced. If the commissions now are favoring one by granting relief, and not to the other, I am opposed to it. I want to correct that situation.

Mr. GORE. I thank the Senator.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. ANDERSON. The Senator from Arkansas is asking what the law is. The legislative history is clearly established. The House wrote the legislative intent in its report. The Senator from Oklahoma, Mr. Kerr, presented the situation to the Senate and the Senate affirmed it. However, the regulatory agencies said, "We do not care what Congress said. We are going to do it our way."

If Senators wish to have it the way the law provides, they should stand with the bill. If they want to stand with the bureaucrats, they should vote for the amendment.

Mr. GORE. Mr. President, I apologize to the Senate for taking so much time. However, this is a very important measure. It involves hundreds of millions of dollars annually. This provision in the bill would deny benefits to consumers. That is why I take some time. I hold in my hand a decision of the Federal Communications Commission. Let me read what the decision says:

> 7. The comments have dwelt at some length on the so-called legislative intent behind the investment tax credit and many of them have implied that the Commission is precluded by such legislative intent from judging the appropriate accounting on the merits in accordance with sound public utility regulatory principles. We do not agree with this implication. It appears to us on the contrary that Congress fully intended that the tax legislation here involved should fit into the normal regulatory scheme.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. GORE. Not just now. I shall yield presently. I read further from point 10:

> 10. The question may well be asked as to how Congress intended the tax credit to be an investment incentive to utilities if the entire amount is to be passed along to consumers in the form of lower rates. The answer, of course, is that in most cases it will not all be passed on even under the "flowthrough" principle. Only in the case of a utility which has already reached the upper limits of a reasonable rate of return is such a result possible, and even then rates cannot be reduced to give immediate effect to the reduction in taxes. In the case of marginal utilities, such as some railroads, for example, it may well be that none of the amount will be passed on to the consumer. It is this factor, present to some degree in the case of most utilities, of providing the means of increasing earnings and making it easier to obtain capital, both directly through retained earnings and indirectly through rendering its securities more attractive to investors, that constitutes the real incentive.

I will read one further point, and then I shall read the conclusion:

> It is our view that the investment tax credit represents a reduction of income taxes and should be so recorded in the accounts. The Revenue Act of 1962 specifically provides that the Federal income tax liability shall be reduced by the amount of the investment tax credit. The amount of the tax due the Government is determined after deductions of the credit.

Now I come to the conclusion:

We conclude that the proper accounting with respect to the investment tax credit arising from both owned and leased property is to account for it as a reduction in income taxes and let such reduction flowthrough to operating income. As stated in the Notice of Proposed Rule Making in this proceeding, we have interpreted all of our uniform systems of accounts as presently requiring "flowthrough" accounting. Consequently, no amendments to our systems of accounts will be ordered herein.

Mr. McCLELLAN. From what is the Senator reading?

Mr. GORE. From a decision of the Federal Communications Commission. I could read from a decision of the ICC or the Federal Power Commission. The Chairman of the Federal Power Commission has asked Congress not to inject itself into ratemaking cases, many of which are pending now before this quasi-judicial body.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. ANDERSON. What the Senator has said bears out what I have been trying to say. The Federal Communications Commission knew clearly what Congress intended. It said, "We do not care what Congress intended. We will do it the way we want to do it."

They do not pay any attention to the clear evidence. The House report was amply clear. The statement of the Senator from Oklahoma on the floor of the Senate admits of no misunderstanding. That is what is in the bill. The bureaucratic agencies went ahead and did what they wanted to do. Therefore, the House slapped them with this language. It is the only way in which it can hold them in line when they violate the clear intent of Congress.

Mr. GORE. I respect the opinion of the senior Senator from New Mexico. I must say, however, that his statement is entirely incorrect. There is room for argument as to what the legislative intent

[*P. 1998*]

was. The Senator has made one argument. Not only did the Senator in charge of the bill in colloquy with me make the intent perfectly plain that the benefits—which, incidentally, I thought never should have gone to regulated utilities anyway—would be passed through to the consumers. Moreover, the late Senator Kerr made it perfectly plain that the benefits would be passed through to the consumers.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. DOUGLAS. I wish to corroborate what the Senator from Tennessee has said. I refer Senators to the CONGRESSIONAL RECORD for August 28 and September 4 of 1962, when the Senator from Wisconsin was raising the very same question about these very points, and was about to offer an amendment to strike out this language. The Senator from Oklahoma rose and said that the amendment was not necessary, because, of course, in the case of these utilities, the utilities would of course pass the benefits through.

It was on that assurance that the Senator from Wisconsin did not press the amendment which he is now pressing.

Then the bill went to conference. The language was continued. Then the Senator from Oklahoma came back with exactly the opposite statement, when it was too late for us to change this provision, because the Senate had either to accept or reject the revenue bill as a whole.

We could not amend it. But when the issue had been before the Senate, we had been given assurances that it was not necessary, because the savings would be passed on. After the provision was firmly embodied in the bill, we were then told exactly the opposite. So to the degree that we want to give weight to the legislative history, the legislative history on the floor of the Senate is at least as important, so far as the Senate is concerned, as the statement of the managers as they returned from conference.

Mr. ANDERSON. Mr. President, will the Senator yield for 1 minute?

Mr. GORE. If the Senator does not mind, I should like to read what was said on August 27, 1962, by Senator Kerr.

Mr. ANDERSON. While the Senator is looking for that statement, I should like to make a brief comment.

Mr. GORE. I will not yield just now. Senator Kerr said:

With reference to that section, I say to the Senator from Tennesse that the benefits would go to the consumers, not the gas pipelines. If the Senator from Tennessee were aware of the facts in the case, the rules and regulations of the Federal Power Commission, and the applicable law, he would have known that. The interstate gas pipeline carriers are a regulated utility, and under the operations of the Federal Power Commission, any saving effected by them reduces their rate base.

That was said to me, standing here, by the distinguished and late beloved Senator Kerr, standing over there.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. DOUGLAS. Senator Kerr repeated the same statement to the Sena-

tor from Wisconsin [Mr. PROXMIRE] on the following day, August 28, and on September 4 he said it again. So we had three assurances that the saving would be passed on.

It was only when the bill came back from conference that a contrary statement was made.

Mr. ANDERSON. The statement made by the Senator from Illinois is exactly correct. I agree with him completely. I have no quarrel with it. I have no quarrel with what the Senator from Tennessee is saying. I regret that there is confusion on the subject. But I wish to explain the reason why I think the House inserted language which it was felt clearly set forth its history, which is somewhat different from ours. The House requires written reports, and the Senate does not. It was felt that the House language was somewhat binding, and that Senator Kerr's statement on the floor of the Senate, after the conference had agreed that this meant a certain thing, was binding also. I admit that there is a difference between them. The Senator from Illinois, so far as this question is concerned, stated the situation exactly as it was.

Mr. DOUGLAS. I thank the Senator from New Mexico.

Mr. GORE. Permit a lawyer from Tennessee, of very limited learning, to express the view that a colloquy on the floor of Congress does not take precedence over a statutory provision of law. Neither does a committee report. Where is the residual grant of power? Where do we find the statutory authority—indeed, the statutory responsibility—for taking into consideration the position of the utilities in arriving at rates fair and reasonable for the consumer and a fair and reasonable return on the investment? We find it in the statutes enacted by Congress before this colloquy occurred; and this colloquy did not repeal any of those laws. All that Congress did in 1962 was to pass a law providing tax benefits called investment credit.

Now another tax bill is before Congress. It contains a legislative measure which would prohibit the Federal Power Commission from taking these benefits into consideration for the purposes of fixing rates for consumers or determining a fair rate of return on investment.

Mr. McCLELLAN. Mr. President, will the Senator yield at this point?

Mr. GORE. I yield.

Mr. McCLELLAN. It strikes me that possibly everyone has about the same objective in mind with respect to this proposal. I should think that no one would want to deny to regulatory bodies the right to take into account the investment involved, the cost of operating, and so forth, to arrive at a fair rate of charge to the consumer or user. Since statements have been made on the floor that caused some confusion, I should think, since possibly regulatory agencies have made some interpretations of their own, and the House feels the agencies are not carrying out the intent of Congress and the intent of law, that it might be well for this matter to go to conference, and let Senators who have the responsibility and the knowledge, after conferring with the House conferees, work out some language on which agreement would be possible. My thought is that a vote for the amendment of the Senator from Wisconsin by the Senate would throw the question into conference.

Mr. GORE. That is correct.

Mr. McCLELLAN. I do not know what the outcome would be; I am not prepared to say. I have reached no conclusion about it. But it occurs to me that it should be possible in conference to work out language that would prescribe what should be done, what I think Congress intends should be done, and at the same time not permit regulatory agencies to ignore or disregard the intent of Congress. I think something could be written into the conference version to get the job done. I do not know any other way to do it. If this language is not satisfactory, or if there is some real objection to it, let us get the matter into conference and see if something can be worked out.

Mr. GORE. I thank the Senator from Arkansas.

Mr. PROXMIRE. The senior Senator from Arkansas has put his finger on the crux of the amendment and has made the strongest argument for it. He does not want to vote for a change in the present situation; or if there is to be a change, he feels that, at least, the conferees ought to have an opportunity to discuss it. The way to accomplish that is to vote "yea" on the amendment.

Under the present bill, regulatory agencies have no discretion. They are compelled, forced, required, mandated, to prohibit or prevent a passthrough. They cannot pass through 1 percent, 2 percent, 3 percent—or any investment credit. They are compelled by law. This is direct dictation by Congress to the Federal Power Commission and to the other Federal agencies and, I think inferentially, to the State agencies.

I should like to make one or two other points. The Senator from Louisiana has argued that the gas pipelines and oil

pipelines do not really have an opportunity to take advantage of the investment credit. He said their competition can get it, but they cannot get it. Oil and gas pipelines are regulated. Why are they regulated? Why did Congress decide to place oil and gas pipelines under regulation? Because they are vested, to some extent, with a character of monopoly. If it were not for the fact that they are regulated by the Federal Power Commission, they would be in a position, on the basis of the judgment of Congress—not of Members of Congress, but the judgment of Congress—to charge rates that would be excessive. Competition alone is not enough to keep the rates charged by oil and gas pipelines within reason.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

[*P. 1999*]

Mr. MONRONEY. It is true that this provision was passed to make certain that independent producers would have pipelines available to carry their oil to market. But the real purpose was to protect carriers owning pipelines, so that every producer in the field, whether the line was owned by the producer or not, would have the same right on a percentage basis to pipe his oil to market. That is, it was a common carrier.

Later, it was provided that the Federal Power Commission should maintain a reasonable rate for the fuel. The pipeline had nothing to do with the rate.

That is why I feel that the Senator's amendment would deny to carriers or transportation facilities, which are in competition, an opportunity to provide service on a basis that would be profitable to them and also to furnish service at a reasonable rate.

Mr. PROXMIRE. Let me say to the Senator from Oklahoma that existing law and this amendment do not deny the oil pipelines and the gas pipelines anything, but merely provide that they must make their case before the regulatory body; and a majority of them have not been able to convince the Commission.

Mr. MONRONEY. But they have already decided this question. We are not talking about letting the regulatory body do that. Two have agreed and three have opposed doing what I thought the Senate had in mind when it previously dealt with the tax credit—namely, provide it as an incentive for the construction of additional lines and for improvement of their plants.

If none of the investment credit is to be retained, I do not believe it can properly be called an incentive. If it is properly called an incentive tax credit, then all who wish to invest more money will be able to deduct the 7 percent as a tax credit. I do not think one minor group should be the only one to be compelled to proceed without the benefit of the tax credit.

Mr. PROXMIRE. But these companies do not regard it as an adequate incentive or as a sufficient amount to really constitute such an incentive.

Mr. MONRONEY. Who determines that question? These companies are in competition, and the rates they charge must be competitive rates, regardless of the views of the commissions as to what rates should be established for the pipelines, the truck lines, or the railroads. These companies have to meet the lowest rate that one of their competitors quotes; and today most of the rate cases taken before the Interstate Commerce Commission are based on attempts to set rates too low, so low that the companies cannot even continue to operate, much less obtain a reasonable return on their investments.

Mr. PROXMIRE. But absolutely nothing in either existing law or the amendment would require that the tax credit be passed through and not be retained by the companies if the rates established by the regulatory commissions were not adequate and sufficient to provide a reasonable or fair return on the investment and were not sufficient to enable the companies to continue to operate.

Mr. DOUGLAS. Mr. President, will the Senator from Wisconsin yield?

Mr. PROXMIRE. I yield.

Mr. DOUGLAS. I believe this question has been before Congress ever since the Moore bill was under consideration—in other words, for approximately 17 years. It has also been before the Federal Power Commission and before the Supreme Court.

It is true that one of the purposes of regulating the pipelines was to give them a common-carrier status. But according to the Supreme Court, that was not the only purpose. In the Phillips case, the Supreme Court held it was also a proper function of the regulatory body to consider what was a reasonable rate of return; and behind that reasoning there was a solid base of economic fast; namely, that once a pipeline is hitched up to the original source of supply and once it connects with the distributing company at the other end, it is, in effect, a monopoly—in other words, that there is no possibility of building a competing line.

We fought out this issue on the floor of the Senate. The late Senator Kerr was so strong that we were unable to

overpower him here. But the Supreme Court clearly stated, in connection with this matter, that this is a proper function of regulation.

So regardless of the action taken by the Senate or the action taken by the Commission—which had some very strange things happen to it, it is clear that the Supreme Court determined, as the law of the land, that that function is included in the provision of this regulatory function.

Mr. MONRONEY. But a pipeline which, in Oklahoma, obtains its gas for approximately 12½ cents, charges 15 cents for it when it turns it over to the distributing company in Washington, D.C., or in Rockville, Md.; and the distributing company charges the consumers about $1.50 for it. At least, that is about what I pay for the gas used in my home. The result is that the large profits are made by the distributing companies; the pipeline companies make a very small amount.

This bill would not affect the Public Utilities Commission of the District of Columbia; and the Senator from Minnesota says there is no corresponding commission in Minnesota.

I do not know whether there is one in Wisconsin.

So, when natural gas passes through the lines of the pipeline company and is delivered to the local utility, the distributing company, it is clear that no provision of this law would require that the tax credit be passed on to the consumers. Certainly I do not want the result of this measure to be the further enrichment of the distributing companies, which now are charging for the gas they deliver to the consumers 10 times the price the pipeline companies charge when they sell the gas to the distributing companies in the cities.

Mr. PROXMIRE. I assure the Senator that the Wisconsin Commission will require them to pass it on. The pipeline companies are allowed a fair return, and they will be required to pass on this tax credit.

Mr. MONRONEY. This law has been in effect since 1962. What have been the rulings of the Wisconsin Public Service Commission as to the passthrough of the tax credit, as an incentive for increased investments in plant and facilities? Certainly that was the purpose; and I feel sure that the members of the commissions are smart enough to have realized that and, therefore, to have set the rates high enough to enable the companies to do that, or else not have required the passthrough to be made.

Mr. PROXMIRE. Only a few of them have required the passthrough to be made, but some of them have.

Mr. MONRONEY. So there is no assurance that if this measure is enacted—although at present it affects only the Federal Power Commission and only the long-line transmission facilities—the Commission will say, "We will require the transmission companies to reduce their rate by 1 cent, but we will not require the local distribution companies to reduce the $1.50 rate they charge the consumers in the cities"—with the result that the transmission companies get only about 7 cents of the total. A great deal more is charged to distribute the gas from Rockville, Md., to the Senator's home or to my home, or even to distant parts of Bethesda, than the charge made for transporting the gas from distant parts of Oklahoma or Texas to the city gate of Rockville, where the pipeline hooks up to the local distribution line.

Mr. PROXMIRE. But the experience in Wisconsin—and I hope the Senator will agree that others have had the same experience—is that the regulation by the State commissions is at least as strict, and generally is stronger, than that by the Federal Power Commission, in seeing to it that the companies are allowed to earn a fair return.

Mr. SYMINGTON. Mr. President, will the Senator from Wisconsin yield?

Mr. PROXMIRE. I yield.

Mr. SYMINGTON. I thank the Senator from Wisconsin for yielding. He always impresses with his clarity.

Tonight much is being said about pipelines. I ask whether this amendment also embraces other transportation, including railroads.

Mr. PROXMIRE. It will embrace them and also the bargelines and the buslines and the oil pipelines and the gas pipelines and the interstate transmission lines—depending, of course, on what the Commission does.

Mr. SYMINGTON. I ask about railroads at the moment.

There are many railroads which have been in bankruptcy.

Some for many years were in bad financial condition. Many need additional, or improved, rolling stock and maintenance of way.

As I understand it, this measure is designed to be tax incentive legislation. Suppose the railroads—understanding the view of economists about the importance to the overall economy of hard capital investment, and believing that the Government was sincere when it said the purpose of this legislation is to

[*P. 2000*]

present this form of investment incentive—decided they would spend a large amount of money to improve their roll-

ing stock, or improve their maintenance of way?

If they first expended this money, accepted what the Government said, used their needed money to improve the economy through this hard line investment; then after they had risked, despite their relatively poor capital structure, to improve the road, the Government under the amendment could come in and say, "We are sorry. You cannot maintain this tax advantage we said we gave you even though you had the courage and the wisdom to make the investment. We must now take that money and give it back to your customers."

Mr. PROXMIRE. Does the Senator have faith in regulatory bodies or not?

Mr. SYMINGTON. I do not believe that is the answer at all. I have seen regulatory bodies consistently criticized at times by the utilities for being against the utilities; and regulatory bodies where the opposite criticism was expressed.

Therefore why leave it up to the regulatory body, to a point where that body can nullify the Government promise which originally was the reason for the investment.

I do not know some of those industries. But in the case of the railroad industry, where one might be operating on a thin line, the regulatory body would have the right to say, "Despite what the law says, we are not going to allow you to keep this money. You must give it back to the consumer."

Mr. PROXMIRE. That is the heart and soul of the argument made by the Senator from Louisiana, which is exactly opposite. The railroads are getting the benefit of that operation.

Mr. SYMINGTON. The Senator from Louisiana was talking about pipeline conditions in his own State. I am talking about a different industry.

Mr. PROXMIRE. He is talking about the national situation, that railroads are enjoying the benefit of the investment credit although the gas and pipeline industries are not. They do not use investment credit.

I believe the Senator from Louisiana has a good point, but what the ICC is doing perhaps is wise. It recognizes that the railroads, as the Senator from Missouri has indicated, have not been doing very well, and therefore it is perfectly proper and permissible and morally right under the circumstances to see that they get full and complete benefit of the investment credit.

As the Senator has said, profitable industries can take advantage of monopolistic power. They may be able to use the power to extort a relatively high price. But the regulatory body can prevent this and see that the benefit is passed on to the consumer. This is the best way by far to see that the investment credit does what it is designed to do; because lowering the rates stimulates business, and of course the utility has reason to buy equipment; and this is the only basis on which the utility will do so.

Mr. SYMINGTON. The Senator from Wisconsin says, "Of course the utility," or "Of course somebody will buy the equipment." I have had experience in deciding whether to buy equipment——

Mr. PROXMIRE. That is because the Senator's market was assured.

Mr. SYMINGTON. It was seldom as clear cut as the Senator from Wisconsin would make it.

Mr. PROXMIRE. The Senator has had great experience in business. Of course, it is right to say that people will do it. All I was trying to say is, if there is an assured market, under these circumstances, if you lower the rate in a utility situation, we can usually get some elasticity to sell more.

Under these circumstances if you do not sell more you are not going to be able to provide additional service.

Mr. SYMINGTON. We might find people believing the Government was sincere in calling this a tax credit, would be rewarded for the risk of additional investment by the regulatory body saying in effect, "We were only fooling, you shall pass it on to the consumer."

Mr. PROXMIRE. The Senator from Missouri is a fairminded person. Would he not agree that, just as there are some circumstances in which the investment credit should not be passed on, there are also other circumstances, in which the investment credit should be passed on?

Mr. SYMINGTON. It would depend upon the premise of the agreement offered by the Government.

Mr. PROXMIRE. It should be left within the discretion of the regulatory body so that it can permit the pass-on as circumstances seem appropriate or right.

Mr. SYMINGTON. I understand the position of the Senator from Wisconsin. There is no Member of this body generally more logical. As I gather it, the Government goes to these corporations, many of whom have a relatively difficult tax structure, and says, "We believe the best place to pick the economy up is by investing in hard line units, construction, and so forth. If you will do that, we will give you a reward. That reward will be a tax credit, an incentive."

My worry is that, based on some people I have seen in these regulatory bodies, they would later say, "We do not care what the Government said to you previously. We are now saying to you, pass it on to the consumer. There is no law to prevent that being done."

If I were a member of the board of directors of a railroad, and was worried about my capital structure, then decided nevertheless, because of this tax incentive, to take a risk in order to have a better railroad—say more freight cars—I do not believe it would be fair for any regulatory board, after I had done that, to take my tax credit away. That is the thrust of my presentation.

Mr. PROXMIRE. Is it not also true that there are two incentives, really, for purchasing equipment? One might be the investment credit. If we pay out $100,000 for the best equipment, we can take $7,000 off our taxes. That might be an incentive; but only provided the equipment was necessary.

Mr. SYMINGTON. It would be.

Mr. PROXMIRE. That would be an incentive for buying equipment. The second incentive, however, is certain. If through the passthrough, rates are lowered, expanded markets will make it desirable, profitable, and necessary to buy equipment to make it possible to perform better service.

Mr. SYMINGTON. But that was not a part of the deal. The regulatory body says, "We did not really mean what we said about that tax credit. What we really did was to trick you into having a finer railroad than before. You have a finer railroad. Everyone is happy. Pass the tax credits on."

Mr. PROXMIRE. Let me say to the distinguished Senator from Missouri that the law has been on the books now since 1962 and has been interpreted by Federal regulatory agencies. The situation is settled. Unless Congress fools around with a change, as the present bill would provide, they will be able to predict what the situation will be in the future. That will be a certainty; and they would be able to act.

Mr. SYMINGTON. I say with respect for the able Senator from Wisconsin, who in the fiscal and monetary fields has no superior in the Senate, that I was in the railroad business in the depression. There was hardly a railroad in the United States not in serious financial condition, if not already in bankruptcy. One of the reasons they stayed so long in that condition was that they could not find any incentive to improve their equipment. Let the Government carry out its agreement. That makes for good government.

Therefore, as I have said, they are now facing other problems. There is active competition between trucking lines and barge lines. The more competition the better. If those companies make investments because they are told by their Government that if they make them they will receive tax credits, I do not believe that any regulatory body should have the right arbitrarily to take away and, in effect, therefore, nullify the agreement that was made when they originally invested as a result of the promise of a tax credit.

Mr. PROXMIRE. Does the Senator from Missouri accept the statement made by the Senator from Louisiana that railroads have been taking advantage of the investment credit under present law to modernize to a substantial extent, to expand, and to invest in a wholesome way? If that be true under present law, why change it?

Mr. SYMINGTON. The answer to that question would be, first, that if the Senator should hold some of the various layers of stock of the railroads, even though they are doing better, he will have observed that they have a long way to go before there will be true reimbursement for investment, especially as against some of the other industries we both know about. I am glad the railroads are doing better.

[*P. 2001*]

Mr. PROXMIRE. So am I.

Mr. SYMINGTON. I hope that all business does better.

On the other hand, a deal is a deal. If the offer is made to a railroad to the effect that, "We will give you a tax deduction if you make a fixed investment in rolling stock or maintenance of way," the Government ought not to let some ideological position of a member of a regulatory body nullify the agreement, made prior to the commitment of cash by the corporation in question.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield to the Senator from Ohio.

Mr. LAUSCHE. Is it or is it not a fact that existing law, which requires a movement through to the consumer of benefits, would preclude a utility from getting a fair return on its capital structure?

Mr. PROXMIRE. The Senator is absolutely correct. Furthermore, there is no compulsion in the present law or in the Proxmire amendment which would require the investment credit to be passed through. The subject is left within the discretion of the regulatory body, and the regulatory body has the duty and the responsibility to see that there is a fair return, as the Senator from Ohio has said.

Mr. LAUSCHE. If the theory of those who oppose the position taken by the Senator from Wisconsin were accepted, would it not mean that, regardless of the liberality of the return, under no circumstances would there be allowed to pass through to the consumer the benefits of the largess that we have given?

Mr. PROXMIRE. I believe the argument implicit in the question of the Senator from Ohio is devastating. Regardless of the largess, regardless of how excessive it may be, regardless of the advantage that the semimonopolies may have, the regulatory body would have no power at all, no discretion, to pass it on to the consumer.

Mr. LAUSCHE. Until it is first shown that there has been a fair return to the utility.

Mr. PROXMIRE. Under the committee bill it could never be passed on.

Mr. LAUSCHE. That is what I mean.

Mr. PROXMIRE. Fair return or not. There must be a fair return on top of that. There is an extra or excessive return.

Mr. LAUSCHE. Under the theory of the opponents of the amendment of the Senator from Wisconsin, the utility would be guaranteed a fair return and, in addition, the concession which the Congress made to them by way of investment credit.

Mr. PROXMIRE. Absolutely. Mr. President, I shall take my seat and yield the floor in a moment, so that other Senators can discuss the question on their own time. But the contrast between the amendment pending and the previous amendment, which was rejected by a close vote, is very sharp.

On the previous amendment, a credit investment of only 3 percent was involved. On the pending amendment a 7-percent credit is involved. Under the previous amendment the regulatory body could spread out the benefit to the consumer over the life of the asset. Under the pending amendment, the regulatory body would be prohibited from giving any of the 7-percent credit to the consumer. Regardless of the return, by law, by congressional dictation and declaration, it must all go to the utility stockholders.

Mr. President, the hour is late. I shall yield very briefly to the Senator from Oklahoma, and then I shall yield the floor.

Mr. MONRONEY. If I correctly understand the distinguished Senator, the Interstate Commerce Commission and other regulatory bodies could pass on cases or not. The ICC could require the railroads to pass through reduced rates the 7-percent credit on the investment that the railroads had made. Is that correct?

Mr. PROXMIRE. As the Senator very well knows, far better than the Senator from Wisconsin, the regulatory sit-railroads than in relation to public utilities. But in general it would be impossible under the committee bill for the ICC to decide whether or not the investment credit should be passed on, whether part of it should be passed on, or whether it should be spread over the life of the asset. They have that discretion under present law.

Mr. DOUGLAS. I do not wish to interrupt the Senator from Oklahoma——

Mr. MONRONEY. I appreciate the interruption of the Senator from Illinois.

Mr. DOUGLAS. Is it not true that in the case of railroads which have very low earnings that there would not be the slightest reduction in rates?

Mr. PROXMIRE. Yes, indeed.

Mr. DOUGLAS. The ICC would not require that the credit be passed on. The ICC has never been accused of being hostile to the railroads. Quite to the contrary, it has often been called the agent of the railroads. I do not think there is any chance whatsoever that the earnings of a railway which has a low rate of earnings would be taken away from them and passed on to the users. On the contrary, I think in this case the investment credit would be used to increase the earnings of the railroad.

Mr. PROXMIRE. The Senator from Illinois is absolutely correct. The Senator from Louisiana indicated as much earlier when he pointed out the difference, in his judgment, between the friendly regulation of the ICC and the less than friendly regulation of the FPC.

Mr. MONRONEY. The Senator has said that the amendment would permit the ICC, the FPC, and the CAB to pass through the investment tax credits. It seems to me that if such be the intent of the amendment of the Senator from Wisconsin, the long-range investments in railroads that we hope to bring about will be in jeopardy, because 10 years would elapse before an appeal would be completed in the courts.

I do not think the ICC would make such a ruling, but there would always be a question of whether they would ever recapture the 7 percent which was enacted as a so-called tax incentive.

Mr. PROXMIRE. I read from the Finance Committee report of February 1963. The ICC feels that the law will be interpreted as it has always been interpreted. They will view Federal taxes, as they have in the past, as a part of the Federal taxation system. As the Senator from Illinois pointed out, the problem of the railroads is that in many

cases they are not making an adequate return. In that case there is no chance that the investment credit will be passed on. Furthermore, in many cases the railroads wish to lower their rates.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. PASTORE. For the benefit of Senators who voted against the previous amendment of the distinguished Senator from Wisconsin—and this includes the Senator from Rhode Island, who, however, now intends to vote for the amendment that is being proposed by the Senator from Wisconsin—I believe that for purposes of clarity of record, we should show the distinction between the two amendments.

Mr. PROXMIRE. Yes, indeed.

Mr. PASTORE. As I understand the proposal, in instances in which the 3 percent was allowed to public utilities, there was a requirement to pass through the tax credits, but for no period shorter than the useful life of the property involved. Is that correct?

Mr. PROXMIRE. The Senator is correct.

Mr. PASTORE. But when it came to the second part, which has to do with the 7-percent investment credit, in that instance, in the way in which the committee reported the bill, there is an absolute prohibition against it.

Mr. PROXMIRE. Absolutely. That is the distinction.

Mr. PASTORE. Therefore, it is fair for the Senator from Rhode Island to assume that preferential treatment is being given to the pipelines?

Mr. PROXMIRE. The Senator is correct.

Mr. PASTORE. Which was not the case in the first part of the amendment, no matter how we argue. There is a distinction between the two.

Mr. PROXMIRE. That is correct. So far as general business is concerned, it is in vigorous and complete competition. The competition is going to result in a substantial pass-through. There is no question about it. It is bound to. But with the oil and gas pipelines, where competition is at best imperfect, there will be very little, if any, pass-through, and pass-through is explicitly prohibited in the committee bill.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. MONRONEY. This affects not only the pipelines, but oil, gas, railroads, trucks, and all the rest. By removing any requirement for passing through, we leave in jeopardy the 7 percent tax credit. I think it would be more honest, if we want to do it, to amend the bill

[*P. 2002*]

and do away with the 7 percent credit as it affects these industries, because they are going to be in jeopardy.

Mr. PASTORE. I think it is probable that it might affect the railroads or trucklines, but I feel whoever invented this amendment was not thinking about the railroads or the trucklines. I will venture a guess that he was thinking of pipelines.

Mr. President, I ask for the yeas and nays on the amendment.

The yeas were ordered.

Mr. LONG of Louisiana. Mr. President, it seems to me that Senators who voted against the investment credit proceed with poor grace when they undertake to tell us what Congress intended by the investment credit. If those Senators had their way, there would be no investment credit, so there would be no problem. Those who fought against investment credit undertake to tell us what Bob Kerr, RUSSELL LONG, and others meant when they voted for investment credit.

I think I have some idea what was meant. The legislative history in the House is clear. The House intended all industry to get it. The bill so provided when it was reported on the House side. Senator Kerr, having made a contrary statement on the floor of the Senate with regard to the transportation industry and utilities, undertook to conform his legislative declarations to those of the House conferees when he brought the bill back from conference and they had agreed to what they meant. That is what I thought they meant.

Now we hear the argument that we should not tell a regulatory agency what to do. This question need not be that complicated. We provided for all industry, except the 3 percent regulated utilities—and we have taken care of that problem—that if one company made an investment of $1 million in new equipment, it was entitled to the exact credit of $70,000, which is 7 percent of $1 million. We said it was an incentive for industry to modernize plant and equipment and—since there was doubt as to the regulated industries—they could keep it.

Suppose we take the attitude of the Senator from Wisconsin. He advocates leaving it up to each regulatory agency. A railroad is competing with a pipeline, one hauling coal and oil, and the other transporting gas. The agency regulating the pipeline says it wants to make the pipeline give back the credit it was given for making a $1 million investment in equipment, amounting to $70,000. The agency that regulates the railroad states

that it is clear to it that the intention of Congress was to have the railroad modernize, and it should keep the credit.

I call attention to page 7 of the Wall Street Journal. The headline reads: "The First of 160 Freight Cars Ordered by Southern Pacific Came Off the Production Line Last Week."

There is the incentive to modernize the railroads. Why do the railroads want this section agreed to? They have a doubt about what would happen in the event the Federal Power Commission went to court with the pipelines and won the lawsuit against the pipelines and made the pipelines give up the investment credit, not for the past, but for all time to come in the future. They think the ICC could be under pressure to do the same thing with regard to the railroads. So the railroads are worried. They would be glad to see their competitors taxed, and themselves go free, but they fear that they, too, may be taxed. So it is having a tremendous effect. This backward industry is modernizing. In an effort to see that the same thing does not happen to them, they would like to see the intention made clear.

President Johnson made clear in his state of the Union message that there is nothing that is worse than to keep someone in doubt. If a man is going to invest his money, and wants to ask a bank to finance him to the extent of $10 or $15 million, he would like to know whether he is going to be allowed to keep the investment credit, or whether he will have to give it back.

So far as the Senator from Wisconsin is concerned, he would leave him in doubt. In effect he says, "I do not think the ICC will do it in the case of the railroads." How does the Senator know? All that would be necessary would be to have a President liberal enough to implement a liberal program and have the ICC do it.

It is up to the Congress to say, "When we passed the investment credit, we meant for you to keep the credit." One can complicate the question all he wishes, but the question boils down to this: When we gave him the tax cut did we mean to put it in his pocket or to give it to somebody else? That is all the question involves so far as the investment credit is concerned.

I believe I have made it clear that, in my judgment, when Congress passes a law that has a tax consequence, Congress having previously established regulatory commissions which are arms of the Congress, positive standards are established which set the general pattern that is expected to be followed; and we expect the agencies to take the situation from there.

From time to time Congress has found it necessary to pass additional laws telling them what to do. Clearly we would leave them in contention if we failed to act one way or the other.

To my mind, the worst thing about the amendment of the Senator from Wisconsin is that it would not settle the question one way or the other. If the Senator does not think there ought to be an investment credit, let him offer an amendment making it clear that the regulated industries will not get it. If he thinks they should have an investment credit, let us say so, as we did 2 years ago.

Mr. SIMPSON. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. SIMPSON. In the order of the Federal Power Commission of January 23, 1964, the dissenting opinion, as the Senator will recall, asked that they wait until Congress made the decision.

As I understand the bill before Congress, the purpose of it is to stimulate industry and business transactions throughout America. The consumer is being thought of in the bill by virtue of the fact that he will receive tax credit in the tax deductions. The purpose of the 7-percent tax credit is to stimulate industry into putting money back into various businesses.

Mr. LONG of Louisiana. The Senator is correct. More than twice as much gas can be carried in a 36-inch pipeline as can be carried in a 24-inch pipeline, and the difference in cost of construction is slight, because both require the same right-of-way and the same investment in many instances. The cost of building the larger pipeline would be about 10 percent more than the cost of the small pipeline, and it would carry 100 percent more gas, which, on a unit cost basis, would benefit the company more.

If a pipeline already exists, the company can do what is called "looping the line." Another pipeline is laid alongside the old one. In that case, the second pipeline is only about half as expensive as the first, with the result that the unit cost is greatly decreased.

Let us take the case of two companies seeking to sell competing products. One wants to build a pipeline. Another wants to build a new tanker. Some of them cost $28 million in American shipyards. Bigger tankers built in foreign shipyards would cost even more if built here. Is it fair that a tanker laying down residual fuel oil out of Venezuela should have a tax credit while the com-

petitor that brings the product to market by rail or pipeline should be denied a tax credit? It seems to me that both should be treated the same way. We are trying to put them on the same competitive basis. We think the public can be served better by having the public determine which of the competing companies gives them a product at the best price. That is the way to do it, rather than to lay the heavy hand of Government on them. Someone is always trying to squeeze profits out of industry, rather than letting industries compete with one another.

I am sure Senators will find that competitive conditions have done much more to reduce prices than almost any other factor. When the natural gas bill was being debated on the floor of the Senate, Senator Kerr made the prediction that if the bill failed to pass the price of gas would go up. At that time the price of gas was 8 or 9 cents. Today it is 23 cents. The price of oil, meanwhile, has gone down. That has happened through competitive conditions. When we encourage competition between competitors, the public gets lower prices by virtue of the competition. Competition, after all, is the great leveler. The public has had far more price reductions as the result of competition than as the result of anything else.

Competition, after all, is the only justification for our whole system of competitive, capitalistic system. We have gained more from competition and incentive than from the Federal regulatory hand. I submit that we should let

[*P. 2003*]

all industries have the benefit, and not give an advantage to one and refuse to give it to another. Looking down the road for 20 years or so, as I have said, what we expect to have is a space age transportation industry and a space age manufacturing industry. If we give an advantage to one and not to the other, one will fall behind.

The PRESIDING OFFICER. The question is on agreeing to the second branch of the Proxmire amendment. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD (after having voted in the negative). On this vote I have a pair with the distinguished minority leader, the Senator from Illinois [Mr. DIRKSEN]. If he were present and voting he would vote "nay." If I were permitted to vote, I would vote "yea." I therefore withhold my vote.

Mr. KUCHEL (after having voted in the affirmative). On this vote I have a pair with the distinguished senior Senator from Nebraska [Mr. HRUSKA]. If he were present and voting he would vote "nay." If I were at liberty to vote, I would vote "yea." I withhold my vote.

Mr. HUMPHREY. I announce that the Senator from Nevada [Mr. CANNON], the Senator from Arizona [Mr. HAYDEN], the Senator from Alabama [Mr. HILL], the Senator from Massachusetts [Mr. KENNEDY], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

I further announce that, if present and voting, the Senator from Arizona [Mr. HAYDEN] would vote "nay."

On this vote, the Senator from Massachusetts [Mr. KENNEDY] is paired with the Senator from Nevada [Mr. CANNON]. If present and voting, the Senator from Massachusetts would vote "yea" and the Senator from Nevada would vote "nay."

Mr. KUCHEL. I announce that the Senator from Illinois [Mr. DIRKSEN], the Senator from Arizona [Mr. GOLDWATER] and the Senators from Nebraska [Mr. HRUSKA and Mr. CURTIS] are necessarily absent.

The Senator from North Dakota [Mr. YOUNG] is detained on official business.

The respective pairs of the Senator from Illinois [Mr. DIRKSEN], and that of the Senator from Nebraska [Mr. HRUSKA] have been previously anounced.

If present and voting the Senator from Nebraska [Mr. CURTIS] and the Senator from Arizona [Mr. GOLDWATER] would each vote "nay."

The result was announced—yeas 42, nays 46, as follows:

[No. 25 Leg.]

YEAS—42

Aiken	Jackson	Muskie
Bartlett	Javits	Nelson

NOT VOTING—12

Cannon	Hayden	Kuchel
Curtis	Hill	Mansfield
Dirksen	Hruska	Yarborough
Goldwater	Kennedy	Young, N. Dak.

So the second branch of Mr. PROXMIRE'S amendment was rejected.

Mr. LONG of Louisiana. Mr. President, I move that the Senate reconsider the vote by which the amendment was rejected.

Mr. MANSFIELD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HICKENLOOPER obtained the floor.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. HICKENLOOPER. Mr. President, I yield to the Senator from Kansas, provided I do not lose the floor.

DOUBLE TAXATION OF DIVIDENDS

Mr. CARLSON. Mr. President, yesterday the Senate by a close vote of yeas 44 and nays 47 defeated an amendment which would have had the effect of retaining in the tax law in modified form a portion of the relief granted against the double taxation of dividend income. This amendment offered by the distinguished junior Senator from Kentucky [Mr. MORTON] on behalf of himself and our esteemed and able minority leader [Mr. DIRKSEN] would have limited the amount of the present 4-percent dividend received credit to a $300 ceiling.

It will be recalled that present law does not contain such a ceiling, but the offering of the proposed ceiling represented a determined attempt to provide some compromise solution to the action of the Committee on Finance in repealing the credit outright. It was believed that in this way we could at least retain in the Federal tax structure a modest recognition of the need to alleviate, to a partial extent, the wrong done to American taxpayers who are willing to invest their savings for the betterment and growth of our American free enterprise system.

It was my privilege to join the Senator from Kentucky [Mr. MORTON] in speaking in behalf of this amendment. While the amendment was defeated, the closeness of the vote encourages me to hope that possibly at some future time Congress will recognize again the inequity inherent in the double taxation of dividend income and again adopt remedial provisions in some form.

Regrettably, it is too often concluded that dividend income is derived only by the so-called rich and that, therefore, the granting of tax relief against double taxation is preferential treatment for the rich. The truth of the matter is that the stake of the so-called rich man in the dividend received credit is really less than the millions of Americans of more modest means who have saved and made equity investments in American private enterprise. The rich man has a flexibility in the conduct of his financial affairs that for a practical matter is not available to the vast majority of American taxpayers who own shares in American business.

At the time the dividend received credit was first made a part of our Federal tax structure in 1954, I supported the provision on the grounds of tax fairness to alleviate the impact of double taxation, on the ground that the provision would encourage individuals to make equity investments in our free enterprise system, and on the ground that by encouraging both thrift and industrial modernization we would be taking a significant step in the creation of better job opportunities and the avoidance of inflationary pressures. In supporting the provision in 1954, it was my hope that we would succeed in subsequent years in achieving a further liberalization of this credit so that it would be more adequate. Instead of a liberalization, the experience has been a persistent attack on the provision, particularly in this body, so that today we find ourselves faced with the likely situation that the provision will be removed from our tax law—at least temporarily.

Treasury officials have been very diligent in their efforts to have not only the dividend received credit removed from the law, but also to have the dividend exclusion removed from the law as well. In my judgment, the Treasury arguments substantiating this unwise position are erroneous at best and to a large extent even spurious.

The Wall Street Journal for today, February 5, 1964, contains an excellent analysis of the Treasury arguments, written by Dr. Harley L. Lutz. Dr. Lutz is a distinguished economist who is highly respected for his sound views on tax policy and on the operation of our free enterprise system. So that Dr. Lutz' comments may be made a part of the record of this tax debate, I ask unanimous consent that this perceptive article to which I have referred be printed as a part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TREASURY'S ARGUMENTS AGAINST DIVIDEND TAX RELIEF SUGGEST CONTINUING EMPHASIS ON EQUALIZING INCOMES

(By Harley L. Lutz)

Repeal of the dividend credit and exclusion, recommended by the President in his

1963 tax program and included, as to the credit, in the bill passed by the House of Representatives, was supported by unconvincing, inconsistent, and even emotional arguments. The case advanced in favor of these provisions when they were under consideration in the 1954 revision of the Internal Revenue Code has now been repudiated by both the Treasury and the Ways

[*P. 2004*]

and Means Committee. The official defense of the present proposed action limps badly and it suggests the persistence of a concept of income taxation which views this tax as an instrument for the equalization of incomes.

The dividend credit is a credit against the individual tax equal to the smallest of three criteria. These are: (a) 4 percent of dividends less the exclusion of $50, or $100 in a joint return if both spouses have dividend income; or (b) the income tax as computed with standard or itemized deductions; or (c) 4 percent of taxable income.

Two major points of justification were made in 1954. These were first, that the allowances were a recognition of, and a first step toward, elimination of double taxation of income earned by corporations and distributed to stockholders as dividends; and second, that such easing of the double tax burden would promote investment in equity capital. Secretary Dillon rejected these contentions in his testimony before the Ways and Means Committee and added some further points of attack. His statement included the following assertions:

"1. The dividend provisions are not an effective remedy for 'double taxation.'" There is no consensus among economists and businessmen on the issue of where the burden of the corporation income tax really falls. It is paid, initially, by the corporation out of its income, but there is controversy, unfortunately, over whether it is recouped from consumers in higher prices, from workers in lower wages, or from stockholders in smaller dividends.

The ramifications of the theorizing that has been engaged in on this subject cannot be explored here. It is pertinent to say, however, by way of brief summary, that much of the labor force is protected from shifting of the corporation income tax by ironclad wage contracts, and that wages are increased, not lowered, in each successive round of wage negotiations. Consumers are protected against such shifting by their freedom of choice in the market, where they are not obliged to buy any particular article, or brand of article, unless in their opinion the price is right. They are further protected by the competition among producers who tend to charge what the traffic will bear regardless of taxes or other costs, and who are further kept in line by the competition of the nonprofit companies that comprise, at any given time, about one-quarter of all business corporations and sell upward of the same proportion of the total goods marketed. The stockholder has no defense against reduction of dividends or against their failure to rise. He seems to be the most likely candidate as bearer of the corporation income tax burden.

Just what is meant by an "effective remedy" is not made clear in Mr. Dillon's statement. It has never been claimed that the 4-percent dividend credit was a complete remedy. In 1954, the House bill carried a credit of 10 percent and it was suggested that this rate might later be advanced to 15 percent. The Canadian allowance at the time was 20 percent. The conference bill set the credit at 4 percent.

"2. Whatever double taxation exists is relatively more burdensome to low-income taxpayers than to high-income taxpayers." This is a curious reason for denying to low-income taxpayers such relief as the credit might provide. Mr. Dillon argued that the reduction of the corporation tax rate from 52 percent to 47 percent (the House bill provides 48 percent) would give as much or more relief to low-income taxpayers as they would get from the dividend credit. The argument misses the point entirely. Regardless of the rate of individual or corporation income tax, taxpayers with dividend income are still bearing whatever double taxation may exist as long as there are two taxes, whatever the rates may be. This burden cannot be swept under the rug by trading tax rate reduction for a denial of the credit.

"3. The existing 4-percent dividend credit removes much more of the extra burden of double taxation for high-income stockholders than for low-income stockholders." Again it may be asked why, even if this be the case, should the low-income stockholders be refused such relief as the credit would give? This argument says, in effect, that nothing should be done for the little stockholder because it would do so much more for the big stockholder. More than once in the history of tax legislation, proposals that would benefit the low-income people have run aground on the snag of "the man with a million dollar income." Bigness of income is always relative and a given income is big or little depending on whether we are looking up from the bottom or down from the top.

It is enlightening to note the number and distribution of returns with tax reductions from dividend provisions in 1960. The data are given in the accompanying table.

The revealing thing about the figures is not that 23,150 taxpayers in the adjusted gross income classes of $100,000 and above had total tax reductions of almost $59 million in 1960 by reason of the dividend provisions, but rather that way down at the bottom of the income scale more than 1,100,000 persons had tax reductions by reason of these provisions. The amount was small for so large a number, only $28,864,000, but when total income is under $5,000 there can't be much in the way of dividends. The Treasury argument is that we must not give these little fellows their bite because that would give the big fellows their supper.

"4. The 4-percent dividend credit has had no appreciable effect in stimulating the supply of equity funds to corporations." To begin with, no one, rich or poor, can supply equity funds to a corporation unless it invites that kind of money by offering stock for sale. Since World War II corporations have consistently relied on internal financing for some three-fourths of their capital requirements, and for various reasons they

have given preference to debt rather than equity capital in their external financing.

At this point the Treasury testimony does not square with all of the facts. It accepts the estimate of the New York Stock Exchange that the number of shareholders rose from 6.5 million in 1952 to 17 million in 1962. Data are presented which show that corporations, excluding banks and insurance companies, issued a total of $15.2 billion in stocks in the 8-year period 1946–53, which compares with a total of $26.3 billion in the 8-year period 1954–61. Obviously, the savings from the tax provisions were not sufficient, even if the entire amount had been invested every year, to supply this huge total of equity capital. It is true, as the testimony states, that other sources of savings were drawn upon. It had to be for a boy can't do a man's work. However, there is no justification for arguing that the tax credit had little or no influence on the decisions of investors. It is impossible to ascertain how much of the tax saving was invested; but considering that the dividend credit was realized by persons who obviously had an investment bias toward stocks, it would be more reasonable to assume a substantial, rather than a negligible, reinvestment of the tax savings.

The Ways and Means Committee did not accept the Treasury argument against the dividend exclusion although it was to the same effect as that against the credit, namely, that an exclusion of $50—or $100—would mean a larger tax saving for the high than the low income. On the contrary, the House bill carries an increase of the exclusion to $100—$200 for joint returns. The committee report quotes with approval the Treasury line that the dividend credit has not promoted equity financing, and it extolls the increased exclusion on the ground that it "will tend to encourage a broader stock ownership among those with relatively small incomes." The table above shows that for the adjusted gross income classes under $5,000, the dividend credit accounted for more of the tax saving than the dividend exclusion.

The Ways and Means Committee report explains that repeal of the credit and doubling of the exclusion will provide $300 million in 1965 and thereafter and that this gain was used to reduce income tax at other points. The minimum standard deduction of $300, plus $100 for each dependent, is estimated to cost $320 million. The new deduction device was advocated on the ground that persons with very low income ought not to pay income tax. The level at which individuals should begin to pay income tax is not involved here, but it would appear from the coincidence of the above estimates that we have here a minor case of equalization of incomes rather than tax relief across the board.

"5. The 4-percent dividend credit is a dead end approach." The thought here is that a 4-percent credit does very little, but that a larger percentage credit, such as 15 or 20 percent, would remove a still larger part of the burden of double taxation for high-income than for low-income stockholders. It has been said above that, assuming the existence of double taxation, as the Treasury argument does, there is double taxation as long as two taxes are levied on the same dollar of corporate income, regardless of the specific rates. A credit of 100 percent to the stockholder would correct the difficulty, or an exemption to the corporation of dividends paid would do it. It may be that a remedy applicable at the stockholder level is not the best method. The fact is that we have chosen this method and there is nothing in the Treasury statement to indicate an intention to seek other solutions. If equity requires a full and satisfactory solution we are moving backward in seeking to eliminate even the first limited step that has been taken toward fairer treatment.

If the Congress and the Treasury are really worried about the tax break that the dividend credit gives to the high-income people, a crude remedy could be provided by setting a dollar limit on the credit. The tax law abounds with arbitrary limits and one more would not violate the precedents. Senator Dirksen has proposed a $5,000 limit, but a lower limit, say $3,000 or even $1,000, would make possible retention of the present inadequate relief for persons in the low and middle income groups. A limit of $1,000 would be equal to a 4-percent credit on a dividend income of $25,000.

Finally, it is clear that the case which the Treasury has sought to make against the dividend credit and exclusion is another of the many examples that prove tax rate progression to be the great source of complexity and inequity. Elimination of progression would not get rid of double taxation but it would remove the incentive, and the opportunity, to pit the poor against the rich in a kind of fiscal class war which benefits neither the taxpayers nor the country.

HOW DIVIDEND CREDIT AND EXCLUSION WORKED IN 1960

The table below shows the number and distribution of 1960 tax returns which showed reductions in tax because of the dividend credit and the dividend exclusion:

Adjusted gross income classes	Returns with dividend tax reductions	Reductions because of—		Total
		Dividend credit	Dividend exclusion	
		Thousands	*Thousands*	*Thousands*
Under $5,000	1,137,724	$16,664	$12,200	$28,864
$5,000 to $10,000	2,020,378	38,083	25,030	63,113
$10,000 to $20,000	1,526,727	61,778	28,729	90,507
Subtotal	4,684,829	116,525	65,959	182,484
$20,000 to $50,000	552,547	81,393	19,173	100,566
$50,000 to $100,000	88,986	46,404	4,660	51,064
Subtotal	641,533	127,797	23,833	151,630
$100,000 to $200,000	17,543	26,198	1,135	27,333
$200,000 to $500,000	4,619	17,669	331	18,000
$500,000 to $1,000,000	703	5,805	54	5,869
Over $1,000,000	285	7,678	21	7,689
Subtotal	23,150	57,350	1,541	58,891
Total	5,349,512	301,672	91,333	393,005

Mr. KUCHEL. Mr. President, will the Senator from Iowa yield?

Mr. HICKENLOOPER. Mr. President, I ask unanimous consent that I may yield to the Senator from California without losing my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. KUCHEL. Mr. President, while Senators are in the Chamber, and for their information, I should like to ask the distinguished majority leader what plans he has for the Senate for the remainder of the evening. I assume that the Senate will proceed to a yea-and-nay vote on the amendment which the able Senator from Iowa desires now to call up. May I inquire what the plans of the leadership are thereafter for the remainder of the evening and for tomorrow?

Mr. MANSFIELD. It is my understanding that the distinguished senior Senator from Iowa intends to ask for a yea-and-nay vote on his amendment. I understand that following that vote a conference report will be called up by the distinguished Senator from Alabama [Mr. SPARKMAN]. If my understanding is correct, that will take only 2 or 3 minutes.

Then an amendment is intended to be offered by the distinguished Senator from Minnesota [Mr. MCCARTHY], which may well call for a yea-and-nay vote, and which may also call for a motion to table. I think I should notify Senators ahead of time in that connection.

Mr. McCARTHY. It should not take long to present the case. It is a clear case. Senators should know that. It should not require the long explanation that was made on the last issue.

Mr. MANSFIELD. I hope that other amendments may be forthcoming, because with the consent of the Senate the leadership would like to have the Senate remain in session until 10 o'clock, or thereabouts, to expedite action on the bill as much as possible.

As of now, I cannot say what time the Senate will convene tomorrow. I wish to consult with the minority leadership to discuss the time of convening tomorrow. But it will not be later than 10 o'clock, and it may be earlier.

Mr. McCARTHY. The majority leader might announce that I am more or less committed to calling up tomorrow the so-called sick pay amendment, which has received some attention around the edges of the Capitol.

Mr. MANSFIELD. I understand that there will also be ready for consideration the amendment of the Senator from Delaware [Mr. WILLIAMS] on oil depletion allowances, and also the Douglas amendment, which is another oil depletion amendment, and other amendments.

Mr. CARLSON. Mr. President, will the Senator from Iowa yield?

Mr. HICKENLOOPER. I yield.

Mr. CARLSON. The Senator from Illinois [Mr. DIRKSEN] has left with me an amendment dealing with excise taxes on used automobile parts. He presented the amendment to the committee; and I wish to bring it up in the Senate, before final action is taken on the bill.

Mr. MANSFIELD. Mr. President, if the Senator from Iowa will yield further to me, let me say that I think the Senate is to be complimented on the cooperation it has shown in expediting to this extent up to this time, the action of the Senate on the bill.

Mr. McCLELLAN. Mr. President, will the Senator from Iowa yield briefly to me?

Mr. HICKENLOOPER. I yield.

Mr. McCLELLAN. Let me ask whether the Senator from Montana thinks the Senate will still be working on the bill on Friday.

Mr. MANSFIELD. My guess is that the Senate will pass the bill by tomorrow night; but if not by then, on Friday; or, if not on Friday, on Saturday; or, if not on Saturday, on Monday, or perhaps on Tuesday.

But certainly we face the prospect of completing our action on the bill at some time.

AMENDMENT NO. 408

Mr. HICKENLOOPER. Mr. President, I offer the amendment which I send to the desk. It is amendment No. 408, and I offer it on behalf of myself and the Senator from Illinois [Mr. DIRKSEN]. I ask that the amendment be stated.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. At the proper place, it is proposed to insert the following new section:

SEC. . REPEAL OF MANUFACTURERS EXCISE TAX ON MECHANICAL PENCILS AND PENS.

(a) REPEAL.—Section 4201 (relating to imposition of tax on pens and mechanical pencils, etc.) is amended by striking out subsection (a).

(b) TECHNICAL AMENDMENTS.—

(1) The table of parts for subchapter E of chapter 32 is amended by striking out

"Part II. Pens and mechanical pencils and lighters."

and inserting in lieu thereof

"Part II. Mechanical lighters."

(2) The heading for part II of subchapter E of chapter 32 is amended by striking out "PENS AND MECHANICAL PENCILS AND LIGHTERS" and inserting in lieu thereof "MECHANICAL LIGHTERS".

(3) Section 4221 (relating to certain tax-free sales) is amended by striking out subsection (f).

(4) Section 4222(b) (relating to exceptions from requirement of registration) is amended by striking out paragraph (4).

(5) Section 6416(d) (relating to certain items taxable as jewelry) is amended by striking out "MECHANICAL PENCILS" in the heading and inserting in lieu thereof "CERTAIN ARTICLES".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply with respect to articles sold on or after the first day of the first month which begins after the date of the enactment of this Act.

Mr. HICKENLOOPER. Mr. President, on the question of agreeing to this amendment, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. HICKENLOOPER. Mr. President, for the information of Senators, let me say now, before some Senators leave the Chamber, to attend to various and sundry other duties, that this amendment proposes that Congress abolish the manufacturer's excise tax on mechanical writing devices, approximately 60 percent of which are used for the development of literacy among the schoolchildren in the United States.

I expect to take about 15 minutes to explain the amendment. I believe there will be a few questions about it; but I think the debate on the amendment can be concluded in approximately 15 minutes.

[*P. 2006*]

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

Mr. HUMPHREY. Mr. President, will the Senator from Iowa yield to me?

Mr. HICKENLOOPER. For what purpose does the Senator request me to yield?

Mr. HUMPHREY. To enable me to ask a question.

Mr. HICKENLOOPER. I yield to the Senator from Minnesota, for a question.

Mr. HUMPHREY. Does the Senator from Iowa consider his rather erudite and scientific explanation of his amendment to be such as to indicate that a proper definition of the amendment would be that it relates to ballpoint pens?

Mr. HICKENLOOPER. I have not yet come to a definition—erudite or otherwise—of that sort. If the definition is such as to be interpreted as relating to ballpoint pens, I shall leave that to the Senator from Minnesota.

However, Mr. President, the amendment does relate to devices available for use by the youth of our country in writing.

Mr. HUMPHREY. Will the Senator from Iowa say that this amendment relates to the excise tax on ballpoint pens?

Mr. HICKENLOOPER. Oh, yes, indeed; it does.

Mr. HUMPHREY. In other words, the amendment goes right to the point of the ballpoint; is that correct?

Mr. HICKENLOOPER. Indeed it does.

Mr. SCOTT. Mr. President, will the Senator from Iowa yield briefly to me?

Mr. HICKENLOOPER. I yield.

Mr. SCOTT. The other day, I sat at the dinner table beside a gentleman who introduced himself to me, and told me

that his name was Milton J. Reynolds. He said he was the inventor of the ballpoint pen. I understand that he has traveled quite extensively, and that he still holds the record for an around-the-world trip by air. However, all that is aside from the point, which is that the ballpoint pen is properly defined, so I am informed, as a device for writing clearly and permanently, but which does not require the direct fluid flow of ink. But for which the ink is compressed and isolated in a cylinder, and operates for the life of the cylinder, which is readily replaceable. [Laughter.]

Mr. HUMPHREY. Mr. President, I thank the learned and erudite Senator from Pennsylvania.

Mr. HICKENLOOPER. I understand the ballpoint pen was invented approximately 14 or 15 years ago by a citizen of Argentina, and was not developed in this country until the patents expired.

Mr. MANSFIELD. Mr. President, will the Senator from Iowa yield briefly to me?

Mr. HICKENLOOPER. I yield.

Mr. MANSFIELD. I supposed the Senator was answering the question which had been asked by the Senator from Minnesota. In that connection, let me say that I recall purchasing, approximately 15 years ago, one of the the Reynolds pens, and paying about $12.50 for it—and it did not work.

Mr. SCOTT. Mr. President, recently I was sent a newspaper which contained an advertisement of ballpoint pens, and the date of the newspaper was in the 1880's.

Not until I met Mr. Reynolds recently, had I heard of him; but I understand that he still takes great pride in claiming that he is the inventor of the ballpoint pen.

Mr. HUMPHREY. Perhaps he has relatives in Pennsylvania.

Mr. BENNETT. Mr. President, will the Senator from Iowa yield?

Mr. HICKENLOOPER. Mr. President, first let me say that I do not mind being challenged in regard to legal points or technical points in connection with proposed legislation, but I do not like to be laughted at.

At this time I yield to the Senator from Utah.

Mr. BENNETT. Let me ask whether the Senator from Iowa is being challenged by some who bought ballpoint pens which did not work?

Mr. HICKENLOOPER. I am afraid I cannot say as to that.

Mr. RIBICOFF. Mr. President, will the Senator from Iowa yield briefly to me?

Mr. HICKENLOOPER. I yield.

Mr. RIBICOFF. Those of us who have been proposing amendments have met with so little success, even though we have presented our amendments on the basis of logic and reason, that perhaps it now appears that the only chance of success for an amendment is to have its presentation based on humor.

Mr. AIKEN. Mr. President, will the Senator from Iowa yield briefly to me?

Mr. HICKENLOOPER. I yield.

Mr. AIKEN. Let me ask whether the amendment is based on French lighters which are imported, and which sell for approximately 89 cents?

Mr. HICKENLOOPER. No.

Mr. President, I shall quickly explain the amendment. I have already stated that the explanation will take only a short time.

The amendment relates to a serious situation. At present there is a manufacturers excise tax of some 10 percent on manufactured writing instruments—such as pens and pencils, and including ballpoint pens. The evidence and the testimony are to the effect that more than 60 percent of all instruments of this sort are used by students, and that less than 40 percent are used by the general public.

Writing instruments are of great importance; and in these days when orders and records must be made out in duplicate or in triplicate, the ballpoint pen seems to be indispensable and clearly a necessity.

I am told that the total loss of tax revenue to the Treasury, if the amendment is enacted into law, will be—according to the facts and the testimony which has been adduced—approximately $5 million, relatively a small amount. On the other hand, this tax is in some ways a nuisance tax on devices which are substantially a necessity in our society and in our educational system.

I presume statistics could be produced that would vary the figures somewhat, but not much. I am told that the average price of fountain pens at the wholesale level, when all qualities are taken into account, is approximately 64 cents. The average price for a mechanical pencil, some cheap and some better, is approximately 33 cents. They are certainly not luxuries; they are a necessity. Accordingly, this comes under the classification of a wartime revenue measure.

Since the close of World War II, I have consistently voted for either reduction or abolition of wartime emergency excise taxes. I believe they are unjustified in peacetime. In various ways, they contribute to confusion, to difficulty, and to a

substantial amount of unusual and undue expense for those who have to collect the taxes and also to those who have to pay them.

It is as simple as that, Mr. President. It is a question of whether we wish to continue the 10 percent manufacturers' excise tax on a basic necessity used overwhelmingly by students in this country to advance their literacy—and I hope all Senators are interested in advancing literacy in this country—they are used in the educational process, in necessary business operations all over the country, and otherwise.

Mr. RIBICOFF. Mr. President, will the Senator from Iowa yield?

The PRESIDING OFFICER (Mr. HART in the chair). Does the Senator from Iowa yield to the Senator from Connecticut?

[*P. 2007*]

Mr. HICKENLOOPER. I yield.

Mr. RIBICOFF. I have listened with great interest to the figures given by the distinguished Senator; and although there was much banter about ballpoint pens, which have become such widely used writing instruments, the average cost of a ballpoint pen is 11 cents. Basically, as the Senator indicated, 60 percent of these items are used by schoolchildren, and when we consider that we are placing this tax on an item purchased mainly by schoolchildren, I think it is unjustifiable.

The manufacturers of this particular type of instrument have to meet competition from abroad, from countries like Japan and Germany, which sell the pencils in large numbers.

I commend the distinguished Senator for bringing up this amendment which would cost, as I recall, between $5 and $6 million. I want to let the Senator know that I shall support his amendment.

Mr. HICKENLOOPER. I thank the Senator from Connecticut. I do not mean to be facetious and I am sure no one needs to be facetious about the basic issue involved. It is serious to some extent. It is a small thing, but it is important. This tax applies directly—and unwarrantedly, in my judgment—to a basic necessity not only to the educational system of the country, but also to the business world.

Mr. CARLSON. Mr. President, will the Senator from Iowa yield?

Mr. HICKENLOOPER. I am glad to yield.

Mr. CARLSON. We all remember that some years ago the post offices around the country used penholders with penpoints inserted in them, and a bottle of ink. We particularly remember that the point never worked. They are now being replaced in large numbers by ballpoint pens. I believe it is another good sign of what the Post Office Department has done, so I believe the amendment has a great deal of merit.

Mr. HICKENLOOPER. I thank the Senator from Kansas.

Mr. President, as far as I am concerned, I have nothing more to add. I do not know whether any other Senator wishes to be heard on this question.

Mr. SPARKMAN. Mr. President, will the Senator from Iowa yield for a question?

Mr. HICKENLOOPER. I am glad to yield.

Mr. SPARKMAN. I am very much interested in the Senator's proposal. Because the Senator from Connecticut has said that the average price of a ballpoint pen was 11 cents, I am curious to know what the tax is on an individual pen. Is it 1 cent?

Mr. HICKENLOOPER. The tax is 10 percent.

Mr. SMATHERS. The average tax, as I understand, according to the figures, is actually 1 percent, which will amount to $6 million.

Mr. SPARKMAN. Yes. Over the years, the Senate Small Business Committee has been urging the repeal of the wartime excise taxes. We have had this saving clause, as the fiscal situation might justify. These days get so long I forget about time—I suppose it was yesterday when we voted on the excise tax?

Mr. SMATHERS. It was today. This morning. The first vote of the day.

Mr. SPARKMAN. I thank the Senator. I had a hard time voting on that question. I voted against it. But I did it largely upon the assurance, and I understand it has been given both by the House Ways and Means Committee and by the Senate Finance Committee, that a study will be made on the whole problem, across the board, of excise taxes. It seems to me that when we get to a small item like this, involving such a small amount, in the nature of a tax on something that by no stretch of the imagination could be called a luxury but a necessity, it might be well to repeal it.

On two or three different occasions, I supported the amendments offered by the Senator from Florida to repeal the transportation tax and various other excise taxes that have been offered on the floor of the Senate. Little by little, we have taken off the excise taxes, and I feel rather inclined to support the amendment of the Senator from Iowa, even in the face of the premise by two committees to make a thorough study.

Mr. HICKENLOOPER. I thank the Senator from Alabama for his encouragement.

Mr. President, I invite attention to the fact that the Senator from Alabama and I, ever since the end of World War II, have been studying the excise tax problem. We continue to study it. It so happens that this is a small tax. But it is a good start, and it is a completely worthy area in which to eliminate excise taxes. No one can claim that this item is a luxury. No one can claim that it is only for the rich to purchase. This is for "kids" in the main; this is for their education. The amount of money involved is not much. But in the aggregate, it will amount to something. It will amount to something on the basis of the price of the pens and pencils, and when sold in quantities will amount to a substantial sum of money.

Mr. President, I yield the floor.

Mr. SMATHERS. Mr. President, I shall be brief. When proposals for little repeals such as this were considered in committee, we finally reached the point where a Senator such as the able Senator from Connecticut [Mr. RIBICOFF] and others would offer an amendment of this character and would state that it would not cost much—only $6 million. The end result is a cost of $10 billion, for the reason that if we wish to take off the excise tax on a ballpoint pen used by a child, it does no good if he cannot see in his room to write with that ballpoint pen if there is an excise tax on the light bulbs. It does no good to have a ballpoint pen if he cannot get to school because there is an excise tax on tires, or an excise tax on automobiles, and other items.

The proposal has some merit, and we recognize it, but instead of costing $6 million, the cost is $10 billion, because if we take this amendment the Senator from Indiana [Mr. HARTKE] will talk to us until he brings tears to our eyes and we agree to remove the tax on musical instruments. He described a young child going to school wishing to play a musical instrument, who must pay an excise tax if the school does not provide the instrument. So once we begin taking off excises, we are in deep trouble in determining where to stop.

Then there is the telephone tax, and the excise tax on safes in business, and so on. The total amounts to a vast sum of money.

Mr. HICKENLOOPER. I might suggest, in regard to the Senator's reference to electric lights, that it is necessary for a child to see so he can write with his ballpoint pen, and he must have the tires so he can go to school, but many Members of this Chamber obtained their early education by the light of a kerosene lamp, and they also walked to school.

The Senator referred to the electric light, which is necessary for the child so that he may see to write with his ballpoint pen. He referred also to the tires which he needed for his car in order to go to school. I point out that a great many Senators got their early education by kerosene light, and they walked to school. They did not have to have automobile tires. But they did have to have pencils and pens in those days.

Mr. SMATHERS. But they did not have to have ballpoint pens.

Mr. HICKENLOOPER. No. The amendment applies to other types of pens in addition to ballpoint pens.

Mr. SMATHERS. They used a lead pencil similar to the one which I hold in my hand, on which there is no excise tax, rather than mechanical pencils or ballpoint or fountain pens.

I do not disagree with the motive of the able Senator from Iowa. I merely say that what we would be doing would be to open a Pandora's box. The Senator from Alabama has said that he is inclined to vote for the amendment, even though we have assurance that excise taxes will be considered later. We must consider excise taxes before June 30, because over $1.5 billion of excise taxes will otherwise expire. If we are to keep the revenue coming, we shall have to consider them. We would like at that time to consider all the excise taxes. Perhaps the tax related to ballpoint pens should be the first to come before the committee. But at least we would have the benefit of the views of the House Committee on Ways and Means and the Senate Committee on Finance on the question. I hope the Senate will reject the amendment.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. SMATHERS. I am happy to yield.

Mr. MANSFIELD. Is it not true that we have assurances in writing from WILBUR MILLS, the chairman of the House Ways and Means Committee, and at least the oral assurance of the Senator from Virginia [Mr. BYRD], that hearings will be held on the entire excise tax bill, probably in April or May?

Mr. SMATHERS. The majority leader is absolutely correct.

[*P. 2008*]

Mr. ANDERSON. Mr. President, a small amount of money might seem to be involved. But what happened the other day? The Finance Committee was

meeting. A Senator suggested, "Why not take the tax off of old ladies' pocketbooks?"

Surely, an old lady's pocketbook is something that we do not wish to tax. We took off the tax, and $550 million later we began to slow up a little.

If we remove the tax, how would we stop the Senator from Michigan [Mr. HART], who is the present occupant of the Chair, from proposing that we take the tax off automobiles? Surely if a child is going to have a ballpoint pen in school, he ought to be able to get to his school in an automobile. Then someone would suggest, "Why do you not take the tax off the tires on his automobile?" On and on it would go.

Mr. President, there is only one way to handle the problem, and that is the manner in which the committee has proposed. The House Ways and Means Committee came forth with a suggestion. The Senate Finance Committee has accepted the suggestion.

If Senators observe that the tax is removed from ballpoint pens, proposals will be made to remove the tax from other commodities.

I know the people the Senator from Iowa represents in this Senate are fine people. They are good folks. This amendment would be a fine thing for many business firms across the country. But I suggest that if we should start to pick out places to remove excise taxes, it would be dangerous. I hope the Senator can be patient and wait until the House acts upon the measure next June, and we shall then act on it accordingly. I hope that at the present time the amendment will be rejected. I believe next June it may be adopted.

Mr. HICKENLOOPER. Mr. President, it is no excuse whatsoever to refuse to do a good thing because we are continuing to do a bad thing. If the amendment to take a manufacturer's excise tax off pencils is a meritorious amendment, what difference would it make in relation to other taxes? We consider them one at a time, and it is no excuse whatsoever to say that we would open up Pandora's box. It is our responsibility if we open Pandora's box. We are dealing with one amendment that would affect schoolchildren in respect to their pens and pencils. It is an inexcusable maintenance of a tax that probably never should have been imposed in the first place.

The amendment is not my original amendment, and I am not here representing anyone in particular. I filed the amendment for the Senator from Illinois [Mr. DIRKSEN], who originated it and filed it in the Senate. The Senator from Connecticut filed it in the committee. I am not representing any particular individual. The so-called person that the Senator from New Mexico attempts to allege that I am representing has not contacted me on the subject.

Mr. ANDERSON. Mr. President, will the Senator yield at that point?

Mr. HICKENLOOPER. I yield.

Mr. ANDERSON. The Senator knows that I did not mean he was representing the Sheaffer fountain pen people. There are good industries in his State as there are good industries in the State of Connecticut.

Mr. HICKENLOOPER. I will let the RECORD stand in respect to what the Senator stated. In my judgment, he did not quite make that statement. I am not representing anyone. I am happy to represent any industry in my State that is suffering from the tax. I am proud to represent the Sheaffer Pen Co., if they need representation, or any other pen company. Actually we have a great many distributors in our State that handle these things—a great number of them. They are hurt by this tax.

There are pen manufacturers in Illinois. There are distributors. There are manufacturers and distributors in Michigan, Minnesota, and a number of other States. It is no excuse to say that we should destroy a good amendment merely because some bad ones are standing up.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Iowa. On that question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD (after having voted in the negative). Mr. President, I have a live pair with the distinguished minority leader [Mr. DIRKSEN]. If he were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." Therefore, I withdraw my vote.

Mr. HUMPHREY. I announce that the Senator from Virginia [Mr. BYRD], the Senator from Nevada [Mr. CANNON], the Senator from Pennsylvania [Mr. CLARK], the Senator from North Carolina [Mr. ERVIN], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Arizona [Mr. HAYDEN], the Senator from Alabama [Mr. HILL], the Senator from North Carolina [Mr. JORDAN], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Ohio [Mr. LAUSCHE], the Senator from Oregon [Mrs. NEUBERGER], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

I further announce that the Senator from California [Mr. ENGLE] is necessarily absent.

I further announce that, if present and voting, the Senator from Nevada [Mr. CANNON], the Senator from Pennsylvania [Mr. CLARK], the Senator from California [Mr. ENGLE], the Senator from Arizona [Mr. HAYDEN], the Senator from Alabama [Mr. HILL], and the Senator from North Carolina [Mr. JORDAN] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Illinois [Mr. DIRKSEN], the Senator from Arizona [Mr. GOLDWATER], and the Senators from Nebraska [Mr. HRUSKA and Mr. CURTIS] are necessarily absent.

The Senator from North Dakota [Mr. YOUNG], and the Senator from Massachusetts [Mr. SALTONSTALL] are detained on official business.

If present and voting, the Senator from Massachusetts [Mr. SALTONSTALL], the Senator from Arizona [Mr. GOLDWATER], and the Senators from Nebraska [Mr. HRUSKA and Mr. CURTIS] would each vote "yea."

The result was announced—yeas 36, nays 44, as follows:

[No. 26 Leg.]

YEAS—36

Aiken	Gruening	Nelson
Allott	Hickenlooper	Pastore
Beall	Jackson	Pearson

Dirksen	Hruska	Yarborough
Engle	Jordan, N.C.	Young, N. Dak.
Ervin	Kennedy	

So Mr. HICKENLOOPER'S amendment was rejected.

Mr. SMATHERS. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. HUMPHREY. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HARTKE. Mr. President, I call up my amendment No. 276, and ask that it be stated. It deals with excise tax changes.

The legislative clerk proceeded to read the amendment.

Mr. HARTKE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with, but that it be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment offered by Mr. HARTKE is as follows:

At the end of the bill insert the following new title:

TITLE IV—EXCISE TAX CHANGES

SEC. 401. Musical Instruments Sold to Students for Educational use.

(a) EXEMPTION FROM TAX.—Part II of subchapter C of chapter 32 (relating to tax on musical instruments) is amended by adding at the end thereof the following new section:

"SEC. 4152. Exemption for Educational Use.

"The tax imposed by section 4151 shall not apply to any musical instrument sold to an individual who is a student in an educational institution if such instrument is to be used by such student in an orchestra, band, or similar organization sponsored by, or a course of instruction offered by, such institution. For purposes of this section, the term 'educational institution' means an edu-

[*P. 2009*]

cational institution (1) which is a nonprofit educational organization (as defined in section 4221(d)(5)) or (2) which is an agency or instrumentality of any government or any political subdivision thereof, or is owned or operated by a government or any political subdivision thereof or by any agency or instrumentality of one or more governments or political subdivisions. The right to exemption under this section shall be evidenced in such manner as the Secretary or his delegate may prescribe by regulations."

(b) CLERICAL AMENDMENT.—The table of sections for such part is amended by adding at the end thereof the following new item:

"Sec. 4152. Exemption for educational use."

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to sales of musical instruments made after December 31, 1963, to students of an educational institution (as defined in section 4152 of the Internal Revenue Code of 1954, as added by subsection (a)).

Mr. HARTKE. Mr. President, I should like to have made clear in my mind what is to be done about excise taxes. My present amendment would exclude excise taxes from any musical instrument purchased for use for educational purposes for use in a school band or an orchestra. Such an excise tax would be exempt.

It relates to a very small group. I should like to know what will happen with respect to excise taxes before the end of the fiscal year.

Mr. SMATHERS. Mr. President, when the Senator brought up the amendment in committee at one time it was agreed to.

Mr. HARTKE. By unanimous vote.

Mr. SMATHERS. The amendment has a great deal of merit. There is involved a type of discrimination, because when a school buys a musical instrument, it can get it without paying the excise tax; whereas if a pupil buys one in a small school, for himself, he must pay the tax.

Therefore, I ask the Senator not to press the amendment at this time. There will be hearings on the whole excise tax problem. Mr. MILLS, the chairman of the Ways and Means Committee of the House, has already written a letter to that effect, and the chairman of the Finance Committee, the distinguished senior Senator from Virginia [Mr. BYRD], has assured us that there will be a hearing on the whole excise tax problem. We must do that before June 30, because if we do not do it by then, a billion and a half dollars in excise taxes which are now in existence will go off the rolls.

The Senator can be certain that his amendment will receive thorough and full consideration in the Finance Committee.

Mr. HARTKE. I thank my distinguished friend from Florida. On the basis of his assurance, I withdraw the amendment.

The PRESIDING OFFICER. The amendment is withdrawn.

Mr. MANSFIELD. Mr. President, has the amendment of the Senator from Minnesota been stated?

Mr. McCARTHY. Mr. President, I call up my amendment which is a printed amendment, No. 377.

The PRESIDING OFFICER. The clerk will state the amendment.

The LEGISLATIVE CLERK. At the proper place in the bill it is proposed to add the following new section:

SEC. .

That (a) section 1(b) of the Internal Revenue Code of 1954 (relating to definition of head of household) is amended—

(1) by striking out ", or" at the end of subparagraph (A) and inserting in lieu thereof a semicolon;

(2) by striking out the period at the end of subparagraph (B) and inserting in lieu thereof a semicolon;

(3) by inserting after subparagraph (B) the following new subparagraphs:

"(C) is a widow or widower; or

"(D) has attained the age of 35 before the close of the taxable year, and either—

"(i) has never been married, or

"(ii) has been previously married and has been legally separated from his spouse under a decree of divorce or of separate maintenance for a period of not less than 3 years before the close of the taxable year."; and

(4) by adding at the end thereof the following new sentence: "In the case of an individual who has been married more than once, the status of such individual for purposes of applying subparagraph (C) or (D) (ii), shall be determined only with reference to his last marriage."

(b) The amendments made by subsection (a) shall apply to taxable years beginning after December 31, 1962.

Mr. MANSFIELD. Mr. President, it is my intention to move that the pending amendment be tabled. I believe the Senate should be informed to that effect.

Mr. McCARTHY. Mr. President, I ask unanimous consent to request the yeas and nays on the motion to table, even though the motion has not yet been made.

The PRESIDING OFFICER. Without objection, it is so ordered.

The yeas and nays were ordered.

Mr. McCARTHY. Mr. President, the amendment relates to a problem which I believe is becoming more serious in America from year to year. It is one which I discussed on the floor of the Senate last year, and it incorporates a recommendation which I made to the Treasury Department in January of last year, when the tax bill, on which we are acting today, was first being drafted.

Whereas I approve generally of what the Treasury has done with the pending tax bill, and also approve of the action of the Ways and Means Committee, and of the action of the Finance Committee, and undoubtedly will approve generally of what the Senate will do with the tax bill, I believe that at the very beginning of the effort in connection with the tax bill, some attention should have been given to the recommendations which I sent to the Treasury Department in January, and to the proposals which are incorporated in the pending amendment.

Under existing law and under the present bill there are two tables of tax rates, one for single taxpayers and another for taxpayers who are listed under the category of heads of households.

Under existing law and under the pending bill some unmarried persons are considered heads of households for tax purposes if certain conditions are met. They get this tax advantage if they meet a number of rather complicated conditions. I suggest that Senators who are interested look at the explanation that is contained in the instructions accom-

panying the Federal income tax form. There are three columns of instructions or computations covering the special conditions which must be met if a person is to qualify as the unmarried head of a household.

I will not read all the special conditions, but I would like to read two or three for the RECORD. The special computation in the instruction sheet states:

Only the following persons may qualify: (a) One who is unmarried (or legally separated) at the end of the taxable year, or (b) one who is married at the end of the year to an individual who was a nonresident alien at any time during the taxable year.

Under certain conditions, one might have to find a nonresident alien to marry in order to qualify for this tax benefit.

The instructions continue:

In addition, you must have furnished one-half of the cost of maintaining as your home a household which during the entire year, except for temporary absence, was occupied as the principal place of abode and as a member of such household by (1) any related person other than your child or stepchild (See those listed under line 2, paragraph 5 on page 6 of these instructions)—

And so forth.

I ask unanimous consent that these special computations or instructions on what a person must do to meet these special conditions in order to qualify as the head of a household be printed in the RECORD at this point in my remarks.

There being no objection, the instructions were ordered to be printed in the RECORD, as follows:

SPECIAL COMPUTATIONS

UNMARRIED HEAD OF HOUSEHOLD

The law provides a special tax rate for any individual who qualifies as a "head of household." Only the following persons may qualify: (a) One who is unmarried (or legally separated) at the end of the taxable year, or (b) one who is married at the end of the year to an individual who was a nonresident alien at any time during the taxable year. In addition, you must have furnished over half of the cost of maintaining as your home a household which during the entire year, except for temporary absence, was occupied as the principal place of abode and as a member of such household by (1) any related person other than your child or stepchild (see those listed under "line 2," par. 5 on p. 6 of these instructions) for whom you are entitled to a deduction for an exemption, unless the deduction arises from a multiple-support agreement, (2) your unmarried child, grandchild, or stepchild, even though such child is not a dependent, or (3) your married child, grandchild, or stepchild for whom you are entitled to a deduction for an exemption.

If you qualify under (a) or (b) above, you are entitled to the special tax rate if you pay more than half the cost of maintaining a household (not necessarily your home) which is the principal place of abode of your father or mother and who qualifies as your dependent.

The rates for head of household are found in "Tax Rate Schedule III" on page 9 of these instructions.

WIDOWS AND WIDOWERS

Under certain conditions a taxpayer whose husband (or wife) has died during either of her 2 preceding taxable years may compute her tax by including only her income, exemptions, and deductions, but otherwise

[*P. 2010*]

computing the tax as if a joint return had been filed. However, the exemption for the decedent may be claimed only for the year of death.

The conditions are that the taxpayer (a) must not have remarried, (b) must maintain as her home a household which is the principal place of abode of her child or stepchild for whom she is entitled to a deduction for an exemption, and (c) must have been entitled to file a joint return with her husband (or wife) for the year of death.

Mr. McCARTHY. Mr. President, at the present time there are about 18 million single persons in the United States who are 35 years of age and older. Thirteen million of these are women. We are speaking, particularly this year, about the changed status of women. I suggest that the Treasury Department is not giving much thought to this changed status.

I hope that consideration by the committee of the amendment, and its implication with regard to the changing structure of American society, may somehow or other get through to the Treasury Department. I know it is getting through to some Members of the Senate. I propose that any single person or any unmarried person in the United States who is 35 years of age be treated as the head of a household for tax purposes.

This would give such persons a tax advantage somewhat better than they would get if they were treated as single persons. It does not come close to the kind of treatment they would receive if they were married and filing a joint return. They would carry a tax burden about halfway between that carried by a single person and that carried by a person who files a joint return.

The adoption of my amendment would serve the cause of equity and justice. It would take into account the important social changes which have taken place and are now taking place in the United States.

I have no further statement to make.

Mr. ANDERSON. Mr. President, I understand the Senator from Montana

will make a motion to table the amendment. Before he does so, I wish to say that this is another matter for the Finance Committee to look into very carefully. To adopt the amendment at this time would disturb the balance that exists in the tax structure. There are many arguments that the Senator from Minnesota could advance. I realize that he has not advanced many, and I appreciate his graciousness.

Once we start to change the basic system of taxation, we get into many arguments. I would like to have an opportunity to consider this matter in a separate bill. I do not know what action the Senate or the House would take on it. I do know that it would be dangerous to accept the amendment tonight. I hope it will be defeated if it is voted on. It would amount to a loss to the Treasury of $300 million.

I appreciate the fact that the able Senator from Minnesota, with his usual graciousness, has not detained the Senate a long time. Therefore I shall try to be as gracious and not take much time. I merely wish to say that this is a good time to vote down the amendment. It is a bad amendment, and it should be voted down.

Mr. SMATHERS. Is it not a fact that the amendment would cost $350 million, in addition to the other reductions?

Mr. ANDERSON. I said $300 million, because I tried to be kind to the Senator from Minnesota. If the Senator from Florida insists on getting the last dollar, I shall be glad to make it $350 million. I hope the amendment will be voted down.

Mr. McCARTHY. I did not wish to get into the argument between my friends as to whether the sum is $300 million or $350 million. However, the estimate of the Treasury is $300 million.

Mr. ANDERSON. I am happy to have the Senator from Minnesota sustain me and rule against the Senator from Florida. But whatever it is, it is still too much. I hope we may sustain the majority leader in his motion to table the amendment.

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed at this point in the RECORD three articles dealing with this particular proposal.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

TAX BILL DISCRIMINATES AGAINST SINGLE WOMEN

Senator EUGENE McCARTHY, Democrat, of Minnesota, has urged revision of tax laws to end discrimination against single persons.

Senator McCARTHY complained that the Federal income tax code provision of special tax rates for heads of households, aimed at assisting single women, carry qualifications "so demanding that they exclude many more women than they include."

One qualification, he noted in the current issue of McCall's magazine, requires payment of "over half the cost of maintaining a household for the entire year for at least one relative." Another holds that "if a single woman supports a father or mother, one or both must live in a home the daughter maintains for her parents."

Senator McCARTHY points out that "a parent in a nursing home or in a home for the aged does not entitle the woman to claim to be head of the household, even though she is financially entirely responsible. Unmarried children, grandchildren, or stepchildren must live in the same household with the head of the household."

These qualifications fail to consider "that practically any unmarried woman over 35 has actually founded a household," he charged, noting that more than half the 11 million unmarried working women in America are over 35.

HOW PRESENT LAW PENALIZES THEM

(By Sylvia Porter)

NEW YORK.—Are our tax laws discriminating against the not-married working woman, particularly the single woman over 35? Yes.

Are our tax laws also unfair to the working mother, particularly the mother of young children who must go out to work for pressing financial reasons but who can do so only if she pays someone to take care of her children while she is away from home? Yes.

For the first time in many years, there is basis for belief that at the next session of Congress, such injustices to women as I pinpointed above will be thoroughly probed by an informed and sympathetic Congress.

A group of aroused Senators, led by EUGENE J. McCARTHY, Minnesota, Democrat, introduced a bill at this year's session to end the tax discrimination against the mature not-married woman.

A committee of the President's Commission on the Status of Women headed by Senator MAURINE NEUBERGER, Oregon, Democrat, is investigating right now the adequacy of the child care tax deduction provided for working mothers and its conclusion already is a loud "inadequate."

The President's hard-working Commission on the Status of Women, headed by Mrs. Eleanor Roosevelt and consisting of nationally respected men and women, has been directed to submit a report to the White House by this time next year on inequities of this type—and the Commission's committees surely will issue interim reports which will spur action.

These are not insignificant matters. There are more than 24 million women working at jobs in the United States today. Almost 6 million are unmarried women over 35 years of age.

Huge numbers are working mothers who are paying for child care which is essential to their being able to earn the paychecks on which they pay taxes to the Federal Government.

The discrimination against the not-married woman over 35—including women who have never married or are widowed, divorced

or legally separated—arises from the fact that while they may be heads of households, they cannot meet the rigid requirements for this classification under the tax law and thus are denied the tax benefits.

For instance, to be eligible for the head-of-household tax rate, a not-married woman must furnish over half the cost of maintaining a household for a whole year for at least one relative—and if she supports her father, mother, or both, one or both must live in a home she maintains.

Dependent children also must live in the same house as the head of household. She might be supporting an aged parent in a nursing home but she couldn't qualify under this; she might be contributing heavily to dependent children living elsewhere, but again she wouldn't be eligible.

The tax differential is substantial.

As McCarthy emphasizes, a not-married woman earning $8,000 of taxable income would pay an income tax of $1,960, a head of household would pay $1,820 tax on the same income, a married taxpayer filing a joint return would pay $1,680.

McCarthy's bill would extend head-of-household tax benefits to all not-married women over 35, among others.

The bill received considerable favorable response, will come up again.

The injustice to the young working mother arises from the fact that the $600 deduction for child care expenses offered to working wives and widowers is so limited by qualifications that few can get the relief.

To obtain this deduction, a working wife must file a joint return with her husband and for every dollar of joint income over $4,500, $1 of the $600 deduction must be eliminated.

In effect, therefore, the child care deduction now is available only to working mothers in families with a combined income of under $5,100. There is no similar income limit for widowers, though.

The limit was too low to begin with. Now with average family incomes running at $5,700 and with minimal nonprofessional care amounting to $10 to $15 per child a week, the limit is obviously obsolete.

The stage is set for across-the-board, top-to-bottom tax cuts and for tax reform in 1963.

If only a tiny percentage of the over 24 million women working in our country today would get behind efforts already underway to correct these clear discriminations, the stage would be set for their elimination, too.

TAXES AND THE NOT MARRIED WOMAN

(Most single women, widows, and divorcees are paying a heavy penalty in income taxes. Here, a plea on their behalf from a legis-

[P. 2011]

lator whose bill to remedy the situation comes before the Congress this month—EUGENE J. McCARTHY, U.S. Senator from Minnesota.)

There are, unfortunately, a good many inequities in the tax laws of the United States. Some of them result from the passage of laws that benefit one group, but exclude another. Some come about because the economic and social picture changes and laws that were formerly more or less fair to everyone become discriminatory to a particular group. But however it is that they have come about, they can and should be corrected.

In recent years, both types of change have affected the financial situation of what I have chosen to call the not-married woman—that is, the woman who has never married or who is presently widowed, divorced, or legally separated.

Under Federal law, individual income-tax payers are grouped in three broad categories: single taxpayers, married taxpayers, and those who, while not currently married, qualify as "head of household." The amount of taxes they pay varies substantially. For example, consider three people, each with a taxable income of $8,000 a year. The married taxpayer, filing a joint return for himself and his wife, would pay $1,680 in tax. The person classified as head of household would pay $1,820 in tax. But the single person's tax would amount to $1,960. In the higher income brackets, the differences are even greater.

Although the single person has always paid a higher percentage of tax, the discrimination was intensified in 1948, when income splitting for married couples was first provided in the Federal code, making a significant reduction in their tax. Then, in 1951, the tax code was again modified, to provide special tax rates for those who meet the qualifications of head of household.

The trouble is that these qualifications are so demanding that they exclude many more women than they include. For example, to be eligible, one must furnish over half the cost of maintaining a household for the entire year for at least one relative. If a single woman supports a father or mother, one or both must live in a home the daughter maintains for her parents. A parent in a nursing home or in a home for the aged does not entitle the woman to claim to be the head of household, even though she is financially entirely responsible. Unmarried children, grandchildren, or stepchildren must live in the same house with the head of household. And these are just a few of the restricting qualifications for head of household. There are many more.

Now, it is a fact that practically any not-married woman over 35 has actually founded a household. Hundreds of thousands of them are supporting minor children; millions are contributing to the support of aged parents. Single women are making large and often disproportionate contributions to most insurance programs, to social security, and to other systems that provide retirement income.

Today, 11 million not-married women are working in this country; more than half of them are over 35. These women need both privacy and permanence, and there is no valid reason they should pay a disproportionate price for either.

In the interest of both justice and equity, the Federal income tax law should recognize their position.

Mr. McCARTHY. Mr. President, in closing, although this is not a compelling argument, I hope that Senators may reflect and recall whether they were cosponsors of this particular measure.

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed at this point in the RECORD a statement prepared by the Treasury with respect to the cost—$350 million.

Mr. EASTLAND. I object.

The PRESIDING OFFICER. Objection is heard.

Mr. MANSFIELD. Mr. President, it is with deep regret that I shall make the motion I am about to make. However, I am assured by the statement of the distinguished senior Senator from New Mexico [Mr. ANDERSON] that this meritorious amendment will, hopefully, be given consideration by the House Committee on Ways and Means and the Senate Committee on Finance. I would hope that that half promise may become full blown. I now move to lay the amendment offered by the Senator from Minnesota [Mr. McCARTHY] on the table.

The PRESIDING OFFICER. The question is on agreeing to the motion to table. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ALLOTT (when his name was called). On this question I have a pair with the minority leader [Mr. DIRKSEN]. If he were present, he would vote "yea." If I were at liberty to vote, I would vote "nay." I withhold my vote.

The rollcall was concluded.

Mr. HUMPHREY. I announce that the Senator from Virginia [Mr. BYRD], the Senator from Nevada [Mr. CANNON], the Senator from Pennsylvania [Mr. CLARK], the Senator from North Carolina [Mr. ERVIN], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Arizona [Mr. HAYDEN], the Senator from Alabama [Mr. HILL], the Senator from North Carolina [Mr. JORDAN], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Ohio [Mr. LAUSCHE], the Senator from Oregon [Mrs. NEUBERGER], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

I further announce that the Senator from California [Mr. ENGLE] is necessarily absent.

I further announce that, if present and voting, the Senator from Nevada [Mr. CANNON], the Senator from Pennsylvania [Mr. CLARK], the Senator from California [Mr. ENGLE], the Senator from North Carolina [Mr. ERVIN], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from North Carolina [Mr. JORDAN], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Oregon [Mrs. NEUBERGER], and the Senator from Texas [Mr. YARBOROUGH] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Illinois [Mr. DIRKSEN], the Senator from Arizona [Mr. GOLDWATER], and the Senators from Nebraska [Mr. HRUSKA and Mr. CURTIS] are necessarily absent.

The Senator from North Dakota [Mr. YOUNG], the Senator from Massachusetts [Mr. SALTONSTALL], and the Senator from Pennsylvania [Mr. SCOTT] are detained on official business.

If present and voting, the Senators from Nebraska [Mr. HRUSKA and Mr. CURTIS] would each vote "nay."

The pair of the Senator from Illinois [Mr. DIRKSEN] has been previously announced.

The result was announced—yeas 33, nays 46, as follows:

[No. 27 Leg.]

Dirksen	Hruska	Yarborough
Engle	Jordan, N.C.	Young, N. Dak.

So Mr. MANSFIELD's motion to lay Mr. McCARTHY's amendment on the table was rejected.

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed at this point in the RECORD a statement by the Treasury Department on the subject "Extension of 'Head of Household' Definition to Single Persons Over 35 Years".

There being no objection, the state-

ment was ordered to be printed in the RECORD, as follows:

EXTENSION OF "HEAD OF HOUSEHOLD" DEFINITION TO SINGLE PERSONS OVER 35 YEARS

It is proposed to extend the definition of "head of household" to include widows and widowers and also any taxpayer over 35 who has never been married or who has been divorced or separated for at least 3 years. Thus, almost every unmarried person over 35 will be treated as a head of household although he does not maintain a household for himself or for anyone else.

It is estimated that the revenue cost of the proposal at the rates contained in the bill reported by the Senate Finance Committee would be $350 million.

The proposal is undesirable for the following reasons:

1. Further tax reduction for single persons over 35 is unwarranted: A tax reduction for single persons over 35 on the order of $350 million, in addition to the reductions already embodied in the bill, is not warranted. The reduction in tax rates and the minimum standard deduction wil substantially reduce the tax burden of those single persons who maintain households for themselves, but not for dependents. Moreover, an additional revenue loss of $350 million would require reexamination of the rate scales in the bill.

2. Proposal is not in accord with intent of the Congress: Extension of the definition of "head of household" to provide additional tax reduction to single persons who do not maintain households for dependents would not be in accord with the congressional in-

[P. 2012]

tent in establishing the special "head of household" rates. The special "head of household" rates were added to the Code in 1951 as an extension of the split-income benefit previously granted to married persons filing a joint return. Both the House and Senate committee reports are clear that the rationale of the "head of household" provision was to give a portion of the split-income benefit to taxpayers who maintain households for dependents. In such cases Congress believed that the head of household, in effect, shares his income with the person for whom he is maintaining a household in a manner similar to the way a husband shares his income with his wife. Thus, the House committee report stated:

"It is believed that taxpayers, not having spouses but nevertheless required to maintain a household for the benefit of other individuals, are in a somewhat similar position to married couples who, because they may share their income, are treated under present law substantially as if they were two single individuals each with half of the total income of the couple. The income of a head of household who must maintain a home for a child, for example, is likely to be shared with the child to the extent necessary to maintain the home, and raise and educate the child. This, it is believed, justifies the extension of some of the benefits of income splitting."

This general rationale was not changed when, in 1954, the definition of "head of household" was extended to cover taxpayers maintaining a household for a dependent parent, even though the household was not the taxpayer's household.

3. No rational justification for the proposal: It has been argued that expansion of the definition of "head of household" is necessary to provide relief in the cases of a taxpayer supporting a parent who lives alone and of a taxpayer supporting a child who spends part of the year away at school. No change in the law is required for the taxpayer to obtain "head of household" rates in either of these cases. The present Treasury regulations make clear that a taxpayer may be a head of household if he maintains a home for his dependent parent even if the taxpayer does not live there. Similarly, the fact that a child of the taxpayer is temporarily absent from home because he is away at school does not disqualify his parent as a head of household.

Thus, this proposal would not give new relief in the cases of single persons who do maintain a household for dependents. It would, however, reduce the taxes of single persons who maintain a household only for themselves and of single persons who do not maintain households even for themselves; for example, older persons living with their relatives or single persons over 35 living with their parents. The taxpayers to whom Congress has granted relief under the "head of household" provisions are only those who not only maintain a household but incur the additional expenses inherent in maintaining a household for a dependent. There is no justification for extending this special treatment to taxpayers who maintain a household only for themselves, much less those who maintain no household at all.

[P. A542]

Tax Relief for College Education

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 27, 1964

Mr. BOW. Mr. Speaker, as I was driving home last night, I heard Edward Morgan announce that the administration had won a narrow victory in the other body, and so I listened to learn the nature of that victory, and I found that the other body had decided, 48 to 45, to deny a tax deduction for colleges expenses proposed by the junior Senator from Connecticut.

The administration had won a victory against higher education.

An administration devoted to education, or so we were led to believe in the state of the Union message, had strained every resource to deny college students

69-108 O—66—pt. 3——48

and their parents the modest encouragement and assistance that could stem from deducting college expenses.

And the AFL-CIO commentator said that opponents of this relief believed it would help those who need help least.

Need help least? Who are they talking about?

I have many case histories in my files. Consider the parents of three above-average students, all of college age, who have put a new mortgage on their home, drive a 10-year-old car, deny themselves new clothing and all entertainment, work at two jobs to try to keep these youngsters in school, and the children are working too. Need it least? I cannot think of anyone who needs the modest relief this amendment would have offered more than a couple like this one, and there are millions of them.

How about the working widow with a college son who is also working, risking the loss of a scholarship because he cannot keep up his grades while working full time? Who thinks these people do not need tax relief?

For that matter, how about the young man working his way through college, or perhaps with a wife who is working, while trying to rear little children. The senior Senator from New Hampshire proposed an exemption for this young couple. It was rejected as well. The administration said "No."

No relief. No help for higher education unless it is through Federal Government controlled scholarships and loans. Federal control, Federal handouts, Federal subsidies, Federal programs—but not one bit of relief from Federal taxaation.

Mr. Speaker, no matter what the administration may say hereafter about higher education, no matter what promises or programs may be offered, all will have a hollow ring of hypocrisy because this administration strong armed the members of its party into defeating the most simple, effective, easily administered and readily available kind of assistance that the Federal Government has it in its power to offer.

I am the author of a House bill far more generous, I believe, than the proposed Senate amendment. I propose a tax deduction covering all expenses of a college education, and I propose that it be available to any parent or student or any benefactor who may wish to pay the expenses of a student. If we truly wish to encourage higher education, let us do so. College expenses, like most everything else, are a burden because the Federal Government takes too large a share of everyone's earnings. The administration proposes tax relief to encourage spending and investment. The administration proposes tax relief to spur the economy. How can the administration oppose tax relief to encourage education?

I am sorely distressed and I think I speak for millions of American parents and students when I say that no more cruel blow has been struck against the ambitions, the aspirations, the hopes, and the futures of those young Americans to whom this small concession might mean the difference between going to college and staying at home to join the ranks of the undereducated unemployed about whom this administration so hypocritically pretends to be concerned.

[*P. A551*]

The Tax Cut Bill

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 5, 1964

Mr. DULSKI. Mr. Speaker, the Senate will soon act on one of the most important bills that has been before this Congress—the tax cut bill.

Based on income levels estimated for 1963, the bill as passed by the House last September is calculated to reduce tax liabilities by about $11.1 billion—$2.3 billion in corporate income taxes and $8.8 billion in individual income taxes over a 2-year period (1964-65). For the individual, the tax rate would be reduced from the present range of 20 to 91 percent to rates ranging from 14 to 70 percent. For the year 1964, the rates would range between 16 and 77 percent, and the full reduction would be effective in 1965. The maximum tax rate for corporations would be reduced from 52 to 50 percent in 1964, and to 48 percent in 1965. Small businesses would receive relief by a reduction in the rate applicable to the first $25,000 of corporate income from the present 30 to 22 percent.

A number of structural changes are contained in the bill which either limit or exclude certain deductions the taxpayer has been allowed under present law.

There has been a great deal of public discussion on the subject of tax reduction, and while there is an area of general agreement on the need for a cut to allow the economy of our Nation to oper-

ate at a higher level, we have a number of differing opinions as to how this should be accomplished.

It has been my theory that the best way to accomplish a realistic tax cut for the American taxpayer is through an increase in personal exemptions. To me, this is a more sound and by far the most fair method of effecting a tax cut which will really benefit the little taxpayer who needs it the most. It is true that this method would result in less revenue for the Federal Government than under the House-passed tax cut bill. But to offset this loss, all we have to do is to abolish the highly preferential legislation we now have for the vast oil interests. By reducing the 27½-percent oil depletion allowance so generously provided by Uncle Sam over the years to 15 percent, it is estimated that this would add millions and millions of dollars annually to our Treasury.

These amounts, in the hands of a relatively few oil millionnaires, will not boost our national economy. But, in the hands of the little taxpayer, it can mean a great deal in bolstering our lagging economy.

Even though there has been much discussion of the tax cut bill, I still feel that too few people are aware of its provisions and just what it will mean to them individually. Many who are supposed to be in the know have been shadowboxing. Our labor unions have heralded the House-passed tax measure and urged swift passage. Business, too, has been on the bandwagon for the tax cut bill. John Q. Public, by and large, favors relief from our heavy tax burden and has indicated support for this bill.

But just what does the tax cut, as proposed in the pending legislation, really mean to the man in the street? To quote from a recent AFL–CIO publication—

> In terms of hard money, the average worker would receive a tax cut equivalent to 7½ cents an hour added to purchasing power.

The 7½ cents an hour is $3 a week, or about $150 a year. Some will even gain less under the proposed bill, but the more prosperous couple with a taxable income of $300,000 will gain $42,660. Percentagewise, this would mean an extra 6.3 percent to a couple earning $3,000 a year, but an extra 55.9 percent to the couple earning $300,000 a year. For those with even higher incomes, the gain could be more than 100 percent in take-home pay.

I am pleased to note that the U.A.W. has shown an awakening, and I quote from its Washington Report, dated January 20, 1964:

> While the labor movement and liberals generally support the $11 billion tax cut, they are alarmed by the fantastic special privileges still in the tax laws and additional privileges which slick tax lawyers in Washington have managed to slip into the already sorry situation.

This is exactly why I am not satisfied with this legislation. The small wage earners of this country, who provide 87½ percent of the income tax revenue, are the ones who need relief the most, and who will spur our economy the most. As has been true of previous tax reduction measures, enacted during other administrations, the wealthy taxpayer gets the most relief and the special privileges apply to him alone.

Last year, after considerable research work on the subject, I was astonished to find how the giant oil industry has thrived on the 27½-percent oil depletion allowance that has been so generously provided by the American public for years, and which continues to flourish. Under this depletion allowance and the fact that from 70 to 90 percent of costs under the intangible drilling and development cost provision can be written off in the first year, plus the capital gains provisions for oil and gas, and the loss carryover provisions, along with other loopholes in our tax structure, we find millionaire oil operators paying little or no taxes. Is this not fantastic? And every effort to decrease or to do away

[P. A552]

with the depletion allowance has been in vain.

When the tax bill, passed by the House last September, was first proposed by the administration, it contained a recommendation to reduce the 27½-percent rate. But this recommendation was quickly buried in committee. It is no secret that the tax-writing committees of Congress have eye-winking friendships with this special interest group. If it were not so, this depletion allowance would no longer be in existence today, or at least substantially reduced.

Certainly the oil industry is entitled to various tax deductions. It is given a deduction for operating expenses, and rightfully so. But, in addition, it can write off the cost of dry holes against the income from successful drillings. It gets another advantage not enjoyed by other industries by being able to write off 75 to 90 percent of the exploration, drilling, and development costs—tangible and intangible—in the first year. I understand this item alone amounts to about $2 billion. Then they can get credit of 27½ percent of gross income, up to 50 percent of net income, which is completely free from taxation.

These special tax benefits are among the most gaping loopholes in our tax structure today. Big oil companies are allowed to take tax deductions far above their operating costs. As a consequence, some of these ultrarich oil companies are taxed at a lower rate than a family man with a $5,000 taxable income. A big Oklahoma company paid less than 5-percent tax for many years while other firms not engaged in the oil industry paid taxes at the rate of 52 percent. I find that this same Oklahoma company paid no taxes at all on a profit of $5,378,973 in 1958. Another oil operation had an income in excess of $23 million in 1960, on which it paid nothing in income tax to our Federal Government, whereas a man with a $100 a week salary, having a wife and two children, would pay approximately $400. This is ridiculous and a fraud on the American taxpayer.

As I have pointed out before in the pages of this RECORD, the total tax deductions in 1957 for U.S. corporations under depletion provisions was $3 billion, of which the oil and gas industry alone accounted for $2 billion. The oil industry spent approximately $5 billion annually for exploration and development, with $1 billion lost down dry holes each year. Thus, our Government provided $1 billion or more annually in tax relief to the oil industry under the heading of depletion allowances—for no other reason except pure unadulterated favoritism.

I laud the efforts of those Senators in the Senate Finance Committee who have been hitting hard at these tax loopholes which help the rich and hurt the poor. But once again, a proposal to raise $420 million in revenue by putting steeper taxes on gas and oil producers was defeated in the committee by a vote of 13 to 4. Only an irate and completely aroused nation can change the picture as it has emerged over the years. Those who hail from Texas, Oklahoma, and Louisiana, will continue to guard zealously the tax bonanza that our country has bestowed upon the oil interests. They may allow a slight tap on the wrist, but nothing like the trouncing this deserves. But I appeal to them, in fairness to all Americans, to consider the welfare of our country first rather than the special interest groups that no longer need these preferential tax benefits except to fatten their own pocketbooks.

As the Representative of a highly industrialized area, which has suffered and continues to suffer from critical unemployment, I must agree with my constituents who tell me they foresee little that they will be able to add to our national economy on the basis of the tax break they will receive on their weekly wages running from a low of $40 to a high of $125 a week.

Mr. Speaker, I have sponsored legislation to increase the personal income tax exemption, and also to reduce the percentage depletion rate for oil and gas wells from 27½ to 12½ percent. This depletion allowance is one of the greatest sources of privilege in our entire tax structure. Not only the oil interests but some of the most power-laden economic groups in the country, including those who own shares and stock in oil properties, are opposed to reducing the rate. They are most powerful, and indeed, well entrenched.

I intend to continue, with every means at my command, to focus attention on this oil tax loophole in an effort to arouse the American public. If enough taxpayers sound the alarm, we will succeed in eliminating one of the worst abuses that exists in our tax structure.

[*P. 2043*]

REVENUE ACT OF 1964

Mr. GORE. Mr. President, in order that the Senate may be advised, I now state that whenever it is appropriate for me to obtain recognition to offer an amendment, I shall offer an amendment on the utility flowthrough provision—an amendment which will not, I believe, be divisible, and which will rewrite the section, so it will read precisely as it does in the prefatory language and then apply the treatment set out in subparagraph (1) of the bill—which deals with the electric and telephone utilities—to all regulated industries, whether they receive 3 percent or 7 percent investment credit. In other words, all regulated utilities would receive the same treatment—that which the bill now would accord electric and telephone companies.

Mr. CARLSON. Mr. President, will the Senator from Tennessee yield?

Mr. GORE. I yield.

Mr. CARLSON. Let me ask whether the amendment would then reduce the 7 percent to 3 percent, for all utilities?

Mr. GORE. I thank the Senator from Kansas for his question. The answer is that it would not. It would not change the 7 percent; but my amendment would leave to the regulatory agencies some direction in determining whether they would require partial flowthrough, but if flowthrough were to be required, it could be required only on a proportional

basis, and spread over the life of the capital additions involved—the same treatment now set out in subparagraph (1), applicable to the electric and telephone utilities.

Mr. CARLSON. I thank the Senator from Tennessee.

Mr. GORE. Mr. President, I think it is reasonable to conclude—from the three votes taken yesterday with respect to this part of the bill—that the Senate has not yet reached a satisfactory conclusion. Many Members think part (1) is acceptable, but that part (2) is unconscionable. But having approved part (1), many Members do not want to strike out entirely part (2). So my amendment would treat all in exactly the same way.

Mr. SMATHERS. Mr. President, will the Senator from Tennessee yield for a question?

Mr. GORE. I yield.

Mr. SMATHERS. In other words, to rephrase it, what the Senator from Tennessee wants, by means of his amendment, is to give to the Federal Power Commission the same authority which section 1 now gives the Interstate Commerce Commission, the Civil Aeronautics Board, and all the other regulatory agencies involved—in other words, put the regulatory agencies exactly on the same basis with respect to their power to regulate?

Mr. GORE. Insofar as this provision deals with that power, yes.

Mr. MORTON. Mr. President, will the Senator from Tennessee yield to me?

Mr. GORE. I yield.

Mr. MORTON. But section No. 1 does not give the power to the Interstate Commerce Commission, and so forth. Part 1 deals with the so-called monopoly utilities; is not that correct?

Mr. GORE. Neither section grants power. The whole measure is, rather, a restriction upon power.

Mr. MORTON. Yes.

Mr. GORE. My amendment—which now is being typed, and which has been prepared with some care—would treat all exactly the same.

I do not think the amendment will require a great deal of debate—certainly not by me. As soon as copies of the amendment are prepared, I shall give one to each member of the committee.

Mr. MORTON. Does the amendment deal with all the 7-percent group—the whole transportation industry—or only the pipelines?

Mr. GORE. It would deal with all those now dealt with in the entire subsection 203(e).

Mr. SMATHERS. Which is all of them, is it not?

Mr. GORE. As I understand, that is all of them.

But I say to the Senator from Kentucky that I seek to add no power, but to apply the same rule with respect to both categories of utilities; but I would not change the 7-percent credit to 3 percent. That is a decision which Congress has previously made.

Mr. MORTON. Yes; but what is the difference between what the Senator from Tennessee is attempting to accomplish and what the Senator from Wisconsin [Mr. PROXMIRE] was attempting to

[*P. 2044*]

accomplish last night, by means of his second amendment?

Mr. GORE. The provision with respect to the 7 percent investment utilities—if I may so describe them—is to prohibit the Federal Power Commission from taking the investment credit into consideration at all in arriving at fair and reasonable rates or fair and reasonable returns on capital. The last amendment of the Senator from Wisconsin would have stricken that out entirely.

My amendment would place the 7-percent utilities in the same position as the 3-percent utilities, insofar as the regulatory agencies may grant or require a passthrough.

Mr. MORTON. I thank the Senator from Tennessee; but I disagree as to the effect of the second amendment of the Senator from Wisconsin. I interpret it as requiring the Federal Power Commission to leave it to the intent of Congress, as expressed in the 1962 act.

Mr. GORE. Mr. President, I say to the distinguished majority leader that I have taken this brief period, following the morning hour, in order to put the Senate on notice that I will propose this amendment.

Perhaps this procedure will lessen the requirement for debate later.

Mr. MANSFIELD. Mr. President, I appreciate the courtesy and the explanation which has been made by the distinguished senior Senator from Tennessee.

REVENUE ACT OF 1964

Mr. MANSFIELD. Mr. President, I move that the Senate resume consideration of the unfinished business, and that it be laid before the Senate.

The ACTING PRESIDENT pro tempore. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to and the Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the amendment of the Senator from Minnesota [Mr. McCarthy].

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. Ribicoff in the chair). Without objection, it is so ordered.

[P. 2047]

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Minnesota [Mr. McCarthy].

Mr. SMATHERS. Mr. President, am I in a position to suggest the absence of a quorum?

Mr. MORTON. Mr. President, will the Senator withhold the request?

Mr. President, I ask unanimous consent that I may address the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

[P. 2048]

DOUBTS OVER THE TAX CUT

Mr. JORDAN of Idaho. Mr. President, I ask unanimous consent that I may address the Senate for 1 minute.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JORDAN of Idaho. Mr. President, in the New York Times of February 3, that newspaper's distinguished financial and business columnist, Murray J. Rossant, has set forth some of the doubts about the administration's economic program that are being felt among a wide variety of observers. There is considerable feeling that the administration is packing too much of a fiscal stimulus into 1964 and that this is likely to lead to renewed inflationary pressures and difficulty in maintaining sustainable and balanced economic growth in a later year. As the First National City Bank has commented, the administration may be borrowing business from 1965.

Because of the crucial issues involving our economic stability and the prospect of employment opportunities for our people, I ask unanimous consent that the column by Mr. Rossant be included in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Doubts Over Tax Cut: Some Misgivings Are Being Aired by Both Liberal and Conservative Camps

(By M. J. Rossant)

Some of the most fervent supporters of tax reductions are expressing concern that the Texas-size package proposed by President Johnson may be too much of a good thing. Their fear is based on the extra punch in purchasing power that would result from the President's request to immediately reduce the individual withholding rate to 14 percent.

President Kennedy had sought a two-stage reduction, with a 15-percent rate for 1964 and a further cut, to 14 percent, next year.

According to those economists having second thoughts, packing most of the proposed tax relief into the current year can provide too great a stimulus now, making it more difficult to maintain economic stability later.

The growing uneasiness concerning the reductions in taxes and spending sought by the administration was not quelled by Secretary of the Treasury Douglas Dillon's statement made last week before the Congress' Joint Economic Committee, that the program is designed to mesh, so that there is a proper mixture of stimulus and restraint over the next 2 years.

SOME DOUBT EXPRESSED

Economists hope that this is the case, but they are not at all sure. This doubt is shared by both liberals and conservatives who achieved a surprising degree of unanimity in agreeing on the need for tax reductions. They are now airing similar misgivings, although they disagree over what policies are required to cope with potential trouble.

Prof. Paul A. Samuelson of MIT, who serves as consultant to the President's Council of Economic Advisers, is a leading worrier among those tax supporters in the liberal ranks.

In a recent article, Professor Samuelson stated that he had "stepped upward rather

than downward my estimates for this calendar year" because of the additional income that would be released by the proposed change in the tax rate, adding that "it will take a burst of private consumption and investment spending next year to offset the destabilizing effect of the withholding tax change."

The February issue of the economic letter published by the First National City Bank of New York makes plain that conservatives favoring tax reductions have taken to biting their fingernails. Commenting on the President's tax plan, the bank's letter noted that it "should insure a vigorous and prosperous 1964," but runs the risk of adding "too much stimulus too soon to an already healthy expansion."

Anxiety in both liberal and conservative camps may well increase when the final size of the reductions are known. Like Topsy, it has been growing.

ESTIMATE BASED ON 1963

The administration estimate, which most economists have used in their own forecasts, puts the total amount of tax reduction at $11.1 billion. But this figure is based on an estimate of 1963 incomes, which were bigger than expected. In addition, it does not take into account Congress refusal to approve some $500 million revenue-raising reforms contained in the administration's package.

Congress is not expected to give its approval to the bill as quickly as the President had assumed. This means that the stimulus will be deferred a month or even two. There is little question, though, that the amount of the stimulant will be a lot bigger than the estimate of $11.6 billion in the bill passed by the Senate Finance Committee.

The increased amount of reductions reinforces National City's belief that "the im-

[*P. 2049*]

petus of the tax cut is likely to push production and distribution closer to capacity," which could lead to mounting inflationary pressure. In its view, some restraint is required this year. It warns that, "If we are not to develop an unsustainable rate of expansion and borrow business from 1965, a monetary policy of judicious restraint may well be needed to create a climate in which price stability can be achieved."

This is where Professor Samuelson and liberals in general part company with the conservative bloc. He is more concerned about the brake exerted by a decline in Government spending once the stimulus of taxation fades. He argues for "planning a mix of budget deficits and easy money sufficiently expansionary to prevent development of a deflationary gap."

There can be no certainty about the outlook because it is impossible to measure how consumers and businessmen will react to the stimulus of tax reductions. Nor is it certain that Government spending will turn down in the coming fiscal year.

The difficulty in assessing the impact of shifts in policy was emphasized by Fortune magazine's business roundup almost a year ago. It stressed "the importance but uncertainty of timing in economic affairs," and went on to suggest that the outlook contained "risks both of too much stimulation and too much restraint."

These observations are now being applied by both liberals and conservatives in reappraising the present business outlook. They are obviously hoping that the expansion continues on a smooth upward course, but they recognize that if tax reductions prove stimulating it will be difficult to avoid resort to a policy of overrestraint.

But at this late stage, with the tax cut that they have sought just about to be made effective, there is little that they can do aside from crossing the fingers of one hand while biting the nails of the other.

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

Mr. KUCHEL. Mr. President, I desire to ask the able leader of the majority what, in his judgment, will be the working hours of the Senate today; and does he contemplate proceeding into the evening hours tonight?

Mr. MANSFIELD. Mr. President, in response to the question raised by the distinguished acting minority leader, I would hope the Senate would follow the procedure today that it has followed for the past several days; and that the Senate will be prepared to remain in session until 10 o'clock tonight or thereabouts. It is my understanding that there are at least 10 amendments to be considered. The distinguished Senator from Tennessee recently informed us that there would be another amendment by him.

So I hope all Senators will take to heart this situation and do what they can to continue to do what they have been doing in the past several days; namely, to expedite the business of the Senate, which is the consideration of a very important tax bill.

Mr. KUCHEL. I thank the Senator. A number of Senators have heard there has been some slight suggestion that it might be within the realm of possibility for the Senate to conclude action on the tax bill today. I wonder if there would be an opportunity for a unanimous-consent agreement on time.

Mr. MANSFIELD. No; I would have to object.

Mr. KUCHEL. Then I am filled with regret, because I thought the business of the Senate might be expedited.

I thank the Senator.

The PRESIDING OFFICER. The question is on agreeing to the amend-

ment of the Senator from Minnesota [Mr. McCARTHY].

Mr. LONG of Louisiana. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LONG of Louisiana. Mr. President, this amendment would result in a loss of $350 million in revenue to the Government. It would give head-of-a-household treatment to single people who are not required to maintain a household.

Let us look for a moment at what the purpose of the head-of-a-household provision is. The head-of-a-household provision was an effort by Congress to try to recognize the problems that exist for a widow or a widower left with a child to support, and who must maintain a home for that child, or who is left with an old mother and father to care for and who must maintain a home for them. It provides tax rates midway between the tax rates for a single person and the tax rates for a married couple filing a joint return. As a result this recognizes that a person maintaining a home for a child, or for his parents, or for someone for whom he is obligated, is to some extent in a similar position to that of the husband who must maintain a home for his wife and children.

This amendment would provide that same advantage for bachelors, single women, or divorced women, as well as widows and widowers, who have no such responsibility, merely if they are 35 years of age or over. Those people are not required to maintain a home; they are not required to support a child; they are not required to provide a home for a child or to support an old mother or father, or some other relative whom no one else in the family will care for. They are the people who have only themselves to support. What sort of sense does it make that they should receive preferential tax treatment merely because they are single and over 35 years of age?

This amendment would cause single people to receive better tax treatment than married couples, if they are 35 years of age and over. It would place a premium on a single man remaining a bachelor.

Senators know that many countries actually subsidize marriage and pay a man a premium if he is married, and provide him with an additional family benefit for each child.

This amendment would go in the opposite direction and place a premium on bachelorhood, or a premium on a woman remaining single, even though she might have a number of suitors proposing marriage.

Mr. SMATHERS. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. SMATHERS. I totally agree with the Senator from Louisiana. I have an illustration of what the Senator from Louisiana is now saying.

Take the lowest rate under the tax schedule of present law, of $2,000, on which a 20-percent rate is now applied. Under the law, we allow the filing of a joint return, which means that the couple would have $4,000 taxed at the 20-percent rate.

The McCarthy amendment gives head-of-household treatment to all single people over the age of 35. As a result in the case of two single people, they both have $3,000 subject to the 20-percent rate.

Adoption of the McCarthy amendment would mean that if two single people, neither of whom had any dependents, happened to be sharing the same apartment, they would be subject to tax at a 20-percent rate on $6,000—$3,000 for each.

When we consider the social implications of this particular proposal, it is something to think about.

The amendment clearly would discourage matrimony.

It seems to me this is a question to which the Senate should give careful consideration before it goes forward with this type of provision. It runs contrary to the whole method of taxing community property and the manner in which income splitting is provided by present law, since it in effect gives single people over age 35 one-half the advantage of income splitting.

The amendment certainly is not so good as it sounds. It does have appeal, but when we look at it on its practical side, I do not believe the Senate would wish to adopt it.

Mr. LONG of Louisiana. Mr. President, if I may go a step further, in some States common-law marriage is recognized. It is not recognized in the State of Louisiana. Common-law marriage consists of a man and woman living together as if they were married. In some States they come to be recognized as a married couple, even though they did not go through any formal ceremony before a justice of the peace or a minister. In my State, such a relationship is not rec-

ognized as a marriage. The State of Louisiana does not recognize a common-law marriage. In my State that kind of relationship is recognized as a situation in which two people have "took up." They have merely started to live to-

[P. 2050]

gether. The pending amendment would give better tax treatment for those who have just "took up" than married people would receive under the law.

Mr. McCARTHY. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. The Senator from Minnesota would give any person over 35 years of age a special tax advantage. Such persons can get that advantage if they can meet the head-of-household provision. All they have to do is to maintain a home for their old mother, for example. She does not even have to live with them. All they have to do is to maintain a home for their old "pappy." He does not even have to live with them. Or, if they cannot do either of these, all they have to do is to maintain, perhaps, a home for simple-minded Uncle Jim. However, to give that advantage to a couple who "just took up," rather than getting married, does not make sense to me.

Furthermore, it places a premium on a bachelor or a woman who does not want to get married. I know that these are unintended consequences. At the same time, the Senator's amendment would give a "consolation prize" to some woman who has never had a proposal of marriage from a man, or to a bachelor who has not been able to convince a woman that she should marry him. Of course, these are unintended results, but they are results.

Furthermore, Mr. President, the committee did not go into these situations. The Senator did not seriously press it before the committee. These are questions that should be studied by the committee.

I hope the Senate will reject the amendment and will give the committee an opportunity to study these questions. If we want to provide a premium for a woman who cannot get a man to marry her, or for a man who cannot get a woman to marry him, that is something else. However, all these matters should be studied. We must beware of these unintended benefits, and see to it that they do not accrue.

Mr. McCARTHY. Mr. President, I say to the Senator from Louisiana that I have given consistent and serious support to him on the tax bill. I do not have the reputation of offering capricious amendments on this or any other bill before the Senate. I consider this to be a very serious matter, relating to a social change that is taking place in American society.

If the Senator from Louisiana wishes to treat the amendment as though it were a joke, and cite extreme examples, he can do so. However, the kind of situation he cites could also occur under present law. Two persons could go through the form of marriage, and get the benefit of split income.

I might cite the example of the hypothetical widow who was figuratively trotted around the floor yesterday. Now the Senator is trotting around a hypothetical person who is living in sin.

I am trying to meet a basic social problem. There are 18 million unmarried people in the United States who are 35 years of age and over; 13 million of them are women. Most of these people must maintain a household of some kind. The amendment seeks to give recognition to that basic fact. It would provide equity and serve the cause of a sound social structure if it were adopted. That is its purpose. I suggest to Members of the Senate who are making speeches about their concern over the status of women in this country that they give some consideration to the amendment. Soon Democrats will go throughout the country and say, "We have promoted 50 women in the departments of Government." The amendment shows regard for the changing status of women in America. If Senators are concerned about the status of women in America, they ought to be concerned about the pending amendment.

This is the kind of problem involving taxation to which the Senate should address itself.

Yesterday Senators talked about removing excise taxes on pens and pencils. Do Senators suggest that that is as serious a subject to discuss in the Senate as the status of women? Here we propose an amendment which, I believe, reaches out to try to do something about a basic social change in America. It is certainly something with which the Senate ought to concern itself. The amendment should be adopted and taken to conference, and perhaps some adjustment will be made in conference.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. McCARTHY. I yield.

Mr. PASTORE. First of all, I regret that I was not present at the time the amendment was discussed. I am somewhat puzzled as to precisely what the amendment would accomplish. I know the Senator well enough to believe that he is one of the best balanced men in the Senate, and that he does not indulge in anything that can be passed off as a joke, as he fears.

I should like to have the Senator from Minnesota tell me precisely what the amendment would do. Could he give a capsule explanation of his amendment?

Mr. McCARTHY. Under existing tax law, there are two tables of income tax rates, one applying to single persons and the other applying to those who are heads of households.

The tax that applies to single persons is the tax which is used as the basis for the split-income-tax rate that married people can use in filing their income tax return.

There is a second table which applies to heads of households. "Head of household" is a term which involves rather complicated conditions under which one can qualify.

A person who supports a parent in his home can qualify. If he supports the parent in a home for the aged, he cannot qualify. There are complicated conditions, also, regarding relationship, such as whether a spouse is a resident alien or a nonresident alien.

Mr. PASTORE. Let us take the case of a schoolteacher who is 35 years of age and who is caring for a mother in a nursing home.

Mr. McCARTHY. Under existing law she would not qualify.

Mr. PASTORE. If an unmarried schoolteacher, 35 years of age, cares for a mother in a nursing home, she does not qualify as the head of a household?

Mr. McCARTHY. The Senator is correct.

Mr. PASTORE. Even though she supports her mother in the nursing home?

Mr. McCARTHY. The Senator is correct.

Mr. PASTORE. Is that a situation the Senator is trying to correct?

Mr. McCARTHY. That is because of the complexity of law. There are people 35 years of age, women especially, who must maintain their own households. This is not an age when Aunt Molly can be kept in a little room in the house or in the back bedroom. These people must live in society. Take the case of widows who live for several years after becoming widows. They have a house to maintain as the head of a household. The amendment I propose would permit them to have the advantage of qualifying under the category of "head of household."

Mr. PASTORE. What about the argument that the amendment would encourage bachelorhood and spinsterhood, and that sort of nonsense?

Mr. McCARTHY. That is what the opponents have prophesied. I do not know why they should prophesy it. The amendment states that its provisions would go into effect at age 35, when people are more or less settled. I do not think it is fair to say that it would encourage people to live in sin. If we are going to talk about morality, perhaps the amendment might help some people not to be tempted. My amendment could very well encourage morality, instead of what Senators on the other side of the question have prophesied.

Mr. PASTORE. Any person over the age of 35 who has the responsibility of a married person and who has the same burden would be placed by your amendment in the same category as a person who is married. Is that correct?

Mr. McCARTHY. We do not go quite that far. People who are married still have a big advantage over a head of a household.

Mr. PASTORE. This covers only the case of an individual who independently maintains a home or abode of his or her own. Is that correct?

Mr. McCARTHY. If a person is unmarried and over 35 he is assumed to be the head of a household for tax purposes.

It is like eliminating the means test for old-age assistance.

Mr. PASTORE. Let us assume a person is over 35 years of age, is living with his parents, and is filing an independent or separate tax return. He could not take advantage of what the Senator is suggesting now, could he?

Mr. McCARTHY. If that is the way he lives, and if he files an independent return, and if it meets the test, he could.

Mr. PASTORE. Does the Senator think that is fair? Let us assume a family of five persons, among whom are two daughters, each teaching school, and each filing a separate return of her own. In that particular case, would they come under the classification of a head of family, when they are living within the

[*P. 2051*]

home of a head of a family? I do not think that would be right.

Mr. McCARTHY. If one did not want to bother with the details of administration and did not want to be technical he could say that a father and mother and a son and his wife, living in the same household, were one household, but could be treated as though they were two married couples maintaining separate households.

But considering the realities of American life today, the chances of living under such circumstances are so small that it might be compared to medical care for the aged, in which aid is provided at age 65, rather than under a means test, and other details. It is in the same category.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. McCARTHY. I yield.

Mr. CARLSON. I voted against tabling the Senator's amendment last night. I know there are some problems involved. A large sum of money is involved. But I do not like to have such an amendment kicked around with levity. A serious problem confronts us, and it ought to have the serious concern of every Member of the Senate as we consider it.

A single person is always at a disadvantage in paying taxes. I think the distinguished Senator from Louisiana [Mr. LONG] was incorrect this morning when he said that a single person could receive tax benefits for taking care of children of relatives of any type, except children of the father and mother, unless they were in a home. As I recall, the Internal Revenue Service has ruled that one may take care of his father and mother but cannot go further than that.

It seems to me that there are many people in the Nation who are trying to be helpful and are helpful.

As I said earlier, I have not been completely carried away with this proposal. However, when the tax law was rewritten in 1948 and provided for a split income, a single person was at a disadvantage. In 1951, when the code was rewritten, provisions were included to adopt rules and regulations for a household. That, again, tightened up the tax exemption for a single person. This is the only reason why I raise the question today. The proposal does have merit.

I know it is said that the cost will be $350 million, but the proposal ought to have some consideration because single persons are at a great disadvantage in their personal income tax payments at this time. Let Senators talk to some of the girls in their offices. They will say that they find the present schedule a real problem.

I appreciate the work the Senator from Minnesota has done on this problem. I shall support him.

Mr. PASTORE. Mr. President, will the Senator yield for another question?

Mr. McCARTHY. I yield.

Mr. PASTORE. Why could not the Senator amend or modify his amendment to exclude persons who are already living within a household, when the head of that household is already taking advantage of that status? If such a modification were made, I could perhaps support the Senator's amendment.

Mr. McCARTHY. I should be glad to accept the Senator's proposal as a modification of my amendment.

Mr. PASTORE. I am not prepared to write the amendment, because I have not been as conversant with the subject as has the Senator from Minnesota. But if the Senator, who has been studying the subject for a year and half, could make such a modification, I could support him.

If an individual has to maintain a home, as a married couple does, he could be placed in that classification. But if he or she were living in a house where the parents were living and taking advantage of the household status, I do not think it would be fair to grant such an exemption.

Mr. McCARTHY. Mr. President, I ask unanimous consent that I may modify my amendment by providing that the exemption may be allowed for only one head of a household; that the deduction be allowed for any household, and that if the split income privilege is exercised for that particular household, anyone else living in the household shall not have the advantage.

Mr. PASTORE. That would be a wise provision, and I could support it.

Mr. SMATHERS. Did the Senator ask unanimous consent to modify his amendment?

Mr. PASTORE. He does not need to do so.

Mr. SMATHERS. So that we may know what we are doing, and because some incorrect statements have been made with respect to what the present law is, I think there should be a further clarification. I believe the able Senator from Minnesota, if he will check with the staff, will be told—and I should like to have the Senator from Rhode Island hear this—that one may still get the classification of head of household if he furnishes more than one-half of the cost of maintaining his mother or father in a nursing home.

Mr. McCARTHY. No.

Mr. SMATHERS. Let me ask about that. We might as well have it cleared up. In the meantime, let me try to straighten out one thing. Suppose one family of five people—father, mother, and three children over 35 years of age, live in the father's house. The father receives an income; so do the children. Would all the children receive an exemption because they happened to be over 35 years of age?

Mr. PASTORE. No; I do not think the Senator from Minnesota intends that they should.

Mr. SMATHERS. I do not think so, either. But that is a situation which needs more precise study.

Mr. PASTORE. Under the circumstances, it is rather complicated, but it could be worked out. Why could not the amendment temporarily be withdrawn, let us consult with the staff, have

the amendment rewritten properly, and then submitted again?

Mr. McCARTHY. I think the general principle has been cleared up. I appreciate the fact that this particular limitation is one that could easily be drafted. I will offer it as an amendment. But so far as offering technical amendments is concerned, I think the proposal to put those people in the category of a household is a simple and clear one and that the cause of equity would be generally served, even with the modification proposed by the Senator from Rhode Island, because only a few such persons would be affected. It is not a complicated amendment. It could be accepted if he offered it as an amendemnt to my amendment. On that basis it could go to conference. This entire bill will be in conference. There is no reason why the conference has to finish its work in a day or a week. It will probably be the last basic revision in the tax law for 5 or 10 years.

The PRESIDING OFFICER (Mr. RIBICOFF in the chair). It will be necessary for the Senator to send his proposed modification to the desk; otherwise, the clerk will have nothing at the desk to read. The amendment would be out of order unless the precise amendment were at the desk.

Mr. PASTORE. That is why I suggested consultation with the staff. I am not prepared to write such an amendment; it was merely my suggestion.

Mr. CLARK. Mr. President, will the Senator from Minnesota yield?

Mr. McCARTHY. I yield.

Mr. CLARK. I should like to address a question to the Senator from Minnesota. I have read in the CONGRESSIONAL RECORD the very brief debate on the Senator's amendment last night. Unfortunately, I could not be present. I find myself completely incapable of understanding the present administrative regulations dealing with the tax status of bachelors, spinsters, widows, and widowers. I wonder whether the Senator from Minnesota shares my confusion, or whether he can give us in some understandable form an explanation of what the Internal Revenue Service is doing with respect to the tax status of those individuals who have been quite inequitably treated for many years.

Mr. McCARTHY. It is extremely difficult to do that. Evidently, from what was said by members of the staff, the Internal Revenue Service has changed the ruling that was in effect last year. It keeps moving the game around. It is almost impossible to understand or clarify the regulations as they are written in some of the instructions.

Mr. CLARK. Would it not be wise procedure to adopt an amendment which would simplify and clarify the present jungle of unintelligible administrative regulations and at least take some substantial step forward in remedying the inequities which now exist with respect to the tax treatment of single individuals?

Mr. McCARTHY. It would be my opinion that if the Senate adopted this amendment and took it to conference, in a very short time a great deal of improvement and simplification could be made in the regulations which are now applied under the household provisions of the income tax law.

Mr. CLARK. Can the Senator enlighten me as to just how much relief—

[*P. 2052*]

in general terms—his amendment would give single people? I understand he does not intend to have a single person have the same tax status that a married couple would have, but that he does intend to remove to some extent the heavy taxes now imposed on single persons. Can he explain how far his amendment would go?

Mr. McCARTHY. By examining the tables as to the various income levels, the Senator from Pennsylvania can obtain some indication as to that. For example, in the tables it is shown that a single man with a taxable income of $6,000 would pay a tax of $1,130.

Mr. CLARK. That would be the tax under the bill as it now stands. What would be the tax of that person under the Senator's amendment?

Mr. McCARTHY. Under the amendment, the head of a household would pay a tax of $1,060—or $70 less.

At the level of a taxable income of $12,000, under the bill as it now stands a single man in 1965 would pay a tax of $2,830. The head of a household would pay a tax of $2,540—or a saving of approximately $300.

Mr. CLARK. Compared to those figures, what would a married man in the same income bracket pay? He would pay a great deal less, would he not?

Mr. McCARTHY. He could use the split-income principle. For 1965 a married man in the $12,000 bracket would pay $2,260.

Mr. CLARK. I know the Senator from Minnesota does not intend to have a single person receive as much of a tax "break" as a married couple would receive—certainly not as much as would be received by a married couple with dependents, but that, on the other hand, the Senator intends to have a single person placed in a somewhat better sit-

uation—one roughly comparable to that of the head of a household who is not married—and thus significantly reduce his tax burden. Is that correct?

Mr. McCARTHY. Yes. In addition, a married couple is able to take many deductions which a single person would not be able to take.

Mr. CLARK. Is it not the opinion of the Senator from Minnesota that the tax burden placed on a single person, as compared to that placed on others, is quite unfair and inequitable?

Mr. McCARTHY. I believe so—not only in view of the amount of the tax itself, but also in view of the contributions of many sorts to the social welfare. For example, consider the payments made under the social security program. Both groups pay the same, but both do not receive the same benefits from the social security program. However, the contributions to the social security program by single persons and by married persons are the same, although the married persons receive much greater benefits—for example, the benefits for their dependents—whereas the single person receives benefits only for himself.

Mr. CLARK. Yesterday, there was some debate in regard to the cost estimates received from the Treasury.

I take it that the best estimate the Senator from Minnesota has been able to receive from the Treasury, in regard to the cost of his amendment, is around $300 million.

Mr. McCARTHY. That is correct.

Mr. CLARK. Mr. President, I shall be happy to support the amendment of the Senator from Minnesota. I think it is fair and equitable.

It seems to me that the Treasury Department might have been more courteous to the Senator from Minnesota than I understand it was when he proposed this change to the Finance Committee—well over a year ago, as I understand. Is that correct?

Mr. McCARTHY. That is correct.

Mr. CLARK. Has the Treasury Department stated why it has suggested the amount of loss of revenue which it has suggested in connection with the amendment of the Senator from Minnesota?

Mr. McCARTHY. It has filed one statement in regard to the loss of revenue, and it has also submitted figures in connection with the status of the head of a household—figures which, as the Senator from Pennsylvania has said, are difficult to understand and would make the administration extremely difficult. The Treasury protested and objected to this amendment, on the ground that it would create inequities—which is true; but they will be less than the inequities are now.

Mr. CLARK. As the Senator from Minnesota knows, I attempted to square my conscience with the position taken by the administration on this bill all the way through, and on occasion I have supported provisions even when I had considerable doubt as to their validity. However, I find it impossible to go along entirely in that connection; and I shall support the amendment of the Senator from Minnesota.

Mr. McCARTHY. I thank the Senator from Pennsylvania.

Mr. ANDERSON. Mr. President, will the Senator from Minnesota yield?

The PRESIDING OFFICER (Mr. INOUYE in the chair). Does the Senator from Minnesota yield to the Senator from New Mexico?

Mr. McCARTHY. I yield.

Mr. ANDERSON. I realize that the Senator from Pennsylvania said the Treasury Department was not very courteous to the Senator from Minnesota, in connection with the efforts to obtain data in regard to the effect of the amendment on the internal revenue laws.

However, I point out that more than the internal revenue laws are involved in the case of this amendment, for it would place a very high premium on divorce. If a married couple were not getting along very well, and if in their minds there was a question as to whether to obtain a divorce, under this amendment all they would have to do would be to get a divorce, and then they would be able to get the tax "break" the Senator from Minnesota is discussing. In short, many other things enter into this situation, in addition to the internal revenue laws; and I do not think the amendment is quite as simple as one would judge if he considered only the casual words of the Senator from Rhode Island, and thus favored the hurried adoption of such an amendment on the floor of the Senate.

These provisions are very complicated, and amendments to them should be studied very carefully.

So I hope Senators will give thoughtful consideration to all the other problems involved in the situation the Senator from Minnesota is discussing in connection with his amendment.

Mr. McCARTHY. However, even if the decision as to whether to obtain or not to obtain a divorce depended partly on the question of whether those involved would be able to increase their income after taxes by $100 or $200, as a result of such a tax change, I think they probably would get a divorce anyway. They might hesitate a little bit before doing so; but I do not think the tax advantages which would accrue to the head of a household as a result this amendment would be a great incentive

to divorce. In fact, the amendment might result in discouraging hasty marriages, and in that way the divorce rate would level off over the long run.

Mr. ANDERSON. But very often the amount of the budget is the controlling factor in connection with the decision to get married.

Mr. McCARTHY. It would be more advantageous financially for them to get married, so as to have the benefits of the split-income provisions for tax purposes.

Mr. ANDERSON. Oh, no; oh, no.

Mr. McCARTHY. On the other hand, it would be more advantageous for them to stay married, so as to be able to have the advantage, under ordinary circumstances, of being able to file a joint return.

Mr. ANDERSON. I wish the Senator from Minnesota would check with the Treasury Department on that situation. If he does, he will find it is not more advantageous. It would be more advantageous for one who was contemplating marriage to stay single and be able to take these two deductions as the head of a household.

Mrs. NEUBERGER. Mr. President, will the Senator from Minnesota yield?

The PRESIDING OFFICER (Mr. RIBICOFF in the chair). Does the Senator from Minnesota yield to the Senator from Oregon?

Mr. McCARTHY. I yield.

Mrs. NEUBERGER. The Senator has pointed out one of the things to which I wish to call attention—namely, that, historically, the single man has had the raw end of this tax "deal."

Two years ago, the late President Kennedy called together the President's Commission on the Status of Women. I would say that two things impelled the appointment of that Commission, on which I was proud to serve as a member: One is the complaint of many workingwomen that they are not allowed to deduct their child-care costs when they calculate the taxes they must pay. The other is the plight of the single woman.

And all of us who worked diligently for 2 years on the President's Commission noted the amount of mail we received from single women—many of whom work in the offices of Senators, and many work elsewhere in the Capital City.

[*P. 2053*]

So the Senator from Kansas has hit on a very important part of this whole debate.

Furthermore, I also take issue with the closing comment of the Senator from Louisiana [Mr. LONG], in his historic comments of a little while ago, when he said many women cannot get a man to marry them.

When women stay single, it is always implied that they cannot get a man; but I never have heard it said that when a man chooses to remain single, he cannot get a woman.

Mr. LONG of Louisiana. Mr. President, I said it.

Mrs. NEUBERGER. I think it quite important to note that in the government, for example, there are many single women who prefer to remain single. There are many advantages in not being married.

Next month we are going to award citations to a number of women who, while in the Government service, have devoted their lives to working in astronomy, science, and many other fields; and they chose not to have a man in the house—a man to get in the way.

So I think it adds insult to injury if these women, who choose to be single, do not get the same consideration that men do. A matter of equality is involved.

Mr. LONG of Louisiana. I am quite aware of the fact that there are many men who cannot get women to marry them. I made that statement. At the same time, I mentioned the problem of a women who would like to be married and yet does not have a proposal from a good man. I realize that it works both ways. I also realize that some people prefer not to be married. There are many bachelors who take great pride in bachelorhood, as the distinguished Senator from Oregon so well knows. I am sure that the Senator is correct in her statement that many women would rather be single than be married. That is why they are single. I quite agree.

I would like to make it clear that the amendment raises all kinds of problems for which we on the committee have not yet found answers, for which our staff has not found answers, and for which the Treasury has not found answers.

For example, under the amendment, if two married people agree to disagree, under the amendment they might receive better tax treatment than they would have if they had remained in matrimony. I believe that would be an unintended benefit, but it nevertheless would be true.

All sorts of unintended consequences would flow from the proposal. Also the problem would be raised as to whether better tax treatment would be given to a person who actually is maintaining a household for his father, his mother, and a child, or whether the same tax treatment would be accorded a person who has no such responsibility.

Mrs. NEUBERGER. May I interrupt the Senator to say that there seems to be a contradiction. The Senator from Louisiana has said that they would receive better tax treatment if they should separate. I thought the Senator from Minnesota pointed out that it would be advantageous to split income and remain married.

Mr. LONG of Louisiana. Yes; but a married couple in the lowest tax bracket, with the advantage of income spltting, might divide $2,000 for one and $2,000 for the other, or a total of $4,000 for the lowest tax bracket.

Under the proposed amendment, if those two people agreed to disagree and merely had a friendly divorce, they would then have the advantage of a $3,000 income for one in the lowest bracket and $3,000 income for the other in the lowest bracket, or a total of $6,000 income for the two of them in the lowest bracket, because they were no longer married.

A number of questions are raised as to why it should be so. Furthermore, the adoption of the amendment would create an additional problem. The head-of-household provision would be designed, in the event of divorce, to give favorable tax treatment to the spouse who provided a home for the child. On the other hand, the amendment would require the same tax treatment for the spouse who did not maintain a home for the child. That would seem to be an inequity.

Furthermore, a number of Senators who voted against the motion to table last night did so under the impression that the amendment was for the benefit of women. The benefits of the amendment would include men as well as women. Frankly, some Senators voted for the proposal on the theory that chivalry is not yet dead, but they are now finding they were actually voting a tax benefit for themselves that they had not intended.

That is another question that should be studied with regard to this very difficult and complicated problem. Some of the items I have mentioned sound ludicrous, I know, but nevertheless they are problems which would be raised by the amendment. Those are the reasons why the proposal deserves study. It deserves the best thought the Treasury can give us.

After all, there are many more people on the staff of the Treasury Department who study these things than there are on our committee staff. The subject also deserves the best study of our joint committee staff, and the committee staffs of the House Committee on Ways and Means and the Senate Finance Committee. I would be willing to concede that a problem is involved. The Senate, by voting not to table the amendment last night, has indicated that there is a problem. I believe that the sponsors of the amendment realize that there are a number of questions they are not in a position to answer as the amendment now stands.

Mrs. NEUBERGER. Mr. President, will the Senator yield?

Mr. McCARTHY. I yield.

Mrs. NEUBERGER. For the 2 years I worked on the Commission on the Status of Women, my own committee, which had to do with taxation and insurance affecting women, had representatives of the Treasury sit in at every meeting. Those representatives did not wish to change a single provision related to that subject. They never looked into the right or wrong or the inequity of any proposal. If the proposal would cost the Treasury 5 cents, they were opposed to it.

When our committee finally insisted that there was an inequity and we wanted to recommend a change in the child-care deduction and the single woman provision, they reluctantly went along.

But merely because the Treasury was opposed I do not accept as an argument. It is wrong. It seems to me that we must consider that a single woman is a person in her own right, as is the single man also.

As the Senator from Kansas pointed out much better than I have been able to do, it is an insult. That is a point which has never been considered. I believe Senators would find that it is a situation which faces single women all over America. They feel that they are getting the "short end."

Perhaps with the adjustment suggested by the Senator from Rhode Island the amendment could be modified. But it is not merely a laughing matter. It is not something for the Congress to moralize about whether people "took up," "divorced," "took down," or anything else. When we on the Commission accepted the premise that we would take women where we found them, it was not for us to decide whether they ought to work or ought not to work and stay home with the children. I think that is the approach that we have made.

The story is that many women work and many are responsible for child care. They are the heads of households, and I suggest that we give them a break.

Mr. LONG of Louisiana. The Senator well knows that the committee agreed to the amendment proposed by the distinguished Senator from Oregon with

regard to working women. As the Senator well knows also, her amendment expanded upon the House provision that the problem of a working woman is treated the same, whether she is a wife who finds it necessary to work or whether she is a widow who finds it necessary to work. In that respect, I believe the committee made a very substantial improvement in the bill toward forward-looking and constructive legislation to meet a problem that has troubled many people for a long period of time.

So far as I am concerned, I should like to help meet that problem, but I would not like to extend the benefit to the solution of other problems. For example, my reaction is that the problem is substantially different with regard to a working woman than it is with regard to a single man. It might not be, but that is the impression which I gain from it. I hope that we can find a way to afford some sort of equitable relief, but I feel that to impose the amendment on the committee to take to conference would leave us in a position in which we would not be able to find the answer in the brief period in which we would be in conference on the amendment.

However, I would be happy to study the subject and contribute the best efforts I can to try to find something that we can do about the problem. But

[*P. 2054*]

the conference is not the place to make that study. The place to do it is in the committees. There should be hearings to develop what we can do about the situation. The Senator from Louisiana hopes very much that the Senator from Minnesota will help us to solve the problem in the committee. He is a member of the committee. He serves with great distinction on the committee. I hope very much that the Senator will not insist upon his amendment at the present time in order that we may be able to have a further look at it. I am of the opinion that there is a problem involved.

Mr. McCARTHY. I appreciate the comment of the Senator from Louisiana. I do not know whether we have impressed the Treasury Department with the fact that there is a problem involved, since they gave very little attention to it over the year during which they were considering revision of the Income Tax Code. It seems to me that when we are dealing with a proposed $11.5 billion reduction in taxes, that is the time in which we should give some thought to basic changes which are taking place in the social structure of the country. Only about every 10 years do we have an opportunity such as we now have. To pass it up would seem to be a grave mistake. I believe that the Senate should be more concerned than the House, since we are supposed to think in terms of at least 6 years. I do not know whether we do. But we are supposed to take the long view.

We are taking a long look back, and it shows that we have not been responsive to the particular needs of women in society, although I do not propose to make a distinction between the sexes in the tax bill. We ought to take a look ahead, as the junior Senator from Oregon [Mrs. NEUBERGER] has described today, and take into account what she sees and has seen. The record we make on the floor, if the amendment does not pass, ought to be a warning to those concerned. If it is approved, I hope the conferees who study it will treat this problem properly in conference.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. McCARTHY. I yield.

Mr. GRUENING. I want to commend the Senator from Minnesota. I hope he will not withdraw his amendment. I hope he will press for it, whatever may be the vote. I highly commend the junior Senator from Oregon [Mrs. NEUBERGER] for her remarks. She is perhaps as well qualified as, if not better qualified than, any other Member of this body to speak on this subject. A question of justice and the principle of equal treatment are involved.

It is a highly desirable amendment. I hope it will be adopted. I commend the Senator from Minnesota.

Mr. McCARTHY. Mr. President, I ask that the clerk read the modification of my amendment.

The PRESIDING OFFICER. The clerk will read the modification.

The legislative clerk read as follows:

At the end of the subsection add the following:

"This section shall not apply where there is more than one head of household in each household or where split income is claimed by a member of the same household."

Mr. McCARTHY. Mr. President, the effect of this provision would be that the advantage of head of household could be taken only once in any one household. In a household where joint returns were filed, the advantage could not be taken.

Mr. RANDOLPH. Mr. President, will the Senator yield?

Mr. McCARTHY. I yield to the Senator from West Virginia.

The PRESIDING OFFICER. Does the Senator from Minnesota desire that his amendment be modified?

Mr. McCARTHY. Yes; this is the modification I would like to have accepted.

I yield to the Senator from West Virginia.

Mr. RANDOLPH. Mr. President, I support the amendment as modified. I have discussed the proposal with the scholarly Senator from Minnesota [Mr. McCARTHY] on several occasions. On prior periods the general objective has had my endorsement. It was so in 1962 and 1963 when he advanced the plan.

The debate today has clarified the issue. I commend my colleague for pursuing this matter to a possible favorable solution. Whether he will be sustained by an affirmative vote of the Senate on a rollcall, I cannot say; but, if there is not to be an opportunity to be recorded, I state for the RECORD that I believe there is equity involved in the amendment. I believe a bona fide case has been made for its approval.

Mr. McCARTHY. Mr. President, I have no further remarks. I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. LONG of Louisiana. Mr. President, I send to the desk an amendment to the amendment. It includes both sheets that I am sending forth.

The PRESIDING OFFICER. The amendment offered by the Senator from Louisiana to the amendment of the Senator from Minnesota, as modified, will be stated.

The legislative clerk read the amendment of Mr. LONG of Louisiana as follows:

At end of title II add the following new section:

"SEC. . HEADS OF HOUSEHOLDS.

"(a) Section 1(b) (relating to definition of head of household) is amended—

"(1) by striking out the word 'either' in the first sentence of paragraph (2) and subparagraph (A) and subparagraph (B) of paragraph (2) of subsection (b) and inserting in lieu thereof: 'maintains a household which constitutes for such taxable year the principal place of abode of any person who is a dependent of the taxpayer if the taxpayer is entitled to a deduction for the taxable year for such person under section 151.'

"(b) The amendments made by subsection (a) shall apply to taxable years beginning after December 31, 1963."

Mr. MILLER. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. MILLER. Was the McCarthy amendment modified, and was the modification accepted by the Senator from Minnesota?

The PRESIDING OFFICER. The modification was accepted.

Mr. MILLER. So the question is on the McCarthy amendment as modified, to which the Senator from Louisiana has offered an amendment. Is that correct?

The PRESIDING OFFICER. The question now is on the Long amendment to the McCarthy amendment as modified.

Mr. LONG of Louisiana. Mr. President, the Senator from Louisiana has asked the staff to try to find something that the staff could suggest to meet this problem so that we could take it to conference.

The amendment to the amendment would provide that a person could claim head-of-household treatment if such person were maintaining a household for any dependent.

The way the law stands now, if the person is maintaining a mother or a father in a nursing home, for example—and that was the illustration given—that person could claim the head-of-household treatment. But it might well be that that person was the only relative being looked after.

A working man or woman can claim credit for a dependent if he contributes 50 percent or more to the support of the dependent, whether it be an uncle, aunt, grandchild, or nephew. This provision would still maintain the concept that a taxpayer, in order to qualify for the head-of-household treatment, must satisfy some of the same conditions that the head-of-household provisions were intended to apply to. The provision would protect us against the kind of situation that Congress did not intend to be covered, namely, that if two people were divorced, by their own decision, they would have much better tax treatment than if they had remained married.

This proposal would give better treatment to the person who is helping to maintain a dependent who has these kind of problems, than it would give to someone who has only himself to support.

While there is sympathy for those who have a relative or some loved one to care for, the case for bachelors, for example, is extremely weak. Bachelors do not expect and are not asking for it. If there is any case for it, is is a very weak case.

If the Senator wants to have us study the problem, it would seem to me that those of us on the committee would be happy to go into it, and recommend something to the House conferees.

I hope the Senator will accept the amendment, to show that we are interested in this problem, that we want to help with it, and that we would like to make some progress in this direction.

Mr. McCARTHY. Mr. President, my feeling is that the objective which the Senator seeks is one which the Treasury could reach by directive, if it wished to do so. I think there is existing law to cover the people described by the Sen-

69-108 O—66—pt. 3——49

ator from Louisiana. The Treasury does not think in social terms, but in purely economic terms. Take the instance of the nursing home I understand that I was in error earlier with regard to the statement that nursing home support of a parent did not qualify for head-of-household treatment. That is the way

[*P. 2055*]

the situation was until someone went to court and forced the Treasury to accept those who supported someone in a nursing home as qualified for head-of-household treatment.

This question is really peripheral. I am trying to get at the basic reality of the American social structure today, in which I think there is great inequity and injustice operating against single people. I regret, therefore, that I cannot accept the amendment.

Mr. PASTORE. Mr. President, will the Senator from Minnesota yield, before he makes up his mind?

Mr. McCARTHY. I yield.

Mr. PASTORE. I hope that the Senator from Minnesota will not be too hasty in his decision. He may not advocate retreat or compromise, but I beg him to be practical and realistic.

Some meritorious amendments have been lost on the floor of the Senate in the past few days by a handful of votes. I believe the Senator from Minnesota has made a very good case. What is lacking is that it has never been brought to the attention of the other body. If we could only establish that contact, even though it is watered down considerably—and I grant him that I stand for his amendment as he has proposed it, and I shall vote for it—but looking at what might happen, I ask him to look at the two choices presented today—whether he will face the fact that a better amendment might be defeated on the floor and he would lose all contact, or whether a more watered-down amendment which has already received the sympathy of the Senator in charge of the bill will be brought to the House for further discussion.

In conference, because this is a matter that did not appear in the House bill, the conferees would have the right to modify it in conference to carry out precisely what the Senator from Minnesota is striving for.

What I am advocating, before the Senator makes up his mind, is that he give serious thought to trying to establish this contact, which I believe must be made at this juncture.

Mr. McCARTHY. I appreciate the helpful suggestion of the Senator from Rhode Island.

Mr. PASTORE. In other words, let us think about it first rather than try to gamble all, thus running the risk of losing all.

Mr. McCARTHY. I believe that the Treasury Department could reach this very objective without any change in the law which has been described by the Senator from Louisiana, if it wishes to do so under existing law; in effect, I would receive nothing in return for receding, since I believe the Treasury can now do what the Senator from Louisiana proposes to do by amendment.

Mr. PASTORE. But has not done?

Mr. McCARTHY. But has not done. Now that the court has ruled on nursing care and has established the basis for the claim of head of a household, it seems to me that additional court action could extend head-of-a-household privileges to cover almost anyone supporting a child or parent almost anywhere.

I would prefer to have the committee go to conference with what I am proposing. Then if they feel they must retreat, I would hope they would not go back as far as the suggestion made by the Senator from Louisiana.

Mr. ANDERSON. Mr. President, will the Senator from Minnesota yield?

Mr. McCARTHY. I yield.

Mr. ANDERSON. The Senator has said that this provision might be amended by administrative action?

Mr. McCARTHY. Yes, but not what I am proposing.

Mr. ANDERSON. No, no——

Mr. McCARTHY. The Senator from Louisiana is proposing an amendment.

Mr. ANDERSON. If something of that nature were adopted, that would be an easy step in the right direction. As the Senator from Rhode Island has pointed out, this might be a step that would be somewhat longer.

Mr. McCARTHY. It would be an improvement over what we have, but it would be a minor improvement compared to what I am proposing. I believe the case I am making is much more important in the area in which the Senate should act.

Therefore, very reluctantly, I must decline the kind offer of the Senator from Louisiana.

Mr. ROBERTSON. Mr. President, will the Senator from Louisiana yield to me?

Mr. LONG of Louisiana. I yield.

Mr. ROBERTSON. I was interested in listening to the comments of the distinguished Senator from Louisiana as to married couples, who, if they should be divorced, would be better off financially than while married if we gave them this special tax treatment.

Do I correctly understand that with the alarming divorce rate; now exceeding

more than one out of every four marriages, that this proposal would be calculated to increase the divorce rate?

Mr. LONG of Louisiana. It is impossible to predict what effect it might have. Under present law, a married couple is entitled to have a total of $4,000 taxed at the 20-percent rate. But under this amendment there is no doubt that if they agreed to disagree, and obtained a legal divorce, each would be entitled to $3,000 of taxable income in the 20-percent bracket, for a total of $6,000 taxable at a 20-percent rate.

In view of the graduated income brackets, they would be entitled to a proportionate additional tax benefit by being separated instead of being married. That would be one of the consequences of this proposal.

I know the distinguished Senator from Minnesota does not propose to encourage divorce with his amendment, but the effect of it would be that under this amendment as it stands, if a married couple in a high-income tax bracket decided that they were not getting along very well, they would obtain a substantial tax advantage if they were divorced.

Mr. ROBERTSON. Perhaps I do not correctly understand the requirements which the Senator has cited for the relief of genuine hardship cases, in which an unmarried girl over 35 is really contributing and should have some tax concession. What is the plan to broaden that definition of head of a household?

Mr. LONG of Louisiana. My proposed amendment, if the Senator from Minnesota wishes, can consider it as an amendment in the nature of a substitute, would broaden the head-of-a-household provision of present law so that a person who has any dependents whom he is supporting—it need not be his father in his home; it could be an aunt or an orphan—but if he has any dependents that he is supporting, or to whose support he is contributing more than 50 percent, he could claim the advantage of head-of-a-household treatment. But this proposal seeks to maintain the principle that to have head-of-a-household treatment, he would have to be, at least in some respect, the head of a household, maintaining a home for someone else.

That is as broad as we can make the principle. It is much broader than the Treasury can make it by regulation.

When the Senator from Minnesota inferred that this was what the Treasury was about to suggest, he was in error. This was done by our own staff.

Mr. ROBERTSON. I wish to commend the Senator. I believe his suggestion is logical and fair. I agree with the Senator from Rhode Island that the distinguished chairman of the committee might be well advised to accept it because, frankly, as far as I am willing to go, whether it is $300 million or $350 million, I believe when Senators take a quick look at the bill and what it will do, and the possible inflationary effect, I do not know what the spending will be, but they will not wish to go beyond it.

Let us remember that President Kennedy requested $3 billion of new revenue; and President Kennedy asked that the full effect be postponed until next year.

We will make $800 million of new spending available immediately. Therefore, we cannot afford to put another $300 or $350 million spending back into the bill. However, I believe the Senator is off to a very fair compromise.

Mr. LONG of Louisiana. Mr. President, let me point out one obvious advantage of the substitute that I am offering over the amendment offered by the Senator from Minnesota. The proposal of the Senator from Minnesota provides that a single person, whether a single man or woman, or a divorced man or woman, if he or she is 35 years of age, would be treated as though he were maintaining a home for a dependent mother or for a dependent father, and were thus burdened with the expense of maintaining a home for someone else, even though that were not the case.

Under the Senator's amendment, a single person 32 years of age actually maintaining a separate home, for another person—for example, a niece or nephew—that person, 32 years of age, who was actually providing a home for another person, would be denied the benefit of the head-of-household treatment.

Mr. McCARTHY. Mr. President, will the Senator yield? That is not a correct statement.

Mr. LONG of Louisiana. Take the case of two people, one of whom is caring

[P. 2056]

for his uncle or aunt or niece or nephew. That person if under 35 years could be denied the head-of-household treatment; whereas the other person, even though not burdened with that obligation, would receive the favored treatment if over 35 years of age.

Mr. McCARTHY. Mr. President, that would not be the effect of my amendment. People who are under 35 would continue to be treated under existing law if they were supporting parents or children. Those people would receive the head-of-household treatment, just as they are receiving it now.

At age 35 those tests would be eliminated; they would not apply.

Mr. LONG of Louisiana. As the law now stands, the head-of-household treatment is available at the present time only in the event that a person has a dependent living in his home, or in the event he is supporting a father or mother who is living in another house. It is not available for the support of nieces or nephews and other dependents who are not living in the person's home; or for the support of an orphaned niece, or for an uncle, not living in the person's home.

There are all sorts of situations in which a person could be burdened with that obligation, but not receive the treatment the Senator would extend to other persons.

There are all kinds of situations under which a person may be burdened with the obligation of maintaining someone else, perhaps a child who is not mentally competent. There are many situations which would not receive relief under the Senator's proposal. The original McCarthy proposal would give relief to a great number of people who do not have any real problem from the standpoint of dependents.

Mr. MORTON. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. MORTON. I believe the Senator in charge of the bill has been very considerate in proposing his substitute amendment. We are confronted with a real problem, and he has offered a fair and equitable approach towards solving it. I agree with the Senator from Rhode Island that if the amendment goes to conference, it will be given consideration in conference, even though the House has not considered it. The proposal should be considered. I hope that the substitute will be accepted. Speaking for myself—and I believe also for many Members on my side of the aisle—I am aware that this is an important matter and that we should do something about it.

For reasons that have been outlined, many Senators cannot accept the proposal as originally offered by the Senator from Minnesota.

Mr. SMATHERS. Mr. President, I should like to join Senators who are importuning the Senator from Minnesota to accept this particular compromise. It was evident from the very beginning that there was considerable confusion as to what the original amendment would do. It became rather evident as soon as the debate started that we could be faced with a situation in which six men were living in one apartment. All of them could be over 35 years of age, and each one could claim to be the head of the household and receive the benefit under the McCarthy amendment.

The Senator from Minnesota, realizing that he did not want to do that, offered a modification on the floor, which provided that there could be only one head of the household.

Those same six men could live in the same apartment, and they would have to decide which one would get the benefit of the head-of-the-household tax treatment.

There might be the situation of a mother and father and two sons living together. They could say, "We ought to do something to improve our tax situation. Why don't you, Joe, move next door, where you can become the head of the household and have your taxes reduced?"

Mr. ROBERTSON. Mr. President, having been a member of the Ways and Means Committee for many years, I could not forget the admonition that it is not possible to write a tax bill on the floor.

Mr. SMATHERS. I thank the able Senator. I agree with him.

Mr. ANDERSON. Mr. President, I appreciate what the Senator from Virginia has said. As a former member of the Ways and Means Committee, I agree with him completely. There is great danger in writing a tax bill on the floor.

Mr. SMATHERS. The Senator from Mississippi also was a member of that committee. The point is that we really do not know, and he does not know, and no one knows, at this point where this amendment will lead.

There has been an expression on it from the acting minority leader and from the Senator in charge of the bill, and from members of the Finance Committee. I am certain, as a result of the colloquy today, that the Treasury will be impressed with the fact that something should be done about the situation. The able junior Senator from Oregon [Mrs. NEUBERGER] made a very appealing case. I hope the junior Senator from Minnesota [Mr. MCCARTHY] will agree to let the substitute go to conference. Let us have the Treasury work on it. Let us have the staff work on it also. Let us see if we cannot resolve the differences in a fashion that will be useful and helpful to everyone.

The whole proposal could be lost. The Senator from Minnesota could lose it all. A benefit is already being given to everyone by the bill, whether he is over 35 years of age or not. Single persons who are over 35 would receive some benefit from the bill. It does not totally leave them out. The bill would give tax benefits to the extent of $9.3 billion. It would

reach every individual who pays taxes. The Senator has said that he wants to put persons 35 years of age and over in a better category. We agree that that should be done, if those persons can qualify as heads of households. They should receive special treatment if they can qualify as genuinely supporting someone while maintaining an individual household.

I add my voice to the voices of other Senators who have asked the Senator from Minnesota to accept our suggestion.

Mr. McCARTHY. I am not sure that it is not possible to write changes into a tax bill on the floor of the Senate, especially when Senators who are on the committee and who are opposed to a provision will not write them into the bill in committee.

Mr. JAVITS. Mr. President, I have been a conferee on many occasions. It is important that we understand what conferees will or will not do. With the Long substitute in the bill, the conferees could not return to the McCarthy original. That does not mean that the original is what we wanted, either. Therefore, I should like to ask the Senator whether he is seeking to introduce into the McCarthy idea one additional factor; namely, the factor of dependency; in other words, that there must be some basis, not only the maintenance of a separate physical establishment, which is the basis of the McCarthy idea, plus the age limit, but also the additional factor of some kind of dependency. Is that correct?

Mr. LONG of Louisiana. Yes; the proposed amendment to the McCarthy amendment would take care of the best cases that the McCarthy amendment would aid.

Mr. JAVITS. One other question: Does the Senator's substitute maintain the age limit or discard it?

Mr. LONG of Louisiana. It does not maintain the age limit.

Mr. JAVITS. I thank the Senator. Now we understand exactly what the amendment provides.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. KEATING. I wonder if the Senator from Minnesota heard the answers to the queries propounded by my colleague from New York [Mr. JAVITS] and whether he agrees with the answers given by the Senator from Louisiana.

Mr. McCARTHY. I believe most of the cases which the Senator from Louisiana said would be covered by his amendment could really be covered by a proper interpretation of existing law. It would certainly force the Treasury to take care of the worst cases, but it would not take care of the injustices and inequities that are involved.

Mr. KEATING. If the Treasury were so disposed, it could take care of any cases involving a dependency, could it not?

Mr. McCARTHY. Until quite recently, the Treasury had been refusing to grant a head-of-household exemption if a person was maintaining a parent in a nursing home. If he had the parent in his own home or maintained a separate home for the parent, he could claim the head-of-household exemption.

Eventually, a case was taken to court, and as a result the Treasury has ruled that if a person maintains a parent in a nursing home, he may claim the head-of-household exemption. However, that

[P. 2057]

does not reach out to the basic social problem and inequity that are involved.

Mr. LONG of Louisiana. Under existing law, the Treasury does not have power to issue regulations to accord relief to a working single person to help a niece, a nephew, uncle, an aunt, or an orphaned child, who is living in a separate home. This amendment would cover all those situations which the Treasury at present has no statutory power to reach at all. It would also take care of cases in which the Senator from Minnesota [Mr. McCARTHY] thinks there should be relief, but to which the Treasury does not have power to extend relief.

So this amendment would, in the broadest sense, extend the head-of-a-household treatment to a taxpayer who was supporting a dependent who might not be living in his home.

But it leaves one problem, which I think we should not go into at this point. Should we try to extend to persons who have no dependents to help the special tax benefit which is intended for those who do? The amendment also would prevent what could become a serious discrimination. If we started at age 35 with special tax treatment for single persons, it is likely that new problems would develop, and we would have to start all over again. So if the tax relief sought by the McCarthy amendment is to be accorded, it seems to me that what is proposed in my amendment would be a good starting point. It would be something to take to conference. As a Senate conferee, I would use my best efforts to urge the House to agree with us to begin relief in this direction.

I hope the amendment to the amendment may be agreed to.

The PRESIDING OFFICER. The question is on agreeing to the amend-

ment of the Senator from Louisiana [Mr. LONG] to the amendment offered by the Senator from Minnesota [Mr. McCARTHY].

The amendment to the amendment was agreed to.

The PRESIDING OFFICER. The question now is on agreeing to the amendment of the Senator from Minnesota, as amended.

Mr. LONG of Louisiana. Mr. President, now that the amendment to the amendment has been agreed to and includes my proposal, I shall gladly take the amendment to conference. I ask unanimous consent that the order for the yeas and nays be vacated, so that the amendment may be taken to conference.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question now is on agreeing to the McCarthy amendment as amended.

The amendment as amended was agreed to.

Mr. GORE. Mr. President, I understand from the distinguished Senator from Florida [Mr. SMATHERS] that there is an understanding that the senior Senator from Delaware [Mr. WILLIAMS] will be recognized to call up his amendment. Therefore, I shall withhold the amendment I had intended to offer.

Mr. WILLIAMS of Delaware. Mr. President, on behalf of Senators SMITH, AIKEN, and PROXMIRE and myself, I call up amendment No. 400 and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. At the proper place in title II of the bill it is proposed to insert the following new section:

SEC. . PERCENTAGE DEPLETION RATES FOR OIL AND GAS WELLS, ETC.

(a) Section 613(b) of the Internal Revenue Code of 1954, relating to percentage depletion rates is amended—

(1) 1964.—With respect to taxable years beginning in 1964, by striking out "27½ percent—oil and gas wells" in paragraph (1) thereof and inserting "25 percent—oil and gas wells".

(2) 1965.—With respect to taxable years beginning in 1965—

(A) by striking out "25 percent—oil and gas wells" in paragraph (1) thereof and inserting "22½ percent—oil and gas wells", and

(B) by striking out "23 percent—" in paragraph (2) thereof (relating to sulfur and uranium and certain minerals from deposits in the United States) and inserting "22½ percent—".

(3) 1966 AND SUBSEQUENT YEARS.—In the case of taxable years beginning after December 31, 1965—

(A) by striking out "22½ percent—oil and gas wells" in paragraph (1) thereof and inserting "20 percent—oil and gas wells", and

(B) by striking out "22½ percent—" in paragraph (2) thereof (relating to sulfur and uranium and certain minerals from deposits in the United States) and inserting "20 percent—".

Mr. WILLIAMS of Delaware. Mr. President, perhaps the Senator in charge of the bill is willing to accept the amendment. If he is, much discussion could be eliminated.

Mr. LONG of Louisiana. The Senator from Delaware knows that I oppose his amendment. I shall be glad to hear him. I hope other Senators will also remain in the Chamber and hear both arguments, so that the Senate may pass fairly on the proposal.

Mr. WILLIAMS of Delaware. Mr. President, this amendment provides for a progressive three-step reduction in certain percentage depletion rates. When this amendment is fully effective in 1966, all those percentage depletion rates which now are above 20 percent would be reduced to 20 percent.

The minerals affected by this amendment include oil and gas which presently enjoy a percentage depletion rate of 27½ percent and sulfur, uranium, and certain other minerals which are extracted from deposits within the United States which are entitled to percentage depletion of 23 percent.

Under its first step, the amendment would reduce the percentage depletion allowance for oil and gas from 27½ to 25 percent. This would be the percentage depletion applicable to oil and gas income in 1964. This change for 1964 would produce $75 million in new revenues for the Treasury and would help offset the cost of the first stage of the income tax reductions.

As its second step, effective in 1965, the amendment would further reduce the percentage depletion allowance for oil and gas to 22½ percent. At the same time, it would have its first impact on the minerals in the 23-percent category. As in the case of oil and gas, the allowance for these minerals in 1965 would be 22½ percent, an initial reduction of only one-half of 1 percent. These changes made by this second step in 1965 would produce an additional $75 million in new revenues for the Government, offsetting part of the cost of the second-step reduction in income taxes.

The third and final step of my amendment would apply in 1966 and subsequent years. It would reduce the percentage allowance to 20 percent for oil and gas and for minerals now in the 23-percent category. In 1966 and thereafter there will be no percentage depletion allowance above 20 percent. This last step, in 1966, would produce additional revenues of $100 million for

the Federal Treasury, making the total revenue gain for a full year of operation of the amendment approximately $250 million.

Mr. President, I ask that the yeas and nays be ordered on the amendment.

The yeas and nays were ordered.

Mr. JAVITS. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. JAVITS. As the Senator knows, there is a large amount of business of this character in our State and our city. New York is the headquarters of probably most of the major oil companies in the United States. They are always concerned about changes in definitions, in terms of the law, in the way in which foreign income is treated, depending upon its sources, and so forth. To some extent, those factors are affected in the bill. The companies operate under a very complicated set of tax laws.

Can the Senator assure us that, other than with respect to strict rates of depletion, his amendment would not change either existing law or what is contained in the bill with respect to depletion income from mineral sources, and so forth?

Mr. WILLIAMS of Delaware. That is correct.

Mr. JAVITS. Only the rates?

Mr. WILLIAMS of Delaware. Only the rates.

Mr. JAVITS. And if there were to be any question about that—if the Senate adopts the Senator's amendment, and if the opposite proved to be the case——

Mr. WILLIAMS of Delaware. Then I would help correct that.

Mr. JAVITS. The Senator from Delaware would help correct it?

Mr. WILLIAMS of Delaware. Yes.

Mr. JAVITS. I thank the Senator from Delaware.

Mr. WILLIAMS of Delaware. Yes, because the amendment is drafted with the sole intent of changing only the rate, not changing any other part of the formula.

If it were found—although I do not think it will be because the staff has carefully prepared this amendment—that the amendment would do otherwise. I shall be ready to change it, in conference or elsewhere.

Mr. JAVITS. I thank the Senator from Delaware, because everyone knows

[*P. 2058*]

that I am devoted to the struggle to have the private enterprise system really do its proper job in the world. I think the question before the tax collector is always how he can do his job without drawing blood.

So in deciding whether this rate should be 22 percent or 21 percent or 26 percent, our decision will depend on the answer to the question, Will this inhibit the exploration for oil, on which the rate is based.

It is my judgment that this amendment will not inhibit the exploration for oil, any more than the 27½ percent has done; and I thank the Senator from Delaware.

Mr. WILLIAMS of Delaware. I thank the Senator from New York.

There is no industry for which I have more respect than the oil industry. This industry makes a great contribution to our Government; and in submitting the amendment I have no thought of punitive action against the industry or anyone else. I have respect for this industry, but I expect it to pay its proportionate share of the total tax burden, the same as all other citizens.

There is no magic in the 27½-percent figure. It was a compromise between the position taken by the two Houses—one of which proposed a rate of 25 percent, and the other proposed 30 percent. At that time the corporate rate was around 20 percent, and the top individual rate was around 25 percent. Therefore, the 27½-percent rate did not result in the same advantages and benefits for this industry as those which now result for it under the existing law or those which it will enjoy under the new rates now in this bill. I feel that in an era in which we must raise about $100 billion a year to support our Government, and when approximately one-half of that goes to support the national defense it is only right that this industry be called upon to pay a fair proportion of the tax load required in order to operate the Government and protect the country. It is for that reason that I am proposing this change in this rate structure; and I feel that this change will not disrupt at all the exploration activities and development of the industry.

Mr. JAVITS. Mr. President, will the Senator from Delaware yield further to me?

Mr. WILLIAMS of Delaware. I yield.

Mr. JAVITS. As a practical citizen and a campaigner of longstanding, I know of no particular area in the tax bill which sticks more in the public mind as some kind of gimmick and some sort of way by which the rich avoid heavy taxes than this one. However, as a matter of fact, that is not true; as a matter of fact, there are no particular iniquities involved in this depletion allowance. It has a great deal of basis and soundness in the national interest; and I have been pleased to find that the Senator from Delaware takes that position, too, because after studying that situation, he

has submitted his amendment, which would bring the rate down, not sensationally, but to 20 percent over a period of years.

So I submit that if we show that this particular rate is not a sacred cow and that—at long last—it can now be reformed, and that no lobby or power group will prevent us from reforming it, that will be one of the finest demonstrations of the strength of the tax system that we could possibly have; and I think the oil companies will benefit from it, in terms of the public esteem which they will receive, and which I believe they deserve to receive.

I agree with the Senator from Delaware that the oil companies have done a fine job in the public interest, and that they have done many fine things in that connection, in a forward-looking way.

But somehow the American people have come to feel that these oil companies have an inside drag, and that their tax rates cannot be changed—that other rates can be changed either up or down or across the board, but that this rate is the sacred cow of all sacred cows. I think that attitude is bad for the country and for the tax system; and I hope that—at long last—the Senate will support the Senator from Delaware, in connection with his amendment.

Mr. WILLIAMS of Delaware. I thank the Senator from New York. I agree with the principle of depletion, and I am not trying to abolish the principle itself.

On the other hand, since 1926 Congress has made many changes in the tax rates—in most cases, raising them—with the result that the individual rates have been increased from around 11 percent until today they are as high as 91 percent, and the corporate rates have been increased from 20 to 52 percent. During the war the excess profits tax resulted in raising the rates even higher. However, during this entire period, this 27½-percent rate has been considered sacred and as one which could not be touched.

I think the oil industry—for which I have the greatest respect—can pay its proportionate part of the cost of the defense of the country.

Fifty billion dollars of the annual expenditures, for which Congress appropriates, are made for the Nation's defense programs. Those expenditures are made in order to defend the lives of all American citizens and the defense of the property of America. The oil industry represents a substantial amount of property which is being defended by means of the congressional appropriations for the national defense and certainly this industry should pay its proportionate share of that cost. Why should it do otherwise?

I think it is also fair that it do so, and I believe the American people will have a much higher regard for this industry than if Congress insists that this special tax privilege is sacred and cannot be touched.

Mr. JAVITS. Mr. President, will the Senator from Delaware yield further to me?

Mr. WILLIAMS of Delaware. I yield.

Mr. JAVITS. My remarks will be brief, and I appreciate very much the courtesy of the Senator from Delaware in yielding to me.

I wish to refer to one other point: The oil industry often suffers severely from strange and unjustified constructions in regard to provisions of the tax law, from the point of view of the income of the industry; and it has complained about that and about the considerable insensibility on the part of those who complain about the effect which the depletion allowance has, and the programs taken under it, and the demands for corrective action in that connection, as compared to other parts of the tax system.

Therefore, I believe that by means of this amendment the oil companies will be able to do even better than they can do today, because, in the absence of this amendment, the attitude of Congress and of the people of the country toward that industry is an unhealthy one; and I believe it is time for a change to be made.

Mr. WILLIAMS of Delaware. I thank the Senator from New York, and I agree with him.

Mr. SIMPSON. Mr. President, will the Senator from Delaware yield briefly to me?

Mr. WILLIAMS of Delaware. I yield.

Mr. SIMPSON. I have great respect for the Senator from Delaware, as he knows; and he is one whom I should like to have on my side in connection with any controversy.

I agree with what he has said about the oil industry and its part in the defense of the country and its participation in it.

I wish to point out that the oil industry has been the minuteman of America, during all our country's conflicts. In World War I, in World War II, and in World War III the oil industry provided tremendous impulse to the motivation of our Armed Forces—both those on the land, those on the sea, and those in the air.

I point out that any diminution of the 27½-percent depletion allowance would

wreak havoc in this industry, which in recent years has been suffering a decline.

I believe that the economic shock wave which would result from any change in the depletion allowance would not only adversely affect the oil industry, but also would adversely affect the oil users, and also—and principally—the U.S. Government itself. The Government is the biggest user in the United States of the production of this industry. For instance, I believe our Armed Forces use about 446,000 barrels a day of oil products; and jet fuel is used in similar proportions.

I call the attention of the Senate and the attention of the Senator from Delaware to the fact that the oil industry will spend $2 for every $1 it receives from the depletion allowance; the industry will spend that for further exploration and for the discovery of the hidden sources of oil.

I also call attention to the fact that the industry itself has spent an average of $5.1 billion and has made approximately 15,000 explorations, including both the large ones and the small ones. That has been the average over the years; and if Congress were to reduce the depletion allowance, the resulting

[*P. 2059*]

increased cost would be inflicted upon the consumers.

I know how honorable the Senator from Delaware is in his intentions. I know how he must feel with respect to the great job that the oil industry has done. Coming from the eighth largest oil State in the Union from the standpoint of production, I know what it means. Furthermore, I know that the oil industry itself is far below the norm in corporate receipts in the United States by virtue of the industry itself. I call to the attention of the Senator from Delaware the fact that that great industry would be irreparably injured if there were any reduction in the 27½-percent depletion allowance which has been in existence for 35 years. The oil industry expected to use it. It has been given a promise by the U.S. Government that it could depend upon that type of thing and could work out its destiny in the future. As much as I should like to be for the amendment of the Senator from Delaware, knowing the repercussions that it would have on the oil industry, I sincerely hope that Senators will vote against it.

Mr. WILLIAMS of Delaware. I appreciate the remarks of my good friend the Senator from Wyoming, for whom I have the greatest respect. He has no higher regard for the oil industry than I do. I certainly recognize the great contribution that the industry made to our war effort, and I am willing to accept the industry as a minuteman that always stood by when our country was in need. But by the same token we have not merely one minuteman; we have many. What the Senator has said could be said also of the American farmer.

The oil would be of no use if we did not have food for America. So, therefore, one could say that the farmer is most important. Neither the farmer nor the oil industry would be of great importance if it did not have the great productive capacity of America to provide the implements. We can speak of no segment of America in itself as all-important. It takes all of them working together as a unit—as a group of minutemen—to make our country successful in its defense. I would not for one moment, in making that statement, detract from the part which the oil industry has played, but they are not all-important. If we had all the oil in the world but did not have all these other things to go with it, it would be of no use.

Mr. SIMPSON. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I shall yield in a moment. The Senator mentioned the fact that the oil industry has been led to expect that they could keep the 27½-percent depletion allowance. I cannot say that I agree with that conclusion. The fact that 35 years ago the rate was fixed at 27½ percent does not give the industry any right to believe that it has an inherent right always to maintain that allowance, any more than do the American taxpayers who were paying around 20 percent to 25 percent rates at that time have any right to say that the Congress and the Government doublecrossed them as they raised the rates to higher levels in succeeding years.

Nothing is fixed in our tax structure. Every American taxpayer recognizes that rates can be raised or lowered at the discretion of the Congress as it sees the need. Sure, this change will have some effect on the consumers. I recognize that it will have some effect on the cost to the Government, which is a large purchaser of the oil products. I recognize that as we increase taxes the addition becomes part of the built-in costs. But, by the same token, the same statement is true with respect to all corporate rates. All taxes are a part of the built-in cost of operations. It is true of all industries, not merely the oil industry. It is one of those factors which we must take into consideration. The alternative

would be to abolish all taxes on all corporations, so that the Government could buy at lower costs.

The reason I am offering the amendment is that I strongly feel that this segment of our American industry, which is an important segment and one of the most respected segments of American industry, is not paying its proportionate part of maintaining the cost of operating our Government today. For that reason I am proposing what I think is not only in the interest of the taxpayer but in the interest of the oil industry itself—that they accept some modification of the depletion allowance.

As the Senator knows, under this 27½-percent depletion allowance they can recover not just the original cost but in some instances, many times over their investment.

There is no limit.

I have suggested what I believe would be a reasonable adjustment. I admit that there is no magic in the figures I have suggested, nor is there any magic in the 27½-percent figure. Congress should recognize that. Personally I feel that the oil industry itself would be better off if it accepted a modification of the depletion allowance in order to remove the stigma we sometimes hear that they are trying to enjoy a special privilege. I accept the industry as a respected part of our American system. Let them accept their responsibility as a respected part of that system.

Mr. SIMPSON. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. SIMPSON. I am sure that the Senator from Delaware is not contending that the depletion allowance is a tax loophole for the benefit of the oil industry.

Mr. WILLIAMS of Delaware. No.

Mr. SIMPSON. Some responsible people do.

Mr. WILLIAMS of Delaware. I have always looked upon a loophole as an unintended benefit that creeps into our Internal Revenue Code. As we act upon a bill, such as we are considering today, consisting of 380 pages, occasionally we will find that we have extended a benefit to some group or to some individual which we did not intend. We later correct them. To me those are loopholes.

The reason I make that statement is that I do not consider the allowance a loophole in that Congress, with its eyes wide open, established the depletion allowance at 27½ percent. On numerous occasions the Congress has refused to change it. If I were a part of the oil industry today and were operating an oil well, I would take the 27½-percent depletion allowance the same as every one else in the industry does. I do not make any charges of impropriety when anyone in the industry utilizes the benefits which are acorded to them under the revenue code.

I shall state another example. I shall vote against the proposed tax reduction of $11.5 billion, not because I believe that the tax rates are low enough already, but, as I have previously explained, I believe we should postpone a tax reduction until after we have actually reduced Government expenditures to the point at which we can afford a tax cut. But if the bill should pass and tax rates are reduced, even though I vote against it, when I compute my tax return at the end of the year, I shall compute it on the same lower formula as every other taxpayer will. That does not mean that I would be taking advantage of a loophole.

That is the law. If the tax rate is raised over my objections I shall pay the increased rate. If it is lowered over my objections I shall take the benefit. So I certainly do not cast any reflection on the oil industry because it has utilized the 27½-percent rate which is provided in existing law.

I frankly believe that any segment of the oil industry which did not utilize the allowance would be subject to severe criticism on the part of the company's stockholders. They must take advantage of the law. I certainly am not attacking from that angle. I do say that it is up to Congress to change the provision.

Mr. SIMPSON. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. SIMPSON. It is the evidence of the integrity of the Senator from Delaware that makes me very friendly toward him, as he knows. The Senator has been very fair and convincing with respect to the matter of tax loopholes, which so many irresponsible people refer to when they speak about the oil depletion allowance for the oil industry. I should like to point out to the Senator that, since I come from a State which has large oil capacity, and participate in an independent company known as the Husky Oil & Refining Co., I can assure the Senator from Delaware, as well as other Senators, that the job of the oil industry is not all sunshine and roses. Approximately 1 out of every 12 wells drilled is a good producer. Many of the wells are marginal wells or even submarginal wells that do not pay their expenses.

The path of the oil industry is a very severe one. The job is becoming more difficult by virtue of the importations of oil from abroad. In all of my experience in the oil industry I have never

found any stinkers in that industry with the exception of one or two, and the oil industry itself took care of those right off the bat.

[*P. 2060*]

This great industry is doing a great service for America. The repercussions of the proposal on the economics of the country would be most severe, not only to the oil industry, but to other industries that utilize the oil.

I agree with what the Senator has said about the farmers being minutemen, but it is the propulsion provided in many instances to the farmer and to other forms of transportation and in the other areas of industry that is provided by the oil industry that makes them competent to be minutemen.

Mr. WILLIAMS of Delaware. What the Senator has said is true. As I stated, I am not trying to minimize the contribution which the oil industry makes to the American economy—not for one moment. I have great respect for the industry. Some of my best friends are engaged in it. They understand my position, and I understand theirs. On many occasions I have agreed with them and fought for what I thought was fair for the industry, and I shall do so again.

This is not a personal grudge I have against them. I have supported measures relating to the industry which I felt were justified, as has the Senator from New York, and I shall probably do so again in the future.

Several Senators addressed the Chair.

Mr. WILLIAMS of Delaware. Mr. President, I promised to yield to the Senator from Ohio [Mr. YOUNG] first.

The PRESIDING OFFICER (Mr. KENNEDY in the chair). The Senator from Ohio is recognized.

Mr. YOUNG of Ohio. Mr. President, I compliment the distinguished senior Senator from Delaware [Mr. WILLIAMS] on the moderate amendment he has offered today. The Senator from Delaware is rendering a real and needful public service in offering the amendment. I am sure it will be debated fully.

I think I know something about this matter for the reason that, while a member of the Committee on Ways and Means of the House of Representatives, I heard a great deal of testimony on the 27½-percent oil depletion allowance in the tax writing of 1949 and 1950. At that time in committee, based upon the testimony that had been heard, and upon my judgment, I voted to reduce the 27½-percent depletion allowance to 15 percent. I would have voted to reduce it further. I also know something about it because in recent months I have received letters, accompanied with dividend checks, from the Atlantic Refining Co. and the Sinclair Oil Co., telling me to write my Representative to insist upon the retention of the 27½-percent depletion allowance.

I am not writing my Representative on that subject, but for many years I have been happy to have been a stockholder in the Sinclair Oil Co., the Getty Oil Co., the Tidewater Oil Co., the Mission Development Co., the Atlantic Refining Co., and the Monsanto Co.

The estate I have accumulated over the years has been added to somewhat by reason of the fact that I had the good judgment many years ago, when I was practicing law in Cleveland, to purchase oil stocks. I am retraining them. I am happy to have them. I am still in favor of reducing the oil depletion allowance.

When it is said that there would be a great economic shock if this moderate amendment were to be adopted today, I cannot "buy" that argument. It might require some mild adjustments in the oil industry, but I am certain there would be nothing shocking about it.

Evidently the distinguished Senator from Delaware has studied this subject very thoroughly. In the graduated reduction that is here proposed, I am certain the oil producing companies will not suffer whatever.

They have been beneficiaries of this high allowance over the years. We have been glad to give them these benefits, and this amendment will continue to give them a more than reasonable and fair depletion allowance.

It is true that at the present time the oil industry is making a great contribution for the defense of our country. I am aware of the great contributions that were made by the industry to defend the free world, and to win the war against Hitler. However, the time has now come for a careful and thorough reappraisal of its tax benefits, which are not sacred at all. Congress provided them back in 1926, in the era just preceding the period of the great depression. Since 1926, oil and gas producers have been permitted to deduct 27½ percent annually as a depletion allowance regardless of the actual depletion involved. There is nothing in our tax laws so inequitable as the excessive depletion exemptions now enjoyed by oil and gas corporate interests. If this depletion allowance were reduced from 27½ percent to 15 percent, $800 million would be added to our annual revenue, and in my judgment, no corporation would be dealt with unjustly. I commend the Senator from Delaware for his amendment which is a big step in that direction.

In that connection, may I add that a great President, the late great John F. Kennedy, who 50 years from now will

be regarded, in my opinion, as one of our very, very great Presidents, recommended to the Congress that the depletion allowance of 27½ percent be reviewed and reduced. That is our opportunity here today.

Mr. WILLIAMS of Delaware. I thank the Senator from Ohio for his support of the amendment. I, too, have seen the letters sent out by the oil companies to the stockholders, urging that they write Members of Congress. As a stockholder I have received some of them. I find no fault with those companies sending out such letters. Under our form of government they have that right, and I would defend their right to do what they can to keep the 27½-percent depletion allowance. At the same time, I defend my right to put the allowance in proper perspective. In my opinion, it should be lowered.

I have often listened to the argument that the industry would be completely demoralized if it had to pay more taxes, and I am not at all convinced.

I yield now to the senior Senator from Ohio [Mr. LAUSCHE].

The PRESIDING OFFICER. The senior Senator from Ohio.

Mr. LAUSCHE. Mr. President, I merely wanted to express my concurrence with the fine remarks made by my colleague from Ohio [Mr. YOUNG]. I think he ably stated the case, and I subscribe to all the thoughts he expressed.

Mr. WILLIAMS of Delaware. I thank the Senator from Ohio.

I now yield to the Senator from Iowa [Mr. MILLER].

Mr. MILLER. Mr. President, the Senator from Delaware knows in what great esteem I hold him. He also knows that he and I share the same tax and economic philosophy. I venture to say that the record of the yea-and-nay votes will show that we voted very closely together on tax questions. Accordingly, I hope he will understand why I feel unhappy about the fact that I must differ with him.

The Senator from Iowa has this approach to the problem: If an adjustment is made in what is really a built-in factor in the cost, either of two things will happen. Either the oil companies will cut down on the amount of their exploration activities, or there will be an increase in the cost of the end product.

I do not believe the oil companies will cut down on their exploration activities, because this is a matter of life and death, a matter of survival of the oil industry, in view of the international competitive situation. There will be an increase in the cost of the end product, in the price of gas and oil and heating fuel.

The Senator from Delaware said that, if we use this argument, perhaps it is an argument that we ought to reduce the taxes of other corporations.

I do not believe that is quite the point. The point would more likely be that we should not increase the taxes of other corporations, and we are not about to do that. The essence of the bill pending before the Senate is that we will reduce taxes on corporations rather than increase them. The amendment of the Senator from Delaware goes contrary to that philosophy by increasing the taxes of one industry. I suggest to the Senator from Delaware that the result will be an increase in the cost of gas and oil and heating fuel.

Mr. WILLIAMS of Delaware. Will the Senator from Iowa yield at that point?

Mr. MILLER. I should like to tie in one other point first——

Mr. WILLIAMS of Delaware. I should like to reply at that particular point, if the Senator will yield to me.

Mr. MILLER. I yield.

Mr. WILLIAMS of Delaware. I recognize that if we increase taxes, surely of it does flow through and pass on to the consumer. But by the same token, so, too, would this a tax reduction represent lower prices, should the reduction all be passed on to the consumer. But changes in tax rates are not always reflected at the consumer level. If that were true, mathematically they would be just a well off as they were before, so why all the argument?

Mr. MILLER. That is just the point. The products of the oil industry are in a competitive situation, not only with respect to other types of products in the United States—coal, for example—but with respect to international competition as well. The Senator from Delaware well

[*P. 2061*]

knows that in the American economic competitive system, the general approach has been to reduce rather than to increase the cost of products to consumers. But the Senator from Delaware recognizes that there will be some increase in cost to the consumers.

With the percentage depletion, the oil industry is not paying as much in taxes as it would if the amendment of the Senator from Delaware were adopted. So who is going to be paying the difference? As of now, the general taxpayer will be paying it. Mainly, the income-tax payer will be making up the difference. But he will be doing this on the basis of relative ability to pay. Those with high incomes are filling more of the gap than those with lower incomes, because that is the essence of our tax system. That is our philosophy.

If certain industries do not have to pay as much tax as they otherwise would, with the change in the structure, the general taxpayers, on the basis of relative ability, will make up the difference. But if we close the gap, and the extra cost is passed on to the consumer, the consumer will not be paying according to relative ability to pay.

Those who buy gas and oil and heating fuel do not pay according to their ability to pay. The very lowest income groups may well drive their automobiles as much as, if not more than, those in the highest income bracket, but they will pay the extra cost just the same. So from the economic standpoint, it seems to me that if we are going to pass on extra costs to the consumers, we shall have a more regressive situation by far than at the present time.

My argument would break down if the Senator from Delaware could show that the extra taxload would not be passed on to the consumer as extra cost of the end product.

Mr. WILLIAMS of Delaware. I thank the Senator from Iowa. At that point I should like to reply, because perhaps I can convince the Senator.

Even though the Senator from Iowa and I may differ on this point, it does not in any way diminish my respect for him. Men can differ honestly on views, and I most certainly respect his views and the views of other Senators on this question, but by the same token I hope that they in turn will respect mine.

Mr. MILLER. I thank the Senator. The Senator well knows that the respect is mutual.

Mr. WILLIAMS of Delaware. I should like to quote an example that was given demonstrating how the oil depletion allowance works. I quote from a speech which was delivered by none other than former President of the United States Harry S. Truman, in one of his messages to Congress, at which time he was asking Congress to change the depletion allowance. This was back in 1950—on January 23. It appears in the CONGRESSIONAL RECORD, volume 96, page 771 of that year. I should like to quote one example to which President Truman invited our attention as a glaring example of what exists and can exist under the 27½-percent depletion.

I quote:

> For example, during the 5 years 1943 to 1947, during which it was necessary to collect an income tax from people earning less than $20 a week, one oil operator was able, because of these loopholes, to develop properties yielding nearly $5 million, in a single year without payment of any income tax. In addition to escaping the payment of tax on his large income from oil operations, he was also able through the use of his oil tax exemptions to escape payment of tax on most of his income from other sources. For the 5 years his income taxes totaled less than $100,000, although his income from nonoil sources alone averaged almost $1 million each year.

I remain unconvinced that slightly raising the taxes of one who has an income of $1 million a year, as this amendment would do, would place him in a position in which he could not afford to pay his taxes. I venture to say that some of the tax increase should come out of his pocket rather than the consumer's. Yes, if we increase taxes some of it does siphon down to the consumer, but not all of it.

It is these glaring examples which are holding up the oil industry to criticism, a situation which I believe is unfortunate. The adoption of my amendment would correct that situation. It would not be a punitive action against them. But how can we justify the action indicated at that time; namely, a tax of 20 percent in the case of a man making $40 or $50 a week and not taking at least some taxes out of the incomes of others who are making a million? Cases have come to our attention involving individuals and companies with large incomes paying little or no taxes whatever toward the support for the defense of America. They are a part of America. I recognize them as an important part of the American economy. I have great respect for them; so great is my respect that I believe they have the ability at least to pay a part of the operating costs of their Government.

Mr. MILLER. Mr. President, will the Senator from Delaware yield at that point?

Mr. WILLIAMS of Delaware. I would be glad to yield but first, Mr. President, I should like to ask unanimous consent that the entire message of President Truman to which I have referred may be printed in the RECORD.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

> I know of no loophole in the tax laws so inequitable as the excessive depletion exemptions now enjoyed by oil and mining interests.
>
> Under these exemptions, large percentages of the income from oil and mining properties escape taxation year after year. Owners of mines and oil wells are permitted, after deducting all costs of doing business, to exclude from taxation on account of depletion as much as half of their net income. In the case of ordinary businesses, investment in physical assets is recovered tax free through depreciation deductions. When the original investment has been recovered, a depreciation deduction is no longer allowed under the tax laws. In the case of oil and mining businesses, however, the depleted exemp-

tion goes on and on, year after year, even though the original investment in the property has already been recovered tax free not once but many times over.

Originally introduced as a moderate measuse to stimulate essential production in the First World War, this special treatment has been extended during later years. At the present time these exemptions, together with another preferential provision which permits oil-well investment costs to be immediately deducted from income regardless of source, are allowing individuals to build up vast fortunes, with little more than token contributions to tax revenues.

For example, during the 5 years 1943 to 1947, during which it was necessary to collect an income tax from people earning less than $20 a week, one oil operator was able, because of these loopholes, to develop properties yielding nearly $5 million in a single year without payment of any income tax. In addition to escaping the payment of tax on his large income from oil operations, he was also able through the use of his oil tax exemptions to escape payment of tax on most of his income from other sources. For the 5 years his income taxes totaled less than $100,000, although his income from nonoil sources alone averaged almost $1 million each year.

This is a shocking example of how present tax loopholes permit a few to gain enormous wealth without paying their fair share of taxes.

I am well aware that these tax privileges are sometimes defended on the grounds that they encourage the production of strategic minerals. It is true that we wish to encourage such production. But the tax bounties distributed under present law bear only a haphazard relationship to our real need for proper incentives to encourage the exploration, development, and conservation of our mineral resources. A forward-looking resources program does not require that we give hundreds of millions of dollars annually in tax exemptions to a favored few at the expense of the many.

Mr. MILLER subsequently said: Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. MILLER. If the Senator would permit me to do so, I should like to continue our earlier colloquy with regard to the example the Senator gave of $1 million income over a 5-year period, and a tax liability of only $100,000.

I wish to emphasize that I am still of the opinion that these examples are not properly given in a debate on percentage depletion. I repeat that percentage depletion can in no event exceed 50 percent of net income.

The Senator has cited an example of a corporation having $1 million net income over 5 years—let us say 1958, 1959, 1960, 1961, and 1962—$200,000 a year. The maximum percentage depletion would be $100,000 a year, leaving taxable income of $100,000 in each of those years, and a tax of $46,500 in each of those years, or a total tax liability of $225,000.

I ask unanimous consent that this example be printed at this point in the RECORD. The Senator makes the point that this is merely an example. But if the example is different from the one that President Truman gave, perhaps we can clarify it to show that other factors are involved. But I suggest that more than percentage depletion is involved in these examples.

Mr. WILLIAMS of Delaware. I would appreciate having the Senator incorporate that table in the RECORD, but I ask

[*P. 2062*]

that it appear in the RECORD immediately following my insertion of the statement by President Truman, and thus let the RECORD show that the Senator from Iowa and President Truman differ in their conclusions.

Mr. MILLER. The Senator from Iowa wholly endorses that statement. Let the RECORD show that this is not the only point on which the Senator from Iowa and President Truman differ.

Mr. WILLIAMS of Delaware. On most of the other points, the Senator and I would be in agreement.

Mr. MILLER. That is correct.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Corporation with $1 million of net income over 5-year period with percentage depletion of 27½ percent (limited to 50 percent of net income):

	1958	1959	1960	1961	1962
Net income	$200,000	$200,000	$200,000	$200,000	$200,000
Less percentage depletion	100,000	100,000	100,000	100,000	100,000
Taxable income	100,000	100,000	100,000	100,000	100,000
Tax	46,500	46,500	46,500	46,500	46,500

Total $225,000.

Mr. MILLER. I wish to emphasize that other factors are involved in these examples, factors such as intangible drilling and development costs; factors such as net operating loss, carryovers, and carrybacks, which are applicable to other corporations, as well.

If there are other abuses that have

arisen, they relate to net operating loss, carryovers, or to intangible drilling development costs, or to percentage depletion, or to combinations of them, perhaps this is something for the Treasury and for Congress to focus attention upon.

But I deplore the giving of such examples. The Senator from Illinois [Mr. DOUGLAS] well knows this situation, because he and I have had many a scuffle on this matter. I do not like to see a debate start on the percentage depletion allowance by referring to other examples of deductions for tax purposes, because I do not think it is proper for the percentage depletion allowance to take a beating when intangible development and drilling costs may be the basis for the fact that very little income tax is paid.

Furthermore, a net loss carryover may be the basis for the fact that very little income tax is paid; a person with an income of $1 million may pay no income tax because he has a net loss carryover of $1 million, as a deduction.

So I believe it should be pointed out, in connection with such a situation that he did not pay an income tax that year because he was allowed to make a deduction of $1 million, because of a net loss carryover of $1 million from the previous year.

So, Mr. President, in such cases the cause of the failure to pay an income tax is, not the oil depletion allowance, but the deductions allowed because of net loss carryover.

I am not enchanted by the rates now on the statute books; and it may be that the depletion rate can be improved upon. However, I point out that if the rate is decreased, the result will be to increase the industry's operating costs, and then it would be necessary to change the rate in order to make it possible for the industry to pay those increased costs.

Therefore, Mr. President, Congress should be careful not to take action, by way of changing the deduction allowed, which would prevent the industry from paying for its increased costs.

The example which the Senator just read from President Truman sounds very much like some of the examples that the distinguished Senator from Illinois [Mr. DOUGLAS] presented to the Senate not long ago. I point out that these examples are meaningless unless we get down to specifics.

The Senator from Delaware read an example that President Truman gave of someone with an income of $1 million paying only $100,000 in taxes.

Mr. WILLIAMS of Delaware. That is over a 5-year period.

Mr. MILLER. Over a 5-year period, yes.

Mr. WILLIAMS of Delaware. He was earning a million dollars a year for 5 years.

Mr. MILLER. I do not know what relevance the example has to a debate on percentage depletion, because the Senator knows as well as anyone that percentage depletion cannot possible exceed 50 percent of net income to the 27½ percent with a limit of not more than 50 percent of net income. So this individual would have had to have at least $500,000 of that $1 million subject to tax if the percentage depletion was the only factor involved. However, my guess is that it was not, because if it were, I am sure the officials of the company, or the taxpayer himself, would probably be doing a little time in the Federal penitentiary for tax evasion.

The point is that in these examples of the Senator from Illinois and others, they always talk about using percentage depletion, but never point out that other factors are involved—for example a factor like intangible drilling and development costs which are currently deductible, and the fact that the net operating loss carryover is applicable to all taxpayers.

For an example to mean something, it is necessary to take other things into account. I recognize that in any group of taxpayers there may be some who will have a tendency to abuse a situation. Some oil companies might pass on to taxpayers undue costs for a period of time, until competition catches up with them. We are talking about an industry. The Senator from Iowa will be the first to join the Senator from Illinois and the Senator from Deleware in revising our tax laws so as to stop abuses. However, we are attempting to use a meat ax approach if we follow the suggestion of the Senator from Delaware and the approach of the Senator from Illinois, by merely dropping down, across the board, the percentage depletion allowance.

Mr. WILLIAMS of Delaware. I regret that I must disagree with the Senator from Iowa. I have checked with the staff member who sits beside me, and he says I am correct in saying that it is possible for a man to have had a $1 million a year income and to escape all income taxes by living off the 27½-percent depletion allowance, which is not taxable, by piling all his other income into intangible investments.

Mr. MILLER. Intangible development costs; yes.

Mr. WILLIAMS of Delaware. It is possible according to the figures which were furnished to us by the Department of the Treasury. These are many specific cases that have been furnished to us.

What we propose would not correct the situation completely. In the case I cited the man was abiding by the law, of course. If we do not like the law, we have an opportunity to change it. We must recognize that these conditions do exist. Several such cases were furnished to our committee. Only the names of the men were withheld. As the Senator from Illinois has pointed out, there are many examples of piling up an estate without paying any taxes. The Senator is aware of that possibility. I do not say that that can be done in all instances. Of course there is the 50-percent ceiling. At the same time there are ways of maneuvering around that ceiling.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I shall be glad to yield again in a moment. However, first I yield to the Senator from Kansas.

Mr. PEARSON. Mr. President, the statement of the Senator from Delaware with respect to the 27½-percent depletion allowance is correct, when he says it was enacted in 1926. It is interesting to note that prior to that year, the law pertaining to this subject matter required the owner or lessor of a property having mineral resources to estimate the value of the resources or reserves, and then to amortize them over a given period of time.

That was not possible. There are reserves today on which it is impossible to estimate. Because of this, and consistent with tax principles and with principles involved in the business—geological principles and accounting principles, for example—it was the judgment of Congress at that time that somewhere between 25 and 30 percent would be a fair depletion allowance for a capital asset, consistent with the depreciation principle.

It is interesting to note, in going back and checking on this matter, that the figure of 27½ percent was arrived at between those two figures. One House wanted 30 percent, and the other House wanted 25 percent. The point I am making is that this determination was made after study at that time.

My attention has been directed at the fact that the petroleum industry must

[*P. 2063*]

use about $5 billion annually for purposes of exploration and discovery; that, furthermore, possibly $1 billion of that amount is derived from the depletion allowance.

My attention has also been directed to the fact that under today's market circumstances and the import situation, a producer is caught in the familiar squeeze of our economy, with costs going up and income going down.

I hope that the tax bill can be amended on this phase of it, on the basis of something beyond the conviction of some person that a given taxpayer is not paying enough; or that we would amend it on the basis of something beyond the desire of the Senator from New York to create flexibility, to assert the independence of Congress, and to promote the character of our work, as I understand his statement. I believe it ought to be based on something besides the great service the oil industry performed for our country in periods of national emergency; as well as beyond the relationship that it might have had in 1926 to the corporate tax structure.

Although I do not fully understand what the charts and tables in the rear of the Chamber mean, I believe that some of the facts which exist today touch upon and deal with cold, hard facts of the industry's situation today which leads us to support the 27½-percent depreciation allowance.

I conclude by stating to the Senator from Delaware that on investigation I have been advised by the independent oil producers of Kansas that a lowering of the depletion allowance would mean that possibly something like 3,000 wells in Kansas would become marginal. The Senator from Wyoming, on the basis of my knowledge, is correct; with reference to marginal and unprofitable wells, we could have a ratio of 1 to 40.

Mr. WILLIAMS of Delaware. I appreciate the remarks of my friend from Kansas. I do not believe that the change in the rate from 27½ percent to 20 percent, graduated over a 3-year period, will stop oil flowing from any well. Of course, there will be wells that will not be productive. In 1926, when the depletion allowance rate was fixed at 27½ percent, the figure was a compromise between the two Houses. One suggested 25 percent, and the other suggested 30 percent. Suggestions were also made as to the corporate rate and as to the individual rates. The compromise came back with a figure for the corporate rate of around 20 percent, individual rates of 20 to 25 percent, and a depletion allowance of 27½ percent. There was no magic in any of these figures. The 27½-percent depletion allowance is the only one which over a 35-year period has been held too sacred to change. There is nothing sacred about it. The 27½ percent might have been perfectly proper at that time. However, as the tax rates go up I believe the depletion rate should be adjusted downward, and vice versa.

I respect the opinions of the Senator from Kansas. I certainly have great respect for him. However, I do not believe that it would create chaos in the industry if we were to cut the depletion allowance as proposed under this amendment.

Mr. PEARSON. Mr. President, will the Senator yield once more?

Mr. WILLIAMS of Delaware. I yield.

Mr. PEARSON. The Senator cited an example from a letter written by former President Truman. Does the Senator, in support of his amendment, have any factual information, other than the sincere conviction he has expressed? Does he have any factual information which indicates that the oil and gas industry is in such a state of high profits that it is not paying its fair share of taxes?

Mr. WILLIAMS of Delaware. In my opinion, yes. Such evidence has been presented to our committee. We have studied it over the years. I believe the oil industry is a prosperous industry and fully capable of sustaining such an adjustment. I disagree completely that it is a depressed industry, as it was referred to the other day.

I do not say it is the most profitable or the least profitable industry; but the oil industry, over a period of years, has been profitable. I am not quarreling with that situation. I merely say that if we want to change the law we can. We certainly have the right to change it. Nor do I think the oil industry is in such dire circumstances that it is about to go on relief. I have not seen any evidence of the oil industry having to pass the hat. The oil industry is well able to support itself and to pay its proportionate share toward the cost of operating the Government. That is all I am trying to have it do. I have as much respect for the oil industry as for any other industry, but I do not have any more respect for it than I have for any other industry.

Mr. PEARSON. I am sure that is so.

Mr. President, if the Senator from Delaware will permit me to do so, I ask unanimous consent that I may have a statement printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR JAMES B. PEARSON ON OIL DEPLETION ALLOWANCE

The amendment before the Senate would reduce the 27½-percent depletion rate for oil and gas. I hope my colleagues will bear in mind the origin and the reasons for this tax provision that has been a part of our basic tax law for more than 37 years. The percentage method for computing mineral depletion was written into our tax laws in 1926. It grew out of the highly complicated and difficult-to-administer provisions which had been a part of our income tax laws beginning with the original Income Tax Act of 1913.

Congress recognized that capital assets were used up in the production of petroleum, and as a result Congress initiated a provision in the original Income Tax Act to allow for the depletion of resources. In 1926, Congress replaced the earlier method of computing depletion by establishing a depletion deduction of 27½ percent of the gross sum received from sale of crude petroleum.

In applying this 27½-percent depletion rate, Congress intended, among other things, that it approximate the diminution of the value of the capital asset used up each time a barrel of oil is removed from the ground.

The decision the Senate must make today is whether we are writing a tax law which represents good, reasonable, and accepted business practice, or whether we are writing a tax law to satisfy someone's political philosophy.

The depletion allowance on minerals is an accepted substitute for an impractical method of computing the using up of mineral resources. Originally, the owner or lessor of property having mineral resources was required to estimate those resources and then amortize them over a given period of time. This was found to be impractical. Some major gas and oil fields still have reserves which cannot be computed.

As a result, a study of experience, based on accounting, tax and geological reports produced the agreement that a depletion allowance of between 25 and 30 percent would reflect with reasonable accuracy that achieved by the original system. Congress agreed on 27½ percent for oil and gas.

There is no evidence to justify a change from 27½ percent. There is only a political philosophy which seeks to reallocate income.

Without such recognition in the tax laws of the capital value being depleted by production, taxes would be devouring the capital of mineral producers and depriving them of the funds needed to replenish reserves in order to stay in business and to continue to supply the oil and gas and other minerals needed for our very existence.

All who have studied the oil business know that the search for and production of petroleum is indeed a unique business. Due to the circumstances involved in exploration and development, the investment process in petroleum production is quite different from that encountered in manufacturing enterprises and trade. Normally, an investor can estimate with reasonable accuracy the assets and producing capacity that will result from a specific expenditure of money. Not so in the search for oil however. The investor who is searching for oil has no way of determining what results will come from his investment. Even if he were to assume the average results of the recent past, that is, that one discovery out of every nine wildcat wells will continue to be realized in the search for oil, he cannot know to what extent his experience will differ from the average. While oil is found in one out of every nine wildcat wells drilled, if the marginal and unprofitable discoveries are excluded, the chance ratio would drop from one in nine to about one in 40 wells drilled.

This risk factor has been fairly constant for many years. Even so, an oil operator cannot know in advance to what extent his experience will vary from this highly risky enterprise. It may be more favorable or it may be less favorable. The only thing that the petroleum explorer knows for sure is that a great deal of the money he spends in the search for oil and the drilling of wells will probably yield no results. Thus, it can be quickly seen that the cost of a particular well is not a true measure of the owner's true economic position. For example, if an operator spent $800,000 on eight dry holes and then spend another $100,000 on a producing well, the actual economic cost of the producing well involves both outlays and one producing well cost him $900,000.

Thus, it is this cost rather than the amount spent on the lone producing well which he must take into account in determining the true economic income. In contrast, if a taxpayer purchases a truck in his business, he acquires that truck for immediate use. He does not have to purchase eight other trucks which will not run in order to have one truck that will run and which he can use for productive purposes in his business. Herein lies one basic difference in investing in the oil and gas-producing industry and that of normal manufacturing or trade.

Thus one can see that the wide variations in the relative success, including the many complete failures that represent a loss of

[*P. 2064*]

capital, mean that some producing properties must recover enough to pay for its cost and also help to pay the cost of the losers if the taxpayer is to continue in business.

When one looks at these facts, it must be concluded that the petroleum producing industry is indeed a unique industry and that this fact must continue to be recognized in our tax laws. The petroleum producing industry must generate approximately $5 billion annually to be used in the search for and development of new mineral reserves. Through the operation of percentage depletion, the petroleum producing industry retains approximately $1 billion each year to be used in this activity. Thus, each year for every dollar generated through percentage depletion, the petroleum producing industry must acquire through retained earnings, borrowing, or other sources, about $4 billion or $4 for every depletion dollar in order to carry on the all-important task of searching for and producing new petroleum reserves.

In the foreseeable future, these capital costs will no doubt continue to exceed the value of percentage depletion because on the one hand the cost of locating and developing new oil and gas reserves in the United States are increasing rapidly while on the other hand the price of domestic crude oil is constantly subject to pressures from excessive imports of oil and competition from other energy sources. Thus, it can be expected that percentage depletion will probably cover a steadily declining share of the cost of new crude oil reserves.

In my own State, the result of a decrease in the depletion allowance could mean that as many as 3,000 wells would become submarginal, depending upon the rate agreed upon. The depletion allowance is so intricately woven into oil finance, along with restrictions on well spacing, daily allowables and other conditions, that hurried manipulation of the tax structures could create depressed conditions and poverty such as we are now asked to appropriate large sums to help overcome.

In view of these factors, certainly this is no time to be making adverse changes in this vital tax provision.

Mr. DOMINICK. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. DOMINICK. I have been listening with much interest to the debate. I wonder whether, in determining whether the oil industry is paying its fair share of taxes, the Senator from Delaware has taken State taxes into account. I should like to cite an example. Of all the industries that I know of in Colorado, the oil industry bears the heaviest tax load. It is not permitted, as are other industries, to deduct Federal taxes in order to determine its State taxes. So the oil industry in Colorado pays the Federal income tax, pays the usual property tax, and pays the State income tax. In addition, the State of Colorado, under a Democratic administration, imposed a gross-severance tax at the wellhead, so it is paying more taxes than any other industry in Colorado at present. These are largely not the big major companies we hear so much about; they are the independents, the companies which are trying to get for themselves a profitable business in a field which they know.

As a result, ever since this law went into effect, oil development in Colorado, which was fairly substantial up to about 1956, has been dropping off. I have just received from the oil industry in Colorado—this has nothing to do with the Senator's amendment; I simply wish to report a factual statement—a report showing the results of last year's explorations in comparison with explorations of previous years. The report shows that, once again, the industry is dropping off.

In addition to the Senator's amendment having an effect on the oil people, it also contains a provision which affects sulfur and uranium producers. Of course, when we speak about uranium, the uranium producers have been hit right in the heart. This is an industry which has been progressively cut off by governmental action since its peak in about 1956.

I presume the Senator from Delaware is trying to say that uranium should receive no greater depletion allowance than oil. That is why he proposes to change the rate. But the net effect is to create

one more difficulty in trying to sustain an industry which was at one time vital to the Nation, and which may again be vital in a few years. I read that a person prominent in the administration advocated that there should be more uranium exploration and production because we shall need more uranium by 1970. Yet in the meantime all the Government does is to continue to chop back. The Senator's amendment would affect the possibility of uranium producers who are still in business remaining in business.

Having made that prefatory statement, I ask the Senator whether the committee took any evidence as to the effect his type of amendment would have on uranium producers this year.

Mr. WILLIAMS of Delaware. I do not recall that uranium producers appeared before the committee, although they were on notice that the amendment would be offered, and that if they felt it would in any way disturb them they had the opportunity to present their views. I do not recall that they did so.

Mr. DOMINICK. There may not have been enough of them left to make a statement.

Mr. WILLIAMS of Delaware. I fully recognize that the Government has recently cut back on uranium production. I am sure that that has disturbed uranium producers somewhat. But that may be due to the fact that the uranium industry itself exists as a result of Government expansion; and that which the Government expands, the Government can contract. Sometimes it is painful when it does so, but any industry that is dependent almost solely on sales to the Government can and does expect that.

I have high respect for the uranium industry and the contribution it has made to the Government, but the uranium industry has done extremely well under the Government procurement and stockpiling program. What is proposed by the amendment is a modest rollback—no change this year, one-half of 1 percent next year, and a 2½-percent reduction thereafter.

As to the point that the State of Colorado has in recent years imposed what the Senator feels are rather punitive taxes against the oil industry, he realizes, I am sure, that Congress has no control over what a State government does. I wondered, however, as I listened to the Senator outline the situation, whether the increased tax in Colorado, which is an important oil-producing State, is a result of the people who control the State government feeling that they could afford to pay these extra taxes. Perhaps they may have felt that since the Federal Government was not taking its proportionate part they could afford to expand somewhat at the State level. But those are questions I shall not go into. It is none of the business of Congress what taxes the State of Colorado imposes. I feel that Congress should vote whatever changes in the Federal income tax it feels are best.

With all due respect to the position of the Senator from Colorado, I do not feel that what is proposed by the amendment would disrupt the normal development of the oil industry. It will be more healthy and can hold its head up because it will then be paying its proportionate part of financing the country. I should like to see a solution of this problem, which arises every year on the floor of the Senate.

Mr. DOMINICK. Again, I remind the Senate that the State tax increase occurred when we Republicans were in the minority in the government of the State. It occurred largely, I feel, because, somehow or other, the State was trying to get more revenue to finance the services which it felt were needed.

If the Senator's amendment should be adopted, it would have a cumulative effect, because the Federal tax is not deductible from the Colorado State income tax, so far as the oil industry is concerned. So to the extent that there would be an additional tax imposed by Congress, it would automatically make an additional tax so far as the State is concerned, because this tax would apply in Colorado. So the Senator's amendment would have an effect so far as Colorado and every other State is concerned on the overall tax burden. I do not believe, therefore, that we can divorce ourselves from the overall effect that this amendment, if adopted, would have on the oil industry.

I appreciate having the Senator from Delaware yield to me.

Mr. ALLOTT. Mr. President, I reached the floor only a few moments ago, having been required to attend a committee hearing.

I desire to join in the remarks the Senator from Colorado has made.

Mr. President, in discussing this amendment, I wish to say, first, that the effect of the depletion allowance is one of the most complicated matters which could come before Congress. I have not been able to ascertain whether any testimony was taken this year in regard to the depletion allowance for the oil and gas industry. If testimony was taken this year, I know it could not have been extensive. On the other hand, I know that the effect of this amendment

would be so extensive that it is clear that this matter deserves long and careful hearings, and I know that no long, careful hearings have been held recently.

Second, the Senator from Delaware has stated that if this depletion rate is lowered this year, we can avoid having

[*P. 2065*]

this matter brought up on the floor of the Senate every year.

In discussing that point, I wish to say that there is no justification for raising the tax rate on this industry; and I cannot avoid feeling that the amendment is brought up only because of a fixation in the minds of certain Senators that the tax rate on this industry should be raised.

On the other hand, I do not believe for a moment that any comments I might make would result in removing that fixation from the minds of anyone.

Mr. President, we have heard much debate on the imports of oil and the imports of residual oil. This amendment would affect that situation. Strangely enough, some of the loudest protests about those imports have come from the great consuming areas in the country which want more oil and cheaper oil imported.

Mr. President, let us consider what the effect of this amendment would be. If the depletion allowance were to be altered, the exploration for oil and gas in this country would be decreased by just that much. Let us make no mistake about that. Oil is becoming harder to find and more expensive to find.

I only wish I could get some Senators to focus their attention on the great reserves of oil which are present in Colorado, Utah, and Wyoming, in the oil shale deposits there. For some strange reason, all the requests that Congress make a depletion allowance for this great potential industry seem to fall on deaf ears.

I wish to speak further about the exploration costs, and the effect of this amendment, if adopted. Let us make no mistake about the effect of the amendment. One of the first effects of the amendment would be to put out of business many of the independent oil operators, explorers, and wildcatters, who have contributed so much to the development of the oil reserves in the United States.

Mr. SIMPSON. Mr. President, on this point, will the Senator from Colorado yield to me?

Mr. ALLOTT. I yield.

Mr. SIMPSON. The Senator from Colorado already knows that over 80 percent of the exploration is done by the independents, not by the majors. The impression that the greatest amount is done by the majors certainly is not founded on fact; and I think the Senator from Colorado will bear out the accuracy of my statement on that point.

Mr. ALLOTT. Yes, Mr. President, the Senator from Wyoming is entirely correct.

In the past, although not recently, I haxe examined the books of independent oil operators, who had contended that they could not continue to operate without the depletion allowance. I have not done that in an official capacity, but I have done it because they were trying to demonstrate their contention to me, and I was attempting to ascertain how valid it was.

There is no question that the change in the depletion allowance advocated by the distinguished Senator from Delaware would only increase the cost of oil and gas to the consumer. It would greatly lower the already diminishing discovery of new oil and gas. If we are to progress in that area and not be dependent upon the whim and will of other countries for our supplies of oil and gas, we must continue its development in our country.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. ALLOTT. I yield.

Mr. AIKEN. I dislike to disagree with the Senator from Colorado, but I cannot agree that support of the amendment offered by the Senator from Delaware [Mr. WILLIAMS] would slow down the exploration for oil in our country.

Only a few years ago I joined the Senator from Delaware in introducing a bill relating to the depletion allowance. As soon as the bill was before the Senate, oil rigs came into Vermont and drilled here, there, and everywhere. We were told that a great deal of petroleum was "just around the corner. The State will get rich." I was supposed to withdraw from sponsorship of the depletion allowance bill, even though geologists said that oil would not be found under granite. I do not know whether the geologists are correct or not. However, the drillers continued to drill, and I think they eventually found, near the Canadian border, a small pocket of gas.

I do not believe that the drilling for oil ceases when it is suggested that we reduce the depletion allowance.

Mr. ALLOTT. I do not see the application of what the Senator has said to what I have said. My point may be verified from records, no matter from what source they are obtained, whether they are obtained from the Finance Committee, from the oil and gas producers,

or from public records. The cost of drilling is going up every year. It is becoming more difficult to find oil and gas. Companies are drilling to depths of 17,000, 20,000, and 23,000 feet in order to find oil and gas. That kind of drilling cannot be done cheaply. It costs real money.

Mr. SIMPSON. Mr. President, will the Senator yield?

Mr. ALLOTT. I yield.

Mr. SIMPSON. I point out to the Senator from Vermont that his State reaped a great harvest if all that drilling which he stated was done there. I point out to the Senator that the records show that one out of every nine wells drilled in wildcatting results in production. Those wells cost an average of $100,000 each. So if nine wells were drilled in the State of Vermont, even if the result was a dry hole, the people of the State received the benefit of all that drilling.

I point out that production of oil has been decreasing materially. In 1962 exploratory drilling showed a reduction of over 4,000 wells, or 30 percent, from the 1956 level, which may have been the level to which the Senator from Vermont referred.

Mr. AIKEN. I merely wished to point out that the proposal to change the depletion allowance spurred the exploration.

Mr. ALLOTT. The Senator's assumption is wholly fallacious. I will have to disagree with him. How long ago did the drilling in Vermont take place?

Mr. AIKEN. Seven or eight years ago.

Mr. SIMPSON. Seven or eight years ago the oil industry was at its peak. It has declined since. The oil industry is now a sick industry.

Mr. AIKEN. The depletion allowance cannot be accused of being responsible for the reduction in exploration.

Mr. ALLOTT. There has been no contention that the allowance has been responsible for the reduction. I merely say that if the amendment is agreed to, there will be an even more violent reduction in exploration, because it will be too expensive. The independent operators are the ones who do most of the exploration and would be hit heaviest by the change. The decrease in the allowance would shove them out of the field.

Mr. President, I should like to make a remark or two about the uranium industry. We in Colorado have a little knowledge of the uranium industry. We have learned it the hard way. Uranium was found in a great area including the States of New Mexico, Wyoming, Utah, and Colorado. Some of the greatest deposits in our country are in that area.

One point which should be considered with respect to the uranium industry is that to couple uranium with any other depletion item would be completely invalid. With respect to uranium we have only a "one-person" market, and that is the Federal Government.

A few years ago the famous announcement of November 16 was made, and uranium production and contracts in this country were cut back. People were then engaged in uranium mining in Colorado. Prospectors had gone out and spent years looking for it and living literally on sour dough—I am not trying to be dramatic—in order to find uranium for the Government when the Government needed it. Those miners found themselves cut back to the point at which they could do nothing.

Today uranium is a sick industry, not only in my State, but throughout the West. I do not criticize too much the decisions of the Government which brought about the cutback at that particular point. We had done so well for the Government in discovering uranium that we had uranium literally running out of our ears. We had also made long-term contracts, particularly with Canada, for the delivery of uranium to the United States, which cut Americans out of the production of uranium.

Many people believe—and I am not an authority with respect to future uses—that the demand will rise, as my colleague has pointed out, and that in the 1970's we shall again be hunting for uranium. But we cannot apply the usual principles of depletion to a product which can be marketed only through the Government and which can be produced only for the Government, and is subject to the will and whim of a Government commission. Even on that basis alone I think the amendment of the distinguished Senator from Delaware should be rejected.

[*P. 2066*]

I yield the floor.

Mr. MONRONEY. Mr. President, I believe it is exceedingly unfortunate that a bill designed to stimulate production, employment, and the creation of new wealth would have offered as an amendment to it the one offered by the Senator from Delaware [Mr. WILLIAMS]. The bill is designed to grant certain tax concessions, to continue other tax concessions to stimulate manufacturing, and to create new wealth in the United States. Yet the Senator's amendment would be regressive. It would have the effect of cutting the historic oil and gas depletion allowance back from the 27½-percent rate that has given us oil and

mineral resources and resources of petrochemicals that have been sufficient to take us satisfactorily through two World Wars and through a postwar development of great magnitude.

I believe the reduction would be crippling to an industry that has not asked for a Government subsidy and has spent its own money for research and development, an industry which has proved in all cases that it is willing not only to bear its own load of taxation, which has practically equaled the taxation of the manufacturing industry, but has also borne a heavy load of excise taxes which have resulted in huge amounts of income to our Government.

Furthermore, I believe it is rather strange that, without any large-scale hearings, it is proposed to cut back the depletion allowance on oil, a great natural resource and source of energy on which we depend, to the same depletion allowance as applies to sulfur. I did not think that sulfur was as hard to find as oil or as quickly exhaustible once found. Those are generally the tests of what a depletion allowance should be. I know little about uranium, but I feel that cutting the depletion allowance for uranium back from its present rate of 23 to 20 percent might be unwise in the light of what we might need.

It may be that sulfur does not need the present 23-percent depletion allowance and could be cut back to 20 percent, but I am doubtful about the uranium. I am not prepared to say, because I do not know what these minerals look like, and I wonder if the Senator knows, whether we should cut back the depletion allowance on anorthosite. I do not know whether the depletion allowance should go from 23 to 20 percent, under the Senator's amendment. It is not set out in the language of the bill but there are several other minerals that are put on the same category as oil in the depletion allowance.

I do not believe the history of the search for, discovery of, or production of such products will show that they are as difficult to find or as quickly exhaustible over a period of years as oil is.

The amendment refers to the following minerals: asbestos, bauxite, beryl, celestite, chromite, corundum, fluorspar, graphite, ilmenite, kyanite, mica, olivine, quartz crystals—radio grade—rutile block steatite talc, and zircon, and ores of the following metals: antimony, bismuth, cadmium, cobalt, columbium, lead, lithium, manganese, mercury, nickel, platinum and platinum group metals, tantalum, thorium, tin, titanium, tungsten, vanadium, and zinc.

This is quite a list. Anyone familiar with these metals will know that the supply of them is generally found within a few feet of the surface of the ground, and not thousands of feet down. The ore yields generally continue over a long period of time. So it is difficult for me to see how the Williams amendment is any more sound in its approach to oil than it is to titanium, tin, lead, or zinc, or some of the exotic metals the names of which it is difficult for me even to pronounce.

So I say it is a poor time, when we are considering a bill to stimulate industry, to tax one of the greatest industries at a time when there is an increasing demand for oil.

Mr. President, the percentage depletion allowance on oil and gas is being attacked this year, as it has been almost every year during the 25 years I have served in the Congress. I shall defend it again this year, and I shall continue to do so every year I am permitted to remain in this body.

The opponents of depletion charge that it is an inequitable feature of our tax structure. They consider it only in its relation to other provisions of our tax law. This is the inherent fallacy in their reasoning, their argument, and their proposals.

The depletion allowance is part of our basic national policy on natural resources—

A policy responsible for the development of the most powerful industrial nation on the face of the earth.

A policy which has enabled this Nation to win two major world wars and remain a bulwark against aggression and the builder and protector of the free world during the past 19 years.

A policy which has afforded to the citizens and industrial concerns of this country a cheap and abundant source of energy.

Throughout our history the importance of our natural resources has been recognized. We have consistently pursued a policy designed to develop and conserve these vast riches. We have realized the necessity for maintaining self-sufficiency in the minerals which provide the energy that is the life blood of any strong country. Petroleum products provide 75 percent of the energy required in this Nation today.

The success of this policy cannot be challenged. The benefits received by the people of this country cannot be disputed. Nor do I believe the method by which success has been achieved can be honestly or rightfully subjected to scorn or ridicule or the charge of vested interest. For the method has been good old American private enterprise and the incentive has been the reward of profits. The instrument through which the incentive is generated is, in the case of the petroleum industry, the depletion

allowance. And the reason why the percentage allowed on oil and gas is higher than that allowed on other minerals is that the probability of failure is greater and the costs of infinitely higher.

Mr. President, if the oil industry were making the exorbitant profits alleged by the opponents of the depletion allowance, if the need for oil and gas as the basic source of energy in the United States had declined, if the capital investments required to find and develop new reservoirs were less, or if any of the basic reasons for providing an incentive to discover new oil and gas were no longer relevant, then I could understand why the percentage depletion allowance is being attacked. But the facts, Mr. President, tell another story.

The need to find new reservoirs, both in this country and abroad, is even more imperative today. The tremendous amount of capital required to do that job is staggering. The oil industry is no more profitable than other industries; and, in fact, during the last few years has made less return on its investment than most companies in the manufacturing industry.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD two tables which compare the rate of return of the petroleum industry and all manufacturing, and the rate of return on net worth.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

Rate of return on invested capital

[In percent]

Year	All manufacturing	Domestic petroleum
1955	12.6	10.2
1956	12.3	10.5
1957	11.0	10.1
1958	8.6	7.2
1959	10.4	8.5
1960	9.2	8.8
1961	8.8	8.6

Source: Testimony presented by president, Independent Petroleum Association of America, before House Committee on Ways and Means, Mar. 26, 1963.

Rate of return on net worth for petroleum, manufacturing, and all industry in the United States, 1958–62

[In percent]

Year	Petroleum industry	All manufacturing industry	All industry
1962	10.5	10.9	9.1
1961	10.4	9.9	8.7
1960	[1] 10.3	[1] 10.6	9.1
1959	10.0	11.7	9.8
1958	[1] 9.9	9.8	[1] 8.9

[1] Revised.

Authority: First National City Bank of New York.

Mr. MONRONEY. The first table shows that for all manufacturing the rate of return on invested capital in 1961 was 8.8 percent, while that for the domestic petroleum industry was 8.6 percent.

Those were the figures presented to the House Ways and Means Committee by the Independent Petroleum Association of America.

The second table shows that the rate of return on net worth for the petroleum industry in 1962 was 10.5 percent, for all manufacturing industry it was 10.9 percent, and for all industry grouped together it was 9.1 percent.

[*P. 2067*]

Mr. AIKEN. Mr. President, will the Senator yield for a question?

Mr. MONRONEY. I am happy to yield.

Mr. AIKEN. In determining the earnings of the petroleum companies, was the excise tax considered as an expense of the company?

Mr. MONRONEY. No; it was not. Excise taxes were kept separately.

Mr. AIKEN. What is the excise tax?

Mr. MONRONEY. There are many of them. The State and Federal excise taxes on gasoline amount to about 10 cents a gallon. The oil companies collect them for the Government. They get nothing for it.

Mr. AIKEN. On the chart in the back of the Senate Chamber there is listed as an expense of the oil companies $6 billion in excise taxes, and $2 billion for all other taxes.

Mr. MONRONEY. That exhibit shows that since 1919 the petroleum, or the fuel, industry has been responsible for and has collected for the Federal Government, not from the industry itself, but from consumers, excise taxes amounting to more than $76 billion. For last year, 1962, the oil and gas industry collected as excise taxes on fuel alone, motor fuel, $6,136 million. I am not saying the oil companies paid it.

Mr. AIKEN. I thought I, as a consumer, helped to pay it.

Mr. MONRONEY. For that reason alone, because of consumer resistance, and because of the 10 cents a gallon tax on gasoline——

Mr. AIKEN. The consumer pays the tax; does he not?

Mr. MONRONEY. The consumer pays the tax; but in order not to have diminishing consumption, the industry has managed to keep the price low. The price of gasoline today without the tax is less than it was in 1926.

The increase in price has been the result of the excise tax.

Mr. AIKEN. Has the highway program caused this increase?

Mr. TOWER. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield.

Mr. TOWER. The industry does pay a severance tax.

Mr. MONRONEY. A severance tax is paid to the State on the barrel charge, or some other way, but I am talking about——

Mr. TOWER. I wished to impress upon the Senator from Vermont the fact that the industry does pay taxes, which are highly important to his State as well as to mine.

Mr. MONRONEY. The Federal tax plus State severance taxes paid by the company will compare favorably with taxes paid by the total of all industries.

Mr. AIKEN. Does the Senator from Oklahoma know how many States have a severance tax?

Mr. MONRONEY. Practically every State which produces oil has a severance tax.

Mr. AIKEN. What does it amount to? Is it a gallonage tax?

Mr. MONRONEY. It is a barrel tax.

Mr. AIKEN. A barrel tax.

Mr. MONRONEY. A barrel tax on the oil.

Mr. AIKEN. On the oil.

Mr. MONRONEY. Yes. It is approximately 3 percent, as I recall; at least in my own State.

Mr. AIKEN. Three percent.

Mr. MONRONEY. Yes—on the gross production of oil or gas. Every barrel produced is subject to a 3 percent of gross production tax. I do not know what it is in the State of Texas.

Mr. AIKEN. And that tax is then passed on to the consumer?

Mr. MONRONEY. I do not know, but——

Mr. AIKEN. Is it absorbed by the companies?

Mr. MONRONEY. This is the price added to the barrel of oil and the byproducts which are made from it, but this does not reflect itself in any consumer tax. The price would be higher if this tax were raised; but in spite of the increase in the cost of production, the price of a barrel of oil or a gallon of gasoline is less today than it was in 1920.

Mr. AIKEN. Does the Senator know how many States limit the production of oil?

Mr. MONRONEY. Almost all of the oil-producing States, except, perhaps, one or two which have a proration based on conservation results. We could open up those wells and produce much more oil today, tomorrow, or next month, perhaps, but we would destroy the long-range production of oil by doing so. We found that out when America opened its wells up to the free world when the Suez Canal was closed, and with irreparable damage. The oil which we thought we might have in productive capacity could not be produced without impinging on State conservation practices.

Mr. AIKEN. The limit on imports is an instrument to maintain a reasonably profitable price for domestic production of oil; is that correct?

Mr. MONRONEY. The same as it would be on agricultural products or other products. We import oil to the United States; there is no tariff, which would raise the price so high that foreign oil could not come over profitably. Therefore, the tariff is no good, and an effort has been made to limit imports to about 12½ percent, which I believe is the figure of our domestic production. That seems to still deny adequate production in many States. But I believe that is probably a ratio that the industry can live with.

Mr. AIKEN. Does the Senator know that American agriculture is probably the largest customer the oil industry has?

Mr. MONRONEY. That is probably so.

Mr. AIKEN. I believe it is—I am not quite sure about it.

Mr. MONRONEY. Agriculture is dependent on oil, for its motive power, to move a great quantity of oats and other feed grains.

Mr. AIKEN. I do not wish to deprive the oil industry of the opportunity of making a reasonable profit. I know how involved the industry is all over the world today, and how it all adds together when it pays dividends.

Mr. MONRONEY. The Senator is thinking of the giant majors, the big, integrated companies, with refineries and manufacturing facilities operating in the United States, in Latin America, and in the Middle East. The oil industry is a many-sided industry. The majors could, I believe, get along very well without some of the allowances that are contained in the tax laws, because they operate overseas where they do not require a depletion allowance to come out whole.

Mr. AIKEN. I know.

Mr. MONRONEY. We do not wish to favor that operation to the exclusion of always keeping in this country an adequate supply of petroleum.

Mr. AIKEN. The Senator is correct. It seems to me the difference between the 27½-percent and the 20-percent depletion allowance would not necessarily mean that we would exhaust our oil supply. It would mean we would not have to find new supplies.

Mr. MONRONEY. I shall furnish statistics on that point later on in my speech. The 27½-percent depletion al-

lowance has still not encouraged enough drilling to replace that which we use each year. So we are going down hill in our known reserves of oil. If we do not reverse this treatment, we shall find ourselves more dependent on sources of oil from abroad.

American efforts, even in our domestic economy, seem to be going down hill. To cut depletion by 25 percent, as the Senator proposes, would prevent us from developing the new sources to replace that which is consumed each year as reserves become less. This is the money that finds new oil—we could not find it, if it were not for this allowance.

Mr. EDMONDSON. Mr. President, will my colleague yield?

Mr. MONRONEY. I yield.

Mr. EDMONDSON. With reference to the statement made by the Senator from Vermont when he brought up conservation practices of States, insofar as allowables are concerned. I believe this is a material factor in the consideration of a possible reduction of the depletion allowance, as when an oil company, independent or otherwise, has to deal or operate under a restricted allowable because of the conservation purposes, not price purposes, but conservation purposes. As an example, the State of Oklahoma allowable now is 14 barrels a day.

Mr. AIKEN. Fourteen barrels a day?

Mr. EDMONDSON. Fourteen barrels a day limit on the production of oil in Oklahoma.

Mr. AIKEN. Fourteen barrels a day for the State?

Mr. EDMONDSON. Fourteen barrels per well per day.

Mr. AIKEN. Of oil per day. I understand.

Mr. EDMONDSON. It must be realized that, as a result of that self-imposed limitation of local government, this limit is definitely vital insofar as incentive for future explorations also is concerned.

Mr. AIKEN. Does the State of Oklahoma produce that limitation of 14 barrels per day per well?

Mr. EDMONDSON. That is the allowable. We cannot go over that except in exceptional circumstances.

Mr. AIKEN. Suppose there were two wells and one produced 7 barrels a day

[*P. 2068*]

and the other 21 barrels a day; could that be marketed?

Mr. EDMONDSON. Certainly. The per well limitation is based upon the conservation needs of the State insofar as the future is concerned.

Mr. AIKEN. Then there would be no particular incentive to find more oil than one would be permitted to extract and sell.

Mr. EDMONDSON. It is a question of how long it will take to extract and sell. Still wells extract and sell all of it because of the length of time required to get the money back from the investment from the well.

Mr. TOWER. Mr. President, will the Senator from Oklahoma yield at that point?

Mr. MONRONEY. I yield.

Mr. TOWER. Regarding the allowable we had to pay, as the former Governor of Oklahoma [Mr. EDMONDSON] well knows, it is difficult for a man to amortize his investment. As a matter of fact, he is hardly breaking even.

Mr. AIKEN. I was about to compare the oil situation and the maximum amount which would be produced today with the situation which prevailed in New England in the late thirties with reference to the production of milk, when we tried the allotment program which the Department of Agriculture is now so insistent on imposing on us again. Each farmer had a maximum allotment which he could bring into market, and every farmer produced his marketable allotment each day, even if the cows were dry. Are the maximum allotments in oil produced? Do the dry wells figure in this computation?

Mr. TOWER. With the kind of maximum we have, we still have to produce to stay alive.

Mr. MONRONEY. Production is not transferable from one well to another.

Mr. CARLSON. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield.

Mr. CARLSON. As to the pending amendment, as I read it and understand it, I am wondering if the Senator from Oklahoma would agree with me that if it were approved it would considerably affect domestic production, while it would have practically no effect on foreign producers or foreign importers. In other words, the amendment is so drawn up that if we approved it, it could vitally affect our domestic production, and would have no effect on importers of foreign oil. Is that what we are talking about?

Mr. MONRONEY. The Senator is correct. While it would withdraw and cut the depletion alowance by 25 percent, reduce it from 27½ percent to 20 percent over a period of years, the oversea producers, who have an arrangement to pay 50 percent of the gross income from their production of oil in the Middle East to those foreign countries, are able to de-

duct that 50 percent of gross income as a tax credit from the taxes that would be paid in the United States. Therefore, the 27½-percent depletion does not enter into their operations. While we would be cutting the depreciation allowance here, their production would not be impinged upon in any way by this deduction.

Therefore, we would see our domestic producers at a disadvantage. The oil industry has never made the exorbitant profits which are given as one reason for reducing the depletion allowance. And, because the need is greater, the costs are higher, and the profits are average, every reason justifying the original policy of the depletion allowance remains and is even stronger today.

The proved reserves of crude oil in the United States declined by 369.3 million barrels in 1962. This amounted to a decrease of 6 percent in the ratio of reserves to consumption. It represented the 10th year in a row in which more oil was consumed than was found. At the present time we have a reserve supply which would last for only 11 or 12 years if no new oil were found. Additions to crude oil reserves each year must exceed our consumption by 20 percent if we are to maintain a constant ratio of reserves to consumption. In 1962, we found little more than one-half as much as we consumed, and not since 1949 have we found enough new oil to stop this decline in the reserves to consumption ratio. A report by the Chase Manhattan Bank of New York issued last year stated that:

> Our domestic requirements for all petroleum hydrocarbons seem likely to increase at an average rate of 4 percent a year between 1960 and 1970. To meet these requirements, and prevent any further erosion of the reserves to consumption ratio, the industry would have to find 50 percent more crude oil than it discovered in the preceding decade. And the same is true for natural gas.

The report concluded with these words:

> This Nation can ill afford to discourage in any manner the continuing search for petroleum anywhere in the free world. There is abundant evidence that we will need for ourselves and our friends abroad all that we now have and can reasonably hope to find.

Mr. President, this would not only definitely deter the discovery of new sources, as has been said by the distinguished Senator from Kansas and other Senators from oil States but it would also result in closing down and capping and losing forever oil from many of the stripper and submarginal wells which must depend on depletion to succeed—to make possible secondary recovery from them. By this ill-advised proposal to cut the depletion allowance, we would force abandonment of the small marginal wells and would shut them down, because it would no longer be profitable to produce from them without the full 27½-percent depletion allowance. Thus, under such abandonment, 50 percent of the oil that these wells are capable of producing would be lost for our own and future generations.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point statistics contained in the January 27, 1964, issue of the Oil and Gas Journal which show that our domestic crude oil reserves declined by another 139.9 million barrels in 1963, that the total number of wells drilled in 1963 was 2,526 less than in 1962, and that the number of wildcat wells drilled was 396 less in 1963 than in 1962.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

Estimated proved recoverable reserves of crude

[Thousands of barrels—primary recovery]

Mr. MONRONEY. Mr. President, the increase in gasoline consumption and the total number of motor vehicles alone demonstrate the tremendous need for finding new oil and gas to satisfy and quench this Nation's thirst for oil products. During the period from 1958 to 1962, motor vehicle registrations increased by almost 11 million, and gasoline consumption in the United States alone increased from 59 billion to 66 billion gallons a year. The United States needs oil and gas more than any country in the world since this Nation accounts for almost half the total world consumption.

How much has it cost the petroleum industry to find today's reservoirs and how much will it cost the industry to locate and develop the new reservoirs needed for the future? The Chase Manhattan Bank tells us that between 1950 and 1960 the petroleum industry spent $44 billion for the purpose of finding and developing petroleum hydrocarbon reserves in this country alone. During that same period of time, it spent $38 billion to find reserves in other countries. And the task of finding enough new domestic reserves to halt the frightening erosion of reserves which has occurred since 1949 will probably cost as much as $70 billion during the period between 1960 and 1970. Over the years, the industry has spent an average of $4.6 billion every year searching for new reserves and developing them. An annual total of $2.2 billion has been spent for exploration alone, and an additional $2.4 billion a year has been spent for development.

The cost of drilling and equipping wells in 1961 was 8 percent higher than the cost in 1957, and there was an increase of 13 percent in the average hourly wage paid to employees engaged in oil and gas production. Yet, during this same period of time, the price of crude oil actually declined by 7 percent. The average price per barrel of crude at the well was $3.01 in 1958, but was only $2.90 in 1962.

Despite the increase in need, despite the incentives in existing law, and despite the large amounts of money which

[P. 2071]

have been spent in exploration and development, the activity of the producing industry has declined. By 1962, the total crew-months of geophysical work had declined by 50 percent since 1955.

These geophysical experts are the men who find the oil fields. If the crews are not out searching for new supplies, it means that in 3 or 4 years from now there will not be any new discoveries or any new drilling. These are the people who look ahead.

We had better watch this situation, particularly from the standpoint of incentive, when the number of crew months has steadily fallen by 50 percent since 1955.

The number of active rotary drilling rigs has declined by 40 percent since 1955. And the amount of exploratory drilling showed a reduction of more than 4,000 wells, or 30 percent, from the 1956 level. The total drilling activity—including producing wells, dry holes, and service wells—decreased almost 12,000 wells from 1956 to 1962—a 20 percent drop. The number of employees engaged in the producing branch of the industry has dropped by 40,000 employees since 1957.

If the situation were as good as is claimed by those who would cut the depletion allowance from 27½ percent to 20 percent or 15 percent, this decline in employment would not occur. There would be a much larger employment and much more geophysical work, and much more effort to find new fields.

I ask unanimous consent to have printed in the RECORD at this point statistical tables which reflect the decline in exploration and development activities of the oil industry; the number of employees engaged in oil and gas production; a comparison between the price of crude oil and the cost of producing it, which shows a decrease in price and an increase in cost; and an index of U.S. retail gasoline prices compared with the consumer price index.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

Decline in exploration and development activity, 1955 through 1962

Year	Geophysical activity	Active rotary drilling rigs	Exploratory wells drilled	Total wells drilled
	Crew months	*Number*	*Number*	*Number*
1955	8,240	2,688	12,271	56,682
1956	7,846	2,618	13,034	58,160

Authority: Bureau of Labor Statistics; American Petroleum Institute.

Mr. MONRONEY. Mr. President, the need for oil and the cost of obtaining it have increased greatly and will continue to do so. The prospects of failure have become greater, too. A study containing a 6-year analysis of the more than 8,000 new-field wildcat wells drilled in 1956 shows that less than 2 percent of the wells had oil or natural gas in commercial quantities. This figure is down from the 3 percent figure which previous studies had shown. This geologists' study found that, out of the 8,436 new-field wildcats drilled in 1956, only 159, or 1.88 percent proved to be profitable discoveries. This is a ratio of one 1 profitable well to 53 drilled. The remaing 8,277 new-field wildcats, or 98.12 percent, were either abandoned as dry holes, or found too little oil or gas to be profitable. For the 12-year period 1945 through 1956, the ratio was 1 profitable well to every 38 new-field wildcats drilled. The average cost of an exploratory well is roughly $90,000. It should be evident to even the opponents of the depletion allowance that the producer must recover not only the capital expended in developing a profitable well, but also the vast sums poured into dry holes and nonprofitable wells from which no income or recoupment of capital is derived.

Mr. RANDOLPH. Mr. President, will the Senator from Oklahoma yield?

Mr. MONRONEY. I yield to the Senator from West Virginia.

Mr. RANDOLPH. I appreciate the Senator's yielding at this particular point in his most informative presentation. The Senator [Mr. MONRONEY] is most knowledgeable on this subject.

In connection with the West Virginia situation, the RECORD can very properly disclose information from constituent correspondence received, and from which I read, in part:

> During the taxable year 1962, we produced 141 wells in West Virginia. Only one of these had sufficient profit for us to receive the full 27½-percent depletion allowance. On all of the others, we took one-half of the net profit. The actual depletion allowance for our seventh-eighths working interest wells amounted to 12.36 percent.

In West Virginia, where production is not large-field operation, where the drilling is for relatively lesser amounts of oil and gas, there is a need, among our smaller independent domestic searchers for oil, for this incentive in the present tax law.

In West Virginia last year, when 1,400 wells were drilled, a very small percentage of those wells would have been drilled had the present depletion allowance not been included as an incentive in a hazardous venture capital program for hoped for production.

Mr. MONRONEY. The Senator from West Virginia is exactly correct. Without a depletion allowance, some marginal fields, fields that do not have the great,

lush production, would never be developed.

Some Oklahoma drillers are now going to West Virginia, because there has been enough depletion allowance to start a discovery of wells. But certainly it is the smaller wells that would sustain the greatest destruction if the amendment of the Senator from Delaware were adopted.

Mr. RANDOLPH. I so understand.

[*P. 2072*]

Mr. SIMPSON. Mr. President, will the Senator yield?

Mr. RANDOLPH. I yield.

Mr. SIMPSON. Does the Senator from West Virginia have information as to the number of wells that were dry holes?

Mr. RANDOLPH. Our producing sands in West Virginia are at levels of 1,000 to 12,000 feet below the earth's suface. Our average depth for production is 3,500 feet. The average cost for a producing well in our State is $49,000. Most of our wells are drilled in proven fields, rather than in wildcatting. In 1962 there were 1,171 wells drilled in West Virginia and 200 of them were dry holes.

Mr. SIMPSON. The national average is 1 out of 12. It used to be 1 out of 9. The industry has been drilling fewer and fewer wells. There were 4,000 fewer in 1962 than in 1956. It would be interesting to have the Senator provide information as to the number of dry holes that were drilled in West Virginia and the cost per well, because the average cost is about $90,400.

Mr. RANDOLPH. There is a very real risk in drilling for oil and gas in West Virginia, and we need this incentive in the law in the interest of developing a sound industry.

Mr. MONRONEY. Mr. President, who has benefited from the profit incentives contained in our tax laws and in our inherent policy on all natural resources? The petroleum industry has received a reasonable profit, without which there would have been no reason under our system of free enterprise for them to risk the capital they have. The employees of the oil companies have benefited from the wages they have received. In 1962, the crude petroleum and natural gas portion of the industry itself employed 254,760 people, with an annual payroll of over $1½ billion. But the greatest beneficiaries have been the people of the United States who have had available to them a constant and adequate supply of cheap and easily available sources of energy provided by oil and gas. The retail price of gasoline at service stations, excluding sales and excise taxes, was one-half cent per gallon less in 1962 than in 1926. In 1926, 1 hour's average wage would buy less than 3 gallons of gasoline, but in 1962 it bought almost 12 gallons of gasoline. The price of U.S. petroleum products is lower than in any other industrial country. A brief look at some of the prices which citizens of other countries have to pay for a gallon of gasoline illustrates only one of the benefits which the citizens of this country have. As of January 1, 1962, a gallon of gasoline in the United States, including all taxes and duties, cost 30.6 cents. In Belgium the price was 56.5 cents; in Denmark, 55.9 cents; in Finland, 60.3 cents; in France, 75.6 cents; in West Germany, 54.4 cents; and in Israel, 71.4 cents per gallon.

This has been the result of applying the depletion allowance to production, so that new supplies of oil could be found in increasing quantities, thus maintaining the benefit to the consumer.

If the amount that is necessary for exploration were taken away under the amendment of the Senator from Delaware, the only way the cost of finding and producing oil could be financed would be to put the burden on the backs of automobile drivers. The cost would have to be multiplied many times as the oil passed through the industrial process before it reached the consumer.

Mr. President, in 1960 President Kennedy stated the fundamental consideration involved in the principle of depletion when he said:

> The depletion allowances which affect over 100 items should be considered primarily as a matter of resources policy and only secondarily as a tax issue.

This principle is fundamental and must be kept foremost in mind in any discussion of the depletion allowance. Mr. Kennedy went on to say:

> Its purpose and its value are first of all to provide a rate of exploration, development, and production adequate to our national security and the requirements of our economy. * * * The oil depletion allowance has served us well by this test.

The role of the depletion allowance in the maintenance of our defense and national security has become particularly acute throughout the years of the cold war. Mr. Khrushchev declared economic war on the United States and the free world and the major instrument which he has utilized in this economic war has been the vast oil resources which exist within the boundaries of the Soviet Union. This part of the economic war, which has been described as the Soviet oil offensive, is a part which I am not sure we are winning.

There is no question that the Soviet Union has the reserves to draw upon to

69-108 O—66—pt. 3——51

wage and win that war. Russia is second only to the United States in average daily oil production; and, in 1962, Russian production equaled one-half of the U.S. production. In 1950, Russian production amounted to only one-seventh of U.S. production. Soviet bloc oil exports to the free world and Cuba increased from 116,000 barrels per day in 1955 to 740,000 barrels per day in 1963. This was an increase of 10 percent over the 670,000 barrels a day exported in 1962. Their estimated export potential in 1965 is 1 million barrels per day. The export of soviet oil accounted for one-fourth of Russia's earnings of free world currencies in 1962. Russia's proved oil reserves are estimated to be 28.5 billion barrels, compared to U.S. reserves of 35.5 billion. Some estimates of potential Russian reserves have run as high as 200 billion barrels; and, in 1960, the Soviets announced that new oil deposits discovered in the Central Asian republics have a potential capacity expected to equal the total output of the Middle East oilfields. The discovery of new oil and gas in the Soviet Union has top priority and, in recent years, Russia has had more geophysical crews in operation than the entire free world.

The objectives of the Soviet oil offensive are threefold: economic, political, and strategic. From an economic standpoint, the Soviet Union is attempting to regain the share of the world oil market which it formerly held, in order to acquire foreign exchange needed to finance imports required by other sectors of the Soviet economy. Politically, the Soviets are attempting to undermine the position of western oil companies and western governments by building a dependence on Soviet oil supplies, and by building dependence on Soviet markets for surplus local products and commodities for which the Soviet Union barters its oil. Strategically, the intrusion of Soviet oil on the world market and the peculiar terms and prices at which it is offered have dislocated the market and have contributed to sluggishness of price and disruption of established distribution patterns.

All Soviet oil is channeled through a monopoly owned and operated by the state, thus eliminating all competition in the sale of oil and resulting in a monopolistic bloc policy. This policy enables the Soviets to make planned adjustments in the utilization of various engineering sources and in its allocation of external and internal demand. It permits a greater flexibility in viewing the direction of bloc trade for purely political and strategic reasons; for example, the cancellation of deliveries to Israel after the Suez incident and the diversion of its oil to Europe.

The Soviet pricing policy is extremely flexible since it is not restricted by normal profit and loss considerations, and the cost of production is considerably less because there is no obligation to pay royalties to producing countries at the prevailing rate of 50 percent of the posted world price, which the U.S. companies engaged in foreign operations must now pay. In 1957, the Soviets exported oil to the free world at an average price of $2.06 per barrel, when the price of Middle East oil was $2.79, and Venezuelan oil was $2.92. In 1958, the Soviets sold oil to Argentina for $1.60 per barrel, but charged Poland $2,87 per barrel. In 1960, Russia exported crude oil to its satellites at an average price of $3.01 per barrel, but charged free world nations only $1.56 per barrel. In 1960, the Soviets entered into a barter arrangement with Italian refineries for long-term supplies of Soviet oil at a price of about $1 per barrel. In 1963, the Soviets concluded another agreement with Italy under which Italy will take about 180 million barrels of Soviet oil between 1964 and 1970 at a price of only $1.10 per barrel in exchange for Italian synthetic rubber, fertilizer, man-made fibers, and machinery and equipment so vitally needed in the Soviet economy.

The trend of increased Soviet oil exports will continue, and is demonstrated by the new system of pipelines which the Russians are building to the markets of Western Europe and its ports on the Black Sea and the expansion of its tanker fleet, which has been going on for a number of years. This will make Soviet oil even more accessible and available.

This is an economic war, which we cannot afford to lose. For reasons of defense, national security, and the well-being of our own economy, we must win. We do not want to adopt or use the methods applied by the Soviet Union. We must continue to provide other alternatives and incentives, such as the deple-

[*P. 2073*]

tion allowance and other incentives in our tax and trade laws, which will enable the petroleum industry of the United States to compete effectively with the influx of low-priced Soviet oil and to continue to outproduce the Soviet Union. Any reduction in the existing incentives would be disastrous.

It would be most unwise and inappropriate, in a tax bill designed to bring about necessary production for our own needs in peace or war, to cut the depletion allowance by 25 percent.

The advocates of reduction argue that the 27½-percent depletion allowance on oil and gas is excessive, that it creates an inequality in our tax structure, that oil companies and oil men derive exorbitant profits solely because of the depletion allowance, and that the result has been an overinvestment of our total capital resources in the petroleum industry. None of the arguments is sound.

I have already pointed out that the oil industry is no more profitable than other industries in this country, and that its rate of return on investment is about the same as it is for manufacturing companies. Considering the unique risk involved in oil and gas exploration, and the tremendous benefits which the opponents of depletion say the oil industry derives from the "truck hole" in our tax laws, it would seem that the rate of return for the oil industry would therefore be much higher than that for other industries. The 27½-percent rate is not excessive and it is not inequitable to allow the oil industry 27½-percent and the sulfur industry only 23 percent. The comparative risks involved have, I think, been wisely recognized by the Congress. The amendment would reduce the depletion allowance on oil and sulfur to the same amount. Sulfur is not found 5,000 to 25,000 feet below the earth's surface, and it does not require the drilling of a well costing anywhere from $100,000 to almost $2 million even to find out if there is sulfur at a particular location.

The percentage depletion allowance is not the cause for oil producers or oil companies paying no Federal income taxes, as has been insinuated, since the depletion deduction cannot exceed 50 percent of net taxable income. It cannot reduce taxes to zero; it can only reduce the tax on oil production to approximately the capital gains rate available to all taxpayers and all industries. The main reason why some oil producers pay only a small amount of tax is they are reinvesting the money available through the depletion allowance in the exploration and development of new oil and gas reserves. These costs for exploration are obviously a deductible item.

In fact, the petroleum industry has consistently expended for domestic exploration and development alone over 2½ times the total amount of depletion taken on both domestic and foreign production.

When the percentage method of computing depletion is compared with the original principle of discovery value depletion, which was carried over in the percentage depletion formula, the amount of depletion currently allowed is lower than the amount which would have been allowed under the original formula. Under discovery value depletion, a producer was entitled to recover tax free the value of the mineral deposit at the time of discovery. Congress recognized the economic principle that a mineral producer's capital is not restricted to the actual cost of finding a mineral deposit. Today, the cost of finding and producing a barrel of oil in the United States is about $3.38. Excluding development and production costs, the current value of new oil in place in the reservoir averages a little more than $1 per barrel. Based on an average selling price of $2.90 per barrel, the absolute maximum depletion deduction would be only 79 cents. The discovery value of about $1 per barrel thus exceeds the maximum depletion deduction today by over 20 cents per barrel. The result is that under the 27½-percent rate the Government actually taxes a portion of the producer's capital value as income.

Instead of being excessive, as its opponents charge, the depletion rate for oil and gas is in reality insufficient to carry out the principle intended by the Congress when the provision was enacted in 1926.

It is true that the oil and gas producing industry pays less Federal income tax than U.S. industry in general. This is what causes its opponents to scream "inequity." But when the total tax burden borne by the oil and gas producing industry, exclusive of excise and sales taxes, is computed, the rate of domestic taxes on gross income is about 5 percent both for the oil industry and for almost all other industries. When the total tax impact is considered, the oil industry pays essentially the same tax rate per dollar of gross income as is paid by all mining and manufacturing industries.

When it is pointed out that the profits of the oil industry are reasonable as compared to the profits of other industries, despite all of the alleged tax havens which are attributed to the industry, the opponents charge that the reason for that is an overinvestment in the oil industry which has resulted in a misallocation of the capital resources of the country. It is difficult for me to understand how we can be overinvesting in an industry so extremely vital to the strength and security of this country, particularly in view of the fact that our domestic reserves have declined steadily for 15 years and our energy requirements have almost quadrupled since 1926. It seems to me that we have not been investing enough money for the exploration and development of oil and gas resources, especially for domestic oil and gas reserves.

U.S. petroleum requirements by 1970 are expected to be at least 13 million barrels a day. Our current production is only about 7.5 million barrels a day, and the requirements for 1970 will be about 2 million barrels a day greater than our present productive capacity, which in 1963 was, at the most, 3 million barrels a day greater than actual production. With respect to excess productive capacity which the advocates of reduction say results from overinvestment, our domestic production now would be at least 1,800,000 barrels a day greater if it were not for foreign imports of oil. If these imports were cut off in an emergency, our present productive capacity would exceed our current requirements by very little. This does not take into consideration the increased consumption of our military establishment which, in an emergency, has been estimated to be as much as an additional million barrels a day. Thus, if an emergency should arise, and in today's world it is highly likely that it will, we would have no reserve productive capacity.

I am grateful that we are a Nation blessed with many natural resources and a Nation competent to invent the methods by which such resources are readily and easily producible and deliverable. I am glad that we have a surplus in productive capacity to fall back upon in times of crisis. We have excess productive capacity in almost all of our manufacturing and mining industries today. One of the reasons for the tax bill we are debating is to provide more money through tax reduction for investment in new plant facilities and to provide more disposable income to increase the demand for the products of industry. It is incomprehensible to me that a proposal should be made to increase the taxes of the oil industry on the grounds of excess productive capacity and at the same time propose a reduction in taxes to solve the problems of other industries which have excess productive capacity.

Mr. President, I am firmly convinced that the adoption of any of the proposals to reduce the depletion allowance will result in an increase in the price of petroleum products to the consumer and a drastic reduction in the capital funds expended in the search for new reserves. This would be contrary to our historic policy on natural resources, which has provided cheap and abundant sources of energy to the citizens of this Nation. The strength of this Nation has been built on that policy. Unless our resources are taken out of the ground, they have no value to us, and unless we find new deposits of resources and make them available at low cost, our strength will decline. Our natural resources policy has served us well in peacetime and in war. The proposals to amend the depletion allowance represent a fundamental change in that policy, and if adopted, would be detrimental to the national interest and the individual interest of every citizen of the United States. It is a tribute to the Congress that it has rejected these proposals in the past. I am confident that it will do so again.

I feel that it would be most unwise for us to make such a drastic cut as is proposed by the amendment of the Senator from Delaware. That would be enough to freeze or disrupt the industry during the 3 years the depletion allowance was being reduced. Make no mistake about that, because as the cut became effective, it would freeze the financing of wells and freeze the willingness, the energy, and the efforts that ordinarily go into providing the Nation with its adequate supply of new-found oil.

[*P. 2074*]

I ask that the amendment be rejected.

I yield the floor.

Mr. SIMPSON. Mr. President, I wish to associate myself with the remarks of the distinguished Senator from Oklahoma [Mr. MONRONEY].

In light of the statements made during the debate in regard to the taxes imposed on the oil and gas industry, I wish to state that the taxes paid in Wyoming—and Wyoming has grown to be the sixth largest producer, among all the States, of oil and gas; and Wyoming is an export State—are based to the extent of 46 percent on the production of the oil industry in Wyoming.

I wish to present, very briefly, certain basic facts that I believe should be kept in mind in considering Federal tax policies as to oil and natural gas production.

Even critics of petroleum tax provisions recognize that these provisions result in more investment in petroleum development and more oil and gas at lower prices. Proved reserves of oil in the United States have increased from 8 billion barrels in 1926 to 38 billion. Oil production has been expanded from less than 1 billion barrels per year to 3 billion in 1962. The retail price of gasoline at service stations—excluding sales taxes—the distinguished Senator from Oklahoma has already stated this information, which is gathered from the same source—was one-half cent per gallon less in 1962 than in 1926. The greater value to the consumer is illustrated by the fact that 1 hour's average wage will now buy almost 12 gallons of gasoline in contrast to less than 3 gallons in 1926.

In short, more oil and more gas have been made available to the consuming

public at relatively low prices under the tax treatment than has been established and maintained by Congress for more than a third of a century.

Exploratory activity is the necessary forerunner to oil and gas drilling. Advance exploration, as measured by the crew-months of geophysical activity, has been declining steadily. In 1962, the total crew-months of geophysical work showed a decline of 50 percent in the search for new oil and gas reserves since 1955.

This is only one indicator of deteriorating conditions in the domestic producing industry. Any adverse change in petroleum tax policies unquestionably would accelerate this decline and threaten the adequacy of future oil and gas supplies.

Following the decline in exploration there has been a sharp decrease in the number of drilling rigs in operation. The number of active rotary drilling rigs has declined by 40 percent since 1955.

Despite continuing advances in scientific techniques, new oil and gas reserves can be found only by drilling. Less drilling means fewer wells and less oil and gas for the future.

Let us turn now to the record of wells completed in the United States.

In 1962, exploratory drilling showed a reduction of more than 4,000 wells, or 30 percent from the 1956 level. Clearly, the funds and incentives for oil and gas exploration have been deteriorating, even under existing tax provisions.

Looking at total drilling activity, there has been a decrease of almost 12,000 wells from 1956 to 1962. This is a 20-percent drop. These wells include producing oil wells, producing gas wells, dry holes, and service wells.

Again, it is clear from the decline in total drilling activity that the domestic industry is being forced to curtail its operations. At the same time, national oil requirements are expanding.

I would like to point out that independent oil and gas producers account for about 80 percent of the wells drilled in the United States. The funds for drilling activities are generated primarily within the industry. Many wells are joint ventures, with the funds provided by both independents and larger companies. Producers depend heavily on existing tax provisions to carry on drilling activities which would be directly and adversely affected by the proposed changes in these provisions.

The decreases in geophysical activity, drilling rigs, exploratory wells and total well completions result from the cost-price squeeze on the domestic producing industry.

The price of crude oil has declined by 7 percent since 1957 in the face of increasing wages and higher costs of steel and other materials. The cost of drilling and equipping wells in 1961 was 8 percent higher than 1957, with an increase of 13 percent in the average hourly wages paid to employees in oil and gas production.

The domestic petroleum industry has a lower rate of return on invested capital than the average for all manufacturing industries.

For the 7 years from 1955 through 1961, petroleum earnings averaged 9.1 percent on invested capital as compared with 10.4 percent for industry generally. The petroleum industry was lower, not only for the entire period, but also for each of the 7 years.

The relatively low rate of return in the petroleum industry provides evidence that increased taxes, unless compensated for by increased prices, could be paid only at the expense of further curtailment of industry operations.

Huge investments are required each year to find and develop domestic oil and gas reserves. The latest and most complete surveys show that an average of $4.6 billion is spent each year in searching for new reserves and developing these reserves so they will be available to meet consumer requirements. An annual total of $2.2 billion is spent for exploration alone, with an additional $2.4 billion expended for development.

Federal tax provisions have enabled the petroleum industry to make investments on the tremendous scale required by expanding national consumption. In fact, as previously shown by declining exploration and development activities, funds and incentives have become inadequate for the necessary expansion of these activities.

The proposals to impose large additional taxes on domestic oil and gas production are, in effect, proposals to curtail investments in oil and gas exploration and development.

The huge investments in petroleum exploration and development are made in the face of unusual risks and great uncertainty.

On the average, there is only one chance in nine of finding any oil or gas, at an average cost of approximately $90,000 for each exploratory venture. Even if oil or gas is discovered, it is often a marginal or unprofitable operation. The chances of finding a substantial oil or gas deposit are slim indeed. In fact, if the marginal and unprofitable discoveries were excluded, the chance ratio would drop from 1 in 9 to 1 in about 40.

There is little doubt that this Nation will require more, rather than less oil and gas. More, rather than less, exploration and development for new reserves is needed.

Here, Mr. President, let me say that the U.S. Government itself is the greatest customer—using approximately 426,000 barrels a day, and using an average of more than 356,000 barrels of jet fuel alone a day. In a year's time, that amounts to billions of barrels. So, as I have said, there is little doubt that this Nation will require more, rather less, oil and gas, and that more, rather than less, exploration and development for new reserves is needed.

Under such policies, domestic oil and gas supplies can continue to expand at reasonable prices to the consuming public. The potentials for future discovery are vast, with a relatively small proportion of favorable areas in the 50 States having been explored to date. National tax policies should serve to increase, rather than decrease, exploration and development activities.

Furthermore, we know that the purpose of the pending bill is to expand the economy.

There is an additional factor that should be considered before taking any action that would further discourage domestic producing activities.

Since 1956, domestic crude oil production has increased by less than 200,000 barrels daily or only 2 percent. Total output of the producing nations of the free world outside the United States has increased by more than 5 million barrels daily, or 68 percent, with 90 percent of this increase resulting from the rapidly expanding use of oil abroad.

During the same period, Russia has expanded its oil production by more than 2 million barrels daily or more than 100 percent. With oil the primary weapon in the Soviet economic offensive, it would seem foolhardy indeed to depress the development of United States oil supplies and weaken the Nation's strength as to its energy resources.

This brings us to perhaps the matter of overriding concern: our national security and our ability to preserve world peace.

The value of U.S. oil to national security has been demonstrated over a period of 45 years of meeting various types of emergencies.

We all recall that the Allies floated to victory on a sea of oil in World War I. In World War II, the U.S. oil again was indispensable to victory with 6 of every

[*P. 2075*]

7 barrels used by the United States and our allies supplied from domestic sources.

More recently, and of perhaps more significance as a deterrent to world war III, a number of political crises have emphasized the essentiality of maintaining adequate oil supplies within the United States. In 1951, the production of oil in Iran was shut down and 600,000 barrels daily were cut off as a source of supply to the free world. Five years later, in 1956, the closing of the Suez Canal posed a grave threat to world peace. The availability of reserve supplies from the United States and, to a lesser extent, from other Western Hemisphere sources averted this threat of war. Today, Communist activities in Cuba again threaten the availability of oil supplies from foreign sources through sabotage activities in South America.

In conclusion, I respectfully but emphatically urge the Senate to take no action that would weaken the Nation's strength as to its supplies of oil and natural gas. The value of a vigorous and expanding development of petroleum resources to our standards of living and our national security is a matter of basic natural resource policy and goes beyond the more limited consideration of tax revenues.

In the short run, the proposed changes in petroleum tax provisions could result in additional tax revenues. In the long run, they could mean a lower rate of economic growth and less tax revenue. Beyond question, they would result in less oil and gas. In the public interest, we cannot afford to exchange the hope of additional tax dollars for the certainty of oil and gas supplies.

Mr. MECHEM. Mr. President, speaking, as a former member of the executive committee of the Interstate Oil Compact Commission and as former chairman of the New Mexico Oil Conservation Commission, I oppose the amendment.

A reduction in the petroleum depletion allowance from the existing 27½ percent of gross petroleum sales receipts would be a serious blow to the economy of New Mexico, as well as to that of her neighboring States.

We must continue developing our petroleum reserves in this country. We are already drawing heavily on known reserves and we are not developing new reserves as rapidly as we should. Exploratory drilling carries a high degree of risk, but it is absolutely essential to the security and future well-being of the United States.

It is simple for those not familiar with the facts about the petroleum industry to

single out a few millionaires as causes for attacking the depletion allowance as a supposed loophole in our tax structure. The hard truth is that many a dry hole is drilled for every successful producer.

Without this tax incentive, the exploratory drilling so necessary for the continued operation of the oil industry may well taper off. If that happens, it can only mean future danger to the Nation's security and its economy.

I urge that the Senate reject this amendment.

Mr. EDMONDSON. Mr. President, I believe it fundamentally important in our consideration of proposals which would amend the Internal Revenue Code to reduce the percentage depletion allowance to consider both the need which exists for an adequate and readily accessible supply of petroleum and the fundamental nature of our American oil industry.

Few can argue that an adequate supply of petroleum and petroleum products is essential in order to have a continued increase in industrial progress and in our already high standard of living.

Many can remember well those days when the citizens of our country gladly and cheerfully went without fuel for their automobiles in order that our fighting forces would have the means to carry the war to its successful conclusion. Today effective military action in anything less than all-out conflict still depends on adequate supplies of petroleum. These facts are self-evident and need not be endlessly repeated.

Another fact equally clear is that we do not have an oversupply of oil. While the oil industry spends large amounts of money each year—about $5 billion—to maintain an adequate supply of oil, costs are increasing and the risks in exploring for oil are growing every day. Today, only 1 out of 32 exploratory wells results in the discovery of a field large enough to be profitable, and only 1 out of 600 such wells finds a field large enough to supply this Nation's needs for a week.

In spite of these great risks oil and gas companies receive about the same rate of return on their investment as do manufacturing companies. From 1955 through 1962 domestic petroleum earnings averaged 9.1 percent on invested capital as compared to 10.3 for industry in general.

As Governor of a great oil-producing State and as former chairman of the Interstate Oil Compact Commission, I have been aware for a number of years of the effect of a reduction in the percentage depletion allowance upon the oil industry and upon the 33 States which produce petroleum. Without doubt the broad base now existing in the oil and gas-producing industry would shrink greatly if percentage depletion were to be adversely changed.

We can foresee adjustment in the industry financial processes which would result in sellouts and mergers among smaller industry units with a resulting increase in corporate concentration in the production and control of petroleum. This would have a severe effect upon the economies of thousands of oil communities throughout producing States, and there would follow a reduction in the overall base for local, State, and Federal tax revenues.

Governmental policies should be designed to encourage the continuation of the present broad base in the petroleum industry. Eight companies presently control only 32 percent of crude oil production, compared with the 70 percent of steel production controlled by eight companies, and the 80 percent of motor vehicle production controlled by eight companies. Retention of the present depletion provision of our tax laws will maintain a broad based domestic petroleum industry, a goal which should be the policy of this Congress.

In recent years the health of the domestic petroleum industry has been declining. Crude oil prices are down, gasoline prices are down, employment in the industry is down, and fewer exploratory wells are being drilled.

Considering these facts and considering the close relationship of economic progress and the availability of low-cost energy primarily supplied by oil and gas, I earnestly submit that a tax change such as proposed in this amendment would impede the economic advancement this country has made in the last 3 years and would be extremely detrimental to the maintenance of the security of the free world.

Mr. CARLSON. Mr. President, today we are again witnessing what has come to be almost a perennial attack on the longstanding tax policy—percentage depletion.

These attacks come each year almost as consistent as the weeds that return each year to torment the farmers back in my State of Kansas.

While I do not question any Senator's motives or right to offer amendments to reduce or eliminate the effectiveness of this vital tax provision, it must be recognized that over the 38 years that percentage depletion has been in the law, it has repeatedly stood the test of thorough review and study by Congress and its committees. In fact, I know of no other national policy which has been subject to as much examination as has percentage depletion.

As in past years, this amendment offered here today during floor consideration of this important tax bill was given full and considered study by the Finance Committee and rejected by a substantial bipartisan vote.

Nonetheless, the foes of percentage depletion continue to hammer away, which, of course, is their privilege.

Mr. President, I deem it important, each time this subject is discussed on the Senate floor, that the matter be put in proper focus and considered in light of the intended purpose of this tax policy, as well as a look at how just this policy has met its intended goal. A look at the record shows that, back in 1926, when Congress first wrote percentage depletion into law it had two things in mind; namely, a simplified method for computing depletion which would recognize that first, percentage depletion would partially compensate for the using up of a producer's capital as is the case in mineral extraction; and, second, provide the necessary encouragement to men willing to spend their money, time, and energy in the search for and development of mineral resources.

This minerals tax policy has served well in the case of more than a hundred different minerals which this Nation must have in large quantities if it is to remain strong and self-sufficient.

However, Mr. President, since these amendments appear to only affect petroleum production, I will confine my remarks to that portion of the minerals industry.

Petroleum provides more than 70 percent of the energy requirements of this Nation, so there remains little doubt that we must have adequate supplies of this

[*P. 2076*]

vital commodity at reasonable prices for both our military and civilian requirements. What is the picture as of today?

Percentage depletion and the other mineral tax policies have helped to provide adequate petroleum at very reasonable prices. For example, U.S. petroleum reserves in 1963 were five times as great as when percentage depletion was adopted in 1926. What is more, excluding excise taxes, a much better gasoline is being sold at the gas station pump today for less than it sold for in 1926—the year percentage depletion came into law. Thus, there can be no doubt that one of the original congressional goals, plentiful supplies at reasonable prices, is being met. As a matter of fact, Mr. President, I know of no other commodity which is being sold today for less than it was in 1926. If the price of gasoline had increased since 1926—the year percentage depletion came into the law—in proportion to the increase in the consumer price index, gasoline would cost today 65 percent more than it did in 1926. Another test is that today an hour's average earnings will purchase about 10 gallons of gasoline in contrast to about 2.5 gallons of an inferior product in 1926.

Stated simply, for more than 37 years, percentage depletion has helped the petroleum producing industry to make available to the American people the vital energy required to make more and better things for more people at reasonable prices. What more can you ask?

Mr. President, there are endless reasons which I could cite as to why an adverse change in the percentage depletion rate for oil and gas production would not be in the best public interest. However, I do not wish to burden the Senate with a long discourse and use up valuable time in our efforts to expedite this very important measure.

Before I conclude, however, I feel I must discuss the important role percentage depletion has made and is making toward helping to encourage the investment in the oil and gas search needed to meet our growing energy demands for national security.

In the two World Wars, the Korean conflict and the numerous peacetime incidents such as the Suez crisis, U.S. oil has made the difference between victory and defeat; between sufficiency and shortage. Already at serious competitive disadvantage in both domestic and world markets, U.S. crude oil production has risen only 2 percent since 1956, while free world foreign output has risen 68 percent and Soviet Russian production has increased 115 percent.

Mr. President, in view of the uncertainties on the international scene, we must do nothing to weaken this important industry and its ability to remain strong and to have this nation continue in its position of energy supremacy.

We must continue the national policies that will encourage men to invest their resources in the important endeavor of searching for and developing new petroleum reserves.

Mr. President, now is no time to further aggravate an already bad situation existing in the domestic petroleum industry. I find that in my own State of Kansas as well as the Nation as a whole, our petroleum-producing industry has been going down hill consistently since 1955.

For instance, in my State of Kansas, drilling activity reached a peak of 4,958 completions in 1955. During last year,

1962, only 3,961 wells were drilled in Kansas. This is a decline of nearly 1,000 wells, or of 20 percent. Exploratory crew activity is down approximately 30 percent over the same period. This is indicative of fewer discoveries in the years ahead for actual exploratory drilling is only undertaken after a search for subsurface conditions favorable to the accumulation of oil and gas.

These facts foretell fewer wildcat wells in the future, a further decrease in development drilling, less employment, dwindling county, State and Federal taxes, and declining development of this vital and basic resource.

It is disheartening to one from an oil state to be aware of the depressed condition of an essential industry and to witness its gradual deterioration in so brief a number of years. It is disillusioning to now be faced with a proposition, as proposed in this adverse amendment, that would further suppress the normal and natural progress of a great industry.

Then, too, Mr. President, unfortunately this situation is not confined to my State of Kansas. These deteriorating conditions exist in each of the 31 oil producing States of this Nation.

I was delighted when the former Governor of Oklahoma [Mr. EDMONDSON] and the former Governor of New Mexico [Mr. MECHEM], who both served on the Interstate Oil Compact Commission, told of the effect the provision would have on their States. It was also my privilege to serve not only as a member of the commission, but as chairman. Kansas is the fifth largest oil-producing State.

I have learned from the recent Finance Committee hearings that economic conditions in the domestic petroleum industry have deteriorated steadily while the U.S. economy in general has experienced continuing upward trends. Each factor measuring the health of the oil- and gas-producing industry has been declining. Each factor for the general economy shows advances. Yet these depressed conditions persist despite an expanding national economy.

The declining trends in prices, employment and activity reflect the increasingly unfavorable atmosphere for capital investments in oil and gas production. It is significant that the domestic petroleum industry has a lower rate of return on invested capital than the average for all manufacturing industries.

For the latest 8-year period from 1955 through 1962, domestic petroleum earnings averaged 9.1 percent on invested capital as compared with 10.3 percent for industry generally. The rate of return for petroleum companies was lower not only for the entire period, but also for each of the latest 8 years.

With relatively low rates of return on investment, declining prices, shrinking employment and progressively sharp curtailment of oil exploration and development activities, adverse changes in oil and gas percentage depletion and related tax provisions would widen the growing disparity between economic trends in the domestic petroleum industry and the general economy. Surely we in Congress do not wish to aggravate this disturbing situation.

Mr. President, I do not wish to be unduly alarming. But I must state that in view of the economic plight of the U.S. petroleum producing industry, this body should be considering ways and means of breathing new life and vigor into this all-important industry rather than harass it with the constant threat of adversely changing basic national tax policies which over almost a half century have become an integral part of the economic fabric of this industry; an industry which is absolutely essential to survival and progress of this Nation. An industry which Interior Secretary Stewart Udall recently declared "is perhaps the most essential of all to our national security."

Mr. President, there can be no question that in the public interest, this Nation can ill afford to exchange the unlikely hope of additional tax dollars for the certainty and security of maintaining adequate petroleum supplies.

Mr. SIMPSON. Mr. President, will the Senator yield?

Mr. CARLSON. I yield.

Mr. SIMPSON. The Senator from Kansas spoke of the various Members of this body who were former members of the Interstate Oil Compact Commission, representing their States as Governors. I, too, had that privilege. The Senator will recall, as a member of the Interstate Oil Compact Commission, which has the sanction of the U.S. Government, how the commission has policed the industry with great care and precision.

Mr. CARLSON. I pay tribute to the distinguished services the Senator from Wyoming rendered during his service on the Oil Compact Commission. I am familiar with them. I am sure he will agree with me that the Interstate Oil Compact Commission has not only contributed to the stability of the industry but has added much to the reserves which continue to assure this Nation of a future supply that will not only be for the benefit of the country but will add to its economic stability.

Mr. LAUSCHE. Mr. President, according to the indications, the tax bill as

it came to the Senate will be passed without substantial modifications. There is no evidence that the amount of revenue loss contemplated in the bill will be reduced by any amendments. This prospect—I should not call it a prospect; it is a bad omen—of a tax cutting bill, which is likely to produce a deficit of $8 billion or $9 billion, in all certainty, in the fiscal year 1965, to me is a matter of grave concern.

Tax reductions on the basis of sound economics cannot be made merely by legislative fiat. Whenever tax reductions are made, they must be made bearing in mind their relationship to the state of the economy, the state of the debt, and the state of the purposes of the admin-

[P. 2077]

istration to spend money. We are, by a sort of legerdemain, attempting to cut taxes and thus cure an ailment confronting the Government.

Taxes are the product of spending. If taxes are to be cut, spending must first be cut to lessen the burdens that rest upon the financial shoulders of the country.

There are some indications that there will be a cut in spending. I wish that were true and that I could rely upon it. There may be some reduction in spending immediately, but after the tax cut bill is passed, I fear what is going to happen. All inhibitions will be cast aside. I fear what will happen next year, after the tax reduction has been put into effect. The spending train will be put on greased rails, and off we will go into high, entirely unmindful of what repetitious deficit operations are likely to do to the country.

We are contemplating taking a great leap; my suggestion is that before we do so we ponder the probable consequences of that jump. The proposed tax cut is bottomed on a great deal of speculations and contingencies. If those contingencies and conditions do not occur and if the prophets of the nostrum are wrong, we may come up with a $20 billion deficit in one of the next few years, and what the impact of that will be is simply frightening to me. This tax cut has an appeal to the people of the country, and yet it has been slow in being accepted. My mail asking for a tax cut has been practically negligible. I have had more approvals of my determination not to support the cut than I have had criticisms. It points up one thing, that the citizens of the country are in advance of the thinking of the Congress.

It is said by these prophets of the tax cut that it will balance the budget by 1968, that our gold outflow will be stopped, that more money will be invested by industry in manufacturing cycles, that the consuming public will take every penny of tax benefits and run to the merchandiser and spend it.

This last assumption is an insult to the intelligence of the people of the country. If it is true, then in my opinion we are ascribing immorality to the people.

I do not believe they are going to take 94 percent of this benefit and spend it immediately. There is greater character and greater stability in the makeup of the American citizen than to assume that he will put all his money into purchasing and nothing into savings.

If these assumptions prove to be unfounded, we shall run into trouble of the direst kind. We may run into trouble in the next several years, when we shall have an additional deficit operation of $20 to $30 billion. I submit to the Senate that our economy cannot stand it, and the people of the country should not be subject to that danger.

I will not vote for this tax bill. I will not vote for it even though it forebodes my political demise.

I believe it is wrong. I believe it is not in the interest of our Nation.

In 1954 we cut taxes in the sum of $7½ billion. There was a rise in the economy in 1955, and some rise in 1956. In 1957 the graph went down, and in 1958 we ran into a $12 billion deficit.

If we run into that same situation now—and it is not outside the realm of probability—it will be catastrophic.

Mr. President, let us look again before we leap. In the pending tax reduction bill we are being asked to do something that has never been done before in the history of our Nation under existing circumstances and conditions. While we are being asked to reduce taxes, we are also, at the same time, being urged to spend more, raise the national debt, embark on new Federal spending programs, and enlarge existing programs. This is completely contrary to the economic philosophies that have been held frugal and prudent throughout the world for centuries.

First, we were asked to enact a tax cut and tax reform bill to take our economy out of the doldrums. In the meantime, the economy progressed to a new high in gross national product and then the tune was changed that a tax cut was essential to ward off an impending recession. The recession did not appear and then the tune was changed again that a cut was necessary to steer clear of a recession which might appear, and, lastly, we are now requested to cut taxes to bolster an already booming economy.

The administration's tax reduction proposal is couched in very attractive

terms. We are promised a restoration of "the healthy glow of dynamic prosperity" and insurance against future recessions. Consumer demand and investment spending is to be stimulated, State, and local government revenues to be raised, and future fiscal policy to be facilitated. While everyone is in favor of increased economic activity and rising income, the tax cut approach to a solution of our problems, at present, is open to some serious questions. In particular, the favorable forecasts on which the administration's proposal is premised need scrutiny. They rest on too many assumptions and contingencies.

IMPACT ON CONSUMPTION

Mr. President, the main thrust of the proposal is to engineer a rise in disposable income which is to touch off a substantial increase in consumer spending for consumption goods. This, in turn, is to create additional rounds of income and consumption increases along lines of the familiar multiplier process. The President's Council of Economic Advisers has indicated how much quantitative importance it has assigned to this tendency. As an example, a tax reduction of "$8 to $9 billion added directly to the flow of consumer income would call forth at least $16 billion of added consumer goods and services." It is further claimed that about one-half of this rise in consumption would take place within a 6-month period.

While there can be little doubt that a reduction in tax withholding would exert upward pressure on consumption expenditure, the strength of this influence is far more difficult to predict with reasonable probability. The added income in the hands of the consumer can be used for a number of things besides spending on U.S.-produced consumer goods. It can be used to buy securities, it can be used to repay old debts, it can be used to increase the purchases of imports, or it can be saved. All of these alternatives involve more complex and uncertain connections with income generation and consumer spending; in fact, it is not unreasonable to expect that these responses to increased consumer income would lead to proportionately greater personal saving and a worsening in the U.S. balance of payments.

All of these possibilities are unquestionably open. The question is: What are consumers likely to do? How will other economic and political developments affect consumer choices?

The administration's assertion that "the ratio of total consumption expenditures to total personal disposable income has in each recent calendar year fallen within the range of 92 to 94 percent" is surely not sufficient as a guide to future consumer behavior. For example, the chances for a rise in the proportion of income devoted to the purchase of goods and services produced abroad has probably been boosted by Great Britain's failure to join the Common Market. Unquestionably, Britain will attempt to expand her American markets in order to help compensate for this setback. We are also told that "recent experience with tax reduction demonstrates clearly that additions to disposable income from this source are spent as completely as any other additions."

Mr. President, is it true that experience with past tax cuts shows cause why we should be sanguine about the effectiveness of the cut now contemplated? How does the President's Council of Economic Advisers argue its case?

Taxes were reduced by some $4.7 billion on May 1, 1948—retroactive to January 1—and this resulted in large refunds in mid-1949. Again, taxes were cut by about $6 billion, net, effective January 1, 1954, followed by further cuts later that year. According to the Council, these two observations suggest that in the periods following a tax cut the percentage of consumer income spent for consumption can be expected to remain within the normal range of fluctuation from quarter to quarter. It is therefore proper, the Council goes on to argue, to abstract from transitional fluctuations and to accept the proportion of consumer expenditure out of consumer income experienced in other years—92 to 94 percent—in order to forecast the effects of the proposed reduction in taxes.

To improve its relevance to the period in question now, experience in recent years was chosen. This argument needs a closer look.

Quarter-to-quarter changes in consumer income and consumption expenditure may indeed be dominated by erratic factors, but this does not mean that short-run responses of consumers to increased disposable income should be ignored in favor of some longer-term average relationship. These shorter-run developments are precisely what matters in the process following a tax cut or any other major change affecting the course of economic activity.

[*P. 2078*]

The results of the tax program are going to be evaluated by the public as well as the policymakers in the next few quarters, not over the next decade or two.

Also, the change in consumer spending has its effects depending on the way it is observed and interpreted by the business community. If consumers react favor-

ably to an improvement in their spendable income, producers may be motivated to increase their production schedules and thus raise income payments to the factors of production. This is how the further rounds of consumption and income increases come about.

But if, after two to three quarters, consumers still fail to live up to expectations, producers are likely to hold the line or begin reduction of output in order to avoid excessive inventory accumulation. In that case the so-called multiplier fails to function, or, more correctly, the multiplier effects are erased by shifts in consumer spending.

Mr. President, the tax cut of 1948 affords practically a textbook example of a multiplier that failed to materialize. Disposable income rose sharply beginning with the second quarter of 1948, but, notwithstanding the strong rise in income that developed as a result of this action and for other reasons, personal consumption leveled off. The rise in income merely enlarged personal saving, which increased from 2.7 percent of disposable income in the quarter preceding the tax cut to 6.8 percent of disposable income in the final quarter of the year.

What did happen was that the retardation of consumer spending led to the turnabout in inventory investment, the salient feature of the 1948–49 recession. There were other contributing factors, of course, but slackening consumer expenditures were, beyond question, a major cause of the downturn.

IMPACT ON THE BUDGET AND THE PUBLIC DEBT

Mr. President, a special feature of the tax cut proposal is the fact that it is scheduled at this time. Fiscal experience has been somewhat unfortunate during recent years, so that we must contemplate a situation that is bound to get even worse before it gets better. Previous tax cuts have come at more opportune times and have not involved the prospect of prolonged deficits.

In the 1948–49 period, there were large surpluses in the 1948 tax-cut year and these were followed by only 5 quarters of deficit financing. The year 1953 would have shown a significant surplus without the tax cut, and the deficits that followed because of the recession were wiped out in short order by the rapid expansion of 1955–56. Note that both 1949 and 1954 were recession years.

The outlook at the present time is modestly expansionary, and could be made more so by policies that do not involve so large an increase in deficits and in the national debt.

At the present juncture, we are building upon almost 4 years of deficit financing. According to Dr. Arthur Burns, if the tax cut is enacted:

> The budget would not be in balance before 1972 and * * * the public debt meanwhile would rise about $75 billion above its level at the end of this fiscal year.

There is no denying that this poses a major problem. The rise in Federal indebtedness for the 1961–64 period would be the largest increase for any such period since the Second World War and yet we are promised more.

Mr. President, I do not plead here for an annually balanced budget. What I oppose is the scrapping of the principle that the Federal budget should be balanced over the course of the business cycle. There are at least two main reasons why series of large sustained deficits are undesirable during the next 7 or 8 years.

The first of these is the fact that the Treasury is likely to encounter a dilemma in trying to finance the deficit. If the Federal Government raises these funds by borrowing them from the private sector of the economy, it will bid away funds from other uses and thus drive up the rate of interest. Private investment and consumption spending will be discouraged and this will surely act to offset at least partially the positive effects that the tax cut may have in this area.

Of course, the deficit can be financed by money creation, but then other undesirable effects may be unleashed. To enable the Treasury to borrow this money from the commercial banking system, thereby avoiding a rise in interest rates, excess reserves would have to be created by the Federal Reserve and the money supply would accordingly be expanded. Rough calculations show that this rise in the amount of money would have to be at an annual rate of about 5 percent if financing the prospective deficit is not to tighten capital markets and risk substantial increases in the rate of interest.

But if that is done, the large increases in public liquidity can lead to a resumption of inflationary pressures in certain sectors. This kind of spotty inflation could increase our balance-of-payments difficulties and provide an unhealthy climate—economic and political—for more general domestic expansion.

The second main problem created by sustained deficit spending is the large increase in the public debt forecast in the near future. While the character of the burden implied by the public debt is sometimes misconceived, many err on the side of ignoring the very real burdens of the national debt.

Ninety-five percent of the debt is held domestically and in that sense, it is true

that "we owe it to ourselves." But the debt is not held proportionately by all of those who pay taxes. As a result, burdensome and unjust transfers of income are certain to happen. Moreover, substantial increases in the debt have undesirable economic effects.

Probably the most important of these is created by the large interest charges that must be paid yearly for the privilege of borrowing these funds. This large item is scheduled to reach more than $10 billion in the next few years and will keep on rising for at least a decade if the tax proposal is approved. In the words of the President's Council of Economic Advisers:

> At full employment, an increase in interest payments on the publicly held Federal debt will ordinarily require higher personal income and corporate profits taxes than would otherwise be necessary to prevent inflation. In this situation * * * by dampening incentives, the higher tax rate may reduce total output.

Also, these interest charges represent what is probably not a very desirable use of revenue resources. Surely there are many more worthwhile projects for which we could use $10 billion tax.

A second unfavorable effect of the debt lies in the fact that it complicates anti-inflationary actions. It is quite true that this may not be an immediate problem, but, at a later stage when credit conditions should be tightened to prevent a possible cost-price inflation, enlarged bank holdings of U.S. Government securities would create difficulties. These securities can then be sold off by the banking system thereby mobilizing funds for unwarranted, inflation-creating expenditures.

Third, some waste of our Nation's resources occurs whenever a large part of the Federal debt has to be refinanced. The profits from this operation are largely reaped by a handful of Government securities dealers and this operation employs many Government workers.

SUMMARY

Mr. President, the tax cut proposal as it stands is difficult to accept without comparable reductions in expenditures, curtailment of new unnecessary Federal programs and other efforts to decrease the deficit. The favorable forecasts underlying the administration's scheme can be questioned on historical and theoretical grounds. The increase in consumption envisaged by the proposal is quite uncertain and so is its impact on investment. If increases in these two components of GNP do not occur to the presumed extent, the deficits that are forecast for fiscal 1964 and 1965 will be substantially larger.

I yield the floor.

Mr. TOWER. Mr. President, I believe an inaccurate and erroneous picture has been painted by the proponents of the amendment of the Senator from Delaware [Mr. WILLIAMS], that those engaged in the oil business are greedy and avaricious, that they are constantly looking for tax loopholes, and that they are ruthless exploiters of the public.

Mr. President, this is not true. For every man who has made a great deal of wealth in the oil business there are many more who have lost what they have and many have gone broke.

I wish that the proponents of this measure could walk the streets of my home town and see geologists working as shoe salesmen, drillers trying to peddle insurance, independent oil operators working as bank clerks. They would see and understand the sickness that has beset the great American petroleum industry.

This is an industry that is extremely vital to the Nation's defense. Had it not been for our vast petroleum production and our reserves during World War II, we could not have prevailed as we did.

If ever foreign sources are denied us, we must rely wholly and entirely on our domestic production to keep our industrial and military might going.

[*P. 2079*]

The oil industry is currently sick, and it needs help. It seems to me to be a singularly inappropriate place to effect a cut in oil income in a tax bill that is designed to stimulate economic growth. As has been noted, this is an extremely risky and hazardous business. I believe that the basic risks inherent in oil exploration should be pointed out. Drilling expenses continue to rise. The cost of drilling wildcat wells may range from $50,000 to $3 million. According to the American petroleum industry, the average cost of every well drilled is almost $55,000. Only 1 out of 32 exploratory wells finds a field that is large enough to be profitable; 1 out of 600 exploratory wells finds a field as large as 50 million barrels of oil, or the equivalent in gas. I might note that 50 million barrels would supply our Nation's need for less than 1 week.

In spite of the great risks involved, the average profits of oil and gas companies represent a slightly smaller rate of return on investment—less than 10 percent—than in manufacturing companies. Without the depreciation allowance, the return would be much smaller still.

In addition to supplying man with a wide variety of low-cost, high-energy fuels, oil and oil derivatives form the basic ingredients of more than 1,000

industrial and consumer products, ranging from synthetic rubber and man-made fibers to plastics and detergents.

More than 70 percent of our Nation's energy is supplied by oil and gas.

Reduction of the present depletion allowances would destroy the conservation program.

It would no longer be possible to recover oil from marginal wells. Secondary recovery cost would be prohibitive.

It would result in raising the prices of crude oil which would increase prices of gasoline and other consumer products.

It would further reduce the working forces of the producers, refiners, and so forth.

I am convinced that any proposed substantial reduction in the present depletion allowance would result in a far-reaching reduction in efforts and expenditures by the industry to find new reserves. These new reserves must be found. An adequate supply of petroleum is essential to national defense, both as a deterrent to nuclear war, and as an indispensable fuel in a conventional war. The retention of the present depletion allowance will insure us of these necessary reserves.

Petroleum already is one of the most taxed industries in America, channeling billions of dollars annually to local, State, and Federal Governments through ad valorem, income, corporate, sales, and dozens of other direct and indirect tax devices.

In 1961 the State petroleum tax provided Texas with 46 percent of its tax revenue, actually in excess of $370,300,648.

Taxes paid by oil companies, excluding excise tax and sales taxes, are 5 percent of gross revenue, compared to 5.1 percent for manufacturing generally. If excise and sales taxes on petroleum products—totaling $6 billion annually—are included, taxes paid by oil companies represent 17 percent of gross revenues. The present percentage depletion rate is indeed necessary if tax deductions are to provide for recovery of capital values.

Existing natural resource tax policies have been built into petroleum industry's economic structure for nearly 40 years. Our tax laws must recognize that rising energy demands in this Nation require the constant development of maintenance of a healthy petroleum industry. Exploration and development of petroleum resources grow more difficult, more costly, and financially more hazardous. Venture capital will continue to be attracted in the industry only if the reward for success is commensurate with the risks involved. To meet national and international needs and to assure replacement of petroleum products produced for energy use, tax laws must continue to provide adequate depletion allowances.

The retention of the present allowance is necessary, possibly to the very existence of the industry as it is presently constituted. The present depletion allowance is both just and fair.

Therefore, I fervently hope that the depletion allowance will not be reduced, and that the Williams amendment will be defeated.

[*P. 2080*]

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

Mr. McGEE. Mr. President, we are indulging today in what has almost become an annual ceremony, under a different guise. Whether the issue be taxes, whether it be inequities in Federal money structures, whether it be evasion or loopholes, somehow or other the question of the oil depletion allowance is invariably attracted to the floor of the Senate. This particular occasion is no exception.

In the congressional garden of hardy perennials that blossom at a given stimulus is the movement to reduce the depletion allowance provided for the oil industry. The stimulus that brings this hardy but noxious plant to bloom is the consideration of national tax legislation. It is the almost automatic assault that is made on the depletion allowance. Now that we are considering tax legislation, the cries to reduce the depletion allowance have been heard throughout the Chamber.

In this weeding operation, which I would seek to undertake for a few minutes, I find that the basic approach by distinguished Senators on the other side of the issue is a fallacious one in its fundamental premise. The principal function of the tax bill is to attempt to cut taxes for specific economic reasons in our national scene at the present time. The fallacy behind the thinking of many Senators who are attacking the oil depletion allowance is that, somehow, the oil depletion allowance is a part of our taxing policy. The tax income from the oil industry in relation to depletion is purely incidental and, at most, secondary. The only function of the oil depletion allowance is to provide an or-

derly development of our valuable oil resources. The purpose of the depletion allowance is to encourage exploration for more oil.

The demands for the use of oil are intensifying. The availability of oil that is ready to go has been declining. Therefore, we start with the mistaken view that somehow the oil depletion allowance is a part of the tax structure of the country that demands reexamination or new examination. The fact is, if we understand it as a resource policy for the development of this great potential in the national interest, that only then will we give it its primary or prior consideration.

If the truth were known, the cost of oil exploration has continued to rise. The reason it has continued to mount in my part of the world, in the Rocky Mountain West, is that the proved reserves of oil are less today than they were a year ago. The drop has been almost 8 percent, from 362 million barrels to 338.8 million barrels in 1962. Likewise, our natural gas reserves have dropped by almost 20 percent.

We know that a vast reservoir of oil exists. We know that we have untold wealth in this kind of God-given resource. But it is not worth anything in the ground. It is not worth anything if we do not know where it is in the bowels of the earth. The whole purpose of the depletion allowance is to encourage a more aggressive exploration, in order to establish our known reserves, so that in a time of emergency, or in an emergency of a normal increased usage of oil, such as is taking place at present, we can reasonably and rationally measure our long-term capabilities in this regard. That is why the real substance of my plea is to keep this question where it belongs, as a factor of resource development policy, and not drag it in by the heels, under one guise or another, as some kind of taxing measure or measure to bring income to the Treasury.

The oil depletion allowance has produced large income for the Treasury, for the more oil we can produce, the greater the amount of income that will then be available for taxation to bring dollars into the Treasury. But one of the mistakes would be if we were to start at the wrong end of the line, start at the resource end, in an attempt to destroy, as it were, the goose that lays the golden egg.

I believe our sense of values, our order of priorities, is reversed in the annual attack that is made on the depletion allowance. For that reason, I urge Senators to give special consideration to the question, not as a taxing measure, but as a resource measure over the long range.

When Congress passed the allowance more than 35 years ago it had no intention of creating a tax "loophole"; it was providing for the obvious fact that a mineral-producing industry—and depletion allowances apply to more than 100 minerals—is using up its capital assets

[*P. 2081*]

in the process of production and that it is very expensive to find new assets to replace the old.

In fact, the cost of oil exploration has risen to such a point, Mr. President, that the oil depletion allowance now falls more than 20 cents a barrel short of discovery value, thus permitting the Government to tax a portion of the producer's capital value as income.

The basic principle of the depletion allowance, as conceived by the Congress, was very well stated by President Kennedy in 1960 when he said that—

> The depletion allowance which affects over 100 items should be considered primarily as a matter of resources policy and only secondarily as a tax issue.

The President further said that—

> Its purpose and its value are first of all to provide a rate of exploration, development and production adequate to our national security and the requirement of our economy. The oil depletion allowance has served us well by this test.

And I would point out that the need now is for even greater exploration and development in this country. In the Rocky Mountain West the production and consumption of oil and gas are now outstripping the discovery of new oil and gas reserves. Our reserves of crude oil dropped from 362 million barrels to 333.8 million in 1962—nearly 8 percent—while natural gas liquid reserves dropped from 20.7 to 16.5 million barrels.

And we know that a vast reservoir of oil is still beneath our soil, unusable because it is undiscovered. The Senate Interior Committee study on National Fuels and Energy estimated that our undiscovered reserves are between 225 and 300 billion barrels.

It would be a sad thing indeed if this Nation were to go fuel hungry or face a reduction in our defense strength because we have not the capability to find and develop our oil potential.

Oil exploration is a high risk business. The odds against the wildcat driller are 40 to 1 and the costs are continually increasing while the price of crude oil is decreasing. It should be noted that for every dollar available for exploration through the depletion allowance the oil industry spends an additional two exploration dollars. And the business of exploration and development is still one

of those ventures attracting a large percentage of independent small operators. And they, naturally, would be the first to go down if any change was made in the depletion allowance.

The economic impact of any change in the depletion allowance would be largely felt on the Main Streets of towns and cities throughout the Nation; the impact upon the Treasury would be small by comparison. Some of the results would be:

First. A drastic flight of capital from the industry.

Second. A rash of mergers and sell-outs among smaller operators with the resulting increase in corporate concentration.

Third. This concentration would lead to greatly reduced levels of exploration, drilling, and development.

Fourth. The shrinking industry would, in turn, shrink the tax base for local, State, and Federal tax purposes.

Fifth. Military requirements for petroleum fuels, one of the larger budget items, could be filled only at a much higher cost.

Sixth. Reduced oil industry activities would result in lower markets for steel, other basic materials and spread economic discontent through a whole chain of supply and service organizations sustained by petroleum production.

Seventh. Reduced reserves would result in increased dependence upon foreign supplies which in turn would seriously weaken our ability to be self-sustaining in time of war or national emergency.

Mr. President, to tamper with the oil depletion allowance is to open the gates for a wholesale upheaval in the Nation's economy with serious results to a vital industry and to the entire country. I would suggest that while we are considering a bill designed to stimulate our economy to new and broader expansion, it is completely unthinkable that at the same time we provide for the crippling of a vital segment of that economy.

Mr. PROXMIRE. Mr. President, will the Senator from Wyoming yield for a question?

Mr. McGEE. I yield.

Mr. PROXMIRE. I was interested to hear the Senator from Wyoming say—and I wonder if I heard him correctly—that this was a tax cut bill, not a tax reform bill. As the bill was conceived by President Kennedy and sold to the American people, it was primarily a tax reform bill, but it has ended, as the Senator from Wyoming has revealed or disclosed, almost exclusively as a tax reduction bill. That is why the New York Times editorial writer was concerned and wrote against the bill in its present form.

The Senator from Wyoming did not hear me correctly, although I would be glad to debate with him the issue he has raised. I said that we are considering a tax bill. That is the pending business. Whether it be a tax cut bill or a bill under any other guise to discredit its real intent and purpose, my point is that the oil depletion question does not belong in the discussion of a tax bill, whether it be a tax reform or a tax cut bill. It belongs in a resource policy development measure. This is the purpose of it; this is the goal it seeks.

Would not the Senator acknowledge that some persons disagree with his viewpoint? Fortune magazine has called this the most injurious loophole in our tax laws. For the same reason, Fortune has the feeling that if there is to be any kind of tax reform bill at all, this item most certainly should be considered.

Mr. McGEE. I am mindful of that. I leave it to the Senator from Wisconsin to make his apologies to Fortune magazine. I maintain that this is a matter of education or information. That is the whole point of what I am trying to say. The oil depletion allowance was never conceived as a loophole. Nobody can honestly argue that it is a loophole. The oil depletion allowance was conceived as constructive legislation when it was written into the books. It was not conceived as a loophole, it was written not as a tax measure, but as a conservation resource measure. It should remain in that realm and not be changed into the tax arena as it is at the present time.

Mr. STENNIS. Mr. President, the reduction of oil and gas percentage depletion would have a very adverse effect upon our national security by jeopardizing the continued supply of energy necessary to our defense effort.

In addition, it would have a very detrimental effect upon the country's economy. Removal or reduction of the incentive percentage depletion would be especially damaging to the economic welfare of many land and royalty owners and to the small independent oil producers.

The State of Mississippi, while only one of many States concerned, is an example of how many present and future royalty owners, land owners, farmers, and small oil and gas operators, as well as the larger companies, will be seriously hurt by reducing the depletion allowance. Mississippi has no large fields, but has several small ones. The oil depletion allowance distributes the benefits among many individuals and many areas.

The search for oil and gas is an extremely risky business requiring large capital investment. Even after a field is found, production costs in deep produc-

ing areas such as Mississippi are very high, and unless large amounts of oil are found these costs are prohibitive. Unless we continue to find new fields and new supplies, our national reserves will be reduced below the level necessary to supply our future needs.

The 27½-percent depletion allowance has been established as the minimum amount that will insure the recovery by individuals and companies of enough of their investment capital to remain in business and continue finding new oil and gas reserves.

Money placed in circulation by the search for and the production of oil and gas benefits many people. Merchants, farmers, landowners, and in fact, every segment of the economy reaps an economic benefit from the leasing of land, royalty payments, direct and indirect employment, and many other activities resulting from oil and gas production.

The oil industry is the third largest industry in my State. It is the fourth largest producer of our State's revenue. But the risks are greater in Mississippi than in almost any other State. Experience has shown that we must drill twice as many wildcat or exploratory wells to find a producing field as is necessary in other States. Almost half of our field or development wells are dry holes and are a total loss of investment capital. Our average drilling depth of nearly 10,000 feet is the second deepest in the Nation, making the search for and production of oil and gas an extremely hazardous business financially.

These natural disadvantages greatly reduce the possibility of making a profit; and without the advantage of percentage depletion, most of our operations

[*P. 2082*]

would be forced out of business. The result would be disastrous to the economic welfare of our people. Royalty payments would cease, land would not be leased, employment would decline, and farmers depending on lease or royalty payments to supplement their income would become distressed. The total result would be a decline in the standard of living.

When fully and objectively considered, the depletion allowance is not a tax "loophole" benefiting large multimillion-dollar companies; but it is a logical, fair, and equitable provision in our tax law which has proved to be workable and essential to the continued economic welfare of our Nation. It is not a favor to the property owner. It is an insurance which favors continued production. It should be retained, in order that we may continue to be assured of an adequate supply of energy to supply our domestic needs, and to have sufficient reserves for the future, and to be able to meet any national emergency.

Mr. President, the pending amendment and similar amendments should be rejected; and I urge Senators to join in rejecting this amendment.

I thank the Senator from Pennsylvania [Mr. CLARK] for his courtesy in enabling me to obtain the floor.

I yield the floor.

Mr. PROXMIRE. Mr. President, the Senator from Delaware [Mr. WILLIAMS] is recognized as a man of integrity and very deep and sound principles, and a man of very conservative instincts—at least, that is my opinion—with regard to government spending and all other government policies. Certainly he is a warm friend of free enterprise; and certainly he is so recognized throughout the country, as well as in this body.

Mr. President, the pending amendment, which has been submitted by the Senator from Delaware, cannot be "kissed off" as an amendment submitted by a group of Populists or "wild-eyed liberals." To the contrary, the amendment has been submitted by a Senator who sincerely respects—I am certain that he does—the importance of this industry to the Nation.

The pending amendment is the most modest amendment on oil depletion that has been submitted during the number of years I have served in the Senate. The amendment does not call for a sharp cut in the oil depletion allowance. Instead, the amendment calls for a gradual cut, changing over the years from 27½ percent to 20 percent.

The pending amendment is a very modest one, and it gives this industry an opportunity to adjust to this change. Therefore, the amendment seems to me to be entirely workable.

Mr. President, it seems to me that the arguments made by the Senator from Wyoming—who is a very fine person—were most shocking. He said this proposal is raised year after year as a noxious weed, when tax bills are under consideration. In other words, he is implying that we have "a lot of crust" to propose that the oil depletion allowance be amended, that it is sacred, and that it should not be touched or dealt with in a tax bill. He said any provision in regard to it should be included in a natural resources bill.

But, Mr. President, according to my view, all sorts of provisions are included in the tax bill, and not all of them by any means are for the purpose of raising revenue. They include the investment credit provision, which is certainly not

primarily a revenue raising measure; but during the debate on that provision, no Senator said it had no place in the bill. That provision, too, was included for the alleged purpose of providing for growth.

Outstanding economists and other authorities feel that this provision of the law is an exceedingly inequitable one. Certainly it should be considered by the Senate when it deals with a tax-reform and tax-reduction bill.

Mr. President, I believe we should recognize that the oil depletion allowance—which, as the Senator from Wyoming said, was originally conceived as a means of conserving our oil resources and as a means of encouraging their development—was instituted at a time when the corporation income tax was only 13 percent. However, after this bill becomes law, the corporation income tax will be 48 percent—or an increase of almost 400 percent. Yet there has been no reduction, revision, or modification of the depletion allowance. On that basis, we could make a good argument in favor of reducing the depletion allowance from the present 27½ percent to only 7 or 8 percent. However, no one is asking that that be done. In short, the pending amendment calls for a modest change in the existing rate.

It is argued that the depletion allowance is necessary in order to encourage exploration, development, and other activities in the oil industry. But what are the facts? Today there is an oversupply in the oil industry. For example, how much oil are the Texas fields allowed to pump? They are not operating at capacity, or even at 50 percent of capacity; instead, they are operating at less than 30 percent of capacity. So this industry does not need any encouragement for the production of more oil because of any idea that the country needs to have more oil produced. The restrictions imposed by the State of Texas, with the cooperation of the oil industry in Texas—which produces a great deal of our oil, and is the No. 1 oil-producing State—are imposed because of the realization that production must be held down. So they do not have too little oil; they have too much oil.

Mr. President, tears have been shed this afternoon for "the little producers"—those "who," it is said, "would be injured by a reduction of the oil depletion allowance."

But, Mr. President, who are the ones who really get the benefit of this existing provision of the tax law? We know who they are. They include Mr. J. Paul Getty, Mr. H. L. Hunt, and the late Sid Richardson—fine men, I am sure, and men who, of course, deserve proper consideration.

The Senate should consider where the principal benefits of the tax depletion allowance go. In 1958–59, $70 out of every $100 obtained by means of the depletion allowance went to corporations with assets of more than $100 million, and $97 out of every $100 obtained by means of the oil depletion allowance went to corporations with assets of $1 million or more. So the oil depletion allowance is not primarily a means of aiding "the little wildcatter." Instead, it is overwhelmingly an aid to the big boys.

Mr. ANDERSON. Mr. President, will the Senator from Wisconsin yield?

Mr. PROXMIRE. I yield.

Mr. ANDERSON. The Senator from Wisconsin said that much of the money obtained by means of the oil depletion allowance goes to Mr. Getty and to Mr. Richardson. But Mr. Richardson is dead. So where is he getting that money—in heaven or in hell?

Mr. PROXMIRE. I am sure he is in heaven.

Mr. ANDERSON. He was a great friend of Billy Graham, and I hope he is there.

Mr. PROXMIRE. Nevertheless, during his lifetime, he made a vast amount of money by means of the oil depletion allowance, and his estate is being administered, as the Senator from New Mexico knows——

Mr. ANDERSON. By a foundation.

Mr. PROXMIRE. Yes, by a foundation; and it is being administered in the usual manner, and it will be handled by men who were close to Mr. Richardson during his lifetime. But regardless of whether Mr. Richardson is alive or is dead, it is a fact that he made a great deal of money out of the oil depletion allowance, and so will the foundation, and so will many other wealthy men—who invest in oil in order to take advantage of the oil depletion allowance. The fact is that this particular provision of the tax law induces those with enormous amounts of money and very large incomes to invest in the oil industry, because the oil depletion allowance enables them to reduce their tax liability very sharply. The oil depletion allowance represents a strong attraction for many persons who are very well off, indeed.

Mr. ANDERSON. Mr. President, will the Senator yield further?

Mr. PROXMIRE. I yield.

Mr. ANDERSON. The Senator would be interested in checking to see who in America is drilling for oil. The statement was made that the Standard Oil Co. has a great interest. It has a great interest. That company pays after the entrepreneur goes in and completes the drilling for oil.

Mr. PROXMIRE. The Senator is correct. That is one of my main points.

Mr. ANDERSON. The depletion allowance goes to them.

Mr. PROXMIRE. The Senator is correst. The depletion allowance goes to the people who move in after the wildcatter has done the work. How much do the wildcatters get? As I pointed out, the corporations with assets of $1 million or more get 97 percent of the benefits of the depletion allowance.

Mr. ANDERSON. They have purchased it in advance. They have paid

[*P. 2083*]

for it and have taken it into consideration in the payment for a barrel of oil in place.

Mr. PROXMIRE. Of course it has been taken into consideration, but the fact is that the corporations get the benefit of it.

Mr. MONRONEY. Mr. President, will the Senator yield before he starts on another subject?

Mr. PROXMIRE. I am happy to yield.

Mr. MONRONEY. The implication that the proration exists because we have far too much oil is very misleading. Today the daily demand for oil is about 7½ million barrels of production. If we opened up every single well to blast the full amount that it could possibly produce, we would have about 10½ million barrels. The Senator would not expect us to destroy one of the assets of America which we are producing under a conservation method. For that reason the proration exists. It is true that many wells are shut down on a percentage basis, but that action is necessary if we are to be able ultimately to get the oil supplies that we have.

When the Suez Canal was closed and we had to supply the necessary oil, not only for ourselves, but for the free world, within a period of a few weeks we discovered how quickly our wells would be destroyed if they were opened and allowed to flow at their full flow capacity.

The depletion allowance is not a means of trying to maintain a condition of overproduction. Our reserves are decreasing all the time. Even under the so-called very expensive and very wasteful depletion allowance that statement is not true. If it were true, we would have more production, more exploration, and more drilling of wildcat wells.

Mr. PROXMIRE. The facts are, first, that the Texas fields are pumping only about one-third of capacity; second, that any tax incentive which encourages the drilling of oil wells tends to use up a limited American resource. We have only so much oil. It is limited. When exploration proceeds under forced incentive, artificially, we are using up our resources more rapidly than we should.

In discussing the oil depletion allowance, too many of us have discussed it strictly from the standpoint of its justice and equity. In my opinion, the Senator from Delaware certainly has justice on his side. But what we have ignored is the realistic and practical effect of the amendment. The proposal would raise $250 million of taxes a year. When a Senator offers an amendment which would cut excise taxes, the only argument used against it is that we would lose revenue. The argument is a good one. It is a sensible and strong argument. The amendment of the Senator from Delaware would gain revenue and reduce our loss. It is a fiscally responsible proposal.

Mr. SIMPSON. Mr. President, will the Senator yield?

Mr. PROXMIRE. I am happy to yield.

Mr. SIMPSON. Does not the Senator from Wisconsin know that if the depletion allowance were reduced, the added expense would be passed on to the consumer, and that in the United States individuals are the largest consumers of gas and oil?

Mr. PROXMIRE. That is one point about which I feel very sure, for many reasons. The cost would not go to the consumer. There are many reasons why, but the big reason is that while the big oil corporations and the lobbyists for the oil industry will fight to the death such an amendment as is proposed, still they make some battle, but not very much, when the States and Federal Government increase excise taxes. That cost does go to the consumer of oil. That is a point about which I feel very strongly. The depletion allowance goes to the people who can invest vast sums and a reduction in the depletion allowance will reduce the amounts going to these persons who have invested in the industry.

They are in a position, with the depletion allowance, greatly to reduce their taxes. I believe that most economists agree that the incidence of the income tax is not shifted except in unusual circumstances. It is really shifted if the corporation is in a monopolistic position. It is in a position to shift the incidence of the tax to the consumer, but the oil industry is a competitive industry.

Mr. SIMPSON. Do I correctly understand the Senator's answer to be that the consumer would not pay the increased cost?

Mr. PROXMIRE. Yes, indeed.

Mr. SIMPSON. The Senator does make that statement?

Mr. PROXMIRE. Yes. The consumer may pay a little of it, but most of the saving would result in a diminution in the after-tax income of the big investors—those who invest heavily in the oil industry.

Mr. SIMPSON. That is conjecture.

Mr. PROXMIRE. All of this is conjecture. I agree with the Senator. We cannot be absolutely positive about it, but it seems logical.

As I have said, we cannot overstress the fact that this is a responsible proposal. It would raise money. Eventually it would raise $250 million. Immediately I believe it would raise $75 million for the next year.

Mr. President, I am almost finished. I would like to make two additional points.

First, the people in the oil industry say that they deserve, need, and should have the privilege of the oil depletion allowance. I wonder how many people in America really appreciate what an extraordinary privilege that is. Most businesses and businessmen are allowed to write off their assets once, and only once. Between 1946 and 1949 the oil industry was able to write off its oil wells not once, not twice, not three times, but 19 times—19-fold.

I can understand an incentive or a superincentive. I can understand why people would go so far as to permit a little excessive depreciation. But a 19-fold writeoff is ridiculous.

The Senator from Delaware has not proposed that we cut the depletion allowance so that those in the industry would be able to write off their oil investment once; his amendment would result in reducing the corporation writeoff to only 15 or 16 times.

I should like to state one more point. The argument for the depletion allowance has also been justified on one other basis—that the oil industry is a risky business. Since there is a great risk, the element of reward in after-tax income should be higher. How risky is it?

Dun's Review, in the mid-1950's, showed that the failure rate for every 10,000 businesses was as follows: In the food business, 20 firms, per year; apparel, 50 firms; construction, 86 firms; retailing—which is, of course, the most risky and perilous of all—400 firms; in oil, 4 firms. In other words, retailing is 100 times as risky as is the oil industry.

Mr. President, the amendment of the Senator from Delaware is the most moderate and conservative amendment which has been offered on oil depletion in years. It would reduce the revenue loss in the bill eventually by only $250 million. It deserves our support, and I hope that the amendment will be adopted.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Delaware.

On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. SALTONSTALL. (after having voted in the affirmative). Mr. President, on this vote I am paired with the Senator from Nebraska [Mr. HRUSKA]. If he were present and voting, he would vote "nay." If I were at liberty to vote, I would vote "yea." Therefore, I withdraw my vote.

Mr. HUMPHREY. I announce that the Senator from Oregon [Mr. MORSE] is absent on official business.

I further announce that, if present and voting, the Senator from Oregon [Mr. MORSE], would vote "yea."

Mr. KUCHEL. I announce that the Senator from Nebraska [Mr. CURTIS], the Senator from Illinois [Mr. DIRKSEN], and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent.

The Senator from Nebraska [Mr. HRUSKA] is detained on official business.

If present and voting, the Senator from Nebraska [Mr. CURTIS], the Senator from Illinois [Mr. DIRKSEN], and the Senator from Arizona [Mr. GOLDWATER] would each vote "nay."

The pair of the Senator from Nebraska [Mr. HRUSKA] has been previously announced.

The result was announced—yeas 33, nays 61, as follows:

[No. 28 Leg.]

YEAS—33

Aiken	Humphrey	Neuberger
Byrd, Va.	Jackson	Pastore
Case	Javits	Pell

NOT VOTING—6

Curtis	Goldwater	Morse
Dirksen	Hruska	Saltonstall

So the amendment of Mr. WILLIAMS of Delaware was rejected.

Mr. LONG of Louisiana. Mr. President, it seems to me that the oil industry more than any other industry, has suffered from adverse publicity from people who do not want to understand the problems of the industry. It is the only industry that will suffer increases in taxes of a substantial nature in the bill. Because of the bad publicity that some insist on giving the industry, it is being taxed in the bill an additional $40 million, which could not be justified, in my opinion, in any other way except by ridicule and propaganda, such as Mr. Herblock's cartoons, and things of that nature.

I invite the attention of Senators to the charts at the rear of the Chamber, which show the actual situation of the oil industry compared with other industries.

The bottom bar on the first chart shows the average rate of return on invested capital for the entire domestic oil industry for the years 1955–62. The top bar shows the average rate of return on invested capital for all manufacturing industries for the same period.

The profits for all manufacturing industries over this period has averaged 10.3 percent, after taxes, while the profits for the domestic oil industry for this same period has averaged only 9.1 percent.

The profits of the petroleum industry are based on cost depletion, which some people argue is the way taxes should be figured for the oil industry.

Furthermore, we hear talk that the oil industry does not pay as much income tax as some other industries because of the 27½ percent depletion allowance.

I hope Senators will look at all the taxes levied on the oil industry, and take into account production taxes, and taxes on income at the State and local level. For example, in the State of Louisiana, of which I have the honor in part to represent, the severance tax alone this year which the oil industry will pay will be $160 million.

Also consider State and local property taxes, which are very high in a great number of jurisdictions, and the other taxes of State and local governments. The grand total of all these direct taxes on the oil industry total is $2 billion. That is 5 percent of the total revenue of the industry, which works out to be just about the average for the manufacturing industry.

While most manufacturing industries pay very little excise tax, the oil industry is burdened by State and Federal excise taxes of $6 billion a year. That amounts to a grand total for the industry of $8 billion a year.

The next chart shows the rate of growth of industrial production and employment over the last 4 years, based on the 1957 to 1959 average and the increase in consumer prices over that period.

For all industries, on the average, industrial production since 1959 has gone up by 23.5 percent. Employment has gone up by 8 percent. Consumer prices have gone up by 4 percent.

Let us look at the domestic oil industry. Gasoline prices have actually gone down by 6.5 percent.

Employment has gone down by 10.8 percent. The drilling of exploratory wells has declined by 19.4 percent. In relative terms, Mr. President, this is a depressed industry, which is paying more than its fair share of taxes. What some people who would have the industry pay more taxes forget is the risk factor which prevails in the oil industry, but which does not prevail to the same extent in the manufacturing industry.

If they were to take the risk factor into consideration, they would not contend that the industry should pay more in taxes. The industry is already taxed $40 million more in the bill. It is the only industry whose taxes have been increased in the bill.

Let us take a look at the risk factor.

If a person drills a well in New England, whether it be Massachusetts or Connecticut or Maine, that person ought to have a 100 percent depletion allowance. For what reason? The chances are 10,000 to 1 that he would not find any oil up there.

Therefore, if a person is to take that kind of risk, he should have something to offset the risk.

The depletion allowance has been arrived at as the only fair way to deal with the risk factor. Furthermore, the only fair way in which to determine whether an industry is getting too much or too little depletion is to see whether it is relatively more profitable than other industries.

Studies made by the Chase Manhattan Bank show that it is not.

The studies to which I refer are the kind that President Kennedy wanted made. He wanted them made before making his recommendation—his recommendations having such a study made. He told me frankly that he had overlooked that point and that it was

too late to make the study, and he had to make his recommendation.

The Petroleum Industry Research Foundation made the study on which the charts I have used were based. It was based on the published figures available to the Securities and Exchange Commission and from other sources. I ask unanimous consent that the study may be printed in the RECORD at this point.

There being no objection, the study was ordered to be printed in the RECORD, as follows:

THE TAX BURDEN OF THE DOMESTIC OIL AND GAS INDUSTRY

PREFACE

"The Tax Burden of the Domestic Oil and Gas Industry" is another in Petroleum Industry Research Foundation's background studies on current oil industry affairs of public interest.

The present study has been prompted by the special emphasis on oil and gas taxation in the President's tax reform program for 1963.

The aim of our study is to add to the information on the subject of oil and gas taxation by developing facts and figures on the oil industry's total domestic taxpayments and to consider Federal income taxpayments within this overall framework. We believe this particular approach has not previously been published in the form in which it is presented here.

Our calculations are made both with and without excise and sales taxes and pertain only to the taxpayments of oil producers and refiners. To obtain the oil industry's complete tax burden one would also have to consider the taxpayments made by the Nation's thousands of independent oil products jobbers and retailers.

The study was made under the supervision of our research director, John H. Lichtblau, who was assisted in his work by Miss Susan Goodman.

JOHN HARPER,
Petroleum Industry Research Foundation, Inc.

PURPOSE OF THE STUDY

This study was undertaken in order to (a) determine the total domestic tax payments of the U.S. oil and gas producing and refining industry; (b) to compute a ratio which measures the incidence of these tax payments on this particular industry; and (c) to compute similar ratios for other industries in order to compare the tax burden of the oil and gas industry with that of other industries.

SUMMARY OF FINDINGS

The findings of the study are that:

(a) While the burden of Federal income tax payments on the oil and gas industry tends to be somewhat lower than on U.S. industry in general, the incidence of the various other taxes paid by the oil industry (exclusive of excise and sales taxes) is significantly higher than on most other industries;

(b) The ratio of total domestic taxes (exclusive of excise and sales taxes) to total domestic revenue is approximately 5 percent for both the oil industry and most other industries;

(c) The total tax burden per dollar of revenue is therefore essentially the same for the oil industry as for other industries;

(d) If Federal and State excise and sales taxes are included, oil's tax burden is considerably higher than that of most other industries;

(e) The administration's recent proposals for changes in the taxation of minerals industries would tend to raise the oil industry's total domestic tax burden perceptively above the average for all industries.

THEORETICAL CONSIDERATIONS AND ASSUMPTIONS

A. Types of taxes considered

All types of domestic taxes—Federal, State, and local—(with the exception of excise and sales taxes) were taken into account in this study in determining the industry's total tax burden. The reason for the exclusion of excise taxes is explained below. All other

[*P. 2085*]

taxes were considered collectively on the theory that all tax payments by business firms have at least one common economic effect: They tend to lower net earnings and, hence, may be considered a burden on the taxpaying firm. Thus, a tax on business operations raises the cost of production, a tax on payroll raises labor costs while a franchise or property tax increases fixed overhead costs. In the absence of offsetting measures, all these taxes will act to reduce the business' net income. They are therefore not only comparable with each other but also with income taxes which have a similar, if more direct, impact on disposable income.

B. Determination of the tax burden

To measure the relative tax burden on oil and other industries, ratios of total tax payments (exclusive of sales and excise taxes) to gross revenues were computed. The rationale for relating tax payments to revenue is that business firms usually attempt to shift taxes forward by incorporating them into the price structure of their products. However, the ability of business firms to effectively do so is limited by competitive factors and varies among different types of taxes, products, and industries.

Among the different taxes, those on operations, payroll, cost of goods, etc., are most readily shifted, since they are usually absorbed into the firm's cost structure.[1]

Income taxes are of a somewhat different nature, since they do not directly affect the product's cost. However, empirical evidence suggests that most businesses have a price

[1] An excellent illustration of the forward shifting of productions taxes is contained in "An Analysis of the Effects of the Processing Taxes Levied Under the Agricultural Adjustment Act," U.S. Treasury Department, Bureau of Internal Revenue, Washington, 1937, which analyzes in detail the effect of a processing tax on certain agricutural commodities on the price of the processed goods made from these commodities.

policy to maintain stable rates of return on investment, at least in the long run, regardless of prevailing income tax rates.[2]

Generally speaking, a comparison of corporate income tax rates and corporate rates of return over an extended period of time reveals little visible effect of the tax rate on the rate of return in the short run and even less in the long run. These and other findings have led many tax economists to conclude that in the long run the incidence of a significant part of all business income taxes tends to fall on the consumer.[3]

Accordingly, the tax burden of the industry under study was computed by relating all taxes to sales receipts plus other revenues. In effect, the resulting ratio indicates how much taxes for each dollar of revenue the industry must pay.

It should be pointed out parenthetically that the term "tax shifting" does not mean that a firm or industry thereby escapes the impact of the tax. Aside from the aforementioned fact that taxes can very rarely be completely shifted forward, the inclusion of the tax burden into the price affects, of course, the demand for and production of the firm's goods and, hence, its earnings, investments, growth rate, etc. Thus, tax shifting often only transforms the tax incidence of the business firm but does not remove it.

TREATMENT OF EXCISE AND SALES TAXES

Several reasons exist for excluding excise and sales taxes from our calculation of the tax burden:

(1) Unlike other taxes, excise and sales taxes are clearly visible to the consumer, since they are generally marked as such by being specifically listed apart from the price of the product. They are therefore shifted to the consumer with the latter's full knowledge. In fact, the tax-levying authority frequently intends these taxes to be fully passed on to the consumer and often regards the firms on whose goods these taxes are levied merely as collecting agents of public funds. Excise and sales taxes are therefore somewhat outside the scope of this study which is concerned primarily with the less visible or internal tax burden of oil and other industries.

(It should be pointed out, however, that even by shifting excise and sales taxes completely to the consumer a business does not fully escape their impact. For the resulting higher sales price affects, of course, the business much as any other tax on operations.)

(2) Another reason for excluding these taxes from our computation is that motor fuel excise taxes are of such magnitude that they overshadow all other oil industry taxes combined and, indeed, most taxes paid by any other industry. Since the size of these excise taxes are a matter of public knowledge, this study has concentrated on the other oil industry taxes whose magnitude is much less well known.

(3) The final reason for excluding excise and sales taxes was that these taxes were not included in the data pertaining to many of the industries compared to the oil industry. Hence, excise and sales taxes were eliminated as far as possible from the tax burden of the oil as well as the other industries considered. A brief discussion of the burden of the excise tax on oil only is found in the section entitled "Findings of the Study."

OUTLINE OF THE METHODOLOGY

A full discussion of the methodology employed in arriving at the findings of this study is contained in a separate appendix. The following outline of the methodology is therefore not meant to be comprehensive but is deemed sufficient for an understanding of the manner in which this study was carried out.

(1) Since domestic revenues and related tax payments for the entire U.S. oil industry are not available,[4] the desired data had to be gathered from a representative sample of individual companies. The companies selected for this purpose were the 30 large U.S. oil companies used by the Chase Manhattan Bank in its annual petroleum industry review. These companies accounted in 1961 for 63 percent of domestic crude oil production and 88 percent of domestic refinery operations.

(2) The domestic tax payments of these companies were taken from form 10–K which publicly owned corporations are required to file annually with the Securities and Exchange Commission.

(3) To compute the domestic revenues, the five major international companies were eliminated from the sample. The revenue of the 25 other oil companies is derived primarily from domestic sources in the years under study (1959–61). An adjustment was made to eliminate their marginal foreign revenues. The ratio of the total adjusted domestic revenues of these 25 companies to their total domestic tax payments was assumed to be representative of the entire U.S. oil and gas producing and refining industry.[5]

---

[2] See "Pricing in Big Business"—a case approach by Kaplan, Dirlam, and Lanzillotti, the Brookings Institution, 1958. The study concludes that many large business corporations have a "target rate of return" pricing policy, designed to achieve a specific rate of return on investments.

[3] Eugene R. Schlessinger, "Corporate—Income Tax Shifting and Fiscal Policy," National Tax Journal, vol. XIII, March 1960. The author asserts that: "The existence of a corporate income tax should result in a conscious decision to charge higher prices than would have been the case in the absence of the tax or with a significantly lower rate of taxation." For additional discussion of the shifting of the corporate income tax see: (1) Eugene M. Lerner and Eldon S. Hendriksen, "Federal Taxes on Corporate Income and the Rate of Return on Investment in Manufacturing, 1927 to 1952," National Tax Journal, vol. IX, September 1956; (2) B. V. Ratchford and P. B. Han, "The Burden of the Corporate Income Tax," National Tax Journal, vol. X, December 1957; (3) Gilbert Burck, "You May Think that Corporation Profits Tax is 'Bad' But," Fortune Magazine, p. 86, April 1963.

[4] The oil industry data in the annual IRS publication, Statistics of Income, include large nonsegregable amounts of foreign revenues.

[5] In 1961 the 25 companies accounted for 35 percent of total U.S. crude oil production and 50 percent of total U.S. refinery runs.

(4) For comparative purposes, a similar ratio was computed for all U.S. mining and manufacturing corporations other than oil and for all U.S. business corporations other than oil. The source for these computations was the annual Internal Revenue Service publication, "Statistics of Income—Corporation Income Tax Returns" for the fiscal years 1958–59 to 1960–61. The numerator of the ratio consists of figures for the items "taxes paid" plus "income tax" and the denominator of figures for "total compiled receipts." In the mining and manufacturing category as well as in the all-business category a few industries, known to be burdened with very large manufacturer's excise taxes, were either eliminated or adjustments were made to exclude the excise taxes presumably included in the Internal Revenue Service data.

VALIDITY OF FINDINGS

The comparability of the data is discussed in more detail in the appendix. In brief, it is our view that while the oil industry data and the data derived from the Internal Revenue Service statistics has been computed somewhat differently, they are sufficiently homogenous to permit an approximate comparison of the various ratios. The data for mining and manufacturing and for all-business corporations include some foreign revenues and taxes. But, as the foreign tax credits of these categories indicate, their share of total revenues and taxes is too small to affect the findings significantly.

FINDINGS OF THE STUDY

A. The oil industry's tax payment

The total domestic tax payments (exclusive of motor fuel taxes) of the 30 major U.S. oil companies listed by the Chase Manhattan Bank amounted to $1.43 billion in 1961, $1.37 billion in 1960, and $1.3 billion in 1959, as the following table shows.

Total domestic tax payment of 30 major U.S. oil companies

[In thousands of dollars]

Type of tax	1961	1960	1959
Federal income taxes	260,855	289,573	308,783
State income taxes	39,365	35,892	33,809
Ad valorem, severance, production taxes	268,430	250,072	232,972
Properaty and franchise taxes	660,331	613,685	567,391
Payroll taxes	79,586	79,297	68,945
Other taxes [1]	118,599	98,714	88,684
Total	1,427,166	1,367,233	1,300,584

[1] Includes lubricating oil excise taxes.

Source: SEC Form 10-K.

In view of the aforementioned share of these companies in domestic production and refining, it is estimated that the total domestic tax payments of the entire U.S. oil and gas producing and refining industry amounted to somewhat less than $2 billion in 1961.

[*P. 2086*]

The share of the various taxes in the 30-company total was as follows:

Type of tax	1961	1960	1959
Federal income taxes	18.3	21.2	23.7
State income taxes	2.8	2.6	2.6
Ad valorem, severance, production taxes	18.8	18.3	17.9
Property and franchise taxes	46.3	44.9	43.6
Payroll taxes	5.5	5.8	5.4
Other taxes	8.3	7.2	6.8
Total	100.0	100.0	100.0

As the above table indicates, the largest single tax was that levied on properties (a substantial part of which are properties held for oil production or exploration). Next came Federal income taxes and taxes levied on production or reserves, which were approximately of the same magnitude. This distribution of tax payments is peculiar to the minerals industry and differs from manufacturing industries where Federal income taxes account for about half of total tax payments, according to IRS statistics for all manufacturing corporations.

The distribution of the oil industry's tax payments reflects the existence of a number of special factors, including two provisions in the Federal income tax statutes applicable only to minerals industries, namely, percentage depletion which is designed to enable oil and gas producers to recover the value of their depleting deposits, and the right to write off intangible drilling and development expenditures in the year in which they are incurred. These factors tend to reduce the oil industry's Federal income tax burden, as defined in this study. However, they apply only to the producing sector of the industry—the same sector which must bear most of the industry's heavy property and production taxes. Hence, a determination of whether the oil and gas producing industry pays an equitable share of taxes cannot be made on the basis of Federal income tax payments alone.

B. The tax burden on oil and other industries

The domestic gross revenue and total taxes of the 25 companies in the Chase Manhattan Bank's group with primarily domestic revenues were as follows:

[In millions of dollars]

	1961	1960	1959
Gross revenues	14,016	13,229	13,333
Total taxes	655	673	643

Source: SEC Form 10-K and annual company reports.

The companies' tax burden (the ratio of taxes to receipts) for these 3 years was, therefore, 4.7 percent, 5.2 percent, and 4.8 percent, respectively. The average for the 3 years was 4.9 percent. Thus, for each dollar of revenue, these 25 companies paid out nearly 5 cents in taxes (always exclusive of excise and sales taxes) in the 3 years under study.

For total manufacturing and mining corporations other than oil,[6] the comparative figures were as follows (by fiscal years):

[In millions of dollars]

	1960–61	1959–60	1958–59
Gross revenue	323,446	317,497	283,551
Total taxes	16,750	17,131	13,511

On this basis, the tax burden ratios were 5.2 percent, 5.4 percent, and 4.8 percent respectively, or an average of 5.1 percent for the 3-year period. Considering the approximate character of many of our calculations we may therefore conclude:

(a) That the oil industry's total domestic tax burden per dollar of revenue is virtually the same as that for all mining and manufacturing industries, and

(b) That the oil industry's lower Federal income tax burden, relative to other industries, is fully offset by the correspondingly higher burden of other taxes.

To realize the full magnitude of these other taxes it should be kept in mind that the oil industry also had a lower burden of payroll taxes than many other industries, since it is not very labor intensive. Apparently, the burden of production and property taxes was sufficient to offset all these factors.

While the tax burden for all manufacturing and mining corporations appears to be fractionally above that of the oil industry, the following figures show that for all U.S. business corporations other than oil the burden is slightly less than for oil:

All business corporations [1]

[In millions of dollars]

	1960–61	1959–60	1958–59
Gross receipts	775.3	748.9	669.3
Total taxes	35.3	34.2	29.0
Ratios	4.5	4.6	4.3
3-year average ratio		4.5	

[1] A small number of industries with very heavy excise taxes have been eliminated from this total; for details see chart III in appendix.

The reason why the tax burden for all corporations is somewhat lower than for mining and manufacturing corporations is probably due to the fact that as goods and commodities travel through the economy on their way from primary producers to consumer outlets they increase in value, partly because of the inclusion of successive tax payments into the price structure. The ratio of taxes to revenues tends therefore to be lower at the distribution level than at the production level.

MOTOR FUEL EXCISE AND SALES TAXES

Although this study is not concerned with excise and sales taxes, these taxes are of such magnitude for the oil industry that they warrant at least a brief discussion.

Total excise and sales taxes paid by the 25 domestic oil companies amounted to $2.2 billion, $2.4 billion, and $2.6 billion, respectively, for the years 1959–61. This was equivalent to a ratio of about 17 percent of the total revenue of these companies. Thus, the full and complete tax burden of oil and gas producers and refiners on each dollar of revenue is approximately 22 cents (17 cents excise taxes plus 5 cents other taxes).

It was not possible to compute a meaningful comparable ratio of excise and sales taxes to revenue for all other corporations. However, the fact that about 23 percent of total Federal, State, and local excise and sales tax receipts of $23.3 billion in 1960 consisted of motor fuel taxes indicates that the excise tax burden on the oil industry is considerably larger than on most other industries.

EFFECT OF THE TAX REFORM PROGRAM ON OIL INDUSTRY TAX BURDEN

According to a recent estimate by the U.S. Treasury, the President's tax reform program of 1963 is expected to yield $280 million annually in additional Federal income taxes from the oil and gas producing industry, as a result of a series of proposed statutory tax changes affecting the minerals industries.

Since the 25 domestic oil companies in our sample paid approximately half of the oil industry's total Federal income taxes in the years under study, we may assume that these companies would contribute the same share of the anticipated additional tax payments, or about $140 million. This would have increased their total domestic tax burden to $783 million, $813 million and $795 million respectively for the years 1959–61. In turn this would have raised their average tax burden ratio to 5.9 percent, or perceptively above the 5.1 percent figure for mining and manufacturing corporations.

Assuming that the additional tax burden could be completely shifted to consumers, prices on all oil and gas products would have to be raised by 2.2 percent in order to obtain the required $280 million in additional revenue.[7] (Actually, the price increase would probably be concentrated principally on gasoline whose cost would have to rise considerably more than 2.2 percent to recoup the additional tax payments). Even under these circumstances, the tax burden ratio would still be 5.75 percent, or higher than that of the industries with which oil is being compared in this study.

CONCLUDING COMMENTS

While the distribution among income taxes and other taxes varies significantly between the oil industry and American industry in general, the total tax burden, as defined in this study, of the U.S. oil industry is at least equal to that of the average U.S. industrial corporation and considerably higher if excise and sales taxes are included.

APPENDIX

(a) The list of 30 oil companies used in this study was obtained from the Chase Manhattan Bank's report "Petroleum Industry 1961." They are described therein as "representative" companies. They fall into

[6] For other exclusions from the total, see chart II in appendix.

[7] Based on a 50-percent corporate income tax rate, as proposed for fiscal 1964 in the President's tax message, the after-tax income from $280 million would offset the additional tax payments of $140 million.

three categories: producers, integrated refiners and international companies. Following is a list of the individual companies by category:

Producers: Amerada Petroleum Co., the Louisiana Land & Exploration Co., the Superior Oil Co., Texas Gulf Producing Co., and the Texas Pacific Coal & Oil Co.

Integrated refiners: Ashland Oil & Refining Co., the Atlantic Refining Co., Champlin Oil & Refining Co., Cities Service Co., Continental Oil Co., Getty Oil Co., Marathon, Phillips Petroleum Co., Pure Oil Co., Richfield Oil Corp., Shell Oil Co., Signal Oil and Gas Co., Sinclair Oil Corp., Skelly Oil Co., Standard Oil Co. (Indiana), Sun Oil Co., Sunray Mid-Continent, the Standard Oil Co. (Ohio), Tidewater Oil Co., and Union Oil Co. of California.

International companies: Gulf Oil Corp., Socony Mobil Oil Co., Inc., Standard Oil Co. (New Jersey), Standard Oil Co. of California, and Texaco Inc.

(b) Elimination of Foreign Revenue (see chart I): Inspection of annual reports and other sources led to the conclusion that from 1959 through 1961 foreign refinery runs accounted for an average of 2.5 percent of total refinery operations of the 25 integrated refiners (i.e., 2.0 percent in 1959, 2.9 percent in 1960 and 2.8 percent in 1961). The abovementioned percents were subtracted from the gross revenue of these integrated refiners to obtain figures for gross revenue from domestic operations only. No adjustments were made for any foreign crude oil production of these 25 companies.

The lubricating oil tax was added to the figures for gross domestic revenue and taxes of refiners and producers in order to compensate for the inclusion in the IRS "Statistics of Income" of unidentifiable amounts of excise taxes in the total compiled receipts and taxes paid by other industrial groups. The amounts allocated to these 25 refiners for the lubricating oil tax were estimated on the basis of their share of total domestic refinery runs.

[*P. 2087*]

(c) Elimination of specific industries: The figures used in charts II and III were derived from the IRS "Statistics of Income—Corporation Income Tax Returns" which gives the following definitions of terms. Gross revenues (total compiled receipts) are the gross operating receipts of corporations (minus returns, discounts, and allowances) and other receipts such as those from interest, dividends, rents, and royalties. Income taxes represent gross liabilities reported on the tax return before credit for foreign taxes paid or accrued. Other taxes (taxes paid) include the amounts reported as an ordinary and necessary business deduction as well as identifiable amounts reported as part of the cost of sales and operations. Deductible were ordinary State and local taxes paid or accrued during the year; social security and payroll taxes; unemployment insurance taxes; import and tariff duties; and business, license, and private taxes. Excise and stamp taxes were deductible, but when included in business receipts or in the cost of sales and operations these taxes often could not be identified.

The crude petroleum and the petroleum refining industry was eliminated from all industrial groups, since it was the industry to be compared to others. The beverage and tobacco industries were eliminated because it was not possible to determine how much of their heavy excise taxes—which we wanted to eliminate—were included in their gross revenues and taxes paid. Even though the motor vehicle and equipment industry pays substantial excise taxes, it was undesirable to eliminate it on the same ground that the beverage and tobacco industries were eliminated because of its greater significance in the economy. Therefore, we computed the ratio for 1958 through 1961 of taxes paid (excluding Federal income and all excise taxes) to gross receipts of the eight largest motor vehicle companies. The resultant ratio was considered representative of the entire industry and was therefore applied to the gross receipts of the motor vehicle industry as given in the IRS "Statistics of Income." The difference between the "taxes paid" item in the IRS "Statistics of Income" and our computed tax figure was considered to be excise taxes and was therefore subtracted from total mining and manufacturing revenues and taxes.

The communications industry was eliminated from the totals for all corporations because it too pays substantial excise taxes and it was not feasible to estimate the amount of its excise included in the IRS data.

(d) Limitations of data: Even though excise taxes were eliminated as far as possible from the data in the IRS "Statistics of Income" either by omitting entire industries which pay heavy excise taxes (the beverage, tobacco, and communications industries) or by estimating the amount of the tax and subtracting it (in the case of the motor vehicle and equipment industry), the figures still contain incalculable amounts of excise taxes paid by the remaining industries. As previously stated, allowance was made for this fact by adding oil lubricating taxes to the taxes paid and revenues received by the oil industry. Another limitation lies in the fact that the figures obtained from the IRS "Statistics of Income" are overstated to the extent that they include foreign sales and foreign tax credits, while the oil industry data are for domestic operations only. However, foreign tax credits represents only a very small part of total income tax liabilities of mining and manufacturing corporations. For example, according to the IRS data, in 1961 these credits accounted for only 3.6 percent of their total income tax liabilities. This fact was taken as an indication that the foreign revenue of these corporations was also relatively insignificant. Hence, the comparability between oil and other industries is not perceptively affected by the inclusion of foreign taxes and revenues in the data for other industries.

CHART I.—*Ratio of taxes to revenue of 25 selected domestic oil companies*

	1961	1960	1959
Gross revenue of 25 companies	14,384	13,585	13,308
Less gross revenue of 5 producers	340	367	359
Gross revenue of 20 refiners	14,044	13,218	12,949
Less estimated revenue from foreign refining operations	393	383	259
Gross domestic revenue of 20 refiners	13,651	12,835	12,690
Plus:			
Gross domestic revenue of 5 producers	340	367	359
Estimated lubricating oil excise tax receipts	25	27	25
Gross domestic revenue of 25 oil companies	14,016	13,229	13,333

	1961	1960	1959
Total domestic taxes [1] of 25 companies	655	673	643
Gross domestic revenue of 25 companies	14,016	13,229	13,333
Taxpayments per dollar of domestic revenue (percent)	4.67	5.17	4.82

Source: IRS "Statistics of Income."

Mr. LONG of Louisiana. It seems to me that when this industry is paying $40 million more in taxes under the bill, with every other industry getting a reduction, it is paying enough taxes, and we should not increase them.

I hope that in the future, Senators will investigate the facts, and not listen to people who are constantly spearing this industry. There are those who have no more than a detached, textbook interest in the industry. We cannot justify any further taxes on this industry unless we wish to have a general increase in taxes for all industries.

Mr. JAVITS. Mr. President, on behalf of myself and Senators BEALL, BENNETT, and KEATING, I send to the desk an amendment and ask to have it stated.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. At the end of page 351, it is proposed to add the following:

SEC. 239. EXEMPTION OF CERTAIN LIVE DRAMATIC OR MUSICAL PERFORMANCES FROM TAX ON ADMISSIONS.

(a) IN GENERAL.—Section 4233(a) (relating to exemptions from the tax on admissions) is amended by adding at the end thereof the following new paragraph:

"(12) LIVE DRAMATIC OR MUSICAL PERFORMANCES.—No tax shall be imposed under section 4231 in respect of any admission to a live dramatic or musical performance presented in a theater, or presented in any other place if the presentation of such performance is the principal activity being conducted in such place at the time of such admission."

(b) EFFECTIVE DATE.—The amendment made by this subsection (a) shall apply only with respect to amounts paid, or nor after the first day of the first month which begins more than ten days after the date of the enactment of this Act, for admissions on or after such first day.

Mr. JAVITS. The amendment proposes to take the 10-percent tax off theater tickets for the live theater. It has nothing to do with the motion picture theaters or any other form of entertainment. It deals only with the live theater and musical performances.

This is the amendment which the Senator from Arkansas [Mr. FULBRIGHT] sponsored in the Finance Committee, and which was approved by the Finance Committee. Then, because of the administration's feeling that this type of tax should not be removed, it was swept out with other provisions.

I propose it as a separate item because, first, I do not believe it fits into the category of any of the taxes with which we can deal; second, because we have already demonstrated, both in the terms of the bill itself, and in the action we took on the amendment of the Senator from Minnesota [Mr. MCCARTHY], that there is no pretense of confining this tax bill purely to the idea of adjusting the rates, so far as either individuals or corporations are concerned, but that this tax bill will deal with other matters.

This is another matter which had very sympathetic consideration in the committee; indeed, enough to be carried in the committee, at least tentatively; and it should have a sympathetic consideration in the Senate.

Man does not live by bread alone; this is the essence of what we understand to be our society, and the theater is one of the great ornaments of our Nation.

The theater is suffering very materially. Indeed, the commercial theater, as we know it, is dying. This is a point which I think needs to be impressed upon all Americans; and anything that we can do to breathe some life into it is extremely useful and valuable. The theater industry is probably the best judge of the fact that the 10-percent tax on theater tickets is extremely harmful to it. If the burden were lifted from the industry, this would be extremely helpful to its continuance and vitality.

As evidence that the theater is in a very bad way, let me say that the amount of the tax, about $6 million a year, is approximately equal to the annual loss suffered by theater productions in the major theater center of the United States, New York City. The tax amounts to $6 million. The annual loss in theater production is figured at about $5.5 million.

When the 20-percent tax on theater tickets was reduced to 10 percent, the city of New York put a 5-percent tax on theater tickets, which was very wrong. The city realized it was wrong and removed that tax in October 1961, in the hope that this proffer on the part of the city of New York might create some feeling in Congress that the Federal Government should remove its tax burden from the theater tickets.

When it was announced that the Senate Finance Committee had voted to take the tax off theater tickets, the leaders in the theater, including the president of the New York League of Theaters, which represents all the managers, made a public declaration that if the 10-percent tax were taken off theater tickets, that saving would be passed on to the theater ticket buyers to stimulate attendance at the theater.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. ANDERSON. I was trying to find a clipping which stated that the saving would not be passed on.

Mr. JAVITS. The saving would be passed to the theatergoer.

Mr. ANDERSON. The clipping stated that the price would remain the same.

Mr. JAVITS. I am sorry, but I have talked with the acting president of the League of New York Theaters, and with some of the leading producers, including Leland Hayward, about it. And the leading managers have assured me by telegram that the savings would be passed on to the theater ticket buyer in order to stimulate attendance at the theater.

Mr. ANDERSON. I saw an article published in a newspaper the day after the Senate committee had taken its first action, showing that the tax would be retained by the theaters, because they were in distress.

Mr. JAVITS. I have a letter from the attorney in Washington for the League of New York Theaters and the National Association of Legitimate Theatre. He is Joel Fisher. I should like to read one section from his letter.

He writes as follows:

> Also, I am pleased to confirm on behalf of my clients, the League of New York Theatres, Inc., and the National Association of Legitimate Theatres, Inc., that the leading producers and theater owners will pass along to the theatergoers the savings from the elimination of the admission tax. In brief, the theatergoer will benefit from repeal of this admission tax.

I might say to the Senator from New Mexico—and I have, of course, the high-

[P. 2089]

est respect for anything he might tell the Senate—that it may very well be that some theater manager said that this proposal would assume the continuance of present scales of wages, salaries, and other costs, with which the Senator knows the theater is very much concerned, including union and association problems. We would expect that. In other words, we could not expect this commitment to be completely blind; but this is the present design, based upon present financial operations, as expressed to me by counsel for the League of New York Theatres, which represents theater management.

Mr. ANDERSON. I thank the Senator from New York. Unless my memory is playing me a trick, my understanding of the statement made by someone connected with the theater industry was that the theaters in New York did not contemplate passing on the proposed reduction.

Mr. JAVITS. There is no contract or commitment that that would be done. One manager or another might believe that he could not pass on the saving; that he would have to take it for himself, in order to produce a play that he thought ought to be produced. But the general intention and design is the one I have just read, from counsel for the League of New York Theatres. I would not wish to make any representation to the Senate that I have an ironbound promise or anything else; but I do have a statement of intention.

Mr. LONG of Louisiana. Mr. President, will the Senator from New York yield?

Mr. JAVITS. I yield.

Mr. LONG of Louisiana. I understand that the Senator is confronted with a real problem. As one who voted on the amendment in committee, I know we felt that this was an amendment that would have opened the door to the removal of all excise taxes, and that that would cost about $550 million. We agreed to the amendment before lunchtime but had to reverse ourselves in the afternoon in order to prevent the removal of all excise taxes.

I should like to suggest to the Senator that, so far as I am concerned, if he would offer the amendment to a subsequent bill—which would, of course, have to originate in the House of Representatives, an appropriate bill that the President would have an opportunity to veto if he did not agree with it—I could support what the Senator from New York is seeking to do. I think we might be able to get on its own merits the kind of relief he seeks for the legitimate theater.

But if we vote on a single excise tax amendment in the Senate, there are Senators who would feel obligated to offer similar amendments to remove the excise tax from other items, and we would have no choice but to open the floodgates; and that might cost $5 billion.

If the Senator from New York would be willing to cooperate with the committee in this respect, I assure him that we would try to see to it that this question would be considered at the earliest possible opportunity.

Mr. JAVITS. There seems to be an appropriate frame of reference for the consideration of this matter, especially as the committee looked favorably upon it. I am sure the Senator would not wish me to assume that he expresses the opinion of anyone other than himself. But if he does express the opinion of the committee, it would, of course, be extremely valuable for the Senator from New York to know that. I will be as frank with the Senator from Louisiana as he has been with me. Whether the amendment succeeds or fails on a vote, it is my feeling that, at least, there would be an expression of a substantial amount

of opinion in the Senate. The amendment may fail because of the important argument which the Senator from Louisiana makes. Apparently, the Senator convinced the Senator from Arkansas [Mr. FULBRIGHT], too, because I asked the Senator from Arkansas to offer this amendment since he was the original author of it in the Finance Committee. But he declined to do so, saying that in view of my deep interest in the theater, he preferred to have me do it.

I am being frank with the Senator from Louisiana. I know he will understand it. I should like to demonstrate some substantial sentiment for this idea by a vote. Then I feel there would be a good basis for a followup at some time when the argument that is now being made could not be made.

On the other hand, if the committee, or a substantial number of the members of the committee, would give that assurance, I would certainly give most serious consideration to whether to press the amendment.

Mr. LONG of Louisiana. When the amendment was first offered, it was agreed to in committee by a vote of 9 to 8. I voted against it. If we made that adjustment, the vote would have been 10 to 7. The committee itself recognized the merit of what the Senator from New York is advocating.

Mr. SMATHERS. I, too, voted against the amendment.

Mr. LONG of Louisiana. The Senator from Florida also voted against it. He feels somewhat as I do.

Mr. SMATHERS. As the Senator from Louisiana has said, the amendment was agreed to orginally in committee. There was a sort of pulling of fingers from the dike; because after voting as the Senator from Louisiana said yesterday, for a $550 million reduction in excise taxes. We are all somewhat sympathetic toward the Senator's desires.

I must say to the Senator from New York that in my State perhaps we are somewhat uncultured. We do not have as many legitimate theaters as motion picture houses, and some excise tax still remains on motion picture theater admissions. While I strongly favor helping and encouraging the legitimate theater, the living theater, as much as possible, still, in most small communities in my State the people who have a night out go to the motion picture theaters. They have to pay excise taxes on all admissions costing more than $1. So it seems to me that we must consider this, as the Senator has said, and we will consider it when the excise tax question is considered in toto. Before June 30, $1,500 million in excise taxes will expire. So there will be an opportunity to consider the legitimate theater admissions proposal. We shall have to consider the motion picture admissions proposal. We shall have to consider the excise tax on light bulbs, because, once again, it is not possible to see the theaters unless there are those light bulbs—and there is a tax on the light bulbs.

We shall have to go over the whole country again, talking about the removal of excise taxes. Every individual Senator has a favorite tax that he would like to have dropped off. Certainly the proposal of the Senator from New York will receive consideration when an excise tax bill is considered. The chairman of the Committee on Finance has already stated that he will hold hearings on excise taxes this year. The chairman of the House Committee on Ways and Means has said the same thing. However, under the circumstances at this time, I do not see how we could favor accepting this particular amendment without opening up the floodgates.

Mr. JAVITS. I should say in response to both Senators that they have pointed up one of the reasons why I have offered the amendment and why I really believe it should be pressed to a vote. I deeply believe that unless we have some cognizance of the significance of the living theater as being, in a sense, one of the real gages of culture of our country, we miss the fundamental point of the amendment.

Let us consider the motion picture theaters where all admissions below $1 are exempt from the excise tax. The vitality and skill of American moving pictures is very heavily based on what happens in the American theater. That is where actors are developed. That is where scene directors, who try out new ideas and concepts, are developed. It is the legitimate theater that develops playwrights. As a practical matter, the living theater has come to such a low estate that of the roughly 12,000 members of Actors' Equity—I am giving the figures off the top of my head, but the order of magnitude is correct—only about 10 percent—somewhere between 1,200 and 1,500—held a job within the last couple of years, notwithstanding the fact that so many are finished actors.

One of our colleagues told me a story to the effect that he had paid the way through a college theater course for a particularly gifted young man, but now had him working in his own office because the young man could not obtain work in the theater, for which he had been so superbly trained. So it seems to me that if we do not understand this proposal as being an effort to encourage

one of the finer cultural expressions—our stage—we really miss the point.

Mr. President, while a substantial number of Senators are in the Chamber, and so long as the Senate will vote on the amendment, I ask for the yeas and nays.

Mr. LONG of Louisiana. Does the Senator from New York wish to insist on the yeas and nays?

[*P. 2090*]

Mr. JAVITS. I do. We ought to get some concept of the sentiment of Senators who favor the proposal. I think that would help in the future.

Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. JAVITS. Mr. President, I would not want the Senator from Louisiana to consider me obdurate. I believe that his good will and helpfulness will be indispensable in getting the job done. I said a moment ago that the theater is suffering seriously and materially. For example, in 1931, there were 66 theaters in New York. The number is down to 33 now. On the road—that is, throughout the country—there were 560 theaters; now the number is down to 193.

Mr. President, I have already given the figures in regard to the money lost in the theater. It is estimated that out of every $2 invested, only $1 is returned, under present conditions—especially in view of the fact that the costs in the theater have risen so very materially—approximately five times or more in the past two decades. In other words, a play which cost $25,000 to produce in 1939 would cost approximately $150,000 to produce today.

A very significant analysis of the situation in the American theater has been written by John F. Wharton, based upon material compiled by Prof. O. Glenn Saxon, under the auspices of the League of New York Theatres and the National Association of Legitimate Theatre, Inc. The analysis shows what is happening in this country. From the analysis made by these very able men, it appears that the whole system of theaters in America, both the commercial and the noncommercial ones throughout the Nation, depend on what Mr. Wharton calls the creative core of our theater, which he says is the system which brings 50 to 75 new plays, professionally produced, to New York every season—and more than 75, if professional off-Broadway is included. He points out:

> For 50 years these plays have dominated the American theater.

I believe it might come as a surprise to many Senators to find, when they examine the situation throughout the country, the extent to which people in the various States are involved in the theater or are closely related to it, from the point of view of their interest in it and their wish to encourage it and help it develop.

In the United States there are some very fine repertory theaters. The most recent development in that connection has been in Minneapolis; I refer to the so-called Tyrone Guthrie Theater.

It is important that Senators fully realize that the pending amendment relates to a great social effort in the interest of aiding what is perhaps America's most distinguished art—the American theater, which throughout the years has been the hallmark of the culture of a people—and that Senators understand that in the United States the theater is not subsidized. Incidentally, ours is about the only one of the great nations which does not have theater subsidies by the government. We have no Government subsidies or any contributions of that sort in aid of the theater, except for the commercial efforts or the voluntary efforts of Americans throughout the country who are desirous of helping the theater.

So when Senators consider the key place the theater occupies in our culture, I believe they will find that this amendment cannot properly be considered as one to be lumped together with amendments relating to the excise taxes or other phases of the tax structure which relate to personal comforts or conveniences, or even personal necessities. Instead, this amendment relates to the giving of assistance to a great art which so far has received no assistance whatever of this kind.

Let us remember that we have completely removed the tax from the nonprofit theaters of all kinds. I say frankly, Mr. President, that I see no real difference—when we consider the condition of the theater—between the situation of the commercial American theater and the situation of the nonprofit theater. Their objectives are the same. Indeed, the nonprofit theater draws its sustenance very heavily from what Mr. Wharton calls the "creative core" of the American theater, strongly based in New York. but which also has established areas of great importance in other parts of the country, including Denver, Dallas, San Francisco, and other metropolitan centers where the theater has become a very significant and important art.

Mr. President, as I speak of the American theater, I also wish to pay my respects to New York, in particular. Often we hear expressed on this floor a feeling which would lead one to believe that New

York is not really a part of the United States, not a seat of culture and understanding, not an exponent of the fine things in our country of which all of us can be very proud. However, I know of no particular development in New York, other than the great buildings and skyscrapers there, which represents better America's trusteeship than does the institution of the theater, which, as it has developed in New York, constitutes a magnet to people from all over the United States and from all over the world, who there find in the theater the expression of American culture and creativity.

Furthermore, anyone who now attends the New York theater will be quite surprised by the number of British plays and other foreign plays being produced there, after first having been developed abroad.

All this is confirmation of my statement that, judging from the available figures, the American theater is suffering very seriously and may be dying right before our eyes. Thus, anything we can do to help revive it and breathe life into it is of critical importance, not only to the theater in New York, but to the theater in the entire Nation.

To Senators who feel that this amendment should be laid aside at this time—with all due respect for the feeling about this matter—I say that I think it most important that there be sufficient expression of opinion by Senators in regard to this matter—which I believe to be entirely separate and apart from the question of raising excise taxes—to give us a solid basis of support for dealing with it at some other appropriate time, if the Senator from Louisiana [Mr. LONG] feels that way.

The pending bill already deals with a number of matters which are not strictly related to the tax-reduction concept and to the concept of giving stimulation to the economy. For example, I have already referred to the McCarthy amendment, which was worked out admirably and was adopted.

I feel that the American theater is an institution of very great importance to the Nation and to the stimulation of its culture; and I am convinced that anything of such great importance in that connection should receive this proposed support at this time.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the analysis to which I have referred.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

[A statement of the League of New York Theaters, Inc]

CRISIS IN THE FREE WORLD THEATER

(By John F. Wharton, from material compiled by Prof. O. Glenn Saxon)

INTRODUCTION

Let me say first that the following pages are not a statement of despair. They are aimed at awakening in us the awareness of an important problem existing in our country and at offering a possible solution that is both practical and optimistic.

The League of New York Theaters commissioned Prof. O. Glenn Saxon to do an exhaustive study of theater economics in the United States of America. When the report was finally compiled, we saw before us a clear picture of a constantly diminishing business within a constantly expanding economy. The obvious competition from motion pictures and television was by no means a sufficient or valid answer to this consistent decline. The fact is that the living theater in America has been caught in a cost-price squeeze and has faced ever increasing taxes. This is a historic dilemma which has seriously impeded the development of the performing arts in many parts of the world. However, in most cases the solution has been found in legislation which could enable the theater to function as fully as possible as a vital expression of the Nation from which it springs.

John F. Wharton, who has written this statement, has spent his life in the professional theater as a partner in the Playwrights Producing Co., and as a legal adviser to many of America's most important theater people. He sees the theater as an exciting and serious element in our national life and its preservation as a responsibility not only to ourselves but to the rest of the world. From this standpoint Mr. Wharton has drawn upon the research of Professor Saxon and written the following pages which he has entitled so meaningfully, "Crisis in the Free World Theater."

ROBERT WHITEHEAD,
President, the League of New York Theaters, Inc., the National Association of the Legitmate Theater, Inc.

In the current contest to win the undecided peoples of the world to our way of life; money, arms, and even machines have, by themselves, proved insufficient. Every honest observer reports that something more is

[*P. 2091*]

needed; these peoples demand something for the spirit, for the soul. In short, a culture which makes the material life worth living. Since the days of Aeschylus, one of the keystones in the arch of culture has been the living theater, which can entertain, educate and inspire its audience—often even an illiterate audience. Fortunately for us, we have built a vital living theater which, despite a current decline, can still impress both the sophisticated and the uneducated anywhere in the world.

In dynamics, progressivism and drive, our theater, for many years, ranked ahead of any

69–108 O—66—pt. 3——53

other country, when viewed as a whole. Despite the long history of the Russian theater, returning travelers reported year after year that, except for an occasional company, they were years behind us. The same was true of all of the Iron Curtain countries of which he had knowledge. On the Continent, except for a few avant garde writers, nothing was happening. Only in England was there evidence of ferment and creativeness comparable to ours.

Now, it is in our own country and in England (to a lesser extent) that the theater is the product of the free enterprise system. In the Iron Curtain countries, and also in almost every other country, the living theater is either the creature of the state or largely subsidized by it. (Today some countries are pouring such enormous subsidies into their theater that our supremacy is threatened.) Even England has resorted to subsidy, in part. Hence, the American theater should be one of our proudest displays to the undecided peoples, and should be encouraged and assisted by every device known to the free enterprise system.

JUST THE OPPOSITE IS THE CASE

The Federal Government and the city of New York have continually harassed and impeded the creative core of the American theater. The heaviest blow is today dealt by the Federal Government through the admissions tax of 10 percent. This tax yields, from the living theater, not more than the insignificant amount of .0007 percent of Federal revenues. Yet, as we shall see, its impact on the theater is staggering; moreover, it is applied in a fashion clearly discriminatory against the creative core.

The creative core of our theater is the system which brings 50 to 75 new plays, professionally produced, to New York every season (more than 75, if professional off-Broadway is included). For 50 years these plays have dominated the American theater. The millions of people who see them each year in New York begin to spread the thoughts, standards, and concepts of these plays throughout the land. Many of them are toured through the country; they are duplicated by the 75,000 nonprofessional groups outside of New York. They thus reach more millions of our citizens who do not come to New York.

In addition, the best of the productions are adapted for presentation not only in the British Empire, but in all non-English speaking countries which have a going theater. Even the Iron Curtain countries present them—without paying royalties. But these presentations are, on the whole, puny in comparison to what could be done if real assistance were given.

It is important to understand that the dynamics of the industry requires as many new productions as possible. For every year brings a new crop of talent—playwrights, directors, actors, producers, composers, lyricists. They must have an opportunity to learn their trade and test their skills. Very few will reach the top, just as in any other free enterprise industry. But if the best are to reach the top, everyone must have opportunity. Only a sufficient number of productions can make that opportunity available.

THEATER ECONOMICS AND THE ADMISSIONS TAX

In order to have a sufficient number there must be a sufficient number of entrepreneurs (who, in the theater, are the producers) who can bring together the talent and the capital necessary for a production. The money, in the theater, is of unusual importance, for every production of a play is a new venture calling for venture capital, the most difficult kind of capital to obtain. Fortunately, the theater has had an intrinsic fascination for many venture capitalists, but it has, up to now, also offered a chance of reward commensurate with the risk. Whether it can continue to do so is doubtful. There are various reasons, but clearly one of the most important is the heavy and discriminatory admissions tax.

In the 1959–60 season, the last season for which figures are available, 77 percent of the new plays produced failed to earn back the venture capital invested in them; the combined loss was about $5½ million. It remains to be seen whether the successful 23 percent will, in time, earn more than that amount. What can be seen now, by any venture capitalist who cares to look, is that the Federal Government took, in admissions taxes, $6 million, more than the total losses of the failures. It isn't an attractive picture, is it?

This discrimination is equally startling. Motion picture theaters attract seekers of theatrical entertainment. When a motion picture has been produced, it requires, to exhibit it, only a projection machine and a projectionist. After a play is produced, it requires a troupe of actors, musicians, and stagehands who must be paid every week. Consequently, the admission price to the living theater must be higher. But the lower priced motion picture tickets have been consistently exempted, in whole or in part, from the admissions tax.

The admissions tax is an excise tax, and one thing about excise taxes is clear. A booming industry can absorb an excise tax without much difficulty (the theater absorbed it in the boom 1920's and war years). A financially declining industry cannot; excise taxes accentuate the decline, and eventually help to kill the goose that once laid the golden eggs. Since 1930 the theater has been a financially declining industry; in detailing the decline it will become apparent how the Government—instead of trying to halt the decline and stimulate regrowth—imposed both excise and other tax problems, as well as nontax burdens with disheartening regularity.

The amazing feature is the fact that until recently the theater maintained its artistic vigor despite the financial decline.

THE RISE AND FALL

Between 1920 and 1929 the disposable personal income of the Nation (in dollars of constant purchasing power) increased nearly 40 percent. In the second half came the (until then) unprecedented stock market boom. Simultaneously there was a great reduction in Federal income and corporation taxes. By 1929 personal income taxes were one-half of 1 percent to 25 percent. Corporate taxes were only 11 percent, which precipitated an increasing flow of dividends. The 10-percent admissions tax was carried

over from the World War I tax structure, but in the face of the other tax reductions was insignificant. Venture capital was easy to find; the box office boomed; production costs and running costs were comparatively low. The number of productions soared. In 1928 there were 264 new productions; the lowest number for any year in the 10 years 1921–30 was 152; the average was 217. During this period, famous personalities, such as Robert E. Sherwood, Eugene O'Neill, Maxwell Anderson, S. N. Behrman, Alfred Lunt and Lynn Fontanne, Katharine Cornell, Richard Rodgers, Cole Porter, began or developed their careers.

The stock market crash of 1929 warned of the depression which was to settle down on us and close every bank within 4 years. At the same time, the effectively competitive talking picture passed out of the experimental stage, and the no-admission radio programs began to take hold with a vengeance. Personal and corporate income tax rates went up. Venture capital was no longer plentiful. The financial decline of the theater began.

The factors of financial rise or decline in any industry are (1) amount of production (number of plays produced); (2) capital goods facilities (physical theaters), (3) sales (attendance), and (4) profit per dollar invested—this last of overpowering importance in an industry constantly seeking venture capital. Let us take these up in order.

Production: In the seasons ended May 31, 1927, and 1928, over 260 plays were produced per season. By 1931 this number had fallen to 187—and the decline had only started. The average number of plays per season from 1931 through 1940 was 142; for the ten years 1941–1950 it was 78—despite the fact that in the war years, always a boom time in the theater, the number was over 90 each year. From 1951 through 1960 the average dropped to 62, but in the last four seasons (including 1961) it has been under 60. The detailed figures are set out in exhibit A.

Theaters: In 1931 there were 66 physical theaters available for productions of the creative core. This number declined steadily during the depression decade of the 1930's to only 43 in 1940—a decline of 35 percent in one decade.

The downward trend continued, even during the war years, and reached a low of 30 theaters in 1950 and 1956—a decline of 55 percent since 1931. Today the number is about 33, an increase of 3 over 1956. However, these three theaters were old theaters, which had been abandoned for other uses and were reclaimed for professional production. No theater for professional productions exists in New York that was built after 1927—34 barren years as far as capital facilities are concerned—although architects and designers have been burning with creative ideas.

The decline in physical facilities has not been limited to New York. Plays emanating from the creative core frequently are toured through the Nation. Obviously, this requires physical theaters throughout the Nation. The number of such theaters has declined from 560 to 193. (See exhibits B and C.)

Attendance: Accurate figures on attendance are difficult to obtain. However. it is obvious that if the number of physical theaters in New York dropped from 66 to 30, and that if the number of physical theaters on the road dropped from 560 to 193, there must have been a decline in attendance of considerable proportion.

During the period of this decline, the population of the United States increased 46 percent, the per capita disposable personal income (in dollars of constant purchasing power) rose more than 78 percent, and the increased efficiency of the airlines brought New York within easier and easier reach.

Profits: Almost all profit-seeking industries in the United States have been caught in a cost-price squeeze since 1939. The industries which have had the hardest going are those which (a) rely on personal service employees to a major extent, particularly where such employees are highly unionized, or (b) constantly requuire new items of one sort or another, or (c) find more than average public resistance to increased prices for the product, or (d) have limited outlets of distribution. The living theater suffers heavily in all four respects.

[P. 2092]

Machines play an insignificant role in the theater. Actors, musicians, stagehands, press agents,—all highly unionized,—are the major operating costs, although the royalties to dramatists, composers and lyricists, also highly organized, come to no small item. Moreover, there is always a shortage of talent with "star" quality—the ability to draw people to the box office—and the successful actor or dramatist or composer can obtain astoundingly high compensation. Exhibit D shows the increase of minimums in the theater; vast increases in cost also come from those who can command much, much more than the minimum.

As mentioned, every play is the organization of a new enterprise—new sets are bought, new costumes made, new props secured, often in a rush and hence at overtime rates. The rise in these costs has been tremendous. In the 1930's a musical comedy could be, and often was, produced in toto for $75,000 to $100,000. Today, the costumes alone may cost more than that.

Ticket prices have been raised (see exhibit E), but it has not been possible to raise them sufficiently to pass along the increased costs. Plays must now run longer in order to recoup their costs and make a fair profit; this means that more people must see them.

However, the distribution outlet is limited. Even a lavish musical cannot be presented properly in a stadium seating 100,000 people. The current physical theater will seat, on the average, around 1,000 people. This means that many people who wish to see a "hit" cannot get in; this germinates a sales resistance to all ticket prices.

It is difficult to get exact financial figures on plays, since they are private enterprises, but certain facts are clear. Exhibit F shows how capital requirements have risen. Profits have not risen commensurately.

For example, in 1938 "Life With Father" was capitalized at $25,000. It is estimated that it earned at least $1,500,000, a profit of $60 for each $1 invested. Ten years later the same producer presented a sequel by the

same authors, "Life With Mother." It was capitalized at $100,000—four times as much, and would have required earnings of $6 million to show a 60-to-1 return.

Let us repeat once more: If the creative core is to continue as part of a free enterprise system, it must attract venture capital. Every factor which the venture capitalist scrutinizes is shifting toward the negative. The trend cannot continue indefinitely, or the theater will require subsidy or cease to exist.

By every test the living theater, for 30 years, has been a financially declining industry which has needed, still needs, and will continue to need, help and encouragement. The record shows that it has received discouragement from every side.

SOME OTHER ASPECTS OF FEDERAL TAXATION

In the low tax years of the 1920's, the organization of a legal entity to produce a play was a simple matter. Sometimes it was done by syndicate letter agreements. More often a simple corporation was organized; the investors received a senior security, debentures or preferred stock, and a share of the equity stock. Everyone was thus protected from personal liability; the accounting problems were routine; the tax burden clear and small.

When corporate tax rates rose, during the 1930's, investors, who, it must always be remembered, were venture capitalists, objected to stock ownership, so a simple loan agreement with the producing corporation was worked out, which gave them their share of profits in lieu of interest. Personal liability was still protected. (The professionals, among themselves, and their close friends, still frequently used syndicate agreements.)

In 1940 an excess profits tax was passed which discriminated so violently against new ventures such as play productions that the use of the corporation had to be dropped. Most producers assumed personal liability and used a modified form of the loan agreement. Suddenly, an amendment to the law knocked out the loan agreement by denying a fully deductible loss to the lender—the venture capitalist.

The industry then turned to the limited partnership as a last hope. At first this hope seemed doomed by mechanical difficulties. When the first investor, or his counsel, looked at the proposed agreement, he demanded changes; the second investor then demanded other changes, which required going back to the first for reapproval; the third wanted something which required going back to the first two; and so ad infinitum. Fortunately, the industry laid aside personal prejudices and agreed on a more or less standard form. This did away with the interminable delays.

When all seemed well, the Treasury launched another attack. It brought suit against a syndicate of one of the most distinguished and reputable producers and his investors, asserting that they should be taxed as if they were a corporation. There was a further plain implication that the standard limited partnership was next in line for attack. The sophisticated venture capital dried up immediately; it looked as if there would be only a shell of a season during the coming year. At this point the industry retained a distinguished ex-Treasury official who was able to make the Government see some light. He obtained a ruling that the standard limited partnership was a partnership, to be taxed as a partnership and not as a corporation.

But the end is not yet. Less than a year ago the Treasury proposed new regulations designed to knock out a limited partnership unless the general partner could show adequate financial means. The new entrepreneur, willing to risk his own credit future, was not to be acceptable. He was to be denied the financing method open to his successful older competitors. The regulations, as finally promulgated, were less onerous, but where this attack will end remains to be seen.

Such is the record of the lack of help or encouragement given to the declining living theater by the Treasury.

Just one bit of help was given in 30 years. In 1954 the admission tax was not eliminated but it was reduced to 10 percent. New York City immediately imposed a new tax of 5 percent.

NONTAX ASPECTS

Near the close of the 1940's the Securities Exchange Commission decided that play productions involved sales of securities to the general public and therefore the entrepreneurs must file with the Commission. The industry protested; the law was far from clear. A Commission representative assured the industry that the matter would be handled so as to provide minimum difficulty. A short set of papers would be all that was required; 5 days after filing, unless the Commission objected, the producer could seek and take investments. The industry then quickly agreed to obey despite warnings that the simple procedure was only the beginning.

The warnings proved correct.

The organization of a play often depends on one golden moment when star, director, and theater are all available; then moving ahead full speed. Five days' delay is not fatal. But it didn't remain 5 days very long. New Commission representatives decided it should only be 5 days if they gave their approval within that time, and they frequently didn't even look at the papers within that time. The short set of papers grew and grew and grew, as the Commission demanded more and more and more statements. At one time the Commission proposed a regulation that the papers must include a synopsis of the plot of the play. Six or seven weeks became the normal time. Finally, after continued protests, but only after continued protests, the Commission adopted a system which can and does speed up approval. But the short set of papers and the 5 days have never returned.

During this whole period of harassment of the producers who complied with the Commission's rulings, not one action was brought by the Commission to prevent producers who ignored the law from raising money for a play, although these producers regularly sent out unapproved prospectuses and in one case announced their money raising in the daily papers.

Such has been the lack of help from the guardians of financial morality.

Until Mayor Robert Wagner personally studied the problem and reached the long over-due conclusion that the theater was one of the city's main attractions, the city of New York drew, from the theater, indirect benefits in the millions, but added to the general harassment.

One reason why the construction of theaters came to an end was an obsolete city building code. The theater protested for years but it wasn't changed until building costs had risen to a point of no return, while the general theatrical financial decline had made any kind of theatrical construction unattractive to the builder.

Even in minor ways, the city has been, to put it mildly, uncooperative. In the 1920's it became clear beyond all question that the theater was an enormous drawing card for visitors, and some wise theater operator appealed to the city to help make theatergoing attractive to them. He proposed that, since many of these visitors used taxicabs to go and come, the theater approaches be cleared of parked cars for an hour before curtain time. The experiment was tried and everyone who remembers it will testify that it was spectacularly successful—everyone except the city officials, who refused to make it permanent. No only that, but shortly thereafter taxicabs were forbidden to enter theater streets to pick up passengers at the close of a play.

A real body blow was dealt by the city when it negated half the benefit of the grudging reduction of the Federal admissions tax. This occurred in 1954. The reduction was from 20 to 10 percent. The city immediately imposed a 5-percent tax.

Quite properly, the city has a commissioner of licenses whose duty it is to make sure of the physical safety of theaters for both actors and audience. From time to time, a commissioner has been appointed who has used his power over the physical theater to censor the artistic content of a play. No other city has ever used such a crude, backhanded method of censorship.

Such has been the attitude of the city where the artistic side of the living theater has flourished so brilliantly as to bring millions of visitors every year.

At the moment there is a glimmer of hope. Mayor Wagner has studied the problems and realized that the city has been energetically sawing off a stout branch of its support. helped by the State and the Federal Governments. He is advocating as a first step to rescue the theater repeal of all admission taxes.

CONCLUSION

The United States is justly proud of the fact that its great physical natural resources have been developed by a free enterprise profit system. The culture of a country is as much a natural resource as any physical product, but only two facets of our culture have been products of the free enterprise system—books and the living theater. Painting, sculpture, music, opera, ballet have had to rely largely on charitable institutions. Books have been left alone; no one ever had to pay 10 percent, or 15 percent, or 20 percent of the cost of a book before

[P. 2093]

being permitted to read it. The disheartening record of the theater is set out above. In conclusion, let us compare the treatment of a physical resource with the treatment of the living theater.

When the importance of oil became apparent, what did the Government do? Did it harass the oil explorer and his backers with Government, city, and State regulations? Did it levy special unfair taxes on the prospector? Very clearly it did not; instead it gave the seeker for oil and his backers an enormous tax advantage. They were permitted to charge off exploration costs whether they succeeded or failed; they were given, in cases of success, a depletion allowance which amounted to tax-free income; they were assured of a capital gain treatment on sales. These factors combined to produce the greatest oil industry in the world—copied by every other nation. Would we have had it without this encouragement?

The creative core of the living theater can be proud of the fact that, despite lack of help and encouragement, despite financial harassment, despite discrimination against it, it has maintained, artistically, a vital dynamic theater. But artistic vitality cannot surmount financial disaster forever. Our creative core is today on the brink of the cascade; at any moment it may go down with a plunge. Yet very little is needed to avert the danger. It is not seeking subsidization nor special aid; it is asking only that a free people take pride in their free theater and treat it fairly.

Without pride at home, we shall soon lose our position abroad. We cannot continue to ask eminent producers to arrange economical foreign tours to show off our theater, while our competitors spare no expense to display their best. We must look on our artistic theatrical accomplishments with admiration, not as something to be used at the least expense possible. This may require a complete reversal of feeling toward the theater on the part of many people. Maybe this cannot be done overnight, but, to quote our President, "Let us begin." An admirable beginning, as shown above, would be the elimination of unfair and discriminatory taxes.

Source: League of New York Theatres.

Mr. MORTON. Mr. President, I appreciate the plight of the American theater, and I commend the Senator from New York for his efforts in behalf of this institution.

However, I feel constrained to oppose his amendment.

Yesterday, the Senate had a very close vote on the Federal retail sales tax amendment; and the amendment was rejected. Assurance was given to us that this matter would be reviewed by the Ways and Means Committee and the Senate Finance Committee before the end of this fiscal year.

If that amendment had been adopted yesterday, I would be more inclined to support this amendment. But yesterday we pointed out that we must not open a Pandora's box, and that therefore amendments which do not relate to the actual necessities should be rejected.

Therefore, Mr. President, although I am sympathetic to the objectives the Senator from New York has in mind, I must oppose the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from New York. On this question, the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD (when his name was called). On this vote I have a pair with the distinguished minority leader, the Senator from Illinois [Mr. DIRKSEN]. If he were present and voting, he would vote "yea"; if I were at liberty to vote, I would vote "nay." Therefore, I withhold my vote.

The rollcall was concluded.

Mr. HUMPHREY. I announce that the Senator from Arizona [Mr. HAYDEN], the Senator from Oregon [Mr. MORSE], and the Senator from Georgia [Mr. TALMADGE] are absent on official business.

I further announce that the Senator from California [Mr. ENGLE] is necessarily absent.

On this vote, the Senator from Oregon [Mr. MORSE] is paired with the Senator for California [Mr. ENGLE]. If present and voting, the Senator from Oregon would vote "yea" and the Senator from California would vote "nay."

Mr. KUCHEL. I annouce that the Senator from Nebraska [Mr. CURTIS], the Senator from Illinois [Mr. DIRKSEN], and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent.

The pair of the Senator from Illinois [Mr. DIRKSEN] has been previously announced.

On this vote, the Senator from Arizona [Mr. GOLDWATER] is paired with the Senator from Nebraska [Mr. CURTIS]. If present and voting, the Senator from Arizona would vote "yea", and the Senator from Nebraska would vote "nay."

The result was announced—yeas 33, nays 59, as follows:

[No. 29 Leg.]

YEAS—33

Aiken	Fulbright	Pastore
Bartlett	Gore	Pearson
Beall	Gruening	Pell
Bennett	Hickenlooper	Prouty

Hill	Miller	

NOT VOTING—8

Curtis	Goldwater	Morse
Dirksen	Hayden	Talmadge
Engle	Mansfield	

So Mr. JAVITS' amendment was rejected.

Mr. DOUGLAS. Mr. President, I call up my amendment No. 368, which is on the desks of most Senators.

The PRESIDING OFFICER. The amendment offered by the Senator from Illinois will be stated.

The legislative clerk read as follows:

Add at the end of the bill a new section:

"SEC. . PERCENTAGE DEPLETION FOR OIL AND GAS WELLS.

"(a) GRADUATED RATES.—Section 613 (relating to percentage depletion) is amended—

"(1) by striking out in subsection (a), 'specified in subsection (b)' and inserting in lieu thereof 'specified in subsections (b) and (d)';

"(2) by striking out paragraph (1) of subsection (b) and inserting in lieu thereof the following:

"'(1) OIL AND GAS WELLS.—The percentage applicable under subsection (d) (1).'; and

"(3) by redesignating subsection (d) as (e), and by inserting after subsection (c) the following new subsection:

"'(d) OIL AND GAS WELLS.—

"'(1) PERCENTAGE DEPLETION RATES.—In the case of oil and gas wells, the percentage referred to in subsection (a) is as follows:

"'(A) 27½ percent—to the extent that,

for the taxable year, the taxpayer's gross income from the oil and gas well, when added to (i) the taxpayer's gross income from all other oil and gas wells, and (ii) the gross income from oil and gas wells of any taxpayer which controls the taxpayer and of all taxpayers controlled by or under common control with the taxpayer, does not exceed $1,000,000;

"'(B) 21 percent—to the extent that, for the taxable year, the taxpayer's gross income from the oil and gas well, when added to (i) the taxpayer's gross income from all other oil and gas wells, and (ii) the gross income from oil and gas wells of any taxpayer which controls the taxpayer and of all taxpayers controlled by or under common control with the taxpayer, exceeds $1,000,000 but does not exceed $5,000,000; and

"'(C) 15 percent—to the extent that, for the taxable year, the taxpayer's gross income from the oil and gas well, when added to (i) the taxpayer's gross income from all other oil and gas wells, and (ii) the gross income from oil and gas wells of any taxpayer which controls the taxpayer and of all taxpayers controlled by or under common control with the taxpayer, exceeds $5,000,000.

"'(2) CONTROL DEFINED.—For purposes of paragraph (1), the term "control" means—

"'(A) with respect to any corporation, the ownership, directly or indirectly, of stock possessing more than 50 percent of the total combined voting power of all classes of stock entitled to vote, or the power (from whatever source derived and by whatever means exercised) to elect a majority of the board of directors, and

"'(B) with respect to any taxpayer, the power (from whatever source derived and by whatever means exercised) to select the management or determine the business policies of the taxpayer.

"'(3) CONSTRUCTIVE OWNERSHIP OF STOCK.—The provisions of section 318(a) (relating to constructive ownership of stock) shall apply in determining the ownership of stock for purposes of paragraph (2).

"'(4) APPLICATION UNDER REGULATIONS.—This subsection shall be applied under regulations prescribed by the Secretary or his delegate.'

"(b) EFFECTIVE DATE.—The amendments made by subsection (a) shall apply only with respect to taxable years beginning after the date of the enactment of this Act."

Mr. DOUGLAS. Mr. President, this is a variation of the amendment previously offered by the Senator from Delaware [Mr. WILLIAMS]. On this question I ask for the yeas and nays.

The yeas and nays were ordered.

SLIDING SCALE REDUCTION

Mr. DOUGLAS. First, Mr. President, let me explain the amendment. It is the same amendment which I have offered in previous years. In brief, it would reduce

[*P. 2096*]

the depletion allowance on oil and gas from the present 27½ to 15 percent in those cases where the taxpayer's gross income, abroad and at home, from oil and gas in any 1 year exceeds $5 million.

The allowance would be reduced to 21 percent where the taxpayer's income from oil and gas exceeded $1 million but did not exceed $5 million.

It would leave the existing 27½-percent allowance for those whose income from oil and gas does not exceed $1 million gross income in a year.

SMALL INDEPENDENTS AND WILDCATTERS EXEMPT

This, in practice, would exempt virtually all the wildcatters from any reduction in the depletion allowance. It would also exempt the owners of land upon which drillings are conducted, and who normally receive a one-eighth royalty.

My amendment differs from the Williams amendment in that the Williams amendment would have reduced, at a uniform rate, all operations, regardless of size, down to an ultimate low of 20 percent.

This amendment provides a graduated reduction, exempting small drillers, operators and royalty recipients. It provides that the medium-sized drillers will not have their depletion allowance reduced below 21 percent, but under it the big companies, the very prosperous companies, will have their depletion allowance reduced to 15 percent.

REBUTTAL OF PROFIT FIGURES

Before I go into the affirmative case for this amendment, let me refer to some of the figures which have been introduced by my good friend, the Senator from Louisiana [Mr. LONG], and which are contained in the well-fashioned charts at the rear of the Chamber and which bear evidence of an expert job.

The Senator from Louisiana pointed out one chart which shows, apparently, that the average profits of the petroleum industry were only 9.1 percent over the 8-year period from 1955 to 1962, whereas they were 10.3 percent for all the manufacturing industries.

This is correct so far as it goes, but what is omitted is that it does not include income which American companies receive from oversea oil operations. It is well known these are much more profitable to the big companies, such as Standard Oil Co. of New Jersey, that have oil wells in Venezuela, or such as the three standard oil companies and Texaco, which have oil wells in the Persian Gulf. It does not include them.

OIL AVERAGE PROFITS HIGHER THAN OTHER INDUSTRIES

If they are included, we find that the average rate of profit for the 8 years on foreign operations is, not 9.1 percent, but 19.5 percent. If the foreign operations are added in with the domestic oil operations, it produces a combined total aver-

age rate of profit of 11.2 percent, or 1 percent higher than the average for all manufacturing industries. This is shown in a table prepared at my request by the Tax Analysis Division of the Treasury Department and which I ask unanimous consent to be inserted in the RECORD at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 1.—*Rate of return on investment capital*

[Percent]

	All manufacturing companies [1]	33 petroleum companies [2]		
		Total [3]	Domestic	Foreign operations
1955	12.6	13.5	10.2	30.2
1956	12.3	13.9	10.5	28.8
1957	11.0	13.0	10.1	23.8
1958	8.6	9.5	7.2	17.3
1959	10.4	9.7	8.5	13.8
1960	9.2	10.0	8.8	13.8
1961	8.8	10.0	8.7	13.9
1962	9.8	10.3	8.8	14.6
Average of 8 years	10.3	11.2	9.1	19.5

Office of the Secretary of the Treasury, Office of Tax Analysts, Jan. 29, 1964.

[1] Federal Trade Commission-Securities and Exchange Commission.

[2] Chase Manhattan Bank, "Annual Report on 33 Petroleum Companies."

[3] Rate of return on all operations, regardless of origin by domestic or foreign.

Mr. DOUGLAS. So let us be done with the crocodile tears about the low rate of earnings in the oil industry. I shall refer to that matter again later on in my remarks.

DRY HOLE MYTH

Second, we have had brought up again the old ghost that there are eight unsuccessful or dry holes for every successful drilling. This is a somewhat hoary myth which has been perpetrated year after year.

I call attention to the statement of Gen. E. O. Thompson, who was supposed to have been the great authority in the oil industry. In testimony before the House Ways and Means Committee in 1950, he stated that the overall industry average was two successes for every dry hole.

The Oil and Gas Journal itself, volume 67–16, stated that the 5 largest oil companies in 1958 hit 3,447 successful production wells against 868 dry holes, or a ratio of 4 successes to 1 miss. Even the worst record among the 40 top oil companies was 105 successes to 96 dry holes. The secret of the whole thing is that the wildcatters do the adventurous drilling and, when a field is found and developed, the big companies come in. They take very little risk. The wildcatter does take some risk. That is why I do not propose to reduce the depletion allowance for the wildcatters and for those who have a gross income of less than $1 million a year.

My amendment, therefore, is a small independent oilman amendment as well as a propublic amendment.

This amendment strikes at the greatest abuse among the many abuses in our whole tax system. Many unjust tax privileges are now embodied in the revenue system, costing the Government many billions of dollars a year in revenue. These privileges are sometimes called loopholes. Perhaps they are better termed "truck holes." They produce a disparity in the rates of taxation on equal net incomes. They have been increased over the years so that the tax structure of the country is now seriously eroded.

OIL AND GAS DEPLETION GREATEST ABUSE

Of all these abuses, depletion allowance and other privileges for oil and gas are the worst. Unless Congress cures this and other erosions and injustices, these abuses will continue to spread like a cancer through our tax system and make citizens disgruntled and cynical. They may break down our whole tax system with everyone seeking special privileges.

I have said that the 27½-percent depletion allowance and other privileges for income from oil and gas are the worst of many tax loopholes. Let me review the situation so far as oil and gas are concerned.

Under present law, a host of costs and special allowances in and for the gas industry are deductible from gross income even before the depletion allowance applies. There are others which offset the actual taxes—that is, tax credits owed dollar for dollar.

OPERATING COSTS DEDUCTIBLE

First, of course, there are operating costs. This is a deduction for every industry. Perhaps it is the only deduction which is not a special deduction for the oil industry. I would not change this. It is completely proper.

INTANGIBLE DRILLING COSTS

Second, the gas and oil industry is credited with intangible drilling and developmental costs. These are capital costs which can be written off in 1 year and not spread over a period of years, as is the case in other industries. It has been estimated that between 75 and 90 percent of all costs involved in drilling a successful well can be written off within a year in this manner. We have,

therefore, given to this industry virtually the ultimate in accelerated depreciation and in fast tax writeoffs. This is in addition to and apart from the ordinary depreciation and the depletion allowance. Thus, there is the very great advantage of the fast writeoff which many experts tell us is more advantageous than even the oil depletion allowance itself. What other industries must capitalize and depreciate, the oil industry can and does write off in the first year.

I am not proposing in my amendment to alter this situation. It applies abroad as well as at home. Most of the 75 to 90 percent of the capital costs can be written off in 1 year.

WRITEOFF OF DRY HOLES

Third, the custom of drilling unsuccessful so-called dry holes can be written off against the income from successful drilling. I do not propose to change that.

FOURTEEN-POINT WESTERN HEMISPHERE DEDUCTION

Fourth, there is a 14-point reduction in the tax itself, or a reduction from 52 to 38 percent on taxable income, for incomes derived from operations abroad in the Western Hemisphere, notably in the oil center of Venezuela, but also in Mexico and other countries.

Standard Oil has big drillings and fields in Venezuela.

[*P. 2097*]

ROYALTY PAYMENTS DISGUISED AS TAXES

Royalty payments abroad, particularly in the Near East, are commonly disguised as income tax payments for which the foreign tax credit then is available. The 50–50 plan was started, I believe, in Latin America and then it was applied to the Middle East. Now it has been applied to Persia and throughout the Near East. Indeed, it has gone up in many countries from one-half to two-thirds, and up to 70–30 in some countries. This is really a royalty, but it is called a tax, and therefore it is used to offset to that degree the tax which the American company would otherwise pay on its income from abroad.

I believe it is well known that the Arabian-American Oil Co., which is a subsidiary of three Standard companies, and of Texaco, probably does not pay a single dollar in income tax to the American people, although its profits run into the hundreds of millions of dollars.

DEPLETION IN PERPETUITY

In the case of gas and oil, this amounts to an additional 27½ percent of gross income which is free from taxation up to one-half of net income. This allowance is, moreover, permitted in perpetuity, as long as there is any flow of oil or gas from the well. There are wells in the east Texas fields which I believe started to gush 30 to 50 years ago, and are still continuing.

I remember as a youngster reading about the first great gusher that came in outside of Beaumont, Tex. Some years ago, I was in Beaumont, and I was told that it is still flowing, that ever since 1926 a depletion allowance has been given to it.

Oil can flow, and gas can flow. Men may come and men may go, but the depletion allowance goes on forever.

Mr. GORE. Mr. President, will the Senator from Illinois yield at that point?

TAX HAVENS

Mr. DOUGLAS. I should first like to finish my statement as a whole, and then I shall be glad to yield. In times past, I have yielded during the course of my presentation and have never been able to get back to the thread of my discourse. So if the Senator will allow me to finish my speech, I shall try to finish rapidly, and then I shall be happy to yield to him.

There are also tax havens abroad. If the Gore amendment should be dropped in conference, which may well be its fate, the oil executives abroad would be exempted, as they are now, on the first $35,000 of income. I hope the Gore amendment will be maintained, but I am not too optimistic.

Mr. GORE. The Senator from Illinois will certainly yield long enough for me to say "hurrah," will he not?

Mr. DOUGLAS. Most certainly.

PERCENTAGE DEPLETION ALSO

All these provisions would seem to be extremely generous, but the oil and gas industry is permitted a still further allowance called the percentage depletion allowance, and I should like to speak about that.

There is no limit, moreover, to the depletion allowance as compared with the original cost of the well. They are not limited to the original cost, and in the case of rich wells and long-gushing or long-flowing wells, the deduction of the depletion allowance has gone on interminably without regard to the original cost.

I emphasize again that the depletion allowance is not limited to recapturing the cost of the well in question. It may sound like depreciation, but I assure Senators that depletion is different from depreciation. Depreciation really means providing for the replacing of the original cost of the properties. Under our system, we have double depreciation and then added the depletion allowances as well.

I emphasize that the depletion allowance is in addition to all of the other deductions, continuing through time, without relationship to the taxpayer's investment in the venture and whether or not the investment has been more than recovered from the taxpayers.

There are wells where the depletion allowance has amounted to more than 20 times the original cost. I should like to get the cost figure on that original well in the Beaumont region. Probably the depletion allowance down there has been 100 times the original cost of the drilling.

DEPLETION MORE VALUABLE OVER TIME

From its inception, the percentage depletion allowance has been 27½ percent of gross and half of net income when it was put into effect in 1926. The corporation income tax was then 14 percent, so that this amounted to only about 7 percent of net profits.

As corporation income taxes have risen from 14 percent to the present 52 percent, the value of the allowance both in percentage of profits retained, and dollars, has grown. Not only is this true, but it has also brought in its train a host of similar deductions on virtually everything else extracted from the earth and from the sea.

LOOPHOLE EXTENDED FROM A TO Z

It extends all the way from aluminum to zinc. I should like to read some of them:

Sulfur, uranium, anorthosite (to the extent that alumina and aluminum compounds are extracted therefrom), asbestos, bauxite, beryl, celestite, chromite, corundum, fluorspar, graphite, ilmenite, kyanite, mica, olivine, quartz crystals—radio grade—rutile, block steatite talc, and zircon, and ores of the following metals: antimony, bismuth, cadmium, cobalt, columbium, lead, lithium, manganese, mercury, nickel, platinum and platinum group metals, tantalum, thorium, tin, titanium, tungsten, vanadium, and zinc.

Also rock asphalt and vermiculite; also brucite, coal, lignite, perlite, sodium chloride, and wollastonite.

In 1951, the great Senator from Texas, Tom Connally, had the list extended to include mollusk shells, including clam shells and oyster shells. Other items include peat, pumice, sand, scoria, shale, and stone; also clay used, or sold for use, in the manufacture of building or paving brick, drainage and roofing tile, sewerpipe, flower pots, and kindred products.

I could continue to read from another supplementary list. I shall read only a few of them:

All other minerals, including, but not limited to, aplite, barite, borax, calcium, carbonates, diatomaceous earth, dolomite, feldspar, fullers earth, garnet, gilsonite, granite, limestone, magnesite, magnesium carbonates, marble, phosphate rock, potash, quartzite, slate, soapstone, stone—used or sold for use by the mine owner or operator as dimension stone or ornamental stone—thenardite, tripoli—that is not the place, but a mineral, I assume—trona. And so forth.

Perhaps I should read what the list does not include. It does not include soil, sod, dirt, turf, water, or mosses, or minerals from sea water. I understand that there is a lawsuit now pending in an attempt to include water in the depletion allowance. But the oil and gas depletion allowance has been the father of them all. We started sowing the dragon's teeth with this allowance and they have borne bitter fruit.

A LOOPHOLE UNIVERSALIZED

This process has gone wild. The depletion allowance is almost a perfect example of why it is necessary to close these loopholes in the law. A more or less successful attempt has been made to make the loopholes universal. This is the citadel of privilege. This is the greatest waste of taxpayers' money. This is the "truckhole" which enables certain specially favored groups to obtain enormous privileges from the Treasury and from the taxpayers.

I do not always agree with the policies of the Treasury. However, it has a very honorable and very capable Office of Tax Analysis manned by fine men. When we ask them to produce figures, they produce honest statistics. For years we have been asking them to produce statistics on depletion. We did so last year. Senators will find these statistics in the first volume of the hearings on the bill before the House Ways and Means Committee, beginning on page 302. It will be found that in the year 1960 the total amount of the tax-free depletion allowance to corporations amounted to $3.267 billion. This was merely the allowances to corporations. It does not include the allowances to individuals.

The estimate is that this figure for individuals as well as corporations would raise the total by approximately one-sixth more. This may be an overstatement. It is most conservative to say that the total depletion granted tax exemption is at least $3.5 billion, of which $2.5 billion is on gas and oil. I do not believe those figures can be challenged in any degree.

Furthermore, 72 percent of this depletion allowance goes to companies with total assets of over $100 million. This information will be found on page 304 in table 3 of the report. Only a little over 2 percent went to corporations with

incomes of less than a million dollars. So it is the big boys who are getting the depletion allowance, although they like to hold up the little fellows, the widows, and orphans and use them as fronts and also as the receptacles for the copious tears which they shed.

I ask unanimous consent that this table from page 304 of the House hearings be printed at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Amount and distribution of total depletion deductions, by asset size classes, corporate tax returns, 1950, 1958, and 1959 [1]

Total asset classes	1950			1958			1959		
	Depletion claimed	Percent of total	Percent of total cumulative from largest asset class	Depletion claimed	Percent of total	Percent of total cumulative from largest asset class	Depletion claimed	Percent of total	Percent of total cumulative from largest asset class
	Millions			*Millions*			*Millions*		
0	$3.5	0.2	100.0	$11.4	0.3	100.0	$20.1	0.6	100.0
Under $50,000				9.2	.3	99.7	5.3	.1	99.4
$50,000 under $100,000	3.7	.2	99.8	5.9	.2	99.4	4.5	.2	99.3
$100,000 under $250,000	12.1	.6	99.6	22.3	.7	99.2	16.4	.5	99.1
$250,000 under $500,000	21.4	1.0	99.0	32.1	1.0	98.5	28.6	.9	98.6
$500,000 under $1,000,000	41.4	2.0	98.0	42.8	1.4	97.5	28.8	.9	97.7
$1,000,000 under $5,000,000	160.8	7.8	96.0	167.0	5.3	96.1	165.6	5.1	98.8
$5,000,000 under $10,000,000	83.8	4.1	88.2	91.4	2.9	90.8	96.4	2.9	91.7
$10,000,000 under $50,000,000	318.9	15.4	84.1	333.6	10.6	87.9	341.0	10.6	88.8
$50,000,000 under $100,000,000	120.8	5.8	68.7	200.2	6.3	77.3	206.3	6.3	78.1
$100,000,000 and over	1,299.3	62.9	62.9	2,232.5	71.0	71.0	2,326.5	71.9	71.9
Total	2,065.8	100.0		3,148.2	100.0		3,234.0	100.0	

[1] Includes depletion claimed for both minerals and timber since the figures in the original source could not be adjusted to remove depletion for timber, which accounts for approximately 8 percent of total depletion claimed.

Source: "Statistics of Income, Corporation Income Tax Returns," 1950, 1958–59, 1959–60.

Office of the Secretary of the Treasury, Office of Tax Analysis, Feb. 6, 1963.

INDIVIDUAL EXAMPLES

Mr. DOUGLAS. We all know, as men, some of the huge individual fortunes which have been made and upon which either no taxes or very little taxes have been paid.

I am not here to excoriate those gentlemen; I do not make a practice of that. I do not say that they have done anything illegal. I do say that the laws have been so rigged as to benefit them enormously, and that virtually all of those gentlemen—with some honorable exceptions—are opposing any change in the law which would take from them some of the unjust benefits which they are now receiving.

MILLIONS IN INCOME—NO TAXES PAID

On December 12, I had printed in the RECORD six examples of individual oil operators, who, because of special allowances allowed, paid little or no taxes in 1960. One of these individuals had an economic income of $26,400,000 in 1960, and paid no Federal income taxes at all. I do not say the depletion allowance was the sole cause of this. The intangible drilling and developmental costs, and capital gains all played their part.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. DOUGLAS. Not at this time. I had to decline to yield to my friend, the Senator from Tennessee [Mr. GORE]. I would like to complete my speech. Then I shall be very glad to yield to the Senator from New Mexico.

Another had an income of $2,300,000, and paid no income taxes at all; another had an income of $1,200,000 and paid no income taxes at all. Another had an income of little over $1 million, but paid only 5.9 percent of his income, or $60,000 in Federal income taxes. Another had an economic income of $2.1 million and paid $167,000, or 7.9 percent in Federal income taxes.

Still another had $1.7 million in income, but paid only $162,000, or 8.4 percent, in Federal income taxes.

I ask unanimous consent that a table showing these facts and the detailed examples be printed at this point in the RECORD, and that specific examples for each of the six be also printed in the RECORD.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

TABLE I.—*Examples of high income oil operators with low effective tax rates (1960)*

Taxpayer	(1) Total economic income	(2) Reported economic income	(3) Adjusted gross income	(4) Net taxable income	(5) Federal income tax	(6) Federal income tax as percentage of total reported economic income (col. 2)
A	$4,542,447	$2,110,060	$405,376	$317,284	$166,768	7.9
B	4,020,349	2,271,723	(723,916)	(725,252)	0	0
C	2,201,278	1,707,839	454,404	240,016	142,808	8.4
D	28,716,932	26,440,776	[1] (556,626)	[2] (846,330)	0	0
E	1,522,478	1,179,248	[1] 330,645	[2] (184,992)	0	0
F	1,307,962	1,029,540	135,633	[2] 131,945	61,240	5.9

[1] After carryover of net loss.
[2] Before personal exemptions.

Example of actual high income oil operator (individual A) with low effective tax rate, 1960

Total reported economic income:	
Salary	$45,000
Dividends	$1,028,163
Interest (taxable)	$5,904
Capital gains (100 percent)	$717,166
Oil and gas production (before special deductions)[1]	$2,336,729
Oil and gas manufacturing, distribution, and royalties	$399,495
Farm income	$9,990
Total income before exploration and development and nonallocated overhead expenses	$4,542,447

Footnotes at end of table.

Example of actual high income oil operator (individual A) with low effective tax rate, 1960—Continued

Less:	
Oil and gas exploration and development expenditures[2]	$2,072,069
Overhead expenses not allocated[3]	$360,318
Total reported economic income—Continued:	
Total exploration and development and nonallocated overhead	$2,432,387
Total reported economic income	$2,110,060

Footnotes at end of table.

Example of actual high income oil operator (individual A) with low effective tax rate, 1960—Continued

Components of taxable income for Federal tax purposes:	
Salary	$45, 000
Dividends less exclusion	$1, 028,063
Interest (taxable)	$5, 904
Capital gains (50 percent)	$358, 583
Oil and gas production:	
Net before special deductions	$2, 336, 729
Less special deductions:	
Excess percentage depletion [4]	$881, 297
Intangible drilling expenses	$464, 704
Taxable income from oil and gas production	$990, 728

[*P. 2099*]

Oil and gas manufacturing, distribution and royalties	$399, 495
Farm income	$9, 990
Total adjusted gross income before exploration and development and nonallocated overhead expenses	$2, 837, 763
Less total exploration and development and nonallocated overhead [3]	$2, 432, 387
Adjusted gross income	$405, 376
Less deductions from adjusted gross income:	
Contributions	
Interest	
Taxes	$2, 157
Medical	$85, 483
Other	$452
Total deductions	$88, 092
Net taxable income	$317, 284
Federal income tax:	
Computed tax before dividends credit	$179, 291
Less dividends received credit	$12, 523
Net Federal taxes	$166, 768
Net tax as percent of total reported economic income (percent)	7. 9

[1] Excess percentage depletion (footnote 4) and intangible drilling expenses.
[2] Including $1,221,925 in dryhole expenses, $520,508 in canceled and surrendered leases.
[3] Interest expenses of $382,766 is included in total overhead expenses of $617,797. Some $257,479 of total overhead was allocated to oil and gas production. The remaining $360,318 was not allocated by income category.
[4] Excess of percentage depletion over adjusted basis depletion.

Example of actual high income oil operator (individual D) with low effective tax rate, 1960

Total reported economic income:	
Salary	$18, 150
Dividends	64, 398
Interest (taxable)	852, 639
Capital gains (100 percent) [1]	26, 203, 307
Oil and gas production (before special deductions) [2]	1, 534, 082
Oil and gas royalties, drilling contracts, partnerships and miscellaneous [3]	320, 724
Farm income (loss)	(276, 368)
Total income before exploration and development and nonallocated overhead expenses	28,716, 932
Less:	
Oil and gas exploration and development expenditures	1, 546, 463
Overhead expenses not allocated [4]	729, 693
Total exploration and development and nonallocated overhead	2, 276, 156
Total reported economic income	26, 440, 776
Components of taxable income for Federal tax purposes:	
Salary	$18, 150
Dividends less exclusion	64, 298
Interest (taxable)	852, 639
Capital gains (50 percent) [1]	5, 436, 224
Oil and gas production:	
Net before special deductions	1, 534, 082
Less special deductions:	
Excess percentage depletion [5]	686, 642
Intangible drilling expenses	1, 609, 530
Taxable income (loss) from oil and gas production	(762, 090)
Oil and gas royalties drilling contracts, partnerships, and miscellaneous	320, 724
Farm income (loss)	(276, 368)
Total adjusted gross income before exploration and development and nonallocated overhead expenses	5, 653, 577
Less total exploration and development and nonallocated expenses	2, 276, 156
Adjusted gross income before carryover of net loss	3, 377, 421
Less net operating loss carryover from 1957 and 1959 [6]	(3,934, 047)

Footnotes at end of table.

Example of actual high income oil operator (individual D) with low effective tax rate, 1960—Continued

Adjusted gross income after carryover of net loss	(556, 626)
Less total itemized deductions	289, 704
Taxable income (loss) before personal exemptions	(846, 330)
Federal income tax	0
Net tax as percent of total reported economic income	0

[1] For tax purposes an installment of $10,872,449 was reported in 1960 from a total capital gain realized of $26,203,307 (under section 453(b)(2)(A)). The gain resulted from the sale of a reserved oil and gas production payment. A second installment of $5,743,200 from this capital gain was reported in the 1961 tax return.

[2] Excess of percentage depletion over cost depletion, and intangible drilling expenses.

[3] Includes net income from royalties, drilling contracts, drilling tools, and other sources, in part offset by net losses from partnerships in oil development and manufacturing operations.

[4] Includes $238,430 in interest, $80,675 in general overhead and $63,965 for employees group insurance.

[5] Excess of percentage depletion over adjusted basis depletion.

[6] $232,050 loss carried over from 1957 and $3,701,997 from 1958, primarily from oil operations.

Example of actual high income oil operator (individual B) with low effective tax rate, 1960

Total reported economic income:	
Salary	----------
Dividends	$1, 441
Total reported economic income—Continued:	
Interest (taxable)	$120
Capital gains (100 percent)	1, 642
Oil and gas production (before special deductions)[1]	4, 061, 682
Oil and gas distribution, royalties, and other income	(44, 536)
Total income before oil and gas exploration and development expenditures	$4, 020, 349
Less oil and gas exploration and development expenditures[2]	$1, 748, 626
Total reported economic income	$2, 271, 723
Components of taxable income for Federal tax purposes:	
Salary	----------
Dividends less exclusion	$1, 341
Interest (taxable)	$120
Capital gains (50 percent)[3]	----------

Footnotes at end of table.

Example of actual high income oil operator (individual B) with low effective tax rate, 1960—Continued

Oil and gas production:	
Net before special deductions	$4, 061, 682
Less special deductions:	
Excess percentage depletion[4]	$1, 529, 667
Intangible drilling expenses	$1, 464, 230
Taxable income from oil and gas production	$1, 067, 785
Oil and gas distribution, royalties and other income (loss)	($44, 536)
Total adjusted gross income before exploration and develop. expend	$1, 024, 710
Less oil and gas exploration and development expenditures	$1, 748, 626
Adjusted gross income	($723, 916)
Less deductions from adjusted gross income:	
Contributions	----------
Interest	----------
Taxes	$1, 366
Medical	----------
Other	----------
Total deductions	$1, 336
Net taxable income	($725, 252)
Federal income tax	0
Taxes as percent of total reported economic income	0

[1] Excess percentage depletion (footnote 4) and intangible drilling expenses.

[2] Includes $875,622 in dryhole expenses and $765,620 in canceled and surrendered leases.

[3] In 1960 capital gains offset by capital losses carried forward from previous years.

[4] Excess of percentage depletion over adjusted basis depletion.

Example of actual high income oil operators (individual C) with low effective tax rate, 1960

Total reported economic income:	
Salary	$100
Dividends	$9, 927
Interest (taxable)	$32, 192
Capital gains (100 percent)	$571, 950
Oil and gas production (before special deductions)[1]	$2, 297, 052
Oil and gas manufacturing, distribution and other income (loss)[2]	$27, 731

[P. 2100]

Example of actual high income oil operators (individual C) with low effective tax rate, 1960—Continued

Less:	
Oil and gas exploration and development expenditures	$286,527
Overhead expenses nonallocated	$206,912
Total exploration and development and nonallocated overhead	$493,439
Total reported economic income	$1,707,839
Components of taxable income for Federal tax purposes:	
Salary	$100
Dividends less exclusion	$9,877
Interest (taxable)	$32,192
Capital gains (50 percent)	$285,975
Oil and gas production:	
Net before special deductions	$2,197,052
Less special deductions:	
Excess percentage depletion [3]	$861,400
Intangible drilling expenses	$106,010
Taxable income from oil and gas production	$1,229,962
Oil and gas manufacturing, distribution and other income (loss)	$27,731
Farm income (loss)	($637,674)
Total adjusted gross income before exploration and development and nonallocated overhead expenses	$947,843
Less total exploration and development and nonallocated overhead	$493,439
Adjusted gross income	$454,404
Less deductions from adjusted gross income:	
Contributions	$38,940
Interest	$49,435
Taxes	$63,365
Medical	----------
Other	$62,648
Total deductions	$214,388
Net taxable income	$240,016
Federal income tax:	
Computed tax before dividends credit	$143,203
Less dividends received credit	$395
Net Federal taxes	$142,808
Net tax as percent of total reported economic income (percent)	8.4

[1] Excess percentage depletion (footnote 3) and intangible drilling expenses.

[2] Includes losses on various business ventures, offset by net income from others.

[3] Excess of percentage over adjusted basis depletion.

Footnotes at end of table.

Example of actual high income oil operator (individual E) with low effective tax rate, 1960

Total reported economic income:	
Salary	$250
Dividends	$73,176
Interest (taxable)	$320,731
Capital gains (100 percent) [1]	$610,257
Oil and gas production (before special deductions) [2]	$440,918
Oil and gas royalties and miscellaneous income	$83,499
Farm income (loss)	($6,353)
Total income before exploration and development and nonallocated overhead expenses	$1,522,478
Less:	
Oil and gas exploration and development expenditures [3]	$222,671
Overhead expenses not allocated [4]	$120,559
Total exploration and development and nonallocated overhead	$343,280
Total reported economic income	$1,179,248
Components of taxable income for Federal tax purposes:	
Salary	$250
Dividends less exclusion	$73,076
Interest (taxable)	$320,731
Capital gains (50 percent)	$66,164
Oil and gas production:	
Net before special deductions	$440,918
Less special deductions:	
Excess percentage depletion [5]	$217,513
Intangible drilling expenses	$59,339
Taxable income from oil and gas production	$164,066
Oil and gas royalties and miscellaneous income	$83,499
Farm income (loss)	($6,353)
Total adjusted gross income before exploration and development and nonallocated overhead expenses	$701,433
Less total exploration and development and nonallocated overhead expenses	$343,230
Adjusted gross income before net operating loss carryover	$358,203
Less net operating loss carryover from 1958	($27,558)
Adjusted gross income after carryover of net loss	$330,645

Footnotes at end of table.

Example of actual high income oil operator (individual E) with low effective tax rate, 1960—Continued

Less deductions from adjusted gross income:	
Contributions [6]	$511, 419
Interest	$--------
Taxes	$2, 950
Medical	$1, 133
Other	$135
Total deductions	$516, 637
Net taxable income (before exemptions)	($184, 992)
Federal income tax	0
Net tax as percent of total reported economic income (percent)	0

[1] Includes $125,469 from sale of oil and gas leases and $477,929 excess of market value over book value of gift (unimproved land in a major city) to a foundation.

[2] Excess percentage depletion (footnote 5) and intangible drilling expenses.

[3] Includes $145,867 for drilling expenditures on nonproducing leases and $41,202 for leases expired and surrendered.

[4] Includes $82,700 for general and administrative expensse.

[5] Excess of percentage depletion over adjusted basic depletion.

[6] Includes contribution to foundation referred to in footnote 1.

Example of actual high income oil operator (individual F) with low effective tax rate, 1960

Total reported economic income:	
Salary	----------
Dividends	$191, 933
Interest (taxable)	$1, 157

Footnotes at end of table.

Example of actual high income oil operator (individual F) with low effective tax rate, 1960—Continued

Components of taxable income for Federal tax purposes:	
Salary	----------
Dividents less exclusion	$191, 833
Interest (taxable)	$1, 157
Capital gains (50 percent) [4]	$60, 940
Oil and gas production:	
Net before special deductions	$767, 488
Less special deductions:	
Excess percentage depletion [5]	$297, 703
Intangible drilling expenses	$536, 955
Taxable income (loss) from oil and gas production	($67, 170)
Oil and gas royalties, partnership, trust and miscellaneous	$227, 295
Overhead	$278, 422
Total adjusted gross income before exploration and development and nonallocated overhead	$414, 055

[P. 2101]

Components of taxable income for Federal tax purposes—Con.	
Less total exploration and development and nonallocated adjusted gross income	$135, 633
Less deductions from adjusted gross income:	
Contributions	$1, 151
Interest	$1, 471
Taxes	$1, 066
Medical	0
Other	0
Total deductions	$3, 688
Net taxable income (before exemption)	$131, 945
Federal income tax:	
Computed tax before dividends received and foreign tax credit	$66, 628
Less dividends received and foreign tax credits	$5,388
Net Federal taxes	$61, 240
Net tax as percent of total reported economic income (percent)	5. 9

[1] Excess percentage depletion (footnote 4) and intangible drilling expenses.

[2] Includes $166,804 from a family partnership and $56,619 from rents and royalties.

[3] Includes $152,368 for leases canceled and expired.

[4] Includes a small amount of short-term capital gains at 100 percent.

[5] Excess of percentage depletion over adjusted basis depletion.

Mr. DOUGLAS. Mr. President, in addition to this, Fortune magazine for April 1963, estimated that the depletion allowance was taken by 30 of the largest oil and gas companies in this country. The first 10 companies received a total of $1,440 million in depletion allowances. If we add the next 5, for a total of 15, we get a grand total of $1,680 million which was written off and freed from taxation.

I ask unanimous consent that a table, reprinted from the Fortune magazine article, showing the estimated depletion allowances for the 30 largest companies, be printed at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Depletion: What's at stake for 30 companies

	Estimated production revenues		Estimated depletion allowance	
	Total (millions)	As proportion of net sales	Total (millions)	Per common share
		Percent		
Standard Oil (New Jersey)	$1,511	18	$399	$1.84
Gulf Oil	862	31	228	2.18
Texaco	817	27	216	1.74
Standard Oil of California	492	24	130	2.05
Shell Oil	430	23	114	1.88
Standard Oil (Indiana)	415	20	110	3.06
Socony Mobil Oil	415	13	110	2.25
Phillips Petroleum	250	20	66	1.92
Cities Service	225	23	59	5.48
Continental Oil	200	25	53	2.47
Sinclair Oil	196	16	52	3.32
Atlantic Refining	185	33	49	5.37
Sun Oil	180	23	47	3.43
Superior Oil	144	99	38	89.89
Marathon Oil	128	36	34	2.37
Tidewater Oil	123	20	33	2.38
Union Oil of California	122	27	32	3.61
Sunray DX Oil	103	22	27	1.51
Amerada Petroleum	100	97	26	4.17
Richfield Oil	97	34	24	2.96
Pure Oil	96	17	25	2.55
Skelly Oil	86	35	23	3.93
Signal Oil & Gas	53	18	14	1.38
Standard Oil (Ohio)	39	9	10	2.09
Kerr-McGee Oil Industries	19	11	5	.80
Ashland Oil & Refining	17	6	4	.66
Murphy	16	15	4	1.08
Delhi-Taylor Oil	11	10	3	.43
American Petrofina	11	14	3	.40
Clark Oil & Refining	(1)			

[1] Negligible.

INDIVIDUAL COMPANIES

Mr. DOUGLAS. Mr. President, in addition, over the years, I have been collecting some facts and figures on taxes paid in general by producing companies, as opposed to those which have large integrated operations. I have collected figures on some 28 companies to show the amount they paid in income taxes and the percentages which those taxes were to income before taxes. Some of those figures go back as far as 1945. It will be seen very clearly that the rates for those companies are very much lower than the 48- to 52-percent corporate tax which has been in effect since that time. These figures are available to the public in Moody's Manual and other sources; but I have preferred to call them company A, company B, company C, and so forth, because I am not interested in pillorying any company, but merely illustrating the point.

I ask unanimous consent to have printed at this point in the RECORD tables showing the 28 companies and the taxes they paid and the percentage of the income taxes paid to income before taxes.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

Income taxes paid by 28 oil and gas companies

COMPANY A

[Data through 1962, if available]

Year	Net income (loss) before income taxes	Income taxes (credit)	Net income (loss) after income taxes	Percent of income taxes to income before taxes
1962	$34,804,282	$1,294,000	$33,510,282	3.72
1961	28,824,114	250,000	28,574,114	.87
1960	27,768,929	200,000	27,568,929	.72
1959	24,122,835	100,000	24,022,835	.41
1958	23,270,135	785,000	22,485,135	3.37
1957	35,208,979	5,260,000	29,948,979	14.94
1956	29,523,395	3,024,000	26,499,395	10.24
1955	28,143,673	2,780,000	25,363,673	9.88

[1] Credit.

NOTE.—"Income taxes" include Federal taxes only.

Mr. DOUGLAS. Mr. President, I have called attention very often to company W, which over one period of 6 years had net profits of $65 million, paid no tax during that time, and received a refund of $425,000.

Mr. MONRONEY. Mr. President, will the Senator from Illinois yield for a suggestion?

Mr. DOUGLAS. I yield for that purpose.

Mr. MONRONEY. Will the Senator be good enough to identify for the RECORD the companies having overseas production in addition to the domestic producing companies?

Mr. DOUGLAS. I believe that most of the nonintegrated companies do not have oversea production. The Standard Oil group, Texaco, Getty, and the rest do.

Mr. MONRONEY. Some of them do.

Mr. DOUGLAS. I will try to follow the Senator's suggestion. In the main, although not entirely, these 28 companies are the smaller companies.

Mr. MONRONEY. There is a vast difference between the application of the depletion allowance for companies operating at home and companies operating abroad.

Mr. DOUGLAS. That is correct. Would the Senator like to have me state the names of the companies, or should I shield them?

[*P. 2105*]

Mr. MONRONEY. I am not asking for any shielding. The Senator can use his own judgment.

Mr. DOUGLAS. If we study the table, we find that many companies pay less than 10 percent of their net profits in taxes and a large number that pay less than 20 percent. As I have said, some companies pay nothing at all, or only 1, 2, or less than 5 percent. These on the whole are nonintegrated companies.

OTHER EXAMPLES

If we take some of the big companies—and I am speaking of taxes paid—Texaco in 1961, according to my figures, drawn from Moody's Manual for Industrial Companies, paid only 13.2 percent of its profit in taxes. Sinclair paid 18.2. Socony-Mobil paid 31.1. Standard Oil of New Jersey, the parent Rockefeller Co., paid 11.7 percent.

TAXES OF OIL COMPANIES PAY ABOUT HALF WHAT OTHERS PAY

The average for all corporations was 49 percent of net profits. The average for all oil corporations, however, was only about 23 percent, or less than half the amount paid by all other corporations. Some of those oil companies paid very much less than 23 percent. The biggest ones paid very much less.

Consider Standard Oil of New Jersey. Less than 12 percent of its net profits went to taxes. About three-fourths of its profit came from overseas. I call attention to the fact that my amendment refers to oversea oil as well as domestic oil. It is not confined to domestic oil, but applies to oversea oil, as well. My amendment would, therefore, give a comparative advantage to the small domestic producer as compared with the large oversea producer.

In addition, the table which was placed in the hearings of the House by the Secretary of the Treasury indicated who got the depletion allowances by asset classes. I have already mentioned that, but let me review it again.

BIG FIRMS GET MOST OF THE DEPLETION

The table showed that 71.9 percent—or 72 percent—of all depletion allowances went to firms having assets of $100 million or more. Firms having less than $1 million in assets got only 2 percent of all allowances. Firms having under $5 million in assets got only 5.3 percent. In other words, 91.7 percent, or approximately 92 percent, of depletion allowances went to firms having assets in excess of $5 million. From that, it can be seen that very little of the depletion allowance goes to the small wildcatters, to the independent producers, to farmers, to royalty holders, in whose names the depletion allowance is often supported. This is another case in which a vast loophole, going almost entirely to the extremely high income groups, is justified in the names of widows, orphans, and small wildcatters.

One of the major points of my amendment is that it does not reduce the depletion allowance in any way for those who really receive relatively small incomes from oil and gas, but only the vast incomes of oil companies.

OVERINVESTMENT IN OIL

Mr. President, we have already heard the argument that the oil industry has lower average profits than the rest of industry. I have dealt with that point, and have pointed out that if we include oversea income, which I strike at in my amendment, the figure is 11.2 percent as compared with 10.3 percent for all major industries. Therefore, the average is higher than in other industries; but even if it were not higher, it would indicate that the depletion allowance is greater.

What the depletion allowance has done has been to encourage overinvestment in the oil industry. The prospect of tax reductions has lured capital into the industry which would not normally go in if the tax were neutral, so far as the oil industry is concerned. This is one of the gravest abuses in the oil industry, in that it has led to an uneconomic application of labor and capital. This is one of the great abuses of our tax system.

It causes people to think not of what is needed, not of what profits can be made, but how they can beat Uncle Sam. It has shifted the business decisions onto an extremely uneconomic level.

UNECONOMIC INVESTMENT

As I understand, in Texas, the oil wells are now limited to 30 percent of production and run for approximately only 8 days a month. They close down for the remainder of the month. This is a clear indication of overdevelopment. Texas has so many wells that it has to restrict their flow. If my figures are incorrect, I shall be glad to be corrected.

I observe the Senator from New Mexico rising to his feet.

Mr. ANDERSON. Did the Senator ever hear of conservation?

Mr. DOUGLAS. Oh, yes; I have heard of conservation. I know that conservation is generally an excuse for restricting output and either raising or maintaining prices.

Mr. ANDERSON. I assure the Senator from Illinois that that is not the situation at all. The Texas Railroad Commission administers the operation of oil wells for purposes of conservation.

Mr. DOUGLAS. It says it does.

Mr. ANDERSON. It has done a fine job. It is not done for the purpose of making money, either.

Mr. DOUGLAS. I am the one who got through the Senate the provision requiring the Attorney General to examine the operations of the interstate oil compacts; and I believe he has had some questions about these practices. They do not involve conservation alone. These restrictions are imposed in order to maintain the price, because the industry is overdeveloped in relation to the demand, and it is overdeveloped because of the great tax bonus which has been given the industry.

Mr. ANDERSON. Does the Senator from Illinois say the Attorney General has charged that, with reference to these compacts?

Mr. DOUGLAS. Well, I have some qualifications in regard to the job done by the Attorney General.

RELATIVE ADVANTAGE TO INDEPENDENTS

Mr. President, let me make a further point: This amendment would, if passed, give a relative advantage to the independent domestic producers who are, at the moment, in some difficulties. The depletion allowance is given for production both at home and abroad. The large American companies abroad are shipping oil into this country, and are cutting down the production of the domestic industry. The domestics are therefore in trouble. One of the basic reasons they are in trouble is that the depletion allowance goes to those companies which operate abroad. My amendment would cut down the depletion allowance for companies abroad which, in the main, are the huge companies—most notably the Standard Oil Co., Texaco, Gulf, J. Paul Getty, Superior, and the others.

But, at the same time, it would not decrease the depletion allowance for the smaller companies and the independent companies which operate here at home. Thus, there would be a relative advantage to the small and independent producer of oil in the United States if my amendment is passed.

Far from hurting the vast majority of those in the oil business in this country, it would help them. The large major companies spend much of their time trying to prove to the small independents that their interests are one and the same. But this is not true.

ROYALTY PAYMENTS ABROAD DISGUISED AS TAXES

The major companies not only have the advantage of the depletion allowance for their operations abroad, but also have the advantage of having royalty payments disguised as taxes. I should like to discuss that subject, because along the Persian Gulf the land is owned by a sheik or a potentate, and our taxes should not be offset, dollar for dollar, by royalties which are regarded as taxes. But instead, the royalties should be regarded as a cost, and then deducted from income rather than taken as a credit against taxes. The same is true in Venezuela, where the Roman law prevails, and where, therefore, the subsurface assets belong to the state. Therefore, the roy-

alty payments, in that case, should be regarded as a deductible cost.

But the clever experts and advisers of these companies succeeded in having the royalty payments called taxes, and then the companies proceed to charge off the royalties, dollar for dollar, against the taxes which otherwise they would have to pay; and then they have the depletion allowance, in addition, tax free; and also the exemptions on their salaries—all that, and heaven, too.

Mr. ANDERSON. As to the European situation, let me say that I might agree about that with the Senator from Illinois.

Mr. DOUGLAS. I am glad to hear the Senator from New Mexico say that.

Mr. ANDERSON. That is a situation to which I believe we must pay some attention.

[*P. 2106*]

A SMALL PRODUCERS AMENDMENT

Mr. DOUGLAS. My amendment is not only a consumers and taxpayers amendment; it is also a small producers amendment and a widows and orphans amendment, and an amendment for the owners of farmland on which there are drillings, and also a little man's amendment. But it is not a Standard Oil Co. amendment or a Texaco amendment or a J. Paul Getty amendment or an H. L. Hunt amendment; neither is it a Clint Murchison amendment. In other words, it is not a "big shot" amendment.

Mr. EDMONDSON. Mr. President, will the Senator from Illinois yield for a question?

Mr. DOUGLAS. I yield.

Mr. EDMONDSON. Earlier, the Senator from Illinois said his amendment would apply to the foreign producers as well as to the domestic producers.

Mr. DOUGLAS. Yes.

Mr. EDMONDSON. Is any distinction made, in terms of the gross income?

Mr. DOUGLAS. No; but, as I indicated today, the Standard Oil Co. of New Jersey is making its profits largely from its operations abroad. Therefore, this amendment would hit that company more than it would hit the small companies.

Mr. EDMONDSON. A while ago the Senator from Illinois indicated that there are those who are sympathetic with the criticism the Senator from Illinois has raised with reference to that foreign production. But as I understand his amendment, the proposed reduction of the depletion allowance would apply both to domestic production and foreign production, and with the same percentage.

Mr. DOUGLAS. That is correct. In fact, I submitted another amendment, which provided that the payments to foreign governments for the privilege of drilling should be called royalties, not taxes, and that there should be a reduction of the depletion allowance abroad, and I tried to obtain support from the independent producers. But they are so afraid of the big operators, that the independent producers would not endorse the amendment. I have never seen a group more intent on suicide than are the small producers.

Mr. SIMPSON. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. SIMPSON. I point out that in the case of crude oil production, and the conservation of the production of crude oil in the Nation, as compared to the meatpacking industry and the production of automobiles, the large producers account for only 32 percent, and the rest own 68 percent.

Mr. DOUGLAS. Does the Senator refer to the domestic production?

Mr. SIMPSON. Yes.

Mr. DOUGLAS. Yes. But the Senator will find that the group of American companies virtually control the production in Venezuela and in Saudi Arabia, and, I believe also in Iran. They have interests in other countries as well.

Mr. SIMPSON. There are more than 15,000 producers of oil in the United States.

Mr. DOUGLAS. Yes, and my amendment would not hurt "the little fellow"; he could still get his 27½ percent.

Mr. SIMPSON. But the amendment would hurt the little fellow, because any amendment that would diminish the depletion allowance would, in my opinion—and I have been interested in the discovery of oil and the production of oil by a small, independent oil company—it would hurt the little fellow, because the price of the product, which naturally will go up if they lose the depletion allowance to the extent the Senator seeks.

I am for the little fellow, although I do not know who he is, because I thought everybody in America was big. And I am for the big fellow, because I have seen what he does, and I am sure he has never disgraced the principles of morality, except in a few instances; and the American industry will, I am sure, take care of him.

I was interested in the Senator's reference to the Attorney General in connection with the IOCC. We have always depended on that office to take care of the interests of the industry; and during the years in which I have been in touch with the industry, the Interstate Oil Compact Commission, over which I

once presided, not only has policed the industry, but also has done a very magnificent job in connection with it—better than has been done in any other industry of which I know.

Mr. EDMONDSON. Mr. President, will the Senator from Illinois yield again to me?

Mr. DOUGLAS. I yield.

Mr. EDMONDSON. Will the Senator from Illinois agree that if there are inequities in our tax laws with reference to the production of oil, those inequities are much more apparent in the instances of foreign production to which the Senator from Illinois has referred?

Mr. DOUGLAS. Yes; and I think they get proportionately more than the domestic ones do, because they are allowed to charge off the royalties, which are regarded as taxes; and they have that benefit in addition to the benefit of the depletion allowance; and they also benefit because of the fact that the wells are gushers, and also because the risk of having dry holes is less.

Mr. EDMONDSON. There are no allowables. There are no conservation practices.

Mr. DOUGLAS. I believe that is true.

Mr. EDMONDSON. As to fairness, why would the Senator suggest that a reduction in the depletion allowance applicable to a domestic producer would be more fair than one in the same amount applicable to a foreign producer?

Mr. DOUGLAS. If it is fair for the domestic producer, it would be still more fair for the foreign producer, if there are degrees of fairness.

Mr. EDMONDSON. The Senator believes that the percentage should apply equally, even though the inequity would be greater in the instance of the foreign producer?

Mr. DOUGLAS. If one tries to proportion everything precisely, he may never remove any abuse. I merely repeat that we all know that it is the big companies and the big operators that have the foreign holdings.

I have been in Venezuela. The Standard Oil Co. is there. I am not attacking them. They have done a good productive job. I have been near the Persian Gulf. I know something of what goes on there. Enormous profits are being made there—hundreds of millions of dollars. Production costs are very low. Those profits are siphoned back home. They are virtually free from taxation.

Mr. EDMONDSON. Mr. President, will the Senator yield further?

Mr. DOUGLAS. I yield.

Mr. EDMONDSON. I would like to allude for a moment to the statements made by the Senator from Wyoming. Having served on and worked with the Interstate Oil Compact Commission, as well as having been aware of the problems of the oil industry for a number of years in Oklahoma, I cannot quite see the comparison between an oil company in Oklahoma that produces under a 14-per-barrel-per-day-per-well allowable and the tax cut that the Senator is proposing for a foreign producer that not only has no allowables, but also, as a result, when he hits a 10,000-barrel-a-day production, he can produce 10,000 barrels a day.

The operator in Oklahoma, Texas, or any other State in the United States must operate under local conservation laws, and certainly would be at an extreme disadvantage over and above the disadvantage the Senator would be placing upon the foreign producer if the Senator's theory were carried through.

Mr. DOUGLAS. What I am trying to say is that the relatively low production of American wells is not merely due to the comparative low yield of the oil fields and the relative absence of gushers but it is also due to the overinvestment in the industry, which has been encouraged by the depletion allowance.

Mr. EDMONDSON. Mr. President, will the Senator yield further?

Mr. DOUGLAS. I yield.

Mr. EDMONDSON. How can the Senator justify the fact that for about 25 years our reserves have remained almost constant?

Mr. DOUGLAS. There are always enough reserves discovered to keep the ratio approximately the same. I have watched most reserve figures for many years. They always find enough reserves to keep the ratio of reserves to current yield at the same figure. It is very interesting. The Senator can go back over the years. What happens is that the wildcatter drills. Most of them lose their shirts. A few make some money. If they develop a field, a big company comes in. If a field is found, the large company buys up the wildcatter, takes the leases on the land, and then drills systematically with a minimum of waste and makes a great deal of money. That is what happens.

Mr. EDMONDSON. Mr. President, will the Senator yield further?

Mr. DOUGLAS. I yield.

Mr. EDMONDSON. That theory is not commensurate with the figures released by the Department of Commerce

[P. 2107]

which were recited by the Senator from Wyoming [Mr. SIMPSON] a moment ago, showing that 62 percent of the produc-

tion is held by the independent small producers and not by the major companies.

Mr. DOUGLAS. Not by the major eight.

Mr. EDMONDSON. Not by the major companies that control 32 percent of the production.

Mr. DOUGLAS. I think he said eight companies. If 20 companies are considered, that is a different story.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield to the Senator from New Mexico.

Mr. ANDERSON. A while ago the Senator used the term "economic income." I believe he said that some man had an economic income of $26 million and paid no taxes.

Mr. DOUGLAS. Yes.

Mr. ANDERSON. I am perplexed by the term "economic income." I have in my hand a copy of the Wall Street Journal for today. Last year the Owens-Illinois Glass Co. had net sales of $654 million.

The net before income taxes was $62,616,000. Would that be their economic income? Since the Senator has referred to $26 million of economic income, I should like to understand what he means by the term. Is that net, gross, or the final figure?

Mr. DOUGLAS. Virtually all that amount came from capital gains—not half of the capital gains, but all capital gains. Of that income $26,200,000 was on capital gains.

Mr. ANDERSON. What economic income was there?

Mr. DOUGLAS. The $26,200,000 consisted of capital gains. It was all capital gains—not half of it, but all of it. The interest was $852,000, dividends $64,000, salary $18,000. Oil and gas production before special deductions, $1,534,000. Oil and gas royalties, $320,000. Against those amounts the taxpayer wrote off a deduction for a farm income loss of $276,000.

Mr. ANDERSON. Did I correctly understand the Senator to say that the owner of a royalty could not take the depletion allowance?

Mr. DOUGLAS. No; as I understand, very few royalties yield more than $1 million a year.

Mr. ANDERSON. I am sure of that.

Mr. DOUGLAS. Under my amendment they would still continue to get the 27½ percent allowance. There would be no change in that. It would be effective only if they got more than $1 million.

Mr. GORE. Mr. President, will the Senator yield?

Mr. DOUGLAS. I am glad to yield to the Senator from Tennessee.

Mr. GORE. I have been observing with interest the figures and statistics on the chart which the distinguished junior Senator from Louisiana placed in the rear of the Chamber. I notice that on the chart reference is made to the profits of all manufacturing industries. About what percentage of profits would the manufacturing industries pay in taxes in the opinion of the senior Senator from Illinois?

Mr. DOUGLAS. Approximately 48 or 49 percent in Federal taxes.

Mr. GORE. I notice in another category "U.S. Petroleum Industry." About what percentage of its profits would be paid?

Mr. DOUGLAS. About 23 percent in taxes. Profits on the domestic production were about 9.2 percent. I wish to emphasize again that if we included foreign production, where the profits are 19½ percent, we would arrive at a profit figure of 11.2 percent, or 1 percent higher than the figure for all manufacturing industries.

Mr. GORE. If the Senator would include the foreign holdings of the U.S. petroleum industry, the tax payment as a percentage of gross profits would be considerably less than 23 percent.

Mr. DOUGLAS. In my judgment, the income tax paid on foreign oil holdings of American companies is very low, because against the taxes is written off not only the depletion allowance, but also the so-called tax on royalty disguised as a tax. It is a notorious fact, which I believe once got into the RECORD inadvertently, and therefore I do not believe I am violating any confidence if I repeat it, that in some years the Arabian-American Oil Co., with profits of hundreds of millions of dollars, paid no taxes at all to the U.S. Government.

Mr. GORE. The distinguished Senator will observe on the charts to which I have referred that there is no reference to the percentage of profits paid in taxes.

Mr. DOUGLAS. On domestic production it is around 23 percent.

Mr. GORE. But this chart makes no reference at all to that.

Mr. DOUGLAS. It makes no reference to earnings abroad or to taxes paid on earnings abroad.

Mr. GORE. Or to taxes paid on domestic profits.

Mr. DOUGLAS. These are not profits before taxes; on Senator LONG's chart, these are profits after taxes.

Mr. GORE. But there is no indication as to the percentage of tax paid, either on domestic or foreign earnings.

Mr. DOUGLAS. That is correct.

Mr. GORE. Likewise, that is omitted from the figure on manufacturing industries.

Mr. DOUGLAS. That is correct.

Mr. GORE. There is a second chart, on which reference is made to taxes, though it bears no relationship to chart No. 1.

Mr. DOUGLAS. That is correct.

Mr. GORE. I notice a very large taxpayment, $6 billion in excise taxes. Who pays the excise taxes?

Mr. DOUGLAS. The consumer not the companies, pays the excise taxes. These are gasoline taxes which the motorists pay.

I wish my good friend from Louisiana [Mr. LONG] were here. My good friend from Louisiana is taking credit on behalf of the companies for the taxes which the consumers and the motorists pay.

Mr. MONRONEY. Mr. President, will the Senator yield at that point?

Mr. DOUGLAS. I yield.

Mr. MONRONEY. The distinguished senior Senator from Illinois was present when I had a long colloquy with the distinguished senior Senator from Vermont [Mr. AIKEN] in which, certainly in our part of the debate, I agreed that this tax was paid by the consumers. I also pointed out, however, that we in the gas and oil producing States are saddled with the regressive effect of the charge for excise taxes that amounts to 10 cents a gallon. It does not help the sale of oil and gas when those taxes are 10 cents a gallon.

Mr. DOUGLAS. The Senator from Oklahoma is the soul of honor, as is the Senator from Louisiana, and he would never stretch figures; but I find it extraordinary to see that this figure of $6 billion in excise taxes is somehow implied in the chart, if not directly stated, as being borne by the companies. It is borne by the motorists.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. LONG of Louisiana. I know that if the Senator investigated it, he would learn this. When the last Federal excise taxes were placed on the oil and gas industry, it tried to pass that tax on to the consumers in the price on oil and gas. It could not do it. It tried it, but could not do it. That is shown by the decline of 6.5 percent in gasoline prices.

It is sometimes possible for Congress to tax so heavily that the tax cannot be passed on. The Senator from Illinois is an economist. He has read some of these studies. He knows that every industry tries, if it can, to pass forward even the income tax. The industries try to fix what they regard as a fair profit after taxes. They try to pass forward the income tax. They do it if they can. That is true of all taxes, the excise tax, the income tax, the severance tax, and all the rest. Much of that $8 billion tax is stuck on the oil and gas companies, and they cannot pass it forward. That is shown by the other chart. I invite attention to the 6.5 percent decline in gasoline prices.

Mr. DOUGLAS. That is due to foreign oil competition plus improvements in technique and production. The companies have done extremely well from a technical standpoint. I do not criticize them for that. On the contrary, I praise them for it. I am merely saying they are not paying their share of the taxes.

Mr. LONG of Louisiana. They are paying the $2 billion.

Mr. DOUGLAS. The Senator admits they are not paying the $6 billion?

Mr. LONG of Louisiana. Let us take the $2 billion.

Mr. DOUGLAS. No; let us take the $6 billion.

Mr. LONG of Louisiana. The profits of the oil companies are down. They are not making as much as the manufacturing industry. I am talking about the domestic oil industry. This is a domestic industry.

Mr. DOUGLAS. No; I am seeking to tax both foreign and domestic.

Mr. LONG of Louisiana. Let us talk about the domestic companies.

Mr. DOUGLAS. Let us talk about both.

[*P. 2108*]

Mr. LONG of Louisiana. It is not going to do a domestic oil company any good if the Senator taxes a foreign oil company.

Mr. DOUGLAS. I am seeking to tax the foreign company as well as the domestic company, but mainly the large companies.

Mr. LONG of Louisiana. If the Senator imposes a tax which covers both the foreign and domestic producer, it is of no particular consequence to the domestic oil producer who is having a hard time that the foreign producer, which is doing better than the domestic producer, is being taxed.

Mr. DOUGLAS. The Senator from Louisiana has one of the sharpest minds and is one of the most amiable persons and one of the most honorable characters of anyone I know. I admire and love him. I have tried for years to make him understand that this is not a proposal for uniform reduction, as the amendment of the Senator from Delaware provided. My amendment provides for a graduated reduction, in which the

small producer would suffer no reduction in his depletion allowance. He still would get the 27½-percent depletion allowance. The medium-sized producer would get a depletion allowance of 21 percent. The big producer would have his depletion allowance reduced to 15 percent.

Mr. LONG of Louisiana. The reason why the tax on the domestic oil producer should not be increased has a different logic than the reason why the tax on the foreign oil producer should not be increased. If the Senator wants to debate the question with respect to the domestic producer, there is good reason why his tax should not be increased. It is not the same as the reason why the tax on the foreign producer should not be increased. If we are talking about domestic oil production, the domestic oil industry is not making the profit that it needs to be competitive as compared with all manufacturing. At the prices it is getting, it is suffering. Explorations are down. Domestic producers will all be affected.

The only reason why there is a difference between the amendment of the Senator from Illinois and that of the Senator from Delaware is that the amendment of the Senator from Illinois is well calculated. It affects Louisiana, Texas, and Oklahoma producers, but does not affect anybody in Illinois.

Mr. DOUGLAS. It affects the Ohio Oil Co. It affects the Carter Oil Co. It affects several other oil companies operating in Illinois. The big companies have been successful in bamboozling the small operator. During every election they try very hard to take after me with a scalping knife, but I go into the oil districts then, and at other times as well, and explain the situation, and I carry the oil counties every time.

Mr. LONG of Louisiana. If the Senator is really looking at why the 27½-percent depletion allowance is in existence, it is to offset the tremendous risk a man takes when a man goes into New Hampshire or Vermont or Massachusetts and tries to drill for oil. The chances are very great that all he will get will be salt water. Against that, the allowance is for the fantastic risks involved in exploring and trying to find new oil. The companies invest 67 cents every time they get a dollar in revenue, in order to find more oil. That is the big problem we are talking about.

The Senator from Illinois seeks to retain the depletion allowance for the man who owns the land. Let us assume that someone leases a man's land and explores for oil. The chances are 50 to 1 that nothing will be found, but the farmer has nothing to lose.

The Senator from Illinois is a very smart politician, so he protects the farmer, even if nothing is found on his land but salt water, or even dust, and the farmer makes a profit.

Mr. DOUGLAS. Is the Senator against the farmer and the small producer?

Mr. LONG of Louisiana. I am against giving something for nothing to anyone except the welfare client, and I am in favor of giving him a little more, but I am not in favor of giving something to somebody at another man's expense.

Mr. DOUGLAS. The Senator from Louisiana has charged me with hypocrisy——

Mr. LONG of Louisiana. No; with being a good politician.

Mr. DOUGLAS. I just voted for the Williams amendment, which did not provide for graduation. I do not think it is as good an amendment as mine, because the small producer does not have the same distribution of risk as the large operator. Furthermore, he tends to venture out into untrained fields and, therefore, it is proper that he should have greater protection against risk. That is the basic economic reason why I retain the 27½-percent allowance for those with a gross income of less than $1 million.

Mr. LONG of Louisiana. I hope the Senator from Illinois, who has been three times elected to the Senate, will not contend that he is not an astute politician. I have always known that he is a great man, that he is a lovable man, and one whom I truly admire, but I hope he will not contend that he is not an astute politician, because I have always considered that that is one reason why he is here.

Mr. DOUGLAS. This is the first time I have ever been accused of being an astute politician. I have always regarded myself as a wandering city fellow trying to do his best, making many mistakes, one who did not have the ability of many of his colleagues, but somehow hitched up with the right causes which would ultimately, though not immediately, triumph.

Mr. ANDERSON. Mr. President, will the Senator from Illinois [Mr. DOUGLAS] yield?

Mr. DOUGLAS. I promised before to yield to the Senator from Tennessee [Mr. GORE] but——

Mr. McGEE. If I may fill in the gap made by the Senator from Tennessee, who is not now in the Chamber, I would hope the Senator from Illinois would be willing to correct one of the rare mistakes that he is guilty of making.

Mr. DOUGLAS. I am guilty of making mistakes?

Mr. McGEE. The Senator from Illinois has one of the great minds in this body.

Mr. DOUGLAS. Beware of Greeks bearing gifts. I yield to the Senator from Wyoming.

Mr. McGEE. I believe the Senator from Illinois, if I may make the point, is starting at the wrong end of the problem, that again, as I had occasion to say earlier today, this is a resource development question. The depletion allowance is aimed at encouraging oil exploration. I say we are only confusing the issue and having a little fun when we start to reverse the order of priority.

The Senator from Illinois, in his esteemed way, is interested in maintaining the well-being of the independents. In fact, he proposes to "do them in." By his own table of statistics he reminds us that only 2 percent of the depletion allowance going to producers with gross incomes of $1 million would be affected by his amendment.

Mr. DOUGLAS. The table involves gross assets; yes.

Mr. McGEE. Yes. That 2 percent proves the point. It seems to me that the Senator is talking unrealistically.

Mr. DOUGLAS. Wait a minute——

Mr. McGEE. The independent works with a risk factor, there is the momentum factor and other factors concerned with the resource of oil.

Mr. DOUGLAS. My amendment provides for a $1 million gross income before any reduction in the depletion allowance. The figure the Senator has just given deals with $1 million of assets. The income would be——

Mr. McGEE. One million dollars gross will bring in what, to a producer?

Mr. DOUGLAS. A $1 million income.

Mr. McGEE. One million dollars gross. The Senator is talking about $1 million gross.

Mr. DOUGLAS. I do not know what the net would be.

Mr. McGEE. It would be small. The profits would bring in what, $80,000?

Mr. DOUGLAS. If it is small, then the taxes would be small.

Mr. McGEE. No; the Senator from Illinois is discouraging the independents, for the reason that——

Mr. DOUGLAS. How am I discouraging the independents, by permitting them to retain the same depletion allowance that they have today?

Mr. McGEE. The Senator has this $1 million in gross income. I should like to point out that the independent would be deterred from oil exploration. I do not believe the Senator is trying to argue that we have too much oil and that we have got so much that we do not know what to do with it.

Mr. DOUGLAS. We have got too many wells.

Mr. McGEE. We need more oil and we need to prove up more reserves. Why would not the independent, if the Senator is interested in protecting him, have an incentive to stop exploring the moment he reached a million dollars?

Mr. DOUGLAS. Is he saying that to become a John D. Rockefeller is what lures him on?

Mr. McGEE. The Senator from Illinois, by the use of this figure, has not been deeply involved in oil exploration.

[*P. 2109*]

Mr. DOUGLAS. That is true.

Mr. McGEE. The risk and cost factors must be considered.

Mr. DOUGLAS. The risk factor shows up between the wildcatter and the established company. General Thompson, who was formerly regarded as the great god on this subject in Texas, testified in 1950 that in the industry as a whole there were two successes for every failure. I have the figures on the drilling, and the ratios of success to failure are approximately 4 to 1 for the 5 big companies.

Mr. McGEE. We are talking about exploring oil and the independents do 70 to 80 percent of all exploration. They have no such phenomenal percentage as this.

Mr. DOUGLAS. This is one of the reasons why I am not diminishing the depletion allowance for those who have a gross income of less than $1 million. I am retaining the 27½-percent depletion allowance for them as a compensation for the risk because they suffer in two ways. First, they drill in undeveloped fields, and second, they do not have as wide a distribution in the number of the drillings which a big company will have.

Mr. McGEE. With $1 million gross they cannot continue. The Senator will put them out of business before they start.

Mr. DOUGLAS. I do not believe I will put them out of business because they would still have the same 27½ percent depletion allowance.

Mr. McGEE. One million dollars gross to an independent, he cannot stay in the oil exploration business on a wide scale. He has got to go out of business. The Senator's $1 million is totally out of line because he loses the point of the whole assault on depletion. Depletion was designed to develop and prove out on resources. It was not a source of income to the company. That is why the Sen-

ator has started at the wrong end. He has the well before the exploration.

Mr. DOUGLAS. I say a million dollars in gross income from oil is not an excessively small amount.

Mr. McGEE. I say it is a very excessively small amount. In the oil exploration business one cannot stay in business by bringing in one well and then waiting until one has spent out that year, whatever the allowance would be, $80,000, and then do it again next year.

Mr. DOUGLAS. What is the price per barrel of oil in the field?

Mr. McGEE. Around 20 to 25 cents profit. We are interested in the profit.

Mr. DOUGLAS. What is the price in the field?

Mr. McGEE. Three dollars.

Mr. DOUGLAS. Well, then, an oil man would have to produce more than 333,000 barrels in a year in order to exceed the $1 million figure. On all yields of less than 333,000 barrels, or the $1 million figure, the depletion allowance would not be reduced.

Mr. ANDERSON. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. ANDERSON. I should like to ask a question about this $26 million. The Senator from Illinois has said that an individual earning $26 million paid no tax. Would the Senator compare the record because I know the fact of a man with $26 million and only $10 million of it was attributable to that year.

Mr. DOUGLAS. I know, but it was capital gains.

Mr. ANDERSON. The capital gains was attributable to that year. Only $10 million went in that year. So it comes down from $26 million to $10 million. The capital gains was $5,436,224. From that he took only $2,276,156 in exploration. That left $3,377,421 profit on which he would have paid tax had it not been that he had a previous loss. So while he did have $26 million it came to only $3 million and the rest is cut off. If the Senator has some information better than that, I should like to hear it.

Mr. DOUGLAS. I have a memorandum on that, which was furnished to the Senator from Louisiana and to the Senator from Illinois. The sale was made for $8 million cash with the balance in purchase money notes. Notes due January 25, 1961, amounting to $3,377,421 were sold to a third party on December 29, 1960, raising the selling price realized in the calendar year to $11,325,000. The realized gain for 1960, therefore amounted to $10,888,000, the balance being deferred until future years in accordance with the installment method which is provided in the code. This is possible only if the payments—exclusive of evidence of indebtedness—do not exceed 30 percent of the selling price. Of the balance of the notes, $6 million was collected in 1961.

Mr. ANDERSON. That is right. That is what he paid.

Mr. DOUGLAS. On which $5,743,000 represented taxable gain, 10 million therefore remained for collection in future years.

The point is that he was paid in cash, and the balance in purchase money notes, which he could collect at almost any time.

Mr. ANDERSON. No. He would have lost his whole capital gains. This is a perfectly normal transaction.

Mr. DOUGLAS. What tax did he pay in the following year?

Mr. ANDERSON. I do not know.

Mr. DOUGLAS. I believe the Senator will find that he paid no tax in the following year.

Mr. ANDERSON. Oh, no. The Senator has had many nice things said about him, and I could add to them. It was unfortunate, however, that he said the man had a $26 million income.

Mr. DOUGLAS. An economic income.

Mr. ANDERSON. Economic income is income. The Senator said that he paid no taxes.

Mr. DOUGLAS. I am not trying to conceal anything. I gave the Senator the information I had. I had previously put all the facts in the RECORD.

Mr. ANDERSON. The Senator handed me the chart. He is not trying to conceal anything. He wanted it all out in the open. I do not believe that what he has said shows the exact situation.

Mr. DOUGLAS. Suppose he had $12 million and did not pay any taxes?

Mr. ANDERSON. But he had previous losses which he wrote off.

Mr. SIMPSON. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. SIMPSON. Perhaps we are fiddling while Rome burns. We may well need the combined resources of these great companies to provide us with the required energy. The news has just come over the wire that Castro has enforced his threat to shut off the water at Guantanamo. What we are discussing here may become academic in a few days.

Mr. President, I ask unanimous consent to insert in the RECORD at this point a table showing the net value of production as against expenditures for finding, developing and producing oil and gas for the years 1951, 1953, and 1955.

The total net value of production in 1955, for the entire industry, was $6,720,539,000. The total exploration and developmental costs in 1955 were $5,127,465,000.

The net annual loss in 1955 was $428,260,000.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Net value of production versus expenditures for finding, developing, and producing oil and gas

[In thousands of dollars]

	1951	1953	1955
Industry income:			
Net value oil produced	4,862,136	5,401,018	5,884,215
Net value gas produced	465,451	660,501	836,324
Total, net value production	5,327,587	6,061,519	6,720,539
Industry expenditures-exploration costs:			
Geological, geophysical, and related professional services	186,000	243,590	245,440
Lease purchases and rentals	637,910	744,630	876,520
Dry holes	650,290	795,890	940,210
Overhead	126,780	171,270	206,220
Total, exploration costs	1,600,980	1,955,380	2,268,390

[P. 2110]

	1951	1953	1955
Development costs:			
Drilling and completion of producing wells	1,390,050	1,689,607	2,097,225
Equipment (tubing, tanks, flow value, etc.)	420,360	483,000	556,210
Overhead	135,780	168,378	205,640
Total, development costs	1,946,190	2,340,985	2,859,075
Subtotal, exploration and development costs	3,547,170	4,296,365	5,127,465
Operating costs:			
Oil:			
Direct costs	1,274,149	1,392,576	1,540,092
Overhead	242,146	306,326	337,758
Total, oil operating costs	1,516,295	1,698,902	1,877,850
Gas:			
Direct costs	89,220	134,675	134,097
Overhead	7,758	10,920	9,387
Total, gas operating costs	96,978	145,595	143,484
Total operating costs	1,613,273	1,844,497	2,021,334
Total expenditures for finding, developing, and producing [1]	5,160,443	6,140,862	7,148,799
Net annual balance	+167,144	−79,343	−428,260

[1] Includes maintenance, supervision, and general overhead but excludes charges for research. The costs do not include income taxes, payment on interest and principal, or return to investors.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. PROXMIRE. The colloquy between the Senator from Illinois and the Senator from Wyoming was quite fascinating. If we followed it through, would it not show that if a firm or individual has a gross income of $1 million, he is netting in the neighborhood of $75,000 or $85,000?

Mr. DOUGLAS. Yes.

Mr. PROXMIRE. Does the Senator believe that a man who nets $75,000 or $85,000 is a pauper, or is in a very weak financial position?

Mr. DOUGLAS. I hardly think so.

Mr. PROXMIRE. Besides, he would not be affected by the Senator's amendment, would he?

Mr. DOUGLAS. The Senator is correct.

Mr. PROXMIRE. So he would have a substantial income, an income more than three times as large as U.S. Senators receive.

Mr. DOUGLAS. He would be among the upper one-fifth of 1 percent of the people of the country.

Mr. PROXMIRE. One-fifth of 1 percent. In other words, 99.8 percent of the people earn less than that.

Mr. DOUGLAS. Yes.

Mr. PROXMIRE. Yet a man who has that income is considered by Senators opposing the Senator from Illinois, as small potatoes in the oil industry, yet he is in a category which is far above that of 99 percent of the population of the country. Is that correct?

Mr. DOUGLAS. Yes; I am trying to protect 99.8 percent of the population. The Senator from Wyoming is weeping copious tears for two-tenths of 1 percent, or for 1 out of every 500.

I do not regard that as a principle of the Democratic Party of Andrew Jackson, Woodrow Wilson, Franklin Roosevelt, Harry Truman, and John F. Kennedy.

Mr. PROXMIRE. The Senator has discussed the fact that the manuufacturing industry has a profit of 10.3 percent and the petroleum industry a profit of 9.1 percent. Of course, as he pointed out, this does not include foreign operations.

Let us assume that the oil industry does not make quite as much money as the rest of the industry. Does the Senator believe that to be any basis for arguing that they should pay only half as much in taxes? For example, if a person lives in a State which has half the per capita income of another State, should he be permitted to pay only 50 percent as much in taxes?

Mr. DOUGLAS. If the average domestic production is lower, it is due to the depletion allowance, which has encouraged overinvestment and overdrilling—so much overdrilling, in fact, that it is necessary to restrict production in order to keep up prices.

I ask unanimous consent that a table giving the profits on investment for 16 major companies be provided at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Profits on investment after taxes 1961–62

	Percent
1. Standard Oil of New Jersey	11.1
2. Socony	8.2
3. Texaco	14.8
4. Standard Oil of California	11.6
5. Standard Oil of Indiana	6.6
6. Shell	11.2
7. Phillips	8.9
8. Sinclair	5.0
9. Continental	9.4
10. Standard Oil of Ohio	8.4
11. Marathon	8.3
12. Signal	8.6
13. Richfield	10.6
14. Kerr-McGee	15.7
15. Superior	9.6
16. Amerada Petroleum	15.9

Mr. PROXMIRE. Would it not be to the interest of the people in Texas, Oklahoma, Louisiana, and Wyoming if the oil industry did not have these enormous concessions, so that the wealthy people from the East and the North who have huge incomes would not be in a position where they felt they had to come into the oil industry to take advantage of the tax concessions.

Mr. DOUGLAS. Their going into the oil industry has contributed to overdevelopment. They have made the plight of the producer worse than it would have otherwise been.

Mr. PROXMIRE. Does the Senator recall the great book by Phil Stern "Treasury Raid" in which the author referred to a man who had $85 million in assets, with very high income, and who said he could not afford to stay out of the oil industry, and had to go into it in order to take advantage of the tax concessions?

Mr. DOUGLAS. Yes.

Mr. PROXMIRE. As a consequence, the people who live there and who have ordinary wealth would be better off if this capital were not pulled in into that area in this artificial way.

Mr. DOUGLAS. The Senator expresses it very well.

Mr. PROXMIRE. The argument is made that the depletion allowance is necessary because this is a high risk industry. Is it not correct that Dunn's Review shows that, whereas the construction industry has failures in the neighborhood of 85 per 10,000, the retail industry has failures of 400 per 10,000——

Mr. DOUGLAS. Construction has 86 failures per 10,000.

Mr. PROXMIRE. I stand corrected; 86 per 10,000. The retail industry has failures of 400 per 10,000. How many failures are there in the petroleum industry?

Mr. DOUGLAS. Four out of every ten-thousand.

Mr. PROXMIRE. Four out of every ten thousand?

Mr. DOUGLAS. Yes. It is the lowest of any industrial group. It is one of the safest industries to go into. The ratio is 20 in food and 86 in construction, but only 4 in oil, gas, and mining. If these people claim we must give them a tax break, what are we going to do for the corner grocer?

What about the baseball player. A baseball player's life in baseball is very short. There are few Stan Musials. Most players have a very brief time in the game. Should they not have the benefit of a depletion allowance? They want it. What about poets? Should not poetic genius have a depletion allow-

ance? Should not there be a depletion allowance for defeated politicians?

Mr. PROXMIRE. I think that would be an excellent idea, in view of what I may face in a few months.

One of the real difficulties of the depletion allowance in its present form is that Uncle Sam is a partner, up to 90 percent, for the man who is losing money in the oil industry; 70 percent, if the pending bill passes. It will be very high. But what happens when the oil speculator is on the winning side? How much does Uncle Sam get?

[*P. 2111*]

Mr. DOUGLAS. The speculator takes almost all. It is a case of "heads I win, tails you lose."

Mr. PROXMIRE. In other words, heads, Uncle Sam loses; tails, the oil speculator gains.

Mr. DOUGLAS. That is correct.

Mr. PROXMIRE. Uncle Sam never wins.

Mr. DOUGLAS. Seldom.

Mr. PROXMIRE. One more question. I know the Senator from West Virginia has been waiting patiently. Does the Senator from Illinois know of any principle in taxation or economics that would justify a depletion allowance which, in the years 1946 to 1949, enabled the average oil corporation to write off its wells not once, not twice, not 10 times, but 19 times?

Mr. DOUGLAS. I know of no such principle. This is one of the scandals. The depletion allowance is not depreciation, but the oil well operator writes off the original cost multiple times. I know of no other industry in which that can be done. There is no other industry, except possibly the sulfur industry.

Mr. PROXMIRE. But in terms of the whole principle of depletion depreciation, what is the purpose of it? The purpose is to enable the taxpayer to write off the asset which he has invested for business purposes, full value of it during its life, not twice, but once. Is not that correct?

Mr. DOUGLAS. That is correct.

Mr. PROXMIRE. So this principle is violated by the depletion allowance, and the Senator from Illinois, by his modest amendment, would not affect the man who nets about $75,000 or $80,000 a year at all. He would affect the middleman only to the extent of reducing his depreciation to 21 percent. The big operator would still have a 15-percent depletion allowance with which he could write off his investment.

Mr. DOUGLAS. If the oil industry does not accept this, it will get something worse. I am astounded by my own moderation. It would save the taxpayers nevertheless $400 million a year. Those who were so solicitous for the budget when they voted down the Ribicoff amendment and the proposed removal of retail excise taxes now have the chance to prove that their concern is sincere.

Mr. RANDOLPH. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield to the Senator from West Virginia.

Mr. RANDOLPH. I am deeply honored to sit here, as I do day after day, beside the diligent and distinguished Senator from Illinois. We hold many similar views and we vote together very often. I hold a genuine affection for him as a friend.

Mr. DOUGLAS. May I interrupt the Senator from West Virginia to say that Disraeli was once asked how he got along with Queen Victoria. He replied:

> When I deal with Queen Victoria, I lay it on with a trowel.

I would say that the Senator from West Virginia lays it on with a shovel.

Mr. RANDOLPH. What I have spoken is from my heart.

We hear about the multimillionaires——

Mr. DOUGLAS. The Hunts and the Gettys.

Mr. RANDOLPH. The Senator has placed these names in the RECORD.

Mr. DOUGLAS. The Cullens and Clint Murchisons and Sid Richardson and a host of lesser lights.

Mr. RANDOLPH. I remember that my revered father was an active independent oil and gas producer in West Virginia. He lost money in this industry; but he was a pioneer and he helped thousands of citizens and aided the economy.

Mr. DOUGLAS. He would not be affected by my amendment.

Mr. RANDOLPH. But I make the point that not all persons who drill for oil and gas have become or did become rich.

Mr. DOUGLAS. That is true.

Mr. RANDOLPH. Not all West Virginians who went from our State to the fields in Oklahoma became wealthy in that State. Most of them, I note, in the presence of Senators from that State, were substantial people. They were ready to take a chance.

I had two uncles who went to Oklahoma from West Virginia; they did not become rich men, although they carried from the oil background in West Virginia to the Sooner State, hard work and good citizenship.

We have pioneered in this industry. Our first commercial well was drilled in October 1859. This well was drilled in

the Hughes River territory 4 years before West Virginia became a State.

Mr. DOUGLAS. About the time of the discovery of oil at Titusville?

Mr. RANDOLPH. Titusville was the location of the first U.S. production.

Mr. DOUGLAS. That is correct.

Mr. RANDOLPH. Mr. President, in the early years there was feverish competitive activity in the petroleum industry. Overdrilling was the rule. Extravagant dissipation of reservoir energy wasted billions of feet of valuable natural gas. It also allowed upward to 80 percent of the oil in the reservoir to lie unrecovered and unrecoverable except under some form of secondary operation.

Despite those early practices, and because of the large virgin territory in our State available for exploration and development, production steadily increased until the peak year of 1900, when over 16 million barrels of oil were produced in our State. After that top year, production steadily declined until the total output of crude oil in 1962 in West Virginia amounted to 3.5 million barrels.

But oil alone is not involved, in our State, because oil and gas are generally found in the same horizon and in many cases are produced from the same well. It is significant that the total value of crude oil, natural gas liquids, and natural gas in 1962 amounted to $91.7 million. These mineral products were second in value only to coal, and these petroleum values represent 12.9 percent of the total value of all our State's minerals.

In West Virginia, 47 percent of the total land area is under lease for oil and gas purposes and in the search for and development of these hydrocarbons, 85,193 wells have been drilled. Upward to 30,000 producing oil and gas wells were in operation in the State in 1962, and 1,400 of them were new last year. In 1962 we drilled 1,171 wells and 200 were dry holes.

The producing division of the industry provides employment for 4,250 persons. Refining, transportation, and marketing divisions and employees of gas companies number 10,400. Thus, 14,650 individuals are gainfully employed by the oil and gas industry in West Virginia. Several thousand additional are employed in retail marketing outlets. It is estimated that payrolls in excess of $70 million are generated annually in our State by petroleum drilling, transporting, refining, and marketing.

Approximately 80 percent of the wells now producing in West Virginia are owned by small independent companies. More than 150,000 West Virginians receive income from these wells based on investment or royalty or rental.

The oil and gas industries are vital revenue producers for several of our counties, and for the State government. The industry, in the month of August of last year, paid gross sales taxes amounting to $671,230—the oil portion having been over $22,000, the gas portion almost $122,000, and gas utilities, slightly over $527,000.

I am a vigorous believer in the concept that conservation of our nonrenewable natural resources, particularly oil and gas and component hydrocarbons, is indispensable to the welfare and the continuing strength of the State and the Nation. Only through wise utilization of our nonrenewable natural resources can we escape the detrimental consequences of profligate depletion of the sources of our valuable petroleum products.

I think in terms of incentive, and the aiding of productivity of West Virginia. Even so, although one may discount the financial hazard of drilling an oil well in West Virginia, the hazard exists, nevertheless, to a considerable degree.

I feel that, by and large, we must face the fact that there is a need, not only in this particular industry, but in many other industries, for what we call incentives for venture capital, for risk capital.

I wish to emphasize again, as I did earlier, that in West Virginia the average cost of drilling a producing well is $49,500. That is not a deep well; it is of the average depth of 3,500 feet. Our productive sands are between 1,000 and 12,000 feet below the surface.

The domestic, the independent, the small producer in West Virginia is concerned in terms of the needed protection which comes to him from the present depletion allowance.

Earlier this afternoon I read into the RECORD—at a time when I believe the Senator from Illinois was not on the floor—a statement from a West Virginia friend whom I know very well. In 1962 his firm drilled 141 wells. Only one of them produced sufficient profit to be em-

[*P. 2112*]

braced within the 27½-percent depletion allowance. The actual depletion allowance on the wells drilled amounted to less than 13 percent. So the figure is not always 27½ percent.

Mr. DOUGLAS. The average percentage taken, in the country as a whole, is, however, approximately 26 percent.

Let us consider the average small producer in West Virginia. How many barrels of oil will his well produce in a year?

Mr. RANDOLPH. I cannot answer

that question, but I do have the figures on crude-oil production for the following years:

	Barrels
1958	2,186,000
1959	2,184,000
1960	2,300,000
1961	2,760,000
1962	3,345,000

Mr. DOUGLAS. We do not reduce the depletion allowance for any individual or corporation on any gross income of less than $1 million; and with oil worth $3 a barrel in the field—as the distinguished Senator from Oklahoma has said and has been corroborated by the Senator from New Mexico—one would have to have over 330,000 barrels, to go over the $1 million mark. So a producer who has 2,000 barrels a year need not fear; neither will one who has 10 average wells with 20,000 barrels or $60,000, or one who has 50 wells, or one who has 100 wells, or one who has 150 wells need fear. Even the latter will only have a gross income of $450,000. He will still have his 27½ percent allowance.

Let the Senator return to West Virginia and tell the producers there that there is nothing for them to fear in the Douglas amendment.

Mr. RANDOLPH. I understand the principle on which the Senator from Illinois bases his argument.

Those of us who come from States such as West Virginia—which is identified in the public mind as being a coal-producing State, there is important oil-production——

Mr. DOUGLAS. But the Senator should not let his State be used by the "big boys"——

Mr. RANDOLPH. I feel we are both concerned with doing that which is equitable, even though there is a disagreement on this proposal. My position has been a consistent one, in the House and now in the Senate. I respect the conviction of the Senator from Illinois.

Mr. DOUGLAS. Mr. President, the Senator from West Virginia is always generous, and also amiable and kind.

Mr. RANDOLPH. I thank the Senator from Illinois.

Mr. DOUGLAS. Mr. President, unless the Senator from Oklahoma [Mr. MONRONEY] wishes to ask me some questions——

Mr. MONRONEY. I wish to obtain the floor.

Mr. DOUGLAS. Does the Senator from Oklahoma wish to obtain the floor in his own right?

Mr. MONRONEY. Yes.

Mr. DOUGLAS. Very well.

Mr. President, I yield the floor.

Mr. MONRONEY. Mr. President——

The PRESIDING OFFICER. The Senator from Oklahoma is recognized.

Mr. CLARK. Mr. President, will the Senator from Oklahoma yield briefly to me?

Mr. MONRONEY. I yield.

Mr. CLARK. I thank the Senator from Oklahoma.

Mr. President, I supported the Williams oil depletion amendment, and I shall support the Douglas amendment. I desire to state very briefly my reasons for doing so.

First, I wish to make it clear that—at least, in my own mind—I am not engaging in a grandstand play. I have revealed to the public the fact that for many years my principal source of income has been oil royalties paid me by the Humble Oil & Refining Co., in an amount sufficient to enable me to lead a comfortable life and still be a U.S. Senator.

I repeat that I am not indulging in a grandstand play.

Mr. LONG of Louisiana. Mr. President, will the Senator from Pennsylvania yield?

Mr. CLARK. I yield.

Mr. LONG of Louisiana. Would not the Senator from Pennsylvania be protected by this amendment? He is an oil royalty owner, is he not?

Mr. CLARK. I intend to support the amendment of the Senator from Illinois, because the oil depletion allowance is so unconscionable that I cannot sleep very well some nights when I realize that I am a beneficiary of it. So I intend to support a cut in it; and I think it can be cut and still be such as to enable me to continue my rather comfortable mode of living.

I say to the Senator from Louisiana that it is the munificence which flows from underneath the land of the sugar plantation which my great grandfather had the wisdom to squat on, shortly before the Civil War, land located in Louisiana, which enables me to take this so-called high-minded attitude, because I could afford to have the oil depletion allowance cut rather substantially and still not suffer unduly.

Mr. LONG of Louisiana. Mr. President, does the Senator from Pennsylvania say——

Mr. CLARK. Mr. President, I do not yield at this time.

I say that this is no grandstand play on my part, because the depletion allowance could be cut in half, and I still could pay for the groceries I need.

Mr. President, I asked the Senator from Oklahoma to yield briefly to me. However, if the Senator from Louisiana

wishes to inject his remarks into my speech, I am glad to yield to him.

Mr. LONG of Louisiana. Is the Senator from Pennsylvania making more than $1 million a year from those royalties?

Mr. CLARK. No. I am making in the neighborhood of $60,000 to $70,000 a year from the royalties.

Mr. LONG of Louisiana. Then the Senator from Pennsylvania is well protected; and the amendment would cost him nothing, and he could be a statesman about this matter.

Mr. CLARK. So what? I am still in favor of the amendment.

Mr. LONG of Louisiana. But the Senator from Pennsylvania would take no risk.

That is exactly what is wrong with the amendment of the Senator from Illinois: Those who take no risk could continue to stay in Philadelphia and draw their royalties; and the Senator from Pennsylvania therefore would favor the amendment, even if the result was that nothing but dust were found in the bottom of a dry hole.

Mr. CLARK. Mr. President, I can shout as loud as the Senator from Louisiana can. If he wishes me to yield from the time given me by courtesy of the Senator from Oklahoma, I am willing to yield for a question—but not for a speech in the brief amount of time which has been yielded to me. But I can shout as loud as the Senator from Louisiana can. If he wishes to ask me a question, I shall yield. If he wishes to make a stump speech, he should make it on his own time.

Mr. LONG of Louisiana. Well, does the Senator from Pennsylvania say that if an oil company conducts its operations on the land which was acquired by his great-grandfather, and if that company takes all the risk and drills the well, and if its operations result in enabling the Senator from Pennsylvania to have a guaranteed income of $70,000 a year, is it fair, when that company takes all the risk for the Senator from Pennsylvania to take none of the risk, but still favor an amendment which would cut the depletion allowance to an extent which really would hurt that company?

Mr. CLARK. Mr. President, if the Senator from Louisiana wishes to have me give him a candid answer, it is that I do not think it is fair that I get so much income tax free and at the same time that the Humble Oil Co. not pay the amount of taxes which it should pay as its fair share in order to help preserve our freedoms and our American way of life.

Mr. LONG of Louisiana. Does the Senator from Pennsylvania think it is fair for the producer to take all the risk and for the Senator, who receives that fine income from the oil company's operations, to take no risk—not only take no risk, but, in fact, receive that very large payment—and also for the Senator to favor this amendment, which really would hurt that producer? Does the Senator from Pennsylvania think it is fair for him in that way to repay that company for all the risk it took? In other words, does he believe it would be fair for him to favor an amendment which would penalize those who took the risk, while those who are protected and are making fine profits are living comfortably and are the ones who really benefit as a result of the 27½-percent depletion allowance?

Mr. CLARK. The answer to that question is "Yes." Nevertheless I voted for the amendment of the Senator from

[*P. 2113*]

Delaware [Mr. WILLIAMS], which did not include the escape clause which, in my opinion, the Douglas amendment includes.

In my opinion, a cut in the depletion allowance, whether confined to the depletion allowance received by the large companies which produce oil or confined to allowance received by the royalty owners, is an appropriate exercise of the discretion of Congress; and I shall support it.

Mr. President, if the Senator from Louisiana will permit me to do so, I should like to conclude my comments—and in short order.

I thank the Senator from Oklahoma for yielding this time to me.

My point is that the arguments made by the Senator from Delaware and the Senator from Illinois are quite unanswerable. In my opinion that is an industry which quite clearly is not paying its fair share of our national tax burden.

I understand that this is a controversial statement for me to make. I have tried to follow the arguments on both sides as well as I could. Nevertheless, it seems clear to me that the preponderance of sound argument is on the side of the Senator from Delaware [Mr. WILLIAMS] and the Senator from Illinois [Mr. DOUGLAS]. In my judgment, there is no conceivable excuse for my getting tax free income because my great-grandfather, who thought he was going to raise sugar—I am sure he would roll over in his grave now if he knew that there were 63 to 70 oil-producing oil wells under the land where, unhappily, he failed to raise sugar with any profit—

had the good fortune or the good luck to squat on that land. I suppose that statement is not fair to great-grandfather, because he got a good title to that Spanish land grant. He did not really squat; he bought the land.

I conclude on the following note: Here is an inequitable tax situation which has existed for a long time. Every year since I came to the Senate efforts have been made to cut the depletion allowance in order to bring the return from the oil industry somewhere into line with the return from other well-managed and profitable American corporations.

We have been defeated because the votes of Senators who come from the States where oil is being produced defeat the effort to give equity to this part of our tax structure.

The argument has been made that we ought not to cut the depletion allowance because we have to encourage further exploration for oil and gas and the building up of further reserves. In my opinion that is an unsound argument. There is too much oil now. The Middle Eastern oil is produced so much more cheaply than our domestic oil that it is necessary to rig the price. The gulf coast posted price which controls U.S. prices for oil is far higher than the profitable cost of bringing oil in from the Middle East and elsewhere. In my opinion—and I am now about through—it would be far better to keep those reserves in the ground until perhaps they will be badly needed in the event of war or some other catastrophe, when perhaps our source of supply from foreign oil would be cut down. We know those reserves are there. We know what they are. The oil wells on the property from which I received royalties are now restricted as to the number of barrels they can produce each day. It is probably a good thing for my children and my grandchildren that, in an effort to maintain and stabilize the price, production from those wells is being curtailed. It seems to me that in that situation it would be far wiser not to drill a great many more wells to prove those reserves. I believe domestic production should be cut even further.

I thank my friend from Oklahoma for yielding to me. I shall support the Douglas amendment.

Mr. MONRONEY. Mr. President, before we establish a change in our historic and, I believe, successful policy of dealing with mineral deposits in the United States, we should at least stop, look, and listen. We have heard nothing, except bare statements on the floor of the Senate, to show that we have too much oil. I feel that we do not have too much oil. I believe that we must always have enough oil so that our Nation can be independent, if necessary, in the event Middle Eastern oil is shut off or if Latin American oil is shut off. We should have that oil available so that we can supply with oil the necessary equipment, including airplanes, tanks, automobiles, and buses that are so heavily dependent on that prime source of energy.

If we keep those objectives in sight, I do not believe it can be shown that we are overdeveloping our natural resources. Any idea that we should make it harder to find oil is difficult to understand. That is the point of the argument of all three leaders who support the amendment. They maintain that there has been overdevelopment of our oil resources and overinvestment in them. If we are required to import 12½ percent of our oil from overseas today, I believe that we certainly are not overproducing or overdeveloping. Certainly some of the oil is shut in. I am very glad that we are producing only 7½ million barrels a day against an absolute potential of 10½ million barrels. But that is not a sign that if we should open production to 10½ million barrels we would have that much supply per day. Over a period of 45 days, when the rock pressure would go down, we could not produce that much oil.

I should like to state what we are asked to do in the Douglas amendment.

I am very much surprised that a man who always hews to the line of absolute fairness in the treatment of any tax question would change the whole philosophy of the depletion allowances, which historically have been based on many factors, but certainly not on the income of the individual taxpayer.

We have a graduated income tax for individuals. We have a corporation tax, which has been too high. It has been 52 percent; it will be lowered to 48 percent. But even then these corporations will be declaring dividends. When the dividends go out and are received by the individual stockholders, those stockholders will pay the graduated income tax on them. For that reason I say that we are attempting to put two taxes on the income of the individual taxpayer. We would put a penalty on his success in finding oil or developing it. I think such a penalty is against the best principles that we have always stood for.

Under the Douglas amendment, the rate of depletion would no longer be based upon a particular mineral or commodity, as has historically been the case, but it would be based instead upon a concept completely irrelevant to the original purposes of depletion, such as

the need for domestic reserves, the large amount of capital required, and the comparative risk. Under the Senator's amendment, the depletion rate would be based solely on the financial status of a particular individual or a particular corporation.

It would not depend on the mineral, whether it was hard to find, or whether it existed in great quantities. All the minerals with peculiar sounding names would be placed above oil in the depletion allowance. The amendment would give higher allowances to those people who are fortunate enough to have deposits of sulfur or uranium that he mentioned.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. DOUGLAS. If the Senator desires to apply to sulfur and uranium the same rate that would apply to oil, that would be satisfactory.

Mr. MONRONEY. The Senator has his amendment, and he has been arguing for it for 2 days. I am merely pointing out how poorly thought out is the amendment.

Lead and zinc, which exist in great quantities, are found only a few hundred feet under the surface of the ground. Sometimes they are only 10 feet below the surface. Those minerals would continue to have a depletion allowance of 23 percent, while the depletion allowance on oil would be cut to 15 percent.

As the Senator has said, most of the oil producers would be in the higher brackets. But all of these things depart from the traditional concept that the percentage depletion allowance over the years should be based on the mineral and not on how many stockholders there are, or how rich or how lucky an oil producer might have been in the discovery of oil. I do not think we wish to go to that kind of concept, particularly when the Senator includes such items as sagger clay, and clay used or sold for use for such purposes, and bentonite. All those minerals would be given a more favorable rate than oil, which is to be found 5,000 feet under the surface of the earth. The risk one must take in searching for oil is high.

We might as well use the number of shareholders of a corporation, or in the case of an individual, the color of his hair or the cut of his clothes to determine what the rate should be.

[*P. 2114*]

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield to the Senator from Kansas.

Mr. CARLSON. An interesting discussion on the statement which the Senator has made took place during the hearings at the time Mr. Harold Decker, who was immediate past president of the Independent Petroleum Association, testified. The statement is found at page 2373 of the hearings. The Senator from Illinois was involved in the colloquy. I ask the Senator if I may quote briefly from that page.

Mr. MONRONEY. Yes.

Mr. CARLSON. It reads as follows:

Senator CARLSON. Just following the suggestion that the Senator from Illinois, Senator DOUGLAS, made, would it not be the establishment really of a graduated corporation tax based on size or bigness and the tendency, of course, if that were approved would be for these large corporations to gradually split up into smaller units; wouldn't that be the tendency?

Mr. DECKER. I think you would find the smaller individual once he gets past a certain stage would immediately sell out.

Senator CARLSON. In other words—well, yes, of course, that is what would happen, I assume.

Mr. DECKER. It is happening fast enough now and you would really accelerate it if you had that.

Senator CARLSON. That is all.

Senator DOUGLAS. Would the Senator yield?

Senator CARLSON. I am through.

Senator DOUGLAS. Do you think they would sell out?

Mr. DECKER. I say if the depletion came to 20 percent instead of 27½ percent by the graduation that you propose they would immediately sell out.

Senator DOUGLAS. Why?

Mr. DECKER. Because the lower depletion rate that they would have after they got past a certain stage, they would sell out. The capital gains would be a greater encouragement for them to sell. My income, if it is a million dollars under your proposal, I would have 27½ percent.

Senator DOUGLAS. That is right.

Mr. DECKER. If my income became $5 million, I would be graduated down to 20 percent.

Senator DOUGLAS. Fifteen percent.

Mr. DECKER. Fifteen, all right.

Senator DOUGLAS. Between 1 and 5 million, 21 percent.

Mr. DECKER. Why should I remain in business having seen—had depletion at 27½ percent, seen it go down to 15 percent. I would sell out.

That is an interesting colloquy in view of the statement of the Senator from Illinois. Mr. Decker is one of the most important oil producers.

Mr. MONRONEY. I think we would depart from a commodity depletion allowance which was established as a result of putting a high value on materials we need to have in adequate supply. I do not think the time has come to turn the valve off the discovery of such products. Perhaps they should not be pro-

duced in such volume. Perhaps their production needs to be prorated, and they should not be pulled out of the ground as fast as at present. But we do not have to put up a sign, "No explorers need apply." I do not think any State wants to deter explorations.

I am sure many investors from Oklahoma who discovered oil there have moved to West Virginia and are helping to find oil in West Virginia. If they were held down to a strict financial restriction whereby their depletion allowance was reduced to 15 percent, I think they would do what many of the wildcatters and big producers have done when they find oil. They sell and take a capital gain, which is more productive of income than the discovery of an oilfield, producing oil for 10 years, and taking the 27½ percent on 50 percent of the net.

Mr. DOUGLAS. If the Senator will yield, up to 50 percent.

Mr. MONRONEY. Fifty percent of the net. They have to have no expenditures if they are going to use up the whole 27½ percent. The average in my State is about 15 percent.

The depletion allowance applies to more than 100 metals. This method has proven valuable and is now applicable to all such industries. Why single out oil and gas as the sole minerals to be penalized by making them exceptions, when the others will continue to have a depletion allowance much higher than 15 percent, which would be the amount for the $5 million producers?

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield.

Mr. DOUGLAS. I do not have the list from the Internal Revenue Code before me.

Mr. MONRONEY. I have it.

Mr. DOUGLAS. It is my understanding that oil and gas are the only ones that have a 27½-percent depletion allowance. I believe sulfur and uranium have a depletion alowance of 23 percent. I believe other minerals have a depletion allowance of 15 percent or less.

Mr. MONRONEY. No; there is a long list, including sulfur, uranium, lead, zinc, and thorium. That is the way the Internal Revenue Code reads. Most of these minerals—enjoy a 15-percent depletion allowance. The Senator certainly knows that coal is found very close to the surface. Once it is found, its location is definitely known and how long the field will last is known.

Mr. DOUGLAS. If my friend will permit me to say it, it states "27½ percent" depletion allowance, which starts the parade, and the others move up toward it.

When I last saw the list, I had not realized there were some 20 or 30 minerals which had a depletion allowance of 23 percent. I thought it was confined to sulfur and uranium. The 27½ percent is an evil example. Everything is drawing toward it.

Mr. MONRONEY. The Senator is drawing on his own judgment. The 27½-percent depletion allowance has produced a profitable industry that has led employment in its field and has supported a tax base of billions of dollars. I do not think it has proved to be unsuccessful.

The Senator feels that certain persons have made an unusual amount of money in oil; but, generally speaking, I feel that the oil industry has paid its part of the taxes. Now it is proposed to single out oil and gas producers for a special rule and not only penalize them on what can be deducted, but, if they are successful in finding oil, decrease their depletion allowance gradually, until the depletion allowance for a company making $80,000 a year, which is about the net profit on $1 million gross of oil production, will be 21 percent. If they happen to be efficient and discover oil, and spend money for geologic and geophysical research, and receive an income up to $5 million, the depletion allowance drops to 15 percent.

When that happens many oil producers will go out of business, and this country will have to depend on oversea supplies. and will be plagued again by the dollar outflow as a result of having to depend for our supplies from abroad.

Mr. TALMADGE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. KENNEDY in the chair). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. TALMADGE. Mr. President, I ask unanimous consent that further proceedings under the quorum call be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is on agreeing to the amendment of the Senator from Illinois [Mr. DOUGLAS]. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from Arizona [Mr. HAYDEN], the Senator from Georgia [Mr. RUSSELL], and the Senator from Alabama [Mr. SPARKMAN] are absent on official business.

Mr. KUCHEL. I announce that the Senator from Nebraska [Mr. CURTIS],

the Senator from Illinois [Mr. DIRKSEN], and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent.

The Senator from Iowa [Mr. HICKENLOOPER] and the Senator from North Dakota [Mr. YOUNG] are detained on official business.

If present and voting, the Senator from Nebraska [Mr. CURTIS], the Senator from Illinois [Mr. DIRKSEN], the Senator from Arizona [Mr. GOLDWATER], the Senator from Iowa [Mr. HICKENLOOPER], and the Senator from North Dakota [Mr. YOUNG] would each vote "nay."

The result was announced—yeas 35, nays 57, as follows:

[No. 30 Leg.]

YEAS—35

Aiken	Jackson	Neuberger
Brewster	Javits	Pastore
Case	Keating	Pell
Church	Kennedy	Prouty
Clark	Lausche	Proxmire

NOT VOTING—8

Curtis	Hayden	Sparkman
Dirksen	Hickenlooper	Young, N. Dak.
Goldwater	Russell	

So Mr. DOUGLAS' amendment was rejected.

Mr. GORE. Mr. President, last evening the Senate took three votes on a section to be found on pages 38 and 39 of the bill, dealing with the treatment of the investment credit. If Senators will give me their attention, once again I will give them my promise not to take very long.

The PRESIDING OFFICER. Is the Senator offering an amendment?

Mr. GORE. In a moment I shall offer it. Last evening, there were three votes on one highly controversial section of the bill. The first vote was on a motion to table. This failed by 10 votes. That indicated a substantial sentiment in the Senate to treat substantively with this subject.

The distinguished junior Senator from Georgia [Mr. TALMADGE] then demanded a division of the amendment. That was his parliamentary right.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. GORE. I should like to finish stating my proposal; then I shall be happy to yield.

When the question was divided, both parts of the amendment failed. A number of Senators raised the question that neither the provision in the bill nor the failure of one amendment and the adoption of the other would treat all regulated utilities alike.

I have drafted an amendment, with the advice and help of many Members of the Senate and of the staff, which would neither require nor prohibit the passthrough of the investment credit.

It would leave to the regulatory agencies discretion as to whether to do so or not, but would fix a limitation on all flowthrough requirements affecting all regulated utilities. That is the identical provision that we find in Part 1 of section 203(e) on page 38, that is the part of that section which deals with the electric utilities and interstate telephone lines. Insofar as the investment credit is concerned, this would treat all regulated utilities in identically the same way.

I send the amendment to the desk and ask that it be read. I have several copies which I shall distribute to Senators.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. Beginning on line 18, page 38, it is proposed to strike out all through line 9, page 39 and insert:

More than a proportionate part (determined with reference to the average useful life of the property with respect to which the credit was allowed) of the credit used against tax allowed for any taxable year by section 38 of such Code to reduce such taxpayer's Federal income taxes for the purpose of establishing the cost of service of the taxpayer or to accomplish a similar result by any other method.

Mr. TOWER. Mr. President, will the Senator from Tennessee yield?

Mr. GORE. I yield.

Mr. TOWER. The Senator said that first we had to defeat the motion. We defeated that motion by 10 or 11 votes. Then the Senator from Georgia invoked his privilege to divide the amendment into two parts. It is not true that the Senator from Georgia announced his intention to invoke his privilege prior to the vote on the motion to table?

Mr. GORE. Yes.

Mr. TOWER. So Senators who voted to table were aware that that privilege could be invoked, and that in spite of the result of the vote on the tabling motion, we could still vote on the amendment in two parts?

Mr. GORE. The Senator is exactly correct.

Mr. TOWER. Many Senators felt that since they were going to vote on the two parts anyway, they might as well defeat the tabling motion.

Mr. GORE. I do not know what were the reasons of Senators, but the Senator has correctly stated the situation.

[*P. 2118*]

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

Mr. GORE. Mr. President, I shall take only enough time to read the amendment as it would appear in the bill. If Senators will turn to page 38 of the bill, my amendment strikes, beginning with line 18, all through line 9 on page 39. If Senators will look at line 14, on page 38, I shall begin to read with the word "accordingly", and then, after the word "use", read from my amendment. I read from the bill, line 14, page 38:

> Accordingly, Congress does not intend that any agency or instrumentality of the United States having jurisdiction with respect to a taxpayer shall, without the consent of the taxpayer, use more than a proportionate part (determined with reference to the average useful life of the property with respect to which the credit was allowed) of the credit used against tax allowed for any taxable year by section 38 of such code to reduce such taxpayer's Federal income taxes for the purpose of establishing the cost of service of the taxpayer or to accomplish a similar result by any other method.

That is it. It treats every regulated utility in exactly the same way. I desist.

Mr. LONG of Louisiana. Mr. President, we are again asked to regulate the utilities of the country. Yesterday the argument was made for 9 hours that we should not tell regulatory commissions what to do. Those of us who were arguing for the prevailing position of the Senate said that we had voted a tax cut for the transportation industry, and that that meant that for the utility industries we provided a tax cut as an incentive. That is the way the Senate voted. But we had to listen to at least 6 hours of oratory yesterday, to the effect that we should not tell the commissions what to do.

The amendment of the Senator from Tennessee provides that the commissions shall not require a passthrough except over the life of depreciable property. Is not that telling the commissions what to do? Of course it is telling them what to do.

If that is not telling them what to do, why leave it to their discretion, so that they may or may not require the passthrough? It is the same issue on which the Senate passed last night. It is telling the commissions what they can or cannot do. It is the same issue all over again. The question is whether we want to require commissions that regulate the utility industry—that regulate railroads, pipelines, bargelines, ship lines, and airlines—whether we want to require regulatory agencies to require a passthrough of the tax credit which Congress, to this point at least, has indicated it wants to permit those industries to keep as an incentive for their expansion.

It seems to me that we have voted on the issue and made our position clear. I do not think the Senate would want, on the spur of the moment, to do something which, I am told by those who would be regulated by the amendment, based on the short time they have had to consider it, would be a suggestion to the regulatory agencies that they should require a passthrough of the tax credit that the industries have earned, in the event that they modernize and improve their facilities or in the event they procure new facilities or provide improved service for the people.

Furthermore, if we accepted the so-called flexibility provided for by the amendment, the situation would still be that if a management wanted to modernize its railroad, wanted to install a new pipeline alongside an existing pipeline, wanted to build new barges or tankers, it would have to do so not knowing whether it would be able to keep the tax credit or would ever get its expenditure back. Such a management would be in a state of uncertainty when it sought to borrow money from a bank. It could not tell the banker whether it could keep the investment credit or would have to return it. It would be in the kind of uncertainty that President Johnson, in his state of the Union message, said is a very bad thing for business.

If Senators want to be certain that business will be able to use the credit to modernize and expand, if they want to enable industry to serve the people bet-

ter, they will permit it to have the incentive of the tax credit. If they do not want industry to have it, they can vote against the incentive of the tax credit.

Mr. MORTON. Mr. President, will the Senator yield?

[*P. 2119*]

Mr. LONG of Louisiana. I yield.

Mr. MORTON. As I understand—and I saw the amendment only a few hours ago—it would impose twice as much of a penalty on industry as did the amendment offered by the Senator from Wisconsin last night. Senators spent 9 hours debating this question. We voted on the amendment on its merits, and we rejected it.

Now an amendment is proposed that seems to me, from my cursory examination of it—and I spent a couple of hours with it—would not only eliminate depreciation credit, but, on top of that, lower the rate base. So there would be a double penalty by reason of this amendment. After spending 9 hours of absolutely exhausting debate on the issues, I would hope that the Senator in charge of the bill would see fit to move to table the amendment.

Mr. LONG of Louisiana. It seems to me that the bill contains language to carry out what appears to be the original intention of Congress when the tax credit was originally passed.

That is what we have here. We also have here a measure which has been studied by the House Ways and Means Committee, and then passed by the House; and then studied by the Senate committee and debated by the Senate committee, and then voted by the Senate. But now we are asked—after a presentation lasting only 2 or 3 minutes—to change the whole policy in the way the Senator from Tennessee thinks it should be changed.

This is the way the bill as it now stands would treat the regulated electric companies and the telephone companies, as compared with the treatment of the companies in the transportation industry: It is felt that the telephone companies and the private utilities which serve the home—such as the electric companies—have a locked-in monopoly. They are guaranteed a fair rate of return, and they do not have to compete for customers.

On the other hand, the transportation industry is such that the railroads are competing with other railroads, and also are competing with the barge lines, and all of them are delivering the same commodities; and, in turn, all of them are competing with the shipping lines and the truck lines. So it is only good sense that all of them be treated alike, and that none have an advantage over the others.

Mr. McCLELLAN. And that is why we have the arrangements for the seven and the three.

Mr. LONG of Louisiana. Yes; the one for the locked-in monopoly companies, and the other for the companies that have competition.

Mr. COOPER. Mr. President, I wish to discuss the proposed amendment briefly. I listened carefully to the debate yesterday which lasted 6 or 7 hours. I know that the subject is not a simple one, and that any amendment to this section can affect the relative position of different businesses or have other effects which may not be immediately apparent.

Yesterday, I voted against the amendments of the Senator from Wisconsin [Mr. PROXMIRE] would have permitted a regulatory agency to require that a utility or regulated business flow through or pass on the benefit of the tax credit—in 1 year or 2 years or 3 years, as that agency might see fit—and thereby vitiate what I considered to be the intent of the investment credit act passed by the Congress in 1962, and for which I voted. The clear intent of the Congress was to encourage investment in new equipment, to make businesses more competitive, and to reduce unemployment.

I wish to ask a question. The Finance Committee, and the Senator from Louisiana, who is the Senator in charge of the bill, supported subparagraph (1) of section 203(e), which with respect to public utility property would permit a regulatory agency to require that the investment tax credit or benefit be "flowed through" or passed on—but only "a proportionate part determined with reference to the average useful life of the property" for which the credit was allowed.

If that was agreed to by the committee, and by the Senator in charge of the bill, and yesterday by the Senate, in what respect does the pending amendment, which has been offered by the Senator from Tennessee [Mr. GORE], differ from subparagraph (1) which has the support of the Senator from Louisiana and the committee?

I felt, I may say, that the proposals of the Senator from Wisconsin to strike subparagraph (1), and later subparagraph (2), were both wrong because I believe they would have vitiated the intent of the Investment Credit Act. No regulatory agency has any authority to change or frustrate the intent of the Congress with respect to the investment credit.

But inasmuch as the Senate committee and the Senator in charge of the bill and the Senate itself accepted the principle incorporated in subparagraph (1)—respecting public utility properties—I think it should be made clear why it should not be applied to all the other properties which get the benefit of the investment tax credit.

Mr. LONG of Louisiana. The difference is that the industries which were held to the lower investment credit to begin with because they do not have to compete for their customers, in other words, the ones which include the telephone companies, inasmuch as the telephone company keeps its customers, no matter how much or how little the customers use the telephones, and, in effect, the telephone company can guarantee that it will have a fair rate of return; and the same is true of the electric companies, which provide electricity to the homes—can charge a rate high enough to guarantee themselves a fair rate of return, and thus they an be assured that they will be able to remain in business.

On the other hand, consider the situation which is faced by the gas companies in New York City which supply gas to homes. A certain amount of the gas is used for cooking purposes; but at the moment I refer particularly to gas which is used for heating homes. At any moment an oil company could build an oil tanker twice the usual length of oil tankers, and could arrange to have that supertanker operated with only half the usual number of crew members, and could use the tanker to transport oil to New York at half the previous cost of transporting oil there by tanker; and the oil of the grade used for heating houses could then be placed on the New York market, and in that way there would be sharp competition with the gas company which was supplying gas for household heating purposes.

Furthermore, imports of residual oil would also provide sharp competition with the gas company, particularly in view of the fact that residual oil has, on a British thermal unit basis, twice the efficiency of gas. Likewise, consider the competition which would then develop if an electric company decided to supply electricity for heating purposes to the consumers in New York City. After all, in view of recent developments, electricity is now competitive with gas, for heating purposes; and since the electric companies have begun to work hard to have electricity used for heating purposes, and thus be able to take the customers away from the gas companies, insofar as the heating of households is concerned, and since the electric companies are becoming much more efficient in that connection—by making offpeak rates available, and by other means, and thus keeping down the rates—all the more competition is developed.

Furthermore, even in the case of customers who now are using coal, other companies can bring in coal over the highways, by truck, or over the waterways, by barge or by ship. In short, all those industries are competing to provide the service to the customers; and they are competitive industries, even though they are regulated. They do not have captive customers, and all of them are competing for the market. In fact, in some instances this would apply to trucklines which use the same highways, but are competing with each other for the customers or for the business; and thus this proposal would treat them as competing, and would permit them to enjoy the 7-percent tax credit.

Mr. COOPER. Under the amendment proposed by the Senator from Tennessee, all these competing transportation businesses would be treated the same way, as far as legislation is concerned, with respect to passing through the investment tax benefits, would they not?

Mr. LONG of Louisiana. No. The Commission could treat them the same way, but it would also have the discretionary authority not to do so.

Mr. COOPER. But the amendment of the Senator from Tennessee requires that all be treated the same way, as far as legislation is concerned.

Mr. GORE. That is correct.

Mr. LONG of Louisiana. Oh, no.

Mr. COOPER. That is to say, it would provide that their investment tax benefit should be passed through over a number of years, proportionate to the use-

[*P. 2120*]

ful life of the property on which the investment credit was used.

Mr. LONG of Louisiana. No. Under this amendment the Federal Power Commission could tell the pipelines that they would have to pass through or give back every nickel of the investment credit over the useful life of the property, at the same time that the Interstate Commerce Commission could permit the railroads and the bargelines to have the full benefit of it. But under this amendment, the opposite effect could obtain; in other words, it would permit the one regulating agency to deny it to the carriers it regulates, whereas the other regulating agency could permit it to the carriers it regulates.

With this problem before them, three of the Commissioners thought the companies should be required to give up the investment credit entirely, but two of

the Commissioners thought the companies should have the benefit of it. So the fight will wind up in court, and eventually the Supreme Court will decide whether to decide in line with the view of the three Commissioners or to decide in line with the view of the two Commissioners—in other words, to decide whether the companies should have the credit or should not have it.

So far, the Interstate Commerce Commission thinks the act clearly was intended to enable the railroads to have it, in order to be able to modernize. Thus, the Interstate Commerce Commission thinks the railroads were intended to get the benefit of it; and that would still be the result, even under the discriminatory tax treatment which the Senate laid down last night.

Mr. COOPER. I shall vote against the amendment. As I understand the position of the Senator from Louisiana, it is that some, and perhaps most businesses, would receive the full benefit of the investment credit, for their own uses, under the amendment offered by the able Senator from Tennessee [Mr. GORE], but that a few would be required to pass the credit through to others, and thus be placed in a bad position with their competitors.

Mr. LONG of Louisiana. Exactly; and the amendment could let it obtain in one way, but not obtain in the other.

Mr. TOWER. Mr. President, will the Senator from Louisiana yield briefly to me?

Mr. LONG of Louisiana. I yield.

Mr. TOWER. Would the amendment apply to companies also engaged in transportation in competition with other concerns which might have their own trucklines or pipelines or bargelines, and so forth; and would it enable them to get the full benefit of the credit, without any regulation whatsoever?

Mr. LONG of Louisiana. Yes. Furthermore, there is at least an inference that that is the way Congress should permit the agency to do it.

Mr. SALTONSTALL. Am I correct in saying that section 1 refers to a monopoly, and that would allow 3 percent; section 2 refers to competition with railroads, pipelines, and so on, and would allow 7 percent. Then, if the amendment of the Senator from Tennessee were adopted, it would vitiate the whole value of the second part of the section. In other words, in instances in which railroads and pipelines were competing and were allowed 7 percent, because of the competition, and so on, that provision would be vitiated and it would be returned to the same basis as the first section, which refers to a monopoly?

Mr. LONG of Louisiana. The Senator is correct.

Mr. SALTONSTALL. Is that a fair statement?

Mr. LONG of Louisiana. That is a fair statement of the situation as I see it.

Mr. LAUSCHE. Mr. President, with respect to the amendment offered by the Senator from Tennessee, if we refer to page 38 of the bill we find that the language at that point is an absolute prohibition against the right of a regulatory agency to pass on to consumers any of the benefits derived through the investment credit except when the utility consents.

Mr. GORE. Mr. President, will the Senator yield?

Mr. LAUSCHE. I yield.

Mr. GORE. The Senator is referring, I wish it understood, to a provision in the bill.

Mr. LAUSCHE. The Senator is correct.

Mr. GORE. The Senator from Louisiana said something about the big point. The big point here is that the 7-percent utility group has, according to the bill as it now stands, an absolute lock against the regulatory agency even considering the benefits of investment credit in reaching a fair and reasonable rate for consumers to pay or a fair and reasonable rate of return on investment. If Senators will read my amendment, they will find that the treatment which the bill accords to the electric and telephone utilities would be extended to the other utilities. The big point is that unless the Senate adopts the amendment, the unconscionable thing is that by subparagraph (2) we would say to the gas pipelines, "You have a free ride," and to the Federal Power Commission that it cannot even consider the question. So the amendment would treat the 3-percent and the 7-percent groups of utilities in exactly the same way.

The amendment does not require that the benefits be passed through, but it does not prohibit consideration of the investment credit to the extent—and this is a severe limitation—of the prorated annual amounts according to the useful life of the capital assets.

Mr. LAUSCHE. I contemplate voting for the amendment of the Senator from Tennessee. But I now would like to speak a word apart from the subject which the Senator from Tennessee discussed. If the tax reduction bill is passed, it will be on the basis of a commitment that there will be a reduction of expenditures by the Federal Government. The effort was made to convince the chairman of the Committee on Fi-

nance that the tax bill ought to be passed because the Government contemplates exercising prudence in expenditures in the future.

I invite the attention of Senators to the amendment offered by the Senator from Arkansas [Mr. McClellan] and myself. The amendment reads:

(a) In General.—If the net administrative budget expenditures made during any fiscal year ending on or after June 30, 1965, exceed $100,000,000,000, then—

(1) with respect to taxable years beginning after the December 31 following the close of such fiscal year, the amendments made by part I (relating to individuals) and part II (relating to corporations) of this title and the amendments made by section 301 (relating to optional tax if adjusted gross income is less than $5,000) of title III shall not apply, and the provisions of the Internal Revenue Code of 1954 amended by such parts I and II and such section 301 shall apply as if this Act had not been enacted, and

The purpose of the McClellan-Lausche amendment is to keep the commitment that there shall be prudence in the expenditure of the public funds. If and when expenditures exceed $100 billion, and it is so certified, the tax reductions provided in the pending bill would no longer apply, and the taxes which were in existence before the pending bill is passed would go into effect.

I yield the floor.

Mr. GORE. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Tennessee [Mr. Gore]. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MILLER (after having voted in the affirmative). Mr. President, on this vote I have a live pair with the distinguished Senator from Illinois [Mr. Dirksen]. If he were present and voting, he would vote "nay." If I were at liberty to cast my vote, I would vote "yea." I therefore withdraw my vote.

Mr. HUMPHREY. I announce that the Senator from Alabama [Mr. Hill] and the Senator from Mississippi [Mr. Stennis] are absent on official business.

Mr. KUCHEL. I announce that the Senator from Nebraska [Mr. Curtis], the Senator from Illinois [Mr. Dirksen], and the Senator from Arizona [Mr. Goldwater] are necessarily absent.

The Senator from Iowa [Mr. Hickenlooper] and the Senator from North Dakota [Mr. Young] are detained on official business.

If present and voting, the Senator from Nebraska [Mr. Curtis], the Senator from Arizona [Mr. Goldwater], and the Senator from Iowa [Mr. Hickenlooper] would each vote "nay."

The pair of the Senator from Illinois [Mr. Dirksen] has been previously announced.

The result was announced—yeas 42, nays 50, as follows:

[*P. 2121*]

[No. 31 Leg.]

YEAS—42

Aiken	Jackson	Neuberger
Bartlett	Javits	Pastore
Bayh	Keating	Pell
Burdick	Kennedy	Prouty
Byrd, Va.	Kuchel	Proxmire
Case	Lausche	Ribicoff

Ellender	McCarthy	Williams, N.J.
Engle	McClellan	

NOT VOTING—8

Curtis	Hickenlooper	Stennis
Dirksen	Hill	Young, N. Dak.
Goldwater	Miller	

So Mr. Gore's amendment was rejected.

Mr. MORTON. Mr. President, I move that the vote by which the amendment was rejected be reconsidered.

Mr. LONG of Louisiana. Mr. President, I move that the motion to reconsider be laid on the table.

The motion to lay on the table was agreed to.

Several Senators addressed the Chair.

The PRESIDING OFFICER. The Senator from Minnesota [Mr. McCarthy] is recognized.

Mr. McCARTHY. Mr. President, I call up my amendment No. 403 and I send to the desk the language which I have substituted for the text of amendment No. 403.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The Legislative Clerk. On page 49, line 13, strike out "period.'" and insert

"period if such amounts exceed 75 percent of the regular weekly rate of wages of the employee; provided that if such amounts are less than 75 percent of the regular weekly rate of wages of the employee, the preceding sentence shall not apply to amounts attributable to the first seven calendar days in such period unless the employee is hospitalized on account of sickness for at least one day during such period.' "

Mr. McCARTHY. Mr. President, in considering this amendment, I urge Senators to keep in mind the actual situation faced by most workers who are sick and the equities which are involved.

Most workers do not receive their regular wages from their employer when they are absent from work because of sickness or an accident. They receive only a sickness benefit which is generally no more than 50 to 65 percent of their regular weekly wage. This benefit is paid only for a limited number of weeks. Whether the benefit is provided unilaterally by the employer through an agreement negotiated by their union or from a health and welfare fund, the same reduction in income is applicable. For example, the General Motors worker whose weekly wage is $105 a week and who is absent from work because of a disability, will only receive a weekly benefit of $60 and this benefit will not be payable for more than 26 weeks for any one illness. A steelworker whose weekly earnings are $125 will only receive a benefit of $69 when he is sick.

These limited benefits, where they are provided through group insurance, have heretofore never been included in gross income or subject to income tax.

The tax bill of 1954 did not affect the status of these benefits. It provided that an individual who continued to receive his regular wage when he was sick, would be able to exclude the first $100 of such wage from gross income. The bill before you, however, would tax not only continued wage payments for the first 30 days, it would also require that limited sick benefits be included in gross income.

There is a considerable difference between requiring an individual to include in gross income his regular wages which he continues to receive during the period of illness, and requiring a worker whose income has been sharply curtailed during a period of illness or injury to pay a tax on a benefit which is considerably less than his after-tax take-home pay when he is working.

My amendment would not relieve the individual who continues to receive his full wage. It would only exclude benefits from gross income which are less than 75 percent of the regular weekly wage. Such a worker has already had his income curtailed by at least 25 percent. During a period of total disability, which is usually a condition of eligibility for the receipt of these limited benefits, the workers' expenses are likely to be substantially increased because of illness or injury. The additional costs of medicine, special diet, and other expenses are usually not reimbursed by most hospital and medical care programs. These increased expenses must be met out of the limited benefit.

I do not believe that equity is served by imposing a tax on these unfortunate workers. The unemployed worker who receives a limited unemployment compensation payment does not have to include this payment in his gross income. There is no more reason to require the worker who is unemployed because of illness to include as gross income, his benefit, which is usually the same percentage of his wages as unemployment compensation.

It is also important to keep in mind that all existing collective bargaining agreements which provide for sickness or accident benefits were predicated on their nontaxable status. If, for the first time in tax history, these benefits are made taxable, there will be an immediate demand for increasing the benefits to compensate for the tax which is imposed. Unions will be forced to demand a reopening of otherwise stable collective bargaining agreements with many thousands of employers.

My amendment would avoid these results. It would avoid any possibility of the tax law being used as a tax avoidance device, by continuing the requirements of present law that does not give the tax benefit during the first 7 days of sickness, unless the employee is hospitalized during such period. At the same time, it would avoid the imposition of a gross injustice on workers who are afflicted by serious illness and who are at the same time suffering a drastic reduction in income.

If the employee's sick pay is less than 75 percent of his regular pay, the 30-day waiting period provided by the House bill would not apply. Rather, in such a case, the waiting period provided by the existing law, would be retained. On the other hand, if the sick pay is 75 percent or more of the employee's regular pay, the 30-day rule of the House bill would apply.

Mr. President, I urge the adoption of this amendment.

Mr. SMATHERS. Mr. President, will the Senator from Minnesota yield?

Mr. McCARTHY. I yield.

Mr. SMATHERS. I should like to say to the able Senator from Minnesota that having checked with the various members of the Finance Committee, including the senior member of the Finance Committee on the other side, we believe that this is an amendment which should be accepted and taken to conference.

Mr. McCARTHY. I thank the Senator from Florida.

Mr. SMATHERS. I have also talked with the majority leader, the Senator in charge of the bill, and the acting majority and acting minority leaders, who are in accord on this matter.

Mr. KEATING. Mr. President, will the Senator from Minnesota yield?

Mr. McCARTHY. I yield to the Senator from New York.

Mr. KEATING. I believe the distinguished Senator from Florida has shown excellent judgment in accepting the amendment. I hope that the words "taken to conference" do not have a sinister connotation and that it will emerge from conference as well as being taken there. It will, in my judgment, receive overwhelming support if put to a vote. I commend the committee for its wisdom, good sense, and judgment; and when I offer the next amendment I hope I shall do as well as the Senator from Minnesota has done.

Mr. MORTON. Mr. President, will the Senator from Minnesota yield?

Mr. McCARTHY. I yield to the Senator from Kentucky.

Mr. MORTON. I concur with the Senator from Florida, and I suggest that the Senate vote now, because if we start "fighting" in the Chamber we shall repeal it.

Mr. HUMPHREY. Mr. President, I am pleased that the Finance Committee is willing to accept the amendment. Un-

[*P. 2122*]

der present law sick pay is excludable from a worker's gross income. It has been argued that since sick pay is a substitute for regular income it should not be tax exempt except in case of serious illness or injury. Following this line of reasoning, the Finance Committee adopted a provision that the first 30 days of sick pay would be subject to income taxation.

I agree with the reasoning behind the committee's decision and I support the principle that tax exemptions on sick pay should not be used as a device to avoid just taxation. However, the committee's action would cause serious hardship. The fact of the matter is that many employees do not receive regular wages when they are sick. Instead, they are paid only a fraction of their regular compensation. The customary practice in labor-management agreements on sick pay is to provide 50 to 65 percent of the employee's regular pay in sickness and accident benefits. For example, a man whose regular wage was $100 a week would get only $50 if he were too sick to work. Taxing this partial pay would impose an additional burden on a family already suffering from the disability of its breadwinner.

Many collective bargaining agreements are based on the assumption that sick pay will be tax exempt. Accepting the Finance Committee's provision will force renegotiation of thousands of contracts between management and labor.

For these reasons I support the humane amendment offered by my distinguished colleague from Minnesota. The amendment provides that the first 30 days of sick pay would be taxable only when it exceeded 75 percent of the employee's regular pay.

Some opponents of this amendment have claimed that exemption from taxation should be given only in cases of hardship. But if being sick and then losing 2 weeks' pay is not hardship, I do not know what is. I trust the conference committe will give this amendment full support. It is fair; it is just; and it is needed.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Minnesota [Mr. McCarthy].

The amendment was agreed to.

Mr. KEATING. Mr. President, I believe my amendment can be disposed of in 5 or 10 minutes. I shall wish to have a yea-and-nay vote.

I call up amendment 417 which is offered on behalf of myself, my colleague the Senator from New York [Mr. Javits] the Senator from Nebraska [Mr. Hruska] and the Senator from New Jersey [Mr. Williams].

The PRESIDING OFFICER. The clerk will state the amendment for the information of the Senate.

The Legislative Clerk. At the proper place in the bill add the following new section:

Sec. . Retailers Excise Tax on Purses and Bags.

(a) In General.—Section 4031 (relating to imposition of retailers excise tax on luggage, handbags, etc.) is amended by adding at the end thereof the following new sentence: "In applying the tax imposed by the preceding sentence with respect to any purse or handbag sold at retail, there shall be disregarded so much of the retail sales price of such purse or handbag as does not exceed $50."

Mr. KEATING. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. MANSFIELD. Mr. President, I should like to propound a unanimous-consent request and ask unanimous consent that on the pending amendment there be a allocation of 20 minutes, 10 minutes to each side.

Mr. GORE. Mr. President, reserving the right to object, yesterday I said I was not angry with anyone. I still think that way, but I must admit that today my temper is not quite so high as it was yesterday morning.

I should like to suggest to the distinguished majority leader that the absence of unanimous consent as to time limits and time to vote may have served the Senate very well for 2 days. I believe we have had the best attendance and perhaps the best debate for the past few days that I have witnessed in my 12 years in the Senate.

Mr. MANSFIELD. I agree.

Mr. GORE. I do not attribute all of that to the absence of a unanimous-consent agreement. I believe much of it is because of the importance of the subject matter, but as we near the conclusion of this very difficult and complicated bill, I am going to yield to the wisdom and the leadership of the majority leader, and I shall not impose any objection to this request.

Mr. MANSFIELD. I appreciate that. Can the distinguished Senator from Tennessee advise the Senate how much time he would like on his amendment so that we could obtain a general consensus?

Mr. GORE. I have only one other amendment that I shall offer. There are many more I should like to offer, believing that the bill needs to be thoroughly rewritten; but I shall offer only one amendment. It is a major amendment, in my opinion, affecting restrictive stock options.

Please understand that I would not eliminate options. I would permit employee purchase plans. This is the kind of restrictive stock option for the corporation insider, which has been greatly abused.

If I could have 40 minutes that would be sufficient, and I shall try to hold it down to 25 minutes.

Mr. MANSFIELD. That is fair enough.

Mr. President, I ask unanimous consent that on all amendments except the Gore amendment, there be allocated 30 minutes, 15 minutes to a side, to be equally divided between the proponents and the opponents of the measure, and that on the Gore amendment there be an allocation of 80 minutes, with 40 minutes under the control of the Senator from Tennessee [Mr. GORE] and 40 minutes under the control of the Senator from Louisiana [Mr. LONG], and that there be 1 hour debate on the bill.

Mr. TALMADGE. Mr. President, will the majority leader yield?

Mr. MANSFIELD. I am glad to yield.

Mr. TALMADGE. I assume that the usual rule of germaneness will prevail.

Mr. MANSFIELD. Yes.

Mr. MORTON. This request is for 1 hour on the bill?

Mr. MANSFIELD. Yes.

Mr. MILLER. Mr. President, reserving the right to object, would the majority leader extend the time on the bill to 2 hours?

Mr. MANSFIELD. If the Senator from Iowa will trust the judgment of the leadership, if additional time is needed, it will be forthcoming.

Mr. MILLER. Very well.

Mr. WILLIAMS of Delaware. Mr. President, reserving the right to object, would the agreement apply to the amendment which the Senator from Arkansas intends to offer? It is a major amendment.

Mr. MANSFIELD. I have not seen the Senator from Arkansas. However, if there is any objection on his part, we will, of course, take it into consideration and withdraw that part of the unanimous-consent request.

The PRESIDING OFFICER. Is there objection?

Mr. MANSFIELD. Mr. President, I exclude from the proposed agreement the amendment to be proposed by the Senator from Arkansas [Mr. MCCLELLAN].

Mr. RANDOLPH. Mr. President, reserving the right to object, I wish to ask the distinguished majority leader, in view of these arrangements which are now taking place, if it is anticipated that the Senate will meet tomorrow, or will an attempt be made to finish consideration of the bill tonight?

Mr. MANSFIELD. If the opportunity presented itself tonight, yes; however, I doubt it at this time. I would be prepared to remain in session late. However, in view of the fact that some Senators are overly tired and exhausted, it would be better to anticipate concluding consideration of the bill tomorrow instead of tonight.

Mr. EASTLAND. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. EASTLAND. I should like to know what the plans are for tonight.

Mr. MANSFIELD. At the convening of the Senate this morning, and in response to questions raised by Members

of the Senate, it was indicated that the Senate would remain in session, provided amendments were offered, until about 10 o'clock this evening. It was not anticipated that consideration of the tax bill could be completed this evening. It was hoped that it would be possible, but events have proved that it is not possible. It is our hope that the Senate will bear with the leadership, and allow us to consider amendments up to 10 o'clock this evening. The Senate will then meet at 10 o'clock tomorrow morning. Tomorrow it will finish consideration of the bill, and immediately therafter proceed to the consideration of certain money resolutions, to get them out of

[*P. 2123*]

the way, so that the decks may be cleared for next week.

Mr. EASTLAND. In other words, consideration of the bill will not be concluded tonight.

Mr. MANSFIELD. The Senator is correct.

Mr. GORE. Would it be agreeable to make my option amendment the pending business tomorrow? I could use half of my time tonight, so that Senators could read my statement in the RECORD tomorrow. I could offer the amendment this evening and make my brief remarks this evening.

Mr. MANSFIELD. That might be satisfactory.

Mr. LONG of Louisiana. I suggest to the majority leader that he modify his unanimous-consent request, so that the Senator from Tennessee may make his statement tonight and perhaps divide the time tomorrow. If any Senator wishes to respond to the Senator's statement tonight, that will be all right. It would be better to do that than to have it made the pending business. Might we not let it come up in its natural course, and reserve such time as the Senator may require?

Mr. McCARTHY. Mr. President, does the Senator from Delaware intend to offer his amendment tonight?

Mr. JAVITS. Mr. President, there is too little time on the bill. I shall wish to speak for 10 minutes on the bill. The Senator from Iowa——

Mr. MANSFIELD. When that question was raised by the Senator from Iowa, I assured him that if more time is needed, it will be forthcoming.

The PRESIDING OFFICER. Is there [illegible]ection to the unanimous-consent re[illegible]st? The Chair hears none, and it is [illegible] ordered.

Mr. MANSFIELD. Mr. President, if I [illegible]ay recapitulate, the agreement pro[illegible]ides for a half hour of debate on all amendments, equally divided, except the Gore amendment. On the Gore amendment the time allowed will be 80 minutes, 40 minutes to a side. The only exception is with respect to the McClellan amendment. When the Senator from Arkansas comes to the floor, an agreement will be reached, which I hope will be satisfactory. I should like to suggest to the Senator from Louisiana, who is so skillfully managing the pending bill, that it would be in the interest of the Senate to have a part of the debate on the Gore proposal tonight, so that Senators may have an opportunity to study it overnight.

Mr. LONG of Louisiana. What the Senator from Tennessee has in mind is that he would like to explain the amendment and his position on it tonight, in order to have it in the RECORD. I would prefer not to agree on what the pending business will be tonight or tomorrow. I would be glad to accommodate the Senator by having him make his speech, and have the time either charged against his time or not.

Mr. GORE. I do not believe that I have made an unusual request. On two previous evenings understanding was reached as to what the pending business would be the following day. I have cooperated with the leadership. I feel very deeply about my amendment. I will remain here as late as necessary. I am willing to us half my time tonight. However, I would like to have it the pending business tomorrow.

Mr. MANSFIELD. I believe that is agreeable. The time limitation will begin to run when the amendment is brought up.

Mr. JAVITS. In order to clarify the situation, the unanimous-consent agreement applies to any amendment, whether printed or not, whether at the desk or not. Is that correct?

Mr. MANSFIELD. Yes, except that the amendment must be germane. Any Senator has a right to offer such an amendment.

Mr. LONG of Louisiana. I am not satisfied with the procedure of having a speech made by the distinguished Senator from Tennessee in favor of his amendment tonight without having an opportunity for a response, to state the other side of the argument, if any Senator cares to do so.

Mr. GORE. I have no objection to that.

The unanimous-consent agreement subsequently reduced to writing is as follows:

UNANIMOUS-CONSENT AGREEMENT

Ordered, That, effective on the adoption of this order, during the further consider-

ation of the bill H.R. 8363, the Revenue Act of 1964, debate on an amendment intended to be proposed by Mr. GORE, relating to stock options, shall be limited to 80 minutes, and on amendment No. 407, intended to be proposed by Mr. MCCLELLAN, debate shall be limited to 100 minutes, the time in each case to be equally divided and controlled by the mover of the amendment and Mr. LONG of Louisiana; and that debate on any other amendment, motion, or appeal, except a motion to lay on the table, shall be limited to 30 minutes, to be equally divided and controlled by the mover of any such amendment or motion and Mr. LONG of Louisiana: *Provided*, That in the event Mr. LONG is in favor of any such amendment or motion, the time in opposition thereto shall be controlled by the minority leader or some Senator designated by him: *Provided further*, That no amendment that is not germane to the provisions of the said bill shall be received.

Ordered further, That on the question of the final passage of the said bill debate shall be limited to 1 hour, to be equally divided and controlled, respectively, by the majority and minority leaders: *Provided*, That the said leaders, or either of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, motion, or appeal.

Mr. KEATING. Mr. President, I yield myself 5 minutes on the amendment. I believe that is all I shall need. The amendment relates to only one item.

Mr. SMATHERS. Mr. President, have the yeas and nays been ordered on the amendment?

The PRESIDING OFFICER. The yeas and nays have been ordered.

Mr. SMATHERS. We can expect a vote on the amendment at 8:15. Is that correct?

Mr. KEATING. I should say that there should be a vote by 8 o'clock.

Mr. President, we defeated by a rather narrow margin the amendment offered by the distinguished Senator from Kentucky [Mr. MORTON], on behalf of the Senator from Illinois [Mr. DIRKSEN], to repeal all of the Federal retail excise taxes. My amendment relates to one item only, ladies' purses and handbags. It provides that the present 10 percent tax shall apply only to the portion of the selling price over $50. I am pressing this separate amendment applicable only to ladies' handbags on the ground that there is probably no other item subject to existing excises for which a more convincing and meritorious case of repeal can be made.

This particular tax is unfair, regressive, discriminatory, and inequitable. Originally imposed in 1944 as a temporary wartime emergency measure, the tax was supposed to have expired automatically 6 months after the cessation of hostilities. But now, almost 20 years later, it is still burdening the women of America and the handbag industry and all those employed by the industry.

Of course, no article of women's clothing, with the exception of furs, is subject to a Federal tax. Shoes, hosiery, skirts, blouses, belts, scarves, and hats, even though they may be made partly or wholly of leather, are not subject to any excises. But handbags are. I know of ladies who travel in the best of circles who, depending on their particular outfit, can dispense with items like belts or leather shoes. But rare is the occasion on which any woman can do without a basic handbag.

I do not see how ladies' handbags can in any sense be called a luxury. They are an absolute necessity. American women are up in arms against this unmitigated nuisance tax.

The handbag industry has lost much ground because of it. It has been losing ground around holidays like Christmas and Mother's Day to other appropriate gifts which do not bear the burden of the 10-percent excise tax. The tax in practical operation, therefore, discriminates against this one item and against the industry that produces the item in favor of other items of women's apparel, many of which can well be classified as luxuries, which do not carry any Federal excise levy.

There is this additional consideration for repealing the tax on ladies' handbags only. The justice of singling out this one item is demonstrated by the fact that when in 1950 an excise tax reduction bill passed the House—I might say, by the overwhelming margin of 375 to 14—the tax on furs, jewelry, cosmetics, and luggage was to have been reduced from 20 to 10 percent, but, in contrast, the tax on handbags was to have been repealed in its entirety. However, the entire bill was killed in the Senate Finance Committee when the Korean war broke out. The point I make is that as far back as 1950 the case for singling out the excise tax on handbags for repeal was clearly recognized.

The modified Dirksen-Morton amendment, which would have repealed all the retail excise taxes combined, would have resulted in a net revenue loss to the Treasury of approximately $455 million. The amendment which I am now offering, on the other hand, would result in

[*P. 2124*]

revenue losses in the neighborhood of only $38 million annually. I emphasize that this estimated loss represents a gross loss of revenues from the excise tax considered by itself. It does not take into account the undeniable fact that ad-

ditional income tax revenues would flow to the Treausry from a healthier handbag industry and the additional employees who would be put back on the job—and in many cases, back on the tax rolls—if Congress would only give the industry this vitally needed shot in the arm. Therefore, the net revenue loss to the Treasury, in my judgment, would be considerably less than the $38 million figure which represents the gross loss in excise tax revenues.

During the debate on the much broader Dirksen-Morton amendment, I heard very often the argument that it would not be appropriate to remove from the excise tax, purchases which are strictly luxury in nature. There is much force in this argument, provided you can properly draw the line between luxuries and necessities. The Dirksen-Morton amendment, as modified, drew the line at $100 on purchases of furs and jewelry. Let me point out that the overwhelming majority of handbag purchases are plainly in the necessity classification. Very few are sold for over $25, still fewer for over $50 and almost an infinitesimal number for over $100. I am willing on balance, to strike a dividing line between handbags that are a necessity and handbags that are a luxury at the $50 level. This amendment would, rather than repeal the entire tax, simply exempt the first $50 of retail value from the handbag tax, thereby subjecting only the excess over $50 to the 10 percent Federal tax.

I hope all Senators will search their consciences and consider the fealty they owe to their wives and mothers, sisters and daughters, and, indeed, to all American womanhood, and vote their resounding approval of this amendment.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. KEATING. I yield.

Mr. JAVITS. I support my colleague from New York in his eloquent plea to the Senate. This is a unique application of a tax. It affects one single item of wearing apparel for women—handbags. The Senator's amendment is designed to exclude it from the classification of a luxury. I hope the Senate will grant this measure of justice and remove the discrimination that exists against handbags in favor of other items of apparel which are not subject to tax.

Mr. KEATING. I am grateful to my colleague from New York. His cosponsorship of the amendment is most helpful and is much appreciated.

Mr. LONG of Louisiana. Mr. President, I yield 3 minutes to the acting minority leader.

Mr. MORTON. In the first place, I do not think I am the acting minority leader.

Mr. LONG of Louisiana. I yield to the Senator from Kentucky.

Mr. MORTON. I thank the Senator.

Mr. President, I dislike to oppose the amendment offered by the junior Senator from New York, as I did the amendment offered by the senior Senator from New York [Mr. JAVITS] concerning theater tickets. We went down this road yesterday. We then had for consideration an amendment that was all encompassing and comprehensive with respect to what are actually Federal retail sales taxes. The amendment was rejected. The vote was close. I fought as hard as I could for its adoption. However, I do not believe we would be serving the consumers of this country by tearing up the excise taxes piecemeal.

We now have an agreement from the Committee on Ways and Means and the Committee on Finance that we will promptly examine the whole question of excise taxes.

The proposal to remove the excise tax from ladies' handbags has much political sex appeal, perhaps other appeal. Of course, it is the best thing in the package. So why throw away our best weapon for getting all the regressive taxes removed?

Much as I dislike to be on the opposite side from my friend the distinguished junior Senator from New York [Mr. KEATING], I shall have to oppose the amendment. It is my opinion that we must consider the retail excise taxes, which are nothing but retail sales taxes at the Federal level, as a package. Therefore, I shall have to oppose the piecemeal approach to the situation.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield 2 minutes to the Senator from Delaware.

Mr. WILLIAMS of Delaware. Mr. President, I concur in the statement of the Senator from Kentucky. I supported a similar proposal yesterday. I had hoped we would be able to do away with all the retail excise taxes. But I believe it would be a mistake to start to remove them in piecemeal fashion tonight. Regretfully, I shall have to oppose the amendment.

Mr. KEATING. Mr. President, I yield myself 2 minutes.

This is a rather amazing argument, but the candor of the Senator from Kentucky [Mr. MORTON] is admirable. The reason given for opposing the amendment is that it is the most meritorious item from which to remove the excise tax. In other words, there is a tacit admission that some of the other items

cannot stand on their own feet and that it is necessary to throw in the ladies' handbags in order to have a bill reported later.

Personally, I should like to see some action taken on this item now. If it is more meritorious than the other items, I find it difficult to see how any Senator who supported the amendment to remove all excise taxes on articles costing less than $100 can vote against the amendment to remove the excise tax from an article which most deserves to have the tax removed.

I do not accept the argument that it is necessary to use this item as a trading point in some later operation in an effort to have the excise tax removed from other items.

I supported the Dirksen-Morton amendment. I regret that it was not agreed to. But I have now selected what I believe to be the most meritorious item and the most deserving. I do not think any Senator can explain voting against this amendment by saying that he wanted to wait for a bill that would provide for the removal of the excise tax from more articles.

Mr. ALLOTT. Mr. President, will the Senator yield for a question?

Mr. KEATING. I yield.

Mr. ALLOTT. I am sure the Senator from New York was in the Chamber yesterday and heard the argument that many countries in Europe raise money by means of excise taxes. Does not the Senator agree that if money is to be raised for general, broad tax purposes by means of an excise tax, the tax must cover the whole gamut, and should not be restricted to a few items at the retail level?

Mr. KEATING. I agree. That is why I supported the Dirksen-Morton amendment. We now have a retail excise tax on only a few, selected items. We told the American public long ago that the tax on all such items would be removed in its entirety, and it should have been removed. What we did over a period of years was to remove the tax gradually from one thing and then from another. I have now selected what I think is the most meritorious of the various items from which to remove the tax.

Mr. ALLOTT. I entirely agree with that statement. The Senator has a clearcut case. Other clearcut cases were left outside the purview of the amendment offered yesterday.

I join wholeheartedly with the Senator in this effort, because I think the total effect of the excise tax is greatly to restrict two classes of individuals—first, those who are really supplying necessities to the people; and, second, the small retailers, who have to bear the burden of the collection of this tax by the Federal Government.

Mr. KEATING. I appreciate that statement, and I agree entirely with the sentiments of the Senator from Colorado.

Mr. MORTON. Mr. President, I yield myself 30 seconds.

The PRESIDING OFFICER. The Senator from Kentucky is recognized for 30 seconds.

Mr. MORTON. Mr. President, handbags may be very important; but for someone who has the itch, itching powder is important, and it also carries the 10 percent penalty tax.

Mr. KEATING. But someone who has the itch always has the tax-free alternative of scratching himself.

Mr. President, as I recall, in my previous remarks I stated the distinguished Senator from New Jersey [Mr. WILLIAMS] is a cosponsor of this amendment. If I did not make that statement before now, I make it now.

Mr. LONG of Louisiana. Mr. President, I yield back the remainder of the time under my control.

Mr. KEATING. Mr. President, I yield back the remainder of the time under my control.

[P. 2125]

The PRESIDING OFFICER. All remaining time on the amendment has been yielded back.

The question is on agreeing to the amendment of the Senator from New York [Mr. KEATING]. On this question, the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD (after having voted in the negative). On this vote I have a pair with the distinguished minority leader, the Senator from Illinois [Mr. DIRKSEN]. If he were present and voting, he would vote "yea"; if I were at liberty to vote, I would vote "nay." Therefore, I withdraw my vote.

Mr. HUMPHREY. I announce that the Senator from Arizona [Mr. HAYDEN], the Senator from Alabama [Mr. HILL], and the Senator from Georgia [Mr. RUSSELL] are absent on official business.

On this vote, the Senator from Nebraska [Mr. HRUSKA] is paired with the Senator from Georgia [Mr. RUSSELL].

If present and voting, the Senator from Nebraska would vote "yea" and the Sentaor from Georgia would vote "nay."

Mr. KUCHEL. I announce that the Senator from Nebraska [Mr. CURTIS], the Senator from Illinois [Mr. DIRKSEN] and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent.

The Senator from Iowa [Mr. HICKENLOOPER], the Senator from Nebraska [Mr. HRUSKA], and the Senator from North Dakota [Mr. YOUNG] are detained on official business.

If present and voting, the Senator from Nebraska [Mr. CURTIS], and the Senator from Arizona [Mr. GOLDWATER] would each vote "yea."

The pair of the Senator from Illinois [Mr. DIRKSEN] has been previously announced.

On this vote, the Senator from Nebraska [Mr. HRUSKA] is paired with the Senator from Georgia [Mr. RUSSELL]. If present and voting, the Senator from Nebraska would vote "yea" and the Senator from Georgia would vote "nay."

The result was announced—yeas 35, nays 55, as follows:

[No. 32 Leg.]

YEAS—35

Aiken	Gruening	Pell
Allott	Jackson	Prouty
Beall	Javits	Proxmire
Boggs	Jordan, Idaho	Ribicoff
Case	Keating	Saltonstall
Cooper	Kennedy	Scott
Cotton	Kuchel	Simpson
Dodd	Mechem	Smith
Dominick	Morse	Tower
Douglas	Mundt	Williams, N.J.
Fong	Pastore	Young, Ohio
Gore	Pearson	

NAYS—55

Fulbright	Miller	

NOT VOTING—10

Curtis	Hickenlooper	Russell
Dirksen	Hill	Young, N. Dak.
Goldwater	Hruska	
Hayden	Mansfield	

So Mr. KEATING's amendment was rejected.

Mr. MANSFIELD. Mr. President, I should like to have the attention of the distinguished Senator from Arkansas [Mr. MCCLELLAN].

I should like to make a unanimous-consent request, which was postponed because of the fact that the Senator from Arkansas was absent from the floor of the Senate on official business.

I ask unanimous consent that 100 minutes be allotted to the amendment offered by the distinguished Senator from Arkansas [Mr. MCCLELLAN], 50 minutes to be under the control of the Senator from Arkansas and 50 minutes to be under the control of the Senator in charge of the bill, the Senator from Louisiana [Mr. LONG].

Mr. McCLELLAN. Mr. President, reserving the right to object, I assume that the distinguished leader has reference to my amendment No. 407.

Mr. MANSFIELD. The Senator knows that I have reference to that amendment.

Mr. McCLELLAN. I did not want any misunderstanding. That is the amendment which would provide that the tax cut would remain in force only so long as total expenditures of the administrative budget remain not to exceed $100 billion.

In other words, this is an amendment that gives Senators an opportunity to vote both for a tax reduction and for economy in government. Is that the one my distinguished friend refers to?

Mr. MANSFIELD. That is the general idea.

The PRESIDING OFFICER. Is there objection. The Chair hears none; and it is so ordered.

Mr. McCLELLAN. Mr. President, it is my understanding that this amendment will come up tomorrow. Is that correct?

Mr. MANSFIELD. Following the Gore amendment, it will be the pending business tomorrow.

Mr. McCLELLAN. Mr. President, will the Senator yield further to me?

Mr. MANSFIELD. I yield.

Mr. McCLELLAN. So far as we know, it will be the last amendment. Is that correct?

Mr. MANSFIELD. That is the general idea, but we have no right to prevent any Senator from offering an amendment.

Mr. McCLELLAN. The amendment of the Senator from Tennessee will be the pending business when the Senate reconvenes tomorrow. Is that correct?

Mr. MANSFIELD. Yes.

Mr. McCLELLAN. Immediately following the disposal of that amendment, my economy amendment will be in order. Is that correct?

Mr. MANSFIELD. I would assume so.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. FONG. Mr. President, I call up my amendment No. 338. I ask unanimous consent that the reading of the amendment be dispensed with and that it may be made a part of the RECORD at this point.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment offered by Mr. FONG is as follows:

At the proper place in title II of the bill insert the following new section:

"SEC. . DEDUCTION BY LESSEE OF RESIDENTIAL LAND OF CERTAIN REAL PROPERTY TAXES PAID BY HIM.

"(a) TAXES CONSIDERED AS IMPOSED ON LESSEE.—Section 164 (relating to deductions for taxes) is amended by redesignating subsection (g) as (h), and by inserting after subsection (f) the following new subsection:

"'CERTAIN REAL PROPERTY TAXES PAID BY LESSEE OF RESIDENTIAL LAND.—

"'(1) TAXES CONSIDERED AS IMPOSED ON LESSEE.—For purposes of subsection (a), a real property taxes paid or accrued with respect to land by a lessee of such land shall be treated as real property taxes imposed on such lessee (and not on the owner of such land) if—

"'(A) a residence owned by the lessee is situated on such land,

"'(B) the lessee is required under the lease to pay all real property taxes assessed with respect to such land, and

"'(C) the term of the lease is for a period of 20 years or more.

"'(2) LEASE CONSIDERED AS SALE.—For purposes of subsection (d), the entering into of a lease of land described in paragraph (1) by a lessee described in such paragraph shall be treated as a sale of the land, and the lessor and lessee shall be treated as the seller and purchaser, respectively.

"'(3) APPLICATION TO SUBLESSEES.—For purposes of paragraphs (1) and (2) (other than paragraph (1)(C), the terms "lease", "lessor", and "lessee" include a sublease, sublessor, and sublessee. The requirement of paragraph (1)(C) shall be treated as being satisfied with respect to a sublease if the term of the lease is for a period of 20 years or more.'

"(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply to taxable years beginning after the date of the enactment of this Act."

Mr. FONG. Mr. President, my amendment would permit a lessee who has a home on land leased to him for a term of 20 years or more to deduct real property taxes paid by him if the lease agreement requires him to pay such taxes.

Under present provisions of the Internal Revenue Code, real property taxes are allowed as deductions to a taxpayer only if the taxes are both owed and paid by him.

Because of this requirement, a serious inequity has arisen for many residential lessees in Hawaii. There are large tracts of land in Hawaii which have been subdivided and leased out as residential districts for periods in excess of 20 years. In many of the lease contracts, the lessees are required to pay all real property taxes.

In such instances, because the lessor owes the tax but the lessee is required to pay it, neither party is permitted to claim the payment as a deduction on his Federal income tax return.

My amendment would correct this inequity and allow the lessee who is legally obligated to pay the real property taxes assessed against his leased land and who does actually pay them to claim such payments as Federal income tax deductions.

[*P. 2126*]

I want to emphasize that first, the residence owned by the lessee must be situated on the leased land; second, the lessee must be required under the lease to pay all real property taxes assessed against this land; and, third, the term of the lease must be for a period of 20 years or more.

My amendment would also extend to sublessees if their leases meet the requirements applicable to prime lessees; that is, if the land is used as his residence, if the lease agreement is for 20 years or more, and if the sublessee is required to pay and does pay the real property taxes on such leased land.

My amendment is identical to Senate bill 344, which I introduced earlier this year and which is cosponsored by my friend and colleague the distinguished junior Senator from Hawaii [Mr. INOUYE]. No oral testimony has been taken by the Finance Committee on S. 344 or on my amendment, although I did file a written statement with the committee explaining amendment 338 prior to the committee's executive consideration of the pending tax bill—H.R. 8363.

Had there been oral testimony on either S. 344 or on amendment 338, I believe questions of committee members on this matter could have been answered satisfactorily.

What is involved here is a matter of equity for many Hawaii taxpayers who are denied this deduction on a technicality. The existing Internal Revenue Code, does not take into a situation faced by many lessee-taxpayers, particularly a large group in Hawaii, who by their lease contracts are legally obligated to pay real property taxes but who are denied the right to claim them as deductions on their Federal income tax returns because the Treasury has ruled the taxes are owed by the lessor.

Thus, neither the lessor nor the lessee can claim the real property tax deduction.

While I believe equity is on the side of my amendment, and while I believe it is both fair and meritorious, I shall not call for a vote on my amendment, as I

have discussed this matter with the senior Senator from Virginia [Mr. BYRD], chairman of the Finance Committee, who has assured me he would arrange for further study and consideration of this important matter. I believe when the issue is fully explored, the committee will recognize the equity involved and will approve S. 344 and report it to the Senate.

Mr. BYRD of Virginia. Mr. President, will the Senator yield?

Mr. FONG. I yield to the distinguished Senator.

Mr. BYRD of Virginia. What the Senator has said is correct—we will arrange for further study and consideration or hearings.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. FONG. I yield.

Mr. ANDERSON. This amendment was considered by the Finance Committee. We did not feel we had an opportunity to go over the matter carefully. A strange situation is involved in which neither of the parties involved can claim these property tax deductions. I also assure the Senator, as the distinguished chairman of the committee has, that this matter will receive attention. It sounds like a situation in which we could be helpful.

Mr. FONG. I thank the Senator.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. FONG. I yield.

Mr. LONG of Louisiana. As one member of the committee, I am sympathetic toward the problem. I studied it in the Finance Committee. I am sure the Senator realizes that the problem involved is that if we legislate in the fashion he asks us in order to meet the problem in Hawaii, it would tend to open up problems in many other States of the Union. The answer is to find a way to give relief to the people for whom the problem exists, without creating problems involving the other 49 States.

Mr. FONG. I believe the suggested change in the law would not create other problems. I think the committee will find the problem to be very simple.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. FONG. I yield.

Mr. CARLSON. I commend the Senator for the diligence with which he pursued this matter in the Senate, and particularly in the Finance Committee. It was pursued to some extent in the committee. As mentioned by the chairman and members of the committee, there are problems involved that need further consideration and study. I assure the Senator, as a member of the Finance Committee, that the problem will receive sympathetic consideration and any necessary hearings.

Mr. FONG. I thank the distinguished and able Senator from Kansas for his kind remarks and sympathetic understanding of the problem.

Mr. BENNETT. Mr. President, will the Senator yield?

Mr. FONG. I yield.

Mr. BENNETT. The Senator from Utah presented this amendment to the committee, and regrets that he was not a good enough salesman to persuade his colleagues on the committee to handle the problem in the bill. Under all the circumstances, I agree with the chairman of the committee that the best way to handle the problem is by separate consideration, so that we can get to the very novel and interesting problems involved, without having it become involved with other problems that may arise.

Mr. FONG. I thank the Senator from Utah for bringing the matter before the committee. I am sorry he was not able to convince the committee. I know that on further study the committee will be convinced.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. FONG. I yield.

Mr. WILLIAMS of Delaware. I assure the Senator from Hawaii that the Senator from Utah did a good job in trying to convince the committee. There was no objection to finding a solution for your problem. However, we felt it was not properly a part of this bill. Along with the other members of the committee, I give the Senator my assurance that your proposal will receive consideration.

Mr. FONG. I thank the Senator.

Mr. President, in view of the various assurance I have received from the distinguished members of the Finance Committee, I now withdraw my amendment.

The PRESIDING OFFICER. The amendment is withdrawn.

Mr. WILLIAMS of Delaware. Mr. President, I call up my amendment No. 398 and ask that it be stated.

The PRESIDING OFFICER (Mr. WALTERS in the chair). The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. It is proposed to strike out section 217 relating to deductions for interest on indebtedness incurred or continued to purchase or carry tax-exempt bonds (beginning on page 100, line 3, and continuing through page 101, line 5), as follows:

SEC. 217. INTEREST ON INDEBTEDNESS INCURRED OR CONTINUED TO PURCHASE OR CARRY TAX-EXEMPT BONDS.

(a) APPLICATION WITH RESPECT TO CERTAIN FINANCIAL INSTITUTIONS.—Section 265 (relating to expenses and interest relating to tax-exempt income) is amended by adding at the end of paragraph (2) the following new sentence: "In applying the preceding sentence to a financial institution (other than a bank) which is subject to the banking laws of the State in which such institution is incorporated, interest on face-amount certificates (as defined in section 2(a)(15) of the Investment Company Act of 1940 (15 U.S.C. 80a-2) issued by such institution, and interest on amounts received for the purchase of such certificates to be issued by such institution, shall not be considered as interest on indebtedness incurred or continued to purchase or carry obligations the interest on which is wholly exempt from the taxes imposed by this subtitle, to the extent that the average amount of such obligations held by such institution during the taxable year (as determined under regulations prescribed by the Secretary or his delegate) does not exceed 25 percent of the average of the total assets held by such institution during the taxable year (as so determined)."

(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply with respect to taxable years ending after the date of the enactment of this Act.

Mr. WILLIAMS of Delaware. Mr. President, this particular amendment proposes to strike from the bill section 217. The adoption of the amendment or its rejection would in no way affect existing law as it relates to the taxation of banks. That interpretation is incorporated in the committee report; and the Senator from Minnesota, the committee, and the Treasury are all in agreement on that point. So we are dealing only with the proposed language of the amendment which affects one company only. It is true that there are several related companies controlled by two singly owned companies. These two are, in turn, under one ownership.

My argument is that the bill is not meritorious, and even if it were I believe it should be considered as a separate bill. This is a private bill and should not be made a part of general tax bill where the President would have to accept it in order to approve the bill. The

[P. 2127]

committee should have a right to consider this question on its own merits.

This is in effect a private bill for only one company, and it should not be made a part of the large tax bill.

I was hoping that the Senator from Minnesota would agree to strike this out and have it considered by the committee at a later date on its own merits. If approved it could then be sent to the President, and he could accept it or veto it, based upon his opinion of the merits of this individual case.

I yield now to the Senator from Minnesota.

Mr. McCARTHY. The Senator from Delaware knows that I am in disagreement with him. In my opinion, this question was adequately considered by the committee, which made several significant changes in the language of the bill which was submitted for the consideration of the court.

This is not in that case a precourt situation, to deal with internal revenue, but we provide that there shall be no retroactivity.

The problem in dispute as between the Treasury and the company is the 25-percent limitation upon the credit tax exempts which might be held in portfolios of the company, as described in the bill. I believe the vote in the committee after the hearings and the deliberations was 11 to 3.

This is not the only provision in the bill which relates to a single company. It may involve slightly more money in other cases. One amendment that was adopted for the special benefit of one other insurance company is the changeover, the time for which we may extend another year. This is special legislation. I do not believe it to be the kind that would be vetoed by the President, but this is not unusual practice; and I believe that what we did was meritorious.

Mr. WILLIAMS of Delaware. The extension of the extra year for the mutual company to which the Senator from Minnesota refers, does not in any way affect their tax liability. It merely gave them 1 extra year to change their company over to the formula of new insurance laws enacted a couple of years ago. We gave that company an extended period of time to make the changeover and bring them into compliance with the new law. I repeat, it would not in any way affect the tax liability of that company.

Mr. McCARTHY. This is a minor item, but a member of my staff informs me that it involves certain deductions which would not otherwise have been involved; but they do not amount to very much.

Mr. WILLIAMS of Delaware. If they make the changeover it still leaves the tax the same as it would be for all other taxpayers. However, in the particular instance before us now, this company would be allowed to charge off the interest which it will be paying for the money it receives from its investors and then to put that money in tax-exempt securities.

This would be an unsound principle, a proposal which is denied to all other corporations and all individual taxpayers in America. This should be treated as a private bill and should not be made a part of general tax legislation.

Mr. LAUSCHE. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. LAUSCHE. I have just heard the Senator from Delaware state that if this amendment is passed it will be applicable to only one company of the thousands of companies in the United States, and that it is, instead of a tax bill, to apply uniformly. In truth, it is a relief bill for one company.

Mr. WILLIAMS of Delaware. That is correct. There are two related companies under single ownership, so we might say that in effect, we are dealing with one case. That is why I say it should be in the form of a private relief bill and should be considered as a separate measure.

The President could then accept it or reject it depending upon advice which he received from the Treasury Department.

Why should this measure not rest or fall on its own merits? Why should we be laying down the ground rules for one company different from those for other American companies? I was hoping we could strike this from the bill in order that it could be considered as a separate measure.

Mr. LAUSCHE. What type of relief does it contemplate and what is the name of the company? I wonder if the Senator from Utah [Mr. BENNETT] could answer that question?

Mr. BENNETT. The interest on State and local bonds under law is exempt from Federal taxation. They are so-called tax-exempt bonds.

Under the law, banks are allowed to buy tax-exempt bonds. The interest on such bonds is eliminated from the total income on which taxes are computed. This provision in the bill would give that same privilege to a company which operates to sell a savings ideas to people. It is a financial institution. But it invests about 30 percent of its income now in tax exempts. People are asked to buy the certificates. They buy a lesser amount, and after so many years, the face amount of the certificate is returned to them in the same way that labor bonds and factory bonds are sold.

In a sense, they borrow money from the people and issue the bonds against the borrowings. They use the borrowed money to buy tax exempts. The general Federal law says one cannot deduct interest on borrowed money if one uses that money to buy bonds which are exempt from taxation.

This is a technical problem. I stand somewhere between my two colleagues. It is not a case of a man going out and deliberately using his own funds to borrow money at his own risk and then investing that money in tax exempts.

This is a financial program, a savings program, operated by this one company, under which the company invites investments or loans from individuals.

The fundamental question is, Having invited those loans, should these people have the right to invest any of that money in tax exempts, and in turn have the income from those tax exempts eliminated from the income on which they pay taxes?

The company says it should. The Treasury says this company is not a bank, and therefore they cannot deduct whatever interest they pay to these certificate holders to the extent that that money is invested.

Mr. LAUSCHE. What is the position of the Treasury Department on the measure?

Mr. WILLIAMS of Delaware. The Treasury Department was opposed to this item being included in this bill.

Mr. ANDERSON. I believe the Senator is correct. I believe that is correct as to the earlier language. They did not testify too much on the subsequent language.

Mr. LAUSCHE. Does the testimony show whether there is any other company in the United States which has benefited, or is interested in the passage of the measure?

Mr. WILLIAMS of Delaware. To my knowledge there was none.

Mr. LAUSCHE. So, in effect, this is a special measure for one company.

Mr. WILLIAMS of Delaware. We are told that there are seven companies registered under the Investment Company Act of 1940 which presently issue face amount certificates. More than 90 percent of the total of the assets of these seven companies are held by two related companies, both of which are presently being audited by the Internal Revenue Service with respect to the very issue covered by the McCarthy amendment. In substance it is a private relief bill.

Mr. LAUSCHE. What is the Senator reading from?

Mr. WILLIAMS of Delaware. I am reading from a memorandum prepared by the staff of the committee. It is on this basis of what I say, that the proposal should be considered on its merits as a separate proposal. This should not be made a part of the pending bill.

That is the argument I am making. It is wrong to draft a formula which will fit one situation and one company only.

69-108 O—66—pt. 3——57

We are told that no other company in America fits the guidelines set out in the amendment.

Mr. LAUSCHE. May I pursue this one step further? On August 30, 1962, when the tax bill of 1962 was considered, there was also submitted a special relief bill for a Minnesota company, known as the Twin Cities Rapid Transit Co.

Mr. BENNETT. This is not that case at all.

Mr. WILLIAMS of Delaware. The question before the Senate now is not related to that situation.

Mr. LAUSCHE. But the principle is the same, is it not?

Mr. WILLIAMS of Delaware. The principle is different, but in both instances there are private bills for the benefit of one company only.

Mr. ANDERSON. They are completely different things. They are entirely different. It is true that a firm was involved in the previous bill, and that a private situation was involved. However, this is a wholly different matter.

[*P. 2128*]

Mr. WILLIAMS of Delaware. My time has expired. I yield the floor.

Mr. ANDERSON. I have no objection to the Senator continuing.

Mr. LAUSCHE. Mr. President, I have a distinct recollection of the measure of 1962. At that time I argued that laws must be uniform in operation. Laws which are passed solely for the purpose of aiding one group or one individual are not consonant with our concept of justice. If the bill, as has been stated by the Senator from Delaware, has within it provisions intended to serve one company or seven companies alone, and has been designed to serve them outside the realm of the application of the general principle, it ought not to be passed.

On the basis of what the Senator from Delaware has stated, it strikes me that the Senate is being asked to pass a provision that will be applicable to one or several companies. I cannot subscribe to it.

Mr. ANDERSON. Mr. President, in the first place, this may or may not be a private bill. It is true that the Treasury is thus far auditing only one company. I know of no one who can state with any certainty that no other company in the United States issues this type certificate. As the Senator from Utah very ably stated, with his fine business background, this is a provision that comes within section 265, which clearly states that "no deduction shall be allowed for interest on indebtedness incurred or continued to purchase or carry obligations, the interest on which is wholly exempt from the taxes imposed by this substitute."

I have left out a few words, but that is the substance.

In order to make this section applicable, one must say that these people purshased the certificates, and bought them tax exempt, for the purpose of doing a certain thing. That is the argument between the Treasury and the company, it seems to me. The Treasury has filed no lawsuit. If they were sure they were right, the Treasury might have filed a lawsuit long ago. The Treasury Department recognizes that the banks of this country have been faced with the very same question. There is no lawsuit pending against a single bank. Banks issue certificates of deposit, and sometimes buy the same type investment that is referred to here. No one has raised the question of whether they buy them for the specific purpose of evading taxation, and I am not sure what the outcome of a suit on that question would be.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. ANDERSON. I only say that the Senator from Utah put his finger on it when he said this is a very technical problem. The Senator from Utah referred to the prior bill, which was passed a year and a half or 2 years ago.

It is true that the situation in Minneapolis dealt with a firm that was not able to take care of its indebtedness, and it was necessary to lengthen the period for a short time, so that it could take care of it.

Mr. McCARTHY. To carry over the loss.

Mr. ANDERSON. Strangely enough, in this very bill, there was included a provision that would have taken care of it completely.

We provided for a carryover of losses for many years in advance. We would not have needed a bill at this time. Therefore, I do not think we should say this is private legislation. We were merely dealing with one institution that was in deep trouble.

I now yield to the Senator from Delaware.

Mr. WILLIAMS of Delaware. In order to clarify the RECORD, the Senator from New Mexico will agree, will he not, that the language in the bill, whether it is stricken from the bill as my amendment would provide, or left in, will, in no way affect existing law as it relates to the methods by which banks have been and will continue to be taxed?

— Mr. ANDERSON. That is correct. I tried to say that.

Mr. WILLIAMS of Delaware. The Senator was clear. The reason I raise the question was that I did not want some bank officials to read about our discussion tomorrow and think that banks are involved. Banks are in no way affected by what we do here on this proposal now before us.

Mr. ANDERSON. The Senator from Delaware is completely correct. I am glad he has made that abundantly clear. Banks are not involved, because for a long time the Treasury has allowed banks to go ahead and take all the tax-exempts they want and not question whether they were bought for this purpose.

Mr. WILLIAMS of Delaware. The Treasury agrees that as far as banks are affected the existing law stands unchanged.

Mr. ANDERSON. Mr. President, I support the committee bill, and I oppose the amendment offered by the Senator from Delaware. Incidentally, the language in the bill was placed in it by a vote of 11 to 3. I am sure the Committee on Finance is not composed of individuals who are trying to class this as a private law for particular individuals.

The committee bill provides that within reasonable limits a financial institution—let me emphasize—a financial institution, which issues face amount certificates and which is subject to the banking laws—let me emphasize—which is subject to the banking laws of the State of its incorporation—is not to be denied a deduction for interest paid by it with respect to its face amount certificates merely because it has invested a part of its assets in State or local government bonds rather than corporation securities.

There is nothing peculiar about this amendment. Under Treasury practice dating back to 1918, banks have been free from the rule of the Internal Revenue Code that denies an interest deduction because of the purchase of tax-exempt securities.

The Treasury Department came to Congress in 1934 with a recommendation that we specifically provide by statute that this administrative rule be overturned and that banks be denied an interest deduction in these circumstances. The House version of the 1934 act would have accomplished the Treasury objective but when the bill came before the Senate Finance Committee, the Finance Committee refused to follow the House bill. To the contrary, the Senate Finance Committee was of the opinion and stated in its report:

> Your committee is of the opinion that the change made by the House bill will seriously interfere with the marketing of Government securities, which are bought for the most part by banks and financial institutions; and also presents grave administrative difficulties. Your committee, therefore, disagrees with the change made in this section by the House bill and recommends that the provisions of existing law be continued. (S. Rept. 558, 73d Cong.)

Note the emphasis the committee places on the fact that the interest deduction was not to be denied in the case of banks and financial institutions.

This year, 1964, we are reaffirming the action taken by the Senate Finance Committee in 1934 with one very important difference. We are placing a limit by statute on the amount of tax exempt securities that can be purchased by financial institutions, other than banks, which issue face amount securities and which are subject to the banking laws of the State in which they are incorporated. Under the committee amendment, the disallowance rule in the case of such a financial institution is not to apply to the extent that investments in tax exempt securities do not exceed 25 percent of the total assets of the corporation. This means, Mr. President, that the face amount certificate company must invest 75 percent of its total assets in taxable securities if it is to completely avoid the disallowance rule. The Finance Committee felt this was a reasonable limitation, and I feel it is a reasonable limitation. I believe the provision approved by the committee after careful and complete consideration should be retained.

Let me make it perfectly plain that the committee amendment does not apply to banks. Banks, if they choose to do so, may invest their entire assets in tax-exempt securities and no deduction will be denied. This practice is now the published position of the Internal Revenue Service Rev. Rul. 61–222 (1961–2CB 58). The amendment only applies to the financial institution which issues face amount certificates.

The committee received testimony on this amendment at its public hearings on the bill. A witness before your committee called attention to the fact that financial institutions which are subject to the banking laws of a State, although not actually banks themselves, pay interest on face amount certificates—a way by which thousands of individuals throughout the country systematically invest their savings. In the example cited to your committee, a certificate holder pays to the financial institution equal monthly payments for 20 years and at the end of that time, the financial institution pays back the amount of the

investment plus interest in accordance with the provisions of the certificate. The funds of the financial institution in this case are subject to regulation by the Investment Company Act which permits investment of the funds received from the certificate holder in "qualified investments."

Qualified investments for this purpose include real estate mortgages, certain property improvement loans, U.S. Government and municipal bonds, and other securities meeting certain performance standards. As a result, part of the financial institution's funds are invested in State and municipal bonds.

The committee concluded that in cases of this type the relationship of the financial institution to the certificate holder is sufficiently close to the relationship of a bank to its depositors as to permit the investment of a substantial portion of the funds of such an institution in tax-exempt State and municipal bonds without this resulting in the possible denial of the interest deduction with respect to amounts paid out to the certificate holders.

That is the basis on which the committee acted. I think the committee acted wisely. It merely said that if a bank does not put more than 25 percent in tax exempts, it does not have to be punished by a deduction of the interest paid out. That follows the rule of 1934, adopted by the Senate.

Mr. BENNETT. Mr. President, will the Senator yield?

Mr. ANDERSON. I yield.

Mr. BENNETT. There is one other point which I think should be made to the Senate, if the Senator remembers it. This is prospective only, and has no effect on the existing quarrel between the company and the Internal Revenue Service.

Mr. ANDERSON. I thank the Senator from Utah. His statement is exactly correct. When we were assigned to pass on the question, the amendment was put to a vote again. Some of us announced that we would not vote for it if it were to be retroactive. I said I would not cast my vote for it if it involved one dollar of retroactive taxation. The Treasury said it did not. The Senator from Utah [Mr. BENNETT], with his fine business background, suggested that we should not make it retroactive, and we did not. We voted upon it. It does not contain one dollar of retroactive relief.

Mr. McCARTHY. I should like to make one additional point in connection with the dispute with the Treasury. Representatives of various units of the Government that sell tax-exempt securities have joined with the company in support of its position. We have had discussions with them with regard to this particular action. I think we ought to correct the RECORD with regard to municipalities, so that there will be no question that their tax-exempt status is in no way affected, either retroactively or prospectively, by the action taken here.

To that end, I should like to ask the Senator in charge of the bill, the distinguished Senator from Louisiana (Mr. LONG), a question regarding section 217 of the bill, which amends section 265 of the Internal Revenue Code. I think every member of the committee was concerned that there should be no impairment of the exemption of State and local bond interest. Everyone knows the need of government at those levels to raise money to meet growing responsibilities.

Do I correctly understand that section 217 of the bill creates no inference against any investor in such public obligations merely because in a particular tax year, past or future, the investment in such obligations exceeded the 25-percent figure? I should like to have the Senator confirm my understanding that the existing rule remains unchanged, that for the interest on any indebtedness to be disallowed under section 265 there must be a determination that such indebtedness was incurred or continued for the purpose of purchasing or carrying tax-exempt State and local government bonds.

I am sure that none of us wanted in any way to see financial institutions affected merely because they invest in State and local government bonds.

Mr. LONG of Louisiana. The Senator from Minnesota is correct in his interpretation of the bill and the existing law which it would amend. No inference is to be created against any taxpayer for any year; and the existing test for disallowance of interest on indebtedness, as the Senator has stated it, would remain.

Mr. McCARTHY. I understand that the Senator's interpretation would meet the demands of State and local governments with respect to tax-exempt securities. I thank the Senator for having made that point clear.

Mr. LONG of Louisiana. The bill was designed to meet the problem pointed out by a witness before the Committee on Finance, and it creates no inference for past or future years against any investor in State or local government bonds.

Mr. WILLIAMS of Delaware. Mr. President, I have used all my time, but I had promised to yield 5 minutes to the Senator from Tennessee to discuss my

amendment. Would there be objection to my asking unanimous consent that he be granted 5 minutes, in addition to the time I have used.

Mr. ANDERSON. There is no objection to that.

Mr. GORE. Mr. President, I support the amendment. Perhaps the Senate will recall that on the first day of debate I called to the attention of the Senate the fact that only a few pages of this more than 300-page bill dealt with tax rates. The other 300 or so pages are filled with provisions a few of which may be in the public interest, but most of which, in my view, are adverse to the public interest and deal with special interests.

With all due regard to the explanation which has been given, my view is that this is a special-interest provision, and that it should be stricken.

It is questionable, Mr. President, whether even the banks—with their special responsibility for part of the monetary functions of government—should have the privilege of deducting an interest charge as an operating cost, while investing such money in tax-exempt securities. If that is to be permitted, it will be a sure-fire way of making money at the expense of the Government of the United States.

This provision would extend that special privilege to a few special institutions which are not banks. It is said that these assets are owned to the extent of 90 percent by two companies. If this privilege is to be extended to these special companies, why not extend it to others? And then all will have a way to borrow money and deduct the interest and buy the tax-exempt securities, but owe no taxes on the income received from the tax-exempt securities. The issue is just that simple.

Mr. President, there are many other parts of the bill which should be stricken, but surely this one should be; and therefore I support the amendment of the Senator from Delaware.

Mr. LONG of Louisiana. Mr. President, I am not an expert in this field. I do not understand this subject as well as I should like to understand it. Moreover, I do not know what company or companies may be involved. But I sat with the committee and heard the matter discussed, and heard the Treasury's views and the staff's views. On the basis of the discussion I concluded that it made sense to permit some of those institutions to have 25 percent of their investments in tax-exempt State or municipal bonds and still receive a deduction for interest paid to certificate shareholders. I understood that if they were not entitled to this treatment for the part of their portfolios which invested in such securities, it would not be practically possible to invest any of the funds from the certificates of these financial institutions in tax-exempt bonds. That is the problem, as I understood it.

But whenever we are asked to pass a special bill for the benefit of one individual, I have regularly insisted that, instead of having the bill drawn so as to be for the benefit of only one person, it at least be drawn in general language, so that others similarly situated might have the benefit of the same law.

So far as this case is concerned, there may be two or three or four other companies which might benefit from this provision. At any rate, I would much rather vote on the basis of the principle involved. If it is right, I would be inclined to vote for it; if it is wrong, I would be inclined to oppose it.

I believe this issue is not now a court case, but I assume that it could become a case in court.

It seems to me this is the logical answer to the problem; in order to clear up what seems to be a hiatus between the Treasury Department and one or more companies, this would appear to be the way to solve it.

The subject would be in conference, of course; and if the Senator from Delaware feels as strongly about it as he appears to, I have no doubt that he would

[*P. 2130*]

be able to impress the conferees with the force and the merit of his views.

However, I still feel that I should oppose the inclusion of this amendment in the bill.

Mr. WILLIAMS of Delaware. Mr. President, I yield myself 2 minutes.

The PRESIDING OFFICER. The Senator from Delaware is recognized for 2 minutes.

Mr. WILLIAMS of Delaware. Mr. President, I think there should be no confusion about this matter.

The practical effect of the amendment would be to exempt financial institutions which sell face amount certificates under the Investment Company Act of 1940 from application of the disallowance rule. Data issued by the Securities and Exchange Commission shows that there are seven companies registered under the Investment Company Act of 1940 which presently issue face amount certificates. More than 90 percent of the total of the assets of these seven companies are held by two related companies, both of which are persently being

audited by the Internal Revenue Service with respect to the very issue covered by the amendment. Thus the committee amendment is in substance a private relief bill which would resolve in favor of the taxpayers primarily concerned, an issue which is being contested with the Internal Revenue Service.

Since this really is only a private relief measure it should be considered as such and on its own merits, not as part of this broad tax bill where it would be vetoproof.

Therefore, I urge that my amendment striking the McCarthy amendment from the bill be approved.

The Treasury Department agrees that we are dealing with a proposal that affects only one group of taxpayers or one company. There is no question about that. The Treasury Department opposed this provision remaining in the bill. It is clear that the provision is a private bill for the benefit of only one group of investors.

If this provision of the bill were to be enacted into law no doubt in a relatively short time others would find that the loophole would be of advantage to them. They would be able to come under the same umbrella and thus would avoid paying some of their taxes.

In short, Mr. President, the McCarthy amendment, as contained in the bill, is a violation of the principle of sound taxation. We should close this loophole tonight, and thus be done with it.

That can only be done by approving my amendment to delete the section.

Mr. GORE. Mr. President, will the Senator from Delaware yield to me?

Mr. WILLIAMS of Delaware. I yield.

Mr. GORE. If we open this loophole for the benefit of this small group, how shall we be able to oppose opening it, next year, for the building and loan associations and other institutions?

Mr. WILLIAMS of Delaware. Yes; and, not only that, no doubt many others would find that they could fit their operations under the formula of the bill and thus avoid their tax liability. Let there be no doubt that this is a new loophole for the benefit of one company now, but others will later take advantage of it also.

Mr. President, I yield back the remainder of the time under my control.

Mr. LONG of Louisiana. Mr. President, I yield back the remainder of the time under my control.

Mr. WILLIAMS of Delaware. Mr. President, on the question of agreeing to my amendment, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Delaware. On this question, the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from Alaska [Mr. BARTLETT], the Senator from Maryland [Mr. BREWSTER], the Senator from Virginia [Mr. BYRD], the Senator from Mississippi [Mr. EASTLAND], the Senator from Alaska [Mr. GRUENING], the Senator from Arizona [Mr. HAYDEN], the Senator from Alabama [Mr. HILL], the Senator from North Carolina [Mr. JORDAN], the Senator from Virginia [Mr. ROBERTSON], and the Senator from New Jersey [Mr. WILLIAMS] are absent on official business.

I further announce that the Senator from California [Mr. ENGLE] is necessarily absent.

I further announce that, if present and voting, the Senator from Alaska [Mr. BARTLETT] and the Senator from Virginia [Mr. ROBERTSON] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Nebraska [Mr. CURTIS], the Senator from Illinois [Mr. DIRKSEN], and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent.

The Senator from Iowa [Mr. HICKENLOOPER], the Senator from Nebraska [Mr. HRUSKA], the Senator from Massachusetts [Mr. SALTONSTALL], the Senator from North Dakota [Mr. YOUNG], and the Senator from New Jersey [Mr. CASE] are detained on official business.

If present and voting, the Senator from Nebraska [Mr. CURTIS], the Senator from Illinois [Mr. DIRKSEN], the Senator from Arizona [Mr. GOLDWATER], the Senator from Nebraska [Mr. HRUSKA], and the Senator from Massachusetts [Mr. SALTONSTALL] would each vote "yea."

The result was announced—yeas 40, nays 41, as follows:

[No. 33 Leg.]

YEAS—40

Aiken	Hartke	Nelson
Allott	Jackson	Pearson
Beall	Javits	Pell
Boggs	Jordan, Idaho	Prouty
Burdick	Keating	Proxmire
Carlson	Kuchel	Scott
Church	Lausche	Simpson
Clark	McClellan	Smith
Cooper	McGovern	Tower
Cotton	Mechem	Walters
Dominick	Monroney	Williams, Del.
Douglas	Morse	Yarborough
Fong	Morton	
Gore	Mundt	

NAYS—41

Anderson	Inouye	Muskie
Bayh	Johnston	Neuberger
Bennett	Kennedy	Pastore
Bible	Long, Mo.	Randolph
Byrd, W. Va.	Long, La.	Ribicoff
Cannon	Magnuson	Russell
Dodd	Mansfield	Smathers
Edmondson	McCarthy	Sparkman
Ellender	McGee	Stennis
Ervin	McIntyre	Symington
Fulbright	McNamara	Talmadge
Hart	Metcalf	Thurmond
Holland	Miller	Young, Ohio
Humphrey	Moss	

NOT VOTING—19

Bartlett	Engle	Jordan, N.C.
Brewster	Goldwater	Robertson
Byrd, Va.	Gruening	Saltonstall
Case	Hayden	Williams, N.J.
Curtis	Hickenlooper	Young, N. Dak.
Dirksen	Hill	
Eastland	Hruska	

So the amendment of Mr. WILLIAMS of Delaware was rejected.

Mr. PROXMIRE. Mr. President, I call up my amendment No. 386.

The PRESIDING OFFICER. The amendment of the Senator from Wisconsin will be stated.

The LEGISLATIVE CLERK. On page 33, it is proposed that, beginning with the word "Repeal" on line 10, strike out all through the word "Provisions" on line 12.

Beginning on page 33, line 14, it is proposed to strike out all through line 2, page 36.

Mr. PROXMIRE. Mr. President, I modify my amendment by adding:

On page 38, beginning on line 10, strike out "and it is the intent of the Congress in repealing the reduction in basis required by section 48(g) of such Code,".

The correction is a technical one. It was suggested to me by the distinguished Senator from Iowa. I think it necessary to make the amendment properly drafted.

The PRESIDING OFFICER. The Senator has the right to modify his amendment.

Mr. PROXMIRE. Mr. President, I ask for the yeas and nays on the amendment.

The yeas and nays were ordered.

Mr. PROXMIRE. It is my understanding that the debate on the amendment will be limited to one-half hour. I believe it can be completed in less time than that.

Each Senator has on his desk a memorandum which describes what the amendment would do. The amendment would reduce the revenue loss in the bill by $725 million a year by 1973, according to the estimates of the Joint Committee on Internal Taxation.

It would reduce the revenue loss in the 1965 budget by $245 million.

Many Senators—those who are in favor of and those who are against the bill—are concerned about the bill's revenue loss. The proponents of the bill have fought hard to keep out excise tax cuts on the ground that we would lose too much revenue. This amendment would enable us to restore some of the revenue loss, and at the same time abide by a principle which was written into the tax law deliberately and carefully by the Finance Committee in 1962, and ratified by the Senate in 1962, and upheld in conference in 1962.

[P. 2131]

The amendment would eliminate from the committee's version of the bill a change in present law proposed by the committee.

The present law prevents purchasers of plant and equipment, in effect, from deducting more than 100 percent of the cost of an asset as depreciation in computing their income taxes.

It seems to me that it is a sound and vital tax principle. But I think we all must recognize that the investment credit, if it were modified as the committee has suggested, would have the effect of providing more than 100 percent depreciation.

This is because the law now recognizes that a 7-percent investment credit gives purchasers of assets an opportunity to buy the asset at an effective 93 percent of stated cost. Let me give an example of this. A firm paying $1 million for equipment can subtract $70,000—the investment credit—from its taxes, and, in effect, therefore, have a net expenditure of only $930,000 for its purchase.

I think that is clear and simple. A firm buys equipment for $1 million. With the investment credit, in effect, it costs $930,000, not $1 million. This is the actual cost.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. PROXMIRE. I yield myself 2 additional minutes.

Because of this, the firm, under present law, is allowed to depreciate $930,000—the real cost of the asset—not $1 million.

The committee bill would remove this recognition of the effect of the investment credit in calculating asset cost and would thereby, in effect, permit equipment that cost $1 million to be depreciated for tax purposes as if it cost $1,140,000.

This is a sharp departure from the whole philosophy of American taxation, which has always been that a firm should be allowed to depreciate the full cost of an asset, but no additional fictitious cost.

While the cost of this provision is high—$245 million next year and $725 million a year by 1973—the potential cost to the Treasury, once the principle is recognized that assets can be depreciated at more than 100 percent is immense.

Once this principle is abridged there is no reason why in the future Congress could not provide for 150 percent depreciation or 200 percent depreciation. There is no limit.

A firm principle has been established for 175 years of American history that depreciation shall be 100 percent. It is clear that this bill would violate that principle.

There is no justification for this additional artificial benefit for purchasers of plant and equipment.

In the past 3 years such purchasers have enjoyed the following benefits expressly for purchasing equipment in addition to the corporate and personal tax reduction they enjoy in other sections of the bill:

First. Purchasers of plant and equipment have been allowed to increase depreciation under the new accelerated depreciation provisions as announced by the Treasury to any rate they can physically justify. That is, any equipment can be written off at least as rapidly as it is used up.

The value of this incentive to business is estimated at more than $1 billion a year. That is provided by the accelerated depreciation guidelines on the basis of the Treasury regulations recently issued.

Second. The investment credit in its present form provides an additional generous incentive to buy new equipment. The value of this incentive, with depreciation confined to 100 percent of the real cost of the asset, is more than $1 billion a year.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. PROXMIRE. I yield myself 1 additional minute.

Mr. President, this amendment should be adopted for two reasons. In the first place, it is an amendment that stands for fiscal soundness. It means that the Treasury will recover between $245 million per year and $725 million per year over the period of the next 10 years.

Finally, the amendment should be adopted because it would permit the Senate to do what it did in 1962, to stand for the principle that equipment should be depreciated only 100 percent, and not 107 percent, or 114 percent.

The PRESIDING OFFICER. Does the Senator modify his amendment?

Mr. PROXMIRE. Yes. I did modify my amendment, which is at the desk. I shall bring the modification to the desk in a moment.

Mr. MILLER. Mr. President, will the Senator yield me 3 minutes?

Mr. PROXMIRE. I yield 3 minutes to the Senator from Iowa.

Mr. MILLER. I want to wholeheartedly support the amendment offered by the Senator from Wisconsin. When the Senate acted on the investment tax credit last year we intended taxpayers to take the 7-percent investment tax credit. In the case of the purchase of $1 million worth of equipment, the firm can subtract a $70,000 tax credit on its tax return. If we do not adopt the Proxmire amendment, we are going to vitiate our intention by doubling that deduction. We will double it because we will allow the complete cost—that is, the market price of the item purchased—to be depreciated, instead of requiring it to be reduced by the amount of the investment tax credit. If we permit a taxpayer on his income tax return to take $70,000 tax deduction this year for investment tax credit and then next year, and during the next 3 or 4 or 5 years, to take $70,000 more off in depreciation, that is nothing except a gift that allows him to restore to himself that which he never had in the first place.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. MILLER. I yield.

Mr. PASTORE. The last time I was in Rhode Island I had a meeting with some of our industrialists. Their complaint was pretty much to the effect that the trouble with amortization was that, as it was done, they could amortize only the value of the machinery and equipment that had been purchased. When it came to replacing it, one of the impediments to modernization was that it cost much more than it did the last time. I was wondering how much this amendment affects the philosophy I have just expressed.

Mr. MILLER. This amendment has nothing to do with what the Senator has just mentioned. What it does have to do with is the investment tax credit; and that is exactly why we permitted the investment tax credit. We recognized that the costs to replace worn-out machinery were much more than they had been previously. As an incentive for modernizing equipment, we said: "We will give the incentive by means of the 7-percent investment tax credit," but we never said, "We will give you 14-percent investment tax credit." That is what would happen if the Senate did not adopt the Proxmire amendment.

Mr. PASTORE. While it is true that Congress has provided the 7-percent in-

vestment tax credit, the investment credit can be invoked only if new machinery or equipment is bought.

Mr. MILLER. That is correct.

Mr. PASTORE. My question is raised not so much as to the equipment that is bought in 1964; I am wondering about the equipment that will have to be bought in 1974.

We have had to build up a reserve in order to modernize the machinery. I am questioning now whether the amendment will not retard the incentive to modernize in 1974.

Mr. MILLER. I can answer that question by stating that in 1974 the investment tax credit of 7 percent will be to encourage that modernization; and it is not a 14 percent investment tax credit.

Mr. LONG of Louisiana. Mr. President, I yield 5 minutes to the Senator from Utah.

The PRESIDING OFFICER. The Senator from Utah is recognized for 5 minutes.

Mr. BENNETT. Mr. President, I am in the unusual position—as many Repubican Senators have been in this debate—of defending the administration against its own members.

The investment tax credit was considered by President Kennedy, supported by him and offered by the Treasury Department to Congress. When it was adopted last year, it was modified by an amendment proposed by the Senator from Louisiana [Mr. LONG], which has created so much difficulty for investors and for the industries which propose to use the investment tax credit, that many of them failed to use it because, in the form in which it was passed into law, it reqiured these companies to keep a completely separate depreciation record for every piece of machinery that they bought under this program. They could no longer use guidelines set up by them, because under the Long amendment they could not depreciate 100 percent; they could depreciate only to the extent of 93 percent in order to get the benefit of it. They had to have a separate set of books for every piece of machinery. So many industries in the United States, when we

[*P. 2132*]

got to work on this job, said, "Give us what you said you were going to give us or take it away, because we cannot keep our records under the Long amendment because it is prohibitive and unreasonable."

Mr. CARLSON. Mr. President, will the Senator from Utah yield?

Mr. BENNETT. I yield.

Mr. CARLSON. I wonder if it does not boil down to the simple proposition that if Senators are for the investment credit they will vote against the Proxmire amendment, and if they are against it, of course they will vote for the Proxmire amendment.

Mr. MILLER. Mr. President, will the Senator from Utah yield?

Mr. BENNETT. The Senator from Iowa has had an opportunity to make his remarks; I have only 5 minutes.

This is the fundamental problem. The Treasury had the concept. It was offered to Congress a year ago. The Senate cut it in half. I believe the Senator from Kansas [Mr. CARLSON] has laid down the question simply. If we want industry to use the investment tax credit, let us accept the proposal in the form in which it was originally offered. If we wish to stultify it and nullify its use by industry, let us go back and re-create the problems that they hoped the committee would eliminate by a change which the committee did adopt.

In this case, I had some personal consideration about the investment tax credit when it was adopted a year ago, but now I am sure that we either want it all one way or we want to eliminate it entirely.

Mr. PASTORE. Mr. President, will the Senator from Utah yield for a question?

Mr. BENNETT. I yield.

Mr. PASTORE. In other words, what the Senator from Utah is saying is that if we adopt the Proxmire amendment now, we are actually vitiating the effect of the 7 percent investment credit.

Mr. BENNETT. Yes. If we adopt the Proxmire amendment, we will vitiate the effect of the 7 percent investment credit.

Mr. PASTORE. In other words, in the process of including the amortization benefit we give now, and subtracting it on the other end, we will take away from what we have already given?

Mr. BENNETT. That is partially true.

Mr. PASTORE. I like to simplify things.

Mr. BENNETT. We can say to a man, "Your investment credit, if you spend a thousand dollars for a machine, will be $70. You still have that machine, but under the Long proposal adopted last year, you cannot deprecite it less than a thousand dollars," so the depreciation is $930.

Mr. PASTORE. Which in effect takes it away?

Mr. BENNETT. Certainly; in effect it takes it away.

Mr. ANDERSON. Mr. President, will the Senator from Utah yield?

Mr. BENNETT. I yield.

Mr. ANDERSON. I compliment the Senator from Utah. That is the real question. Are we going to make every

business man keep two sets of books? I believe it is a bad thing to keep two sets of books.

Mr. PASTORE. That is correct. Not only two sets of books; but the Treasury went to great lengths a year ago to try to simplify the depreciation program by saying "we are going to lump machinery in a class, and we can apply a flat figure to a class, but if we are going to continue the Long amendment, the businessman must write a separate depreciation ledger for every single piece of machinery."

Mr. ERVIN. Mr. President, will the Senator from Utah yield for a question?

Mr. BENNETT. I am glad to yield, if I have the time.

Mr. ERVIN. The Senator from Wisconsin said that if we did not adopt the amendment, we would destroy the principle. I ask the Senator from Utah if it is not true that we have had the principle; and will not the depreciation always be calculated upon the actual cost of the machinery?

Mr. BENNETT. That is correct.

Mr. ERVIN. If we adopt the amendment of the Senator from Wisconsin, we will change that principle so that instead of depreciation on the basis of the actual proposal we will depreciate only on the basis of 93 percent.

Mr. BENNETT. I believe the Senator is absolutely correct. Under the investment credit proposal, we did not say the Federal Government would pay 7 percent of the cost of a machine, and to the man from whom it was purchased say the cost will be that much lower. We said the Federal Government would give a tax credit of 7 percent, which has no specific relationship to the depreciation problem with the machine.

Mr. LONG of Louisiana. Mr. President, I yield myself 5 minutes.

The PRESIDING OFFICER. The Senator from Louisiana is recognized for 5 minutes.

Mr. LONG of Louisiana. Mr. President, I have considerable regard for the Proxmire amendment, because it is the Long amendment of 2 years ago. The Senator from Louisiana thought 2 years ago exactly as the Senator from Wisconsin thinks today. The amendment was offered in committee, it was not discussed on the floor. If it had not been for the vigorous support which I gave it in the conference committee, it would not have become law; but I held out for it. That is how it became law. I believe we should change the name to the Proxmire amendment because I think the Senator is entitled to that much credit for saving the "baby" from the "flaming building."

As a practical matter, this amendment has had the effect of requiring that the tax credit be used as a reduction in depreciation. So, as a practical matter, if we take the tax credit that was passed by the House 2 years ago, and attach the Long amendment to it, it means that there will be a 4 percent tax credit in the long run instead of a 7 percent tax credit; because while people reduce their depreciation base, they have the benefit of interest during the period of time that they are depreciating the equipment; and the result is about a 4 percent reduction as recommended by President Kennedy. When President Kennedy made his recommendation 2 years ago, he recommended an 8 percent tax credit. The House cut it back by 1 percent, to 7 percent. The committee took the Long amendment and cut it by 3 percent. The bill went through with the 4 percent investment credit.

I would be against repeal of my amendment if we were doing this only in and of itself, but this is a balanced package. If we repeal the dividend credit in the bill, it will cost corporation stockholders a considerable amount of money.

So when we repeal the dividend credit, the answer to those of us from the Democratic side of the aisle who advocate it is, "yes; we are going to take care of your dividend credit which will give you back what the Long amendment took away from you on investment credit. Then we are going to give back to you a reduction in tax rates and we are going to cut your personal income taxes. So by the time you see the whole package, we believe you will be happy." And with a few exceptions, they will be glad.

But this is a part of a package proposition when we look at the whole thing. We have to see it work out to a balanced tax reduction for those in the highest bracket receiving reductions of about 5 and 6 percent, and those in the lowest brackets receiving a reduction of a maximum of 38 to 75 percent—1,500,000 taxpayers removed from the income tax brackets.

Considered as a part of a package, it is a good proposal. When our Republican friends prevailed temporarily in putting the cost up by $550 million, I urged the Senator from Delaware to move to save the Long amendment. If we look at it as a balanced package, it is a good proposal, and it should be agreed to. While I am proud about it and think I was right about it, I am frank to state that apparently the only ones who understand the bill do not appreciate it. I am willing to let someone else take the credit. I am content to go along with

the committee and the judgment of the Treasury. As an overall proposal, it is a fair settlement of the issue.

Mr. PROXMIRE. Mr. President, the distinguished Senator from Utah and other Senators have said that if the amendment is adopted it will vitiate the investment credit provision. If it is adopted, it will keep the present law as it is. It would not change anything. It would maintain the principle adopted in 1962. The amendment merely maintains what we already have.

The argument has been made that those who understand the amendment are opposed to it, and want to change the law. I submit that if we consider the membership of the Committee on Finance we find that the chairman of the committee, the Senator from Virginia [Mr. BYRD], who is a man of great judgment, was strongly opposed to the change in the Long amendment. The distinguished ranking minority member——

Mr. SMATHERS. Mr. President, will the Senator yield?

[*P. 2133*]

Mr. PROXMIRE. I yield.

Mr. SMATHERS. Is it not a fact that the chairman was opposed even to the investment credit? He was opposed to the whole thing, was he not?

Mr. PROXMIRE. It is true that he was opposed to the investment credit. The distinguished Senator from Louisiana, the champion of the investment credit provision, the father and the author and the prime supporter of the proposal, was right then, and he is wrong now.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. LONG of Louisiana. I thank the Senator for admitting that I am batting 500.

Mr. PROXMIRE. The Senator is batting far more than .500. On the bill he is batting .995. He has been able to beat off everything except one little amendment.

Mr. AIKEN. Mr. President, the Senator from Vermont confesses to being considerably puzzled by the argument last night and tonight. Last night, we had Senators pleading for the right of utilities to keep two sets of books for the benefit of stockholders, and tonight we hear some of the same Senators say that keeping two sets of books would work a hardship on a corporation. I cannot understand why last night it was said that keeping two sets of books was a benefit, and tonight that keeping two sets is a curse.

Mr. PROXMIRE. The Senator is correct.

Mr. AIKEN. It is really puzzling to hear conflicting arguments made by the same Senators.

Mr. PROXMIRE. The Senator from Vermont is correct. I yield to the Senator from Iowa.

Mr. MILLER. I reply to the Senator from Vermont that the keeping of two sets of books will not be required. There is no reason for keeping two sets of books.

Mr. ANDERSON. Oh, my.

Mr. MILLER. I am referring now particularly to the comment made by the Senator from New Mexico. If the taxpayer buys an item for $1,000, and Uncle Sam says: "You paid only $930 for it, because of a $930 tax credit," he has no business putting that item down on his tax return, or on his depreciation schedule for anything more than $930. If he desires to bring it up to $1,000, and keep two sets of books, that is his privilege.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. MILLER. I yield.

Mr. ANDERSON. If he keeps one set of books for his State income tax, and one set of books for his Federal income tax, he is wrong.

Mr. MILLER. May I answer that?

Mr. ANDERSON. Yes.

Mr. MILLER. It depends on the State. The State of Iowa recognizes the investment tax credit. I suggest that most States which levy an income tax do so; nevertheless, even if a person kept two sets of books, any accountant could handle it in the twinkling of an eye by simply reducing the amount of depreciation by 7 percent. There is no handicap involved in that, and the question is whether it is worth it to keep two sets of books, to get the benefit of the investment credit. I do not believe this argument of a double set of books is valid at all.

Mr. PROXMIRE. Mr. President, how much time have I remaining?

The PRESIDING OFFICER. The time of the Senator has expired.

The question is on agreeing to the amendment offered by the Senator from Wisconsin [Mr. PROXMIRE]. On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD (when his name was called). On this vote I have a pair with the junior Senator from Illinois [Mr. DIRKSEN]. If he were present and voting, he would vote "nay." If I were at liberty to vote, I would vote "yea." I withhold my vote.

Mr. McNAMARA. On this vote, I have a live pair with the senior Senator from Alaska [Mr. BARTLETT]. If he were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." I withhold my vote.

Mr. SMATHERS. On this vote I have a pair with the junior Senator from Alaska [Mr. GRUENING]. If he were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." I withhold my vote.

The rollcall was concluded.

Mr. HUMPHREY. I announce that the Senator from Alaska [Mr. BARTLETT], the Senator from Maryland [Mr. BREWSTER], the Senator from Virginia [Mr. BYRD], the Senator from Mississippi [Mr. EASTLAND], the Senator from Alaska [Mr. GRUENING], the Senator from Arizona [Mr. HAYDEN], the Senator from Alabama [Mr. HILL], the Senator from Ohio [Mr. LAUSCHE], the Senator from Washington [Mr. MAGNUSON], the Senator from Virginia [Mr. ROBERTSON], and the Senator from New Jersey [Mr. WILLIAMS] are absent on official business.

I further announce that the Senator from California [Mr. ENGLE] is necessarily absent.

I further announce that, if present and voting, the Senator from Maryland [Mr. BREWSTER], the Senator from Mississippi [Mr. EASTLAND], the Senator from California [Mr. ENGLE], the Senator from Arizona [Mr. HAYDEN], and the Senator from Virginia [Mr. ROBERTSON] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Nebraska [Mr. CURTIS], the Senator from Illinois [Mr. DIRKSEN], and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent.

The Senator from Iowa [Mr. HICKENLOOPER], the Senator from Nebraska [Mr. HRUSKA], the Senator from North Dakota [Mr. YOUNG], and the Senator from New Jersey [Mr. CASE] are detained on official business.

If present and voting, the Senator from Nebraska [Mr. CURTIS], the Senator from Arizona [Mr. GOLDWATER], and the Senator from Nebraska [Mr. HRUSKA] would each vote "nay."

The pair of the Senator from Illinois [Mr. DIRKSEN] has been previously announced.

The result was announced—yeas 20, nays 58, as follows:

[No. 34 Leg.]

YEAS—20

Aiken	Gore	Nelson
Burdick	Keating	Proxmire
Church	McGovern	Ribicoff
Clark	Metcalf	Williams, Del.
Cooper	Miller	Yarborough
Dodd	Monroney	Young, Ohio
Douglas	Morse	

NAYS—58

Allott	Humphrey	Neuberger
Anderson	Inouye	Pastore
Bayh	Jackson	Pearson
Beall	Javits	Pell
Bennett	Johnston	Prouty
Bible	Jordan, N.C.	Randolph
Boggs	Jordan, Idaho	Russell
Byrd, W. Va.	Kennedy	Saltonstall

Holland	Muskie	

NOT VOTING—22

Bartlett	Goldwater	Mansfield
Brewster	Gruening	McNamara
Byrd, Va.	Hayden	Robertson
Case	Hickenlooper	Smathers
Curtis	Hill	Williams, N.J.
Dirksen	Hruska	Young, N. Dak.
Eastland	Lausche	
Engle	Magnuson	

So Mr. PROXMIRE's amendment was rejected.

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

Mr. MANSFIELD. Mr. President, I hope Senators will remain in the Chamber to listen to what the distinguished senior Senator from Tennessee will say apropos his amendment. There will be no further voting tonight. It is my understanding that when the Senator from Tennessee has made his preliminary statement, the Senate will adjourn.

Mr. GORE. I send to the desk amendment No. 207 and ask that it be read.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 74, beginning with line 14, it is proposed to strike out all through line 3 on page 108 and insert the following:

[P. 2134]

SEC. 214. TERMINATION OF PREFERENTIAL TAX TREATMENT OF RESTRICTED STOCK OPTIONS.

Section 421(d)(1) (definition of restricted stock option) is amended by inserting after "granted after February 26, 1945," the following: "and before January 25, 1963,".

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

Mr. HART. Mr. President, since many of the constructive actions of the Committee on Finance perhaps go unnoticed because of the attention we concentrate upon controversial amendments, I should like to refer to an action which the Committee on Finance took and which is reflected in full detail on pages 73 and 74 of the committee report. I refer to deductions for political contributions, which are there authorized.

There is much concern that we develop a method which will broaden the basis for the support of political parties in this country. Many of us have spoken on the subject. No one pretends to have an answer at hand. The bill now pending does not purport to contain an answer.

However, I thank the Committee on Finance very much for adding this particular section to the bill that was received from the House. I clearly voice the attitude of both major political parties in Michigan. I ask unanimous consent to have printed at this point in my remarks a joint statement issued by the Democratic State chairman, Zolton A. Ferency, and the Republican State chairman, Arthur G. Elliott, Jr. The recommendations of our two political party chairmen have been heard by the Committee on Finance. I add my voice to theirs, and I am glad the committee acted in a responsible fashion.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Following is a joint statement issued today by Zolton A. Ferency, Democratic State chairman, and Arthur G. Elliott, Jr., Republican State chairman:

"As chairmen of our respective political parties, we have together been reviewing problems concerning the financing of political party activities—problems that we both agree are becoming increasingly disturbing.

"The complex difficulties of modern life require that voters be better informed on the issues of our day; that they have a clear understanding of the stands proposed by our major political parties on the vital problems of the day; that they be able to make discerning selections of public officials in elections.

"The burden of properly informing and educating voters on both issues and candidates, falls to the major political party organizations. The expanding volume of needs and assignments require that the parties be more adequately and systematically financed to effectively carry out their responsibilities.

"It is our belief that citizens will support the parties of their choice if they are given sufficient encouragement and inducements to do so.

"To stimulate greater citizen support of the parties of their choice, we are asking Michigan Congressmen and Senators to join in a genuine bipartisan effort to initiate and promote passage of legislation, in this session of Congress, which will permit Federal income tax deductions for contributions to political parties.

"We suggest allowances up to $50 for contributions of individuals up to $100 for husbands and wifes who file joint returns.

"We are confident that such legislation would be an excellent start in the development of systematic procedures for financing the essential operations of political parties.

"In addition, such a move will greatly encourage wider citizen activity in the management of political parties, and will reduce the danger of the parties coming under control of heavily financed special interest groups."

Mr. HART. I thank the Senator from Tennessee very much.

Mr. GORE. Mr. President——

Mr. MORTON. Mr. President, will the Senator from Tennessee yield for a parliamentary inquiry?

Mr. GORE. I yield.

Mr. MORTON. Mr. President, I understand that the Senate is now proceeding under a time limitation. Are the remarks to be made tonight by the Senator from Tennessee [Mr. GORE] to be charged to his time, or will that start from scratch tomorrow?

The PRESIDING OFFICER (Mr. WALTERS in the chair). Under the agreement, any time used tonight by the Senator from Tennessee is to be charged against his allotted time.

Mr. MORTON. Very well, Mr. President.

I wish my colleague well.

Mr. GORE. I thank the Senator; and good night. [Laughter.]

Mr. President, two basic questions are involved in the amendment I have offered.

The first question is this: Will the officers of a corporation be required to pay, on the compensation they receive for their work, the same kind of taxes that ordinary employees are required to pay and that other citizens are required to pay?

The second question is this: Will Congress reward corporate insiders by preferential tax treatment and encourage them to divide among themselves funds of the corporation which rightfully belong to all the stockholders of the corporation?

Mr. President, I have long waged a battle to eliminate from the law this loophole of tax favoritism. Fortunately, very influential and powerful voices have been raised in support of this battle. The late beloved President Kennedy made one of his strongest recommendations for tax reform in this regard; and I wish to read from his recommendation to Congress on January 24, 1963:

(b) The tax treatment of restricted stock options: The difference between the price paid for optioned stock at the time of exercise of such an option and the option price represents compensation for services quite as much as do wages and salaries. Under present law, however, such gains are taxed under capital gains rules at very favorable rates and the tax liability may be postponed for many years.

Under present war-inspired high tax rates, compensation arrangements of this kind clearly have their attractions. But under the new more reasonable rates I am recommending, the favored tax treatment of stock options can no longer be said to be either

[*P. 2135*]

desirable or necessary; and larger salary payments will be more effective than at present as a means of attracting and holding corporate executives.

I, therefore, recommend that, with respect to stock options granted after this date, the spread between the option price and the exercised be taxed at ordinary income tax rates at the time the option is exercised. The averaging provision referred to above, which the Secretary of the Treasury will present, will prevent a tax penalty due to bunching of income in 1 year. In addition, payment of tax attributable to exercise of the stock option would be permitted in installments over several years.

This change will remove a gross inequality in the application of the income tax, but it is not expected to yield appreciable amounts of revenue; for the gains to be taxed as compensation to the employee will, as in the case of compensation in other forms, be deductible from the income of the employer.

The overall effect of all these changes in the capital gain provisions affecting individuals and corporations will stimulate a freer flow of investment funds and facilitate economic growth as well as provide more evenhanded treatment of taxpayers across the board. They have a direct positive revenue impact of about $100 million per year. The reduction in the tax rate on capital gains will be somewhat more than offset by the increased revenue from the change in holding period, the taxation of capital gains at death and the changes in definitions—including those affecting real estate shelters and sales of mineral properties.

However, the "lock-in" effect of the present law, due to the ability to avoid all capital gains taxes on assets held until death, will be eliminated. This will result in a sharp increase in transfers of capital assets as individuals feel free to shift to the most desirable investment. The increased volume of transactions under these new rules should, in an average year, yield approximately $700 million in additional revenue. Indeed, this figure will be substantially higher during the first few years after enactment as those who are presently "locked in" respond to the new situation.

Mr. President, the pending bill amends the option law. For instance, the bill provides for an employee purchase plan. My amendment would not alter that; indeed, the amendment I have offered would not prevent stock options. My amendment would strike out of the bill the prefential tax treatment provided for qualified stock options.

In the existing law, the provision by which corporate insiders receive preferential tax treatment is entitled "Restricted" stock option. The existing "restricted" stock option is terminated by the provisions of the bill; and, instead, a new "qualified" stock option is instituted.

Under the employee purchase plan, any employee—whether an officer or a lathe operator—can purchase as much as $25,000 worth of stock per year. I repeat that this is a provision which is available to the janitor of the company and also to the president of the company. My amendment would not repeal this. So even after enactment to the amendment I have offered, the officers of a corporation could purchase option stock, under the employee purchase plan, to a maximum of $25,000 per year.

But, Mr. President, my amendment would strike out of the bill the provisions for the new "qualified" stock option, which under the old term "restricted" stock option has been so greatly abused as an instrument of tax avoidance.

Now, Mr. President, a good example of this abuse has been furnished recently by the Chrysler Corp.

The Senate Finance Committee ordered an investigation of the Chrysler stock option deal which was published early this year. I wish to read briefly from the report which was prepared following an investigation. The Treasury Department conducted the investigation, and rendered a thorough report to the Senate Finance Committee; and I now read the report.

Letter of Transmittal

Treasury Department,
Washington.

Hon. Harry F. Byrd,
Chairman, Senate Finance Committee,
New Senate Office Building,
Washington, D.C.

My Dear Mr. Chairman: Pursuant to the request of the committee to study the facts involved in the operation of Chrysler's stock option plan, I am transmitting copies of a report, "Chrysler's Stock Options." This re-

port was prepared by the Treasury Department but coordinated with the joint committee staff and has its concurrence.

Sincerely yours,

STANLEY S. SURREY,
Assistant Secretary.

REPORT ON OPERATIONS OF STOCK OPTION PLAN BY CHRYSLER CORP.

1. PRINCIPAL PROVISIONS OF THE STOCK OPTION PLAN

Chrysler's stock option plan was approved by the stockholders at their annual meeting, April 15, 1952. Originally covering a period of 10 years, the plan was extended for an additional 5 years by approval of the stockholders on April 17, 1962. During this 10-year period the plan was substantially revised, principally with respect to the number of shares authorized, option pricing policy, and the conditions of exercise of the options.

The original plan authorized 400,000 shares of Chrysler common stock to be set aside for purchase by the principal officers and key employees of the corporation and its subsidiaries. No more than 45,000 shares could be granted to a single employee. A committee of directors not eligible to receive such options was authorized to award the options at a price not less than 95 percent of the fair market value of the stock on the date of grant. On January 4, 1962, the minimum option price was raised to 100 percent of the fair market value of the stock.

The plan originally provided that no option could be exercised in whole or in part until after the holder of the option had been employed by the corporation (or a subsidiary) for at least 1 year after the date of grant. At the end of the first year the holder could purchase up to one-third the total number of shares subject to his option, at the end of the second year up to two-thirds, and at the end of the third year he could purchase up to 100 percent of the shares covered. The period of the option was limited to 10 years. The conditions of exercise were later amended (1958) to provide that options could be exercised, in whole or in part, after the holder had been in continuous employ at least 18 consecutive months after the date of grant. Thereafter he could exercise options (except in the case of death) only if he remained continuously employed through the date of exercise.

On January 4, 1962, significant changes were made in the terms of exercise of new options. An employee receiving new options after that date was required to remain in the continuous employ of the corporation or of a subsidiary for 12 consecutive months before he could exercise any part of the option; thereafter he may not buy more than 20 percent of the shares covered before the second anniversary of the date of grant, more than 40 percent before the third anniversary, more than 60 percent before the fourth anniversary, or more than 80 percent before the fifth anniversary. Options granted before January 4, 1962, however, could continue to be exercised in whole or in part after a period of 18 months from the date the option was granted.

The plan originally contained a provision that the person exercising the option must represent in writing that he intends to acquire the shares for investment purposes and not with a view to their distribution. After the annual stockholders' meeting of March 5, 1962, the board of directors, on recommendation of the stock option committee, deleted this provision for outstanding options as well as for all options granted in the future.

Shares sold under the plan may be either authorized and unissued shares or issued shares reacquired by the corporation; i.e., Treasury stock. Only authorized and unissued shares have been used for this purpose. The purchase price for the shares acquired under an option must be paid in full, in cash, upon exercise. Because of the sizable investment entailed, many officers finance the purchase of stock through bank loans.

In the event of a change in the outstanding common stock of the corporation by reason of a stock dividend, splitup, recapitalization, merger, or consolidation, the board of directors or the stock option committee may make appropriate adjustment in the aggregate number of shares available under the plan, the maximum number of shares which may be granted to any individual, the number of shares subject to each outstanding option and the option price.

No option may be granted under the plan after April 30, 1967. Prior to that date the board of directors may amend the plan in any respect or terminate the plan. But they may not increase the maximum number of shares to be sold under the plan or to any one individual, reduce the minimum option price, or extend the period during which options may be granted or exercised without further approval of the stockholders. Nor may the board of directors, without approval of stockholders, reduce the option price of an outstanding option or cancel an outstanding option and grant a new option at a lower price to replace it. Termination or amendment of the plan may not, without the consent of the holder of any option outstanding, terminate any employee's option or materially or adversely affect his rights under the option.

On January 10, 1963, subject to the approval of the stockholders, the board of directors amended the plan to increase to 650,000 shares the maximum number of shares covered. This number was doubled in accordance with the stock split effected April 19, 1963, and redoubled to 2,600,000 shares with the second stock split approved by stockholders, effective December 20, 1963. Shares reserved for options represented 3.25 percent of authorized capital stock.

2. OPTION GRANTS AND PRICES 1952–63

Options were first granted under the plan on May 1, 1952, for 84,000 shares of common stock at a price of $69.35. These awards were followed on June 19, 1952, by additional grants of 75,250 shares at a price of $73.51. Further grants were not made until May 5, 1955, when options covering 97,250 shares were granted at a price of $77.07. These grants were followed by options cover-

ing 64,000 shares on August 2, 1956, at a price of $61.52. An additional grant of 34,500 shares was made April 25, 1957, at a price of $75.71. Thus, through 1957, option awards covered a total of 355,000 shares (1,420,000 shares after adjustment for subsequent stock splits).

By August 31, 1958, options covering only 23,500 shares were exercised; 63,500 shares covered by options lapsed through the death of the holder or otherwise, and 320,500 shares remained unexercised. The status of the plan at that time is shown by the following table:

Date of grant	Option price per share	Number of shares covered by options exercised	Number of shares covered by options lapsed [1]	Number of shares covered by options outstanding	Latest date of expiration [2]
May 1, 1952	$69.35	21,311	31,500	62,189	Apr. 30, 1962
June 19, 1952	73.51	2,129	19,500	73,121	June 18, 1962
May 5, 1955	77.07		12,500	86,750	May 4, 1965
Aug. 2, 1956	61.52	60		63,940	Aug. 1, 1966
Apr. 25, 1957	75.71			34,500	Apr. 24, 1967
Total		23,500	63,500	320,500	

[1] Through death of holder or otherwise. These shares became available for subsequent options.
[2] Provided holder of option remains in employ of the corporation (or of a subsidiary).

Source: Chrysler Corp., notice of annual meeting of stockholders, Mar. 11, 1959.

By this time, because of the declining price of Chrysler stock, the options had tended to lose their value to the employee and their usefulness as a means of retaining desirable personnel. The average market value of Chrysler stock during the preceding 12 months had declined to less than 80 percent of the fair market value of stock on the dates that the foregoing grants were made. Taking advantage of the reset provisions of the Internal Revenue Code, the stock option committee lowered to $52.49 the option price covering 245,111 shares previously granted May 1, 1952, June 19, 1952, May 5, 1955, and April 25, 1957, at prices ranging from $69.35 to $75.71 per share. This action was conditional upon the surrender for cancellation by the employees of their old options. On January 8, 1959, the committee also granted new options at $49.94 a share to replace those previously granted August 2, 1956, at a price of $61.52. Each holder of these newly granted options could exercise them after a continuous period of employment of 18 months from the new date of grant.

Because of changes in management assignments since the original options were granted, the size of the options held by many individual employees no longer reflected their management responsibilities. The stock option committee, therefore, did not modify all outstanding options "across the board" but considered each case individually and adjusted the number of shares optioned to each holder in accordance with his new responsibilities. In addition to the above adjustments of previously existing options (involving the surrender of the old options for cancellation) the stock option committee granted options on September 11, 1958, to 21 officers and employees to purchase 28,750 shares of stock at $52.49 a share, and on January 8, 1959, to 5 officers to purchase 45,000 shares of Chrysler stock at $49.94 a share. On December 3, 1959, options were granted to 12 persons covering a total of 30,750 shares at $61.22 a share.

By March 5, 1962, none of the newly granted options had been exercised. At that time options were held by 86 officers and employees to purchase in the aggregate 307,396 of Chrysler common stock; 69,104 shares remained available for future grants. Of the original 400,000 of common stock reserved under the plan, options covering 23,500 shares had been exercised (prior to 1959). It was not until January 1963, that any of the new options was exercised by directors and officers of the corporation.

Table 1 summarizes the total number of shares covered by option grants through December 31, 1963, together with their price. Because of the 2 for 1 stock splits of April 19, 1963, and December 20, 1963, the number of shares and option prices are adjusted to reflect the situation at December 31, 1963. Through this period all directors and officers received options covering the equivalent of 1,112,584 shares, of which the officers who were directors received 603,984 shares. No information is available on the total number of shares covered by options granted all employees.

3. VALUE OF OPTIONS EXERCISED, 1963

As was indicated above, none of the new options was exercised until January 1963. By the end of the year all officers of the corporation (29) exercised options covering 480,800 equivalent number of $6.25 par value shares. All executives, including the above officers, purchased 876,000 shares covered by options (table 2). The total value of these options at the time of exercise was $13,658,979. This amount represented the difference between the option price and the market value of the shares at that time.

Officers who were directors of Chrysler exercised options with a value of $3,891,811. Of these, the options exercised by Mr. Love, chairman, had a value of $1,281,614, almost one-third of benefits realized by this group. The value of Mr. Townsend's, president, amounted to $667,483, Mr. Quinn's, $632,298, Mr. Misch's, $481,981, and Mr. Bright's, $500,175 (table 2).

It is of some interest to know how option benefits realized by the sale of optioned stock (the spread between market value and option

price at time of exercise), and similar unrealized benefits on stock acquired under option but not yet sold, compare with compensation received by the principal executives of Chrysler. Since the period might properly be considered to date from 1958—when new options were granted in connection with the resetting of prices—salaries and bonuses received over the 6-year period, 1958–63, are taken as a basis of comparison. Although there were significant variations among the principal executives, the realized and unrealized value of options exercised by the seven top officers almost exactly equaled the salaries and bonuses they received over this period, excluding the 1963 bonus yet to be determined (table 3).

During this 6-year period there was also an increase in the regular compensation of Chrysler's officers (table 4). In part, this increase, particularly in the case of Messrs. Townsend and Leary, was occasioned by an appreciable increase in responsibility. Excluding the new chairman, G. H. Love, total salary and bonuses of the top six officer-directors more than doubled, from a total of $452,000 in 1958 to $917,600 in 1962. In addition, increases in the salaries of some officers, as well as an anticipated increase in bonuses awarded in 1963, should bring their 1963 compensation to well above the 1962 total.

The option benefits of G. H. Love, chairman, represented about 83.3 percent of his total compensation, and those of E. C. Quinn and L. A. Townsend, president, about 51 percent of their total compensation (including the option benefits).

As of December 31, 1963, substantial options remained unexercised. Outstanding options of all employees are estimated at 885,684 shares, of which 638,184 shares were covered by options held by officers (table 5). These represented over one-half the number of shares covered by options granted over the period. At the end of 1963 the seven top officers still held options covering 347,184 shares, or about 57 percent of those received since 1958.

Under the terms of the grant not all of the options outstanding December 31, 1963, could be exercised by that time. Although those granted prior to January 4, 1962, could have been evercised in full, those granted after this date could be exercised only over a period of 5 years, and not over 20 percent could be exercised before the second anniversary of the grant. Thus, all but 302,400 shares of those issued to the directors and officers during the period could have been exercised; exercisable options of officers covering 335,784 shares, therefore, remain unexercised at the end of 1963. No information is available on the number of options exercisable by all optionees.

4. SALES OF OPTION STOCK, 1963

(a) *Shares sold*

During the second half of 1963, Chrysler's officers sold substantial amounts of the stock they acquired through the exercise of options during the first half of the year. In most cases they sold the stock shortly after the 6-month holding period that would qualify them for long-term, capital-gains tax treatment.

Reports of officers filed with the SEC show that in 1963 they sold about 33 percent of the stock acquired during this year (table 6). One-third of the officers reporting, including G. H. Love, chairman, retained all the stock purchased through options. Others sold up to 75 percent, including P. C. Ackerman, 75 percent; W. S. Simmons, 67.5 percent; Robert Anderson, 60 percent; and Messrs. Misch, Quinn, Bogan, and O'Brien, about 50 percent. L. A. Townsend, president, disposed of 63.8 percent of the stock he acquired during this period. Although R. S. Bright sold stock not identified as option stock, his sales amounted to 40 percent of the stock he acquired through options.

(b) *Gains realized*

Substantial gains were realized by the officers of Chrysler on the sale of their stock in 1963. All officers as a group are estimated to have realized $4.2 million gain, before tax (table 7). After deduction of capital gains tax at the alternative rate, net gains are estimated at $3.2 million.

The top seven officers realized total gains of $2.7 million. Individual gains ranged to as high as $744,000, for L. A. Townsend, $507,234 for F. W. Misch, and $625,982 for E. C. Quinn. Although R. S. Bright did not sell stock purchased through options, his gain would have amounted to $376,530 if figured on the basis of stock so acquired. Mr. Love did not sell any of his holdings.

The magnitude of the gains reflected not only the low option price in comparison with market price at the time of exercise, but also the sharp rise in price of Chrysler stock since that time. Of the total gains of $2.7 million realized by the top seven officers $1.5 million reflected the rise in market price over the option price at time of exercise.

According to the chairman, Mr. Love, the large sales of stock are explained by the necessity of paying the corporation the full option price at time of purchase. Since this usually requires borrowing from banks and other sources to finance the purchase, it is necessary for the optionees to sell a portion

[*P. 2137*]

of the shares acquired in order to repay the loans. The 6-month holding period complies with SEC rules and with provisions of the Internal Revenue Code to qualify as long-term gains.

(c) *Total realized and unrealized gains, 1963*

In addition to the gain actually realized on sale of Chrysler stock, the officers also experienced substantial appreciation in the value of stock acquired during 1963 and still held at the end of the year. The value of the unrealized gain on such holdings of the seven top officers of the corporation at December 31, 1963, is estimated at $4,649,992, of which G. H. Love's holdings accounted for almost one-half (table 8). About 50 percent ($2.3 million) of the appreciation took place after the exercise of the options.

Taking into account realized and unrealized appreciation on option stock purchased, the total value of the seven top officers' wealth was enhanced through the exercise of options by an estimated $7.3 million. After tax on gains realized, the net increase in wealth was $6.7 million.

Including the $4.8 million value of options exercisable at the end of the year, total realized and unrealized gains on options of the top officers amounted to $12.2 million (table 8).

5. THE RECORD OF EARNINGS AND STOCK PRICES

The substantial stock option benefits realized by Chrysler's officers are attributable to the recovery in the company's earnings and the value of its stock since 1958. After plunging from $3.44 per share in 1957 to a deficit of $0.97 per share in 1958 (based on the equivalent number of $6.25 par value shares outstanding) earnings rose to $1.81 per share in 1962 and to probably double this amount in 1963 (table 9) (1963 earnings have not been reported but amounted to $100 million in the first 9 months, against $65 million for the full year 1962). Dividends per share dropped from $1 in 1957 to a low of $0.25, and were restored to $1 in 1963.

Reflecting Chrysler's improved earnings outlook, the market value of its stock rose from a low of $11 in 1958 to a high of about $50 in 1963 (after adjusting for stock splits). Since most of the options were exercised at prices ranging between $10.79 and $13.1225, and the stock sold at prices ranging between $30.8125 and $45 in 1963, the gains were very substantial. The closing December 31, 1963, market price was $41.625 (adjusted for the 2 for 1 split on December 20).

The improved profit of Chrysler's operations since 1958 is largely explained by the increase in its passenger car output from 581,244 cars to 1,047,722 in 1963. The efficiency of its operations was also improved through severe cost-cutting measures. However, it did not succeed in improving its market share in 1963 over the 13.7 percent held in 1958. Although this was somewhat higher than the low point of 10.3 percent in 1962, it fell below the 20-percent mark in 1957 and 15.2 percent in 1960. The record of automobile production over this period is shown below:

U.S. production of passenger cars, 1957–63

	Total United States	Chrysler	Chrysler percent of total
1957	6, 120, 029	1, 223, 035	20. 0
1958	4, 247, 371	581, 244	13. 7
1959	5, 599, 468	737, 799	13. 2
1960	6, 703, 108	1, 019, 295	15. 2
1961	5, 522, 019	648, 670	11. 7
1962	6, 943, 334	716, 809	10. 3
1963	7, 644, 350	1, 047, 722	13. 7

6. NET INCREASE IN HOLDINGS DURING 1963

Despite the large sales of stock acquired through options, Chrysler officers still retained a substantial interest in their corporation at the end of 1963. And this interest represented a considerable increase over their holdings in the past. The number of shares still held by officers reporting to the SEC, compared with those held at the beginning of the year, are shown in table 10. At the end of 1963 this group of officers held a total of 334,132 shares—6.9 times the number held before the exercise of options in 1963. Although most of these officers held options to purchase additional shares before the end of the year, it was necessary, under SEC rules, for them to wait 6 months after they sold their corporation's stock before acquiring additional stock.

TABLE 1.—*Number of shares covered by options granted, dates granted, and the option prices per share* [1]

Source: Chrysler Corp. and SEC reports.

Mr. GORE. Mr. President, in summary, the report shows that within one 7-month period seven officers of Chrysler Corp. received option benefits of some $4 million. On that they either paid a lower tax on the capital gains or, in the case of the largest beneficiary of all, no tax at all.

Mr. President, it is my view that if I pay a person for working for me $1,000 by check and another $1,000 by selling him stock in the amount of $1,000 which he can on the same day sell on the market for $2,000, then I say that person has been compensated in the amount of $2,000, the same as the man who has worked for 1,000 hours on a lathe at $2 per hour.

The question is whether the man who receives one-half of his compensation in stock option benefits is to pay taxes in the same manner in which the majority of American taxpayers pay on their wages, salary, and the income they receive.

In many ways the officials of corporations constitute a privileged group. Not only do they have expense accounts and many other benefits, but in this instance a special tax benefit by which a whole crop of new millionnaires is made every year with the payment of only a small or, in many instances, no tax at all.

I ask unanimous consent to have printed at this point in the Record an article published in U.S. News & World Report entitled "The Stock Option Comes Under Fire," and an article published in the Harvard Business Review entitled "Are Stock Options Getting Out of Hand?"

There being no objection, the articles were ordered to be printed in the Record, as follows:

[From U.S. News & World Report, July 11, 1960]

THE STOCK OPTION COMES UNDER FIRE

(Do stockholders and their companies get anything in return for the expense of stock options granted to key executives?

(That question, for the first time, has just been laid before a Government agency, the Securities and Exchange Commission.

(Answer given in an SEC staff report: Such options do "not necessarily produce anything of value to the stockholders.")

The favorite fringe benefit of corporation executives, the stock option, is under heavy fire from the Government in Washington.

The Securities and Exchange Commission, policeman of the securities industry in this country, has just received from its division of corporate regulation a report which argues that stock options offer nothing good—either for shareholders or for the public.

This official assault on stock options comes at a time when increasing thousands of corporations are using this method to give their executives added pay in a tax-favored form. Industry managers fear the report—a brief in the case of a public utility holding company pending before the Commission—could raise shareholders' resistance to stock options.

THE KEY: HIGH TAXES

To see how stock options work, and why executives like them so well, take the example of an executive with a $100,000 salary, a wife and no young children.

If this executive's firm gives him a salary raise of $10,000, the Federal income tax will take away $7,200 of it. That leaves him $2,800, or little more than a fourth of his pay raise, to spend or invest for himself.

Suppose, instead, that under an option plan the firm issues to the executive for $15,000 a block of shares that sells on the market for $17,500. The executive pays a tax of something over $600 on his $2,500 profit, and keeps a bit less than $1,900. Cost to the corporation, says the SEC report, is the $2,500 discount at which it sold the stock. And that cost, not to be deducted in figuring the corporation's tax, is greater than the $2,400 that it cost to give the executive an added $1,900 in after-tax salary.

What all this means, says the SEC report, is that only where executives have incomes of around $65,000 or more is it true that added pay can be granted more cheaply through stock options.

HOW INVESTORS FARE

Do the owners of a corporation, the shareholders, get their money's worth from options?

The SEC report says there is no assurance this will be the case.

Stockholders lose, claims the report, when corporations sell shares to their executives at prices substantially below the market price, at which the stockholders themselves can buy. Such sales "dilute" the worth of the stockholders' shares "in terms of investment value and net earnings per share," and affect shareholders "adversely," the report says.

The brief also contends that, where shareholders have a "preemptive" right to buy any shares issued by their company, this right is lost to the extent that a company issues stock to executives at special discounts.

What do the owners get in return for the cost of stock options?

Here is the SEC report's answer: "The 'compensation' given the employee by way of stock options does not necessarily produce anything of value to the stockholders."

[P. 2140]

[From Harvard Business Review, November–December 1960]

ARE STOCK OPTIONS GETTING OUT OF HAND?

(By Erwin N. Griswold)

(EDITOR'S NOTE.—Dean Griswold has prepared his views on stock options for two different audiences. Late last year, at the request of the House Committee on Ways and Means, he wrote a paper entitled "The Mysterious Stock Option" for tax specialists and lawyers. It was published in "Tax Revision Compendium." In the present article, written at our request, he develops the implications of his views for businessmen.)

Stock options have become a part of American corporate mores—to such an extent, perhaps, that it is not possible to think very wisely about them without considerable effort. In some quarters they are taken for granted, without any real thought being given to all of the factors involved. Quite generally, they have become status symbols. The corporate executive either has a stock option and thinks it is fine, or he wants to have one and thinks it would be very fine indeed if he did.

It is hard to put one's finger on the problems in the area of stock options. Few things in the tax law are as vague and intangible as the provisions relating to these grants. A recent commentator has summarized the matter in these words:

"The following quotation, usually attributed to Lincoln, best appears to sum up the policies for and against the restricted stock option provisions of the Internal Revenue Code: 'People who like this sort of thing will find this the sort of thing they like.' "[1]

It is time, it seems to me, for some very careful thinking to be done about stock options. There are very definite signs that they may be getting out of hand; and they should certainly not be taken for granted. They tend to provide their own anodyne for the pains of thought and fiduciary responsibility, particularly among corporate managers.

OPTIONAL ILLUSIONS

In some respects, the stock option problem is primarily a tax problem. However, it also becomes a problem of corporate management—and to a very considerable extent, or so it seems to me, one of corporate morality.

Let us look at some of the aspects of stock options under the existing tax law.

INHERENTLY DISCRIMINATORY?

The provisions granting tax benefits to pension, profitsharing, and stock-bonus plans must, by the terms of the statute, and within limits fixed by Congress, be nondiscriminatory; that is, they must be proportionately available to a substantial number of the employees of an enterprise, reasonably classified, and all within the Treasury Department's rules for an approved pension plan. In technical terms, they must "qualify" under the mildly stringent terms provided in the statute for such plans.

But the provision of stock options, by sharp contrast, may be as discriminatory as the employer desires. They can be limited to one employee or a few employees, and ordinarily they are. Even among the group of employees who are granted options, some may receive options for a large number of shares and others for a small number. In the case of pensions, Congress sought to assure that the plan would be a genuine plan for pensions by requiring that it be nondiscriminatory. In the case of stock options, there is no such assurance at all.

Thus we see that stock options fall outside the general safeguards provided in the case of other employee-benefit plans. They are in a special class, though just why this should be is far from clear, and has never been stated by the congressional committees which developed these provisions. In a tax law which seeks generally to impose taxes on a basis of equality and fairness, it seems odd that there should be this special provision which stimulates discrimination, and on a rather grand scale.

TAXABLE OR NOT?

A stock option holder may buy shares of stock at the price stated in the option. Obviously, the option is attractive only if the price is lower than the fair market value of the stock at the time of exercise. Thus, when the stock option is useful, it enables the employee to make a bargain purchase of the stock.

---

[1] Edward S. Schlesinger, "Selected Problems in the Use of Restricted Stock Options," 36 Taxes 709, 756 (1958).

Ordinarily, bargain purchases made by an employee from his employer result in income, taxable at ordinary rates. They are simply a form of compensation for services rendered. When most people receive something of substantial economic value as compensation, they have to pay a tax on the value of the benefit received, regardless of its form.

In the case of stock options, however, Congress has provided a peculiarly complex scheme:

If the option price is at least 95 percent of the market value at the time the option is granted, no "income" is realized on the exercise of the option. Thus, a substantial economic benefit may be obtained, and retained indefinitely, without the payment of any tax. The economic benefit—often substantial—obtained on the exercise of the option is wholly tax-free. If the stock is sold, then there may be tax, but income realized on the sale of the stock is taxed as a capital gain. If the stock is simply held until death, though, there is no income tax at all, at any time, no matter how much the actual gain may have been. The stock, in such an event, as in the case of other property, passes to the estate or beneficiary, taking as its basis in the new owner's hands the fair market value at the time of death.

"Where the option price is between 85 and 95 percent of the fair market value of the stock at the time the option is granted, a more complicated rule becomes applicable. In such cases, no income is realized on the exercise of the option, but the spread between the option price and the fair market value at the time of grant is taxable as ordinary income on any disposition of the stock, though not before such event. The death of the holder of the stock is treated as a disposition, so this amount—the spread up to the fair market value at the time of grant—does become taxable as ordinary income on a sale or in the event of the death of the holder of the stock.

"As a matter of fact, there is now going through Congress an amendment to the stock-option provisions under which the transfer of stock on death to the widow of the employee will not be treated as a disposition, so that no tax will be due not only while the employee is living but while his wife is living, too. For some reason it seems to be fairly easy to get legislation extending tax benefits in this area. It is, of course, not surprising that there does not seem to be a very effective lobby against stock options.

"There are further complexities in the case of a person who possesses more than 10 percent of the stock of his employer. In this case he gets the tax benefit only if the option price is at least 110 percent of the fair market value on the date when the option is granted. In such a case, the option can be exercised only within a period of 5 years. In cases of employees with lesser stock interest, the option can be exercised over a period of 10 years.

"In all cases, the benefits cannot be obtained unless the stock is held until at least 2 years after the date the option was granted, and for at least 6 months after the option was exercised.

"These time limits were obviously designed to insure that the employee would have some stake as a shareholder for at least an appreciable period of time. However, there is often a way around requirements of this sort, and there appears to be one in this instance. The Treasury has recently ruled that a person who has exercised a stock option may purchase a "put"—that is, a right to sell the stock at a fixed price at a future date—and that this purchase of a "put" will not constitute a "disposition" of the stock he has acquired on his option.[2] Thus, at relatively small expense, he may in many cases completely hedge his position, and assure himself that he will not suffer from future declines in the price of the stock."

Truly, this is a fairyland. The ground is strewn with quite a bit of gold. But this is only for a select few, and in somewhat special cases. With care, though, and in a sufficiently stable and prosperous company, the benefits can be very great. The benefits can be received without any present income tax, and often without any income tax at all (in cases where the stock received is held by the employee until his death).

IN SMALL COMPANIES?

Because of the limits to 95 percent or 85 percent of market value—in some cases, 110 percent—a curious consequence develops. It is in small and closely held companies that the stock option device may have its clearest justification. It is in such companies, perhaps in need of better management, that an outsider can be brought in and given the real incentive through a stock option of sharing in the improvement of the company. It is in such companies, too, that the efforts of an individual can have some impact on the value of the stock.

Yet it is in just these smaller companies that determination of the fair market value of the stock at any particular date is most troublesome and uncertain. The Treasury has recently ruled (and quite properly) that it will not undertake to fix the value of stock in order that a stock option may qualify as a restricted stock option.[3] For this reason, it is extremely difficult to use stock options in the case of a closely held company. If the stock goes up in value, the employee is always subject to the risk that it will be eventually determined that the value of his stock when the option was granted was higher than was then contemplated, with the result that the option price is outside the charmed circles of 85 percent or 95 percent.

On the other hand, in the case of a publicly held company whose stock is listed on the big board, there is no such problem. The fair market value of the stock can always be determined with considerable accuracy, from day to day. As a result, it would appear that stock options are most widely used by employees of such companies. Yet these are the very circumstances where use of the device is least justified, where the contribution of any individual employee has much less to do with the value of the stock than do such

---

[3] "Internal Revenue Bulletin," Revenue Ruling 59–243, July 20, 1959, p. 11.

factors as general market conditions, and where the option benefit is most clearly a form of compensation.

JUSTIFIABLE CAPITAL GAIN?

Is there any real justification for treating the spread between the option price and the fair market value on the date of exercise of the option as a capital gain? Capital gains are taxed at a special rate for a variety of reasons. One of these is that a person holding a capital asset has made a capital investment which is at risk during the period he has held it. He takes the chance that the value will go down, in which case he will suffer a loss. Such losses are not fully de-

[*P. 2141*]

ductible from income taxes, and one recompense is that capital gains, when realized, are taxable at special rates.

But the employee who has a stock option has no capital investment before the option is exercised. He has nothing at risk. He loses nothing if the value of the stock goes down. He is on a one-way street. If things go well, he gains. If things go badly, he loses nothing.

Accordingly, there is not here a true justification for the allowance of capital gain rates. Capital gain rates should be applicable to people who have capital at risk. An employee with an unexercised stock option has nothing at risk. He has made no investment. He has hopes for profit, but no risk of loss. It is a very happy situation, which hardly seems entitled to special tax treatment as well.

Of course, once the employee exercises his option, he does have capital at risk, assuming he has made bona fide payment. Any fluctuation from the fair market value at the time he acquires the stock is a true capital gain or loss, and should be treated accordingly. But this is not applicable to the gain inherent in the stock at the time he receives it through the exercise of a favorable stock option.

INCENTIVE VALUE?

The basic reason given for the allowance of tax benefits in the case of stock options is that they will provide incentives to corporate employees. Generally speaking, there is little doubt that tax-free income is highly attractive to anyone, but in this case there are real difficulties in the way of realizing on the incentive.

Where an employee has a stock option, he must in some way provide the funds to meet the option price in order to take up the grant.[4] From gossip in the luncheon clubs, one gets the impression that this sometimes presents a real problem. Indeed, a number of instances have appeared in the papers where an employee had to sell stock he already owned in his employer company in order to raise the money needed to take up stock at a favorable price under an option. Considering that one of the arguments presented in favor of stock options is that they enable an employee to acquire a stake in his company, this is surely an odd result. What is more, it seems likely that a considerable amount of the sales of shares by "insiders" reported to the Securities and Exchange Commission may actually be sales which are made in order to raise cash to take up stock options. If this is true, it serves to emphasize the essentially compensatory nature of the stock option scheme.

In other cases, apparently employees have real difficulty in taking up their options with cash because they are allowed to pay for the stock by giving a note. It may even be that in some cases such notes are canceled if the market value of the shares goes down. This may involve returning the shares, but the net result is favorable to the employee.

All of this emphasizes the fact that the incentive involved in stock options tends to be very uncertain and haphazard. If we are really seeking to provide incentive, it would seem that there are at least two things that we might do:

(1) We might learn a lot more about what really are the incentives which lead people to engage in productive and useful work.

(2) We might find a tax device which would provide financial incentive in a far less discriminatory and haphazard form.

It is no doubt generally true that men are acquisitive, and that they like to acquire economic benefit. It is perhaps less clearly true that men will work harder to acquire a greater economic benefit after they are already fairly well paid. It is far from clear, though, that economic gain is the only objective for which men will work, or work hard. Large segments of our population work devotedly for relatively small economic benefits. It is also far from clear that the economic incentive is effective on a man who already has substantial means, say, many millions of dollars. Yet, if investigation were made, it might be surprising what a large proportion of the benefit from stock options goes to people who are already very well off in economic terms.

ENOUGH FACTS KNOWN?

It is hard to investigate matters of this sort, and particularly hard for the private citizen. About all that he can do is to rely a good deal on instinct and general feeling. The basic fact remains that we know virtually nothing about stock options—who gets them, who exercises them, the amount of the benefit that is thus obtained without current tax, and often without any tax at all, the relation of this benefit to the person's other income and wealth, and the actual amount of "incentive" which is provided by the stock option.

It would be a very fruitful thing, it seems to me, if Congress, through an appropriate committee or the Treasury, were to investigate this matter on a calm, dispassionate, and unprejudiced basis, simply for the purpose of developing the facts as to:

The extent to which stock options have been used.

The extent of the benefit which has been obtained, or is potentially realizable.

The amount of incentive provided by the gain from options which would not have been available without the options or the tax benefit, or from some other source.

It might even be the conclusion that the acquisitive instinct in Americans is not the one which should be encouraged by substantial tax benefits.

[4] See V. Henry Rothschild, "Financing Stock Purchases by Executives," HBR March–April 1957, p. 136.

HEADS OR TAILS LOTTERY?

The basic and appealing theory behind the stock option provision is the thought that a man might come into a company and by his own ability and efforts improve the firm's business so that its stock would greatly increase in value. In such a case, there is something to be said for the proposition that the man whose efforts have produced such a desirable result should share in the gain. Whether that share should be on a specially favorable tax basis is another matter. However, it might be that there should be tax concessions where it is clear that the employee's efforts have contributed substantially to the increase of the value of the company's stock.

In certain special, relatively small cases, one man's efforts may directly affect the value of his employer's stock. But, as has already been pointed out, many or most options are granted by very large corporations where general business conditions have far more to do with the value of the stock than do the efforts of one man or any group of men.

As an incentive device, stock options have a very large element of lottery in them. We have stringent provisions in our tax law aimed against gambling. Yet the stock option provision turns to a very large extent on what amounts to a gamble. When the market value of the stock goes up, it is very nice and interesting—and stock options may lead to very large amounts of economic gain, without any present tax, and with the real possibility that there may never be any income tax at all.

What happens, though, when the market value of the stock goes down, as it did in the case of many companies during 1957–58? As a matter of fact, this may merely increase the incentive. It [illegible]s to become a heads-I-win, tails-you-lose type of lottery. For when the market goes down, the old options may be canceled, and new options may be issued at the lower price. Thus, the employee may get the maximum incentive if the price of the stock is first depreciated.

As a matter of fact, a number of companies did do exactly this, in some cases canceling options and reissuing them at not much more than one-half their previous figure. How must stockholders feel when they see such actions by what one columnist called "a fairy godmother stock option committee"? Having suffered the humiliation of watching their holdings drop almost to one-half, they must have read with mixed emotions the decision of the corporation's top executives to spare themselves and other employees a similar indignity.

Now it was undoubtedly not essentially the fault of employees holding stock options that the fair market value of most companies' stock went down in 1957–58. This was due to general market conditions, and to forces quite beyond the influence of corporate employees generally. In this respect, the decline in value was not much different from the increase in value which occurs in boom periods. Yet the employee with a stock option is really sitting very well. When prices go up, he can exercise his option and get a substantial benefit without current tax—very likely without ever paying any income tax. On the other hand, when prices go down, he can, with a little difficulty, get a new option at the lower price, and thus have the prospect of a much larger gain at a later date, likewise without current tax, and with the prospect of no income tax at all.

HOW FIXED ARE PRICES?

These things are made even easier by provisions in the statute for options at variable prices. Instead of granting the option to buy stock at a fixed price, the option may provide a formula based on market value when the option is exercised. If this is carefully drafted, it can be an almost foolproof device—it will allow the greatest potentiality of gain at the time when the price of the stock is lowest. Just how this fits in with the general incentive philosophy behind the stock option provisions, however, is far from clear.

It is true that the statute contains provisions dealing with modification of stock options, which were apparently designed to make it impossible to substitute a new lower price for the original higher price specified when the option was granted. But this provision is largely negated by the authority also given in the statute for options with variable prices. It is negated, too, by the simple device of leaving the old option outstanding and granting new options to the favored employees at the new reduced price. This latter arrangement may present certain problems from the point of view of corporation law, but these problems do not seem to have been insuperable in many cases where new options have been granted in recent years.

DO THEY COST ANYTHING?

There is a sort of general assumption that stock options do not cost the stockholders anything. No money is paid out by the corporation. Indeed, the corporation receives money, in the amount of the stock option price. To conclude, however, that the benefit received by the employee on the exercise of the options costs nothing to anyone would clearly be most unsophisticated. It does not take much analysis to show that the exercise of the option at a bargain price does necessarily involve a dilution of the stock and has a direct cost for each shareholder.

This cost may be very great in the aggregate. Indeed, it may be far more than the shareholders would sustain from a direct sal-

[*P. 2142*]

ary payment in the same amount to an employee. Such a salary payment would, among other things, be deductible by the corporation on its tax return, and would thus reduce the corporation's taxes. But the issuance of stock pursuant to a stock option gives no tax benefit to the corporation, even though the market value of the stock may be far greater than the option price. This is true even in the cases where options are granted at prices between 85 and 90 percent of market value where there is a tax due from the holder, at ordinary income rates, upon the disposition of the stock.

In this respect, stock options may be most insidious, for they may involve a substantial cost to the shareholders, of which they are largely unaware. It is true that the grant-

ing of stock options is usually authorized by shareholders at a stockholders' meeting. But shareholders rarely know much about the exercise of stock options, and, in particular, they are given little direct information as to the actual amount of benefit derived from such exercise, either for individual employees or in the aggregate.

There are some corporations whose stock comes to a certain plateau, and rarely rises much above that. Some security analysts believe that this is due to the very large amount of stock options outstanding. In such cases, the costs to the shareholders may be very heavy indeed, and far more than they may ever realize. It seems odd that such hidden costs should be fostered by our tax laws and tolerated by our properly strict security laws.

We should know much more about how much options cost shareholders. In addition to tax information, the Securities and Exchange Commission should require that detailed information about stock options be furnished to shareholders, not only on the authorization of the grants but also on their issue and especially their exercise.

REACTIONS OF EXECUTIVES

Points like the foregoing have, understandably enough, stirred up a good deal of comment and controversy among people who are concerned about stock options. One of the interesting things about these comments has been the violence with which they have been presented, on one side or the other. Obviously, this is an area where emotions are quite heavily involved. When that is the case, we should be very careful. Emotions have their place, but they are not ordinarily conducive to good sound thinking.

SHARING THE INCREMENT

Over the past 20 years, enormous amounts have been made as capital gains in the United States. Some of this has been made in real estate, oil, and other ventures. A very large amount, though, has been made by the holders of corporate shares. There are many companies, listed on exchanges, whose shares now sell for from four to ten times what they did a number of years ago, and even more. This is, of course, also true of many unlisted shares.

In the case of listed companies many of the shares are now held by persons who make little or no contribution to the business. These include widows, children, and grandchildren of the founders. Some of the large holders of shares have developed reputations as playboys and playgirls. They have all the benefits of good dividends and huge capital gains, but do nothing to bring them about.

It is understandable that the executives of such a company, a new generation, should feel that it is really their work which has brought about this increment, and that they have more right to share in the increase than do the passive shareholders who never do anything more strenuous than endorse their dividend checks. Even though members of "management" do not have much "ownership," they are likely to think of the enterprise as "their" company, and to feel that the gains that are made really belong to them—not all of the gains, of course, but a goodly share of them, and much more than is reflected in their salaries.

Purchasing shares outright is hard to do with the amount which is left from salary after taxes. In this situation, the allure of stock options is very great. Options require no immediate payment at all; payment does not come until a time when the expenditure is very advantageous. Thus, the officer can feel that he is sharing in the increment. This seems very right and just to him, because he feels that he has borne a considerable share of the burden and responsibility of producing the increase. Whether corporate managers should have, by reason of their management, so great a share of ownership is not a matter with which they happen to feel greatly concerned.

This, then, is a reason why the stock option seems right and sound and agreeable to corporate executives. It does have a certain appeal. Whether it should be provided with the favorable tax discrimination that exists under the present law is another question. A puritan might observe, too, that one way to achieve ownership in the company for which he works is to buy shares in it, and that can readily be done on corporate salaries by living more simply, by driving smaller or fewer cars, by doing less to keep up with other executives, and so on. Whether corporate executives should have all this and heaven too is perhaps a question.

THE COMPETITIVE ASPECT

Some corporate directors tell me that they have become involved in more and larger stock option plans than they think desirable because everyone else is doing it. They say that they have found they cannot keep their executives unless they provide large stock option plans because other companies would lure the men away with such arrangements.

If this is the case, and it appears to be, then perhaps it is time to take a very careful look at the situation. Competition for executives is understandable and desirable. But if granting stock options, with the thought that, after all, it does not cost anything, leads to arrangements which are unwise or undesirable, then it should be reconsidered.

In the recently issued proxy statement of the Sperry Rand Corp., the following statement appears:

"Time and again within the last 2 years—even within the last few months—the ability of your corporation to offer attractive stock options in addition to proper salaries to highly talented and experienced individuals, employed to fill key positions within important divisional operations of the corporation, has played a major, if not a decisive, part in securing their services. In successfully bidding for the services of such key personnel against other corporations, the ability of this corporation to offer attractive stock options has, in the opinion of your board of directors, proved its worth to the corporation and all its stockholders."

No doubt it has been important to the company to get these people. But at what cost? No one knows. Is that good corporate management? Is it really sound for industry to rest an important part of its employment policies on so aleatory, so uncertain, a basis?

CONCLUSION

Stock option plans are usually developed by boards of directors, often on the recommendation of management. In some cases, there has been an effort to keep the actual award of stock options in the hands of a group or committee of the board that cannot share in the options. It is felt that this provides a fair and independent way of handling the matter.

It is far from clear to me, however, that real independence is achieved in the fiduciary sense. The persons on the stock option committees are often those who have received options themselves in the past and have benefited handsomely from them. They naturally have a bias in favor of the arrangement. In other situations, although the forms of independence and impartiality are sought for, the substance is not really achieved. This is brought out in the following passage from a letter I received:

"Options to outside people for top-level jobs in unusual situations are likely to be arm's length—e.g., United Fruit's arrangement with Mr. Sunderland. The great danger of abuse arises from conflict of interest where corporate officials participate in development of the plan or have such relation to 'outside experts' or 'outside directors' as to make objective administration difficult.

"The whole subject is so sensitive that those with the most information may be in no position to criticize."

It is the last sentence of this quotation which gives me the most pause. There are a number of factors in these situations which, in one way or another, emphasize the fact that "the whole subject is so sensitive" that many persons, including corporate directors, feel they are "in no position to criticize." When that is the situation, there is no real independence of judgment, and management action can become very unsound indeed.

Perhaps this discussion is enough to show that the field of stock options is filled with many problems and difficulties. My objective is not to denounce stock options generally, but to raise questions about them, to suggest that perhaps they have come close to getting out of hand, to urge that the whole area be thoughtfully and thoroughly reconsidered by persons responsible for corporate management and control.

Mr. GORE. I ask unanimous consent that an article published in Management Record, entitled "The Importance of Restricted Stock Options in Executive Compensation," be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE IMPORTANCE OF RESTRICTED STOCK OPTIONS IN EXECUTIVE COMPENSATION

(By George E. Lent and John A. Menge [1])

Studies of trends in executive compensation invariably have been limited to an analysis of two components of the direct remuneration of executives: current salary levels and current bonus payments. The compensation aspects of restricted stock option plans have been largely neglected, despite the rapid increase in their use since Congress granted them special tax treatment in 1950. Failure to take into account the value of these stock options has resulted in a very incomplete record of how corporate executives have fared in the postwar period. This article summarizes the significant findings of a recently completed study of restricted stock options as a form of executive compensation.[2]

It should be noted at the outset that there is no accepted measure of the "compensation" value of restricted stock options. Any of three measures of value might be used: (1) The difference between the option price and the market price at the time the option is granted; (2) the difference between the op-

[P. 2143]

tion price and the market price at the time the option is exercisable; or (3) the difference between the option price and the market price at the time the option actually is exercised. As a practical matter, however, the first two measures are not satisfactory, since an executive does not realize the compensation implicit in the stock option award until he actually exercises the option. This is the critical point—the point at which the executive becomes an investor in the corporation, not simply an employee. Therefore, in this article the difference between the option price and the market value at exercise is used as the measure of the "compensation" received from a stock option. For convenience, this difference between the cost of the option stock to an executive and its market value at the time he purchases it is called the "option benefit."

In the following pages, these option benefits are analyzed in two different contexts. First, the benefits from options granted during 1950–60 by 350 corporations are measured, and their distribution between officers and other employees is shown. Also, the relationship of option benefits to the regular compensation of corporate officers during this period is analyzed. Second, a more detailed comparison of option benefits and compensation is presented for 215 top executives. This comparison covers the complete option record of these executives, including retention of option stock, capital gains realized on option stock sold and unrealized gains on stock still held.

RESTRICTED STOCK OPTION PLANS

A stock option plan is "restricted" when it conforms to the following requirements of section 421 of the Internal Revenue Code:

Option grants are to be limited to employees of the issuing corporation or its subsidiaries.

Stock is to be purchased by optionees while actively employed, or within 3 months after termination of employment or retirement.

Option grants are not transferable, except by inheritance.

[1] Mr. Lent is professor of business economics, The Amos School of Business Administration and Mr. Menge is assistant professor of economics, Dartmouth College.

[2] This study was completed under a grant by the Alfred P. Sloan Foundation to the Amos Tuck School.

Terms of options granted on or after June 22, 1954, are not to exceed 10 years—or 5 years in the case of optionees owning more than 10 percent of the outstanding voting stock.

Stock prices may not be less than 85 percent of the fair market value, or less than 110 percent of such value in the case of employees owning over 10 percent of the outstanding voting stock.

To be taxed at capital gains rates, stock may not be sold within 2 years from the date of the option grant, nor within 6 months from the date the stock is acquired.

BENEFITS IN 350 FIRMS, 1950–60

This analysis of aggregate corporate option benefits is based on data for 350 corporations with stock option plans in effect by 1957–58, under which options were exercisable before 1959.[3] Except for 27 wholesale and retail trade firms, and a few other nonmanufacturing companies, all are manufacturers (whose classification by industry group is shown in table 3, page 8). The size of these companies, based on total assets reported in 1959, was as follows:

Assets and number of corporations

$1,000,000 to $10,000,000	8
$10,000,000 to $25,000,000	40
$25,000,000 to $50,000,000	39
$50,000,000 to $100,000,000	79
$100,000,000 to $250,000,000	90
$250,000,000 to $500,000,000	41
$500,000,000 to $1,000,000,000	35
Over $1,000,000,000	18
Total	350

For each of these corporations, option benefits were computed for three groups of option recipients: (1) the three highest-paid officers, (2) all other officers and (3) all other employees except officers.[4] The data cover more than 5,000 officers plus a substantially greater number of other employees.

AMOUNT OF BENEFIT

Option benefits granted by the 350 companies rose significantly over the decade. As table 1 indicates, the difference between the option price and the market value at exercise of all shares exercised in these companies in 1950 was $3 million. By 1955 annual benefits realized on the exercise of options granted by the 350 companies were $160 million. After declining in 1957 and 1958 with a dip in stock prices, option benefits of these companies reached a peak of $200 million in 1959 and then dropped to $164 million in 1960.

WHO GETS BENEFITS?

Traditionally, stock options have been reserved for policy-making officers of the company. But company practices vary widely on how far down the line they should be extended. Although frequently limited to a few executives at the top, more generally they are used to reward additional key employees whose decisions are most important to the success of the firm.[5] Nevertheless their use is relatively restricted: a recent survey of large companies shows that options were offered to less than 1 percent of their 2,800,000 employees.[6]

Table 1 also indicates the extent of this concentration of option benefits at the top. About 44 percent of benefits since 1950 have been realized by "officers." The three highest-paid officials received about 18 percent of total benefits. Thus 57 percent of the option benefits were realized by other than "officers," including other key employees as well as general employees.

[3] This group of corporations includes most industrial and trade firms listed on the New York Stock Exchange with plans in effect by 1957–58, under which options were exercisable before 1959. Also included are many others listed on the American Exchange, as well as a few unlisted companies.

[4] Data are from proxy statements and corporate annual financial reports (10–K) which are submitted to the SEC. Corporations registered with the SEC are required to report in their proxy statements the compensation of each of their directors and each of the three highest-paid executives with salaries over $30,000. For each of these executives, the number of options granted and exercised must be shown, along with the relevant option price and market price at exercise. Similarly, compensation data and option data must be shown for all officers as a group. In most cases it was necessary to estimate the total value of stock options for all employees from the total number of shares of option stock reported in annual financial reports, at the average spread reported for officers; however, in many cases, these data were taken directly the 10–K statement.

[5] At the end of 1958 only 11 listed companies were known to extend options below the executive level; see "Stock Options for Nonexecutives" Management Record, November 1959. Stock purchase plans typically are used for general employees, and such plans sometimes incorporate option privileges which qualify under the provisions of Sec. 421 of the Internal Revenue Code. In 1960, 111 companies listed on the New York Stock Exchange had stock purchase plans. See "Stock Plans for Employees," New York Stock Exchange. (1961.)

[6] "Stock Option Administration in 72 Leading Companies," McKinsey & Co., 1961, pp. 1–4.

RELATIONSHIP TO CURRENT COMPENSATION

The above data relate only to the size of the option benefits generated in these companies and their distribution among three groups of employees. A much more significant measure of the impact of stock options is the relationship of option benefits to the current compensation of option recipients. This relationship is shown in table 2 for officers in the 350 companies.[7] It is quite apparent that officers covered by stock option plans realized substantial increments to their current compensation. Over the entire period the value of options exercised by all officers in the 350 industrial companies averaged 21 percent of their salaries and bonuses.

Prior to 1954, stock-option benefits of the corporate officers covered by option plans were negligible. In 1954, they increased sharply to 23 percent of other compensation, before income tax, and by 1955 and 1956 they amounted to roughly one-third. After dipping in 1957 and 1958, benefits (before income tax) increased to 31 percent of salaries and bonuses in 1959 and 25 percent in 1960.

The value of stock options realized by the three highest-paid executives generally represents a higher percentage of salary and bonus than that realized by other executives. Table 2 shows that the benefits of the top three averaged 25 percent of current cash compensation over the 11-year period, while those of other officers averaged 19 percent. Since 1955, benefits of the top three averaged 29 percent of other compensation, while those of other executives averaged 23 percent. The differential reflects the relatively more generous options granted top officials. A recent study shows that the five highest-paid executives received options averaging 3.2 times their total compensation, while the five lowest-paid participants received options averaging 1.9 times salary and bonus.[8]

[7] Corporations are not required to file specific information on the compensation of stock option recipients who are not officers. It should be noted, too, that for the officer group as a whole, only the aggregate compensation of the group is available. The compensation of officers who actually exercised options in each year is not reported separately.

INDUSTRY VARIATIONS

Wide variations in the relative importance of option benefits are found among different industries (table 3). In the rubber industry they rose to 140 percent of other compensation in 1955 and 1956, and averaged 46 percent over the 11-year period. Benefits averaged 30 percent in the electrical machinery and transportation equipment industries, 25 percent in paper and primary metals companies, and 20 to 23 percent in stone, clay and glass, machinery (other than electrical) and instrument companies. On the other hand, they averaged about 10 to 11 percent of other compensation in the trade and food and beverage companies covered by the survey, and 5 percent in textiles and apparel.

The relative importance of stock-option benefits in different industries largely reflects the movement of stock-market prices after the plan's adoption. In general the greatest benefits are in companies with plans in operation by 1953. Over the period covered, industrial stock prices experienced their sharpest rise after 1953, when the Standard & Poor's index rose from a yearly average of 24.8 in 1953 to 30.3 in 1954 and 42.5 in 1955; by 1956 it had doubled to 49.8, where it leveled off through 1958. A further increase, to 61.5 in 1959, was sustained through 1960. (Greater variations of course were experienced within each year.)

THE GROWTH OF STOCK OPTION PLANS

Prior to the restricted stock-option legislation, U.S. corporations made little use of employee stock options. Sweeney's survey of corporation reports to stockholders and to the SEC turned up only 75 stock-option plans in the 10 years and 9 months from January 1, 1940, to October 1, 1950.[7] A very large proportion of these (30 percent) were limited to one individual, and in only a few cases were more than five officers covered.

The 1950 stock-option legislation awakened new interest in this form of compensation. During 1951, 85 companies listed on the New York Stock Exchange instituted employee option plans—more than the number of plans adopted by all registered companies during 11 preceding years. By the end of 1955 about one-third of the companies listed on the NYSE had plans, and by 1957 about one-half. This period of rapid growth then slackened, but by mid-1961 about 63 percent of the 1,128 listed corporations had adopted restricted stock-option plans. Because the expiration (or cancellation) of old plans was frequently followed by new ones, these companies adopted an average of 1.4 plans over the period.

Restricted stock-option plans are much less prevalent among small corporations than among large firms. A 1958 study of 3,500 corporations by the American Management Association indicated that about one-third of these companies had a stock option plan in 1957, but only 12 percent of the corporations with sales of $10 million or less had option plans, against 60 percent-65 percent of the very large corporations (over $100 million sales).[8]

Studies of the Conference board show wide industry variations in the proportion of listed companies with stock-option plans.[9] The plans are most popular in trade and manufacturing: about 70 percent and 74 percent respectively, of listed companies in these industries have plans. Only about half of the listed mining, finance (other than insurance and banks), and railroad companies, and one-third of the airlines have option plans. On the other hand, about 20 percent of large gas and electric utilities and 10 percent of large stock insurance companies use restricted stock options. Commercial banks rarely use stock options, principally because of Federal and State restrictions on the use of Treasury and authorized but unissued stock.

COST TO THE CORPORATION

Despite the substantial benefits realized by employees on the exercise of stock options, corporations uniformly do not reflect any cost on their books. This practice at present is supported by the accounting profession, which treats as compensation the excess of the fair value of the stock over the option price on the day the option is granted rather than at the time exercised.[10] And since restricted stock options generally are priced at between 95 percent and 100 percent of the market, the difference is considered de minimus and virtually always is ignored.

Even though, for accounting purposes, the cost of the option is calculated at the time granted, it is its cost at the time of exercise—the critical point at which the corporation parts with its capital stock—that is most meaningful. The difference between the consideration (the option price) it receives and the market value of the stock represents, on the one hand, a cost to the corporation and, on the other, compensation to the employee. In economic terms, the difference represents an opportunity cost; that is, the amount of capital sacrificed as a result of selling the stock to the employee, rather than on the open market. While corporations typically use authorized but unissued stock for this purpose, the cost of the option is best understood if one thinks of a corporation purchasing its own stock in the market to cover the option at time of exercise.

Since no deduction of the cost of the option is allowed for corporate income tax purposes, the real cost to the corporation is actually more than double this spread at time of exercise. At a 52-percent corporate rate it costs the firm $2.08 for each $1 of executive compensation thereby granted. The $2.08 cost comprises the spread or initial cost to the corporation of $1 plus $1.08, which represents the income tax reduction it foregoes. This tax factor is not gen-

[P. 2145]

erally recognized or understood, but it can make stock options a very costly method of compensating employees.[11]

The relative importance of this cost to the business can be shown by a comparison of option benefits and corporate earnings. Cost is measured by the total spread between the proceeds of sale (option price) and the market value of the stock at time of exercise. Since, as has been noted, this cost is not deductible, it must be related to net earnings after tax. The results of this analysis for the 350 corporations in 3 selected years is shown in table 4.

[8] "Executive Pay Trends Changing," Nation's Business, December 1958, p. 44.

[9] "Top Executive Compensation," Studies in Personal Policy, No. 179, 1960.

[10] The recognized authority for this position is found in Accounting Research Bulletin No. 43 (ch. 13, section B), issued by the American Institute of Certified Public Accountants in 1953. The designation of the date of grant represents a departure from the previously announced declaration in favor of "the date on which the option right becomes the property of the grantee." (Accounting Research Bulletin No. 37, issued in 1948.) In the case of restricted stock options this would appear to be the date on which they are exercisable.

[11] See "Probing the Record of Stock Options," by D. M. Holland and W. G. Lewellen, Harvard Business Review, March-April 1962, pp. 132–50.

According to these data, employee options can represent a significant cost to the corporation. In 1960, for example, they represented 5 percent or more of earnings for about one out of five companies.

EXPERIENCE OF TOP EXECUTIVES, 1958-60

These corporate data provide one measure of the importance of stock option benefits in the compensation of key employees; they cannot be used, however, to outline the varieties of individual executive experience, nor can they be used to answer other obvious questions about the way in which options have been used by executives.

However, by reference to proxy statements, SEC "insiders" reports and stock market data, a much more specific stock option record can be reconstructed for certain executives, generally for the three highest paid. This was done for a sample of 215 executives selected from the 350 corporations; data were available since 1954 for all of these executives and since 1950 for most of them. For the purpose of this analysis, option benefits for each executive have been prorated over the option period as though their value accumulated in equal annual installments from the time the option was granted until exercised.

TABLE 4.—*The cost of stock options, 350 corporations*

[2] Less than 1 percent.

RATIO OF BENEFITS TO SALARY—BEFORE TAX

Over the 11-year period the average salary and bonus of this group of 215 executives rose from $75,000 to about $102,500—an increase of about one-third (see table 5). The exercise of stock options, however, increased their compensation by as much as 35 percent during 1954–56, and by about 16 percent in 1958–60. As a result, their average compensation rose very rapidly, from around $75,000 at the beginning of the period to a peak of $126,800 in 1956, and then leveled off at around $117,000. Including the value of options exercised, total compensation of this group of executives, before tax, thus rose more than 50 percent, against a one-third increase in current cash compensation alone.

Not all exercisable options actually were exercised during this period. Of the 215 optionees, 27 did not exercise any options and many of the others had additional exercisable options to purchase stock at favorable prices. Exercised and unexercised option benefits, prorated over the option period, rose to a peak of 43 percent of salaries and bonuses in 1956, then leveled off at about 30 percent.[12] Including these benefits, average executive compensation, before income tax, increased by over two-thirds during this period.

The wide range in the distribution of benefits among the 188 executives who exercised options is indicated by chart 2 (not printed in RECORD). In about 37 percent of the cases the value of options was less than 10 percent of other compensation before tax, and in 65 percent of the cases was less than 20 percent of before-tax compensation. At the other extreme, 14 percent of the top executives had option benefits in excess of 50 percent of their salaries.[13]

[1] Assumes that the executive is married, has no other dependents, no other income, and typical deductions.
[2] Includes exercised and exercisable benefits at Dec. 31, 1960, values, prorated back to the year of option grant.

[12] The value of unexercised options is taken as at Dec. 31, 1960, or the end of the corporation's fiscal period ending early in 1961, and spread back in equal annual installments to the year of the option grant.

[13] If unexercised benefits are included, the range is much greater. While about 30 per-

RATIO OF BENEFITS TO SALARY—AFTER TAX

Of greater relevance is the value of stock options in relation to ordinary compensation after income tax.[14] Because of the graduated rate structure, aftertax salaries of the selected executives rose slightly less than salaries before tax. However, if exercised option benefits are included, average aftertax compensation almost doubled between 1950 and 1956, and then tapered off by 1960 to about 50 percent above the 1950 level. By 1956, the prorated value of exercised option benefits amounted to about three quarters of the executives' salaries after tax, but then declined to about 30 percent by 1960.

The value of unexercised options further increased aftertax compensation. After hitting a peak of 91 percent of other compensation in 1956, total option benefits averaged more than two-thirds of salary and bonus after tax. As a result, total aftertax compensation of these men virtually doubled by 1955 and then leveled off.

About 16 percent of the top executives exercised options with a value in excess of their other compensation after tax. At the lower end of the scale, about 20 percent of the executives exercised options whose value was less than 10 percent of their salary.[15]

The preferential tax treatment of stock options thus made it possible for corporate executives to improve their economic position since 1950 far more than is indicated by the rise in aftertax salary and bonus alone.[16] While such stock-option benefits are subject to tax at capital-gains rates when realized by the sale of the stock, this rate is a maximum of 25 percent and thus still leaves a substantial tax advantage.

DISPOSITION OF OPTION STOCK

The decision to sell option stock may, of course, be determined by considerations similar to those influencing the sale of any other investment. But stock options, in addition, offer a unique opportunity to convert what is essentially ordinary income (i.e., a bargan purchase) into a long-term capital gain—providing the stock is held for at least 6 months. It is not unusual for executives to sell their shares in order to pick up newly exercisable options after the 6-month interval imposed by SEC regulations. In a rising market such acquisitions are thereby self-financing. Also, executives frequently are under pressure to liquidate their holdings in order to pay off bank loans incurred to finance the option stock, whether or not new options are exercised.

Although the special tax treatment of stock options has succeeded in greatly increasing the stake of executives in the business, substantial option stock is sold. Of the 188 top executives in the group who exercised options, only about 40 percent still held all their stock at the end of the period, and only half still held at least 80 percent (table 7). But one-quarter sold more than half their option stock, and 6 percent disposed of all.[17]

[P. 2146]

TABLE 7.—*Disposition of option stock, 188 top executives,[1] 1950–60*

Percent of option stock sold	Executives	
	Number	Percent
None	73	39
Less than 10 percent	7	4
10 to 20 percent	16	9
20 to 30 percent	19	10
30 to 40 percent	9	5
40 to 50 percent	16	9
50 to 60 percent	12	6
60 to 70 percent	5	3
70 to 80 percent	12	6
80 to 90 percent	6	3
90 to 100 percent	2	1
100 percent	11	6
Total	188	[2] 100

[1] Excludes 27 executives who did not exercise options.
[2] Does not equal 100 percent due to rounding.

Thus, more than half (115) of the executives realized capital gains on the sale of option stock over the period. As table 8 indicates, somewhat more than half of these realized capital gains of less than 10 percent of beforetax compensation; and only a few realized more than 30 percent. However, because of the preferential tax rate, capital gains represented a more significant share of aftertax compensation. Over the entire period, more than 60 percent of the executives who sold stock realized net gains in excess of 10 percent of other aftertax compensation, and about one-quarter had net gains of over 30 percent; 8 of the 115 executives realized net gains in excess of 50 percent of their other aftertax compensation.

HOW OPTION STOCK ACCUMULATES IN VALUE

The preferential tax treatment of stock options has opened up a new avenue for the accumulation of an estate by executives that was little known or used prior to 1950. Executives not only have an unusual opportunity to take advantage of the rise in market value of unexercised options; they also build up substantial capital gains—realized as well as unrealized—on their investment in option stock. They, of course, assume the risks of an investor with respect to the option stock purchased, but they are partly protected against a market decline by the spread at the time of exercise.

cent of the executives had total benefits amounting to less than 10 percent of other compensation (including 7 percent with none), 20 percent enjoyed total option benefits in excess of 50 percent of their salaries; and about 5 percent had total benefits greater than their other compensation.

[14] Aftertax salary was computed for each executive without regard to possible other income, assuming the executive was married with no other dependents and had typical deductions.

[15] If all options had been exercised by the end of the period, about 21 percent would have received benefits in excess of their salaries and bonuses, and 7 percent would have received more than twice such compensation after tax. About 17 percent had combined exercised and unexercised benefits of less than 10 percent of other compensation after tax.

[16] The inclusion of various other forms of deferred income would show an even greater increase.

[17] These estimates are consistent with the McKinsey survey's reported average retention of 75 percent, op. cit., pp. 2–14.

In order to determine how executives have fared over the period, their total realized capital gains were added to unrealized appreciation on stock still held at the end of the period (table 9). Those who did not exercise options (13 percent) of course did not have any gains; 61 percent had total gains of over $50,000 and 28 percent gains of $250,000 and over. Finally, 13 executives had a total appreciation in the value of their stock (realized and unrealized) of over $1 million, and 1 in excess of $2 million.

The full potential of stock options is best revealed by the addition of unexercised option benefits at the end of the period to market appreciation in the value of option stock actually purchased, i.e., unrealized and realized capital gains after tax. Calculated this way, 73 percent of the executives accumulated an estate (after deducting the cost of the options) greater than $50,000 and 32 percent an estate of $250,000 and over. Of the 215 executives, 17 built up a net value in excess of $1 million, 4 in excess of $2 million and 2 a net estate of over $3 million.

TABLE 8.—*Realized capital gains on option stock, 1950–60, as a percent of compensation,[1] before and after tax,[2] 115 executives[3]*

Realized capital gains as percent of compensation	Before tax		After tax	
	Number	Percent	Number	Percent
Less than 10 percent	61	53	43	37
10 to 19 percent	30	26	29	25
20 to 29 percent	16	14	13	11
30 to 39 percent	4	3	10	9
40 to 49 percent	0	--------	12	10
50 to 99 percent	4	3	4	3
100 to 149 percent	0	--------	1	1
150 to 199 percent	0	--------	3	3
Total	115	100	115	100

[1] Cumulative salary and bonus since year of option grant.
[2] Assumes that the executive is married, has no other dependents, no other income, and has typical deductions.
[3] Excludes 100 executives who did not sell option stock.

TABLE 9.—*Capital gains[1] and unrealized options benefits, 1950–60, 215 top executives*

Amount (thousands of dollars)	Realized and unrealized capital gains		Capital gains and unexercised option benefits	
	Number	Percent	Number	Percent
0	28	13	15	7
Under $10	19	9	18	8
$10 to $24	18	8	11	5
$25 to $49	20	9	16	7
$50 to $99	36	17	34	16
$100 to $249	34	16	53	25
$250 to $499	29	14	32	15
$500 to $999	18	8	19	9
$1,000 to $1,999	12	6	13	6
$2,000 to $2,999	1	(2)	2	1
$3,000 and over	0	0	2	1
Total	215	100	215	[3] 100

[1] Realized capital gains taken after tax; unrealized capital gains and unexercised option benefits valued at end of period.
[2] Less than 1 percent.
[3] Numbers do not add to 100 due to rounding.

Mr. GORE. Mr. President, I should like to point out that throughout the report of the Department of the Treasury following its investigation of the Chrysler stock option deal, the benefits from restricted stock options are classified as "compensation."

Compensation is what Senators receive when they draw their salaries. Compensation is what the worker receives when he draws his check on Friday afternoon. Compensation is what the teacher receives when she gets her check at the end of the month. Compensation is what the newspaper reporter receives when the newspaper publisher sends him his weekly check. Compensation is what most Americans receive for their work.

But here is a very special privileged group to which preferential tax treatment is given. A large portion of the income of the members of that group is treated not as ordinary compensation, but with a preference.

I have long been interested in this instance of tax avoidance and favoritism. It is not my purpose to review all that I, or others, have said in the past about restricted stock options. On April 14, 1961, I discussed the subject quite thoroughly in an address on the floor of the Senate. On April 24 of the same year I offered additional views and comments. Again, on April 27, May 4, June 8, and August 8, I addressed the Senate on this matter.

In my remarks on these various occasions I pointed out several things which appeared to me to be unwholesome, immoral and inequitable with respect to restricted stock options, both in legal concept and in their administration and award by various companies.

Here is how the restricted stock option works: A corporation executive who is paid a large salary, and who is, therefore, in a relatively high income tax bracket, may wish to reduce his overall, effective tax rate while at the same time obtaining increased compensation. The executive persuades his board of directors to set up a generous stock option plan conforming to the statute, section 421 of the Internal Revenue Code, so that he can get the reduced tax treatment afforded the profits realized from the sale of stock he will acquire under the option. It may not be very difficult to persuade the board of directors to do this, since many of them will also be officers of the corporation and will be eligible for the same generous treatment. The stockholders sometimes go through the motions of approval by proxy, although this may not be required.

The option price must generally be within 95 percent of the market value of

the stock at the time the option is granted. After the market price of the stock has gone up, the option may be exercised. If the price does not increase, the option need not be exercised. Thus the holder of a stock option gets a free ride. Heads he wins, tails he does not lose.

All that then remains to be done is to hold the stock for 6 months so that the profit realized on the sale of the stock can receive the long-term capital gains treatment. The final sale of the stock must also be 2 years or more after the option has been granted. The option may be held for many years without being exercised. Then when the option is exercised, though it is then that the compensation is really realized, no tax is due under the present law. It is not until the stock is actually sold that any tax is due, and that may be never.

The advantage which the restricted stock option gives is twofold. In the first place, no tax accrues upon the exercise of the option. Ordinarily, when one exercises an option, he realizes a gain of some sort. If this were not so, he would not exercise the option. The gain,

[P. 2147]

in the case of a stock option, is actually the difference between the price set out in the option and the market price of the stock when the option is exercised. If the option was granted in connection with employme[illegible] it is logically a part of the employee's compensation, and any gain should be taxed at ordinary income tax rates at the time the option is exercised. As I have said, this is not the case under present law.

In the second place, with the restricted stock option, when the gain is finally realized in cash upon the sale of the stock, the capital gains tax applies, even though the option was actually granted in the first place as compensation and was intended as part of the employee's compensation.

One might well ask how such an obviously inequitable provision as this became law.

The present law regarding restricted stock options is found in section 421 of the Internal Revenue Code of 1954, but this section was first enacted in the Revenue Act of 1950. Prior to that time, there had been various types of stock option plans; but the Supreme Court had held, in 1945, in the Smith case, that, where such options constituted compensation, the difference between the option price and the market value of the stock at the time the option was exercised was income, and was taxable at ordinary income rates.

Let me summarize a few of the objections which have been raised against restricted stock options:

First. Applying the capital gains rate to the spread between the option price and the market price at the time of exercise serves as a device to lower the effective income tax rate on the compensation of highly paid corporate executives.

Second. The granting of options in large amounts serves to dilute the value of stock in the hands of all other stockholders.

Third. The granting of options by large corporations serves to discourage capable management personnel from setting up companies which can compete against the Big Threes and Fours.

Fourth. A large block of stock reserved for options for corporate executives may cause these executives to engage in practices which will influence the market price of the stock of their company, both up and down, so that these executives may become enriched personally. These practices often are contrary to the best interests of the majority of the stockholders, the long-range growth and stability of the company, and the national economy.

Fifth. The compensation, incentive, or reward of the corporate executive is determined, not by his own efforts, or even by the success of his company, but primarily by the vagaries of the market.

On July 20 and 21, 1961, the Senate Finance Committee held hearings on the bill which I introduced in the 87th Congress, S. 1625, to terminate the favored tax treatment now accorded the compensation arising from the granting and exercise of restricted stock options under section 421 of the Internal Revenue Code. The testimony of witnesses before the committee would, I believe, be helpful and of interest to Members of this body and to others who might and ought to be concerned with tax equity. The record of this hearing makes worthwhile reading.

Three main pillars of support were erected by the organizations and special interests having a stake in the perpetuation of this tax loophole. Three chief witnesses not directly associated with the usual loophole-favoring organizations came before the committee to present the case for continuing this tax gimmick which has made fortunes for a few at the expense of the small stockholders in our corporations and the taxpaying public in general.

One of these three pillars of support for restricted stock options was a college professor. He, I suppose, was to present the case for restricted stock options from an academic point of view.

The second was the executive head of a company, a fairly good sized company, which had been rescued from failure, or mediocrity at best, back in the late thirties, and which was now booming. Stock options, presumably, were at least partially responsible.

The third was a representative of a small business which had supposedly prospered because of options. It is most important, of course, to have a facade of small business behind which any group interested in preserving a special privilege can hide.

Now, let us look at the testimony of this first witness.

Dr. Roger Murray, a professor at Columbia University, really succeeded in clarifying a point which had been bothering me a little, and some others a great deal. He succeeded admirably in pointing out the difference between the employee qua employee receiving compensation, or his "reward" as Dr. Murray expressed it, and the employee qua investor receiving a return on his capital investment.

There has been a good deal of confusion about just this point. When does the employee, receiving a restricted stock option, really become an investor and entitled to take capital gains on any appreciation in the value of his stock?

I pointed out to Dr. Murray that up until the time an employee actually exercised his option he was not an investor, he had undertaken no risk, but that when he exercised his option he had, at that time, as the witness had said, received "the incentive and the reward," and that he should at that point pay his taxes on that reward—compensation, if you will—just as any other taxpayer. The employee's role as an investor, of course, starts at that point, and any further appreciation in value of the stock from that point forward should properly be treated as a capital gain and taxed as such. It is only when the option is exercised that the employee assumes the investor's risk and thus becomes entitled to the investor's capital gains tax treatment.

Looking at this witness' testimony on this bill, it is obvious to me that he and others who share his views really are attacking the graduated income tax.

What the proponents of much loophole legislation are after is someway to convert ordinary income into something which can be classified as capital gains for tax purposes. This, of course, puts such income in the 25-percent maximum bracket rather than the 50-, 70-, or 90-percent bracket. I might also point out that the capital gains gimmick is of value primarily to the man who is in the 50 percent, and up, tax bracket. The man in the 20-percent bracket is not helped very much. Supporters of these capital gains gimmicks are really against the tax principle, followed in this country and at least partially in most other progressive countries, of taxation according to ability to pay. These people want the wage earner, farmer, clerk, stenographer, and small storekeeper to carry most of the tax burden.

The second pillar of support for stock options was Mr. Louis Ware, chairman of the board of International Minerals & Chemical Corp., a company of intermediate size, having sales of about $130 million per year.

Mr. Ware claimed that stock options were very helpful to him in building up his company.

Now, what are the facts about this company?

Mr. Ware took over this company in 1939, at which time it was struggling along rather unsuccessfully. Although it had been in existence for some 29 years, it had never paid a dividend on its common stock and sales were only about $10 million annually.

Mr. Ware revitalized the company. He brought in new management personnel, and sales began to move steadily upward. The strange thing about this corporate Horatio Alger is that Mr. Ware seems to feel that the restricted stock option should get the credit for the success story.

It is true that this company initiated a restricted stock option plan in 1951 and that the company has grown since that year. But consider the growth prior to 1951 when the company had no restricted stock option plan. In 1951 the company had sales of $66 million. This represents a growth, as measured by sales, of more than 500 percent during the period 1939–51. From 1951 to 1961, with the aid of this wonderful but "mysterious," to use Dean Griswold's term, stock option, sales increased by only a scant 100 percent.

Surely one could not look at this picture and say that the restricted stock option has been the saviour of this company. Indeed, stock options have rewarded those key executives—and Mr. Ware pointed out that he did not believe in giving out options much below the top 25 men in the company—who came with the company during the 11th hour, after success was assured, just as fully as those who labored in the vineyard from 1939 onward, when there was a real job of building to be done. And in either case, the reward has been received after the fact, in so far as the real needs of the company and the performance of the key tasks were concerned. Neither the re-

[P. 2148]

ward nor the hope of this restricted stock option reward could possibly have influenced the rebuilding of this company from 1939 to 1951.

The third pillar of support for restricted stock options was a representative of a local, relatively young, and relatively small company. The representative of this company told the committee that stock options had been important to the growth of his company. Here are his words:

In my opinion, the importance of restricted stock options in making that growth possible, and in enabling CEIR to continue to expand its services, cannot be overestimated.

When I questioned this witness about some of the specifics as to his company's use of options and just exactly how they had helped his company, he indicated that his company had used options as a partial substitute for salary. But the witness became so vague that I asked him to furnish me with data on all the options which his company had issued. I was somewhat dumbfounded to learn, that no options had been issued prior to 1960, with one exception, and that no options whatsoever had ever been exercised except for that one employee who got an option in 1959. Even more peculiar, the employee who received the 1959 option received the largest block of stock under option of any employee to 1961, and he left the company very shortly after receiving his option.

It seems to me that the effect of restricted stock options on the growth of this young company was nil. The company has grown, it is true. But growth has come as a result primarily of numerous mergers.

All things considered, it does not seem to me that these three pillars support the restricted stock option very firmly.

Now, during the course of the Finance Committee hearings, an article by Mr. Henry Ford II, which appeared in the July–August 1961 issue of Harvard Business Review, and which supports restricted stock options, was mentioned several times. This is an interesting article, and a few remarks about it are in order.

I think the key to Mr. Ford's attitude is found on page 50 of this article. After speaking of the lag in executive compensation, the article goes on to say:

Inflation and highly progressive income tax rates have greatly aggravated this situation, which is shared, we have reason to believe, by other large companies. The restricted stock option has been an effective means of meeting this problem.

In other words, Mr. Ford really favors the restricted stock option as a means of lowering the tax rate for highly compensated top corporate executives.

Here again we have the complaint about the progressive income tax rates. Here again we find an attack on the principle of ability to pay.

Incidentally, Mr. Ford seems to feel that options have saved the Ford Motor Co. The facts hardly bear this out.

Let us look at some of the things Mr. Ford has to say about the Ford Motor Co. and restricted stock options.

Mr. Ford stated in this article that a "dozen or so skillful men" were brought into the company after Word War II, and that they transformed the company from "a bogged-down, antiquated, money-losing company into a modern, efficient, profitmaking enterprise." He also stated that these men came into the company upon his promise that he "would do his best to give them an opportunity to acquire a stake in the company as soon as it was feasible to do so." He went on further to state that, finally, in 1953, restricted stock options were granted "to 114 key employees." He then places the stamp of approval finally upon the restricted stock option with these words:

I am convinced that, in broad effect, stock options have helped materially to raise the company to third place among American industrial corporations in total dollar sales.

This makes an unassailable, step-by-step argument. The company was bogged down and losing money, the company instituted stock options, the company is now in third place in the entire country. No further proof is needed of the efficacy of restricted stock options. Quod erat demonstratum.

Well, let us see.

The Ford Motor Co. had a deficit in 1946, but it had a profit in 1947 and every year thereafter up to and including 1953, when it finally instituted a stock option plan. This "bogged down" company was in excellent condition before it started a stock option plan. How, then, can the stock option plan get credit for restoring the company to a profitmaking position?

As for the company moving up to third place nationally in sales, this exalted position was also reached in 1953, the same year restricted stock options were instituted, and prior to the time any effect from the restricted stock option plan could possibly have been felt.

With all due respect to Mr. Ford, who is a fine businessman, an outstanding executive, and a dedicated American, he is confusing a legitimate stake in the business with a tax gimmick. Mr. Ford, right after World War II, got from General Motors some experienced produc-

tion executives and, in addition, picked up a younger group of very capable men. Mr. Ford, as he said, promised them an opportunity to own stock in the company as soon as he could arrange it. The real difficulty, and the reason he could not arrange it at the time, was that there was no public ownership of Ford stock. According to my understanding, only the family and the Ford Foundation owned any stock in the company. The restricted stock option had nothing to do with this problem. It came into the tax laws in 1950, but even before that there had been all sorts of stock purchase and option plans.

Now, I would not want to accuse Mr. Ford of trying to mislead anyone, but a careful analysis of his article, plus a few key facts which are omitted from his article, tend to support the thesis that it is well for management to have a stake in the business, or the opportunity to purchase stock in their company. Few would quarrel with this thesis. If I were president of a large corporation and my executives were not buying stock in the company but were, instead, making investments in other enterprises, I would have a thorough conflict-of-interest investigation. I would probably chop a few heads on general grounds of disloyalty, at least.

But I submit that this is an entirely different thing than writing into law a tax gimmick which enables an executive to gamble on the stock market without an investment and to reduce his overall tax rate drastically. The experience of the Ford Motor Co. lends no support whatsoever to the desirability of this tax gimmick.

Now, Mr. President, in a sense I have been reviewing past history. But it is pertinent. I have been working on this subject for a long time.

But, let us now come to the pending bill. I must acknowledge that the bill makes some improvement in existing law. I shall continue my discussion of this matter on tomorrow and will show not only in what ways the pending bill represents an improvement in existing law, but how it falls far short of what is really required.

Mr. GORE. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. GORE. How much time have I consumed?

The PRESIDING OFFICER. The Senator has consumed 20 minutes of his allotted time.

[*February 7, 1964*]

[*P. 2235*]

REVENUE ACT OF 1964

The ACTING PRESIDENT pro tempore. Under the order of yesterday, the Chair lays before the Senate H.R. 8363, the Revenue Act of 1964.

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

The ACTING PRESIDENT pro tempore. The pending question is on agreeing to the amendment of the Senator from Tennessee [Mr. GORE], numbered 418, upon which there is a limitation of debate, with controlled time.

The Senator from Tennessee has 20 minutes of his time remaining.

The pending amendment will be read.

AMENDMENT NO. 418

The amendment was read, as follows:

Beginning on page 121, line 23, strike out all through line 23, page 128.

On page 129, line 1, strike out "423" and insert "422".

On page 135, line 1, strike out "424" and insert "423".

On page 140, line 16, strike out "425" and insert "424".

On page 140, line 19, strike out "425" and insert "424".

On page 142, line 20, strike out "422(b)(7), 423(b)(3), and 424(b)(3)" and insert "422(b)(3) and 423(b)(3)".

On page 144, line 3, strike out "422(a)(2), 423(a)(2), and 424(a)(2)" and insert "422(a)(2) and 423(a)(2)".

On page 144, line 8, strike out "425" and insert "424".

On page 144, line 16, strike out "423 AND 424" and insert "422 AND 423".

On page 144, line 20, strike out "423 or 424" and insert "422 or 423".

On page 146, line 9, strike out "422(b)(6), 423(b)(9), and 424(b)" and insert "422(b)(9) and 423(b)".

On page 147, line 19, strike out "423" and insert "422".

On page 147, line 25, strike out "424" and insert "423".

On page 149, in the material following line 3, strike out "(1) The term 'qualified stock option', see section 422(b)."

On page 152, line 4, strike out "425" and substitute "424".

On page 153, lines 9 and 10, strike out "paragraphs (2) and (3)" and substitute "paragraph (2)".

Beginning on page 153, line 18, strike out all through line 2, page 154.

[P. 2236]

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

Mr. LONG of Louisiana. Mr. President, without prejudice to the pending amendment, I ask unanimous consent for the present consideration of a technical amendment in the nature of a clarification of a committee amendment.

The ACTING PRESIDENT pro tempore. Is there objection? Without objection, it is so ordered; and the amendment submitted by the Senator from Louisiana will be read.

The LEGISLATIVE CLERK. On page 75, in lines 7 and 8, it is proposed to strike out "with respect to property".

On page 75, line 9, strike out "such".

On page 75, line 12, after the period insert:

> For purposes of the preceding sentence, a debt which becomes worthless shall, to the extent of any deduction allowed under section 166(a), be treated as a loss.

Mr. LONG of Louisiana. Mr. President, the purpose of this technical amendment is to make it clear that the 10-year foreign expropriation loss carryover will apply to a taxpaper who incurs a loss because the stock of a 95-percent-owned subsidiary becomes worthless or because a business debt becomes wholly or partially worthless by reason of an expropriation of assets. The amendment would not create a new deduction or change the character of any loss from capital to ordinary.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Louisiana.

The amendment was agreed to.

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent that the amendment of the Senator from Tennessee [Mr. GORE] may be laid aside temporarily in order that the Senate may proceed to consider an amendment which I have cleared with members of the committee and the Treasury Department.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. WILLIAMS of Delaware. Mr. President, on behalf of myself, the Senator from Colorado [Mr. ALLOTT] and the Senator from Florida [Mr. SMATHERS], I offer an amendment and ask that it be stated.

The CHIEF CLERK. At the appropriate place insert a new section in the bill as follows:

> That section 165 of the Internal Revenue Code of 1954 (relating to losses) is amended by relettering subsection (i) as subsection (j) and by adding the following new subsection (i):
>
> "(i) Property confiscated by Cuba: For purposes of subsection (c)(3) losses of property which arise from expropriation, intervention in or confiscation by Cuba, shall be deemed to be losses from 'other casualty.'"

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Delaware.

Mr. LONG of Louisiana. Mr. President, this is a matter with regard to which the Treasury Department would like to cooperate to reach a proper solution of problems relating to Cuban expropriation. While we have not been able to determine the matter conclusively, we hope to do so in conference. In the event we cannot arrive at an adjustment, I hope the Senator will not be intransigent about the matter.

Mr. WILLIAMS of Delaware. Mr. President, I talked with representatives of the Department of the Treasury. First they thought the desired result could be accomplished by regulation or that we should wait until a general bill dealing with this subject came over. This is too important to wait, and I hope the provision I am proposing can be inserted in the bill.

[P. 2237]

I see no reason why individuals whose property is confiscated by Castro should not be allowed to claim such loss of property as a casualty loss in the same manner they would, should the property be destroyed by fire or flood.

Corporations or other business activities can claim their losses—why should individual property owners not be treated the same.

I urge the approval of the amendment.

Mr. SMATHERS. Mr. President, I am a cosponsor of the amendment. We have talked with representatives of the Treasury Department. The Treasury Department thinks the difficulty can be resolved. I believe it can. The amendment would provide simple justice for everyone.

The PRESIDING OFFICER. The

question is on agreeing to the amendment of the Senator from Delaware.

The amendment was agreed to.

Mr. SMATHERS. Mr. President, I ask unanimous consent that the amendment of the Senator from Tennessee may be temporarily laid aside.

The PRESIDING OFICER. Is there objection to laying aside temporarily the amendment of the Senator from Tennessee? The Chair hears none, and it is so ordered.

Mr. SMATHERS. Mr. President, I offer an amendment which I send to the desk and ask to have stated.

The legislative clerk read as follows:

SEC. —. EXTENSION OF TIME FOR PAYMENT OF ESTATE TAX ON VALUE OF REVERSIONARY OR REMAINDER INTEREST IN PROPERTY

(a) EXTENSION UNDER 1954 CODE—Section 6163(b) (relating to extension of time for paying estate tax on value of reversionary or remainder interest in property to prevent undue hardship) is amended by striking out "not in excess of 2" and inserting in lieu thereof "or periods not in excess of 3".

(b) EXTENSION UNDER 1939 CODE—Section 925 of the Internal Revenue Code of 1939 (relating to periods of extension of time for paying estate tax attributable to future interests) is amended by striking out "not in excess of 2" and inserting in lieu thereof "or periods not in excess of 3".

(c) EFFECTIVE DATE:

(1) The amendment made by paragraph (a) shall apply in the case of any reversionary or remainder interest only if the time for payment of the tax under chapter 11 of the Internal Revenue Code of 1954 attributable to such interest, including any extensions thereof, has not expired on the date of the enactment of this act.

(2) The amendment made by paragraph (b) shall apply in the case of any reversionary or remainder interest only if the time for payment of the tax under chapter 3 of the Internal Revenue Code of 1939 has not expired on the date of the enactment of this Act.

Mr. SMATHERS. Mr. President, the proposed amendment to section 925 of the 1939 code and section 6163(b) of the 1954 code, identical in substance, are designed to lengthen to 3 years the present 2-year period for which the payment of the estate tax on a remainder or reversionary interest may be extended where earlier payment would cause undue hardship.

Mr. President, the proposal has been checked out with the Treasury on both sides of the aisle. There is no objection to it. No cost to the Treasury would be involved. It is more in the nature of a technical amendment.

Mr. WILLIAMS of Delaware. Mr. President, I concur. The amendment would in no way change the tax liability of this company. I am willing that we accept the amendment.

Mr. SMATHERS. Mr. President, I ask unanimous consent that an explanation of the amendment be printed at this point in the RECORD.

There being no objection, the explanation was ordered to be printed in the RECORD, as follows:

MEMORANDUM IN SUPPORT OF AMENDMENTS TO SECTION 6163(b) OF THE INTERNAL REVENUE CODE OF 1954 AND SECTION 925 OF THE INTERNAL REVENUE CODE OF 1939 RELATING TO HARDSHIP EXTENSIONS OF TIME TO PAY ESTATE TAX ON REMAINDER INTERESTS

The attached proposed amendment to section 925 of the 1939 code and section 6163(b) of the 1954 code, identical in substance, are designed to lengthen to 3 years the present 2-year period for which the payment of estate tax on a remainder or reversionary interest may be extended where earlier payment would cause undue hardship. Under section 6163(a) of the 1954 code and sections 925 and 926 of the 1939 code, executors may, by posting an appropriate bond, postpone for 6 months the payment of that part of the estate tax attributable to the inclusion in the estate of a reversionary or remainder interest. If, after the period of postponement, the payment of the tax would result in undue hardship section 6163(b) of the 1954 code and section 925 of the 1939 code, as amended by the Technical Amendments Act of 1958, provide for a further 2-year extension of time for payment.

The provision for 2-year hardship extensions added by section 66 of the Technical Amendments Act of 1958 was designed to provide for situations in which payment of the tax could not be effected within 6 months after the termination of the precedent interest. It had been found that the settlement of the accounts of a complicated trust sometimes delays the executors' possession of the reversion or remainder interest. In some instances, a court construction of a doubtful trust instrument is required to determine the distribution of the trust corpus.

Unfortunately, experience has shown that the 2-year extension provided in 1959 is inadequate in certain cases. Accordingly, it is proposed that the period for which extensions may be granted be increased to 3 years.

Such an increase in the time period would not prejudice the revenue and would give the Secretary of the Treasury added flexibility in dealing with taxpayers who might otherwise be seriously prejudiced by the present limitations. The amendments would apply only to estates as to which the time for payment has not expired on their effective date.

The amendments give the Secretary authority to grant a series of extensions within the 3-year period thereby facilitating control of the length of such extensions and preventing any taxpayer's delaying payment

for a period longer than actually required by circumstances.

Prompt enactment of the amendments is urgently needed to prevent a substantial estate having an extension under present law which will shortly expire from being in default on payment of tax by reason of inability to conclude the litigation of relevant issues prior to the expiration of its extension.

Mr. LONG of Louisiana. Mr. President, we will take the amendment to conference and see if we can work it out.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Florida.

The amendment was agreed to.

Mr. KUCHEL. Mr. President, I ask unanimous consent that the amendment of the Senator from Tennessee [Mr. GORE], which is pending, be temporarily laid aside so that I may offer an amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KUCHEL. Mr. President, I offer an amendment which I send to the desk and ask to have stated.

The LEGISLATIVE CLERK. It is proposed that at the appropriate place in the bill insert the following:

That section 6511 of the Internal Revenue Code of 1954, relating to limitations on credit or refund, is hereby amended by adding at the end of subsection (d) thereof, relating to special rules applicable to income taxes, the following new paragraph:

"(5) SPECIAL PERIOD OF LIMITATION WITH RESPECT TO SELF-EMPLOYMENT TAX IN CERTAIN CASES.—If the claim for credit or refund relates to an overpayment of the tax imposed by chapter 2 (relating to the tax on self-employment income) attributable to the retroactive effect of an agreement, or modification of an agreement, made pursuant to section 218 of the Social Security Act (relating to coverage of State employees), by reason of which the self-employment income (as defined in section 1402 (b)) of an individual is different from what it would be but for such agreement (or modification), and if the allowance of a credit or refund of such overpayment is otherwise prevented by the operation of any law or rule of law other than section 7122 (relating to compromises), such credit or refund may be allowed or made if claim therefor is filed on or before the later of the following dates: (A) the last day of the second year after the calendar year in which such agreement (or modification) is agreed to by the State and the Secretary of Health, Education, and Welfare, or (B) December 31, 1965."

Mr. KUCHEL. The amendment has been cleared with the Senator in charge of the bill. The Treasury Department has approved it. The Budget Bureau has approved it. The Department of Health, Education, and Welfare has approved it.

The amendment provides for the same treatment for the self-employed under the social security system with respect to refunds as the present law now authorizes for others in the system. I ask unanimous consent that the reports, on S. 1480 which I authored and introduced on May 8, 1963, submitted by the Secretary of the Treasury and the Secretary of Health, Education, and Welfare be printed in the RECORD at this point.

There being no objection, the reports were ordered to be printed in the RECORD, as follows:

DEPARTMENT OF
HEALTH, EDUCATION, AND WELFARE,
Washington, D.C., November 1, 1963.

Hon. HARRY F. BYRD,
Chairman, Committee on Finance,
U.S. Senate,
Washington, D.C.

DEAR MR. CHAIRMAN: This letter is in response to your request of May 9, 1963, for a report on S. 1480, a bill to provide credit or refund of self-employment tax in certain cases.

The bill would provide for a credit or refund of social security self-employment taxes

[*P. 2238*]

paid in cases where the retroactive coverage of State or local Government employees under the old-age, survivors, and disability insurance program extends to years for which refunds of such taxes are barred by statute.

Social security coverage for employees of States or their political subdivisions may be provided under agreements entered into between the States and the Secretary of Health, Education, and Welfare pursuant to section 218 of the Social Security Act. Section 218(f) of the act provides that an agreement, or a modification of an agreement, shall be effective with respect to services performed after the date specified in the agreement or modification, but such date may not be earlier than the last day of the sixth calendar year preceding the year in which the agreement or modification, as the case may be, is agreed to by the Secretary of Health, Education, and Welfare and the State.

Retroactive coverage under section 218 of the Social Security Act has been provided for employees who, in some instances, have paid taxes on self-employment income for years in the period of retroactive coverage for which they must also pay social security contributions on their wages from State or local government employment. This retroactive period of coverage can include years for which no refund of self-employment taxes can be made because the taxes were paid in the period for which refunds are barred by section 6511 of the Internal Revenue Code. Thus, when the total of wages and self-employment income credited for a year in the retroactive period exceeds the maximum amount of earnings that can be credited for social security purposes, the employee would have paid an excessive amount of social securty taxes; if the year is within the period barred by the statute of limita-

tions the worker can receive no credit or refund of the taxes, and the taxes paid on the extra earnings will not increase the social security benefits payable on his account. The extra taxes paid by a worker in these cases result from the implementation of statutory provisions authorizing retroactive coverage and not because of any action taken by the worker.

Substantially the same problem was encountered a number of years ago when State or local government employees had other wages on which social security taxes had been paid in the period of retroactive coverage. Relief from the payment of excess taxes in these cases was granted by Congress in the Social Security Amendments of 1954. S. 1480 would provide relief, in the form of a credit or refund of taxes, that is similar to that provided for employees whose excessive payment of social security tax relates to wages rather than self-employment income.

Since section 218 of the Social Security Act distinguishes an "agreement" from a "modification of an agreement," we believe that the bill should include a reference to such modifications as well as to the basic agreement itself. The situation for which the bill would provide relief can occur not only as a result of an agreement but also as a result of a modification to an agreement.

The bill provides that in order to get a refund of social security self-employment taxes paid for a barred year an application for a refund would have to be filed within 3 years from the time the agreement for retroactive coverage was entered into. Some State and local government employees have retroactive coverage under agreements made more than 3 years ago and therefore they could not qualify for a refund of taxes under the provisions of S. 1480, the time limit for filing having already expired. We believe the bill should be changed so that it would apply to these people.

We would have no objection to enactment of the bill subject to the modifications proposed above.

We are advised by the Bureau of the Budget that there is no objection to the presentation of this report from the standpoint of the administration's program.

Sincerely,

ANTHONY J. CELEBREZZE,
Secretary.

TREASURY DEPARTMENT,
Washington, D.C., October 22, 1963.

Hon. HARRY F. BYRD,
Chairman, Committee on Finance,
U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: This is in response to your request for the views of this Department on S. 1480, "A bill to provide credit or refund of self-employment tax in certain cases."

Social security coverage for employees of States or their political subdivisions may be provided under agreements entered into between the States and the Secretary of Health, Education, and Welfare pursuant to section 218 of the Social Security Act. Under section 218(f) of the act the agreement, or modification of an agreement, "shall be effective with respect to services performed after an effective date specified in such agreement or modification; except that such date may not be earlier than the last day of the sixth calendar year preceding the year in which such agreement or modification, as the case may be, is agreed to by the Secretary and the State."

It is our understanding that retroactive coverage under section 218 of the Social Security Act has been provided for employees who, in some instances, have paid self-employment tax on amounts earned from sources other than State employment (for example, by writing a textbook). Under section 1402(b) of the Internal Revenue Code, relating to the definition of self-employment income, an individual's maximum income subject to self-employment tax for a year is determined by subtracting his "wages" for that year from $4,800 (from $4,200 for the years 1955 through 1958). Thus, if a State employee is retroactively covered for 1961 and he received wages of $4,000 from the State in that year (and no other wages), his self-employment income, if any, for that year could not exceed $800 ($4,800 minus $4,000). If the individual paid self-employment tax on earnings in excess of $800 he would be permitted to recompute the self-employment tax and claim credit or refund of any overpayment. There is no barrier to the allowance of the credit or refund if the claim is filed before the expiration of the period of limitation prescribed by section 6511 of the Internal Revenue Code. In the cases to which S. 1480 is directed, however, such period expired, or will have expired, before the existence of retroactive coverage under section 218 of the Social Security Act. Under these circumstances, the individual concerned has no opportunity to avoid the duplication of coverage and taxes, and under existing law there is no remedy. The Treasury Department believes that in these circumstances an inequity exists and that a remedy should be provided.

S. 1480 would add a new section to the Internal Revenue Code (sec. 6424) which would provide for the allowance of a credit or refund in any case in which the amount of self-employment income for a barred year, before the retroactive coverage of wages under section 218 of the Social Security Act, differs from the amount of such income after the wages are retroactively covered. The credit or refund would be computed by multiplying the amount of such difference by the rate of self-employment tax applicable to the barred year. The credit or refund would be allowable, however, "only if claim therefor is filed within 2 years from the date on which the agreement under section 218 was entered into."

The Department would like to suggest a revision of the bill, as set forth in the enclosed draft, which is intended to accomplish the following changes:

1. Section 6402 of the code, providing general authority for credits or refunds of overpayments, is applicable to the cases in question, and the only additional provision

needed is an appropriate period of limitation in lieu of the period prescribed by section 6511(a). Accordingly, as a matter of code arrangement, it would seem preferable to place the additional provision in section 6511, rather than to state it as a new section 6424.

2. It is our understanding that the 2-year period of limitation proposed in S. 1480 may have expired, or that expiration thereof may be imminent, for some of the cases which S. 1480 is intended to remedy. The enclosed draft would open the period of limitation for all concerned until December 31, 1965, and would provide thereafter for a period ending at the close of the second year following the calendar year in which the retroactive coverage is agreed upon by the State and the Secretary of Health, Education, and Welfare. (This latter period is the same as the period provided for State employees in sec. 202(a)(2) of the Social Security Amendments of 1954, 68 Stat. 1090.)

3. Section 218 of the Social Security Act distinguishes an "agreement" from a "modification of an agreement." It appears necessary to include a reference to such modifications inasmuch as they may be a source of retroactive coverage. An "agreement," for example, would not necessarily be the only appropriate event from which to measure a period of limitation.

Subject to the changes referred to above, the Treasury Department has no objection to the enactment of S. 1480.

The Bureau of the Budget has advised the Treasury Department that there is no objection from the standpoint of the administration's program to the presentation of this report.

Sincerely yours,

STANLEY S. SURREY,
Assistant Secretary.

Mr. GORE. Mr. President, reserving the right to object, will the Senator in charge of the bill give us an explanation of the amendment?

Mr. KUCHEL. I believe the best way to explain it is to read a portion of the letter from the Secretary of Health, Education, and Welfare which refers to the amendment that I have offered:

The bill would provide for a credit or refund of social security self-employment taxes paid in cases where the retroactive coverage of State or local government employees under the old-age, survivors, and disability insurance program extends to years for which refunds of such taxes are barred by statute.

* * * * *

The bill provides that in order to get a refund of social security self-employment taxes paid for a barred year an application for a refund would have to be filed within 3 years from the time the agreement for retroactive coverage was entered into. Some State and local government employees have retroactive coverage under agreements made more than 3 years ago and, therefore, they could not qualify for a refund of taxes under the provisions of S. 1480, the time limit for filing having already expired. We believe the bill should be changed so that it would apply to these people.

* * * * *

We are advised by the Bureau of the Budget that there is no objection to the presentation of this report from the standpoint of the administration's program.

[*P. 2239*]

In addition, having listened to representatives of this Department, the House of Representatives has reported similar legislation in the House.

Mr. GORE. Mr. President, I have listened to the explanation, and I have also conferred with staff members. I am now familiar with the problem to which the amendment is addressed, and I have no objection.

Mr. KUCHEL. I thank the Senator.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from California.

The amendment was agreed to.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that, without prejudice to the pending amendment, the Senate may proceed to consider certain amendments that are purely technical in nature.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Louisiana? The Chair hears none. The amendments of the Senator from Louisiana will be stated.

The CHIEF CLERK. The following amendments are proposed:

Page 33, line 7, strike out "amendment" and insert "amendments".

Page 47, in the second line following line 9, strike out "602(a)" and insert "6052(a)".

Page 66, line 5, strike out "tribution" and insert "tributions".

Page 67, line 20, strike out "intervening year" and insert "taxable year intervening".

Page 69, line 9, strike out "years" and insert "year".

Page 75, line 6, strike out "loss" " and insert "loss' ".

Page 75, line 13, strike out "such" and insert "any taxable".

Page 76, line 9, strike out "year." and insert "year,".

Page 76, line 13, after "expropriation" insert "loss".

Page 87, line 3, after "date of" insert "the".

Page 88, line 20, strike out "on or".

Page 92, line 6, strike out "year." and insert "year,".

Page 92, line 11, strike out ") relating" and insert "(relating".

Page 95, line 7, before "(c)" insert opening quotation marks.

Page 100, line 15, after "80a–2)" insert closing parenthesis.

Page 105, line 13, strike out "described" and insert "described".

Page 109, line 22, after "corporation" insert ", with respect to the plan described in subsection (a) (2).".

Page 110, line 7, strike out "plan" and insert "plans".

Page 116, line 1, after "poration" insert ", with respect to the plan described in subsection (a) (1) (A),".

Page 116, line 11, strike out "plan" and insert "plans".

Mr. LONG of Louisiana. The amendments are clerical.

The PRESIDING OFFICER. The question is on agreeing to the amendments of the Senator from Louisiana.

The amendments were agreed to.

Mr. CARLSON. Mr. President, I would like to inquire of the Senator in charge of the bill as to the application of the minimum distribution tables contained in section 123(b) of the bill, relating to minimum distributions from controlled foreign corporations under section 963(b) of the code.

Section 123(b) of the bill provides three separate minimum distribution tables to give effect to the new corporate tax rate changes. The first of these tables is provided for "Taxable years beginning in 1963" and is the same as existing law. The second table is provided for "Taxable years beginning in 1964"; the third for "Taxable years beginning after December 31, 1964."

Many U.S. corporations to which these tables will apply, may own one or more foreign subsidiary corporations having taxable years which differ from the taxable year of the U.S. parent. Is it intended that each of the references to taxable years in the revised minimum distribution tables is to the taxable year of the U.S. parent corporation receiving the minimum distribution and not the taxable year of any foreign subsidiary?

For example, is the table provided in section 963(b) (2) to apply in determining the amount of minimum distribution required to be received by a domestic corporation whose taxable year begins in 1964 irrespective of the taxable year of any of its foreign subsidiaries from whom the minimum distribution has been, or is to be received?

Mr. LONG of Louisiana. The answer to the question is "Yes." Similarly the table described in section 963(b) (3) is to be used for taxable years of the U.S. parent corporation beginning after December 31, 1964.

Mr. CARLSON. Mr. President, I appreciate very much the response of the Senator from Louisiana.

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. WILLIAMS of Delaware. I was talking with representatives of the Treasury Department yesterday, and I understand there may be technical error in the personal holding company section and that they might suggest an amendment.

It is my understanding that such an amendment would not in any way change the intent but would merely correct a draftsmanship error. I do not know whether the Senator from Louisiana is familiar with this or if he has the amendment.

Mr. LONG of Louisiana. As the Senator well knows, this bill is 379 pages long. It is extremely technical in nature. The Senator knows that the members of the staff are perhaps the most overworked persons in the United States, having been driven almost like slaves in a galley for the last 2 weeks, and, to a considerable degree, even for months preceding that. The staff has been working 16 hours a day, including Sundays, trying to do all the technical drafting necessary for the bill. People can be only human. They can make errors. No one is perfect. So if there have been a few oversights in drafting, we certainly wish to do away with any technical mistakes or any failures in language to carry out what was the intent of the committee when the staff attempted to carry out that intention. Our staff, and the Treasury staff, have performed Herculean tasks in drafting this bill in such a short time.

Mr. WILLIAMS of Delaware. I join the Senator in commending the staffs of both the committee and the Treasury.

Mr. LONG of Louisiana. It may well be that at some point in this lengthy bill of some 375 pages of technical drafting an undue hardship may have been inadvertently placed on someone. If that is the case, I will cooperate with the Senator in trying to correct it.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. CARLSON. I wish to pay tribute to the staff and the Treasury for the outstanding service they have rendered to the committee in executive sessions as well as during the consideration of the bill on the floor. It was my privilege to serve for many years on the House Ways and Means Committee, and for the past 8 years on the Senate Finance Committee. This is the finest cooperation we have ever had. It was interesting to note that there were no problems this year in that connection. I think I should mention that previously there was discussion as to whether representatives of the Treasury Department should sit in with the committtee during consideration of the bill. This year there was no objection to the representatives of the Treasury Department continually sitting with the committee. I urged it. I think it was helpful.

I do not always support the views of the Treasury. At the same time, I think they can be helpful. This bill represents evidence of hard work. Some of the staff members worked on Sunday to get together a report in 2 or 3 days which might well have taken at least 10 days. They are entitled to great commendation.

Mr. WILLIAMS of Delaware. Mr. President, I join the Senator in congratulating the staff on the job they have done. It would be a miracle if we did not discover more errors before final passage of the bill.

Mr. LONG of Louisiana. We have found that the Treasury and the staff can be most helpful. On one particular occasion, the Senator from Louisiana did not prevail with an amendment when the Treasury did not agree with him on it. The Senator from Louisiana had not invited the staff to give views on what the result of the adoption of my amendment would be. That is what happens when we do not have the views of the advisers, and tell them to speak only when they are spoken to, when they are available for professional advice.

[*P. 2240*]

Mr. CARLSON. Mr. President, I probably had more amendments that were opposed by the Treasury representatives and received less consideration or approval than any other member of the committee. Nevertheless, I appreciate their position and do not hold it against them.

Mr. SMATHERS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. SMATHERS. I wish to join other Senators. I shall not prolong the tributes too long, but I wish to highly commend the staff for the wonderful work they have done. Without their help we could not have understood the bill, and the Treasury Department officials themselves, who, as the Senator from Louisiana has said, worked around the clock in order for us to consider the bill as expeditiously as we have.

I wish to ask the Senator from Louisiana certain questions for the purpose of clarification.

The first question is on section 216 of the bill, relating to interest on loans on certain insurance contracts. The general explanation of this provision, contained in the reports of the House Ways and Means Committee and the Senate Finance Committee, explains that "the interest deduction is not to be denied where the indebtedness actually is to finance business obligations, rather than to carry insurance." How would section 216 of the bill apply where life insurance is purchased by a business in the following situations:

First, a corporation which every year borrows substantial sums to carry on its business has agreed to pay employees an income after retirement. To fund this corporate obligation it purchases level premium life insurance but does not plan to borrow the funds needed to pay the premiums.

Mr. LONG of Louisiana. The answer to the first question is that the mere fact that the corporation purchased a cash value life insurance policy would not cause any disallowance of the interest paid on the corporation's normal indebtedness. This would be true even if the policy is later used as part of the collateral for the corporation's borrowings for purposes other than to carry life insurance policies.

Mr. SMATHERS. The second question is as follows: A finance company borrows money and lends it to customers. Is it correct that interest on the borrowed funds would not be disallowed as a deduction merely because the corporation also owned a cash value policy on the life of a key employee?

Mr. LONG of Louisiana. That is correct.

Mr. SMATHERS. The third question is as follows: A bank purchases cash value insurance on the life of one of its key executives.

Mr. LONG of Louisiana. The answer to that question is that no part of the deduction for interest paid to depositors

will be disallowed merely because the bank owns a cash value life insurance policy. Similarly, a corporation which has outstanding bonds will not have any portion of the interest paid on such such bonds disallowed as a deduction merely because it purchased cash value life insurance. In these cases, the interest deduction will not be disallowed unless there is a plan for systematically borrowing increases in the cash value of the policy, for example by increasing the amount of corporate indebtedness each year by the amount of increase in the cash value.

Mr. President, without prejudice to the pending amendment, I send to the desk another amendment, which I believe has been cleared with Senators on both sides.

The PRESIDING OFFICER. Without objection, the amendment offered by the Senator from Louisiana will be stated.

The legislative clerk read as follows:

On page 47, line 9, after the period, insert: "In applying section 79(b) of the Internal Revenue Code of 1954 (as added by subsection (a)(1) of this section) to a taxable year beginning before May 1, 1964, if paragraph (2)(B) of such section applies with respect to an employee for the period beginning May 1, 1964, and ending with the close of his first taxable year ending after April 30, 1964, such paragraph (2)(B) shall be treated as applying with respect to such employee for the period beginning January 1, 1964, and ending April 30, 1964."

Mr. LONG of Louisiana. Mr. President, this amendment has also been cleared with the Treasury and with both sides of the aisle. This amendment gives until April 30, 1964, for this 1 year, to give all rights to group term insurance over to a charity without the insurance giving rise to income to the taxpayer involved. This is to take into account the fact that the provision was not enacted by January 1, 1964.

Mr. GORE. Mr. President, reserving the right to object, the bill as it came from the House and as it was reported by the Senate committee moves to limit the amount of group term life insurance which can be carried on any employee without the employee having to include in his taxable income the value of the premium paid. Under present law, the employee is not subject to tax liability for the value of the premium paid but his employer corporation does receive a tax deduction. I am pleased, indeed, that, even though the limits are much higher than I believe equitable, the bill does contain a limit, as does the House version.

The Treasury advised us of instances in which corporation officers were given policies to the extent of $900,000, of coverage payable to their estates. The vast benefits which they receive under present law to the extent of the value of the premium paid go entirely without tax liability as to them. The premium payment thereon is entirely without tax liability, as to the employee, yet the premium payment is deductible as to the corporation.

So we have the case of an individual who is receiving a vast benefit without any tax liability thereon. Due to the corporate tax rate, the Treasury is financing a little more than half of the premium, for the total amount is deductible to the corporation.

Accordingly, I am pleased that we are moving toward a limit. The Treasury wanted initially a $5,000 limit; the House bill has a $30,000 limit. Unfortunately, the Senate committee recommends a $70,000 limit. I trust the conferees will agree to the lowest possible compromise.

The pending amendment, it seems to me, is all right, and I hope its adoption will assist in holding a good limitation in conference.

Mr. LONG of Louisiana. This is to prevent unintended hardship for persons who would have expected the law to have become effective on January 1, 1964, and found that they were prejudiced because it did not become effective on that date; so that date would be advanced to April 30.

Mr. GORE. Mr. President, I concur in the amendment.

Mr. SMATHERS. Mr. President, I congratulate the able Senator from Tennessee with respect to this particular amendment and the others in this field. There is no question that sometimes someone goes too far. In some instances companies bought too large policies for their executives; and I believe the practice was being abused. We owe a considerable debt to the able Senator from Tennessee for having called this situation to our attention. I believe we will arrive at a reasonable and sensible compromise, and I believe the Senator from Tennessee deserves the credit.

Mr. GORE. I thank the Senator from Florida.

Mr. WILLIAMS of Delaware. Mr. President, I should like to call up an amendment on behalf of the Senator from Iowa [Mr. MILLER], identified as Amendment No. 414, and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The CHIEF CLERK. At the proper place in the bill it is proposed to insert the following:

SEC. . CROP INSURANCE PROCEEDS.

Section 451 of the Internal Revenue Code of 1954, as amended (relating to general rule

for taxable year of inclusion), is amended by adding the following subparagraph:

"(c) In the case of insurance proceeds received as a result of destruction or damage to crops, a taxpayer reporting on the cash basis of accounting may elect to include such proceeds in income for the year following the year of destruction or damage provided he establishes to the satisfaction of the Secretary or his delegate that, under his practice, income from such crops would not have been reported in the year in which raised."

Mr. WILLIAMS of Delaware. Mr. President, the purpose of the amendment is to provide a means to aid farmers who are accustomed to carrying a crop over and not selling it until after the first of the year.

Should their crops be destroyed, under existing law the insurance they collect for the damaged crops would be received in the same year they had sold their previous year's crops. This would result in a heavy tax in one year—the year of the crop damage—and a loss in the next year's taxes.

This amendment would allow the farmer to carry forward until the next year the amount he collects as insurance on the damaged crops.

[*P. 2241*]

I join the Senator from Iowa in urging its adoption.

Mr. MILLER. Mr. President, I thank the distinguished Senator from Delaware [Mr. WILLIAMS] for the courtesy in offering my amendment in my behalf during my unavoidable absence from the floor.

The Senator from Delaware has succinctly stated the purpose of my amendment.

I invite attention of my colleagues to the fact that the amendment applies only to farmers reporting on the cash basis of accounting. There is no need to cover farmers using the accrual or inventory basis of accounting. Let me give an example to illustrate this. Take an accrual-basis farmer who harvests $5,000 worth of corn in October, with the intention of not selling it until the following spring. He will have to include the $5,000 worth of harvested grain in his closing year inventory and compute his annual income accordingly. Now, if his crop is destroyed by hail and windstorm and he receives $5,000 in insurance proceeds, these proceeds will have to be reported when they are received in that year. In either case, whether his crops are destroyed or not, he is going to have $5,000 of income for the year the crops are being raised.

But the cash-basis farmer is in a different position. If his crop is harvested, and he does not sell it until the following year, he will not have to report the $5,000 income until the year of sale—the following year. If his crop is destroyed and he receives $5,000 insurance proceeds in the current year, however, he must report the $5,000 as income for the current year. This would mean doubling up income from crops from the previous year—which were not sold until the current year—with the $5,000 insurance proceeds. Thus, we have an abnormal amount of income thrown into 1 year as a result of a hardship over which the farmer had no control. My amendment would prevent this abnormality by giving the farmer an election to report the insurance proceeds in the following year, when the crops—had they not been destroyed—would have normally been sold.

My amendment requires that the taxpayer satisfy the Internal Revenue Service that it was his practice to sell his crop in the following year. This should not be difficult, because farmers who follow this practice can readily obtain records showing delivery of their crops in the spring or summer following the previous year when harvested.

If it be suggested that a farmer engaged in his first year of operations could not show an established practice, the answer is that it will not work hardship on him to report the insurance proceeds in the current year, since he will not have any crop income from a previous year to double up on.

A number of farmers seal their grain crop in the year of harvest. They have a choice of reporting the loan proceeds received from the Commodity Credit Corporation as income in the year the loan is received or in the year when the grain is actually sold. Once they make a choice of how they want to handle it, they are required to consistently follow their procedure until and unless they receive permission to make a change from the Internal Revenue Service.

In the case of a farmer who normally seals his crop in the year it is harvested, and reports the loan proceeds as income, he will not be adversely affected by having to report insurance proceeds received in the same year. My amendment would not affect him, because he does not need to be protected from the doubling-up problem. He already has a practice of reporting income from the crop in the year harvested, because he reports the loan proceeds received from sealing the crop in the same year.

In the case of a farmer who normally seals his crop in the year it is harvested, but does not report the loan proceeds as income and does not report the income until the crop is sold, he can readily show that income from the crop would not be reported in the year harvested under his practice, and my amendment would cover him and protect him from the doubling-up problem.

One other situation calls itself to mind. Take the case of a cash-basis

69-108 O—66—pt. 3——60

farmer who feeds his raised crops. Normally he keeps enough feed on hand so that the crops raised in one year are not fed until the following year. But in one year the crops are destroyed and he receives insurance proceeds in that year which he must report as income. My amendment would not cover this individual, but it need not do so. He can already protect himself from an abnormality by simply taking the insurance proceeds, which he must report as income, and purchasing feed grain, using the purchase as an offsetting deduction. Thus he already can protect himself from an abnormality.

I have attempted to explain the various situations under which the application of my amendment might arise with a view to providing some legislative history to assist the Internal Revenue Service in the preparation of a regulation to cover this change in the law. I am confident that the equity of the amendment is readily apparent, and the only wonder is that the law was not changed long ago. I hope my amendment will be adopted, and I trust there will be no difficulty in having it approved by the Conference Committee.

Mr. LONG of Louisiana. I assume that this would be done with the understanding that if the amendment encounters any serious objection from the House the Senator will not be adamant. I should be glad to have the amendment considered in conference.

Mr. WILLIAMS of Delaware. That would be acceptable.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Delaware [Mr. WILLIAMS] on behalf of the Senator from Iowa [Mr. MILLER].

The amendment was agreed to.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Tennessee [Mr. GORE].

Mr. LONG of Louisiana. Mr. President, I yield 5 minutes to the Senator from Florida.

The PRESIDING OFFICER. The Senator from Florida is recognized for 5 minutes.

Mr. SMATHERS. Mr. President, I thank the able Senator from Louisiana. With respect to the proposed stock option amendment of the able Senator from Tennessee [Mr. GORE], in this area I believe it is the general opinion of most members of the committee that there has been some abuse. In the case of the Chrysler Corp., which the Senator from Tennessee most eloquently pointed out some time ago, the president of that corporation was able to take company stock rather precipitately—I believe to his credit and business ingenuity—but in any event he was able to come out of the transaction with what would appear to be vast profits over the course of the years.

The stock option period has been carried out, and the option has been made, open end, so to speak, for such a long period of time that there have been cases where the profits have been inordinate, and I believe went too far.

There has been no abuse of the law. Nonetheless, I believe that some restriction should be placed upon the practice.

Mr. KUCHEL. Mr. President, will the Senator from Florida yield?

Mr. SMATHERS. I yield.

Mr. KUCHEL. Do I correctly understand that no allegation is made in this debate that the present law has been violated?

Mr. SMATHERS. No allegation has been made that the present law has been violated.

Mr. KUCHEL. By any corporation?

Mr. SMATHERS. The Senator is correct.

Mr. KUCHEL. Then I understand that we have the present law; we have the recommendation of the committee changing the present law; and the Senator from Tennessee has a proposal now pending to change the provision in the committee.

Mr. GORE. The Senator is correct.

Mr. KUCHEL. I wish the RECORD to be clear that on this floor no one has alleged that any corporation in America has violated the present statute.

Mr. SMATHERS. The Senator is eminently correct. No one charges that. The only claim, which has been made—and verified to some extent by the recommendations of the Treasury, and the action taken by the House Ways and Means Committee, and now the action taken by the Senate Finance Committee—is that the law as it has existed, has been a little overgenerous with respect to the stock option features. Therefore, the Treasury, the House Ways and Means Committee, and now the Senate Finance Committee have tightened up in various respects on the stock option provision, which I shall describe in just a moment.

The Senator from Tennessee thinks we ought to go even further than the committee has gone. We have tightened up the situation in four major respects, which I shall enumerate. The Senator from Tennessee would like to go even further in tightening up the stock option provision.

[*P. 2242*]

We had some very interesting testimony from the Secretary of the Treasury

and from many others with respect to the value of stock options, which are in the form of premiums that are given to young business executives who understand how to operate large business corporations.

Because of the high rate of taxes on large salaries, the only manner in which it is possible to attract talented young men to take over the guidance and operation of major business corporations, is to give them, in most instances, an opportunity to become part owners of the company. When such a man becomes a part owner in a company, an incentive is provided by setting a time limit and a price at which he can buy the stock, and the incentive is to make the company's profits bigger. As a result, everyone benefits. When the profits become larger, the price of the stock goes up. He can exercise his option, and take the stock. He can keep it for himself. If he wishes to increase his immediate cash income he holds it for 6 months, and then sells it. Of course, it then receives only capital gains treatment. Therefore, his taxable income in effect, is increased substantially.

Mr. GORE. Mr. President, will the Senator yield?

Mr. SMATHERS. I am happy to yield to the Senator from Tennessee.

Mr. GORE. The Senator makes a correct statement, in my view.

The PRESIDING OFFICER. The Senator's 5 minutes have expired.

Mr. SMATHERS. I yield myself 2 additional minutes.

Mr. GORE. I would not take from business and industry the flexibility needed to provide proper incentive compensation for employees. Of course, this can be accomplished through a bonus plan conditioned upon the success and profits of the corporation. The bonus plan can have an escalating clause. This was the incentive plan often used by business before the restricted stock option provision was placed in the law.

The Senator from Florida has given an example of how the salary of a corporate officer may be increased by the use of the restricted stock option, on which the employee would be taxed only at a low rate; or, if he wishes to keep his stock, pay no income tax at all.

Mr. SMATHERS. That is true of every stockholder. He does not pay anything until he gets something by the sale of the stock.

Mr. GORE. What the Senator has said is a fact. I agree.

Mr. SMATHERS. We are not in disagreement.

Mr. GORE. But if the salary of a teacher or bank clerk or grocery store clerk is increased, he pays more taxes. This illustrates the favoritism that is involved in this situation. The corporate insiders have a provision in the law by which they receive added compensation, but they do not pay taxes on this added compensation in the same way that ordinary American citizens pay taxes.

If we struck this provision out completely, business could still provide all the incentive necessary through a bonus plan. Under such a plan the ordinary employee or the officer would pay the same kind of taxes. They would be taxed alike on their reward.

Mr. SMATHERS. It seems to me that when a person is in the 70-percent bracket, there is not much incentive under the plan suggested by the Senator, when one sees 70 cents of every dollar taken out of one's salary to pay a tax to the Government. That is the reason, I suppose, for the stock option plan in the first place. Actually there are two reasons. I believe it came into existence in 1950.

It was done in order to get away from the very high personal income tax rate that was in existence. Even when a man's salary was raised, it was possible that he might get only 9 cents out of every dollar he earned. That did not provide very much incentive under the competitive conditions that existed with respect to attracting talented, bright business executives. Some plan had to be devised which would make it possible for them to buy into the company.

The second reason was that a person might own a little stock in the company. If he were an officer in a company, it would not look very good. For example, when I see how much an executive owns in a company, and I see that he does not own very much, I begin to think that it is not a very good investment to buy stock in that company, because the men who operate it apparently are not sufficiently interested in its success to own much stock in it. The officers may be working only for their salary, and that might lead me to believe they are not interested in making the company grow or expand.

It is something like the case of a professional baseball player, who goes from one team to another. In this case the man would probably go from one company to another, if he did not show enough interest in the company to buy stock in it. It would seem that he did not owe any great loyalty to his company. When a better offer came along, he would probably move to another company.

I am sure the Senator knows that from his own business operations. When a

man holds stock in a company he usually does a much more efficient job in helping the company become successful and in helping it to expand.

Mr. GORE. Mr. President, will the Senator yield?

Mr. SMATHERS. I am happy to yield.

Mr. GORE. In the beginning of his remarks a short time ago the Senator made what appears to me to be a peculiar but fair admission.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. SMATHERS. I yield myself an additional 3 minutes.

Mr. GORE. The Senator expressed a too widely accepted view, namely, that we really do not believe in thc progressive income tax at all, because he said, in effect, that when a man receives a sufficient income, we ought to provide tax avoidance, or some way in which he can earn more money without paying additional taxes on it.

I dare say that many people hold that view. I am not one who does. I believe that we ought to have a federal income tax system based upon the ability to pay, and that we should measure every man by the same yardstick, and not give corporate insiders special treatment and make of them a privileged class.

That is what the present provision in the law, section 421, does, and the able Senator from Florida has just demonstrated what it does.

Mr. SMATHERS. I thank the able Senator from Tennessee. He states my position to some extent, and I understand his position. I believe that so long as a person works and produces, he is entitled to receive a reward for what he does. I believe in the progressive income tax, but I do not want it to get to the point where, when the person reaches a certain level of ability, he will receive nothing or practically nothing. That is what our present tax law has done. That is why incentive has gone out of a lot of businessmen. That is why we see, in many instances, men who do not work more than 3 or 4 days a week. That is why we are beginning to see some of the fortunes beginning to be reduced.

I had suspected all along that the able Senator from Tennessee believed that there should be a limit to what a person could earn; and when he reached that point, he should be cut off from earning more. I do not believe in that. I believe that if a person works and produces, he ought to have the right to receive compensation commensurate with the value of what he can produce.. Although the tax rate is high, I do not believe it should reach such a level that it would confiscate practically everything a person made.

The PRESIDING OFFICER. The time of the Senator from Florida has expired.

Mr. SMATHERS. I yield myself 3 additional minutes.

Mr. GORE. Mr. President, will the Senator yield?

Mr. SMATHERS. I shall be glad to yield, but first I should like to conclude my own statement.

Mr. GORE. I shall be glad to desist, but the Senator from Florida imputed to me views that he says I hold, but which I do not hold.

Mr. SMATHERS. Very well; I yield to the Sentator from Tennessee.

Mr. GORE. The Senator said he had suspected all along that the senior Senator from Tennessee thought there ought to be a limit to what a person could earn or hold or own. The Senator from Tennessee has never made such a statement as that. What I do believe, ardently, is that when we have a system of taxation based upon the income of the individual, we ought not to start to welsh upon the principle as soon as one gets into a bracket where he begins to pay in taxes a large share of his income. Unless one believes in that principle, we do not have a progressive system at all.

Mr. SMATHERS. While I do not wholly agree with what the Senator says, I shall use his argument with respect to

[*P. 2243*]

stock options. Let us see what the committee has done along the line the Senator is describing. What we are really talking about at the moment is the stock option provision. The committee has tightened up on stock options. We believe, generally speaking, that stock options should not be eliminated. They are an important part of business operations; and they are needed in order to provide incentive to certain officials and certain employees. At the same time, we believe they afford an opportunity for employees to acquire a stake in the company for which they work. So we believe stock options should not be totally eliminated.

The section of the bill we are talking about requires a holding period for the stock of 3 years, as distinguished from the 6 months' period provided in existing law. That is a material change. Obviously, that provision had to be changed for the better, even in the mind of the able Senator from Tennessee.

Second, the maximum period during which the option can run is to be 5 years, instead of 10 years, as provided in existing law. In other words, it was for-

merly the view that a person who worked for a company for a period of 10 years during which he could exercise his option. If the price of the stock were to rise at the end of 9 years and 9 months, he could exercise his option, and there would be a great margin of difference, and he could take the stock, even at the interest price, and make for himself a large profit. We have shortened the time during which the option may be exercised by 50 percent. We have reduced the period from 10 years to 5 years.

Next, the stock option must be issued at the market price on the date of grant, as against 85 percent of that price under existing law. It should be remembered that stock options are not always made available only to the president, vice president, treasurer, and other officers. I know of many cases in which companies provide stock options to employees as far down as floor walker, janitor, elevator operator, and others.

If the stock were selling at $100, the company could let its employees buy it at $85. Under the committee's proposal, that would not be possible any longer. The option must be issued at the market price on the date of the grant, although the employee would not have to exercise the option at the moment. The date on which the opportunity to buy stock is fixed; and it must be offered at the market price on that day.

Those are three respects in which the committee has materially tightened up the stock option section.

Another respect in which we have tightened up is that the bill modifies the provisions so that the price of stock options can no longer be reset when the price of the stock goes down. That is self-explanatory. That is the fourth way in which we have tightened up the stock option provision. If the price of the stock goes down, the company cannot set a lower price. It must retain the price as of the first date of issue, if they exercise it, and wait until it reaches the price at which it was originally set. Obviously, if the price of the stock goes down, the employee will not use his option. That is another important way in which the stock option privilege has been tightened.

The fifth way in which it has been tightened is that stockholder approval now must be obtained for the option plans. Rather than to let a few executives of a company meet and set for themselves and their employees the kind of stock option plan they propose to allow their employees to have, it is now proposed to require the company executives, who obviously would previously have made the determination, to hold a regular stockholders' meeting. The stockholders, whether they own 1 share, 10 shares, 50 shares, or 50,000 shares, would in the future be called into meeting and advised as to what the new stock option plan would be. So if there is any stockholder who believes the proposed option plan would be a little too generous to persons in the higher echelons of the company, or if he did not like the way in which the company was operated, or thought it might cost too much money, he would have an opportunity to disagree with the proposed plan.

I have enumerated what the committee believes are five effective ways to tighten up the entire stock option provision. If it is agreed at the outset that stock options are necessary for incentive and to provide responsible management of business, the Committee on Finance, the Treasury, and the Committee on Ways and Means have provided five effective ways in which to tighten up the stock option proposals and to eliminate practically all the abuses, including the abuses about which the Senator from Tennessee has been speaking.

Mr. LONG of Louisiana. I can appreciate the arguments of both sides—the argument made by the Senator from Tennessee [Mr. GORE] and the argument made by the Senator from Florida [Mr. SMATHERS]. When this provision first became law, I voted for it. I did not understand it too well, but I was persuaded by the late Senator Kerr, of Oklahoma, that in view of the almost confiscatory rate of taxation in the upper income brackets, some relief should be provided as an incentive to energetic young men to go into management and stay with the corporation. It was felt that they should be encouraged to work, in the Horatio Alger sense, to make for themselves a substantial income, to be a personal success, to be a success in business and finance. It was designed, one might say, to enable a person to earn his way from rags to riches by becoming a great success as a leader or captain of industry.

Industry's argument today is that something of this sort is needed in order to attract and retain good management.

So the Senator from Louisiana voted for the provision at that time. However, I am frank to say that it was the confiscatory tax rates in the upper income brackets that caused me to vote for the provision when it became law in 1950.

When President Kennedy proposed tax legislation that would afford a large measure of relief, to overcome the confiscatory rates and provide a number of adjustments that business was well en-

titled to expect, it seemed to me that the case for the qualified stock option could no longer be justified, liberal as that provision is, for the benefit of those to whom it applies.

At that time I stated that I expected to vote for the Kennedy recommendation; and, in truth and in fact, I did vote for the Kennedy recommendation. In the committee, the Senator from Tennessee moved for adoption of the Treasury's recommendation, as originally made by President Kennedy; and I voted for it, for it seemed to me that it made good sense. However, that was not the view of the majority of the committee. The majority of the committee felt that we have substantially tightened up in this field, and that the amendment would result in going too far; and the majority of the committee feels that the incentive is necessary.

Mr. President, I feel that, all things considered, the amendment represents a fair compromise between the views of the contending sides. I hope that next year we shall consider the stock option situation, and shall determine whether we should improve or change this situation one way or the other. Perhaps we have gone too far.

It is contended that a requirement that a person must exercise his first option first would be unfair, in that a person might have two options, one selling below the market and the other selling above the market, and that it would be unfair to require him to sell the one on which he would lose money, instead of selling the one on which he would gain money.

Next year we can consider all those situations, and can determine whether we have gone too far in this field.

But insofar as the committee felt that the case for relief was justified, the committee did act to provide some flexibility.

I feel that it was most unfortunate that the name of the Chrysler Corp. was used extensively in the debate, for, so far as I am able to determine, it was by no means the only large corporation using the stock option plan in just the way it was intended to be used, in order to make it possible for the corporations to acquire good management.

If I may relate a personal story, my own mother was trustee for certain funds for her grandchildren; and she bought some Chrysler stock at a time when Chrysler had poor internal management and when all sorts of difficulties confronted it. For a while she thought she had made a bad decision—because of the situation then existing in the management of that corporation. However, we are told that the stock option incentive was one of the main reasons which caused the management of that company to improve and caused the stock to double or more than double in value. In fact, I think it actually increased in value five times. So, so far as my relatives are concerned, they do not have any objection whatever to the stock option plan, and they are not the least disturbed about the fact that the Chrysler Co.'s executives made a profit by means of the plan.

After all, Mr. President, if a friend proposed to one of use that he knew how to make some money by means of a good

[*P. 2244*]

business deal, one of us might reply, "Fine, I will put up some of the money you need; and when you succeed, I will share in the profits."

So that development was a fine break for the Chrysler Corp., for in that way it acquired improved management; and I doubt that one would find that anyone who was holding 100 shares of Chrysler stock at the time when the Chrysler Corp. had poor management, and who subsequently found that the stock rose very greatly in value, now begrudges that development. In fact, many persons will contend that is exactly what Congress wanted to happen in connection with the stock-option plan. So if the stock-option plan was largely responsible for that result, I think they would bless us for voting that provision into the law and for letting the Chrysler Corp. take advantage of it.

I have referred to that great corporation because it happens to be one of the large employers in Louisiana, as a large contractor.

Mr. President, I ask unanimous consent to have printed in the RECORD a statement from the president of that corporation, together with certain explanatory information which I believe was prepared by the information officers of that corporation. The material is in regard to that transaction.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

WHAT STOCK OPTIONS MEAN TO INCENTIVE

Incentive is a critical ingredient in any economic system. The chance to sharply improve their condition is the chief reason men work hard. This has been true for a long time, and in many kinds of societies (even the Soviets are now making increasing use of personal incentives for their managers), but it has been true to a unique extent of this country. The opportunity to make it big if you're good enough is an essential part of America.

For 200 years this has been perhaps the world's most open society—which is to say,

the one in which personal incentive has had the most hope of fulfillment. We have tried to encourage, not dampen, incentive through many devices; for example, through the development of a system of education which provides more opportunity—and personal incentive—than any other country, and by far. We have tried to encourage personal incentive, and protect the spark which it provides for the whole society, in many ways. These include the law, and it is with such a law that we are concerned here.

The incentives for hard work and good performance in American business are complex, but three, at least, are unmistakable. One is the satisfaction and self-esteem that comes from doing a job well. Another is the tangible reward of money; the hope of acquiring not only enough for the things one wants today, but for the establishment of an estate. The third is a sense of ownership; of being not an employee, but a partner; of feeling "I helped build it, and a part of it is mine."

Probably every highly successful man in American business seeks in some combination all three of these rewards. But basic changes in the nature of the American corporation in the years after the great depression sharply affected the hopes of their attainment by an important group of men. This was the period which crystallized the trend away from the family-run corporation which was not only owned, but directed, by individuals of great inherited wealth. A new kind of man took over the essential decision-making functions of industry. He was a manager, not a capitalist; he was a technician, a man who knew how to make businesses go. And he was almost invariably a salaried employee.

This fact sharply limited his personal incentive. The fact that his salary might be high—very high indeed, in some cases—did not solve the problem. Taxes on income were high enough that it was, by the end of World War II, impossible to build a personal fortune through salary alone. And, if the corporation was of substantial dimensions, it was equally impossible to accumulate—through salary—enough money to buy into the business in any sizable way. This left the new breed of executive with a comfortable way of life and, presumably, great personal satisfaction—but little else.

There was, in both business and in some circles in Government, particular concern about the lack of opportunity to share in ownership. Stock option plans were devised as a means of opening a shorter road to something beyond employee status.

Essentially, a stock option is the right granted to an employee to buy a specified stock in his company at a particular price. The price is the market price, or very near it, on the day the option is granted. The employee then retains the right to buy that amount of stock, at that original market price, over a period of time (the length of time varies, depending on the company; the legal limit is 10 years). If the price of the stock goes up during that period, he has, in effect, a bargain. If it does not, he normally wil not exercise the option.

This procedure obviously represented some encouragement for top management to build a deeper interest in their company's performance, but stock option plans did not become popular immediately. Until 1950, gains realized from the sale of stock purchased on options were considered compensation by the Treasury Department; they were regarded, in effect, not as profits, but as a part of salary, and were subject to standard income tax rates. Hence, the dampening effects of a high rate schedule on personal income tax continued, essentially, to operate.

In 1950 the law setting up restricted stock options was passed by the Congress and signed by President Truman. The law set forth new, and more restrictive, rules concerning the award of stock options, but its most important change was a redefinition of the philosophy for taxation. Senate Report No. 2375, 81st Congres set it out in this fashion:

"Such options are frequently used as incentive devices by corporations who wish to attract new management, to convert their officers into 'partners' by giving them a stake in the business, to retain the services of executives who might otherwise leave, or to give their employees generally a more direct interest in the success of the corporation."

To meet this need for a kind of incentive which could not be provided by treating option-stock gains as salary, the law of 1950—modified slightly, from time to time, by later Congresses—provides that profit from the sale of stocks bought under restricted option plans and held for at least 6 months shall be taxed as capital gains.

With this modification in the concept of taxation in relation to incentive, restricted stock option plans rapidly became more popular. By 1951, 85 corporations had adopted such plans; by 1958, some 800; and by 1961 well more than half (714) of the firms listed on the New York Stock Exchange alone were using restricted stock options as a primary incentive for managerial talent. One of these was Chrysler, which adopted a plan of this kind in 1952.

The reasons why so many major corporations found such plans attractive was put succinctly by Henry Ford II, who, after pointing out that he did not and would not hold any options in his company, said:

"We (had) developed a group of exceptionally able younger men who contributed materially to the company's growth and who were not being rewarded commensurately with their contributions. * * * Some outstandingly capable people left us for that reason.

"When Congress authorized restricted stock options by amending the Internal Revenue Code, it gave us an effective means to recognize and stimulate exceptional performance. * * * In 1953, when our only shareholders were members of the Ford family and the Ford Foundation, the board of directors made its first grants of restricted stock options to 114 key employees, thus breaking a tradition of long standing.

"We have had no reason to regret that decision. I am convinced that, in broad effect, stock options have helped materially to raise the company to third place among American industrial corporations in total dollar sales. Without stock options or some comparable

incentives, the same results would not have been achieved." (Harvard Business Review, July-August 1961.)

Restricted stock option arrangements work well for many kinds of companies, as well as for many kinds of employees; the fact that they are useful to small corporations as well as large ones, to middle-range executives as well as the top echelon, have helped increase their popularity. And such a plan was to be particularly useful to Chrysler. The way it operated in this corporation is described in the next memorandum.

RESTRICTED STOCK OPTIONS AND CHRYSLER

The fact that restricted stock options would play an important part in Chrysler's future was not apparent in the first years after the plan's adoption. The period 1952–58 was one of overall decline in the market price of the company's stock; there was little advantage in the option prices generally, and only about 20 percent of options granted were exercised. This decline became more precipitous and the general position of the corporation weaker in the 4 years (1958–62) which followed; no restricted stock options were taken up during this period.

Unable to meet its competitors on across-the-board salaries and bonuses to its top officers, Chrysler was able to put the restricted stock option law to work to do what it was designed to do: to provide incentive, to say to the men it needed and wanted most "come with us and stick with us; make the company's future your future, and you will be rewarded." The men who would be attracted by this kind of challenge, it might be assumed, were the kind who could meet it best.

The success of the Chrysler Corp. during the past 2 years has been spectacular, a story almost without parallel in terms of major modern corporations. And if the rewards of the men at the center of this massive corporate rebuilding have been substantial, it should be no surprise. This is precisely the way the system is supposed to work. Specific figures for Chrysler's top officers are shown on the following table:

	Number of shares purchased [1]	Difference between market value and option price [1]
Officers who are directors:		
Paul C. Ackerman	24,000	$194,535
R. S. Bright	30,000	500,175
John D. Leary	10,000	133,725
George H. Love	80,000	1,281,614
F. W. Misch	32,000	481,981
E. C. Quinn	43,200	632,298
Lynn A. Townsend	37,600	667,483
Total	256,800	3,891,811
All executives	876,000	13,658,979

[1] Equivalent number of $6.25 par value shares, after adjustment for stock splits, Apr. 19 and Dec. 20, 1963.

[P. 2245]

The most important point is not that some individuals profited, but that a company which is a substantial force in the American economy is contributing to that economy with a vigor undreamed of 3 years ago. The evidence is striking:

Chrysler sales and earnings, 1958–63

	1963 [1]	1962	1961	1960	1959	1958
Net sales.....million dollars	2,212	2,378	2,127	3,007	2,643	2,165
Earnings (loss) before taxes on income.....do	148	126	21	66	(10)	(74)
Taxes on income (credit).....do	47	61	10	34	(5)	(40)
Net earnings (loss).....do	101	65	11	32	(5)	(34)
Per share (on present shares).....dollars	2.72	1.81	.31	.90	(.16)	(.97)

[1] 9 months only.

The rewards for incentive shown in table 1 would not have been possible without the corporate success shown in table 2; they are inextricably linked.

This point has sometimes been lost sight of in the past few months. Critics have pointed to the fact that many of the chief officers have taken advantage of the rise in the market value of the company's stock, as well as two splits, to obtain substantial personal gains. This is unquestionably true; once again, it should be pointed out that this is the way the system is supposed to work.

Some critics have gone further than this, however. They have charged that this is profit taking pure and simple, and that any presumed longtime interest in ownership is a sham. This is not true. An account of the operations of the Chrysler stock option plan is available in the report to the Senate Committee on Finance prepared by the Treasury Department and the Joint Committee on Internal Revenue Taxation, and comprehensive tables set out the activities of each of the officers as well as the general dimensions of the plan. At the end of 1963, the year in which more options were exercised than in all the rest of the company's history, Chrysler officers held almost seven times the amount of stock they held at the year's beginning. The willingness to reinvest in one's own company the profits just earned from it would seem the clearest kind of long-term commitment to partnership. There is another indication of that commitment in the fact that over half the options granted officers of the company since 1958 still have not been exercised. This hardly represents a cynical gutting for the sake of a fast dollar.

It has been said also that the utilization of restricted stock options is risk free; that

it is a game in which it is possible only to win and impossible to lose. This is hardly the case; in the first place, it is a naive view of the highly competitive automobile business in which much is constantly at stake for any officer. The slightest competitive advantage can have implications of millions of dollars. In Chrysler's case, the necessity to fight for its life in competition with two larger competitors has made the atmosphere of risk perpetual. This risk is made clear by the fact that 6 months ago there were 5 major automobile companies in the United States—and now there are 4.

Secondly, this is a naive view of personal finance. Options must be exercised for cash and in full. (This meant that most of Chrysler's officers had to arrange personal bank loans, at their own risk.) An officer must at minimum hold this stock for 6 months. If the stock goes down sharply in value, he can be wiped out—and this has happened in American corporations. If it declines substantially, he will be asked to provide more collateral. His debt, and his risk, are genuine indeed; and the pressure upon him grows as his participation increases. This is a major reason why, in the early stages of a profitable option cycle, many options are exercised; their holders pay off their debt so that in future purchases they will be working with their own, and not borrowed, money. Although the holder of restricted stock options has what is in many ways an advantageous position, it hardly can be described as free of risk.

Finally, there have been attempts to give the whole business of restricted stock options a vaguely tainetd air; as if it were a process which, if not illegal, is somehow unethical or unfair. It has been described as a "tax loophole," which it is not; a loophole is a defect unwittingly built into a statute through faulty drafting, or emergent because of changing circumstances. The law of 1950 has worked precisely as it was designed to work; the Chrysler experience demonstrates its full potential. The concept of capital gains taxation was deliberately built into the law to produce incentive—and incentive has been built into the American economic system to make it function increasingly well, to the benefit of all of us.

STATEMENT ISSUED BY GEORGE H. LOVE, CHAIRMAN OF THE BOARD, CHRYSLER CORP.

NEW YORK, December 20.—A lifetime spent in American business has made me proud of our system and of the businessmen which it fosters. A few days ago, as chairman of Chrysler Corp.'s board of directors, I commented during a special meeting of the company's stockholders on the remarkable progress Chrysler has made in the short space of 2 years.

Furthermore, I reported with some pride on the working of the stock option plan which, as an incentive to its vigorous management team, has helped that company write one of the finest comeback stories in the annals of American business.

I have been shocked at the reaction which my rather forthright statement seems to have aroused. I feel so strongly about the stock option plan and its value that I want to make certain things very clear. Two years ago Chrysler was floundering. The search for top management candidates outside the company was fruitless—no one wanted the job. We finally decided to entrust the fortunes of the corporation to the younger but experienced and aggressive men who were running it on an interim basis. By using stock incentives already approved by shareholders, and thus holding out the opportunity to share in the company's improvement, good men, both in and out of the corporation, were persuaded to tackle this really formidable task.

How well have they succeeded?

The company's earnings have gone from $11 million in 1961 to $65 million in 1962 to $100 million in the first 9 months of this year.

The value of the company's stock has increased by over a billion dollars in 2 years' time.

The dividend on the original shares has been doubled and doubled again.

The company's dealer body—each an independent and important business in itself—has grown to 6,000 and is still growing.

The company enjoys full employment—every man and woman laid off in the lean years has now been offered reemployment in a Chrysler facility.

The company's purchases are near an all-time high.

The company is now expanding vigorously at home and abroad. This expansion will mean thousands of additional jobs.

The company's tax payments for 1963 will be among the highest in its history.

Furthermore, from the stockholders' standpoint, the stock option is the most economical method of incentive. And it has the added advantage of making possible a significant investment by men who are not wealthy. It is important to get these young men out of debt so that they can devote full energy to their job, and pull themselves into the position of making additional purchases with their own earned capital.

It should be remembered that the total dispositions by officers of Chrysler Corp. since the end of February 1961, have amounted to less than one-third of their total purchases and that they today own over 10 times as many shares in their company as they owned at the end of February 1961.

Naturally, the personal investment situation varies from officer to officer. In my own case, having been in business for many years and having achieved a measure of financial security, I have neither the need nor intention to dispose of my option purchases of Chrysler stock. With younger men whose salaries are their principal income, the situation is of necessity different.

I feel so strongly that stock options are important to the successful management accomplishment we are seeing at Chrysler and also to the maintenance of national economic strength, that I will gladly make myself available at any time to anyone in our Government who wishes to discuss the workings of this plan in detail.

Mr. LONG of Louisiana. Personally, Mr. President, I am inclined to take their view that that was an intended use of the stock option plan; and I am in-

clined to believe that if they went too far with it, Congress should modify the law, after studying all the facts.

I think it unfortunate that the way the matter was handled caused a temporary decline in the price of the stock. However, all of us recognize that unfortunate events or developments often cause the price of stock to fall. I recall that on one occasion when an investigation was being made of stock market conditions and the situation with regard to a number of corporations, the result was a temporary decline in the price of the stock of the American Telephone & Telegraph Co.; but soon it recovered from that drop.

Mr. KUCHEL. Mr. President, will the Senator from Louisiana yield?

The PRESIDING OFFICER (Mr. KENNEDY in the chair). Does the Senator from Louisiana yield to the Senator from California?

Mr. LONG of Louisiana. I yield.

Mr. KUCHEL. As I understand the statement the Senator from Louisiana has made, he believes it inappropriate and inaccurate to describe as an abuse the stock-option arrangements which were entered into by the Chrysler Corp.

Mr. LONG of Louisiana. Yes. Of course, all that is a matter of opinion; but I would say that if the Senator had placed 100 shares of Chrysler Corp. stock in trust, for the benefit of his children, and if the stock was then worth $4,000, and if partially as a result of the stock-option provision which Congress passed, the market price of that stock increased to such an extent that the value of those 100 shares rose from $4,000 to $20,000, the Senator would be inclined to bless

[*P. 2246*]

Congress and to bless the corporation, and would feel that he was happy to have the corporation's executives share in his good fortune.

Mr. KUCHEL. I have asked the question so that we can understand that the use of the word "abuse" in connection with that situation is not relevant.

Mr. LONG of Louisiana. Of course, it all depends on a person's point of view. From one angle, someone might consider that development an abuse.

Perhaps that situation is somewhat similar to a situation which developed shortly after a papermill was established at Hodge, La. When the mill began operations, some of the people in that community complained about the smell. But an old storekeeper there said, as he rang up purchase after purchase on his cash register, "You know, every time I push the button on this cash register, the smell from that mill smells—to me—just like Chanel No. 5." [Laughter.]

I think that is the average reaction. Of course, someone might feel resentful when he found that the officers of the corporation had made more money; but no doubt the stockholders feel tickled pink about that entire situation.

Mr. MORTON. Mr. President, will the Senator from Louisiana yield briefly to me?

Mr. LONG of Louisiana. I yield 3 minutes to the Senator from Kentucky.

The PRESIDING OFFICER. The Senator from Kentucky is recognized for 3 minutes.

Mr. MORTON. Mr. President, I support the committee's position, and I am in opposition to the amendment offered by the Senator from Tennessee [Mr. GORE].

As has been pointed out by both the Senator from Florida and the Senator from Louisiana, the stock-option plan has developed in recent years, since World War II, during the period of high, confiscatory taxes. This plan would not have been developed if there had been more moderate income-tax rates.

Some economists say our country could get by with a maximum personal income-tax rate of between 35 percent and 40 percent, if Congress eliminated all tax-free obligations, eliminated all depletion, eliminated the credits for charitable contributions, and also eliminated this, that, and the other provisions. But we know that will not be done.

So we are reducing the rate from 91 percent to 70 percent; but 70 percent is still a very confiscatory tax rate for a person who has all his income come from his own earnings, and thus be subject to the full tax.

That is how this situation came about.

I also share the opinion of the Senator from Louisiana in connection with the publicity the Chrysler Corp. received. It happened to receive a considerable amount of publicity—whereas hundreds of others are using the same plan. Mr. Love became Chairman of the Board and reorganized the management—why? He was not necessarily trying to bail out the Chrysler Corp. stockholders. Certainly he is engaged in other important operations.

He is one of the leading management authorities in the United States. He did what he did because he had a personal reason to do so. If he were successful, he had an opportunity to make some money for himself. Is that so wrong? Who would try to straighten out that stack of worms if an incentive had not been provided?

Therefore, what the Committee on Ways and Means and the House itself have done to tighten the provision is

probably a good thing. We may have to tighten it further. We may have to relax it somewhat. We will have to see what happens. But basically there is nothing wrong in what occurred. What has made our country great is a fundamental will to produce. While America has many natural resources, it has also a great people. In 150 years we did more than any people in human history. Why? Because we had the will to produce.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. LONG of Louisiana. Mr. President, I yield 1 additional minute to the Senator.

Mr. MORTON. We have an incentive system that generates and nourishes the will to produce. If we kill the will to produce, we will never take care of the 4 or 5 million who are unemployed today. We will never expand our economic horizons as we are hopeful of doing as a result of the bill. For those reasons, I believe the tightening up process has gone far enough. I trust that the Senate will support the committee and reject the amendment of the distinguished Senator from Tennessee.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield 1 minute.

Mr. KEATING. Mr. President, I desire to add a word to what the distinguished Senator from Kentucky has said. Frankly, I have not reached a conclusion yet as to whether I shall support the Gore amendment. I believe the stock option provisions should be tightened. The committee has done a good deal of tightening. There has been an increase in the holding period for capital gains treatment. The period during which options may be outstanding has been cut in half. Options would no longer be issuable at bargain prices. Very importantly, stockholder approval of option plans would be required. These are all substantial reforms, and should be given a chance in operation. Whether the committee has gone far enough is a question I have not yet resolved, and I can assure the Senator from Tennessee [Mr. GORE] of my earnest attention to his arguments.

However, on reading last night's RECORD, I was rather distressed to see that a particular company—the Chrysler Corp.—was singled out for criticism. I hope no intimation will be left that what has happened in the Chrysler Corp. is unique or unusual. Executives in a great many companies have been taking advantages of the stock option provisions. No one has alleged, and I do not believe anyone could properly allege, that there has been anything illegal about it. All these executives have lived completely within the letter of the law. For this reason, I very much resent seeing any one company made a scapegoat. After all, that company has competitors which have pretty much the same kind of stock option plans for their own executives. So, one company should not be singled out unless there should be a clear case of illegal transactions. I do not understand that the distinguished Senator from Tennessee [Mr. GORE] is making such a contention. If he is, I would appreciate the Senator clarifying it.

Mr. GORE. Mr. President, will the Senator yield?

Mr. KEATING. I yield.

Mr. GORE. I do not know why the Senator from New York raises the question.

The PRESIDING OFFICER. The 1 minute yielded has expired.

Mr. LONG of Louisiana. Mr. President, how much time remains on both sides?

The PRESIDING OFFICER. The Senator from Louisiana [Mr. LONG] has 8 minutes, and the Senator from Tennessee has 20 minutes.

Mr. GORE. I yield the Senator 1 minute of the time allotted to me. I do not know why the Senator from New York raises the question of using the Chrysler Corp. as a scapegoat. No one has attempted to do so. But this transaction is an example of abuse by the corporate insiders of the loophole that is in the law.

I do not mean to say that they acted illegally. As far as I know, and so far as the Treasury report after its investigation showed, the transaction was entirely legal. The point is that I am trying to correct the law. I am not charging that these people have acted illegally at all. The committee unanimously asked for that report, and I placed the report of the Treasury in the RECORD.

Mr. KEATING. Mr. President, will the Senator yield 1 minute?

Mr. LONG of Louisiana. I yield 1 minute.

Mr. KEATING. I was reasonably sure that the Senator from Tennessee was endeavoring to present his case without reference to particular companies, but this particular company was the only one cited in the RECORD. I felt that it would be unfair to any one company to have it appear that that company was unique in its operation. That is the only point I was making. As I have said, I am not yet sure where the merits in the amendment are, but in fairness, I did not want to permit the RECORD to be construed as an attack upon any particular company.

Mr. GORE. Mr. President, I have cited many instances in debate and in the course of the committee hearings in which this loophole of tax favoritism has been abused. In 1961 I used IBM as an example. I cited the stock option benefits received by the president of that corporation, Mr. Thomas Watson. I did not do so by way of criticism of Mr. Watson. I do not now mention his name

[*P. 2247*]

in any critical way. But to cite the abuses which are legally available and the inequitable situation that is legally made possible, I have mentioned him. I desire to close that loophole. That is what I have been fighting for. President Kennedy asked that the loophole be closed.

Since I have referred to Mr. Watson—and again I say uncritically—I should like to cite the record.

Mr. Watson is a man of great talents. He has made great social contributions. I honor him for his contributions. But he is also a man who inherited a large fortune. I do not condemn him for that. But why should the Senator state that it is necessary, as an incentive to Mr. Watson, who already owns a very large share of IBM, to give him stock options on which he has a profit of more than $5 million?

I point out also that the record does not show that he has sold any of the stock. What he intends to do with it, I do not know. But there is an example of the president of a corporation who, through the entirely legal device about which we have been speaking, has been receiving and earning a fortune of $5 million on which he has not paid one dime in taxes, and on which the law does not require him to pay any income taxes. Yet every person who sweeps the floor pays taxes out of every check he receives.

Let Senators examine their consciences. Shall we continue to let corporate officers be a privileged class? Not only are they receiving compensation without tax liability, but we are also enticing them to increase their option benefits, thereby reducing the value of the stock which the ordinary stockholder holds.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. JAVITS. The Senator has been quite fair to Mr. Watson, whom I know as a constituent, and whom I regard very highly.

Mr. GORE. So do I.

Mr. JAVITS. I should like to add one point to the recital of the Senator from Tennessee which I think is important. Tom Watson is not only the president of the IMB Co., but also he operates the company in a very active way. I believe he spends about as many hours on the job as we do. That is important.

Second——

Mr. GORE. Before the Senator proceeds to his second point, I wish to say that I agree with everything he has said. I know Mr. Watson. I hold him in high regard. I say for the third time that I do not speak critically of him as a citizen or as an officer of a corporation. He has taken advantage of the law, and our eyes are open to it. So are his. True, he operates the company. I merely cite that example as an answer to the canard that we must provide stock option benefits for preferential tax treatment in order to give the officers of a corporation an incentive to run their business efficiently.

Mr. Watson would operate the business efficiently whether this loophole was in the law or not. He already owns a substantial part of it, and I think he would.

Furthermore, if I may allude once more to Chrysler Corp., the Senator from Kentucky made a statement earlier about how Mr. Love had increased the profits of that corporation. The truth is that last year was a great automobile year. The percentage of Chrysler's share of automobile sales has not significantly changed during the last 5 or 6 years. Six of the Chrysler Corp. officers who made a killing last year on stock options have been in the employ of the corporation for years and had options at least as early as 1958. They did not suddenly have to become activated. They did not suddenly have to be offered this premium or incentive to perform for Chrysler Corp. They had made a career in Chrysler Corp. Yet in a 7-month period last year they made a killing.

They receive compensation for their services, and they should pay taxes on their compensation the same as a man working on a lathe has to pay taxes every week from his salary.

Mr. JAVITS. As a friend of Tom Watson, let me say that he has not only operated the company well, but with phenomenal success. I do not know whether the stockholders vote on these options, but I am sure they would approve——

Mr. GORE. If I may interrupt, stockholders do approve most of them; but, as the Senator knows, the business of stockholder approval, with all the proxies that are held, is a mere formality. The corporate officers control the corporation, in large measure.

Mr. JAVITS. In my judgment, that fact cannot be used as an argument. A stockholder has a right to vote——

Mr. GORE. Let us not get into that argument. Let us say that the stockholders approved.

Mr. JAVITS. My next point is that I am sympathetic toward the Senator's position. I only suggest we would be better advised if we sought to spread the stock option doctrine to the man who works at the lathe than to penalize certain persons for helping to produce great results for the American economy.

Mr. GORE. The Senator has a suggestion that is on all fours with a provision in the bill. There is an employee purchase plan provision in the bill, but it must be nondiscriminatory, and I think it should be nondiscriminatory. Under this plan, every employee of a corporation can be given an option to buy $25,000 worth of stock annually at 85 percent of the market value the day he receives the option. This can go on year after year; but it must be nondiscriminatory. My amendment leaves that provision in the bill. But over and beyond that, the bill has this other category, the "qualified" opinion. This is the "top insiders" deal, and there is no limit on it. It can be $250 million. It can be any amount.

That is unconscionable. It is wrong. It sets up the corporate officers as a privileged class. We permit them to receive compensation on which they owe a very limited tax liability; and, if they are affluent, on which they will owe no income tax liability whatsoever.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. PASTORE. What does the Senator's amendment do?

Mr. GORE. My amendment would strike from the bill this new category of qualified stock option. It would in no way affect the stock purchase plan, which must be nondiscriminatory.

I would strike this qualified section on which there are no limits—to be specific, section 422.

If we are to permit under the law preferential tax treatment for stock options, there ought to be two conditions: First, it ought to be nondiscriminatory. The man who works by the hour should benefit from the profits of that corporation, the same as the man who works at the front office. Second, there should be some reasonable limit to the amount of the options.

There is in the bill a provision that does exactly that: First, it provides for nondiscrimination; second, it is limited to $25,000 a year. Third, the option can be granted at 85 percent of market value.

I think this is liberal enough for the man at the top or the man at the bottom. True, the man working on a machine will not be able to buy $25,000 worth of stock a year; but the man at the top may be, and it seems to me that is enough incentive for him to have.

The bill now contains section 422. This provides a new category, called "qualified" options to replace the present restricted stock option.

Mr. PASTORE. Mr. President, will the Senator yield further?

Mr. GORE. I yield.

Mr. PASTORE. I am sympathetic toward the Senator's amendment. My reason is simple, without mentioning personalities, which is regrettable, because Mr. Watson and I are cotrustees of Brown University. I have great admiration for him. I regret that anyone's name had to be used on the floor of the Senate. But that as it may, I have known cases in which ingenious and talented persons had been taken into large corporations and, within 5 or 6 years, became very wealthy men. Some retired from the corporations after only 10 years and had so much money that they could not spend it during the remainder of their lives. I heard that testimony in some of the committees on which I have served. I am not critical, because they are acting within the law.

Mr. GORE. But we are lawmakers.

Mr. PASTORE. There is abundant legal opinion to the effect that no man has to be embarrassed or apologize for doing what the law permits. But the fact is that something should be done about it. What disturbs me is the ceiling of $25,000. Why could it not be measured on a man's salary? Would that not be more effective? Suppose a man earns a quarter of a million dollars. Why should he be confined to $25,000? Why not base it on his salary or earnings? I think it should be based on a percentage of the salary that the board of directors are willing to pay him, rather than have it

[*P. 2248*]

gaged arbitrarily at $25,000. To me $25,000 is a large sum of money, but I know that to some of my colleagues $25,000 is not much. I am looking at the Senator from Ohio [Mr. LAUSCHE].

Mr. GORE. In which category does the Senator from Rhode Island put the Senator from Ohio?

Mr. PASTORE. In my category.

I think it might be better if it could be measured in terms of a man's salary. In other words, no one could benefit to the extent of more than a certain percentage of his salary.

Mr. GORE. The Senator's suggestion has some merit. There should be some limit or some guideposts. But there are no limits in this "qualified" plan.

Mr. PASTORE. That is correct. I do not think we ought to measure it on that basis. A man may have the ability to earn $250,000 a year, for example. He has to pay a tax on it, sometimes amounting to 90 percent of his salary. I think we ought not to measure it by a ceiling which is arbitrary, because it is difficult to say that the ceiling should be $25,000. Perhaps it should be 25 percent, or 50 percent, or another percentage, of his salary. But it ought to be gaged upon a man's ability to earn rather than on an arbitrary ceiling of $25,000.

Mr. GORE. The Senator refers to a possible 90-percent tax rate. I point out that the maximum rate is, by this bill, cut to 70 percent. Senators have been saying here for years that what we should do is cut the highly progressive rates, but at the same time close the loopholes.

Mr. PASTORE. That is correct.

Mr. GORE. What we are doing here is cutting the rates and opening up more loopholes.

Mr. PASTORE. That is right. That is one reason why I have made the suggestion. It takes into account that 91 percent of a man's salary is rather much.

Mr. GORE. That is correct.

Mr. PASTORE. To cut out the cause of the abuse and reduce it from 90 percent to 70 percent is right. We should give consideration to what the Senator from Tennessee has in mind, but I would hope that we would gage it more on a percentage of salary, rather than on an arbitrary figure. That is the only reason I have made the suggestion.

Mr. GORE. Mr. President, may I inquire how much time remains to me?

The PRESIDING OFFICER. Five minutes remain to the Senator from Tennessee.

CORRECTION OF THE RECORD

Mr. GORE. Mr. President, the amendment at the desk is the correct amendment No. 418, but I notice that the amendment printed in the RECORD yesterday, on page 2133, is an incorrect amendment.

I ask unanimous consent that the permanent RECORD show the correct amendment which is at the desk.

The PRESIDING OFFICER. The correction will be made, as indicated.

Mr. GORE. Mr. President, I reserve the remainder of my time.

Mr. HART. Mr. President, will the Senator from Tennessee yield briefly?

Mr. GORE. I yield.

Mr. HART. The Senator from Tennessee referred to the RECORD of yesterday. I refer to page 2137 of that RECORD, where seven officers of the Chrysler Corp. are listed. I believe I understand the Senator from Tennessee perfectly. I am a friend of six of the seven officers listed. It is unusual to find ourselves in the Chamber talking about individuals whom some of us know personally. I should like to make myself clear on this point.

Each of these individuals is a contributing, responsible citizen in Detroit. Each would adhere rigidly to any requirement of the law with respect to a stock option, which, in the case of these friends of mine, the Senator from Tennessee has agreed is quite within the law.

Mr. GORE. Yes, indeed.

Mr. HART. I should like to have that made clear in the RECORD. It so happens that I support the amendment offered by the Senator from Tennessee, because I believe it moves in the proper direction, but when I see such phrases as "insiders dealings," and "making a killing," somehow this suggests in the minds of casual readers, perhaps, that it was in violation of law, or socially wrong. However, I wish to make it explicit and tell the Senator from Tennessee that I believe his approach is sound and his amendment should be adopted.

Mr. GORE. I am in disagreement with only one part of the statement of the Senator from Michigan. I believe it is socially wrong. Unfortunately, it is necessary to cite specific cases. We do not deal in a vacuum in our debates and we must bring things down to concrete reality.

I have referred to "restricted" options as "insiders deals." That is what it essentially is. Numerous instances have been cited to me of smaller corporations than Chrysler in which the value of a stock was deliberately manipulated to a low point at the time the options were granted and then, once the options are granted, once the options are in hand, the publicity begins to flow, the dividends are paid, and the stock goes up on the market—and then the corporation officers cash in.

I have had instances cited in which corporations were left almost bankrupt. I am not speaking now of big corporations, I am speaking of something almost——

Mr. PASTORE. I agree with the Senator from Tennessee. Of course it is socially wrong. If we look at the automobile industry, the automobile industry is controlled by the Big Three, namely, Chrysler, Ford, and General Motors. There was a time when Kaiser tried to inject himself into the automobile industry, but he did not last too long.

If we wish to buy an automobile today, unless we wish to buy a foreign import, we buy either General Motors, Chrysler, or buy Ford. We say that is competition. That is all among the Big Three. But this system is socially wrong. Who pays for it? The man who buys the automobile is paying for it.

If we allow these abuses, they will be reflected in the price, and when they are reflected in the price, the consumer is hurt. When we hurt the consumer by some loophole, it is socially wrong.

Mr. GORE. Mr. President, let me now review the changes made in existing law by the pending bill.

Under existing law, let me repeat, we have specifically recognized a certain method of paying employees additional compensation at a reduced tax rate. This is the so-called restricted stock option as now set out in section 421 of the code.

The pending bill terminates—albeit, very, very slowly so as not to upset the affluent—the "restricted" stock option. The Finance Committee has made some changes in this regard which I hope will be revised by the conferees. But these changes are relatively unimportant when viewed in the light of the main issue.

The pending bill then sets up a new stock purchase plan, with conditions very similar to the old "restricted" stock option plan, except that the ordinary employee must not be discriminated against, and a ceiling of $25,000 per year is set. This provision is modeled somewhat on the employee purchase plan now in effect at A.T. & T.

The pending bill then sets up a brand new type of option plan for corporate executives and insiders which is called the "qualified" stock option. This is similar to the old "restricted" stock option, with the following changes:

First. The stock must be held for 3 years. This is certainly a vast improvement over the corresponding requirement with respect to the "restricted" stock option, under which the stock must be held for only 6 months. This new requirement should discourage some of the quick profit operations, such as we have recently seen at Chrysler.

Second. An option cannot be oustanding for more than 5 years. The present requirement is 10 years. This is some improvement, although the 5-year period will be sufficiently long to allow the market to fluctuate through an economic cycle so the corporate insiders can at least get one good free ride during the life of the option.

Third. The new "qualified" options must be issued at 100 percent of market value. This is an ostensible improvement, but the corporate insider who is manipulating the market and looking for a 100- or 200-percent rise in the price of his stock, from low to high, is not going to be concerned over this rise from 95 to 100 percent in the requirement. Little use has been made by insiders of the present 85-percent limit.

Fourth. The new requirements are said to be tight enough to beat the present vicious practice of "resetting," that is reducing the price of outstanding options when the market goes down. The old requirements were thought by some to be good enough in that regard, but they were not. Whether these new requirements are good enough remains to be seen. Already, the experts are, I am sure, busy trying to see how best to circumvent these new requirements.

[*P. 2249*]

Fifth. Stockholder approval is to be required under the new rules. This is a rather meaningless requirement. Corporate management uses the proxy system. It take something more exciting to the insiders, such as a battle for outright control, to upset the routine proxy system by which management always controls sufficient votes to carry any question at a stockholders' meeting such as a new option plan.

Sixth. Stockholders with more than 5-percent ownership in the corporation are not to be allowed to participate in new option plans. Few people who are still working own 5 percent of any publicly held corporation.

Mr. President, I would not belittle the improvements made under the new "qualfied" system over the old "restricted" plan. But the only real improvements are the first two, that is, the lengthening of the holding period, and the shortening of the option period. I am not so sure the latter is too important.

The first requirement, that is, the 3-year holding period, can perhaps be circumvented to some extent by setting up liberal loan plans or otherwise having the corporation set up some system for helping the insiders swing their deals. And, of course, with the backing of an option, the insider can still play the market, including puts and calls, straddles, strips and straps, and all the other manipulations.

It is to the credit of the Congress that something is being done to clean up this option mess. But what ought to be done is to put an end to this whole free ride at the expense of the taxpayers and of

the ordinary corporate stockholders.

Mr. President, let me advert to the Chrysler situation. I placed in the RECORD yesterday, and Senators will find it beginning on page 2135, the Treasury report. Let me emphasize that the Chrysler situation is not unique. There has been no violation of law. I do think there has been something of a violation of trust. The ordinary stockholder has not been properly dealt with by the insiders, in my opinion.

There are two things about the Chrysler situation which do seem to me to be worth emphasizing.

First, Chrysler has had a stock option plan in effect since 1952. If stock options guarantee top performance and top profits, why did Chrysler not prosper during the past several years? It should be quite obvious that Chrysler is really riding the crest of a wave of 3 good automobile years.

Second, most of the Chrysler executives who made such a killing on Chrysler stock during the past year have been with the company for some time. Of the top seven officers who figured so prominently in this current Chrysler deal, only Mr. George H. Love, chairman of the board, is a relative newcomer to the company. All the others have been with the company for years, and all had stock options at least as far back as 1958. Why did not options encourage these people to work harder, take more interest in their company's affairs, and pull it into a strong profit position years ago?

The plain truth, Mr. President, is that the stock option gimmick is nothing more than a tax dodge. It does not help the company. Any corporate executive who is paid upward of $200,000 per year, as is the case with these top seven Chrysler people, is going to do his best. He is going to take an interest in his work. He is going to try to make money for his stockholders.

The PRESIDING OFFICER. The time of the Senator from Tennessee has expired.

Mr. GORE. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. GORE. Mr. President, I ask unanimous consent that because of the official absence on important business of the distinguished chairman of the committee, the yea-and-nay vote on this amendment be postponed subject to the call of the Senator in charge of the bill, the Senator from Louisiana [Mr. LONG].

Mr. LONG of Louisiana. I was taken somewhat by surprise by such a request, but now the Senator has informed me of the purpose of his request. Will the Senator from Tennessee inform me as to what hour he would like to have the vote?

Mr. GORE. Whenever the Senator from Louisiana wishes to call it up. The Chairman of the Committee is necessarily absent and the distinguished majority leader, the Senator from Montana [Mr. MANSFIELD] has asked that the vote be delayed, and I am sure that all Senators will wish to comply.

Mr. LONG of Louisiana. I agree to that. Do we also reserve the time that is available prior to the vote under the unanimous-consent request of the Senator from Tennessee?

Mr. GORE. I would prefer that the debate be finished to be followed by the yea-and-nay vote at the pleasure of the Senator from Louisiana.

Mr. LONG of Louisiana. Mr. President, how much time remains?

The PRESIDING OFFICER. Four minutes remain.

Mr. LONG of Louisiana. Four minutes?

The PRESIDING OFFICER. Four minutes remain to the Senator from Louisiana.

Mr. LONG of Louisiana. Mr. President, I suggest that the time be reserved and divided, 2 minutes for each side; and that the Senate proceed to another amendment and take the yea-and-nay vote at a later hour—perhaps in one-half hour.

Mr. PASTORE. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Rhode Island will state it.

Mr. PASTORE. Does whispering between Members get into the RECORD? I should like to know what happened in this whispering session, so that Senators may be informed. There is so much happening on the floor.

Mr. GORE. Mr. President, the chairman of the committee is now at the White House conferring with President Johnson, and I should like to have the vote on this amendment postponed until he returns.

Mr. PASTORE. When can we expect to vote on the amendment?

Mr. GORE. I understand that the chairman of the committee will return at 12 o'clock.

Mr. LONG of Louisiana. Mr. President, I shall defer the vote until the chairman of the committee has returned, and Senators can then vote on it.

Mr. PASTORE. Then, do Senators stand around waiting until——

Mr. LONG of Louisiana. We will proceed with other amendments. The chairman particularly wished to vote on this amendment offered by the Senator from Tennessee.

Mr. PASTORE. Then we will proceed with another amendment at this time?

Mr. LONG of Louisiana. Yes.

Mr. PASTORE. That is satisfactory.

Mr. LONG of Louisiana. Mr. President, I reserve the time for the yea-and-nay vote on this amendment when it is called up by the Senator in charge of the bill.

The PRESIDING OFFICER. Is there objection?

The Chair hears none and it is so ordered.

Mr. CARLSON. Mr. President, I offer my amendment No. 385 which I send to the desk and ask to have it stated.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. At the end of the bill it is proposed to insert the following:

TITLE IV—EXCISE TAX CHANGES

SEC. 401. REBUILT AUTOMOBILE PARTS.

(a) EXEMPTION FROM TAX.—Section 4063 (relating to exemptions from the tax on motor vehicles) is amended by adding at the end thereof the following new subsection:

"(c) REBUILT PARTS.—Under regulations prescribed by the Secretary or his delegate, the tax imposed by section 4061(b) shall not apply in the case of rebuilt parts or accessories."

(b) TECHNICAL AMENDMENT.—Section 4062 (relating to definitions) is amended by striking out subsection (b).

(c) EFFECTIVE DATE.—The amendments made by this section shall apply with respect to articles sold on or after the first day of the first month which begins more than 10 days after the date of the enactment of this Act.

Mr. CARLSON. Mr. President, the minority leader, the Senator from Illinois [Mr. DIRKSEN], offers the amendment, which I am presenting it for him today in his absence. I shall read the statement which the minority leader had prepared for delivery.

The tax bill has been sponsored by the administration as a means of invigorating our economy. In this connection, epistles have been written and voices have rung loud throughout the Nation in concern over the plight of the small businessman. I take my place with those who believe that the small businessman has been considered the least while known to be one of the most important in the survival of our economic system. I think we should take steps to afford the small businessman the relief that he so richly deserves. Along with my colleagues, Senators BENNETT and CARLSON, I am offering amendment 385 to H.R. 8363 as a token of the recognition that the Congress must soon give to those whom we so eloquqently profess to protect. Lip service is no longer enough.

[*P. 2250*]

I refer in this particular instance to the small companies that are rebuilding automotive parts and who have been so seriously and adversely affected by the imposition of an excise tax on their goods. They are not rebuilding luxury items, rather they are rebuilding essentials required by our Nation on wheels. And they do so at a low price with the quality of an originally manufactured automotive replacement part. The tax imposed on these restored parts is a double tax that is ultimately borne by the consumer twice—for the original part was taxed upon its manufacture and, under the code, is taxed again when it is restored.

There are over 1,200 of these small businesses in Illinois and if each Senator were to examine the rebuilders, machine shop operations, independent garage men, service stations and the various car and truck dealer services who operate in Senators' States and who deal in restored automotive parts, they would easily see that the removal of this tax will stimulate their small businesses and benefit the Nation as a whole.

The revenue derived from this tax is relatively small. The Secretary of the Treasury admits difficulty "even to obtain a reasonable estimate of the total revenue from rebuilt parts" but uses the figure of from 5 to 8 million as an estiamte. This revenue derived from this excise tax is almost completely offset by the indecision and confusion arising out of the uncertainty of the regulations of the Internal Revenue Service as to which rebuilding operations are taxable. The language of the regulations is at best difficult and elusive of interpretation. Over the years there have been constant negotiations with the Internal Revenue Service as to the application of the tax.

I believe Senators will find on their desks the basic regulation which is now being considered by the Internal Revenue Service. It would affect anyone who drove his car into a filling station to have his spark plugs cleaned. Such an operation would be subject to an excise tax. The cleaning of plugs would be treated as if the plugs were new.

The 8-percent excise tax as imposed is supposedly applied to manufacturing and is defined in the Internal Revenue regulations as "rebuilding of automobile parts and accessories as distinguished from reconditioning or repairing."

From this seemingly simple but illusory distinction have emerged interpretations full of potholes. Indeed the Internal Revenue Service has frolicked with the traditional definition of the courts that manufacturing means a transformation, the making of a new and different article with a distinctive name, make, and use.

Thus, in 1959, Revenue Ruling 58–620 was proposed which would have applied the tax to any rebuilding operation if there was merely a commingling of the components of automotive parts in the restoring process. This was finally withdrawn on June 29, 1959, after months of confusion and unrest.

Again, in 1961 the Internal Revenue Service proposed regulations based on another new theory—that would have labeled as manufacturing the simple cleaning of a commutator in a lathe operation.

After long negotiations with the Internal Revenue Service the proposed regulation in this respect was not promulgated.

Today, as in the past, we find the small businessmen who restore automotive parts unable to forecast their tax liability with any degree of accuracy. For example, the Internal Revenue Service has just issued Revenue Ruling 63-255 which would extend the manufacturers' excise tax on automobile parts to spark plugs under the unique theory that in view of the "totality" of the cleaning operation, it is somehow the same as manufacturing.

I have one of these spark plugs on my desk, as an example of what would be involved in this situation.

In view of the factors we have outlined; namely, the fact that rebuilding is not manufacturing, the adverse impact of the tax on the thousands of small businesses, and the very small revenue involved, I submit that this tax should be repealed entirely.

Having in mind the fervent plea of the administration to stimulate the economy through the tax cut, it would seem antipodal not to rescue the thousands of small businessmen engaged in these operations which involve the restoration of nonluxury, essential items which are made available to the consumer at low prices and original quality.

Mr. President, the Department of Commerce states that as of June 30, 1961, there were 240,431 filling stations in the United States. Of these, 203,960 were sole proprietorships, 30,554 were partnerships, and 5,907 were corporate owned.

When we combine the filling station operators with the regular rebuilders and jobbers we approach a total of 288,000 small businessmen who must file quarterly tax reports on the excise tax. This represents over a million tax reports to be prepared by the small businessman; these reports must then be processed and audited by the Revenue Service, and the total yield in revenue is between $5 and $8 million, far less than the cost of preparing them and probably less than the cost incurred by Revenue Service in processing them. In fact, the Revenue Service probably loses money in collecting and processing this tax.

Senators will find on their desks the proposed regulation 63-255 dealing with rebuilt spark plugs.

I sincerely hope that the Senate will give consideration to the problems of the great number of people who would be involved in this situation. Under the ruling, a person who drove into a service station to have his spark plugs cleaned would have to pay an excise tax on the cleaning of used spark plugs. That is what the ruling would provide. This is the ruling that the Internal Revenue Service is considering issuing.

I sincerely hope that the Senate will accept the amendment.

Mr. LONG of Louisiana. Mr. President, if the matter had been presented to the committee, the committee could have persuaded the Treasury to change its regulation insofar as the cleaning of spark plugs is concerned. I agree with the Senator from Kansas with respect to the clearing of spark plugs. Although the Senator's amendment involves a revenue loss of $8 million, it also involves commodities which are competitive with manufactured articles, which are also subject to a higher excise tax, and those articles yield tax revenue of $240 million.

The competitive nature of rebuilt parts as against new parts, and of new parts being more heavily taxed than rebuilt parts, raises a number of problems that should be considered. If an automobile is being repaired, no tax is imposed for the repair and rebuilding of the part, if the owner has title to the automobile while it is being repaired, contrary to the impression the Senator's statement may have left.

The adoption of the amendment would, again, mean entry into the excise tax field, in which the Senate thus far has avoided engaging.

In addition, the amendment is proposed by the Senator from Kansas [Mr. CARLSON] on behalf of the junior Senator from Illinois [Mr. DIRKSEN], who is not present. No member of the Committee on Finance was able to persuade the committee to adopt more amendments than was the Senator from Illinois. Actually, the bill contains amendments originally proposed by the junior Senator from Louisiana and disagreed to by the committee, which were subsequently proposed by the junior Senator from Illinois and then agreed to. [Laughter.] There is no stronger advocate of any cause in the Senate than the junior Senator from Illinois, who unfortunately is not present today for reasons of health. If there is merit to the amendment, he should have offered the amendment in committee. He did not. So far as I know, the Senator from Illinois has a better batting average for having amendments agreed to in committee than has any other member of the committee.

I hope the Senator from Kansas will permit the committee to consider this proposal further and to study it in connection with expected excise tax legislation. I assure the Senator from Kansas, even though I do not believe the junior Senator from Illinois needs help from the junior Senator from Louisiana, that if there is any help I can give, as the Senator in charge of this bill and as a member of the committee, I shall be glad to give it. I hope the Senator from Kansas will not insist on including the amendment in the tax bill. The Senator knows how fervently I insisted that ex-

cise tax amendments should not be included in the bill. When the question of revision of excise taxes comes up in a subsequent bill, I shall have no objection to considering such an amendment as the Senator from Kansas proposes.

Mr. CARLSON. The distinguished Senator from Louisiana has made a correct statement. When it comes to having amendments agreed to in committee, I am sure that the efforts of the minority leader, the distinguished Senator from Illinois [Mr. DIRKSEN], were much more successful than were those of the senior Senator from Kansas.

Mr. LONG of Louisiana. More than the efforts of both of us together.

Mr. CARLSON. In view of the opposition of the Senator from Louisiana, I assume that the amendment will not be agreed to today, thus keeping my batting average about where it was in committee. But I do say that the amendment has merit, in view of the proposed regulation of the Treasury Department, which, to say the least, is outlandish.

Mr. President, I ask unanimous consent that the text of the proposed regulation and also a list of the auto part rebuilders, by States, be printed at this point in the RECORD.

There being no objection, the proposed regulation and list were ordered to be printed in the RECORD, as follows:

REVENUE RULING 63-255, REBUILT SPARK PLUGS

The restoring of used spark plugs to serviceable condition by a process which consists of the washing, drying, sandblasting, filing the electrodes, plating, and packaging of the plugs constitutes a "comparable major op-

[P. 2251]

eration" within the meaning of section 48.-4061(b)-3(a) of the Manufacturers and Retailers Excise Tax Regulations. Therefore, such operation is considered to be rebuilding (manufacturing), and the restored spark plugs are subject to the manufacturers excise tax on automobile parts or accessories, imposed by section 4061(b) of the Internal Revenue Code of 1954, when sold by the rebuilder (maufacturer).

For purposes of determining the applicability of the manufacturers excise tax on automobile parts or accessories, advice has been requested whether the restoration of automobile spark plugs in the manner and for the purpose described below is considered to be "rebuilding" (which contitutes manufacturing).

A company is engaged in the business of restoring and selling automobile spark plugs. The company purchases used spark plugs from garages and service stations. The spark plugs are then sorted and only the restorable plugs are retained and processed.

The first step performed by the company in restoring the used plugs is to wash them in detergent and water and dry them in ovens. After sandblasting the plugs to remove all carbon deposits, the electrodes are filed and the plugs are cadmium-plated to retard corrosion and make the plugs look new.

Finally, the plugs are sorted as to brand and type, stamped with the word "Repaired" and packaged eight to a box. These restored plugs are guaranteed for 10,000 miles.

Section 4061(b) of the Internal Revenue Code of 1954 imposes a tax on the sale by the manufacturer, producer, or importer of parts or accessories (other than tires and inner tubes, and other than automobile radio and television receiving sets) for any of the articles enumerated in section 4061(a) of the code.

Section 48.4061(b)-3(a) of the manufacturers and retailers excise tax regulations provides that rebuilding of automobile parts or accessories, as distinguished from reconditioning or repairing, constitutes manufacturing, and the rebuilder of such parts or accessories is liable for the tax imposed by section 4061(b) with respect to his sales of such rebuilt parts or accessories. Reboring or other machining, rewinding, and comparable major operations constitute rebuilding. The person owning the part or accessory being rebuilt is the manufacturer of the article and is liable for the tax on his sale of the rebuilt part or accessory. The tax attaches whether the machining or other operation is performed by the rebuilder himself or by some other person on his behalf.

The spark plug restoring process described above, when viewed in the totality of the operation, constitutes a comparable major operation within the meaning of section 48.4061(b)-3(a) of the regulations. Therefore, such operation is rebuilding (manufacturing) for purposes of the manufacturers excise tax.

Accordingly, it is held that the rebuilt automobile spark plugs are subject to the manufacturers excise tax on automobile parts or accessories, imposed by section 4061 (b) of the code, when sold by the rebuilder (manufacturer).

This Revenue ruling will not be applied to sales of the rebuilt spark plugs made prior to January 9, 1964, under the authority set forth in section 7805(b) of the code.

Auto part rebuilders: Independent garage men and service stations in the United States total over 288,000 small businesses.

In addition to the service stations, the count of rebuilders and jobber-warehousemen by States is below:

State	Rebuilders	Jobbers
Alabama	87	274
Alaska	7	11
Arizona	141	131
Arkansas	50	199
California	1,320	1,374

Mr. CARLSON. Mr. President, in view of the statement made by the distinguished Senator from Louisiana, I shall not ask for a yea-and-nay vote on the amendment, but I urge that the Senate vote on it.

Mr. LONG of Louisiana. I appreciate the excellent argument made by the Senator from Kansas. I hope the Senate will not agree to the amendment. But speaking for myself, I promise the Senator my full cooperation to try to solve this problem when new legislation is considered.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Kansas.

The amendment was rejected.

Mr. MORTON. Mr. President, on behalf of the Senator from Illinois [Mr. DIRKSEN], I call up amendment No. 359, which was offered in committee.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 179, between lines 12 and 13, it is proposed to insert the following new subsection:

(b) INCREASE IN AMOUNT OF ORDINARY INCOME WHICH MAY BE OFFSET BY CAPITAL LOSSES.—Section 1211(b) (relating to limitation on capital losses of taxpayers other than corporations) is amended by striking out "plus the taxable income of the taxpayer or $1,000, whichever is smaller" and inserting in lieu thereof the following: "plus whichever of the following is smaller: (A) the taxable income of the taxpayer, or (B) $2,000, in the case of a taxable year beginning in 1964; $3,000, in the case of a taxable year beginning in 1965; $4,000, in the case of a taxable year beginning in 1966; and $5,000, in the case of a taxable year beginning in 1967 or any subsequent taxable year".

On page 179, line 13, strike out "(b)" and insert "(c)".

On page 180, line 22, strike out "(c)" and insert "(d)".

On page 203 (line 8, strike out "(d)" and insert "(e)".

Mr. SMATHERS. Mr. President, is this the amendment the Senator from Illinois [Mr. DIRKSEN] offered in committee?

Mr. MORTON. If the Senator will allow me to explain the amendment, the Senate will know what we are talking about.

The amendment deals with the stepup amount a person can carry forward on capital losses. The House language provides that $1,000 may be carried forward indefinitely. As I recall, the present law provides 5 years. The amendment would step that up. It would increase the $1,000 to $2,000 in 1964, to $3,000 in 1965, to $4,000 in 1966, and to $5,000 thereafter.

As members of the committee may remember, the Senator from Illinois stated that we were trying to encourage risk capital. He cited the example of one who might risk, perhaps $50,000, and then have no chance of ever recovering it if the venture went sour. The amendment is designed to encourage more people to invest risk capital and in that way create jobs.

Mr. President, I ask unanimous consent that a statement prepared by the Senator from Illinois may be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

INCREASE IN AMOUNT OF ORDINARY INCOME WHICH MAY BE OFFSET BY CAPITAL LOSSES

In his tax message to the Congress the President in commenting on capital losses said "More adequate capital-loss offsets will improve the investment odds, encourage risk taking on the part of investors, and stimulate economic growth." H.R. 8363 provided for an indefinite loss carryover period, repealing the 5-year limitation. This was deleted by the Finance Committee. It is doubtful that this provision alone would have the desired effect, asked by the President particularly among the small investors.

The amendment I am proposing increases the annual dollar limitation on the amount of capital losses which may be deducted from ordinary income. Presently the limit is $1,000.

This amendment increases the $1,000 to $2,000 in 1964; $3,000 in 1965; $4,000 in 1966; and to $5,000 in 1967 and subsequent taxable years.

1. DOUBLE STANDARD FOR TAXING GAINS AND LOSSES

Under section 1211(b) of the Internal Revenue Code the individual is permitted to

deduct capital losses to the extent of his capital gains plus $1,000 in any one year.

In the absence of capital gains, an individual who sustains a capital loss of $10,000 in 1963 could deduct only $1,000 on his 1963 return even though he paid capital gains tax on $10,000 of capital gains in the previous year.

[*P. 2252*]

2. INDIVIDUAL MAY NEVER RECOVER CAPITAL LOSSES IN FUTURE YEARS

Under section 1212 of the Internal Revenue Code the individual is permitted to carry capital losses forward for 5 years. If the taxpayer does not have capital gains during this 5-year period there would be an opportunity to recover capital losses to the extent of only $5,000. In the case of a deceased taxpayer, it would appear that any capital losses not utilized on his final return could not be deducted thereafter.

The tax bill which passed the House of Representatives extended the 5-year limit to an indefinite period. This bill did not change the $1,000 limit above.

3. TAXPAYER DEPRIVED OF USE OF FUNDS EVEN IF HE RECOVERS LOSSES IN FUTURE YEARS

If an individual carries forward capital losses in the amount of $5,000 from the calendar year 1963, he would be deprived of the use of $5,000 for 1 year, $4,000 for 2 years, $3,000 for 3 years, $2,000 for 4 years, and $1,000 for 5 years in the absence of capital gains.

To carry $10,000 in capital losses forward under the House bill, in the absence of capital gains, would cost the taxpayer about $2,700 in lost interest on his money at 6 percent.

To carry forward nine-tenths of a $10,000 capital loss to future years results in a cost of $2,700 in interest when figured at the rate of 6 percent under the House bill. The figures are as follows:

$9,000 for 1 year at 6 percent	$540
$8,000 for 2 years at 6 percent	480
$7,000 for 3 years at 6 percent	420
$6,000 for 4 years at 6 percent	360
$5,000 for 5 years at 6 percent	300
$4,000 for 6 years at 6 percent	240
$3,000 for 7 years at 6 percent	180
$2,000 for 8 years at 6 percent	120
$1,000 for 9 years at 6 percent	60
Total	2,700

While we profess to encourage free competitive enterprise and risk capital, under the House bill we would be requiring that capital losses be carried forward to future years if these losses exceeded 5 percent of a $20,000 investment or 2 percent of a $50,000 investment or 1 percent of a $100,000 investment. The maximum dollar investment that one could afford under these restrictions would be very limited.

The percentage of income on securities is relatively small in comparison with earlier years. Once a price-earnings ratio of 19 times earnings was considered reasonable. This ratio has about doubled. This means that more savings and larger investments are required to buy securities that will earn the same number of dollars, and these dollars will buy even less. Therefore, investors cannot take an undue risk for themselves and their families.

4. INDIVIDUAL CANNOT USE DIVIDEND INCOME AS OFFSET AGAINST LOSSES

If an individual received dividends of $10,000 in 1963, and sustains capital losses of $10,000 in 1963, he could deduct only $1,000 of the capital losses on his 1963 income tax return and would be required to pay taxes on the total $10,000 in dividends received.

5. INDIVIDUAL NOT ALLOWED CARRYBACK ON CAPITAL LOSSES

If an individual had paid income taxes on $10,000 in capital gains in 1962, and the situation is reversed and he sustains capital losses of $10,000 in 1963, this taxpayer can deduct only $1,000 in capital losses in 1963.

6. CAPITAL LOSSES ALLOWED INDIVIDUALS COMPARES UNFAVORABLY WITH OTHER RESERVES FOR LOSSES

The $1,000 limit on capital losses imposed under section 1211(b) of the Internal Revenue Code amounts to 1 percent of a $100,000 investment, to 2 percent of a $50,000 investment, or 4 percent on a $25,000 investment. A $1,000 limit on capital losses does not provide a worthwhile incentive and it is inequitable on its face.

The Government is in effect stating to investors that on their future investments, in the absence of capital gains, an allowance of $1,000 will be made annually regardless of the size of the investment. This offer is being included in a bill that is designed to encourage risk capital. The limit of $1,000 permits a deduction of 20 percent of a $5,000 investment, of 10 percent of a $10,000 investment, or a mere 1 percent of a $100,000 investment. Instead of encouraging investment, the present law and the House bill discourages investment above $5,000 to $10,000.

Investors have avoided risk situations for some time. There are undoubtedly more risk situations in the over-the-counter market than are involved in securities listed on the New York Stock Exchange. An examination of the volume in these two markets would no doubt reveal the extent to which investors are avoiding risk situations at the present time.

Individual investors are entitled to an allowance for capital losses that is more in line with the reserves for losses that are set up by lending institutions.

7. REASONABLE OPPORTUNITY FOR PROFIT

It is ordinarily assumed that there should be some reasonable relationship between the opportunty for profit and the risk of loss in any given transaction. The individual who invests his money in the stock of a corporation recognizes that about one-half of the company profits will be paid to the Government in the form of corporation income taxes. It is essential that part of the remaining profits be retained by the business to maintain facilities that will continue to be profitable. The stockholder in the final analysis receives a fractional part of the total earnings as dividends. At an income level of about $16,000 the Government would again take about one-half of the dividends.

Of the total distributions made to the Government and to the stockholder, the Federal Government received about 75 percent and the stockholder about 25 percent. If there is to be any reasonable relationship between the opportunity for profit and the risk of loss, the Federal Government should assume about 75 percent of the risk and the stockholder about 25 percent of the risk. Yet, if the stockholder is unfortunate to sustain even a $5,000 capital loss, the Federal Government required the stockholder to bear 80 percent of this loss and to postpone the remainder to an uncertain future time.

8. DID THE $1,000 LIMIT ON CAPITAL LOSSES ACCELERATE THE 1962 MARKET DECLINE?

Assume that an individual had an investment of $20,000 in 1962. Assume further that the decline in the value of his securities amounted to an average of 20 percent on his total investment, or $6,000. On a mere 20 percent decline the taxpayer would have incurred all of the capital losses he would be allowed to utilize in future years in the absence of capital gains. Is it reasonable to conclude that the investor might consider it sensible to get out of the market without incurring additional losses which he might never recover?

9. IS THERE A RELATIONSHIP BETWEEN THE $1,000 LIMIT ON CAPITAL LOSSES AND CAPITAL INVESTMENT AND ECONOMIC GROWTH?

In past years the U.S. Government has offered various incentives when there was a desire to bring about increased industrial expansion. Tax incentives were the most widely used. If tax incentives constituted the most effective and widely used means of expanding the economy in the past, is it logical to conclude that the taxing of gains accompanied by the postponement or disallowance of losses would have the opposite result.

10. RISK CAPITAL

A new venture requires risk capital. At best these new ventures start on a shabby foundation. The probability of failure is frequently greater than that of success. Yet it is this very type of undertaking that must be encouraged, but it will not be encouraged if the present limitation of $1,000 is retained.

Every large business in this country started small—risk capital was required. If we are to encourage the formation of small businesses, if small businesses are to expand, a more favorable climate for investment and recovery of losses must be provided. This amendment to increase the amount offset, in stages from $1,000 to $5,000 marks a modest beginning, but one that must be made.

Mr. LONG of Louisiana. The Senate has voted to sustain the committee by eliminating entirely the capital gains provisions in the bill. It is the hope of the committee that there will not be any change in the capital gains treatment now.

This amendment would increase the amount of capital losses that could be deducted against ordinary income. The Treasury is vehemently opposed to the amendment, not only because of the revenue loss involved, but because the Treasury feels there is a considerable possibility for manipulation of capital losses to be used against ordinary income. Persons could bunch their losses in 1 year and bunch their gains in other years, to achieve substantial advantages at the option of the taxpayer.

Upon that basis, the committee voted, 11 to 5, against the amendment. I sincerely hope the Senate will sustain the position taken by the committee on the amendment.

Mr. MORTON. Mr. President, I yield back the remainder of my time.

Mr. LONG of Louisiana. I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Kentucky [Mr. MORTON] on behalf of the Senator from Illinois [Mr. DIRKSEN].

The amendment was rejected.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that I may suggest the absence of a quorum, and that there may now be a brief quorum call, but without charging to the time available under the unanimous-consent agreement the time required for the quorum call.

The PRESIDING OFFICER (Mr. BAYH in the chair). Is there objection? Without objection, it is so ordered.

Mr. MANSFIELD. Then, Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT NO. 412

Mr. PROXMIRE. Mr. President, I call up my amendment No. 412.

[*P. 2253*]

The amendment was read, as follows:

At the end of the bill add the following new title:

"TITLE IV—EXCISE TAXES

"SEC. 401. Repeal of tax imposed with respect to amounts paid by patrons of cabarets, roof gardens, or other similar places.

"(a) IN GENERAL.—Section 4231(6) (relating to tax on amounts paid by patrons of cabarets, roof gardens, or other similar places) is repealed.

"(b) CONFORMING CHANGES.—Section 4323 (b) (relating to definition of roof garden, cabaret, or other similar place) and section 4232(e) (relating to performances for profit) are repealed.

"(c) EFFECTIVE DATE.—This section shall apply only with respect to amounts paid, on or after 10 o'clock antemeridian of the first day of the first month which begins more than ten days after the date of the enactment of this Act, for admission, refreshment, service, or merchandise on or after such time."

Mr. PROXMIRE. Mr. President, this amendment presents us with an unparalleled and unusual opportunity. Would Senators be willing to adopt an amendment that would reduce excise tax rates, but actually increase revenues? I think I can show that that will be the effect of the amendment.

In addition, would Senators adopt an amendment which they knew—and I say this on the basis of hard experience—would provide between 20,000 and 30,000 jobs? I can show that the reduction of this tax will have that result.

Mr. President, I speak of the so-called cabaret tax. Until 1940, that tax was 3 percent. During the war, it was sharply increased. In 1960, it was reduced from 20 to 10 percent.

On the basis of that experience, we can determine what would happen to jobs and to revenue by now reducing the cabaret tax still further, inasmuch as the previous reduction of this tax from 20 to 10 percent caused a marked increase in the number of jobs for musicians—in fact, an increase of more than 34 percent; and that has been certified to by the International Statistical Bureau, of New York City. So there is no question about that result—an increase of nearly 35 percent.

The tax loss was none. The Treasury estimated that there would be a tax loss of approximately 50 percent. Actually, the direct tax loss was 22 percent; but when the marked increase in employment for musicians and income of proprietors is taken into consideration, and the Federal tax on that income it becomes evident that there was an actual gain to the Treasury.

Mr. President, if Congress now reduces this tax from 10 to 3 percent, it is clear—on the basis of that experience and any kind of honest and fair assumption—that there will be a much greater increase in the demand for the services of musicians than there was when the previous reduction in this tax was made.

Most of us are old enough to remember the situation which existed before 1940—at the time when, if one went to a restaurant, there would be music and dancing. But that situation was killed cold by the cabbaret tax. Although there might have been some excuse for that tax during the war, it has gone now.

When the tax was reduced from 20 to 10 percent, musician employment made some comeback.

If the rate is now reduced to 3 percent, that experience clearly shows that there will be a great increase in the number of jobs. I estimate that the increased number of jobs will total between 20,000 and 30,000. However, those jobs will not be there if this particular tax cut is not made. For those who really want to stimulate employment with a tax cut, here is the way to do it. Right here, today, now, on this bill.

Some economists say the pending tax bill will not stimulate the economy very much. However, by means of this amendment—making music and entertainment far more readily available—we can persuade the taxpayer, who will get some of the benefit of the bill, to spend some of it, for then he will have a reason to feel an incentive, a real, living reason to go to a restaurant where music is played, and where he can dance with his wife or with his girl friend, and can enjoy himself.

What harm will be done? More jobs will be provided; more revenue raised for the Federal Government.

Mr. President, if the pending tax bill has any purpose at all—it is to stimulate the economy and to solve our No. 1 economic problem, which is the need for more jobs.

Mr. KEATING. Mr. President, will the Senator from Wisconsin yield briefly to me?

Mr. PROXMIRE. I yield.

Mr. KEATING. I congratulate the Senator from Wisconsin for his fine statement and fully concur in his position. I wish to emphasize the point the Senator made at the beginning of his remarks, namely—and I sincerely believe this to be the case—that reduction in the cabaret tax rate will not result in net losses of revenue to the Treasury. The previous reduction in the cabaret tax rate actually generated increased revenues. Experience has shown that the amendment now proposed will not result in a loss of revenue, and even more important, will result in many new jobs for musicians and other entertainers and kitchen and dining room employees.

Mr. President, many restaurants and hotel dining rooms have had rough times recently, for a variety of causes, including the 1962 revisions in the tax treatment of certain business expenses. At no sacrifice to the interest of the Treasury, we now have a chance to help this vital industry along and in the bargain give new jobs to thousands of unemployed. I have over the years supported reducing the cabaret tax and shall support this amendment.

Mr. PROXMIRE. I thank the Senator from New York.

Mr. President, I realize that the leadership—and I sympathize with them—have been trying hard to keep excise-tax cuts out of the pending bill. However, I think the situation to which this amendment applies is an extraordinary one, and is very different from the others to which consideration has been given, because I believe we can show, on the basis of the experience between 1959 and 1962, that this amendment, if enacted into law, will not bring about a loss of revenue.

Mr. President, I ask unanimous consent that the excellent report showing the impact of the cabaret tax on Federal revenues and jobs be printed in the RECORD at this point.

Mr. President, I reserve the remainder of the time available to me.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

IMPROVEMENT IN MUSICIANS' EMPLOYMENT FOLLOWING REDUCTION OF THE CABARET TAX

(Prepared for American Federation of Musicians, May 15, 1963)

SUMMARY

1. Reduction in the cabaret tax from 20 to 10 percent as of May 1, 1960, has been chiefly responsible for a marked improvement in the income and employment of musicians in establishments subject to the tax. On the basis of this study, it is estimated that between late 1959 and 1962:

Man-hours increased by 34.2 percent; income increased by more than 33 percent for local musicians playing local engagements; 5 percent for traveling musicians.

2. Despite the Treasury's prior contention that a 50-percent reduction in the tax rate would cause a 50-percent decline in cabaret tax revenue, the actual decline, from fiscal 1959 to fiscal 1962, was only 22.4 percent. After the tax was reduced, consumers increased their taxable spending by about 55 percent.

3. Relief provided by the tax reduction unquestionably improved the earnings of establishments subject to the tax, the income of their proprietors, and the income and employment of employees other than musicians. For musicians, it can be estimated on the basis of this study and information from other sources, the increase in income following the tax reduction ranged between $25 and $35 million. An estimate of income improvement for proprietors and other employees of these establishments was outside the scope of this study. It seems most likely, however, that the increase in income tax revenue following the tax reduction was more than enough to offset the decline in cabaret tax revenue.

4. An earlier and more extended study, conducted in 1955, described the depressed position of musicians, analyzed the causes, and estimated the extent to which complete elimination of the cabaret tax would relieve their conditions. The chief conclusions stated in this earlier report are summarized on the following page. The present study deals with an accomplished fact. The tax was not eliminated, but it was cut in half. What has happened since May 1, 1960, when this reduction took place, strongly supports the validity of the estimates made in 1955.

INTRODUCTION

An earlier study

A nationwide survey, conducted for the American Federation of Musicians in 1955, analyzed the depressive effects of the 20 percent cabaret tax on the employment of musicians in 1954. Complete results were made available to Members of Congress, and a detailed summary of results was published by the Federation in a brochure entitled "The National Crisis for Live Music and Musicians." The most important facts established and estimates made, as a result of this earlier study are as follows:

1. During the period of the 20 percent, cabaret tax, from 1943 through 1954, establishments subject to this tax reduced their employment of musicians by the equivalent of 25,000 man-years. This exceeded the losses due to technological changes between 1930 and 1940, estimated at 20,000 man-years.

2. Of the total shrinkage in employment opportunities for musicians between 1930 and 1954, from 99,000 to 59,000 man-years,

[*P. 2254*]

the high cabaret tax level of 20 percent was a decisive factor.

3. Despite this retrenchment by establishments subject to the tax, these places in 1954 provided about 27,000 man-years of work for musicians, being the single most important source of employment.

4. It was estimated, therefore, that repeal of the 20-percent tax was bound to react favorably on the depressed condition of musicians, increasing both their employment and their income.

5. It was estimated on the basis of the survey that about 16,000 places were subject to the 20-percent cabaret tax, 63 percent of them being small businesses paying a tax of $1,000 or less a year. Repeal of the tax would increase the business income of these establishments and the personal income of their owners. It would also lead to increased employment and earnings for entertainers, waiters and waitresses, kitchen help, service help, etc.

6. It was conservatively estimated, therefore, that the loss of revenue following repeal of the tax would be more than made up by gains in personal and business income tax payments by those individuals and establishments who were favorably affected by the elimination of the cabaret tax.

Eventual tax reduction

The so-called cabaret tax remained at 20 percent until May 1, 1960, when it was reduced to 10 percent in line with other excise taxes which had been reduced from their war-emergency levels at various earlier dates.

During 1961, the American Federation of Musicians, by means of questionnaires which were returned by 426 locals, estimated that reduction of the tax had led to an increase of 34,861 work hours per week of employment for musicians. On the basis of this survey, the Federation also estimated

the increase in musicians' annual income at a little over $9 million. On the basis of this study, it was pointed out in official proceedings of the 64th annual convention of the American Federation of Musicians.

Foes of cabaret tax reduction had based a large part of their opposition on "the fact" that halving the 20-percent tax to 10 percent would decrease the yield to the Federal Government by 50 percent.

A realistic appraisal of income tax returns, compiled by the Internal Revenue Bureau in 1958, shows that wage earners in the $4,000 bracket pay approximately 10 percent of their gross earnings in income taxes. On this basis, the additional $45 million yearly cabaret workers' income made possible by the tax reduction would yield the Government an additional $4,500,000 annually in income taxes, or $1,125,000 per quarter.

When the additional business or income taxes paid by cabaret operators are added to employees tax liabilities, it is obvious that the annual yield in taxes to the Government has remained at least equal, while at the same time the general economy has been bolstered by making possible all this additional work.

Latest study of tax reduction results

Late in 1962, the American Federation of Musicians decided to employ the services of an independent agency to document any further improvement which had taken place in the position of musicians since reduction of the tax, and, incidentally, to confirm the earlier findings. The present study, conducted by International Statistical Bureau, Inc., is a result of that decision.

Musicians' report

The chief purposes of the present study have been to determine the extent to which man-hours of musicians' employment in establishments subject to the cabaret tax have changed since the reduction of the tax from 20 to 10 percent, and to gain some information about the income of musicians.

The present survey covers 202 locals, representing a musician membership of 122,266. This represents about 30 percent of the total number of locals and 46 percent of the union membership.

The survey was undertaken late in 1962, and covered man-hours of employment of musicians in establishments subject to the cabaret tax during a 4-week period ending December 16, 1962. The comparison period was the 4 weeks ending December 13, 1959. This choice of periods provided the latest possible information in 1962, and eliminated variations which might have been caused by seasonal factors or holiday periods.

The representation of locals includes those who had maintained contract files for both periods. From these it was possible to obtain the names of the establishments subject to the tax which employed musicians in one or the other or both of the two 4-week periods, and to determine from the contract files the number of musicians, the number of days per week, the number of hours per day, and the number of weeks during each of the two 4-week periods, from which could be computed man-hours of employment. The survey includes contract employment in 3,486 establishments.

Information on musicians' income was based on local tax information, covering both local and traveling musicians.

RESULTS OF THE SURVEY

The results of the survey, detailed in the following section, apply to the large and representative sample obtained. The gains for the entire union membership in actual man-hours would be two or three times as large; percentage increases would probably be of about the same magnitude.

Number of establishments

Of the 3,486 establishments subject to the cabaret tax in one or the other or both of the 2 years, 1,694 were in business in both years, and employed musicians in both years.

In addition, there were almost as many, 1,336, which either employed musicians only after the tax was reduced, or came into business (and employed musicians) only after the reduction. The number, 456, which either went out of business or stopped employing musicians after the tax was reduced, was much smaller:

Additional details about establishments subject to the tax are as follows:

Establishments in existence during both periods:	
Employing musicians in both periods	1,694
Employing musicians in 1959 but not 1962	219
Employing musicians in 1962 but not 1959	480
Establishments in business in 1959, but not in 1962	237
Establishments which came into business after the tax was reduced [1]	856

[1] A few of these establishments may have started or discontinued business between Dec. 13, 1959 (the date used in the survey), and May 1, 1960, when the tax was reduced.

Man-hours increased

The increase in man-hours which followed the reduction of the cabaret tax from 20 to 10 percent is indicative of the burden which the high tax rate had imposed. This is revealed by changes in the employment policies of the establishments involved.

The first establishments considered are the 1,694 which were in business in both 1959 and 1962, and which employed musicians in both periods. These establishments provided 494,926 man-hours of employment in the 4-week period in 1959, and this had increased to 541,031 in 1962, after the reduction in the tax.

In establishments in business in both periods, but which employed musicians in one period only, there were 43,541 man-hours in 219 establishments in the 4-week period in 1959, and 88,367 man-hours in 480 establishments in the corresponding 4-week period in 1962.

In addition, some establishments were in business in 1959 but not 1962, while others came into business only after the tax was reduced. The former provided about 75,000

man-hours of employment for musicians, while the latter provided about 194,000.

Details are as follows:

	Man-hours of musicians' employment in 4-week period [1] in—	
	1959	1962
In business both years:		
Hired musicians in both years	494, 926	541, 030
Hired musicians only in 1959	43, 541	
Hired musicians only in 1962		88, 367
In business in 1959 but not 1962	75, 565	
In business in 1962 but not 1959		194, 389
Total (4-week period)	614, 032	823, 786
Annual equivalent	7, 982, 416	10, 709, 218
Percentage increase		+34. 2

[1] 1959: 4 weeks ending Dec. 13, 1959; 1962: 4 weeks ending Dec. 16, 1962.

A comparison might be made here between an accomplished fact following the reduction of the cabaret tax from 20 to 10 percent, and the estimate made in the original study of the probable increase in musicians' employment in 20-percent establishments, if the tax were eliminated altogether.

The accomplished fact, following reduction of the tax from 20 to 10 percent is the 34.2-percent increase in musicians' employment cited above.

In the earlier study it was estimated that musicians' employment in these establishments would increase by about 68 percent if the tax were eliminated altogether.

Musicians' income

Traveling musicians are charged a payroll tax in behalf of the local in the area in which they are engaged. In many cases, there is also a small payroll tax based on the employment of local musicians in local establishments. Thus it was possible to obtain a sampling of what has happened to musicians' income, based on 18 locals which were able to report both local and traveling payroll tax, 15 locals which were able to report only the local tax, and an additional 27 locals which reported only the traveling tax.

The income estimate is not exactly comparable with the man-hour data, since the latter was limited to establishments subject to the cabaret tax, while the payroll tax covers all forms of musical employment. The estimated income is based only on the tax collected by the local, which in many cases is based on scale rather than on earnings. To the extent to which payment rates to musicians have increased more rapidly than scale rates, the estimates made here will understate the increases in musicians' income which have actually taken place.

[P. 2255]

Income estimates for local and/or traveling musicians

[Thousands of dollars; 4-week periods [1]]

	Local musicians		Traveling musicians	
	1959	1962	1959	1962
18 locals	$6, 674	$8, 059	$1, 355	$1, 271
15 locals	25, 501	34, 663		
27 locals			961	1, 153
Total (4-week periods)	32, 175	42, 722	2, 316	2, 424
Annual equivalents	418, 275	555, 386	30, 108	31, 512
Percent change	+32. 8		+4. 7	

[1] 4 weeks ending Dec. 13 in 1959; 4 weeks ending Dec. 16 in 1962.

There are three points to note in connection with these income estimates:

1. The gain of slightly less than 5 percent for traveling musicians, based on 4-week periods in 1959 and 1962, is not far from the gain of almost 8 percent shown in national collections of the traveling tax during the 2 fiscal years ending March 31, 1959 and 1962.

2. Most of the increase in musicians' income has been accounted for by local employment. This is not surprising. Traveling musicians, in the main, are employed in the larger establishments in leading cities or resort areas. Reduction of the tax, although a relief for such establishments, was not so much a matter of life or death as it was for the scattered small places, which are a major source of local employment for local musicians.

In a very real sense, therefore, it can be concluded that the reduction in the cabaret tax from 20 to 10 percent has provided relief where it was most needed; i.e., among small establishments and for local musicians.

3. The present study has been limited to the impact of the cabaret tax reduction on the position of musicians. It is not unreasonable to believe, however, that the income of the affected establishments, and of other employees of these establishments, showed somewhat similar increases. There has, therefore, been a very substantial increase in related business and income tax revenue collected by the Treasury since the cabaret tax was reduced.

In the original study commissioned by the federation, it was estimated that loss of revenue caused by complete elimination of the tax would be more than offset by increased income tax revenue.

The Treasury, however, consistently took the position that a 50-percent reduction in the tax (from 20 to 10 percent) would result in a 50-percent loss in revenue. The tax was reduced nevertheless, and the results—a decline of 22.3 percent in cabaret tax revenue between fiscal 1959 and fiscal 1962—proves conclusively that the Treasury's contention was unrealistic.

If allowance is made further for the increases in income tax revenue since the cabaret tax was reduced (based on the higher income of musicians, establishments subject to the cabaret tax, and other employees of these establishments), the conclusions of the original study seem to be substantially validated.

TAX REDUCTION CHIEF REASON FOR IMPROVEMENT

Time has elapsed since the 20-percent cabaret tax was reduced to 10 percent as of May 1, 1960, and there has, of course, been some improvement in general economic conditions since then. It might be argued that this general improvement contributed to higher income and employment for musicians, even though, as pointed out in the original study, much greater economic gains in earlier periods had failed to do so. However, various comparisons can be made which justify the conclusion that the cabaret tax reduction was primarily responsible for the marked improvement in the economic condition of establishments subject to this tax, and of the musicians and others employed by these establishments.

Consumer expenditures

[In millions of dollars]

INCREASED SPENDING IN CABARETS

A measure of the extent to which the 20-percent carbaret tax inhibited taxable consumer spending in these establishments is the extent to which taxable consumer spending increased when the tax was reduced. This can be calculated directly from reports on cabaret tax revenue, since the tax rate was 20 percent in 1959 and 10 percent in 1961 and 1962. The increase in taxable consumer income amounted to 49 percent between fiscal 1959 and 1961, and to 55.3 percent between fiscal 1959 and 1962.

Consumer expenditures for goods and services are reported by the Department of Commerce, the last detailed information at the time of writing being for calendar 1961. The extent to which gains for other types of consumer spending fall short of the increase for taxable spending in cabarets is indicated in the table on the following page.

The relatively restricted gains for other forms of consumer spending indicate that it was the reduction in the cabaret tax, rather than an improvement in general economic conditions, which chiefly accounts for the marked gain in taxable consumer spending in cabarets.

Man-hours

Man-hours of work available to musicians, in establishments subject to the cabaret tax were affected, between 1959 and 1962, by the reduction in the tax from 20 to 10 percent.

That this reduction in the tax was chiefly instrumental in the 34.2-percent increase in man-hours is indicated by comparing with the much smaller gains (or declines) in other activities, which did not have the benefit of this special stimulus.

Percent change in employment[1] by major industry classifications

	Percent change
Mining	−10.7
Contract construction	−6.3
Manufacturing	+1.9
Durable	+3.9
Nondurable	−.9
Transportation and public utilities	−2.0
Wholesale trade	+3.0
Retail trade	+1.5
Finance, insurance and real estate	+7.3
Services and miscellaneous	+13.7
Government	+12.9

[1] Based on man-hours of employment per week, except for transportation and public utilities; finance, insurance, and real estate; services and miscellaneous; and Government, which are based on number of employees.

Source: U.S. Department of Labor.

Mr. LONG of Louisiana. Mr. President, so far those of us who have been trying to get the tax cut bill through the Senate have taken the position that if we were to agree to a single reduction in the excise taxes—any one of them—we would "pull the plug out of the dike" and all the excise taxes would flow through. It would cost us $10 billion. Once we repeal one of the excise taxes, a case is made for the repeal of the next. After that tax is repealed, the way is

open for the repeal of the next excise tax. Each proposal sounds good in its own right. Each excise tax that would be repealed would set the stage for the repeal of another excise tax. After a while we would discover that we had lost $10 billion of taxes, so that instead of having a tax bill which would result in a loss of revenue in the amount of $12 billion, we would wind up with a tax bill containing a loss of revenue in the amount of $24 billion. If we take that action, we might as well repeal the entire Revenue Code.

Mr. President, this is the first time that the junior Senator from Louisiana has been the Senator in charge of a tax bill on the floor of the Senate. I suppose it would be interesting to have the distinction of being the Senator in charge of the bill that repealed the entire Internal Revenue Code and removed all taxes.

Mr. President, the Government must operate. It must have some revenues. Senators have been required to remain in the Chamber and vote to hold the bill together, knowing that if we should load the bill down with many excise tax cuts, the President would be compelled to veto it, and we would have done a vain and futile thing in attempting to help the taxpayer. In the last analysis, we would have done nothing after having labored for 2 years on a bill.

Mr. SMATHERS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. SMATHERS. To demonstrate the sincerity and at the same time the plight in which the junior Senator from Louisiana and the junior Senator from Florida find themselves, I point out the fact is that we were the original sponsors of a similar amendment.

[*P. 2256*]

For 5 years we have been the ones who at various times when bills relating to excise taxes were before the Senate fought for a reduction in that tax. There are many cabarets in the State of Florida. In one city in Louisiana I suppose there are more cabarets than there are in the entire State of Wisconsin. I do not know. Certainly we have plenty in Florida. We sponsored a similar amendment for years.

Mr. President, I point out that we reduced the tax on cabarets from 20 percent to 10 percent. The amendment would not remove the tax entirely but would reduce it to 3 percent. As the able Senator has said, if we pull our finger out of the dike on the excise tax to which we are now referring, or any one of the excise taxes, instead of the cost being only $30 million, as the Senator has said, the final cost would be about $10 billion, because we would take off the excise taxes on lights, automobiles, tires, and all the other commodities on which excise taxes are imposed. So I hope the Senate will reject the amendment.

Mr. LONG of Louisiana. Mr. President, the junior Senator from Louisiana was the father of the amendment offered by the Senator from Wisconsin before the Senator from Wisconsin ever sought to adopt it. He is the one who made the fight to reduce the excise tax on cabarets from 20 percent to 10 percent. During the time that he was not fighting for it, the Senator from Florida fought for it.

The Senator from Illinois made the same fight. He joined us in the effort. We reduced the tax from 20 percent to 10 percent.

I hope we can do what the Senator from Wisconsin is trying to do, but not in the bill before the Senate. If we should adopt the amendment in the present bill, in my judgment, there would be no bill.

I do not know whether the musicians are as appreciative of the efforts of the Senator from Wisconsin to remove the excise tax in that industry as they were of the efforts of the Senator from Louisiana. Drew Pearson even wrote a column about me on the subject, stating that the musicians contributed to my campaign. The musicians bought an advertisement in the newspaper which read, "Thank you, Senator LONG, for cutting the tax on cabarets, because that is where we make our living playing music."

The Senator from Louisiana would be happy to cooperate with the Senator from Wisconsin in helping to repeal the tax, but not in the pending bill. When the Senator offered the amendment, he inflicted the crueliest wound of all. [Laughter.] He would like to be able to tell the people in the city of New Orleans that he had played some part in the repeal of that tax. To resist the amendment is doing the same thing as was done to certain other Senators who proposed repeal of the excise taxes on ballpoint pens, musical instruments, and certain other commodities in order to assure our obtaining a $11.6 billion tax reduction. Sometimes, when a Senator must resist that kind of amendment, such resistance can be cruel.

Mr. SMATHERS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. SMATHERS. The able Senator from New Mexico [Mr. ANDERSON] is also one of those who has some paternity rights in the amendment, because at one

time he offered an amendment of the nature of the one proposed. The Senator from Illinois did also. I believe the Senator from Washington has done so. So as the able Senator from Louisiana has said, the amendment is a sort of cruel amendment because it would require us to do a 180° turn. But I cannot accept the amendment on the bill before the Senate.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. MAGNUSON. Though many of us have strong feelings about certain excise taxes, we have stayed with the recommendations of the committee for the very reasons which the Senator from Louisiana has pointed out.

The bill before the Senate is a different kind of bill.

The argument always stated by members of the Committee on Finance is that if one excise tax is removed, we would open the floodgates for almost $11 billion of excise tax reductions, and that all excise taxes should be treated alike.

Obviously, all excise taxes are not alike. Some are more unjust than others. Some are more inequitable. Some are more irritable. Different products sold by members of the public fall into different categories. I hope that when we again come before the committee, after staying with them on the bill, the Committee on Finance will not take the position that we cannot touch any excise tax or any one segment of the excise tax structure, because we would have to repeal $11 billion worth of excise taxes.

Excise taxes must be considered as they are presented. The Senator from Florida and I had a part in the repeal of the transportation excise tax because that tax affected the whole economy of the Nation.

I believe that we ought to have a little more assurance from the Finance Committee. I know their word is absolutely good, but I wish to make it a little more clear that when we come to the committee with some suggestions as to an excise tax program—for example, a repeal of the sales tax to which the Senator from Kentucky referred—we will not be met again with the argument that if it is done for one commodity, it must be done for $11 billion worth of commodities. That is not the correct way to get rid of excise taxes. I hope that is clear.

A few days ago the Senator from Virginia [Mr. BYRD] said that, as soon as the House sends a bill to the Senate, or after the Finance Committee itself examines the excise taxes, he would call the committee immediately and consider the question. The chairman of the House Committee on Ways and Means, Mr. MILLS, has said that he would hold hearings on excise taxes this spring, as I recall the statement in the press. Some of us will stay with the committee, but we are still not abandoning the belief that there are some excise taxes the repeal of which would not cost us anything but, in many instances, would actually bring money into the Treasury.

Mr. PROXMIRE. My amendment would, too.

Mr. MAGNUSON. Some would not.

Mr. LONG of Louisiana. Mr. President, who has the floor?

Mr. MAGNUSON. When we talk about one excise tax that we believe should be repealed, and it has the feature about which I have spoken, I hope we will not be met with the argument that to repeal the tax would result in the repeal of $10 or $11 billion of excise taxes.

Mr. LONG of Louisiana. Mr. President, who has the floor?

The PRESIDING OFFICER. The Senator from Louisiana has the floor.

Mr. MAGNUSON. I believe I am entitled to 3 minutes.

Mr. LONG of Louisiana. I appreciate that fact. I merely wished to make clear that I have the floor, and that I have yielded to the Senator.

Mr. MAGNUSON. I thank the Senator.

Mr. LONG of Louisiana. As chairman of the Committee on Commerce for a number of years, the Senator from Washington knows that when he makes a commitment that a certain measure will be considered, he cannot promise what his vote will be. But based upon the circumstances, he understands what the general effect of that commitment is, and he knows as well as I do that the chairman of the committee is as much a man of his word as any man in public life.

Mr. MORTON. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. MORTON. On Wednesday the Republican members of the Committee on Finance made their position clear on the subject of the repeal of excise taxes. So the Senator knows that he can count on Senators on our side of the aisle.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield to the Senator from Illinois.

Mr. DOUGLAS. I have great feeling and friendship for the junior Senator from Louisiana, and always have had ever since we both came into the Senate together some 16 years ago. I hope he will not take it amiss, when he says that he had been for the removal of the

original cabaret tax, but is opposed to it now, if I quote from Euripides, "The Hippolytus," as translated by Gilbert Murray:

> And to mine eyes, not in man's knowledge, not in wisdom, lies the lack that makes for sorrow.
>
> Nay, we scan and know the right, for wit hath many a man who will not to the last live, strive and serve.
>
> But some grow too soon weary and some swerve to other paths setting before the right the faint, far-off image of delight.
>
> And many are the delights beneath the sun.

Mr. LONG of Louisiana. The Senator has not borne the cross nearly as much as the Senator from Louisiana has in bringing this bill before the Senate. I am more concerned about those musi-

[*P. 2257*]

cians than I am about Euripides. [Laughter.]

Mr. PROXMIRE. Mr. President, the argument for this amendment has not been disputed at all. Apparently it is agreed that the reduction of the cabaret tax from 10 to 3 percent would not reduce revenues. It is agreed that there will be new jobs, which will provide new taxes. The only argument that has come forth is that if we do this, all other excise taxes would have to be eliminated. The Senator made that argument in 1962, and led a successful fight in reducing excise taxes on transportation. The Senator from Louisiana states that he was responsible for cutting the excise tax from 20 to 10 percent on cabarets and that there has been a $10 million or $20 million cut in excise taxes. Of course that argument is not accurate. It is an argument that should not be made to an intelligent body—that if we vote to cut one excise tax, we will have to vote to cut all others. It is ridiculous.

This amendment has all kinds of fathers. Everybody supported it, apparently, under some circumstances; but Senators who really are interested in this kind of excise tax cut must vote now or not this year at all, because we know there is not going to be another tax cut this year. We are providing an $11.7 billion tax cut now. Does anyone think there is going to be another $5 billion or $10 billion tax cut later this year? Of course not. This is the only opportunity to give relief to those who need it, which will result in making more jobs and increasing revenues.

Mr. President, I ask for the yeas and nays on my amendment.

The yeas and nays were ordered.

Mr. LONG of Louisiana. Mr. President, how much time do I have?

The PRESIDING OFFICER. The Senator from Louisiana has 7 minutes remaining.

Mr. LONG of Louisiana. Mr. President, New Orleans is one of the prime entertainment cities in the United States. It is sometimes known as the city that care forgot. The Senator from Louisiana could go as far as any other Senator in voting to take the tax off cabarets; but some Senators will have difficulty explaining why they voted against taking the tax off ladies' handbags, ball point pens, electric light bulbs, and spark plugs, and wound up by voting to take the tax off cabarets.

It is not a problem for me. I could get away with it. The votes I would lose in north Louisiana I probably would recoup in New Orleans. But certain Senators are going to have difficulty explaining why they voted against taking excise taxes off everything else but cabarets.

If the Senator from Louisiana has any influence, he would see to it that we look into the question of excise taxes. Excise taxes amounting to $1,900 million will have to be extended this June, or they will expire. I can assure the Senator that we will consider that item if I have any influence. But I do not think this is the time to do it.

Mr. President, I yield to the Senator from Kansas [Mr. CARLSON].

Mr. CARLSON. Mr. President, I think this is an opportune time to say that I agree with the Senator from Washington. I know when the chairman of the Commerce Committee says the committee is going to go into the matter of excise taxes this summer, he will do it, not only because his word is good, but because $1,900 million worth of excise taxes expire on June 30. But I do not vote for any excise tax in the illusion that there are to be reductions because there will be hearings. We shall be faced with a reduction of $11 billion in taxes this year. I voted against the handbag amendment last night. I shall vote against this amendment. But let us not vote against it with the idea that next summer there will be reductions in these excise taxes.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield to the Senator from Montana.

Mr. MANSFIELD. The point is not that there will be an expectation of great reductions, but that there will be hearings, and this subject will be considered on its own merits. In the words of the Senator from Louisiana [Mr. LONG], he is going to seek to avoid any excise tax reductions or abolitions in this bill.

Mr. LONG of Louisiana. Yes. Some persons may be unhappy over the fact that some excise taxes will be retained and perhaps some will not be. It may be the case that some excise taxes should be reduced, some eliminated altogether, and some continued. But the Senator from Louisiana does not propose to do that in this bill.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield 1 minute to the Senator from New York.

Mr. KEATING. Mr. President, I dislike to see all these "fathers" take to the hills. I commend the Senator from Wisconsin for standing up for the parentage of this amendment. One cannot say he is for an amendment and then vote against it. The American people cannot rely on any relief in this field this year unless the amendment is adopted. Employees in this industry—musicians, chefs, cooks, waiters, bartenders, and so on—employees who now have no jobs will find little solace in the views of those who say they favor the amendment but will vote against it now. Voting for it next year may make jobs next year, but what about this year? How about making jobs in this industry this year? Why not increase revenues this year?

This amendment would increase revenues, not reduce them, as shown by the results of excise taxes which were eliminated by similar amendments.

I am convinced of the difference in kind between this amendment and others that have gone before it, although I supported all the others, too, and in fact proposed the amendment on ladies' handbags. I think all should have been approved. But none had the peculiar status of the cabaret tax amendment. This one is entirely different from the other amendments. It would not result in losing revenues. It would create jobs and increase revenues at one and the same time.

Again, I express my admiration for the Senator from Wisconsin for sticking to his guns on this one.

Mr. PROXMIRE. Mr. President, I yield to the Senator from Hawaii [Mr. FONG].

Mr. FONG. Mr. President, I join the Senator from Wisconsin in urging adoption of the amendment. I think it is long overdue. It would give the same incentive to the economy that the bill as a whole is designed to provide. If the tax is reduced, it will stimulate employment for musicians, entertainers, waiters, cooks, and all the other personnel related to cabarets, roof gardens, and other places to which the tax now applies.

America is trying to induce foreign business people and visitors to come to our shores to view our scenic wonders, to visit our historic places, to sojourn in our vacation playlands and to enjoy oure entertainment facilities. A reduction in the entertainment tax would induce many more oversea visitors and many more Americans seeking relaxation to go to cabarets and similar places. I believe it would lead to a significant increase in patronage and thereby help create jobs. I hope the amendment will be adopted.

Mr. PROXMIRE. Mr. President, I yield to the Senator from Michigan [Mr. MCNAMARA].

Mr. MCNAMARA. Mr. President, I take the same position that has been explained by other Senators. I have consistently voted against repealing excise taxes in this bill because I think there is an unfair excise tax on automobiles.

However, I find the amendment now offered has so much appeal that I am going to vote for it despite my belief that I would not be able to vote for any repealers until there was an abolition of the unfair excise tax on automobiles.

Mr. PROXMIRE. I thank the Senator.

I yield now to the Senator from Tennessee.

Mr. GORE. Mr. President, every time an amendment is offered, whether it is to take a tax off women's handbags, or costume jewelry, or what not, we hear the argument that it is going to break the dike.

First, I should like to know who is breaching the dike. The $11 billion tax cut is not something to be stopped with a finger, exactly. The whole argument is unsound. There are those who advocate the $11.7 billion tax cut on the basis that it will be a wonderful thing to lose revenue that will bring prosperity and balance the budget, but if we try to do something for the people and remove Federal excise taxes, we are about to breach the dike.

Mr. PROXMIRE. I thank the Senator from Tennessee. That is particularly apropos in view of what happened to the amendment yesterday, when we had an opportunity to save $725 million a year by depreciation on the basis of 100 percent of the real cost of the asset. Where were the managers of the bill then?

[P. 2258]

I yield to the Senator from Michigan [Mr. HART].

Mr. HART. Mr. President, each of these amendments to repeal specific excise taxes has great appeal. I have shared the concern of the Senator in

charge of the bill the Senator from Louisiana [Mr. LONG], that adoption of any one such amendment could jeopardize the income tax reduction bill itself by opening up all of the excise taxes. For this reason, I shall continue to support the committee on this and other excise reductions.

We need very much the same full committee's review, report and then legislative action on the excise taxes as we have now before us on the income tax. Reduction of automobile and cabaret excise taxes, among others, would then be within such review as so much needed.

Mr. PROXMIRE. Mr. President, I yield to the Senator from Montana [Mr. MANSFIELD].

Mr. MANSFIELD. Mr. President, we have heard the same argument time and time again during the course of this debate as it affects exercise taxes on this or the other item. I would hope Senators would not allow the dike to be breached. The Senator from Louisiana has done an extremely efficient and effective job in keeping the bill together. It has been no easy task, and I would hope that the amendment will be given the support to which it is entitled. I hope the Senate will vote down the amendment. If it is adopted, we shall find other proposals along a similar line, and the dike will really be breached.

Mr. SIMPSON. Mr. President, I am comforted by the knowledge that the excise taxes will be reviewed at a later time. I believe that.

We have a song out West that should dispose of this question. I do not ask Senators to join me in singing it. They do not have to do that, but there is a little ditty which goes:

> Come little girlie and let us fly away
> Far from the noisy, gay cabaret.

[Laughter.]

So I suggest that we get on with the business of doing away with this amendment.

Mr. LAUSCHE. Mr. President, the other day I opposed a proposal to remove the tax on jewelry and other items. I did so on the basis that the bill that was pending before us dealt only with income taxes. Each Senator has some particular type of excise tax in which he is interested. He believes that that excise tax is the one that primarily should be reduced.

When we encounter the "hobbies" of various Senators, each saying, "My State has cabarets," "My State manufactures jewelry," or "My State manufactures leather goods," where are we to end?

I should like to give support to those in the cabaret business, but I believe it should be looked at as to the whole unit. Comparison should be made——

The PRESIDING OFFICER. The time of the Senator from Ohio has expired.

Mr. LAUSCHE. Mr. President, I ask unanimous consent that I may proceed for 1 minute.

The PRESIDING OFFICER. The Senator from Ohio is recognized for 1 minute.

Mr. LAUSCHE. Comparisons should be made as to which of the excise taxes should occupy the highest priority by way of getting a concession, and that cannot be done on the floor of the Senate.

Mr. PROXMIRE. Mr. President, I yield time on the bill to the Senator from Nevada [Mr. BIBLE].

Mr. BIBLE. I should like to ask the distinguished Senator in charge of the bill as to the timetable for the hearing on the excise taxes, as to whether that has been indicated.

Mr. LONG of Louisiana. The chairman of the Ways and Means Committee of the House announced that he will undertake hearings on this subject in May. The Senator from Virginia, chairman of the Finance Committee, has undertaken to assure the Senate that immediately after an excise tax bill reaches the Senate he will hold hearings on it.

Mr. BIBLE. I thank the Senator. As the Senator from Louisiana knows, we joined during previous debate on reduction of the carbaret tax from 20 percent to 10 percent. I believe it can be demonstrated that the reduction caused a great increase in employment. I believe it can be proved that it also resulted in an increase in revenue. I am inclined to believe that the same thing would occur again, but I am perfectly willing to defer to the entreaty of the Senator from Louisiana, and his assurance that it will be considered later in this session, at the time excise taxes are considered.

Mr. LONG of Louisiana. The Senator from Nevada was a great battler in the fight to reduce carbaret excise taxes from 20 percent to 10 percent. I look forward to joining forces with him in the future on this subject.

Mr. BIBLE. That is good, because I believe that the soundness of the reduction can be fully demonstrated.

Mr. PROXMIRE. Mr. President, I shall be brief, and take less than a minute. We all know, that no matter what Senators say here, there will be no excise tax reduction this year. The only way we can get this one through is to vote for it now. This is our only opportunity. We also know that there has not been a single word to dispute the statement that it would not deprive the

Treasury of one penny in revenue, and that it would provide thousands and thousands of jobs.

Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Wisconsin. The yeas and nays have been ordered; and the clerk will call the roll.

Mr. MANSFIELD (after having voted in the negative). On this vote I have a pair with the Senator from Illinois [Mr. DIRKSEN]. If he were present and voting, he would vote "yea." If I were at liberty to vote, I would vote "nay." I withhold my vote.

Mr. HUMPHREY. I announce that the Senator from Louisiana [Mr. ELLENDER] is absent on official business.

I further announce that, if present and voting, the Senator from Louisiana [Mr. ELLENDER] would vote "nay."

Mr. KUCHEL. I announce that the Senator from Nebraska [Mr. CURTIS] and the Senator from Illinois [Mr. DIRKSEN] are necessarily absent.

If present and voting, the Senator from Nebraska [Mr. CURTIS] would vote "nay."

The pair of the Senator from Illinois [Mr. DIRKSEN] has been previously announced.

The result was announced—yeas 30, nays 66, as follows:

[No. 35 Leg.]

YEAS—30

Beall	Gore	Morse
Bennett	Gruening	Nelson
Cannon	Hartke	Neuberger
Case	Inouye	Proxmire
Cotton	Jackson	Randolph
Dodd	Javits	Saltonstall
Dominick	Keating	Scott
Douglas	Kuchel	Symington
Fong	McNamara	Williams, N.J.
Goldwater	Mechem	Young, N. Dak.

NAYS—66

Aiken	Hickenlooper	Moss
Allott	Hill	Mundt
Anderson	Holland	Muskie
Bartlett	Hruska	Pastore
Bayh	Humphrey	Pearson
Bible	Johnston	Pell
Boggs	Jordan, N.C.	Prouty
Brewster	Jordan, Idaho	Ribicoff

Engle	McIntyre	Tower
Ervin	Metcalf	Walters
Fulbright	Miller	Williams, Del.
Hart	Monroney	Yarborough
Hayden	Morton	Young, Ohio

NOT VOTING—4

Curtis	Ellender	Mansfield
Dirksen		

So Mr. PROXMIRE's amendment was rejected.

Mr. MORTON. Mr. President, I move that the Senate reconsider the vote by which the amendment was rejected.

Mr. ANDERSON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. The Chair understands that the Senate is now ready to proceed to the further consideration of the Gore amendment. The Senator from Louisiana has 4 minutes remaining.

Mr. LONG of Louisiana. Mr. President, I yield 2 minutes to the Senator from Tennessee.

Mr. GORE. Mr. President, this is a very important amendment. Only 4 minutes remain. The distinguished junior Senator from Louisiana has kindly allotted 2 of those 4 minutes to me.

The bill contains two sections dealing with new types of stock options. One

[P. 2259]

covers the employee purchase plan. My amendment does not touch that.

Under this new employee purchase plan, the officer of a corporation can be granted an option to buy $25,000 worth of stock each year at only 85 percent of market value.

There is another condition in the employee purchase plan. It must be nondiscriminatory. Any preferential special tax treatment of stock options should have those two requirements. Any such plan should be nondiscriminatory, so that the man who works on a lathe can benefit from the profit of the corporation the same as the man in the penthouse; second, there should be some reasonable limit to the amount. The employee purchase plan, which is found in section 423, has both of those qualities.

But there is another section in the bill that is without limit. It is section 422. This is for the officers of the corporation and is, I repeat, without limit. My amendment would strike out section 422.

I ask Senators to turn to my remarks of yesterday evening.

The PRESIDING OFFICER. The time of the Senator from Tennessee has expired.

Mr. LONG of Louisiana. I yield the Senator 1 minute on the bill.

Mr. GORE. I thank the Senator.

I placed in the RECORD yesterday evening the recommendation of the late beloved President Kennedy to the effect

that the existing "restricted" stock option be stricken from the law. This is one tax reform that I should like to see accomplished in the bill. President Kennedy asked for it. Secretary Dillon recommended it. That is what my amendment actually would accomplish. It is fair; it is right. We should not write into law any such special benefit without limit. Vast benefits can still be received under section 423—$25,000 of options a year at 85 percent of market value.

Mr. LONG of Louisiana. Mr. President, I yield to the Senator from Utah 2 minutes on the amendment and 1 minute on the bill.

Mr. BENNETT. Mr. President, the program of qualified stock options has become a component part of the pattern for the hiring of professional management executives. The company that finds itself in management difficulty and is under great pressure to find a man who can pull it out of trouble certainly cannot induce a man to buy stock in that company in limited amounts without some special incentive.

We have voted a 7-percent tax credit as an incentive to business. Here is a device which, in the management field, serves the same purpose. The amendment offered by the Senator from Tennessee [Mr. GORE] would eliminate it completely and would have exceedingly dangerous effects on publicly held corporations with respect to their opportunities to secure management.

The bill tightens existing law very much:

First. It requires a holding period for the stock of 3 years as against 6 months under existing law.

Second. The maximum period during which an option could run would be 5 years instead of 10.

Third. Stock options must be issued at the market price on the date of grant rather than at 85 percent of the market price under existing law.

Fourth. The bill modifies the provisions so that the price of stock options can no longer be reset when the price of the stock goes down. If a person has an option, he must live up to it before he can get another option.

Fifth. The stockholders themselves must approve any plans for stock options.

In my opinion, it would be tragic and dangerous to adopt the Gore amendment. I hope the Senate will support the Committee on Finance, which heard much testimony and studied the problem very carefully, that it will have faith in the committee's decision, and will vote to retain this feature in the bill.

Mr. LONG of Louisiana. Mr. President, I yield myself 1 minute on the bill.

It is true that the Treasury originally recommended the position now urged by the Senator from Tennessee. However, this matter was studied by both the House and Senate committees and both the House and Senate committees rejected the original Treasury recommendations and took different action. Now, Treasury has accepted the position taken by the committees. The Treasury recommends that we adhere to the position covered by the bill. Therefore, Treasury is not now supporting the Gore amendment.

The PRESIDING OFFICER. All time has expired.

The question is on agreeing to the amendment of the Senator from Tennessee [Mr. GORE]. The yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from Louisiana [Mr. ELLENDER] is absent on official business.

I further announce that, if present and voting, the Senator from Louisiana [Mr. ELLENDER] would vote "nay."

Mr. KUCHEL. I announce that the Senator from Nebraska [Mr. CURTIS] and the Senator from Illinois [Mr. DIRKSEN] are necessarily absent.

The Senator from Arizona [Mr. GOLDWATER] is detained on official business.

If present and voting, the Senator from Nebraska [Mr. CURTIS], the Senator from Illinois [Mr. DIRKSEN], and the Senator from Arizona [Mr. GOLDWATER] each would vote "nay."

The result was announced—yeas 39, nays 57, as follows:

[No. 36 Leg.]

NOT VOTING—4

Curtis	Ellender	Goldwater
Dirksen		

So Mr. GORE's amendment was rejected.

Mr. McCLELLAN obtained the floor.

Mr. BENNETT. Mr. President, will the Senator from Arkansas yield for about 1 minute to me? I wish to offer a technical amendment, and its consideration should not require more than 1 or 2 minutes.

Mr. McCLELLAN. Mr. President, if I yield for that purpose, I shall have to yield for the submission of several other amendments.

However, Mr. President, at this time I yield for that purpose to the Senator from Utah, with the understanding that Senators will speak in their own time on their own amendments.

I yield first to the Senator from Utah; thereafter, I shall yield to the Senator from Iowa [Mr. MILLER].

The PRESIDING OFFICER. The Senator from Utah is recognized.

Mr. BENNETT. Mr. President, I offer the amendment which I sent to the desk.

The PRESIDING OFFICER. The amendment of the Senator from Utah will be stated.

The LEGISLATIVE CLERK. On page 168, in line 3, after the word "months," it is proposed to strike out "or," and to insert: "unless the loans, notes, or installment obligations are evidenced or secured by contracts of conditional sale, chattel mortgages, or lease agreements, arising out of the sale of goods or services in the course of the transferor's or borrower's trade or business, or."

Mr. BENNETT. Mr. President, this amendment arises out of an attempt by the Treasury to simplify the language of the law relating to finance companies. The Treasury has gathered up all the sections of the existing law and has shortened them very much; and in the process the Treasury wrote language which would make it impossible to finance house trailers.

The Treasury recognizes what it has done; and the language of this amendment has the approval of the Treasury, which recognizes that this change should

[*P. 2260*]

be made. The Treasury considers this amendment to be a technical one. If the Treasury had realized the problem when it recommended the other changes in the law, the Treasury would have caught this error or oversight or complication; but the Treasury did not realize it.

Therefore, I ask that the Senate approve this amendment, and then have the amendment taken to conference as a technical amendment.

Mr. LONG of Louisiana. Mr. President, so far as I know, there is no objection to the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Utah.

The amendment was agreed to.

Mr. BENNETT. Mr. President, I thank the Senator from Arkansas for his courtesy in yielding this time to me.

Mr. McCLELLAN. Mr. President, have I the floor?

The PRESIDING OFFICER. Yes.

Mr. McCLELLAN. Has the time used for the last amendment been charged to the time available to me, under the unanimous-consent agreement?

The PRESIDING OFFICER. No.

Mr. McCLELLAN. Mr. President, I call up my amendment——

Mr. JAVITS. Mr. President, first, will the Senator from Arkansas yield 3 minutes to me?

Mr. McCLELLAN. Mr. President, I am perfectly willing to yield to the Senator from New York 3 minutes on the bill, provided the time he uses will not be charged to the time available to me.

Mr. JAVITS. Mr. President, I so request.

The PRESIDING OFFICER. The Chair understands that the Senator from Arkansas yields 3 minutes on the bill to the Senator from New York.

Mr. KUCHEL. With the consent of the Senator from Arkansas.

Mr. McCLELLAN. Therefore, Mr. President, at this time I yield for 3 minutes, with the understanding that the time which will be used by the Senator from New York will not be charged to the time available to me.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KUCHEL. Do I correctly understand that the Senator is yielding, but declines to yield any of the time available to him?

Mr. McCLELLAN. The Senator is correct.

Mr. KUCHEL. The time will be applied under the order to the bill.

Mr. McCLELLAN. With the understanding that I will not be charged with the time, I yield 3 minutes to the Senator from New York.

Mr. KUCHEL. I thank the Senator.

Mr. THURMOND. Mr. President, will the Senator yield a half minute?

Mr. JAVITS. I have only 3 minutes available.

Mr. THURMOND. Mr. President, I ask unanimous consent that my name may be added as a cosponsor of the amendment of the Senator from Arkansas. Several days ago I had asked that my name be added.

The PRESIDING OFFICER. Without objection, it is so ordered.

[P. 2261]

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

Mr. McCLELLAN. Mr. President, I ask unanimous consent that I may suggest the absence of a quorum, without the time required for the call of the quorum being charged to the time available to Senators on either side.

Mr. KUCHEL. Mr. President, reserving the right to object—and I shall not object because our able friend the Senator from Arkansas has cooperated with several Senators, and I believe the subject of his amendment is of sufficient importance to have a quorum call——

Mr. SMATHERS. Therefore, the Senator will not object.

Mr. KUCHEL. That is correct.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

[No. 37 Leg.]

Aiken	Clark	Hayden
Allott	Cooper	Hickenlooper
Anderson	Cotton	Hill
Bartlett	Dodd	Holland
Bayh	Dominick	Hruska
Beall	Douglas	Humphrey

Mechem	Randolph	Williams, N.J.
Metcalf	Ribicoff	Williams, Del.
Miller	Robertson	Yarborough
Monroney	Russell	Young, N. Dak.
Morse	Saltonstall	Young, Ohio
Morton	Scott	
Moss	Simpson	

The PRESIDING OFFICER. A quorum is present.

Mr. McCLELLAN. Mr. President, on behalf of myself, the senior Senator from Ohio [Mr. LAUSCHE] and the junior Senator from South Carolina [Mr. THURMOND], who have joined me as cosponsors, I call up my amendment No. 407.

The PRESIDING OFFICER. The amendment offered by the Senator from Arkansas, for himself and other Senators, will be stated.

The legislative clerk proceeded to read the amendment.

Mr. McCLELLAN. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with, and that it be printed in the RECORD at this point.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment offered by Mr. McCLELLAN, for himself and other Senators, is as follows:

On page 27, after line 24, insert the following:

"PART IV—TERMINATION OF TAX REDUCTION

"SEC. 141. TERMINATION WHEN ADMINISTRATIVE BUDGET EXPENDITURES FOR ANY FISCAL YEAR EXCEED $100,000,000,000

"(a) IN GENERAL.—If the net administrative budget expenditures made during any fiscal year ending on or after June 30, 1965, exceed $100,000,000,000, then—

"(1) with respect to taxable years beginning after the December 31 following the close of such fiscal year, the amendments made by part I (relating to individuals) and part II (relating to corporations) of this title and the amendments made by section 301 (relating to optional tax if adjusted gross income is less than $5,000) of title III shall not apply, and the provisions of the Internal Revenue Code of 1954 amended by such parts I and II and such section 301 shall apply as if this Act had not been enacted, and

"(2) with respect to remuneration paid and payments made after such December 31, the amendments made by section 302 of title III (relating to income tax collected at source) shall not apply, and the provisions of the Internal Revenue Code of 1954 amended by such section shall apply as if this Act had not been enacted.

"(b) ANNOUNCEMENT BY SECRETARY OF THE TREASURY.—The Secretary of the Treasury shall, on or before September 1, 1965 (and on or before September 1 of each succeeding year, if the amendments made by parts I and II of this title and by title III have not been terminated under subsection (a)) announce and publish in the Federal Register the net administrative budget expenditures made during the fiscal year ending on the preceding June 30.

"(c) RATE OF CORPORATE NORMAL TAX.—For purposes of subsection (a), if the provisions of section 11(b) of the Internal Revenue Code of 1954 (relating to rate of corporate normal tax) apply as if this Act had not been enacted, the rate of the normal tax under such section 11(b) shall be 30 percent.

"(d) CHANGE IN RATES DURING A TAXABLE YEAR.—Section 21 of the Internal Revenue Code of 1954 (relating to effect of changes in rates during a taxable year) shall apply with respect to changes in the rates of tax which take effect under the provisions of this section."

When I introduced this amendment last Monday, I stated the purpose of it and what its effect would be. I restate briefly the objective of the amendment.

It provides that if the net administrative budget expenditures, made during any fiscal year ending on or about January 30, 1965, exceed $100 billion, then on January 1 of the calendar year immediately following, the tax rate for individual and corporate, as well as the withholding rates provided in the bill, would cease to apply and the rates would revert to those contained in the Internal Revenue Code, 1954, as amended and as now in effect.

Mr. President, simply stated, it means this: We are going to take a tax cut—and I say "take it"—and I will explain what I mean by that term later—we are going to take a tax cut without doing anything about expenditures.

I therefore propose that the tax cut that the bill provides shall remain in effect only so long as the expenditures of government—and I am not talking about trust funds, I am talking about administrative budget expenditures—so long as they remain $100 billion or less.

First, the net effect of the amendment would be to require the administration to exercise caution in its administrative budget requests.

Second, it would require the administration to come to Congress if it becomes necessary to exceed the limitation of $100 billion in any one fiscal year.

Third, it would place a brake on deficit spending by providing adequate tax receipts to meet increases in its administrative budget expenditures which exceed the ceiling of $100 billion.

I do not believe adoption of the amendment would result in any hardship or difficulty. The total estimated administrative budget for expenditures in 1964 is $98.4 billion. The amount requested in the budget before us now, for fiscal year 1965, is $97.9 billion.

Thus, it will be seen that the $100 billion limitation contained in my amendment still leaves a leeway of $2.1 billion.

I submit this amendment because I believe it will assist in a return to prudence and thrift in the operation of our National Government. It will help bring about a reduction in expenditures that will move us in the direction of a balanced budget.

I invite the attention of the Senate to the fact that although the pending tax bill has been accorded a preferred status, it is in no way tied to or conditioned upon a corresponding reduction in Federal expenditures. The President of the United States in his state of the Union message to the Congress mentioned many things that we must do. In that brief message he used the word "must" 40 times. He used "we must" 16 times to emphasize the need for new legislation for the expansion of existing programs and for expenditures in new fields of Federal responsibility, all of which calls for additional spending.

The President said:

> Above all, we must release $11 billion of tax reduction into private spending streams to create new jobs and new markets in every area.

Yes, Mr. President, this bill is a preferred bill. It is the one remedy above all others recommended by the administration as the medicine that the economy needs, the medicine and the treatment that we need for a healthy Government, for a healthy economy, for an expanding economy, for a growing country, but the President did not say anything in support of a balanced budget. That is the one thing that is missing.

Yes, Mr. President, the trouble with the tax bill is that it is in no way tied to or conditioned upon any corresponding reduction in Federal expenditures. It is not based upon nor is it subject to any contingency whatsoever or any requirement, not even to a "hold the line" budget. Instead it is accompanied by recommendations for numerous increases in proposed new fields of governmental expenditure responsibility.

Mr. President, a tax cut of such magnitude should be geared to a positive and appropriate reduction in the already exorbitant and constantly rising cost of government. At least such an unprecedented tax reduction as is proposed in the bill should be supported and justified by an enforcible ceiling on expenditures.

That is what I seek to do. In my judgment, under the conditions that now prevail, prudence and sound fiscal policy require a limitation on expenditures to prevent inflation and to protect the purchasing power of the dollar from further erosion and deterioration.

In my judgment, without this amendment or something comparable, the tax bill should not be enacted into law.

Mr. LAUSCHE. Mr. President, will the Senator from Arkansas yield?

Mr. McCLELLAN. I am glad to yield to the Senator from Ohio.

Mr. LAUSCHE. In accordance with my understanding that in the message of the President to a joint session of Congress he emphasized the purpose of indulging in economic cooperations of Government and the movement should be toward the ending of deficit operations and that that was done for the purpose of inducing Congress to pass the tax cut, in other words, he says we will cut expenses and therefore justify the cutting of taxes. Is it not a fact that the amendment offered by the Senator from Arkansas contemplates carrying that policy into effect?

Mr. McCLELLAN. Mr. President, in answer to the distinguished Senator from Ohio I say that in the tax bill we are reducing taxes. The tax cut is one which the President requested. But we are doing nothing at all to insure the balancing on the other side of the coin.

I should like to point out that the President in his first message to the Congress on November 27 said:

> I rededicate this Government to, among other things, the maintenance of military strength second to none.

[*P. 2263*]

I wholeheartedly endorse that and I shall support it.

The President said further:

> To the defense of the strength and stability of the dollar.

Mr. President, is a $11 billion tax cut at a time when we have the highest gross national product in the history of the country and at a time when we are running deficits at the rate of about $8 billion a year—is a tax cut under those circumstances calculated to strengthen the dollar and to bring stability?

I say it is not, unless we do something at the same time about spending. That something should be done in this bill. We say we are going to do it in appropriations. We will, I believe, if we have a ceiling to work under. If we do not have a ceiling we will not.

The President went on to say:

> An in particular, I pledge that the expenditures of Government will be administered with the utmost thrift and frugality.

That is what I wish to help the President do. We must begin that thrift and that frugality right here in the Halls of Congress.

The budget is a guide. It is a request. We in Congress make the final decision as to whether the request will be granted. In the past 11 years, Congress has appropriated $32 billion less than was requested by the President of the United States in his budget requests.

That is pretty good work, but not good enough. Mr. President, look at the deficits, and look at the increasing debt. The record of Congress in reducing the budget has not been good enough. I say there can be further reductions. I also say we need the cooperation of the President of the United States, along with the coordinated activities of the two Houses of the Congress, to bring about the reductions that will be necessary to move toward a balanced budget and stability in our fiscal situation.

We did a better job in the past year than we did theretofore. We reduced the budget last year by $6½ billion. That is pretty good. That amounted to more than 6 percent. We had been reducing it during the other years, on the average, by 3.9 percent.

If we are to move toward fiscal responsibility, we will have to cut the budget by more than that.

If my amendment is adopted, it will touch every person who receives a tax cut. It will impress them. It will alert them. I am talking particularly about the little people.

I had a letter yesterday from the kind of person I am talking about. This little lady, whom I do not know, wrote to me:

> When I first learned of the $11 billion tax cut, I was pleased. I am no longer. My husband is regarded as making an average salary. But with two very fast-growing children we literally live from one Friday to the next. The only time we go out for entertainment is when my mother visits us and is available to babysit and give us the money. Most of our friends are in the same financial bind. We certainly do not want the little money that we save for the education of our children to disappear because of the value of the dollar being diminished.

What is happening to the dollar? It is depreciating all the time. It has depreciated 7 cents since the Korean war. It depreciated nearly 2 cents in the last 3 years. It has depreciated 55 percent in the last quarter of a century. A dollar today is a 45-cent dollar based on its value a quarter of a century ago. Who is going to be hurt? When the dollar is depreciated it hurts the little people who buy Government bonds, the widows, and elder citizens who draw social security. Also the fathers and mothers who are saving to educate their children—who are saving or trying to save enough money to provide an education for their children.

Let us go back 15 years. Let us take $5,000 that a mother and father have saved to send little Mary or little Johnny to college. Let us assume that they bought Government bonds 15 years ago. They have had to pay income tax on the interest they collected. They had saved that money to provide an education for their children. The cost of education has increased during the last 15 years.

A couple who had saved $5,000 15 years ago would now be able to buy only two-thirds of the education that they would have been able to buy for their children 15 years ago.

That is what we are doing to the dollar. That is what the little woman wrote me about.

We receive from the Budget and the President estimates of what the deficits will be. The estimate now is that the deficit will be $4,900 million this year. Let me give the Senate a little history. When we provide for a big tax cut it is a very weak reed upon which to lean. In the past 9 years the budget estimators missed in their estimates by $41.1 billion. Only $4.2 billion of that was on the plus side. They missed on the deficit side by $36.9 billion. In other words, we had deficits—we went into debt in those 9 years by $36.9 billion more than the budget calculators had estimated. So budget estimates like that are not very reliable.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. McCLELLAN. I shall be glad to yield in a moment. I should like to finish another point first.

Another argument for making an $11 billion tax cut is that the cut will put the money in the stream of public spending and into the private economy, and will engender financial growth that will provide revenues sufficient to offset any deficit, and to balance the budget. Let me give the Senate a little history on that. The last experience we had with reducing taxes, in 1954, by an estimated $7.4 billion shows what is likely to happen. Let us see what happened during the next 5 years after 1954—after a $7.4 billion tax reduction. What happened to the stimulation of our economy? In the next 5 years we had two surpluses. We had two balanced budgets, with a total surplus of $3.2 billion for the 2 years.

That was the total for 2 years. During the other 3 years, the deficits totaled $19.4 billion. Thus, a $7,400 million tax cut, as recently as 1954, produced in the next 5 years net deficits in the amount of $16.2 billion. Are we proposing now to duplicate that performance—I think something similar to that will be the result of the passage of this bill—I say we cannot rely on the budget estimates, nor can we rely on this kind of pump priming to stimulate the economy to the point where it will be dependable for a sound fiscal policy.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. McCLELLAN. I yield.

Mr. LAUSCHE. I have before me the Budget in Brief for fiscal year 1965. On page 81 is a tabulation of the deficits and surpluses, respectively, that the Government has suffered and enjoyed from 1789 down to this year. According to the tabulation, in 1954, a $7,700 million tax cut was made in the Eisenhower administration, designed to stimulate the economy. In 1955, the first year after the tax cut went into effect, the deficit was $4,180 million. In 1956, the surplus was $1,626 million. In 1957, the surplus was $1,596 million.

Then we came to 1958. That was the year in which the greatest stimulating effect upon the growth of the economy was to take place. Yet in 1958 there was a deficit of $2,819 million. In 1959, the deficit was $12 billion.

Mr. McCLELLAN. Maybe some of our Democratic friends will want to blame that $12 billion on the Republicans. Those who want to spend may blame that on the Republicans. But follow through to the last estimate, that for 1963. The deficit under a Democratic administration was $6.7 billion.

Mr. LAUSCHE. The point I wish to make is that in 1954 the word was spread throughout the country that a $7.7 billion tax cut would be provided; that the result would be greater employment, greater investment in industry, a greater amount of purchasing of consumer goods, and a reduced outflow of gold. That was the argument in 1954.

But what happened in the 4 subsequent years completely demonstrated that that argument was false. There were 2 years when there were surpluses. In 1956 the surplus was $1,626 million. In 1957, the surplus was $1,590 million.

But in 1958, the deficit was $2,819 million. In 1959, the deficit was $12 billion.

What if such deficits should occur as a result of the proposed tax cut? What would be our situation? Instead of Heller being right in saying that the more we spend and the less taxes we pay, the better off we will be, he is proved completely wrong as to what would be the situation for the annuitant, the pensioner, the person who has a few dollars in the bank, the person who had bought Government bonds. That is what bothers me about the proposed tax cut.

Mr. McCLELLAN. That is what has caused us much trouble.

During the course of the debate, since the bill has been under consideration by the Senate, proposals to eliminate excise taxes have been rejected one after another. Why? Because the Government needs the money—and everyone

[*P. 2264*]

has said so. Why is the money needed? Because there can be no spending ex-

cept on a credit without the money. There cannot be such great spending if there is a larger tax cut to include excise taxes.

Why, in view of the great injustice that has been cited to us with respect to some of these excise tax cuts, can we not have them? I will tell you why. It is because of too much spending. That is why there cannot be an elimination of excise taxes on ladies' purses, perfume, jewelry, ball point pencils, cabaret and theater tickets, and many other items on which there is an excise tax. Money is needed for spending; that is why the excise taxes are not removed.

What is the answer? If we want to do justice to those people, and enable them to buy more of the goods that are now taxed, it will be necessary to get rid of these excises, which are a nuisance, by reducing spending.

It is said that the excise taxes were imposed in a time of emergency. They were. But Congress continues to perpetuate the emergency, not because of war, not because of defense spending, but because of excessive nondefense spending.

Look at the record. Our spending problem today is not due to defense. Defense spending has risen only about 12.8 percent in recent years. I will place the exact figure in the RECORD. But nondefense spending has risen 113 percent in the same period of time.

If we want to have a sound economy, if we want a stable economy, an economy that can be relied upon, without peaks or valleys, let us start to reduce Government spending. That is where the start must be made. Cut out the fat in Government spending.

The rise in defense spending since 1954—a period of 10 years—has been 12.8 percent. Nondefense spending has increased by 113.7 percent in the same period. That is our real trouble, and it is in that area where reductions can and should be made.

We are told that it is the war scare that is causing so much spending and causing budgets to be out of balance. I say it is not; and the record refutes any assertion that it is.

Mr. LAUSCHE. Mr. President, will the Senator from Arkansas yield?

Mr. McCLELLAN. I yield to the Senator from Ohio.

Mr. LAUSCHE. I have always been impressed by the statement made by the arch designer of this modern approach to economics. I quote Mr. Heller:

> Yes, that does indicate an enormous need for public education in economics, economic policy, and tax policy. I think it is quite remarkable that the basic puritan ethic of the American people should be such that they want to deny themselves tax cuts because of their fear of deficits and additions to the national debt.

Mr. McCLELLAN. The public at large is a little smarter than Mr. Heller, when he advocates deficit spending and irresponsibility in order to create prosperity, for that is what it seems to me he is saying.

Mr. LAUSCHE. "Puritanical" means honest adherence to integrity. The American people want to adhere to integrity in the management of their public business. But the statement I just read seems to suggest a casting aside of puritanical morality and the acceptance of deficits an additions to the national debt without fear of complaint.

Mr. McCLELLAN. I will cite another illustration. It is said that the tax cut will result in an increase in the gross national product. The increase in gross national product between 1963 and 1964 was $31 billion. How much Federal revenue did that produce? Two billion dollars. Now it is said, according to the most optimistic budget estimate, the gross national product will rise to $623 billion. It rose $31 billion in 1963.

Now they say there will be a rise of $38 billion, and that it will take up a lot of the slack—by doing what? By making a tax reduction, and by pouring the money into private channels. They say—the budget and the administration's economists say—that the gross national product will increase by $38 billion—that is their figure, not mine.

Mr. President, if an increase of $31 billion in the gross national product produced only $2 billion in revenue in 1963, how can Senators expect $38 billion increase in the gross national product in 1964, with reduced tax rates, to produce any more?

I say we are going down the wrong road, and I will not vote to travel in that direction.

Mr. DOMINICK. Mr. President, will the Senator from Arkansas yield?

Mr. McCLELLAN. I yield for a question.

Mr. DOMINICK. First I wish to say I agree with the statement of the Senator from Arkansas.

I have been asked this question: If the Senator's amendment is adopted, how can people plan on what their overall or individual budgets will be, if they do not know what their tax rates will be, and if they have to wait until Congress determines them?

Mr. McCLELLAN. They will know them the next year.

Mr. DOMINICK. That is correct.

Mr. McCLELLAN. But, as I have said, the father of Little Mary, back home,

who is trying to save money for her education, and the pensioner, and the average wage earner and the average salaried worker will be very much interested, and they will be alerted, and they will be writing to their Congressmen and saying to them, "Hold down that budget. I do not want my taxes to be raised again." They will have that direct interest; and I am persuaded that they will manifest it, if that situation develops.

Mr. DOMINICK. Then I understand that the Senator from Arkansas believes his amendment will create an incentive to keep expenditures low, and thus make it possible to keep the tax rates low.

Mr McCLELLAN. Not only that, but I point out that the same will have to be done in connection with the debt-ceiling. If an authorization for an increase in the debt ceiling is justified, they will have to show that it is justified. If my amendment is adopted, we will require the administration to justify an increase in expenditures in excess of $100 billion and to make their case for it, before we will allow Federal expenditures to exceed $100 billion in any one fiscal year.

Mr. President, we need a reduction of expenditures as much as we need a reduction in taxes. A reduction in expenditures will help us move toward a balanced budget and stability; and that will do more to strengthen the dollar and to stimulate investment confidence than will a tax cut that spirals the national debt to dizzier heights, while excessive and improvident Government spending continues unimpeded and unabated.

Recurring heavy deficits, such as we have accumulated in recent years, can only produce hindrances and serious roadblocks to sustained progress and prosperity.

Mr. President, we need a tax cut; on that point, all of us agree. I am not just arguing against making a tax cut, for we do need one. But both spending and taxes are too high, and both spending and taxes should be reduced.

Unfortunately, it is not now proposed that we do anything about reducing the governmental spending; we are not proposing to treat the two problems equally and simultaneously, whereas in fact they are interrelated and inseparable, as we must realize and concede when we weigh or evaluate the soundness of the Federal budget and of our fiscal policy.

While we are trying to remedy the one situation—too high taxes—we are virtually ignoring the other—too high expenditures—and, in my judgment, the result will be to seriously aggravate the spending and deficit problem, particularly will it result in larger deficit spending. The impact of the tax cut could readily aggravate the spending problem by enlarging the annual deficits and, thereby, further pyramiding the national debt. Therein lies the danger.

So the pending bill will require us to take a big gamble; let us make no mistake about that.

Everyone knows that at the present time the national debt is $308 billion; and it is calculated that by the end of next year it is expected to be $317 billion. This situation has a definite impact on the value and deterioration of the dollar; it means that creeping inflation is a present and a nagging reality; and the seeds of spiraling inflation lurk menacingly in mounting indebtedness and deficit spending.

To the extent that we are charging this tax reduction into the Federal debt, we are increasing the inflationany pressures and are further depreciating the value of the dollar.

Any cut in taxes on borrowed money—and that is what we are proposing—is a shirking of responsibility that will saddle on future generations a cost of government that we ourselves would bear.

How can we have a legitimate tax cut? The answer is by earning it.

[*P. 2265*]

That is the right way to do it. How do we earn it? We earn it by reducing Federal expenditures. Can that be done? Yes. Last year we reduced the budget $6½ billion; we reduced the appropriations for the State Department, the Justice Department, and the Commerce Department 15½ percent under their requests. So it can be done.

Undoubtedly this tax bill will be enacted into law.

As a result, we will be taking a tax cut without earning it. It is true that we have the power to take it, but it is also true that we have not earned it.

Mr. President, I say that we can yet earn it. How? By reducing spending and by refraining from enacting new laws that will create additional spending obligations.

The President's state of the Union message included 23 requests for new laws and for expanded programs. If Congress were to enact those laws in the first year they went into effect, they would require an increase of $2,500 million in Government expenditures. Over a period of 5 years, they would cost an additional $13,500 million—and those are underestimates, ultraconservative estimates.

Mr. President, I do not propose to go down that road. I will vote against this tax bill, unless we include a provision

that has meaning, be effective, and be a directive to hold down the expenditures to a level of our revenues and the economy.

Senators talk about economy; and here is their chance—if they still favor the tax bill and if they are going to vote for it—to vote for both tax reduction and economy.

But in my judgment, many Senators will turn away from economy in voting for this measure. If Senators vote to include in the bill an amendment which simply says, "We will allow the Government to spend $2,100 million more than it is spending now, as it could do under my amendment, then Senators will be voting for economy.

Mr. President, today this body will make a most important decision. Either the Senate will decide to go down the road to more reckless spending, or the Senate will begin to apply the brakes, here and now. Senators must make that choice.

Mr. HRUSKA. Mr. President, will the Senator from Arkansas yield for a brief question?

Mr. McCLELLAN. I yield.

Mr. HRUSKA. First, I wish to say that I support the amendment of the Senator from Arkansas, and I shall vote for it.

The amendment includes the phrase "the net administrative budget expenditures." Will the Senator from Arkansas explain the meaning of that phrase? Does it relate to the estimates for the 1965 budget?

Mr. McCLELLAN. The amendment would apply to the expenditure of funds which are appropriated each year by Congress. There are carryover appropriations and obligational authority. Those would come within the proposal. But trust funds and other similar funds would be excluded. The amendment applies to the money that Congress appropriates. The administration comes to Congress to obtain authority to make obligations.

Mr. HRUSKA. Does the amendment apply to the obligational authority or the cash expenditures during the fiscal year?

Mr. McCLELLAN. It applies to expenditures during the fiscal year.

Mr. HRUSKA. The present budget estimates Government expenditures of $97.9 billion.

Mr. McCLELLAN. That is what the President has said he would like to spend, not the amount for which he has asked obligational authority. The amendment is tied to the spending and not to the obligational authority.

Mr. HRUSKA. So if spending actually remained at $97.9 billion, it would be within the limits placed by the Senator.

Mr. McCLELLAN. Yes. If expenditures stayed at $100 billion on the penny, the tax benefits would remain; but if the amount should go one penny over $100 billion, the amendment would apply.

Mr. HRUSKA. We are told that capital assets to the extent of $2.3 billion will be sold during the fiscal year.

Mr. McCLELLAN. The amendment would not include those capital assets. The administration can still sell those. We are giving the administration a great deal of leeway.

Mr. HRUSKA. When the assets were sold, would not the money received be used to increase the income of the Treasury? Would it not be used to reduce the spending and, therefore, if that amount were added to the $97.9 billion, the total would exceed $100 billion?

Mr. McCLELLAN. The total would exceed that amount, but I have excluded those sales. The administration has said that in addition to what would be received from those sales, it wants $97.9 billion.

Mr. HRUSKA. My point is that the net administrative budget expenditures are now exceeded by the President's own calculations, because to the $97.9 billion there must be added the $2.3 billion.

Mr. McCLELLAN. That amount would not be included under the amendment. Those funds would be received from the sale of assets, and the money received from the sales of assets would not be included in the $100 billion figure contained in the amendment.

Mr. HRUSKA. Would items like the REA be included? The legislative authority will be asked of the Congress——

Mr. McCLELLAN. When the money is spent, it will be included.

Mr. HRUSKA. The money received by REA in repayment of loans already made will be available for expenditure by the REA without reporting them in the appropriation process. Would that be included?

Mr. McCLELLAN. No, it would not be included. I have in my hand a document setting forth a full explanation as to the trust funds. The amendment would not apply to them. The amendment refers to money resulting from appropriations which the President gets, or the obligational authority for which he gets us to grant an appropriation later.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. McCLELLAN. I yield.

Mr. LAUSCHE. The fear I have about selling capital assets is that we would be selling capital to finance current operations. When the sale of capital as-

sets has been completed and we must then draw on current taxation, that is the time we will get into real trouble.

Mr. HRUSKA. I thank the Senator.

Mr. McCLELLAN. Mr. President, I should like to reserve a little time. I ask unanimous consent that certain charts supporting the figures that I have stated, and explanations of subsections of the amendment, be printed at this point in the RECORD.

There being no objection, the charts and explanations were ordered to be printed in the RECORD, as follows:

THE 1954 TAX CUT

Previously, the largest tax cut in history was $7.4 billion in 1954. At that time, as now, administration officials stated that this cut would greatly stimulate the economy and result ultimately in a better budget balance.

Let us examine the record for a 5-year period following that cut:

Calendar year	Total gross national product	Dollar gain over last year	Percentage gain	Actual budget surplus (+) or deficit (−)
1954	$363,100,000,000	(1)		−$3,100,000,000
1955	397,500,000,000	$34,400,000,000	9.4	−4,200,000,000
1956	419,200,000,000	21,700,000,000	5.7	+1,600,000,000
1957	442,800,000,000	23,600,000,000	5.6	+1,600,000,000
1958	444,500,000,000	1,700,000,000	.4	−2,800,000,000
1959	482,700,000,000	38,200,000,000	8.6	−12,400,000,000

[1] Declined from 1953.

[P. 2266]

The chart above clearly reveals that in only 2 of the 5 years following the 1954 tax cut was there a Federal budget surplus, the total amount of which was $3.2 billion; whereas in 3 of the 5 years there was a deficit that totaled $19.4 billion, thus resulting in a **net deficit** for that period of $16.2 billion.

Past experience with budget estimates submitted by the administration forcefully demonstrates that estimates as to the anticipated budget surplus or deficits are often inaccurate. The chart below shows the differences between the budget estimates submitted by the President and the actual budget figures for the period from fiscal 1955 through fiscal 1964.

[All figures in billions of dollars]

Fiscal year	Budget as submitted by President			Actual budget figures			Differences, actual and estimated deficit or surplus
	Receipts	Expenditures	Surplus or deficit	Receipts	Expenditures	Surplus or deficit	
1955	62.7	65.6	−2.9	60.2	64.4	−4.2	1.3
1956	60.0	62.4	−2.4	67.8	66.2	+1.6	4.0
1957	66.3	65.9	+.4	70.6	69.0	+1.6	+1.2
1958	73.6	71.8	+1.8	68.5	71.4	−2.8	4.6
1959	74.4	73.9	+.5	67.9	80.3	−12.4	12.9
1960	77.1	77.0	+.1	77.7	76.5	+1.2	+1.1

Fiscal year	Budget as submitted by President			Actual budget figures			Differences, actual and estimated deficit or surplus
	Receipts	Expenditures	Surplus or deficit	Receipts	Expenditures	Surplus or deficit	
1961	84.0	79.8	+4.2	77.7	81.5	−3.8	8.0
1962 (J.F.K.)	81.4	84.3	−2.8	81.4	87.8	−6.4	3.6
1963	93.0	92.5	+.5	86.4	92.6	−6.2	[1] 6.7
1964	86.9	98.8	−11.9	88.4	98.4	−10.0	+1.9
1965	93.0	97.9	−4.9				

[1] Latest estimate.

Deficits $3.9 billion more than Budget predicted; nearly $4 billion per year average

Chart shows net error (or difference) of $36.9 billion—$41.1 billion on the minus side, $4.2 billion on the plus side. Period covered, fiscal 1955 through fiscal 1964.

Comparison of revenue estimates for 1965 and gross national product compared to actual revenue and gross national product for fiscal 1963 and 1964:

Year	Gross national product	Revenue
1965	$623,000,000,000	$93,000,000,000
1964	585,000,000,000	88,400,000,000
1963	554,000,000,000	86,400,000,000

Proposed legislation for user charges (passenger and freight air travel, jet fuel, increased tax rate on general aviation fuel, new tax on fuel used in inland waterways, and new motorboat fuel tax) would add $213 million to revenues, if enacted. Otherwise revenues would be almost quarter of a billion dollars short of the $93 billion estimate.

Reductions in appropriations requests made by the Congress in fiscal years 1954–64:

Fiscal year	Budget request	Appropriations	Reductions	Fiscal year	Budget request	Appropriations	Reductions
1964	$98,883,372,581	$92,433,123,132	$6,513,041,004	1958	$73,113,555,340	$68,070,096,556	$5,043,458,784
1963	95,639,477,405	92,266,154,659	3,373,322,746	1957	68,587,724,820	68,330,229,608	257,495,212
1962	91,597,448,053	86,606,487,273	4,990,960,780	1956	62,030,092,195	59,954,284,321	2,075,807,874
1961	84,011,974,490	83,800,335,992	211,638,498	1955	57,422,327,386	54,812,457,263	2,609,870,123
1960	83,452,687,259	81,572,357,732	1,880,329,527	1954 (Ike)	59,117,311,150	54,539,342,491	4,577,968,659
1959	81,737,060,999	81,119,818,276	617,242,723				

EXPLANATION OF SUBSECTION (C) OF AMENDMENT

Under the provisions of subsection (a) of the amendment, when net administrative budget expenditures exceed $100 billion, the sections of the Internal Revenue Code which are amended by the bill to provide rate reduction will again apply as if this bill had not been enacted; that is, as if those sections had not been amended. One of the rate sections amended by the bill is section 11(b) of the Internal Revenue Code which contains the rate of normal tax on corporations. Under the language of that section as it now exists, the rate of normal tax for years beginning before July 1, 1964, is 30 percent, and for years beginning after June 30, 1964, is 25 percent. This 25-percent rate when added to the 22-percent rate of corporate surtax under existing law would give a combined corporate income tax rate of 47 percent, or a reduction of 5 percent from the combined 52-percent rate which has been in effect for many years under yearly extensions by the Congress of the 30-percent normal tax rate.

This subsection of the amendment provides that, if net administrative budget expenditures exceed $100 billion and the provisions of existing law apply as if the bill had not been enacted, the rate of corporate normal tax is to be 30 percent, the normal tax rate paid by corporations for many years. This, when combined with the existing surtax rate of 22 percent, would continue in effect the combined 52-percent corporate income tax rate.

EXPLANATION OF SUBSECTION (d) OF AMENDMENT

Section 21 of the Internal Revenue Code provides, in effect, that when income tax rates change during a particular taxpayer's taxable year, he determines his income tax liability for that taxable year according to the number of days in his taxable year during which the old rates were in effect and the number of days during which the new rates are in effect. Thus, if tax rates are reduced, such taxpayer gets the benefit of the rate reduction for the portion of his taxable year after the tax rates change, and he does not have to wait until his next taxable year begins. Likewise, if tax rates are increased, such taxpayer pays at the increased tax rates for the period of his taxable year after the rate increase.

This subsection of the amendment merely provides that these provisions of section 21 of the Internal Revenue Code shall also apply to the changes in the rates of tax which will take effect under the provisions of this amendment, if net administrative budget expenditures exceed $100 billion.

Mr. McCLELLAN. Mr. President, I yield the floor. I suppose the time is running and being charged against the other side.

Mr. LAUSCHE. Mr. President, I intend to suggest the absence of a quorum.

Mr. McCLELLAN. The time necessary for the quorum call will come from the time of one side or the other.

Mr. ERVIN. Perhaps some Senator will yield time to me.

Mr. MORTON. The Senator from Louisiana [Mr. LONG] is supposed to be in charge of the time available on the opposite side of the amendment. How much time does the Senator desire?

Mr. ERVIN. Not more than 15 minutes.

The PRESIDING OFFICER. The Senator from Louisiana [Mr. LONG] has 50 minutes remaining.

Mr. MORTON. Mr. President, at the risk of being criticized by my beloved colleague, I yield to the distinguished Senator from North Carolina 15 minutes.

Mr. ERVIN. Mr. President, Federal taxes are too high. They rob virtually every American of the economic right to retain a fair share of the fruits of his labor for himself and his family, and in that way, substantially impair the incentive which makes the free enterprise system work. For this reason, I would welcome an opportunity to vote for a bill which would reduce Federal taxes in a manner consistent with sound economics and good government.

The so-called tax reduction bill, H.R. 8363, undertakes to reduce Federal taxes. Candor compels me to confess, however, that this bill undertakes to reduce such

[*P. 2267*]

taxes in a manner incompatible with sound economics and good government. The bill undertakes to reduce taxes when the Federal Government is operating in the red, and thus is repugnant to the sound principle that government should balance its budget in a time of comparative peace and prosperity. The bill ignores the obvious truth that Federal taxes are too high simply because Federal expenditures are too high and does not limit in any way the spiraling cost of Federal Government, which has increased by $30 billion since the end of the Korean conflict. Incidentally, the major portion of this increase; that is, $23 billion has been for civilian rather than military purposes.

The Federal Government can justify spending in excess of its tax revenues for necessary purposes in times of actual war or severe economic depression. No amount of economic or political sophistry, however, can erase the simple truth that it is folly for the Federal Government to do so in times of comparative peace and prosperity.

The tragic truth is that during 26 of the last 32 fiscal years, the expenditures of the Federal Government have exceeded its tax revenues. As a result, the national debt of the United States has increased to more than $300 billion and

now exceeds the combined national debts of all the other nations on the earth. The anual interest on this national debt now totals approximately $11 billion.

For these reasons, the financial house of the Federal Government is now in sad disarray. The Federal Government has available to it two—and only two—intelligent ways in which to set its financial house in order.

It should either increase its taxes to match its expenditures or reduce its expenditures to match its tax revenues. Unfortunately, however, the Federal Government apparently lacks the fortitude to do either of these things. The first would be too displeasing to taxpayers who are already overburdened, and the second would be displeasing to the individuals, groups, institutions, communities, and foreign nations who crave Federal dollars for purposes too numerous to mention.

Instead of attempting to sets its financial house in order in either of the two intelligent ways available to it, the Federal Government seeks what it conceives to be an easy and painless way of escape from its financial dilemma by means of the so-called tax reduction bill, H.R. 8363, which deepens its deficits and heightens its debts in a period of comparative peace and prosperity when its spiraling expenditures already largely exceed its tax revenues under existing laws.

When men engage in folly, they always lay the flattering unction to their souls that their folly will produce good.

To justify the passage of the so-called tax reduction bill, those who rule in Washington invoke the economic fallacy which has brought the Federal Government to its present unhappy financial plight. They assert that the Federal Government and the people can easily and painlessly spend their way to prosperity and increased revenues and balanced budgets.

If this theory had any substance, the Federal Treasury would be overflowing at this moment with tax revenues, for those who rule in Washington have followed it with constancy for a generation.

We are hearing once again—in increased tempo—the siren song which induced Congress to pass the tax reduction bill effective January 1, 1954. At that time, Congress was assured by those who assert the Federal Government and the people can spend their way to prosperity and increased revenues and balanced budgets, that the tax cut of January 1, 1954, would stimulate the economy to such an extent that lower tax rates would produce increased Federal tax revenues and enable the Federal Government to balance its budget. Unfortunately, however, those who made these rosy predictions at that time are now numbered among the false prophets. This is true because the deficits incurred since the passage of that tax reduction bill and those prophesied by the Treasury for this fiscal year and next will total $46.4 billion.

The so-called tax reduction bill calls to mind an ancient story concerning a proposal allegedly made in the British Parliament a generation or more ago that an immense amount of bonds should be issued for immediate expenditure and that payments upon the principal of such bonds should not commence for 50 years.

One member of Parliament arose and opposed the proposal on the ground that it was not fair to posterity. The author of the proposal then arose and replied:

> Posterity has never done anything for me and I don't propose to do anything for posterity. Furthermore, posterity can't vote in the next election.

For the reasons I have given, I cannot reconcile the so-called tax reduction bill with sound economics and good government. Moreover, I do not believe that the bill is fair to posterity because it indicates that those who rule in Washington have no present intention to make any reasonable effort at any time within the foreseeable future to reduce our enormous national debt.

These things being true, I cannot vote for the so-called tax reduction bill, notwithstanding my conviction that Federal taxes are too high and ought to be reduced in a proper manner.

Mr. LAUSCHE. Mr. President, will the Senator yield for a question?

Mr. ERVIN. I am glad to yield.

Mr. LAUSCHE. I do not quite understand what application the failure of posterity to vote in 1964 has to the measure before us.

Mr. ERVIN. All I can say is that the most tragic discovery ever made by politicians was that unborn generations could not vote; that made the politicians willing to spend the money of future generations, because they could do so with impunity, knowing that future generations cannot vote at the next election.

Mr. LAUSCHE. Does the Senator feel that perhaps the political election of 1964 has some influence upon what is being done on this bill?

Mr. ERVIN. I believe this bill indicates an unwillingness on the part of those who rule in Washington to levy sufficient taxes to meet expenditures for fear they might offend taxpayers, and an unwillingness on their part to reduce Government expenditures to the amount of tax revenues for fear they might offend individuals, institutions, certain

groups, and foreign countries which crave tax dollars from the U.S. Treasury for purposes too numerous to enumerate at this time.

Mr. LAUSCHE. The argument has been made that if we spend more than we tax, that is evil; but if we tax less than we spend, that is a virtue. I would like to have the Senator from North Carolina comment on that.

Mr. ERVIN. I do not accept that as a correct theory, but I would have to admit that it is the economic theory that has been followed at the Washington level for a number of years.

Mr. MUNDT. Mr. President, will the Senator yield to me?

Mr. McCLELLAN. Let us see if the other side wants to use any time.

Mr. MUNDT. I am on the side of the Senator from Arkansas.

Mr. SMATHERS. We are going to speak on this side, but we do not want to yield time to those against us.

Mr. McCULLOCH. I suggest that someone on his side speak for a few minutes.

Mr. SMATHERS. I am willing to yield back the remainder of my time.

Mr. McCLELLAN. Let us hear from the Senator's side for 2 or 3 minutes.

Mr. President, I yield 2 minutes to the Senator from South Dakota [Mr. MUNDT].

Mr. MUNDT. Mr. President, will the Senator from Delaware [Mr. WILLIAMS] yield me 1 minute from the time on the bill?

Mr. WILLIAMS of Delaware. I yield 1 minute to the Senator from Arkansas.

Mr. MUNDT. That gives me 3 minutes.

Mr. McCLELLAN. Two minutes.

Mr. MUNDT. Two from the Senator from Arkansas and one from this side.

Mr. McCLELLAN. Did the Senator receive 1 minute from that side?

Mr. MUNDT. Yes.

Mr. McCLELLAN. Two and one make three.

Mr. MUNDT. That is the soundest economic observation we have had so far during the tax debate.

Mr. President, it seems to me that the opponents of the McClellan amendment must either have no argument to make against it or that they are reluctant to expose those arguments to the logic of the Senate and to the cross-examination of debate.

I am going to support the McClellan amendment as one who, while he has not had much to say during this debate, has listened to or read virtually all of the debate, and has finally persuaded himself to vote for the tax cut whether the McClellan amendment prevails or not.

[*P. 2268*]

I do so, however, with grave doubt and considerable skepticism about the validity of the new, sophisticated argument about Federal financing which holds it wise and prudent to cut taxes and increase expenditures at the same time. I think the Senator from Arkansas [Mr. MCCLELLAN] renders a distinct contribution by providing a prudent safeguard whereby we can give this new, sophisticated concept of Federal financing a chance for a year to demonstrate itself. If it demonstrates itself with anywhere near the degree of success that its optimistic advocates assume it will, there is nothing to fear from the McClellan amendment, because it will never become operative. It becomes operative only if the predictions as they are presented to us by the advocates of tax reduction do not prove to be true. Those ardent advocates of this new and novel concept—budget balancing by cutting taxes and expanding expenditures—should support the McClellan amendment if they have confidence in their own arguments.

In addition, I support the McClellan amendment because it employs a tried and tested economic concept which is utilized, for example, by General Motors in the escalator clauses of their wage contracts; which tends to utilize the scientific concept of an index number which relates expenditures to taxes. I think there should be such a concept in this area of Federal fiscal policy. The amendment gives an index number of $100 billion, in order to preserve some semblance of economic precaution.

I can see how the adoption of the McClellan amendment could change the whole climate of public thinking in America, so that instead of Members of the House and of the Senate being besieged to spend money for certain projects in this or that community, or on this or that new welfare state proposal, generally across the land a sentiment for economy would evolve and cause every taxpayer—and every individual is a taxpayer—to continue to not want to do away with the advantage of reduced taxes. Every taxpayer would then be reluctant to advocate expenditures to pierce the sonic barrier which would destroy the benefits that the individual householder got from the tax cut. He would hesitate long before advocating expenditures which would automatically and directly increase his own personal taxes.

The PRESIDING OFFICER. The time of the Senater has expired.

Mr. MUNDT. May I have one-half of a minute?

Mr. WILLIAMS of Delaware. I yield one-half of a minute to the Senator from South Dakota.

Mr. MUNDT. I urge my colleagues who have been talking about economy and the necessity of budget balancing to vote for the McClellan amendment, which puts an emphasis of economy in the tax cut.

Mr. McCLELLAN. Mr. President, I yield 2 minutes to the Senator from Iowa [Mr. MILLER].

Mr. MILLER. Mr. President, will the Senator from Delaware [Mr. WILLIAMS] yield me 1 minute?

Mr. WILLIAMS of Delaware. I yield 1 minute to the Senator from Iowa.

Mr. MILLER. Mr. President, I commend the Senator from Arkansas and the Senator from Ohio for offering the amendment. I hope it will be adopted; and I hope a majority of Senators will adhere to the economic philosophy which it represents.

The economic philosophy which this amendment represents is that we cannot preserve the purchasing power of the people's hard earned money and continue to incur multibillion-dollar deficits.

Of course, the mere fact that there is a deficit in the Federal Treasury does not necesarily mean that there is going to be inflation. There are many factors to be taken into account. But the fact remains that during the past 3 years of the present administration, for every $1 billion that we have gone deeper into debt, there has been $1 billion worth of inflation. The record shows that during the past 2¾ years of this administration, while we were going $18 billion deeper into debt, there was $19 billion worth of inflation. That is roughly the equivalent of $7 billion of inflation a year.

I do not care what some so-called economists or columnists have to say about the wholesale price index being stable. Most of the American people buy retail. That is what counts. The retail price index has been going steadily upward. That means that the purchasing price of the dollar has been going steadily downward. The purchasing price of the dollar is down to 45.9 cents, as compared with 1939, when the dollar had 100 cents worth of purchasing power.

There is only way to stop that trend. and that is to come somewhere near a reasonably balanced budget. A $5 or $6 billion deficit budget will continue to produce inflation.

The tragedy is that under the tax cut bill the majority of the people who will benefit are not those who need the benefit, and who would be hurt by inflation. But the millions of people in the so-called poverty sector who do not have enough income to pay an income tax are the ones who will get no benefit under the bill, but they will be stuck with inflation.

Therefore, I hope that the amendment offered by the Senator from Arkansas [Mr. MCCLELLAN] and the Senator from Ohio [Mr. LAUSCHE] will be agreed to, because it represents sound economic principles.

Mr. President, I ask unanimous consent that an excerpt from an article entitled "An Avalanche of Figures," written by the distinguished columnist David Lawrence, and published in the Washington Evening Star for January 22 may be printed in the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

AN AVALANCHE OF FIGURES: STATISTICS WITH THE BUDGET ARE CALLED INCOMPLETE AND MEANINGLESS

(By David Lawrence)

For the last 3 days, the American people, and particularly the news correspondents in Washington, have been deluged with an avalanche of figures. This has been designed to prove that the United States from 1961 to 1963 has gone through a period of unexampled prosperity and that even better times are ahead for 1964. But the figures given are not complete and in many respects are meaningless, if not misleading.

Thus, the gross national product—the phrase supposed to describe the output of the whole economic system—is given in the President's Economic Report as reaching $623 billion in the year 1964. This is $259.9 billion above what it was in 1954, just a decade earlier.

But more than 40 percent of this rise is due to higher prices. If compared with the prices of goods and services in 1954 and the value of the dollar at that time, the gross national product this year would not be $623 billion. It would be $517.4 billion, which is $154.3 billion above what it was 10 years ago.

The President also points to corporate profits as having made a 44-percent rise in the last 3 years. This, however, is from a low point in 1961 and is not based on any annual figures. He says that a further rise will come with the tax cut. But a study of the fine print in the same volume of statistics handed to the press this week discloses that corporate profits are projected at 4.9 percent of the gross national product for 1964. This is less than what it has been in 11 of the 17 years since World War II. Corporate profits went up as high as 8 percent in those years. They were 6.2 percent in the 1949 recession year and stood at 4.6 percent in the economic setback of 1954, which is as high as they were in 1963 after 2 full years of expansion.

The sad truth is that corporate profits as a total figure are meaningless. The entire private enterprise system, even by the President's figures, will retain in 1964 only $30.5 billion after taxes. Profit margins are rarely

examined in Government reports, and the fact remains that the narrowness of many of these margins prevents the investment of capital and discourages the expansion projects through which jobs can be created for the people who need them.

Much of the difficulty in creating jobs is due to psychological barriers. There can, for example, be little confidence in the economic future as long as the dollar itself is unsound. Budgets have remained unbalanced almost continuously for many years now, and the cost of living has risen as the purchasing power of the dollar has gone down.

The assertion is made by the President that a tax cut now is necessary to stimulate the economy. But the economic report in some sections gives the impression that the economy is really riding high and doesn't need a tax cut as a stimulus. These viewpoints are contradictory.

Mr. LAUSCHE. Mr. President——

The PRESIDING OFFICER (Mr. McINTYRE in the chair). Who yields time?

Mr. WILLIAMS of Delaware. I yield 5 minutes on the bill to the Senator from Ohio.

The PRESIDING OFFICER. The Senator from Ohio is recognized for 5 minutes.

Mr. LAUSCHE. In determining what the ultimate action on the bill should be, I believe it is necessary to take a look at historic experience to find out what the impact was of past tax cuts.

Secretary Dillon testified before the Finance Committee that as far as he knew, the theory that although we are in an annual operating deficit, by increasing the deficits we will improve the economic position of the country is a new theory which has never before been practiced in the history of our country.

Looking back into the past, I invite the special attention of the Senate to 4

[*P. 2269*]

years in our history, the years 1926, 1929, 1948, and 1954. In those years, substantial tax cuts were given.

If we look into the years that followed those tax cuts we will be able to learn whether it always follows that tax cuts produce economic growth.

In the year 1926, a major tax cut for individuals was given, but instead of a growth in the economy resulting, there developed a minor recession. I point out what happened in 1926 to show what the situation was during that year. We had enjoyed 6 years of surpluses. The Government decided that with annual surpluses it could make a tax cut, so in 1926, with a surplus of $865 million, it introduced the tax cut. The next year the Government produced a surplus of $1,155 million. The following year the surplus fell to $939 million, and in 1929 it fell to $734 million. In 1930 it fell to $730 million.

Except for the first year after 1926, the gross national product fell in each succeeding year.

There was another tax cut given, and that was in December of 1929. This was the second major relief tax cut given to individuals. The result was that there was a depression which ripened into the great depression of 1929 to 1933. Beginning in 1920 and on through to 1931, there were 10 years of surpluses.

The PRESIDING OFFICER. The time of the Senator from Ohio has expired.

Mr. LAUSCHE. Mr. President, I ask unanimous consent that I may proceed for 5 additional minutes.

Mr. SMATHERS. Mr. President, I yield 5 minutes to the Senator from Ohio, to be charged to the time on the bill.

The PRESIDING OFFICER. The Senator from Ohio is recognized for 5 additional minutes.

Mr. LAUSCHE. I thank the Senator from Florida.

Tax cuts were made in 1931. The depression which shook the Nation had arrived. So there were two situations, the year of the 1926 tax cut and the year of the 1931 tax cut. The tax cut of 1931, instead of producing prosperity resulted in the great depression of 1931.

I now come to the year 1948, when sizable tax relief to individuals was given in a tax cut, and a moderate recession began in December of 1948. In 1948 there was a surplus of $8,419 million. A tax cut was given, but the next year there was a deficit.

I therefore state that it does not follow that tax cuts produce growth in the gross national product.

I come now to the fourth year, August 1954, in the Eisenhower administration, when a $7,700 million tax cut was given to the people. What was the result? In 1954, when the tax cut was given, there was a deficit of $3,117 million. The next year, during the year the tax cut went into effect, the deficit rose to $4,180 million.

In 1956, there was an improvement in the economy. In 1957 there was a slide. In 1958, 4 years after the tax cut, there occurred the beginning of the great $12 billion deficit of 1959.

We are asked to pass this tax cut bill under the promise that there will be cuts in spending. Cuts in spending are now contemplated. My fear is that when the tax cut bill is passed, all thoughts of reducing spending will come to an end, and we shall resume the same type of operations in the future that we have had in the past.

The amendment of the Senator from Arkansas contemplates applying pressure so that the spending program will not be reinstituted to the point where our spending of the administrative budget will exceed $100 billion.

To that judgment I subscribe. I will support the amendment.

Mr. McCLELLAN. Mr. President, may I inquire how much time is left on this side?

The PRESIDING OFFICER. The Senator from Arkansas has 3 minutes remaining.

Mr. McCLELLAN. I will wait to see if other Senators wish to speak.

Mr. SMATHERS. Mr. President, I yield to the majority leader such time as he may desire.

The PRESIDING OFFICER. The Senator from Montana [Mr. MANSFIELD] is recognized.

Mr. MANSFIELD. Mr. President, I believe I can say what needs to be said in about 5 minutes.

I point out that the McClellan amendment would provide that if in any future fiscal administrative budget expenditures exceed $100 billion, on January 1 of the following calendar year tax rates would revert, let us say, to the levels of the year before—in this instance, the 1963 levels.

The purpose of the tax cut is to generate more money in the economy, for the purpose of modernizing and rehabilitating plants, for the purpose of providing employment, and for the purpose of preventing what has been an undoubted pattern since the end of the Second World War; namely, a recession at the end of every 44 months. The graphs will bear out that statement.

The Senator from Arkansas said earlier that during the past 11 years Congress had reduced the budget requests of the President by $32 billion. That is a correct statement.

I point out that last year's session of Congress reduced the budget request of the President by $6.3 billion.

Under the pending amendment we would pass the buck to the President, and create a situation which is the responsibility of Members of Congress to deal with.

Everyone knows that in recent years expenditures have been rising rapidly.

In the face of widespread expectations of further increases of up to $101 or $102 billion for 1965, President Johnson cut his proposed expenditures for that year below the level of the current year, namely, from $98.4 to $97.9 billion.

I recall the smile of pleasure which this news brought to the chairman of the Finance Committee when it was announced to him personally, I believe, by the President.

President Johnson's budget was only the second budget in 9 years to propose such a reduction below the previous year. His budget also calls for a substantial reduction in total civilian employment in the executive branch, the first budget to do this since 1956.

Again I refer to the distinguished chairman of the Finance Committee, who has reported that in the intervening period there has been a consistent rise in civilian employment in the executive branch. Here we have a trend in reverse. The present budget cuts the estimated deficit in half and carries us toward the achievement of a balanced budget.

The President has shown his complete good faith in his determination to hold expenditures at an absolute minimum.

Let us not pass judgment on all of President Johnson's future requests before he makes them. If we adopt the pending amendment, that is what we shall be doing.

As set forth in the Budget and Accounting Act of 1921, the President is charged with recommending the Federal budget, and it is up to Congress to pass judgment on such recommendations when they are made.

In the face of the President's fine record on expenditures, let us not assume that he is going to run expenditures over $100 billion. If he makes such a proposal in any budget he submits in the future, that will be the time to pass judgment on it.

In short, let us give the President an opportunity to make his record on expenditures. He has proved his determination to keep down the spending level. Let us encourage him to do so. Let us help him by carrying on the policies and procedures which have marked Congress for more than a decade in every year. Congress, under both Republican and Democratic control, has reduced expenditures below those requested by the President himself. I think we ought to keep that fact in mind.

I point out also that if we should adopt an amendment of this kind we would create a feeling and spirit of uncertainty in the business community. That would mean that there would be not as much business spending as there should be. It would mean that our economic equilibrium would be shattered to some extent. It would mean that fears would rise. Many times recessions have been based on fear rather than on fact. We ought to give our support to the President and encourage him in the procedures he has laid out. Let us assume our

own responsibility. Let us give business an opportunity to achieve something in the way of stability, and not adopt an amendment of this kind, which would apply not only to business, but also to income tax reductions which are planned in the bill.

In response to the distinguished Senator from Ohio [Mr. LAUSCHE], let me point out that on the basis of deficit spending Austria has been able to increase greatly its gross national product. It is a living example of what can be done under the proposal now before the Senate.

[*P. 2270*]

It is my further understanding, based on talks with members of the executive branch, including two Presidents, that if the proposed income tax cut goes into effect it will generate something on the order of $40 billion, to be used for plant modernization, plant rehabilitation, and more jobs.

Whereas the gross national product is $600 billion, it is anticipated that under this proposal, if it is passed as is, it might well rise to $640 billion.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. LAUSCHE. I made a thorough study of the Austrian situation. An examination of the statistics shows that its practices have led to a state of inflation. However, over and above that, Austria collects 70 percent of its revenues through excises and sales taxes, and 30 percent through income and duties on imports. Austria's fiscal structure is not at all comparable to ours, and cannot be used as a basis for demonstrating that the tax cut will produce the economy that it is argued it will.

Mr. MANSFIELD. The facts prove that as a result of tax cuts inaugurated by the Republic of Austria, its gross national product has increased, and the result has been increased prosperity.

Mr. W. P. Gullander, president of the National Association of Manufacturers, has said that if unemployment continued to increase—the figure now stands at 5.6—in 1970 the unemployment figure in this country would be 12.7 percent.

Therefore, we must do something, in looking forward to the future, to give the youngsters coming out of schools an opportunity, and to give the people who are displaced by machines an opportunity in another field.

In the opinion of many who know far more about the subject than I do—and there is much about it that I do not know—we should pass a tax reduction bill of this kind, because it would benefit both corporations and individuals, and thereby give a lift to the economy and prevent the recessions which have marked the economy of this country since the end of World War II every 44 months.

Mr. COTTON. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. COTTON. I congratulate the Senator. I shall vote for the tax cut. However, I find myself confused by the distinguished majority leader's remarks. I have before me an article published in the Chicago Tribune of February 4, in which the distinguished assistant majority leader, the Senator from Minnesota [Mr. HUMPHREY] is quoted. The article states:

> Senator HUBERT HUMPHREY, Democrat, of Minnesota, predicted here last night that a congressional bill proposing a cut in taxes will intensify unemployment and act as a "powerful stimulus to automation."
>
> The Senator told 1,000 dentists attending the first general session of the 99th midwinter meeting of the Chicago Dental Society that the bill would release an additional $200 billion each year for capital investments.
>
> MORE JOIN LABOR FORCE
>
> He said a million more teenagers will join America's labor force this year and an additional 1.25 million teenagers will reach working age in 1965. He asserted that the present rate of 17-percent unemployment among teenagers will increase.

He said the present rate of unemployment would continue, and that the bill would not be the answer to this problem.

Mr. MANSFIELD. I remind my friend from New Hampshire that it was either Thoreau or Longfellow who said that consistency is not always a jewel. Differences of opinion exist on the Democratic side as, I assume, they also exist on the Republican side.

I spoke in Chicago on the 31st of last month, and on that occasion I addressed the Independent Grocers of Illinois on automation and taxes. What I said in effect was what I have said on the floor this afternoon. That is my understanding of the tax bill and what it will do. But I honor the honesty and integrity of the distinguished Senator from Minnesota. He may have been speaking from a different set of figures.

Mr. COTTON. Mr. President, will the Senator further yield?

Mr. MANSFIELD. I yield.

Mr. COTTON. I support the bill. I hope it will do what its supporters claim it will do. But I have discovered, after 17 years in Congress, that about the only way left to stop spending, to regulate spending, is to shut off some of the revenue.

I merely brought to the attention of the distinguished majority leader the remarks of the distinguished assistant majority leader to show that all these other hopes, while we all join in them, are a little nebulous.

Republicans are consistent. We are consistent in being frustrated and bewildered at the kaleidoscope of complicated and conflicting claims we see before us.

I agree with the majority leader. I will vote with the majority leader. But the problem is not plain black and white, as the Senator from Montana seems to present it. It would seem to me that if we could use the emergency, as the Senator from Arkansas [Mr. McClellan] suggests, to put an additional brake on the march into bankruptcy, of which we are, even today, aware, it would be of great advantage.

I hope the Senator will forgive me; I could not resist stating what the Senator from Minnesota said.

Mr. MANSFIELD. I am delighted to hear what the Senator has said. However, he was not listening closely to me, because I was not trying to paint the picture black or white. Some of this problem has been in the gray regions for me, too. I was trying to explain what I thought the effect of the amendment would be and what the effect of the passage of the bill would be.

Mr. GRUENING. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. GRUENING. I wish to comment on the alarming forecast that by 1970 we may reach 12 percent of unemployment in our labor force.

Although I have listened carefully to the debate, I find myself unable to find in the proposed legislation the panacea for our economic ills that is proclaimed for it by its sponsors.

When the late President Kennedy proposed legislation for tax reduction 2 years ago he feared greatly that the country would go into a recession. But conditions have changed since then. Since that time the Nation's economy has improved so much that it is difficult now to justify the proposed far-reaching tax cut. The reasons that actuated President Kennedy no longer exist, or at least exist to a much lesser degree.

Mr. MANSFIELD. Mr. President, will the Senator from Alaska yield at that point?

Mr. GRUENING. I yield.

Mr. MANSFIELD. In my opinion, the late President was worried more by the outflow of gold than by any other factors during the 3 years of his Presidency. He looked upon a recession as likely to occur on the basis of statistical evidence that one had occurred every 44 months. With the end of the past calendar year, I think the 35th month has passed. We are now in the 37th month. There is still a little while to go. If the tax bill is passed, it will be possible to bridge that gap and keep the economy on an even trend.

Mr. GRUENING. I am hopeful that the dire economic forecasts will prove to be not valid. I shall vote for the bill, although expressing, as I have at various times in the past and shall express again, grave doubt about its effectiveness to achieve the ends claimed for it by its proponents.

I believe that if we wish to stop the increase in unemployment, it will be necessary among other things to pass legislation such as a revived accelerated public works bill, which has proved its value in a brief time, and with a relatively small amount of money. In addition to the projects constructed or under construction for which $900 million was expended, we now have $700 million of approved projects, which cannot be started because the original appropriation of $900 million has been exhausted.

If I were making policy, I would seek express authorization of at least $2.5 billion for public works to put people back to work. At the same time I would propose a substantial appropriation for retraining those who, through automation and for other reasons, are thrown out of work and need to be trained in new skills for other jobs. That is the way to stop unemployment.

Mr. MANSFIELD. That is one way.

Mr. GRUENING. I am hopeful that the tax cut bill will have the effect that the President and others who support it say that it will have. I doubt very much whether it will have that effect to any substantial degree.

Mr. MANSFIELD. I hope so. They are more intelligent and know more about it than I do. I have to take their

[P. 2271]

word. It seems to me to be a reasonable assumption.

Mr. GRUENING. Mr. President, throughout the consideration by Congress of H.R. 8363, I have had and have expressed great doubts that the legislation on which we are about to vote will provide an effective remedy for the unemployment problems of our economy and even graver doubts about the wisdom of enacting legislation which does nothing to correct serious inequities in existing tax law. I feel that in view of our prospering economy—at least on the

higher business levels—this is the wrong time to reduce taxes, and, further, I believe strongly that it will prove to be an error to pass a tax law that concentrates its benefits in the upper levels of income while doing nothing significant to reduce tax burdens of those wage earners in middle income levels. I doubt whether the deliberately sought loss of $11 billion in anual revenue and the resulting increase in our national debt will result in the benefits claimed for this legislation, and certainly not to a degree commensurate with so drastic a reduction in our tax revenue.

Further, and above all in importance, I am deeply fearful the expected tax cut of $11 billion will prevent enactment of badly needed legislation proven effective in supplying employment for workers now unable to find jobs. I would far prefer that a portion of the contemplated tax cut now planned to be taken from the tax liability of corporations and individuals with high incomes be used, instead, to appropriate an additional $3 billion for the accelerated public works program.

Last Tuesday, in the discussion of his amendment to increase personal tax exemptions at the expense of other revenue decreases, the distinguished senior Senator from Tennessee [Mr. GORE] expressed my feelings about this bill. I would like to quote from his remarks and again call the attention of the Senate to the views of this conscientious member of the Senate Finance Committee who has also expressed his serious doubts about the wisdom of the present tax bill. Senator GORE said:

I have said earlier that I thought there were times when there are economic conditions under which it was inadvisable to have a balanced budget. I am not one of those who thinks that the sole and only purpose of taxation is to meet governmental expenditures. I believe a fiscal policy can be used, and should be used, for the implementation of economic and social policies. When we are experiencing recessionary conditions, one of our most effective weapons is fiscal policy. If it is desired to describe it by an ugly word, call it deficit financing; call it spending.

But I do not think we are now in the kind of circumstances when a general, massive deficit financing program is justified. There are problems in our society, such as structural unemployment, which need specific treatment. There is the problem of vocational training of teenagers who are coming into the labor market without skills. But the bill does not provide for them. This is scattergun treatment, and such treatment is not called for.

The bill is tailored for economic recessionary conditions which do not prevail. The rationale on which the bill was based has vanished into thin air. That is why I say that even though my amendment were adopted, I would not then vote for passage of the bill, a bill which would make such a gigantic reduction in governmental revenue at this time.

Suppose, as a result of the hoped for stimulation, there were a repeat performance of the 1954–57 period. Suppose we used this great weapon of fiscal policy, and then find, 18 months from now, that consumer demand is not sufficient to utilize plant and facilities which are already in existence, and which would be augmented by the bill. What weapon would then be used? Would we cut taxes again, in order to balance the budget at some other time in the even more indefinite future?

I say that this is unsound fiscal policy. A tax cut is a powerful weapon, but it is being used at the wrong time and in the wrong way.

Senator GORE's analysis of the present law is amply sustained by the views of Mr. Leon Keyserling, who, on the basis of exhaustive economic research, came to a similar conclusion as to the shortcomings of the legislation we have been considering. Mr. Keyserling, demonstrating his remarks before the Senate Finance Committee with extensive data, explained his opposition to H.R. 8363 by pointing out:

Gross private domestic investment and also investment in plant and equipment, during the period 1953–63 as a whole, was indeed deficient, as almost everything was deficient in an economy expanding at little better than half the needed rate. But during each period of economic upturn * * * the expansion of investment in the plant and equipment which enlarge our productivity capabilities raced forward at a nonsustainable rate, very much more rapidly than the demand for ultimate products represented by the combination of private consumer outlays and public outlays at all levels for goods and services. To take the most recent illustration, from the first half of 1961 to the second half of 1962, this investment in plant and equipment rose 8.5 percent, while demand for ultimate products rose only 5.1 percent * * * by ample or more than ample after tax profits, savings, credit, and other sources of funds for these purposes. The sharp investment downturns which occurred periodically, and which sparked the recessionary movements, were not occasioned by any shortage of such funds, but were occasioned by the excess plant capacity which had developed in consequence of the inadequate growth in demand for ultimate products.

This summary analysis of the disequilibriating factors during the past decade and even now indicate unanswerably that changes in tax policies and in other national economic policies should be directed toward bringing the demand for ultimate products into better line with the growth in our productive capabilities. * * *

Investment trends during the past decade, when compared with other trends, provide no justification for the proposition that large tax concessions are needed now for the pur-

pose of stimulating investment, especially when the additional Federal deficits which these concessions would entail could be devoted to far more salutory programs in the interest of the national economy.

Actually, despite much misguided propaganda to the contrary, the increases in wage and salary rates during the morst recent years have lagged very far behind the increases in productiyity, and this of course has an important bearing upon the proper distribution of tax cuts. Thus * * * during the most recent 5-year period 1957–62, productivity per employee-hour in the whole nonfarm economy rose in an average annual rate of 3.1 percent, while the average annual increase in wage and salary rates was only 2.7 percent. And in manufacturing during this 5-year period * * * the average annual increase in output per man-hour was 3.4 percent. It is only very recently that these alarmingly disparate trends have begun to receive the notice they deserve. * * *

The last thing in the world that we need, under such circumstances, are large tax concessions to the investment process, on the ground that these are required to speed up productivity growth, to enlarge our economic growth rate at home, to make us more competitive overseas, and to improve our balance-of-payments and gold position. Insofar as unbalanced tax concessions would increase the disequilibrium between productivity growth and idle plant capacity on the one hand, and inadequate ultimate demand on the other hand, such tax concessions would be self-defeating on all scores. In the longer run, they would even repress the rate of productivity growth (as in recent years past), in consequence of the inefficiencies resulting from high economic slack.

Although I have been greatly persuaded by the views expressed by the senior Senator from Tennessee and by the cogent analysis of the economic impact of this legislation, as described in Mr. Keyserling's remarks quoted above, I have come to the reluctant decision to vote for H.R. 8363 on final passage. Having listened throughout the week to the able arguments of the Senator from Louisiana who has been presenting a lucid and helpful explanation of the position of the administration and its hope for a beneficial effect on the economy, as well as those of the senior Senator from Illinois—one of the Nation's outstanding economists, I have decided that it is only fair to give this measure a chance. Again, I emphasize my plea that the enactment of this bill not stand in the way of badly needed public works projects which could be paid for many times over with reductions in taxes to corporations and individuals in the high income brackets. Since it seems to be the majority opinion of the experts in the field of economics who have been employed by the President and since it is the judgment of the House of Representatives and the Senate Finance Committee that this particular tax cut is needed, I believe we should pass this legislation. Certainly, those who have not served on the committees of Congress having jurisdiction over the bill are not in as strong a position to urge its defeat as the able members of the committee are to advocate its passage.

I greatly regret that in the course of our debate on the floor we have not been able to remove from the bill the provisions that are especially obnoxious. I believe we should have adopted the amendments of the senior Senator from Tennessee [Mr. GORE] to allow higher personal exemptions. I think this would have moved the legislation in the direction of correcting the glaring inequities now present in our revenue laws. Having failed to increase exemptions, I believe it was most unfortunate that the amendment of the senior Senator from Illinois [Mr. DOUGLAS] to increase the minimum standard deduction was not adopted. This amendment would also have helped in obtaining a more equitable distribution of the tax burden.

[P. 2272]

Of course, the most indefensible provision of this legislation, which, unfortunately, remains as it came to us from the House, is section 203(e) which will prohibit regulatory agencies from allowing consumers to gain the benefit of reductions in costs accruing to purveyors of services as a result of the investment credit provisions now in the law. There is no possible justification for this provision. As was thoroughly discussed on the floor last Wednesday, section 203(e). unjustifiably restricts regulatory agencies of the Government in the exercise of their responsibilities. Further, the way in which the regulatory agencies are restricted is unbelievably damaging to the people of the United States, who are dependent upon the services of those who provide telephones, power facilities, and commercial transportation of all kinds subject to regulation. Again, I deplore the action of this body in refusing to remove this iniquitous provision from the law.

The wartime excise taxes on furs and on toilet preparations, luggage and handbags should have been repealed. I regret we were not able to accomplish this improvement in the law which would have been a benefit to the rank and file of our citizenry. These taxes, which were imposed during a national emergency and to conserve materials essential to the war effort no longer serve any purpose in our tax system except as an added burden to individual consumers of the very necessary articles on which they are imposed. Further, these taxes are

discriminatory against manufacturers of the products affected since they are not levied on many similar items with which they are competitive. As far as furs are concerned, this is a depressed industry at present and the repeal of the excise taxes would have been helpful to it.

I hope separate legislation will be enacted soon to eliminate the excise taxes on items which were the subject of the amendment rejected by a very close vote of this body last Wednesday.

These are, unquestionably, the most serious sins of commission of the legislation we are about to enact. Its sins of omission may be found in virtually every section of the bill. As I stated on the floor of this body last Tuesday, it is tragic that a wonderful opportunity has been lost to correct the many deficiencies in the present internal revenue law which allow special and more generous treatment for those in the upper income brackets than is available to individuals who do not make a great deal of money. The legislation remains riddled with mistaken revenue policies of the past.

I hope another attempt will be made soon to enact legislation that will give us a truly fair tax law. Now that this bill is about to become law, I would urge the administration to execute its provision, insofar as possible, to insure the accomplishment of the promises that have been made for stimulation of the economy with resulting economic benefit to all of us.

Mr. SMATHERS. Mr. President, how much time remains to either side?

The PRESIDING OFFICER. The Senator from Florida has 24 minutes remaining.

Mr. SMATHERS. The best way for me to start my remarks is to speak about who favors the bill and whether those who favor it have had experience in the economic field, or have not. The majority leader, very modestly, said that there is much in this field that he does not know. I must make the same confession. Perhaps many other Senators also would have to make that confession. My experience in business has been rather limited. I wish it had been greater. But, as I understand, those who are for the bill are the finest group of economists that can be assembled in the United States. Four hundred of them got together and said that if we were to eliminate chronic deficits that have occurred in 24 out of the past 30 years, if we are to break out of the pattern of spending more than we take in, it is necessary to do something to enable free enterprise to operate with fewer restrictions. They did not take the position that has been advocated by the able Senator from Alaska [Mr. GRUENING], that what is needed is more public works. They said that what should be done was to leave a dollar in the pocket of the actual consumer. They said we should leave more dollars in the corporate treasury and let private enterprise spend them. It was their conclusion—and they have had a lifetime of study in this field—that if those dollars were left in the corporate treasuries, the multiplier effect would be 30 times greater than if the Government spent the money.

So I say to the Senator from Ohio [Mr. LAUSCHE] and the Senator from Arkansas [Mr. MCCLELLAN] that we have placed reliance on the free enterprise system to try to do the job of overcoming economic deficits.

Mr. AIKEN. Mr. President, will the Senator from Florida yield?

Mr. SMATHERS. I yield to the Senator from Vermont.

Mr. AIKEN. Is it not true that of the 400 persons who promoted the tax bill, 397 represent corporations that made unprecedented profits last year?

Mr. SMATHERS. That is not true. Those 400 economists came from universities over the Nation. Customarily, they are not the most conservative group in the world. So the Senator from Vermont is not correct as to that.

Mr. AIKEN. Was not the group headed by Henry Ford II?

Mr. SMATHERS. That was a group of 2,500 businessmen. They have had some business experience, certainly more than I have had, and possibly as much as the Senator from Vermont has had, and possibly as much as some other Senators have had.

But the group of economists said that the only way in which we can break out of the pattern of deficits is to pass a tax reduction bill and make it possible for corporations to spend some of their money, rather than to have the Government take most of it, thereby enabling the corporations to modernize their plant and equipment, so that they can compete with one another, provide more jobs, buy additional equipment, and thus improve the economy. They are some of the people who favor the passage of the bill.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. SMATHERS. I should like to continue for a moment.

Mr. LAUSCHE. Will the Senator yield for half a minute?

Mr. SMATHERS. Very well; I yield.

Mr. LAUSCHE. What agency was it that met under the circumstances? I have the fiscal and monetary policy announced by the President's Advisory

Committee on Labor-Management Policy. Is that the one to which the Senator refers?

Mr. SMATHERS. I do not know about that. I said there were 2,500 businessmen, most of them of the other political persuasion from that to which the Senator from Ohio and I adhere. Yet all of them said they believed the passage of a tax bill was the way to accomplish an improvement in the economy. So we have reason to believe that competent, experienced people in this field have made a worthwhile recommendation. Certainly the way in which the Government had proceeded was not the way to move, because even during the Republican administration there were only 2 years of balanced budgets out of 8, and there have been none thus far in this administration.

Mr. LAUSCHE. Will the Senator answer my four illustrations showing that the program does not work?

Mr. SMATHERS. I will come to the Senator's point. The Senator has had his time to speak; let me have mine.

Mr. LAUSCHE. Very well.

Mr. SMATHERS. I have the deepest affection and respect for the Senator from Arkansas [Mr. McCLELLAN], but what we would be doing by adopting the Senator's amendment would be to pass the buck. Who actually makes an appropriation? Congress. Who levies taxes, under the Constitution? Congress. If we passed the Senator's amendment, we would give to the executive branch, by an order, authority to decide whether to spend a little more money or not. We would be abdicating our own responsibility.

The Legislative Reorganization Act of 1946 authorizes Congress to establish its own legislative Joint Committee on the Budget to determine these questions.

In 1947 and 1948, I believe, Congress tried it; but Congress found that it was so wrong on the estimates for January and the latter part of the year that Congress gave it up.

So we have the authority the Senator is talking about; we have it under the Legislative Reorganization Act, and we can use it if we wish. But I do not think we act in a very brave or responsible way if we decide to turn over this responsibility to the President and let him make the decision, and thereby give him authority to levy taxes and to pass

[*P. 2273*]

on tax cuts, when that should be our concern.

Mr. McCLELLAN. Mr. President, will the Senator from Florida yield? I ask him to yield, because I do not think he wishes to make a misstatement.

Mr. SMATHERS. Certainly I do not wish to do so.

Mr. McCLELLAN. I point out that we are not turning it over to the President. We still have that responsibility, but we are inviting him to act.

Mr. SMATHERS. But if we decided to let the budget expenditures in any fiscal year exceed $100 billion, suddenly the President might have to raise the tax rates, whereas, under the Constitution, Congress is supposed to act in that field. It is one of the obligations and responsibilities of Congress to act in the field of taxation. So in that case Congress would really have abdicated part of its responsibility.

I should like to emphasize the point the majority leader made. How in heaven's name could businessmen, if they were required to operate under this system, determine what their future next year, would be, if the budget should happen to exceed $100 billion? In that case, instead of having the benefit of the tax cuts that the Senate is about to vote for, the businessmen would not have the benefit of the tax cuts. How can businessmen make plans to expand their plants, on the basis of a tax reduction—for example, to open a new plant in Oklahoma or in Arkansas, or in Virginia—on the basis of a tax reduction which may never be made?

So they would live under a cloud of uncertainty, in connection with any activities in which they might wish to engage. They would live with a Damoclean sword hanging over their heads all the time.

Furthermore, consider the situation of private individuals, some of whom might be planning to take trips to Europe—and we hope they do—or to Florida—and let us hope even more enthusiastically that they do that [Laughter]—or to make repairs on their homes. What would be their situation if the country got into a recession or if it were found to be necessary to increase defense expenditures, with the result that the budget might then exceed $100 billion. In that event, there would be no tax cuts.

If it is desired to create uncertainty in the private community, let the Senate adopt an amendment such as this one. In that event, no one will know what will happen—no one except the man in the White House, who is the victim of circumstances and has to meet them when they arise.

So I think it would be a great mistake for the Senate to adopt this amendment.

Suppose we encountered a depression. As the majority leader has pointed out, periodically since World War II, every 40 months—so he said, although I thought it was 36 months—there has been a depression of some kind.

The able Senator from Alaska, the able Senator from Tennessee, the able Senator from Illinois, and other Senators discussed the situation which might exist under such circumstances, and mentioned the steps which might then be taken. The Senator from Tennessee pointed out that in such circumstances the Government would take steps to increase employment and increase economic activities, by means of road construction programs, bridge construction programs, and so forth. A moment ago the Senator from Alaska referred to such activities.

At present, we are living on borrowed money and borrowed time.

The reason there is no recession at the present time is that both individuals and corporations expect to receive the benefit of the proposed tax cuts, with the result that $9,300 million will go into the pockets of individual taxpayers. But if we encountered a recession, what would we do? The only thing to do would be to commence a program of increased Federal expenditures. Then what would happen? When the Government borrows more money and puts it into road programs, retraining programs, WPA programs, and similar programs, what happens? As the government borrows the money and puts it into programs of that kind, on the one hand, taxes rise, on the other hand, and the result is to pull out of the economy $9,300 million. What would happen? There would be no way by which the executive branch of the Government or the Congress could do the necessary things in order to meet a recession, if we got into one.

Furthermore, as I have said, in addition, the amendment of the able and distinguished Senator from Arkansas is totally unrealistic, in view of the fact that it sets the figure of $100 billion as the limit above which the administrative budget could not go.

All of us would like to keep the budget down; there is no question that we need to eliminate every bit of waste, duplication, and fat that exists in the budget. And we are trying to do so. As the majority leader has pointed out, the President has made a magnificent effort toward eliminating waste and duplication. I am afraid that in some areas he has even cut into a little muscle. I hope that has not happened in the national security field; and I do not believe it has. But he may have done so in other areas.

At any rate, today the administrative budget is about 50 percent less than it was. So we have seen cost analysis result in a great measure, actually, from anticipation of the tax cut, I believe.

At any rate, let us remember that at present our country has a population of 191 million, and that the population grows at the rate of approximately 3 million each year. There is no way to stop that, even if we wanted to, or to make the Nation smaller, or to lessen the Nation's commitments or contract them. The Nation will continue to grow.

What will happen? It is obvious that as the Nation grows, even though we practice the greatest frugality and efficiency in connection with the operations of the Government, we already have programs which will require that additional funds be spent. I am sure the Senator from Arkansas would not want to have the Government renege in any fashion on the Veterans' Administration program. Certain hospital construction commitments have been made under the Hill-Burton Act; and in areas in which the population increases, with the result that more hospitals are needed, the Government will have to spend its share of the money required to build the hospitals. As the Nation grows, those needs will become greater; and as the population grows, it will be necessary to construct more highways. They will be constructed, and the Federal Government will provide its part of the cost. As the Nation grows, it will be necessary to construct more airports—for example, in South Dakota, in Honolulu, in Kentucky, and in Kansas; and the Federal Government will have to help pay for the cost of constructing them. Our Nation will not become smaller; it will continue to grow, and become larger and larger.

It seems to me that it would be totally unrealistic to limit the administrative budget in any fiscal year to $100 billion, and thus to say, "The budget will never be allowed to exceed that amount; but if it does, suddenly, instead of a tax reduction, taxes will increase."

Mr. President, how much time remains available to me?

The PRESIDING OFFICER. Eleven minutes.

Mr. SMATHERS. Mr. President, in support of the last statement I made, I wish to read from a statement by President Eisenhower. This may be of some interest even to Members on our side of the aisle, and I am sure it will be of great interest to Members on the other side of the aisle. President Eisenhower said:

> A growing nation requires a growing budget.

President Eisenhower recognized the inevitability of a growing budget with a growing nation. In his budget message for the fiscal year 1960 he said:

> Inescapable demands resulting from new technology and the growth of our Nation and new requirements resulting from the changing nature of our society will generate Federal expenditures in future years. We must not forget that a rapidly growing population creates virtually automatic increases in many new Federal responsibilities.

I hope that the amendment will be resisted in view of the points that I have made. I believe it would be restrictive. In many respects it might even be unconstitutional. I believe it is violative of the 1946 Reorganization Act. It does not recognize the growing population.

Moreover, I believe it would cause the Congress of the United States to abdicate its own responsibility. Members of the Appropriations Committee are sitting in the Senate Chamber. I see four of them. They have under their control appropriations. They will not permit money to be spent that Congress does not appropriate. No money will be spent that members of the committee do not approve for appropriation and that the Senate does not finally approve. Under the Constitution of the United States it cannot be done—and we still live under the Constitution. I do not wish to see a situation arise in which the chairman of the distinguished Finance Committee would lose his power and the

[*P. 2274*]

committee itself would lose its power to determine what the tax rate for individuals and the corporations of our Nation should be. If we adopt the amendment, that is what would happen. He will have lost his authority and we will have lost our authority. We would leave it to the executive branch of the Government to make the determination as to when the proposed $11.6 billion tax reduction would go into effect and when it would not.

So I plead with Senators. While the amendment is directed toward economy, I suggest that we are all for economy. While it is said that we can have a tax cut on the one hand but we can have economy on the other, it will not work that way. It would be a terrible restriction not only on the Congress and on our authority but on the President of the United States. It would tie our hands in the event of a recession. It would tie our hands in the event that some kind of foreign situation would arise as a result of which the administration would come to Congress and ask for additional money.

I yield the floor.

Mr. LONG of Louisiana. Mr. President, the whole problem raised by the amendment of the Senator from Arkansas would not be a problem if Senators who are members of the Appropriations Committee would quit voting so much money for appropriations. We members of the Finance Committee have no control over that.

I talked to my senior colleague, who I believe will vote against the bill. If he votes against it, he will be expressing his honest conviction on the matter. He feels that the Government needs the revenue. I said to him:

> After all, there would be no problem about a tax cut if the Appropriations Committee would not spend so much money.

But I cannot control that committee's actions. I am on the Finance Committee. It is all I can do to discharge my responsibility on that committee.

The amendment would undertake to require me, as a member of the Finance Committee, to show members of the Appropriations Committee how to run their business. I do not feel very well qualified to do so.

I ask Senators to observe who the members of that committee are.

The chairman of the committee is Senator CARL HAYDEN. The Senator from Arizona has been in the Senate for many years. He was a Member of the Congress before I was born. Am I supposed to tell him how to conduct his business, as I would be required to do under the amendment? [Laughter.]

The next member of the committee is Senator RICHARD RUSSELL, a man whom I supported for President of the United States, a man who came to Congress the same year that my father did. Am I supposed to tell him how to conduct his business? I go to him for advice rather than he coming to me. [Laughter.]

The next member of the committee is Senator ALLEN J. ELLENDER, who I thought should have been Governor of Louisiana at a time when I was a mere boy. He is one of the most competent men I have ever known. Am I supposed to tell him how to perform his function? With the possible exception of Representative OTTO PASSMAN, also of my State, Senator ELLENDER has been the greatest economizer in the foreign aid program we could possibly have. Am I supposed to tell him how to economize and to save money? [Laughter].

Those men are experts in their field.

Should I tell Senator LISTER HILL how to run his business? Senator HILL is well qualified to run his business. I recall the day that, as a small boy, I listened over the radio to Senator HILL. He nominated Franklin D. Roosevelt for President of the United States. I can

recall those events. Those men do not come to me for advice as to what they ought to do.

Read down the list. Whose name appears next? Next we have the distinguished Senator from Arkansas [Mr. McCLELLAN]. [Laughter.] At times I have thought he was well qualified to be President. He is urging me to tell him how to discharge his responsibility. I have no doubt that, if I am required to do so, I would have to say, "Let your conscience be your guide." [Laughter.]

So we go down the list of the men who are experts in this field. They have made the appropriations and studied the budget. I have not studied the budget as they have. I have been working on the tax bill for 2 years. I have reached the point where I cannot sleep at night. I lie awake at night and mumble big numbers. [Laughter.]

After all that time of intensive work on this bill, trying to understand all of its complications, I am now asked to tell the Appropriations Committee how to handle a $100 billion appropriation bill. I have not had an opportunity to study the budget. I have been so busy on the question of taxes that I do not even know what is in the budget for flood control in Louisiana.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. PASTORE. Why has the Senator from Louisiana stopped where he did? Why does he not continue to read the names of some of the Senators who will vote for the bill, such as the Senator from Rhode Island?

Mr. SMATHERS. There is a time limitation.

Mr. LONG of Louisiana. The committee is a large committee, with many able Senators on it.

Mr. PASTORE. I should like to hear a little tribute to myself.

Mr. LONG of Louisiana. The distinguished Senator from Rhode Island, a former distinguished Governor of Rhode Island, author of many important bills that have been passed in this body, and one of the greatest statesmen of our time, has been a student of this subject.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. PASTORE. The Senator from Rhode Island wishes to say, "I love you, too."

Mr. LONG of Louisiana. I thank the distinguished Senator.

Mr. President, if the amendment is adopted, it may well be that next year we shall have, not a tax cut bill, but a tax increase bill. The amendment would seek to restore all the rates that presently exist and, in addition, would leave in effect those things in the law to which the committee bill has proposed structural changes. In other words we could get perhaps a $500 million increase in taxes. How do Senators like that as a disappointment? The taxpayer would be holding his sack out, waiting for a tax cut. What do Senators think he would get? A tax increase. [Laughter.]

Unless we are to give the American people the supreme disappointment of the century, we ought to vote the tax cut we have been talking about for 2 years instead of offering one with an amendment which would provide a "quickie" tax cut and a long increase, starting the first of next year.

Mr. McCLELLAN. Mr. President, how much time have I remaining?

The PRESIDING OFFICER. Three minutes.

Mr. McCLELLAN. Mr. President, I have been saddened just a little, in spite of the humor, of my friends, which I have enjoyed. This afternoon we have seen a demonstration in which some of the supporters of this bill have broadcast to this Nation and to the people of this country that we are not serious about expenditures. They choose to ridicule anyone who tries to reduce expenditures.

As the distinguished majority leader has said, we are today telling the country that we will continue the old order of business. We will continue to spend and spend and go into debt. The old order is all we are promised.

The Senator talks about passing the buck to the President; and telling me what to do. The Senator stands on this floor and votes. The junior Senator from Louisiana said a moment ago that he votes without knowing what he is doing, if we are to interpret his language correctly. The Senate and the House of Representatives make the appropriations; it is the duty of the President to request what he needs. It is our duty to weigh the request. The Senator from Louisiana [Mr. LONG] talks about passing the buck. When the President sends that budget down here, and then some of his aids get on the telephone and get his people from the Budget Bureau on the telephone telling us they must have this money, where is the buck passed to? Right back to us.

Let us work together cooperatively. I feel a concern about what we are doing here today to our country. It is not laughable to me. I feel that we are making a mistake in driving this country into debt. The Senator maintains that we will stimulate the economy. The Senator has cited the experience of some

foreign country. I suggest that he cite our past experience here in the United States.

Tax reductions in the past have not greatly stimulated the economy. The Senator has said that we have some good economists now who know how to stimulate the economy. Who are they?

[*P. 2275*]

Every one of those economists believe in deficit spending as a way of life. None of them are looking toward balancing the budget. No one cares today. We are invited to spend and spend.

I am asking only that a limit be set. Why? The Senator has said that we are restricting with this amendment. Of course we are; that is the purpose of it. It is charged we are passing the buck to the President. That is not correct. The President informs us that the money is spent; then we have to raise the debt limit. Here, with respect to this amendment the Congress would have to raise the $100 billion limit if an emergency arose or a real need developed and a proper case should be made to do so.

Of course, we would raise it, if we should. But it comes back to Congress for examination, decision, and action. It is said that this will be done in the Appropriation Committees. The Appropriation Committees work hard and long. They work against the pressures sometimes of the President and the administration forces. I say to the Senate and to the country today that we need the cooperation and the dynamic leadership of the President of the United States and the Congress working together. Congress can hardly do it without that leadership. Both Congress and the President should work together to do it.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MUNDT. Mr. President, I yield 3 minutes to the Senator from Arkansas.

Mr. McCLELLAN. I was interested in what the distinguished Senator from New Hampshire said when he stated he was going to vote for a measure to try to hold back the money so it cannot be spent. That will not be easy. They do not necessarily need the money in order to spend. We can continue to go into debt by operating on a credit as we have been doing. Someday the strain on our credit will cause it to break. There is a limit. We are marching toward that limit today.

Mr. President, we are not conducting this Government with fiscal responsibility. I plead that we, here and now, make a start toward economy, make at least a strong gesture that may have some meaning. My amendment will have a meaning if we adopt it.

Senators are not turning me down on this issue. There is nothing personal involved here. If we vote for continued spending, if we vote for the old order that has brought us to where we are today, if we perpetuate that old order, there will certainly be a day of reckoning. That day is coming sooner than we think.

If we are not willing to start holding the spending line, now, in a period of the highest prosperity we have ever had, with the highest national income in our history, if we are not ready to hold the line when making a big tax reduction, then we are surely plunging headlong toward insolvency and inflationary chaos. Is the Senate willing to make one gesture—just one—openly, publicly, and as an indication of congressional policy, toward reducing expenditures? If the Senators are not willing to do that, then, of course, vote against the amendment. And by so doing, let the country know we are going to continue going into debt; that deficit spending—increased deficit spending is the national—the senatorial policy. In my judgment we are going into debt too deeply and too fast.

Someday we will be called to an accounting for this folly.

Mr. LONG of Louisiana. Mr. President, when the Senator who is now speaking went to war for his country in 1942, this country was about $50 billion in debt. When I returned from the war, I came back to a country that was $258 billion in debt—an increase of $200 billion. That was an enormous increase. This Nation apparently had its choice at the time of war. It could have levied heavier taxes. It could have gone deeper into debt. It had a third choice—which happened to the Confederacy. It could have stayed out of debt, but it would have been under an army of occupation. So the country thought that the best alternative was to go into debt. Today we have a debt of about $300 billion. Our gross national product has increased from $266 billion to $493 billion, almost double what it was at that time.

It is true that, under both Republican and Democratic administrations, we are somewhat deeper in debt; but the Senator from Louisiana still thinks this is the greatest Nation on the face of the earth, with some of the finest people that the good Lord has put on this planet. The Senator from Louisiana feels that our children are at least as good as or better than he was at a similar age, that we are growing stronger, and that this country will be equal to the risks that face us. We must take risks in everything we do in life. There is a risk in cutting taxes, but, in my opinion, there

is a greater risk in not cutting taxes. There will not be a balanced budget until there is full employment.

For those reasons, I shall vote for the bill without the McClellan amendment, which says we cannot do that which I think is necessary to do for the progress of the country.

Mr. SMATHERS. Mr. President, I yield myself a minute and a half, and then I shall yield to the able majority leader.

Mr. President, the question is asked, Are we serious about economy? In all fairness; I think we have been.

The Senator from Arkansas knows that the President of the United States has recommended a budget which provides for a deficit 50 percent below what it was last year.

I think the Senator from Arkansas will agree that in every department of Government there has been a request for reductions in personnel. I think the Senator has seen 30 bases closed. I think he is going to see 30 more bases closed.

Throughout the Government we are seeing practiced an economy that is as stringent and hardheaded as any we have seen. So we have seen economy.

The Senator asks why Senators will vote for it. The Senator from Louisiana has referred to the fact that, because of the technicalities involved in the Defense appropriations—and this is true of other bills—we must rely on the Appropriations Committee. In the final analysis, it is the agency which makes recommendations.

The Senator has said that the economists say those who believe in deficit spending are for the bill. I do not think so. The chamber of commerce is for this bill; and I challenge anyone to show us that it believes in deficit spending. But it is for the bill. Henry Ford is for the bill; and he certainly is not in favor of deficit spending. The president of the Pennsylvania Railroad is for the bill; and he is not in favor of deficit spending. So I say, in all candor and honesty, that we who are in favor of the bill without the restrictive amendment of the Senator from Arkansas believe in the free enterprise economy and believe that the only solution for unemployment and for the future economy is to provide a tax cut.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. SMATHERS. I yield.

Mr. PASTORE. The RECORD should show that last year Congress cut the budget estimates by $6,300 million.

Mr. SMATHERS. I should like to respond to that observation with the statement that perhaps some President has called Members of Congress and has said we must do certain things; but I do not believe any Senator would say that there is any President who can "twist his arm" and make him vote against his conscience. He certainly is not able to do it with the Senator from Arkansas, or with any other Senator. It is up to Congress to decide. It is Congress that levies taxes and spends the taxpayers' money. When Congress wants economy, it can get it.

I now yield to the Senator from Montana.

Mr. MANSFIELD. Mr. President, I have listened with great interest to most of the debate this afternoon, and I wish to commend the distinguished Senator from Arkansas [Mr. MCCLELLAN] for making an attempt in the right direction; but I also wish to reiterate that so far as the Senate is concerned there is a line between the legislative branch and the executive branch, and that line should be observed. The President has his responsibilities, and he has carried them out admirably. We have our responsibilities, and I believe we have done a respectable job.

The Senator from Rhode Island has stated a fact, that in the 1st session of the 88th Congress we cut expenditures below the President's budget request by $6.3 billion. The Senator from Arkansas stated at the beginning of his speech that over the past 11 years the Congresses which were in operation during that period reduced the budget request of the President by $32 billion.

So we have done our share, and a little more. The President is doing his share. We should recognize that if we place a limitation of this kind upon

[*P. 2276*]

the President, it will tie and bind his hands.

What will the President do if a recession comes along and he is forced to raise the ceiling above $100 billion? What will happen to the tax cut? We give and we take away.

There is nothing more that I can add to what the distinguished Senator in charge of the bill, the Senator from Louisiana [Mr. LONG] has said, and also his "first lieutenant" the distinguished Senator from Florida [Mr. SMATHERS]; but I believe, if we are to put a tax cut into effect that the way to do it is to stick to the bill as closely as possible, and give to both corporations and individuals the $11.7 billion cut envisaged in the bill, because it will help business, stimulate employment, and increase the gross national product.

Mr. McCLELLAN. I yield 1 minute to the Senator from South Carolina.

Mr. THURMOND. Mr. President, the pending amendment, which would make the reduction in income tax rates embodied in H.R. 8363 contingent on keeping the spending of the National Government below the level of $100 billion per year, is an absolute prerequisite to a sound fiscal policy for our Nation.

It is not enough to talk in terms of slowing the pace of mushrooming national expenditures. It is time to establish, by practical and effective means, an absolute limit beyond which we will not go. This amendment would partially provide such a limit, although it would not insure the elimination of continual deficit spending.

Only six times in the past 34 years has the budget of the National Government been balanced. This is nothing less than pure fiscal folly. Not only does such fiscal irresponsibility jeopardize the economic stability of our Nation, but it also constitutes an immoral deprivation of future generations of Americans of their right to decide how their own earnings will be spent. We are literally mortgaging the future of babes unborn, and if we continue at the rate we are going, we will completely dispose of their birthright.

This amendment will not, of course, prevent another deficit. It will, however, make the reduction in taxes, and, in my opinion, the reduction in receipts of the National Government enacted by this bill, contingent on expenditures being held to a reasonable level.

The level of expenditures set by the amendment does not even set the cutoff at the current or projected level of expenditures. It leaves room for an increase over current or projected level of expenses of more than $2 billion.

The bill which the Senate is now considering will reduce revenues, and thereby, it will inevitably contribute to the existing gap between receipts and expenditures. It is predicted by some, of course, that the revenues released into the economy by the tax reduction will go through multiplier and accelerator processes, and result in net increases in revenues even at the lower rates. This may be; but in the event this strange phenomenon fails to occur as predicted, this amendment would provide a very essential ceiling on expenditures above which the lower tax rates, and a larger margin of deficit, would not be effective.

This amendment is designed to effectuate in law the assurances that expenditures will be held within some range of reason. Its adoption would establish the intention of Congress to exercise a new and long overdue practice of fiscal responsibility. Its adoption would act as a welcome breath of fresh air and a basis of renewed confidence in the financial future of the United States.

Mr. McCLELLAN. Mr. President, I ask for the yeas and nays on my amendment.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Arkansas [Mr. McClellan]. The yeas have been ordered; and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD (after having voted in the negative). Mr. President, on this vote I have a pair with the distinguished minority leader, the Senator from Illinois [Mr. Dirksen]. If he were present and voting, he would vote "yea"; if I were at liberty to vote, I would vote "nay." Therefore, I withdraw my vote.

Mr. SALTONSTALL (after having voted in the negative). Mr. President, on this vote I have a pair with the Senator from Arizona [Mr. Goldwater]. If he were present and voting, he would vote "yea"; if I were at liberty to vote, I would vote "nay." Therefore, I withdraw my vote.

Mr. KUCHEL. I announce that the Senator from Nebraska [Mr. Curtis] and the Senator from Illinois [Mr. Dirksen] are necessarily absent.

The Senator from Arizona [Mr. Goldwater] is detained on official business.

If present and voting, the Senator from Nebraska [Mr. Curtis] would vote "yea."

The respective pairs of the Senator from Illinois [Mr. Dirksen] and that of the Senator from Arizona [Mr. Goldwater] have been previously announced.

The result was announced—yeas 34, nays 61, as follows:

[No. 38 Leg.]

YEAS—34

Aiken	Hickenlooper	Proxmire
Allott	Hruska	Robertson
Beall	Jackson	Russell
Bennett	Jordan, N.C.	Simpson
Boggs	Jordan, Idaho	Smith
Byrd, Va.	Lausche	Stennis
Carlson	McClellan	Thurmond
Cotton	Mechem	Tower
Dominick	Miller	Williams, Del.
Eastland	Mundt	Young, N. Dak.
Ervin	Pearson	
Gore	Prouty	

NAYS—61

Anderson	Ellender	Kennedy
Bartlett	Engle	Kuchel
Bayh	Fong	Long, Mo.
Bible	Fulbright	Long, La.
Brewster	Gruening	Magnuson
Burdick	Hart	McCarthy
Byrd, W. Va.	Hartke	McGee
Cannon	Hayden	McGovern
Case	Hill	McIntyre
Church	Holland	McNamara
Clark	Humphrey	Metcalf
Cooper	Inouye	Monroney
Dodd	Javits	Morse
Douglas	Johnston	Morton
Edmondson	Keating	Moss

NAYS—Continued.

Muskie	Ribicoff	Walters
Nelson	Scott	Williams, N.J.
Neuberger	Smathers	Yarborough
Pastore	Sparkman	Young, Ohio
Pell	Symington	
Randolph	Talmadge	

NOT VOTING—5

Curtis	Goldwater	Saltonstall
Dirksen	Mansfield	

So Mr. McClellan's amendment was rejected.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. SPARKMAN. Mr. President, I have three amendments, all relating to matters in which the Small Business Committee has been interested. I send them to the desk, and ask that their reading be dispensed with, but that they may be printed in the Record. I shall make a very brief explanation of them.

The PRESIDING OFFICER. Without objection, the amendments will be printed in the Record at this point.

The amendments, ordered to be printed in the Record, are as follows:

On page 14, line 7, strike out "$25,000" and insert "$50,000".

On page 27, strike out lines 8 through 23 and insert the following:

"(2) Corporations.—In applying subsection (a) to a taxable year of a corporation beginning in 1963 and ending in 1964—

"(A) the change in the surtax exemption of such corporation (including a change by reason of the application of section 1561, relating to surtax exemptions in case of certain controlled corporations), and

"(B) the additional tax (if any) imposed on the taxable income of such corporation for such taxable year by section 1562(b) (relating to additional tax in case of component member of controlled groups which elect multiple surtax exemptions),

shall each be treated as a change in a rate of tax taking effect on January 1, 1964."

On page 247, lines 9, 15, and 19, strike out "$25,000" and insert "$50,000".

On page 248, line 7, strike out "$25,000" and insert "$50,000".

On page 250, line 4, strike out "$25,000" and insert "$50,000".

At the end of the bill insert the following:

"TITLE IV—MISCELLANEOUS PROVISIONS

"Sec. 401. Extension of Time for Payment of Estate Tax Based on Undue Hardship.

"(a) Certain Circumstances Which Would Require Sale of Closely Held Business Considered To Constitute Undue Hardship.—Section 6161 (relating to extension of time for paying tax) is amended by redesignating subsection (d) as (e), and by inserting after subsection (c) the following new subsection:

"'(d) Forced Sales of Interests in Closely Held Businesses.—

"'(1) In General.—In applying subsections (a)(2) and (b) to any case in which an extension of time for payment of the tax imposed by chapter 11 has been elected, or could have been elected, under section 6166, if the executor establishes to the satisfaction of the Secretary or his delegate that the payment of an amount described in subsection (a)(2) or (b) on the prescribed date can be made only if there is a forced sale (within the meaning of paragraph (2)) of property constituting all or part of an interest in a closely held business (as defined in section 6166(c)), it shall be considered that such payment would result in undue hardship to the estate.

"'(2) Forced sale.—For purposes of paragraph (1), the term "forced sale of property

[P. 2277]

constituting all or part of an interest in a closely held business" means—

"'(A) a sale to one or more individuals who are not members of the family of the decedent (within the meaning of section 267(c)(4)), or

"'(B) a sale at a time when the market for such property is depressed.

Such term does not include any sale which is required by law or is required under the terms of the will of the decedent or of an agreement entered into by the decedent.'

"(b) Effective Date.—The amendment made by subsection (a) shall apply with respect to amounts of tax imposed by chapter 11 of the Internal Revenue Code of 1954 (including installments thereof) the date for payment of which (including extensions thereof) is on or after the date of the enactment of this Act."

On page 14, lines 8 and 9, strike out "or the amount determined under section 1561 (relating to surtax exemptions in case of certain controlled corporations)".

On page 14, line 20, strike out the closing quotation marks, and after line 20 insert the following:

"(f) Cross Reference.—

"For limitation on surtax exemptions of certain controlled groups of corporations, see section 1561."

On page 27, line 10, beginning with "if" strike out all through "tax," in line 22, and insert the following: "if a surtax exemption is not allowed to such corporation for such taxable year by reason of the application of section 1561 (relating to limitation on surtax exemptions of controlled group of corporations), such disallowance".

On page 246, line 20, strike out "reduction of surtax exemption" and insert "limitation on surtax exemptions."

On page 247, beginning with line 1, strike out all through line 19 on page 256, and in lieu thereof insert the following:

"PART II—CERTAIN CONTROLLED CORPORATIONS

"Sec. 1561. Limitation on surtax exemptions of controlled group of corporations.

"Sec. 1562. Definitions and special rules.

"Sec. 1561. Limitation on Surtax Exemptions of Controlled Group of Corporations.

"(a) General Rule.—If a controlled group of corporations on a December 31 consists of six or more component members, only five of such component members shall be allowed a surtax exemption for the taxable year which includes such December 31. The

component members which shall be allowed a surtax exemption for such taxable year shall—

"(1) be designated, in such manner and within such time as the Secretary or his delegate shall prescribe by regulations, by all corporations which are component members of such group on such December 31, or

"(2) in the absence of a designation under paragraph (1), be determined in accordance with regulations prescribed by the Secretary or his delegate.

"(b) CERTAIN SHORT TAXABLE YEARS.—If a corporation—

"(1) has a short taxable year which does not include a December 31, and

"(2) is a component member of a controlled group of corporations with respect to such taxable year,

subsection (a) and section 1562(b) shall be applied, with respect to such corporation, by substituting the last day of such taxable year for December 31."

On page 256, line 20, strike out "1563" and insert "1562".

On page 275, line 1, strike out "1563(e)" and insert "1562(e)".

On page 275, strike out lines 3 through 7, and insert the following:

"(c) COMPONENT MEMBERS OF CONTROLLED GROUP OF CORPORATIONS.—If the surtax exemption is disallowed to a transferee corporation for any taxable year for which it is a component member of a controlled group of corporations (within the meaning of section 1562), such corporation shall not be taken into account in applying section 1561 (relating to limitation on surtax exemptions) to the other component members of such controlled group."

On page 276, strike out lines 12 through 16, and insert the following:

"(d) COMPONENT MEMBERS OF CONTROLLED GROUP OF CORPORATIONS.—If the surtax exemption is disallowed to an acquired corporation under subsection (a) for any taxable year for which it is a component member of a controlled group of corporations (within the meaning of section 1562), such corporation shall not be taken into account in applying section 1561 (relating to limitation on surtax exemptions) to the other component members of such controlled group."

The PRESIDING OFFICER. The question is on agreeing to the amendments en bloc.

Mr. SPARKMAN. Mr. President, about 11 years ago the Small Business Committee made several recommendations relating to tax reform for the benefit of small business. Little by little over the years those suggestions have been written into law. When the pending bill was under consideration in committee four of the measures still had not been enacted into law.

The Senator from Nevada [Mr. BIBLE], the Senator from Massachusetts [Mr. SALTONSTALL], and the Senator from Kentucky [Mr. COOPER] are cosponsors with me of these amendments.

The first measure that we had recommended, which had not been passed at that time was with respect to reversing the surtax. Thank goodness, the bill carries that in it. The second one related to increasing the exemptions from the surtax from $25,000 to $50,000. I presented before the Finance Committee arguments in favor of increasing the surtax. It was not done. I understand why it was not done. It was because it would take considerable revenue from the Government.

However, there is real merit to the proposal. I invite the attention of the Senator from Louisiana [Mr. LONG], and the chairman of the committee, the Senator from Virginia [Mr. BYRD] to the fact that there is real merit in the proposal to increase the surtax exemption. Of course, it would apply to all businesses, regardless of size, but it would be particularly beneficial to small businesses, which have a hard time building up a sufficient base on which to operate.

Testimony was given on this subject before the Finance Committee. I shall not recite it, but I wish to read some tables which I believe are rather significant.

In 1960 the reports show—excluding 1120S returns—the number of businesses earning under $25,000 were 544,364, or 82.7 percent. Between $25,000 and $50,000—this is the group that is really caught in the pinch—there were 58,722, or 8.7 percent. Between $50,000 and $100,000, there were 26,464, or 3.9 percent. Over $100,000, there were 31,689, or 4.6 percent.

Mr. President, this matter deserves the most careful study and consideration by the tax-writing committees of Congress. I shall not insist upon a vote on the amendments. Small business has done very well in the bill.

First, the bill provides a deduction in the corporate tax. Second, it provides for a reversal of the surtax. The bill contains other items that are quite helpful. I know many of the practicalities of legislation, particularly the problem of writing a tax bill on the floor of the Senate. But I believe this is a matter that is deserving of attention.

I ask the Senator in charge of the bill, the Senator of Louisiana [Mr. LONG] and the chairman of the committee, the Senator from Virginia [Mr. BYRD], for their most careful and sympathetic consideration of this proposal at the earliest opportunity.

Mr. SALTONSTALL. Mr. President, will the Senator from Alabama yield?

Mr. SPARKMAN. I yield.

Mr. SALTONSTALL. As a member of the Small Business Committee, I join in

the statement of the Senator from Alabama. It is my understanding that the committee considered one amendment to increase the surtax, but voted it down for other reasons.

As to the second amendment, regarding the estate tax, we know that the estate tax provisions were not considered at all, so our amendment did not come up for consideration.

Mr. SPARKMAN. I shall say a word about that amendment later. That has been taken care of administratively.

Mr. SALTONSTALL. There was a third amendment.

Mr. SPARKMAN. It had to do with multiple-corporate exemptions.

Mr. SALTONSTALL. That is correct. If and when—and we hope it will be soon, although it does not seem likely to occur soon—the cold war ends and the need for procurement of material eases, we shall want to stimulate small business rather than to have it go out of existence. If business decreases, we would not want only the big corporations to be able to carry on. One of the purposes of the third amendment was to make it possible to create and maintain small business if there should be an overall decrease in the Government undertakings program.

So I hope, while the Senator from Alabama will not press his amendment at thep resent time, that the Senator from Louisiana [Mr. LONG] will give thoughtful consideration to it in the coming year.

Mr. SPARKMAN. And sympathetic consideration, as well.

Mr. LONG of Louisiana. It is a great honor to serve on the Small Business Committee under its chairman, the distinguished Senator from Alabama [Mr. SPARKMAN], and the distinguished Senator from Massachusetts [Mr. SALTONSTALL], the ranking Republican member of the committee.

Many times I have noticed that proposals have come not only to the Committee on Finance, but also to other committees—proposals which originated in recommendations of the Small Busi-

[*P. 2278*]

ness Committee. As the Senator from Alabama knows, I am the ranking member of his committee, under his able guidance. Sometimes I have dragged my feet somewhat on recommendations made by the Committee on Finance, on the theory that as a member of the Small Business Committee I would want to reserve judgment until that committee made its own recommendations.

The bill contains one of the three important, forward-looking recommendations that have been advocated for many years by the Small Business Committee; that is, a reduction from 30 to 22 percent in the tax rate for small business.

The amendments the Senator from Alabama has in mind relate to matters which I am certain the Committee on Finance will consider in the days ahead on appropriate occasions. However, we do not feel that they should be a part of the tax bill.

I deeply appreciate the fact that the Senator from Alabama is not insisting upon a vote on his amendments at this time. I assure him that at an appropriate time I shall use my best efforts to see that they are favorably considered by the Committee on Finance.

Mr. SALTONSTALL. Mr. President, may we who are members of the Small Business Committee consider that we have a very good friend of small business as a member of the Committee on Finance?

Mr. SPARKMAN. I should think so. I thank the able Senator from Louisiana.

Mr. RANDOLPH. Mr. President, will the Senator from Alabama yield?

Mr. SPARKMAN. I yield.

Mr. RANDOLPH. It is my privilege to serve as a member of the Select Committee on Small Business under the capable leadership of the Senator from Alabama [Mr. SPARKMAN]. There is a feeling among small businessmen of West Virginia that the passage of the tax bill will help small business. Whether this will prove to be right or wrong——

Mr. SPARKMAN. I am sure it is right——

Mr. RANDOLPH. We need to give further assurance to the small business people of a State like West Virginia that the Administration and the Congress are at work to stimulate this vital segment of our economy.

Mr. SPARKMAN. That is correct.

Mr. RANDOLPH. I now read portions of a letter received from a West Virginia citizen. The communication comes from M. P. Michael, the owner-manager of Hotel Washington, Berkeley Springs, W. Va. He wrote:

As I am a small businessman in West Virginia, I am asking you all as one of the small businessmen in our State to support and fight in the Senate and House for the tax cut the President has recommended.

I only employ seven people in my business, but on the weekends of August 17 and August 24 (no holiday weekends) I was filled to capacity and had to turn people away. Therefore, I got curious and asked some of my guests why there were so many people traveling on these two weekends. Their reply was that the President is going to get a tax cut and therefore we can afford to spend this money we will save on taxes to see some parts of this beautiful United States.

I sincerely hope the House and Senate can see this tax bill the way I do and the rest of us small businessmen do.

This attitude, one of hope, indicates that the small businessman is intensely interested in the principle and purpose of a tax cut as a stimulation for business.

I congratulate the chairman of the Committee on Small Business for his continued effort to help small business.

Mr. SPARKMAN. I thank the Senator from West Virginia.

I shall now move on to the second amendment which I have sent to the desk. It relates to multiple exemptions for corporations. Under present law, and I believe under the bill as it will pass, there is no limit on the number of exemptions that may be given to corporations. I believe the Treasury Department recommended that there be only one. The Committee on Small Business felt that only one would not be harsh, but at the same time felt that there ought to be some limitation. We recommended that there be five exemptions, no more. I shall not press the amendment at this time. The committee considered it but did not see fit to recommend it. I hope that during the next year we may watch the operation of this provision with reference to multiple tax exemptions for corporations.

I believe we have made a wise recommendation. I hope it will be followed, and that at some time in the future the proposal will be studied again.

I have introduced a third amendment. I call the attention of the Senator from Massachusetts [Mr. SALTONSTALL] to it. It relates to the estate tax that might come due as a result of forced sales. A closely held small business of any kind would be the type of business that would really be affected in case of the sudden death of the operator, owner, or manager of the business. We have proposed that such a case should be considered as a hardship case.

We were able to secure a provision that in hardship cases the heirs might have as much as 10 years in which to pay the estate taxes. What we tried to do was to have such cases included as hardship cases.

I am pleased to say that the Treasury Department wrote me a letter only a few days ago, after I had discussed the situation carefully with them. I told them I thought they could take care of the situation administratively, and I have now been assured that it will be taken care of administratively. I shall read the last paragraph:

The Treasury has already directed the Commissioner of Internal Revenue to prepare an appropriate amendment to the regulations to solve this problem. The amendment to the regulations should be ready for publication in the near future. I assure you that the Treasury will take the necessary steps administratively to solve this problem.

Mr. President, I ask unanimous consent that the entire letter be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNDER SECRETARY OF THE TREASURY,
Washington, D.C.

HON. JOHN J. SPARKMAN,
U.S. Senate,
Washington, D.C.

DEAR SENATOR: As I promised during our conversation of today, I have checked further with regard to our position on your amendment to H.R. 8363 which would allow a district director to postpone payment of estate taxes in any case where payment of the tax would require a sale of a family business.

As you know, we are in complete agreement with the substance of your proposal. We first raised it before the Ways and Means Committee in connection with our proposal to tax capital gains at death. Section 6161 presently allows payment of the estate tax in installments in any case where immediate payment of the tax would result in undue hardship to the estate. The problem arises because the definition of "undue hardship" in the regulations under section 6161 is unduly narrow. We are convinced that the problem can best be solved by an amendment to the regulations. An amendment to the statute is neither needed nor advisable. A precise statement in the statute of the cases to be covered will inevitably result in the exclusion of certain borderline cases which might well merit similar treatment.

Amendment No. 366 is itself somewhat more restrictive than we would consider appropriate. It would apply only "to any case in which an extension of time for payment of the tax imposed by chapter 11 has been elected, or could have been elected, under section 6166." Section 6166 gives taxpayers an absolute right to installment payments of estate tax if a closely held business constitutes more than 35 percent of the gross estate or 50 percent of the taxable estate. Presumably, any estate eligible for this treatment will take advantage of that section and does not need further relief. It is precisely the estates which cannot meet the requirements of section 6166 which may need relief under section 6161.

The Treasury Department has already directed the Commissioner of Internal Revenue to prepare an appropriate amendment to the regulations to solve this problem. The amendment to the regulations should be ready for publication in the near future. I assure you that Treasury will take the necessary steps administratively to solve this problem.

Sincerely yours,

JOE.
HENRY H. FOWLER.

Mr. SALTONSTALL. Mr. President, I commend the Senator from Alabama for having worked to secure this administrative change. It is one of the most fundamental needs, from the point of view of small business. If the Senator from Alabama, the Senator from New Mexico [Mr. ANDERSON], or I owned a small business, and suddenly we were no longer on this earth, it might become quite essential to provide time for our heirs to straighten out their affairs before they had to sell everything to pay the estate taxes.

Mr. SPARKMAN. The Senator is correct.

Mr. SALTONSTALL. The Senator has stated that the problem will be solved administratively. How many years is allowed now?

Mr. SPARKMAN. We succeeded in having it included among hardship cases. These amendments bring this category definitely under hardship cases. It should have been there all along; and these amendments put it there.

[*P. 2279*]

The PRESIDING OFFICER. The time of the Senator from Alabama has expired.

Mr. SPARKMAN. Mr. President, I withdraw the amendments.

The PRESIDING OFFICER. The amendments of the Senator from Alabama are withdrawn.

AMENDMENT NO. 390

Mr. SPARKMAN. Mr. President, I seek further recognition, for I have another amendment, which I can explain briefly. The Senator from South Carolina [Mr. JOHNSTON] and the Senator from New York [Mr. KEATING] are cosponsors of this amendment, which I offer and send to the desk; and I ask that it be read.

The amendment proposed by Mr. SPARKMAN, for himself, Mr. KEATING, and Mr. JOHNSTON, was read, as follows:

At the end of title II of the bill, add the following new sections:

"SEC. —. TRANSPORTATION OF DISABLED INDIVIDUAL TO AND FROM WORK.

"(a) DEDUCTION ALLOWED FOR EXPENSES OF TRANSPORTATION OF DISABLED INDIVIDUALS TO AND FROM WORK.—Part VII of subchapter B of chapter 1 (relating to additional itemized deductions for individuals), as amended by sections 203(a) and 212 of this Act, is further amended by redesignating section 219 as section 220 and by inserting after section 218 the following new section:

" 'SEC. 219. TRANSPORTATION OF DISABLED INDIVIDUAL TO AND FROM WORK.

" '(a) GENERAL RULE.—In the case of a disabled individual, there shall be allowed as a deduction expenses paid during the taxable year for transportation to and from work to the extent that such expenses do not exceed $600.

" '(b) DISABLED INDIVIDUAL DEFINED.—For purposes of subsection (a), the term disabled individual' means an individual who is blind (as defined in section 151(d)(3)) or who has lost the use of a leg, "both legs," both arms, or is otherwise disabled, to such an extent that he is unable during the entire taxable year to use, without undue hardship or danger, a streetcar, bus, subway, train, or similar form of public transportation, as a means of traveling to and from work. A taxpayer claiming a deduction under this section shall submit such proof that he is a disabled individual as the Secretary of the Treasury or his delegate may by regulations prescribe. The regulations so prescribed shall include the following provisions:

" '(1) Proof of disability shall be certified by a physician authorized to do so by any county (or equivalent) medical society.

" '(2) The certifying physician shall specify the nature, cause, and physically limiting effects of the disability.'

"(b) TECHNICAL AMENDMENT.—The table of sections for part VII of subchapter B of chapter 1 (as amended by section 212(a)(2) of this Act) is further amended by striking out—

" 'Sec. 219. Cross references.'

and inserting in lieu thereof the following:

" 'Sec. 219. Transportation of disabled individual to and from work.

" 'Sec. 220. Cross references.'

"(c) EFFECTIVE DATE.—The amendment made by this section shall apply only with respect to taxable years ending after the date of the enactment of this Act.

"SEC.—. ADDITIONAL PERSONAL EXEMPTIONS FOR DISABILITY.

"(a) IN GENERAL.—Section 151 of the Internal Revenue Code of 1954 (relating to allowance of deductions for personal exemptions) is amended by adding at the end thereof the following new subsection:

" '(f) ADDITIONAL EXEMPTIONS FOR DISABILITY.—

" '(1) FOR TAXPAYER.—An additional exemption of $600 for the taxpayer if he is a disabled individual.

" '(2) FOR SPOUSE.—An additional exemption of $600 for the spouse of the taxpayer if the spouse is a disabled individual and if the taxpayer is entitled to an exemption under subsection (b) for such spouse.

" '(3) DISABLED INDIVIDUAL DEFINED.—The term 'disabled individual' means an individual who, during the entire taxable year of the taxpayer, has a permanent loss or permanent loss of use of one or more of the extremities or is otherwise under a physical or mental disability which can be expected to result in death or to be of long-continued and indefinite duration and which renders him unable to engage in any substantial gainful activity. A taxpayer claiming a deduction under this subsection shall submit such proof that he (or his spouse) is a disabled individual as the Secretary of the Treasury or his delegate may by regulations prescribe. The regulations so prescribed shall include the following provisions:

"'(A) Proof of disability shall be certified by a physician authorized to do so by any county (or equivalent) medical society.

"'(B) The certifying physician shall specify the nature, cause, and physically limiting effects of the disability.'

"(b) CONFORMING AMENDMENT.—Section 213(c) of the Internal Revenue Code of 1954 (relating to medical, dental, etc., expenses) is amended—

"(1) by striking out '(c) or (d)' and inserting in lieu thereof '(c), (d), or (f)', and

"(2) by striking out ('age or blindness' and inserting in lieu thereof 'age, blindness, or disability'.

"(c) WITHHOLDING.—

"(1) Paragraph (1) of section 3402(f) of the Internal Revenue Code of 1954 (relating to withholding exemptions) is amended by adding at the end thereof the following new subparagraph:

"'(F) one additional exemption for himself if, on the basis of facts existing at the beginning of such day, there may reasonably be expected to be allowable an exemption under section 151(f)(1) (relating to the disabled) for the taxable year under subtitle A in respect of which amounts deducted and withheld under this chapter in the calendar year in which such day falls are allowed as a credit.'

"(2) Subparagraph (D) of such paragraph (1) is amended (A) by striking out '(B), or (C),' and inserting in lieu thereof '(B), (C), or (F),', and (B) by striking out 'and' at the end thereof.

"(3) Subparagraph (E) of such paragraph (1) is amended by striking out the period at the end and inserting in lieu thereof '; and'.

"(d) EFFECTIVE DATE.—The amendments made by subsections (a) and (b) shall apply only with respect to taxable years ending after the date of enactment of this Act and the amendments made by subsection (c) shall apply only with respect to payment of wages made after such date.

Mr. ANDERSON. Mr. President, will the Senator from Alabama explain the amendment?

Mr. SPARKMAN. I shall do so briefly.

This provision would allow a deduction for the expenses of disabled persons for their transportation, when they are not able to transport themselves to and from work, and must hire transportation—in other words, a deduction of the actual expenses, but not to exceed $600 a year.

I have not yet been able to obtain the figures for the cost of the amendment.

Mr. SMATHERS. Mr. President, we shall take the amendment to conference.

Mr. SPARKMAN. And in the meantime I shall try to get the cost figures and give them to the conferees.

The PRESIDING OFFICER (Mr. WALTERS in the chair.) The question is on agreeing to the amendment of the Senator from Alabama.

The amendment was agreed to.

Mr. JOHNSTON. Mr. President, this is a very important amendment; and it is very fair and equitable, because a person who is totally disabled should receive this assistance.

Mr. KEATING. Mr. President, as a cosponsor of this amendment, I associate myself fully with the remarks just made by the Senator from South Carolina [Mr. JOHNSTON].

I have heard this bill described many times during this debate as containing "something for everybody." Only time will reveal whether this is true. But until the amendment offered by the Senator from Alabama, the Senator from South Carolina [Mr. JOHNSTON], and myself finds its way finally into the Internal Revenue Code, that august body of law will certainly fall short of meting out justice and equity to those of our citizenry who suffer from physical disability or handicap.

Mr. President, this amendment is a tax break not for the taxpayers who would be in a position to take advantage of it in their tax returns, but a tax break for all the American people. Existing law, in discriminatory fashion, makes it exceedingly difficult for many among the handicapped and disabled to contribute their combined talents and skills to the well-being of all. Every one of us suffers when otherwise fully capable and competent citizens are deprived through the tax laws of that margin of finances that can spell the difference between enforced idleness and the ability to pursue gainful employment opportunities. Mr. President, I hope this amendment will be agreed to in conference and ultimately enacted to break the back of the existing inequity of the code.

AMENDMENT NO. 404

Mr. WILLIAMS of Delaware. Mr. President, on behalf of the Senator from North Dakota [Mr. YOUNG], who is unable to be present at this time, I submit amendment No. 404.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. At the proper place in the bill it is proposed to add the following new section:

SEC. —. TIME FOR FILING CLAIM FOR REFUND OF TAXES PAID FOR GASOLINE USED ON FARMS.

Section 6420(b) (relating to time for filing claim for refund on taxes paid for gasoline used on farms) is amended by inserting immediately before the period in the second sentence thereof the following: "; except that the Secretary or his delegate may allow a claim filed after such date if the claimant had good cause for failing to file on or before such date".

Mr. SMATHERS. Mr. President, the Senator from North Dakota and the

[*P. 2280*]

Senator from Delaware have talked with me and with other members of the committee about this amendment. We think it is meritorious; and we shall be glad to take it to conference.

Mr. WILLIAMS of Delaware. I thank the Senator from Florida.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a brief statement prepared by the Senator from North Dakota [Mr. YOUNG].

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR YOUNG OF NORTH DAKOTA

This is an amendment authorizing the Secretary of the Treasury or the Commissioner of Internal Revenue to allow claims filed late for a Federal gas tax refund to farmers.

Under the present law these claims must be postmarked by midnight on September 30 each year. Any application filed later is automatically disallowed even though it was filed late through no fault of the farmer. This amendment would give the Secretary in this instance the same authority as he has for permitting the filing of late income tax returns.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Delaware, on behalf of the Senator from North Dakota [Mr. YOUNG].

The amendment was agreed to.

Mr. SMATHERS. Mr. President, on behalf of the staff, I submit a technical amendment.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 11, in line 19, it is proposed to strike out "equal to 15 percent" and insert "equal to 17 percent, in the case of a taxable year beginning in 1964, or 15 percent, in the case of a taxable year beginning after December 31, 1964,".

Mr. SMATHERS. Mr. President, I understand from the staff that this is strictly a technical amendment, and that it does not involve any money.

I ask that an explanation of the amendment be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The tax rate applicable to the retirement income credit under present law is 20 percent, or the bottom individual income tax rate.

Under the bill this rate is reduced to 15 percent to correspond with the reduction of the rate on individuals to 14, 15, 16, and 17 percent for 1965 and subsequent years.

However, the rates for 1964 are 16, 16.5, 17.5, and 18. This amendment provides therefore a 17-percent rate for the retirement income credit for 1964 (instead of 15 percent) to correspond with individual rates for that year.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Florida.

The amendment was agreed to.

Mr. JAVITS. Mr. President, on page 195, in line 21, and on page 198, in line 2, a change was voted by the Senate committee in the portion of the House version which relates to the opportunity for companies in the personal holding company category to liquidate. The House version used the words "the date of the enactment of this subsection." The Senate committee version uses the date "December 31, 1963." The Senate committee version would thus exclude the calendar year 1963, which many companies use as the basis for paying their taxes.

In short, the argument is that they will be discriminated against in this way, because a company which uses as its tax year a fiscal year ending in October or November would thus have an advantage.

Is it understood that this question should be considered in conference, because under the House version the effective date will be calendar year 1964, which thereby will exclude calendar year 1963; and is it understood that the conferees will give consideration to the equity of this situation?

Mr. SMATHERS. I have talked with the staff about this matter and with the others who are familiar with it; and they say this matter will be in conference and will be given earnest consideration.

Mr. JAVITS. I thank the Senator from Florida.

AMENDMENT NO. 416

Mr. SALTONSTALL. Mr. President, I offer an amendment on behalf of myself, Senators DODD, RIBICOFF, PASTORE, PELL, KEATING, and JAVITS.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. At the end of the bill, it is proposed to add the following new section:

SEC. —. EXCISE TAX ON CERTAIN SILVER-PLATED HOLLOWWARE

(a) Section 4001 is amended by striking out "silver-plated hollowware" and inserting "silver-plated hollowware not sold for use in the trade or business of the purchaser".

(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply with respect to sales occurring more than 10 days after the date of the enactment of this section.

Mr. SALTONSTALL. Mr. President, I shall not press for adoption of the

amendment. The ranking member of the Finance Committee in charge of the bill has stated to me that he will give consideration to the amendment at a future time.

The amendment has to do with repeal of the 10-percent Federal excise tax on silver-plated hollowware when it is used by a purchaser in his commercial business.

The present law works a hardship on the domestic silver-plated hollowware industry and places it at a serious and unfair disadvantage with respect both to foreign competition and to competitive products made in this country of stainless steel, bimetals, china, and glass, none of which is subject to the 10-percent excise tax.

I ask unanimous consent to have a statement on this matter printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR SALTONSTALL

I am glad to join the senior Senator from Connecticut and other Senators in sponsoring this amendment which would repeal the 10-percent Federal excise tax on silver-plated hollowware when it is to be used by the purchaser in his commercial business.

The amount of revenue involved is only approximately $200,000 annually, based on estimated yearly sales of $2 million of silver-plated hollowware to institutional users. Yet this is an unfair and discriminatory tax which places the domestic silver-plated hollowware industry at a serious disadvantage with respect to its foreign competition and to competitive products made in this country. It does not seem fair to levy a luxury tax on items purchased for commercial use or to discriminate against only one of a number of similar products which have the same purpose. I emphasize that this amendment would not grant hollowware any advantage with respect to competitive products of stainless steel, bimetals, china, and glass, none of which are subject to the 10-percent excise tax. It merely would provide equal treatment.

When wartime excise taxes were levied on many goods, the entire silver hollowware field was covered. As a result, although plated flatware used by hotels and restaurants is not taxed, the hollowware is. Thus institutions find themselves forced to use stainless steel, china, or glassware rather than silverplated ware which they feel is superior in many respects.

Another important point to consider in relation to the 10-percent tax on silver-plated hollowware is the fact that the manner in which it is collected makes it difficult for domestic producers to compete with foreign producers. The tax is collected by U.S. manufacturers and jobbers as they sell the products. When hotels, restaurants, schools and hospitals buy from foreign manufacturers, they are billed directly and the excise tax is not collected. Thus, not only do foreign firms have the advantage of lower wage costs, they avoid the burdens of the 10-percent excise tax.

Most U.S. hotels would prefer to buy silverware from the domestic industry since service and replacements are more easily available from the domestic manufacturer. Understandably, however, they have turned abroad for these products to avoid the tax. This is particularly true of some of the larger hotel chains which operate internationally. In a new hotel such as the Washington Hilton this can amount to a purchase of several hundred thousand dollars which means orders leaving the country, dollars leaving the country, and jobs for foreign industries rather than our own. The smaller restaurants and institutions may lack the facilities and organization to take advantage of this situation and thus may be placed at a disadvantage as compared to their larger competitors. Therefore, another defect of this tax is readily apparent. Small business is handicapped unfairly. For all of these reasons, the amendment before us is just and necessary. I hope very much that it will prevail.

Mr. SALTONSTALL. Mr. President, I withdraw the amendment at this time, because members of the Finance Committee have assured me that they will consider it carefully at a later date. I hope that it will be adopted at a future time as it would remove a basic inequity which is harmful to industry in Massachusetts and New England.

The PRESIDING OFFICER. The amendment is withdrawn.

Mr. LAUSCHE. Mr. President, I ask unanimous consent to have printed in the RECORD a statement of my reasons for opposing the pending bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[P. 2281]

STATEMENT BY SENATOR LAUSCHE

In statements previously made on the pending tax bill, I said that while I favored relief from oppressive and burdensome Federal taxes, I could not conscientiously vote for this bill because of a multitude of current economic factors, which, in my opinion, make a tax reduction at this time unsound and seriously threatening to our future fiscal stability.

I pointed out that:

1. A tax reduction should not be made without substantial reductions in Federal spending now and in the future. This has not been accomplished.

2. Past tax cuts, contrary to modern economists' theories, have not boosted our economy.

3. A tax cut under existing circumstances might breed serious inflation; weaken our dollar and affect our gold reserves and balance of payments, both of which are in dire circumstances now.

4. A reversal of our mounting deficit will not occur to the degree claimed by proponents of the bill, and, as a result, our national debt will grow to figures that could prove disastrous.

5. Proponents of the tax cut base their conclusions on "ifs," contingencies, assumptions, and expectations which may never be realized.

I now wish to enumerate additional reasons why I believe that a tax reduction now is not in the best interests of our country and citizenry.

The pending bill containing provisions for a reduction of the tax rates against income both personal and corporate and otherwise liberalizing the income tax structure, in my judgment, should not be adopted.

The opinion urging its approval is rooted completely is expectations and contingencies which may never happen and in a new and untried economic philosophy completely contrary to past practices.

It appears that a group of modern economists have come up with the idea that the cure for unemployment, under utilization of industrial capacity, and for annual operating deficits, and for the frightening drain made upon our gold reserves by foreign short-term creditors, is to reduce income taxes.

The Honorable Douglas Dillon, Secretary of the Treasury, takes the position that the need for a major program of tax reduction and revision is pressing; that any delay in its passage would incur serious economic risks. When the recommendation was originally made, it was contemplated to tax less in the income field and to spend more on the Federal governmental level—all of which would contribute to the economic growth of the country. Arguments have been and are being made that in the face of a $315 billion debt, the precarious position of our gold reserves, the cheapened purchasing power of the dollar—which has fallen from a purchasing value of 100 cents in 1941 to about 44 cents in 1964—the way to save the economy of the country is to spend more and tax less.

On the item of spending more President Johnson has changed the approach to that subject by submitting a budget of $97.9 billion for fiscal year 1965 compared to $98.4 billion budget of President Kennedy for fiscal year 1964. Though President Johnson's budget is $500 million less than President Kennedy's for the preceding year, the fact remains that the present budget is $4.7 billion in excess of the moneys which the Congress appropriated for the operation of the Federal Government in fiscal year 1964.

In the event the Congress acts in accordance with the President's budgetary recommendation, spending instead of being cut will be increased by $5 billion. Not one of the appropriation bills for fiscal year 1965 has been adopted; what the Congress will do with respect to those bills is uncertain.

The possibility exists that after the tax cut is approved, all objectives of reducing spending may be abandoned; if they are not abandoned for the fiscal year of 1965, what, if any, assurance is there that they will be kept for the fiscal year of 1966.

In each of the 7 years that I have been in the Senate, old subsidies have been increased, new ones established; functions, traditionally and historically performed by local and State governments have been assumed by the Federal Government; and functions never performed by Government but always by private enterprise have likewise been taken on by the Government in Washington. Money spending for projects which are desirable but not essential in the period of fiscal stringency confronting the Federal Government has been fantistically advocated and adopted.

If the novel idea of these mid-20th century economic advisers proves to be false, how calamitous to the people and to the country will the consequences of mistake be?

Let us not forget that the deficits for the fiscal years of 1961, 1962, and 1963 aggregated approximately $17 billion; and that the deficit for fiscal year 1964 which will end on June 30 will add another $10 billion provided the pending revenue bill reducing taxes will be enacted early this year. When Secretary Dillon testified before the Finance Committee of the Senate on October 15, he estimated the deficit for fiscal year 1965 at $9½ billion. According to Secretary Dillon, the deficit operations for the fiscal years of 1961 to 1965 inclusive will aggregate about $34½ billion.

With regard to the time when the balanced budget will arrive, Secretary Dillon testified:

"We have said that, with stringent expenditure control and allowing for the growth in the economy, the earliest possible date we foresaw for a balanced budget from this tax bill was 1967, and that it might be 1968. It is either 1967 or 1968. We are in that area. As you recognize, it is hard enough to estimate 18 months ahead."

We are now in the uncertainty and the guesswork which underlies these recommendations. It is thoroughly apparent when one recognizes that the principal proponent of this measure takes the position that it will not be until 1968—that is, 5 years from the time he testified—that the true fruition of his prediction will be realized.

Dr. Arthur Burns, an outstanding economist, did take the position that a balanced budget would not be achievable until 1972. Secretary Dillon in his testimony went on to explain that Dr. Arthur Burns assumed that spending would continue in the future as it has in the past and that on that basis he concluded that it would not be until 1972 that the budget would be balanced. In my judgment, Dr. Arthur Burns in his assumption about the spending program was right, and that Secretary Dillon is wrong.

We will probably have less spending in fiscal year 1965 but once the tax bill is passed, the spending train will be on the greased tracks and off we will go full-speed ahead without any realistic regard of the moneys available to finance the spending program.

The tax burden imposed upon the citizens is related directly to the spending program. The more you spend, the more you have to tax. To reduce taxes you have to reduce spending. To argue that the budget will be balanced if we tax less in the income field, runs contrary to every practice followed by our preceding Secretaries of the Treasury and Executives of the Nation.

If the pains and dangers of constant operating deficits were curable in the present manner suggested by the proponents of the pending bill, it would certainly be fair to assume that this nostrum now discovered by

Dr. Walter W. Heller would have been revealed to governments struggling with fiscal matters by some one of the many economists of the past.

If this recommended tax cut is the panacea for fiscal ailments confronting government, why shouldn't we then make the cut even greater than has been proposed.

The President in his budget message of 1962 predicted a $500 million surplus. In the message, he said:

"It is my current intention to advocate a program of expenditures which, including revenues from a stimulation of the economy, will not of and by themselves unbalance the budget."

The same fiscal advisers surrounded the President in 1962, when in his message it was said that for the fiscal year of 1963 a surplus of $500 million would be the result, who are now advising that an immediate income tax cut is necessary to remedy the unemployment problem, stop the outflow of gold, activate unused production facilities, and through the consequent increase in revenues to balance the budget.

The cold facts show that in fiscal 1963, instead of ending the year with a surplus of $500 million, the Government ended it with a deficit of $6.2 billion.

It is my belief that a great majority of the citizenry of our country would rather forgo a tax reduction at this time rather than to risk the possible consequences of perpetual deficits, a national debt that will plague future generations, and inflation that could wipe out many times the dollar value of the reduction.

AMENDMENT NO. 422

Mr. MILLER. Mr. President, on behalf of myself and the Senator from from Iowa [Mr. HICKENLOOPER], I offer an amendment which I send to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. At the proper place in the bill, it is proposed to add the following new section:

SEC. . CORPORATIONS IMPROPERLY ACCUMULATING SURPLUS

Section 533 of the Internal Revenue Code of 1954, as amended (relating to evidence of purpose to avoid income tax) is amended by adding the following subsection:

"(b) If, during the taxable year on or before the 15th day of the third month following the close of the taxable year, a corporation—

"(1) distributes 60 percent or more of its taxable income, adjusted in the manner provided in subsection 535(b), or

"(2) invest 60 percent or more of its taxable income, adjusted in the manner provided in subsection 535(b), in land or property subject to the allowance for depreciation for use in the trade or business of such corporation, or

"(3) distributes or invests, in the manner provided in subsections (1) and (2), 60 percent or more of its taxable income, adjusted in the manner provided in subsection 535(b), the same shall be presumptive evidence that any accumulation was not for the purpose of avoiding income tax. The fact that a corporation has not distributed or invested 60 percent or more of its taxable income, adjusted in the manner provided in subsection 535(b), as above provided shall not be regarded as presumptive evidence that any accumulation was for the purpose of avoiding income tax."

Mr. MILLER. Mr. President, this amendment is for the purpose of setting forth guidelines for corporations in connection with what is known as the penalty tax for unreasonable accumulation of surplus.

[*P. 2282*]

The Senator from Louisiana will recall that a few years ago the Treasury established a policy that if there were a distribution of earnings and profits of 70 percent, this penalty surtax would not be imposed and there would not be an audit with the idea of imposing the penalty.

Unfortunately, this policy was interpreted by some people to mean that if 70 percent was not declared out, automatically the corporation would be in danger of a penalty surtax. Such was not the intention of the Treasury, but unfortunately it received that interpretation.

Down through the years there have been numerous cases involving this problem. There are many court decisions on the point. Unfortunately, most of them are ad hoc; they are all on the facts of a particular case. As a result, it is pretty difficult for boards of directors to determine whether they are in danger or not in danger of a revenue agent suggesting the imposition of this penalty surtax.

Much has been said in the Senate during the debate on this bill about uncertainty in business. Without fixed guidelines, there is an element of uncertainty which is not healthy. We do not want to see penalty surtaxes imposed on corporations which are genuinely retaining surplus for future investments in their business. On the other hand, we do not want to see a penalty surtax avoided by an unreasonable guideline.

My amendment would provide that if 60 percent of the corporation's taxable income, with certain adjustments, is declared out as dividends, or is invested in land or property, subject to depreciation, for use in the trade or business, or both, a presumption will arise that any accumulation has not been for the purpose of avoiding tax. This would be a rebuttable presumption. The Internal Revenue Service could go forward and offer evidence which could still result in the imposition of the penalty surtax.

I believe that this approach, providing some kind of guideline with a rebuttable

presumption, would not work a hardship on the Internal Revenue Service; nor should it work hardship on the taxpayer who does not see fit to declare out 60 percent. Therefore, my amendment provides further that the mere fact that the corporation has not distributed 60 percent of its taxable income, with certain adjustments, shall not be presumed to be evidence of intent to accumulate profits for the purpose of avoiding tax.

I do think that fixed guidelines are long overdue to take the uncertainty out of these cases.

Mr. LONG of Louisiana. The amendment did not reach the committee in time to be considered in connection with the tax bill. The amendment would take us into a very difficult and intricate field which would require more study. The Treasury Department is opposed to the amendment as it is presently drafted. They feel that while the amendment seems to meet certain problems, it raises additional questions, for which reason the Treasury cannot support the amendment and must oppose it.

The Senator from Louisiana would be willing to see that the question is considered when the committee can get around to it later. He discussed it with the chairman of the committee. The chairman concurs in that view. At an appropriate time we shall consider the amendment which the Senator has in mind. At the present time we could not agree to it, as the Senator realizes.

Mr. MILLER. I realize the fact that the amendment was offered at a late hour. I recognize that the floor of the Senate is not a desirable place to hold a hearing on a subject of relatively far-reaching import. With that assurance I shall offer an appropriate amendment to another bill at a later time.

Accordingly, I withdraw the amendment.

The PRESIDING OFFICER. The amendment is withdrawn.

AMENDMENT NO. 410

Mr. YARBOROUGH. Mr. President, I call up my amendment No. 410.

The PRESIDING OFFICER. The amendment of the Senator from Texas will be stated.

The LEGISLATIVE CLERK. At the proper place it is proposed to insert the following new section:

SEC. —. ESTATE AND GIFT TAX TREATMENT OF EMPLOYEES' SURIVORS ANNUITIES UNDER STATE AND LOCAL RETIREMENT SYSTEMS.

(a) EXEMPTION FROM ESTATE TAX.—Section 2039 (c) (relating to annuities) is amended—

(1) by striking out "or" at the end of paragraph (2);

(2) by striking out the period at the end of paragraph (3) and inserting in lieu thereof "; or";

(3) by inserting after paragraph (3) the following new paragraphs:

"(4) a pension, annuity, retirement, or similar plan established for its employees by a State, a political subdivision of a State, the District of Columbia, or an agency or instrumentality of any one or more of the foregoing; or

"(5) a retirement annuity contract purchased for an employee by an employer which is a State, a political subdivision of a State, the District of Columbia, or an agency or instrumentality of any one or more of the foregoing.";

(4) by striking out "paragraph (1) or (2) or under a contract described in paragraph (3)" in the second sentence and inserting in lieu thereof "paragraph (1), (2), or (4) or under a contract described in paragraph (3) or (5)"; and

(5) by striking out "paragraph (1) or (2)" in the third sentence and inserting in lieu thereof "paragraph (1), (2), or (4), or toward the purchase of an annuity contract described in paragraph (5),".

(b) EXEMPTION FROM GIFT TAX.—Section 2517(a) (relating to certain annuities under qualified plans) is amended—

(1) by striking out "or" at the end of paragraph (2);

(2) by striking out the period at the end of paragraph (3) and inserting in lieu thereof "; or"; and

(3) by inserting after paragraph (3) the following new paragraphs:

"(4) a pension, annuity, retirement, or similar plan established for its employees by a State, a political subdivision of a State, the District of Columbia, or an agency or instrumentality of any one or more of the foregoing; or

"(5) a retirement annuity contract purchased for an employee by an employer which is a State, a political subdivision of a State, the District of Columbia, or an agency or instrumentality of any one or more of the foregoing."

(c) EFFECTIVE DATES.—The amendments made by subsection (a) shall apply with respect to estates of decedents dying after December 31, 1963. The amendments made by subsection (b) shall apply with respect to calendar years after 1963.

Mr. YARBOROUGH. Mr. President, the amendment is designed to eliminate a discrimination against State school teachers in State school systems and their retirement systems. Most State employees under State retirement systems receive benefits paid by public employee benefit plans. It appears that under certain rulings in some districts in this country, at least, annuities received by public school teachers may not be excluded from the gross estate of a deceased teacher. They do not qualify from exemption from the gift tax in the same manner as annuities purchased by private schools for their employees. The same statement would apply to other

State employees under State retirement systems. Federal employees receive the beneficial treatment.

Under section (c) (1) and (2) of section 2039 there is excluded from the gross estate annuities or payments to a beneficiary under an approved corporate pension plan, and section (c)(3) excludes annuity contracts purchased for an employee by a tax exempt religious or charitable organization.

The revenue rulings of the Internal Revenue Service extend the same treatment to beneficiaries under the U.S. Civil Service Retirement System. Section 2517 has the same general effect on gift taxes.

This is not merely some recently offered amendment. On January 25, 1963, the distinguished Senator from Alaska [Mr. BARTLETT] and I introduced the bill (S. 531).

Mr. President, I ask unanimous consent that the bill may be printed at this point in the RECORD.

There being no objection, the bill (S. 531) was ordered to be printed in the RECORD, as follows:

S. 531

A bill to amend the Internal Revenue Code of 1954 with respect to the estate and gift tax treatment of employees' survivors annuities under State and local retirement systems

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 2039(c) of the Internal Revenue Code of 1954 (relating to annuities) is amended—

(1) by striking out "or" at the end of paragraph (2);

(2) by striking out the period at the end of paragraph (3) and inserting in lieu thereof "; or"; and

(3) by inserting after paragraph (3) the following new paragraphs:

"(4) a pension, annuity, retirement, or similar plan established for its employees by a State, a political subdivision of a State, the District of Columbia, or an agency or instrumentality of any one or more of the foregoing; or

"(5) a retirement annuity contract purchased for an employee by an employer which is a State, a political subdivision of a State, the District of Columbia, or an agency or instrumentality of any one or more of the foregoing."

[*P. 2283*]

(b) The second sentence of such section 2039(c) is amended by striking out "paragraph (1) or (2) or under a contract described in paragraph (3)" and inserting in lieu thereof "paragraph (1), (2), or (4) or under a contract described in paragraph (3) or (5)".

(c) The third sentence of such section 2039(c) is amended by striking out "paragraph (1) or (2)" and inserting in lieu thereof "paragraph (1), (2), or (4), or toward the purchase of an annuity contract described in paragraph (5),".

(d) The amendments made by this section shall apply with respect to estates of decedents after December 31, 1962.

SEC. 2. Section 2517(a) of the Internal Revenue Code of 1954 (relating to certain annuities under qualified plans) is amended—

(1) by striking out "or" at the end of paragraph (2);

(2) by striking out the period at the end of paragraph (3) and inserting in lieu thereof "; or"; and

(3) by inserting after paragraph (3) the following new paragraphs:

"(4) a pension, annuity, retirement, or similar plan established for its employees by a State, a political subdivision of a State, the District of Columbia, or an agency or instrumentality of any one or more of the foregoing; or

"(5) a retirement annuity contract purchased for an employee by an employer which is a State, a political subdivision of a State, the District of Columbia, or an agency or instrumentality of any one or more of the foregoing."

(b) The amendments made by subsection (a) shall apply with respect to calendar years after 1962.

Mr. YARBOROUGH. The identical subject was brought up under our Amendment No. 410, which includes the identical language contained in the bill (S. 531). Since the amendment was offered, we have been in conference with the Treasury Department. The officials of the Treasury Department have stated to us that they believe that the problem can be handled administratively under existing administrations, although the collector of internal revenue in my own district states that the law requires that the State employee retirement systems and the State teachers should not receive the same beneficial treatment received by Federal employees, employees of private schools, employees of private corporations, and employees of charitable and religious organizations. Everyone receives the beneficial treatment except the retirees under State and State schoolteacher systems.

From what we learn from the NEA and from a telegram which I have received today from Mr. Sturgeon of the Texas State Teachers Association, in about 48 States of the Union the beneficial treatment has not been extended by regulation. But on the assurance of the Treasury Department that it is believed the problem can be handled without legislation, I direct the following question to the distinguished Senator from Louisiana:

If the amendment is offered and then withdrawn at this time, and if the question is not administratively worked out

by the Treasury Department, as they think may be possible, will it not be possible to bring it up and offer it as an amendment to some subsequent revenue measure at the present session? I understand that there are about 30 more revenue measures expected from the House.

Mr. LONG of Louisiana. Mr. President, our investigation of the problem, since the Senator raised the question, indicates that there is a distinct possibility that the view at the national office, as contrasted with the view at the regional office, may be that which the Senator advocates. In other words, the national office view may be that the plans of which the Senator speaks are qualified. We will ask them to study the matter. In the event the Senator does not receive a satisfactory answer from the national office, we shall endeavor to look into the question for him and see if legislation is necessary. We will undertake to consider it at that time.

Mr. YARBOROUGH. The crux of the question is that the regional Internal Revenue Office has ruled that State plans should not receive the beneficial treatment because they are not irrevocable. State legislatures have reserved the right to amend their pension plans. Many plans are not irrevocable. The Federal retirement system is not irrevocable. We amend it from session to session.

Mr. LONG of Louisiana. We are not sure that because these plans are not irrevocable the teachers may be disqualified. In other words, they may be qualified anyway. If that is the case, the proposal of the Senator would not be necessary. If the proposal of the Senator should prove to be necessary, then would be the appropriate time for the committee to consider it. If that be the case, the Senator from Louisiana will move the proposed legislation as an amendment to some bill, if necessary.

Mr. YARBOROUGH. Later in this session.

Mr. LONG of Louisiana. Yes.

Mr. YARBOROUGH. The Treasury officials have assured us that they believe the problem can be reached administratively.

Mr. LONG of Louisiana. Yes.

Mr. YARBOROUGH. I ask unanimous consent that there be printed at this point in the RECORD amendment No. 401; a letter from Frank M. Jackson, the executive secretary of the Teacher Retirement System of Texas, dated December 29, 1962; and a telegram dated February 7, 1964, from L. P. Sturgeon of the Texas State Teachers Association, Austin, Tex.

There being no objection, the amendment, letter, and telegram were ordered to be printed in the RECORD, as follows:

AMENDMENT 410

"SEC. —. ESTATE AND GIFT TAX TREATMENT EMPLOYEES' SURVIVORS ANNUITIES UNDER STATE AND LOCAL RETIREMENT SYSTEMS.

(a) EXEMPTION FROM ESTATE TAX.—Section 2039(c) (relating to annuities) is amended—

(1) by striking out "or" at the end of paragraph (2);

(2) by striking out the period at the end of paragraph (3) and inserting in lieu thereof "; or";

(3) by inserting after paragraph (3) the following new paragraphs:

"(4) a pension, annuity, retirement, or similar plan established for its employees by a State, a political subdivision of a State, the District of Columbia, or an agency or instrumentality of any one or more of the foregoing; or

"(5) a retirement annuity contract purchased for an employee by an employer which is a State, a political subdivision of a State, the District of Columbia, or an agency or instrumentality of any one or more of the foregoing.";

(4) by striking out "paragraph (1) or (2) or under a contract described in paragraph (3)" in the second sentence and inserting in lieu thereof "paragraph (1), (2), or (4) or under a contract described in paragraph (3) or (5)"; and

(5) by striking out "paragraph (1) or (2)" in the third sentence and inserting in lieu thereof "paragraph (1), (2), or (4), or toward the purchase of an annuity contract described in paragraph (5),";

(b) EXEMPTION FROM GIFT TAX.—Section 2517(a) (relating to certain annuities under qualified plans) is amended—

(1) by striking out "or" at the end of paragraph (2);

(2) by striking out the period at the end of paragraph (3) and inserting in lieu thereof "; or"; and

(3) by inserting after paragraph (3) the following new paragraphs:

"(4) a pension, annuity, retirement, or similar plan established for its employees by a State, a political subdivision of a State, the District of Columbia, or an agency or instrumentality of any one or more of the foregoing; or

"(5) a retirement annuity contract purchased for an employee by an employer which is a State, a political subdivision of a State, the District of Columbia, or an agency or instrumentality of any one or more of the foregoing."

(c) EFFECTIVE DATES.—The amendments made by subsection (a) shall apply with respect to estates of decedents dying after December 31, 1963. The amendments made by subsection (b) shall apply with respect to calendar years after 1963.

TEACHER RETIREMENT SYSTEM OF TEXAS,
Austin, Tex., December 29, 1962.

Hon. RALPH W. YARBOROUGH,
U.S. Senate,
U.S. Courthouse
Austin, Tex.

DEAR SENATOR YARBOROUGH: Yesterday afternoon you discussed the Federal estate tax on benefits paid by public employee benefit plans with Mr. Marlin Bownds, our comptroller. This letter is written to follow your suggestions to him.

Subsections (c)(1) and (2) of section 2039 exclude from the gross estate annuities or other payments to a beneficiary under an approved corporate pension plan. Subsection (c)(3) excludes annuity contracts purchased for an employee by a tax exempt religious or charitable organization. Revenue Ruling 5-1, I.R.B. 1956-1,6 extends the same treatment to beneficiaries under the U.S. civil service retirement system. Section 2517 has the same general effect for the gift tax.

The beneficiaries of public employees under employee pension plans of the several States and their political subdivisions are generally denied this treatment. Texas has 250,000 public employees covered by pension plans. Their beneficiaries receive less favorable treatment for gift and estate taxes than employees of corporations or employees of the Federal Government. In my opinion sections 2039 and 2517 should be amended to extend to beneficiaries under public employee pension plans the same treatment

[*P. 2284*]

which is accorded to beneficiaries under qualified corporate pension plans.

Sincerely,

FRANK M. JACKSON.

AUSTIN, TEX.,
February 7, 1964.

Senator RALPH YARBOROUGH,
Senate Chamber,
Washington, D.C.:

Texas teacher retirement system which includes 180,000 persons and the Texas State employees system which includes an additional 60,000 individuals do not qualify under section 403B Internal Revenue Code and are discriminated against under present Federal estate tax regulations. This same situation exists in all other States with possibly one or two exceptions. Adoption of amendment 410 to H.R. 8363 would do no more than give equal treatment to the teacher and State employees included in such retirement program. Additional information follows from officials of the teacher retirement system.

L. P. STURGEON.

Mr. BARTLETT. Mr. President, will the Senator yield?

Mr. YARBOROUGH. I yield.

Mr. BARTLETT. I am heartened by what the Senator from Louisiana, the Senator in charge of the bill, has had to say on the subject. I trust it can be handled administratively. If it cannot be, the Senator from Texas and I will surely be calling upon our colleagues, seeking legislative action.

I joined the distinguished Senator from Texas as a cosponsor of the bill back in January a year ago, because I thought the State employees were being discriminated against. That discrimination continues, and the time has come, in my judgment, for remedial action, whether it comes through legislation or through administrative action.

I should say that Hon. William A. Egan, Governor of Alaska, has heartily endorsed the proposal.

I desire, in concluding, to commend the distinguished Senator from Texas for calling this matter, then and now, to the attention of the Senate.

Mr. YARBOROUGH. Mr. President, I thank the distinguished Senator from Alaska. He has been very diligent in discussing this matter with me since the proposal was introduced under S. 531 last year. I, too, am heartened by the statement of the Senator from Louisiana, the floor manager of the bill.

Mr. LONG of Louisiana. As the Senator knows, there are some problems in this field.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to withdraw my amendment, but we plan to reoffer the measure later to some other bill, if it has not been worked out.

The PRESIDING OFFICER. The amendment offered by the Senator from Texas is withdrawn.

Mr. WILLIAMS of New Jersey. Mr. President, I have an amendment at the desk, which I offer and ask unanimous consent to have printed in the RECORD at this point, instead of being read.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment offered by Mr. WILLIAMS of New Jersey is as follows:

At the proper place in the bill add the following new section:

"SEC. —. AMORTIZATION OF HOUSING FACILITIES FOR AGRICULTURAL WORKERS.

"(a) IN GENERAL.—Part VI of subchapter B of chapter 1 of the Internal Revenue Code of 1954 (relating to itemized deductions for individuals and corporations) is amended by adding at the end thereof the following new section:

"SEC. 183. AMORTIZATION OF HOUSING FACILITIES FOR AGRICULTURAL WORKERS.

"'(a) ALLOWANCE OF DEDUCTION.

"'(1) ORIGINAL OWNER.—Any person who constructs a certified housing facility for agricultural workers shall, at his election, be entitled to a deduction with respect to the amortization of the adjusted basis (determined under subsection (f)(1)) of such facility based on a period of 60 months. The 60-month period shall begin as to any such facility, at the election of the taxpayer, with the month following the month in which the facility was completed, or with the succeeding taxable year.

"'(2) SUBSEQUENT OWNERS.—Any person who acquires a housing facility for agricultural workers—

"'(A) with respect to which a certificate has been issued by the Secretary of Agriculture under subsection (e) (whether such certificate is issued before or after the date such person acquires such facility), and

"'(B) with respect to which an amortization deduction under this section has been allowed for less than a 60-month period,

shall, at his election, be entitled to a deduction with respect to the adjusted basis (de-

termined under subsection (f)(2) of such facility based on a 60-month period reduced by the number of months with respect to which an amortization deduction under this section has been allowed to any taxpayer prior to the acquisition of such facility by such person.

"'(3) Amount of deduction.—The amortization deduction provided in paragraphs (1) and (2) shall be an amount, with respect to each month of the amortization period within the taxable year, equal to the adjusted basis of the facility at the end of such month, divided by the number of months (including the month for which the deduction is computed) remaining in the period. Such adjusted basis at the end of the month shall be computed without regard to the amortization deduction for such month. The amortization deduction above provided with respect to any month shall be in lieu of the depreciation deduction with respect to such facility for such month provided by section 167.

"'(b) Election of Amortization.—The election of the taxpayer under subsection (a)(1) to take the amortization deduction and to begin the 60-month period with the month following the month in which the facility was completed shall be made only by a statement to that effect in the return for the taxable year in which the facility was completed. The election of the taxpayer under subsection (a)(1) to take the amortization deduction and to begin such period with the taxable year succeeding such year shall be made only by a statement to that effect in the return for such succeeding taxable year. The election of the taxpayer under subsection (a)(2) to take the amortization deduction shall be made only by a statement to that effect in the return for the taxable year in which the facility was acquired. Notwithstanding the preceding three sentences, the election of the taxpayer under subsection (a) (1) or (2) may be made, under such regulations as the Secretary or his delegate may prescribe, before the time prescribed in the applicable sentence.

"'(c) Discontinuance of Amortization Deduction.—

"'(1) Discontinuance by taxpayer.—A taxpayer who has elected under subsection (b) to take the amortization deduction provided in subsection (a) may, at any time after making such election, discontinue the amortization deduction with respect to the remainder of the amortization period. Such discontinuance shall begin, and may be terminated, as of the beginning of any month specified by the taxpayer in a notice in writing filed with the Secretary or his delegate before the beginning of such month.

"'(2) Discontinuance by secretary of agriculture.—The amortization deduction provided in subsection (a) shall be discontinued if the Secretary of Agriculture finds and certifies, after notice to the taxpayer and opportunity for hearings, to the Secretary or his delegate that the requirements of subsection (c)(2) have not been complied with. Such discontinuance shall begin as of the beginning of the taxable year in which such finding is made and certified and shall continue until the month following the month in which the Secretary of Agriculture certifies to the Secretary that the Secretary of Agriculture is satisfied that there is no longer any failure to satisfy such requirements.

"'(3) Where a discontinuance of such an amortization deduction shall have been terminated, as provided in paragraphs (1) or (2), the period with respect to which such deduction may subsequently be allowed shall be equal to 60 months minus the number of months with respect to which such deduction shall have previously been allowed.

"'(4) Depreciation deduction.—The depreciation deduction provided under section 167 shall be allowed with respect to any housing facility for agricultural workers beginning with the first month as to which the amortization deduction does not apply, and the taxpayer shall not be entitled to any further amortization deduction with respect to such facility.

"'(d) Definitions.—For purposes of this section—

"'(1) Agricultural worker.—The term "agricultural worker" means an individual (other than the taxpayer, his spouse and dependents, and members of his household) who is a citizen or permanent resident of the United States and whose primary employment is in agriculture, as defined in section 3(f) of the Fair Labor Standards Act of 1938, or performing agricultural labor, as defined in section 3121(g).

"'(2) Certified housing facility for agricultural workers.—The term "certified housing facility for agricultural workers" means any dwelling or dwelling unit for the housing of agricultural workers—

"'(A) the construction of which is completed after December 31, 1963; and

"'(B) with respect to which a certificate has been issued by the Secretary of Agriculture under subsection (e).

If any facility is converted, through alteration or remodeling, into a housing facility for agricultural workers, or if a housing facility for agricultural workers is altered or remodeled so as to increase the number of dwelling units in such facility, or to improve any of the dwelling units in such facility, such alteration or remodeling shall be treated as the construction of a housing facility for agricultural workers.

"'(e) Certifications by Secretary of Agriculture.—

"'(1) Applications.—Any person who after December 31, 1963, completes the construction of a housing facility for agricultural workers may apply to the Secretary of Agriculture for a certificate under this subsection, or, if the person who completes such construction has not obtained such a cer-

[P. 2285]

tificate, then his successor in interest may apply to the Secretary of Agriculture for a certificate under this subsection. Such application shall be filed at such time, shall be in such form, and shall contain such information as the Secretary of Agriculture may prescribe by regulations.

"'(2) Requirements for certified housing facility for agricultural workers.—The Secretary of Agriculture shall issue a certificate with respect to a housing facility for agricultural workers if he is satisfied that—

"'(A) such housing facility has been constructed to provide decent, safe, and sanitary housing for agricultural workers;

"'(B) any rentals charged an agricultural worker for the occupancy of any dwelling unit in such facility will not exceed rates within the means of the probable occupants of such unit, due consideration being given to the income and earning capacity of agricultural workers in the area; and

"'(C) for a period of 5 years (commencing with the date of application for such certificate), the dwelling units in such housing facility (i) will be made available primarily for occupancy by agricultural workers, (ii) will, when rented, be rented at rates consistent with the provisions of subparagraph (B), and (iii) will be maintained in accordance with such safety and sanitation standards as may be prescribed by State or local law, or, in the absence of such standards, in accordance with such minimum requirements as the Secretary of Agriculture shall prescribe.

The Secretary shall not refuse to issue a certificate with respect to a housing facility for agricultural workers to any person solely by reason of the fact that such person intends to sell such facility to an agricultural worker within the 5-year period referred to in subparagraph (C).

"'(3) PRELIMINARY CERTIFICATION.—An application under paragraph (1) may be filed with respect to any housing facility for agricultural workers prior to the completion of the construction of such housing facility. The Secretary of Agriculture may, by regulations, provide for the issuance of a conditional certificate to any such applicant if it appears from the information contained in his application that upon completion such housing facility will fulfill the requirements for a certificate prescribed in paragraph (2).

"'(4) REGULATIONS.—The Secretary of Agriculture shall prescribe such regulations as he deems necessary to carry out the provisions of this subsection.

"'(f) DETERMINATION OF ADJUSTED BASIS.—

"'(1) ORIGINAL OWNERS.—For purposes of subsection (a)(1), in determining the adjusted basis of any certified housing facility for agricultural workers—

"'(A) there shall be included only so much of the amount of the adjusted basis (for determining gain), computed without regard to this subsection, as is properly attributable to construction after December 31, 1963, which the Secretary of Agriculture certifies is attributable to the provision of housing for agricultural workers; and

"'(B) if the facility is a certified housing facility for agricultural workers within the meaning of the second sentence of subsection (d)(2), there shall be included only so much of the amount otherwise included in such adjusted basis as is properly attributable to the alteration or remodeling.

"'(2) SUBSEQUENT OWNERS.—For purposes of subsection (a)(2), the adjusted basis of any certified housing facility for agricultural workers shall be whichever of the following amounts is the smaller:

"'(A) the basis (unadjusted) of such facility for purposes of this section in the hands of the person who constructed such facility, adjusted as if such facility in the hands of the taxpayer had a substituted basis within the meaning of section 1016(b); or

"'(B) so much of the adjusted basis (for determining gain) of the facility in the hands of the taxpayer (computed without regard to this subsection) as is properly attributable to construction after December 31, 1963, which the Secretary of Agriculture has certified is attributable to the provision of housing for agricultural workers.

"'(3) SEPARATE FACILITIES; SPECIAL RULE.—If any existing certified housing facility for agricultural workers (as defined in the first sentence of subsection (d)(2) is altered or remodeled as provided in the second sentence of subsection (d)(2), the expenditures for such alteration or remodeling shall not be applied in adjustment of the basis of such existing facility but a separate basis shall be computed as if the part altered or remodeled were a new and separate housing facility for agricultural workers.

"'(g) DEPRECIATION DEDUCTION.—If the adjusted basis of a certified housing facility for agricultural workers (computed without regard to subsection (f)) exceeds the adjusted basis computed under subsection (f), the depreciation deduction provided by section 167 shall, despite the provisions of subsection (a)(3) of this section, be allowed with respect to such facility as if the adjusted basis for the purpose of such deduction were an amount equal to the amount of such excess.

"'(h) LIFE TENANT AND REMAINDERMAN.—In the case of property held by one person for life with remainder to another person, the amortization deduction provided in subsection (a) shall be computed as if the life tenant were the absolute owner of the property and shall be allowed to the life tenant.

"'(i) LIMITATION.—No deduction shall be allowed under subsection (a) with respect to a certified housing facility for agricultural workers for any month during any part of which—

"'(1) if the taxpayer is an individual (other than an estate or trust), such facility is occupied by the taxpayer or by the spouse; any dependent, or any member of the household of the taxpayer,

"'(2) if the taxpayer is an estate or trust, such facility is occupied by a beneficiary of the estate or trust, or

"'(3) if the taxpayer is a corporation, such facility is occupied by any stockholder or officer of the corporation or by any employee of the corporation who is not an agricultural worker.

"'(j) CROSS REFERENCE.—

"'For special rule with respect to gain derived from the sale or exchange of property the adjusted basis of which is determined with regard to this section, see section 1238.'

"(b) CLERICAL AMENDMENT.—The table of sections for such part VI is amended by adding at the end thereof

"'SEC. 183. Amortization of housing facilities for agricultural workers.'

"(c) CONFORMING AMENDMENT.—Section 1238 of the Internal Revenue Code of 1954 (relating to amortization in excess of depreciation) is amended by inserting after 'section 168 (relating to amortization deduction of emergency facilities)' the following:

'or section 183 (relating to amortization deduction of housing facilities for agricultural workers)'.

"(d) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 1963."

Mr. WILLIAMS of New Jersey. Mr. President, the purpose of my amendment is to encourage the construction of housing facilities for farmworkers which in many parts of the country today are in a deplorable, inadequate condition for human habitation. Since there is an important public interest in correcting conditions detrimental to the health and welfare of farmworkers and their families, it is appropriate that such construction be encouraged by a tax incentive similar to those used in other areas where an important public interest is served by private construction or investment. My amendment accomplishes this objective by permitting a farmowner to amortize over a 5-year period the cost of newly constructed farm labor housing which under present law is depreciated over the useful life of the property, which may be as long as 40 years.

The reduction in revenue resulting from approval of this amendment will amount to no more than $2.5 million in any year. It is pertinent to note that this reduction—a maximum of $2.5 million—is most modest, indeed, when compared to other revenue-reducing provisions, which the committee has recommended for encouragement of other types of business investment. I refer to two of the committee's recommended revisions of the investment tax credit.

First. The provision repealing the reduction-of-basis requirement will cause an annual revenue loss of $195 million.

Second. The provision allowing investment credit for elevators and escalators will result in a further $10 million annual revenue loss.

It is highly significant to note that these provisions, giving additional tax relief as an incentive to business investment, apply to types of investment which already receive valuable economic benefits under the special tax relief measure enacted in 1962.

In addition to new construction, the 5-year amortization would be available respecting the costs of alteration or remodeling to improve existing farm labor housing.

The special deduction, in lieu of depreciation, could be taken by a farmer or other owner with respect to housing completed after December 31, 1963, or by the purchaser of such housing. To qualify, the owner would obtain a certificate from the Secretary of Agriculture covering these three points:

First. That the housing facility has been constructed to provide decent, safe, and sanitary housing for agricultural workers.

Second. If the housing is to be rented, rather than being furnished to farmworkers rent-free, that the rentals will be reasonable in view of the occupants' probable incomes and earning capacities.

Third. That during the 5-year amortization period, the housing will be made available primarily for occupancy by domestic agricultural workers and will be maintained in accordance with applicable minimum standards on safety and sanitation.

JUSTIFICATION

The farmer who employs hired labor, and especially migratory labor, has a unique labor problem, in that he generally has to provide housing for his employees. This housing is, in effect, an extra item of labor cost; it has no economic value to the farmer beyond enabling him to attract the workers he needs. Further, the adequacy of the housing provided, the questions whether it is sanitary and safe for occupancy,

[P. 2286]

have come under increasingly close scrutiny as more and more States and local governments have established housing codes and stepped up their enforcement in rural areas.

The farmer's costs are especially burdensome respecting migrant housing, because migratory workers are needed in large numbers, but for short periods; and the housing provided for them is likely to stand vacant for large portions of the year. Current developments in mechanization further increase the burden of providing good housing, for in numerous crops and areas the need for the migrant's labor may be eliminated entirely within a few years.

Despite the fact that many farm employers have performed exemplarily in providing good housing for their workers, there is still a great deal of housing for migrants that can fairly be described as deplorably wretched and totally inadequate for human habitation. Furthermore, the fact that the migratory worker may, at some future time, become obsolete is no answer to his need for decent housing now.

The need for better farmworker housing was stressed—not for the first time—at a recent hearing before the Housing Subcommittee of the Committee on Banking and Currency. In testimony for the Department of Labor, Under Secretary John F. Henning gave a vivid de-

scription of the living conditions of many migrant farmworkers in this country. I quote from Secretary Henning's testimony:

A field report by the State Services Division of the Bureau of Labor Standards on the living conditions of approximately 235 migrants in two camps in a Midwestern State is shocking. The first camp visited consisted of a group of six city buses and a trailer located in the middle of a field in the hot sun with no shade. According to the report, no water of any kind was available in the camp itself. Water was hauled in a large garbage-type can from a long distance; garbage and waste were collected in uncovered cans within 15 feet of the bus, which had no screens of any kind.

The second camp included 50 old buses parked in a grove of trees, where there were at least five pumps for water and a pit on the edge of the camp for disposing of refuse. Some of the buses had screens; more of them had burlap sacks on the outside of the windows. However, the three open doorways in each bus were not protected by screens of any kind and the windows for ventilation in the outside toilet were also unscreened.

A recent report from a regional consultant to the Bureau of Labor Standards on labor camps in a western State describes sanitary conditions in a particular camp as atrocious, with no bathing facilities in the camp and no running water in the cabins. Wood stoves were used for cooking purposes, making the cabins extremely hot in the summer.

Typical of a widespread problem are conditions disclosed in an investigation conducted by the Bureau of Employment Security in a southwestern State where the camp was found to have no hot water for bathing, improper drainage, and fire hazards. In other camps the investigator found stagnant water around outside water spigots, bath water seeping into a nearby well, screens in need of repair, and doors, floors, and seats from outside toilets missing.

Since this particular investigation was conducted under an international agreement imposing conditions on the use of foreign farmworkers, the workers could be removed from these unsanitary surroundings. The Federal Government can offer no such protections to domestic farmworkers.

We have long been cognizant of the housing needs of the farmer himself. We have only recently, however, begun to move on the housing needs of the farmer's employees. The President's housing message of this year addresses itself directly and constructively to the worker's housing problem, by proposing loan-grant aids for individual worker housing and low rent projects for workers who rent. These housing aids will be most valuable indeed in dealing with this acute part of the Nation's low income family housing problem. The gravity of this problem is so serious, nonetheless, that the Congress should seek every possible means for quick, remedial action.

The tax incentive which I have proposed to encourage construction of farm labor housing will work in logical harmony with our direct housing aids, to remove this blight from the American scene and to bring about improvements of which our Nation can be proud.

I may say to the distinguished Senator from Louisiana [Mr. LONG], that I have discussed this matter with the distinguished chairman of the Finance Committee, the Senator from Virginia [Mr. BYRD]. It could not be considered during the hearings, but it is worthy of committee study. It is my understanding from the chairman of the committee that the measure will be considered.

Mr. BYRD of Virginia. Mr. President, as chairman of the committee, I assure the Senator that, at the appropriate opportunity this measure will be given consideration.

Mr. WILLIAMS of New Jersey. I am deeply grateful. If the proposal is adopted, it will make a significant contribution to farmers and those who are housed on their land.

Mr. President, I withdraw my amendment.

The PRESIDING OFFICER. The amendment is withdrawn.

Mr. DODD. Mr. President, with the indulgence of my colleagues, I should like to ask the Senator from Louisiana a question or two about an amendment which I have at the desk. I refer to my amendment No. 416.

Six of my colleagues, Senators RIBICOFF, SALTONSTALL, PASTORE, PELL, JAVITS, and KEATING, have joined with me in proposing this amendment to the tax bill to repeal the 10-percent Federal excise tax on silver-plated hollow ware when it is to be used by the purchaser in his business.

It is intended to correct an inequity which has been a part of our tax laws for over 20 years.

The exemption would place silver-plated hollowware on the same footing as its competitive products made of stainless steel, bimetals, china, and glass, none of which are subject to this 10-percent excise tax.

Certainly, no item which is essential to the proper serving of food in hotels, hospitals, restaurants, and schools should be taxed as a luxury item. And it is especially unfair to tax only one of a number of products that have identical end uses, as is the case with silver-plated hollowware.

Actually, silver-plated hollowware which in effect is used for commercial purposes, as in a hospital or a restaurant, should not be taxed as a retail sale in the first place.

But due to an oversight when these excise taxes were put into effect during

69-108 O—66—pt. 3——65

the early part of World War II, this particular category of sales was not exempted.

I am sure it was not intended, because silver-plated flatware, for example, has not been subject to any excise tax whether sold for institutional use or directly to consumers.

Because of this provision in our tax laws, both domestic and foreign manufacturers of stainless steel, bimetal, china and glass serving items enjoy a competitive advantage due to the extra tax that must be paid on silver-plated hollow ware.

In addition, foreign producers of silver-plated hollow ware frequently do not have to pay the excise tax, because the purchasers in the United States can be billed directly from the foreign country. The collection of the 10-percent excise tax is avoided this way, whereas domestic manufacturers and jobbers are required to collect the tax on their sales.

This is a distinctly unfair situation, and one that has existed for far too long. For a very modest revenue loss, estimated to be about $200,000 a year, the Senate could correct this inequity.

I regret my amendment will not be adopted, not only because the loss of income to the Treasury would be small but because this particular tax should never have been put into effect in the first place.

Earlier this week, in a very close vote, we lost in our effort to repeal retail excise taxes. Most of the items subject to this tax are not luxury items at all, and the burden of paying them falls disproportionately on the lower and middle income families.

These taxes are used now strictly as a source of revenue. Admittedly, they are a good one, bringing into the Treasury approximately $450 million a year, and I can well understand the reluctance of the Treasury Department to lose such a large and steady income.

However, I believe this is the most just excise tax amendment that has been offered to the bill. I say that with due consideration, because I feel the legislative history demonstrates it was an accident that this item was included during World War II. I will put it another way—it was an accident that this particular category of sales was not exempted.

It involves only about $200,000 a year in Federal tax revenue. All of its competitors, such as stainless steel and china hollowware, were exempted. By accident, silver-plated hollowware was included.

I have talked with the distinguished Senator from Louisiana, the Senator in charge of the bill. I want to be sure that at the appropriate time, and before too long, he will give this matter his

[*P. 2287*]

earnest consideration. It is a matter of simple justice that this mistake be corrected, and I hope the Senator will agree.

Mr. LONG of Louisiana. Mr. President, the junior Senator from Louisiana has discussed this matter at considerable length, during the past 2 days, on an informal basis, with the Senator from Connecticut, as well as the Senator from Massachusetts, who previously mentioned this question, and the Senators from Rhode Island and New York.

The Senator from Louisiana has been persuaded that there is much equity in favor of what they would like to do. He has pleaded with them not to offer the amendment on the floor because of the long legislative history made during the last 10 days to the effect that we must insist on keeping amendments on the excise tax out of the bill, because we have not had an opportunity to study that field, and we do not know where we would go if we got into it.

This is one of the proposals that might be considered in the event separate legislation were recommended at the time we moved into the excise tax field. Perhaps this would be a meritorious measure to be considered in connection with another bill.

I say to the Senator that at no later than the time when the committee reaches the consideration of excise taxes, will it consider the matter.

I appreciate the great interest that the Senators from Connecticut, Massachusetts, Rhode Island, and New York have in this matter. We shall seek to give every consideration to this amendment when we are in a position to get around to this question, either separately or in connection with excise taxes in general.

Mr. DODD. That is characteristic of the Senator from Louisiana, and I am grateful to him. I feel this is an equitable matter. I am glad to leave it in his good hands.

Mr. RIBICOFF. Will the Senator yield?

Mr. DODD. I am pleased to yield to my colleague from Connecticut.

Mr. RIBICOFF. I am a cosponsor of this amendment and I support the argument that my senior colleague has made. Imposition of this tax on silver-plated hollowware is a serious inequity. The tax certainly should be removed. The senior Senator from Connecticut has ably presented the case on behalf of this amendment and I join with him in urging its approval.

Mr. PELL. Mr. President, will the Senator yield?

Mr. DODD. I yield.

Mr. PELL. Mr. President, I compliment the Senator from Louisiana for his interest and his good offices in this measure, and to associate myself with the remarks made by the Senator from Connecticut.

Mr. KEATING. If the Senator will yield further, I join in applauding the Senator from Louisiana for his assurances, as well as in the observations of the Senator from Connecticut on the pressing need for abolition of the tax on silver-plated hollowware.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. DODD. I yield.

Mr. SALTONSTALL. I wish to add my commendation to the Senator from Connecticut, who introduced this measure.

Mr. DODD. I am grateful to my very able colleague. This means much to us in New England.

Mr. LONG of Louisiana. Mr. President, not only today, but in the past 3 or 4 days, the Senators from the States I have mentioned have made me aware of how important this matter is to the economy of their States.

Mr. MILLER. Mr. President, I call up my amendment No. 421.

The PRESIDING OFFICER. The amendment offered by the Senator from Iowa will be stated.

The LEGISLATIVE CLERK. On page 344, line 8, it is proposed to change "more than" to "at least", and on line 10 strike the semicolon and insert the following: "computed without regard to operating losses since such ownership was acquired.

Mr. MILLER. Mr. President, in the bill there is a provision imposing an extra 6-percent tax on members of a controlled group of corporations. An exception exists in the case of so-called franchised corporations, and it is provided that where more than 20 percent of the stock is owned by the stockholders of an individual corporation, and 79 percent or less of the stock is owned by the parent corporation, then the 6-percent extra tax will not apply. Unfortunately, the line was drawn at "more than 20 percent" being owned by the stockholders of an individual corporation.

One of the major corporations has a franchise arrangement with many of its dealers throughout the country under which they own exactly 20 percent. They do not own "more than" 20 percent, they own just 20 percent. Some of these franchised dealers are in my State of Iowa and I am sure they are also in the States of many Senators present.

My amendment would provide that if they own "at least" 20 percent, then the individual corporation will escape this extra 6-percent tax; in other words, by changing the words "more than 20 percent," to "at least 20 percent," this inequity will be removed.

There is another point and that is that after some of these dealers acquired 20 percent of the value of the stock in their corporations, in good faith, they suffered operating losses. As a result, they do not own 20 percent of the value of the stock today.

My amendment would provide that the 20 percent of the value of the stock shall be computed without taking into account operating losses since the ownership was acquired.

I recognize the difficulty of drawing the line in the bill, but I suggest that consideration should be given to whether the company might be able to work out, within the framework of the bill, the stockownership needed to meet requirements of the bill; and if it cannot do so, I should like to suggest that the Finance Committee consider an amendment later on to take care of this inequity, because it will cause a difference in treatment between the franchised dealers of various competing corporations.

Mr. LONG of Louisiana. The making of tax laws and modifications to improve tax laws is the constant task of Congress, as Senators who have worked on the tax bill well know.

The amendments of the Senator from Iowa which he has already offered on the floor of the Senate today are one more indication of that fact.

This is a subject which must necessarily be studied. There are a number of problems in this field, and I should like to ask unanimous consent to have printed in the RECORD a memorandum pointing out the sort of problems that exist in connection with the amendment of the Senator from Iowa.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

MULTIPLE CORPORATIONS—PROPOSED AMENDMENTS BY FORD TO FRANCHISED CORPORATION RULES

The Ford Motor Co. has proposed two amendments, viz:

1. On page 344, line 8, the phrase "more than 20 percent" would be changed to read "20 percent or more", and

2. On page 344, line 10, in determining the value of the stock it is proposed to disregard the effect "operations" might have.

It is argued that the first amendment is merely "technical." This is not true, for a principle is involved. Under the basic rules of the multiple-corporation legislation, if a corporation owns 80 percent or more of the

stock of another corporation, such subsidiary is considered to be part of a controlled group. On the other hand, if the corporation only owns 79 percent of the stock, such corporation would be treated as separated and distinct corporation. Certain "shrinkage" rules were developed to prevent abuses whereby corporations would give, for example, 21 percent of the stock to an employee in a transitory arrangement, thus breaking the affiliation. However, an exception to the "shrinkage" rules was made to take care of the "franchised" corporation where it appeared that the ownership of the employee was not transitory but was pursuant to a bona fide plan to have such employee eventually own the entire stock interest in the corporation.

The franchised corporation rule is, therefore, merely an attempt to disregard what was an inappropriate tax avoidance rule. On the other hand, the proposal goes one step further and attempts to change the fundamental line that has been drawn to differentiate controlled and noncontrolled corporations. In effect, the line is changed from 80-percent ownership to 81-percent ownership.

The argument made by Ford is that they are going to be discriminated against because the other dealerships involved (Chrysler and GM will not be treated as members of a controlled group. This is because their dealerships start at a 25-percent ownership level. The answer to this, of course, is that anyone owning 80 percent of a subsidiary instead of 79 percent is being discriminated against. This unfortunately is the natural consequence of line drawing, and the obvious answer is that Ford ought to sell an additional 1 percent to its dealers.

The second proposal is still more troublesome. It is not clear what it really means. The problem is, how else does one compute the value of stock other than looking at the prior earnings history? It might be hoped that the Service could avoid market value determinations by looking at par or stated values or some other objective standard except in unusual cases. This amendment would seem to indicate that Congress did not intend us to do that, but wanted to measure the fair market value of the stock except in this one instance the maket value was to be

[*P. 2288*]

determined without regard to the income record of the corporation.

Mr. LONG of Louisiana. Mr. President, in due course, when we have occasion to get back into the question of multiple corporations, we will take a look at the amendment and see if we cannot accord some relief.

Mr. MILLER. As I understand the memorandum to which the Senator from Louisiana has just referred, and which he has placed in the RECORD, the position of the Treasury is that the parent corporation can work the problem out with its dealers. Maybe it can and maybe it cannot; only time will tell. If it cannot be done in the near future, I would expect to offer an amendment to another bill which would cure the inequity.

Mr. LONG of Louisiana. The Senator from Iowa knows that the legislative branch is the final authority on the law; and we do not always have to agree with the executive branch.

Mr. MILLER. I thank the Senator from Louisiana.

Mr. President, I withdraw my amendment.

The PRESIDING OFFICER. The amendment of the Senator from Iowa [Mr. MILLER] is withdrawn.

Mr. RIBICOFF. Mr. President, I call up my amendment No. 413 and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

Mr. RIBICOFF. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

SEC. . FACILITIES TO CONTROL WATER OR AIR POLLUTION.

(a) IN GENERAL.—Section 46(c) (relating to definition of qualified investment for purposes of investment credit in certain depreciable property) is amended by adding after paragraph (4) thereof the following new paragraph:

"(5) Facilities to control water and air pollution.—

"(A) In the case of section 38 property which consists of facilities or equipment to control water or air pollution, the amount of the qualified investment shall be twice the amount determined under paragraph (1).

"(B) For purposes of subparagraph (A), the term 'facilities or equipment to control water pollution' means a facility or equipment used to control water pollution by removing, altering, or disposing of wastes from any type of manufacturing or mining process, including the necessary intercepting sewers, outfall sewers, pumping power, and other equipment, and their appurtenances.

"(C) For purposes of subparagraph (A), the term 'facilities or equipment to control air pollution' means a facility or equipment used to control atmospheric pollution or contamination by removing, altering, or disposing of atmospheric pollutants and contaminants from any type of manufacturing or mining process."

(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply to taxable years beginning after December 31, 1963.

Mr. RIBICOFF. Mr. President, I ask unanimous consent that the Senator from Maine [Mr. MUSKIE], the Senator from New Hampshire [Mr. McINTYRE], the Senator from California [Mr. ENGLE] be included as cosponsors of this amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. RIBICOFF. Mr. President, this amendment is designed to provide an incentive for industry to purchase and install the equipment needed to combat air and water pollution. The amend-

ment doubles the investment credit with respect to the costs of such equipment. Under existing law, most companies purchasing pollution control equipment would be entitled to an investment credit of 7 percent. This amendment would provide a credit for such purchases of 14 percent. The amendment accomplishes this result by doubling the base on which the credit is computed.

On the basis of Treasury estimates of expenditures for pollution control equipment, the revenue loss of the amendment in the first full year would be $28 million.

We will never have a successful attack on air and water pollution until we recognize the vital role that industry must play in solving this problem. We cannot simply point a finger at industry and say "You must do something to end pollution." We have to recognize realistically that the money industry spends for this equipment produces no profit. These expenditures are made in the public interest, and there is some public responsibility to provide an incentive to purchase this needed equipment.

Congress has recognized the seriousness of the problems of air and water pollution by appropriating millions of dollars for Federal assistance in this area. Under the very able leadership of the distinguished Senator from Maine [Mr. MUSKIE], the attack on air and water pollution has been accelerated and is now moving ahead. We are now spending $130 million a year to end water pollution, and just last year we authorized $95 million for the next 3 years to speed the fight against air pollution. How shortsighted it would be for Congress to provide these hundreds of millions of dollars and not at the same time give some incentive to industry to spend the vast sums needed to purchase and install the necessary industrial antipollution equipment.

I know from my experience as Governor that we can design all the Federal and State programs we wish, but unless we have the active cooperation of the industries in each community that are doing the polluting, we are not going to have complete success.

This is not the type of amendment that seeks to help some industry or some companies increase the profits they are already making by creating some new loophole. This amendment is aimed at a serious public health and resource problem which must be solved in part by the expenditures of large sums of money on which no profit is made.

The Treasury Department has in the past opposed this type of amendment. Yet I must point out that the Treasury last year recommended to Congress that this tax bill include a provision to allow industry to deduct in the year of purchase all the costs of equipment for research and development. That amendment would have cost $50 million, twice as much as this one, and the tax break would have been given on profitmaking expenditures. I fail to see any logic whatsoever in the Treasury's support of that provision and its opposition to an amendment of this type. Furthermore, as I have said before, Congress has its own responsibilities to decide what provisions it wishes to support. We need not accept as binding the Treasury's disapproval in every instance. This is a needed amendment. It is far more meritorious than some urged upon us by the Treasury. It is far more meritorius than many provisions now in the bill.

This type of amendment has been before Congress since 1947. The need for the amendment has increased each year. Increasing even faster has been the pollution of our water and our air. Now is the time to combine the public attack we have successfully launched with the vast private effort that must be made.

Mr. LONG of Louisiana. Mr. President, this matter was discussed on a different basis in the committee. At that time the proposal would have had a much greater revenue impact. The committee could not agree to it. We have had an opportunity to examine the amendment of the Senator from Connecticut, as modified, with a much lower revenue estimate involved, and we will be glad to take it to conference and see what the House thinks about the amendment. Perhaps the House might not be willing to agree to it. The Senator from Connecticut knows that this is a new approach to the problem, and we are in no position to guarantee what the attitude of the House will be.

Mr. RIBICOFF. I appreciate the courtesy of the Senator in charge of the bill, the Senator from Louisiana [Mr. LONG].

Mr. HART. Mr. President, as the original sponsor of the proposal I wish to thank the Senator from Louisiana for accepting the amendment.

Mr. RANDOLPH. Mr. President, the 1st session of the 88th Congress was highly productive in the fields of air and water pollution control and the conservation of these vital resources.

The Congress enacted the Clean Air Act, of which the capable junior Senator from Connecticut [Mr. RIBICOFF] was the primary sponsor, and the Senate, under the vigorous leadership of the junior Senator from Maine [Mr. MUSKIE], passed S. 649, the Federal Water Pollu-

tion Control Amendments of 1963, which are now pending in the other body.

It was my privilege to be a cosponsor of both of these important measures, and as ranking member of the Special Subcommittee on Air and Water Pollution of the Senate Public Works Committee, I was actively involved in the hearings, the executive sessions, and the drafting of air and water pollution control legislation during the last session. Also, as a Senator from a State which has a concentration of industry in certain areas with unique topographic characteristics, I am acutely aware of the need for continued efforts in the abatement of air and water pollution.

However, I am also aware of the large capital investments being made by the industries in West Virginia, and in other

[*P. 2289*]

States, in the voluntary effort to control waste effluents and air pollutants. It is for this reason that I associated myself with the junior Senator from Connecticut [Mr. RIBICOFF] in the cosponsorship of S. 736, and I commend him for his leadership in this attempt to grant corporate income tax deductions for expenditures for treatment facilities to control water and air pollution.

The pending amendment is consistent with the intent of the authors of the first Federal Water Pollution Control Act, the late Senators Alben Barkley and Robert Taft. It is consistent with the policy recommendations of the National Conference on Water Pollution held in 1960, and it would implement suggestions received by the Special Subcommittee on Air and Water Pollution during our hearings. Mr. President, it is not unlikely that the adoption of the pending amendment will accelerate the national program for air and water pollution control and will in many instances forestall the need for Federal abatement proceedings.

In view of the tremendous social and economic costs of air and water pollution, which responsible estimates place at $10 billion annually for air pollution alone, the pending amendment would appear to offer a financially prudent approach. Certainly, it is as justified as the granting of tax concessions for plant modernization or for research and development expenditures.

In October of last year, Mr. President, I toured the Kanawha Valley in the area near Charleston, W. Va., where the great concentration of chemical industries is located. This region, comprising a stretch of about 20 miles of the Kanawha River is often referred to as the "Little Ruhr" of America. I was greatly impressed by the active program of the chemical companies in that area in their construction of water pollution control facilities, with investments in excess of $20 million in recent years and operating costs of approximately $2 million a year. Since it is directly relevant to the pending amendment, I ask unanimous consent that an article in the Charleston Gazette setting forth the findings of this tour be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SIGNIFICANT PROGRESS ON KANAWHA: RANDOLPH HAILS RIVER CLEANUP

(By Thomas F. Stafford)

U.S. Senator JENNINGS RANDOLPH said Thursday after examining pollution abatement facilities costing an estimated $36 million that "significant progress" has been made in the effort to clean up Kanawha River.

RANDOLPH visited water treatment plants at several locations in the valley and afterward said:

"We cannot conclude that what's been done is enough or what's under construction is adequate. But I'm encouraged by the attitude and assurance of groups in the valley to clean up the Kanawha River."

RANDOLPH is ranking member of a special Senate subcommittee that has been studying air and water pollution problems nationwide for several months.

On Wednesday the Senate passed a bill designed to give new impetus to the campaign to rid the rivers and lakes of America of pollution. The legislation grew out of hearings by the special subcommittee.

After his tour of the Kanawha Valley Randolph observed that the public isn't aware of the tremendous pollution abatement effort that has been carried out during the past 10 years.

"After what I have seen today," he continued, "I have no hesitancy in saying that West Virginia should be proud of what has been accomplished in water pollution abatement here in the Kanawha Valley by the cooperative effort of the State governmental authorities and the principal chemical plants of the area."

He said he wanted nobody to try to tell him "nothing has been done, or is being done, about this problem."

The chemical companies have recognized the problem, have faced up to it and are achieving their goals, he said, adding:

"Today, I have seen upward of $20 million in chemical plant installations for water pollution abatement requiring approximately $2 million in annual operating costs. This is not all. There are plans for expanding the present effort."

Add to this, the Senator went on, the "tremendous effort" by municipal governments and it is evident that substantial progress has been made.

Here are the plans and municipalities that have been active in the field (with value of the facilities added) he said:

Union Carbide, $6.5 million; Goodrich-Gulf, $1.5 million; Monsanto, $1.5 million;

FMC Corp., $1.5 million; Du Pont, $6 million; American Viscose, $600,000; South Charleston, $2 million; Charleston, $12 million; and others, $4 million.

"The public is not aware," RANDOLPH said, "of the investment and the concern of industry, coupled with the responsible attitude in Government, which has brought all of this into being."

In an interview after he completed his tour, he said:

"People are inclined very often to make generalized charges that efforts to reduce water pollution and waste abatement have been neglected. In fact, certain persons I will not identify in this statement have said in essence. 'Nothing is being done. Nothing has been done. The Kanawha River is a dirty stream.' This is untrue."

Progress has been made and more is coming, he went on. But among the problems still remaining are those connected increasingly with the aspect of air pollution.

With the legislation passed Wednesday, he said, the dominance of the Federal Government in pollution abatement has been lessened.

At present the Federal Government can move into an area after a conference with local groups and start enforcement proceedings without regard for the contributions of fact, interest and expenditures being made by industry and local governing bodies.

The new legislation, he said, is more consistent with the total needs of the Nation and the communities in the pollution abatement field.

In a the face of a national population of 322 million by the year 2000, RANDOLPH said, the water pollution control problem cannot be solved within the framework of present laws.

Mr. RANDOLPH. Equally strenuous efforts, Mr. President, are being made by responsible industries in the abatement of air pollution in West Virginia. In a recent issue of the Charleston Gazette, it is reported that the Weirton Steel Co., a subsidiary of the National Steel Corp., in Weirton, W. Va., has embarked on a multimillion-dollar program of air pollution control. The total cost of the program has not been released, but it is estimated that it will exceed $1 million per furnace. I ask unanimous consent to have this article from the Charleston Gazette printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POLLUTION PLAN PUSHED IN WEIRTON

WEIRTON.—A multimillion-dollar program of air pollution control by Weirton Steel Co. is proceeding here with the cooperation of the West Virginia Air Pollution Control Commission.

Progress of the program was viewed last week by Executive Director Carl G. Beard of the air pollution control commission and one of the commission members, Weirton businessman Sam Kusic.

After the inspection trip, Beard said the steel company "is setting an example for all industry in the State by tackling its air pollution problem head on and sparing no expense to push it to completion."

The program is scheduled to be completed by 1966. "The target dates as outlined to me are satisfactory," Beard commented.

In the company's open hearth department, work is underway to install electrostatic precipitators designed to remove dust effluents from air discharged from the steelmaking furnaces.

Fred E. Tucker, coordinator of industrial health engineering for National Steel Corp., has been conferring with the State commission since inception of the present program at Weirton Steel in 1962.

Beard reviewed final engineering drawings and specifications of the control system during his visit last week.

Construction of a new stack also is underway at furnace No. 13 in the open hearth department. This project includes installation of new waste heat boilers and electrostatic collectors.

Due to the complexity and cost of Weirton's steelmaking air control efforts, a step-by-step program of construction was developed with approval of the air pollution control commission.

Weirton didn't release a total cost estimate, but said last year that it was expected to come to more than $1 million per furnace.

Mr. RANDOLPH. Mr. President, all the expenditures referred to in these articles are nonproductive in the economic sense of the term. The companies involved receive no return on such capital investments in the public interest. These must be considered, in a sense, part of the social cost of production. But it is a cost created in part by the nature of our modern urban and highly technological civilization which is placing ever heavier demands on the limited resources of air and water. Thus, it seems entirely equitable that the industries affected by our Federal air and water pollution control programs should not bear the full burden of pollution abatement. Our society as a whole benefits from these programs. To that extent, therefore, the pending amendment is a fair and just one in that it would place a portion of the burden on our entire society for industrial air and water pollution control.

Mr. President, in final reference to the progress that is being made in the control of air and water pollution in the United States, I ask unanimous consent to have printed in the RECORD a comprehensive but concise article written by the junior Senator from Connecticut [Mr. RIBICOFF] which was published in

[P. 2290]

the New York Herald Tribune on February 2, 1964.

There being no objection, the article

was ordered to be printed in the RECORD, as follows:

RIBICOFF HAILS PROGRESS TO A CLEANER UNITED STATES

(By Senator ABRAHAM RIBICOFF)

Critics of Congress, busy bemoaning delays on headline-making bills, have failed to notice that the 1963 session of the 88th Congress was the most successful in history in taking action to clean up our environment.

We acted to clean up the air you breathe—the water you drink and use—the food you eat. This is good news for you and your health. Here's the record:

Air: Congress passed the most comprehensive air pollution control law in our history—the Roberts-Ribicoff Clean Air Act—providing $95 million for the next 3 years to set up a national program combating dirty air.

Water: The Senate passed a major water pollution control bill introduced by Senator ED MUSKIE, Democrat, of Maine, to speed the attack on dirty water.

Pesticides: A Government Operations Subcommittee I am privileged to head began a year-long review of the entire field of pesticides—their use and their effects, beneficial and harmful. The Senate passed my bill to bar the sale of unsafe pesticides. Labeling of pesticides has been improved by Government order for greater consumer protection. We now have money to check the safety of mass spray programs and see which programs are worth continuing.

Measures like these—and those that will follow this year—are designed to deal with a great growing national problem.

Over the past decades, we have, strangely enough, become the victims of our own prosperity and growth. As factories have multiplied, as industrial plants have studded the land, as technology has perfected ways of protecting us from pests, the environment in which we live has become polluted.

Into our rivers, lakes, and harbors, into our swimming and even drinking waters, spew the wastes of modern industry and modern living. Into the air belches smoke laden with poisonous chemicals stunting or destroying crops, costing us billions of dollars a year and endangering our health and even lives. And manmade lethal poisons, sprayed indiscriminately from cans or planes, give us bug-free homes and more abundant food crops, but may be doing real harm to our bodies and to many of nature's processes.

Pollution. The word has become a hallmark of our age. Sometimes sewer-filled streams or rivers clogged with industrial wastes are simply disgusting sights. But they can also hold serious danger.

Last October, the New Hampshire Fish and Game Department's weekly newsletter said six people had come down with dysentery from eating raw oysters collected from the polluted waters of Great Bay, in the southeastern corner of the State next to Maine. Farther south, each drop of water crossing the Massachusetts-Connecticut State line has a bacteria count of 26—315 times over accepted water sport safety standards.

Still farther south, sewers converging beneath the surface spill out 50 million gallons of industrial and human wastes each day into a 30-square mile body of water called Raritan Bay. The people of New York and New Jersey use Raritan Bay for bathing, boating, and fishing and other recreational purposes as well as for the maintenance of a shellfish industry. In all, the sewage from 1.2 million people is pumped into this bay every 24 hours, along with large amounts of inorganic industrial wastes. A few years ago, an outbreak of infectious hepatitis was traced to clams taken from the bay. Bacteria standards had been set by the States around the bay—but they had not been enforced, and the Federal Government moved in under the Water Pollution Act of 1956.

Most water pollution problems across the country are the result of too little attention in the past. The States, by and large, lag behind in enforcing the clean water powers they already have. Cities and industries have resisted constructing needed waste-treatment works. They see such construction as good only for the other fellow, downstream—as needless or unbearable financial burden for themselves.

The public has an illusion: "Water purifies itself every 7 miles." It has been oversold on the cheapness and plentifulness of water and undersold on the value and necessity for pollution control.

So polluted waters often pose a threat to our health—to recreation and outdoor activities—and a deterrent to economic growth. Our efforts to clean up our water supplies will have a new lease on life under the new water pollution control act. This act:

Establishes standards of water quality for interstate waters:

Authorizes additional aid to comunities for the construction of adequate sewerage and treatment facilities;

Takes a long-overdue first step toward answering a worrisome question: What to do about the used detergents now bobbing up in our waters?

Air pollution is a newer concern, more recently called to public attention. But it is no less, and possibly more, damaging to human life and property.

In 5 days of dense, choking smog, during October 1948, 43 percent of the people of the heavily industrialized community of Donora, Pa., were made ill by the smoke and poisonous gases that streamed from factory smokestacks. The town's death toll: 20.

In November 1953, New York City suffered a similar "temperature inversion"—a lid of warm air overlaid cooler, heavier air at ground level. For 10 days, the stagnant mass trapped the metropolitan area's pollutants, and smog hung over the city. By the time it blew out to sea, more than 240 people were dead.

The full cost of the New York disaster was not realized until years later, when death records for the period were compared with those of years before and after the 10-day smog. The only factor to which the investigators could attribute the increased mortality rate was air pollution.

It was London, December 1962. A killer smog enveloped the city, taking more than 300 lives. At almost exactly the same time, a stagnant air mass over the northeastern United States caused a steady, alarming increase in pollution levels from Richmond to Boston. Sulfur dioxide levels in Philadel-

phia and New York averaged 3½ times normal, and were, for several days, over five times normal.

During this same period, levels of solid matter in the air rose correspondingly. In Connecticut, the 5-day average in Hartford and Middletown was over three times normal, with individual days of from four to five times normal. If we hadn't been lucky—if this mass of contaminated air hadn't been blown out over the ocean in time—the United States might have suffered the worst air-pollution calamity in history.

Scientific studies show we can't always be this lucky. They point to air pollution as the culprit to an increasing array of health hazards. They show that death rates for cardiorespiratory diseases of the heart and lungs are greater in our cities—where air pollution is greater—than in rural parts of the United States. In general, these death rates increase with city size. Within the last few years, this urban-rural difference has also shown up in the death of infants less than 1 year of age.

A recent study in a southern city shows that acute asthmatic attacks among susceptible patients were directly correlated with variations in total sulfate air pollution from time to time. And, according to the Public Health Service, 3-4-benzpyrene, a potent cancer-causing substance, is present in the air breathed by the inhabitants of 100 cities. The concentrations approximate or exceed the dosage people get from cigarette smoking.

This same dirty—"polluted"—air makes our livestock ill and so reduces meat and milk production, stunts and sometimes destroys our crops. It corrodes buildings, bridges, monuments, and structures of all kinds. By reducing visibility, it creates traffic hazards and poses a threat to air navigation.

Expert estimates of the high price we are paying for filth in the air today run into billions of dollars a year. Some of our metropolitan centers suffer damages of up to $100 million a year. The daily average of airborne pollutants in one of our largest cities is 25,000 tons. The cost to every man, woman, and child in this Nation is about $65 a year—and going up. The most important cost, of course, is to our health.

That is why the new Clean Air Act is of such great importance. Under it, cities and States will get financial help to establish their own clean air programs. Federal enforcement measures against interstate polluters are authorized for the first time. Expanded research programs on the nature, causes, effects, and control of air pollution will be started. They will seek especially to develop practical low cost ways of controlling air pollution—ways, for example, of removing sulphur from fuels or controlling automotive exhausts.

The use of chemicals in agriculture, the home, and industry poses the most recent and potentially most hazardous threat to our environment.

Pesticides have been of great value to man. They have increased food and fiber production. And they have helped control diseases carried by insects and other pests. But pesticide residues are now found in the bodies of people and animals and in the environment. They are in our water, in fish far out at sea, and in wildlife.

As the President's Science Advisory Committee put it: "Precisely because pesticide chemicals are designed to kill or metabolically upset some living target organism, they are potentially dangerous to other living organisms." This was true both in California and the State of Washington last summer. "Twenty-four Modesto Peach Pickers Ill of Pesticide Poisoning" read the San Francisco headline. But the orchard where the victims worked had been cleared as safe for picking. In the State of Washington, a dust cloud traveling downward to Toppenish carried the pesticides used in crop dusting. There people and cattle fell ill.

We know that people who have eaten or drunk or even touched large doses of pesticides—either normally at work or in accidents—become ill and sometimes dies. What we do not know is what total effect small quantities of pesticides have on our health as they build up in our bodies and environment over many years. We know very little about these long-range effects; we are not sure of the balance between the good these products have brought and the harm they may cause.

In 1963, we began the long search for the answers to these questions. First, the President's Science Advisory Committee issued its report on "Use of Pesticides," recommending increased research in the field, more public education to avoid haphazard use of pesticides, and a general statement of the benefit that we have gained from pesticides and the broad problems that now face us.

[P. 2291]

Next a Senate subcommittee I head began a thorough discussion of the problem of pesticides and the whole problem of health effects of our environment.

For many weeks the subcommittee conducted public hearings, listening to dozens of expert witnesses on all aspects of the problem. The facts are not all in and hearings will continue this year. But we did pinpoint some of the needs, and we generated a great deal of new activity.

Summing up: this was the year we finally began cleaning up our country. The job is formidable—the permissive years have taken their pollution toll. But an aroused citizenry and Congress are taking action that will make our earth a healthier place for all of us.

Mr. RANDOLPH. Mr. President, it is my conviction that the pending amendment will accelerate our efforts to control air and water pollution in the United States. For this reason, I hope the Senate will accept the amendment, and that the House of Representatives will concur in conference.

Mr. RIBICOFF. I thank the able Senator from West Virginia for his cooperation and support on this amendment. The Senator is one of the Nation's leaders in the fight against water pollution and air pollution.

Mr. MUSKIE. Mr. President, I rise in support of the amendment proposed by the junior Senator from Connecticut and I compliment him for his leadership in this matter.

During the course of hearings held by the Special Senate Subcommittee on Air and Water Pollution, I have been impressed with the need for legislation to encourage industries to attack their pollution control problems. The reluctance of companies to invest in non-income-producing equipment is understandable. However, the threat that air and water pollution presents to the health and safety of every American is most serious and requires immediate attention.

I believe that the modest revenue loss contemplated by this amendment will pay dividends many times over. Unless industry is encouraged to make a substantial investment in pollution control equipment, we will never be successful in meeting this problem.

I have seen the ravages of pollution throughout the country. I have also seen what research specialists have developed and are in the process of developing to meet this threat. If we are to meet the total national need in this area, we must have the full cooperation of our Nation's industries. I am convinced that this bill would provide the incentive needed to encourage them to mount a concerted attack on this problem.

Passage of this amendment will contribute to the health and safety of every American, help to preserve our Nation's natural beauty, and eliminate property losses of thousands of dollars annually.

Mr. SMATHERS. Mr. President, I ask unanimous consent that Senators who have some comments to make on the Ribicoff amendment may be permitted to insert their remarks at this point in the RECORD.

The PRESIDING OFFICER. Is there objection?

Mr. JAVITS. Mr. President, reserving the right to object, I should like to join as a cosponsor of the amendment because it is important to New York.

Mr. KEATING. Mr. President, I too wish to be a cosponsor of the Ribicoff amendment. It is important to the entire Nation as a device to contribute greatly to public health and safety.

Mr. PASTORE. Mr. President, reserving the right to object, I feel the same way. I should like to be a cosponsor of the Ribicoff amendment.

Mr. BARTLETT. Mr. President, reserving the right to object, I am glad I am a cosponsor of the Ribicoff amendment.

Mr. SALTONSTALL. Mr. President, reserving the right to object, this means much to us in New England. I am glad to be a cosponsor.

Mr. PELL. Mr. President, reserving the right to object, I should like to be added as a cosponsor to the Ribicoff amendment.

Mr. KEATING. Are we all on now, Mr. President?

The PRESIDING OFFICER. Is there objection to the request of the Senator from Florida? The Chair hears none, and it is so ordered.

The question is on agreeing to the amendment offered by the Senator from Connecticut and other Senators.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment of the amendments and third reading of the bill.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time.

Mr. PASTORE. Mr. President, I wish to have printed in the RECORD a letter which I received that is relevant to the amendment that was discussed by the Senator from Connecticut [Mr. DODD], and I ask unanimous consent to have it printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

GORHAM CORP.,
Providence, R.I., October 23, 1963.

Hon. JOHN O. PASTORE,
U.S. Senate,
Washington, D.C.

MY DEAR SENATOR PASTORE: As you know, the excise tax of 10 percent on sales at retail of sterling silver wares and silverplated holloware works a great hardship on us because of the competition of other products to which it does not apply. However, this appeal to you has no bearing on this tax as it applies to the goods purchased by the retail consumer.

Under section 4001 of the Internal Revenue Code, hotels, hospitals, schools, restaurants, etc., are required to pay the excise tax of 10 percent on the purchase price of food-serving items, if such items are silverplated, even though they are essential to the adequate, proper, and sanitary serving of food and are not for resale. Since the tax is not applicable to the same items made of stainless steel, bimetals, china, glass, etc., it gives the manufacturers of these other wares a substantial competitive advantage. This advantage has been, and is being, aggressively exploited to the serious detriment of manufacturers of silverplated institutional ware.

As the tax now functions, the large hotel chains operating internationally can easily avoid the tax, whereas it is difficult for smaller operations to do so. The silverware for certain large hotels now building in the United States has been purchased abroad. Because this merchandise will be billed from a foreign country, the tax does not apply. This results in domestic manufacturers losing substantial volume and a further increase in the U.S. balance of payments.

We know most U.S. hotels and institutions would prefer to buy silverware from domestic industry. There are many advantages, but it is most unjust to require them to pay a 10-percent premium for the privilege of supporting domestic industry.

It is our understanding that Senator DODD is prepared to enter an amendment to section 4001 which would grant relief to domestic industry and correct an obvious inequity. We at Gorham would appreciate it if you would cosponsor this amendment.

Mr. Milton Warnstrom, legislative aid to Senator DODD, is spearheading this matter for him and he has full and complete details on this subject, in case my brief explanation is not sufficient.

Thank you in advance for any assistance you are able to give.

Sincerely yours,

BURRILL M. GETMAN.

The PRESIDING OFFICER. The question is, Shall the bill pass?

Mr. LONG of Louisiana. Mr. President, how much time remains on the bill?

The PRESIDING OFFICER. The proponents have 14 minutes and the opponents have 13 minutes.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that an additional hour be allowed for debate on the bill with the time to be equally divided, 30 minutes to each side, to be controlled by the Senator from Kentucky [Mr. MORTON], and by the Senator from Louisiana [Mr. LONG].

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. ELLENDER. Mr. President, at a time when the American people have more money to spend than ever before, at a time when we are riding one of the highest waves of prosperity we have ever known, and at a time when every sound economic theory dictates that we should be balancing the budget and reducing our obligations, instead of drifting deeper into debt, I can see no justification for reducing taxes.

The President's own statements, in his economic report transmitted to Congress in January of this year, attest to the vigor of our economy. On page 4 of that report, in a discussion of our current business expansion as it compares with earlier upswings in the economy, the President points out the following gains:

> The $100 billion rise in output in 2¾ years knows no parallel in our peacetime economic annals.
>
> The advance of $51 billion in labor income is also unparalleled. The average real income of nonfarm workers has risen by $345 a year, again not exceeded in any previous comparable period.

This is real money in the hands of our citizens, and means that their pockets are now better lined than at any previous time.

The report goes on to show that "corporate profits have climbed to an unprecedented height, from a rate of $38.5 billion early in 1961 to about $55 billion by the end of last year." So corporate pockets are also better lined than ever before, and the silver lining is being passed on and enjoyed by millions of our citizens who own shares in American business.

The President also notes that "American exports are in a better and stronger competitive position than in any period since the war, and our export position is better than that of any major industrial country."

I might say here, parenthetically, that should the tax cut prove inflationary, as I am convinced it will, irrevocable harm will be done to our balance-of-payments position, because inflation would inevitably worsen our competitive position in world markets.

Now, I ask: Does the economy I have been describing, using the President's own appraisal, represent an economy which is lagging behind the times—an economy which needs to be "hopped up" by the injection of a multimillion-dollar tax cut? I may be in error, but to me, it does not.

Let us now turn from the President's own Economic Report to an evaluation compiled by the U.S. Department of Commerce. In the January edition of the Department's "Survey of Current Business Statistics," we read these words:

> By most measures the performance of the American economy in 1963 was outstanding. Production and sales rose by sizable amounts to new records. The output increase was accomplished with comparatively little rise in the price level and led to new peaks in employment and a record flow of income—both wages and profit.

In other words, the American public has more money to spend, and is spending it. The Commerce Department report continues with this observation:

> All major markets shared in last year's output advance. No single element of demand was dominant, although durable goods, notably automobiles, and construction, especially residential building, were particularly strong. The course of activity was upward throughout the year, in spite of the dampening effects of a sharp reduction in steel production that followed the Spring wage settlement and lasted almost two quarters.

In other words, more people are buying new cars, more people are buying and moving into new homes than during any

comparable time in our history. Wages are higher, and the economy is so strong that even a weakening of so important an industry as steel production could not seriously affect the upswing.

The Commerce Department also provides some comparative statistics between 1962 and 1963, which give a very clear picture of how the financial condition of our people has changed for the better over the past 2 years.

The national income is up from $454 to $478 billion, an increase of 5.4 percent. Personal income is up from $442 to $463 billion, an increase of 4.7 percent. Corporate profits before taxes are up 10.5 percent. Retail store sales are up almost 5 percent, and steel production has increased 11.2 percent. In the light of such a glowing report, I again ask, Is a cut in our tax revenues warranted? I do not believe we should borrow more money in order to give tax relief.

Earlier, I referred to the fact that it is long past time for us to start balancing the budget and reducing the national debt. We have all heard lately that President Johnson has made such a beginning. I believe he is making a valiant effort in that direction, and I commend him for it. But in considerng the statements and claims that have recently been made concerning the budget and its balance, we should not forget past experience, and we must not overlook these salient facts: When the President refers to a reduction in expenditures in the current budget, he is referring to the administrative budget, and not to overall Federal spending.

The President pointed out that expenditures for fiscal year 1965 were estimated to be reduced by $500 million from the amount estimated for fiscal year 1964. To get the full picture of the Federal spending, it is necessary for us to look at the spending contained in all of the national income accounts.

In the President's 1965 budget, the total expenditures in the national income accounts will amount to $121.5 billion. For 1964, it is estimated that these expenditures will be $119.1 billion. For those who may be interested in finding out how the $121.5 billion will be spent in 1965, and how $119.1 billion will be spent in 1964. I direct them to special analysis A of the President's budget, particularly page 329 thereof. In this connection, I would like to insert into the RECORD at this point, table A-1, entitled "Relation of Federal Receipts and Expenditures in the Administrative Budget, Consolidated Cash Statement, and National Income Accounts, 1963-65."

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE A-1.—*Relation of Federal receipts and expenditures in the administrative budget, consolidated cash statement, and national income accounts, 1963-65*

[In billions of dollars]

	1963 actual	1964 estimate	1965 estimate
RECEIPTS			
Administrative budget receipts	86.4	88.4	93.0
Plus trust fund receipts	27.7	30.2	30.9
Less:			
Intragovernmental transactions	4.3	4.1	4.1
Receipts from exercise of monetary authority	(1)	.1	.1
Equals Federal receipts from the public	109.7	114.4	119.7
Adjustments for agency coverage: Less District of Columbia revenues	.3	.4	.4
Adjustments for netting and consolidation:			
Plus contributions to Federal employees' retirement funds, etc	1.9	1.9	1.9
Less interest, dividends, and other earnings			
Adjustments for timing: Plus excess of corporate tax accruals over collections, personal taxes, social insurance contributions, etc	.6	-.1	-.2
Adjustments for capital transactions: Less realization upon loans and investments, sale of Government property, etc	1.5	1.1	1.0
Equals receipts—national-income accounts	109.3	113.6	118.8
EXPENDITURES			
Administrative budget expenditures	92.6	98.4	97.9
Plus trust fund expenditures (including Government-sponsored enterprise expenditures, net)	26.5	29.3	29.4
Less:			
Intragovernmental transactions	4.3	4.1	4.1
Debt issuance in lieu of checks and other adjustments	1.1	.9	.5
Equals Federal payments to the public	113.8	122.7	122.7
Adjustments for agency coverage: Less District of Columbia expenditures	.3	.4	.4
Adjustments for netting and consolidation:			
Plus contributions to Federal employees' retirement funds, etc	1.9	1.9	1.9
Less interest received and proceeds of Government sales	.6	.6	.9
Adjustments for timing:			
Plus:			
Excess of interest accruals over interest payments	.9	.8	.6
Excess of deliveries over expenditures and other itmes	(1)	-.4	.6
Less Commodity Credit Corporation foreign currency exchanges	.3	.3	.1
Adjustments for capital transactions:			
Less:			
Loans—Federal National Mortgage Association secondary market mortgage purchases, redemption of International Monetary Fund notes, etc	.7	1.1	.2
Trust funds (including Government-sponsored enterprise expenditures, net) and deposit fund items	1.9	3.4	2.6
Purchase of land and existing assets and other items	.1	.1	.1
Equals: Expenditures—national-income accounts	112.6	119.1	121.5

[1] Less than $50,000,000.

Mr. ELLENDER. Mr. President, in point of fact, therefore, instead of a reduction of $500 million in Federal spending in fiscal year 1965, overall Federal spending will actually increase by $2.4 billion.

Consequently, Mr. President, if Congress approves this tax reduction at this time, we will be reducing estimated revenues over the next 2 years by an amount in excess of $11 billion, and at the same time, we will be pumping into our economy through increased Federal spending $2.4 billion more than was expended last year. I submit, Mr. President, that Congress is being sold a bill of goods, as usually happens each year, when the President submits his budget.

Even if we were to look at the administrative budget only, which, as I just pointed out, merely gives a segment of the total Federal receipts and expenditures, the Congress will find that

[*P. 2293*]

in this relatively simple category the estimates are often unreliable. Over the past 17 years, there have been considerable differences in the original budget estimates and the actual amounts of receipts and expenditures.

During the period covered by fiscal years 1946–62 the differences in receipts, both plus and minus, totaled $87.1 billion, while the differences in budget expenditures during this same period totaled $84.2 billion. These differences by fiscal year are as follows:

[In billions]

Fiscal year	Receipts	Expenditures
1946	−$1.4	+$19.7
1947	−10.2	−5.1
1948	−6.5	+1.7
1949	+4.2	−2.4
1950	+3.8	+1.6
1951	−10.9	−2.2
1952	−6.9	+5.1
1953	+5.4	+10.5
1954	+3.4	+10.1
1955	+2.2	+1.0
1956	−8.1	−4.1
1957	−5.6	−4.4
1958	+4.5	−.2
1959	+6.1	−6.7
1960	−1.4	−.2
1961	+5.6	−2.4
1962	+.9	−6.8
Total	87.1	84.2

Will the $97.9 billion estimated expenditures in the administrative budget for 1965 be as accurate as estimates made in the budgets of the last two decades?

Mr. President, I believe it will be just about as accurate, and the chances are that the expenses presented in the 1965 administrative budget will be understated between $3 and $4 billion. It just does not make sense to reduce revenues, increase expenditures, and increase our deficit at the same time. This would be bad enough during a depression period, but during a period of prosperity, it should never happen.

As Senator BYRD of Virginia stated recently on the floor of the Senate, the Secretary of the Treasury has admitted that he does not expect the budget to be balanced before fiscal year 1967, and in that event, as my distinguished colleague pointed out, the National Government will have accumulated six consecutive peacetime deficits for a total amount in new debt of $35 billion. Our budget will not have been balanced since 1960, and I personally do not consider that a real or a true balance.

As I have shown here today, we are in a period of great prosperity. The only other time when the Nation has indulged in deficit spending for as many as 6 consecutive years was in the depths of the 1930 decade of the depression. Mr. President, I believe every Senator should understand that this tax cut will not eliminate deficits for future years, no matter what its proponents claim.

This tax cut, because it is coupled with an increase in expenditure, is highly inflationary. If granted at this time, we can rest assured that the purchasing power of our dollars, already down to 45 cents, expressed in terms of 1939 dollars, will go further down. This tax cut, Mr. President, will diminish and deplete the forces that are available to fight poverty in this country, because it is geared to bring more poverty to the pensioners, who are barely eking out a living on the fixed incomes they receive.

As a final point, Mr. President, I do not believe that we can get the Nation out of debt by borrowing more dollars. I do not believe that we can make the mountainous national debt disappear by cutting the ground out from under it by reducing the national revenue. In short, I do not believe that a tax reduction at this time will redound to the Nation's benefit. I only hope that it will not redound to our sorrow. I shall vote against the pending tax bill.

Mr. MORTON. Mr. President, I yield myself 5 minutes. First, I ask unanimous consent that a statement on the bill by the Senator from Maryland [Mr. BEALL] be printed in the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BEALL

During the consideration of H.R. 8363, I have voted for several amendments which would have given additional relief to the

American taxpayer. These have included amendments to grant a tax credit for college costs; tax deductions for students working their way through college, reinstatement of the 4-percent dividend credit, and repeal of the various excise taxes. The adoption of these amendments, in my opinion, would have provided tax relief where it is most needed and most deserved.

We are now approaching final passage of the tax bill. This measure represents a reduction in revenue to the U.S. Treasury of some $11 billion. The deficit resulting from this loss of revenue will have to be financed with borrowed money. This brings us to the basic question facing the Senate. Will the tax bill stimulate our economy and provide more jobs, or will it set off an inflationary spiral, thus nullifying any possible benefits?

I have given to this question the most serious and deliberate consideration. I believe that this bill, if passed, can have a beneficial effect upon our economy. But, only if we set our minds to making significant reductions in Federal spending. Unless our annual deficits are reduced, this tax bill will do nothing more than trigger inflation.

I shall vote for H.R. 8363, believing that the net result will benefit the economy. In doing so, however, I recognize that I undertake an obligation to oppose all unnecessary expenditures which may be requested. During the current session of Congress, I am sure many proposals will be offered which have much merit. However, these proposals bust be considered in the light of fiscal priorities. We cannot reduce revenue on the one hand and continue to increase expenditures on the other. In voting for this bill, I pledge my continued efforts toward fiscal responsibility and reduction of Federal expenditures. I shall cooperate fully in the achievement of a balanced budget.

Mr. MORTON. Mr. President, I shall read a message from our beloved minority leader, who cannot be here today:

It has been my misfortune during this week of Senate consideration of the tax reduction bill to be confined to a hospital bed because of an indisposition important enough to put me there but not so serious to keep me there more than another day or so.

In misfortune there is frequently compensation and so it has been in my case. I have had time for reflection and contemplation on the wonders of the body politics, on the contradictions in which it exists, and on the vagaries of those who inhabit this most frail of human institutions.

My musings have impelled me to transmit to paper, and, through our esteemed colleague, Senator MORTON, of Kentucky, transmit to you, my fellow Members of the Senate, a few thoughts on the inconsistencies of the human mind when the benefits of a tax reduction are being weighed and apportioned.

Last year, when the late President Kennedy proposed the tax cut, he described it as the core of his program to reduce unemployment. Presumably the creation of jobs through a tax cut was to be achieved by (1) freeing of money for capital investment, and (2) increasing purchasing power for consumers.

This year, President Johnson cast the fight against unemployment in new terms by declaring war on poverty, and only this week sent to Congress a lengthy message on protection of consumers.

We Republicans are very literal, and frequently, literate people. When we read perfectly plain English we are invariably led into taking it at face value. If we read that capital investment should be encouraged, that consumer purchasing power should be stimulated, that consumers should be protected, or, for example, that higher education should be encouraged, who can censure us—except possibly for our innocence—for believing that any proposals we might make to hasten these ends would not receive White House approval, even active support?

So perhaps you can imagine my bedridden amazement, my pajama-ruffled consternation, yes, my pill-laden astonishment this week, to learn that three Republican-sponsored proposals to assist in achieving these laudable goals had been defeated by very narrow margins, victims of that new White House telephonic half-Nelson known as the "Texas twist."

To those of you on the Democratic side of the aisle who are still rubbing your bruised arms, I can only extend my sympathy and hope that you who must face the electorate this fall won't need it. To you on the Republican side of the aisle I happily extend my admiration and gratitude for the unanimous support you gave each of the three proposals. When Republicans stand together, without a single defector, on three crucial Senate votes, then the entire Nation must know we were right.

These three proposals were simple. They were all designed to do something for the little fellow and to limit severely any benefits which, by their adoption, might accrue to those in the higher income layers of our economy.

First, there was the amendment sponsored by Senator PROUTY, of Vermont, as amended by Senator JAVITS, of New York, to provide that students working their way through college could deduct the cost of their tuition, books, and fees from the tax on their earned income. This sizable benefit for those young people, coming from families of extremely limited means, but still determined to obtain a college education, was defeated by a 47 to 47 tie vote despite the unanimous Republican vote for it. I am told that even the boys who run elevators in the Capitol, so they may go to college in Washington in their off-hours, were rooting for its adoption. But the White House said "no."

Second, there was the Dirksen-Morton amendment to retain the present 4-percent dividend credit, but to put a ceiling of $300 on the credit so that its benefits would go mainly to persons having a dividend income of only $3,000 to $7,500 a year. This amendment provided two needed aspects to the tax reduction bill. It would have continued the alleviation for those of modest income from double taxation on dividends as

adopted by the Congress in 1954, thus encouraging the small purchasers to buy job-creating capital investments, while, at the same time, protecting those elderly retired persons who live on dividends coming from the savings of their years of work. What could possibly be wrong with those objectives? But the amendment was defeated by the narrow margin of 47 to 44, despite unanimous Republican support. The White House had said "no."

Third, there was another Dirksen-Morton amendment to remove retail excise taxes on luggage, jewelry, furs, and cosmetics and toilet preparations. These retail taxes were enacted in the war year 1941 to discourage consumer purchases of these commodities, and to impede their manufacture so that materials which go into many of the products could be diverted to the war effort. Congress gave its pledge to terminate these taxes at the end of hostilities. World War II ended 19 years ago. The Korean War ended 10 years ago. But these taxes are still on the books—still discouraging consumer purchases, particularly among low-income groups, still impeding manufacture, thus increasing unemployment. These retail taxes have been a tremendous burden to tens of thousands of small retailers and to millions of consumers, so why not get rid of them?

We all know that on January 23, 1964, the Senate Finance Committee by separate votes ranging from 13 to 2 to 10 to 5 adopted, during a forenoon session, provisions repealing these burdensome taxes. We all know that action was reversed by a 9 to 8 vote in an afternoon session the same day, thanks to that telephonic half-Nelson now discreetly referred to as the "Texas twist."

My poor bruised Democratic friends: You gave your all on the afternoon of January 23; you gave your all again on February 5 when, despite a unanimous Republican vote, the repeal of these regressive retail excise taxes was rejected 48 to 45. Again the White House had said "no."

Now I hope I can be pardoned if, from my temporary bed in a Washington hospital, I see a small cloud on the horizon, a cloud that doesn't quite shut out the sunshine or promise much rain—yet. But it is getting bigger.

Perhaps it could be a cloud that has never been very productive—the "both ways" cloud. You have bigger and better programs, but they cost less. You cut taxes, but Federal revenues go up. You stimulate job-producing investment with one hand, but discourage it with the other. You reduce deficits 1 week, but send the national debt up the next. You stop pounding your thumb with a hammer so hard; you just increase the blows on the index finger.

So much for metaphor. It proves nothing. But it is handy. And from here it is the only defense against the "Texas twist" and the "both ways" cloud.

If there is food for thought here, fine. All I can say is this: If a "both ways" sun shines on me I shall rejoin you in a week or so. If a "both ways" sun shines on my Republican colleagues who face reelection this year, they will return with others who will increase our ranks. Pending this day of voter judgment, my fondest regards to all of you. [Applause.]

Mr. President, I yield 1 minute to the Senator from Kansas.

Mr. CARLSON. Mr. President, I shall vote for the pending tax bill because I believe taxes, both personal and corporate, are too high.

I question very seriously whether the bill as it now stands will make a lasting and strong impact on unemployment. To cut taxes at a time of heavy budgetary deficits and an increasing rate of spending may temporarily produce favorable results in the economy, but it seems to me in the long run it will prove self-defeating.

I fully realize there is a difference of opinion as to whether an effective tax reduction should aim to strengthen consumer purchasing power or whether our tax laws should be so written as to provide additional incentive for investment in industrial plant expansion.

When we look at what has happened since 1956—when the rise in unemployment started and which is still plaguing us—we find that the lag was not in personal consumption—it was not in personal income and it was not in labor income, which has continued to increase. During that period corporate profits actually declined, ás did expenditures for new plant and equipment if converted into constant dollars.

I am fearful that the substantial tax reduction we are giving consumers—which I favor—will not greatly expand our industrial growth.

The second reason why I believe we may not receive beneficial results from this tax reduction is the ever-increasing rise in the consumer price index. Last year the consumer price index rose 1.7 percent. The increase was somewhat greater than in 1961 and 1962, though about equal to the advances registered in the 2 preceding years.

Since 1958 wholesale prices have maintained a level of approximately 100, but the cost of living has increased from 100 to 107½ percent. The cost of living advanced to another new high in December. Wholesale prices in industrial products during that month slanted upward 0.3 percent—the sharpest monthly gain since 1959. Practically every consumer commodity sold on the market today has risen in price.

The National Association of Purchasing Agents reports advances in aluminum, lead, steel scrap, tin, zinc, fuel oil, multiwall bags, corrugated containers, kraft paper and linseed oil, coffee, sugar, clothing, furniture, farm machinery, and many other consumer items.

Some economists have stated that a 2-percent rise in price spread throughout the economy would wipe out all the increased demand that the tax cut is designed to create. We cannot ignore the threat of inflation. If inflation worked out evenly, there would be a proportionate income tax and capital levy on rich and poor alike. It never works out evenly, but falls on those least able to protect themselves.

I do not want to appear as a prophet, but neither do I want to vote for this tax bill without stating that in my opinion, it will not greatly reduce unemployment. It will bring about increased costs to the consumer and thereby greatly reduce the benefits of the proposed cut.

If this tax cut fails to greatly reduce our unemployment, next year we will be confronted with demands for expenditures of billions of dollars for public works, which will result in further fiscal irresponsibility.

As I stated in the beginning, I shall vote for this bill because I believe both personal and corporate taxes are too high, but I have no illusions of the probable affect on our Nation's economy.

Mr. MORTON. Mr. President, I yield 3 minutes to the distinguished Senator from Wyoming.

Mr. SIMPSON. Mr. President, for well over a year, the American people have been told that a tax cut should be made immediately so that our Nation would not experience an economic depression. The depression did not come, but economic growth did. Then the Democrat administration started telling the Nation that we must have an immediate cut in taxes if we were to continue our business expansion. The objective never changed only the reasons and justification for the tax cut.

For many years, I have advocated a tax cut because Federal taxes are too high. When taxes are excessively high, as they are now, they stifle incentive and discourage economic expansion. In my opinion, if we are to meet the challenges of unemployment, deficit spending, gold outflow, and so forth, we must remove the excessive governmental regulations and controls which inhibit the free enterprise system.

However, overriding these considerations which encourage a tax cut is the basic fact which cannot be set aside or ignored—Federal taxes are levied to meet Federal expenditures.

Federal taxes are too high because Federal expenditures are too high. Reduction in both is long overdue.

Although the temptation is great for citizens to ask for a tax cut without regard for the need of a commensurate cut in Federal spending, the people in Wyoming have consistently asked that I oppose any tax cut unless there is a corresponding reduction in Federal spending. This I will do.

The question then must be asked, Will there be a commensurate reduction in spending in fiscal year 1965? The answer is an emphatic, "No."

The President has prepared a budget based upon many contingencies and a lot of happy thinking. The facts are clear. President Johnson is asking for $97.9 billion which is $5.5 billion more than Congress appropriated last year. In addition, the President has asked for new spending authority of $1.2 billion more than President Kennedy had requested for fiscal year 1964.

The President's budget request which is up $5.5 billion from last year's appropriations is based upon contingencies which include enactment of new legislation, favorable market conditions for the sale of Government-held assets, the effect of weather conditions on agriculture, reduction in the postal deficit, and so forth.

Many people blame war, the cold war, and the national defense for the steady rise in Federal expenditures. But the big increases in spending are in the domestic-civilian programs. These domestic programs are characterized by their self-perpetuating nature. Once they are inaugurated, they perpetuate themselves into huge bureaucracies which become a terrible drag on our economy.

[*P. 2295*]

We need a tax reduction but until we can curtail the excessive expenditures we cannot afford the luxury of a tax cut.

The argument is made that a stimulated economy will make up in total revenues for the lower tax rate. This is a fine theoretical argument which can be pursued by the boys in the ivory towers. But when we are dealing with the future of America we had better be more practical than theoretical. The fact of the matter is that the effect of this bill is to charge the tax reduction to the Federal debt, which already exceeds $300 billion. This is fiscal irresponsibility.

The Federal debt has been increasing at the rate of more than $5 billion a year since 1961, and the new budget—with tax reduction—calls for another $5 billion increase in the debt next year. It cannot be said that increasing population compensates for the tremendous increase in total debt over recent years. Per capita debt has been rising at about $250 a year. Per capita debt is now $6,400.

The value of the dollar—on the 1939 index—has dropped to 45 cents. It dropped 23 cents during World War II. It has dropped nearly 7 cents since the Korean war. It has dropped nearly 2 cents since 1960. It dropped more than a half a cent last year.

Continuing inflation is a reality, and there is no doubt that the danger of spiraling inflation lurks in debt and deficit financing conditions which characterize the Nation's economy today.

The risks of massive debt and inflation incident to this tax reduction bill are inescapable. I question that its enactment at this time would contribute to sound and constructive progress.

Mr. President, I would like to be able to vote for this tax cut which is long overdue, but until the Federal Government can show itself to be fiscally responsible, I cannot vote for a measure which we cannot afford and which can have catastrophic effects upon our beloved country.

Mr. MORTON. Mr. President, I yield 3 minutes to the distinguished Senator from New York.

Mr. JAVITS. Mr. President, I shall support the tax bill with no illusions. I shall do so because I think it is important as a minimum measure in connection with what needs to be done if we really want to meet the challenge of endemic unemployment and poverty. The evidence shows that the war on poverty will be a pretty slim war if all we seek to base it on is what the President has asked for in his budget specifications. Far more must be done if we are to make headway on either problem.

One of the most important elements of an effective progrom should be accelerated action in respect to retraining, far beyond what has been scheduled for fiscal year 1965. We are retraining only 15 percent of those who need retraining. It is essential that we enlist the full resources of the private enterprise system in this program, because only private enterprise can do that job and must be brought into it.

Next, there must be incentives for plant modernization and a tax incentive for exports. We must accelerate, extend, and expand Federal assistance to vocational and technical education programs.

A commission on automation must be established to make urgent recommendations in this critical area and to provide for the transition of workers and business to automation.

Legislation is needed to modernize the antitrust laws. Such legislation is pending. U.S. private enterprise must be brought effectively into foreign aid. A top committee to do this is called for by the Foreign Assistance Act of 1963, but has not yet been named.

Another incentive is a fair employment practices law to deal with discrimination in employment, which is contained in the civil rights bill that will soon be coming over from the House; and we must enact permanent Federal standards of unemployment compensation.

If we had all these incentives, there would be a reasonable chance to get on top of our balance-of-payments and other economic difficulties, including endemic unemployment. If we do not, then it seems to me the risk of a tax cut will not have paid off adequately.

Mr. ALLOTT. Mr. President, from the time that a tax cut was first proposed to Congress last year, I have taken the position that while expenditures by the Federal Government exceeded income by such a great margin, we simply could not afford to cut our revenues further by lowering tax rates. I have said that I would want to see some proof of the promises we have heard—promises that if the tax cut were adopted we would not be financing such a cut simply by increasing the public debt.

Last month Congress received from the President assurances that expenditures would be held down, and he transmitted to us a budget which—if we are to take it at face value—contemplates spending $500 million less in fiscal year 1965 than we will spend in fiscal year 1964. He tells us, too, that if the tax cut is granted, our economy will generate enough new growth to make up the difference in tax loss, over the long run. Hence, I intend to vote for the bill now pending. All of us realize that the high rates at which we are taxed have limited growth potential of our economy. We—all Americans—have carried this tremendous tax load for many years now. Accepting the President's promise to keep expenditures down, I feel the time has come to lighten that load. In doing so, I am hopeful that the predictions which we have all read and heard will come true—that releasing the economic growth potential from the drag of exorbitantly high tax rates will in fact lead to further solid growth of our economy, and eventually allow us to recoup the losses.

Perhaps we have seen some evidence that Congress, too, will do its part in keeping expenditures down. During the long session of last year we made substantial reductions in the President's budget requests, and this, I feel, was in some part due to an awareness that a tax cut was impending. I take this as evidence that if we seriously believe this tax cut to be worthwhile, we can keep expenditures down—for all of us must realize that we cannot continue forever on deficit spending.

69-108 O—66—pt. 3——66

And let me serve notice here and now that I shall do everything in my power to see to it that those promises are made good—that spending is kept down. I feel certain that there are others in the Chamber today who feel as I do—that in reliance on the President's assurances to us, we will give the people the tax cut that has been requested, but that new programs, especially, and new requests for money, will be carefully scrutinized.

I do believe that there is great growth potential in our economy which has been stunted by the tremendous tax burden we have been carrying. Therefore, relying on the President's assurances that he will be fiscally responsible in the budgets which he asks us to approve, I shall cast my vote in favor of the pending bill based on the statements of the President, my own determination to hold costs down, and what I feel will be the determination of Congress to do the same.

Mr. DOMINICK. Mr. President, I have decided to vote in favor of the tax bill for two reasons: First, the present tax rates are confiscatory in character, restrict risk capital, deter expanding job opportunities and there is a real need for substantial downward revision.

Second, Congress has made progress in reducing the proposed budget of former President Kennedy and will carefully scrutinize the proposed 1965 budget of President Johnson. If we can continue to cut back spending, real progress will be made. I am, however, skeptical of this administration's so-called economy program particularly when viewed in the light of the vast new Federal program which the President is demanding. Even a quick review will show that if these programs are passed by Congress, the inevitable enormous deficit will sharply jeopardize the remaining 42 cents of value in our dollar.

In my judgment, Mr. President, four serious mistakes have been made in this tax bill. First it gives very little assistance to the middle income group, earning from $4,000 to $15,000 per year. A tax credit to assist these people in paying for the cost of higher education was urgently needed and the administration's opposition which defeated the proposal seems indefensible.

The retail excise taxes imposed as wartime emergencies should have been eliminated in accordance with our promises. Failure to do so is a breach of faith with the consumers who pay them, the retailers who collect them and the States which should be able to use this revenue for local projects.

Third, the tax cuts should have been coupled with a restriction on spending. This would have caused a far greater pressure from the people of the country to control the spending level which is presently absorbing so much of their earnings.

[*P. 2296*]

Finally, the withholding tax rate is insufficient to provide for the average taxes to be collected from the vast majority of the taxpayers. Most taxpayers will find it difficult if not impossible, to pay the additional taxes which will be due in April 1965 over and beyond the amount which will be withheld. We in Colorado suffered through this once before on a State level. As before, this inequity will not show up until after the election this fall in the cynical hope that it will then be too late to change the election results.

I am hopeful that we can continue to pound these points home to improve the present tax structure while cutting down in Federal spending programs.

Mr. STENNIS. Mr. President, every Member of this body would like for every taxpayer to have the benefit of a true and lasting tax reduction. Every Member would like to support a bill for tax reduction.

The facts of the case, however, do not justify the willful cutting off of funds coming into the Treasury which are necessary to pay the bills and expenses of the Government which are incurred from month to month.

In times anything like normal I am convinced that the only honest way to reduce taxes is to first reduce expenditures. Until the reductions in expenditures are sufficient to justify a tax reduction, there should be no tax reduction.

Let us look at the facts.

According to the estimates for revenue for fiscal year 1964—with the proposed tax reduction in effect—we are going to take in $93 billion. During this same period we are going to spend $97.9 billion. This, of course, means that we must go out and borrow $4.9 billion—$4.9 billion which someone at some time will have to pay back, and with interest.

True, we have planned some reductions in expenditures—but at present estimates, these reductions will cause our expenses to be only $500 million less than for the last fiscal year. The Department of Defense, under Mr. McNamara's fine direction, has made some appreciable savings which have already been taken into account. In view of the enormous cost of weapons and the growing cost of each individual maintained by the military departments, I doubt there can be any appreciable further savings in the next few years ahead.

BUDGET DEFICIT FOR FISCAL YEAR 1962, $6.4 BILLION

Mr. President, the expected deficit for the current fiscal year—1964—is $11 billion. For fiscal year 1963, our deficit was $6.3 billion. This means that within only 2 years we have added $17.3 billion to our national debt. Further, this means that we have spent $17.3 billion which we did not have and which we had to go out in the markets and borrow. For the fiscal year 1962, our deficit was $6.4 billion. For fiscal year 1965, the estimated deficit is $4.9 billion. Witnesses before the committee estimate there will be a deficit in fiscal year 1966, and also a deficit for fiscal year 1967. Thus, the total deficit—estimating fiscal year 1966 and fiscal year 1967—for these 6 consecutive years will be more than $35 billion. During all of these years we of course have had the cold war. But we have not had a shooting war, and the gross national product has been progressively larger each year, and is now larger than at any time in the history of our Nation. This means that during this entire period business has been relatively good.

During these 6 years, many of us in the Congress have tried to do something about the ever-increasing Federal expenditures. We have tried to reduce appropriations. During the last calendar year, the Congress reduced the requests for appropriations and requests for authorizations by more than $6 billion. I am glad to have been a part of this effort. This is all creditable, but as yet the reductions effected have not been sufficient to justify a tax reduction.

The estimated income of $93 billion for fiscal year 1965 is the highest in all history. Still, we will nevertheless have a planned deficit of more than $4.9 billion. It is said that it is proper and wise to make the tax reduction and thereby increase the revenue. I seriously doubt that this result can be brought about at all. Certainly, it will not be brought about for any length of time—and we will fall back into even deeper deficits than heretofore.

During all votes on the amendments, I voted to protect the integrity of our fiscal affairs. Some amendments had merits that I would have liked to have supported but being against the bill, I felt compelled to vote against the amendment which would further increase the deficit.

What is actually needed is some belt-tightening. This is the very thing that we as a people are not willing to do. Furthermore, I am satisfied that this unending series of deficits will necessarily cause inflation, the injurious effect of which will far outweigh any relatively small savings in immediate reductions in taxes. In fact inflation and runaway prices are the grave and serious threat of our times.

We should be willing to slow down some and pay the price of sound financing in our national affairs. We must not continue to pass on the bills we are making to future generations to pay. Not only is this unfair and unsound, but as a nation we are thus falling into a habit that will eventually destroy us.

Our first duty is to maintain sound fiscal affairs. Upon this rest our integrity, our strength, and our security.

I shall vote against this bill as a part of maintaining the integrity of fiscal affars and the financial structure of our public debt which is already over $310 billion and still rising.

Mr. HRUSKA. Mr. President, for about a week we have been laboring on legislation in H.R. 8363 ostensibly designed to give the American taxpayer some measure of relief in the form of a tax cut. We have been told by the proponents of the bill that this is necessary to stimulate the Nation's economy and to provide additional opportunity for economic growth. The reasons stated have been many, but I have not been able to accept the reasoning offered by the proponents.

After thoughtful consideration of the problem under debate and the action taken by this body, I can only conclude that this is unwise legislation which will not achieve the objectives of providing incentive for future investment by individual taxpayers and industry to stimulate economic growth. Further, this bill is inflationary and will have an undesired effect on our economy. And most importantly, it will not solve nor appreciably relieve the unemployment problem.

Under these circumstances, I have no alternative but to vote against this bill. It is heartening in this regard to be able to report that heavy correspondence received from my constituents by vast majority bears me out in my decision to follow this course of action.

WORDS NOT DEEDS

Many of us were pleased to note the President's statement that substantial reduction of Government spending could be achieved under his administration. But the words have yet to be matched with deeds.

We are being told, Mr. President, that we must relearn our economic theories. We are being told that our Government can continue to spend more than it receives. We are being told that taxes can

be reduced and that through this action great benefits will accrue to our taxpayers and the Nation, that business investment will be stimulated causing an expansion in plant facilities and a consequent increase in job opportunities and of tax revenues.

This Senator does not care for the distinction between active and passive deficits. Such a distinction does not fool the people because they know that a deficit must be paid eventually and that, if it is not paid, our debt limit will have to be raised again. Also, as a consequence, the interest charges on the deficit will be increased. Inflation will continue to grow.

Many members of the public and many legislators believe that a tax cut might be appropriate if spending were cut back or even held down, but every indication today points precisely in the other direction. The simple fact is that we have not earned a tax reduction.

BILL LACKS REFORMS

The present bill does not provide reforms for our tax structure. This body at the insistence of the administration has defeated many incentive provisions sought by various amendments. Some of these provisions, such as the dividend credit and the excise tax cuts, would have directly and greatly benefited the consumer and the economy.

The present bill was originally conceived as a measure which would take effect in three stages over a period of several years. This was President Kennedy's plan. It has been abandoned. Now we find that the entire cut is to take effect immediately. There are grave and justifiable fears that we will regret our actions later on, for the impact of the bill will be felt too soon and in much greater measure than was earlier anticipated. The effect will be inflationary, bringing with it many other serious

[*P. 2297*]

problems at a very early date after the first year.

If this bill is enacted, a large group of taxpayers will be eliminated from any tax whatsoever. Approximately, one and a half million taxpayers will go off the tax roll. I believe that almost all our citizens should bear some tax responsibility to the Federal Government even though it is a small amount of money.

Many have said in the debate that enactment of this legislation would be a step forward in that it would constitute a simplification of the tax laws. I regret this is not the case. To anyone who has studied the bill it is clearly apparent that the legislation is extremely complicated.

STEALING FROM OUR GRANDCHILDREN

Many citizens of Nebraska have been concerned about the size of our Federal debt, now in excess of $300 billion. This is a tremendous amount of money. Over the years no substantial effort has been made to decrease this debt. Recently, Mr. Maurice H. Stans stated that:

> The total of all present debts, commitments and accrued liabilities of the Federal Government—such as would appear on the financial statement of a business—is now in excess of $1 trillion. This is about $21,000 for every family of four in the country. Is it right to add to this each year for the sake of testing will-o'-the-wisp experiments that include semantic absurdities like calling a present deficit a down payment of future surpluses? Or is former President Eisenhower right in saying that "we are stealing from our grandchildren in order to satisfy our desires of today," and that it is "downright robbery for my Government to decide on policies that are merely certain to shorten progressively the monetary yearstick so that when I received my annuity or savings I would get 'dollarettes'—worth only half or a fourth as much as today's dollars?"

I agree with Mr. Stans and former President Eisenhower that we are leaving a legacy of heavy indebtedness to our children and grandchildren which is most undesirable.

We have continued throughout recent years to pile up deficit after deficit. We have actually planned these deficits. The time to meet this problem is now. We must achieve some measure of financial stability and integrity.

Tax relief is something which everyone hopes for, but taxes will remain high until we achieve greater progress in managing the fiscal affairs of our Government. We must reduce our high expenditures and we must strive toward a balanced budget. Under such conditions a meaningful tax cut could take place. A tax cut should be earned, but this one certainly has not been.

BROKEN PROMISES ON 1964 BUDGET

The American public has high on its list of requirements for our national fiscal policy the principle that Government expenditures be held down. Also high on the list is the requirement that a tax cut must be earned by actually practicing fiscal responsibility, not merely by words.

The administration recognizes this state of the public mind. Proof of this is found in the late President Kennedy's constant assurance to the public that expenditures in the present fiscal year, ending June 30, 1964, would not exceed the level of fiscal 1963 expenditures except in the fields of defense, space, and interest on the public debt. He stressed this point in his message on the budget. He

made repeated promises that it would be achieved.

The Johnson administration now comes forward with a spending budget of $97.9 billion with the claim that this figure is $500 million lower than the spending figure for the current fiscal year. It is upon this fact that great reliance is placed by President Johnson in insisting that a tax cut is is order. In effect, he is saying, "We are doing our share by holding the Federal expenditures down. Hence, we ask the public to accept our tax cut bill."

But the plain fact, Mr. President, is that the fiscal 1965 budget is higher, not lower than the current year. It calls for higher, not lower appropriations which the budget calls "new obligational authority."

Contrary to the President's claim that this 1965 budget is below the magic mark of $100 billion, the plain, in inescapable fact is that it is above that figure. The proposed fiscal 1965 budget calls for more expenditures than this fiscal year, not less.

These statements, Mr. President, are serious and they are far reaching. They are based not only on analysis of the present budget document but are supported by the keen, perceptive appraisals made by several outstanding authorities including the Honorable CLARENCE CANNON of Missouri, chairman of the House Appropriations Committee, and the conclusions which Mr. CANNON drew after he had carefully studied the fiscal 1965 budget document.

Speaking in the House of Representatives on January 21, Mr. CANNON documented his conclusions most thoroughly. With his experience of over 40 years in the House and his standing as perhaps the Congress' leading authority on appropriations, we can accord his words complete faith and credit.

CHAIRMAN CANNON'S WARNING

Mr. President, I recommend strongly to all of my colleagues the careful reading of Mr. CANNON's speech which appears, starting at page 681, in the CONGRESSIONAL RECORD for January 21, 1964. Here are a few excerpts:

> Contrary to impressions, this budget (fiscal 1965) is higher, not lower, than the current year. It calls for higher, not lower appropriations—the budget calls it "new obligational authority."
>
> Contrary to impressions, this budget is above, not below, the magic mark of $100 billion. This is the third straight year the asking price in obligational authority in the President's budget crosses the $100-billion mark.
>
> This budget, while commendable in many respects, does not point to any lasting reversal of the upward trend of Federal spending.
>
> This budget, if adopted as presented, sows the seeds of increased spending in the future by asking for higher appropriations.
>
> It is actively misleading to regard this budget as being below the $100 billion mark. To the contrary, this is the third successive one above that peacetime record amount. New obligating authority actually enacted for fiscal 1963 was above that—$102,283 million, according to today's budget. The President, in today's recommendations, proposes that we go over that mark for fiscal 1964—to $102,554 million. He also proposes, as noted, that we go on up to $103,789 million for fiscal 1965.

It should be borne in mind, Mr. President, those words were spoken by a man now in his 85th year and continuously a Member of Congress since 1923, who has devoted his entire adult life to facts and figures in this Federal fiscal and financial field. No one challenges the degree of truth and factual knowledge of Chairman CANNON. And these conclusions on his part certainly fly flatly and forcefully into the face of the statement by other high governmental officials that the fiscal 1965 budget is $500 million lower than the present fiscal year of 1964. It simply is not.

TAX CUT NOT JUSTIFIED

Mr. President, the point is not only that it is actively misleading to regard this budget as being below the $100 billion mark. The vital point is that the attempted justification for the tax cut—namely, that spending is holding the line in the Federal 1965 budget—is totally lacking in truth and in fact. It just does not exist.

There can be no question that the 1965 budget will meet the same fate as the 1964 budget, by a heavy overspending over its estimates.

Let us recall again that the original declaration and many subsequent promises of the late President Kennedy were that spending other than defense, space, and interest would be held below fiscal 1963 levels. This was apparently true for the first 5 months of fiscal 1964; from July 1 to December 1. But it is clear that the policy of holding below 1963 levels no longer obtains. The present estimate for spending in fiscal 1964 for all purposes other than defense, space, and interest is more than $650 million higher than fiscal 1963. Bear in mind in this connection that the total of supplemental appropriation bills on which the Congress will be asked to act for fiscal 1964 comes to a little over $4.25 billion.

Bear in mind also that the growth potential for the fiscal 1965 budget is even greater than the present fiscal 1964 budget.

THIRTEEN NEW SPENDING PROGRAMS

The 1965 budget proposes at least 13 new spending programs of fiscal significance which are identifiable by proposed new appropriations in the administrative budget, and for which basic legislation must be enacted if they are to be put into operation. The total new obligational authority commitment proposed in the budget for these 13 programs is over $3.3 billion. Only about $450 million of this vast sum is to be assigned through supplemental appropriations to fiscal 1964. About $2.9 billion would be assigned to fiscal 1965. It is estimated that the total expenditures for the initiation of these 13 programs for fiscal 1965 will come to at least $1.6 billion.

It is no wonder that in his speech of January 21, Congressman CANNON stated:

And from a brief look at the list of new propositions of legislation for new activities in today's budget (fiscal 1965), is there any

[*P. 2298*]

doubt but that succeeding budgets will ask for still higher amounts?

New programs not uncommonly began modestly and then invariably accelerated.

Mr. President, this administration is committed to even greater spending this next fiscal year than ever before in our peacetime history. That spending will necessarily and inescapably occur at a much higher level than in last year's budget or the present year's budget. At the same time it proposes to reduce the taxes and the revenues of the Federal Treasury.

This is an unsound and unwise policy. It will be highly detrimental to all of the 191 million citizens of the Republic.

This Senator is opposed to such an irresponsible policy and unwise course. I shall vote against the bill.

Mr. BREWSTER. Mr. President, we are now concluding a long but fruitful debate on a measure of great importance to our national economic growth, and to each taxpayer of this great Nation.

I should like to join with my colleagues in a tribute to the distinguished floor leader of this bill, the junior Senator from Louisiana [Mr. LONG]. His skillful management of the most complex legislative proposal to be considered by this Congress deserves the highest praise.

Mr. President, on April 23 and again on June 6, I spoke here on the floor in support of the proposed program of tax reduction. I am as convinced now as I was then of the stimulating effect these reductions will have on consumer demand, capital investment, and economic growth. This encouragement to expansion promises to be the most effective attack we could make on the problem of chronic unemployment.

For the past 5 years, between 5 and 7 percent of our labor force has been unemployed, too large a portion of our existing plant capacity has been idle, and our Federal budget has been in deficit.

The cost of this underutilization of our manpower and productive capacity is staggering. Our gross national product is $30 billion below what it could be.

At long last, with the passage of this bill, the private sector of our economy will be freed of the stifling effects of tax rates that have consistently braked expansion, reduced potential, handicapped enterprise.

To catch up, we have now committed ourselves to strengthening the private sector of our economy. We did not take the costly pump-priming route by increasing Government expenditures, artifically generating economic activity. Instead, we reaffirmed our faith in the private enterprise system by giving it the opportunity to respond to our needs.

This tax program, as a result of the economic stimulus stemming from the reduction of individual and corporate income taxes by a net total of $11.6 billion, will raise the level of our economic activity. It will help to provide more jobs, more wages and salaries, more profits and, finally, more tax revenues to bring our Federal budget into ultimate balance.

In my own State of Maryland, total individual income is expected to rise by $580 million in 1964 as a result of these tax reductions.

The reductions in individual rates—amounting to $9.3 billion—will immediately create increased consumer purchasing power. This increased purchasing power will trigger expanded production. Idle plants will come back into operation. Idle manpower will be recalled.

With the increased production will come increased profits. Increased profits and the lower tax rates on corporations and unincorporated business—amounting to $2.4 billion annually—will provide additional funds and increased incentives for expansion and modernization.

Modern equipment and techniques are essential for a company, an industry, a nation, if it hopes to compete successfully in domestic and world markets. This tax bill, the investment credit provisions of the 1962 bill, and the revised depreciation schedules, will stimulate our lagging capital goods industry.

Finally, higher employment rates, expanded production, and increased profits

resulting from tax reduction will generate tax revenues which will make possible an attack on continued budgetary deficits.

I am proud to have given this balanced tax program my unqualified support. Where I have disagreed with the provisions of this bill as reported by the committee, I have done so on the basis of firm conviction that the amendments introduced were meritorious.

Two such amendments were those designed to allow a tax credit for expenses of higher education. In a floor speech earlier this week, I set forth in detail my reasons for giving these amendments my unqualified support. I emphasized my concern with the failure of this bill to stimulate investment in our Nation's No. 1 resource, the minds of our young people.

I regret the failure of these amendments, and hope that the Senate will give this proposal renewed attention at an early date. It seems obvious to me that we must promote investment in education, for only through education can we truly make progress in all fields in the years to come.

In addition, I supported an amendment to assist manufacturers in the battle against air and water pollution. The principle of Federal assistance in the control of air and water pollution has always had my support. Foul air is not contained by city or State boundaries; contaminated water flows over State lines on its way to the sea. Senator RIBICOFF proposed a means to assist manufacturers in controlling their output of corrupting materials by allowing them an extra 7 percent investment credit for purchases of pollution control equipment. I was pleased to support this incentive to industry to invest in the air and water pollution control facilities which are so desperately needed. That this amendment was accepted by the Committee and became a part of the bill was a source of satisfaction to those of us who supported it.

Nothing would have pleased me more than to vote for every amendment which would grant greater tax relief to all Americans. I am sure that all my colleagues join me in the fervent wish that every measure to further reduce the tax burden on individuals and corporations could have been supported by each of us.

But we are aware—as are most Americans—of the dreadful burdens which are upon us, and which must be supported by our tax dollars—the demands of our national defense, the necessities of a strong economy, the ever-present danger of inflation.

In the broad area of what might have been—let me select a few issues which were intensely debated.

We might have retained the 4 percent dividend credit provision in our present tax law. Instead, we voted its repeal. I do not feel that we have discriminated against taxpayers with dividend income. There is no doubt that the present 4 percent dividend credit favors those in the high-income brackets. Repealing the credit will mean an increase of $300 million annually in Federal revenues. Considering the other provisions in the measure benefiting shareholders—increasing the exclusion from $50 to $100 and from $100 to $200 for married couples, the 4-point corporate rate reduction, and the lowered tax rates the bill provides—this legislation should not mean a greater tax burden on the investor.

We might have repealed some $400 million in retail excise taxes. I opposed this attempt, even though I have often stated by basic belief that wartime excise taxes are no longer valid and should be repealed. From the very outset, the measure before us has been confined to a revision and reduction in income tax rates. At no time have we gone into the separate matter of excise taxes.

The entire excise tax structure is a complex one. Until such time as both Houses of the Congress have an opportunity to review carefully the whole structure, we should refrain from costly piecemeal adjustments. This was plainly neither the time nor the place to embark on a hastily considered revision.

I am pleased to note that Chairman MILLS, of the House Ways and Means Committee, has already announced his intention to hold public hearings on the excise tax structure later this year. I, for one, welcome the hearings and the analyses which will be made—and look forward to the time when I can vote "aye" on a repeal of these taxes.

We might also have adhered to the House bill in the treatment of capital gains. Instead, we voted overwhelmingly to accept our Finance Committee's version of this portion of the bill—to retain the present treatment of capital gains. We recognized that the rate reductions which are the backbone of this bill will be applicable in the case of capital gains, and that a substantial reduction in tax is provided with respect to these gains.

In one major area the Senate and the committee agreed on a much needed change—in that section of the bill dealing with the taxation of sick pay benefits.

[*P. 2299*]

Through Senator McCARTHY's amendment, a compromise between the present law and the harsh provisions of the new bill was reached. It is an equitable solution—and one which had my wholehearted support.

One of the last amendments to be considered was that requiring that the entire program of tax reduction for our citizens be terminated if, in the future, the Federal budget exceeded $100 billion.

The present estimated budget for next year is $97.9 billion. Unpredictable emergencies, foreign or domestic, could lead to increases in essential spending, particularly for defense.

To tie an entire program for economic growth and unemployment reduction to these unpredictable exigencies would have been a very serious mistake. We would, in effect, place Khrushchev, Castro, and Mao in control of our domestic policies. By creating an emergency to which we must respond, they could torpedo our whole effort to strengthen our national economy.

This is an initiative we must not grant our enemies, no matter how deeply we are concerned with controlling Government expenditures.

I have continued to advocate reduction of nonessential Government spending. In this important matter, I congratulate President Johnson on the reduced budget he has submitted and the efforts he is continuing to make to further reduce the cost of Government.

We have finally broken the logjam of inaction on income taxes, Mr. President. We have written a balanced bill that will lift the repressive weight of income taxes on our national economy. In doing so, we have made clear our determination to move our Nation forward to greater economic strength, vitality, growth, and effectiveness.

Mr. FONG. Mr. President, I intend to vote for the pending tax reduction and reform bill (H.R. 8363).

I have long believed that Federal tax laws have been an obstacle to greater economic growth of our Nation. Income tax rates both on individuals and businesses have been too high too long. Other tax features have acted as a drag on economic expansion and job formation.

It seems to me as a general proposition that we need a two-pronged approach. Income taxes on individuals should be reduced so as to stimulate consumer buying.

At the same time, taxes on business should be lowered so that business can expand and new businesses will be formed. Other growth inhibiting features of our tax laws should be modified also to spur the economy.

In these ways, more jobs will be created for our growing work force.

In deciding how much to reduce tax rates and what other tax changes to make, we must consider the total financial picture of the Federal Government. And that picture has been one of steadily rising expenditures resulting in multibillion-dollar deficits. The deficit forecast by the President for the current fiscal year that ends June 30, 1964, is $10 billion. Another big deficit, $4.9 billion, is predicted for fiscal year 1965.

To finance tax reductions when the Federal Government is so deeply in the red means Uncle Sam will have to borrow money to pay its bills. If America is to maintain the value of its dollar and avoid the inflationary aspects of deficit financing, the upward Federal spending trend must be reversed.

Both Congress and the administration will have to exert strong efforts to stem the tide of unnecessary Federal spending to justify giving tax cuts of a size sufficient to stimulate the economy.

The combination of lower Federal spending and an economy stimulated by tax cuts would then work toward closing the dollar gap between Government income and Government outgo.

Thus, in supporting the pending bill, I do so in the full knowledge that a sizable calculated risk is involved—whether the economy will indeed be stimulated sufficiently to yield total tax revenues of $93 billion, large enough to produce a budget deficit no higher than $4.9 billion as predicted by the President and large enough eventually to get Government finances into the black once more.

This is based also on an assumption that Federal spending will be no more than the President's budgeted total of $97.9 billion in 1965. This, too, is a calculated risk and poses a challenge to the administration to hold the line.

After carefully considering the advantages and the risks, I have decided the risks are supportable.

I had hoped, however, that before the final vote on this bill is taken that the Senate would have amended it in several important respects.

First, instead of repealing the 4-percent tax credit on dividend income, as the Finance Committee recommended, I had hoped the Senate would vote to keep the tax credit but establish a reasonable maximum total tax credit that could be taken. Instead, by a close vote of 47 to 44, the Senate sustained the committee.

The dividend provision approved provides for raising the amount of dividend

income allowed to be excluded to $100—$200 if husband and wife each receive dividends—and for repealing the 4-percent tax credit on dividend income now allowed in two steps: reducing it to 2 percent as of January 1, 1964, and repealing it entirely as of January 1, 1965.

The Treasury Department states these new provisions would increase tax revenues by $300 million annually.

The Treasury Department further states that of the 6.2 million taxpayers who receive dividend income, 2.5 million would find their taxes increased under the House dividend provisions; 1.7 million taxpayers would not be affected as their dividend income is already excluded under the $50 exclusion; and only 2 million taxpayers would have their taxes reduced.

In other words, more taxpayers with dividend income would be hurt than helped by the new dividend provisions. Forty percent would be hurt, 27 percent would be unaffected, only 32 percent would be helped.

This fact, plus the fact that investors will have to pay $300 million more in taxes, is directly contrary to the claimed purpose of the bill to stimulate investments in business and industry so as to create jobs.

I am concerned that these provisions may work particular hardship on elderly persons who rely on dividend income to provide for their daily needs.

I am also concerned that raising the exclusion to $100 and repealing the 4-percent tax credit may impose a hardship on modest-income taxpayers receiving dividends. I call the attention of my colleagues to page 913 of the printed hearings of the Senate Finance Committee where it was testified that:

> The majority of the investors on the 2.5 million returns facing higher taxes are not high-income shareowners. Nearly 60 percent of them have adjusted gross income of less than $10,000. Indeed, a typical stockholder (with an average household income of $8,600) would pay 12 percent more tax on his dividends under the $100 exclusion proposal than with a 4-percent credit and $50 exclusion.

Still another provision which I believe belongs in this bill is the amendment, No. 229, offered by the junior Senator from Louisiana [Mr. LONG] adjusting the entertainment expense deduction provision of the 1962 law.

There is no question that the 1962 act has badly hurt many employees and industries dependent upon the spending of money by businessmen for business-related travel and entertainment expenses. The amendment is directed toward creating stability in these industries while at the same time providing needed protection against abuses.

I certainly do not believe the American taxpayers should pick up the tab for parties, lodges, yachts, and other entertainment for the personal benefit of businessmen.

On the other hand, some travel and entertainment expenses directly related to business should be allowable as business costs. As representative of a State where tourism is our largest income-producing industry next to agriculture, I am keenly conscious of the importance of business conventions and travel to large numbers of employees, hotels, transportation, restaurant, and associated industries.

The Finance Committee twice rejected amendments to ease the entertainment expense provision of the 1962 act. But I am encouraged that the committee recognizes the problem and plans to hold hearings later this year on this subject.

In all fairness to the committee, I should mention that the committee repealed the travel deduction provision of the 1962 act under which only the business costs of a combined business-pleasure trip could be deducted for Federal tax purposes. I hope this provision of the junior Senator from Florida [Mr. SMATHERS] will prevail in conference with the House. I believe it will be very helpful to the tourist industry and related in-

[P. 2300]

dustries in Hawaii and in many other areas of the United States.

I was very disappointed that the Finance Committee did not have the time to perfect and include in this bill my amendment to permit real property tax deductions for land lessees. The amendment which I introduced—No. 338—is identical to S. 344, a bill introduced earlier this year by me with the cosponsorship of my colleague from Hawaii, Senator INOUYE.

The amendment would permit an individual who leases land and uses that land as the site for his residence to deduct real property taxes paid by him which are assessed against such land if the real property taxes must be paid by the lessee under the terms of the lease agreement. The lease must also be for a period of 20 years or more.

Under present provisions of the Internal Revenue Code, real property taxes are allowed as deductions to the taxpayer only if the tax is owed and paid by him.

Land in Hawaii is scarce. There are large tracts of land in Hawaii which have been subdivided and leased out as residential districts for periods in excess of 20 years. In many of the lease contracts, the lessees are required to pay all real property taxes. In such instances,

because the lessor owes the tax but the lessee is required to pay it, neither party is permitted to claim the payment as a deduction on his Federal income tax return.

My amendment would correct this inequity and allow the lessee who is legally oligated to pay the real property taxes assessed against his leased land and does pay it to claim such payments as tax deductions.

This would also apply to sublessees if their leases meet the requirements applicable to prime lessees—that is, if the land is used as his residence, the lease agreement covers a period of 20 or more years, and the sublessee is required to pay the real property taxes on such property.

I am pleased with the assurances of the chairman, the able and distinguished senior Senator from Virginia [Mr. Byrd], and of other distinguished members of the committee on both the majority and minority side, that the committee will look further into this question this year. I appreciate their expressions of sympathetic willingness to give earnest consideration to this important problem affecting many people in Hawaii.

I also regret that the Finance Committee and the Senate did not approve either the tax credit amendment of the junior Senator from Connecticut [Mr. Ribicoff] or the tax deduction amendment of the junior Senator from Vermont [Mr. Prouty] relative to college expenses. I suported both and voted for both, as I believe it is in the public interest, through our tax laws as well as through other measures, to encourage and enable more young people to receive advanced education beyond high school.

The most striking paradox of our time is that there are jobs available all over America; yet there are more than 4 million persons without jobs. One of the major reasons is that many of these persons simply do not possess the skills required by these vacant jobs. In the future, more and more jobs will require higher skills than today. Our young people must receive training to qualify for these jobs—through better vocational education and through higher education in colleges and universities.

I would hope that before the present 88th Congress adjourns the Senate will have another opportunity to consider measures for providing tax incentive for college training.

In a 300-page bill containing many complex and technical provisions, it would be impossible to satisfy every one in every respect.

Overall, I favor the bill and congratulate the members of the committee for their diligence and hard work in drafting an acceptable bill and bringing it before the Senate so early in this session.

In providing $11.6 billion of tax reductions scheduled over the next 2 years, the bill contains the two-pronged approach I deem necessary.

Of the total reduction, $9.2 billion applies to individuals; $2.4 billion to corporations. Tax rates for individuals will drop from their present range of 20 to 91 percent to a range of 14 to 70 percent. In the case of corporations, the 30-percent rate for $25,000 or under income goes down to 22 percent. The top rates applicable to business income drop from 52 percent to 48 percent. The present withholding rate of 18 percent is to fall to 14 percent 8 days after enactment of the bill.

Thus, it provides both increased consumer and business purchasing power to give a boost to individual and business incentives to spend, grow, and expand.

In addition, the bill is a major step toward greater equity and fairness in our tax system. Should inequities show up in the provisions of the bill, Congress can always take remedial action later.

I strongly support prompt enactment of the pending tax bill.

ON BALANCE, TAX BILL TO BENEFIT AMERICA

Mr. BARTLETT. Mr. President, I shall vote today for final passage of the tax bill. I do so with mixed feelings. It is not as good a bill as I would have wished; it is a better bill than I had expected. The benefits which it will bring to Alaskans and to all Americans are many. These benefits will be measured in more dollars in almost every purse in America. It is my hope, if not my confident hope, that this tax bill will also benefit the general economy over the long-term view.

Over a year ago when President Kennedy first requested the tax cut, the economic reasons for such a cut were substantial and compelling. The economy was making a slow and sluggish recovery from recession and an immediate injection of $11 billion of new spending and investment power would have given a mighty help to the recovery. The Congress did not choose to act last year upon the President's request and the recovery proceeded under its own power to the point where, in the fourth quarter of 1963, the gross national product exceeded for the first time $600 billion. The tax cut which we vote today will not pull our economy out of a recession although it will help to sustain a boom. For how long this high level of economic activity will be continued, how much it will be assisted by the tax cut, I do not know. I must say I am concerned, however, with what the reaction of the econ-

omy may be when the exhilarating effect of expanded consumption as a result of the tax cut has run its course.

President Kennedy and President Johnson have both emphasized their expectation that the tax cut will mean new jobs for Americans now out of work. I hope that it will. Our present national unemployment rate stands at 5½ percent; the unemployment rate in Alaska is higher still. In a country as rich as ours, as prosperous, it is unspeakable that over 4 million Americans are unable to find work. Even more distressing is the fact that this unemployment is concentrated among the underprivileged minority groups across the land.

I vote for this tax bill, Mr. President, because it will mean more jobs. I do not believe, Mr. President, that it will solve our unemployment problem. This will take education, job training, and job placement. The President has promised to work for such programs in his war on poverty, and I trust the Congress will give him its support.

As originally proposed, this bill was to embody not only tax cuts but tax reforms. Such reforms cry out for adoption. The inequities, the complexities, the confusions in our tax code are beyond comprehension. There is crying need for a complete overhaul of our tax laws and structure. Such an overhaul is certainly not in this bill. There are some reforms in the bill and they are useful. Among these I number the reduction in the tax benefits of Americans living abroad, the tightening up of the tax requirements on personal holding companies and group-term life insurance programs, and the revision of the sick-pay and casualty-loss provisions. There are, on the other hand, provisions which will serve to increase the inequity of our tax laws. Among these I include those dealing with revolving credit plans, those preventing regulatory agencies from passing on to the consumer the benefits of the investment credit, and the loosening of the expense-account rules approved by the Congress last year.

Mr. President, I do not vote for this bill because of its economic effect which is not certain, because of its effect on unemployment which is doubtful, because of its reforms which are negligible: I vote for this bill, Mr. President, because of the tax cuts which it will bring to every American.

Our present tax rates are as high as those of any industrialized country on earth. I cannot but feel that our level of taxation has had a continuing and persistent dampening effect on our economic growth, in recession and expansion, for many, many years. The people deserve a tax break and this bill will give it to them.

There has been debate as to the fairness of the distribution of the cuts. I

[*P. 2301*]

believe they are reasonably equitable. The man with an income of $3,000 or less will have a tax cut of about 40 percent, the man with an income of between $5,000 and $10,000 will have a cut of about 20 percent, the man making more than $10,000 will have a cut of about 15 percent. The value of individual tax cuts will be about $9.47 billion. The remaining cuts will be made in corporate taxes and will serve to stimulate new investment growth in industry.

The families of America will be the beneficiaries of this tax cut. The poorer families will benefit to a larger degree than will the richer families.

The floor debate on this measure has been extraordinarily informative and valuable; particularly so was the discussion of the Ribicoff amendment to provide tax credits for higher education. The fervor with which this proposal was discussed, the closeness of the vote illustrates most clearly the strong desire of the Senate to see that real and substantial assistance is provided for students and their parents. The Senate knows the future of our country depends upon the quality and quantity of our higher education. Now as never before a college education is vital. We will be left on the launching pad in the space age if we do not now improve our college and technical facilities and make possible the education of every able and qualified student who desires college training.

The chairman of the Education Subcommittee has promised the Senate immediate hearings on this matter. I congratulate him and I congratulate the Senate.

In closing, let me add one additional word. The floor manager of this bill, the senior Senator from Louisiana, has performed a service to us all in the skillful and intelligent manner with which he has managed this bill. We are all in his debt.

The tax bill for which I will today vote is not a bad bill. It is not as good a bill as I would have wished. It is, however, as good a bill as it is now possible to have.

Mr. TOWER. Mr. President, I will not vote for this tax bill, although I have myself introduced legislation, in the present session of Congress as well as the last, to reform and reduce personal and corporate income taxes. I have long

felt that tax relief is needed and that the reduction in tax liabilities would be a necessary stimulus to our economic growth. I think that nearly everybody would agree that we do need a tax cut.

The tax legislation before us today, then, is legislation which most of us can support in principle as a stimulus to business, investment, and general economic growth. Not accompanied by a corresponding reduction in Federal spending, however, I am fearful the legislation may lead to economic chaos. Federal Government will have to borrow money in order to give this tax reduction.

The President's economic message for this year gives much cause for alarm, the budget figure itself relying far too heavily upon contingencies which may or may not arise. True, the message does talk of an eventual balanced budget, but seems to ignore the probable cost of numerous additional Federal programs being proposed.

Regardless of what has been said about the present administration's economy budget, it is not an economy budget. Total expenditures will be greater than those proposed by the previous administration, as many programs will receive approval in supplemental appropriations that will actually show up in the current year's budget.

The Secretary of the Treasury has predicted, in addition to the deficits of 1963 and 1964, further deficits in 1965 and 1966. Last year the deficit was $6.3 billion; it will probably be some $10 billion this year. The most conservative deficit estimate for the next year is $4.9 billion, giving us a combined 3-year deficit of $20 billion plus. This figure will most likely be several billion dollars higher. We must remember there is ever present the inherent danger of spiraling inflation in deficit government financing.

Federal expenditures are estimated for this year to be $98.4 billion. This is $22 billion higher than 4 years ago, for an average increase of about $5 billion a year.

The biggest increases are in the domestic field, and not attributable to the cold war and necessary national defense. Of the $30 billion increase in Federal spending since the Korean war, nearly $23 billion has gone to finance domestic programs.

Mr. President, I am of the opinion this bill should not be passed unless we are prepared to reduce Federal expenditures by a comparable amount. It is my belief that the Federal budget should be balanced in periods of peace and general prosperity, such as we are now having.

I am grateful that so many of my constituents, and so many other throughout the country have expressed concern, even outrage, that we should consider reducing taxes and going further and further into deficit spending. I do not feel we can continue to pile deficit upon deficit without a day of reckoning.

Mr. President, I cannot conscientiously support this reduction of taxation without a commensurate reduction in Federal expenditures.

Mr. KEATING. Mr. President, last week one of the most distinguished Members of the Senate, who shall remain nameless, summed up all of the reasons why she should not become a candidate for her party's nomination to the Presidency and then on balance announced her determination to seek it, notwithstanding all of the obstacles she had enumerated.

I take a somewhat analagous approach to the tax bill. It is, of course, not a perfect bill. It is far from that. There are many reasons why, at other times, or under other circumstances, it would not pass congressional muster. Despite its shortcomings, however, the times and circumstances now prevailing require action on it. It will receive my vote.

The need for tax revision is compelling. The present tax structure grew Topsy-like out of the emergency of the depression in the 1930's and out of World War II and the Korean conflict. But certainly after the cessation of hostilities in Korea, changes have occurred in the American economy. These changes, unfortunately, have not generated a complete adaptation of the Federal tax system. The Internal Revenue Code of 1954, which I supported, made a wholesome start. But it was only a start. The bill now before us will take us further along the road to fiscal sanity. But it is only a little further along, and the end of the road is still before us.

I consider the heart of this bill to lie in the schedule of reductions in both individual and corporate rates. There is no question in my mind that the present, steeply progressive and very high rates of taxation have contributed significantly to retarding the natural forces for growth in the American economy. They have acted to dampen individual initiative, to curb industrial expansion, to dam up consumer purchases, and as the most damaging consequence, have failed to produce the full employment conditions to which both parties are committed by the bipartisan Full Employment Act of 1946. Also, within the last 5 years, it has been recognized that the tax structure is inflicting great injury upon America's

position in world markets and has contributed somewhat, although there are a host of other factors, to the deterioration in the balance of our international payments.

Therefore, I have long regarded reduction in both individual and corporate rates as the single most important reform which could be made in the entire Federal tax structure. The cuts made in this bill will provide a measure of fair reform. Quite obviously, they are the produce of compromise and it is very easy to pick them apart on the basis that they may unduly favor certain brackets over others. They are not entirely satisfactory to me. But the short of the matter is that the rate reduction provisions of the bill are the same in the House-approved version and in the bill reported by our Finance Committee. Any attempt to change them in the Senate might result in touching off controversies productive of delay in the final enactment of this legislation. If there is one thing we cannot afford at this time, it is delay in bringing to bear upon the operation of our economic system the beneficial effects of the reductions contained in the bill.

Again, let me emphasize that the program of rate reductions is but a start. We have much farther to travel along the road of according fair income tax treatment to all our citizens.

When the revenue losses which will be incurred by rate reductions are offset by several revenue-raising reforms in this bill, the net revenue loss to the Treasury will amount to something on the order of $12 billion annually. Estimates in this area are very rough. They are based upon a great number of assumptions about the course the economy will take in the fiscal years immediately following enactment. It is difficult to predict the

[*P. 2302*]

ultimate and permanent effect which enactment of this bill will have upon Government fiscal policy. It is hoped—and I certainly join in that hope—that after a reasonable transition period, the new tax structure will eliminate the chronic budget deficit position of the Federal Government. To do this, the economy must be counted upon to expand in all areas—production, employment, income, consumption, and investment—so as to yield higher and higher levels of revenue to the Federal Government, revenues necessary to maintain the gamut of Federal activities and services required in the interest of our national security and the well-being of all our citizens. Growth in the Federal establishment for its own sake must be discountenanced. But sane and orderly growth we must have to meet the inevitable demands of the world and times in which we live. Without the enactment of this measure we could not succeed in raising the revenues to meet these demands without imposing well-nigh intolerable burdens and inequities upon the American people.

One caveat is in order. In my judgment, there is a great deal of merit in recent observations that we may be trafficking with danger to the economy in 1965 by concentrating so much of the reduction in this bill to take effect in 1964. By contrast, the reductions of this bill to take effect in 1965 may not be sufficiently large to sustain the long upward swing of the business cycle which we have been enjoying. It will require a high degree of skill in using the tools of fiscal and monetary policy in 1965 to prevent a leveling off in the upturn which this bill is expected to generate.

Of the reform elements of this bill, there are many which I wholeheartedly endorse. The reversal of the normal and surtax corporate rates applicable to small business will provide a vital stimulus to this crucial sector of our economy, helping to create both jobs and new opportunities for gainful self-employment. The new income-averaging formula will give fairer treatment to large numbers of professionals and small businessmen whose incomes fluctuate widely from year to year. Liberalization of the child-care deductions, though not as generous as I would have cared to see them, will, nevertheless, be of great benefit to considerable numbers of women with valuable skills to contribute who otherwise could not meet their obligation to provide for decent care of their children.

The minimum standard deduction is a timely antipoverty device to help bolster the miserable standard of living of the underprivileged to a more tolerable level for an affluent society such as ours; but antipoverty measures cannot end there, and obviously, other programs must be enacted to help create better employment and living prospects for the poor.

The tax benefit to elderly citizens on the sale of their residence to furnish additional retirement income is a reform which I have sponsored in separate bills for many years, and it gives me the greatest amount of personal satisfaction and pride to witness its approval. Also, the removal of the unrealistic limitation on the deductibility of the cost of medicines and drugs for our elderly citizens is a long-overdue improvement in the tax treatment of our senior citizens.

Yet, several of the most important reforms, unfortunately, were defeated this

week. Repeal of the retail excise taxes, which I have advocated for many years, is an urgent necessity, both to remove ridiculous burdens on the purchase of commonplace necessities of everyday life, as well as to generate expanding levels of production, income, and employment in large segments of American industry. The failure to bestow even a modest measure of relief upon the parents and the students who must carry the burden of investing in education, the prime asset of any advanced economy, is a failure for which this Congress must take responsibility. I am hopeful, however, in view of the narrow margin by which several proposals in this area were defeated, that a new drive can be mounted in short order to supplement education bills with appropriate accommodations in the tax structure to the pressing need for relief. It seems to me the height of irony that Congress should have adopted such a niggardly attitude toward educational expenses while leaving in the tax structure blatant opportunities for avoidance of tax, through other exemptions and deductions, for segments of our society who are among the least needy.

One final note on reform. Congress did display its good sense in rejecting from the very start several of the more extreme among original administration proposals. Now is not the time to become embroiled in controversy over novel schemes to raise revenue which would have worked inestimable damage upon individuals and institutions who, over the years, have developed a reliance interest in the present structure that cannot lightly be disregarded. The plan to put a 5-percent floor under itemized deductions would have had an unwholesome impact upon the financing of charitable and educational organizations. So, too, the simplified tax method, although certainly we must continue to explore possible means of simplifying the process of making out returns to the Internal Revenue Service. A new capital gains levy upon unrealized appreciation of assets transferred by gift or at death would have represented a harmful incursion into time-honored incentives and traditions for building an estate to improve the lot of one's children. I am glad that reform did go in the opposite direction from these proposals by widening the scope of 30 percent charitable organizations.

Limitations of time prevent extensive comment upon each and every section of the bill and amendments which were offered, some of which were approved and some of which were defeated. I shall not dwell upon them.

In closing I will express my judgment that members of our Finance Committee have labored upon this bill as hard and as diligently as any committee has labored upon legislation in recent times. The country owes a debt of gratitude toward all Members, regardless of their own positions on the bill and regardless of party labels. If experience is the best teacher, the lesson should be gained from the events of the past year that perhaps in the future joint House-Senate committee sessions should be held for taking testimony, so that path-breaking revenue measures as this can be expedited when time is a crucial factor in the desirability and the efficacy of the legislation.

Mr. President, I shall vote for this bill, and I hope it gains overwhelming approval. It is also my hope that the differences between the Senate and the House can be resolved as fairly and as expeditiously as possible so that the measure may be signed into law without delay.

Mr. CANNON. Mr. President, the Senate has completed action on what is perhaps the major piece of legislation to come before the Congress in the last decade. Its significance is important for the Nation as a whole and for all individual taxpayers.

I am pleased to state for the record that I support this measure and, while I have voted for certain changes which were not accepted, I support the final bill.

It is difficult, Mr. President, to preassess the impact of such legislation as this. I believe, however, that the great majority of economists in the Nation are convinced that this bill will do more to correct the economic ills besetting this Nation than any other single type of legislative program. Our taxpayers have been long oppressed by a tax burden made necessary to keep this Nation free and strong. High tax rates were imposed not by choice, but by necessity. It is pleasing, therefore, when we can undertake a major program of tax reduction and reform without jeopardizing the Nation's strength.

In addition to the relief offered our taxpayers, this bill is designed to provide an impetus to the growth rate which must be stimulated if the Nation is to achieve a rate of production tantamount to its capacity.

As we move toward this goal, new jobs will be developed to provide employment for the too great number of the Nation's unemployed. This factor alone should be sufficient justification for the enactment of this tax bill.

I should interject here the fact that I do not suggest that this measure alone

will eliminate all the Nation's problems, that it will provide everything by way of stimulus, or that it will eradicate completely our unemployment problem. I believe, on the contrary, that many other programs, some of which have been proposed, will be needed; and I intend to support such measures. But this tax bill does afford the vehicle most needed and its early enactment at the beginning of this session of the Congress is a tribute to the distinguished floor manager of the bill, Senator LONG, and members of the Senate Finance Committee, to the leadership of the Senate, and, I think, to the Senate itself.

As the economy in this Nation accelerates, and as more people obtain employment, more taxable revenue is produced, providing for an increase in Fed-

[*P. 2303*]

eral income and contributing to the budget balance which all Senators are so desirous of achieving. I believe that the record which was made in the first session wherein $6.5 billion was cut from appropriations requests illustrates that the Congress has more than a passive interest in balancing our budget and this possibility is enhanced by the action taken by President Johnson and now by passage of this tax bill.

The bill is more than a financial measure; it is also social legislation of the most farsighted nature.

I commend Members of the Senate for their support of this bill.

Mr. PELL. Mr. President, I would like to register disappointment that we seem to have missed the opportunity for a thoroughgoing reform of the tax structure. Indeed, if our administration had not so eloquently argued the current need for a tax cut, I would find it hard to support the bill as it now stands.

Not only do I mourn the $3.4 billion in offsetting revenues which would have helped reduce our deficit and which President Kennedy's package of reforms would have brought, but I am also sorry that we have seemingly strayed yet further from the goal of simplification of the tax structure. Instead of eliminating the countless special deductions, credits, and allowances which would permit a much lower range in personal income tax rates, the current approach has encouraged, in the name of equity, special tax concessions to be extended. If, instead, it had been possible to eliminate this host of provisions that reduce the amount of taxable income, inequitable excise taxes could have been eliminated or all tax rates could be cut further without any sacrifice of revenue.

If it has been impossible to reverse the trend with this piece of legislation which includes the sugar coating of tax reduction, but little of the bitter pill of tax reform, when can we get on the road to tax reform and simplification? To my mind I still feel that we would be lacking in foresight and shirking our responsibilities if we do not consistently give active consideration to proposals that would lead to the simplification of the tax structure. I think everyone is aware of the dreadful complexity of our Internal Revenue Code, which runs over 1,100 pages, not to mention the many rules and regulations associated with it. At the beginning it says gross income means "all income from whatever source derived," and virtually all the rest of the code is devoted to exceptions. If the proreform forces are "diffuse, inarticulate, politically impotent" and the Treasury "lacks the political leverage of a constituency of its own," as Philip M. Stern pointed out in a recent article, it is all the more important that care be taken. With several notable exceptions, such as the articles by Messrs. Evans and Novak, and J. A. Livingston, and other recent editorials, the general silence of the public on the subject of tax reform is surely due primarily to the complexity of the tax laws and the feeling of futility.

I sincerely hope that when this current piece of tax legislation is passed into law we will not sit back but rather take a fresh breath and start again with a bold approach to a more simple equitable tax structure.

THE TAX BILL AND THE ECONOMY

Mr. WILLIAMS of New Jersey. Mr. President, the tax bill now pending in the U.S. Senate is crucial to the solution of some of the major economic problems that confront this Nation—unemployment, idle industrial capacity, and persistent deficits in our budget and our international accounts. It is crucial because nearly every one of these problems has its roots in an economic performance that, over the long term, has fallen short of its potential.

No one imagines—and no one claims—that the tax bill, or the improved economic performance that it will engender, will, like some magic wand or formula, remove these problems from our economic life instantly, completely, and forever. Six or more years of economic slack cannot be taken up that easily. But the tax bill can get to the root of these problems.

In New Jersey, for example, it is estimated that the administration's bill now before the Senate will increase the take-home pay in our State by $352 million this year, if put into effect by March 1. In 1965 the take-home pay of New Jersey

workers would be increased by approximately $422 million.

Not only would this be a tremendous benefit to individual wage earners, the bill would have a much more important effect on the State's economy than these figures indicate, through the stimulus of increased industrial investment and expansion.

In addition, that Federal tax cut would also help alleviate the serious financial needs facing the State and local governments of the State. It is estimated that eventually, as these released funds work their way through the economy, the tax cut will result in an increase in State and local tax revenues of about $116 million—$36 million in State revenue and $80 million in local revenues.

Clearly this tax bill will have a profound and beneficial effect on the State of New Jersey.

It has been nearly a year now since the tax program was proposed—it has been even longer than that since tax reduction was proposed. And during that time our economy has been steadily advancing, with an unbroken forward stride which began nearly 3 years ago, as the economy emerged from the depths of our fourth recession since the Second World War.

But the best measure of what we have yet to do lies in what we have not yet succeeded in doing—not in what we have already accomplished. For if we do nothing but continue past progress—and ignore the failures that will continue to attend it—then those failures will dog our footsteps with increasing ferocity until they trip us and we fall headlong.

That is the conviction that lies behind the tax bill now before the Senate—that, and the simple fact that, while our economy has done comparatively well for nearly 3 years, it has not done nearly well enough for some 6 years.

Not once for more than 75 consecutive months has unemployment fallen below 5 percent. Over the 6-year period from 1957 through 1963, unemployment has averaged 6 percent—almost 50 percent more than during the 1947–57 period. Even during the past year—a year of steady economic upturn—unemployment has averaged 5.7 percent, and now stands at 5½ percent. Some 4 million Americans able to work, needing work, and seeking work, are unable to find it. That has been the plight of that many Americans for far too long—and that will be their prospect, and the prospect of millions more, unless our economy gathers even greater momentum. Already those millions of young people born in the early postwar years have begun to enter the labor force, and will enter it in ever-increasing numbers over the next few years—at a time when technological change will proceed at even more rapid a pace than today, and render even more jobs obsolete than it does today.

All it takes is a close look at the facts to realize how stubborn this unemployment problem is, and how urgently it requires that we take action now. A year ago last quarter, the American economy was turning out $565 billion of gross national product, and unemployment ran at an average of a little less than 5.6 percent. During the last quarter gross national product hit the $600 billion mark—$35 billion above the year before—and yet unemployment ran at an average of a little more than 5.6 percent. It took, in other words, a whopping $35 billion rise in gross national product merely to keep an already unacceptably high unemployment rate at about the same level.

Unemployment, therefore, is the most disturbing and dissonant factor that both mars the 3 years of unbroken economic progress that we will shortly complete and confronts our continued progress with its most urgent and insistent challenge.

Unemployment, however, is not the only area in which our economy has fallen short—and will continue to fall short unless it enters a new and sustained period of more rapid growth. The longrun investment picture is also disturbing.

For it reveals on the one hand, persistent inadequate levels of domestic investment and, on the other, too large and sustained an outpouring of investment funds to foreign fields where profits seem better. At home, business-fixed investment has fallen from 10 to 11 percent of gross national product in the earlier postwar period to 9 percent in recent years.

One corollary of this dwindling investment in plant and equipment—in contrast to the sizable growth in total output—is the increasing obsolescence of existing plant and equipment. The proportion of that plant and equipment 10 years or older—as pointed out last year by the American Machinists magazine—has climbed from 43 percent in 1949, to 56 percent in 1953, to 60 percent in 1958, to 64 percent in 1963. And when you contrast that current 64 percent with the ratios of other leading coun-

[*P. 2304*]

tries—with 50 percent in the Soviet Union, 55 percent in West Germany, 58 percent in France, 59 percent in Great Britain—then it seems all the more serious.

As we all know, this lagging investment at home has been matched by a

dramatic upsurge in the flow of funds abroad, where economic expansions outpacing our own have given promise of greater returns.

These, and others, are the facts that lead to an inescapable conclusion: On the basis of its long-term performance, our economy needs some kind of stimulus.

The late President Kennedy, and President Johnson, therefore recommended a program to increase the role of the private economy by freeing private incentives and initiative, incomes and capital, from the grip of restrictive tax rates. That choice is represented in the tax bill now awaiting final decision—and that final decision is ours.

I do not think that—whatever reservations we may harbor about any aspect of the tax bill—most of us have any real doubt about what our decision must be.

I am told that the tax reduction will generate economic growth in the amount and kind that will create an estimated 2 to 3 million new jobs each year—2 to 3 million new jobs over and above those the economy would create if it merely maintained its current pace.

It will not of itself abolish unemployment. But I think it will bring unemployment closer to its so-called hard core level, and provide the prosperous and expansionary climate in which specific remedies can operate most efficiently and effectively.

By improving private incentives and freeing substantial private capital, tax reduction should also result in sharply expanded domestic investment in modern plant and equipment and new techniques of production.

And this kind of result should generate, not only economic progress at home, but the lower costs and greater productivity that will sharpen the competitive edge of American industry in both foreign and domestic fields. In this respect, as well as by making America a far more attractive magnet for foreign and domestic investment, tax reduction presents the basic long-range answer to our balance-of-payments problem. Arthur Burns—a chairman of the Council of Economic Advisers under President Eisenhower—made this point quite cogently in an interview not long ago with the Christian Science Monitor, in which he expressed his support for tax reduction of the general magnitude recommended by the administration. He said, and I quote:

> The most important single thing to do in dealing with the balance-of-payments problem is to create a climate in this country that is more favorable to investment and enterprise. * * * The proper way to keep American capital at home—and attract foreign capital to our shores—is to improve the climate for investment and profitmaking in our own country.

Tax reduction will thus radically improve our long-range economic picture in domestic employment and investment and in our international balance of payments. I think it also offers the best hope of getting us on the road to balanced budgets.

This is a goal which surely, in the light of our recent economic history, all of us can endorse wholeheartedly without, however, endorsing the view that it is all really a grandiose morality play in which deficits stand always for absolute evil and balanced budgets stand always for absolute good. For whether deficits are good or bad, or whether balanced budgets are good or bad, is a question that depends entirely on the actual economic conditions in which a given deficit or balanced budget occurs.

Surely, however, we can all endorse—emphatically and without the slightest reservation—the view that wasteful spending is intolerable, and that in a healthy and vibrant economy the Federal budget ought to be in long-term balance. The trouble with the deficits of recent years is that they are the unwanted, unwelcome children of a delinquent economy—an economy that has not lived up to its potential.

When we look, for example, at the first postwar decade—from 1947 through 1957—we see an economy nurtured and sustained in prosperity by the enormous unfulfilled demand that built up during the war. Employment was high and growing, incomes and output were rapidly expanding, and investment was running at continually high levels to keep up with the new high tide of demand. And during that same period—over the 11 fiscal years from 1947 through 1957—the Federal budget was in cash surplus seven times and in cash deficit four times, for a net cash surplus of $20 billion.

Then the tide began to fall—and we are all familiar with the results. We had not yet fully recovered from the 1957 recession, when recession struck again in 1960. And while, against that background, the recovery from the 1960 recession is an impressive accomplishment indeed—it has not been enough to make up for the ground already lost. In the 6 fiscal years from 1957 through 1963, the Federal budget has been in cash deficit five times and in cash surplus once—for a net cash deficit of $26 billion. About half of that net deficit occurred in the first 3 years—from 1957 through 1960—despite the fact that the deficit from 1961 through 1963 reflected large

69-108 O—66—pt. 3——67

increases in expenditures for national defense and space.

Any objective analysis makes it quite clear, therefore, that our deficits since 1957 have their origin—not in wasteful or excessive Federal spending—but in an unsatisfactory economic performance that has failed to produce adequate revenues. Such an analysis also makes it clear that high tax rates have played a primary role in the economic difficulties we have encountered since 1957.

There is also little question that only an economy operating at reasonably full capacity can produce the Government revenues needed to bear the costs of the cold war as well as to meet urgent national needs—or that by helping expand economic activity the tax bill before this Senate will help increase Federal revenues. With the tax cut, we will, after a relatively short period, have greater Federal revenues than we will without it. This means that, with the tax cut and with the kind of expenditure control which the new budget represents, the administration estimates we can reach the point of balance in our budget within 2 or at least 3 years. Without the tax cut, the prospect is bleak indeed for a balanced budget within the near future—except at the cost of essential national needs and, very likely, of our continued economic progress.

Thus the tax cut has very great implications, not only over the long run, but for the relatively near future as well. It is very much this kind of consideration that has led men such as Prof. Raymond Saulnier—like Arthur Burns, a former Chairman of the Council of Economic Advisers under President Eisenhowever, and a man not given to agreeing with the fiscal policy of the last 3 years—to resolve their earlier doubts about the tax cut and support its prompt enactment. Professor Saulnier's major concern is that the tax cut be accompanied by rigorous expenditure control.

The new budget represents what I am convinced is the positive approach to expenditure control. It will produce real savings this year and in years to come. Yet it responds in new and forward-looking ways to real and urgent national needs. It is genuinely frugal and prudent, while at the same time refusing to pay homage to the dismal theory that between expenditure control and national needs—or between balanced budgets and national needs—there is some kind of war, that we cannot provide for one without sacrificing the other.

The tax cut and budgeted expenditures together will provide, in 1964, a net fiscal stimulus to the economy three times as great as in any of the last 3 years—greater, in fact, than that during any peacetime year in history.

With the new budget, and with prompt passage of the tax cut, I think our Nation can look forward in all sober confidence to an economic growth, throughout this year and beyond, of greater strength and magnitude than that of any comparable period in our history.

We can expect that, by the end of fiscal 1965, the current recovery will become the longest and strongest in our peacetime history. In dollar terms, the $38 billion rise in gross national product that—with a prompt tax cut—is expected this year, will represent as great a year-to-year increase in total national output as any in our peacetime history.

That, therefore, is the prospect that the tax cut holds out before us. And the importance of the tax cut becomes even more impressive when we recall that nearly all the recent forecasts by leading business economists have us verging upon recession levels by the end of this year—if we do not have a tax cut.

Thus, we stand at a historic turning point. And the tax cut will spell the difference between making economic history, or merely repeating it.

Mr. HUMPHREY. Mr. President, the Senate will take up hundreds of different proposals this session. Of all this legislation, only the civil rights bill will be as important as the tax reduction and

[*P. 2305*]

reform bill that we have just finished discussing. H.R. 8363, the Revenue Act of 1964, will sharply reduce the taxes of almost every individual and business in this country. The impact of these tax cuts will be felt in every segment of the American economy. I would like to set forth my views on this vital piece of legislation and on the general economic conditions that make a tax reduction imperative if the American economy is to regain full health.

THE STATE OF THE AMERICAN ECONOMY

Our economy has made steady gains since the recession of 1960. In 3 years the gross national product increased $100 billion; personal income went up by 17 percent, and corporate profits by 44 percent. This is an impressive record, but it is only a progress report on the job that has to be done. We still have an unemployment rate of 5½ percent. Four million Americans, willing and able to work, are unable to find jobs. Many more people are underemployed, working fewer hours than they should and making less money than they need. The families of 30 million Americans have incomes under $3,000 a year—incomes far below the minimum necessary for health and well-being.

Unhappily, these are but the problems of the present. Unless changes are

made, the future will bring more unemployment.

The economy will have to provide jobs for mounting numbers of workers released by automation. That great generation of wartime babies will soon come of age. At present a million youngsters join the labor force each year and one out of six cannot find work. The wartime babies will increase the annual addition to the labor force by more than 50 percent. If the economy cannot provide more jobs, these children will become tomorrow's lost generation, and the number of unemployed will reach catatrophic levels.

Unemployment is more than a social problem, it is a drain on every taxpayer who has a job. Putting the unemployed back to work will also put them back on the tax rolls. It will restore not only their well-being and self-respect, but their ability to contribute to the general welfare. These are the goals of President Johnson's all-out war on poverty. Waging this war requires a healthy economy, instead of the limping progress we have had since 1957. At no time since that year has unemployment been under 5 percent. Business is producing at barely 87 percent of its capacity, like an 8-cylinder motor with 1 sparkplug missing. These idle productive facilities cost over $30 billion in income every year.

For 10 years successive administrations have tried to encourage full production. The most popular approach was to provide incentives to capital investment. We cut the excess profits tax, gave the stockholders the dividend credit and exclusion, liberalized depreciation schedules, and provided a 7-percent investment credit.

These measures gave tax relief of almost $5 billion a year. Despite this massive help, unemployment went up and investment declined. Capital investment is now down to 9 percent of the gross national product, compared to 12 percent a few years ago. This is not due to lack of capital—in 1962 corporate savings exceeded gross corporate investment by $3 billion. This money has not been invested because there is not enough consumer demand to keep our present productive facilities working to capacity, let alone stimulate new investment.

Demand for consumer goods is too low because wartime taxes cripple purchasing power. Despite price stability, despite a complete return to a normal peacetime economy, despite massive incentives to investment, the sizes of the Federal tax bite has gone up as fast as total national production.

This is the heart of the case for the present tax bill. Our current tax rates were set in wartime to finance the war effort and discourage inflation. Today we are at peace and inflation is no longer a problem, yet these old taxes remain, draining off needed purchasing power and saddling the economy with a burden that is as unnecessary as it is crippling.

MAJOR PROVISIONS OF THE TAX BILL

The Revenue Act of 1964, H.R. 8363, will reduce taxes by $11.6 billion a year. $9.2 billion of this amount will go to individuals, the rest to corporations. The tax cuts will result in an increase in gross national product of between $30 billion and $40 billion. In addition to lowering taxes, the bill will bring about a number of structural reforms—lightening unfair tax burdens, chiefly on the very poor, and closing loopholes that permit a few people to escape just levels of taxation.

The bill's most important provision calls for the reduction of every taxpayer's income tax rate. The rate cuts range from 28 percent for people making less than $3,000 a year to 17 percent for those with incomes over $20,000. The new rates will go into effect in two stages—on January 1 in 1964 and 1965. The withholding rate on individual incomes will be cut from 18 percent to 14 percent 1 week after the bill is enacted. The passage of this bill will produce an almost immediate increase in gross national product of about $2 billion a month.

Most of the individual tax cuts will go to the people who need them the most, those with incomes of $10,000 a year or less, who account for 85 percent of all tax returns. An average childless married couple making $6,000 a year will have a tax saving of $186, or 22 percent of its total tax bill. A couple with two children and an income of $10,000 would have a tax cut of $258, a saving of 19 percent.

The corporate tax rate will be cut from 30 to 22 percent on the first $25,000 of income, and from 52 to 48 percent on income over $25,000. Tax payments for corporations with incomes over $100,000 will be accelerated. At present such firms pay most of their taxes in the year after they are due. In fact, many corporations fund their tax liabilities by investing in short-term notes. H.R. 8363 provides for gradual changes which, over a period of several years, will put corporations on the same pay-as-you-go basis as individuals.

These rate cuts account for most of the tax reduction. The bill also contains a number of highly desirable reforms which will remove inequities in the present laws. The most critical of the structural reforms is the minimum standard deduction. Under present law persons who do not itemize their deduc-

tions are allowed a standard deduction of 10 percent of their gross income. This means that a single person with an income of only $667 has to pay income taxes. The bill provides that single taxpayers will get a minimum standard deduction of $300, married couples will get $400, plus $100 for each additional dependent. This provision amounts to only 2.6 percent of the total tax reduction, yet it will give relief to 13.5 million taxpayers, and will completely remove 1.5 million very poor persons from the tax rolls. Most of the benefits of this reform will go to people making less than $5,000 a year. Taking into account the rate cuts, the minimum standard deduction, and certain other reforms, the effective tax rate for persons with incomes under $3,000 will be reduced by 39 percent.

The other major humanitarian reform in the tax bill is a considerable liberalization of the provisions for deductions for child care in families suffering undue hardships. The maximum age of children for whom deductions can be claimed has been raised to 12, the maximum deduction increased to $1,000, and the maximum family income raised to $7,000.

There are other provisions that will relieve hardship and cushion the shock of economic dislocations. The present 1 percent floor for deductions for drug purchases has been abolished for people over the age of 65. The cost of moving to take a new job has been made a deductible expense, thus making it easier for workers to go from depressed areas to places where jobs are more plentiful.

The bill contains a number of reforms to prevent legal tax dodging by means of personal holding companies, artificial dispersion of corporations to evade the corporate surtax, and other devices. It prevents most of the shenanigans on stock options by tightening the provisions by which such benefits are eligible for treatment as capital gains rather than personal income.

There is one more reform that I would like to mention, because of its connection with my own State of Minnesota. This is the provision that political contributions may be deducted, up to $50 for single taxpayers and $100 for married couples. Minnesota was the first State to give such encouragement to popular financial support of the political process, and I am pleased that this progressive example is being followed by the Congress of the United States.

A PROGRESSIVE TAX BILL

I think that this is a sound and good bill. It combines urgently needed tax reduction with a number of highly desirable reforms. It does not include every necessary reform, but it would be unrealistic to expect perfection in any one piece of legislation. This bill may not be all that some of us would like, but it takes us a long way toward that goal.

[*P. 2306*]

Since this bill has so much that is good in it, I am amazed to hear some of my distinguished friends complaining that it is a giveaway bill, favoring the rich and mighty at the expense of the humble citizen. I can find little to justify such claims. Most of the tax cuts in this bill go to individuals, not corporations. And small businesses get three times as big a tax reduction as larger corporations—27 percent as opposed to 8 percent.

On the individual level, the bulk of the reduction, either in absolute or percentage terms, goes to the smaller taxpayer; $7.621 billion, or 80 percent of all individual tax savings, goes to taxpayers making under $20,000 a year. People with annual incomes less than $3,000 will get a 39-percent reduction in taxes, compared to a 16-percent cut for people in the $20,000 to $50,000 class, and 13.5 percent for those making more than $50,000. This is not a regressive bill; it is a progressive one, and as such it deserves the support of all those who believe in progressive principles of taxation.

By the same token, this is not a soak-the-rich bill, either. One of the most important and controversial issues is the treatment of capital gains. At present gains held more than 6 months are taxed as follows: one-half of the net gain is not subject to taxation; the other half is taxed at ordinary income tax rates; however, the total tax cannot exceed 25 percent of the entire net gain. Less than 4 percent of all the taxpayers who report capital gains actually compute their taxes at this maximum rate of 25 percent. The overwhelming majority compute their capital gains taxes by applying the regular income tax rate to half of the gain. Since these income tax rates have been reduced so sharply, more than 96 percent of all holders of capital gains will have a tax reduction on those gains equal to the reduction on regular income. If the capital gains rate were also reduced, a small, wealthy minority would get a capital gains tax cut almost double the cut on regular income.

The present treatment of capital gains is hardly oppressive. It is the chief reason why the effective tax rate for the average man with a yearly income of over a million dollars is barely 30 percent which is a lower effective rate than is paid

by people making a tenth as much. We propose substantial tax reduction in every income bracket, and the largest rate reductions of all in the high tax brackets These cuts will be fully reflected in the taxes paid by 19 out of 20 holders of capital assets. They will also reduce substantially the taxes paid by the remaining holders of capital gains. If, on top of this, we gave yet another tax cut to the wealthy few, we would in fact be shifting an equal tax burden to people who are less able to pay. For this reason I am pleased that the Senate voted, by an overwhelming margin, to support the Finance Committee's decision to retain the present capital gains tax rates.

In another wise action, the Committee on Finance eliminated the 4-percent tax credit on dividend income. At the same time, the committee encouraged the small stockholder by increasing from $50 to $100 the amount of dividend income which is not subject to taxation. The dividend exclusion for married taxpayers was also doubled, from $100 to $200. These committee actions have been confirmed by the Senate.

As a result of these changes more than 60 percent of all people with dividend income will pay less or the same amount of tax on that income. In fact, a family would have to own almost $15,000 worth of stock before these changes would increase its taxes on dividend income. For most such large stockholders the loss of the dividend credit will be offset by income tax rate cuts and by the corporate tax reduction. This last change alone will increase after-tax corporate income by 8.3 percent.

The dividend credit was enacted in 1954 in hopes that it would stimulate investment in the stock market. But the Secretary of the Treasury, a man of vast experience in the financial world, has testified that the dividend credit did not stimulate such investment. In fact the percentage of private savings invested in stock has actually declined since 1954.

SOME DEFECTS IN THE TAX BILL

As I have said, this is not a perfect piece of legislation by any means. For all its excellent provisions, this bill has several unfortunate features that I voted against and that I hope will not remain in force for long.

One of these provisions will cost customers of public utilities billions of dollars. In 1962 the Congress gave businesses a tax credit to encourage new investment. In most businesses, this credit was 7 percent of the worth of the new investment. This represents a substantial saving in operating costs.

This provision has a special significance for public utilities, whose rates are set by regulatory agencies which take cost, profit, and capital needs for future expansion into account. Since the investment tax credit lowers costs, its benefits should be passed along to utility customers in the form of lower rates. In fact, the floor manager of the 1962 tax bill specifically stated that it was intended that utilities would pass along to their customers the savings that they received under the investment credit.

But section 203(e) of the current tax bill prohibits regulatory agencies from requiring public utilities to do this. In effect this provision forces the regulatory agencies to pretend that these tax concessions do not exist for purposes of setting utility rates. It has been estimated that this provision will cost American utility customers $618 million in 1964 alone. For this reason I regret the Senate's decision to uphold section 203(e).

Second, the Senate once again refused to take any significant action on the tax treatment to the oil industry. The depletion allowance permits oil companies to exclude up to half of their net income from taxation. Together with so-called "intangible development and drilling costs," this provision lets some oil producers escape income taxation altogether. To be sure the production of oil requires special consideration, and I am prepared to support such reasonable provisions. But I do believe there is a need for a modest revision of present depletion allowances.

Several attempts were made on the floor of the Senate to reduce this special treatment somewhat. These proposals were all defeated, despite the impressive documentation presented by Senator DOUGLAS and other Members.

There also was a valiant but unsuccessful attempt to increase the minimum standard deduction. While the bill's provision of $300 for a single taxpayer and $100 for each dependent represents a considerable reduction in the taxes paid by very poor families, this group still bears too great a tax burden. A minimum standard deduction of $400 and $200 for each dependent would give further tax relief to those people whose incomes do not permit them to maintain minimum levels of health and well-being. The revenue loss caused by this measure would be made up by a smaller reduction in the taxes paid by large corporations. I am sorry that this humane proposal was not adopted.

THE IMPACT OF THE TAX BILL

The major overriding goal of this bill is to stimulate a lagging economy by in-

creased purchasing power freed by lower taxes. From every indication the bill's impact on the economy will be immediate and profound. About 93 percent of the tax cut will go into personal consumption spending. This will result in a speedy increase in the gross national product of between $30 and $40 billion a year. This stimulus will be felt in every industry and every part of the country, by workers, farmers, and businessmen. For example, the Treasury Department has estimated that the tax cut will result in a personal income increase of $540 million a year in my own State of Minnesota. The Senator from New Hampshire [Mr. COTTON], has quoted me as saying that this bill will not increase employment. I'm afraid he has failed to quote me in full or has failed to understand that what I sought to emphasize was the importance of long-range planning to obtain the benefits of automation, automation that will be encouraged by the benefits of this tax bill. But, automation should create jobs provided that we have an economy that is propelled forward by expanded purchasing power. It is just this purchasing power that is provided in this measure.

The tax cut's impact on the Federal budget will come in several stages. A good deal of the tax loss will be made up by higher revenues produced by increased prosperity. While the total tax cut for fiscal year 1965 will be over $8 billion, the actual loss in tax revenues will be only about half this figure, since the higher level of business activity will return more taxes to the Government. Within a few years the economy, freed from the burden of wartime taxes, is expected to produce enough tax revenue to balance the budget.

The short-run budget deficit is like borrowing in order to finance future ex-

[P. 2307]

pansion—a common practice in progressive corporations.

It is wise to remember that the actual amount of tax revenue received by the Treasury is a product of both the tax rate and the general health of the economy. A drop in the level of business activity is the surest way to deficits.

In 1959 a recession turned an estimated half-billion-dollar budget surplus into a deficit of $12 billion—a peacetime record. The important thing about the national debt is not its absolute size considered in isolation, but its size relative to the gross national product. In 1946 the national debt was slightly larger than the total of all goods and services produced in the United States in that year. Since then the GNP has grown so much faster than the national debt that today the debt is only 50 percent of the GNP. In fact, while the national debt has grown 11 percent since 1946, corporate debt has gone up by 400 percent, and State and local government debt has also increased by 400 percent.

In reducing the tax bite taken by the Federal Government, the tax bill is expanding the tax base of State and local governments. The prosperity resulting from the Federal tax cuts will provide almost $3 billion in additional revenues for State and local governments, without any rise in their tax rates. The effect of this tax bill in Minnesota will be to increase State and local tax collection by $62 million.

This bill had its inception in the careful and scholarly deliberations of the Council of Economic Advisers and the Treasury Department. The Committee on Finance and the Ways and Means Committee heard hundreds of witnesses and deliberated for months as they devised the specific legislation. They have produced a comprehensive and wisely conceived measure. This bill alone will not solve the unemployment problem. But, by freeing the great productive energies of the American economy, it holds out the promise of creating more than 2 million new jobs in the years ahead. We need those jobs, and we need this bill.

Mr. THURMOND. Mr. President, I cannot bring myself to vote for passage of H.R. 8683.

The National Government is operating almost every year at a deficit. Only six times in the past 34 years have revenues exceeded expenditures, and in most of the balanced budget years the margin of revenues over expenditures was narrow. On the other hand, in deficit years the margin of expenditures over receipts has soared. We are now faced with a deficit in years when the economy is booming. We cannot continue such fiscal irresponsibility without permanently impairing the economic stability of the Nation.

It is estimated that at constant levels of income, this bill, when fully effective, will reduce receipts of the National Government by $8.4 billion. The Treasury Department optimistically estimates that the resulting release of funds to the private economy will result in a mitigation of revenue losses, but even the Treasury's optimistic estimate concedes a net revenue loss of somewhere between $4 and $5 billion annually as a result of this bill. We have no guarantee that spending will be reduced

or held to present levels, for we have rejected amendments to insure controls on spending.

Even in the absence of a reduction in taxes, we are faced with mounting deficits in prosperous times. To reduce taxes under such circumstances is to invite inflation which is even harder to control than is the spending rate of the National Government. It is impossible, therefore, to reach any other conclusion than that a tax reduction without concurrent or prior reductions in expenditures constitutes the height of fiscal irresponsibility.

Mr. President, Federal income tax rates at present are exeessively high. They should be reduced. A reduction without a corresponding or greater reduction in expenses, however, constitutes a remedy for the problem with far worse consequences than the problem itself.

Generally, the structural changes made by H.R. 8683 improve the equity and operation of the tax structure. For the most part, they are long overdue. Were they to be considered separately from the reduction in rates, or were the entire bill to be considered under circumstances of assured reduction in expenditures, I would certainly support it. Under existing circumstances, I must vote against passage.

SMALL BUSINESS ASPECTS OF THE TAX BILL

Mr. FULBRIGHT. Mr. President, I wish to discuss briefly the significance of the tax bill to small business. As a former small businessman and chairman of the committee having jurisdiction over small business legislation, and as representative of a State whose economy is based on small business, I have a special interest in the implications of this bill for the small businessman. The overall effect of this bill—direct and indirect—should make this one of the most important small business-related measures ever to come before the Congress. It is especially gratifying to me that this bill proposes to reverse the corporate normal and surtax rates—an idea I have promoted for a number of years. This feature will probably prove to be the most significant provision of the bill for small corporations.

There is really nothing small about small business. Small business firms constitute about 95 percent of all businesses in the country, employ some 30 million people and account for about 40 percent of the total business volume.

They now bear the greatest burden of an economy that is operating below capacity. Larger, diversified firms are in a much better position to shift production emphasis during slack periods. Small, single-product firms with limited markets and sources of capital have little freedom to maneuver when economic conditions become unfavorable. The provisions of this tax bill should give much encouragement to small businessmen throughout the Nation who have been fighting a losing battle with bigness on every hand.

The tax bill will help small business in a number of ways.

First, the full reduction in the normal corporate tax rate from 30 to 22 percent will go into effect in 1964. I am pleased that the idea was adopted by the late President and made a part of his tax recommendations to Congress. Nearly one-half million small corporations, those with taxable incomes of $25,000 or less, will have their tax rates cut by almost 27 percent, as contrasted to an 8-percent rate reduction for those earning above that amount. The annual tax saving for these small firms will total about $230 million starting in 1964. In the case of single-proprietor businesses, the benefits from individual tax reductions will average nearly 20 percent.

Second, credit is a particular problem with the small corporation—because it does not have access to sources of capital available to big business. Lack of adequate capital to invest in new equipment, venture into a new product line is a prime factor inhibiting growth of most small businesses. Tax reduction, by increasing the volume of earnings that may be used for expansion and modernization, can help relieve dependence on costly short-term credit.

Continued borrowing of excessive amounts is no substitute for retained earnings. The tax bill will immediately increase retained earnings—permitting small businessmen throughout the country to expand, relocate, or purchase new machinery and equipment.

On occasion it will still be necessary for the small businessman to borrow in order to take prompt advantage of promising opportunities. But we must not lose sight of the fact that the ability to obtain such funds, at the right time, in the right amount, and on reasonable terms, depends on the outlook for profitable operations.

This tax measure will greatly improve the prospects for profitable operations for the small businessman. It can, in fact, well spell the difference between success or failure for existing small business, the difference between starting or holding back on a new venture. The tax bill will help unlock once again all the initiative and enterprise that U.S. businessmen, large and small, have always been able to call upon.

Finally, small businesses will benefit from liberalization of the investment credit provision. This will also foster expansion by encouraging acquisition of new equipment. This coupled with last year's liberalization of depreciation schedules should give great incentive for modernization that will make small businesses more able to compete for growing markets.

The present rate structure has undoubtedly contributed to the decline in the relative importance of small business in recent years. To the extent that our tax laws foster larger and more powerful business units, our political democracy is distorted and weakened. This tax bill

[*P. 2308*]

should help insure that small business will be given a fair chance to grow and prosper under our competitive system. I can think of no action more vital to the maintenance of our system of free enterprise than the encouragement and development of small businesses. They are the very foundation of our national economy.

INFLATION AND THE TAX BILL

Mr. President, a number of points have been raised concerning possible inflationary aspects of the tax bill when coupled with restraints on Federal spending. Some argue that although the combination will bring about a high level of economic activity this year, the stimulus will "overheat" the economy and that it will create eventually inflationary pressures that will offset benefits of the tax cut. Others question the timing of the tax reduction and expenditure restrictions. They contend that the combination will cause rapid withdrawal of stimulus to the economy after 1964 and that the impact of tax reduction will be lessening at the same time Government expenditures are being lowered.

There is no doubt that inflationary pressures are likely when the economy is operating under conditions of full employment and full production. This is not the case now, nor is it likely to be in the immediate future. Although gross national product is increasing and the gap between actual and potential productivity is being closed, we have not come close to reaching our full employment level. Four million Americans are looking for work and the unemployment rate is over 5½ percent. The rate is not expected to go below 5 percent this year, even with the stimulating effect of the tax cut. It should also be kept in mind that some 3½ million new jobs must be created annually for the next decade in order to keep the unemployment situation from worsening. The labor force will also be increased by many workers returning to work who have temporarily dropped out of the labor market. Those leaving the unemployment rolls and others returning to work after a temporary layoff will also be consumers who will be in a position to help close the gap between our productive capacity and output.

Considerable excess capacity exists. It is estimated that the economy is fully capable of producing without strain at least $30 billion more in goods and services—but is not doing so because of insufficient demand. Production rates are well below maximum operating levels. The central purpose of the tax reduction is to remove these twin conditions of unemployment and unused capacity. In this sense the tax bill is a catalyst that will energize the private sector of the economy to eliminate underutilization of manpower and machines.

In considering the question of possible inflation it should be noted that a considerable part of the expansion now underway is a result of the proposed tax cut. Economists report that much of the recent rise in the level of fixed investment expenditure can be attributed to the expectation of passage of the tax bill. Actual adoption of the tax bill will not mean an entirely new factor for stimulating investment. Expectations on the part of businessmen that their own taxes as well as the taxes of consumers will be reduced undoubtedly have been significant factors in accounting for the $9 billion increase in expenditure for fixed investments over the past year.

Those who are so concerned over the possibility of inflation perhaps do not attach sufficient importance to the changes that have taken place in our economy since the end of World War II. During the late forties and early fifties, we had conditions conducive to creation of excess demand—with inflationary consequences. We are not now involved in a peacetime readjustment as we were in the late forties and we are not involved in a large-scale armed conflict as we were during the Korean period. During both periods, heavy demands were placed on the labor force which was already substantially at full employment levels. Businessmen and labor unions were not unduly concerned with pricing themselves out of the market. One reason was that we had no substantial competition from the rest of the free world at that time. But the situation is different today. Competition for markets is keen at home and abroad and workers are probably as concerned about jobs and job security as in increases in money wages. Increases in money wages and

prices since the late fifties have in fact been minimal. During the past year, for example, average hourly earnings of manufacturing employees have gone up by only 8 cents while the index for manufacturing production rose almost 8 percent.

We are experiencing a period of relative price stability. The wholesale price index has been quite stable for 5 years and is now actually below the level of 3 years ago. The Consumer Price Index has gone up by only a little over 1 percent a year in the last 3 years and most of that has been due to increases in prices of services. We have had a $100 million increase in gross national product with little inflation in the last 3 years. Of the 20-percent increase in gross national product in the last 3 years, only 4 percent is attributable to a rise in prices. The $38 billion increase in gross national product predicted for this year, which includes the stimulating effects of the tax cut, should not place any undue strain on our price-wage structure in view of the ratio of idle capacity to manpower.

Concern has been expressed about the dangers from timing of the tax reduction and spending curbs. Actually, the timing of the combination in the present form turns out to be much better than originally contemplated. Government expenditures for goods and services rose during the past year and part of the increase in gross national product is attributable to this factor. Rising Federal expenditures played an important role in the 1961–63 expansion. These expenditures accounted directly for 11 percent of the growth in GNP. The tax reduction and the President's budget for the next fiscal year shift the Government's emphasis from direct stimulation sharply over to the private sector. With the combination policy proposed there should be a slight increase in Goverment expenditures for the first half of the year and a leveling out at about the time the stimulus to the economy from the tax cut takes hold. This timing as a balance in the use of the two fiscal weapons should turn out to be quite beneficial.

As a last point, it should be noted that one of the most effective lines of defense against inflation is a sense of public responsibility exercised by labor and business leaders. Decisions made by these men will decide ultimately whether or not we will have another wage-price spiral. I do not think it is unreasonable to expect these leaders to exhibit that sense of responsibility. If they do not, the outlook for our economy is bleak indeed, with or without a tax cut. The President has appealed to labor and management to hold the line on prices and wages. As Members of this body know so well, the President can be most persuasive.

I can appreciate the fears of those who look over their shoulder at the results of the Nation's past experiences with runaway inflation. None of us is willing to agree to a measure that promises to set off another disastrous wage-price spiral, diminish further the value of the dollar, and wipe out the solid economic gains that have been made in recent years. We are not confronted with such a risk in this bill. As I have attempted to point out, the prime factors which feed the fires of inflation are not at worrisome levels today—nor can they be expected to be after the effects of this bill are fully operative. The only justification for the tax cut is to try to bring employment and production up to satisfactory levels. We should concern ourselves with taking necessary steps to reach this goal and maintain it rather than permitting vague fears to keep the Congress from taking constructive action. The soundest growth periods of the Nation were not founded on either fear of the future or on reckless gambling. This bill represents that middle ground of confidence in the basic strengths of our economy which has been the key ingredient in our Nation's growth.

Mr. SMATHERS. Mr. President, I should like to propound a unanimous-consent request that the Senate be permitted to vote on the passage of the bill, and that following the vote on the passage of the bill Senators who may wish to speak concerning the bill may do so and that their remarks may appear in the RECORD prior to the final vote. The reason for the request is that at least 20 Senators have plans to take airplanes in the next 35 or 40 minutes, but will be unable to do so if many Senators speak.

Mr. CLARK. Mr. President, reserving the right to object—and I shall not object—does the Senator intend to have the conferees appointed before or subsequent to the making of the speeches? I desire to say a word about the conferees, but I am wondering whether it is intended to wait until after the vote.

[*P. 2309*]

I should like to say a word about the conferees.

Mr. SMATHERS. Mr. President, I should like to make the unanimous-consent request with the understanding that the Senator from Pennsylvania will be permitted to make this speech before the conferees are appointed.

Mr. PROXMIRE. Mr. President, reserving the right to object—and I shall not object. I informed the majority leader and the Senator in charge of the bill this morning that I desired to make a 15-minute speech on the bill. At their specific request, I agreed not to offer an amendment for that purpose, because they assured me that I would receive time on the bill before the vote if I deferred to their wishes.

Nevertheless, I will speak after the bill passes in view of the obvious desire to vote, and to vote now.

Mr. MANSFIELD. Mr. President, will the Senator from Wisconsin yield?

Mr. PROXMIRE. I yield.

Mr. MANSFIELD. The Senator from Wisconsin is absolutely correct. He was given that assurance; and, so far as I am concerned, I wish he would deliver that speech now.

Mr. PROXMIRE. No; I shall not do so.

Mr. MANSFIELD. I would appreciate it if the Senator would give his speech now, because when word is given, it must be kept.

Mr. TALMADGE. Mr. President, on the question of the passage of the bill, I ask for the yeas and nays.

The yeas and nays were ordered.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass?

On this question the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk called the roll.

Mr. KUCHEL. I announce that the Senator from Nebraska [Mr. CURTIS] and the Senator from Illinois [Mr. DIRKSEN] are necessarily absent.

On this vote, the Senator from Illinois [Mr. DIRKSEN] is paired with the Senator from Nebraska [Mr. CURTIS]. If present and voting, the Senator from Illinois would vote "yea," and the Senator from Nebraska would vote "nay."

The result was announced—yeas 77, nays 21, as follows:

[No. 39 Leg.]

YEAS—77

Allott	Dodd	Javits	Monroney	Pell	Sparkman
Anderson	Dominick	Johnston	Morse	Prouty	Symington
Bartlett	Douglas	Jordan, N.C.	Morton	Randolph	Talmadge
Bayh	Eastland	Jordan, Idaho	Moss	Ribicoff	Walters
Beall	Edmondson	Keating	Mundt	Robertson	Williams, N.J.

Ervin	Mechem	Thurmond
Goldwater	Miller	Tower
Gore	Neuberger	Williams, Del.

NOT VOTING—2

Curtis	Dirksen

So the bill (H.R. 8363) was passed.

Mr. LONG of Louisiana. Mr. President, I move that the Senate insist upon its amendments and request a conference with the House of Representatives on the disagreeing votes thereon, and that the Presiding Officer——

Mr. DOUGLAS. Mr. President, may we have order?

The PRESIDING OFFICER. The Senator will suspend. Will the Senate please be in order?

Mr. CLARK. Mr. President, under the unanimous-consent agreement, I understood that I would be entitled to speak before the conferees were appointed.

Mr. LONG of Louisiana. The Senator is correct. I had anticipated that the Senator would speak on that subject.

Mr. CLARK. Mr. President, is the Senate still on limited time?

The PRESIDING OFFICER. It is not on limited time.

SUPPORT OF THE TAX CUT

Mr. CLARK. Mr. President, for more than 7 months last year the Subcommittee on Employment and Manpower plumed the depths of the Nation's unemployment problem. The subcommittee is now developing its reports and recommendations as a result of these studies. We are convinced that the solution to America's unemployment problem is not a simple one, but that it would be useless to try to resolve the many structural problems which lie at the heart of unemployment unless the economy is expanding at a rapid enough rate to absorb all who can be trained and educated for work.

The President's tax bill goes to the heart of this problem. It will provide a much needed stimulus which will encourage an increase in the consumption of goods and services and additional investments in modern plants and equipment.

In my judgment, this tax bill is the first step toward the intelligent use of tax and expenditure policy to achieve full

employment in the United States. Every nation of Western Europe has been using the tax and expenditure policies of government to maintain high levels of employment and growth. Yet here in the United States our Federal budget remains a horse and buggy document.

The Employment Act of 1946 declared it to be our national purpose to provide all those willing and able to work with employment. Congress has never given the President the tools he needs to make good on that promise. This bill is a step in that direction and I support it for that reason.

APPOINTMENTS OF CONFEREES

Mr. President, I should like to speak briefly in reference to the appointment of conferees. I am not too clear who the conferees on the bill will be. I do not make the request that I should be advised.

I wish to call to the attention of the Senator in charge of the bill and potential conferees the very clear rules about the appointment of conferees which are set forth in the book on Senate Procedure authored by Mr. Watkins and Mr. Riddick. Beginning on page 171 of that book, the following statements appear:

> Appointment by Chair under order of Senate: It is the universal practice in the appointment of conferees for the Presiding Officer to name the Senators suggested to him by the Member in charge of the particular bill—

That is the Senator from Louisiana [Mr. LONG]. Continuing to read—

> Under rule XXIV, "the Senate may elect its conferees, if it sees fit to do so. The Senate has a right to elect its own conferees. A motion to elect certain conferees is amendable by substituting other conferees."

Still quoting:

> The conferees in theory are appointed by the Presiding Officer but in fact are designated by friends of the measure, who are in sympathy with the prevailing view of the Senate, and with consideration for the usual party ratio. And the Senate, on motion, may elect its conferees as it sees fit.

Quoting from page 174:

> Resignation or declaration to serve: Senators have declined to serve as conferees in some instances because they were not in sympathy with the provisions of bills as passed by the Senate or, after a conference report was rejected, a Senator declined to serve on a second conference committee because of views not in harmony with the action of the Senate.
>
> Conferees have resigned because they were not in sympathy with the action of the Senate on the bill or opposed to the bill in question.

I shall leave to the conscience of every member of the conference committee whether or not he thinks he qualifies under the terms clearly established by the precedents of the Senate. A number of questions are in disagreement between the Senate and the House. Perhaps the most important is with reference to the capital gains tax. Another important issue is the amendment of the Senator from Tennessee [Mr. GORE] dealing with the foreign tax credit. It is essential for the orderly, proper and, indeed, honest conduct of business that a majority of the conferees on the part of the Senate should have supported by their votes the position taken by the Senate on the questions which are in disagreement with the House of Representatives.

I hope that each potential conferee will search his own conscience to determine whether he qualifies under that clearly established principle.

Mr. LONG of Louisiana. Mr. President, I move that the Senate insist upon its amendments and request a conference with the House of Representatives thereon; and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. BYRD of Virginia, Mr. LONG of Louisiana, Mr. SMATHERS, Mr. ANDERSON, Mr. WILLIAMS of Delaware, Mr. CARLSON, and Mr. BENNETT conferees on the part of the Senate.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that the bill, H.R. 8363, be printed with the

[P. 2310]

amendments of the Senate numbered, including a table of contents following the end of the bill; and that in the engrossment of the amendments of the Senate to the bill, the Secretary of the Senate be authorized to make all necessary technical and clerical changes and corrections, including corrections in section, subsection, and so forth, designations and cross-references thereto.

Mr. PROXMIRE. Mr. President, I want to pay my respects to the tax reduction bill which has just been passed—and I choose my words carefully—as an unprincipled, irresponsible, regressive, super budget buster. Furthermore, it is inflationary. It cruelly excludes the aged. It excludes 85 percent of those over 65. It excludes a majority of the farmers from tax benefits. But it hits them hard with inflation. It is a bad bill.

Make no mistake—this 1964 tax cut bill inaugurates a brandnew era in American economic policy.

What is the new policy in the bill? It is that the Government will deliberately unbalance the budget—by cutting taxes

or increasing spending in any year in which unemployment is more than 4 percent. We will do this regardless of how prosperous business may be, or how high profits are, or how rapid growth is.

As the President said in his economic message to the Congress, the fact is that this is the most prosperous peacetime year in peacetime history. It is a year of the greatest increase in personal income, savings, gross national product in our history. The stock market is at an alltime high—twice as high as 1929. The policy we follow in this tax bill is an explicit violation of the Democratic platform adopted in 1960 at Los Angeles. I read one passage from it:

> We believe, moreover, that except in periods of recession or national emergency, these needs can be met with a balanced budget * * * with some surplus for the gradual reduction of our national debt.

What we have done this afternoon is to repudiate that platform promise. We now have made it clear that it is the policy of this Congress—and I must say the policy of our party in the Congress—not to balance the budget in a period of our greatest prosperity. Suppose we had followed that policy since 1909, Mr. President.

Applied historically, this policy means that between 1908 and 1917 taxes should have been cut deliberately, or spending increased, to unbalance the budget every year, for unemployment exceeded 4 percent every year.

Then, between 1917 and 1919 when we were in World War I, and unemployment was low, we had an immensely unbalanced budget, of course, because of the huge war spending.

From 1921 to 1941—a 21-year sweep—we should have had, if we had followed this policy, deliberately unbalanced the budget in every year except three, 1923, 1926, and 1929.

During World War II and the Korean war we had an immensely unbalanced budget, because of our necessary military spending.

Between 1954 and 1964, if we had followed the policy which now has been made explicit and ratified by Congress, there would have been an unbalanced budget every year of the last 10 years with one exception.

To sum up, the policy of placing full and ultimate reliance for solving unemployment upon a fiscal policy of an unbalanced budget would if followed in the past 55 years have given us a fantastically huge national debt. If followed in the future, our debt and eventually our taxes will be immense. We are ignoring the real and proven methods of meeting our unemployment problem. We have done nothing about early retirement, or monetary policy. We have created a situation now where monetary policy is almost sure to be restrictive, and likely to offset whatever stimulative effect the tax cut may give us.

We have established the beginning of our reliance for meeting unemployment almost entirely on unbalanced budgets.

There are other elements in the tax bill which are almost as unfortunate as those which I have mentioned. This tax bill dictates to Federal regulatory bodies that they shall ignore full after-tax income in computing a fair return to utilities. It requires a super fair return.

As I have said, this bill is expressly inflationary. It is going to result in an increase in utility rates of $630 million for American consumers in the next year, and $6 billion a year within a few years. The American family's electric light bill, and its gas bill will climb and climb because of the express direction in this bill to regulatory bodies that they must permit utilities to earn more than a fair return, a super return that the full impact of Federal tax reductions specifically the investment credit cannot be considered in determining utility rates.

Another provision of the bill violates the cherished 175-year-old American legal precedent that a businessman can depreciate assets he buys only 100 percent.

It opens the door to tremendous future abuse because it provides for 114 percent depreciation. Every economist knows that when demand is deliberately increased by a $11.5 billion tax cut in a period of prosperity when prices are already high, the inflationary effect on our economy is going to be substantial indeed.

As I have said, this tax bill can be summed up as a principle-busting, financially irresponsible, inflationary, regressive monstrosity.

At the same time, it is popular. There is nothing a politician can do that is more popular than cutting taxes. Everybody wants to cut taxes.

We are entering into a new wonderful era for the politician. It means we are going to follow for the future the policy of cutting taxes regardless of what the deficit is, or how prosperous conditions are and if that does not work, increase the spending. The day of reckoning is in the long run, but as Lord Keynes has said in the long run, we are all dead.

Mr. LAUSCHE. Mr. President, will the Senator yield for a brief observation?

Mr. PROXMIRE. I yield.

Mr. LAUSCHE. I do not quite agree with the last statement made by the Senator. In Columbus, Ohio, the question was before the people as to what rate of fare should be charged on the local transportation system. The company wanted to increase it to 10 cents. The city council did not want to act upon the proposal. The mayor did not want to act. So the question was placed before the voters: "Shall you pay a 5-cent or a 10-cent fare?"

To the great amazement of everybody, after the arguments were made, the voters voted for the 10-cent fare, knowing that that was sound and just.

Mr. PROXMIRE. The Senator from Ohio makes an excellent point. If the people could know, or if they were told all the facts, I am convinced they would be against the tax cut. But the President of the United States, the great newspapers, AFL–CIO, the U.S. Chamber of Commerce, and many newspapers in the Nation have been arguing and pleading loud and long for lower taxes. They have publicized the case for tax reductions. They have done a remarkable job in the past year.

Mr. President, I had promised to yield to the Senator from Oregon [Mr. MORSE], who has an appointment to keep, and I shall do so after a very brief statement.

Unfortunately, the Senator from Louisiana [Mr. LONG], who has been the floor manager of the bill, has left the floor. I want to say that this not only may be a new era in economic policy or tax policy for this Nation, but it also embarks on a new era in Senate tax leadership. I think the Senator from Louisiana has done a superb job on the floor in managing this bill. I say it about him though he was the leader in fighting against every amendment I proposed. I have never seen a Senator who was more forceful and effective. He beat us, and beat us very badly. I regret very much that he has won and as I said yesterday won so smashingly. Never has a monstrous bill had such a remarkable champion.

Mr. President, if a man murdered a crippled, enfeebled orphan at high noon on the public square in the plain view of a thousand people, I am convinced after today's performance that if the Senator from Louisiana represented that guilty murderer, the jury would not only find the murderer innocent, they would award the defendant a million dollars on the grounds the victim had provoked him. The Senator from Louisiana not only made this monstrous tax bill appear good enough to win the votes of an overwhelming majority of Senators. He made those of us who fought it to the bitter end and suffered defeat grudgingly enjoy seeing an obvious legislative artist in action.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. PROXMIRE. Let me yield first to the Senator from Oregon.

[*February 8, 1964*]

[*P. 2455*]

REVENUE ACT OF 1964

Mr. MILLS. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes, with Senate amendments thereto, disagree to the Senate amendments, and agree to the conference requested by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

Mr. HALLECK. Mr. Speaker, reserving the right to object, and I shall not object, am I correct in my understanding that as chairman of the committee you discussed the matter with the gentleman from Wisconsin [Mr. BYRNES], the ranking minority member, and this meets with his approval?

Mr. MILLS. The gentleman is correct. I had hoped the gentleman from Wisconsin [Mr. BYRNES] would be here, but he has evidently been delayed in getting here this morning.

Mr. HALLECK. I withdraw my reservation of objection, Mr. Speaker.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas? The Chair hears none and appoints the following conferees: Messrs. MILLS, KING of California, O'BRIEN of Illinois, BOGGS, BYRNES of Wisconsin, CURTIS, and KNOX.
