ALPHABETICAL LISTING OF MEMBERS OF CONGRESS WITH CROSS-REFERENCES TO FLOOR DEBATES (INCLUDING EXTENSION OF REMARKS)—Continued

Subject and Members of the Senate—Continued — Page Nos. (of this document)

Percentage depletion rates for oil and gas wells; three-step reduction in (Senator Williams of Delaware) ---------- 3248–3303
- Aiken, George D. (Vermont)
- Allott, Gordon (Colorado)
- Anderson, Clinton P. (New Mexico)
- Carlson, Frank (Kansas)
- Dominick, Peter H. (Colorado)
- Edmondson, J. Howard (Oklahoma)
- Javits, Jacob K. (New York)
- Lausche, Frank J. (Ohio)
- Long, Russell B. (Louisiana)
- McGee, Gale W. (Wyoming)
- Mechem, Edwin L. (New Mexico)
- Miller, Jack R. (Iowa)
- Monroney, A. S. Mike (Oklahoma)
- Pearson, James B. (Kansas)
- Proxmire, William (Wisconsin)
- Randolph, Jennings (West Virginia)
- Simpson, Milward L. (Wyoming)
- Stennis, John (Mississippi)
- Tower, John G. (Texas)
- Williams, John J. (Delaware)
- Young, Stephen M. (Ohio)

Excise tax—Tickets to live dramatic or musical performances (Senator Javits) ---------- 3303–3317
- Anderson, Clinton P. (New Mexico)
- Javits, Jacob K. (New York)
- Long, Russell B. (Louisiana)
- Morton, Thruston B. (Kentucky)
- Smathers, George A. (Florida)

Percentage depletion rates for oil and gas wells; reduction in (Senator Douglas) ---------- 3317–3354
- Anderson, Clinton P. (New Mexico)
- Carlson, Frank (Kansas)
- Clark, Joseph S. (Pennsylvania)
- Douglas, Paul H. (Illinois)
- Edmondson, J. Howard (Oklahoma)
- Gore, Albert (Tennessee)
- Long, Russell B. (Louisiana)
- McGee, Gale W. (Wyoming)
- Monroney, A. S. Mike (Oklahoma)
- Proxmire, William (Wisconsin)
- Randolph, Jennings (West Virginia)
- Simpson, Milward L. (Wyoming)
- Talmadge, Herman E. (Georgia)

Wage continuation payments (Senator McCarthy) ---------- 3359–3361
- Humphrey, Hubert H. (Minnesota)
- Keating, Kenneth B. (New York)
- McCarthy, Eugene J. (Minnesota)
- Morton, Thruston B. (Kentucky)
- Smathers, George A. (Florida)

Excise tax—Purses and handbags (Senator Keating) ---------- 3361, 3364–3367
- Allott, Gordon (Colorado)
- Javits, Jacob K. (New York)
- Keating, Kenneth B. (New York)
- Long, Russell B. (Louisiana)
- Morton, Thruston B. (Kentucky)
- Smathers, George A. (Florida)
- Williams, John J. (Delaware)

Subject and Members of the Senate—Continued — Page Nos. (of this document)

Deduction to lessee of residential land of certain real property tax paid by him (Senator Fong) ---- 3367–3369
- Anderson, Clinton P. (New Mexico)
- Bennett, Wallace F. (Utah)
- Byrd, Harry Flood (Virginia)
- Carlson, Frank (Kansas)
- Fong, Hiram L. (Hawaii)
- Long, Russell B. (Louisiana)
- Williams, John J. (Delaware)

Interest on indebtedness incurred or continued to purchase or carry tax-exempt bonds (Senator Williams of Delaware) ---- 3369–3377
- Anderson, Clinton P. (New Mexico)
- Bennett, Wallace F. (Utah)
- Gore, Albert (Tennessee)
- Lausche, Frank J. (Ohio)
- Long, Russell B. (Louisiana)
- McCarthy, Eugene J. (Minnesota)
- Williams, John J. (Delaware)

Investment credit; adjustment of basis under (Senator Proxmire) ---- 3377–3382
- Aiken, George D. (Vermont)
- Anderson, Clinton P. (New Mexico)
- Bennett, Wallace F. (Utah)
- Carlson, Frank (Kansas)
- Ervin, Sam J., Jr. (North Carolina)
- Long, Russell B. (Louisiana)
- Miller, Jack R. (Iowa)
- Pastore, John O. (Rhode Island)
- Proxmire, William (Wisconsin)
- Smathers, George A. (Florida)

Restricted stock options; termination of preferential tax treatment (Senator Gore) ---- 3382–3410, 3420–3435, 3451–3453
- Bennett, Wallace F. (Utah)
- Gore, Albert (Tennessee)
- Hart, Philip A. (Michigan)
- Javits, Jacob K. (New York)
- Keating, Kenneth B. (New York)
- Kuchel, Thomas H. (California)
- Long, Russell B. (Louisiana)
- Morton, Thruston B. (Kentucky)
- Pastore, John O. (Rhode Island)
- Smathers, George A. (Florida)

Deduction—Losses of personal residences seized by Cuba (Senator Williams of Delaware) ---- 3411–3412
- Long, Russell B. (Louisiana)
- Smathers, George A. (Florida)
- Williams, John J. (Delaware)

Extension of time for payment of estate tax on value of reversionary or remainder interest in property (Senator Smathers) ---- 3412–3413
- Long, Russell B. (Louisiana)
- Smathers, George A. (Florida)
- Williams, John J. (Delaware)

Credit or refund of self-employment tax (Senator Kuchel) ---- 3413–3415
- Gore, Albert (Tennessee)
- Kuchel, Thomas H. (California)

Technical amendments ---- 3411, 3415–3418, 3453, 3488
- Bennett, Wallace F. (Utah)
- Carlson, Frank (Kansas)
- Javits, Jacob K. (New York)
- Long, Russell B. (Louisiana)
- Smathers, George A. (Florida)
- Williams, John J. (Delaware)

88TH CONGRESS 2d Session } SENATE { REPORT No. 830

REVENUE ACT OF 1964

JANUARY 28, 1964.—Ordered to be printed

Mr. LONG of Louisiana, from the Committee on Finance, submitted the following

REPORT

Together with

INDIVIDUAL AND MINORITY VIEWS

[To accompany H.R. 8363]

The Committee on Finance, to whom was referred the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes, having considered the same, report favorably thereon with amendments and recommend that the bill as amended do pass.

I. SUMMARY

This bill, H.R. 8363, the Revenue Act of 1964, provides $11.6 billion of tax reduction scheduled over a 2-year period, the bulk of the relief, however, becoming effective within a month of enactment. The bill will cut back on excessive tax rates which unnecessarily restrain individual and business incentives, it will provide the increased consumer and business purchasing power to assure continued expansion, and it will improve the equity of the tax system.

(*a*) ***Revenue.***—The bill when fully effective in 1965 will reduce tax liabilities of individuals by $9.2 billion and of corporations by $2.4 billion. At constant income levels the bill would reduce receipts by $1.9 billion in fiscal year 1964 and $8.4 billion in fiscal year 1965 (including the $1.9 billion reduction from 1964). Taking into account the effect of this reduction in increasing private expenditures and income, the net effect on revenues is expected by the Treasury Department to be a reduction of $1.7 billion in fiscal year 1964 and $4.3 billion in fiscal year 1965.

(*b*) ***Rate reduction.***—

1. ***Individual.***—As in the House bill, individual rates are reduced from the present range of 20 to 91 percent to a new range of 16 to 77 percent in 1964 and to 14 to 70 percent in 1965. The bill provides that the withholding rate, presently 18 percent, will be reduced to 14 percent, effective within a week after enactment.

2. ***Corporate rate.***—As in the House bill, the tax rate for corporations in 1964 is reduced from 52 to 50 percent and is further reduced in 1965 to 48 percent. In addition, the rate applicable to the first $25,000 of corporate income beginning in 1964 is reduced from 30 percent to 22 percent. Furthermore, corporations are placed on a full pay-as-you-go basis so that ultimately all of their tax liability above $100,000 is to be payable in the year in which it is earned. This is achieved over a 7-year period so that it will not increase corporate cash outlays for tax payments in any year of the transitional period.

(*c*) ***Structural changes.***—In addition to rate changes the bill provides a number of provisions designed to increase the equity of the present tax law. Some of these increase and others decrease the revenue. The major items are:

1. ***Minimum standard deduction.***—The bill provides that each taxpayer may have a minimum standard deduction of $300 plus $100 for each additional exemption. This relieves from tax all single individuals with incomes up to $900, and all married couples with incomes up to $1,600.

2. ***Dividend credit and exclusion.***—The 4-percent dividend received credit is reduced by the bill to 2 percent for 1964, and repealed for subsequent years. The $50 dividend exclusion is increased to $100 for 1964 and subsequent years. In practical effect, this increase is from $100 to $200 for married couples.

3. ***Retirement income credit.***—The bill provides that in computing the retirement income credit the limit on retirement income is to be raised from $1,524 to $2,286 in certain cases where a joint return is filed.

4. ***Investment credit.***—In the case of the investment credit, the bill (*a*) repeals the provision requiring a 7-percent downward adjustment in the basis of property eligible for depreciation to the extent that the investment credit applies; (*b*) prevents regulatory commissions in certain cases from requiring the "flowthrough" of the benefits of the investment credit to the customers of regulated industries; and (*c*) makes other revisions in the investment credit.

5. ***Group term insurance.***—The bill limits the employee exclusion for premiums on group term insurance furnished through the employer to premiums paid for the first $70,000 of coverage.

6. ***Sick pay exclusion.***—The bill restricts the sick pay exclusion, of up to $100 a week, only to those who are absent from work for more than 30 days (and makes the exclusion available only for the period beyond that time).

7. ***Sale of residence by aged taxpayer.***—The bill provides an exclusion from the tax base for the gain attributable to the first $20,000 of the sales price of a personal residence in the case of an individual aged 65 or over.

8. ***Deduction of certain State and local taxes.***—The bill denies a deduction in computing income subject to Federal tax for State and

local taxes other than property, income, general sales taxes, gasoline, and auto license (the principal taxes for which a deduction is denied are alcoholic beverage, cigarette, and selective excise taxes).

9. ***Casualty loss deduction.***—The deduction for personal casualty and theft losses is limited to the amount in excess of $100 per loss (similar to "$100 deductible" insurance).

10. ***Charitable contribution deduction.***—Several changes are made in the charitable contribution deduction: (*a*) The 30-percent maximum deduction is made available generally for contributions to publicly supported organizations other than private foundations; (*b*) the 2-year carryover of charitable contributions for corporations is extended to 5 years; (*c*) a 5-year carryover is provided for individuals with respect to contributions to publicly supported organizations; (*d*) the unlimited charitable deduction is restricted to contributions to publicly supported organizations; and (*e*) charitable contributions deductions for future interests in tangible personal property are denied until the gifts are completed.

11. ***Foreign expropriation losses.***—The bill permits a taxpayer which has sustained a substantial foreign expropriation loss after 1958 to carry over that portion of a net operating loss arising from the foreign expropriation loss for 10 years without any carryback.

12. ***Medical expense deduction.***—The 1 percent limitation, or floor, on medicines and drugs which must be taken into account in determining deductible medical expenses is made inapplicable where the taxpayer or his wife is over 65 and also with respect to such expenses for dependent parents over 65.

13. ***Child-care expense deduction.***—The child-care deduction is revised (*a*) to make it available in the case of a wife who is incapacitated; (*b*) to make it available with respect to care for children up to age 13 (instead of 12); (*c*) the maximum deduction allowable where there are two or more children is increased from $600 to $900, and to $1,000 where there are three or more children; and (*d*) the present limit on the family income in the case of a working wife is raised from $4,500 to $7,000.

14. ***Moving expense deduction.***—A deduction for certain moving expenses—transportation of the household goods and the persons involved, and also their meals and lodging while in transit—is allowed for employees who are not reimbursed for these expenses and also for new employees (an exclusion for these items is already available in the case of old employees who are reimbursed). Old employees who are reimbursed for certain costs and losses in connection with the sale of their old home, occasioned by a move, are permitted to treat the reimbursement as sale proceeds rather than compensation.

15. ***Political contribution deduction.***—The bill allows individuals a deduction, limited to $50 a year ($100 on a joint return) for contributions to any political candidate or political committee to further the candidacy of individuals.

16. ***Intercorporate dividend deduction for certain affiliated groups.***—The bill provides that certain affiliated groups eligible to file a consolidated return, but not doing so, may take under certain conditions a 100-percent deduction for intercorporate dividends received from other members of the group if the group agrees to be treated as a single entity for certain purposes, such as the surtax exemption.

17. ***Face amount certificate companies.***—The bill provides that a "face amount certificate company" shall not be subject to disallowance of a deduction on interest paid with respect to face amount certificates under section 265(2) of the code (relating to interest indebtedness to carry tax-exempt bonds on tax-exempt income) to the extent that tax-exempt obligations do not constitute more than 25 percent of the average of the total assets.

18. ***"Bank loan" insurance.***—An interest deduction is denied for amounts borrowed under a systematic plan to pay premiums on life insurance (certain exceptions are provided).

19. ***Corporate reorganizations.***—The bill provides tax-free status to a stock-for-stock reorganization, where the corporation acquiring the stock exchanges either its voting stock or the voting stock of a corporation which is in control of the acquiring corporation.

20. ***Travel expense deduction.***—The bill repeals the rule, adopted in 1962, which disallows a portion of travel expenses for certain business trips which are combined with a vacation.

21. ***Pension plans.***—The bill permits retroactive qualification for certain pension plans under multi-employer collective bargaining agreements. It also permits a U.S. corporation to extend coverage under its qualified pension, profit sharing, etc., plan to certain U.S. citizens employed by subsidiaries operating outside of the United States.

22. ***Stock options.***—The present tax treatment of employee stock options is further restricted, the principal additional restrictions being: (*a*) the stock when acquired must be held for 3 years or more; (*b*) the option must not be for a period of more than 5 years; (*c*) the option price must at least equal the market price of the stock when the option is issued; (*d*) stockholders' approval for the options must be obtained; and (*e*) the extent to which new options may be exercised when the old options are outstanding is restricted. Separate tax treatment is provided for employee stock purchase plans which are available to all employees on a nondiscriminatory basis under rules which are substantially the same as under present law.

23. ***Installment method.***—The bill treats all revolving credit sales as installment sales for tax purposes and also treats time payment charges as installment sales.

24. ***Deduction of contested liabilities.***—The bill would allow a deduction for the taxable year in which a taxpayer pays a tax or other liability, even though he contests the liability.

25. ***Interest on certain deferred payments.***—Where property is sold on an installment basis and either no, or very low, interest is charged on the installments, the bill provides that an appropriate amount of each installment is to be treated as if it were an interest payment.

26. ***Personal holding companies.***—The percentage of passive income which may result in a company being classified as a personal holding company is reduced from 80 to 60 percent and amendments are made so that the tax cannot be avoided by using rental income or oil or gas or mineral royalties (or working interests) to shelter substantial amounts of investment income, such as dividends and interest, from the personal holding company tax. Other restrictive amendments are also made. Relief is provided for those companies which are not now personal holding companies, but which would be

under the new definitions. They are permitted favorable liquidation treatment in certain cases and also permitted a deduction, in computing the personal holding company income, for paying off existing debts.

27. ***Aggregation of oil and gas properties.***—For the future, oil and gas leases or acquisitions are no longer to be aggregated in determining what constitutes a property for purposes of computing the percentage depletion deduction.

28. ***Iron ore royalties.***—The bill provides capital gains treatment for certain domestic iron ore royalties.

29. ***Life insurance companies.***—The bill makes three changes with respect to the income tax of life insurance companies: (1) It removes the requirement of present law that life insurance companies, and mutual insurance companies electing to be taxed on investment income only, are to ratably accrue market discount on purchased bonds as ordinary income; (2) it extends to 1962 the rule for deductibility of certain distributions to shareholders pursuant to certain mutualization plans; and (3) it assures deductibility of qualified pension plan contributions of mutual insurance companies.

30. ***Regulated investment companies.***—The bill amends the regulated investment company provisions (1) by increasing from 30 to 45 days after the close of the taxable year the time for giving certain notices to shareholders, and (2) by providing that distributions by a unit investment trust liquidating an individual's interest are not to be considered as giving rise to capital gains tax with respect to interests of other investors still in the trust.

31. ***Foreign tax credit on mineral operations.***—The bill provides that any excess foreign tax credit which arises from mineral extraction, because of the percentage depletion allowance under U.S. law, may not be used to offset U.S. tax on income not related to mineral extraction, processing transportation or marketing.

32. ***Sale of depreciable real estate.***—In the case of real estate sold in the future, any depreciation deductions, generally to the extent these deductions exceed depreciation allowable under the "straight line" method (to the extent of the gain), will be treated by the bill as giving rise to ordinary income. However, in the case of property held more than 20 months the amount treated as ordinary income will be reduced by 1 percent for each month of holding over 20, with the result that no amount will be treated as ordinary income in the case of real property held more than 10 years.

33. ***Averaging of income.***—The bill in effect provides for the averaging of income over a 5-year period where the income in the current year exceeds the average of the 4 prior years by more than one-third and this excess is more than $3,000.

34. ***Subchapter S corporations.***—The bill amends the provisions for subchapter S corporations to provide (1) that certain distributions of money made after the close of a taxable year may be treated as made at the close of that year in order to prevent double inclusion of income, and (2) that a corporate member of an affiliated group may elect subchapter S treatment where the only other members of the group are inactive subsidiary corporations.

35. ***Repeal of consolidated returns tax.***—The 2-percent penalty tax, which must presently be paid by corporations for the privilege of filing consolidated returns, is repealed.

36. ***Multiple surtax exemption.***—For corporations where there is common control to the extent of 80 percent or more, the corporations involved generally are limited to one $25,000 surtax exemption for the group or alternatively required to pay a special tax of 6 percent on the first $25,000 of their income. No penalty tax is imposed where a consolidated return is filed for the group.

37. ***Tax lien on automobiles.***—A purchaser, mortgagee, or pledgee of a motor vehicle will not be subject to a Federal tax lien against the motor vehicle, notice of which has been publicly filed, unless the purchaser, mortgagee, or pledgee had actual knowledge of the existence of the lien.

II. GENERAL STATEMENT

H.R. 8363 represents a basic revision of the Federal income tax laws. By substantially reducing individual and corporate tax rates, it is anticipated that this bill will stimulate higher investments and increase consumer purchases. In this manner, the bill is designed to lessen unemployment and to increase the rate of growth of our productive capacity. The bill also contains a series of structural changes in the tax system designed to improve the equity of the system and to close loopholes.

The extensive public hearings held by your committee have provided convincing evidence of the wide area of agreement on the part of the public generally—including representatives of both business and labor—of the need for reducing our present unrealistically high individual income tax rates. At present, they range from 20 to 91 percent and under this bill are reduced to a range of 14 to 70 percent. Also in the case of corporations, by reducing the top rate from 52 to 48 percent, this bill converts the Government from a "senior partner" to a "junior partner" in any business undertaking. The present high income tax rates are a carryover from the tax policy of World War II and the Korean war when the dampening down of investment stimulants and holding the line on consumption were necessary to our wartime effort. These policies are no longer appropriate, however, in our economy today.

Despite the fact that business conditions have been improving over the past 33 months, unemployment still is at the high rate of 5.5 percent, which matches the unemployment rate in the 1954 recession. Since obtaining an unemployment rate of 4.2 percent in 1956, we have experienced a succession of disappointing recoveries in which the unemployment rate has remained disturbingly high; this rate, in fact, has not been below 5 percent since 1957.

Added significance for this persistent high rate of unemployment lies in the fact that the next decade will be a period of unusually high growth in the labor force as the children of the post-World War II era come of age. The annual growth in the labor force as a result can be expected to increase from less than 1 million to about 1½ million. In addition, it is expected that with an improvement in employment conditions, perhaps 1 million people not now seeking work will return to the labor market. This shows quite clearly that the growth rate of our economy must be increased if the requisite jobs are to be found for this expanding labor force.

Although business conditions were generally good in 1963, the level of new investment in business plant and equipment was scarcely 6 percent above the level of investment in 1957, despite the 31-percent increase in the gross national product during this period.

The existence of these underutilized resources of manpower and plant capacity means that it is possible to attain a faster economic growth through tax reduction without significant inflationary pressures. The 5-year stability of the wholesale price index, together with the relatively moderate increase in the consumers' price index, in recent years, is evidence of this. The goal of a balanced growth with stable prices will, of course, also call for restraint in Government expenditures.

Tax reduction is also important as an aid in the reduction of our persistent balance-of-payments deficit. The presence of greater investment incentives and opportunities abroad than at home is the root cause of American capital seeking foreign outlets. The expanding markets resulting from the tax reduction contained in this bill will raise the attractiveness of domestic investment. Moreover, a faster domestic growth rate will result in a larger flow of new products and technological improvements, making our exports more competitive. The substantial improvements in our balance-of-payments position in the last 6 months is further evidence that an improvement in domestic business can aid our foreign balance. This also has been the experience in Europe where is is the rapidly growing and modernizing economies that have strong currencies.

(a) Tax reduction and revenues

The record of economic performance below capacity over the last 6 years has left a heavy mark on the Federal debt. The initial budget forecast for each of the fiscal years 1958–63 was for a budgetary surplus. The actual outcome in 5 out of the 6 years was a deficit with the deficit averaging about $5 billion.

The major factor in each of these deficits was the failure of the economy to expand as predicted. Either the present or proposed tax rates are high enough to produce a substantial budgetary surplus in a few years if there is sufficient growth and the economy operates at a high level. The present rates, however, constitute such a drag on the economy that the rate of growth has been disappointing and the rate of operation remains low. As a result, income and profits are relatively low and tax receipts are lower than would otherwise be the case. This is the principal factor accounting for the budgetary deficits.

The size of tax receipts is attributable to two variables, the tax rates and the tax base. The major thrust of the present tax bill is to provide a long-range expansion in one of these variables—the tax base—and thereby to increase the revenue potential. To accomplish this result the bill encourages the expansion of the private, rather than public, sector of the economy.

The present tax bill, along with a policy of expenditure constraint offers promise of restoring a balanced budget by the fiscal year 1967 or 1968. During a year of healthy growth in our economy the yield of the present tax system will increase in the neighborhood of $5 billion to $6 billion. The reduction in tax rates under this bill is designed to maintain that high rate of growth which will provide

sufficient additional revenue to cover the cost of the tax bill in a relatively short period of time.

It may be argued that taxes should not be cut while there is a budget deficit. However, this overlooks the fact that maintaining high tax rates does not produce more revenue unless the tax base expands sufficiently—and the rates themselves inhibit this expansion. It is your committee's considered judgment that with the current rates it would take longer to eliminate the deficit than would be the case with the lower rates of this bill but with the expanded economy induced by this bill.

(b) Expenditure control

The House bill in section 1 contains a statement of policy as to the need to stimulate the economy and in this manner raise revenues. It also states that to further the objective of obtaining balanced budgets in the near future, Congress by this action, recognizes the importance of taking all reasonable means to restrain Government spending and urges the President to declare his accord with this objective.

The accord of your committee with the first of these statements is evidenced by its approval of the tax reduction provided by this bill and in the views expressed above that this legislation will, in the long run, increase rather than decrease revenues.

Your committee is also in accord with the second of these statements. The fact that your committee is reporting this bill after the presentation of the President's budget for the fiscal year 1965 is fortunate in that now the restraint of Government spending not only has been stated as an objective of administration policy but also is evidenced by the budgetary figures themselves. This budget reduces the deficit in the administrative budget by more than one-half from $10 billion to $4.9 billion. It also reflects a substantial decrease in new obligational authority requested and actually provides for a slight reduction—from $98.4 billion to $97.9 billion—in the level of spending for the fiscal year 1965. In view of these considerations, your committee believed that the retention of section 1 of the House bill was unnecessary. Moreover, it is questionable whether expressing declarations of intent in tax legislation would be a desirable precedent. Intent to restrain Government expenditures can best be evidenced by action on appropriation bills as they are presented in this session of Congress.

(c) The structure of tax reduction

This bill provides a balanced reduction between individuals and business firms. In this respect, the bill is much the same as the bill that came from the House. When fully effective, the bill will reduce individual income taxes by $9.2 billion and will reduce corporate taxes by about $2.4 billion. These figures must be evaluated along with the effective tax reduction of 1962 through the investment credit and depreciation reform, the largest share of which went to corporations. Taking the 1962 and 1964 programs together, the share of the reduction going to individuals is about two-thirds and to corporations about one-third, which is approximately the present relative shares of individuals and corporations in income tax liabilities.

Looked at another way, the net individual income tax reduction will reduce present tax liabilities for individuals by just under 20 percent. The combined effects of this bill, depreciation reform, and

last year's investment tax credit, will reduce corporate tax liabilities by something more than 19 percent.

The bill equitably distributes tax reduction over the various individual income tax levels. Those at the lowest income levels will receive the largest tax reductions, measured as a percent of the present tax. This reduction of 38.6 percent of present law tax at these levels is due to the sharper reductions in the first bracket rate, the split first bracket, and the effect of the minimum standard deduction. Due to the structural reforms, particularly the repeal of the dividends received credit the amount of tax reduction for persons with incomes of $50,000 or more will average approximately 13.5 percent of their present tax (excluding the alternative capital gains tax). Since the present tax for these individuals is already considerably higher relative to income than it is for those with incomes below $3,000, this 13.5-percent reduction in tax necessarily represents a greater increase in aftertax income.

In addition to a rate reduction the present bill contains a number of provisions designed to increase the equity of the tax system, some of which increase and some of which decrease the total revenue. These provisions are listed in part I above.

The bill also significantly improves the pattern of progression in the tax structure. At the lower end of the income tax scale, the minimum standard deduction will effectively eliminiate tax for all single people with adjusted gross incomes below $900 and for married couples with incomes below $1,600 (with higher minimum levels of $700 for each dependent). Furthermore the division of the present first surtax bracket (which is $4,000 wide for a married couple) into four narrower brackets permits greater proportionate tax reduction for families and single individuals whose total income leaves them close to a poverty level.

At the upper end of the income scale, under the demands of war finance, progression has been carried to the extreme of rates that under peacetime conditions are clearly excessive and inhibit individual initiative. Over the years the Congress has been faced with the necessity of making statutory exceptions, through special deductions, lower capital gains rates and the like, until there now is a wide range of effective rates applicable to people with the same economic income. Your committee's bill deals with this problem by applying the reductions made in these higher brackets to those cases where current rates are excessive and also by removing special benefits in the law which account for part of this divergence in rates.

(d) *Principal changes from the House bill*

Your committee's amendments make a number of changes in the House bill. These are:

(1) The 14-percent withholding rate, scheduled under the House bill to become effective in 1965, is made effective in 1964, 8 days after the enactment of this legislation. This change is needed because lower tax rates will apply to all of 1964 incomes but withholding will continue at 18 percent (rather than the 15 percent provided in the House bill) until this bill goes into effect.

(2) The restoration of the deduction for State and local taxes on gasoline and for other State and local registration taxes on automobiles. Under the House bill individuals who itemize their personal deductions were not to be allowed deductions for these items.

(3) The deletion of the House provision reducing the tax rate on capital gains where the assets have been held more than 2 years. Under the House bill certain capital gains held more than 2 years were to achieve an effective lower rate of tax by the reduction of the percentage of such gains included in income from 50 to 40 percent and by the reduction of the alternative tax rate on these gains from 25 to 21 percent. Your committee believes that further reduction in capital gains should be deferred until Congress has a further opportunity to examine these rates and related problems. Even though the capital gains provisions are not reduced in this bill, those who include half of their capital gains in their regular income tax base (96 percent) will obtain under this bill the same percentage tax reduction on these capital gains as is applicable to other kinds of income.

(4) The taxation of group term insurance paid for through the employer is to apply to the cost of insurance for over $70,000 of coverage rather than $30,000 as provided by the House bill.

(5) A new deduction for political contributions of up to $50 a year for a single person and up to $100 a year for a married couple is provided.

(6) The child-care deduction is liberalized, particularly with respect to working wives. Under present law this deduction is reduced in the case of a working wife by the excess of the family income over $4,500. The bill raises this limitation to $7,000.

(7) A new provision is added limiting the use of excess foreign tax credits arising from mineral extraction. Where the foreign tax on the extraction activity exceeds the U.S. tax, because of the allowance of percentage depletion under the U.S. tax, the resulting excess foreign tax credit may not be used against U.S. tax on income arising from nonmineral activities.

(8) The limitation on the business travel expense deduction enacted in the Revenue Act of 1962 is repealed. Thus there will no longer be an allocation of the travel expense where the taxpayer combines a business trip with a vacation.

(9) A new provision provides that where an employee moves and the employer reimburses him for selling costs on his house and losses incurred on the sale of the house attributable to the fact that it must be sold more quickly than usual, the reimbursement is to be treated as a part of the selling price of the house (rather than as compensation).

(10) Groups of affiliated corporations eligible to file a consolidated return and those eligible which do not do so, will be permitted to take a 100 percent dividends received deduction with respect to dividends received from other members of the controlled group, provided the group elects to take only one surtax exemption and meets certain other conditions.

(11) A new provision is added extending the installment method of accounting to business firms maintaining so-called revolving credit accounts.

(12) A new provision is added to allow taxpayers who suffered losses through foreign expropriation after 1958 to carry these losses forward for 10 years (instead of the usual 3-year carryback and 5-year carryforward).

(13) A new provision liberalizes the retirement income credit. This increases the amounts of retirement income on which the credit is computed to make the credit more nearly analogous to the social security exclusion.

(14) A 5-year carryover of unused charitable contributions is provided for individuals, deductions for gifts of future interests are restricted, and contributions to private foundations are made ineligible for the unlimited charitable contributions deduction.

(15) A new amendment provides that companies issuing face amount certificates may invest up to 25 percent of their total assets in tax-exempt obligations without losing a deduction for interest paid to the shareholders.

(16) A new amendment provides a tax-free status for a stock-for-stock reorganization where the corporation acquiring the stock exchanges the stock of its parent for the stock of the acquired corporation.

(17) A new provision provides for the retroactive qualification of union negotiated multiemployer pension plans where these pension plans are subsequently qualified.

(18) A new provision makes possible the coverage under qualified pension plans of U.S. employees of foreign subsidiaries or of U.S. employees of foreign branches of domestic corporations.

(19) In the case of employee stock options, the House provision is liberalized with respect to the restrictions imposed where one option is outstanding and a subsequent option is acquired and the effective date is changed to apply to options granted after December 31, 1963 (instead of June 11, 1963).

(20) A new provision provides that in the case of contested liabilities, the deduction is to be taken in the year of the payment where this occurs before the contest is settled.

(21) The personal holding company provision of the House bill is liberalized somewhat in the case of the test as to when rent is considered personal holding company income and also with respect to the exemptions for consumer finance companies.

(22) Three new provisions are added with respect to insurance companies, providing additional time for special treatment mutalization distributions, providing capital gains treatment with respect to the accrual of bond discount in certain cases, and correcting a technical error in present law.

(23) Liberalizing amendments are provided giving regulated investment companies more time for the mailing of notices to shareholders and with respect to the treatment of redemptions by unit investment trusts.

(24) An amendment liberalizes somewhat the treatment accorded "small business corporations"; namely, those treated essentially like partnerships for tax purposes.

(25) An amendment provides that a purchaser, mortgagee, or pledgee of a motor vehicle will not be subject to a Federal tax lien against the motor vehicle unless the purchaser, mortgagee, or pledgee has actual notice of the existence of the lien.

III. REVENUE ESTIMATES

The revenue effect of your committee's bill is shown in tables 1 through 4 below. (Pt. A of tables 1 through 3 refers to estimates under your committee's bill and pt. B in each case to estimates under the House bill.) Estimates in the tables are based on income levels assumed for the calendar year 1963 but do not take into account any "feedback" to the economy anticipated from this bill. Table 1 shows the estimated impact of the various provisions contained in your committee's bill and the House bill upon calendar year 1964 and 1965 tax liabilities and also upon liabilities in the long run. Table 2 shows the estimated effect of your committee's bill and the House bill upon receipts in the fiscal years 1964 and 1965.

Table 1 indicates that your committee's bill can be expected to decrease calendar year 1964 tax liabilities by $7.9 billion and calendar year 1965 liabilities by $11.6 billion (the latter figure includes the $7.9 billion reduction). The calendar year 1965 effect is virtually identical with the long-term effect of the bill before taking into account any impact of the reductions upon the economy. Of the $11.6 billion reduction in 1965, $9.2 billion will go to individuals, or nearly 80 percent of the total. Revenue raising structural changes for the calendar year 1965 amount to $740 million but are partially offset by other liberalizing provisions reducing the net increase to $160 million.

Table 2 shows that your committee's bill will decrease revenues in the fiscal year 1964 by $1.9 billion and in the fiscal year 1965 by $8.4 billion (the latter figure includes the $1.9 billion reduction). These figures are considerably lower than the calendar year liability figures for the same year; first, because of the fact that the fiscal year ends in the middle of the calendar year; and, second, because the calendar year data are shown on the basis of liability rather than receipts. Liabilities indicate the amount of tax liability attributable to income of the year in which it is earned; receipts show the actual amount collected in the year in question. Since collection tends to lag behind the accruing of the liability, tax reductions show up in later years when shown on a "receipt" basis than when shown on a "liability" basis.

It is important to note that it is not expected that actual tax revenues in the fiscal year 1964 and future years will be reduced by the full $1.9 or $8.4 billion referred to above. It is anticipated that income levels in these years will be substantially higher as a result of the economic stimulus of the tax cut and will generate revenues significantly offsetting the budgetary impact of these rate reductions.

The stimulative effects of the tax reduction are expected to produce, according to the Treasury Department, relatively modest amounts of increased income in the first months, with the result that the "feedback" effect on the fiscal year 1964 revenues is expected to amount to only $200 million. As a result, the gross tax loss of $1.9 billion for the fiscal year 1964 is expected to be reduced to $1.5 billion after the "feedback" effect. The Treasury Department has estimated that the increased revenues from the rise of income, however, will amount to about $4 billion in the fiscal year 1965. Thus, the Treasury estimates that while tax reductions during that year would lose an estimated $8.4 billion of revenue at 1963 income levels, the net cost after allowing for the revenues generated by the expansion in income and

profits induced by the tax program would be limited to approximately $4.3 billion. The expansionary effect of the tax reductions on future years' revenues can be expected to be considerably larger than for the first 2 years. The order of magnitude was indicated in the discussion in part II.

Part A of table 3 shows by adjusted gross income class the distribution of changes in estimated tax liabilities for individuals when your committee's bill is fully effective. This table shows this distribution for each of the major rate and structural changes. These data are shown both in terms of amount of tax liability involved and the percentage change each of these is of present tax liability. It indicates that the rate changes alone would decrease tax liability by 20 percent while the structural changes would increase tax liability by 0.3 percent, resulting in the net reduction of 19.7 percent. Part B of table 3 presents similar data under the House bill.

Table 4 compares the tax liability effect of your committee's amendments with the House bill. This table indicates that in the calendar year 1964 your committee's amendments would decrease tax liabilities $680 million more than the House bill, in 1965 your committee's amendments are expected to decrease tax liabilities $395 million more and in the long run $185 million more.

The impact of the capital gains provisions is excluded from table 3 because of the difficulty of showing these changes by adjusted gross income class. Part A of table 1 sets forth the overall effect of the changes in the taxation of capital gains under your committee's bill: an increase of $115 million in calendar year 1964 tax liabilities, $120 million in 1965, and $50 million in the long run.[1]

As set forth in part A of table 2, the estimated overall revenue loss, before taking into account acceleration of corporation tax payments, is $2.2 billion in fiscal year 1964. This is $400 million less than was estimated in the budget. According to the Treasury Department this difference is due to the assumption of an earlier effective date in the budget document for institution of the 14-percent withholding. Similarly, according to the Treasury Department, the $9.3 billion revenue loss ($8.4 billion plus $900 million of accelerated corporation tax payments) estimated in part A of table 2 for fiscal year 1965 is greater than the loss shown in the budget by approximately $1.1 billion. The difference is ascribed primarily to $400 million due to the change in date of the reduced withholding and to the $680 million due to changes in structural provisions as shown in table 4.

[1] When this $115 million estimate for 1964 under your committee's bill is compared with the $295 million estimate under the House bill (pt. B of table 1) as subsequently revised to $215 million, the effect of your committee's action as compared to action by the House is a decrease in tax liability of $100 million in calendar year 1964 (see line 7 of table 4). Similarly, when the $120 million estimated increase in calendar year 1965 tax liabilities under your committee's bill is compared with the $170 million estimate under the House bill (pt. B of table 1), as subsequently revised to $80 million, the effect of your committee's action as compared to action by the House is an increase in tax liability of $40 million (see line 7 of table 4).

TABLE 1.—*Revenue bill of 1964, H.R. 8363—Estimated decrease in tax liability* [1] (−) *and increase* (+) (*before feedback*) *of provisions of bill*

[In millions of dollars]

A. AS APPROVED BY SENATE COMMITTEE ON FINANCE

6. Allowance to reimbursed employee, as part of sales price, of selling costs and loss on forced sale of house	−45	−45	−45
7. Elimination of general capital gains provision	−100	+40	+260
8. Allowance of installment sales treatment for revolving credit plans	−140	−10	−10
9. Permitting election of 10-year carryforward without carryback for expropriation losses	(2)	−5	[2] −5
10. Increasing from $50,000 to $70,000 the minimum group-term life insurance subject to tax	−5	−5	−5
11. Liberalize retirement income credit on certain joint returns	−10	−10	−10
Total	−680	−395	−185

[1] $25,000,000 for presidential election year; 50 percent of that amount for congressional election year and 25 percent for off year; average about $15,000,000 per year.
[2] Less than $2,500,000 in 1964 and practically exhausted by 1970.

IV. GENERAL EXPLANATION

A. RATE CHANGES

1. *Individual income tax rates (sec. 111 of the bill and sec. 1 of the code)*

The most important change made by this bill is the individual income tax rate reduction. The bill, in both the House and your committee's versions, provides an individual income tax rate reduction of $9.47 billion spread over the 2 calendar years, 1964 and 1965. Over this 2-year period, the present rates, which range from 20 percent on the first $2,000 or $4,000 (the former for single persons and the latter for married couples) and 91 percent on incomes over $200,000 or $400,000 are reduced to a range of from 14 percent on the first $500 or $1,000 to 70 percent on incomes over $100,000 or $200,000. This represents an average rate reduction of 20 percent. Approximately two-thirds of this reduction is made effective in 1964 and the remaining one-third in 1965.

Table 5 shows the individual income tax rates under present law and under the House and committee bill, both for 1964 and for subsequent years. A separate table with rates, as nearly as possible halfway between those applicable for single persons and for married couples is provided for heads of households. The withholding tax rate of 18 percent under present law is reduced to 14 percent not only for 1965 and subsequent years but, under your committee's action also for 1964, starting 1 week after the date of enactment. The House bill would have provided a 15-percent rate for 1964. Wage bracket withholding tables provided by the bill reflect similar reductions in withholding tax rates. The 14-percent withholding tax rate is designed to withhold the appropriate amount of tax at an income level of $2,000 for a single person, or $4,000 in the case of a married couple, using the standard deduction.

TABLE 5.—*Individual income-tax rates under present law and schedules provided by House and committee bill for 1964 and 1965*

Taxable income brackets (in thousands of dollars)		Present rates	Rates provided under House and committee bill—

90 to 100	180 to 200	87	75.0	69
100 to 150	200 to 300	89	76.5	70
150 to 200	300 to 400	90	76.5	70
200 and over	400 and over	91	77.0	70

[1] Provides ⅔ of tax cut in 1964.

The rate brackets provided by the House and committee bill differ from those under present law in that what is now the first bracket is divided into four brackets:

Single persons	*Married couples*
$0 to $500	$0 to $1,000
$500 to $1,000	$1,000 to $2,000
$1,000 to $1,500	$2,000 to $3,000
$1,500 to $2,000	$3,000 to $4,000

Splitting this first bracket into four brackets has several advantages. First, it makes it possible to have a lower starting rate than would otherwise be possible, given the same revenue loss. Only splitting this first bracket into four parts makes it possible to provide a 30-percent tax reduction for those with the lowest taxable income, who need the tax cut the most. Second, it makes it possible to provide some progression in the portion of the rate structure where none has been provided before. The significance of this is that over half of the taxpayers presently are subject only to the first bracket rate. As among taxpayers in this major group, the present rate structure provides no differentiation in applicable tax rates.

Table 6 shows the percentage of tax rate reduction provided in each rate bracket for 1965 and subsequent years. This table indicates that the new 14-percent rate represents a 30-percent reduction; the 15-percent rate, a 25-percent cut; and the 16-percent rate, a 20-percent cut. The average reduction in these first four brackets is 22.5 percent. Above this level the percentage reductions, up to a taxable income level of about $50,000 for single persons or $100,000 for married couples, is as nearly a uniform 15-percent rate reduction as practicable for a smooth progression. Above this $50,000 or $100,000 taxable income

level, the rate reductions again gradually increase until the top rate is reached at $200,000 or $400,000 where a 23-percent rate reduction is provided. This rate schedule, therefore, provides a minimum reduction of approximately 15 percent for all tax brackets. In addition, it provides extra reductions in the very lowest tax brackets where the impact of the present taxes is the most heavy. It also provides larger reductions in the very highest bracket where it is quite clear the present rates are too steeply graduated. These rates, which were developed during World War II to assure equality of sacrifice, are no longer appropriate under today's conditions.

TABLE 6.—*Individual income tax rates under present law and under House and committee bill for 1965*

Taxable income bracket (thousands of dollars)		Present law rate	House and committee bill	
Single person	Married (joint)		Rate for 1965 and subsequent years	Percentage reduction from present law rates
		Percent	*Percent*	*Percent*
0 to 0.5	0 to 1	20	14	30 } 22.5
0.5 to 1	1 to 2	20	15	25 } 22.5
1 to 1.5	2 to 3	20	16	20 } 22.5
1.5 to 2	3 to 4	20	17	15 } 22.5
2 to 4	4 to 8	22	19	14
4 to 6	8 to 12	26	22	15
6 to 8	12 to 16	30	25	17
8 to 10	16 to 20	34	28	18
10 to 12	20 to 24	38	32	16
12 to 14	24 to 28	43	36	16
14 to 16	28 to 32	47	39	17
16 to 18	32 to 36	50	42	16
18 to 20	36 to 40	53	45	15
20 to 22	40 to 44	56	48	14
22 to 26	44 to 52	59	50	15
26 to 32	52 to 64	62	53	15
32 to 38	64 to 76	65	55	15
38 to 44	76 to 88	69	58	16
44 to 50	88 to 100	72	60	17
50 to 60	100 to 120	75	62	17
60 to 70	120 to 140	78	64	18
70 to 80	140 to 160	81	66	19
80 to 90	160 to 180	84	68	19
90 to 100	180 to 200	87	69	21
100 to 150	200 to 300	89	70	21
150 to 200	300 to 400	90	70	22
200 and over	400 and over	91	70	23

The rate reductions found in table 6 reflect only the marginal rate reduction, or the rate reduction in each bracket. From the standpoint of the reduction in the total tax burden, however, it is important to realize that all taxpayers benefit from the rate reductions in all of the tax brackets below their top, or marginal, bracket. Thus, every taxpayer receives the benefit of the 30-percent reduction in the first bracket, either on his entire taxable income or on his first $500 or $1,000 of taxable income. Table 7 reflects this accumulative effect of the rate reduction provided by the House and committee bill. This is accomplished by showing for the top of each rate bracket—both for married couples and for single persons—the total tax under present law and under House and committee bill for 1965, together with the decrease, in terms of dollars and also percentages, which this represents in present tax liability. This indicates that on an accumulative basis the large rate reduction in the bottom bracket has an important effect on income up to $8,000 for married couples (or $4,000 for single per-

sons) and is of some significance for income levels up to about $40,000 for married couples (or $20,000 for single persons).

TABLE 7-A.—*Comparison of individual income tax liability under present law and under House and committee bill*

MARRIED COUPLE FILING JOINTLY

Amount of taxable income	Tax		Decrease in tax in House and committee bill

Table 8 shows the distribution by adjusted gross income classes (as distinguished from taxable income classes) of both the rate and structural changes provided by the bill when these changes are fully effective. This table also shows the number of taxable returns and tax liability under present law (not including the alternative tax on capital gains), together with the tax liability which will remain when the rate reductions and other changes provided by this bill are fully effective. The table further shows the percentage distribution of the rate, structural, and total changes made by this bill (expressed as a percentage of present tax liability by income class). This indicates that the rate changes on the average represent a 20-percent reduction. The percentage reductions vary within the various income classes from 17 percent for adjusted gross income above $10,000 up to 27.6 percent for incomes below $3,000. Taking the structural changes into account, the overall reduction averages 19.7 percent under your committee's bill and 18.8 percent under the House bill. The reductions under your committee's bill range from 13.5 percent for those with incomes over $50,000 to 38.6 percent for those with incomes under $3,000. Under the House bill this range was from 12.6 to 38.3 percent.

TABLE 8.—*Revenue bill of 1964—Distribution by adjusted gross income class of the full year effect of all tax changes*[1] *made by your committee's bill which directly affect individuals*

Adjusted gross income class (thousands of dollars)	Number of taxable returns (millions)	Tax liability under present law[2]	Effect of revenue bill of 1964			Total tax under revenue bill of 1964
			Rate change	Structural changes	Total	
		In millions of dollars

[1] Excluding effect of capital gains provisions and repeal of the requirement to reduce basis by amount of investment credit.
[2] Excludes alternative tax on capital gains.

The tax rate reductions described above take effect as of January 1, 1964, and January 1, 1965. For taxpayers with fiscal years falling partially in either the calendar year 1963 or the calendar year 1964, the bill provides for the proration of the rates applicable in the 2 years involved, according to the number of days in the fiscal year in question which falls in each calendar year.

The tax rate changes provided for individuals by this bill are expected to decrease tax liabilities in the calendar year 1964 by $6.3 billion and in the calendar year 1965 by $9.5 billion. The latter reduction is cumulative and includes the reduction of $6.3 billion for the calendar year 1964.

2. Minimum standard deduction (sec. 112 of the bill and sec. 141 of the code)

(*a*) *Present law.*—Under present law, single taxpayers who take the standard deduction, if they have no dependents, become taxable on income above $667. This represents a standard deduction of 10 percent ($67) plus the personal exemption ($600). For a married couple filing a joint return under present law, income becomes taxable above $1,333. This represents a 10-percent standard deduction ($133) plus two $600 exemptions. Similarly, a married couple with one child becomes taxable on income above $2,000 (a standard deduction of $200 plus three $600 exemptions).

(*b*) *General reasons for proposal.*—In addition to the rate reductions described above, the House and your committee concluded that it was desirable to remove from the tax rolls those persons with minimum incomes and also to provide those with incomes just slightly above these levels a somewhat larger tax reduction than is made available generally through the rate cuts.

The minimum standard deduction that the House and your committee have adopted, and which is described below, removes 1.5 million taxpayers, with very low incomes, from the tax rolls entirely.

The tax relief provided under this provision is almost entirely concentrated in the adjusted gross income classes of $5,000 or less, with much of it concentrated in income levels below $3,000. The total revenue loss anticipated from the minimum standard deduction of $320 million, for example, is distributed as follows:

Adjusted gross income class (thousands of dollars)	Change in tax liability from minimum standard deduction (millions of dollars)	Percentage change in present tax liability
0 to 3	−170	−11.7
3 to 5	−100	−2.5
5 to 10	−50	−.3
10 and over	0	0
Total	−320	−.7

The minimum standard deduction relieves persons at or near the subsistence level of much or all of their tax liability. In this respect the provision is much more economical than a personal exemption increase. The minimum standard deduction in the bill provides a floor of $300 above his exemption for a single person, a floor of $400

above exemptions for a married couple, and one of $600 above exemptions for a married couple with two children. Yet an increase in exemptions of only $100 would cost $2.6 billion, and one of $200 would cost $5 billion in lieu of the $320 million cost entailed in the minimum standard deduction.

(c) *General explanation of proposal.*—The bill provides that taxpayers who use the standard deduction may use either the regular 10-percent deduction or a minimum standard deduction, whichever is the larger. The minimum standard deduction in effect is $300 for the first exemption and $100 for each additional exemption. In the case of a married person filing a separate return, however, the minimum standard deduction is $200 for the first exemption and $100 for each additional exemption.[1] As under present law, the standard deduction, whether a "10-percent" deduction or a "minimum" deduction, may not exceed $1,000 (or $500 in the case of a married person filing a separate return).

Under the bill, a single person would be allowed a minimum standard deduction of $300 which, together with the personal exemption of $600, would mean that he would have no tax to pay until his income exceeded $900. Similarly, a married couple with no children would be allowed a minimum standard deduction of $400 ($300 for the first exemption, plus $100 for the second exemption). As a result, the married couple would pay tax on income only in excess of $1,600. A head of a household with one dependent also would be subject to tax only on income above $1,600, since the minimum standard deduction in this case also would be $300, plus $100 for the dependent. A married couple, both over age 65, would receive a minimum standard deduction of $600; i.e., $300 with respect to the first exemption, and $100 with respect to the three additional exemptions. This together with their four exemptions would mean they would pay no tax on the first $3,000 of income. This would also be true of blind persons with double exemptions.

The income levels under present law and under the bill at, or below, which there would be no tax, are as follows:

Status of taxpayer	Present law with 10-percent standard deduction	Minimum standard deduction provided by bill
Single person	[1] $667	$900
Married couple, no dependents or head of household, 1 dependent	[1] 1,333	1,600
Married couple, 1 dependent or head of household, 2 dependents	[1] 2,000	2,300
Married couple, 2 dependents or head of household, 3 dependents	[1] 2,667	3,000
Married couple, 3 dependents or head of household, 4 dependents	[1] 3,333	3,700
Married couple, 4 dependents or head of household, 5 dependents	[1] 4,000	4,400
Married couple, 5 dependents or head of household, 6 dependents	[1] 4,667	5,100
Married couple, 6 dependents or head of household, 7 dependents	5,333	5,800

[1] The amounts shown above assume that the income level under existing law is reached at exactly the level which would apply if a uniform 10 percent standard deduction were used. However, under present law for taxpayers with income below $5,000, a tax table with brackets is substituted for the uniform 10 percent. This modifies slightly all of the figures noted above. The income levels in these cases according to the tax table are $674, $1,324, $1,999, $2,674, $3,349, $3,999, and $4,649 respectively.

[1] In the case of married couples, where one takes the 10-percent standard deduction, rather than the minimum standard deduction, the other spouse must also take the 10-percent standard deduction. However, both may, if they so desire, elect to take the minimum standard deduction, which, as indicated above, is $200 for the 1st exemption and $100 for each additional exemption in the case of married persons filing separate returns.

Under the bill, taxpayers have the right to change their election with respect to the minimum standard deduction at any time within the period in which they can amend their tax return, that is, generally within the period ending 3 years after the due date filing for a given return.

(c)(i) *Effective date.*—Generally, the minimum standard deduction applies to taxable years ending after December 31, 1963. However, for taxpayers with fiscal years straddling this date, the bill provides for a portion of the benefits of the minimum standard deduction in the same way as rate reductions, in accordance with the number of days before and after December 31, 1963, in such years.

(d) *Revenue effect.*—The minimum standard deduction provided by this bill is expected to reduce revenues in a full year of operation by $320 million.

3. Amendments related to individual income tax rate reductions (sec. 113 of the bill and secs. 37 and 871 of the code)

(a) *Retirement income credit.*—Present law provides a tax credit on retirement for passive investment or pension income received by persons generally over age 65. However, the income taken into account for this credit must be reduced for tax exempt social security or railroad retirement income, and for those under age 72 for income derived from work above a specified income level. In computing the credit, present law provides that the income eligible for the credit is to be multiplied by the "rate provided in section 1 for the first $2,000 of taxable income." Under present law, this rate is 20 percent. Under both the House and committee bill, however, since this bracket has been split into four brackets, there are four rates ranging from 14 to 17 percent, applicable to different segments of this first $2,000 of taxable income.

The bill provides that the rate of tax to be used in computing this credit in the future is to be 15 percent. This is as near the middle of the four rates applicable to the first $2,000 of income as is possible, without the use of fractional rates.

(b) *Tax on nonresident aliens.*—Under present law, nonresident aliens receiving income from sources within the United States, such as interest, dividends, rents, salaries, wages, etc., are taxed on this income at a flat 30-percent rate (unless applicable tax treaties provide some other rates). However, present law also provides that if the nonresident alien receives more than $15,400 from the specified sources within the United States, then the regular individual income tax will apply with respect to the nonresident aliens' income from sources within the United States (if this results in a higher tax than the flat rate 30-percent tax).

The income level of $15,400 in present law is the point at which a 30-percent flat tax rate with one exemption would be likely to approximate the regular income tax rate with exemptions and with progressive rates. Because of the rate reductions provided by the bill, this income level of approximate equality rises, and has been established in the bill at $21,200.

4. Corporate rate reductions (sec. 121 of the bill and sec. 11 of the code)

Under present law, the total, or combined, corporate income tax rate is 52 percent. It consists of a 30-percent normal tax rate, applying to all corporate income, and a 22-percent surtax rate applying to corporate income in excess of $25,000. Thus, corporations are

taxed at a 30-percent rate on the first $25,000 of their taxable income and at a 52-percent rate on their taxable income above that level.

The House and committee bill makes two basic changes in the rate structure provided by present law. First, it lowers the overall rate from 52 to 50 percent for 1964, and to 48 percent for 1965 and subsequent years. Second, it "reverses" the normal and surtax rate in order to provide greater relief for small business. Thus, it provides that the normal tax rate is to be 22 percent instead of 30 percent for 1964 and subsequent years. The surtax rate then, for 1964, is to be 28 percent, and for 1965 and subsequent years, 26 percent. Thus, the bill provides a tax rate of 22 percent (in place of 30 percent) on the first $25,000 of a corporation's taxable income for both 1964 and subsequent years and a tax rate of 50 percent in 1964 and 48 percent in 1965 and subsequent years for the portion of a corporation's income over $25,000 (in lieu of the present 52-percent rate).

This reduction in corporate rates is important because it reverses the trend toward higher and higher corporate rates and also because it again makes the Government a "junior," rather than "senior," partner in any venture a corporation may undertake, insofar as the sharing of corporate income before tax is concerned. This tax rate reduction should be an important factor in improving the rate of profitability for corporations and, therefore, should provide an incentive for business investment and economic modernization and growth. It should also aid corporations in the export market in competing with corporations in other countries, where the corporate rates may not be as high as in the United States.

This tax cut for corporations, when fully effective, will amount to $2.2 billion a year. It should, of course, be viewed in connection with the reduction provided by Congress in 1962 in the form of an investment credit and the reform provided in 1962 in the depreciation guidelines. These taken together provide corporations with a tax reduction of approximately $4½ billion.

The "reversal" of the corporate rates should be a substantial benefit to small business. The substitution of a 22-percent rate for the 30-percent rate represents a rate reduction of nearly 27 percent on the first $25,000 of income, as contrasted to the rate reduction for income above $25,000 of slightly less than 8 percent. Moreover, as indicated in table 9, the benefit of this rate reduction on the first $25,000 of income is appreciable for income levels up to $100,000.

TABLE 9.—*Revenue effect* [1]

Surtax net income class (dollars)	Number of taxable corporations	Computed tax liability, present rates [2] (million)	Normal tax to 22 percent and combined rate to 48 percent	
			Amount of reduction (million)	Percent reduction
0 to 25,000	467,500	$874	$233	26.7
25,000 to 50,000	54,000	636	126	19.8
50,000 to 100,000	25,000	759	94	12.4
100,000 to 1,000,000	25,500	3,427	299	8.7
1,000,000 and over	4,000	18,664	1,438	7.7
Total	576,000	24,360	2,190	9.0

[1] At 1963 levels of income.
[2] Excluding capital gains presently taxed at the alternative rate.

Your committee agrees with the House that it is important to provide a greater rate reduction for small businesses because of their importance in maintaining competitive prices in our economy, and also because of the greater difficulty small businesses have in finding outside funds to finance their expansion. As a result, they have traditionally found it necessary to expand largely out of income remaining after tax.

The rate reductions provided by the House and your committee for corporations apply to taxable years beginning after December 31, 1963, in the case of the reversal of the normal and surtax rates and also in the case of the reduction of the general rate to 50 percent. The reduction in the corporate rate from 50 to 48 percent applies to taxable years beginning after December 31, 1964. For fiscal year taxpayers, with years straddling either of these two dates, the bill provides that the reductions are to be prorated in accordance with the portion of the corporate year occurring after December 31, 1963, or after December 31, 1964.

The decrease of corporate rate from 52 to 50 percent in the calendar year 1964, and the reversal of the normal and surtax rates, is expected to decrease corporate tax liabilities for that year by $1.3 billion. The reduction in corporate tax liabilities for the calendar year 1965 and subsequent years (when the corporate rate will be further reduced to 48 percent) is expected to amount to $2.2 billion. This estimate is cumulative and includes the $1.3 billion loss referred to with respect to 1964 corporate tax liabilities.

5. Current tax payments by corporations (sec. 122 of the bill and secs. 6074 and 6154 of the code)

(*a*) *Present law.*—Under present law a calendar year corporation is required to pay 25 percent of its estimated tax in excess of $100,000 in the third quarter of the year in which the tax liability actually arises, or on September 15. Another one-fourth of this estimated tax is paid in the fourth quarter of the year of liability, or on December 15. The remainder of the tax is paid in two equal installments in the following year, the first installment being due at the same time as the tax return for that year, or on March 15, and the second and final installment being due on June 15. Comparable dates are provided for fiscal year corporations.

This system of paying two quarterly installments with respect to tax liability in excess of $100,000 in the same year in which the liability arises, was initially provided at the time of the adoption of the Internal Revenue Code of 1954. Before that time Congress had, in 1950, provided, in the case of calendar year corporations, that the tax was to be paid in two installments of 50 percent each on March 15 at the time for filing the return and on the following June 15, both of these payment dates being in the year immediately following the year in which the tax liability arose. (Comparable dates were provided for fiscal year corporations.) Prior to 1950, corporate taxes were payable in four installments of 25 percent each, the first two for calendar year corporations being on the dates specified above, and the last two on the following September 15 and December 15—both dates being in the year following the year in which the tax liability arose.

(*b*) *General reasons for provisions.*—As indicated above, corporations presently are only on a partial pay-as-you-go basis. Individuals, on

the other hand, either through withholding or through declarations, are on a full pay-as-you-go basis. Both the House and your committee, with respect to tax liability in excess of $100,000, place corporations on essentially the same pay-as-you-go basis as is already true in the case of individuals. This is to be accomplished gradually over a 7-year period. With the corporate rate reduction also provided by this bill, spreading the acceleration in corporate payments over this 7-year period can be accomplished without raising any corporation's income tax payment above its tax for 1963 (assuming the same income level throughout).

At the present time, the larger corporations appear to have sufficient funds to meet their investment requirements. In fact, many of the larger corporations customarily fund their tax liabilities by investing currently in Treasury tax notes or other types of short-term debt. Moreover, the cash and other liquid assets of corporations in 1962 amounted to $68.5 billion, or some five times the aggregate tax liability of these corporations. In any event, since in each year the acceleration in payments is offset or more than offset by the tax reduction, the speedup of corporate payments will not decrease internal funds available at the corporate level for investment. At the same time, the reduction in the rate of corporate tax will increase the profitability of investments, thus encouraging further expansion.

Since the acceleration of the corporate payments has no effect if tax liabilities are $100,000 or less, the smaller corporations which, in many cases, may have a shortage of internal funds available for investment, will not be affected by this provision. Such corporations will have additional funds available for investment through the general 4 percentage point corporate rate cut, and more especially through the 8 percentage point reduction in the tax applying to the first $25,000 of income.

(*c*) *General explanation of provision.*—Over the 7-year period, 1964 through 1970, the House and the committee bill, in effect, provides, in the case of calendar year corporations, that the two installment payments due on March 15 and June 15 of the year following the year of liability are to be advanced to April 15 and June 15 of the year of liability, leaving the September 15 and December 15 installment payments of 25 percent still due at the same time as under present law. (A comparable advance is made for fiscal year corporations.) Any liability, to the extent that it is not paid by estimated tax payments (for example, does not exceed $100,000), will still be payable in two installments after the close of the year of liability, on March 15 and June 15, in the same manner as under present law. The following tabulation shows the change in the percentage payment dates from present law to the system set forth in the bill when it is fully effective in 1970 and subsequent years:

	Percentage payments	
	Present law	Under bill when fully effective in 1970
Payments in year of liability:		
Apr. 15	0	25
June 15	0	25
Sept. 15	25	25
Dec. 15	25	25
Payments in year following year of liability:		
Mar. 15	25	(1)
June 15	25	(1)

[1] Payments will still be due on these 2 dates with respect to tax liability on the 1st $100,000 of tax and on any amount of underestimates.

The advance in corporate payments described above is achieved under the bill over a 7-year period, commencing in 1964, with respect to tax liabilities arising in that year. For corporations with tax liabilities in excess of $100,000, the bill requires that they make first and second quarterly current payments of 1964 tax in excess of $100,000 of 1 percent in April and June of 1964 (assuming they are calendar year corporations), with these quarterly percentages increasing to 4 percent in 1965, 9 percent in 1966, 14 percent in 1967, 19 percent in 1968, 22 percent in 1969, and then 25 percent in 1970 and subsequent years. These percentages apply only with respect to the portion of the corporations' tax liabilities which exceed $100,000. This gradual shift of the corporate tax payments, with respect to tax liability above $100,000, can perhaps best be seen by the following tabulation.

	Percent of estimated tax to be paid on the 15th day of the—				Percent of tax to be paid on the 15th day of—	
	4th month	6th month	9th month	12th month	3d month	6th month
	of the year of liability				of the year following the year of liability	
1964	1	1	25	25	24	24
1965	4	4	25	25	21	21
1966	9	9	25	25	16	16
1967	14	14	25	25	11	11
1968	19	19	25	25	6	6
1969	22	22	25	25	3	3
1970 and any subsequent year	25	25	25	25	(1)	(1)

[1] Payments will still be due on these 2 dates with respect to tax liability on the 1st $100,000 of tax and on any amount of underestimates.

The percentages of the tax liabilities to be accelerated for each of the years 1964 through 1970 were selected so that the speedup in corporate payments would not exceed the reduction in tax liabilities provided by the bill. The effect of the speedup on corporate tax liabilities for a calendar year corporation having a $10 million tax liability is shown in table 10. As indicated by this table, the combined effect of the rate reduction with the acceleration of corporate payments in all years results in a net reduction in tax payments, even for a corporation with a taxable income of $10 million. Corporations with smaller incomes would fare still more favorably in this respect.

The present provisions exempting corporations from any additional charges for failure to comply with the provisions of the declarations of estimated tax are continued as under present law. Present law provides an additional charge equal to 6 percent per annum for underpayments only if the estimated tax payments fail to come under one of the following four categories:

(1) they amount to 70 percent of the tax shown on the final return after subtracting $100,000 and allowing credits;

(2) they amount to as much as the previous year's tax reduced by $100,000;

(3) they are equal to what last year's tax (less $100,000 and allowable credits) would have been had current rates been applicable to that year's income; or

(4) the installment with respect to the declaration for any quarter is equal to 70 percent of the tax (less $100,000 and allowable credits) due on the basis of the income received to date, placed on an annual basis.

TABLE 10.—*Example of the combined effect on a calendar year corporation of current tax payments and the tax rate reductions provided by the bill (corporation assumed to have $10 million of taxable income and to base its estimates on 75 percent of this income* [1]*)*

Calendar year	Corporation payments		Calendar year	Corporation payments	
	Dollars	Percent of 1963		Dollars	Percent of 1963
1963	5,194,500	100.0	1968	5,145,513	99.1
1964	5,192,332	99.9	1969	5,004,707	96.3
1965	5,126,402	98.7	1970	5,004,707	96.3
1966	5,145,512	99.1	1971	4,793,500	92.3
1967	5,145,513	99.1			

[1] Your committee's bill provides for (1) a reduction of the normal tax rate to 22 percent in 1964; of surtax rate of 28 percent in 1964 and 26 percent in 1965; and (2) 1st and 2d quarter current payments in 1964 and 6 succeeding years of 1, 4, 9, 14, 19, 22, and 25 percent.

(*c*)(*i*) *Effective date.*—The changes described above with respect to the acceleration of corporate tax payments start in taxable years beginning after December 31, 1963, and will become fully effective for taxable years beginning after December 31, 1969.

(*d*) *Revenue effects.*—It has been estimated that this proposal will increase revenues in the fiscal year 1964 by $260 million and in the fiscal year 1965 by $900 million.

IV. GENERAL EXPLANATION

B. STRUCTURAL CHANGES

1. Dividend credit and exclusion (sec. 201 of the bill [1] *and secs. 34 and 116 of the code)*

(*a*) *Present law.*—Under present law, individuals are allowed to exclude from their tax base the first $50 of dividend income. If a husband and wife each have dividend income (or if they have such income jointly), the exclusion claimed on a joint return may amount to as much as $100 of dividend income. In addition, under present law, a credit of 4 percent is allowed against tax for any dividends

[1] The parenthetical references to the bill are to the bill as amended by your committee.

remaining after the $50 or $100 exclusion. This credit may not, however, exceed 4 percent of taxable income.[2]

(*b*) *General reasons for provision.*—In 1954 when the present dividend credit and exclusions were adopted, the committee report indicated that these relief measures were provided because the earnings of a corporation are taxed twice, once as corporate income and again as dividend income when paid out to the shareholders. It was stated that in addition to this being a double tax on this type of income, it also was a deterrent to investment in corporations. The report in 1954 partcularly stressed the effect of the penalty of double taxation in channeling investments in the form of indebtedness rather than equity capital or stock.

In fact, the reduction in the corporate rate by 4 percentage points provided by this bill probably does as much to remove any double taxation involved with respect to corporate distributions as would the continuance of the present 4 percent dividend credit. Moreover, from the standpoint of making funds available for investment in corporate enterprises, this reduction in tax with respect to retained earnings can be expected to have a more important impact on corporate investment than any reduction directed solely toward corporate income which is distributed. This greater encouragement for corporate investment has been provided not only by the corporate rate cut in this bill, but also by the investment credit allowed with respect to business investment in the Revenue Act of 1962. The House and your committee's action in this bill, in making this investment credit available without reduction in the depreciation base, provides still further inducements for business investment.

In addition, the notion that the dividend credit would encourage equity financing does not seem to be borne out by the events which have occurred since 1954. The Secretary of the Treasury has pointed out that the ratio of equity to debt financing by corporations has not increased despite the presence of the 4-percent credit.

The form of the present dividend credit, in any event, is undesirable since it reduces any double taxation by a much larger percentage for the higher income bracket stockholders than it does for those in the lower bracket. Information presented by the Secretary of the Treasury indicated that the dividend credit, even combined with the present exclusion, reduces the extra burden of double taxation by 10.4 percent in the highest income bracket, while reducing it by only 4.3 percent for those subject to the first bracket rate.

In view of these considerations, your committee agreed with the House that it would be better to concentrate relief from any double taxation which it is possible to provide in a dividend exclusion rather than in a dividend credit. The dividend exclusion, in the area operative, completely removes any double taxation. Moreover, increasing the exclusion, as the bill provides, will tend to encourage a broader stock ownership among those with relatively low income. At the same time, the repeal of the credit removes the discrimination in present law in favor of high bracket shareholders. Furthermore, removing the credit even though doubling the exemption available has the effect of raising $300 million of revenue in the calendar year

[2] The dividend exclusion and credit are not allowed for dividends received from foreign corporations, China Trade Act corporations, exempt corporations, corporations deriving most of their income from U.S. possessions, real estate investment trusts, life insurance dividends, dividends from mutual savings banks, domestic building and loan associations, etc., and capital gains dividends from regulated investment companies.

1965 and subsequent years, which in the bill is devoted to further individual income tax rate reductions than would otherwise be possible.

(*c*) *General explanation of provision.*—In view of the considerations referred to above, the bill, both as passed by the House and as approved by your committee, decreases from 4 to 2 percent the credit against tax allowed for dividends received during the calendar year 1964. With respect to dividends received in 1965 and subsequent years, the credit is repealed altogether. Consistent with the treatment provided when the tax credit was 4 percent of the dividend income, the dividend credit allowable during the calendar year 1964 is to be limited to 2 percent of taxable income received by an individual during that year.

The bill provides that with respect to dividends received in the calendar year 1964 and subsequent years the maximum exclusion per individual with respect to dividends received from a domestic corporation is to be $100, in lieu of the $50 available at the present time. In the case of married couples, where each owns stock separately or where stock is owned jointly and joint returns are filed, the maximum exclusion will be $200 in place of the $100 applicable under present law.

(*c*)(*i*) *Effective date.*—As indicated above, the dividend credit is reduced from 4 percent to 2 percent with respect to dividends received in the calendar year 1964 and is repealed with respect to dividends received in 1965 and subsequent years. The dividend exclusion is doubled with respect to amounts received in the calendar year 1964 and subsequent years.

(*d*) *Revenue effect.*—The combined effect of the reduction and then repeal of the credit and the increase of the exclusion is expected to increase tax liabilities by about $120 million for the calendar year 1964 and by $300 million in the calendar year 1965 and subsequent years when the repeal of the credit becomes fully effective.

2. Limitation on retirement income (sec. 202 of the bill and sec. 37 of the code)

(*a*) *Present law.*—Present law provides a retirement income credit which in general terms is designed to provide a credit against tax for those making provision for their retirement other than through social security, or railroad retirement or other tax-exempt income, and it is intended that this credit be approximately equal in value to the exclusions provided in the case of social security, etc. Thus, the maximum amount of income with respect to which a retirement income credit may be taken is geared to the maximum social security payment. Moreover, the credit is based upon the amount of pension or investment income of the individual involved, on the general principle that this represents the retirement base built up by those not covered by social security, etc. (or not covered to any appreciable extent). For the same reasons, the amount of income upon which the credit is based is reduced for any tax-exempt social security, railroad retirement, or other similar income received by the individual.

In addition, what amounts to a "work clause" applies to the retirement income credit to make it comparable to social security payments which also are reduced for earned income received by the individual above a specified level. The reduction for earned income in the case of the retirement income credit generally is a reduction of 50 percent for any earned income above $1,200 but not above $1,700, and a 100 percent reduction for any earned income above $1,700.

Social security and the retirement income credit also are correlated in the earnings requirement. To be covered for social security tax purposes, an individual generally must have a minimum coverage of 40 quarters or 10 years, assuming he has been in covered employment for a sufficient period of time. On the same basis, the retirement income credit provides that an individual to be eligible for the retirement income credit must have had 10 years of prior earnings experience, in each year of which he earned in excess of $600. For this requirement a widow or widower may use the earnings experience of the deceased spouse in much the same way as is provided in the case of social security benefits.

(*b*) *General reasons for provision.*—The attention of your committee was called to the fact that in one respect the retirement income credit is not coordinated with the social security program. Under the old age and survivors insurance program, if a husband has the appropriate 40 quarters of coverage but the wife does not, nevertheless, the payment may be made not only with respect to the husband directly but also a supplementary payment of one-half the size of the payment going to the husband may also be made with respect to the wife. The retirement income credit, on the other hand, contains no supplementary payment with respect to a spouse where that individual does not have the requisite prior 10 years' earnings experience. To provide a retirement income credit of one-half the size of that going to the primary wage earner in the family in such a case is the purpose of the amendment added by your committee.

(*c*) *General explanation of provision.*—Your committee has added a new subsection to the existing retirement income credit provision to provide that where the husband and wife have both attained the age of 65 before the close of the year, the maximum income on which the credit may be based is to be increased above the present ceiling of $1,524 by $762, or one-half of the present maximum. This is designed as the equivalent of the supplementary benefit going to a wife under the old age and survivors insurance program.

Where only one spouse has the requisite 10 years' prior earnings experience and receives an increase in his retirement income of $762, this amount is to be reduced by any social security, railroad retirement, or other tax-exempt pension income received by the spouse without the prior earnings experience. In addition, this $762 is to be decreased by any earned income this spouse is currently receiving in excess of $1,200 (on a 50-percent basis with respect to income between $1,200 and $1,700) assuming this spouse has not reached the age of 72.

If one spouse does not have 10 years' prior earnings experience, then the maximum base retirement income of the other spouse is increased by the full $762 (with certain reductions referred to later). On the other hand, if both husband and wife have the requisite 10 years' prior earnings experience and if one of them has less than $762 of retirement income, then the maximum of $1,524 with respect to the other spouse is to be increased to the extent that the retirement income of the other spouse is less than $762. Computations, similar to the reductions referred to above where only one spouse has the ten years prior earnings experience, are required here with respect to tax-exempt income and earnings above the specified levels.

It should be noted that increasing a spouse's maximum allowable retirement income by the $762, or any part of this amount, does

not of necessity mean a larger retirement income credit. Whether he can receive a larger retirement income credit in such a case depends upon whether or not he receives sufficient qualifying investment and/or pension income to reach this new ceiling level, which may be as high as $2,286. The credit allowable is 15 percent of this amount.

(*c*)(*i*) *Effective date.*—This increase in the retirement income credit applies to taxable years beginning after December 31, 1963.

(*d*) *Revenue effect.*—It is anticipated that this will result in an annual revenue loss of $10 million a year.

3. Investment credit: Repeal of provision reducing basis of property by 7 percent and other amendments (sec. 203 of the bill and secs. 48 and 1245 of the code)

(*a*) *Present law.*—Last year in enacting an investment credit, Congress in general allowed a credit equal to 7 percent of certain types of investment (3 percent in effect in the case of most public utilities). This amount may be offset in full against tax liability up to $25,000 and against one-quarter of the tax liability above this level. Property with an estimated useful life of 8 years or more is fully taken into account in computing this credit, property with an estimated life from 6 to 8 years is taken into account at two-thirds of its cost, while property with an estimated life from 4 years up to 6 years is taken into account at one-third of its cost. The credit for the most part is limited to purchases of tangible personal property. As a result, machinery and equipment are the principal types of investment eligible for the credit.

As finally enacted in the Revenue Act of 1962, it was further provided that the base on which depreciation may be taken in the case of assets eligible for the investment credit was to be reduced by the amount of the credit. Thus, for example, where a taxpayer purchased a $100 asset and $7 of this purchase price was allowed as an investment credit, the basis on which depreciation could be computed with respect to the asset was decreased from $100 to $93.

(*b*) *General reasons for provisions.*—Although the investment credit enacted last year appears to have been successful in stimulating investment, several problems have arisen with respect to this credit which are dealt with in this bill.

First and most important of the changes made is the repeal of the requirement that the basis of property eligible for the investment credit be reduced by 7 percent of the qualified investment. This provision requires that if property costing $100 and eligible for an investment credit of $7 was acquired, the basis of this property for purposes of depreciation (or gain or loss on sale) was to be reduced from $100 to $93.

This provision has proved troublesome to taxpayers since it requires a downward basis adjustment with respect to eligible property, whether or not an investment credit is claimed for the property. Moreover, making this adjustment has presented recordkeeping problems for taxpayers, especially in the case of early retirements, and also severely complicated the statutory language of the investment credit provision.

In addition, this basis adjustment for property severely restricted the incentive effect of the investment credit. In effect, this amendment converted the 7-percent credit into a 3½-percent credit for corporations, plus a 7-percent initial depreciation allowance. This

result occurs because the decrease in basis of the asset which may be written off means that the equivalent of approximately one-half of the investment credit is recouped over the life of the asset in substantially the same manner as an initial depreciation allowance. This effect substantially reduces the incentive effect of the credit, since it means that approximately half of the benefits must be restored over the useful life of the asset. In effect, this transforms one-half of the credit into an interest-free loan.

To remove the recordkeeping and accounting problems which have arisen in connection with the basis adjustment provision and also to provide a greater stimulus with respect to the investment credit, the bill, both as passed by the House and as reported by your committee, repeals this basis adjustment provision. It also provides a means whereby over a period of time taxpayers may recoup their basis adjustments already made.

A second problem presented with respect to the investment credit arises in determining the amount of the credit in certain situations in the case of leased property. Under present law a lessor may pass on the benefits of any investment credit with respect to his purchases or other acquisitions to the lessee of the property. This was provided on the grounds that it was the lessee in such cases who was creating the additional market for investment. The existing provision in this respect provides that the amount of the investment credit, if the property is constructed by the lessor, is to be the appropriate percentage of the "fair market value" of the property. However, in all other cases involving leases the investment credit is to be the appropriate percentage of the basis of the property to the lessor. In practice, this has discriminated in favor of manufacturers of equipment relative to independent distributors. Thus, in the case of equipment leased by the manufacturer having a fair market value of $1,000 the investment credit passed through to the lessee in this case will be 7 percent of $1,000 or $70. However, if the same equipment is purchased from the manufacturer by an independent distributor at a dealer's discount of perhaps 25 percent, the basis of the property to the dealer would be $750. Thus, he could pass on an investment credit of only $52.50 instead of the $70. As a result, it is more advantageous for customers to lease the property directly from manufacturers, rather than from independent distributors. Both the House and your committee's version of the bill removes this discrimination by basing the credit in both cases upon the fair market value of the property.

A third problem arises with respect to the treatment of escalators and elevators in the case of the investment credit. Among the categories of property not eligible for the investment credit are buildings and their structural components. Your committee's report indicated that the term "structural components" of a building included such parts of a building as central air conditioning and heating systems, plumbing and electric wiring and lighting fixtures relating to the operation and maintenance of the building. The proposed regulations issued by the Treasury Department with respect to the term "structural components" provide an extensive list of the type of items considered to be structural components and therefore not eligible for the investment credit. Among these items are escalators and elevators. While these regulations are an accurate interpretation of the intention of Congress last year in this respect, nevertheless your committee

agrees with the House that it is appropriate to reconsider the treatment of escalators and elevators for purposes of the investment credit. Escalators and elevators are closely akin to assets "accessory to the operation" of a business which presently are eligible for the investment credit. These assets include machinery, printing presses, transportation or office equipment, refrigerators, individual air-conditioning units, grocery counters, etc. In addition, new elevator and escalator equipment represents an important aspect of modernization of plant and facilities.

For the reasons cited above, the bill provides that new elevators and escalators installed after June 30, 1963, and modernization of existing elevators after that date should be eligible for the investment credit. This, of course, also means that elevators and escalators will be treated as coming under the recapture provision enacted in 1962. This in general provides that depreciation deductions taken with respect to such equipment in the future are to give rise to ordinary income to the extent of any gain recognized on the sale of such property.

A fourth modification in the investment credit relates to the treatment of the credit by regulatory bodies. Both the House and Senate committee reports on the investment credit, as well as the statement of the managers on the part of the House with respect to the conference (and the floor statement on the Senate with respect to the conference report) state that the purpose of the investment credit was to stimulate investment by reducing the net cost of acquiring depreciable assets. This is shown by the following quotations. First, in the report of the Committee on Ways and Means of the House on that bill:

> The investment credit will stimulate investments because—as a direct offset against the tax otherwise payable—it will reduce the cost of acquiring depreciable assets. This reduced cost will stimulate additional investment as it increases the expected return from their use. The investment credit will also encourage investment because it increases the funds available for investment. * * *

In the report of your committee on that bill it was stated:

> The investment credit will stimulate investment, first by reducing the net cost of acquiring depreciable assets, which in turn increases the rate of return after taxes arising from their acquisition. * * *
>
> The objective of the credit is to reduce the net cost of acquiring new equipment; this will have the effect of increasing the earnings of new facilities over their productive lives and increasing the profitability of productive investment. It is your committee's intent that the financial assistance represented by the credit should itself be used for new investment, thereby further advancing the economy.

Again, in the statement of the managers on the part of the House with respect to the conference committee, and also in the floor statement of the manager of the bill in the Senate, it was stated:

> It is the understanding of the conferees on the part of both the House and Senate that the purpose of the credit for investment in certain depreciable property, in the case of both regulated and nonregulated industries, is to encourage mod-

ernization and expansion of the Nation's productive facilities and to improve its economic potential by reducing the net cost of acquiring new equipment, thereby increasing the earnings of new facilities over their productive lives.

Despite the statements cited above, the Federal Communications Commission has indicated that it is its policy that any benefits from the investment credit made available by the Revenue Act of 1962 should "flow through" immediately to the customers. In addition, the staff of the Federal Power Commission has recommended the same position. This is clearly contrary to the intent of Congress in enacting this provision and as a result this bill contains a provision to the effect that it was and is not Congress' intention that the Federal regulatory agencies require the benefit of the investment credit to "flow through" in this manner.

(*c*) *General explanation of repeal of basis adjustment provision.*—In the case of property placed in service after December 31, 1963, the bill, as amended by your committee, repeals the provision in existing law requiring a downward adjustment in the basis of property by 7 percent of the qualified investment. In the House bill the repeal of the provision was for property placed in service after June 30, 1963. This date was moved up by your committee because of the later consideration of the bill by your committee.

In addition, the bill provides that the basis of property eligible for the investment credit which was placed in service before January 1, 1964 (July 1, 1963 under the House bill), is to be increased by 7 percent of the qualified investment for such property, as of the first day of the taxpayer's first taxable year beginning on or after that date—January 1, 1964, with respect to a calendar-year taxpayer.[1]

Where the lessor passed the benefit of the investment credit on to the lessee, present law provides that the deductions allowed to the lessee for payments to the lessor under the lease contract are to be adjusted downward to reflect an amount similar to the amount of basis denied in the case of other than lease property. The bill provides that where this has occurred the Treasury is to provide for upward adjustment in the deductions allowed to the lessee for amounts paid to the lessor to similarly reflect the restoration of basis adjustments in these cases.

The effect of the provisions described above is to provide for no downward adjustment in basis with respect to property placed in service after December 31, 1963 (June 30, 1963, under the House bill). With respect to property placed in service before that time but in 1962 or 1963 and still on hand at the beginning of the taxpayer's first year beginning after that time (January 1, 1964, in case of calendar-year taxpayers) the basis on which depreciation is taken (or gain or loss in the case of sale) for property which was eligible for the investment credit is to be increased by the same 7 percent by which the basis was reduced when the property was acquired. This addition to basis in the case of those computing depreciation on a straight-line basis will be recouped ratably by the taxpayer over the remaining life of the assets. In the case of double declining balance depreciation the recoupment will occur somewhat more rapidly. This method of handling the

[1] The restoration of basis referred to above is to be reduced with respect to any previous restoration which may have arisen because the property was no longer eligible for the investment credit or because of conversion of industrial property to public utility use, therefore no longer being eligible for the full investment credit.

restoration of the basis in the case of previously acquired investment credit assets makes the taxpayer "whole" without the necessity of refunds.

(*c*)(*i*) *Credit for leased property to lessee.*—As indicated above, present law provides that when the investment credit is passed through from the lessor to the lessee the investment credit is to be based on the fair market value of the property if the property was constructed by the lessor, but otherwise is to be determined from the basis of the property to the lessor. The House and your committee's bill provides that the investment credit in these lease cases is to be based on the fair market value of the property, whether or not the lessor created the property. An exception to this rule is provided, however, where the property is leased by a corporation which is a member of an affiliated group to another member of the same affiliated group. In this latter case, since there is no lease to an "outsider," the investment credit will still be determined on the basis of the cost of the property to the lessor. This amendment applies to property, the possession of which is transferred to a lessee on or after the date of enactment of this bill.

(*c*) (*ii*) *Treatment of elevators and escalators.* Elevators and escalators have not, up to this time, been eligible for the 7-percent investment credit, since they have been classified as structural components of a building which specifically were not eligible for the investment credit. Both the House and your committee's version of the bill, however, modifies this rule. It provides in the case of elevators and escalators that where their construction, reconstruction or erection is completed after June 30, 1963, or the elevator or escalator is new in the hands of the taxpayer and is acquired after that date, then the cost of the elevator or escalator (or a reconstruction) is to be eligible for the investment credit.

In view of the fact that the investment in elevators and escalators is to be eligible for the investment credit, they also are to be treated as subject to the recapture provision (sec. 1245) enacted by Congress in 1962. However, only depreciation deductions taken with respect to periods after June 30, 1963, are to be subject to this ordinary income recapture where the elevator or escalator subsequently is sold at a gain (and then only to the extent of this gain are these depreciation deductions to be treated as ordinary income). This provision applies only to elevators and escalators sold after December 31, 1963.

(*c*)(*iii*) *Treatment of investment credit by Federal regulatory agencies.*—Another investment credit provision in the bill makes it clear that it was the intent of Congress in providing an investment credit in 1962, and that it is the intent of Congress this year in repealing the reduction in basis required with respect to investment credit assets, to provide an incentive for the modernization and growth of private industry, including regulated industries.

As a result, the bill specifies in two paragraphs the intent of Congress as to the treatment of the investment credit by Federal regulatory agencies. It states in the case of public utility property that these regulatory agencies are not, without the taxpayer's consent, for the purpose of establishing the cost of service of the taxpayer, to treat more than a proportionate part of an investment credit (determined with reference to the useful life of the property) as reducing the taxpayer's Federal income tax liabilities. Nor are they to accomplish a

similar result by any other method. Public utility property for this purpose includes property of electric, gas, water, telephone, and telegraph public utilities which under present law is eligible for what in effect amounts to a credit of 3 percent.

The bill also provides restrictions for Federal regulatory agencies in the case of other regulated companies—such as natural gas pipelines, railroads, airlines, truck and bus operators, and other types of public carriers—which receive an investment credit of 7 percent of the investment in qualified property. It provides that Federal regulatory agencies are not, without the taxpayer's consent, for purposes of establishing the cost of service of the taxpayer, to treat any investment credit allowed him as reducing his Federal income taxes. Nor are the agencies to accomplish a similar result by any other method.

As indicated above in the case of the public utility property Congress is merely directing the Federal regulatory agencies not to "flow" the benefits of the investment credit "through" to the customers over any period shorter than the useful lives of the property involved. In the case of the other property Congress is directing the Federal regulatory agencies not to "flow" this benefit "through" at any time. This difference in treatment is attributable to the fact that Congress provided what in effect is a 3-percent credit for the public utility property rather than 7-percent credit because in 1962 it was recognized that in their case part of the benefit from the investment credit would be likely to be passed on eventually to the customers in lower rates.

(*c*)(*iv*) *Effective dates.*—As indicated previously, under your committee's amendments the repeal of the basis adjustment is to apply with respect to property placed in service after December 31, 1963. However, property placed in service before that time, with respect to which a basis adjustment has already been taken, if still in the hands of the taxpayer on the first day of his taxable year beginning after December 31, 1963, is to receive an upward adjustment in basis.

The amendment concerning the amount of the investment credit in the case of leased property is to apply with respect to property transferred to a lessee on or after the date of enactment of this bill. The amendment made with respect to escalators and elevators in the case of the investment credit applies to those acquired or constructed after June 30, 1963. The recapture rule with respect to these assets applies to dispositions of escalators or elevators after December 31, 1963.

(*d*) *Revenue effect.*—The repeal of the basis adjustment with respect to the investment credit is expected to reduce tax liabilities by $160 million in the calendar year 1964 and by $195 million in the calendar year 1965 with gradually greater reductions in successive years, according to Treasury estimates; estimates by the staff of the Joint Committee on Internal Revenue Taxation are $245 million and $305 million, respectively. Making elevators and escalators eligible for the investment credit is expected to result in an additional $10 million of loss in the calendar year 1964 and subsequent years.

4. Group term life insurance purchased for employees (sec. 204 of the bill and sec. 79 of the code)

(*a*) *Present law.*—Under present law, employees are required to include in their income the amount of premiums paid by their employers to provide them with individual life insurance or group

permanent life insurance which carries a loan or surrender value. However, the regulations (1.61–2(d)(2)) have provided that the cost of group term life insurance purchased for employees is not includible in their income as compensation although the employer receives deductions for the amounts he pays to provide this protection.

(*b*) *General reasons for provisions.*—As indicated above, this tax-free status for employer-financed group term life insurance is inconsistent with the tax treatment of other types of life insurance protection furnished employees by their employers. While this complete exclusion might have been considered relatively insignificant when tax rates were low, the present relatively high rates as well as the growing volume of group term life insurance now provided makes it particularly inequitable to continue this complete exclusion. The employee in such case receives a substantial economic benefit from this insurance protection whether or not the policy for a specific year leads to a payment to his beneficiary. The provision of this insurance by the employer relieves the employee of substantial costs of providing his own insurance protection for his family which he would otherwise have to provide out of tax-paid dollars.

The House, despite recognizing that the entire cost of this insurance protection represents compensation to the employee, provided an exemption with respect to the premiums paid on the first $30,000 of such insurance because it believed, from the standpoint of the economy as a whole, that it is desirable to encourage employers to provide life insurance protection for their employees. Provision of such a basic amount of insurance does much to keep together family units where the principal breadwinner dies prematurely. Your committee is in accord with the reasoning of the House on this subject but believes that $70,000 represents a more appropriate exemption level. It has also made three other more technical amendments described below.

(*c*) *General explanation of provisions.*—For the reasons given above, the bill as amended by your committee provides that the gross income of an employee for tax purposes is to include the cost of any group term life insurance provided him under a policy carried directly or indirectly by his employer to the extent that the insurance coverage provided is in excess of $70,000 as contrasted to $30,000 under the House bill. The employee will not be charged with any portion of this insurance protection over $70,000 which he provides himself through his own contributions, since insurance protection provided in this manner is paid for out of tax-paid dollars. Moreover, all contributions made by the employee are applied against insurance protection above the $70,000 exclusion level.

The cost of protection above $70,000 is taxed to an employee if it is provided under a plan arranged for by the employer whether the protection the employee receives (over and above that provided by his own contributions) is provided directly by the employer, or indirectly by the employer's charging more than the cost of the insurance to other employees (such as those in younger age brackets) and less to those in the older age brackets, such as the specific employee in question.

(*c*)(*i*) *Exception for retired employees, etc.*—Both the House and your committee's bill provides an exception to the general rule described above where the individual's employment has been terminated and either he has reached the normal retirement age (under the practice followed by his employer) or he has become disabled. In both of

these cases it was concluded that it would be undesirable to tax the aged or disabled individual who is no longer working for group term life insurance protection provided to him by his former employer.

Two other exceptions are also provided where the insurance protection provided by the employer will not be treated as compensation to the employee, even though in excess of the $70,000 coverage exclusion. First, it will not be taxed to the employee where the employer directly or indirectly is the beneficiary of the policy since in such cases the employer is in reality providing for his own rather than his employee's interest.

Secondly, the costs of the insurance protection in excess of $70,000 will not be taxed to the employee where the beneficiary of the policy is a charitable organization (of the type described in sec. 170(c) of the code). An exception is provided for such cases because it is recognized that where an employer provides protection for all of his employees, a few of them may not have natural heirs and, therefore, if left to their own choice, might not purchase insurance protection. It was concluded that in such cases, it would be unfair to tax such employees on the cost of insurance protection provided by employers. For this reason, it was thought that where the employee demonstrated his own personal disinterest in the protection by naming a charity as the beneficiary, no portion of the cost of such protection should be considered as income to him. It is not intended, however, that he receive any deduction for a charitable contribution with respect to such assignment.

(c)(ii) *Determining the cost of the insurance.*—The House bill provided that the cost of the insurance protection can be determined under either of two methods. Your committee's bill provides that this cost can be determined only under the first of these methods. Under both versions of the bill this cost can be determined by using a uniform table. In this case, the cost of the insurance is averaged out on the basis of 5-year age brackets, in order to simplify computations which must be made by the employer in informing the employee as to the amount of taxable income. Where cost is determined on the basis of this uniform table it will be determined on the basis of a table published in the Treasury Regulations on this provision.

This table will reflect costs of such protection based upon insurance company experience and, of course, will be changed from time to time as mortality experience or other factors indicate that this is appropriate. Until provided otherwise by regulation, however, the cost per $1,000 of group term life insurance protection can be determined from table 11 below.

TABLE 11.—*Uniform 1-year term premiums for $1,000 of life insurance protection*

[Cost per $1,000 of protection]

Age:	
15 to 19	$1.44
20 to 24	1.73
25 to 29	2.11
30 to 34	2.72
35 to 39	3.65
40 to 44	5.10
45 to 49	7.36
50 to 54	10.87
55 to 59	16.29
60 to 64 [1]	24.67

[1] Those age 65 and over whose employment is not terminated will also have their insurance cost computed on the basis of the 60 to 64 age category.

The second method which would be available under the House bill but not under your committee's amendments provides that an employer, in computing the cost of his employee's protection for tax purposes, may use the actual cost of the policy to him and the employees. In this case also, the same 5-year age brackets as provided under the uniform premium table would be used. Your committee's amendments remove this second method of computation because it has been informed that this method is difficult for employers to compute. Moreover, since the uniform premium table method of computation contains no loading charge, in almost all cases it will in any event result in the lower cost.

Both the House and your committee's version of the bill provides that in the case of employees (not retired), who are over age 64, the cost of protection is not to be increased in such cases, but instead is to continue to be computed on the same basis as those in the age bracket 60 to 64.

(*c*)(*iii*) *Deduction for certain contributions provided by House bill but not your committee's amendments.*—The House bill provided a special deduction in computing taxable income for contributions made by an employee toward the purchase of group-term insurance protection in excess of the cost of his own insurance (only above the exemption level). This deduction was provided by the House bill on the grounds that under some group-term insurance plans the younger employees in effect pay for insurance protection provided for those in higher age brackets. It was suggested that this usually occurs where a uniform rate of contribution is required of all employees regardless of age. In such cases, it was indicated that the cost of protection for those who are relatively young may not equal the contribution made by the employees. In view of this, the House bill provided that contributions made by an employee (above the exemption level) to the extent that they exceeded the cost of the protection provided for him were to be deductible by him for tax purposes. Your committee's amendment deletes this deduction. Your committee has taken this action primarily because it believes that the size of these deductions would in any event be relatively small and on the grounds that it is questionable whether these deductions are worth the added administrative burden they would bring for the employer.

(*c*)(*iv*) *Example of method of computation.*—To illustrate the method of computing the taxable cost of group term insurance provided under your committee's version of the bill, it is first assumed that the employee makes no contribution toward this protection himself, and then that he makes a contribution of $2 per $1,000 of coverage. The method of computing the inclusion in the employee's gross income is illustrated by an employee age 41 who is provided with $200,000 of group term life insurance protection.

Where employee makes no contribution

Portion of insurance coverage taken into account ($200,000–$70,000)	$130, 000. 00
Cost of insurance protection per $1,000 for individual age 41 assuming uniform premium table is used	5. 10
Amount to be included in income tax base by employee ($5.10×130)	663. 00

Where employee makes contribution

Portion of insurance coverage taken into account ($200,000-$70,000)	$130, 000. 00
Cost of insurance protection per $1,000 for individual age 41 assuming uniform premium table is used	5. 10
Total cost of insurance attributable to employee's contribution ($2.00×200)	400. 00
Cost of insurance protection above $70,000 exclusion ($5.10×130)	663. 00
Amount to be included in income tax base by employee ($663−$400)	263. 00

(*c*)(*v*) *Reporting instead of withholding.*—The House bill provides that the cost of group term insurance, to the extent taxable to the employees, is to be subject to regular income tax withholding. Your committee concluded that this was unnecessarily burdensome for employers, particularly in view of the fact that so few employees would be affected by the $70,000 exclusion level. Instead, your committee's bill provides for the reporting of this income annually by the employer to the Government, with a copy of the information return also going to the employee. The amount shown on this information return is only the amount payable with respect to an employee which represents taxable income to him. Where he is covered by more than one employer, each employer is to determine the exemption for purposes of the information return in the same manner as if he were the only employer. The type of information return (form 1099) is the same as that already used under existing law to report dividends and interest. The penalties for failure to provide the information are $10 per person unless the failure is due to reasonable cause rather than willful neglect. The total penalties paid by an employer may not exceed $25,000.

(*c*)(*vi*) *Effective date.*—The tax treatment provided with respect to group term insurance as described above is to apply with respect to such insurance protection provided after December 31, 1963. The information reporting with respect to this insurance will apply to remuneration paid after December 31, 1963, in the form of group term insurance provided after that date.

(*d*) *Revenue effect.*—It has been estimated that the enactment of the group term life insurance provision described above will result in an increase of somewhat less than $5 million in revenues in a year when this provision is fully effective.

5. *Sick pay exclusion (sec. 205 of the bill and sec. 105(d) of the code)*

(*a*) *Present law.*—Under present law amounts paid to an employee by his employer to continue his wage payments when he is absent from work because he is sick or injured are excludable from the employee's gross income under certain conditions (although deductible by his employer). The exclusion in any case is available only up to $100 per week. In the case of absence from work due to personal injuries, this $100 is the only limitation at the present time. In the case of sickness, however, the exclusion is available only after the first 7 days of absence, unless the employee is hospitalized because of the sickness for at least 1 day during his absence.

(*b*) *General reasons for provision.*—Your committee agrees with the House that this sick pay exclusion in its present form is not justified. The amounts received by the employee in this case are substitutes for regular wages or salaries which, had they been received as such, would

be fully taxable. The wage substitutes in this case are wholly unrelated to the costs involved as a result of illness or injury. Amounts paid by the employer for the medical expense of the employee already are excludable by the employee under other provisions of law (sec. 105(b)) and amounts paid by the employee himself for medical expenses also are deductible elsewhere under present law (sec. 213 of the code) to the extent that they exceed what is considered to be the normal level of medical expenses.

The present exclusion also tends to encourage malingering because it treats the employee who stays at home better than another employee; also is easily abused because an employee who stays home because of a minor injury or illness may obtain an exclusion substantially in excess of any additional expenses he may incur.

The House bill provided, however, that those who have become permanently disabled or who have had long, continuing illnesses or accidents could continue to receive the advantage of this provision. It was thought that persons are likely to have their earnings substantially decreased, at the same time they also may be faced with large medical bills. Moreover, in such cases, the ordinary family financial requirements are likely to continue at their usual level, presenting larger problems for the individual as the period of absence from work becomes longer. Your committee also is in accord with this reasoning, and therefore has continued this provision unchanged.

(*c*) *General explanation.*—For the reasons presented above the sick pay exclusion of present law is amended to provide that wage continuation payments are not to be excludable to the extent they are attributable to the first 30 days of absence because of personal injury or sickness. This means, of course, that this exclusion will be available after the first 30 days of injury or sickness for the long continuing illness and also in the case of those receiving permanent disability pensions before the normal retirement age.

Under present law employers who make wage continuation payments which are not excludable from the employee's income (e.g., payments in excess of $100 a week or payments for the first 7 days in the case of sickness where there is no hospitalization) are required to include these amounts in income subject to withholding and reporting on form W–2. This practice will be continued under the revised provision with the withholding and reporting applying to a larger proportion of the wage continuation payments. Where these payments are made by someone other than the employer, such as an insurance company or a pension trust, the Treasury does not presently require withholding and it is the intention of the House and your committee that this practice be continued. However, these payments are (if made on behalf of the employer) to be included on the W–2 form prepared by the employer and shown on this form as wages or salary.

(*c*)(*i*) *Effective date.*—The amendment made by this provision will apply to wage payments attributable to periods of absence commencing after December 31, 1963.

(*d*) *Revenue effects.*—It is estimated that the provision described above, when fully effective, will result in an increase in revenues of $110 million a year.

6. Exclusion for gain on the sale of a residence by an individual age 65 or over (sec. 206 of the bill, sec. 121 of the code)

(*a*) *Present law.*—Under present law (sec. 1034) where an individual sells his old residence and, within a year of that sale, purchases a new residence (or within 18 months thereafter builds a new residence), the gain on the sale of the old residence is not recognized to the extent that it, plus the cost or other basis of the old residence, is invested in the new residence. This postponement of the taxation of the gain is available only where the new residence is purchased or built within the time specified.

(*b*) *General reasons for the provisions.*—While present law generally provides adequately for the younger individual who is for one reason or another changing residences, it does not do so for the elderly person whose family has grown and who no longer has need for the family homestead. Such an individual may desire to purchase a less expensive home or move to an apartment or to a rental property at another location. He may also require some or all of the funds obtained from the sale of the old residence to meet his and his wife's living expenses. Nevertheless, under present law, such an individual must tie up all of his investment from the old residence in a new residence, if he is to avoid taxation on any of the gain which may be involved.

Your committee agrees with the House that this is an undesirable burden on our elderly taxpayers.

(*c*) *General explanation.*—For the reasons given above, the bill provides an exclusion from gross income for a limited amount of gain received from the sale or exchange of a personal residence in the case of taxpayers who have reached age 65 before the sale or exchange occurs. To be eligible for this treatment, they must have owned and used the property involved as their principal residence for 5 out of the last 8 years before the sale or exchange.

(*c*)(*i*) *Limitations.*—In this provision the primary concern is with the average and smaller homestead selling for $20,000 or less. For that reason, the application of this section is limited so that a full exclusion is provided only for the gain attributable to the first $20,000 of the sales price.[1] Where the sale price of the residence does not exceed $20,000, the entire gain is excluded from income for tax purposes. Where the sale price exceeds $20,000, a proportion of the gain is excluded. The proportion excluded is in the ratio of $20,000 to the actual sale price; for example, if a residence is sold for $60,000 and the gain is $10,000, then the portion of this $10,000 gain which will not be taxable is determined as follows:

Actual sale price	$60, 000
Ratio of $20,000 to sale price ($20,000/$60,000)	⅓
Proportion of $10,000 gain to be excluded from taxable income (⅓ of $10,000)	$3, 333. 33
Remaining gain subject to tax	$6, 666. 67

To prevent taxpayers over age 65 from reusing this section and obtaining numerous exclusions for gains on personal residences, the bill provides that this exclusion is available to a taxpayer and his spouse only once in their lifetimes.

[1] Actually the determination is made on the basis of adjusted sales price which as provided elsewhere in the code is the gross sales price less any so-called fix-up expenses incurred in selling the property. In this regard, see sec. 1034(b)(1).

(*c*)(*ii*) *Other rules.*—Since a taxpayer and his spouse may claim the exemption under this provision only once in their lifetimes, the bill provides that the exclusion is elective and may be made or revoked at any time before the expiration of the period for making a claim for credit or refund of tax, generally about 3 years after the year of the sale or exchange. It also was necessary to provide a number of other special rules for the application of this provision. These rules may be described briefly as follows:

1. Where property is held jointly by a husband and wife either as joint tenants, tenants by the entirety or as community property, if a joint return is filed by the husband and wife and one of them satisfies the age requirement of 65 and has held and used the property for the required 5 out of the last 8 years, then both the husband and wife are treated as meeting these requirements.

2. Where the spouse of an individual has died and that spouse held and used the property as a personal residence for 5 out of the last 8 years and had not previously claimed an exemption under this provision, then the individual who is still living will be treated as satisfying these holding and use requirements. (However, the surviving spouse must be age 65 for the exclusion to apply).

3. The bill provides that for purposes of this provision tenant stockholders in a cooperative housing corporation who sell their right to occupy the house or apartment are to be treated in the same manner for purposes of this provision as those who own their residence outright.

4. Any gain realized from the destruction, theft, seizure, requisition, or condemnation of a personal residence is to be eligible for this provision in the same manner as if the residence had been sold.

5. Where a part of a property is used as a personal residence and the remainder as a business or income producing property, the exclusion provided under this provision upon the sale of the property is to be available to the extent that the gain is attributable to the portion of the property owned and used by the taxpayer as his personal residence.

6. In applying this provision, an individual is to be considered as married or single according to his status on the date of the sale or exchange. An individual who is separated under a decree of divorce or separate maintenance on the date of the sale is not considered as married for purposes of this provision.

7. In the case of involuntary conversions and in the case of the sale or exchange of one personal residence for another, gain is not recognized under present law where the total amount realized from the conversion or sale is reinvested within a specified period of time. In addition, the basis of the new property so acquired in such cases remains the same (except for any additional investments over and above the sales price) as the property previously held. Where both the exclusion available for taxpayers over age 65 and either of these two provisions may be applied with respect to the same transaction, the bill provides that the exclusion for those over age 65 is to be applied first. Thus, in the case of the involuntary conversion or the sale of a personal residence and the purchase of another, by a taxpayer who is over age 65, any gain which might be realized upon the involuntary conversion or sale of the residence will be reduced by any exclusion available to the taxpayer under this section. In addition, in the case

where the total amount is reinvested within the specified period the basis of the taxpayer in the newly acquired residence will be his basis for the old residence increased by any exclusion of gain obtained by him under the provision which is reinvested in the new residence (and, of course, increased by any additional funds which he may have invested over and above the amount realized from the first residence).

8. In determining whether an individual has gross income of $600 or more (or $1,200 or more in the case of those over age 65) any exclusion provided under this provision will for that purpose alone be treated as gross income. This assures that the Government will receive proper reporting on amounts claimed as exclusions under this provision.

(*c*)(*iii*) *Effective date.*—This provision applies to sales, exchanges, and other dispositions after December 31, 1963.

(*d*) *Revenue effects.*—This provision is expected to result in an annual revenue loss of $10 million.

7. Denial of deduction for certain State, local, and foreign taxes (*sec. 207 of the bill and secs. 164 and 275 of the code*)

(*a*) *Present law.*—The general rule under present law is that taxes paid or accrued by a taxpayer are deductible for Federal income tax purposes. However, an exception to this rule provides that no deduction is to be allowed for certain specified taxes, principally Federal taxes. The categories of taxes which may not be deducted under present law are:

1. Federal income taxes.
2. Federal war profits and excess profits taxes.
3. Federal import duties and Federal excise and stamp taxes (except that these taxes may be deductible as business expenses or taken into account as expenses incurred in the production of income).
4. Estate, inheritance, gift, and similar taxes.
5. Most local improvement taxes.
6. Foreign income and excess profits taxes and similar taxes imposed by U.S. possessions (if the taxpayer elects to take a foreign tax credit for these taxes in lieu of a deduction).

The practical effect of the above listing of taxes is to deny any deduction for Federal taxes paid by the taxpayer (except to the extent that taxes listed in category 3 above qualify as business expenses or expenses incurred in the production of income).

State and local taxes on the other hand generally are deductible, except death and gift taxes and most local improvement taxes. The most important State and local taxes, and the revenues derived from them by State and local governments in 1961, are as follows:

1. Real and personal property taxes, $18 billion.
2. Income taxes, $3.9 billion.
3. General sales and gross receipts taxes, $5.4 billion.

The three categories of taxes indicated above account for $7.5 billion of the total $10 billion of taxes taken as nonbusiness deductions on taxable returns for Federal income tax purposes in 1960. The principal remaining State and local taxes, for which deductions may presently be taken, together with revenues derived from them by State and local governments in 1961, are as follows:

1. Gasoline taxes, $3.5 billion.
2. Auto and drivers' licenses, $1.8 billion.

3. Alcoholic beverage taxes, $0.7 billion.
4. Tobacco taxes, $1.1 billion.
5. Selective sales or excise taxes not included above (such as those on admissions, room occupancy, etc.), $1.8 billion.

(*b*) *General reasons for the provision.*—The House bill would provide for the continued deduction only of property taxes, income taxes, and general sales taxes. Your committee's amendments provide for the deduction of these three categories of taxes but also restores the deductibility of two categories of taxes which under the House bill would no longer be deductible. These are the excise tax on gasoline (and diesel and other motor fuels), and the taxes for auto registration and driver's licenses.

Your committee finds no disagreement with the House in the reasons given for the desirability of continuing the deductibility of property taxes, income taxes, and general sales taxes. In the case of property taxes, it was suggested that any denial of the deduction would result in an important shift in the distribution of Federal income taxes between homeowners and nonhomeowners. In the case of State and local income taxes, it was suggested that the continued deductibility of these taxes represent an important means of accommodation to take into account the fact that both State and local governments on one hand and the Federal Government on the other hand tap this same important revenue source. A failure to provide deductions in such a case could mean a combined burden of income taxes which in some cases would be extremely heavy. It was further indicated that, if property and income taxes are to be deductible for Federal income tax purposes, it also is important to allow the deduction of general sales taxes. To deny the deductibility of general sales taxes while allowing deductions for the other major revenue sources would encourage State and local governments to use these other resources in place of the sales tax. Your committee agrees with the House that it is important for the Federal Government to remain neutral as to the relative use made of these three forms of State and local taxation.

Your committee believes that much the same reasons which led to the House continuing the deduction of property, income, and sales taxes also suggest the desirability of continuing the deduction of gasoline and auto registration and drivers' licenses. Gasoline taxes are also a major source of State revenue and to deny the deduction of this tax while allowing the deduction of property, income, and general sales taxes tends to encourage States to use other than automotive taxes as their more important revenue sources. Moreover, a failure to provide a deduction for these automotive taxes also could result in an important shift in the distribution of Federal income taxes between classes of taxpayers, i.e., between those who own automobiles and those who do not.

Moreover, your committee is inclined to doubt that it is difficult for a taxpayer to make good estimates of the amount of these State and local automotive taxes as is sometimes suggested. The registration and drivers' license taxes are no more than annual taxes and certainly present the taxpayer with no particular recordkeeping problem. For most taxpayers the amount of gasoline taxes paid can be estimated relatively accurately either from credit sales slips or from the mileage added on a car each year.

Your committee agrees with the House that the other forms of excise taxes do present a recordkeeping problem for taxpayers. Also, it is recognized that these taxes, especially those on alcohol and tobacco products, may be deductible in some States and not in others, depending on the form of State law. As pointed out in the report of the House Committee on Ways and Means, in the case of cigarette and tobacco taxes, 26 States levy taxes which comply with the Federal rules for deductibility. However, 21 States and the District of Columbia have laws which do not meet these standards; and, thus, in these States, no deductions are available for these taxes.[1] There also is a wide variation among the States as to the deductibility of alcoholic beverage taxes. In six States, these taxes are imposed on the consumer and, therefore, are deductible. In addition, in 10 other States, where alcoholic beverages are sold through State liquor stores, the tax also generally is deductible.[2] This variation as to the Federal tax treatment of these various excise taxes is discriminatory as between taxpayers and different States. Moreover, it further complicates the already difficult problem of reporting deductible taxes in these cases. It should be noted, however, that this problem does not exist in the case of the gasoline, registration, and license taxes.

For the reasons indicated above, your committee is in agreement with the House as to the desirability of denying deductions in computing the Federal income tax for certain selective State and local taxes. However, in addition to retaining deductions for property, income and sales taxes, your committee has concluded that it also is desirable to retain deductions for gasoline and auto registration and driver's license taxes. Your committee has also made a modification with respect to limited types of improvement taxes which presently are deductible. As explained subsequently, under your committee's bill, such taxes to the extent now deductible will continue to be deductible.

(c) *General explanation of provision.*—For the reasons given above, your committee's bill provides as a general rule that only the following taxes may be taken as deductions:

1. State and local personal property taxes;
2. State and local, and foreign, real property taxes;
3. State and local, and foreign, income, war profits, and excess profits taxes; and
4. State and local general sales taxes;
5. State and local gasoline taxes (and taxes on diesel and other motor fuels);
6. State and local taxes on registering automobiles and on driver's licenses.

The fact that only these taxes may be deducted as taxes does not mean that other State, local, and foreign taxes may not be deducted to the extent they represent trade or business expenses or expenses incurred in the production of income. A sentence added to the code on this point makes it clear that these other State, local, and foreign taxes may be deducted as taxes when they are of a business nature or for the production of income even though otherwise they might have to be capitalized. Taxes levied on intangible personal property are examples of taxes generally deductible in this latter category since it

[1] Three States, Colorado, North Carolina, and Oregon, do not levy cigarette taxes.
[2] Seven States do not levy taxes on liquor except beer, and in some cases, wine. The beer and wine taxes of these States are not deductible.

can be reasonably supposed that the property subject to such a tax is held either in connection with a trade or business or for the current, or possible future, production of income.

(c)(i) *Taxes which in no event may be deducted.*—Under present law certain taxes, largely Federal taxes, may not be deducted in any case either as taxes or as business expenses or as expenses incurred in the production of income. To make clear the distinction between these taxes for which presently no deduction may be claimed and the other taxes which may be deducted if they represent expenses of a business or in the production of income, in the bill a new section (sec. 275) is added providing that no deduction at all may be taken for certain specified taxes. The taxes listed in this section are listed as exceptions in section 164 of the code under present law, and are moved to the new location in the code merely to emphasize the fact that these taxes cannot in any event be claimed as a deduction.

These taxes are as follows:

1. Federal income taxes;
2. Federal war profits and excess profits taxes; and
3. Estate, inheritance, legacy, succession, and gift taxes;
4. Income, war profits, and excess profits taxes imposed by a foreign country or a possession of the United States if the taxpayer chooses to take a foreign tax credit with respect to these taxes; and
5. Taxes on real property which the code requires to be treated as being imposed on another taxpayer.

Federal import duties and Federal excise and stamp taxes (to the extent not included in the above categories) will continue to be deductible to the extent they can presently be deducted as trade or business expenses (under sec. 162) or as expenses for the production of income (under sec. 212).

(c)(ii) *Definitions of certain deductible taxes.*—The bill defines a personal property tax which may be deducted as an ad valorem tax imposed on an annual basis in respect of personal property.

A general sales tax is defined as a tax imposed on one rate with respect to the sale at retail of a broad range of classes of items. The bill specifies, however, that the fact that food, clothing, medical supplies, and motor vehicles either are exempt from a sales tax or are taxed at a lower rate is not to result in any given tax being classified as not applying to a "broad range of classes of items." However, if any of these specified items are taxed at a higher rate than the general rate applying to other items, or if any other item is taxed at a different rate, no deduction is to be permitted for the tax on these items.

As under present law, deductions may be taken for general sales and gasoline taxes not only where they are imposed on the consumer as such, but also where they are separately stated and where the tax is in fact paid by the consumer.

Included in the definition of a deductible general sales tax by the bill is a "compensating use tax." A compensating use tax, as its name implies, is generally a tax imposed on items brought in from another taxing jurisdiction. In this case, the tax is imposed on the "use, storage, or consumption of the item" since the sale as such does not occur in the taxing jurisdiction in question. For such a tax to be deductible, similar items must be subject to a deductible general retail sales tax in the taxing jurisdiction in question.

(*c*)(*iii*) *Certain local improvement taxes.*—Under present law, local improvement taxes generally are not deductible (although interest or maintenance charges may otherwise be deductible). However, presently an exception is made and a deduction is permitted for local improvement taxes levied by a special taxing district where the district covers at least one entire county, at least 1,000 persons are subject to the tax levied by the district, and the district levies its assessment annually at a uniform rate on the same assessed value for real property as is used generally for purposes of the real property tax. The House would have eliminated this provision on the grounds that it is of limited application and also on the grounds that the continuation of this provision was not desirable. Your committee is in accord with the view that improvement taxes should not generally be deductible. However, in order to prevent the changing of rules of deductibility in this respect after debt has been incurred it has provided for the continued deduction of such taxes (to the extent presently deductible) for the purposes of paying off indebtedness already existing on December 31, 1963.

(*c*)(*iv*) *Effective date.*—The changes made by the above provisions relating to taxes apply to taxable years beginning after December 31, 1963.

(*d*) *Revenue effect.*—The changes made in the deduction of taxes by this section, as amended by your committee, are expected to increase revenues by $190 million in a full year of operation. The changes made by the House bill would have increased revenues by $520 million.

8. Personal casualty and theft losses (sec. 208 of the bill and sec. 165(c)(3) of the code)

(*a*) *Present law.*—Under present law, taxpayers may claim a deduction for losses of property not connected with a trade or business if these losses arise from fire, storm, shipwreck, or other casualty, or from theft. Under present law, these deductions are available without limitation to all taxpayers who itemize their personal deductions.

In addition, under present law, losses incurred in a taxpayer's trade or business or losses incurred in connection with transactions entered into for profit are deductible. The change made by this bill with respect to casualty losses described below does not affect the continued full deduction of these losses as business expenses or as expenses incurred in the production of income.

(*b*) *General reasons for provision.*—Your committee agrees with the House that in the case of nonbusiness casualty and theft losses, it is appropriate in computing taxable income to allow the deduction only of those losses which may be considered extraordinary, nonrecurring losses, and which go beyond the average or usual losses incurred by most taxpayers in day-to-day living. In view of this, it is believed appropriate to limit the casualty loss deduction to those losses or thefts above a minimum amount. The minimum selected was $100 per casualty loss, since this corresponds approximately with the "$100 deductible" insurance carried by many individuals in the United States with respect to such losses. This means that no deduction will be allowed in the case of an ordinary "fender bending" accident or casualty, but that casualty and theft losses will continue to be deductible (over the $100) in those cases where they are sufficient in size to have a significant effect upon an individual's ability to pay Federal income taxes.

(*c*) *General explanation of provision.*—The amendment made by both the House and your committee's versions of the bill limit the deductibility of personal losses (as distinct from those associated with a trade or business or transactions entered into for profit) to those where the casualty or theft loss exceeds $100. For this purpose, in determining what is a single casualty, it is intended that the law be interpreted liberally. Thus, for example, where an individual's property is damaged by wind from a hurricane and this is followed by additional damage resulting from water, it is intended that the combination of these events be treated as one casualty and, therefore, that all amounts over $100 of damage be deductible.

The $100 limitation applies to a joint return by a husband and wife as well as to a separate return of either. Thus, if a husband and wife file separate returns, each is subject to a separate $100 floor with respect to each casualty or theft, while, if they file a joint return, they are together subject to only one $100 floor with respect to each casualty or theft whether the loss is sustained with respect to jointly, or separately, owned property.

(*c*)(*i*) *Effective date.*—This amendment applies to losses sustained after December 31, 1963.

(*d*) *Revenue effect.*—It is estimated that this provision will increase revenues by $50 million a year in a full year of operation.

9. Charitable, etc., contributions, and gifts (sec. 209(a) of the bill and sec. 170(b) of the code)

(*a*) *Present law.*—Under present law, individuals are allowed a deduction of up to 20 percent of their adjusted gross income for contributions to or for the use of charitable, educational, religious, etc., organizations generally. An additional 10-percent deduction also is available for contributions to churches, schools, hospitals, certain medical research organizations, and certain organizations affiliated with State colleges or universities. Thus, with respect to contributions in this latter category, a charitable contribution deduction of up to 30 percent is allowed.

(*b*) *General reasons for provision.*—The House and your committee agree that the availability of this additional 10-percent deduction should be extended to include contributions to many forms of charitable or philanthropic organizations not now covered by this provision. Greater uniformity in the availability of this additional 10-percent deduction is desirable because of the many beneficial activities that are carried on by various philanthropic organizations not now eligible for the 30-percent deduction. This is especially true of many cultural and educational organizations and major charitable organizations not now eligible for the 30-percent deduction.

The additional 10-percent deduction is limited to organizations which are publicly or governmentally supported, however, and this additional deduction is not made available in the case of private foundations. These latter types of organizations frequently do not make contributions to the operating philanthropic organizations for extended periods of time and in the meanwhile use the funds for investments. The extra 10-percent deduction is intended to encourage immediately spendable receipts of contributions for charitable organizations.

(*c*) *General explanation of provision.*—For the reasons given above, the House and your committee's bill provide that the additional 10-

percent deduction (or 30-percent deduction in total) from a taxpayer's adjusted gross income is to be extended so that it not only is available with respect to charitable contributions to churches, schools, hospitals, etc., but also is available generally in the case of charitable contributions to religious, charitable, scientific, literary, or educational organizations or those for the prevention of cruelty to children or animals (which otherwise meet the conditions set forth in sec. 170(c)(2) of the code). In addition, the 30-percent deduction is to be available for charitable contributions to a Federal, State, or local governmental unit if the contribution or gift is made for exclusively public purposes.

For any of the nongovernmental organizations to qualify for the additional 10-percent deduction referred to above, they must normally receive a substantial part of their support from a governmental unit or from direct or indirect contributions from the general public. "Support" for this purpose does not take into account income received by the organization from exercise of its exempt function. The reference to direct or indirect contributions from the general public prevents what are generally termed private foundations from qualifying for this additional 10-percent deduction. To qualify, the organization must receive support from at least a representative number of persons within the community concerned.

Types of organizations which generally will in the future qualify for this additional 10-percent deduction are those publicly or governmentally supported museums of history, art, or science, libraries, community centers to promote the arts, organizations providing facilities for the support of an opera, symphony orchestra, ballet, or repertory drama, and organizations such as the American Red Cross, United Givers Fund, etc.

(c)(i) *Effective date.*—This provision applies to taxable years beginning after December 31, 1963.

(d) *Revenue effect.*—This amendment is expected to result in a negligible revenue loss when fully effective.

10. Denial of unlimited charitable contributions deduction with respect to gifts to private foundations (sec. 209(b) of the bill and sec. 170(b)(1)(D) of the code)

(a) *Present law.*—Under present law, the 30-percent limitation with respect to charitable contributions deductions in the case of individuals does not apply if the taxpayer in the taxable year in question and in 8 out of 10 of the preceding taxable years made a charitable contribution which taken together with his income taxes with respect to each of those years equalled 90 percent or more of his taxable income for the year in question. Under present law, there is no distinction between charitable contributions in the 20-percent category and those in the 30-percent category for purposes of this unlimited deduction. Thus, the charitable contributions taken into account both in the taxable year and in the 8 prior qualifying years can be either those to public type charities or those to private foundations.

(b) *General reasons for provision.*—Your committee has added a provision to the bill making the unlimited charitable contribution deduction available only with respect to contributions to publicly supported organizations for much of the same reasons that both the House and your committee only make the extra 10-percent deduction

available in the case of these organizations. Your committee believes that the special advantage of the unlimited charitable contribution deduction should not be made available in the case of these private foundations because frequently contributions to foundations do not find their way into operating philanthropic endeavors for extended periods of time. In the meanwhile, the funds are invested and the advantages arising from control of these investments are likely to inure to the principal contributors to the foundations. Thus, your committee concluded that if the 20- or 30-percent limitations with respect to charitable giving are to be removed for those desiring to make large contributions there should be no question that the bulk of the funds involved, within a reasonable period of time, are devoted to the charitable and philanthropic purposes.

(*c*) *General explanation of provision.*—Your committee's amendment provides that for taxable years beginning after December 31, 1963, the charitable contributions taken into account with respect to the unlimited charitable contributions deduction are to be only those going to publicly supported organizations. Moreover, if the unlimited charitable contributions deduction is elected by the taxpayer, then he is to receive no charitable contribution deduction for amounts going to organizations which are not publicly supported, such as private foundations (even with respect to contributions coming under the 20-percent test, which, without this provision, would allow such contributions).

Similarly, in determining in a subsequent year whether contributions and taxes in 1964 and subsequent years meet the 90-percent test in 8 out of 10 years, contributions to private foundations are not to be taken into account. However, with respect to any year prior to 1964 in determining whether charitable contributions and taxes equal 90 percent or more of the taxpayer's taxable income for purposes of the 8- out of 10-year test, charitable contributions to private foundations may be taken into account in the same manner as under prior law. Thus, for purposes of the unlimited charitable contribution deduction, your committee's bill follows the rules of prior law whenever any year prior to 1964 is taken into account and the new rules applicable with respect to any computation involving 1964 or a subsequent year. As a result taxpayers will not find the rules changed with respect to past years' computations; but, if they hope to obtain the benefits of the unlimited charitable contribution deduction with respect to the future, then for subsequent years they will have to forego any income tax benefits for contributions or gifts to private foundations.

With respect to future years, the unlimited charitable contribution deduction will take into account charitable contributions to: churches; schools; hospitals; specified medical research organizations; certain organizations affiliated with State colleges or universities; Federal, State, or local governmental units, if the contribution or gift is made for exclusively public purposes; and charitable contributions generally to religious, charitable, scientific, literary, or educational organizations or those for the prevention of cruelty to children or animals. However, in this latter case, the charitable organization must receive a substantial part of its support from a governmental unit or from direct or indirect contributions from the general public. Support for this purpose does not take into account income received by the organization from the exercise of its exempt function. The reference

to direct or indirect contributions from the general public is designed to prevent gifts to private foundations from qualifying for this unlimited deduction. To qualify, the organization must receive support from at least a representative number of persons within the community concerned.

(*c*)(*i*) *Effective date.*—This provision applies to taxable years beginning after December 31, 1963.

(*d*) *Revenue effect.*—This amendment is expected to result in a negligible revenue increase.

11. Five-year charitable contributions carryover for individuals (sec. 209(c) of the bill and sec. 170(b)(5) of the code)

(*a*) *Present law.*—As indicated above, individuals are limited to a charitable contributions deduction of 20 percent of their adjusted gross income or up to 30 percent for contributions to churches, schools, hospitals, and contributions to public charities generally. Any charitable contributions in excess of the amount which may be deducted under these limitations in the current year in the case of individuals are wasted. Corporations, on the other hand, although limited to a charitable contributions deduction of 5 percent of taxable income (without this deduction) nevertheless may carry any unused charitable contribution deduction forward and under present law use them in the 2 following years. The House bill adds a provision which extends this carryover of unused charitable contributions for corporations to 5 years (see the discussion below).

(*b*) *General reasons for provision.*—Your committee has added a provision to the House bill to provide a 5-year carryover of unused charitable contributions for individuals. Your committee sees no reason why a carryover should be made available for corporations while individuals are in effect compelled to waste their contributions in excess of the specified limitation. More important, however, this will make it unnecessary for taxpayers desiring to make a contribution of a substantial nature to a charitable organization to carefully divide the gift into parts, contributing each in a separate year, or perhaps giving undivided interests in a property, up to their applicable limitation, to the charitable organization in each of a series of years. Not only is the present practice complicated for the donor but it also creates problems for the charitable or educational organization. Where they are given undivided interests in a property over an extended period of time, they may find it impossible either to sell or use the property over this same period of time while their interest in it gradually increases from year to year. The allowance of a 5-year charitable contribution carryover for individuals, like the averaging provision contained in this bill, also is another step toward the computation of income for tax purposes over a long period of time rather than on an annual basis.

(*c*) *General explanation of provision.*—For the reasons indicated above, your committee has added a provision to present law providing a 5-year carryforward for individuals for unused charitable contributions. In making this carryover available, your committee's amendments provide that the only amounts which may be carried forward are excess contributions with respect to which the 30-percent limitation applies (i.e., generally all contributions except those going to private foundations). In determining whether there is any unused charitable

contribution to carry forward, the charitable contributions to private foundations are ignored and only those contributions fully eligible under the 30-percent limitation, to the extent they exceed this limitation, may be carried forward.

In the year to which these contributions are carried, if the taxpayer has made any contributions to a private foundation, these are ignored for purposes of determining how much of these charitable contributions carried forward are used up in that year. This can be illustrated by the following example: Assume $500 of unused charitable contributions are carried forward, the individual's 30-percent limitation for the year in question would permit charitable contribution deductions of $1,000, and $400 had been already contributed in that year to private foundations and $300 to publicly supported charitable organizations. In this case the entire $500 carryforward would be considered as used up in that year, although the additional charitable contribution deductions obtained with respect to this $500 would be only $300. This result is obtained by ignoring the $400 of contributions to the private foundation for purposes of determining the extent to which the carryover is used up in that year. Thus, in the example cited, the charitable contribution in the year to publicly supported organizations was $300 and the carryover from the prior year was $500. This would make it possible to use up the entire charitable contribution carryover in that year. The individual could also deduct $200 of the $400 which he contributed to the private foundation. Since under existing law the individual in the example could have claimed a deduction of $700, the use of the carryover permits an additional deduction of $300.

The provision added by your committee also provides that no charitable contribution may be carried to, or through a year with respect to which the taxpayer has elected the unlimited charitable contributions deduction. The carryover was considered unnecessary in such cases because of the fact that no limitations are imposed in these cases. A technical adjustment is also made to prevent a taxpayer from claiming a benefit with respect to the same amount twice, through the interaction of the net operating loss carryover and the 5-year charitable contribution carryover.

(*c*)(*i*) *Effective date.*—The new 5-year charitable contributions carryover provided by your committee's bill will be available with respect to contributions paid in taxable years beginning after December 31, 1963.

(*d*) *Revenue effect.*—This amendment is expected to result in a negligible revenue loss.

12. Five-year charitable contribution carryover for corporations (sec. 209(d) of the bill and sec. 170(b)(2) of the code)

(*a*) *Present law.*—Under present law corporations are allowed a maximum charitable contribution deduction of 5 percent of their taxable income computed without regard to this deduction (and certain other deductions). Any charitable contribution deductions which exceed this maximum may be carried forward and used in the 2 following years to the extent the maximum limitations for those years permit. In the case of tax-free reorganizations, generally, and in the case of the liquidation of a subsidiary, the present law provides that the 2-year charitable contribution carryover, to the extent not used by the prior corporation, is to be available to the acquiring corporation.

(*b*) *Reasons for provision.*—Situations have arisen where corporations have income which varies widely from year to year with the result that in some years they have losses and in other years income. This presents a problem where these corporations have committed themselves to the making of specific annual contributions to local charitable organizations. This frequently is done because of the importance to the local charity of maintaining a relatively stable budget from year to year. However, from the standpoint of the corporation the 5-percent limitation on charitable contributions means that the benefit of the charitable contribution deduction is lost in loss years, or in low income years, unless income is sufficiently high in the 2 immediately following years to not only permit the deduction of the amount carried forward but the usual charitable contributions for those years as well. Frequently this is not a sufficient length of time to enable the full deduction of charitable contributions in such cases.

(*c*) *General explanation of provision.*—In view of the above considerations the House bill substitutes for the 2-year carryforward of unused charitable contributions available in present law a 5-year charitable contribution carryforward for corporations. Your committee has accepted this amendment except that it has amended the effective date as indicated below. The amount which may be carried forward in such cases is the amount of the charitable contributions in excess of the amount which may be deducted within the 5-percent limitation. In the year to which the charitable contributions are carried the charitable contributions of that year are applied first, and then the charitable contributions carried forward with the oldest year from which a charitable contribution is carried forward being applied first. Any unused charitable contributions are carried forward to succeeding years, but if not used up after a 5-year carryforward period, they no longer are available for further deduction.

The 5-year charitable contribution deduction carryover is also made available to acquiring corporations in tax-free reorganizations and to parent corporations in the case of the liquidation of a subsidiary. The acquiring corporation in these cases treats the carryforward of the charitable contribution in the same manner as if it were its own unused charitable contribution being carried forward to the current year.

(*c*)(*i*) *Effective date.*—The 5-year carryforward under the House bill would be effective with respect to contributions paid (or treated as paid) in taxable years beginning after December 31, 1963. Thus, under the House bill a charitable contribution made in 1964 would be the first charitable contribution with respect to which the 5-year, as distinct from the 2-year, charitable contribution carryforward would be available. Under your committee's amendments, the 5-year carryforward of unused charitable contributions will be available with respect to contributions paid (or treated as paid) in taxable years beginning after December 31, 1961. Thus, charitable contributions made in the calendar years 1962 and 1963, (to the extent the former is not used in 1963) will be available as carryforwards to 1964, since in these cases the 2-year carryforward from these years has not yet expired.

(*d*) *Revenue effect.*—This provision is expected to result in a negligible loss of revenue when fully effective.

13. Limitation on charitable contribution deduction for future gifts of tangible property (sec. 209(e) of the bill and sec. 170(f) of the code)

(*a*) *Present law.*—Under present law, if a taxpayer gives property to charity but retains for either his or someone else's life or any other period the use or enjoyment of the property, he receives a charitable contribution deduction for income tax purposes at the time of the gift of the future interest in an amount equal to the present discounted value of that future interest.

(*b*) *General reasons for provision.*—The House report calls attention to the problem where pictures or art objects are given to museums, but the gift takes effect at some future time, usually based upon the life of the contributor or someone else. In the meanwhile, the use of the pictures or art objects is retained in much the same manner as if the contribution of the future interest had not been made. The same enjoyment would occur, for example, if instead of making a gift of a future interest, the taxpayer were to wait until his, or his family's use of the property was completed. If this use was completed at the time of his death, however, no charitable contribution for income tax purposes could be claimed, even though an estate tax deduction would be available.

The report of the House Committee on Ways and Means suggests generally that it is inappropriate for taxpayers using this device to obtain what amounts to an extra charitable contribution deduction for income tax purposes. However, the House report further suggests that in the ordinary case where the contributor retains the right to use the property for his own life that this in fact has been a strong inducement for giving pictures and art objects to museums and other cultural centers in the United States and that in any event much of the problem which has arisen in the past has stemmed from the problem of valuing the pictures and art objects given.

Based upon the consideration outlined above, the House bill provided a general rule which denied deductions for charitable contributions in the form of future interests in tangible personal property, but then made this rule inapplicable where the life interest was retained for the life or lives of the contributor or contributors. Your committee is in agreement with the general rule adopted by the House but believes that the exception making this general rule inapplicable in the case where a life estate was retained by the contributors in effect makes this rule inapplicable to the bulk of the cases which should come under the rule. Your committee sees no more reason for granting a charitable contribution deduction for income tax purposes whether the life interest is reserved for the contributor or someone else. It recognizes that for some taxpayers this may have some temporary effect in dulling the special incentive now existing for giving pictures and art objects to museums and other cultural centers. Moreover, some taxpayers may be induced under this provision to give their pictures or other objects outright during life rather than wait until their death, thereby accelerating gifts to museums and other organizations. In any event, your committee questions whether it is appropriate to provide the special stimulus of an income tax deduction, in addition to a charitable deduction for estate tax purposes, to induce this result.

(*c*) *General explanation of provision.*—For the reasons indicated above your committee's amendments provide that charitable con-

tributions in the form of a future interest in tangible personal property are to be treated as deductible for income tax purposes only when all interests in, and rights to possession or enjoyment of, the property in question has been given up. Your committee has deleted the exception in the House bill making this rule inapplicable in the case of charitable contributions where the only reservation in the gift is that the property is not to be transferred until the death of the contributor or contributors.

Any type of a reservation by the contributor and any reservation in the hands of related persons described in section 267(b) of the code under your committee's action will result in a denial of the charitable contribution deduction as long as the reservations continue.

Although generally this provision is limited to gifts of future interests in tangible personal property the provision also covers fixtures which are intended to be severed from the real property, such as chandeliers, mantels, etc.

(*c*)(*i*) *Effective date.*—This provision applies to transfers after December 31, 1963.

(*d*) *Revenue effect.*—This provision is expected to result in a negligible revenue gain when fully effective.

14. Losses arising from expropriation of property by governments of foreign countries (sec. 210 of the bill and sec. 172(b)(1)(D) of the code)

(*a*) *Present law.*—Generally, under present law, a net operating loss may be carried back to each of the 3 prior years and then, to the extent of any loss still not offset against income, the balance may be carried forward to the 5 succeeding years—providing a period of 8 years over which a loss may be spread. In two cases under present law, however, longer loss carryover periods are provided. Thus, in the case of corporation suffering losses which are certified as arising with respect to the "Trade Expansion Act of 1962", a 10-year carryover period is provided—a 5-year carryback and a 5-year carryforward. Present law also provides a 10-year carryover period in the case of regulated transportation companies—in this case a 3-year carryback and a 7-year carryforward.

(*b*) *General reasons for provision.*—Your committee has been informed that since World War II at least 14 foreign governments have expropriated property of U.S. taxpayers. The most significant of these expropriations was that made in Cuba, beginning in 1959 when all U.S. investments in that country were expropriated by the government.

Generally, it is believed that the 3-year carryback and 5-year carryforward for net operating losses provide a sufficient period for the recovering of substantially all business losses. In those cases, however, where this period has proved insufficient, Congress has followed the policy of providing a longer loss-carryover period. This accounts for the 10-year period in present law for those suffering losses arising under the Trade Expansion Act of 1962 and for the 10-year period in the case of regulated transportation companies.

Your committee believes that the expropriations by foreign governments which have occurred in recent years represent another example of larger than usual losses, where the usual 8-year carryover period for losses is inadequate. Therefore, your committee's amendments

extend the 10-year loss period, already applied in special cases, to expropriation losses. A 10-year carryforward with no carryback is provided for these expropriation losses. The longer carryforward has been substituted for the 3-year carryback because, if carrybacks were required, the taxpayers might have to forego the benefits derived from using foreign taxes as credits rather than deductions with respect to the back years.

(c) *General explanation of provision.*—Your committee's amendment provides a 10-year carryforward with no carryback for expropriation losses. This is available with respect to expropriation losses arising in taxable years ending after December 31, 1958. Thus, it will include 1959 which was the year the Cuban expropriations began.

To qualify for the 10-year carryforward, the expropriation loss must be at least 50 percent of the total net operating loss for a year. Thus, this extra carryforward period will not be available unless the expropriation loss is a major proportion of a company's net operating loss.

To receive this treatment, the taxpayer must elect the 10-year carryforward on or before the time specified by regulations prescribed by the Secretary of the Treasury or his delegate. However, in the case of past years with respect to which the 10-year carryforward is to be available, namely the years 1959 through 1963, taxpayers are to have until December 31, 1965, to make the elections for these years. In these cases the statute of limitations will be opened for deficiencies or refunds with respect to any years affected by the change and ending before 1964. Taxpayers are also to have an opportunity to make a new election with respect to the foreign taxes for this back period—to take either a deduction or a tax credit as the changed circumstances arising from the longer carryforward of losses (and no carryback of these expropriation losses) warrant.

The types of losses involved are trade or business, or production of income, losses which are "sustained by reason of the expropriation, intervention, seizure, or similar taking of property by the government of any foreign country, any political subdivision thereof, or agency or instrumentality of the foregoing * * *." Such a loss is to be considered a "foreign expropriation loss."

A foreign expropriation loss will be treated separately from any remaining net operating loss for the same year. The regular net operating loss for the year will be carried back and used up to the extent of the income in the 3 prior years. Then, if any of the regular net operating loss still remains, it will be carried forward to the next year and used first. Only after the net operating loss is fully applied in the first carryforward year will any expropriation loss from the same year be used in that year. Thus, the expropriation loss will be considered the last portion of the total net operating loss applied in any case, although the expropriation loss for a year will be applied before the regular net operating loss for any succeeding year.

(c)(i) *Effective date.*—This provision applies with respect to foreign expropriation losses arising in taxable years ending after December 31, 1958.

(d) *Revenue effect.*—This provision is expected to result in a revenue loss of approximately $5 million a year in 1965, but it expected to decline appreciably after 1970.

15. One percent limitation on medicines and drugs for those over age 65 (sec. 211 of the bill and sec. 213 of the code)

(*a*) *Present law.*—Under present law, generally only what are considered abnormal medical expenses are deductible. This result is attained by limiting expenses which may be deducted to the excess of these expenses over 3 percent of the individual's adjusted gross income (income after business and similar expenses but before personal exemptions and personal expenses). In computing medical expenses subject to this 3-percent limit, medicines and drugs may be taken into account only if they exceed 1 percent of adjusted gross income. The 3-percent limitation does not apply in the case of the taxpayer and his spouse where either of them is 65 or over nor does it apply in the case of medical expenses of the mother or father of the taxpayer or of his wife where the parent is 65 or over and receives his principal support from the taxpayer. The 1-percent limitation on medicines and drugs, however, applies to everyone without regard to their age.

(*b*) *General reasons for provision.*—The House bill repeals the 1-percent limitation with respect to medicines and drugs insofar as it relates to a taxpayer, or his spouse either of whom is age 65 or over, or to the parent of the taxpayer (or his spouse) where the parent is a dependent of the taxpayer and is 65 or over. The effect of this is to provide that the 1-percent limitation will apply only in those cases where the 3-percent limitation also applies. Your committee is in accord with this action, because it, like the House, believes that it is undesirable to impose any minimum limitation with respect to the deductibility of medical expenses in the case of the aged. It also believes that conforming the application of the 1-percent limitation with the 3-percent limit will simplify the statute somewhat in this area.

(*c*) *General explanation of provision.*—Present law provides that medicines and drugs which otherwise would be taken into account in computing medical expenses (which are either deductible in whole, or to the extent they exceed 3 percent) are to be deductible only to the extent that the total of these medicine and drug expenses exceed 1 percent of the taxpayer's adjusted gross income. Both the House and your committee's version of the bill make this 1-percent limitation inapplicable in the case of amounts paid for the care of the taxpayer and bis spouse if either of them has attained age 65 before the end of the taxable year. Both versions also provide that this 1-percent limitation is not to apply to amounts paid for the care of a dependent mother or father of the taxpayer or his spouse if the mother or father has attained age 65 before the end of the year and also is a dependent of the taxpayer. Thus neither the 3-percent limit on medical expenses generally nor the 1-percent limit on medicines and drugs will apply to the categories of persons specified above who are age 65 or over. The maximum limitations on medical expenses, however, continue to apply to these and other persons in the same manner as under existing law.

(*c*)(*i*) *Effective date.*—This provision is to apply to taxable years beginning after December 31, 1963.

(*d*) *Revenue effect.*—This provision is expected to result in a revenue loss of $10 million in a full year of operation.

16. Care of dependents (sec. 212 of the bill and sec. 214 of the code)

(*a*) *Present law.*—Under present law, a deduction of up to $600 is allowed in certain cases for expenses of child care incurred to enable a taxpayer to be gainfully employed. At present, this is available for single women, women who are divorced or separated, or in some cases, deserted, and widows and widowers, having one or more dependents without regard to the amount of the taxpayer's earnings. In the case of working wives, the $600 deduction is presently available only if the combined adjusted gross income of the wife and husband (who must file a joint return) does not exceed $4,500. If their income exceeds this amount, the deduction available is decreased $1 for each dollar of income above $4,500, thus disappearing entirely at an income level of $5,100. An exception to this rule provides that this income limitation is not to apply if the husband is incapable of self-support because mentally or physically defective.

A dependent of the taxpayer for whom this $600 may be claimed must be a son or daughter (or stepson or stepdaughter) of the taxpayer who is under age 12 or a dependent who is physically or mentally incapable of caring for himself.

(*b*) *General reasons for provision.*—Your committee, while agreeing with the changes made by the House bill in the child-care provision, found them too narrow. As a result, it has liberalized the changes made by the House bill to also include the principal changes recommended by the administration with respect to this provision which were omitted in the House bill. These changes have also been recommended by the President's Commission on the Status of Women. The most important change made by your committee in the House provision is to raise from $4,500 to $7,000 the income limitation applicable with respect to working wives. In 1954, when provision was first made for the deduction of child-care expenses with respect to working wives, your committee in its report then stated:

> * * * [I]t is recognized that in many low-income families, the earnings of the mother are essential for the maintenance of minimum living standards even where the father is also employed, and that in such situations, the requirement for providing child care may be just as pressing as in the case of a widowed or divorced mother.

Thus, Congress provided for the deduction of child-care expenses in the case of working wives because it was recognized that the maintenance of a minimum standard of living in these cases required the wife to work. However, the present maximum joint income level of $4,500 is so low that relatively few working wives presently can claim this deduction. Of the 244,000 taxable returns claiming the deduction in 1960, only 117,000 were joint returns filed by married couples. In 1961, according to Department of Labor statistics, the median income of husband-wife families in which the wife worked at any time during the year was $7,050. Thus, the $4,500 limitation falls far short of covering the average case where the wife has found it necessary to supplement the husband's income by working. To carry out the original intention of Congress with respect to this provision, your committee's bill raises the joint income limitation for husbands and wives who may claim the child-care expense deduction from $4,500 to $7,000.

Under present law, the maximum amount which may be deducted for child care is $600 per year per taxpayer. As the House report indicates a flat limitation of this type fails to take into account the fact that the costs of caring for dependents, particularly where they must be cared for outside of the home, increases as the number of dependents increases. Because of this, the House bill raised the maximum deduction which may be claimed for child-care expenses to $900 where the taxpayer has two or more dependents. Your committee's bill carries this one step further and provides a maximum deduction of $1,000 where there are three or more qualifying dependents. It also makes this graduated maximum available in the case of working wives as well as where there is only one parent. These expenses are as likely to increase on a per-child basis in the case of a married couple as in those cases where there is only one parent.

In other respects, your committee's amendments, with minor technical exceptions, follow the House bill. Thus, as under the House bill, relief is provided where the wife is either in an institution or is physically or mentally incapable of caring for herself. Under present law, if the husband is incapable of self-support because of mental or physical deficiencies, the wife is fully eligible for the deduction without regard to the family income level. Your committee agrees with the House that a family where the wife is in an institution is at least as likely to incur expenses for child care as a family where the husband is incapable of self-support. Similarly, it also agrees that child-care expenses are likely to be required, where the wife is in the home but not capable of caring for herself. As under the House bill, your committee's amendments extend present law to permit child-care expenses in these cases, subject to limitations, to be deducted. Your committee in this regard modified the House provision only in that in the case of incapacitated wives, the deduction is to be fully available where the adjusted gross income of the taxpayer and his spouse does not exceed $7,000 rather than $4,500. This is in conformity with its change in the income level generally applicable in the case of working wives.

Both the House and your committee's bill also raise the maximum age limit generally available from 12 to 13 years for children with respect to whom the child-care deduction generally may be taken.

(c) General explanation: Raising income limitation from $4,500 to $7,000.—Your committee's amendments, as distinct from the House bill, increase from $4,500 to $7,000 the amount of income that families with working wives can earn and still qualify for the full amount of the deduction for expenses incurred for the care of children or dependents. The House bill made no change in this area. This raising of the income limitation to $7,000 is in accordance with the recommendation of the administration.

Under present law, for every dollar of income a husband and working wife have above $4,500, the maximum limit on their deduction for child-care expenses is reduced by a similar dollar below the $600 level. Thus, under present law with the $600 limitation, it is possible for a husband and working wife to receive some child-care expense deduction in the case of those with incomes up to $5,100. Under your committee's bill, since the maximum child-care expense deduction (where there are three or more children) is raised to $1,000, it will be possible for husbands and wives who are both working to claim some

child-care expense deductions in cases where their joint incomes are up to $8,000. In 1960, the child-care expense deduction was claimed on 244,000 taxable returns. It is anticipated that the liberalizing amendments, primarily raising the income level for working wives to $7,000, will make this deduction available to an additional 200,000 returns or 444,000 taxable returns in all.

(c)(i) *General explanation: Raising the deduction to $900 or $1,000 in certain cases.*—Under present law, as previously indicated, the maximum annual deduction which may be claimed by a taxpayer is $600. The House bill, where there are two or more qualified dependents, would raise this maximun deduction which may be taken, for expenses incurred by the taxpayer, to $900. Your committee's amendments provide that the $600 limitation, as under the House bill, is still to be applicable where the taxpayer has only one dependent and that the $900 limitation is to be applicable where the taxpayer has two dependents. However, it provides that where there are three or more qualifying dependents, the maximum deduction which may be taken is to be $1,000, in lieu of the $900 provided by the House bill. The $900 and $1,000 limitations are also to be available in the case of working wives who are eligible for the child-care deduction (under the House bill, the $600 limitation would continue to apply in such cases).

(c)(ii) *General explanation: Incapacitated and institutionalized wives.*—The House bill adds to the list of situations where the child-care deduction may be claimed those cases where a wife is incapacitated or institutionalized. Your committee's amendments accord substantially the same treatment. For the husband to be eligible for this deduction, the wife must be institutionalized or incapacitated for 90 consecutive days (or a shorter period if she dies). In the case of incapacitated wives, under the House bill the deduction would be fully available only where the adjusted gross income of the taxpayer and his spouse does not exceed $4,500 (for incomes above that level, the deduction would decrease $1 for each dollar of income above $4,500). Under your committee's amendments, the $4,500 limitation in this case is replaced by the $7,000 limitation. The income limitation under both the House bill and your committee's amendments does not apply if the taxpayer's wife is institutionalized for a period of 90 days or more. A wife is considered as being incapacitated if she is incapable of caring for herself because she is mentally or physically defective (including any time she is institutionalized). A wife is considered institutionalized while she is receiving medical care or treatment as an inpatient, resident, or inmate of a public or private hospital, sanitarium, or similar institution.

(c)(iv) *General explanation: Raising the age limit for children to 13.*—Present law provides that a dependent, for purposes of the child-care deduction (if not physically or mentally incapable of caring for himself), must be a son or daughter (or stepson or stepdaughter) of the taxpayer and must not have attained the age of 12. The House bill raises this age limit to 13 and your committee's amendments make no change in the House bill in this respect.

(c)(v) *Effective date.*—The amendment made by this provision apply to taxable years beginning after December 31, 1963.

(d) *Revenue effect.*—Changes made by the House bill with respect to the child-care provision in a full year of operation would have resulted in a revenue loss of $5 million. The changes made by your

committee increase this loss by $15 million or to a total of $20 million when compared with present law.

17. Moving expenses (sec. 213 of the bill and sec. 217 of the code)

(*a*) *Present law.*—Under present law, certain moving expenses of existing employees if reimbursed by the employer are held to be excludable from the employee's income. They have been ruled excludable on the ground that they are incurred "in the interest of the employer" (Rev. Rul. 54–429, C.B. 1954–2, 53).

Under present law, the moving expenses (for moving from one official station to another for permanent duty) which the Internal Revenue Service has agreed are excludable for existing employees where they are reimbursed are:

1. Transportation expenses for moving the employee and his family;
2. Transportation and certain related costs of moving the personal and household effects of the employee and his family; and
3. Expenses incurred for meals and lodging for the employee and his family while they are en route to their new location.

In addition, in two court cases, taxpayers have been permitted to exclude other types of moving expenses, although the Internal Revenue Service has not acquiesced in the exclusion of these other types of moving expenses.[1]

On the other hand, reimbursements for moving expenses received by new employees from their employers are includible in gross income. Moreover, no deduction is allowed for moving expenses of any employee with respect to expenses for which no reimbursement is received.

(*b*) *General reasons for provisions.*—Your committee agrees with the House that the existing tax treatment of moving expenses needs modification because the present treatment discriminates against both new employees and employees who are not reimbursed for their moving expenses by their employers. There is no reason why new employees should include in their income amounts representing moving expenses which, if received by an existing employee who is moved by his employer from one location to another, would be excludable from income. Neither is there any reason for discriminating against those employees who are not reimbursed for their moving expenses, but who incur such expenses in seeking job opportunities. Moreover, it is important to remove deterrents to the mobility of labor. Any thing which can be done in this respect should aid in reducing local structural unemployment.

Both the House and your committee's bill limit the categories of expense for which a deduction is available to new employees or those who are not reimbursed for moving expenses to the three categories specified above, which, by ruling, the Internal Revenue Service recognizes the reimbursements of which are as excludable for existing employees. No inference should be drawn from this, however, that moving expense exclusions under existing law are necessarily limited

[1] In *John E. Cavanagh* (36 T.C. 300; 1961) it was held that living costs incurred by the employee in excess of ordinary living expenses of his family were excludable where they were reimbursed while his household effects were in transit. In *Otto Sorg Schairer* (9 T.C. 549; 1947) it was held that where an employee was reimbursed for a loss incurred in selling his home this reimbursement was an addition to the sales price. More recently, however, the Tax Court held that reimbursements of similar expenses were additional compensation and not excludable from the employee's income in the case of *Harris W. Bradley* (39 T. C. 652; 1963 aff'd, 324 F. 2d 610 (4th Cir. 1963). A reimbursement on sale of a house was also held to be compensation in *Arthur V. Kobacker* (37 T.C. 882; 1962).

to these three categories of expenses. However, since by administrative ruling, these categories are clearly excludable in the case of existing employees who are reimbursed, it is believed that deductions for such expenses should also be made available to new employees and nonreimbursed employees as well. The question of whether the exclusion for existing employees extends beyond these three categories is left for judicial interpretation.

(c) *General explanation of provisions.*—The deductions allowed by the House and your committee's bill with respect to moving expenses are to be deductible in computing "adjusted gross income." These expenses, therefore, are deductible whether the individual involved itemizes his personal deductions or takes the standard deduction. This treatment is provided not only because these expenses are substantially similar to business expenses, but also because when they are incurred, they are likely to be relatively large. In such cases, it was thought that it would be undesirable to, in effect, make taxpayers choose between taking this deduction and the standard deduction in lieu of itemized personal deductions.

No deduction is provided under this provision for moving expenses for which the taxpayer receives reimbursements which are not included in his gross income. Thus, existing employees may continue to exclude reimbursed moving expenses from their gross income in the same manner as under present law. Their status, in this regard, is left entirely unchanged.

The types of moving expenses which may be deducted under this provision are reasonable expenses for—

1. Moving household goods and personal effects from the former residence to the new residence;
2. Transportation expenses of the employee and his family from the former residence to the new place of residence; and
3. Expenses for meals and lodging while in transit from the former residence to the new place of residence.

The moving expenses referred to are available not only with respect to the taxpayer, but also to any other members of the taxpayer's household who had as their permanent place of abode the taxpayer's former residence and moved to his new residence. (For amendment added by your committee with respect to sales of residences of employees who are moved see sec. 232 of the bill, item 39 below.)

(c)(i) *Limitations.*—To prevent the deduction of moving expenses for short moves, the bill provides that, for a deduction to be available, the taxpayer's new place of work must be at least 20 miles farther from his former residence than was his former place of work. In other words, his commuting distance must have increased by at least 20 miles to be eligible for this deduction. If the individual involved previously had no place of work, his new work location must be at least 20 miles from his former residence.

To prevent individuals from taking temporary jobs in order to obtain the deduction of moving expenses, it is provided that during the 12-month period immediately after the individual's arrival at his new principal place of work, he must be a full-time employee in that general location for three-fourths of the time (39 weeks). This limitation, however, is not applied to the extent where the individual is reimbursed for his moving expenses by his employer since, presumably, an employer would not reimburse such expenses even for a new

employee unless it was his intention that the individual remain employed for an extended period of time.

This requirement that an employee be a full-time employee in a general location for three-quarters of a year after moving means that where he has moved after the first half of the year, he cannot be sure when he files his return in the following April that he will meet this 9 months' requirement. For that reason, the employee in such a case is permitted to claim the moving expense deduction (assuming he has not already disqualified himself by that time, such as by moving out of the general location). Then, if after filing his return he fails to qualify for the moving expense deduction by not remaining employed full time for 39 weeks in the new location he is to include in his gross income for the following year the amount of moving expense deduction claimed in the prior year.

(*c*) (*ii*) *Effective date.*—The new treatment provided by this provision applies to expenses incurred after December 31, 1963.

(*d*) *Revenue effect.*—It is anticipated that this provision in a full year of operation will result in an annual revenue loss of $60 million a year.

18. Deduction for political contributions (sec. 214 of the bill and sec. 218 of the code)

(*a*) *Present law.*—Up to the present no deduction or credit has been allowed for political contributions of any type. In fact, charitable and educational contributions presently may be denied if the organizations involved spends any substantial part of its activities in attempting to influence legislation.

(*b*) *General reasons for provisions.*—Your committee's bill departs with the precedent in this respect primarily because of the report of the late President Kennedy's Commission on Campaign Costs and because of his recommendation to Congress with respect to this report. This section, while not identical to the proposal of the late President, nevertheless is substantially similar to it, and in your committee's opinion carries out the objectives of that request. The purpose of allowing a limited deduction for campaign contributions is, as indicated by the late President, to broaden the base of contributions: "to reduce dependence on large contributions of those with special interests." As he indicated, this section "is designed to give party solicitors an additional tool to help stimulate individuals to contribute money, in * * * election years."

(*c*) *General explanation of provision.*—The new section added by the bill allows a deduction for political contributions up to a maximum of $50 a year in the case of a single person (or a married person filing a separate return) and up to $100 a year in the case of a married couple filing a joint return. The amounts for which deductions are permitted are limited in order to achieve the objective of the late President Kennedy in "broadening the base of political contributions."

These deductions are available only to those who itemize their deductions, rather than taking a standard deduction. Therefore, this places these limited deductions for political contributions in the same category as charitable contributions, deductible taxes, interest, certain medical expenses, etc.

The bill provides that this deduction for political contributions is to be allowed only if the fact of the political contribution is verified in such manner as the Secretary of the Treasury or his delegate prescribe

by regulation. It is anticipated that under this grant of authority the Secretary of the Treasury will provide that the deduction will be available only where the taxpayer, if his return is audited, presents adequate records to show that he has actually made the political contributions to a qualified candidate or committee. This will give assurance against the claiming of deductions for fictitious political contributions.

A political contribution which as a result of the new section added by the bill will be deductible must be a contribution or gift to a "political candidate" or "political committee." However, in addition, it is required that the contribution be made only for the purpose of furthering the candidacy of one or more individuals in a general, special, or primary election or a convention of a political party. Thus, contributions or gifts to further the cause of a referendum or other issue on a ballot will not be deductible. The candidate with respect to which the deduction of a contribution or gift may be claimed may be a candidate for National, State, or local office and may be either a partisan or nonpartisan candidate. Thus, for example, where judges are elected officials, contributions for their candidacy may be deducted. The candidacy of the individual may be either for a primary election or for a convention of a political party nominating candidates for office or for a general election. Included also are special elections to fill vacancies.

The deduction for political contributions under the bill is limited to contributions made by individuals. It is not available with respect to contributions from corporations or from estates or trusts.

(*c*)(*i*) *Effective date.*—The bill provides that contributions or gifts made after the date of enactment of this bill are to be deductible.

(*d*) *Revenue effect.*—It is anticipated that this provision will result in a revenue loss of approximately $25 million a year for Presidential election years; 50 percent of that amount for congressional election years; 25 percent for off years; and average about $15 million per year.

19. One hundred-percent dividends received deduction for members of electing affiliated groups (sec. 215 of the bill and sec. 243 of the code)

(*a*) *Present law.*—Present law in general provides a deduction equal to 85 percent of the dividends received by one corporation from another domestic corporation. This has the effect of taxing 15 percent of intercorporate dividends received. With the present 52-percent tax rate, this is a tax of 7.8 percent on the entire dividend (15 percent times 52 percent), or in the case of the 48-percent rate effective under this bill for corporations in 1965 and subsequent years, a tax on the entire dividend of 7.2 percent.

(*b*) *General reasons for provision.*—The administration in its initial recommendation to Congress proposed that the 2-percent penalty tax on consolidated returns be repealed that controlled groups be limited to a single surtax exemption, and also, that the intercorporate dividends received deduction be increased to 100 percent in the case of amounts received as a dividend from a corporation which is a member of the same parent-subsidiary affiliated group. In this regard, the Secretary of the Treasury in his explanation of this provision to the Ways and Means Committee stated:

> The elimination of the intercorporate dividend tax in this type of parent-subsidiary relationship would extend to such

groups one of the tax advantages generally now available only to affiliated groups which file consolidated returns. This amendment is designed to facilitate the adjustment to the elimination of multiple surtax exemptions in cases where the affiliated group does not, or cannot, file consolidated returns, but would recognize that the earnings of an 80-percent-owned operating subsidiary are more directly the earnings of the parent than is the case where one corporation merely derives investment income from an unrelated corporation.

Your committee is in accord with this recommendation of the administration. Your committee concluded that it would be inequitable to repeal the consolidated return 2-percent tax without also providing a 100-percent intercorporate dividends received deduction for corporations meeting the same tests of common ownership, but which for one reason or another cannot, or do not want to, file a consolidated return and are willing to forgo multiple surtax exemptions. Among the principal reasons for not being eligible to file a consolidated return in the case of an affiliated group is the need for different members of a group to maintain different fiscal years due to variations in the natural business years of the different companies involved. Still another factor accounting for some corporations in an affiliated group not filing consolidated returns is the necessity to use the same accounting method (unless the Internal Revenue Service specifically permits a variance) although there may be valid business reasons for the different accounting methods in the case of the different businesses. Another reason which applies in the case of life insurance companies is that under present law such companies may not file a consolidated return with other domestic corporations which are not life insurance companies. Moreover, still other corporations are hesitant to file consolidated returns because of the sheer complexity of the consolidated return regulations.

For these reasons, your committee has added a provision granting a 100-percent dividends-received deduction in those cases where corporations are affiliated but they do not file a consolidated return. To be sure that no special advantage was given these corporations over those corporations which do file consolidated returns, your committee has reviewed the various provisions of the code and denied tax benefits in those cases where the separate corporations received significant advantages over a consolidated group. Thus, where this 100-percent dividends-received deduction is elected, the group is to have only one $25,000 surtax exemption for the group, the election with respect to foreign tax credits or deductions must be the same for all members of the group, only one $100,000 minimum accumulated earnings credit is to be allowed in determining exemptions from the tax on unreasonable accumulations, only one $100,000 exemption in computing estimated tax subject to accelerated payments is to be allowed, and limitations generally applicable to a single corporation are provided in the case of exploration expenditures.

(c) *General explanation of provision.*—A 100-percent dividends-received deduction is allowed by your committee's amendment when dividends are paid by a domestic corporation but only where the dividends are "qualifying dividends." To be qualifying dividends

they must be received from a corporation which is a member of the same affiliated group of corporations. "Affiliated group" for this purpose is defined in the same manner as an affiliated group for purposes of the requirement for filing a consolidated return except that a domestic insurance company (taxable under section 802 or 821) is treated as an includible corporation. For the dividends to be qualifying, the receiving and distributing corporation must be members of the same affiliated group at the time of the distribution and also the dividends must be distributed out of earnings and profits of a year ending after December 31, 1963, when on each day of which the two corporations were members of the same affiliated group and were not claiming multiple surtax exemptions.

The determination as to what earnings and profits a dividend is considered as being distributed out of will be made under the rules applicable elsewhere in the code for this purpose; i.e., they will be considered as paid first out of the current year's earnings and profits and then, to the extent of any excess, out of the prior year's earnings and profits, then, to the extent of any excess, out of the second prior year's earnings and profits, etc. In addition, the dividends must be paid at a time when the distributing and receiving corporations are members of an affiliated group which has elected to qualify for the 100-percent dividend-received treatment provided by the new section.

An election must be made by the parent corporation and consented to by each of the subsidiary corporations. The election is effective for the taxable year of the subsidiaries which includes the last day of the year of the parent with respect to which the election was initially made. In addition, the election applies automatically for each succeeding year unless the election is specifically terminated. A special rule provides that with respect to fiscal years beginning in 1963 and ending in 1964, the election would be effective as long as the last day of the corporation's year is included in a year of the parent for which an election is effective.

An election may be terminated by an affiliated group if the affiliated group files a termination of the election and each member of the group consents to this termination. In addition, the election may be terminated where a new member is added to the affiliated group and this member files a statement to the effect that it does not consent to the election.

Where an affiliated group elects the 100-percent dividend paid treatment, the members of the group must forego certain advantages which they otherwise would have as separate corporations. These rights are withdrawn since they are not available to a group filing a consolidated return, where the tax advantages are substantially similar to those provided in the case of the 100-percent dividends received deduction. The advantages of separate treatment which the affiliated group must forego if this election is made are as follows:

1. The group may not elect to receive more than one surtax exemption.

2. All members of the group must all make the same elections with respect to foreign taxes; i.e., they must all elect either to claim deductions for these foreign taxes or foreign tax credit; and, if they claim foreign tax credit, they must all either elect the "per country limitation" or the "overall limitation" in computing the size of the credits available. They will each, however, continue to compute their own

foreign tax deduction or credit in the same manner as separate corporations.

3. In determining whether or not the various corporations in the affiliated group are subject to the accumulated earnings tax (imposed by section 531), only one $100,000 minimum accumulated earnings credit would be available for the entire group.

4. In determining the tax liability of the group which will be subject to estimated tax (i.e., acceleration of corporate payments so that the tax is paid in the year of liability rather than in the succeeding year), only one exemption of $100,000 of tax liability is to be available to the entire group rather than to each member of the group.

5. In determining the maximum amount of exploration expenditures with respect to mineral deposits which may be written off in any one year or treated as a deferred expense the group of affiliated corporations making this election is to be eligible to write off one $100,000 in any one year with a total of $400,000 over any number of years.

Except for the $100,000 minimum accumulated earnings credit, it is anticipated that the members of the affiliated group will be permitted to apportion the $100,000 exemptions, limitations, or the $400,000 limitation in any manner that they see fit.

Life insurance companies and mutual casualty insurance companies may not file a consolidated return with any other companies except other life insurance companies of the same type. Under your committee's amendment, however, dividends from, or to, such insurance companies are eligible for the 100-percent dividends received deduction if the entire affiliated group of which the insurance company is a member consents to the tax treatment provided by this section.

(*c*)(*i*) *Effective date.*—This 100-percent dividend deduction treatment is to apply with respect to dividends received in taxable years ending after December 31, 1963.

(*d*) *Revenue effect.*—It is anticipated that this provision will result in a revenue loss of approximately $5 million a year.

20. Interest on loans on certain insurance and annuity contracts (sec. 216 of the bill and sec. 264 of the code)

(*a*) *Present law.*—Under existing law, no interest deduction is allowed in the case of indebtedness incurred or continued to purchase, or carry, a single-premium life insurance, endowment, or annuity contract. In addition, if substantially all the premiums on a contract are paid within 4 years of the date on which the contract was purchased, the contract is treated as if it were a single-premium contract for purposes of this provision. Similarly, where a purchaser borrows an amount equal to a substantial portion of the premium payments on a contract, but, instead of purchasing the policy outright, deposits the borrowed funds with the insurance company for future payments on a policy, this also is treated as if it were a single-premium contract and the interest deduction on the indebtedness relating to the contract is denied. However, under present law, no interest deductions are denied where the taxpayer purchases an insurance contract with the intention of borrowing the maximum amount on the contract each year, unless the contract falls in one of the categories described above.

(*b*) *General reasons for provision.*—It is understood that life, or other insurance policies are being sold to individuals on the basis that they cost the individual little or nothing, and in some cases on the

grounds that they actually result in a net profit for him. In such cases, the taxpayer each year borrows all, or a substantial part, of the funds necessary to pay the premium on the policy. If he is in a 50-percent (or higher) tax bracket, since the interest payments on such loans are presently deductible, the net interest cost to him is one-half or less of the interest payments he makes. The annual increase in the cash value of the insurance policy to reflect interest earnings, which generally is not taxable to the taxpayer either currently or otherwise, is likely to equal or exceed the net interest charges the taxpayer pays. Thus, for taxpayers in higher brackets, where the annual increment in the value of the policy, apart from the premiums, exceeds the net interest cost of the borrowing, such policies can actually result in a net profit for those insured. Because of this, some insurance companies have sold insurance policies under plans which provide for the taxpayer borrowing the premiums either directly from the insurer, or from a bank or otherwise, primarily on the grounds that the policies are tax-saving devices. Both the House and your committee doubt that the sale of insurance on such a basis is either desirable or fair to taxpayers generally.

However, the importance of being able to borrow on insurance policies is recognized; and, therefore, while adopting a provision designed at minimizing the sale of insurance as a tax-saving device, the House and your committee have been careful in this provision to provide for the retention of rights to borrow on insurance for other than tax-saving purposes without the loss of the interest deduction.

One of the Treasury's proposals on which neither the House nor your committee took any action involves the tax treatment of split-dollar life insurance arrangements, which are closely related to this bank loan insurance provision. These are arrangements entered into jointly by an employer and employee under which part of the premiums on a life insurance policy are paid by each. It is believed that the issues involved in this problem, and the proper solution, including the possibility of administrative action, are in need of further study by the Treasury Department.

(*c*) *General explanation of provision.*—Both the House and your committee's bill provide that interest paid on indebtedness incurred or continued to pay premiums on life insurance contracts, endowment contracts, or an annuity is not to be deductible if the individual is following a plan of systematically borrowing amounts equal to the increase in the cash value of the insurance contract to pay part or all of the premiums. The interest deduction is to be denied whether the borrowing is direct or indirect; that is, whether it is from the insurance carrier, from a bank, or from any other person. It also is intended to cover cases where the individual borrows on other property or on his general line of credit to pay the premiums. This provision is not to apply to a single-premium contract or to a contract treated like a single-premium contract, since present law already denies a deduction in these cases.

In effect, where the taxpayer systematically borrows the increase in the cash value of his policy he is converting what generally is a permanent form of life insurance into substantially the equivalent of renewable term insurance. In this case, however, he retains the right to restore the contract to permanent insurance as of the original

age at which he took out the contract by repaying the amount borrowed from the insurance company, bank, or other person.

The House bill would apply only to insurance or annuity contracts purchased after August 6, 1963, the date the House Committee on Ways and Means first announced its action on this matter. Your committee has amended the provision so that it will apply only to contracts purchased after December 31, 1963, to bring this provision into line with the general effective dates provided in this bill for structural changes. In any event, both the House provision and the provision as amended by your committee will only affect contracts entered into after the specified date and will have no effect on contracts entered into before that date even in the case of borrowings on such a contract in the future.

(c)(i) *Exceptions.*—Both the House and your committee desire to be sure that the value of insurance generally would not be decreased by reducing the rights of the individual to borrow on the insurance, as he can in the case of other forms of assets. For this reason, a number of exceptions to the general rule are added where, even though the borrowing may take the form of a systematic plan, nevertheless this provision is not to apply. These exceptions are as follows:

1. The interest deduction is to be allowed if there is no borrowing with respect to any four of the annual premiums payable on the insurance or annuity contract in the first 7 years of the contract. However, to prevent avoidance of this provision by taking out a contract with very low premiums for the first 4 years, with the premiums being substantially greater thereafter, the bill contains a rule relating to situations of this type. It is provided that the 7-year period referred to above is to commence again at any time there is a substantial increase in the premiums payable under the insurance or annuity contract.

2. A de minimis rule is to apply. Thus, if the otherwise nondeductible interest of an individual with respect to an entire taxable year does not exceed $100, no interest deduction will be denied.

3. In any event, no interest deduction will be denied if the debt was incurred because of an unforeseen substantial loss of income or unforeseen substantial increase in financial obligations. Thus, for example, the interest deduction would not be denied where the individual systematically borrowed on a policy previously purchased because he, or his family, incurred large unforeseen medical bills or because he unexpectedly lost a substantial income source.

4. The interest deduction is not to be denied where the indebtedness actually is to finance business obligations, rather than to carry insurance. For example, an individual with an insurance policy would not have his interest deductions denied where it can be shown that the amounts borrowed by him were actually used to finance the expansion of inventory or for other similar business needs.

(c)(ii) *Effective date.*—This provision as amended by your committee applies to amounts paid in taxable years beginning after December 31, 1963, but with respect to policies purchased after December 31, 1963.

(d) *Revenue effect.*—It is estimated that this provision will result in an annual revenue gain of $5 million in 1964 and 1965 and $10 million when the provision is fully effective.

21. Interest on indebtedness incurred or continued to purchase or carry tax-exempt bonds (sec. 217 of the bill and sec. 265(2) of the code)

(*a*) *Present law.*—Under present law, no deduction is allowed for interest on indebtedness incurred or continued to purchase or carry obligations the interest on which is exempt from Federal income taxes. It has been held that interest paid on indebtedness represented by deposits in banks engaged in the general banking business is not subject to this provision since this indebtedness is not considered to be "incurred or continued to purchase or carry" tax-exempt obligations. This position which has been a long-standing administrative practice was specified by ruling in 1961 (Rev. Rul. 61–222, 1961–2 CB58).

(*b*) *General reasons for provision.*—A witness before your committee called attention to the fact that financial institutions which are subject to the banking laws of a State, although not actually banks themselves, pay interest on face amount certificates—a way by which thousands of individuals throughout the country systematically invest their savings. In the example cited to your committee, a certificate holder pays to the financial institution equal monthly payments for 20 years and at the end of that time, the financial institution pays back the amount of the investment plus interest in accordance with the provisions of the certificate. The funds of the financial institution in this case are subject to regulation by the Investment Company Act which permits investment of the funds received from the certificate holder in "qualified investments."

Qualified investments for this purpose include real estate mortgages, certain property improvement loans, U.S. Government and municipal bonds, and other securities meeting certain performance standards. As a result, part of the financial institution's funds are invested in State and municipal bonds, the interest on which is exempt from Federal income tax.

Your committee concluded that in cases of this type the relationship of the financial institution to the certificate holder is sufficiently close to the relationship of a bank to its depositors as to permit the investment of a substantial portion of the funds of such an institution in tax-exempt State and municipal bonds without this resulting in the possible denial of the interest deduction with respect to amounts paid out to the certificate holders. Your committee therefore has amended the House bill to provide that interest deductions are not to be denied in the case of these types of financial institutions to the extent they invest not more than 25 percent of their assets in tax-exempt obligations.

Your committee intends that no inference be drawn from the fact that it has provided this treatment for the future as to the proper interpretation of the applicable law with respect to interest deductions for any prior year.

(*c*) *General explanation of provision.*—Your committee's amendment adds a sentence to the provision of existing law which denies a deduction for interest on indebtedness incurred or continued to purchase or carry obligations, the interest on which is wholly exempt from Federal income tax. The sentence added provides that financial institutions which are subject to the banking laws of the State in which they are incorporated are not to be denied interest deductions on face amount certificates (as defined in the Investment Company Act of 1940), or on amounts received for the purchase of these certificates, on the grounds that this interest is on indebtedness incurred or continued to

purchase or carry tax-exempt obligations. However, interest on these face-amount certificates is to be so treated only to the extent that the average amount of tax investments of the institution in the tax-exempt obligations do not comprise more than 25 percent of the average of the total assets of the institution. "Total assets" for this purpose means gross assets (taken at cost) less all of the liabilities other than the liability on the face-amount certificates.

(c)(i) *Effective date.*—This provision applies with respect to taxable years ending after the date of enactment of this bill.

(d) *Revenue effect.*—It is expected that this provision will result in a negligible revenue loss.

22. Repeal of requirement of allocation of certain traveling expenses (sec. 218 of the bill and sec. 274(c) of the code)

(a) *Present law.*—In the Revenue Act of 1962, Congress provided that where a person takes a business trip and this is combined with recreational or other personal activities, the cost of this trip in certain cases must be allocated between the business and personal activity, the former, but not the latter, being deductible for income tax purposes.

Exceptions in the statute provide that this allocation is not to be required where the trip does not take more than a week or where the time spent on the personal activities represents less than a quarter of the time away from home on the trip. In these cases, the entire expenses of travel, and meals and lodging while in travel status, are deductible as under prior law, where the taxpayer can establish that the trip is related primarily to business. Under the authority provided for prescribing, under regulation by the Secretary or his delegate, the amount of activity allocable to the trade or business, the Treasury Department has held that if the travel expense qualifies as an ordinary and necessary business expense, none of it will be disallowed (1) if the taxpayer does not have substantial control over arranging the business trip or (2) if he does not have the obtaining of a personal vacation as a major consideration in determining whether to make the trip.[1] The Internal Revenue Service has held that an employee who is reimbursed by his employer for his travel expenses is considered not to have substantial control over arranging the business trip providing he is not a managing executive of, or closely related to, his employer. Even a managing executive, or an individual who is closely related to his employer, is not affected if he can establish that he did not have substantial control over arranging the particular trip.[2] It is also indicated that mere control over the timing of a business trip will not itself represent substantial control.[3] Even where the person has substantial control over arranging the business-vacation trip, the Service has indicated that it will not be held to be partially allocable to nonbusiness activity unless obtaining a personal vacation or holiday was a major consideration in making the trip.[4] The Service has also indicated that if a major consideration in making the business trip is to visit a hospitalized relative, this will not result in any allocation of the travel expense for personal reasons. On the other hand, of course, if the primary purpose of the trip is to visit an ill relative

[1] U.S. Treasury Department, Internal Revenue Service, "Questions and Answers for the Businessman; Travel, Entertainment and Gift Expenses," Document No. 5495 (7-30-63), question No. 69.
[2] Op. cit., question No. 71.
[3] Op. cit., question No. 73.
[4] Op. cit., question No. 75.

for personal reasons, no deduction would be allowable for travel expense as under prior law.[5]

(*b*) *General reasons for the provision.*—There is at the present time a great deal of confusion as to the area of application of this provision and the rules developed by the Internal Revenue Service with respect to this provision are little understood by the general public. It is recognized that the Internal Revenue Service in its interpretation of this provision has attempted to remove the harsher aspects in its application. However, this also has had the unfortunate effect of complicating the provision to such a degree that it is not generally understood by the traveling public. Moreover, the area of application of the provision is so restricted, since it applies only to self-employed persons and to employees who are managing executives or related to employer, and in many cases not to them, that your committee concluded that the provision in its present form served little purpose. In view of these considerations your committee has added a section to the bill repealing this travel allocation rule retroactively to the date of its enactment in the Revenue Act of 1962.

(*c*) *General explanation of provision.*—The section added by your committee repeals the subsection adopted in 1962 which required a person taking a business trip, which was also combined with recreational or other personal activities, to allocate the cost of the trip between the business and personal activities, deducting the former and not the latter. This allocation was not required where the trip does not take more than a week or where the time spent on personal activity represents less than a quarter of the time away from home on the trip.

(*c*)(*i*) *Effective date.*—This provision is repealed as of the date of its enactment; namely, for periods after December 31, 1962.

(*d*) *Revenue effect.*—It is estimated that the repeal of this provision will result in a revenue loss of $5 million a year.

23. Acquisition of stock in exchange for stock of corporation which is in control of acquiring corporation (sec. 219 of the bill and sec. 368 of the code)

(*a*) *Present law.*—Under present law, a subsidiary corporation can acquire the assets of another corporation in exchange for its parent company's stock. This is a tax-free reorganization (under sec. 368(a)(1)(C)). In addition, following this tax-free reorganization the acquired assets can be transferred to a subsidiary corporation without affecting the tax-free nature of the reorganization.

Under present law, it is not possible, however, for a subsidiary corporation to acquire tax free the stock of another corporation in exchange for the stock of its parent corporation. In such a case, for the reorganization to be tax free, present law requires that the subsidiary corporation transfer its own stock in exchange for the stock of the other corporation, rather than the stock of its parent.

(*b*) *General reasons for provision.*—The Supreme Court in *Groman* v. *Helvering* (302 U.S. 82) and *Helvering* v. *Bashford* (302 U.S. 454), found that exchanges in which the parent corporation transferred stock while its subsidiary corporation received stock or the assets of another corporation did not qualify as tax-free reorganizations because the required "continuity of interest" was lacking.

[5] Op. cit., question No. 76.

In the 1954 code, in order to avoid the results of the *Groman* and *Bashford* decisions, the law was amended to provide that the subsidiary corporation could acquire the assets of another corporation in exchange for its parent corporation's stock (in tax-free reorganization under sec. 368(a)(1)(C)). The 1954 code also provided that following this reorganization, the acquired assets could be transferred to a subsidiary corporation without destroying the tax-free status of the reorganization.

Thus, the 1954 code permits tax-free reorganizations in the case of the exchange of the parent's stock for the assets of a corporation acquired by the subsidiary. However, a similar result is denied where the subsidiary acquires the stock of the other corporation in exchange for the stock of its parent corporation. Since Congress has considered the "continuity of interest" rule satisfied in the case of asset acquisitions, there seems to be no reason for not applying the same rule to stock acquisitions, since there is little in substance to distinguish an asset acquisition from a stock acquisition.

As a result, your committee has concluded that it is desirable to treat these two types of acquisitions in the same manner. For that reason, it has provided tax-free status for the stock-for-stock reorganization in the same manner that present law provides a tax-free status for stock-for-assets reorganizations.

(*c*) *General explanation of provision.*—This provision amends the definition of a stock-for-stock reorganization (known as a (B) reorganization) to qualify as a tax-free reorganization a transaction in which a subsidiary corporation acquires the stock of another corporation (and after that is in control of the corporation) in exchange solely for the voting stock of its parent corporation. Present law is also amended to permit the subsidiary corporation acquiring the stock of another corporation in the "(B) reorganization" to transfer all or part of this stock to another corporation which it controls. In addition, conforming changes have been made to the definition of the term "party to the reorganization".

(*c*)(*i*) *Effective date.*—The amendment made by this provision applies with respect to transactions after December 31, 1963.

(*d*) *Revenue effect.*—This amendment is expected to result in a negligible loss in revenue.

24. Retroactive qualification of certain union negotiated multiemployer pension plans (sec. 220 of the bill and sec. 401(i) of the code)

(*a*) *Present law.*—Under present law, a pension trust is qualified for income tax exemption only if it meets certain requirements relating to coverage of employees and nondiscrimination of contributions or benefits. Where the pension trust is properly qualified, not only is it exempt from Federal taxation with respect to its income, but contributions paid to it by an employer on behalf of his employees are deductible for Federal income tax purposes. Thus, it is of great importance for a pension trust to meet the requirements of the Internal Revenue Code and thereby become a qualified trust.

(*b*) *General reasons for provision.*—On several occasions in recent years bills have been presented to Congress and enacted into law providing for the retroactive qualification of specific pension trusts which could not initially qualify for exemption but after a period of time were able to do so. An example of this is the pension plan of local union No. 435, International Hod Carriers Building and Com-

mon Laborers' Union of America which was retroactively made a qualified trust by Congress in section 25 of the Revenue Act of 1962.

These plans are multiemployer pension plans established under collective bargaining agreements between a union and several employers. The regulations under present law (Regulations sec. 1.401–1(a)(2)) require that a "definite written program and arrangement" be communicated to the employees. This requirement cannot be met without delay in many cases of these multiemployer pension funds. However, the employers are required by the collective bargaining agreement entered into to begin making contributions under a general formula when the agreement is signed. However, to determine a schedule of benefits under one of these plans, frequently a complex actuarial study must be made, including a census of the employees of all of the participating employers. This requires a substantial period of time and during this period there can be no "definite written program." Therefore, there cannot be a qualified plan during this period and the contributions required under the union agreement, where they are not vested, cannot be deducted by the employers.

Because of the severe consequences of the failure to qualify for deductions during this period, Congress has from time to time provided retroactive qualification of plans where they subsequently become qualified and where the pension trust in the meanwhile was not operated in a manner which jeopardized the interests of its beneficiaries. To make it unnecessary to consider each one of these plans separately for retroactive qualification, the Treasury Department has recommended to Congress that it be given general authority to qualify these plans retroactively to the date of their creation where certain tests are met: The plans subsequently must become qualified and in the interval the trust must have been operated in a manner which substantially meets the tests under which the plan subsequently qualifies and the interests of the beneficiaries during this period must not in any way have been jeopardized. Your committee is in accord with the Treasury Department's recommendation and, therefore, has added a new section to this bill to provide retroactive qualification for these plans in such cases.

(*c*) *General explanation of provision.*—Your committee's amendments provide that a trust which is a part of a pension plan which the Secretary has found to be a "qualified trust" and one which is itself exempt from taxation is to be considered as a trust which was a "qualified trust" and as one which was exempt from taxation from the period beginning with the date when contributions were first made to the trust rather than beginning with the date that the trust otherwise first constituted a "qualified trust".

For this retroactive qualification to be made available to a pension trust, it must be established to the satisfaction of the Secretary of the Treasury or his delegate that three conditions have been met. First, he must be satisfied that the trust was created under a collective bargaining agreement with two or more employers who are not related. This provision is made available only in the case of multiemployer plans because it is believed that only these plans involve the substantial delay after the bargaining agreement before it is possible to determine the schedule of benefits for the employees. Moreover, present law already provides that single employer plans may be retroactively qualified to the beginning of a year if the qualifications

are fully met by the 15th day of the third month following the close of a year.

Second, it must be shown to the satisfaction of the Secretary or his delegate that the disbursements made from the trust prior to actual qualification substantially meet the tests under which the pension plan subsequently qualifies. Minor variations, not basically discriminatory in character, for this purpose may be ignored.

Third, the Secretary or his delegate must be satisfied that prior to the time the trust constituted a qualified plan the contributions made to this trust were not used in a manner which would jeopardize the interests of the beneficiaries.

These are essentially the same conditions which previously, when plans were considered on an individual basis, Congress has required to be met before retroactive approval was accorded these plans.

(*c*)(*i*) *Effective date.*—This provision is to apply retroactively back to what was the general effective date of the Internal Revenue Code of 1954; namely, taxable years beginning after December 31, 1953, and ending after August 16, 1954, but only with respect to contributions made after December 31, 1954.

(*d*) *Revenue effect.*—It is believed that this provision will result in a negligible loss of revenue.

25. Qualified pension, etc., plan coverage for employees of foreign subsidiaries and domestic subsidiaries operating abroad (sec. 221 of the bill and secs. 406 and 407 of the code)

(*a*) *Present law.*—Under present law, a domestic corporation may extend old-age and survivors insurance coverage to U.S. citizens employed by its foreign subsidiaries. This social security coverage can be provided by agreements between the parent company and the Secretary of the Treasury or his delegate. This coverage is available only to U.S. citizens employed by foreign subsidiaries in which the domestic corporation has at least a 20-percent voting stock interest or a foreign subsidiary of such a foreign subsidiary if the first subsidiary has at least a 50-percent voting stock interest in the second. Of course, U.S. citizens in a domestic corporation, even though that domestic corporation is operating abroad, also are covered under present law for social security purposes.

There is no method comparable to the social security agreement referred to above for covering under a domestic corporation's qualified pension profit-sharing stock bonus, annuity, or bond purchase plan the U.S. citizens who are employees of its foreign subsidiaries. If a U.S. citizen becomes an employee of the foreign subsidiary, he is no longer eligible to participate in the pension or profit-sharing plan of the domestic parent corporation. Moreover, the foreign subsidiary corporation cannot establish a similar pension, etc., plan and obtain qualifications from the Internal Revenue Service unless it includes in this plan the foreign nationals on its payroll on a nondiscriminatory basis. Where the plan is not qualified, the U.S. citizens of such a foreign subsidiary under present law would be currently taxable on any contributions made by the foreign subsidiary to a pension or profit-sharing plan to which they had nonforfeitable rights.

Similarly, it has been held by some Internal Revenue offices that a domestic corporation operating abroad through branches cannot obtain qualified status plans which provide coverage for U.S. citizens

who are employees of the domestic corporation, unless it also provides nondiscriminatory coverage for the foreign employees on its payroll.

(b) *General reasons for provision.*—Your committee believes that it should be possible to cover under qualified plans U.S. citizens who are employees of foreign subsidiaries in substantially the same manner as it is possible to cover them by agreement under present law for social security purposes. It is believed that it should be possible to cover the U.S. citizens under a qualified plan for U.S. tax purposes without also covering the foreign nationals of the foreign subsidiary under such a plan. The foreign nationals usually are interested in different patterns of retirement benefits depending upon their own local custom; on the other hand, the U.S. citizen employed by the foreign subsidiary has close economic and personal ties with the United States, expects to return home, and may well wish to continue coverage under a qualified plan of the domestic parent corporation under which he was covered before becoming an employee of the foreign subsidiary.

The problem is substantially similar in the case of U.S. citizens employed abroad by foreign branches of domestic subsidiaries. They are covered for social security purposes and should in your committee's view have an opportunity to be covered under qualified plans in the same way as is proposed in the case of employees of foreign subsidiaries of domestic corporations.

(c) *General explanation.*—For the reasons given above, your committee has added an amendment to the House bill providing that U.S. citizens who are employees of foreign subsidiaries of a domestic corporation may under certain circumstances be included for coverage under a qualified pension or annuity plan or profit-sharing or stock bonus or bond-purchase plan or stock bonus plan of the domestic corporation. Thus, contributions made to such a plan for the U.S. citizens employed abroad by the domestic corporation will not be taxable to the employee at the time of contribution even though his rights in the contribution are nonforfeitable and the qualified status of the plan will not be disturbed.

To qualify for this treatment, the individual involved must be a citizen of the United States and an employee of a foreign subsidiary of a domestic corporation. The domestic corporation in this case must have entered into an agreement with the Treasury Department to cover for social security purposes the U.S. citizens who are employees of the foreign corporation involved, and the pension, profit-sharing or stock bonus plan of the domestic corporation must provide coverage for employees of all of its foreign subsidiaries with which it has entered into an agreement to provide social security coverage. In addition the individual involved must not be covered under any other employer's funded plan of deferred compensation such as a pension or profit-sharing or stock bonus plan (qualified or not) with respect to the compensation he receives from the foreign subsidiary. A foreign subsidiary for this purpose is defined in the same manner as is provided for in the case of social security coverage of U.S. citizens who are employees of a foreign subsidiary. Thus, the parent corporation must have a 20-percent voting stock interest in the foreign subsidiary. Also covered are subsidiaries of such a foreign subsidiary where the first foreign subsidiary has at least a 50-percent voting stock interest in the second.

Your committee's amendment also provides that employees of a domestic subsidiary of a domestic parent corporation may be covered

under the domestic parent corporation's pension or annuity plan, profit-sharing plan, stock bonus or bond-purchase plan where the individual involved is a U.S. citizen and the domestic subsidiary's operation is largely through foreign branches. Here, of course, coverage for social security purposes is automatically provided since the subsidiary corporation involved is a domestic corporation. In other respects, however, the conditions which must be met are substantially the same as those specified above in the case of the foreign subsidiary. Thus, the pension or profit-sharing plan of the domestic parent corporation must provide for coverage for employees of all domestic subsidiaries (meeting the definition specified below) who are citizens of the United States. Also the compensation paid by the domestic subsidiary operating abroad to the employee must not be covered under any other funded pension, profit-sharing or other type of plan of deferred compensation.

The definition of a domestic subsidiary whose operations are largely foreign approximates the requirements under present law specified with respect to Western Hemisphere trade corporations except that there is no geographical limitation to the Western Hemisphere. Thus, 95 percent or more of its gross income for the taxable year and 2 prior years must be derived from sources without the United States and 90 percent or more of its gross income for this same period must be derived from the active conduct of a trade or business. In addition, its voting stock must be held to the extent of 80 percent or more by the domestic parent corporation (as contrasted to the 20-percent requirement in the case of the foreign subsidiary).

Although the U.S. citizen who is an employee of either the foreign subsidiary or the domestic subsidiaries operating abroad is to receive the benefit of tax postponement with respect to contributions made by the domestic parent corporation to the qualified pension or profit-sharing plan, the domestic parent corporation is not to receive a deduction for its contribution to the plan since this is compensation provided with respect to an employee of its subsidiary. Generally, the domestic parent corporation, to the extent of these contributions, will be treated as having made a contribution of capital to its foreign subsidiary or domestic subsidiary operating abroad. Then this amount will be treated as a deduction to the subsidiary (to the extent it is subject to U.S. tax). In any event, this amount will decrease the earnings and profits account of the subsidiary.

Although the deduction in this case is denied the domestic parent corporation for purposes of all other tests as to the status of the pension or profit-sharing fund, including funding for back years as to which no benefits were provided under any funded plan of deferred compensation, the contribution to the plan with respect to these U.S. citizens employed abroad will be treated in the same manner as other contributions to the fund by the domestic parent corporation. The individual involved will also be treated as if he were an employee of the domestic parent corporation for purposes of the annuity provisions of the code (sec. 72 (d), (f)), the section providing up to $5,000 of tax-free benefits upon an employee's death (sec. 101(b)) and for purposes of the treatment of annuities received under qualified plans for purposes of the estate and gift taxes (secs. 2039 and 2517).

In testing to be sure that a plan is not discriminatory, officers, shareholders, supervisory personnel, etc., of the subsidiary will be

treated as if they had the same status with respect to the domestic corporation, and the determination as to whether an individual is highly compensated or not will be made on the basis of what the individual's status would be if he were an employee of the domestic parent corporation. Similarly, what is treated as compensation to the employee for purposes of a qualified plan is to be determined on the basis of his compensation received from the foreign or domestic subsidiary corporation. If part of this compensation is received in foreign currency, this compensation will be valued under existing law for purposes of this provision.

(*c*)(*i*) *Effective date.*—The general effective date for these provisions is to be taxable years ending after December 31, 1963.

(*d*) *Revenue effect.*—It is expected that this provision will result in a negligible loss of revenue.

26. Employee stock options and purchase plans (sec. 222 of the bill and secs. 421–425 of the code)

(*a*) *Present law.*—Under present law, no income tax is imposed in the case of employee restricted stock options, either when the option is granted or at the time it is exercised. Instead, tax generally is imposed at the time the stock involved is sold by the employee. In the case of those stock options where the option price is at least 95 percent of the market price of the stock at the time the option is granted, the entire amount of any gain realized by the employee at the time he sells the stock is treated as capital gain. Where the stock option price is between 85 and 95 percent of the market price at the time the option is granted, the difference between the option price and the market value of stock at the time of the grant of the option is treated as ordinary income. However, this ordinary income is not realized for tax purposes until the employee sells the stock.[1] Any additional gain at the time the stock is sold in such cases is treated as capital gain. In the case of these restricted stock options, employers are not allowed any deduction for the amount of the gain realized by the employee, whether this gain is treated as capital gain or ordinary income.

For a stock option to be classified as a restricted stock option and be eligible for the treatment outlined above, the option price must be at least 85 percent of the market price of the stock at the time the option was granted, the stock and/or the option must be held by the employee for at least 2 years after the date of the granting of the option and the stock held for at least 6 months after it is transferred to him, the option must not be transferable other than at death, the individual may not be a 10-percent shareholder in the corporation (unless the option price is at least 110 percent of the fair market value) and the option must not be for a period of more than 10 years.

(*b*) *General reasons for provisions.*—The administration recommended the repeal of the stock option provision altogether. This recommendation was made on the grounds that stock options were compensatory in nature and, therefore, should be treated in the same manner as wages and salaries. It was suggested that with the lower tax rates provided by this bill, compensation received in this manner no longer required special treatment.

---

[1] If the gain is less than the spread between the option price and the fair market value at the time the option is granted, this lesser amount is taxed as ordinary income.

The House, however, decided to continue the stock option provision because it believed that it is good for the economy for management of various businesses to have a stake in their successful operation. The House believed that this provides important incentives to expand and improve the profit positions of the companies involved. It was suggested that this is not only good for the specific business involved, but also for the economy as a whole. Despite the fact that the House continued the stock option provision, however, it was recognized that there are abuse situations in the present provisions which need correcting. The House bill was directed toward such corrections. Your committee is in accord with this position and has, therefore, with relatively minor changes retained the House bill.

Although the use of stock options generally is thought of in terms of providing incentives for key executives in a business, what are presently called restricted stock options also are used by some companies for an entirely different purpose. Some companies have made stock options available to all, or practically all, of their employees Taking advantage of the fact that the option may be granted at 85 percent of the market price they make discount sales of the stock to their employees generally. These are known as employee stock purchase plans. Where stock options are used in this manner, they are designed primarily as a means of raising capital; and, in such cases, the discounts from market price made available to the employees usually correspond approximately with the costs the company would otherwise incur in floating a new stock issue.

In practice, the House and your committee found that quite different features are required for key employee stock options and the discount purchase plans made available to employees generally. For that reason, the two types of options are placed in separate sections setting forth substantially different requirements for each. In the case of the key employee stock options or "qualified stock options" as they are called by the bill for future years—

1. The period over which the stock must be held has been increased to 3 years. This is designed to give assurance that the key employees actually are acquiring a "stake in the business" and are not merely turning the stock over as fast as the options can be exercised.

2. The maximum period of time over which an option may be outstanding has been reduced from 10 years to 5. It is recognized that stock options historically have a much greater value to the individual if the period of time over which they may be exercised is a long period, since over most 10-year periods stock values have risen. Thus, where the option may be exercised over a very long period of time, such as 10 years, its grant appears more closely associated with compensation and less directed toward the individual efforts of the employee involved. Furthermore, the purpose of the provisions is to encourage the acquisition of a proprietary interest in the business as quickly as possible.

3. The options must be issued at 100 percent of the market price rather than 85 percent (with a special rule where the price inadvertently is set below 100 percent). Closely associated with this also is the removal of the variable price stock option provision. These modifications are made to decrease the compensatory nature of the existing stock option provision and to place

greater emphasis on the employee's efforts to improve his company's business and thereby raise the price level of the stock.

4. Provisions have been added to limit the extent to which new options may be exercised where old options previously were issued, but had become less attractive than a new option because of a decline in the market price of the stock in the interval between the issuance of the two. Existing law already limits the resetting of options below the original price of issue where the stock has declined. This modification achieves the result intended, but not obtained, by existing law. Your committee has adjusted this House provision in two respects to eliminate what it believes were unintended, harsh results under the House bill.

5. Stockholder approval is required for stock option plans to give assurance that the benefits granted management in the case of these options is in accordance with the desires of the stockholders.

6. The bill also provides that stock options generally are not to be made available to employees with stockholdings of more than 5 percent (although to a limited extent, they may be made available in the case of small business to those with holdings up to 10 percent). Under present law, stock options may be granted to employees with stockholdings of more than 10 percent only at a price 10 percent above the market price. It was thought unnecessary to provide employees who are substantial stockholders with any incentive to improve the business since they already have a substantial stake in its successful operation.

In the case of the employee stock purchase plans, existing law is continued (in a separate section) without major modification. In this case, for example, employees will continue to be able to purchase stock through options at a price as low as 85 percent of the market price of the stock at the time the option is issued since these plans, as previously indicated, are in the nature of "discount" purchase plans. However, to qualify for treatment under the employee stock purchase plans, a series of new conditions must be met, designed primarily to establish that the purchase plans are made available without discrimination to most employees of the corporation.

(c) *General explanation of provisions.*—The bill divides the tax treatment of employee stock options and purchase plans into five provisions: First are the general rules applicable to both; second, the special rules applicable to qualified stock options (i.e., those for key employees which are granted after December 31, 1963, under your committee's amendments, or June 11, 1963, under the House bill) third, the special rules applicable to employee stock purchase plans (in general, those granted after the date specified above); fourth, restricted stock options (which cover both of the two categories mentioned immediately above but only for options issued before the specified date); and fifth, certain definitions and special rules applicable to stock option and stock purchase plans in both the past and the future. The material presented below deals first with qualified stock options and then with employee stock purchase plans. The provisions dealing with restricted stock options, which are only those options issued in the past, are covered by a continuation of existing law and are not dealt with here.

(c)(*i*) *Qualified stock options: tax treatment.*—Generally, in the case of qualified stock options, no income tax is imposed either at the time

the option is granted or at the time the option is exercised and the stock is transferred to the employee. Similarly, no business expense deduction is allowed to the employer corporation (or a parent or subsidiary of that corporation) at any time with respect to this option.

There is, however, an exception to the general rule that no tax is imposed at the time of the exercise of the option. As is indicated below, one of the requirements of a qualified option is that the price under the option is not to be less than the fair market value of the stock at the time the option is granted. An exception to this, however, is provided where there was an attempt made in good faith to price the option at the market value of the stock but the market value was underestimated. This, of course, would ordinarily occur only in the case of unlisted stock. In such cases the option will not be disqualified, but 1½ times the difference between the option price and what actually is the fair market value of the stock at the time the option is granted (or the difference between the option price and fair market value at the time of exercise, if this is smaller) is to be taxed as ordinary income at the time the option is exercised. This is intended to discourage any attempts at undervaluing the stock, without disqualifying the options where the undervaluation was unintentional.

Another limitation on a qualified stock option (set forth below) is that the stock must be held for at least 3 years. The bill provides that in those cases where it is not held for this 3-year period, the option will still be a qualified option, but the spread between the option price and the value of the stock at the time the option is exercised will be treated as ordinary income at the time the stock is sold. However, in such cases the employee will never be taxed on more than his gain. Thus, if the price of the stock has fallen since the time of the exercise of the option, the amount of the ordinary income will be limited to the difference between the option price and the actual price of the stock on the date of sale. Where the price of the stock at the time of sale is less than the option price, there will be no ordinary income and the difference between the option price and the price at which the stock is sold will be treated as a capital loss. On the other hand, if the stock is sold at a price which is higher than the price on the date the option was exercised, then in addition to the amount treated as ordinary income (the difference between the option price and value on the date of exercise) there will be an amount treated as a capital gain.

The determination of the type of capital gain, i.e., whether short term or long term will depend on the length of time the stock has been held. Thus, any gain where the stock has been held beyond the 3-year period specified with respect to qualified stock options will result in long-term gain with a 50-percent inclusion factor and a 25-percent maximum tax. Where the stock is disposed of in less than 3 years and, in addition to the amount treated as ordinary income, there is an amount treated as capital gain, this capital gain will be either short term (if the stock is held 6 months or less) or long term (if it is held more than 6 months).

As under present law, where the employee dies after having purchased the stock but before holding it for the specified period of time, this holding period is waived since there is no business reason for

requiring the estate or heir to hold the stock. Similarly, a requirement subsequently referred to that the individual must be in the employ of the corporation involved up to 3 months before the date of exercise of the option also is waived in the case of the death of the employee before exercise.

A transfer to a trustee in bankruptcy (or a similar fiduciary) of shares of stock acquired under a qualified stock option is not considered to be a "disposition" of such share so there will be no ordinary income recognized at that time, although a capital gains tax may be due.

(*c*)(*ii*) *Qualified stock options: conditions for qualification.*—For an individual to receive full qualified stock option treatment, he must not sell (or otherwise dispose of) his stock within 3 years of the date of exercise of the stock option. As indicated previously, where all conditions but this one are met, tax is not imposed until the sale of the stock, but much or all of the tax imposed at that time, if this condition is not met, will be on the basis of ordinary income rather than capital gain. This condition is designed to give assurance that the key executive involved actually maintains a "stake in the business" and is not merely selling the stock shortly after he receives it, thus vitiating the principal purpose of stock options, and converting ordinary compensation into capital gain. This requirement, of course, is not a new idea since present law already requires the individual to hold the option, or stock, for at least 2 years and the stock alone for 6 months in order to receive restricted stock option treatment.

A second condition which must be met for the option to receive qualified stock option treatment is that the individual involved, for the entire time from the date of the granting of the option until 3 months before the date of the exercise of the option, must be an employee either of the company granting the option, a parent or subsidiary of that corporation, or a corporation (or parent or subsidiary of a corporation) which has assumed the option of another corporation as the result of a corporate reorganization, liquidation, etc. This provision differs only slightly from existing law, which requires that the individual be in the employment specified at the time of the granting of the option and on the day ending 3 months before the exercise of the option but does not require that he be in the specified employment in the intervening time. Of course, for this purpose, military leave or sick leave would not disqualify an individual.

In addition to the requirements referred to above, the terms of the option itself must also meet certain specified conditions in order to be eligible for qualified stock option treatment. They are as follows:

1. The option must be granted under a plan which specifies the number of shares of stock to be issued and the employees or class of employees to receive the options. This plan must be approved by the stockholders of the corporation within 12 months before or after the plan is adopted. If the plan permits stock options to be granted to a class of employees, the class of employees must be described with sufficient particularity to allow the shareholders to make a meaningful decision concerning the plan. The use of a general term such as "key employees" is not a sufficient description of those eligible to receive options. Ordinarily any change in the aggregate number of shares which may be issued under the plan or the employees or class of employees eligible to receive such options will be treated as the adoption

of a new plan. No other change in the terms of a stock option plan will, however, be considered to be the adoption of a new plan.

2. The option must be granted within 10 years of the time the plan is adopted or approved by the stockholders, whichever is the earlier.

3. The option must by its terms be exercisable only within 5 years of the time it is granted.

4. The option price must equal or exceed the fair market value of the stock at the time the option is granted. An exception to this provides that where the option price was less than the market price, but this was unintentional, then this condition is to be considered as met (although as previously indicated, a maximum of 1½ times any difference in price is taxed as ordinary income at the time of the exercise).

5. Generally the option by its terms is not to be exercisable while there is outstanding any qualified stock option or restricted stock option which was granted to the employee at an earlier time. The purpose of this provision is to prevent an individual from indirectly gaining an advantage by the employer in effect resetting the price at which an earlier option was issued by issuing a second option at the lower price. To prevent this a second option may not be exercised during the period the first option under its initial terms could have been exercised unless the first option itself is exercised. Thus, generally a cancellation of the first option will not enable the second option to be exercised any sooner. However, the bill as passed by the House provides that restricted stock options may be canceled any time before January 1, 1965, without affecting adversely the exercise of a qualified stock option subsequently issued. In addition, in the case of a restricted stock option which under its terms is made available to the employee only in installments over an extended period of time, the House bill provides that the installments which cannot yet be exercised at the time of the granting of a new qualified option are not to prevent the exercise of this second option so long as these installments cannot be exercised. Your committee has accepted this general rule of the House bill preventing the "resetting" of option prices and also has accepted the modifications in the general rule provided by the House bill. However, your committee has added two new modifications to provide for situations which it believes were overlooked by the House. First, where the option price for the new option is at least as high as the price of each of the outstanding, previously issued options to purchase the same stock (whether these prior options were qualified options or restricted options), this "reset" rule is not to apply; i.e., the new stock option in such a case can be exercised before the outstanding options. Second, your committee has provided that where an option under the terms under which it was granted is not immediately exercisable in full, the employer can permit the exercise date for any or all of the remaining installments of the options to be accelerated without this change being considered a "modification" which would require a new option price for the option for it to continue to constitute a qualified (or restricted) option. Both of these modifications made by your committee continue the intent of the House provision, in that neither permits the taxpayer to exercise a new option at a lower price than his old option until the old option has been exercised or lapsed. It was thought, however, that there was no need to deny the right to exercise the second option in those

cases where the taxpayer could gain no price advantage from this. Similarly, it was thought that there was no reason why the installments on the first option should not be accelerated where the inability to exercise these installments was preventing the exercise of the new option.[1]

6. The option by its terms must be nontransferable other than at death and must be exercisable during the employee's lifetime only by him. This provision is the same as under present law.

7. The employee, immediately after the option is granted, must not own stock representing more than 5 percent of the voting power or value of all classes of stock of the employer corporation or its parent or subsidiary. In the case of small businesses, however, the employee may own up to 10 percent of the voting power or value of the stock before being disqualified. For a corporation with equity capital of less than $1 million, this percentage is to be 10 percent and for one with equity capital of $2 million it is to be 5 percent. Between these two levels of equity capital the allowable percentage decreases gradually from the 10-percent level for a company with $1 million of equity capital down to the 5-percent level for a corporation with equity capital of $2 million or more. Equity capital for this purpose is the assets of the corporation, adjusted for any change in their basis, less any indebtedness of the corporation. Where a parent or subsidiary also are involved, adjustments are made to delete intercorporate ownership. For this purpose, the individual is considered to own stock owned directly or indirectly by brothers and sisters, wife, ancestors, and lineal descendants. Stock owned directly or indirectly by a corporation, partnership, estate, or trust for this purpose is considered as being owned proportionately by shareholders, partners, or beneficiaries.

(*c*)(*iii*) *Employee stock purchase plans; tax treatment.*—As indicated previously, except for the addition of the nondiscrimination requirement (and the requiring of stockholder approval) the tax treatment of employee stock purchase plans continues to be substantially similar to the tax treatment of restricted stock options under present law. Thus, as under present law, no income is to be reported by the employee either at the time the option is granted or at the time it is exercised. Similarly, no deduction is available to the employer corporation with respect to the employee stock purchase plan.

As under present law, under these purchase plans the option may be issued at a price as low as 85 percent of the market value of the stock at the time of the grant. Where this is done, this spread between the option price and the market value at the time the option is granted, upon the subsequent sale of the stock by the employee or upon the employee's death is treated as ordinary income. However, in no event is the amount to be taxed to the individual as ordinary income to exceed the gain realized on the stock at the time of its disposition.

In addition, ordinary income in the case of employee stock purchase plans may arise where the stock is disposed of before the expiration of the applicable holding period. As under present law, the option and/or stock must be held for a period of at least 2 years and the stock itself held for a period of at least 6 months. Where this holding

[1] This latter rule, of course, applies whether or not a second option is issued; but it is believed that it will have a primary impact in cases of this type.

period is not complied with, then any spread between the option price and the price of the stock at the time the option is exercised will be treated as ordinary income when the stock is sold or otherwise disposed of. As under present law, the specified amount is ordinary income without regard to whether this is greater or less than the gain realized on the stock at the time of the sale. Where the gain otherwise realized is less than this amount treated as ordinary income, the specified amount is still treated as ordinary income but a capital loss is recognized equal to the difference between the market value of the stock at the time of exercise and the sales price of the stock. Apart from these two cases where ordinary income may be realized any other gain recognized on the sale of purchase plan stock results in capital gain.

(*c*) (*iv*) *Employee stock purchase plans; conditions for qualifications.*—As indicated above, to qualify for purchase plan treatment, the stock in these cases must not be disposed of within 2 years of the date of the granting of the option nor within 6 months after the transfer of the stock to the individual. This is a continuation of existing law.

In addition, the individual must at all times during the period beginning with the date of the granting of the option and ending 3 months prior to the date of exercise, be an employee of the corporation granting the option, a parent or subsidiary of the corporation, or a corporation (or parent or subsidiary of a corporation) which assumed this stock option as a result of a corporate reorganization, liquidation, etc. This provision is the same as that previously described in the case of qualified stock options. As indicated in the case of qualified stock options, this differs only slightly from existing law.

To qualify as an employee stock purchase plan, nine requirements must be met by the plan itself. Alternatively, all but the first two of these may, however, be met in the stock offering rather than the plan. These conditions are as follows:

1. As under present law, the plan must provide that the options are to be granted only to employees of the granted corporation or a parent or subsidiary.

2. The plan must be approved by the stockholders of the corporation granting the option within 12 months before or after the date the plan is adopted. This provision is a new requirement which is the same as that provided in the case of qualified stock options.

3. No employee can be granted an option if he owns 5 percent or more of the voting power or value of all classes of stock of the employer corporation or its parent or subsidiary. Present law provides that employees having more than a 10-percent interest in a corporation may not obtain a restricted stock option at less than 110 percent of the market price of the stock.

4. A new provision designed to prevent discrimination provides that the options must be granted to all employees of the corporation except that there may be excluded one or more of the following four categories:

(*a*) Employees who have been employed less than 2 years;

(*b*) Employees who are part time and employed 20 hours or less per week;

(*c*) Employees whose customary employment is not for more than 5 months a year; and

(*d*) Officers, supervisory personnel, or highly compensated employees.

5. Another new provision designed to give assurance that these stock purchase plans are nondiscriminatory requires that all employees granted options have the same rights and privileges except that the amount of stock which may be purchased by any employee may be a uniform percentage of total compensation or regular or basic compensation and the plan may provide a maximum number or value of shares to be purchased.

6. Under the plan, the option price may not be less than 85 percent of the market value of the stock at the time the option is granted or not less than 85 percent of the market value of the stock at the time the option is exercised, whichever is the lesser. This restriction is similar to the limitations of present law although slightly more restrictive in some cases.

7. The period over which the option may be exercised cannot exceed 5 years where the option price is not less than 85 percent of the value of the stock at the time of the exercise or 27 months from the date of the grant of the option if the option price is at least in part determined on the basis of the price of the stock at the time the option is granted. Present law provides a 10-year period over which restricted stock options may be exercised but in practice it is understood that options issued under purchase plans generally have a much shorter period over which they may be exercised.

8. A new ceiling is provided to the effect that an employee may not purchase stock at an annual rate in excess of $25,000 a year. This restriction is provided since these plans are designed primarily for broad employee participation.

9. As under present law and in the case of the qualified stock options, the option must not be transferable by the individual other than at death and must be exercisable during the employee's life only by him.

(*c*)(*v*) *Reporting requirements.*—The bill provides that corporate employers are to report on the transfer of stock to an employee in the case of the newly established category of qualified stock options or present law restricted stock options. They also are to report on the sale of stock by the employee where stock is acquired under a stock purchase plan at a price less than the full value of the stock and where, under a restricted stock option, stock is purchased at a price between 85 and 95 percent of the value of the stock. In these latter two cases, the report of the sale of the stock by the employee is required since generally in these cases ordinary income tax will be payable by him. A copy of the form of the report going to the Government also is to be sent to the employee or former employee on or before January 31 after the year involved. In those cases where the employer is required to report on the sale of stock by the employee, he will not be expected to follow the ownership of the stock beyond the first transfer; e.g., if an employee transfers stock to a street name and then subsequently sells the stock, the employer will report the first transfer of the stock to the street name but will not be required to report the subsequent sale. Moreover, the reporting in these cases is merely to indicate the name, address, and account number of the individual employee involved and the stock sold by him.

(*c*)(*vi*) *Effective date.*—In the case of qualified options, the House bill generally provided that the new provisions were to apply to options granted to an individual after June 11, 1963. Your committee has amended this to provide that the new provisions with respect to

qualified options are to apply to options granted after December 31, 1963. A binding, written contract entered into before January 1, 1964, will not be considered as giving rise to options which must meet the "qualified option" test. Your committee has provided this new effective date to conform the effective date in this case with the general effective date provided under the bill for structural changes. In addition, it thought that it would be unfair to require taxpayers to conform to a new set of rules during an extended interval of time when the status of the proposals was still uncertain.

Of course, in a transaction which qualified as a tax-free reorganization, where a corporation entered into a binding obligation to assume outstanding restricted stock options previously granted by a corporation, any option which the acquiring corporation issues in assuming the outstanding options already granted by the acquired corporation, to the extent provided by present law, are considered as continuations of the old options and therefore will be considered as granted prior to January 1, 1964, and treated as restricted stock options rather than qualified stock options.

In the case of qualified options, your committee has also added a transition rule. This rule provides that an option which is issued after December 31, 1963, and before January 1, 1965, which does not meet the terms of a "qualified option", can be modified to meet these terms any time before January 1, 1965, without this modification being considered as giving rise to a new option requiring a new option price. This rule is intended to give taxpayers who have their plans already established, or who initially are not aware of the new provision, time to modify their stock options so that the new conditions are met without the options being disqualified as a result.

In the case of employee stock purchase plans, the new provisions under the House bill would apply to options granted after June 11, 1963. Your committee's bill has changed the effective date of the employee stock purchase provision so that it applies to options granted after December 31, 1963, in the same manner as in the case of the qualified options. These same reasons account for this change. Thus, the new employee stock purchase plan provision will apply generally to options granted after December 31, 1963. Existing law, however, will apply to options granted pursuant to a written plan adopted and approved before January 1, 1963, which at that time met the nondiscrimination requirements specified for employee stock purchase plans. A plan which was being administered in a way which did not discriminate in favor of officers, supervisory personnel, or highly compensated employees would continue to qualify as adopted and approved before January 1, 1964. Except for the date, this modification is the same as provided by the House bill. Thus, a plan (not otherwise being discriminatory) would be considered nondiscriminatory even though only full-time employees were covered (rather than those working 20 hours a week or more) or those with less than 6 months a year employment were omitted (rather than those with less than 5 months employment).

(*d*) *Revenue effect.*—The changes made by this provision are not expected to have any appreciable revenue effect. To the extent that the changes made above result in a reduction in stock options issued, this will increase deductions taken by corporations as they make deductible payments to employees in other forms.

27. Installment sales by dealers in personal property (sec. 223 of the bill and sec. 453(a) of the code)

(*a*) *Present law.*—A taxpayer using installment sale reporting can defer income for tax purposes until payments are received under the contract (rather than treating the entire amount as income as of the time the sale is made). This provides the seller with funds with which to pay the tax, while at the same time giving him the immediate advantage of deductions attributable to the sale.

Prior to October 15, 1963, sales under revolving credit plans were not recognized by the Treasury Department as installment sales for tax purposes because of certain differences between revolving credit plans and traditional installment sales. For instance, installment sales ordinarily involve a separate contract for each item of property purchased, providing for a series of payments specifically applicable to the purchase price of that piece of property. Usually the seller also retains some type of security interest in the property, until the property is paid for.

Revolving credit plans, on the other hand, do not involve separate sales contracts; under these plans any item in the store may be charged to the same account, and the seller does not retain any security interest in the property sold. The buyer has an option to pay his account in full within 30 days with no interest or finance charges. Alternatively, he may pay the account in installments and in this case a finance or service charge related to the unpaid balance of the account is added to the account each month. The buyer's regular payments are not specifically attributable to the purchase price of any single item but only go to reduce the unpaid balance on what may be the total purchase price of several items purchased at different times.

Despite these differences the U.S. district court in Massachusetts held revolving credit sales did qualify for installment sale treatment because, like installment sales they did retain the essential feature of an arrangement for the payment by the purchaser for the merchandise sold to him in a series of periodic payments of an agreed part or installment of the debt due (*Consolidated Dry Goods* v. *U.S.*, 180 F. Supp. 878; 1960). Shortly after this case was decided, the Internal Revenue Service announced that it would not follow the decision but was studying whether workable standards could be formulated for determining what part of revolving credit sales qualify as "sales on the installment plan" under existing law (Rev. Rul. 60–293, 1960–2 CB 163).

New regulations were issued by the Treasury Department on October 15, 1963 (TD 6682) as the result of this study. They specifically provide for installment sale treatment of some amounts received under revolving credit plans, and include rules for determining the extent to which revolving credit plans qualify as installment sales. Broadly speaking, under these rules, a sample of revolving credit sales is taken from balances in customer accounts as of the billing dates for the last month of the seller's taxable year, and the percentage of sales in the sample accounts determined which (1) are of the type the revolving credit plan contemplates will be paid for in two or more installments and (2) actually are paid for in two or more installments. This percentage is then applied to total revolving

sales accounts (after adjusting for sales of nonpersonal property) and the resulting amount is considered to be sales under the installment plan. This new regulation provides installment sale treatment for about 80 percent of revolving credit sales.

(*b*) *General reasons for provision.*—Your committee believes that although the new revolving credit regulations are commendable, they are difficult to apply. By providing in the statute that revolving credit sales are to qualify for income spreading, your committee's bill fully conforms the tax treatment of income under revolving credit plans and installment sales contracts. It also replaces the complex sampling procedure required by the regulations with a simple rule which will forestall compliance and administrative problems likely to arise under the regulations. It, of course, is not intended in making this change to exclude from installment sales treatment any sales or existing charges which are covered by existing law or regulations.

(*c*) *General explanation of provisions.*—This amendment adds definitions of two terms of the provision of present law which allows dealers in personal property to spread income from installment sales over the payout period under the installment contract. These terms are "installment plan" and "total contract price."

(*c*)(*i*) *Installment plan.*—The definition of "installment plan" would extend installment sale treatment to income received under any plan which provides for the payment by the purchaser for personal property sold to him in a series of periodic installments of an agreed part or installment of the debt due the seller. This definition would extend installment sale treatment to revolving credit sales of personal property which do not qualify under the new Treasury regulations. These include, principally, sales which are paid for in full on the first billing for the month of purchase, and sales for a month which in total amount to less than the monthly payment agreed to be paid by the purchaser under the revolving credit contract.

(*c*)(*ii*) *Total contract price.*—The proposed definition of "total contract price" would include finance and service charges with respect to revolving credit sales in the amount subject to installment sale treatment, thereby conforming to the treatment which is permitted in the case of the "time price differential" under traditional installment sale arrangements. Time price differentials are treated as part of the contract price and are not required to be included in income for tax purposes until the installments are received under the contract. Finance charges under revolving credit plans on the other hand, under the new regulation, may not be deferred until payments are received but must be accrued currently in the month to which they relate. The amendment does not change present law with respect to the treatment of amounts charged for service contracts or warranties.

(*c*)(*iii*) *Effective date.*—The amendments made by this provision are to apply with respect to taxable years beginning after December 31, 1963.

(*d*) *Revenue effect.*—These amendments are expected to result in a revenue loss of $140 million in the first full year of operation. However, this is a nonrecurring loss which is not repeated in subsequent years. The loss thereafter is expected to be about $10 million a year.

28. Timing of deductions and credits in certain cases where asserted liabilities are contested (sec. 224 of the bill and sec. 461 of the code)

(*a*) *Present law.*—Prior to the decision in the *Consolidated Edison* case [1] the Internal Revenue Service generally held that the payment of a contested tax liability resulted in the tax being considered as deductible even though the tax was still being vigorously denied and contested.[2] In the *Consolidated Edison* case decided in 1961 the Supreme Court held that a contested tax even when paid does not accrue as a deduction for income tax purposes until the contest is terminated. It was held that the tax was not deductible until after the contest was settled because all of the events which would determine whether or not the amount would ultimately have to be paid would not be determined until that time.

(*b*) *General reasons for provision.*—Although your committee does not question the legal doctrine laid down by the Supreme Court in the *Consolidated Edison* case, it believes that it is unfortunate to deny taxpayers a deduction with respect to an item where the payment has actually been made, even though the liability is still being contested either as to amount or as to the item itself. The objective of the reporting of items of income and deduction under the internal revenue laws generally is to realistically and practically match receipts and disbursements attributable to specific taxable years. The internal revenue laws contain a number of adjustments designed to accomplish this result. Your committee believes that allowing the deduction of items in the year paid, even though they are still being contested in the courts or otherwise, more realistically matches these deductions up with the income to which they relate than would the postponement of the deduction, perhaps for several years, until the contest is settled. To the extent that deductions are allowed under this rule and then subsequently as a result of the contest the items were found not to be payable, adjustment can be made for this overstatement of the deduction by the inclusion of the overstatement in income in the year in which the amount of the liability is finally determined.

(*c*) *General explanation of provision.*—In view of the above considerations, your committee has amended the provision of existing law which specifies the year for the taking of deductions or credits generally. The amendment provides that if a taxpayer contests an asserted liability, such as a tax assessment, but makes a payment in satisfaction of this liability and the contest with respect to the liability exists after the payment, then the item involved is to be allowed as a deduction or credit in the year of the payment. This is based upon the assumption that the deduction or credit in this case would have been allowed in the year of payment, or perhaps in an earlier year when it would have been accrued, had there been no contest.

The treatment provided here can be illustrated by an example. Assume that in 1965 a $100 liability is asserted against a business which it pays at that time but contests the liability in a court action. Assume further that in 1967 the court action is settled for $80. Under present law, before the enactment of this provision, the deduction of $80 would be allowed in 1967. Under your committee's action, the taxpayer could claim a $100 deduction in 1965 but then in 1967 would

[1] *The United States* v. *Consolidated Edison Co. of New York Inc.*, 366 U.S. 380 (1961).

[2] This is the general rule laid down in *Chestnut Securities Co.* v. *United States* (62 F. Supp. 574 (1945)) which the Internal Revenue Service accepted in GCM 25298 (1947-2 CB 39).

have to take $20 into income except as provided in section 111 of the code, relating to recovery of bad debts, prior taxes, and delinquency amounts.

In those cases where payment is not made until after the contest is settled, this does not prevent an accrual basis taxpayer from accruing the deduction or credit in an earlier year in which the contest is settled.

A similar amendment to that described above is also made to the Internal Revenue Code of 1939.

(*c*)(*i*) *Effective date.*—Generally, your committee's amendment to the 1954 code is to apply to payments made in taxable years beginning after December 31, 1953, and ending after August 16, 1954, the general effective date of the 1954 code. The amendment to the 1939 code applies to payments in taxable years to which that code applies.

The bill provides two exceptions to the general effective date rule specified above. First, if the taxpayer elects, he may continue to apply the old law with respect to taxable years beginning before January 1, 1964; i.e., he may claim the deduction or credit in the year in which the contest is settled rather than in the year in which the payment is made. If the taxpayer makes this election, he must do so within 1 year after the date of enactment of this bill and may not change this election after the expiration of this 1-year period. Moreover, to make this election the taxpayer must follow the rule of old law with respect to all payments made in a year beginning before January 1, 1964. This election may not be made with respect to a payment if the assessment of any deficiency arising as a result of this election would be barred with respect to any year. If this election is made with respect to a year which is not barred, the period for assessment of any deficiency arising from this election is to be kept open at least until 2 years after the date of enactment of this bill.

The second general exception to the general effective date is designed to keep a taxpayer from losing a deduction as a result of the enactment of this new provision. Thus, where for a past year no deduction or credit was allowed for a payment in a year before the contest with respect to it was settled and the refund or credit which would result from the deduction in the earlier year is barred, then the deduction is to be allowed in the year in which the contest is settled.

(*d*) *Revenue effect.*—This provision is expected to result in a negligible decrease in revenues.

29. Interest on certain deferred payments (sec. 225 of the bill and sec. 483 of the code)

(*a*) *Present law.*—Under present law, an individual may sell a capital asset on the installment basis without making any specific provisions for interest payments on installments. In such cases the full difference between the cost or other basis for the property and the sales price usually is treated as capital gain to the seller. The buyer takes as a basis for the property the total sales price paid. For example, an individual taxpayer might sell a capital asset worth $1,000 for $1,300 payable over 10 years. In this case, if no mention is made that part of this payment is to be treated as interest, and the seller elects to report any gain on the installment basis, then each payment might be treated partly as a return of capital and partly as a capital gain. Over the 10-year period, the taxpayer would report $300 of

capital gain (assuming he had the full fair market value of $1,000 as his basis for the property). However, had $300 of this $1,300 payment been specified as an interest payment, this amount would have been ordinary income to the seller rather than capital gain. From the buyer's standpoint, the $300, if treated as part of the price of the property would be added to the basis of the property and, in the case of depreciable property be recoverable over the life of the property. He might also, if the property qualified, be eligible for an investment credit with respect to this $300. On the other hand, if this $300 were treated as interest, he could receive an interest deduction for this amount.

(*b*) *General reasons for provision.*—Your committee agrees with the House that there is no reason for not reporting amounts as interest income merely because the seller and purchaser did not specifically provide for interest payments. This treats taxpayers differently in what are essentially the same circumstances merely on the grounds of the names assigned to the payments. In the case of depreciable property this may convert what is in reality ordinary interest income into capital gain to the seller. At the same time the purchaser can still recoup the amount as a deduction against ordinary income through depreciation deductions. Even where the property involved is a nondepreciable capital asset, the difference in tax bracket of the seller and buyer may make a distortion of the treatment of the payments advantageous from a tax standpoint. The House and your committee believe that manipulation of the tax laws in such a manner is undesirable and that corrective action is needed.

(*c*) *General explanation of provision.*—The bill solves the problem referred to above by providing that where property is sold on an installment basis and part or all of the payments are due more than 1 year after the date of the sale or exchange—if no interest payments are specified or if "too low" interest payments are specified then part of each payment due after 6 months is to be treated as interest rather than as part of the sales price.

The interest rate to be used for purposes of this provision is to be a rate provided by regulations prescribed by the Secretary of the Treasury or his delegate. It is anticipated that any rate specified by the Secretary of the Treasury or his delegate will reflect the going rate of interest and will not be higher than the rate at which a person, in reasonably sound financial circumstances and with adequate security could be expected to borrow money from a bank. A rate of 5 percent, for example, would appear appropriate under existing circumstances.

With this interest rate specified by the Secretary, the proportion of each payment which would be considered an interest payment would be determined in the following manner: First, the present value of each installment payment would be determined, based upon the specified interest rate. Second, the deduction of the total of these present values from the total actual payments provided for under the contract then would give the total "unstated" interest payments under the contract.[1] Third, the total unstated interest then is assumed

[1] Where an interest rate was provided on the installments but at "too low" a rate, the present value of these interest payments would be determined along with the present value of the remainder of the payments as well. The unstated interest then would represent the present values, including the present values of such interest payments, deducted from total payments to be received under the contract excluding the interest payments.

to be spread pro rata over the total payments involved. Thus, if a specific payment represents one-tenth of the total payments, it would be assumed to include one-tenth of the total unstated interest.

For ease of administration and compliance, the regulations are to provide for the discounting of payments on a 6-month basis and are to ignore for this purpose any interest payments due within the first 6 months.

Where an installment contract provides for the payment of some interest, no unstated interest is to be computed unless the interest payments specified are at a rate more than 1 percent below the rate of interest payments which would be computed under this provision in the absence of those payments. Thus, if a 5-percent rate is specified by the Secretary, no unstated interest will be computed where the interest actually provided for under the contract is 4 percent or more. This represents a de minimis rule to prevent the application of this provision in those cases where interest variations are relatively minor.

For purposes of this provision, a payment for property in the form of a note, or other evidence of indebtedness of the purchaser, is not to be treated as a payment. To treat such amounts as payments would permit avoidance of this provision merely by exchanging non-interest-bearing forms of indebtedness for property. However, payments made on such indebtedness for purposes of this provision will be treated as if they were payments made on the contract itself.

Where, at the time of the sale or exchange, some or all of the payments are indefinite as to their size; for example where the payments are in part at least dependent upon future income derived from the property, the "unstated" interest for purposes of this provision will be determined separately with respect to each indefinite payment as it is received, taking into account the time interval between the sale or exchange and the receipt of the payment. Also, where there is a change in the amount due under a contract, the "unstated" interest is to be recomputed at the time of each such change.

The bill specifies five situations in which this provision is not to apply: First, a de minimis rule as to price is provided. Thus, the provision will not apply unless the sale price of the property is in excess of $3,000. Second, in the case of the purchaser of the property, if any of the amounts involved are carrying charges which under present law from the standpoint of the purchaser are treated as interest, then, in the case of the purchaser, this provision is not to apply. Third, in the case of the seller, this provision is to apply only if some part of the gain from the sale or exchange of the property would be considered as gain from a capital asset or as gain from depreciable property. If the property is sold at a loss, this provision will nevertheless apply if, had there been a gain, some part of it would have been considered as gain from a capital asset or from depreciable property. Fourth, this provision is not to apply in the case of payments with respect to patents, which are treated as capital gain under present law. Fifth, the provision is not to apply where the property is exchanged for annuity payments which depend in whole or in part on the life expectancy of one or more individuals. In addition, this provision, of course, will not apply to payments such as those for timber, coal and iron ore (sec. 631) where the property is treated as sold as the timber is cut or the coal or iron ore is withdrawn, with the result that this is not treated as an installment contract.

(*c*)(*i*) *Effective date.*—Under the House bill this provision applies to payments made after December 31, 1963, on account of sales or exchanges of property occurring after June 30, 1963. Your committee has accepted the House effective date, but has provided one exception to it. It has provided that the new rule is not to apply to any sale or exchange made pursuant to a binding, written contract (including an irrevocable written option) entered into before July 1, 1963. This is consistent with the treatment provided elsewhere in the bill with respect to binding contracts.

(*d*) *Revenue effect.*—This provision is expected to result in a negligible increase in revenues.

30. Personal holding companies (sec. 226 of the bill and secs. 541–543 of the code)

(*a*) *Present law.*—Under present law, a domestic personal holding company is taxed on its "undistributed personal holding company income" at a rate of 75 percent on the first $2,000 and 85 percent on the balance. This is in addition to the regular corporate income tax. In general terms, a personal holding company is a closely held corporation, most of whose income is derived from certain specified forms of passive income. The tax applies only where 50 percent or more in value of the outstanding stock of the corporation is owned directly or indirectly by five or fewer individuals. In addition, at least 80 percent of the corporation's gross income must be from what is defined as "personal holding company income."

In general terms, personal holding company income consists of income from what are considered to be passive forms of investment. Thus, it includes dividends, interest, and annuities. It also includes most royalties although mineral, oil, or gas royalties are included only where these royalties do not represent 50 percent or more of the company's gross income or where there are not trade or business deductions (other than compensation for personal services rendered by shareholders) equal to 15 percent or more of the company's gross income. Copyright royalties also are classified as personal holding company income if they represent less than 50 percent of the company's gross income or the business deductions (other than compensation for personal services rendered by shareholders) represent less than 50 percent of gross income or if other personal holding company income constitutes more than 10 percent of gross income. Thus, where these mineral, oil, gas, or copyright royalties represent the principal business of the company, this type of income is not classified as personal holding company income, if there also is evidence, in the form of sufficient business deductions, that the company is actively engaged in business. Rents also are classified as personal holding company income unless they represent 50 percent or more of the company's gross income. Other forms of income which are classified as personal holding company income includes income from stock, security, and commodity transactions (except in the case of dealers, producers, etc.), income from estates and trusts, income from personal service contracts where 25 percent or more of the stock of the corporation is owned directly or indirectly by the individual performing the services, and income from the right to use property of the corporation where 25 percent or more of the stock of the corporation is owned directly or indirectly by the person eligible to use the property. This latter category of income, however, is treated as personal holding

company income only where 10 percent or more of its income (without regard to this latter category or rents) is personal holding company income.

(*b*) *General reasons for provisions.*—Congress first imposed this tax on personal holding companies in 1934 in order to prevent the avoidance of the individual upper bracket surtax rates, by leaving what is essentially investment-type income in a corporate organization, subject to the lower corporate income tax. As indicated by the Administration, ways around the present personal holding company provisions have been found in several arrangements which permit the use of holding companies to avoid the individual income tax with respect to what is essentially investment-type income without the company involved being classified as a "personal holding company."

The principal avoidance devices involve the use of rental income, income from mineral operations, and certain capital gains which are not classified as personal holding company income as means of sheltering other investment income in such a manner that 80 percent or more of the company's gross income does not come within the technical definition of personal holding company income. In view of this, a number of modifications are made in the personal holding company provisions designed primarily to minimize the extent to which these special categories of income can be used to shelter clearly passive income. More detailed reasons for each of the various modifications provided by the bill are set forth in the explanation given below with respect to each of the modifications.

(*c*) *General explanation of provisions.*—The bill makes a series of modifications in the application of the personal holding company tax in the case of domestic corporations. However, except in the case of the dividends paid deduction in a liquidation, no change is made in the case of foreign personal holding companies. Most of the modifications described below are designed to eliminate various means by which holding companies have been avoiding classification as personal holding companies, although other problems are also dealt with.

(*c*)(*i*) *Tax rate of 70 percent.*—In view of the fact that this bill decreases the maximum tax rate applicable to individuals from 91 to 70 percent, your committee agrees with the House that the rates applicable to personal holding companies also should be lowered from the present rates of 75 percent on the first $2,000, and 85 percent on the excess, to what will be the new top individual income tax rate. Moreover, there appears to be no particular purpose for continuing the graduation in the personal holding company tax rate from 75 percent on the first $2,000 to 85 percent on the balance. In view of this, the bill provides that the personal holding company tax is to be 70 percent of the undistributed personal holding company income.

(*c*)(*ii*) *Decrease in 80-percent test.*—As previously indicated, one of the tests under present law provides that a company, to be a personal holding company, must derive 80 percent or more of its gross income from certain specified types of passive income, called personal holding company income. The bill decreases this 80-percent test to 60 percent. The decrease in this percentage is made because too many holding companies which are essentially holding companies of passive income have avoided the classification as such by holding their "personal holding company income" just slightly below the 80-percent limit. The more realistic 60-percent limit together with

other modifications described below will make the avoidance of this classification much more difficult for holding companies generally.

(c)(*iii*) *Adjusted ordinary gross income requirement.*—Under present law the 80-percent requirement referred to above is applied to the gross income of the corporation; i.e., if the gross income derived from certain specified passive sources equals 80 percent of the total gross income of the corporation, the corporation is classed as a personal holding company. This has made it possible for corporations to avoid personal holding company classification by seeking out types of income not characterized as passive, or of a personal holding company type, which give rise to a proportionately large amount of gross income even though leaving little, if any, income after the deductions attributable to this income. In this manner, various types of income have been used to shelter investment income and remove the company from the classification of a personal holding company. Rents, where they constitute more than 50 percent of the gross income of the corporation, are an example of a type of income used to shelter passive income, such as dividends. Mineral, oil, and gas income are the other principal examples of income which have been so used.

To overcome this problem, the bill adjusts downward the income from certain sources to the extent of certain specified deductions attributable to these types of income. Thus, the corporation will be a personal holding company if 60 percent of "adjusted" gross income consists of certain passive income. The adjustments are as follows:

1. In the case of gross income from rents, the deductions for depreciation and amortization, property taxes, interest, and rents paid to the extent attributable to the rental income received, are to be deducted from gross income.
2. In the case of mineral oil, and gas royalties and also in the case of working interests in oil or gas wells, the deductions attributable to these royalties or working interests for depreciation, amortization and depletion, property and severance taxes, interests and rents paid are to be deducted in computing this adjusted gross income. It should be clearly understood that although income from working interests in an oil and gas well for purposes of the 60-percent limitation are reduced by the deductions referred to above such income is itself never classified as personal holding company income.
3. Interest from U.S. Government bonds held for sale by a dealer who is making a primary market for these obligations and interest on condemnation awards, judgments and tax refunds also are to be excluded in arriving at adjusted gross income for this purpose. This adjustment serves a different purpose from the first two deductions in that it merely excludes from the base on which personal holding company income is computed this particular type of interest income which in reality is not passive in nature.

In applying the 60-percent test, not only is the total gross income adjusted downward by the amount of the deductions (or interest) referred to in the cases specified above, but also in determining the rental income and mineral, oil and gas income for purposes of this test, this income also is reduced by the specified reductions.

(c)(*iv*) *Capital gains.*—Under present law capital gains (other than capital gains attributable to stock, securities, or commodities) are

not treated as personal holding company income. All capital gains, however, are included in the gross income of the company for purposes of the 80-percent test. As in the case of the deductions referred to above, some companies have timed the realization of their capital gains income in such a manner as to keep their personal holding company income below the 80 percent. The bill avoids this problem by excluding all capital gains from the gross income in determining whether the 60-percent test is met. Thus, the test under the bill is based on adjusted ordinary gross income.

(c)(v) *Rental income.*—Under present law rental income is classified as personal holding company income only if it represents less than 50 percent of total gross income. This is based on the concept that where rental income represents the major activity, the activity involved is more likely to be of an active rather than passive character. The House bill retains this 50-percent test (applying it, however, to adjusted income from rents and to adjusted ordinary gross income) but adds a second test providing that rental income may be characterized as passive, or personal holding company income even where it represents 50 percent or more of the adjusted ordinary gross income if, apart from the rental income, more than 10 percent of the ordinary gross income (gross income excluding capital gains) of the company is personal holding company income. For this purpose, income derived from the use of corporate property by shareholders is not viewed as personal holding company income, but income from copyright royalties and the adjusted income from mineral, oil, and gas royalties is included for this purpose as personal holding company income.

Your committee has accepted the House changes in the 50-percent test with one modification. Your committee has made an amendment to this test with regard to rentals of tangible personal property retained by the lessee for three years or less. Under the amendment, in the case of such property, the income is not to be reduced by depreciation attributable to it for purposes of the 50-percent test and also for purposes of computing ordinary gross income. However, in the case of the provision in the House bill that the personal holding company income (apart from rent) may not exceed 10 percent of the ordinary gross income, your committee's amendments provide that the personal holding company income for this purpose may be reduced by dividends paid during the year, by dividends paid in the next year which are treated as if paid in the year in question, and by consent dividends. Your committee believes that this prevents the 10-percent rule from working harshly where the personal holding company income other than rents may exceed 10 percent of ordinary gross income, perhaps by only a small amount but under the House bill, nevertheless, result in the entire amount of rental income being classified as personal holding company income. Your committee's amendment in effect permits taxpayers to meet the 10-percent test after dividend payments (or amounts treated as paid in dividends). At the same time it gives assurance that the personal holding company income (apart from rent) sheltered in the company may not exceed 10 percent of its ordinary gross income.

The fact that rental income, both in applying the 60-percent test and also in applying the 50-percent provision to the rental income itself, is determined on the basis of reducing rental income by depre-

ciation, amortization, property taxes, interest, and rents paid has already been noted above. However, as previously indicated, tangible personal property rented for three years or less is not reduced by depreciation attributable to it for purposes of these tests, under your committee's amendments.

(*c*)(*vi*) *Mineral, oil, and gas royalties.*—Under present law mineral, oil, and gas royalties are considered to be personal holding company income unless they represent 50 percent or more of the gross income of the company and unless the trade or business expense deductions (other than compensation for personal services rendered by shareholders) represent 15 percent or more of the gross income of the company. Thus, under present law, as in the case of rental income, mineral, oil, or gas royalties are treated as personal holding company income unless they represent the bulk of the company's income. However, in this case there also must be business expenses—indicating the active character of the business—constituting 15 percent or more of the gross income.

The bill retains these two tests but applies them on the basis of the adjusted ordinary gross income, thereby reducing, for this purpose, the income considered to be in these categories by depreciation, depletion, property and severance taxes, interest, and rent paid.

In addition, the bill adds another test which must be met in such cases for the mineral, oil, or gas royalty income to escape characterization as personal holding company income. The personal holding company income of the company, apart from this category of income (but including as such income that from copyright royalties and from rents), must not represent more than 10 percent of the ordinary gross income of the company. Thus, the personal holding company type income which mineral, oil, or gas royalty income may shelter even where this income represents the bulk of the income of the company must be relatively small; namely, less than 10 percent of ordinary gross income. Your committee has also added an amendment making it clear that income from mineral, oil, and gas royalties includes production payments and overriding royalties.

(*c*)(*vii*) *Copyright royalties.*—Under present law, copyright royalties also are considered to be personal holding company income unless they represent 50 percent or more of the total gross income. An additional test which must be met in order to escape such classification is that the personal holding company income, apart from the copyright royalty income, must not exceed 10 percent of the company's gross income and the trade or business expense deductions (other than those for compensation for personal services rendered by shareholders or for royalties paid to shareholders) must represent 50 percent or more of the company's gross income. This provision is modified by the bill in that the requirement that deductions equal at least 50 percent of gross income is changed to provide that they must equal 25 percent of ordinary gross income reduced by royalties paid and by depreciation deductions with respect to the copyrights.

(*c*)(*viii*) *Produced film rents.*—Under present law payments received from the distribution and exhibition of motion picture films are treated as rentals. As a result, under present law, a corporation may be formed by an individual who owns a motion picture negative and have its earnings treated as rents for purposes of the personal holding company tax. Since in such a case more than 50 percent of its gross

income would be considered to be from rents, there would be no personal holding company tax payable in this case.

To meet this problem, the bill provides that payments received from the use of, or the right to use, films generally will be characterized as copyright royalty income. Thus, such income will be classified as personal holding company income unless 50 percent or more of the company's ordinary income is from this source, not more than 10 percent of the company's ordinary gross income is personal holding company income, and the deductions properly allocable to this film income represent 25 percent or more of the gross income from this source reduced by royalties paid and depreciation taken.

The bill, however, retains what is essentially the treatment of present law for "produced film rents." Produced film rents are rents arising from an interest in a film acquired before the production of the film was substantially complete. It was thought that less severe tests should be applied in such cases because the participation in the production of the film in itself indicates an active business enterprise in this case. For produced film rent to escape characterization as personal holding company income, as under present law, these rents need constitute only 50 percent or more of the ordinary gross income of the company.

(c)(ix) Other types of income characterized as personal holding company income.—Compensation for the use of property by a shareholder, amounts received under a personal service contract, and income from estates and trusts continue to be classified as personal holding company income essentially to the same extent as under present law, except for the fact that capital gain income is not classified as part of gross income in applying the 10-percent test in the case of the use of corporate property by shareholders.

(c)(x) Personal finance companies.—Present law provides that certain types of companies are not to be classified as personal holding companies. These include, for example, banks, life insurance companies, and surety companies. Also excluded from such classification are certain types of personal finance companies. Under present law, there are four different types of personal finance companies which are excluded from the personal holding company category. These categories in general terms are as follows:

1. Licensed personal finance companies, 80 percent of whose gross income is interest from loans if at least 60 percent of their gross income is received from loans classified as "small loans" by State law (or $500 if there is no State law limit) and if the interest is not payable in advance and computed only on unpaid balances. In addition, loans to a person who is a 10-percent shareholder must not exceed $5,000 in principal amount. These frequently are known as "Russell Sage" type personal finance companies.
2. Other lending companies engaged in the small loan or consumer finance business, 80 percent of whose gross income consists of interest or similar charges on loans to individuals and income from 80-percent-owned subsidiaries which in turn themselves meet this test. In addition, at least 60 percent of the company's income must be from interest or similar charges made in accordance with small loan or consumer finance laws to individuals where the loans do not exceed the State specification for small

loans (or if there is no such limit, $1,500) and if the trade or business expenses of the company represent 15 percent or more of the company's gross income. These companies also must not have loans outstanding to shareholders, with a 10-percent interest or more, which exceed $5,000.

3. A loan or investment company (such as a Morris Plan bank), a substantial part of whose business consists of receiving funds not subject to check and evidenced by certificates of indebtedness or investment, and making loans and discounts. Here also loans to a person who is a 10-percent shareholder may not exceed $5,000 in principal amount.

4. A finance company actively engaged in purchasing or discounting accounts or notes receivable, or installment obligations, or in making loans secured by any of these or by tangible personal property, if at least 80 percent of its gross income is derived from such business. In addition, at least 60 percent of such a company's gross income must be derived from certain categories of income. These categories, in general, relate to business or factoring-type loans: such as purchasing or discounting accounts or notes receivable, or installment obligations arising out of the sale of goods or services by the borrower in his business; making loans for not more than 36 months to businesses where the amounts are secured by accounts or notes receivable or installment obligations of the type described above, or secured by warehouse receipts, bills of lading, inventories, chattel mortgages on property used in the borrower's trade or business, etc. In the case of these companies, the trade or business expense deductions must represent at least 15 percent of the gross income of the company, and loans to those who are 10-percent shareholders in such company must not exceed $5,000 in principal amount.

In the interest of simplification, the House substituted one exclusion for the four now provided these categories of lending or finance companies. At the same time, it saw no need for purposes of the personal holding company provision to restrict the type of loans which these companies could make. It was suggested that this was properly a matter of regulation by State law governing these lending or finance businesses and that in any event the personal holding provisions do not apply to widely held corporations. In these latter cases only State law governs the type of loans which can be made.

In view of these considerations the House bill substituted for all four of the categories described above, one definition of a lending or finance company which is to be excluded from personal holding company tax treatment. This definition provided is designed first to assure that 60 percent of the company's income is from the active, regular conduct of a lending or finance business, and second that its personal holding company income [1] plus interest from U.S. obligations as a dealer in these obligations is not more than 20 percent of the company's ordinary income. These two limitations, and the restriction described below relating to business expense deductions, are designed to give assurance that the company is actively engaged in the lending or finance business and that not more than 20 percent of its remaining income is personal holding company income.

[1] For this purpose personal holding company income is computed without regard to income from subsidiaries qualifying under this exemption as lending businesses, but including gross income from rents royalties, produced film rents, and compensation for use of corporate property by shareholders.

Your committee has modified the requirement that not more than 20 percent of the company's ordinary income may constitute personal holding company income. The House bill permits a company engaged in the small loan business to satisfy the 20-percent test by excluding income which it receives from subsidiaries in the lending or finance business. Your committee's bill would extend this treatment to finance companies. Finally, a technical amendment makes it clear that income received for furnishing services and facilities to a lending or finance company is not to be treated as personal holding company income to members of the same affiliated group which meet the requirement of the exemption for the lending and finance companies, whether they are exempt from the personal holding company tax under the same or another provision.

In addition to 60- and 20-percent tests, the company must have certain business deductions described below, which are directly attributable to its lending or finance business equal to 15 percent of the ordinary gross income up to $500,000 plus 5 percent of the ordinary gross income between $500,000 and $1 million. This provision gives further assurance, as evidenced by the deductions of the company, that it is actively engaged in the lending or finance business. A fourth limitation applicable under present law in the case of all of the categories of lending companies denies the right to make loans to persons who are 10-percent shareholders to the extent of more than $5,000 a year in principal amounts.

The lending or finance business for purposes of this provision is defined as including the business of making loans and purchasing or discounting accounts receivable, notes, or installment obligations receivable, notes or installment obligations. It does not include, however, the making of loans or purchasing or discounting accounts receivable, notes or installment obligations if the remaining period to maturity on the loan or paper exceeds 60 months. It also does not include the making of loans evidenced by indebtedness issued in a series under a trust indenture and in registered form or with interest coupons attached. Your committee has amended the definition of a lending or finance business to make it clear that this includes the income from rendering services or making facilities available to another member of the same affiliated group which is also in the lending or finance business. This is provided because as a matter of economical operations, one company frequently hires the necessary personnel, acquires the appropriate facilities, and in accordance with the requirements of banks, borrows all of the money for the group. Then all of the corporations in the group pay a service charge for these services to the company performing them.

Business deductions for purposes of the 15-percent or 5-percent test include only those trade or business expense deductions which are deductible only by reason of section 162 or section 404 (other than compensation for personal services rendered by shareholders or members of their family), and depreciation deductions and deductions for real property taxes to the extent that the property to which they relate is used in the regular conduct of the lending or finance business. Trade or business expense deductions which are allowable specifically under other sections, such as the deduction for interest expense which is also allowable under section 163, are not included for purposes of the 15-percent or 5-percent test.

(c)(xi) *Liquidating dividends.*—Under present law, the 75- or 85-percent tax (70 percent under the bill) on personal holding companies applies only to the undistributed personal holding company income. Thus, this tax is applied after dividend distributions are taken into account. Included among the amounts treated as dividends eligible for the dividends paid deduction are distributions in liquidation to the extent of the accumulated earnings and profits. As a result, in the year of the liquidation of a personal holding company there is no income subject to personal holding company tax for that year. Despite the fact that the distributions are treated as dividends to the personal holding company, its stockholders in that year receive this income and report it at capital gains rates.

Thus, under present law, a company which is a personal holding company may nevertheless avoid both the personal holding company tax and the ordinary income treatment to its shareholders with respect to the personal holding company income the year in which it liquidates.

A problem is also presented in the case of corporations where a subsidiary is liquidated and both the parent and the subsidiary corporation are personal holding companies. In such a case, if the earnings and profits of the subsidiary exceed its undistributable personal holding company income in the year of the liquidating distribution, the parent corporation may use the excess dividend paid deduction in computing its own dividend paid deduction, thereby reducing its own undistributed personal holding company income in the taxable year and also in the 2 succeeding taxable years.

The bill meets these problems by limiting the application of section 562(b) to companies other than personal holding companies or foreign personal holding companies. However, it is provided in section 316(b) that in the case of a complete liquidation of a personal holding company within a 24-month period after the adoption of the plan of liquidation, that the term "dividend" is to include any amounts distributed in this liquidation to other than corporate shareholders to the extent of its undistributed income (before any deductions for this amount) only if the corporation involved designates amounts as dividends (and so notifies the distributee). If the corporation does so designate the distributions as dividends the individuals receiving a liquidating distribution from the personal holding company must report the amount so distributed as a dividend in the year of receipt. The bill also provides that in the case of a foreign personal holding company, the amount included in a United States shareholder's income is not to be diminished by any liquidating distributions made during the year.

An amendment is also made to the code which provides in the case of corporate distributees that where a complete liquidation of a personal holding company occurs within 24 months after the adoption of the plan of liquidation, the distribution is to be treated as a dividend for purposes of the personal holding company tax only to the extent of the corporate distributee's share of the undistributed personal holding company income for the taxable year of the distribution. Thus, the dividends paid deduction is allowed to a personal holding company only to the extent of the undistributed income for the taxable year and with respect to noncorporate distributees, only if such distributees treat such distribution as a dividend.

(c)(xii) *One-month liquidations.*—Your committee agrees with the House that while the tightening of the personal holding company

provisions as indicated in the prior discussion is desirable, nevertheless, it would be unfortunate to apply these provisions without any alternatives being available, to companies which in the past have not been classified as personal holding companies but which as a result of the new provision will for the first time find themselves subject to personal holding company tax. Your committee agrees that it would be unfair to require such companies to pay personal holding company tax if they are willing to liquidate. Although it is understood that some of these companies are willing to liquidate, nevertheless, it would represent a hardship under existing law for them to do so. The hardship arises from the fact that if they liquidate under the provisions of section 331 of the code, not only would the earnings and profits of such corporations be taxed to the shareholders at capital gains rates but also any other appreciation which has occurred in the value of the assets would be so taxed to them. Such companies in the absence of the new personal holding company provisions would face no necessity of liquidating and therefore under these circumstances no tax would now be paid with respect to these unrealized increases in value. The House and your committee believed it was appropriate therefore to forego the tax at this time on unrealized appreciations in value but to collect the capital gains tax on the earnings and profits distributed.

The bill, to facilitate the liquidation of these companies, provides a special provision (in sec. 333) applicable in the case of companies which, for one of the two most recent taxable years ending before December 31, 1963, were not personal holding companies under existing law, but would have been in that year if the new law provided by this bill had been in effect at that time. In such cases, the bill provides that any distribution in liquidation made by the corporation to the extent of the earnings and profits accumulated prior to the time of the liquidation is to be taxed at capital gains rates and that any remaining gain is to be recognized only to the extent of assets which consist of money or of stock or securities acquired by the corporation after December 31, 1962.

To be eligible for the treatment described above, the liquidation of one of these corporations must occur before January 1, 1967, under your committee's amendments (or January 1, 1966, under the House bill). The treatment described above providing capital gains treatment with respect to earnings and profits is not to apply with respect to any earnings and profits to which the corporation involved succeeds after December 31, 1963, under your committee's amendments (August 1, 1963, under the House bill) as a result of any corporate reorganization or as a result of a liquidation of a subsidiary of that corporation (except earnings and profits which on December 31, 1963 (August 1, 1963, under the House bill) constituted the earnings and profits of one of the companies described above or which were earned by such a company).

In addition to liquidations occurring before January 1, 1967, the capital gains treatment for earnings and profits accumulated before 1967 and nonrecognition of gain with respect to any other gains to the extent with respect to assets acquired before 1963 (and assets other than stock and securities acquired thereafter) the bill also makes this special liquidation treatment apply to certain corporations which liquidate after 1966 (1965 under the House bill). To qualify for

this post-1966 liquidation treatment, as in the prior case the corporation involved must be one which in at least one of the two most recent taxable years ending before December 31, 1963, was not a personal holding company under present law but would have been had the provisions of this bill been in effect with respect to that year. To qualify for this special post-1966 liquidation treatment, the corporation involved must also have incurred indebtedness in the period from December 31, 1933, to December 31, 1963 (August 1, 1963, under House bill), which is still outstanding, or incurred indebtedness after December 31, 1963 (August 1, 1963, under the House bill), which merely replaced indebtedness incurred before that time. So that the necessary records will be kept, the corporation must notify the Secretary that it may wish to liquidate under these provisions. This notice must be given before January 1, 1968 (January 1, 1967, under the House bill).

Cases have been called to the attention of your committee where corporations have entered into commitments to use their incomes to pay off such debts and where as a result it is difficult, if not impossible, for them to liquidate before this indebtedness is paid off. For that reason, the bill makes the liquidation treatment described above (but only with respect to earnings and profits accumulated before 1967) apply if the corporation liquidates in the year in which it either does pay off the pre-December 31, 1963, indebtedness or could have, if it had devoted all of its earnings or profits after 1963 to this purpose. In addition, it must also devote to this purpose any deductions for depreciation, amortization, or depletion since the funds in this case remain in the corporation and can be used to retire indebtedness. Thus, the special liquidation treatment described here with respect to liquidations occurring after 1966 is available only during the period of time necessary for the corporation to retire outstanding indebtedness out of earnings and profits and depreciation allowances.

Your committee has added an amendment providing that where a corporation believes that it is one of these "would have been" corporations eligible for the special liquidation treatment under section 333, if it subsequently is determined that it did not qualify for this treatment, the liquidation will, nevertheless, be treated as occurring under section 333 unless in the election it was indicated that it was made under section 333 only on the assumption that the new treatment would be available. Where the shareholders indicate that they made the election on this assumption, section 331 will apply if other requirements for the use of this liquidation section had been complied with.

(*c*) (*xiii*) *Postponement of new personal holding company provisions for certain corporations.*—To encourage the liquidation of companies which are not now personal holding companies but would become so as a result of the new provisions, a provision is added by the bill to the effect that such companies, if they liquidate before January 1, 1966, will not be subjected to the new personal holding company provisions provided by this bill. They will, however, have available to them the special liquidation provisions described immediately above and will be subject to the rules specified in the prior heading with respect to the dividends paid deduction. In addition, this provision will not apply in the case of the liquidation of a subsidiary corporation under section 332 unless before the 91st day after the last distribution by the subsidiary the parent corporation also is liquidated and both of these events occur before January 1, 1966.

(*c*)(*xiv*) *Deduction for amortization of indebtedness.*—In 1934, when the personal holding company provision was first adopted, Congress provided that indebtedness incurred before 1934 by a company which subsequently became a personal holding company would receive a special debt amortization deduction in computing its personal holding company tax. It was provided that to the extent that this debt was paid off, or amounts were set aside to pay off this debt, the tax base for purposes of the personal holding company tax was to be reduced by the amount of the amortization payments. Thus, these amortization payments were treated for purposes of the personal holding tax as deductions in the same manner as dividend distributions to shareholders.

The bill adds a similar provision for indebtedness incurred after December 31, 1933, and before January 1, 1964 (August 1, 1963, under the House bill), in the case of corporations which were not personal holding companies in one of the 2 most recent taxable years ending before December 31, 1963, but would have been had the new personal holding company provision been in effect at that time.

Qualified indebtedness for purposes of this provision includes not only the debt outstanding before January 1, 1964 (August 1, 1963, under the House bill), but also debt which has replaced that outstanding before January 1, 1964 (if the special amortization deduction has not already been taken for the repayment of the old debt). Thus, short-term bank loans, for example, which are renewed at intervals will not be disqualified for purposes of this amortization deduction if the taxpayer elects not to deduct the payment of the prior loan. In addition to deductions for actual payments, deductions are also permitted for amounts (if reasonable) which are irrevocably set aside to pay off a debt which may be payable at some future date.

The deduction for indebtedness under this provision is to be reduced by any deduction which the company receives for depreciation, amortization, or depletion, and for any deduction (in computing undistributed personal holding company income) for net long-term capital gains. These deductions are disallowed since the funds represented by them can be used by the corporation to pay off indebtedness in the same manner as the earnings and profits of the corporation. Any of these deductions not used in 1 year are carried forward for this purpose and used in a subsequent year. A special provision provides that where depreciable or depletable property which would give rise to this cutback in the indebtedness provision is disposed of after December 31, 1963, then to the extent the basis of the property disposed of exceeds the indebtedness which was transferred at the time of the same disposition the qualified indebtedness for which a deduction may subsequently be taken is reduced.

(*c*)(*xv*) *Effective dates.*—Generally the personal holding company provisions are made effective with respect to taxable years beginning after December 31, 1963. The dividends paid deduction modification and the liquidation provision, however, are to apply to distributions made in taxable years of the distributing corporation beginning after December 31, 1963.

(*d*) *Revenue effect.*—It is estimated that the personal holding company provision will result in a revenue increase of $15 million a year in a full year of operation.

31. Treatment of property in the case of oil and gas wells (sec. 227 of the bill and sec. 614 of the code)

(*a*) *Present law.*—The percentage depletion deduction, in the case of oil and gas, is either 27½ percent, multiplied by the gross income from the "property" or, if less, 50 percent of the net income from the "property." As a result, what constitutes "property" is of considerable significance in determining the percentage depletion deduction available. To avoid any reduction in the 27½-percent deduction on gross income from the property, it frequently is desirable to combine wells having a high ratio of net income to gross income with those having a low ratio so that the 50 percent net income limitation will have little, or no, effect.

At one time each separate mineral deposit in a lease or fee acquisition was treated as a separate property. Subsequently, the administrative practice arose of permitting, at the taxpayer's option, the aggregation or combination of deposits in a single lease or acquisition (sometimes referred to as a single tract or parcel of land). In 1954, Congress permitted the aggregation of properties across lease lines so long as all the properties were in one "operating unit." This change was prompted by circumstances of the hard mineral industry but it also applied to the oil and gas industries as well. In 1958, Congress adopted detailed rules in the case of the hard minerals. In general these rules provided that operating mineral interests may be aggregated mine by mine and any number of mines may be aggregated so long as they are in a single operating unit. These rules, to the extent applicable to hard minerals remain in force. In the case of oil and gas, Congress in 1958 gave operators an option to use either the 1939 code "lease" rule or the 1954 code "operating unit" rule.

The law and the regulations in the case of the "operating unit" rule provide that it is not necessary for purposes of the aggregation that the separate operating mineral interests be included in a single tract or parcel of land, or in contiguous tracts or parcels of land, so long as the interests are a part of the same "operating unit." In defining the "operating unit," the regulations refer to operating mineral interests which are operated together for the purpose of producing minerals. With respect to each taxpayer what constitutes an "operating unit" must be determined on the basis of his own operations. The operating units may not be uniform in the various natural resources industries or in any one of the natural resource industries. Moreover, in the case of a particular taxpayer, business reasons may require the formation of operating units that vary in size and content. The term "operating unit" refers, however, to a producing unit and not an administrative or sales organization. Among the factors which indicate that mineral interests are operated together as a unit are—

(1) Common field or operating personnel;
(2) Common supply and maintenance facilities;
(3) Common processing or treatment plants; and
(4) Common storage facilities.

It is made clear that operating mineral interests which are geographically widespread may not be treated as parts of the same operating unit merely because a single set of accounting records, a single executive organization, or a single sales force is maintained by the taxpayer with respect to such interests or merely because the products of the interests are processed at the same treatment plant. Generally,

however, the determination of the taxpayer as to what constitutes an operating unit is to be accepted unless there is a clear and convincing basis for a change in such determination.

(*b*) *General reasons for provision.*—There have been two major objections to the operating unit rule adopted in 1954 as applied to oil and gas. First, it has been difficult to determine what an operating unit is and this is a continuous source of controversy between taxpayers and the Government. The problem arises from the fact that the term "operating unit" apparently has no generally understood meaning within the oil and gas industries. Basically, it is a tax concept having no real business substance.

Second, the operating unit rule has proved objectionable because it gives taxpayers an opportunity to increase their percentage depletion deduction merely by choosing the best combination of high and low cost properties for purposes of this aggregation rule. This opportunity, of course, is available only to those large enough to have many diverse property interests. It is possible under this rule to include some leases or tracts of land within a large area and to omit others even though the latter may be contiguous to some of the property included, while other property included in the aggregation may be many miles away. Taxpayers, in fact, are contending that the term "operating unit" covers operations over widespread geographical areas, including substantial portions of several States.

To remove this controversy and also to delete this opportunity for larger companies to maximize their percentage depletion deductions by unrealistic grouping of properties, the bill for the future eliminates the operating unit aggregation rule in the case of oil and gas properties. No inferences are to be drawn from this, however, as to what constitutes an operating unit or as to what could properly be aggregated with respect to the period of time before this change is made. In place of the operating unit rule taxpayers, as was true before 1954, will be able to maintain separate deposits as separate properties or can combine some or all deposits falling within a single lease or acquisition. They will not, however, be able to combine different leases or acquisitions, except in the case of properties which are in a unitization agreement. In these latter cases the owners of the property have in effect exchanged their separate interests in their leases for undivided interests in the whole, with the result that all interests of a taxpayer in the unit become one property.

(*c*) *General explanation of provision.*—The operating unit rule of existing law provides that if a taxpayer owns two or more separate operating mineral interests which constitute all or a part of an operating unit, he may form one aggregation and treat as one property any two or more of these interests, treating as separate properties any interests which he does not include in this one aggregation. Separate operating mineral interests may be aggregated for this purpose whether or not they are in a single tract or parcel of land, or contiguous tracts or parcels. A taxpayer may not, however, form more than one aggregation within a single operating unit.

The bill repeals the rule described above for taxable years beginning after December 31, 1963, with respect to oil and gas. It substitutes in its place a rule which, in effect, restores the pre-1954 administrative practice. No longer will the aggregation of properties be permitted at the "operating unit" level. Except in the case of unitization agree-

ments discussed below, taxpayers may not aggregate oil and gas properties above the level of a separate lease or acquisition, or "separate tract or parcel of land" as referred to in the bill.

The general rule which will apply in the future is that all of the taxpayer's operating mineral interests in a separate lease or acquisition will be combined and treated as one property. However, the taxpayer may elect to treat separately operating mineral interests within a single lease or acquisition. Where he does this he may have either no combination, or one combination of mineral interests in that tract or parcel of land. If he has one combination, all other mineral interests not in that combination are treated as separate properties.

Where the taxpayer has elected to treat separately some or all of the operating mineral interests in a single lease or acquisition, and subsequently finds or acquires new interests in that property, the new interests, unless he elects otherwise, are to be treated as a part of the combination, if there is a combination, or as separate properties if there is no such combination.

The election to treat part or all of the operating mineral interests in a lease or acquisition as separate properties must be made at the time of the filing of the return for the first taxable year beginning after December 31, 1963, or if later, the first taxable year in which an expenditure for the development or operation of the operating mineral interest is made by the taxpayer after acquisition.

(c)(i) Unitization or pooling arrangements.—As previously indicated, a unitization or pooling agreement is to be an exception to the rule stated above. A unitization agreement arises where two or more taxpayers holding interests in separate tracts or parcels of land exchange their interests for an undivided interest in a larger area (either by formal conveyances or contractual arrangement). Such an agreement also arises where a taxpayer holding operating mineral interests in several leases enters into an arrangement to pay the lessors royalties based on an undivided share of the oil and gas from all the leases. The bill provides that in these cases all of the operating mineral interests of a taxpayer which participate in one of these unitization agreements are to be treated as a single property without regard to the rules specified above. This treatment applies to all compulsory unitization agreements required by State law and also to voluntary agreements which meet both of the following two tests:

(1) The operating mineral interests must be in the same deposit or two or more deposits, the joint development or production of which is logical from the standpoint of geology, convenience, economy, or conservation; and

(2) The operating mineral interests covered by the agreement must be in tracts or parcels of land which are either contiguous or in close proximity.

In making this determination under No. (1), tax benefits are not to be taken into account.

A special rule is provided in the case of unitization agreements entered into in taxable years beginning before January 1, 1964. In these cases, where for the last taxable year beginning before 1964 the taxpayer treated each interest as a separate property and if it is determined by law that this was the proper treatment, then the taxpayer may, if he so desires, continue to treat these interests as separate

properties despite the fact that they are in a unitization agreement.

(c)(ii) *"Unscrambling" of basis.*—In the past, because of the "operating unit" rule, taxpayers have aggregated two or more separate leases or acquisitions which under the new rules provided by this bill, they must treat separately. This means that any basis for these properties must be segregated or "unscrambled." In the great majority of the cases, it is understood that this will present no problem because of the fact that the entire basis of the property involved has already been written off by percentage depletion deductions. However, for those where some basis still remains, the bill provides two rules, either of which may be followed in "unscrambling" the basis of the operating mineral interests which for the future must be treated as separate properties. The first of these rules provides that any basis may be divided among the separate properties in accordance with the fair market value of each property. The second rule provides that taxpayers may take the adjusted basis of each property at the time it was first included in an aggregation and adjust this basis downward for adjustments reasonably attributable to the property so that the total of these adjusted bases equals the adjusted basis of the former aggregation.

(c)(iii) *Effective date.*—The amendments made by this provision apply to taxable years beginning after December 31, 1963. This does not involve any change in elections for those already covered under the 1939 code rules (sec. 614(d)).

(d) *Revenue effect.*—It is expected that this provision will result in an annual increase of revenue of $40 million.

32. Treatment of iron ore royalties (sec. 228 of the bill and secs. 631(c), 1231(b), and 272 of the code)

(a) *Present law.*—Under present law, iron ore royalties give rise to ordinary income; against this, however, a depletion deduction of 15 percent may be taken.

In the case of coal royalties, however, where the property has been held over 6 months, present law provides that the excess of the amount realized from the disposal of the coal, over the adjusted depletion basis and the expenditures attributable to making and administering the contract and in preserving the economic interest retained in the contract, is to be treated as a capital gain. Where capital gain is realized from coal royalties, no deduction is allowed for percentage depletion or generally for the making and administering of the contract or the preservation of the economic interest in the contract.[1]

(b) *General reasons for provision.*—Your committee agrees with the House that the tax treatment now available with respect to coal royalties also should be extended to iron ore royalties as well. The capital gains treatment was made available in the case of coal royalties in part at least to encourage leasing, and therefore production, at a time when the coal industry was facing strong competition from other forms of fuel energy. Today, domestic iron ore production also

[1] Where the expenditures referred to above plus the adjusted depletion basis of the coal disposed of exceed the amount realized under the contract and are not used to offset other gains, a loss is allowed (if some income is realized under the contract).

generally is decreasing. In recent years, for example, iron ore production in the United States has been as follows:

	Thousands of long tons
1950	98, 045
1955	103, 003
1958	67, 709
1959	60, 276
1960	88, 784
1961	71, 329

Source: Department of Interior, Bureau of Mines, Minerals Yearbook.

The capital gains treatment provided by this bill should encourage domestic leasing of iron ore properties to operators, and therefore should improve the position of domestic iron ore production relative to foreign production.

Your committee has modified the House bill, however, to limit the capital gains treatment for iron ore royalties to domestic iron ore. In addition, it has denied capital gains treatment for these royalties where the person receiving the royalty and the person acquiring the iron ore are related persons or are owned or controlled directly or indirectly by the same interests.

(*c*) *General explanation of provision.*—The bill provides that, as in the case of the disposal of coal, where iron ore is disposed of after being held for more than 6 months by the owner under a contract in which the owner retains an economic interest in the iron ore, the difference beween the amount realized from the sale of the iron ore and certain costs is to be treated as a capital gain. An amendment made by your committee limits this treatment in the case of iron ore to that mined in the United States.

The costs taken into account for purposes of determining the gain are the cost of the property itself (adjusted downward for any depletion deduction taken) plus expenditures in the taxable year for making and administering the contract and the preservation of the economic interest retained under the contract. However, where these expenditures together with the adjusted basis of the property exceed the amount realized under the contract and are not used to offset other gains from the sale or exchange of "property used in the trade or business," a loss is to be recognized. Thus, the costs and expenses incurred by the taxpayer are to decrease the amount received in determining the amount treated as a capital gain.

The bill treats these iron ore royalties like coal royalties as "property used in the trade or business." As a result, if the gains from iron ore royalties plus the gains from other "property used in the trade or business" exceed the losses from the same type of property, the gain is to be treated as capital gain.

In obtaining this capital gains treatment for the iron ore royalty the lessor must forgo any depletion deduction with respect to his property (although his adjusted depletion basis is taken into account in computing his gain). In addition, he must generally forgo any deductions for expenditures attributable to the making and administering of the royalty contract and any expenditures attributable to the preservation of his economic interest in this contract. The primary exception to the denial of the deductions in this case is where these expenses plus the adjusted depletion basis for the iron ore disposed of

exceed the royalty payments received and are not offset against other gains. With respect to this excess, a loss is allowed.

The House bill provided in the case of iron ore, as in the case of coal under present law, that the capital gains treatment is not to apply to income realized by any owner as a coadventurer, partner, or principal in the mining of the coal or iron. The word "owner" here means any person who owns an economic interest in the coal or iron ore in place including a sublessor. Your committee has added an amendment which in the case of iron ore further restricts the availability of the capital gains treatment. Under your committee's amendment, the capital gains treatment will not be available where the owner of the interest in the iron ore and the operator are related, or where the two parties are owned or controlled directly or indirectly by the same interests. "Relationship" here is the same as the relationship which would result in the denial of a deduction for losses in the case of the sale of property under section 267 or 707(b).

The iron ore for this purpose is considered as being sold on the date the iron ore is mined.

(*c*)(*i*) *Effective date.*—As amended by your committee, the capital gains treatment provided by this provision is to apply to amounts received or accrued in taxable years beginning after December 31, 1963, attributable to iron ore mined in taxable years beginning after December 31, 1963. In the House bill, the capital gains treatment would have applied to all iron ore mined in taxable years beginning after December 31, 1963, even though amounts were received with respect to such iron ore in prior taxable years.

(*d*) *Revenue effect.*—This provision is expected to result in an annual loss of revenue of $5 million.

33. Insurance companies; mutualization distributions made in 1962 (sec. 229(a) of the bill and secs. 809(d)(11) and 809(g)(3) of the code)

(*a*) *Present law.*—The Life Insurance Company Income Tax Act of 1959 provided a special rule where a stock life insurance company is "mutualized," or converted into a mutual life insurance company, with a liquidating distribution being made to the shareholders and the remainder of the surplus and reserves being held for the benefit of policyholders in what then becomes a mutual company.

The 1959 act provided a special deduction for these liquidating payments to shareholders. To the extent of the excess of any gain from operations for the year in question over the taxable investment income, a deduction is allowed in computing the phase 2 tax of the insurance company for amounts paid out in one of these liquidating distributions to the shareholders. The distribution has to be under a mutualization plan adopted before January 1, 1958. This deduction in computing the phase 2 tax cannot result in any lower tax than if the 1957 law had applied in the year in question. In addition, this amount is treated as paid first out of capital and paid-in surplus, to the extent of this capital and paid-in surplus, with the result that no tax is likely to arise under phase 3 of the life insurance company tax in the case of these distributions.

The treatment described here was initially made available with respect to distributions in 1958 and 1959 but was subsequently (in Public Law 87–59) extended to cover distributions in 1960 and 1961.

(*b*) *General reasons for the provision.*—The attention of your com-

mittee has been called to a case where a mutualization agreement was entered into before January 1, 1958, and the final distribution payment was authorized in 1961 but the distribution of these payments could not actually be made until 1962 because of the requirements of the State law involved. Your committee believes that liquidation payments made under these circumstances should be treated in the same manner as in the case of the mutualization liquidating payments made in prior years.

(*c*) *General explanation of provision.*—For the reasons given above, your committee has added an amendment to the bill providing that the special liquidating distributions rules provided by present law for the years 1958–61 under a mutualization agreement entered into before 1958 are also to apply to distributions in 1962. This will enable the company to receive a deduction for this amount (subject to applicable limitations) in computing its phase 2 tax and also to treat this amount for purposes of phase 3 as being made first out of capital and paid-in surplus, to the extent of such amounts, and only after that, is a part of this amount to be treated as a payment first out of the already tax-paid shareholders surplus account, to the extent of the balance of this account, and only then from the policyholders surplus account, withdrawals from which are subject to tax.

(*c*)(*i*) *Effective date.*—The amendment made by this provision is to apply to taxable years beginning after December 31, 1961.

(*d*) *Revenue effect.*—It is estimated that this provision will result in a negligible loss of revenue for 1 year.

34. Accrual of bond discount by certain insurance companies (sec. 229(b) of the bill and sec. 818(b) and sec. 822(d)(2) of the code)

(*a*) *Present law.*—Under existing law, prior to Rev. Rul. 60–210 (1960–1 CB 38), mutual fire and casualty insurance companies and life insurance companies amortized premiums and accrued discount on bonds purchased by them. In the case of State and local government bonds, these companies increased the amount of their deduction for tax-exempt interest by the amount of discount accrued by them. This had the effect of treating discount in the same manner as tax-exempt interest, without regard to whether the discount was on the original issue of the bond or whether it grew out of subsequent fluctuations in the market value of the bond.

Revenue ruling 60–210, issued May 31, 1960, draws a sharp distinction in tax treatment between "issue" discount and so-called "market" discount on State and local government bonds. Under this revenue ruling, in the case of issue discount, such discount continues to be treated as in the nature of tax-exempt interest, and the deduction for such interest continues to be increased by the amount of issue discount accrued each year. Market discount, on the other hand, although required to be accrued by these companies, no longer is allowed by the Internal Revenue Service to increase the deduction for tax-exempt interest. Thus market discount accrued by life insurance companies and by mutual fire and casualty insurance companies is taxed as ordinary income.

Stock fire and casualty insurance companies on the other hand, and corporations generally, are not required to accrue discount (either that arising at the time of issue or market) on bonds purchased at a discount by them. Rather these corporations treat market discount on both taxable and nontaxable bonds as capital gain (or loss)

when the bond is sold or disposed of by them and treat original issue discount on taxable bonds as ordinary income when it is realized.

The Revenue Act of 1962 further affected the tax treatment of discount on bonds purchased by mutual fire and casualty insurance companies (but not life insurance companies). Broadly speaking, it was the purpose of that act to treat mutual fire and casualty insurance companies more nearly like stock fire and casualty insurance companies for Federal income tax purposes. To accomplish this objective, mutual companies were taxed under a modified total income formula, which in effect converts accrued discount on bonds into an underwriting deduction. This effectively takes market discount out of the ordinary income tax base of these mutual companies and provides capital gain (or loss) treatment for market discount on both taxable and nontaxable bonds when the bonds are sold or disposed of by the mutual companies and treats original issue discount on taxable bonds as ordinary income as it is realized upon disposition. This treatment is identical to the treatment of discount by stock fire and casualty companies and other corporations. However, this treatment under the 1962 Revenue Act does not apply to all mutual fire and casualty insurance companies. Actually, it applies only to those companies which are subject to the modified total income tax.

Therefore, small mutual companies (those whose gross investment income, plus premiums, is between $150,000 and $500,000) which are taxed only on their investment profits must continue to treat accrued discount currently as ordinary income. In addition, life insurance companies must treat this discount currently as ordinary income.

(*b*) *General reasons for provisions.*—Your committee sees no reason for treating market discount on bonds owned by life insurance companies and by small mutual fire and casualty insurance companies as ordinary income when all other corporations, including all other insurance companies, are allowed capital gain treatment for such discount. Moreover, when the tax treatment of bond discount varies depending upon the type of business the bondholder may be engaged in, it is difficult for the bond market (particularly in the case of State or local government securities) to function normally, since the after-tax earnings on the bond will not be uniform.

Moreover, your committee desires to bring stability to an area of the tax law that has been unsettled since 1960. From 1942 until 1960 there was little question but that discount on tax-exempt bonds held by life insurance and mutual fire and casualty insurance companies, regardless of the source of the discount, was tax exempt. In 1960, however, the market portion of discount on such bonds was held by the Internal Revenue Service to be taxable as ordinary income. In 1962 larger mutual fire and casualty insurance companies (but not the smaller mutual fire and casualty companies and not life insurance companies) were provided capital gains treatment on their market discount. Under your committee's bill in the future, market discount on bonds held by insurance companies and other corporations will be taxed alike; that is, as capital gain when the bond is sold or redeemed.

(*c*) *General explanation of provision.*—This amendment provides that for taxable years beginning after December 31, 1962, market discount received by any insurance company will be taxed as a capital gain. This conforms the treatment of this discount in the case of

life insurance companies and small mutual fire and casualty companies with that presently accorded stock fire and casualty companies, and the larger mutual fire and casualty companies (under the Revenue Act of 1962) and corporations generally.

In the case of original issue discount, the amendment conforms the treatment by small mutual fire and casualty companies with the treatment of original issue discount received by stock fire and casualty, and larger mutual fire and casualty companies (under the Revenue Act of 1962). Under the amendment, this discount will be reported as ordinary income when it is realized upon disposition.

Life insurance companies, however, would continue (as under present law) to accrue original issue discount currently on both taxable and tax-exempt bonds.

(*c*)(*i*) *Effective date.*—The amendments made by this provision are to apply to taxable years beginning after December 31, 1962.

(*d*) *Revenue effect.*—This provision is expected to result in a negligible loss in revenue.

35. Contributions by certain insurance companies to qualified pension, etc., plans (sec. 229(c) of the bill and sec. 832(c)(10) of the code)

Under the Internal Revenue Code of 1939, deductions for contributions of an employer to an employees' trust or annuity plan and compensation under a deferred payment plan were allowed under the same section (sec. 23(p)) as most other deductions from gross income. In the rearrangement made in the 1954 Code, however, the deduction for these contributions was transferred over to the subchapter relating to deferred compensation and pension, profit sharing, stock bonus plans, etc. However, the 1954 Code in the case of casualty insurance companies in providing for trade or business deductions, refers to deductions in part VI of subchapter B, relating to itemized deductions for individuals and corporations, unintentionally omitting the reference to section 404 wherein the deductions for contributions to qualified pension, etc., plans is provided under the 1954 Code.

To remove this clerical error in the 1954 Code, and to make it clear that deductions are allowed for contributions to a qualified pension, etc., trust in the case of these casualty insurance companies, your committee has added a provision to the bill containing an appropriate cross-reference to obtain this result. Thus, section 832(c)(10) of the code is amended by making specific reference to section 404 and following, which are the provisions relating to pension, profit sharing, stock bonus plans, etc.

The amendment made by this provision is to apply to taxable years beginning after December 31, 1953, and ending after August 16, 1954.

36. Regulated investment companies: Time for mailing certain notices to shareholders (sec. 230(a) of the bill and secs. 852–855 of the code)

(*a*) *Present law.*—Under present law, companies may qualify as "regulated investment companies" if they meet certain tests set forth in the statute. In general, to qualify for this status, the bulk of a company's income must be derived from dividends, interest, and gains on the sale of stock or securities. In addition, to receive this treatment, a substantial portion of the company's assets must be in diversified stock investments rather than being concentrated in the stock of a single or a few companies. Where a company qualifies as a regulated

investment company, if it distributes at least 90 percent of its investment company income (excluding net long-term capital gains), then the company is taxed only on its undistributed income.

In addition, certain features of the tax law which generally would be applicable only to the company receiving the income, in the case of a "regulated investment company" may be passed through to its shareholders. In each of these cases, the present provisions of the Internal Revenue Code provide that the shareholder must be given notice with respect to these special tax features within 30 days after the close of the regulated investment company's taxable year.

(*b*) *General reasons for provision.*—This provision increases from 30 to 45 days after the close of a regulated investment company's taxable year the time accorded it for giving notices to its shareholders with respect to these special tax features. Your committee believes that the allowance of this additional 15-day period is desirable because the regulated investment companies have had difficulties in getting out their notices within the 30-day period. Moreover, since individuals generally are not required to file their individual income tax returns until the 15th day of the 4th month (rather than the 15th day of the 3d month of the year as at one time was the case) provision of this additional time for the regulated investment companies to submit these reports to their shareholders still leaves the shareholders with 2 months after the receipt of the notices before their tax returns need to be filed.

(*c*) *General explanation of provision.*—The various tax features with respect to which the regulated investment company under this bill is to be given 45 rather than 30 days after the end of the year for notice to its shareholders are as follows:

1. Under present law, dividends paid to shareholders of a regulated investment company may be designated as capital gain dividends to the extent of the excess of the net long-term capital gain of the regulated investment company over its net short-term capital loss (but only to the extent these amounts are paid out). In the case of these dividends, the company pays no tax but the shareholder includes the dividend in his income as a long-term capital gain. In this case, the company is to have until 45 days after the end of its taxable year to notify its shareholders as to the amount of the dividend (sec. 852(b)(3)(C)).

2. As an alternative to actually distributing net long term capital gains, a regulated investment company can report such capital gains and pay a 25-percent tax on this income. Then the shareholder may include his share of these capital gains in his income as long term capital gain and claim a tax credit for the tax paid by the regulated investment company. For this treatment to be available, the company must designate within 30 days after the close of the taxable year the amount to be so treated by each shareholder. This provision increases this period of time to 45 days (sec. 852(b)(3)(D)(i)).

3. Present law provides that where more than 50 percent of the value of a regulated investment company's assets consist of stock or securities in foreign corporations and certain other tests are met, then the regulated investment company may elect to treat as distributed to its shareholders any income, war profits, and excess profits taxes paid by it to a foreign country (or a possession of the United States). Where the company so elects, the shareholders of the company include the amount of these foreign (or possession) taxes in their income and

then either claim a deduction or foreign tax credit for these amounts. For this treatment to be available, notice must be mailed to the shareholders not later than 30 days after the close of the company's taxable year. The provision changes this 30-day period to a 45-day period (sec. 853(c)).

4. Existing law provides that where less than 75 percent of a regulated investment company's gross income represents dividend income, then the shareholder receiving a dividend from the regulated investment company is to treat the amount he receives as a dividend only in the ratio which the company's dividend income represents of its total gross income. Present law provides that a regulated investment company must supply its shareholders with written notices indicating how much of its income in these cases is to be treated as dividends. This written notice must be supplied the shareholder within 30 days of the close of the company's taxable year. This provision changes the 30-day period to a 45-day period (sec. 854(b)(2)).

5. Existing law provides that income may be treated as paid out in the year earned if a regulated investment company declares a dividend before the time specified by law for filing of its return for the year in question and distributes this dividend to its shareholders not later than at the time of the first regular dividend payment after the declaration. (The shareholder in such cases may take the income into account in the taxable year in which he receives the distribution.) For the dividends to be considered as paid out in the earlier year, notice under existing law with respect to such dividends must be made to the shareholders not later than 30 days after the close of the taxable year in which the distribution of the dividends is made. This provision changes the 30-day period to a 45-day period (sec. 855(c)).

(c)(*i*) *Effective date.*—The changes in the filing dates referred to above are to apply to taxable years of regulated investment companies ending on or after the date of enactment of this bill.

(*d*) *Revenue effect.*—It is expected that this provision will have no effect on revenues.

37. Regulated investment companies: Redemptions by unit investment trusts (sec. 230(b) of the bill and sec. 852(d) of the code)

(*a*) *Present law.*—Present law provides that mutual funds are to be treated for Federal income tax purposes as "regulated investment companies." To qualify for this treatment the corporations involved must have widely diversified investments largely consisting of stocks or bonds. Ninety percent or more of their ordinary income must also be paid out to their shareholders. Such corporations, however, pay tax on their net long term capital gain to the extent such capital gain is not distributed to the shareholders.

In some cases what are sometimes called unit investment trusts are also associated with a mutual fund. These unit investment trusts receive periodic payments from individuals and invest these funds usually in the stock of a single mutual fund. Under present law these unit investment trusts are themselves also classified as regulated investment companies.

(*b*) *General reasons for provision.*—A problem has arisen under present law where one investor liquidates his interest in one of these unit investment trusts. In such a case if the trust sells stock which it holds to make the liquidating distribution and the proceeds from the

sale are distributed to one investor it is possible to argue that the distribution is a "preferential dividend" (as defined in sec. 562(c)) and that for this reason it does not result in a dividends paid deduction for this amount to the trust (but only to the extent of the investor's allocable share of the gain). This would therefore result in a tax on the capital gain to the trust although it retained none of the capital gain in its possession.

(c) *General explanation of provision.*—To meet the problem described the bill provides that in the case of a redemption by the trust of the investor's stock (in whole or in part) the redemption will not be considered as preferential dividend. This amendment is not intended to have any effect on the law prior to the effective date of this provision.

(c)(*i*) *Effective date.*—This amendment applies to taxable years of regulated investment companies ending after December 31, 1963.

(*d*) *Revenue effect.*—It is expected that this provision will have a negligible effect on revenues.

38. Foreign tax credit with respect to certain foreign mineral income (sec. 231 of the bill and sec. 901(d) of the code)

(*a*) *Present law.*—Under present law, citizens of the United States and domestic corporations may treat foreign income, war profits, and excess profits taxes paid or accrued to a foreign country as a credit against their U.S. income tax otherwise payable. In addition to taxes paid directly by a U.S. taxpayer, domestic corporations are allowed a credit for foreign taxes paid by 10-percent-owned first tier foreign subsidiaries and by second tier foreign subsidiaries if 50 percent of their voting stock is owned by a 10-percent-owned first tier foreign subsidiary. Similar tax credits are allowed if so-called "tax haven" income is included in the gross income of a domestic corporate shareholder (under sec. 951).

Foreign taxes which may be allowed as a credit against U.S. tax are limited to the same proportion of the U.S. tax against which the credit is taken as the income from sources within each foreign country (the "per country" limitation), or alternatively all foreign countries (the "overall" limitation), bears to the entire taxable income of the taxpayer. Thus, if foreign tax on foreign source income of the taxpayer on a per-country or overall basis is equal to, or less than, the U.S. tax resulting from including the foreign source income in taxable income, the entire foreign tax is allowed as a credit. Except in the case of interest income which is not related to the taxpayer's foreign operations, computations of foreign and U.S. taxes on foreign source income, for purposes of the limitation on the foreign tax credit, are made without regard to the type of activity from which the income is derived. To the extent the foreign taxes on foreign source income exceed the U.S. income tax applicable to the same income, the excess foreign tax may be carried back 2 years and forward 5 years and be used as a credit against U.S. tax in those years to the extent the foreign tax credit limitation for these years exceeds the foreign tax credit otherwise allowable.

(*b*) *General reasons for provision.*—Under present law, U.S. taxpayers who extract minerals in foreign countries are allowed a deduction for percentage depletion in computing their U.S. income tax. Because of the allowance by the United States of percentage depletion to the mineral-producing industries, the U.S. tax payable on these operations is often lower than the foreign tax payable on the income

from the same operations. Although the rates of tax generally in the foreign country in which the mineral is extracted are not likely to be higher than ours, the fact is that they frequently do not allow a deduction for percentage depletion or grant it at a lesser rate than does the United States. To the extent foreign tax paid or accrued on foreign income derived from the extraction of minerals from mines, wells, or other natural deposits exceeds the U.S. tax on the same income, the excess foreign tax, under present provisions relating to the allowance of foreign tax credits, is available as a credit against U.S. tax otherwise payable on foreign source income from unrelated activities of the taxpayer in the same or other foreign countries.

To prevent continuance of this benefit, which is available only to U.S. taxpayers who are engaged in the business of operating foreign mines, wells, and other natural deposits, your committee has provided that excess foreign tax credits which are attributable to the allowance of percentage, rather than cost, depletion by the United States shall not be allowed as a tax credit against U.S. tax otherwise payable on the income from taxpayer's nonmineral foreign activities. For this purpose, however, the taxpayer's mineral income is to include income from refining, distribution, and retail sales of the mineral products as well as their extraction. This is set forth in more detail below. Treating these related activities in this manner is necessary to enable these companies to maintain their present competitive position with others engaged in mineral extraction abroad. On the other hand, however, since the foreign tax credit cannot offset income from domestic sources, this will have no effect on domestic production.

(c) *General explanation of provision.*—For purposes of computing foreign tax credits available to a U.S. citizen or domestic corporation who claims a deduction for percentage depletion, your committee's bill requires a taxpayer to divide his income into two parts: first, "mineral income" from sources without the United States, and second, income from all other sources.

For purposes of this provision, the bill defines "mineral income" as income derived from the extraction of minerals from mines, wells, or other natural deposits, income from the processing of such minerals into their primary products, and income from the transportation, distribution, and sale of the primary products derived from the mineral or of the mineral itself. Thus, for example, an integrated oil company would treat its entire income from the production of oil, income attributable to the refining of crude oil into gasoline, income from the distribution of gasoline to marketing outlets, and its income from retail sales of gasoline as mineral income. Similarly, income from the refining, distribution, and marketing of fuel oil by the taxpayer would also be treated as mineral income for this purpose, whether or not the oil sold was extracted by the taxpayer. However, income attributable to the manufacture, distribution, and marketing of petrochemicals is not to be treated as mineral income since your committee does not consider them to be primary products of oil. In addition to treating certain operating income as mineral income, taxpayers are permitted to treat dividends from corporations in which they own 5 percent or more of the voting stock as mineral income to the extent the dividend is attributable to mineral activities of the payor corporation. However, this rule only applies if the dividend is treated as income from sources without the United States for income tax purposes. Thus, for example, if a domestic oil company receives

a dividend from a foreign oil pipeline company in which it owns more than 5 percent of the voting stock at the time of the distribution, the domestic company may treat the dividend as "mineral income." The bill also provides that a taxpayer may treat the portion of his distributable share of income of a partnership as mineral income to the extent it is derived from foreign mineral activities of the partnership.

Once the income of a taxpayer is divided into the mineral and non-mineral categories, your committee's bill results in a disallowance of foreign taxes as a credit against U.S. tax to the extent the excess of foreign tax over U.S. tax on the mineral portion of the taxpayer's income is attributable to the allowance of percentage, rather than cost, depletion for U.S. income tax purposes. Under this rule, foreign and U.S. taxes may be compared on the foreign mineral income of the taxpayer as a whole under the overall limitation, or they may be compared on a per country basis. However, if a foreign tax is disallowed under this provision in the year paid or accrued, it is not permitted to be treated as a carry back or a carry forward to another taxable year.

This provision does not affect taxpayers who do not claim percentage depletion on income from extraction of foreign minerals. Moreover, it does not affect taxpayers who claim percentage depletion on such income for Federal income tax purposes if the foreign tax allocable to their foreign mineral income is equal to or less than the U.S. tax applicable to the same income assuming the taxpayer used cost, rather than percentage, depletion for U.S. tax purposes.

(c)(i) *Effective date.*—This provision applies with respect to the computation of foreign tax credits for taxable years beginning after December 31, 1963.

(d) *Revenue effect.*—This provision is expected to result in a negligible increase in revenues.

39. Sale of residence by employee (sec. 232 of the bill and sec. 1003 of the code)

(a) *Present law.*—Under present law, amounts received by transferred employees from their employers in reimbursement of "losses," selling commissions, and legal fees incident to the sale of a principal residence have been held to be as ordinary income. *Harris W. Bradley*, 39 T.C. 652 aff'd 324 F. 2d 610 (4th Cir. 1963).

Prior to the *Bradley* opinion the treatment of these reimbursements was governed by a 1947 opinion of the Tax Court which treated the reimbursed amount as part of the selling price of the old residence (*Schairer*, 9 T.C. 549). This had the effect of providing capital gains treatment on the reimbursed amount if there was an overall gain on the sale and if the proceeds were not reinvested in a new residence. If, on the other hand, there was a loss on the sale of the old residence, the reimbursement received from the employer was not taxed.

(b) *General reasons for provisions.*—Your committee believes that treating reimbursements for selling expenses and "market value losses" as part of the proceeds from the sale of the old residence if the sale occurs because of an employee's transfer to a new place of work recognizes the practical effects of the transaction and treats the employee much as if he had not been required to sell his home under forced circumstances.

These transfers may be for the convenience of the employer, not the

employee, and they often occur unexpectedly. In these cases the employee may be unable to sell his residence on a normal market but must dispose of it promptly, often when market conditions are most unfavorable. In many cases an employer may transfer a great many of his employees at one time. This may have a depressing effect on the home market for which the employer is largely responsible, and his reimbursements of his employees' selling expenses is only equitable.

Your committee believes that in a case of this type the employees are likely to derive no economic advantage from the reimbursements from their employers and that as a result it is unfortunate to treat these reimbursements as compensation.

(*c*) *General explanation of provisions.*—For these reasons, your committee's bill treats reimbursements received by employees from their employers for selling expenses and market value losses arising from the "forced" sale of their residence (within a limited period from the employee's transfer to a new place of work) as an additional amount realized on the sale of the old residence. The provision limits the amount of reimbursement which may receive this treatment to the lesser of (A) the sales differential, or (B) 15 percent of the gross sales price of the old residence. "Sales differential" for this purpose means the amount by which (A) the appraised value of the old residence exceeds (B) the gross sales price of the old residence, reduced by the selling commissions, legal fees, and other expenses incident to the transfer of ownership of the old residence. In no event, however, is the appraised value, for purposes of (1) above, to exceed the fair market value of the old residence.

The bill further provides that this treatment is to apply only where the employee sells his house during the "forced sale" period; that is, the period beginning 90 days before and ending 180 days after the date on which he commences work as an employee at his new principal place of work. In addition, for the new rule to apply, the employee's commuting distance must, as in the case of the deduction for moving expenses under section 213 of the bill, be increased by at least 20 miles. This prevents the provision from applying to purely local moves. Finally, the individual receiving the reimbursement must have been an employee of the reimbursing employer for at least 6 months prior to the transfer.

(*c*)(*i*) *Illustrations.*—The following illustrations indicate the operation of this new provision in cases where the proceeds from the sale are not reinvested in a new residence and compares the result under the new provisions with the tax consequences under the Bradley decision.

Illustrations of provision

	Case A	Case B	Case C
Gross sales price of old residence	$30,000	$30,000	$30,000
Real estate commission	1,800	1,800	1,800
Legal fees incident to closing	200	200	200
Amount of reimbursement by employer	2,000	5,000	3,000
Average of appraisals of old residence	30,000	33,000	31,000
Fair market value of old residence	30,000	33,000	30,000
Cost of old residence	20,000	33,000	30,000
Tax consequences:			
1. Sec. 232:			
(*a*) Ordinary income	0	500	1,000
(*b*) Capital gain	10,000	0	0
2. Existing law, *Bradley* decision:			
(*a*) Ordinary income	2,000	5,000	3,000
(*b*) Capital gain	8,000	0	0

Case A indicates that where a residence is sold for its full value (which exceeds its cost), reimbursements received by the transferred employee for selling commissions and closing costs serve to increase the amount of capital gain otherwise realized on the sale.

Case B shows the application of the 15-percent limitation in a situation involving a loss based upon both fair market value and the employee's cost. In this case $500 of the reimbursed amount (the portion of the $5,000 reimbursement in excess of 15 percent of gross selling price) is not considered part of the amount realized on the sale.

Case C shows the fair market value limitation. Here, the old residence was sold for its value (which equaled its cost), but the employee was reimbursed $1,000 for a "loss" he did not incur. Under the provision, this $1,000 is not considered part of the amount realized on the sale.

(*c*)(*ii*) *Effective date.*—The amendment made by this provision shall apply to reimbursements received with respect to sales contracts entered into after December 31, 1960, in taxable years ending after such date.

(*d*) *Revenue effect.*—This amendment is expected to result in a revenue loss of $45 million in a full year of operation.

40. Dispositions of depreciable real estate (*sec. 233 of the bill and sec. 1250 of the code*)

(*a*) *Present law.*—Under present law, taxpayers may take depreciation on real property (other than land) used in a trade or business or held for the production of income. The depreciation methods available are the same as those applying to tangible personal property. They include (1) straight-line depreciation; (2) 150 percent declining balance depreciation; (3) double-declining balance depreciation; (4) sum-of-the-years-digits depreciation; and (5) any other consistent method of depreciation which does not during the first two-thirds of the useful life of the property result in greater depreciation than under the double-declining balance method. The 150-percent declining balance method is available with respect to used real property only under certain circumstances. The last three methods of depreciation referred to are available only for property with a useful life of 3 years or more and only if the property was new property in the hands of the taxpayer.

The depreciation is allowed as a deduction against ordinary income. As the depreciation deduction is taken the cost or other basis of the real property is reduced by a like amount. If the property subsequently is sold, any gain realized on the difference between the sales price (adjusted downward for selling expenses) and the adjusted basis of the property is taxed as a capital gain if the total transactions in depreciable property and certain other property (referred to in sec. 1231) result in a gain for the year involved. On the other hand, where the aggregate of these transactions results in a loss, the net loss is an ordinary loss.

(*b*) *General reasons for provisions.*—Since the depreciation deductions are taken against ordinary income while any gain on the sale of the property is treated as a capital gain, there is an opportunity under present law in effect to convert ordinary income into capital gain. This occurs whenever the depreciation deductions allowed reduce the basis of the property faster than the actual decline in its value.

Congress in the Revenue Act of 1962 recognized the existence of this same problem in the case of gains from the disposition of depreciable machinery and other personal property. In that act, the Congress provided that any gain realized on the sale of these assets in the future would be ordinary income to the extent of any depreciation deductions taken in 1962 and subsequent years with respect to the property.

In the case of real estate, this problem is magnified by the fact that real estate is usually acquired through debt financing and the depreciation deductions allowed relate not only to the taxpayer's equity investment but to the indebtedness as well. Since the depreciation deductions relate to the indebtedness as well as the equity in the property, this may permit the tax-free amortization of any mortgage on the property. As a result in such cases there is a tax-free cash return of a part of the investment which may in fact enable the taxpayer to show a loss for several years which he may offset against income for tax purposes.

In 1962, Congress did not include real property in the recapture provision applicable to depreciable personal property because it recognized the problem in doing so where there is an appreciable rise in the value of real property attributable to a rise in the general price level over a long period of time. The bill this year takes this factor into account. It makes sure that the ordinary income treatment is applied upon the sale of the asset only to what may truly be called excess depreciation deductions. It does this first by providing that in no event is there to be a recapture of depreciation as ordinary income where the property is sold at a gain except to the extent the depreciation deductions taken exceed the deduction which would have been allowable had the taxpayer limited his deductions to those available under the straight-line method of depreciation. Secondly, a provision has been added which in any event tapers off the proportion of any gain which will be treated as ordinary income so that it disappears gradually over a 10-year holding period for the real estate. As a result, under the bill, no ordinary income will be realized on the sale of real estate held for more than 10 years.

(*c*) *General explanation of provisions.*—In view of the considerations set forth above, the House and your committee have amended present law to provide that when depreciable real estate is sold after December 31, 1963, in certain cases a proportion of any gain realized upon the sale of the property is to be treated as ordinary income; that is, previous depreciation deductions against ordinary income are to be "recaptured" from the capital gains category.

The bill accomplishes this result by treating as ordinary income a certain percentage of what is called "additional" depreciation or the amount of gain realized on the sale of the property, whichever is smaller.[1] Generally, the "additional" depreciation referred to here is that part of the depreciation deductions which exceeds the depreciation deductions allowable under the straight-line method. The depreciation deductions taken into account, however, are only those taken after December 31, 1963. Thus, they are the excess of any depreciation deductions taken under the double-declining balance method,

[1] This provision also applies to certain dispositions where there is not a sale or exchange. Therefore, the bill refers not only to the excess of the amount realized over the adjusted basis of the property but also, so that the provision will apply to these dispositions which are not sales or exchanges, it refers to the excess of the fair market value of the property over its adjusted basis.

sum-of-the-years-digits method, or other method of rapid depreciation, over the depreciation which would have been taken under the straight-line method. In the case of property held for 1 year or less, however, the deductions recaptured are to include not only the excess over straight-line depreciation, but rather the entire depreciation deductions taken.

The bill limits the depreciation recapture to the excess over straight line depreciation because it is believes that only to this extent could the depreciation taken appropriately be considered in excess of the decline in the value of the property which occurs over time. If a gain still occurs, it is believed that this is attributable to a rise in price levels generally rather than to an absence of a decline in the value of the property. The portion representing the rise in value is comparable to other forms of gains which quite generally are treated as capital gains. Moreover, it is believed that when the property is held for an extended period of time, gains realized on the sale or other disposition of the property are more likely to be attributable to price rises generally than to an excess of depreciation deductions. For that reason, the bill also tapers off over a 10-year period the proportion of the additional depreciation (or gain where smaller) which is to be treated as ordinary income upon the sale of the property.

This is accomplished by providing that the additional depreciation (or gain if smaller) which otherwise would be treated as ordinary income is to be decreased by 1 percentage point for each full month the property is held in excess of 20 full months. Thus, the amount which will be treated as ordinary income in the case of property held for a full 21 months would be 99 percent (the applicable percentage) of the amount which otherwise would be so treated. This decreases 1 percent for each succeeding month the property is held until the applicable percentage decreases to zero for property held for 10 years or more.

The property which is to be given the type of treatment described above is depreciable real property other than real property which is eligible for the investment credit. Such property is already subject to the recapture rule provided by section 1245 which generally applies to tangible personal property. The types of real property, therefore, which are not subject to this provision are property other than buildings or structural components which are used as an integral part of manufacturing, production, or extraction, or of furnishing transportation, communications, electrical energy, gas, water, or sewage disposal services or represent research or storage facilities used in connection with these activities. Examples of the types of real property which, therefore, are not included under this provision are railroad track and bridges and blast furnaces.

This provision applies only to the additional depreciation allowed or allowable. Consequently, the enactment of this provision is not intended to affect the question of whether all or any part of a claimed deduction for depreciation is in fact allowable. For example, since in the year real property is sold the actual value of the property is known, it has been held that depreciation deductions should not be allowed to the extent they reduce the adjusted basis of the property below the actual amount realized. This provision, in providing for ordinary income treatment for certain additional depreciation, is not intended to affect this holding.

(*c*)(*i*) *Substantial improvements.*—Because the percentage of additional depreciation (or gain, if smaller) decreases after the first 20

months by 1 percent a month, it is necessary to determine when property has been acquired. This presents a special problem where real estate already held is substantially improved. To consider the substantial improvement as being held for the same period as the original investment in the property would mean that where property has been held for 10 years or more there would be no ordinary income arising with respect to substantial improvements, even though these improvements might have been made within the last few years. To prevent avoidance of the ordinary income treatment provided by this provision, the bill defines a "separate improvement" which is treated as a separate element for purposes of determining the amount treated as ordinary income upon the sale or exchange of real property. Appreciation which may be treated as ordinary income is divided up among the separate elements in accordance with the additional depreciation deductions with respect to each element.[1]

A separate improvement is intended by the bill to be only an improvement which is of a substantial nature. Lesser improvements are treated as if they were a part of the original structure and do not take a new, or separate holding period for purposes of determining the proportion of the additional depreciation (or gain, if smaller) treated as ordinary income. As a result, separate improvements are defined under the bill as arising only where the cost of the improvements in question is greater than the largest of the following three amounts—

1. 25 percent of the adjusted basis of the property;
2. 10 percent of the original cost of the property plus the cost of any improvements made prior to those being considered here less the cost of retired components; or
3. $5,000.

These tests are applied over a 3-year period. Thus, if improvements made in any 3-year period increase the adjusted basis of the property before that period by 25 percent or more or exceed the amount specified under the other tests if larger, then this entire amount will be treated as a separate improvement. The 25-percent adjusted basis test in this case is expected to be the principal test applied; however, the 10-percent test will prevent a relatively moderate improvement in a fully, or almost fully, depreciated building from being classified as a substantial improvement. The $5,000 limitation is intended as a de minimis rule below which no aggregate amount in a 3-year period would be treated as a substantial improvement.

In applying the above test for determining whether an improvement is to be treated as substantial, improvements in any one of the 3 years are to be omitted entirely if they do not amount to at least $2,000, or 1 percent of the original cost of the property plus the cost of any improvements previously made (less the cost of retired components), whichever is the greater. As in the case of the $5,000 limitation, which applies over the 3-year period, these exceptions are designed as a de minimis rule to make it unnecessary to treat as separate improvements relatively minor improvements made in any one of the 3 years which may be involved in the computation in question.

In the future additional depreciation allowed over straight line depreciation is to be subject to recapture not only in the case of the

[1] In addition to the separate improvements, the bill also treats as separate elements units of real property which were placed in service at different times before initial completion of the building.

double-declining balance and other forms of rapid depreciation available only in the case of new property, but also the excess over straight line depreciation is to be recaptured in the case of depreciation, such as the 150-percent declining balance depreciation which presently is permitted with respect to used real property under certain circumstances.

(c)(ii) *Disposition where ordinary income is recognized.*—Ordinary income under the bill is recognized not only in the case of the sale or exchange of real property but also in the case of all other types of dispositions unless a specific exception is provided. Thus, as in the case of the provision enacted in 1962 in connection with tangible personal property, this provision may result in the recognition of ordinary income even though capital gain might not otherwise have been realized at the time of such a disposition. The bill provides seven general categories of exceptions, however, where dispositions are not to result in the recognition of any ordinary income.

The first exception is for gifts. Thus, the making of a gift for this purpose will not be a taxable event. However, the depreciation deductions of the donor in such a case are carried over to the donee. As a result, if the donee subsequently sells the real property, there may be ordinary income recognized by him as a result of depreciation deductions taken by the donor. The donee in such a case, however, will receive the benefit of the holding period of the donor. The effect, therefore, of this is to treat the donor and donee for purposes of this provision as if they were one person, with the result that upon the subsequent sale by the donee of the property, the same amount (if any) will be treated as ordinary income as if the donor held the property throughout the entire period. Similarly, in determining the percentage decrease in total gain to be taken into account as ordinary income, the holding period of both the donor and the donee is taken into account. This, of course, means that a smaller proportion of the gain will be treated as ordinary income than would be true if only the donee's holding period were used for this purpose.

In the case of real property which is given to a charitable organization, although no income is realized by the donor at the time of the gift, the bill provides that the amount of the charitable contribution deduction he may receive is reduced by the amount which would have been treated as ordinary income had the real property been sold at its fair market value (amendment to sec. 170(e)). This conforms with the treatment provided in 1962 by Congress with respect to tangible personal property contributed to a charity.

A second exception to the recognition of ordinary income upon the disposition of real property is provided in the case of transfers at death (except where the sale has occurred before death, in which case the amount is treated as income with respect to a decedent under sec. 691). In this case, however, there is no carryover of the income potential of the depreciation deductions to the decedent's devisee or heir.

A third category of exceptions to the recognition of ordinary income is provided in the case of a series of transactions which generally are tax free and in which the basis of the real property is carried over from the former to the new owner: However, in these transactions where there is any gain recognized because the exchange is accompanied by "boot" (i.e., money or its equivalent) then to the extent of

this gain, ordinary income may be recognized or to the extent of the applicable percentage of the additional depreciation deductions if smaller. The tax free transactions referred to relate to those occurring upon the complete liquidation of a subsidiary (sec. 332); in the case of a transfer for stock or securities to a corporation controlled by the transferor (sec. 351); in the case of a transfer of property by a corporation which is a party to a reorganization in pursuance of a plan of reorganization solely for stock or securities in another corporation also a party to the reorganization (sec. 361); and in the case of reorganizations in certain receivership and bankruptcy proceedings (secs. 371(a) and 374). Also included in the same category are contributions of real property to a partnership in exchange for an interest in the partnership, and distributions by a partnership of real property in partial or complete liquidation of an interest in the partnership (but in this respect, see the special partnership treatment described below). Under the bill, however, there will be a recognition of ordinary income where there is a contribution of depreciable property to a tax exempt organization (other than an exempt farm cooperative) in exchange for stocks or securities in the exempt organization. Recognition of gain in this case, as in the case of tangible personal property in the provision added last year, is provided because a disposition of the property by the exempt organization ordinarily would escape the realization of the ordinary income with respect to these deductions.

A fourth category of exceptions is provided in the case of so-called like-kind exchanges of real property used for production or investment and for involuntary conversions. In exchanges of these types, the ordinary income recognized is in general limited to any appreciation in value attributable to depreciable real property which is not reinvested, after the exchange or involuntary conversion into other depreciable real property. Thus, ordinary income will be recognized to the extent of the additional depreciation, decreased according to the holding period involved, or by the following amount of appreciation, whichever is the smaller. First, to the extent that the exchange or conversion results in actual gain being recognized, this will be treated as ordinary income under the general rule. Second, this gain will be increased by stock purchased in a corporation even though under the involuntary conversion provision this generally would not result in the recognition of gain. This amount is treated as potential ordinary income since any subsequent sale of the stock does not represent the sale of a depreciable asset and, therefore, it would not be possible in this event to recapture the depreciation. Third, to the extent of any remaining appreciation represented by real property, ordinary income is recognized to the extent this unrealized appreciation cannot be included in the basis of the newly acquired real property. Under this provision, the newly acquired real property will, upon its sale or other disposition, give rise to the same ordinary income, decreased according to the holding period for the newly acquired property, as would the previously held real property (except to the extent that ordinary income was recognized at the time of the conversion). The holding period for purposes of determining the percentage of the additional depreciation which is to be treated as ordinary income is begun anew with respect to the exchange or converted property, but the new holding period applies only to the percentage of the gain which would have been taken into account had the property held been sold at the time of the exchange or conversion.

A fifth exception is provided in the case of the exchange or sale of property in obedience to Federal Communications Commission orders or orders of the Securities and Exchange Commission (secs. 1071 and 1081). In these cases, also, the ordinary income includes not only the actual gain recognized but also the appropriate percentage of any depreciation charges unrecovered at the time of the sale or exchange which are not reinvested in other depreciable real property.

A sixth exception is provided in the case of distributions of real property by a partnership to a partner. A distribution of real property by a partnership to a partner, to the extent that the distribution represents the partner's share of unrealized appreciation attributable to this property, is not to result in ordinary income to the distributee partner at the time of the distribution. However, the unrealized appreciation representing additional depreciation taken by the partnership will be carried over to the distributee partner. When he disposes of this real property, the unrealized appreciation represented by these partnerships (or by an earlier transferee where the partnership acquired the property without recognizing gain), additional depreciation deductions will be taken into account in a manner substantially the same as that applying where the taxpayer himself took the depreciation deductions. This rule applies only to the extent a partner is considered as receiving his share of the real property to which is attributable potential ordinary income. An amendment made elsewhere to the code (sec. 751(c)) provides that in other cases the ordinary income element in real property is to be considered as "unrealized receivable." Thus, to the extent of applicable percentage of the additional depreciation deductions taken (or potential gain, if smaller) ordinary income will be recognized in the case of the sale of a partnership interest, in the case of a distribution to a retiring or deceased partner, and in the case of distributions to a partner where he receives either more or less than his proportionate share of real property reflecting this ordinary income.

A seventh exception deals with the case where the property being disposed of by the taxpayer is his principal residence. Under present law (sec. 1034) where the taxpayer sells his principal residence and within a year before or after this sale (18 months after in the case of the construction of a new home) purchases or builds another, then any gain realized on the sale of the first residence is not recognized for tax purposes to the extent the total proceeds from the sale of the first residence are invested in the second. The bill provides that in cases of this type, to the extent the full proceeds from the sale of the first residence are reinvested into a second, no ordinary income is to be recognized at that time.

Similarly, the bill provides no recognition of ordinary income potential with respect to the provision incorporated elsewhere in this bill (sec. 206 of the bill) which provides that no gain is recognized by a taxpayer age 65 or over who sells a home which he has used as a personal residence and owned for 5 out of the last 8 years.

As in the case of the provision enacted in 1962 relating to tangible personal property, the House and your committee in this provision found it necessary to recognize ordinary income in cases where capital gain is not recognized under existing law. This was done primarily in those cases where the transferee receives another basis for the property than that of the transferor. This treatment is provided in three types of cases where a distribution is made by a corporation without

the payment of a tax at the corporate level on unrealized appreciation in value; namely, where the real property is distributed as a dividend (sec. 311), where the real property is distributed as part of a partial or complete liquidation by a corporation (sec. 336), and where in a plan of complete liquidation a corporation sells the real property (and perhaps other assets) and within a 12-month period completes the liquidation of the corporation (sec. 337). Similarly, if the real property is first sold by a corporation for installment notes and the gain which would be realized on such sale is delayed because of the installment method of reporting, a distribution of these notes to the shareholder in a liquidation under section 337 (12-month liquidation) results under this bill in the recognition of the same amount of ordinary income of the corporation as would have been realized on a cash sale of these notes. The same rule is applied whenever similar installment notes are distributed by a corporation in a liquidation in which the basis of the real property to the receiving shareholder is determined under section 334(b)(2) (purchase of 80 percent of the stock of one corporation by another corporation followed by immediate liquidation of the corporation acquiring). The other situations where ordinary income may be realized under this provision although capital gain would not otherwise occur, include the case where distribution is made by a partnership and the partner gives up, or acquires, more than his proportionate share of this real property. Other cases include the provision relating to the exchange of like-kind property, involuntary conversions, sales or exchanges to effectuate FCC policy, and exchanges in obedience to orders of the SEC. In all of these cases where the property received in exchange for depreciable real property is not itself depreciable real property, then ordinary income is recognized.

(*c*)(*iii*) *Leasehold improvements.*—Improvements made to property held under a lease by a lessee present a special problem in determining what is the amortization period equivalent to the straight-line depreciation method selected as the norm in the usual case. Present law (sec. 178) in general provides that leasehold renewal periods are to be taken into account in determining amortization or depreciation with respect to any year if the initial lease period remaining is less than 60 percent of the useful life of the building or other improvement, or if less than 75 percent of the cost of the lease is attributable to the remaining portion of the initial lease period, and if it is more probable that the lease will be renewed, extended, or continued than that it will not. Such a test is appropriate when looking forward to amortization deductions in future years. However, it does not represent an adequate norm for the measurement of excess or additional depreciation after the deduction has been taken and the lease is being sold.

As a result, the bill provides that in determining the norm for purposes of specifying additional depreciation which may be treated as ordinary income, periods for which a lease may be renewed, extended, or continued under an option exercisable by the lessee are generally to be taken into account. However, the renewal periods so taken into account are not to extend the amortization period by more than two-thirds of the initial lease period remaining after the improvement was made. Thus, in the case of a 6-year lease with a 6-year renewal period, only 4 additional years are to be taken into account in determining the amortization period of an improvement made at the beginning of the initial lease. Thus, in this case, the amortization

payments with respect to the lease would be spread over a 10-year period and payments in excess of such a spreading would be considered additional depreciation adjustments. However, if the useful life of the asset itself in such a case were less than 10 years, then the depreciation deductions would be spread for this purpose in a straight-line method over the useful life of the asset, and this would be used as the measure in determining additional or excess depreciation adjustments.

(*c*)(*iv*) *Effective date.*—This provision is to apply with respect to depreciation attributable to periods after December 31, 1963, and to dispositions of property after that date.

(*d*) *Revenue effect.*—Since this provision relates only to depreciation deductions in 1964 and subsequent years, the initial revenue impact of this bill is expected to be small. In fiscal year 1965, it is expected that this provision will result in a revenue gain of about $5 million. In subsequent years, however, when the provision becomes fully effective, it is anticipated that it will result in a revenue gain of approximately $15 million a year.

41. Income averaging (sec. 234 of the bill and secs. 1301–1305 of the code)

(*a*) *Present law.*—Present law does not provide any generally available income averaging provision for the persons whose income fluctuates widely from year to year. Instead, present law contains six specific averaging provisions dealing with special types of situations: Certain compensation for personal services, income from inventions or artistic work, certain income from backpay, compensation for damages for patent infringements, breach of contract damages, and damages for injuries under the antitrust laws.

In the case of the provision relating to compensation for personal services and that relating to inventions and artistic works, in order to be eligible for this treatment, the employment involved must have covered 36 months or more in the case of the compensation for personal services, and in the case of the work on the inventions or the artistic works must have covered a period of 24 months or more. In addition, eligibility under these same two provisions required that the receipts of the payments involved with respect to the work be heavily concentrated in 1 year. In the case of compensation for personal services, 80 percent or more of the total compensation for the employment must have been received in the taxable year in question. In the case of the invention or artistic work, the amount received in the year in question must not be less than 80 percent of the gross amount received with respect to the invention or artistic work in the taxable year, all prior years, and the succeeding 12 months. The backpay provision also has a somewhat similar provision. To be eligible for averaging in the case of backpay, the amount of backpay received in the taxable year must exceed 15 percent of the gross income for that year.

In the case of all of the present averaging devices, the averaging is achieved by providing that the tax involved is not to be greater than if this income were spread back, either ratably over the period to which the income relates, or to the specific years to which the income relates. However, in the case of income from inventions, the spread back for this purpose may not exceed 60 months, and in the case of artistic work it may not exceed 36 months. The other averaging

provisions are not limited in this respect. The tax in each case, although imposed as of the current year, is determined by making a recomputation with respect to one or more back years.

(*b*) *General reasons for provisions.*—A general averaging provision is needed to accord those whose incomes fluctuate widely from year to year the same treatment accorded those with relatively stable incomes. Because the individual income tax rates are progressive, over a period of years those whose incomes vary widely from year to year pay substantially more in income taxes than others with a comparable amount of total income but spread evenly over the years involved. This occurs because the progressive rates take a much larger proportion of the income in taxes from those whose incomes in some years are relatively high. The absence of any general averaging device has worked particular hardships on professions or types of work where incomes tend to fluctuate. This is true, for example, in the case of authors, professional artists, actors, and athletes as well as farmers, fishermen, attorneys, architects, and others.

The present averaging provisions have proved unsatisfactory, first because they are limited to a relatively small proportion of the situations where averaging is needed. Thus, while they presumably cover inventors and writers, they do not provide for actors, athletes, and in most cases do not provide for attorneys, architects, and others. Even in the case of inventors and authors, the present provision is inadequate because of the requirement that the income arise over at least a 24-month period and 80 percent or more of the income from the invention or work be concentrated in the current year in question. In practice, many cases involving authors and inventors where averaging is needed do not meet these specific requirements. This was made clear in testimony from authors and others.

The present averaging provisions also have proved unduly complicated in practice because of the requirement that the prior years' incomes and taxes must be recomputed as if the income had actually been received in those prior years.

Your committee agrees with the House that income averaging should be designed to treat everyone as nearly equally for tax purposes as possible, without regard to how their income is spread over a period of years and without regard to the type of income involved. At the same time, it is necessary to have any income averaging device in a form which is workable, both from the standpoint of the taxpayer and the Internal Revenue Service.

Although the bill generally repeals the averaging devices in present law (secs. 1301–1307), it is recognized that cases may arise where a person has entered into long-term contingent employments upon the assumption that the averaging device in present law applicable to compensation from an employment would be available. Since employments in some cases may last for extended periods of time, such as 20 years, the general 5-year averaging device might produce less favorable treatment than the present provision. As a result, the bill provides, in the case of these long-term employments which were already in being before 1963, for the taxpayers involved to continue the form of averaging available under present law if they elect to forgo the general 5-year averaging provided in this bill.

(*c*) *General explanation of provisions.*—In view of the considerations set forth above, the bill deletes all of the averaging provisions in

present law referred to previously and substitutes instead an income averaging device available to individual taxpayers generally, substantially without regard to the source of the income. As indicated subsequently, however, in the case of the averaging device for compensation from an employment, the bill in certain cases permits the continuance of the application of this provision.

Under the averaging rule provided by the bill, once the amount of income to be averaged is determined—called averageable income in the bill—and assuming this amount is more than $3,000, the taxpayer is to compute a tentative tax on one-fifth of this amount. The tax on this one-fifth is determined by adding this one-fifth to 1⅓ times the average income received in the prior 4 years, plus the average capital gains income in this same 4-year period. The tax attributable to this one-fifth is then multiplied by 5 to determine the final tax on this income.

Averaging is available only where the "averageable income" exceeds $3,000 because, with the present progressive rate structure with tax brackets usually of $2,000 to $4,000, smaller amounts achieve little if any benefit from averaging. The device of including one-fifth of the averageable income in the tentative tax base, computing the tax attributable to this amount, and then multiplying this result by 5, achieves a result which is substantially similar (except when there are rate changes during the 5 years) to including one-fifth of the income eligible for averaging in the taxable income base of each of the prior 4 years and of the current year. The advantage of making the computation in this manner is that it is not necessary to recompute the tax for each of the 4 prior years in order to obtain this result.

The "averageable income" referred to here is the excess of the taxable income in the current or computation year—with certain adjustments—over 1⅓ times the average base period income. The average base period income is the average of the taxable income in the 4 prior years with certain adjustments specified below.

Averageable income is limited to that which is in excess of 1⅓ times average income in the base period for two basic reasons. First, in any new provision of this type, it is necessary to limit the number of cases to which the new provision will apply to a manageable level from the administrative standpoint. In other words, it was necessary initially, at least, to limit the volume of cases where averaging will be applied. Moreover, it is clear that the greatest need for averaging occurs where the fluctuation in income levels varies widely. An increase of more than one-third from the prior average income was selected to make the new averaging rule available in those cases where it is needed the most.

As indicated above, in computing the income subject to averaging, it is necessary to make some adjustments in both the income of the current, or computation year, and also in the income of the 4 base period years with which the current year's income is compared. The income of the computation year, referred to in the bill as the "adjusted taxable income" is the taxable income for that year decreased by: (1) Any capital gain net income for that year; (2) any income for that year attributable to gifts, bequests, devises, or inheritances received during that year or any of the four prior base period years;[1]

[1] Income attributable to gifts, bequests, devises, or inheritances between a husband and wife are not taken out of the income for the computation year if they file a joint return for the computation year or one of them makes a return in that year as a surviving spouse. Also not taken into account are amounts of less than $3,000 in computation year.

(3) any excess of wagering gains in the year over wagering losses; and (4) certain amounts of income to which penalties apply with respect to owner-employees who are self-insured for pension plan purposes (sec. 72(m)(5)).

Long-term capital gains are excluded from the income subject to averaging in the computation year on the grounds that such income does not require averaging because of the fact that only 50 percent of the capital gain income is included in the tax base in any event. Moreover, without regard to the averaging provision, such income is subject to a maximum rate of 25 percent.

Averageable income also excludes income from gifts, devises, or inheritances where the gifts, etc., have been received either in the computation year or in any of the four prior base period years, because such income does not arise from any additional efforts on the part of the taxpayer but merely represents a transfer to the taxpayer of income previously received by someone else. In addition, in the case of the transfer by gift of income producing properties between related parties, there would be some opportunity for manipulation if such income were not excluded from that which can be averaged. Income attributable to such property is excluded under the bill only where it is in excess of $3,000 in the computation year. Also, because it may be difficult to trace specific income to specific gifts, bequests, devises, or inheritances, the bill presumes that such property earns a 6-percent rate of return unless the taxpayer establishes to the satisfaction of the Treasury that some other amount of income is earned with respect to the property.

Net wagering gains are excluded from averageable income to prevent such income from receiving a preferred status. For similar reasons, penalty income of owner-employees in the case of self-insured pension plans is excluded.

It is also necessary to make some adjustments in the base period income with which the adjusted taxable income for the computation year is compared. Two of these adjustments are the same as those made in the computation year. Thus, capital gain net income for the base period year is excluded as is any income from gifts, bequests, devises, or inheritances where such property was initially received by the taxpayer in 1 of the 4 base period years.

A third adjustment made to the average base period income is to add back to such income any income excluded from the taxpayer's base in such year on the grounds that it was earned in a foreign country (the exclusion under sec. 911 of present law) or on the grounds that it was income from sources within a possession of the United States (sec. 931 of present law). The inclusion of such amounts in the base period is necessary so that the taxpayer will not become eligible for averaging merely on the grounds that during the 4-year base period, or a part of this period, he was in a foreign country and not subject to U.S. tax on his earned income. If such amounts are not included in the base period income comparable amounts earned in the United States in the computation year would be eligible for averaging.

(*c*)(*i*) *Example.*—For most taxpayers with little or none of the income which gives rise to the special exceptions described above the application of this averaging provision is relatively simple. This can be illustrated by an example of an unmarried taxpayer having an average base period income of $3,000 in the years 1961–64 and an adjusted taxable income of $44,000 in 1965. The taxpayer in this

case is eligible for averaging since his "averageable income" exceeds $3,000. His averageable income in this case can be computed as follows:

1. Adjusted taxable income in computation year	$44, 000
2. 133⅓ percent of average base period income ($3,000× 133⅓ percent)	4, 000
3. Averageable income	40, 000

Since the averageable income is in excess of $3,000, the entire amount is subject to averaging.

Computation of tax:

(*a*) 133⅓ percent of average base income ($3,000× 133⅓ percent)	4, 000
(*b*) Averageable income included in tentative tax base (⅕ of $40,000)	8, 000
(*c*) Tentative taxable income	12, 000
(*d*) Total tentative tax liability (1965 rates under bill)	2, 830
(*e*) Tax on $4,000 not subject to averaging	690
(*f*) Tax liability on ⅕ of averageable income	2, 140
(*g*) Tax on total averageable income ($2,140× 5)	10, 700
(*h*) Total final tax liability (tax on $4,000 not subject to averaging and $40,000 subject to averaging)	11, 390
(*i*) Tax on $44,000 under 1965 rates without averaging	18, 990

(*c*)(*ii*) *Treatment of capital gains and priority of taxing different types of income.*—As previously indicated, net capital gains—any excess of net long-term gains over capital losses—are excluded from the adjusted taxable income for the computation year in determining how much of this income is to be eligible for averaging and also from the average base period income. Thus, generally, capital gains (other than short-term capital gains) have no effect in determining the income subject to averaging. There is one exception to this general rule, however. If the average capital gain net income in the base period exceeds the capital gain net income in the computation year, then to the extent of this excess the income subject to averaging is reduced. Generally, it was thought that capital gains should be set apart and not taken into account in averaging since they, in effect, have their own specialized form of averaging. However, in those cases where the average capital gains in the base period exceed the capital gains in the computation year, it is believed that averaging should be permitted only when total taxable income of the current year is substantially greater than the average of the base period.

The bill provides that in determining the tax which is attributable to the income subject to averaging, the first income subject to tax is to be the ordinary income not eligible for averaging. In the example previously presented, this meant that the $4,000 of income not subject to averaging was considered to be the income subject to the first income brackets. The income subject to the next higher income rates is the capital gain net income of the computation year but only to the extent [1] this does not exceed the average base period capital gain net income. Following this is the income subject to averaging, with respect to which one-fifth is included, the tax then computed, and the result multiplied by 5. Any remaining capital gains income in the computation year, in excess of average base period capital gain net income, is treated as coming on top of this income subject to averaging along with income from wagering or gifts, bequests, devises, or inheritances, which is not eligible for the averaging treatment.[2]

[1] Actually this amount is preceded by an amount equal to any excess of average base period capital gain over capital gains of the computation year in those infrequent cases where such income exists.

[2] The penalty income with respect to owner-managers in connection with receipt of pension-type income is treated as if the averaging provision did not apply.

The alternative capital gains tax in such a case is determined by applying 25 percent to the long-term capital gains. This tax then is compared with the tax attributable to the capital gains in the computation explained above. The reason for structuring the tax base in the manner indicated is to give assurance that the income subject to averaging is taxed, as nearly as possible, at the same income level as would be the case had such income been earned ratably over the current year and 4 prior years.

(c)(iii) *Eligible individuals.*—To be eligible for averaging, one of the principal concerns is that the individual's income must have been subject to tax by the United States throughout the entire base period as well as the computation year. No one is eligible for averaging who was a nonresident alien in any of the 4 base period years or in the computation year. To be eligible for averaging, the individual must be a citizen or resident in the computation year. In addition, even though a citizen in the computation year, the individual must be claiming no exclusion in that year for income earned abroad. He may have claimed such an exclusion with respect to a base period year, but, for purposes of determining his income in the computation year subject to averaging, this income is added back to his base period income.

A second concern of this provision is that the individual be a member of the labor force in both the computation year and in the 4 base period years. It has been necessary, however, to approximate this result in some cases. The general rule provides that the individual and his spouse must have furnished one-half or more of his own support in each of the base period years. However, it was not intended to exclude from the benefits of the averaging provision an individual who, although in the labor force, was unemployed in part or all of the base period years. For that reason, individuals generally are eligible for averaging if they are 25 years old and there have been at least 4 years since the individual attained age 21 when he was not a full-time student. Thus, generally, individuals age 25 or over will be eligible for averaging so long as they have been out of school for at least 4 years since age 21. A second exception is provided for the individual who, although not self-supporting in the 4-year base period, nevertheless, has income in the current year more than half of which is attributable in substantial part to work he has done in two or more of the base period years. This is designed to make sure that those who have performed some work of a substantial nature which occurred over a period of years will be eligible for averaging even though below the 25-year age limit. A third exception is provided for an individual who was not self-supporting in the base period and who makes a joint return with someone else if not more than 25 percent of the total adjusted gross income of the couple in the computation year is attributable to the individual in question. This means that an individual who has been in the labor force and who marries someone who was a dependent of another will not be deprived of averaging, assuming three-quarters or more of the income in the computation year is attributable to the individual who was in the labor force in the base period. This is designed to assure that a man who marries a woman who was a dependent of her father during part or all of the base period years is not deprived of income averaging as a result of this marriage.

(c)(iv) *Special rule with respect to marital status.*—No problems arise in applying the averaging provision where a husband and wife file a joint return in the computation year and also did so in each of the base period years. However, it is necessary to reconstruct their income where they either filed separately (or with other spouses) in the base period years or are filing separately in the computation year. For example, if a married couple files a joint return in the current year but filed separate returns for one or more base period years, their base period income for purposes of averaging in the current year will be their combined base period incomes for their base period years. In addition, the bill provides that an individual's base period income is to be either his actual base period income in each of the base period years or, if higher, 50 percent of the combined base period income of him and his spouse.[1] In determining actual income for purposes of this provision, community property laws are not to be taken into account with reference to income from personal services. Thus, the actual income attributed to an individual will be the income earned by him without regard to whose income it is considered to be under community property law.

(c)(v) *Continuance of present averaging device in certain cases.*—The bill provides that the averaging device in present law with respect to compensation from an employment is to continue to be available if the taxpayer so elects where he receives or accrues compensation from employment which began before February 6, 1963. If the taxpayer elects this treatment he must forgo for that year the generally available averaging device and the carryover of certain excess charitable contributions.

This provision, which on this elective basis is continued for compensation for the employment begun before the specified date, provides in general that the employment must cover a period of 36 months or more and that the gross compensation from the employment received by the individual (or partnership) in the year in question must not be less than 80 percent of the total compensation for such employment. Where these conditions are met, present law provides that the tax is not to be greater than if the compensation had been included in the gross income of the individual ratably over the period of the employment prior to the date of the receipt or accrual.

(c)(vi) *Effective date.*—The amendments made by this provision apply to taxable years beginning after December 31, 1963. This means that averaging will be available for the first time with respect to taxable years beginning in 1964. This will involve base period years as far back as 1960. However, as indicated previously, the averaging device in present law relating to compensation from employment where the employment began prior to February 6, 1963, may continue to be applicable for taxable years beginning after December 31, 1963, at the election of the taxpayer.

(d) *Revenue effect.*—This provision is expected to result in a reduction of $40 million of tax liabilities in the calendar year 1964 and subsequent years.

[1] If the individual involved was married to another person in one or more of the base period years, his base period income is to be not less than 50 percent of his income in that year combined with the income of whichever spouse had the higher income.

42. Small business corporations: Ownership of certain stock disregarded (sec. 235(a) of the bill and sec. 1371 of the code)

(*a*) *Present law.*—In 1958 Congress added to the Internal Revenue Code a new subchapter (sec. 1371 and following) which provides that the earnings of certain small business corporations may be taxed to the shareholders of the corporation (rather than taxing the corporate entity as such) in a manner somewhat similar to the way partnership earnings are taxed to the partners rather than to the partnership. Where the tax treatment provided by this subchapter is elected, the shareholders include in their own income for tax purposes the current taxable income of the corporation, both the dividends which have been distributed and the portion of the earnings which are still retained by the corporation. This treatment was provided in order to permit businesses to select the form of business organization desired without the necessity of taking into account major differences in tax consequences.

The right to elect the treatment provided under the new subchapter was limited to small business corporations in part because of the complexity involved in passing the earnings of a corporation through to its shareholders where the stock of the corporation is held by a widely diversified group of shareholders, and in part because it was thought that only the relatively small corporations were essentially comparable to the partnership or proprietorship where the earnings are taxed to the owners rather than to the business organization. As a result, Congress provided that corporations making this election must be domestic corporations which are not eligible to file a consolidated return with any other corporation. Also, they must have not more than 10 shareholders, their shareholders must all be individuals (or estates), no nonresident aliens may be shareholders, and the corporations may not have more than one class of stock.

(*b*) *General reasons for provision.*—Situations have been called to your committee's attention where corporations are denied the privilege of electing to have their income taxed to their shareholders (rather than to the corporation) merely on the grounds that the corporation owns the stock of completely inactive subsidiaries.

The establishment of inactive subsidiaries is a common business practice for corporations planning for future growth. Such corporations often desire to reserve their corporate name in States in which they are not yet doing business by establishing subsidiaries with the same or a similar name to that of the parent corporation. Your committee sees no reason to penalize the parent corporation by denying it the privilege of electing to pass the income through to its shareholders for tax purposes merely because, for business reasons, it has established these inactive subsidiaries which constitute an affiliated group which could file a consolidated return.

(*c*) *General explanation of provision.*—As a result of the considerations set forth above, this provision adds a new subsection to section 1371 of the code providing that a corporation will not be considered a member of an affiliated group for purposes of this election (and, therefore, not be denied the right to elect subch. S status) merely because it owns stock in another corporation which is inactive. An inactive corporation, in this case, is one that has not begun business after the date of its incorporation and before the end of the parent corporation's taxable year in question and that does not have taxable

income for this taxable year. If these conditions are met and the parent is not affiliated with any other corporation, an election may be filed under subchapter S by the parent corporation despite the rule that a subchapter S corporation may not be a member of an affiliated group. However, if the subsidiary corporation does not meet the conditions set forth above in a subsequent year, the parent corporation's subchapter S status would be terminated at that time.

(c)(i) *Effective date.*—This bill is effective for taxable years of corporations beginning after December 31, 1962.

(d) *Revenue effect.*—It is estimated that this provision will result in a negligible loss of revenue.

43. Small business corporations: Certain distributions of money after close of taxable year (sec. 235(b) of the bill and sec. 1375 of the code)

(a) *Present law.*—As indicated above, the earnings of small business corporations may be taxed to the shareholders of the corporation in a manner somewhat similar to the way partnership earnings are taxed to the partners rather than to the partnership. The shareholders are taxed each year on the dividend income received from the corporation plus any additional earnings of the corporation which are retained by it rather than distributed. If in a particular year such a corporation does not in fact distribute its earnings, any distributions in a later year are treated as dividend distributions to the extent of the earnings and profits of that later year. In addition, if in that later year the corporation has ceased being an "electing small business corporation" then all distributions are treated as being dividends to the full extent of both current and accumulated earnings and profits.

(b) *General reasons for provision.*—The rule stated above has created a problem where an electing small business corporation sells a capital (or depreciable) asset, adopts a resolution to distribute to its shareholders all or part of the proceeds of such sale, and then actually does distribute such proceeds in the year immediately following the year of sale. In such a case, even though the shareholders pay tax on the full capital gains in the year of the sale, the distribution to them in the later year will be treated as an ordinary dividend at least to the extent of the current earnings and profits of the later year. The result will be even harsher if in the later year the corporation has ceased being an electing small business corporation, because in this case the distribution will be a dividend to the extent of both the current and the accumulated earnings of the corporation.

(c) *General explanation of provision.*—To prevent the result described above, your committee's bill adds a provision to the effect that in the case of an electing small business corporation a distribution of money to the shareholders on or before the 15th day of the third month following the close of a taxable year, may, at the election of the corporation, be treated as a distribution of money made on the last day of the taxable year in question. This election is available whether or not the corporation involved is an electing small business corporation in the second year.

(c)(i) *Effective date.*—This amendment applies to taxable years beginning after December 31, 1957.

(d) *Revenue effect.*—It is anticipated that this provision will result in a negligible loss of revenue.

44. Repeal of additional 2-percent tax for corporations filing consolidated returns (sec. 236 of the bill and sec. 1503 of the code)

(*a*) *Present law.*—Under present law a consolidated income tax return may be filed by a group of parent and subsidiary corporations where there is 80 percent control of each level of the chain of corporations, and there is a common parent corporation; 80 percent control, in this case, means 80 percent of the voting power of all classes of stock and at least 80 percent of each class of nonvoting stock. In the consolidated return, intercompany transactions are washed out, and it is possible to offset losses of one corporation against the gains of other members of the group. These intercompany transactions which are washed out also include intercompany dividends. As a result, dividends may be paid from one company in a consolidated group to another of the same group without the second member including in its income 15 percent of this dividend income.

Under present law, where the election to file a consolidated return is made, a special tax is levied equal to 2 percent of the consolidated taxable income of the group.

(*b*) *General reasons for provision.*—The bill removes the special 2-percent penalty tax on the privilege of filing a consolidated return, in part because the return of commonly controlled corporations as a single economic unit for tax purposes is in accord with the reality of the situation. Moreover, there appears to be no reason why, where a group of commonly controlled corporations are willing to have their operations consolidated for tax purposes, the mere presence of more than one corporate organization in the group should result in any penalty tax. No such penalty, for example, is exacted in the case of other corporate organizations operating through divisions rather than separate corporations.

In addition, the removal of this 2-percent penalty tax should encourage the filing of consolidated returns and serve as a brake on the expansion of the use of multiple surtax exemptions to gain tax advantages.

(*c*) *General explanation of provision.*—In view of the considerations set forth above, both the House and your committee's version of the bill repeals the special 2-percent tax on consolidated returns, effective with respect to taxable years beginning after December 31, 1963. This 2-percent tax presently applies to the consolidated taxable income of the affiliated group of includible corporations.

(*d*) *Revenue effect.*—The repeal of the 2-percent tax on consolidated corporate returns is expected to decrease revenues by $50 million a year.

45. Reduction of surtax exemption in case of certain controlled corporations (sec. 237 of the bill and secs. 1561–1563 of the code)

(*a*) *Present law.*—Under present law, corporations are taxed at a 30-percent rate on the first $25,000 of their taxable income and at a 52-percent rate on all income over that amount. This tax rate differential results from the fact that the first $25,000 of income of a corporation is subject to the 30-percent normal tax but is exempt from the 22-percent surtax, while income in excess of $25,000 is subject to both the 30-percent normal tax and the 22-percent surtax. This tax structure was intended to encourage small businesses which operate in corporate form. However, medium and large enterprises have in some cases taken advantage of the lower rates afforded small business by organizing their corporate structure in multiple corporate form.

As a result, the Internal Revenue Code contains several provisions designed to prevent taxpayers from using the multiple form of corporate organization, to avoid taxes. For example, present law provides (sec. 269) that where an individual or corporation acquires control of a corporation and the principal purpose of the acquisition is the evasion or avoidance of Federal income tax by securing the benefit of a deduction, credit, or other allowance, this deduction, credit, or allowance is not to be allowed. Also, elsewhere (sec. 1551) present law provides that if a corporation transfers part or all of its property (other than money) to another corporation created to acquire the property, or not actively engaged in business at the time of the transfer, and if there is common control of the two corporations, then the transferee corporation is not to be allowed the $25,000 surtax exemption or the $100,000 accumulated earnings credit unless it establishes by the clear preponderance of the evidence that the securing of the exemption or credit is not a major purpose of the transfer. In addition, present law (sec. 482) provides that where two or more corporations are owned or controlled directly or indirectly by the same interest, the Secretary of the Treasury or his delegate may allocate deductions, credits, or allowances between or among these corporations, if he determines that this is necessary to prevent evasion of taxes or clearly to reflect the income of the corporations.

(*b*) *General reasons for provision.*—This bill reduces the tax applicable to the first $25,000 of taxable income from 30 to 22 percent and decreases the tax applicable to income above $25,000 from 52 to 50 percent in 1964 and to 48 percent in subsequent years. One of the effects of this change is to increase the value of a surtax exemption from $5,500 (22 percent tax applicable only above $25,000, multiplied by the first $25,000 of income) per corporation under present law to $6,500 (26 percent tax applicable only above $25,000, multiplied by the first $25,000 of income) per corporation for 1965 and subsequent years.

While the importance to small business of reducing the tax on the first $25,000 of income from 30 to 22 percent is recognized, it is believed that this substantial tax reduction should not provide added inducement to existing medium and large corporations to split up into multiple corporations. Therefore, the bill limits the benefits of the tax reduction in cases where a parent corporation owns or controls one or more other corporations, or where a single individual, trust, or estate owns or controls two or more corporations.

By limiting the benefits of the tax rate reductions in the case of groups of multiple corporations, it is possible to grant a substantial tax reduction to small business in reducing the normal tax rate to 22 percent, as was recommended by the President, without granting the same benefits to medium and large enterprises which use, or might choose to use, the multiple corporate form of organization. The method of taxing controlled corporations contained in the bill will, in the opinion of the House and your committee, when coupled with repeal of the 2-percent additional tax on consolidated returns, encourage some controlled groups to file consolidated returns, while leaving groups which do not choose to file consolidated returns in approximately the same relative position they are in under present law.

While the House and your committee recognize the advantages of use of multiple corporations, it is believed, as it has been in the past,

that, where corporations owned and controlled by the same interests engage in different businesses in the same area or conduct the same type business in different geographical locales, there are legitimate business reasons for use of separate corporations and, therefore, the separate corporations should generally be recognized as separate taxpayers, retaining the benefit of use of multiple surtax exemptions. However, the House and your committee do not intend to encourage the formation of these multiple corporations and therefore propose to apply higher tax rates to corporations which are members of an affiliated group of corporations. Of course, nothing in this bill is intended as changing the application of sections 269, 1551, or 482 if the multiple corporation form of organization is adopted to avoid taxes.

(*c*) *General explanation of provision.*—If a controlled group exists, three basic alternatives are available to corporations which are members of the group:

(1) The corporations in the group may forego the use of multiple surtax exemptions, i.e., they each file separate income tax returns and allocate one $25,000 surtax exemption among the members of the group (and either elect or not elect the 100-percent dividends received deduction provided by sec. 215 of this bill).

(2) Corporations in the group may elect to pay a penalty tax and file a multiple surtax exemption return. Under this election each member of the group (subject to the tax avoidance provision) may claim a separate $25,000 surtax exemption, but each must also agree to pay an additional tax of 6 percent on the first $25,000 of its taxable income. With the generally applicable rates of 22 percent on the first $25,000 of taxable income and 50 percent or 48 percent on income over $25,000, this means a total tax for such companies of 28 percent on the first $25,000 of income and 50 percent in 1964 and 48 percent in 1965 and subsequent years on income over $25,000.

(3) A controlled group which also qualifies as an "affiliated group" of corporations may, as under present law, file a consolidated income tax return.

This third alternative is similar to the first alternative in that only one $25,000 surtax exemption is available to the corporations filing the consolidated return. However, there are additional benefits in filing a consolidated return arising from the ability to declare and receive dividends between members of the group without tax, and to offset losses of one company against another.

The bill does not attempt to achieve complete symmetry between the definition of a controlled group of corporations for purposes of foregoing multiple surtax exemptions and the definition of a group eligible to file a consolidated return. Several differences arise. However, many complicated problems are involved in equating the two, and many avoidance possibilities might be created if they were equated. Thus, for example, a foreign corporation doing business in the United States is included in the controlled group definition. However, if the foreign corporation is also doing business abroad and was permitted to join in a consolidated return, it could pass a dividend, out of its foreign earnings, tax free to the domestic parent, and thus escape all U.S. taxes. Moreover, neither the House nor your committee is aware of any situations in which the discrepancies in the two

definitions would create a hardship (especially with the 100 percent dividends received deduction provided by this bill). If it develops, however, that the differing definitions create a substantial hardship for certain groups subject to the penalty tax which cannot file consolidated returns (or obtain a 100-percent deduction for dividends received), the decision would have to be reconsidered and adjustments made to the extent possible.

(*c*)(*i*) *Test of control.*—In determining whether a controlled group of corporations exists, the bill draws a distinction between a parent-subsidiary controlled group and a brother-sister controlled group. In a parent-subsidiary controlled group one corporation, called a parent corporation, owns at least 80 percent of the total combined voting power of all classes of stock entitled to vote, or at least 80 percent of the total value of all classes of stock, of one or more corporations called subsidiary corporations. The parent-subsidiary controlled group also includes corporations below the first tier subsidiary level which are 80-percent owned by the other corporations in the group. For example, if corporation A owns 80-percent of the stock of corporation B, and corporation B owns 80 percent of the stock of corporation C, corporations A, B, and C constitute a parent-subsidiary controlled group.

A brother-sister controlled group exists where a single individual, trust, or estate owns at least 80 percent of the total combined voting power of all classes of stock entitled to vote, or at least 80 percent of the total value of all classes of stock, of each of two or more corporations.

In determining whether a corporation, or a single individual, trust, or estate, owns 80 percent of the value or voting power of the stock of a corporation, the stock of the corporation is considered not to include nonvoting preferred stock, which more closely approximates a debt obligation than an equity interest, and treasury stock, which, from the standpoint of ownership, constitutes unissued stock. Moreover, certain outstanding stock, although owned by separate persons, could, unless neutralized for purposes of determining control, be used by some owners as a means of divesting themselves of sufficient stock to avoid the application of this section without, as a practical matter, divesting themselves of the benefits of ownership of a corporation. Therefore, in determining whether a parent-subsidiary controlled group exists, stock of a subsidiary corporation owned by (1) individuals who are 5-percent shareholders of the parent corporation, (2) officers of the parent corporation, (3) employees of the subsidiary if the stock is subject to restrictions which favor the parent or subsidiary corporation, and (4) trusts which are part of a plan of deferred compensation for the benefit of the employees of the parent or subsidiary corporation, will not be treated as outstanding stock if the parent corporation owns 50 percent or more of the value or voting power of the stock of the subsidiary. In addition, in determining whether a brother-sister controlled group exists, stock of a corporation owned by (1) a trust forming a part of a stock bonus, pension, or profit-sharing plan for the benefit of the employees of the corporation, and (2) employees of the corporation if the stock is subject to conditions which run in favor of such corporation or the common owner and which substantially restrict or limit the employee's right to dispose of stock will not be treated as outstanding stock if the individual, estate, or trust owns

50 percent or more of the value or voting power of the stock of the corporation.

In determining whether a single individual, trust, or estate owns 80 percent of the value or voting power of the stock of a corporation, such individual, trust, or estate is, in addition to the stock owned directly, considered to own stock by virtue of certain relatively limited attribution rules. The first rule provides that an individual is considered to own stock owned by his spouse. However, it is recognized that in many cases a husband and wife may each own and operate their separate businesses. In order to prevent attribution in such cases, which may have the effect of denying separate surtax exemptions to each corporation, an individual is not considered to own stock owned by or for his spouse if (1) the individual does not directly own stock in the corporation in which his spouse owns stock, (2) the individual is not a director or employee of such corporation and does not take part in the management of such corporation, (3) not more than 50 percent of the gross income of the corporation is derived from rents, royalties, dividends, interest, and annuities, and (4) the stock of the corporation owned by the spouse is not at any time during the taxable year subject to conditions which substantially restrict or limit the spouse's right to dispose of such stock if such right runs in favor of the individual or his children who have not attained age 21 years.

The bill also provides limited attribution rules in cases involving other family relationships. Thus, an individual is always considered to own the stock owned by his children who have not attained age 21. However, an individual is considered to own the stock owned by his children who have attained age 21 and grandchildren only if such individual owns, directly or indirectly, more than 50 percent of the value or voting power of the stock in the corporation. Similarly, children who have not attained age 21 are considered to own the stock held by their parents, but children who have attained age 21 and grandchildren are considered to own the stock held by their parents or grandparents, respectively, only if the child or grandchild owns, directly or indirectly, more than 50 percent of the stock of the corporation. There is no attribution between brothers and sisters. Limited attribution rules are also provided in cases involving stock held by trusts, estates, and partnerships. Stock owned by a corporation, directly or indirectly, is considered to be owned proportionately by any shareholder owning a 5-percent or greater interest in the corporation. If an individual, estate, trust, or corporation owns an option to buy stock in a corporation, for purposes of ascertaining a controlled group, such "person" is deemed to own the stock covered by the option.

(*c*)(*ii*) *Method for determining existence of a controlled group of corporations.*—Determination of whether a controlled group of corporations exists is made once each year on December 31 by taking into account the stockownership of each person who owns stock in the corporation for the taxable year including such December 31. Although the determination of the corporations included within a parent-subsidiary controlled group, or a brother-sister controlled group, is made without regard to the type of corporation involved, provision is made to limit the reduction in the surtax exemption (or payment of the additional tax) to those corporations, referred to in the bill as component menbers, whose income tax is determined in whole or in part by reference to the normal and surtax rates. Thus, exempt organizations which do

not have unrelated business income, and foreign corporations which are subject to a flat rate tax on their income from sources within the United States, are not considered to be component members.

In order to limit reduction of surtax exemptions (or payment of the additional tax) to cases in which the common owner of the controlled group would otherwise derive the principal benefit from the allowance of the exemption, the bill excepts from the definition of component member those corporations which are members of the controlled group for less than one-half of the days in their taxable year which precede the applicable December 31 determination date.

In addition to corporations which meet the ownership tests described above on the applicable December 31 determination date, the term "component member" also includes a corporation whose stock is not owned by the parent corporation or common owner on such December 31 but was so owned one-half or more of the number of days in the corporation's taxable year which includes the applicable December 31. The inclusion of such "additional members" as component members prevents corporations whose stock is sold before the end of the year from obtaining the benefits of an extra surtax exemption in the year in which they leave the controlled group.

The bill also provides for cases where certain manufacturing corporations, in an effort to facilitate the retail distribution of products which they produce, enter into agreements with individuals whereby the manufacturer and the individual each contribute capital to a distributing corporation under a plan by which a portion of the compensation of the individual from the distributing corporation is applied toward the retirement of the stock held by the manufacturer. In most cases, franchised corporations of this type are, by definition, excluded from a controlled group due to the fact that the manufacturer owns less than 80 percent of the value and voting power of the stock of the distributing corporation. However, in some cases the corporate structures of these corporations are arranged in a manner which results in the parent corporation, or common owner, owning more than 80 percent of the vote, but not more than 80 percent of the value, of the stock of the distributing corporation.

Your committee agrees with the House that it would serve no useful purpose to cause these corporations to reorganize their corporate structures and has, therefore, excluded them from the definition of the term "component member" of a controlled group.

Finally, due to the nature of the business conducted by life insurance companies, and the fact that a life insurance company is not permitted to file a consolidated return other than with another life insurance company, a life insurance company is excluded from the definition of a "component member" of a controlled group unless the controlled group contains two or more life insurance companies, in which case the life insurance corporations are treated as component members with respect to each other since they may then elect to file a consolidated return with each other. A mutual insurance company, other than a life insurance company and other than a fire, flood, or marine insurance company subject to the tax imposed by section 821, which is included in a controlled group is also excluded from the definition of a "component member."

(c)(*iii*) *Privilege of groups to elect multiple surtax exemptions.*—The bill provides that the component members of a controlled group of

corporations may elect to have each component member of the controlled group claim a separate surtax exemption in lieu of having one surtax exemption apportioned among such members. However, if the component members of a controlled group so elect, the income tax on each member is increased by 6 percent on so much of its taxable income which does not exceed $25,000. For example, assume individual A is a common owner of a brother-sister controlled group of corporations consisting of corporations X and Y. Further assume that corporations X and Y each have taxable income of $35,000 and that they elect to have each member claim a separate surtax exemption and pay the additional 6 percent. By taking separate surtax exemptions, each corporation would pay a total tax of $7,000 on the first $25,000 of income (28 percent, consisting of a 22-percent normal tax and a 6-percent additional tax), and a tax of $4,800 on the remaining $10,000 of income (48 percent, consisting of a 22-percent normal tax and a 26-percent surtax), for a total tax on each corporation of $11,800. On the $70,000 combined income of the controlled group this would be a tax of $23,600. Alternatively, if the group did not make the election, the total tax on the controlled group would be $27,100 (22 percent of the first $25,000 of income and 48 percent on the remaining $45,000 of income). Under these circumstances, corporations X and Y presumably would choose separate surtax exemptions with the penalty tax, rather than apportioning a single surtax exemption between the component members of the controlled group.

For the component members of a controlled group to elect to claim multiple surtax exemptions, all component members of the group must join in the election. Such an election must be made within 3 years after the date when the income tax return is required to be filed for the taxable year of the component member of the controlled group whose taxable year ends first on or after the December 31 for which the election applies. An election once made may be terminated by the consent of the members, by the refusal of a new member of the controlled group to consent, by the filing of a consolidated return by any component members of the group, or by the termination of the group. Once an election is terminated, the bill provides that the group may not again elect multiple surtax exemptions until the expiration of 5 years. In the case of reorganizations involving groups of corporations some of which, for example, are, and some of which are not, prevented from filing new elections under the 5-year period, the Secretary of the Treasury is required to issue regulations which provide which group is to be treated as the predominant (or successor group) and hence which group's characteristics are to carry over.

(*c*)(*iv*) *Disallowance of surtax exemption and accumulated earnings credit.*—The bill makes two basic changes to present section 1551. The first change provides that if a corporation transfers property (other than money) directly *or indirectly* to a corporation which it controls, and such transferee corporation was created for the purpose of acquiring such property, or was not actively engaged in business at the time of such acquisition, the Secretary of the Treasury or his delegate may disallow the $25,000 exemption from surtax, or the $100,000 accumulated earnings credit, unless the transferee corporation establishes by the clear preponderance of the evidence that the securing of the exemption or credit was not a major purpose of the

transfer. As presently interpreted, existing law applies only to direct transfers of property other than money. The bill does not affect the transfer of money to a new corporation if the money is not used to indirectly acquire property from the shareholder making the transfer. Therefore, the amendment does not in any way inhibit the organization of new corporations with money transfers even though the corporation is organized for the purpose of acquiring a surtax exemption or accumulated earnings credit. However, the new corporation may be a component member of a controlled group in which case a single surtax exemption is allocated among the members of the group unless the group elects to file a multiple surtax exemption return.

The second change from present law extends the application of section 1551 to transfers of property (other than money) by an individual to a corporation which he and not more than four other individuals control. For purposes of determining whether the transferor is considered to be in control of the transferee corporation, the individual who makes the transfer, together with no more than four other individuals, must own at least 80 percent of the value or voting power of the stock in two or more corporations, one of which is the transferee corporation, and the same individuals must own more than 50 percent of the value or voting power of the stock in each corporation (only taking into account identical stock holdings) after the transfer. In determining ownership of stock, the constructive ownership rules for determining if a controlled group exists are applicable.

(*c*)(*v*) *Effective date.*—The amendment with respect to the limitation of the number of surtax exemptions allowable to component members of a controlled group and authority for component members to elect to file multiple surtax exemption returns is effective with respect to taxable years of corporations ending after December 31, 1963. The amendment made to section 1551 is effective with respect to transfers made after June 12, 1963.

(*d*) *Revenue effect.*—It is expected that this provision will increase revenues by about $35 million in a full year of operation.

46. Validity of tax liens against mortgagees, pledgees, and purchasers of motor vehicles (sec. 238 of the bill and secs. 6323(c) and 6324 of the code)

(*a*) *Present law.*—An assessed tax—income, estate or gift, excise, or withheld income or social security tax—if not paid within 10 days after notice and demand, constitutes a lien upon all of the property of the taxpayer, both real and personal. This lien follows the taxpayer's possessions, but it is valid as against a purchaser, mortgagee, or judgment creditor only if the notice of the tax lien has been filed prior to the sale or mortgage in the place designated by the State for the filing of such notices—usually the county recorder's office.

(*b*) *General reasons for provision.*—A prospective purchaser or mortgage lender with respect to real estate will check with the county recording office to ascertain whether there are any outstanding liens on the property. Ordinarily, liens against automobiles and trucks are not recorded in the county recorder's office. In many States any lien upon the automobile or truck is stated on the title. The one who wants to record a chattel mortgage, for example, upon an automobile must present his chattel mortgage and the certificate of title to the motor vehicle department of the State. Dealers in used automobiles,

therefore, rely upon these title certificates to determine whether or not there is any adverse lien on the automobile which they intend to purchase. However, the certificate of title does not show any Government tax lien. Thus, a dealer having unknowingly bought a car from a delinquent taxpayer may find that the car is seized by the Internal Revenue Service to satisfy the lien.

An automobile or truck dealer buying hundreds of used cars or trucks each year finds it difficult to follow the normal procedures—search of the records in the county recording office—with respect to each car which he wishes to buy. A similar situation exists with respect to the sale of stocks and bonds, which are ordinarily sold on the stock exchanges or over the counter without knowledge of any Federal tax lien which might exist with respect to such securities. For this reason, the law has long provided in the case of securities (sec. 6323(c)) that even though the Federal tax lien has been filed in the appropriate recorder's office, the lien will not be effective as against any mortgagee, pledgee, or purchaser of a security if at the time of the mortgage, pledge, or purchase the mortgagee, pledgee, or purchaser is without notice or knowledge of the existence of such lien. Your committee believes that a similar procedure with respect to autos and trucks would be appropriate.

(*c*) *General explanation of provision.*—This section of your committee's bill provides a similar protection for dealers and other persons purchasing or making loans upon motor vehicles as is now provided in the case of securities, so that the lien of the Federal Government will not be effective against a purchaser, mortgage lender or pledgee unless the purchaser, mortgage lender or pledgee has actual notice or knowledge of the existence of the Government's lien.

The definition of the motor vehicle to which this provision will apply is a vehicle (except a house trailer) registered for highway use under the laws of any State or foreign country.

(*c*)(*i*) *Effective date.*—The amendments made by this section apply only with respect to mortgages, pledges, and purchases made after the date of enactment of this bill.

(*d*) *Revenue effect.*—This provision is expected to result in a negligible loss of revenue.

C. HOUSE PROVISIONS DELETED BY YOUR COMMITTEE

1. Reimbursement of medical expenses in excess of such expenses (sec. 204 of the House bill)

(*a*) *Present law.*—Present law provides that gross income is not to include amounts received through accident or health insurance for medical expenses for personal injuries or sickness (secs. 104(a)(3) and 105(b) of the code).[1] At the same time medical expense deductions may be claimed (if they exceed the 3-percent floor) for accident or health insurance premium payments.

(*b*) *Reasons for deleting the House provision.*—Cases were called to the attention of the House Committee on Ways and Means where individuals have been covered by more than one accident or health insurance program. This occurs on occasion when the individual himself carries more than one policy, and occurs in other cases when

[1] An exception to this rule provides that amounts received under accident or health insurance policies are to be included in gross income to the extent they represent medical expense deductions allowed in previous years.

the individual may carry a policy and also his employer may provide for the payment of medical care either through an insurance policy or through self-insurance. In these cases, the employee may receive double payments with respect to the same expenses incurred with respect to a given injury or sickness. In these cases, the House provision would have treated the excess of the amounts received over the actual expenses incurred as income received by the individual.

Your committee is in agreement with the objective of the House provision. However, it has been called to the attention of your committee that the National Association of Insurance Commissioners this last December adopted a report on overinsurance recommending the enactment of legislation at the State level pertaining to this subject. The legislation recommended in effect would provide amendments to the uniform individual accident and sickness policy provisions of State law providing that health insurance benefits are to be prorated in the event of overinsurance among the carriers on the risk. This recommendation of NAIC is likely to lead to changes in State law within the next year or two in many, if not most, of the States. This in effect would eliminate the overinsurance with which the House bill provision is concerned. In view of this, your committee concluded that it would be better to remove the House provision from the bill and see if the problem of overinsurance is not met in the relatively near future by action by the various States. Your committee will review this matter within the next year or two and should implementing legislation not be acted upon by most of the States, it will then reconsider this provision. Your committee has concluded, however, that the problem is broader than merely the tax aspect and, therefore, that it would be more appropriately handled by the States than by amendment to the Internal Revenue Code.

2. Carrying charges (sec. 215(c) of the House bill)

(*a*) *Present law.*—Among the itemized deductions allowed taxpayers under present law is the deduction for interest payments. Administrative practice has long allowed as an interest deduction the portion of any carrying charges on installment purchases to the extent the interest element is stated separately. In 1954, Congress also provided that an interest deduction was to be available in the case of carrying charges stated separately even where the interest charged could not be ascertained directly. In such cases, the law provides that so much of the carrying charges as equal a 6-percent interest charge on the average unpaid balance under the contract is to be allowable as an interest deduction. This provision applies, however, only in the case of "personal property" purchased under an installment contract.

(*b*) *Reasons for deleting the House provision.*—Cases were called to the attention of the House Committee on Ways and Means where carrying charges are imposed with respect to tuition payments to various educational institutions. On the basis of this, the House bill would have extended the deduction for part of the carrying charge as interest in the case of carrying charges for services as well as personal property. Your committee would have no objection to extending this provision to cover service charges which are in the form of tuition payments; however, before this is extended to service charges, generally, your committee believes that there should be a further investigation of what might be covered under such a provision.

3. *Increase in basis with respect to certain foreign personal holding company holdings (sec. 216(j) of the House bill)*

(*a*) *Present law.*—Under present law the undistributed income of a foreign personal holding company is included in the income of the U.S. shareholders of the company and taxed to them. This treatment applies only where 50 percent or more in value of the outstanding stock of the corporation is owned directly or indirectly by five or fewer individuals who are citizens or residents of the United States. In addition, in the first year, 60 percent, and in subsequent years 50 percent, of the corporation's gross income must be "foreign personal holding company income." In general terms, this income consists of passive or investment forms of income, such as dividends, interest, etc. To a substantial degree, the same type of income is classified as foreign personal holding company income as is classified as personal holding company income in the case of domestic companies.

Stock in a foreign personal holding company differs from most other property in that, at the time of the death of the U.S. shareholder, it generally does not receive a new basis equal to its fair market value. Actually, the applicable rule in this case is that the basis of the stock at the time of the death of the decedent is to be the fair market value at that time or the basis of the stock in the hands of the decedent, whichever is lower.

For foreign corporations, including foreign personal holding companies, to participate in a tax-free reorganization it must be determined to the satisfaction of the Secretary of the Treasury that the exchange was not in the pursuance of a plan having as one of its principal purposes the avoidance of Federal income tax. Of the two basic tax provisions on corporate liquidations, sections 331 and 333, foreign companies can use only section 331. Section 331 provides for the imposition of the regular capital gains tax on appreciation in the value of the stock. Section 333, which foreign corporations cannot use, provides that the accumulated earnings and profits of the corporation are to be taxed to the noncorporate shareholders as dividends and that capital gains are to be recognized on other appreciation in the stock only to the extent of the money and stock or securities acquired by the corporation after December 31, 1953, exceed the earnings and profits received as dividends. However, this provision also provides, in the case of assets acquired by the corporation before January 1, 1954, that no gain is to be recognized to the shareholder but that instead the shareholder is to receive the same basis for the assets received which he had for the stock (increased for gain recognized and decreased for money received).

(*b*) *Reasons for deleting the House provision.*—The House Committee on Ways and Means noted that the stock of a foreign personal holding company, when the shareholder dies, received much harsher treatment than is true of practically all other property included in the decedent's estate. Generally, property receives a new basis at a decedent's death equal to its fair market value, either at the time of the decedent's death or at the alternate valuation date 1 year later. Moreover, in the case of gifts where the donee carries over the basis of the donor, an increase in the basis (up to fair market value) is allowed to the donee with respect to any gift taxes paid on the property.

The House recognized that a relatively harsher treatment for the basis of the stock of these foreign personal holding companies is justified in order to discourage their use generally. However it was believed that it was appropriate to permit the same general type of adjustment to the basis as is presently permitted in the case of gifts; namely, to permit an increase in the basis of the stock of the foreign personal holding company equal to the death transfer tax imposed with respect to the appreciation in the value of the stock.

In view of the fact that the issue of a carryover of basis at date of death has not been dealt with by your committee in this bill, it concluded that it would be more appropriate to postpone consideration of this amendment until that broader topic was under consideration.

In addition, the House bill provided that these foreign personal holding companies were to be treated the same as domestic corporations for purposes of section 333 if the liquidation is completed shortly after the date of enactment of this bill. Since such companies are likely to have little if any accumulated earnings and profits, this in effect means that the shareholders would pay a capital gains tax on the appreciation of their stock in the corporation only to the extent they receive money, or stock or securities acquired after December 31, 1953, and that the basis of assets received in the liquidation is the basis of their stock in the corporation increased by the gain recognized. In such cases this property was to receive the same basis as it would if the shareholder died still holding the stock in the foreign personal holding company until this property had passed through one estate—the shareholder's or any transferee's.

Your committee has also decided not to include this aspect of the House provision in your committee's amendments. The same issue of the basis at date of death is involved here as where the stockholder dies still holding the stock of such a company.

4. Capital gains and losses (sec. 219 of the House bill)

(*a*) *Present law.*—Under present law, capital gains and losses are divided into two general classifications: short-term capital gains and losses and long-term capital gains and losses. The former are gains and losses on assets held for not more than 6 months and the latter are gains or losses on assets held for longer periods of time.

Gains and losses in each category are first offset against other gains or losses in the same category. Thus, there is determined "net," short-term gains or losses and "net" long-term gains or losses. Next, any net short-term gains are offset by net long-term losses or vice versa.

Net short-term gains in excess of net long-term losses are taxed to individuals or to corporations as ordinary income. In the case of net long-term gains in excess of net short-term losses, however, the tax treatment applicable to individuals and corporations differs somewhat. In the case of individuals, such a gain is included in the taxpayer's ordinary income and then reduced by a 50-percent deduction, or alternatively, the entire gain is omitted from the taxpayer's ordinary income base and a flat 25-percent tax paid with respect to this gain. In the case of corporations, there is no special 50-percent deduction. Instead, the corporation either includes the entire gain in its ordinary income, or alternatively, pays a tax of 25 percent on these capital gains.

The tax treatment of capital losses also differs somewhat between individuals and corporations. As previously indicated, any net short-term loss is first offset against any net long-term capital gain and vice versa. If there still remains an excess of capital losses (either short term or long term), these losses may be offset against ordinary income in the case of individuals but only to the extent of $1,000. If any net loss still remains, it may be carried forward for a period of up to 5 years as a short-term capital loss (whether such loss was in reality a long- or short-term loss) and as such in each of the years in succession first offset against net short-term capital gains, then against net long-term capital gains and finally against ordinary income to the extent of $1,000.

In the case of corporations, capital losses as in the case of individuals are first offset against gains in their own category (short term or long term) and then against gains in the other category. However, any remaining loss may not be offset against ordinary income to any extent, but it may be carried forward as a short-term loss and offset against short-term and long-term capital gains in each of the 5 succeeding taxable years.

The capital gain and loss treatment described above applies in the case of the sale or exchange of capital assets. In addition, certain other items are taxed in the same manner as capital gains. The principal category of assets treated in this manner are depreciable assets. Such assets, if the gains exceed the losses, are treated as capital gains; but, if the losses are in excess of the gains, they are treated as ordinary losses. Included with depreciable property for this purpose also are gains or losses from—

1. the sale of timber;
2. coal royalties;
3. livestock held by the taxpayer for draft, breeding, or dairy purposes if held by him for 12 months or more;
4. the sale of an unharvested crop sold in connection with the sale of the land.

Other types of items which are eligible for capital gain treatment are patent royalties received by the creator of the patent, certain lump-sum pension payments, and certain termination payments received by employees with more than 20 years employment. Income arising from the sale of stock acquired under a restricted stock option represents still another form of income accorded capital gains treatment under present law. In addition, this bill (sec. 228) provides capital gain treatment for iron ore royalties.

(*b*) *Reasons for deleting the House provision.*—The House bill would make three basic changes in the tax treatment of capital gains and losses. First, it would decrease from 50 to 40 percent, in the case of individuals, the proportion of the capital gain included in the tax base where the asset involved has been held for more than 2 years, and it would provide in such a case a maximum tax rate of 21 percent in lieu of the 25 percent; second, it would limit the more favorable capital gains treatment described above so that this treatment would not be made available with respect to transactions where the capital gains treatment under present law is made applicable to certain types of assets which are not capital assets; and, third, it would provide an indefinite carryover of unused losses in the case of individuals in lieu of the present 5-year limitation.

The Secretary of the Treasury in his testimony before your committee requested that the first two of the changes listed above not be made. He based this primarily on the fact that the administration in recommending lower capital gains tax rates had done so only as a part of a recommendation providing additional taxation on unrealized gains at death. Subsequently, this recommendation was modified to call for a carryover of the decedent's basis in such a case to the one receiving the property from the decedent. The House Committee on Ways and Means considered this latter proposal but rejected it at least in part on the grounds that there were technical problems which had not been satisfactorily worked out. In view of this, the Secretary of the Treasury in his testimony before your committee strongly urged that it not consider reducing the capital gains tax rates at this time.

In addition to the question raised by the Secretary of the Treasury as to whether capital gains tax rates should be lowered at the present time in view of the fact that other related structural changes are not now being made, questions arise as to the desirability of dividing the long-term capital gains group into two parts. Information submitted to your committee made it quite clear that this would substantially further complicate an already complex capital gains tax schedule. If the House provision had been adopted, not only would it be necessary to report separately three instead of two general categories of capital gains, but it would also be necessary to subdivide the proposed class A and class B gains between those coming under section 1231 and those which do not. Although gains from the sale of such assets result in capital gains where there is a gain from all such assets taken together, nevertheless, if there is a loss from the aggregate of these transactions with respect to these assets, they give rise to ordinary gain or loss. In addition, it is necessary on this schedule to account for the "recapture" of ordinary income provided generally for tangible personal property in the Revenue Act of 1962 and the somewhat different "recapture" rule provided in this bill with respect to real estate. As a result of the interrelationship of these factors, your committee concluded that it would be better not to further complicate this schedule at the present time by this further breakdown of what are presently long-term capital gains or losses for individuals.

Your committee also was concerned about the capital gains provision of the House bill because the benefit from this provision would have been largely concentrated in the very highest income brackets. The concentration of capital gains in the higher income levels in fact is a major factor accounting for the effective rates in the highest brackets being substantially below the rates shown in the tax rate schedule. Table 11 shows, for example, that, although those with incomes over $200,000 represent a small fraction of 1 percent of all the taxpayers, nevertheless they receive 16 percent of all capital gains. This is about the same percentage of capital gains received by the 58 percent of all taxpayers having incomes below $5,000. Those with incomes of $100,000 or over, although representing only 0.04 of 1 percent of all taxpayers, nevertheless receive 24 percent of all capital gains.

The effect of reducing the capital gains inclusion factor, or alternative rate, because of this concentration of these gains in the higher income classes would, of necessity, have meant that most of this relief would have gone to those with the highest income levels. This

is shown in table 12, which presents the overall distributional effects of the House and your committee's bill in detail for incomes over $50,000. This table indicates that, although the capital gains reduction in the House bill as a percentage of the present total tax amounted to only 0.7 of 1 percent, nevertheless the tax reduction which this would have accorded those with incomes between $100,000 and $200,000 would have been 3.4 percent; and this percentage would have risen to 7.4 percent for those with incomes of $1 million or over. This can be compared with the capital gains tax reduction accorded those with incomes of $3,000 and under of 0.3 of 1 percent. Your committee did not believe that a reduction of this type was justified in view of the overall distribution of reductions in this bill.

TABLE 11.—*Capital gains, by income levels*

Returns with adjusted gross income of—	Comprise this percentage of all taxpayers—	But receive this percentage of all capital gains
$200,000 and over	0.0096 of 1 percent	16
$100,000 and over	0.04 of 1 percent	24
$50,000 and over	0.2 of 1 percent	35
$10,000 and over	8.7 percent	69
Less than $5,000	57.8 percent	17

TABLE 12.—*Overall distributional effects of the House bill (including capital gains changes) and the Finance Committee bill (which retains present law capital gains treatment)*

Adjusted gross income class (in thousands of dollars)	Total tax reduction as percentage of present tax		Capital gains tax reduction in House bill as percentage of total present tax
	House bill	Finance Committee bill	
0 to 3	38.6	38.6	0.3
3 to 5	26.5	27.3	.3
5 to 10	20.1	20.9	.2
10 to 20	16.9	17.3	.4
20 to 50	16.0	15.8	1.0
50 to 100	13.5	12.3	2.0
100 to 200	12.2	9.7	3.4
200 to 500	12.4	8.1	5.0
500 to 1,000	12.1	5.7	7.2
1,000 and over	12.0	5.6	7.4
Total	18.9	19.1	.7

Source: Treasury Department.

It should be noted that the great bulk of capital gains is accounted for by taxpayers by including 50 percent of the gain in income rather than by subjecting these gains to a separate flat 25 percent tax. It has been estimated that most of the capital gains fall in the former category where 50 percent is included in the ordinary income tax base. As a result, the regular rate reductions provided in this bill, which range from 30 percent for those in the bottom brackets to 23 percent for those at the top, will also be applicable in the case of these capital gains. Thus, even without any special tax treatment for capital gains, a substantial reduction in tax is provided by your committee's bill with respect to these gains.

INDIVIDUAL VIEWS OF SENATOR PAUL H. DOUGLAS

Good Features of the Bill

There are many good features in the present tax bill, H.R. 8363. Among these are (1) the fact of tax reduction itself which will stimulate demand, production, and employment; (2) the minimum standard deduction of $300 per taxpayer plus $100 for each family dependent (this with the per capita exemption of $600 means that families of four whose yearly incomes are less than $3,000 will be exempted from taxation—as they should be—instead of those under $2,666 as is now the case, i.e., $2,400 plus the 10 percent standard deduction); (3) the shifting of the corporation tax collection period from the present delayed system to roughly the same basis as taxes are now collected from individuals; (4) the repeal of the 4 percent dividend credit against taxes actually owed, and certain other features as well; and (5) the elimination by the Finance Committee of the reduction in the capital gains tax.

The capital gains loophole is already the largest loophole in our tax system. Between $5 and $6 billion a year are lost because of this provision. The bill as it came from the House of Representatives would have widened and deepened this hugh loophole by reducing the rate on long-term capital gains from 50 to 40 percent, subject to a maximum of 21 percent instead of the present inadequate rate of 25 percent. This was eliminated by a narrow margin in the committee. There is grave danger that this reduction will be restored in the conference committee. This danger will be reduced if the Senate itself, by a decisive vote, approves the action of the Finance Committee in eliminating this section from the House bill. This, in my judgment, should occur early in the Senate proceedings.

There are some grave defects in the bill as presented which I believe the Senate should correct. The bill also fails to effect much needed reforms in our tax system which are long overdue and for which there will not be another opportunity for some years.

Generally speaking, our present tax structure is riddled with injustices and inequities. There are so many loopholes that 20 people with incomes over $500,000 in 1959 paid absolutely no taxes at all while the average amount of taxes actually paid by all those with incomes of $5 million or more came to slightly less than 25 percent instead of the 90 percent they would theoretically be expected to pay. This is less than the amount which a typical American family with a taxable income of $12,000 derived from wages and salaries would be expected to pay or, because of collection at the source, would actually pay.

If we could close the various loopholes and "truckholes" in the Revenue Act, we could reduce the individual income tax rate from the present scale of 20 to 91 percent to a range of from 10 percent as the

minimum to a maximum of 50 percent. In doing so we would raise as much revenue as we do with our apparently high rates which, as a matter of fact, are not paid by the vast majority of those in the upper income tax brackets. In this connection it is appropriate to quote a salient passage from Philip M. Stern's forthcoming book entitled "The Great Treasury Raid" in which that keen student of our tax system, comments as follows:

> For a raid of its magnitude, the time (high noon) and setting (the U.S. Treasury, a stone's throw from the White House) showed a breathtaking boldness of design and planning. From out of nowhere, it seemed, they appeared—old people and young, rich and poor, an oil millionaire here, a factory worker there, a real estate tycoon, a working mother, several well-known movie stars, some corporation presidents, even the chairman of a powerful congressional committee. It was a mixed lot, all right, that converged on the Treasury Building that high noon. Into the building they strolled, gloriously nonchalant. No one stopped them; not a guard looked up to question them. Quickly and quietly they found their way to the vaults; opened them noiselessly with the special passkeys each had brought with him. Like clockwork, with split-second timing, each went to his appointed spot, picked up a bag and walked out as calmly as he had entered. At the exits the guards sat motionless. At precisely 12:04 it was all over. Each of the "visitors" had vanished into thin air.
>
> So had $40 billion from the U.S. Treasury.

The administration initially made a partial but somewhat ineffectual effort at tax reform. But when most of its proposals were rejected by the House Ways and Means Committee, they ceased to fight with any vigor except on two matters, namely (*a*) the abolition of the unjust 4 percent dividend credit inserted under the Eisenhower administration in 1954, and (*b*) the removal of the reduction in the capital gains tax. Neither of these features is in the present bill, and I hope we can hold these gains.

In other words, the great mass of citizens, primarily in the lower income brackets, have to pay high taxes because the laws have been so shaped that a minority are able, by avoidance and evasion and counseled by highly paid and able tax attorneys, to take advantage of every twisting and turning of the laws. I repeat, if we could plug the loopholes and "truckholes," we could collect the same total amount of revenue with half of the present tax rates. Our failure to do so means that the present unfair and unjust system continues. As a consequence, the present bill, except for the unjustifiable provision with respect to utilities, remains neutral with respect to remedying the great injustices in the tax system. Its failures are not, for the most part, acts of commission, but rather acts of omission. Because of the stimulus which the tax cut itself should bring to the economy, there are many like myself who can therefore support the bill because its stimulating features are good, but in the meantime express dissatisfaction over the failure of the House and the Senate committees to remedy many of the well-known and major loopholes in

the tax system. To us, tax reform is as important as tax reduction. But this bill has a great deal of reduction but very little reform.

The major loopholes in the system are (1) the present provisions for capital gains—the biggest loophole of them all. Huge amounts of ordinary income are taxed at a special lower rate, and other gains are not taxed at all, as in the case of the failure to tax capital gains at death.

The abuses involved in the oil depletion allowance, the writeoff of intangible drilling and development costs in the first year, and the ability of the oil industry to count royalties abroad as a tax payment instead of a deduction of expenses, is another area of grave abuse.

There are additional areas such as the unlimited charitable deduction, which is responsible for people with millions of dollars of income escaping any Federal taxation at all, and such other well-known loopholes as stock options, collapsible corporations, and corporate spinoffs, which mean that the favored few pay a smaller proportion of their income in taxes than the many with modest incomes.

Furthermore, State and local systems of taxation are highly regressive. That is to say, those with low incomes pay a higher proportion of their incomes in taxes than do those with high incomes. The progressive features of the Federal system should offset this so that the overall tax system of the country—Federal, State, and local—is at least proportional. But the fact that the Federal system is riddled with loopholes which favor high income groups, plus the fact that about $13 billion a year is collected in excise or sales taxes at the Federal level, means that even the Federal system has very little, if any, progression in it, and the total tax system is probably somewhat regressive in nature. The present bill fails to correct this situation. The repeal of some of the most onerous and least justifiable of the excise taxes could help to make our tax system more fair.

I therefore hope that we may take the following action to improve this bill:

First. We should try to get the Senate, by an overwhelming vote, to uphold the Finance Committee's action in knocking out the new capital gains loophole. This would strengthen the Senate's position in the conference committee. Otherwise, the capital gains provision in the tax law may end up worse than under present law. This should be a minimum position and it would certainly help if the Senate would also try to do something in the area of capital gains at death.

Second. The Senate should eliminate that feature of the tax bill which has no rightful place in a tax bill, namely, section 202(e) which states that the Federal regulatory commissions need not pass through the tax savings from the investment credit to the consumer. Apart from its lack of merit, this is basically a regulatory rather than a tax matter and really has no place in this bill.

Third. We should retain in the law the Long amendment of 1962 with respect to the investment credit. Corporations which invest $100 in investment reduce their taxes by $7. This is the equivalent of a $14 before-tax deduction. The Long amendment in 1962 said that a corporation could not depreciate more than $93 worth of investment, but the bill before us will allow the full depreciation of the asset even though its actual cost was less because of the investment credit. The elimination of the Long amendment will ultimately cost about $600

69-108 O—66—pt. 3——13

million a year and hence raise the investment credit to about 11 percent.

Fourth. The present provisions in the law with respect to stock options should be greatly modified and the provision in the bill with respect to the amount of term insurance which a corporation can purchase for its employees should be reduced at least to the House figure.

Fifth. We should try to repeal some of the retail excise taxes, such as those on leather goods, women's handbags, inexpensive jewelry, cosmetics, and furs, but we should place a limit of $100 on the amount which is free of tax so that we do not reduce the tax on luxury expenditures.

Sixth. Furthermore, we should certainly try to do much more than is done in the bill with respect to the oil depletion allowance. As a minimum, we should prohibit excess depletion from being used to offset income from sources other than direct oil production. This was proposed by Senator Williams in the committee, accepted twice, but finally considerably watered down at the last moment.

We should also consider an amendment to the depletion allowance which, while retaining depletion for the small producer who does take considerable risks, reduces the depletion allowance for those whose income from gas and oil is between $1 and $5 million to 21 percent, and for those with incomes from gas and oil in excess of $5 million to 15 percent. This would save $400 million a year.

Seventh. We should also not undo the minor progress made with respect to travel and entertainment allowance loopholes in 1962. We should not finally adopt some of the provisions either in the bill or which have been proposed to the bill.

Eighth and finally. We should consider the equity of the rate structure itself. The present bill grants about $2½ billion in tax reductions to corporations and over $9 billion to individuals. The latter is done by reducing the rates; namely, from the present 20 to 91 percent to a figure of 14 to 70 percent.

In addition, the bill splits the rates for the first bracket and gives a new minimum standard deduction. These last two features redeem the inequities in the nature of the personal tax reduction so that there is some degree of equity. However, there is neither a strong case nor any equity considerations involved in reducing corporate taxes by $2½ billion. Since 1954, corporations have had tax reductions of almost $5 billion through the 1954 fast tax writeoff and depreciation provisions, and the 1962 investment credit, and revision of Bulletin F. This bill grants another $2½ billion to corporations while individuals receive some reduction for the first time.

Because of this, it would be well to use some of the corporate reduction to increase the minimum standard deduction or to increase the $600 exemption. Personally, I would propose taking at least $1 billion from the corporate reduction and using the funds to increase the personal income tax reduction. This would be more equitable, would make the tax system more just, and, in my judgment, would give a much stronger stimulus to the economy than the present method.

Moreover, the Senate and the Congress should give serious consideration to simplifying the tax structure and making it more equitable

by the simple process of repealing most of the existing loopholes and truckholes in the tax laws and then using the gain in revenue to bring a drastic reduction in income tax rates. By closing most of the present loopholes, the tax rates could be reduced from the present level of 20 to 91 percent to a new level of about half that amount, or from 10 to 50 percent. This would simplify the tax structure, make it more just and equitable, and improve its enforcement, while benefiting the great mass of Americans who pay their taxes and who do not either avoid or evade them. The longer we put off tax reforms the more unjust our system becomes. The time to act is now.

PAUL H. DOUGLAS.

INDIVIDUAL VIEWS OF SENATOR RIBICOFF

This tax bill will have my vote, but not my unqualified approval.

Many unwise provisions have been included, some desirable provisions have been omitted, and the bill as a whole will not achieve all of the results that have been claimed for it.

Rate reduction and reform are the principal needs to which this bill should be directed. It achieves rate reduction. It does not achieve reform.

Unfortunately, the public has been largely unaware that the issues in this bill included anything more than simple rate reduction. To judge from the general reaction to the bill, one would think it contained a single provision saying, "Taxes shall be reduced by $11 billion." The fact is the bill containes more than 300 pages of detailed provisions, making a great number of changes in 37 separate areas of the Internal Revenue Code, in addition to the provisions making reductions in tax rates. In a few instances, these so-called structural changes do make modest reforms. But many needed reforms have not been made, and many of the changes in the bill are the opposite of reform: they are special preferences for a few taxpayers.

I do not agree that we should benefit—

- utility companies by prohibiting the "flowthrough" of the investment credit to consumers;
- department stores by allowing special tax treatment of revolving credit sales;
- iron ore companies by providing capital gain treatment for certain royalty payments;
- companies with foreign subsidiaries by permitting a 10-year carryforward for expropriation losses;
- insurance companies by giving them capital gain treatment of bond discounts in certain situations; and
- purchasers of new equipment by doubling the benefit of the investment credit.

These provisions are all included in the bill. The revenue loss for 1964 is estimated at $305 million.

Left out of the bill are provisions to reduce depletion allowances, end the immediate writeoff of intangible drilling and development costs for oil and gas, and abolish the preferential treatment of stock options. These provisions would have prevented a revenue loss in 1964 of $1,150 million.

These sums of money would more than pay for two other provisions which I believe should be included in this bill. These provisions would benefit the national interest and help millions of individuals. I will offer them as amendments on the Senate floor.

My principal amendment provides an income tax credit for college costs. The amendment provides a credit based on the first $1,500 of tuition, fees, books, and supplies at an institution of higher education. The credit is available to anyone who pays these costs—parents, students, or any other person who wants to pay for the

education of a deserving boy or girl. The credit is 75 percent of the first $200, 25 percent of the next $300, and 10 percent of the next $1,000. The credit is reduced by 1 percent of the amount by which the taxpayer's adjusted gross income exceeds $25,000—in other words, reduced $50 for each $5,000 of income above $25,000.

The financial burdens of high college costs are just as entitled to be eased through tax relief as medical expenses and casualty losses. These college costs hit middle income and lower middle income families with a serious impact. The man earning $8,000, $10,000, or $15,000 is generally not eligible for scholarship or loan funds for his son or daughter, and he faces a heavy burden in paying $2,000, $1,000, or even $500 for college costs.

One of the premises of this bill is that incentives should be given to capital investment. Yet there is no better form of capital investment we can make than investment in education. The investment credit in the 1962 tax bill and the revised depreciation guidelines provide over $2 billion in tax relief for investment in machinery. The pending bill provides millions more for this purpose. I believe we should invest in the education of our youth. In the last analysis, trained minds, not just new machines, will insure the success of this Nation.

Four main objections have been raised against this proposal:

1. It is claimed the amendment helps the wealthy. The fact is the credit benefits the $30,000 man less than the $5,000 man, and does not benefit the $60,000 man at all. Under this amendment, 91 percent of the dollar benefit goes to families with incomes below $20,000, 63 percent to families with incomes below $10,000.

2. It is claimed the amendment discriminates against the poor. The fact is the credit operates exactly like all other tax relief provisions of the Internal Revenue Code: it is available only to those who pay a tax. The medical deduction is not used by nontaxpayers, yet few would oppose it on this ground.

Those in the very low income groups who pay no taxes need a sound program of student aid including scholarships. I am for such a program. It is needed in addition to tax relief for the middle-income families. These are not alterntives. They are both necessities.

3. It is claimed the amendment favors the high tuition colleges, most of which are private colleges. The fact is the amendment favors the low tuition colleges, most of which are public colleges. The credit on a $200 expense is $150. That's 75 percent. The credit on a $1,000 expense is $275. That's only 27 percent. Even where a college charges no tuition, the expense of fees, books, and supplies invariably totals $200 or more.

4. It is claimed all the tax benefit will be absorbed in tuition increases. The fact is that tuitions go up whether tax relief is granted or not. Furthermore, any colleges that want to raise tuition because they know parents have some extra money will take advantage of the rate reductions in this bill. They can absorb the tax dollars that come from rate reductions, whether or not my amendment is added to the bill. Finally, the amendment provides only a 10-percent credit on expenses over $500, so every added $100 of tuition over $500 results in only a $10 saving to the parent—scarcely an incentive to the college.

For years proposals similar to this one have regularly been introduced by many Members of the Senate. I believe there should be an

opportunity for every Senator to vote on this proposal. I intend to see that this opportunity is provided.

My second amendment permits accelerated deductions of expenses for air and water pollution control equipment. If we are ever to make substantial progress in combating air and water pollution, we must recognize that private industry has a major part to play. But playing that part costs money. Since these expenditures are for a public purpose, the public should assume part of the burden through tax relief.

Industry needs financial encouragement to speed the acquisition of this equipment. This equipment produces no revenue to the company that installs it. Yet the Internal Revenue Code and many new amendments provided in this bill provide billions in tax relief for expenditures that are revenue producing. In fact, the Treasury Department last year proposed that fast tax writeoffs be provided for all equipment purchased for research and development expenditures which are clearly revenue producing.

When we are providing hundreds of millions to establish air and water pollution control programs, we should not overlook the need to help industry make the purchases of pollution control equipment which can make the difference between success or failure in cleaning up our environment.

Finally, I must express a word of caution concerning the claims that have been made for this bill as a whole. It can legitimately be called a needed stimulant to an economy that is not operating at full capacity. But it cannot and should not be expected, in and of itself, to spur that economy to full capacity or to solve many of the difficult problems that have been preventing our economy from reaching full capacity. Chief among these is unemployment and while this bill will help create new jobs, I do not believe it will solve the basic problem of structural unemployment. Economists with views as divergent as Leon Keyserling and Roger Freeman agreed on this point in testimony before the committee.

"I doubt that tax reduction can make a major impact on our present type of unemployment," said Freeman. "Even well-designed tax reduction cannot cope with a large portion of the unemployment problem," said Keyserling.

This joint warning should be well heeded. As we enact this tax cut bill, let us not delude ourselves or the country into thinking that it is a cure-all for our problems, especially for our unemployment problem.

We should pass this bill despite its imperfections. Taxes are too high and do act as a deterrent to individual initiative. This bill will be of benefit to all segments of our society and will be helpful to the economy. But we must continually strive toward the goals that remain: tax reform, a meaningful reduction in unemployment, and a fully productive economy.

Abraham Ribicoff.

MINORITY VIEWS OF SENATOR ALBERT GORE

Position in Brief

On balance, in the light of its design and consequences, and in view of its scope and magnitude, this is one of the most important and most ill-advised bills ever to come before the Congress for serious consideration.

Born of ineptitude in economic forecasting, sired by political considerations, and nurtured by the greed of special interests, it creates more inequity in many respects and bears no resemblance to true tax reform. Favoritism in tax law, furthered by H.R. 8363, threatens to erode our economic, political, and social structure.

Specifically, this bill—

(1) Is the embodiment of fiscal folly. While it is generally recognized, and I am no exception, that a balnced budget is not necessary or even desirable in every year, and in all circumstances, debt and deficit cannot be ignored indefinitely. After 3 years of unprecedented prosperity, expansion, and growth, and with nearly all the important economic indicators pointing upward, we certainly should not seek deliberately further to increase debt and deficit and to impair, for all foreseeable time our capacity to meet pressing public problems by a drastic reduction of governmental revenue.

(2) Provides no solution to our economic or social problems. The vast, unfulfilled economic needs of our society lie in the public sector—better housing for low-income groups, better mass transit systems, better educational facilities at all levels, better highways, more and better hospitals and nursing homes, more clean drinking and industrial water. The private sector of our economy is the wellspring of our continued prosperity, but this sector is fat with unused productive capacity. The unemployed and those burdened by poverty need specialized assistance in overcoming specific problems. Those who are so enamored of aggregates and macroeconomics fail to recognize that specific solutions are needed for very specific and pointed problems. The war on poverty is thus far but a skirmish of words—we need a pitched battle, with live and heavy ammunition, aimed at specific targets. Necessary programs require more, not less, revenue.

(3) Would provide the wrong type of tax cut, even if a large reduction in revenues were justified at this time. The tax reduction provided by this bill for the already very rich, through both a drastic reduction in high bracket personal income rates and a cut in corporate rates is unconscionable. Equity aside, sound economic theory is violated. If any shortage exists in our economy in the private sector, it is to be found in an absence of broadly based purchasing power. An equitable solution by way of revenue reduction would dictate a tax cut which would restore some of the prewar purchasing power which has, ever since that

time, been withheld. An increase in the personal exemption, with possible consideration being given to the restoration of some preferential treatment for earned income would be not only more equitable but more defensible from a purely economic standpoint. The reconcentration of wealth directly attributable to the tax cuts as well as indirectly realized from increased interest payments—acting as transfer payments—which will be stepped up by virtue of the built-in deficits created or increased by this bill, poses grave dangers. Political democracy can hardly survive without economic democracy.

Rate Reduction

GENERAL

The subject bill represents one of the most flagrant, obvious, and dangerous attacks of the past 35 years on the ideals, purposes, and underlying machinery of our economic democracy. Economic democracy is one of the hallmarks of our society, without which political democracy, social progress, and national purpose would soon cease to be.

In the name of equity this frontal attack is being made on the graduated income tax. The result will be a reconcentration of income and wealth in the 1929 pattern—an increased inequity.

In the name of economic expansion and employment opportunities, this bill would increase the already high liquidity of corporations, resulting not in increased jobs, but in increased automation, increased outflow of investment funds and jobs to Europe, and increased dividends to line the pockets of the rich and very rich.

In the name of social justice—the war on poverty, ignorance, disease, the hopelessness of those who dwell in city slums or in areas of worked out agricultural and mineral production—this bill would put the Federal Government in a fiscal straitjacket, denying to the Government the revenues required for any successful assault on poverty and its ugly bulwarks.

In the name of tax reform, this bill would, for at least a generation, dull the spur for real reform. Professed liberals will fain surprise in future wars for reform when they find themselves deserted by some of their current allies, even as the armies of David withdrew from Bathsheba's husband, leaving him naked and alone before the walls.

If the pattern of this bill is followed, we will likely witness, within the next few years, a worsening of our economy. We may well find ourselves repeating the 1954–57 pattern of nonsustainable productive capacity and increased unemployment.

Government—society organized for political purposes—does not exist for economic reasons alone, and I would never equate economic prosperity with the good life. But a society does not long live when it supports a politicoeconomic system which gives to the man who has one loaf two, while withholding from the man who has half a loaf or none.

Ideals and attitudes are as important as economics. The cynicism of some of the backers of this bill will be long remembered by those who are now without effective representation in Washington. Propaganda, like morphine, soon wears off. It will not be long before the majority of our citizenry awake to the realization of reality and know

that their bag is still empty and there never really was a snipe in the woods at all.

We decry and deplore waste and inefficiency in Government spending—and rightly so. But those who are so enamored of aggregates and mesmerized by macroeconomic manipulation in the private sector seem to assume that they have discovered in a tax cut economic perpetual motion—without waste, without inefficiency, without friction. All we need to do, we are told, is to release the "brake" of taxation on the economy and the private sector will expand in exactly the right ways to cure unemployment, without inflation of course, and will with perfect equity insure the good life for all, without Government interference or activity.

And all this without error in decisionmaking. Where was Adam Smith's "unseen hand" when the Edsel automobile was stillborn?

The theory behind a tax cut of this type and magnitude, under conditions existing today, will not stand close examination. Indeed, it is difficult to pin down the theory upon which some base their support for this bill.

Regardless of theory, the practical results of a tax cut of the type proposed will be diametrically opposed to the ostensible goals of many of its proponents. The implementation of this fiscal folly is a reckless gamble with our entire national economy.

In theory, assuming we are all Keynesians, and assuming further that conditions today fit the situation envisioned by Lord Keynes when he tried to adapt economic theory to fit the world stagnation of the late 1920's and early 1930's, a deficit will inflate the economy. This deficit can be achieved by increased spending or decreased revenues. But conditions are far different in these days of dynamic expansion.

The result of this bill will be to transfer yet another large slice of national production and wealth from those who produce wealth to those who parasitically participate in its enjoyment.

II. THE ADMINISTRATION POSITION

From the early and recurring rumors of a tax cut which gained wide circulation in the early fall of 1962 to the present time, it has been difficult to understand from statements issued by spokesmen for the administration the specific purposes of this proposed tax reduction.

At times this bill seems to have been regarded as a vehicle for long-range tax reform.

At other times it appers to have been sold as a hedge against more or less imminent recession.

At still other items, it appears to be straight Keynesian deficit financing for the avoidance of low-level equilibrium in the economy.

Under current conditions, and in the form in which this bill now exists. This legislation makes a mockery of any and all these purported positions.

The late President Kennedy in his tax message of January 24, 1963, stated:

> My recommendation for early revision of our tax structure is not motivated by any threat of imminent recession * * *.

But by March, when some of the indicators seemed to hang a bit, he seemed to have something else in mind, telling us:

> If we don't have the tax cut, it substantially, in my opinion, increases the chance of a recession * * *.

By May it became apparent that 1963 would be a good business year, and Secretary Dillon came back to the original theme. On May 7, 1963, the Secretary of the Treasury—a consistent follower of Republican theory and doctrine—told the Chamber of Commerce of New York:

> Above all, it must be borne in mind that the President's program is not intended—and is not designed—merely as a quick and temporary shelter against recession. It was designed—and has always been intended—as a permanent program to raise our long term rate of overall economic growth.

But again, the late President Kennedy on September 9 expressed concern that without a tax cut in 1963 "we may move into a period of economic downturn."

Meanwhile, Dr. Heller was working the Keynesian theme. I must say he has stuck pretty closely to this line, which he set out most explicitly in an article which appeared in November 1962 in Nation's Business:

HOW CUT WOULD SPUR GROWTH

> The U.S. economy has consistently fallen short of its employment, production, income, and profits goals in the past 5 years. A sizable cut in tax liabilities both of households and businesses throughout the Nation would push the economy toward more robust activity in three main ways—ways which would bring business stronger markets, expanded investment opportunities and healthier profits:
>
> 1. Tax reduction would increase the disposable income—the take-home pay of consumers. Careful analysis of past experience indicates that consumers consistently spend from 92 to 94 percent of their disposable income. History also shows that when this income is increased, a high proportion of the increase is promptly spent.
>
> When consumers spend this income, markets strengthen, production rises, new jobs are created, and income and profits rise accordingly. This creates added cycles of private spending. Boosted spending and income results in what economists call the "multiplier effect." It produces an increase in gross national product of perhaps two or three times the original reduction in taxes. Gross national product, the total output of goods and services, is, of course, a major indicator of growth.
>
> 2. By strengthening sales and pushing output closer to capacity, tax reduction spurs investment in inventories and in new equipment and new plants. This impact on investment in productive capacity is called the "accelerator effect." The increased production of capital goods expands gross national product, stimulates further consumption and increases profits. It reduces the deterrent effect of excess capacity,

which has tended to discourage investment in productive facilities during the past 5 years or so.

3. Reducing personal and corporate taxes raises profit margins for businessmen and enlarges the supply of internal business funds available for investment. Tax reduction thus strengthens the incentive to invest in two ways: Businessmen have money available to undertake the risks of new investment. And there is the prospect of larger after-tax returns to be earned on new productive facilities.

So, tax reduction would help business directly by reducing the tax load on business enterprise and indirectly by stimulating demand for both consumer goods and capital goods, thereby boosting the volume of sales and output. Indeed, tax cuts achieve their stimulating effect mainly by inducing business to employ, produce, and innovate.

President Johnson stated in his Economic Report, "The tax cut will give a sustained lift, year in and year out to the American economy." This would seem to indicate that this action is in the nature of some sort of permanent reform.

Its proponents claim this bill will:

1. Stimulate economic growth.
2. Balance the budget.
3. Relieve unemployment.
4. Solve the balance-of-payments problem.
5. Avoid inflation.
6. Promote tax equity.

This is just what the doctor ordered, and it all comes in one little pill which causes the happy patient no pain whatsoever.

III. ECONOMIC EXPANSION

It is claimed that this bill would stimulate the economy in two ways. First, consumers, having more money to spend by virtue of a tax cut, will spend more and thus create additional demand. Second, investors will have more money to invest by virtue of being able to show a better rate of return.

But these are only the first steps. At that point the "multiplier" and the "accelerator" take over and we bootstrap ourselves up to the point where—within a relatively short time, of course—we increase our gross national product by at least three times the amount of the tax cut.

If there were a shortage of funds for investment, a tax cut for corporations might induce more investment. If there were a shortage of spendable personal income, a tax cut for consumers might create increased consumer demand.

But do these conditions prevail? Not at all. Corporations are highly liquid and rarely need to go to the capital markets for outside money. Corporations sold only about $1 billion of new common stock last year. Personal income, although poorly distributed, continues to rise. The irony of the tax cut is that it would give increased spending and purchasing power to those who need it least and who would use it sparingly. The man on the bottom of the poverty pile pays no income taxes now. He needs income, not a tax cut.

Now, what is the likelihood of complete, or nearly complete, and prompt, spending of increased personal income? The prospects are not good.

Already personal savings are high. Increased take-home pay by way of a tax cut is apt to increase savings, at least for several months. Of course, the man who is out of a job, or the man who is trying to get by on such a small income that he has no tax to pay, would spend more money if he could get it, but this bill does nothing for him.

Savings are up 25 percent in the past 3 years. Secretary Dillon, himself, in an interview reported in Banking for May 1963, said, "At present when our economy is not operating at full speed, it is characterized by what one might call an excess of savings."

If there is now an "excess of savings," why would it be thought that marginal income would be largely spent rather than saved?

I am not the only one who questions this aspect of this bill. As long ago as February 26, 1963, an article appeared in the Wall Street Journal emphasizing this point. Here are two paragraphs from that article:

> To many economists, the savings rise suggests that a tax cut to spur consumer spending—as proposed by the Kennedy administration—may not be particularly effective, at least in the middle and upper income brackets. If consumer demand continues to lag, they argue, a considerable part of extra income from reduced taxes would go into savings, rather than be spent.
>
> "The theory behind the tax cut idea is that it will stimulate demand," says J. Walter Thompson's Mr. Johnson. "But the savings accumulation suggests this may not happen." John R. Bunting, vice president of the Philadelphia Federal Reserve Bank, expresses "concern" that income consumers may receive through lower taxes "will be siphoned out of the spending stream" into more savings.

There is now no shortage of investment funds in the corporate structure. On the other hand, corporations are highly liquid. Profits are rising, and cash flows are rising even faster.

I do not see how hard statistics can be overlooked. In 1963, corporate cash flows, after allowing for taxes, amounted to about $60 billion. After record dividend payments, this left well over $40 billion in the hands of corporate management. Investment in plant and equipment amounted to only about $39 billion. Would anyone logically think that increasing cash flows by way of a tax cut would materially increase investment in plant and equipment—given these conditions?

We now have further statistical proof that a tax cut will induce little in the way of increased plant and equipment expenditures.

According to Dr. Heller, in addressing the Printing Industries of Metropolitan New York on May 20, 1963, a McGraw-Hill investment survey reported that business executives attributed $1.2 billion of the planned increase in plant and equipment expenditures for 1963 over actual expenditures for 1962 to the investment credit passed in 1962 by Congress and to the depreciation revisions instituted the same year by the Treasury Department. When one considers that the tax reduction given business as a result of these two changes in taxation amounted to about $2.25 billion, and this reduction in

revenues induced a 50-cent investment of each tax dollar lost, can we expect any better results from an across-the-board tax cut?

I can see no way by which this tax cut can increase the GNP by $30 to $40 billion—not without inflation—even if we accept Keynesian theory as valid and apply it to existing conditions.

The principal results of a tax cut for corporations will be increased dividends and increased foreign investment which adds to balance-of-payments difficulties. A side effect is further to entrench the Big Three's and make it more nearly impossible for new enterprises to grow up and challenge them. Competition will be increasingly a thing of the past.

Certainly a tax cut will have some effect on economic growth. But that effect, under current conditions, will be much smaller, and slower in developing, than we have been led to believe. A tax cut, especially one weighted largely in favor of those who need it least, is the most expensive and least efficient way imaginable to get an economic boost.

IV. BUDGET BALANCING

It is a bit difficult to understand how this proposed tax cut is to balance the budget.

Dr. Heller and other more or less straight Keynesians have reasoned that through the magic of the "multiplier" and "accelerator" a tax cut of about $11 billion will cause an increase in the GNP of $40 billion or so and this increased economic activity will, in turn, bring in enough taxes at the new, lower rates to balance or nearly balance the budget.

President Kennedy seemed to start out on this tack in his tax message to Congress last January. He stated, as I have already pointed out, "It would be a grave mistake to require that any tax reduction today be offset by a corresponding cut in expenditures." This is genuine Keynesian theory. A deficit-creating tax cut will spur the economy, but this stimulating action would be offset and negated by a corresponding cut in Government expenditures. If these two actions were taken at the same time, they would pretty well cancel each other out.

There was, last January, no evidence that the late beloved President Kennedy wanted to cut back on worthwhile programs. Indeed, his budgets emphasized positive programs of development and were partially responsible for our economic expansion since 1961.

Mr. Ford's group issued a pronouncement during last year's "millionaire's march on Washington" which stated:

> We, therefore, believe it possible to hold Federal expenditures in fiscal 1964 below the level set forth in the budget this January. We believe this would have been impossible without the current pressures for economics generated by a proposed tax reduction. We urge the Congress and the administration to work jointly to achieve this goal.

This rationale is interesting. We are urged to cut taxes, reduce revenues, run up larger deficits, and it is argued that this will put additional pressure on the President and the Congress to cut spending. Of course, the spending which some want to cut is in the fields devoted to the social advancement of the whole country, to the attack on poverty, ignorance, disease, and hopelessness.

If we adopt the wrong kinds of expenditure reductions, we will certainly do untold harm to the Nation and to the economy. For we must continue to pursue worthwhile programs. Highways, education, health, etc., must not suffer if the Nation is to make any worthwhile progress. But these are the programs which will suffer under the kind of philosophy embraced by Mr. Ford.

V. THE "BRAKE" THEORY

We are told that our high tax structure acts as a "brake" on the economy, stifling both investment and consumer purchasing. Releasing this "brake" will, according to the argument, promote investment and increase final demand.

A favorite propaganda trick is to state a conclusion as the basis for a second conclusion, hoping that the first conclusion will be uncritically accepted as a proven fact. Those who try to sell this "brake" theory are indulging in just such sleight of hand.

We have heard the European countries praised for their swift postwar recovery, and for their wise fiscal policies which have reportedly promoted high rates of growth. How does the tax take of these countries compare with our own?

Secretary Dillon has testified that total taxes collected by all levels of government in the United States in 1961 amounted to 28 percent of gross national product. No major European country collected a smaller percentage—France, 35 percent; Germany, 35 percent; United Kingdom, 29 percent; Italy, 28 percent.

One might legitimately discuss the incidence of certain taxes, and argue that our tax structure needs to be reformed. But this is no argument for a reduction in total revenues. It is this latter situation which we face in this bill. Will those who now advocate tax cuts for the rich soon come before the Congress to propose replacing the revenue loss by a general excise tax, further to oppress the poor?

What about this "brake" theory so far as high bracket individual taxpayers in this country are concerned?

The regrettable fact is that the rich and the very rich do not now pay their fair share of the tax burden. And this bill makes the situation more, not less, inequitable.

The very rich now pay a low percentage of their realized income in taxes. From table I below, furnished by the Treasury Department, I have developed table II which shows just how light is the taxload at the upper end of the income scale.

The "brake" theory simply does not appear plausible unless one examines the lower end of the tax and income scale. It is here that we may need to restore the broad base of purchasing power which existed prior to World War II.

TABLE I.—*Tax savings and increase in after-tax income under House bill*

[Married couple with 2 dependents, with typical dividends, capital gains and other income,[1] and typical itemized deductions]

Adjusted gross income [1]	Present law		House bill		Tax cut or increase in after-tax income		
	Tax	After-tax income [2]	Tax	After-tax income [2]	Amount	Percentage tax cut	Percentage increase in after-tax income
$3,000	0	$3,131	0	$3,131			
$4,000	$143	3,987	$103	4,027	$40	28	1
$5,000	299	4,827	219	4,907	80	27	2
$6,000	455	5,671	339	5,787	116	26	2
$7,500	719	6,971	569	7,067	150	21	2
$10,000	1,193	8,993	972	9,214	221	19	2

TABLE II.—*Effective tax rates under H.R. 8363*

[Married couple with 2 dependents, with typical dividends, capital gains, and other income,[1] and typical itemized deductions]

Adjusted gross income [1]	Realized income [2]	Tax under H.R. 8363	Tax as percentage of realized income	Adjusted gross income [1]	Realized income [2]	Tax under H.R. 8363	Tax as percentage of realized income
$3,000	$3,131	0	0	$25,000	$26,026	$3,983	15.3
$4,000	4,130	$103	2.5	$30,000	31,461	5,297	16.8
$5,000	5,126	219	4.3	$40,000	42,331	8,392	19.8
$6,000	6,126	339	5.5	$50,000	53,201	12,217	23.0
$7,500	7,636	569	7.4	$75,000	81,220	20,672	25.5
$10,000	10,186	972	9.5	$100,000	113,212	29,670	26.2
$12,500	12,736	1,373	10.8	$200,000	247,580	56,675	22.9
$15,000	15,385	1,830	11.9	$500,000	721,365	138,216	19.2
$17,500	18,033	2,296	12.7	$1,000,000	1,501,588	238,037	15.9
$20,000	20,713	2,820	13.6				

[1] Includes such income as wages and salaries, interest, rents, business and partnership income, royalties, and typical dividends and capital gains. Estimates of typical dividends and realized capital gains and itemized deductions are based on 1960 tax return data.

[2] Realized income exceeds adjusted gross income largely because adjusted gross income includes only 40 percent of capital gains under H.R. 8363 (50 percent under existing law).

NOTE.—Several items, such as tax-exempt interest, ½ of long-term capital gains, including so-called statutory gains which often have no logical relationship to capital transactions, depletion, and intangible drilling costs, are omitted from adjusted gross income and from realized income.

Source of basic data: Office of the Secretary of the Treasury, Office of Tax Analysis. See table on p. 709 of Finance Committee hearings.

The proponents of this legislation also err when they attempt to apply the "brake" theory to corporate taxation. Although stated corporate rates have not been reduced in recent years, the actual tax burden has been considerably lightened by changes in laws and regulations applicable to depreciation, and to the investment credit. Such

positive Government programs as stepped up research and development expenditures, most of which go to and through industry, have relieved corporations of the necessity for spending their own funds for activities they would otherwise have to budget for and undertake.

But let us look at corporation taxes as they are assessed against corporate gross income, not as they appear to be levied as a percentage of certain bookkeeping figures.

Just as it is necessary to go behind the stated rates and look at total income in order to know just what effective tax rate any individual pays, so is it necessary to look behind the stated 52 percent rate for corporations to determine just what the true tax and profit figures are.

Effective tax rates for corporations have been reduced quite steadily and regularly during the past few years. There were rapid amortization procedures during the Korean war, accelerated depreciation enacted in 1954, administrative changes in depreciation approved by the Treasury last year, the investment credit enacted last year, and the further liberalizing of this credit contained in the subject bill. Of course, we have retained the same stated rates, but the effect of these rates has been drastically altered, thus materially reducing the effective rate.

It seems difficult for some, economists and laymen alike, to understand that these actions have the effect of reducing the burden of income taxation on corporations. But the effect is just as real as is the effect on individuals when a new deduction, or an increase in an exemption, is enacted.

As proof of this, one has merely to look at the profits curve on page 7 of the Economic Indicators. Due to the fact that depreciation guidelines were revised so drastically last year, a new curve had to be started. The corporate profit figures are not now comparable to the figures prior to 1962.

Some facts relative to corporate profits, taxes, and cash flows are shown on table III below.

TABLE III

[In billions of dollars]

	Gross national product	Dividends paid	Corporate profits after tax	Corporate profits after tax plus capital consumption allowances	Dividends as a percent of gross national product	Dividends as a percent of corporate profits after tax	Corporate profits after tax plus CCA as a percent of gross national product	Dividends as a percent of corporate profits after tax plus CCA
1946	210.7	5.8	13.4	18.6	2.8	43.3	8.8	31.2
1947	234.3	6.5	18.2	24.5	2.8	35.7	10.5	26.5

1963	575.7	17.4	26.1	58.0	3.0	66.7	10.1	30.0

Source: Staff of the Joint Committee on Internal Revenue Taxation.

This table shows that corporate profits after taxes just barely doubled between 1946 and 1963, while GNP almost tripled. This has led many to believe, and to state, that corporate profits have not kept pace with GNP. This has been cited as one of the reasons for our alleged slow rate of growth in recent years. It has been said that this is one reason for the lack of sufficient investment in new plant and equipment, and that this has, in turn, been one of the main causes of unemployment. Thus, the need for a tax cut for corporations.

But corporate profits after taxes plus capital consumption allowances have kept pace with GNP, running at a pretty steady 10 percent. Furthermore, dividends have kept pace with GNP, running about 3 percent.

If one claims that only the profit figures are to be considered, then he must of necessity condemn corporate management for paying out too much in dividends. Dividends being paid out today amount to about two-thirds of corporate profit after taxes. As a percentage of corporate profit after taxes, dividends have gone up 50 percent since 1946. If bookkeeping profit is in reality the key figure, then dividend payments are, without question, too high and more earnings ought to be retained.

The fact is that corporations are highly liquid, and cash flows have in recent years exceeded investment in new plant and equipment.

As for effective taxation, corporations got about $2.4 billion in tax reduction under the 1954 Internal Revenue Code. Last year they got another $2.25 billion as a result of changes in depreciation and enactment of the investment credit. What is the effective corporate tax rate? In 1946, corporate taxes amounted to about 33 percent of profits plus capital consumption allowances. Today, the comparable figure is about 29 percent. This is an effective tax reduction of about 12 percent.

Not only have we been cutting tax rates in a disguised form, but these cuts have not really been effective—or they have been inefficient—in promoting investment in plant and equipment. We have concrete proof of this.

The most optimistic statements I have seen about the effects of the $2.25 billion tax reduction given corporations last year have been to the effect that this cut has induced $1.2 billion of increased spending for plant and equipment. This is an efficiency of about 50 percent. Can we expect any better performance from this year's proposed cuts? I think not.

We give corporations a tax cut of $2 to induce them to spend $1 for plant and equipment. Hopefully this kind of expenditure, costly as it is to the Government, will create jobs. Actually it has not, and likely will not, at least not in manufacturing. We have lost about 1 million production jobs in manufacturing during the past 6 or 7 years, despite increased production.

Equity does not dictate a reduction in corporate tax rates, because dividends are maintaining pace with the economy as a whole, and the high income individuals, who own the large blocks of stock, are being given a drastic reduction in their own rates under the bill, H.R. 8363.

Economic reasons also fail to convince. A tax cut is a most inefficient way to induce expenditures by corporations. And plant and equipment expenditures in industry are not likely to create many jobs. Indeed, industry is daily accelerating the trend toward auto-

mation, thereby not only failing to create jobs, but even failing to maintain current job levels.

VI. UNEMPLOYMENT AND POVERTY

One of the more appealing arguments in favor of a mammoth tax cut is that this action will result in a drastic decrease in unemployment. It is a sad commentary on our economic and social system that so many who want and need jobs are unable to find them. Even worse, in some respects, is the fact that in many cases when jobs are available those who need those jobs are not qualified to fill them.

This is an appealing argument, because we want to insure, insofar as we are able, the right and the opportunity for each of our citizens who wants and needs a job to have one. We want our people to be self-supporting, self-reliant, prosperous, and secure.

But it is far from certain that the tax cut will reduce our excessive unemployment. Indeed, in my view, it is more likely, after about 18 months, to cause increased unemployment. A tax cut is not the place to start—or to stop a war on poverty and unemployment.

We need to look squarely at our unemployment and see just what it consists of and what has caused it. In what geographical, age, health, and ethnic areas is it concentrated? Can increased general demand cure it without causing inflation?

To begin with, we are not suffering unemployment because of a recession or depression. On the contrary, the economic indicators are, by and large, at alltime highs. We are not in that desperate condition we faced during the great depression when almost any gamble seemed in order—no matter how inefficient, or how dangerous.

We are not suffering unemployment because of lack of capital or productive capacity. The corporate sector is highly liquid; and about 12 to 15 percent of plant capacity is idle. Certainly our basic productive structure is sound, and we would have no trouble increasing production in almost any area where demand is spurred. But would this put many of the presently unemployed to work? Some confuse poverty and unemployment, and the two are closely linked. But we should always keep in mind that we do not have poverty for lack of production. Our situation economically is almost unique in recorded history. Characteristically and historically, there has been, in every society, a problem of sufficient total production. This is not our problem. We have an almost unlimited capacity to produce. Our basic problem is distribution, and the understanding of this fact is a necessary prerequisite to formulating any workable plan for an attack on unemployment and poverty. There must be a proper distribution of the fruits of national production, and this is best achieved in our society by a proper distribution of jobs which pay a decent wage.

There are two general ways of attacking unemployment. Such an attack can be directed toward increasing production and creating additional jobs. A slightly different type of attack focuses on a more equitable distribution of jobs without materially increasing total national production. We need to launch this two-pronged attack.

A tax cut does not fit into this picture. I am sorry to say that it will likely make matters worse. This is particularly true of the type of tax cut contained in the subject bill.

The first type of attack must be concentrated on increased production in the public sector, for this is where our unfulfilled demands now largely lie—for better rapid transit systems, better housing for low income groups, better educational facilities at all levels, better highways, more and better hospitals and nursing homes, more clean drinking and industrial water. It is here that jobs could readily, directly, and with profit to society, be created. But this takes public funds, which will be less available after passage of the tax bill.

Furthermore, to the extent this tax cut is effective in spurring increased investment, we are likely to build up a capacity which cannot be sustained by demand in the private sector, just as was the case in 1956–57. This may worsen unemployment in the not distant future, and especially so when accompanied by policies of economic retrenchment and monetary squeeze.

Those who would fight unemployment and poverty only by trying to increase overall demand do not understand the nature of the problem or the composition of the unemployed segment of our labor force, and the poverty-stricken in the midst of our affluence.

Present unemployment is largely structural. It is concentrated in certain geographical localities, certain age groups, certain social and ethnic categories. Unemployment is daily being worsened, or at least made more difficult to cure, by technological advances—automation, if one uses the term loosely.

From 1953 to 1962 investment in scientific research and development tripled. As a result, partially, of this effort, we are now losing 2 million jobs each year because of the laborsaving effects of increasing productivity. Manufacturing employs about 1 million fewer production workers than was the case just 6 or 7 years ago, despite vastly increased production.

This may be all to the good, and I know of no latter-day Luddites, but we must recognize the fact that no longer does increased production through increased overall demand create jobs in large numbers for the unskilled. The seeds of inflation would be sown by a shortage of skilled labor long before profitable work could be found for the bulk of presently unemployed. Altogether too large a proportion of our unemployed are not qualified to hold down productive positions in our highly mechanized and automated economy, even if those jobs could, somehow, be created.

Unemployment, and poverty, sprouting from such roots, cannot be cured by a tax cut. The type of unemployment problem we have requires more specific treatment. We must concentrate more on the public sector as well as upon encouraging and assisting private enterprise to play its part as the mainstay of our economy.

The other half of our two-pronged attack centers around encouraging certain types of persons to delay or refrain from entering the labor market—some temporarily, some permanently. After all, unemployment is a product of the participation rate—the numbers of people who say they want a job—as well as of the total number of jobs available.

One obvious place to begin here—and with profit to society—is to set up programs designed to delay the entry of young people into the labor market until they are better qualified. This would not only make for a more stable labor force, but it would also assist these young people individually to achieve a more well-rounded life, as well

as specifically to fit them for more productive jobs when they do enter the labor force. We have been altogether too timid about moving into this area. Education is the key here, not a tax cut. This kind of realistic and highly beneficial attack on unemployment will cost money, thus indicating the need for more, not less, Government revenue.

Another approach of this sort is to assist those wives and mothers who wish to devote more time to their homes and children and who really do not want to work, but who feel they must, to stay out of the active labor force. We could help them in their home life, and society as a whole, if we took steps to insure that the head of the household earned a proper wage so the family could maintain a decent standard of living without the mother having to leave the home every day to seek employment.

It is not generally realized, perhaps, just to what extent women have increasingly come into the labor force since World War II. At the same time, relatively more men have been dropping out of the labor force. This may not be socially desirable.

In 1947, the participation rate for women was 31.0 percent. This figure rose in 1962 to 36.7 percent. During the same period of time, the participation rate for men went down from 84.5 percent in 1947 to 79.3 percent in 1962.

Let me make it very, very plain that I favor full employment opportunities for men and women alike—the opportunity for a decent job for any man or woman who is able and willing to work. But I am opposed to a social and economic structure which forces wives and mothers to leave their homes and children daily to seek work because the head of the household is not paid a wage or salary which will keep the family in decent comfort. I am opposed, too, to a tax system that penalizes the parent as a taxpayer.

A tax cut for corporations and the high income brackets hardly fits in here. If a tax cut must be had, then tax relief for parents of the largest numbers of children would be fairest and of greatest benefit.

In this connection, also, we need to look more closely into the area of the minimum wage, overtime pay, and the length of the workweek.

Unemployment can be partially cured, of course, by increasing production. But, as I have pointed out, the increased production that is needed is not in the private sector where there are neither shortages nor reasonably full utilization of capacity, but in the public sector. A tax cut does not fit in here at all. Worse still, the capacity of the Government to provide for our pressing public needs will be seriously and permanently impaired by a drastic reduction in revenue.

We cannot cure unemployment and poverty by reducing revenues and leaving ourselves defenseless, bereft of our most useful weapon, before the onslaught of the next recession.

VII. BALANCE-OF-PAYMENTS CONSIDERATIONS

Because the economic royalists who are now running the Treasury Department refuse to take positive action to stem the outflow of private capital, or to take such other steps as might be indicated, the balance-of-payments problem persists. Indeed, our situation can hardly be said to have improved at all.

During 1962 there was some apparent improvement—more apparent than real, because there were several special operations, such as advance repayments well ahead of schedule, on obligations of certain foreign governments.

During the first half of 1963, capital flows reached runaway proportions. The apparent improvement during the last half of the year may be illusory, representing only a partially balancing of forces at work earlier in the year.

It is felt by proponents of the subject bill that a tax cut will help materially in solving our balance-of-payments problem. It will not.

It is felt, first, that the cost of production will be lower and our goods will be more competitive in world markets. We have not achieved lower prices as a result of the investment credit and depreciation changes, and both had the effect of reducing corporate taxes. We will not achieve lower prices as a result of this tax cut.

Even if we were to achieve lower prices through any mechanism whatsoever, this would not materially increase exports. Other countries use direct controls to regulate imports of merchandise and exports of capital. Witness the "chicken war." We will certainly not achieve a sufficiently large favorable balance in goods and services to overcome other areas of deficiency.

Proponents of this bill also claim that the economy will be so booming—without inflation, of course—and domestic investment will pay off so handsomely as a result of the enactment of this bill that no longer will money go abroad to find a higher rate of return.

This is an argument which is so fantastic that it is difficult to answer.

Investment decisions are dictated by many considerations—markets, raw materials, costs, taxes—and so long as out investors can earn high rates of return abroad, and build up their investment without the necessity of paying U.S. taxes, there will be continued encouragement to send funds abroad.

In 1962, the Congress took a timid step in the direction of closing off some of the tax haven operations abroad, but this did not really reach the direct investment problem.

In 1963, after it became apparent that interest rates could not be pushed high enough to stop portfoilo outflows without doing untold damage to the domestic economy, the administration proposed the so-called interest equalization bill. The threat of this legislation appears to have had some effect on portfolio outflows, but this effect now appears to be wearing thin.

It seems to be obvious that a positive program of regulation of capital flows is the answer to our direct and portfolio outflow of capital. But it would appear that no action along this line will be taken. Barring such action, the approach of indirect regulation by taxation is the next best thing. It is not sufficiently selective. Methods of avoidance will be found. But if this is the best we can do, let us at least do that.

All other modern industrial countries invoke positive controls whenever it appears to be in their interest to do so. The fact that we do not is difficult to understand or justify.

The most likely effects of the bill on the balance of payments are—

1. Increased imports.
2. No material change in exports. The domestic price level is, to the extent the bill is at all effective, likely to be inflated. This will likely make exports move more slowly.
3. Higher interest rates. This may slow down portfolio outflows, but it will, in turn, slow down the whole domestic economy.

All in all, it would seem that the bill will not help achieve a balance in our international payments.

VIII. TAX REDUCTION AND INFLATION

If I understand correctly the position of the proponents of this bill, it is not that it will help to curb inflation; rather, it will boost economic activity without causing inflation.

It is claimed that, because we now have high unemployment and unused plant capacity, we can have greatly increased production without inflationary pressures.

Although inflation does not seem to be a matter of major concern at the moment, the Consumer Price Index has crept up consistently, and some commodities are now beginning to push upward in price.

But what will happen if the tax cut really does react in the way its proponents hope it will?

Can any really large dent be made in the ranks of the unemployed without putting pressure on certain skills and categories of workers?

There are some relatively scarce categories of trained personnel, and pressures will be felt in these categories even though we still have several million of the unskilled and uneducated unemployed.

But what really concerns me more is the tight rope which must be walked—it is felt—by our money managers. My fear is that, in attempting to guard against monetary inflation, the Federal Reserve Board will raise interest rates and restrict the supply of money so that, having rid our house of the supposed evil spirit of high taxes, we will find it filled with the even more malevolent spirits of high interest rates, tight money, restrictive debt management, and reduced spending. Truly our final state will be worse than our former.

IX. EQUITY

Although economic considerations are important when considering the tax structure, equity must not be ignored.

There is little equity in this bill.

The new minimum standard deduction gives some relief to the lowest income groups, but it is not enough.

There is no better way to show the basic inequity of the changes in the rate structure which this bill makes—by far the most important part of the bill—than to note the increase in after-tax income or take-home pay which this bill gives to various income groups.

The tables below were prepared by the staff of the Joint Committee on Internal Revenue Taxation, and show (col. 8) the treatment which taxpayers in various income groups will receive from the rate reductions.

TABLE IV.—*Individual income tax liability: Under present-law tax rates, under H.R. 8363 tax rates, and under uniform percentage increase in taxable income after present-law tax; selected levels of taxable income, 1965, single person*

Taxable income	Tax		Taxable income after tax		Reduction in tax or increase in taxable income after tax				
					Under H.R. 8363			Under uniform percentage increase in taxable income after tax (5.95 percent)	
	Present law	H.R. 8363	Present law	H.R. 8363	Amount	As percent of present-law tax	As percent of taxable income after present-law tax	Amount	As percent of present-law tax

Source: Staff of the Joint Committee on Internal Revenue Taxation, Oct. 4, 1963.

These tables show some very disturbing results. Whereas a married couple filing a joint return, having a taxable income subject to ordinary income rates of $3,000 per year, will gain $150 from the rate reductions in the bill, the more affluent couple with a taxable income of $300,000 will pick up an extra $42,660. As a percentage of taxable income, this would mean an extra 6.3 percent to this $3,000 couple, but an extra 55.9 percent to the $300,000 couple. For the really rich, the gain would be more than 100 percent in take-home pay after tax income.

It has been pointed out, and I want this clearly understood, that the table does not reflect the full picture insofar as the rich and very rich are concerned. The typical high income taxpayer is able to take advantage of many loopholes in the law. The affluent do not pay taxes in accordance with the regular, ordinary income tax rates. But the table does show the true picture with respect to whatever taxable income any taxpayer has to which the published ordinary income rates apply.

The majority of Americans pay their taxes in accordance with the stated rates. This is not true, however, of the "typical" taxpayer with a very large income. But the gain which would be realized under the tax bill by those in the upper income groups would be tremendous. In my view, it would be grossly unfair.

A far more equitable way of reducing taxes, if we can afford a large reduction in governmental revenue, would be to raise the personal exemption for each taxpayer and each dependent. This would give everyone a more nearly equal and equitable amount of tax benefit.

Referring again to the table, it shows that a taxpayer with a small income would receive a very small percentage increase in take-home pay. It would be a percentage increase of a small amount. But those who have large taxable incomes would receive a large percentage increase in take-home pay. It would be a large percentage of a large amount.

Instead of the pending bill making our tax system more progressive, more equitable, more stimulative primarily of the consumer element of our economy, it would do just the reverse. Its enactment would bring a more regressive tax law, a more unfair tax law, a more unjust tax law, and would allow those with really large incomes, who now do not pay their fair share now to pay less.

X. SUMMARY OF RATE REDUCTION ASPECTS OF THE BILL

With 3 years of rapidly expanding economy behind us and the prospect of another good year—perhaps the best in our history—before us, it would appear that our economy is doing quite well.

From the viewpoint of those who would use fiscal policy actively in a countercyclical way, this would appear to be the worst possible time to initiate and carry through a tax cut.

If a tax cut is indicated, the nature and magnitude of the cut could hardly coincide with the one provided by this bill. The broad base of our consumer purchasing power has not been restored since World War II, and it is this element of our economy, in the private sector, which may possibly need some stimulation. This kind of stimulation can best be brought about by raising the personal exemption. Equity, likewise, would dictate such a change.

We do have high unemployment and pockets of poverty, but the indicated corrective action must take into account specific problems and any acceptable solution must provide specific solutions. Increasing overall demand artificially through a tax cut which is poorly balanced will do little and at great cost.

Positive programs of education, and increased production in the public sector, will accomplish much, and at less cost in money. Moreover the benefits to society would be immeasurable in the long run.

Structural Changes

I. GENERAL

This bill makes a mockery of tax reform. There has been a tremendous slippage in reform from the general tenor of the remarks of administration spokesmen in 1962, to the actual proposals advanced by President Kennedy in January 1963, to the bill as approved by the Ways and Means Committee, and finally to the bill now reported from the Finance Committee.

I think it is not too extreme to say that this bill, providing as it does for enormous tax benefits for the rich and very rich through rate reduction in the upper brackets has rung the death knell for tax reform. What little reform there is in the bill, and it is miniscule when measured by obvious needs, will mark the last serious effort at reform for a generation.

Given a decent amount of time, the Senate might possibly be prevailed upon to make some significant moves toward reform. But the drumfire of propaganda and pressure for passage of this bill without quite taking the time to read it has made any serious discussion difficult if not impossible.

Under the circumstances, it is necessary to concentrate on a very few structural changes. My efforts shall be directed toward defending the public interest against special interest raids. There is so little hope of positive reform. There is such great fear of further damage.

II. THE INVESTMENT CREDIT

As is so often the case, a tax loophole once opened is quickly widened. The crevice deepens and an apparently slight erosion of the tax base soon becomes a great gully. Often this is a process which takes a few years. In the case of the investment credit, however, the ink was hardly dry when the beneficiaries of this tax refund—a refund which must come out of the pockets of average taxpayers—began efforts to fatten themselves further.

I will not here repeat what was stated in minority views signed by Senator Paul Douglas and me when the investment credit was first adopted in 1962. For anyone who might be interested, I would cite the Report of the Committee on Finance on the Revenue Act of 1962, page 396.

Section 203 of the subject bill as reported by the Finance Committee simply makes the investment credit twice as bad as it was when it was enacted. The credit now becomes an outright gift, with not even the pretense of partial recovery through slightly decreased depreciation allowances.

There is one additional provision in this section, however, which does not even relate to revenues, and therefore has no place in this bill, but which is conducive of untold mischief. I refer to section 203(e), which would direct the Federal regulatory agencies not to order any of the benefits of the investment credit "flowed through" to consumers.

Regulatory agencies have two basic choices in handling the treatment of the tax refunds represented by the investment credit.

One method is to "flow through" the tax cut, that is, put the tax savings into the net profit figure, where it would, of course, operate to raise the utility's rate of return. It does so operate, even if the company and the regulatory agency agree to allow it to be hidden somewhere else in the books—or to pretend it does not exist, that all apparent taxes were actually paid. But if logic, equity, and decency prevail, this tax savings will be shown as a reduction of costs, or an increase in profits, and the consumer, the customer of the utility, will eventually benefit through reduced rates.

The other choice, and the one which would in effect be ordered by this bill, is to "normalize" the tax savings, that is, to permit the utility to use this tax refund as it sees fit, while continuing to charge its customers the full price it would be allowed to charge if these taxes were, in fact, actually paid.

I think it is not putting the matter too strongly to say that the Congress is, with the passage of this bill with this section intact, ordering the regulatory agencies to participate in the perpetration of a fraud on the consumers of electricity, gas, and other goods and services which come to them from these favored companies which have been given monopolies, and against whom the consumer has no recourse—there is no competitive choice available to him.

On January 23, 1964, the Federal Power Commission announced its decision in favor of "flow through." Other Federal regulatory agencies are reluctant and indecisive, and are dawdling in the hope the Congress will prohibit them from performing their duty. They have been standing by since the investment credit was enacted in 1962.

But even industry spokesmen have, in some instances, spoken out against this unconscionable theft from their customers.

Mr. Donald C. Cook, president of American Electric Power Co., Inc., in a letter to the chairman of the Finance Committee, a copy of which was very kindly sent to me, and I am sure to all members of the committee, by Mr. Cook, has set out his views on this subject.

Here is a paragraph from Mr. Cook's letter:

> It is my view that the investment credit does in fact represent a reduction in current Federal income tax expense, and therefore a reduction in current operating expenses; that the investment credit will stimulate capital expenditures by utilities even if all or part of the tax saving is passed on to customers, or if the tax saving forestalls or reduces an otherwise necessary increase in rates; and, indeed, that the use of this tax saving to reduce or avoid an increase in the price of the taxpayer's product is best calculated to increase demand and in turn to stimulate plant investment, and thus to carry out the basic objectives underlying the adoption of the credit.

Mr. Cook went on to say that he understood that his views were shared by many other utility companies and regulatory agencies.

The question of equity and forced, if not false, bookkeeping aside, there are tremendous sums of money involved. By the passage of this section, the Congress is taking away from consumers some $300 million per year by forcing higher rates on the customers of natural gas pipelines and electric utilities under the jurisdiction of the Federal Power Commission alone, considering both their interstate and intrastate business. And this is just one segment of regulated activities.

If the matter would stop with the handling of the investment credit, the situation would be bad enough. But already proposals have been advanced to have the Congress order the Federal regulatory agencies to allow regulated monopolies to "normalize" with respect to other funds.

During the Korean war, rapid amortization certificates were issued to many companies. In the 1954 Code, accelerated depreciation was approved. As a consequence, the sums of money collected from consumers by the monopolies operating in the utility field—supposedly regulated—are truly astronomical.

Amendment No. 350 to this bill has already been offered and may well be brought up during floor debate. This amendment would order the Federal regulatory agencies to give the same treatment this bill accords the investment credit to amounts set aside under liberalized depreciation provisions.

Accumulated deferred taxes of companies under the jurisdistion of the Federal Power Commission amounted to some $2 billion at the end of 1962.

These amounts, set aside under provisions of section 167 and 168 of the code, have given rise to sizable tax-free dividends. With the enactment of the principle enunciated in this bill, section 203(e), consumers will be denied the benefit of past rate reductions. They will continue to pay rates based on phantom, nonexistent taxes which show on the books, but which are never, in actuality, paid.

III. CAPITAL GAINS TREATMENT

In one major respect, the Finance Committee has improved the bill. The committee decided to delete the provision in the House-passed version of this measure which provided for an inclusion factor of only 40 percent (50 percent under present law) and a maximum rate of 21 percent (25 percent under present law) for capital gains on assets held for 2 years or longer.

It is in the capital gains area that muchof the tax dodging takes place, and this action on the part of the committee is highly commendable. At least, it is commendable in that the committee did not make a sorry situation sadder. The committee did not, of course, go so far as to make any real improvement in existing law. Holding the line, however, is a noteworthy accomplishment.

It has become customary to reduce effective tax rates by allowing many transactions which are not logically capital transactions to be so classified. One often hears of a highly compensated executive "running his money through" oil or timber or cattle. Hopefully the time will come when some real progress can be made toward correcting the many abuses associated with capital gains. In the

meantime, it is important that things not be made even more unwholesome by reducing capital gains rates.

It is through the capital gains route that the rich and very rich are often able to reduce their effective tax rates. In this connection, the table prepared by the Treasury and which appears on page 2606 of the Finance Committee hearings, is most revealing.

This table shows that, under existing law, a taxpayer with adjusted gross income of $700,000 may pay an effective tax rate which will vary from 20.1 percent to 47.6 percent, according to whether he has a high or low proportion of capital gains in his income. Under the House bill, of course, the situation is worse, his rates varying from 18.1 to 39.9 percent.

What ever happened to the 91 percent, so-called "confiscatory" tax rate?

This table also shows that the taxpayer with adjusted gross income of $2 million might pay a rate as high as 46 percent if he has little capital gains, or as low as 18.5 percent if he has a lot of capital gains, under terms of the bill.

Incidentally, although the Treasury elsewhere has tried to show that the rich and very rich gain little from the bill's rate reductions for ordinary income, this table shows that this $2 million man with little capital gains keeps a full 10 percentage points more after taxes under the bill, and would have his effective rate cut from 56.7 percent under existing law to 46 percent under the House bill. This is a pretty good measure of the benefits he receives from the rate reduction part of this bill—upward of $200,000.

IV. STOCK OPTIONS

So much has been said by me and others on the evils of the restricted stock option that it would serve no useful purpose to repeat it here. I would call attention, for those who might be interested, to remarks which I made on the Senate floor during 1961, specifically on April 14, April 24, April 27, May 4, June 8, and August 8. The hearings held by the Finance Committee on this subject on July 20 and 21, 1961, also contain useful information, as do the hearings on the subject bill.

There are some basic objections to the restricted stock option.

First, it is a device which enables corporate insiders to take money from the corporation which rightfully belongs to the stockholders.

Second, it is another of the many gimmicks associated with capital gains by which ordinary income, in this case compensation, is treated as a capital gain for income tax purposes.

Third, it encourages manipulation on the part of corporate insiders which will work harm, in varying degrees, to the whole economy, and specifically to the securities markets.

The recently publicized Chrysler Corp. incident involving options is a good case in point, and I commend to my colleagues as interesting reading the report prepared by the Treasury for the Finance Committee on this maneuver.

The subject bill makes some improvement in the option area. It will, if enacted into law, cure some abuses. It will not cure all abuses, however, and I shall renew my efforts to remove from the bill the new "qualified" stock option which replaces the old section 421 type of "restricted" stock option.

ALBERT GORE.

Part 2

REVENUE ACT OF 1964

JANUARY 31, 1964.—Ordered to be printed

Mr. LONG of Louisiana, from the Committee on Finance, submitted the following

SUPPLEMENTAL REPORT

[To accompany H.R. 8363]

TECHNICAL EXPLANATION OF THE BILL

SECTION 1. SHORT TITLE, ETC.

(*a*) *Short title.*—Subsection (a) of section 1 of the bill (sec. 2 of the bill as passed by the House) provides that the bill may be cited as the "Revenue Act of 1964."

(*b*) *Amendment of 1954 Code.*—Subsection (b) of section 1 of the bill provides that whenever in the bill an amendment or repeal is expressed in terms of an amendment to or repeal of a section or other provision, the reference is considered to be made to a section or other provision of the Internal Revenue Code of 1954.

TITLE I—REDUCTION OF INCOME TAX RATES AND RELATED AMENDMENTS

PART I—INDIVIDUALS

SECTION 111. REDUCTION OF TAX ON INDIVIDUALS

This section has been approved by your committee without change. For the technical explanation of this section of the bill, see page A–9 of the report of the Committee on Ways and Means on the bill (H. Rept. 749, 88th Cong., 1st sess.).

SECTION 112. MINIMUM STANDARD DEDUCTION

This section has been approved by your committee without change. For the technical explanation of this section of the bill, see page A-10 of the report of the Committee on Ways and Means on the bill.

SECTION 113. RELATED AMENDMENTS

This section has been approved by your committee without change. For the technical explanation of this section of the bill, see page A-12 of the report of the Committee on Ways and Means on the bill.

SECTION 114. CROSS REFERENCES TO TAX TABLES, ETC.

Section 114 of the bill contains cross references to the provisions of the bill relating to optional tax if adjusted gross income is less than $5,000 (sec. 301) and income tax collected at source (sec. 302).

Part II—Corporations

SECTION 121. REDUCTION OF TAX ON CORPORATIONS

Your committee has approved this section except for a technical clarifying change discussed below.

Section 121 of the bill amends section 11 of the code (relating to tax on corporations). Under the bill as passed by the House, subsection (d) of section 11 of the code provided that for purposes of subtitle A of the code (relating to income tax) the surtax exemption for any taxable year was to be $25,000 or the amount determined under section 1561 of the code (relating to surtax exemptions in case of certain controlled corporations), as added by section 237 of the bill (section 223 of the bill as passed by the House). Your committee has made a clarifying amendment, and as amended subsection (d) of section 11 provides that for purposes of subtitle A the surtax exemption for any taxable year is $25,000, except that, with respect to a corporation to which section 1561 applies, the surtax exemption is the amount determined under such section.

For the technical explanation of this section of the bill, see page A-12 of the report of the Committee on Ways and Means on the bill.

SECTION 122. CURRENT TAX PAYMENTS BY CORPORATIONS

This section has been approved by your committee without change. For the technical explanation of this section of the bill, see page A-13 of the report of the Committee on Ways and Means on the bill.

SECTION 123. RELATED AMENDMENTS

This section has been approved by your committee without change. For the technical explanation of this section of the bill, see page A-16 of the report of the Committee on Ways and Means on the bill.

Part III—Effective Dates

SECTION 131. GENERAL RULE

This section has been approved by your committee without change. For the technical explanation of this section of the bill, see page A–17 of the report of the Committee on Ways and Means on the bill.

SECTION 132. FISCAL YEAR TAXPAYERS

Except for conforming changes referring to the "Revenue Act of 1964" (instead of the "Revenue Act of 1963"), this section has been approved by your committee without change. For the technical explanation of this section of the bill, see page A–17 of the report of the Committee on Ways and Means on the bill.

TITLE II—STRUCTURAL CHANGES

SECTION 201. DIVIDENDS RECEIVED BY INDIVIDUALS

This section has been approved by your committee without change. For the technical explanation of this section of the bill, see page A–20 of the report of the Committee on Ways and Means on the bill.

SECTION 202. LIMITATION ON RETIREMENT INCOME

Section 202 of the bill, which is a new section added to the bill as passed by the House, amends section 37 of the code by inserting a new subsection (i) therein. Section 37 relates to the retirement income credit.

Under existing law eligible taxpayers 65 or over who receive taxable pensions or annuities, interest, rents, dividends, etc., and eligible taxpayers, regardless of age, who receive taxable pensions or annuities under public retirement systems (as defined in section 37(f)), are allowed a retirement income credit. To be eligible for the retirement income credit, a taxpayer must have received in each of any 10 calendar years before the taxable year earned income (as defined in section 37(g)) in excess of $600. The amendments made by section 202 of the bill make no change in existing law with respect to the foregoing.

Under existing law, the retirement income credit is computed by multiplying the amount of retirement income, limited to a maximum of $1,524, by the rate of tax on the first $2,000 of taxable income. The amendments made by your committee increase the limitation on retirement income under certain circumstances and are discussed below. Also under subsection (a) of section 113 of the bill, the rate against which retirement income (as defined in subsection (c) and as limited by subsection (d) of section 37) is to be multiplied for purposes of computing the retirement income credit is established as 15 percent.

Under existing law, the maximum retirement income of an individual on which the credit may be based ($1,524) is reduced by amounts received as a pension or annuity either under title II of the Social Security Act or under the Railroad Retirement Act of 1935 or 1937, and by amounts received from other pensions or annuities which

are exempt from tax. In the case of an individual who has attained the age of 62 but who has not attained the age of 72 before the close of the taxable year, the maximum retirement income on which credit may be based is also reduced by the sum of one-half the amount of earned income received during the taxable year in excess of $1,200 but not in excess of $1,700 and the amount of earned income in excess of $1,700. In the case of an individual who has not attained the age of 62 before the close of the taxable year, the maximum retirement income is reduced by the amount of earned income received during the taxable year in excess of $900.

Under existing law, the retirement income credit is computed separately for each spouse and each spouse is required to meet the earned income test in section 37(b) ($600 of earned income in each of any 10 prior years); except that in the case of a widow or widower whose spouse had received such earned income, such widow or widower is considered to have received earned income.

Subsection (a) of section 202 of the bill adds a new subsection (i) to section 37 of the code. The new subsection (i) provides for an increase, in certain cases, in the limitation on retirement income in the case of married taxpayers both of whom have attained the age of 65 before the close of the taxable year and who file a joint return for the taxable year.

Paragraph (1) of new section 37(i) provides that if both spouses meet the earned income test in subsection (b) of section 37 and if the sum of the retirement income and the amounts described in paragraphs (1) and (2) of subsection (d) of such section received by either spouse during the taxable year is less than $762, the $1,524 amount referred to in subsection (d) shall, with respect to the other spouse, be increased by an amount equal to the amount by which such sum is less than $762. If such sum is equal to or greater than $762, no such adjustment shall be made. The application of the provisions of paragraph (1) of new section 37(i) may be illustrated by the following example:

Example 1.—H and W, each of whom are 66 years of age and each of whom meets the earned income test in section 37(b), file a joint return for the calendar year 1964. During 1964, H receives as his only income $8,000 of retirement income and no social security benefits or other amounts described in paragraph (1) of section 37(d). During 1964, W receives as her only income $100 of retirement income and $500 under title II of the Social Security Act.

Under existing law, H is entitled to a retirement income credit computed on the maximum retirement income of $1,524. W is entitled to a retirement income credit computed on $100 of retirement income.

Under the new section (i), the $1,524 limitation on the retirement income of H would be increased by $162. The $162 increase is computed under paragraph (1) of new subsection (i) by subtracting from $762 the sum of the retirement income received by W ($100) and the social security benefits received by W ($500). The retirement income credit of W is not affected.

Paragraph (2) of new section 37(i) provides that if either spouse does not meet the earned income test in subsection (b) of section 37, the $1,524 amount referred to in subsection (d) of such section shall, with respect to the other spouse, be increased by $762 minus the sum of the amounts described in paragraphs (1) and (2) of subsection (d) received by the spouse who did not meet the earned income test.

The application of the provisions of paragraph (2) of new section (i) may be illustrated by the following example:

Example 2.—Assume the same facts as in example 1 above except that W does not meet the earned income test in section 37(b). Under existing law, H is entitled to a retirement income credit computed on the maximum retirement income of $1,524. (W is not entitled to any retirement income credit.)

Under the new section 37(i), the $1,524 limitation on the retirement income of H would be increased by $262. The $262 increase is computed under paragraph (2) of new subsection (i) by subtracting from $762 the social security benefits received by W ($500).

Subsection (b) of section 202 of the bill provides that the amendments made by section 202 of the bill apply to taxable years beginning after December 31, 1963.

SECTION 203. REPEAL OF REQUIREMENT THAT BASIS OF SECTION 38 PROPERTY BE REDUCED BY 7 PERCENT; OTHER PROVISIONS RELATING TO INVESTMENT CREDIT

Your committee has approved subsection (a) of section 203 of the bill (section 202(a) of the bill as passed by the House) with changes in the effective dates (discussed below); and has approved subsections (b) through (f) without change. For the technical explanation of subsections (b) through (f) of section 203 (sec. 202 of the bill as passed by the House) of the bill, see page A–25 of the report of the Committee on Ways and Means on the bill.

(*a*) *Repeal of requirement that basis be reduced.*—Subsection (a) of section 203 of the bill repeals section 48(g) of the code, which relates to adjustments to basis of section 38 property (that is, property with respect to which an investment credit is allowable), with respect to such property placed in service after December 31, 1963. In the case of property placed in service before January 1, 1964, subsection (a) of section 203 of the bill repeals section 48(g) with respect to taxable years beginning after December 31, 1963, and provides for an increase in basis as of the first day of the taxpayer's first taxable year which begins after December 31, 1963. Subsection (a) of section 203 also makes certain related amendments to the code.

Repeal of reduction in basis under section 48(g)(1)

Paragraph (1) of section 203(a) of the bill repeals paragraph (1) of section 48(g) of the code. (See below for discussion of repeal of paragraph (2) of sec. 48(g).) Under paragraph (1) of section 48(g), the basis of any section 38 property is reduced by an amount equal to 7 percent of the qualified investment (as determined under sec. 46(c)) with respect to such property. This reduction in basis is taken into account for purposes of subtitle A of the code, relating to income tax, except for purposes of computing, or recomputing, the investment credit. Thus, the reduction in basis is taken into account for purposes of computing depreciation deductions and for purposes of computing gain or loss on the sale or other disposition of the property.

This repeal is effective (under par. (4) of sec. 203(a) of the bill), in the case of section 38 property placed in service after December 31,

1963, with respect to taxable years ending after December 31, 1963; and in the case of property placed in service before January 1, 1964, with respect to taxable years beginning after December 31, 1963. Thus, a taxpayer who makes his return on the basis of a fiscal year ending March 31, must reduce the basis of any section 38 property placed in service before January 1, 1964, but is not required to reduce the basis of any section 38 property placed in service after December 31, 1963. No reduction in basis is to be made in the case of section 38 property the construction, reconstruction, or erection of which is completed, or which is acquired, before January 1, 1964, but which is placed in service after December 31, 1963.

Repeal of increase in basis under section 48(g)(2)

Paragraph (1) of section 203(a) of the bill also repeals paragraph (2) of section 48(g) of the code. Under paragraph (2) of section 48(g), if the tax under chapter 1 of the code is increased for any taxable year under paragraph (1) or (2) of section 47(a) of the code (relating to certain dispositions, etc., of sec. 38 property) or an adjustment in carrybacks or carryovers is made under paragraph (3) of such section, the basis of the property described in such paragraph (1) or (2) of section 47(a) is increased by an amount equal to the portion of such increase in tax, or the portion of such adjustment to carrybacks or carryovers, attributable to such property. The increase in basis is made immediately before the event which causes paragraph (1) or (2) of section 47(a) to apply. Thus, the increase in basis is taken into account for purposes of determining gain or loss on a disposition of the property.

This repeal is effective (under par. (4) of sec. 203(a) of the bill), in the case of section 38 property placed in service after December 31, 1963, with respect to taxable years ending after December 31, 1963; and in the case of property placed in service before January 1, 1964, with respect to taxable years beginning after December 31, 1963. Thus if, in February 1964, section 47(a) (1) or (2) applies to increase the tax of a taxpayer who makes his return on the basis of a fiscal year ending March 31, under chapter 1 of the code with respect to property placed in service in 1962, the basis of such property is increased under section 48(g)(2) by the amount of such increase in tax.

Increase in basis of property on account of prior reduction

Paragraph (2)(A) of section 203(a) of the bill provides, in general, that the basis of any section 38 property (as defined in sec. 48(a) of the code) placed in service before January 1, 1964, is to be increased, under regulations prescribed by the Secretary of the Treasury or his delegate, by an amount equal to 7 percent of the qualified investment with respect to such property. In determining the amount of such increase in basis, any prior increase in basis with respect to the property under section 48(g)(2) (in taxable years beginning before Jan. 1, 1964) is to be taken into account. Thus, the amount of the increase in basis under paragraph (2)(A) of section 203(a) of the bill is equal to the amount of the reduction in basis under section 48(g)(1) less any increase in basis under section 48(g)(2) with respect to such property. The basis of any section 38 property is not increased under paragraph (2)(A) of section 203(a) of the bill if the taxpayer dies in a taxable year beginning before January 1, 1964.

The increase in basis provided by paragraph (2)(A) of section 203(a) of the bill is to be made, under paragraph (2)(C) of section 203(a), as of the first day of the first taxable year of the taxpayer which begins after December 31, 1963. Generally, such increase in basis is to be taken into account by the person whose basis of the property was reduced under section 48(g)(1). Thus, in the case of partnership section 38 property, the increase in basis is to be taken into account by the partnership as of the first day of its first taxable year which begins after December 31, 1963. If a transaction to which section 381(a) of the code applies or a mere change in the form of conducting a trade or business (within the meaning of sec. 47(b) of the code) occurs before the increase in basis has been taken into account by the transferor, the increase in basis is taken into account by the transferee. For example, if calendar-year individual A, who placed section 38 property in service before January 1, 1964, transfers the section 38 property to calendar-year corporation X on September 1, 1963, in a transaction to which section 47(a) does not apply because such transaction constitutes a mere change in the form of conducting the trade or business, the increase in basis is to be taken into account by corporation X as of January 1, 1964.

The increase in basis is to be taken into account for purposes of computing depreciation deductions for the taxpayer's first taxable year which begins after December 31, 1963, and for all subsequent periods, and for purposes of computing gain or loss on the sale or other disposition of the property.

The provisions of paragraph (2)(A) of section 203(a) of the bill are illustrated by the following example:

Example.—X corporation, which makes its returns on the basis of the calendar year, acquires and places in service on January 1, 1962, an item of new section 38 property with a basis of $10,000 and an estimated useful life of 10 years. For the taxable year 1962, X is allowed a credit of $700 (7 percent of $10,000). Under section 48(g)(1) of the code, the basis of the property is reduced by $700. Under paragraph (2)(A) of section 203(a) of the bill, the basis of the property is increased on January 1, 1964, by $700 (7 percent of $10,000, the qualified investment). However, if such property had been sold by X on December 1, 1963, on such date the basis of such property is increased under section 48(g)(2) by $700, and there would be no further increase on January 1, 1964. If X was a partnership and if a partner had disposed of his partnership interest on December 1, 1963, and on such date the basis of such property had been increased under section 48(g)(2) by $500, the basis of the property would be increased on January 1, 1964, by only $200 ($700 minus $500). If X was an individual who died on December 1, 1963, there would be no increase under section 203(a)(2)(A) of the bill in the basis of such property.

Increase in rental deductions

Paragraph (2)(B) of section 203(a) of the bill provides that if, with respect to any section 38 property placed in service before January 1, 1964, a lessor made the election (provided by sec. 48(d) of the code) to treat the lessee as having purchased such property for purposes of the investment credit, the basis of such property is not to be increased under paragraph (2)(A) of section 203(a) of the bill. However, under regulations prescribed by the Secretary of

the Treasury or his delegate, the deductions otherwise allowable under section 162 of the code to the lessee with respect to such property for amounts paid to the lessor under the lease (hereinafter referred to as rental deductions) are to be adjusted in a manner consistent with paragraph (2)(A). The amount of the increase in rental deductions with respect to a leased property placed in service before January 1, 1964, may not exceed the sum of the actual decreases made (under the last sentence of sec. 48(d)) in the rental deductions with respect to such property. In determining the amount of the increase in such rental deductions, any prior increase in such deductions under the last sentence of section 48(d) because of the application of section 47(a) (in taxable years beginning before Jan. 1, 1964) is to be taken into account. The rental deductions with respect to any section 38 property are not to be increased under paragraph (2)(B) of section 203 (a) of the bill if the lessee dies in a taxable year beginning before January 1, 1964.

The amount of the increase in rental deductions with respect to a leased property is to be taken into account, commencing with the first taxable year beginning after December 31, 1963, over the remaining portion of the useful life used in making the decreases in rental deductions with respect to such property. Generally, if the lessee terminates the lease during this period, the portion of the increase which has not yet been taken into account is allowed as a deduction in the taxable year in which such termination occurs. If the lessee actually purchases the leased property during this period, the portion of the increase which has not yet been taken into account is added to the basis of the property at the date of purchase.

If a lessor of property makes the election under section 48(d) to treat the lessee as having purchased section 38 property for purposes of the investment credit and if such lessee in a taxable year beginning before January 1, 1964, actually purchases such property, the basis of such property is increased by 7 percent of the qualified investment with respect to such property (in a manner consistent with par. (2)(A) of sec. 203(a) of the bill) as of the first day of the first taxable year beginning after December 31, 1963.

The provisions of paragraph (2)(B) of section 203(a) of the bill are illustrated by the following example:

Example.—X corporation constructs a machine after December 31, 1961, and on February 1, 1962, leases the machine to Y, a calendar year taxpayer, who places it in service. The fair market value of the machine on the date on which possession is transferred to Y is $25,200 and the machine has an estimated useful life to X of 12 years. X elects to treat Y as the purchaser of the property for purposes of the investment credit. For purposes of computing qualified investment under section 46(c) of the code, the basis of the property to Y is $25,200 and Y's credit earned for 1962 with respect to such machine is $1,764 (7 percent of $25,200). Y's rental deductions with respect to such machine are decreased by $12.25 each month ($1,764 divided by 144 months). Under paragraph (2)(B) of section 203(a) of the bill, Y's rental deductions are increased by $281.75 ($12.25 multiplied by 23 months). Such increase is taken into account over the remaining 121 months of the useful life of the machine commencing with the taxable year 1964. If Y had actually purchased the machine from X on January 1, 1963, and had reduced the basis of the machine on such date by $1,629.25

($1,764 minus $134.75), the basis of such machine in Y's hands would be increased, on January 1, 1964, by $1,764 (7 percent of the qualified investment).

Certain leased property

Paragraph (3)(A) of section 203(a) of the bill repeals the last sentence of section 48(d) of the code. Under the last sentence of section 48(d), if a lessor makes an election to treat the lessee of section 38 property as having acquired such property for purposes of the investment credit, section 48(g) (relating to adjustments to basis) does not apply with respect to such property and the deductions otherwise allowable to the lessee under section 162 of the code for amounts paid to the lessor under the lease must be adjusted in a manner consistent with the provisions of section 48(g).

This repeal is effective (under par. (4) of sec. 203(a) of the bill), in the case of section 38 property placed in service after December 31, 1963, with respect to taxable years ending after December 31, 1963; and in the case of property placed in service before January 1, 1964, with respect to taxable years beginning after December 31, 1963. Thus, if lessor X elects to treat calendar year lessee Y, who placed section 38 property in service in July 1962, as the purchaser of the property for purposes of the investment credit, Y reduces his deductions for rental payments under section 162 of the code for his 1962 and 1963 taxable years, but does not reduce his rental deductions for any subsequent taxable year. If in December 1963 section 47(a) (1) or (2) of the code applies to increase Y's tax with respect to such property, Y's rental deductions with respect thereto are adjusted, under the last sentence of section 48(d), in a manner consistent with section 48(g)(2). However, if Y had placed the property in service on January 1, 1964, Y would not reduce or otherwise adjust his deductions for rental payments for any taxable year.

Deduction for certain unused investment credit

Paragraph (3)(B) of section 203(a) of the bill repeals section 181 of the code. Under section 181, if the amount of the credit earned for any taxable year exceeds the limitation provided by section 46(a)(2) (relating to limitation based on amount of tax) for such year and if any portion of such excess is not allowed as a credit after the application of the 3-year carryback and the 5-year carryover provisions, then the portion of such excess not so allowed as a credit in any of such taxable years is allowed to the taxpayer as a deduction in the sixth taxable year following the taxable year in which the credit was earned. Section 181 further provides that if a taxpayer dies or ceases to exist prior to such sixth taxable year, such taxpayer is allowed as a deduction, for the taxable year of such death or cessation, an amount equal to the proper portion of such excess.

This repeal is effective (under par. (4) of sec. 203(a) of the bill), in the case of section 38 property placed in service after December 31, 1963, with respect to taxable years ending after December 31, 1963; and in the case of property placed in service before January 1, 1964, with respect to taxable years beginning after December 31, 1963.

Adjustments to basis under section 1016

Paragraph (3)(C) of section 203(a) of the bill makes a technical amendment to section 1016(a)(19) of the code (relating to adjustments to basis).

Clerical amendment

Paragraph (3)(D) of section 203(a) of the bill amends the table of sections for part VI of subchapter B of chapter 1 of the code.

Effective date

Paragraph (4) of section 203(a) of the bill provides effective dates for the amendments made by paragraphs (1) and (3) of section 203(a). Paragraph (4)(A) provides that if the property involved is placed in service after December 31, 1963, then the amendments made by paragraphs (1) and (3) apply with respect to taxable years ending after December 31, 1963. Paragraph (4)(B) provides that if the property is placed in service before January 1, 1964, then the amendments made by paragraphs (1) and (3) apply with respect to taxable years beginning after December 31, 1963.

SECTION 204. GROUP-TERM LIFE INSURANCE PURCHASED FOR EMPLOYEES

(*a*) *Inclusion in income.*—Subsection (a)(1) of section 204 of the bill (sec. 203 of the bill as passed by the House) adds a new section 79 to part II of subchapter B of chapter 1 of the code (relating to items specifically included in gross income).

SECTION 79. GROUP-TERM LIFE INSURANCE PURCHASED FOR EMPLOYEES

(*a*) *General rule.*—The new section 79(a) has been approved by your committee with one change. In the bill as passed by the House, an exclusion was provided for the cost of the first $30,000 of group-term life insurance provided for an employee. Your committee has increased such exclusion to the cost of the first $70,000 of such insurance. For the technical explanation of the new section 79(a) of the code (other than the amendment made by your committee), see page A–29 of the report of the Committee on Ways and Means on the bill.

(*b*) *Exceptions.*—The new section 79(b) has been approved by your committee without change. For a technical explanation of this section, see page A–31 of the report of the Committee on Ways and Means on the bill.

(*c*) *Determination of cost of insurance.*—The new section 79(c) as passed by the House provides rules for determining the cost of group-term life insurance protection with respect to an employee. Your committee has modified this section to eliminate one of the two alternative methods of determining cost. As passed by the House, section 79(c) contains three paragraphs, paragraph (1), (2), and (3). Your committee has deleted paragraph (2) and has combined without substantive change the provisions contained in paragraphs (1) and (3) into section 79(c).

Uniform premium table method

Under the bill as passed by the House, paragraph (1) of section 79(c) provides that the cost of group-term life insurance protection on the life of an employee provided during any period is determined on the basis of uniform premiums (computed on the basis of 5-year age brackets) to be set forth in a table prescribed in regulations by the Secretary of the Treasury or his delegate. Your committee has made

this method the sole method of determining the cost of group-term life insurance with respect to any employee. Under the bill as amended by your committee, this method of determining cost is now set forth in the first sentence of the new section 79(c).

Policy cost method

Under the bill as passed by the House, paragraph (2) of section 79(c) provides that, in lieu of using the uniform premium table, the employer may elect, with respect to any employee, to determine the cost of such employee's group-term life insurance on the basis of the average premium cost under the policy for the ages included within the age bracket which is applicable to the employee under the provisions of paragraph (1). Your committee has deleted this provision from the bill.

Employed individuals over age 64

Under the bill as passed by the House, paragraph (3) of section 79(c) provides that in the case of an employee who has attained age 64, the prescribed cost cannot exceed the cost with respect to the individual if he were age 63. Under the bill as amended by your committee this provision is incorporated in the second sentence of the new section 79(c).

Example.—The operation of the new section 79 as amended by your committee may be illustrated by the following example. Assume that for a full taxable year an employee, age 52, is provided (under a policy carried by his employer) with $110,000 of group-term life insurance on his life and that his spouse is the beneficiary. Assume further that the uniform premium applicable at his age is $10.87 per $1,000 of protection and that the employee contributes $1 per $1,000 of protection. Based on these facts, the amount includible in the employee's income is computed as follows:

Total group-term life insurance protection	$110, 000
Less $70,000 exclusion	70, 000
	40, 000
Cost of $40,000 of insurance (40×$10.87)	434. 80
Less employee's contributions (110×$1)	110. 00
Amount includible in employee's gross income	324. 80

SECTION 204. GROUP-TERM LIFE INSURANCE PURCHASED FOR EMPLOYEES—Continued

Full-time life insurance salesmen

Subsection (a)(3) of section 204 of the bill amends section 7701(a)(20) of the code to provide that a full-time life insurance salesman who is considered an employee for purposes of chapter 21 of the code shall also be considered an employee for purposes of the new section 79. This subsection has been approved by your committee with a clerical change.

Certain contributions by employees for group-term life insurance

Subsection (b) of section 203 of the bill as passed by the House added a new section 218 to part VII of subchapter B of chapter 1 of the code (relating to additional itemized deductions for individuals). Your committee has deleted this subsection from the bill.

(*b*) *Withholding.*—Subsection (b) of section 204 of the bill (subsec. (c) of sec. 203 of the bill as passed by the House) amends section 3401(a) of the code (relating to definition of wages) by adding a new paragraph (14) at the end thereof. Under this new paragraph (14), as passed by the House, the term "wages" (for purposes of withholding of income tax at source on wages) includes remuneration paid in the form of group-term life insurance on the life of an employee, but only to the extent that the cost of such insurance is includible in the employee's gross income under the provisions of section 79(a) of the code (added to the code by this section of the bill). Your committee has amended the new paragraph (14) to provide that the term "wages" (for purposes of withholding of income tax at source on wages) does not include remuneration paid in the form of group-term life insurance on the life of an employee. In lieu of the deleted withholding provision, your committee has provided an information reporting requirement.

(*c*) *Information reporting.*—Subsection (c)(1) of section 204 of the bill adds a new section 6052 to subpart C of part III of subchapter A of chapter 61 of the code (relating to information concerning transactions with other persons).

The new section 6052(a) provides that every employer who, during any calendar year, provides group-term life insurance on the life of an employee during part or all of such calendar year under a policy (or policies) carried directly or indirectly by such employer shall make a return according to the forms or regulations prescribed by the Secretary of the Treasury or his delegate setting forth the cost of such insurance and the name and address of the employee on whose life such insurance is provided, but only to the extent that the cost of such insurance is includible in the employee's gross income under section 79(a). For purposes of the new section 6052(a), the cost of group-term life insurance is determined with reference to the cost of the life insurance (computed as provided in sec. 79(c)) provided to the employee, without regard to the time when the premium is paid by the employer. Under the provisions of the new section 6052(a), each employer paying remuneration to an employee in the form of group-term life insurance determines the amount includible in such employee's gross income under section 79(a) of the code as if such employer were the only employer paying the employee remuneration in the form of such insurance. Thus, an employer computes the amount includible in the gross income of an employee by applying a full $70,000 exclusion, without regard to whether another employer may also be furnishing group-term life insurance for the same employee during the same period.

The new section 6052(b) provides that every employer making a return under subsection (a) is to furnish to each employee whose name is set forth in such return a written statement showing the cost of the group-term life insurance shown on such return. The written statement required under the preceding sentence is to be furnished to the employee on or before January 31 of the year following the calendar year for which the return under subsection (a) was made.

Your committee has also provided that the penalties imposed by section 6652(a) of the code (relating to penalty for failure to file certain information returns) and section 6678 of the code (relating to penalty for failure to furnish certain statements) are to apply in the

case of each failure to file, with respect to an employee, a return or statement required by the new section 6052. See paragraph (2) of section 204(c), and paragraph (2) of section 222(b), of the bill.

(*d*) *Effective dates.*—Subsection (d) of section 204 of the bill provides that the amendments made by subsections (a) and (c) of this section of the bill, and paragraph (2) of section 222(b) of the bill, apply with respect to group-term life insurance provided after December 31, 1963, in taxable years ending after such date. The amendment made by subsection (b) applies with respect to remuneration paid after December 31, 1963, in the form of group-term life insurance provided after such date.

SECTION 205. AMOUNTS RECEIVED UNDER WAGE CONTINUATION PLANS

This section has been approved by your committee without change. For the technical explanation of this section of the bill, see page A–35 of the report of the Committee on Ways and Means on the bill.

SECTION 206. EXCLUSION FROM GROSS INCOME OF GAIN ON SALE OR EXCHANGE OF RESIDENCE OF INDIVIDUAL WHO HAS ATTAINED AGE 65

This section has been approved by your committee without change. For the technical explanation of this section of the bill, see page A–36 of the report of the Committee on Ways and Means on the bill.

SECTION 207. DENIAL OF DEDUCTION FOR CERTAIN STATE, LOCAL, AND FOREIGN TAXES

Section 207 of the bill as passed by the House consisted of three subsections. Subsection (a) of such section 207 revised subsections (a), (b), and (c) of section 164 of the code (relating to deduction for taxes). Subsection (b) of such section 207 made a number of technical amendments to the code and subsection (c) thereof contained the effective date provisions.

Your committee has made changes in subsection (a) of section 207 of the bill which affect subsections (a) and (b) of section 164 of the code. Subsection (b) of section 207 of the bill, as passed by the House, has been approved by your committee without change. Your committee has changed subsection (c) of section 207 of the bill by adding a new paragraph (2) thereto.

For the technical explanation of section 207 of the bill (other than the amendments made by your committee), see page A–40 of the report of the Committee on Ways and Means on the bill.

Section 164(a) as amended

Subsection (a) of section 164 of the code, as amended by the bill as passed by the House, provided, in part, that the following taxes would be allowed as a deduction for the taxable year within which paid or accrued:

(1) State and local, and foreign, real property taxes.
(2) State and local personal property taxes.

(3) State and local, and foreign, income, war profits, and excess profits taxes.

(4) State and local general sales taxes.

Your committee has added to the foregoing list State and local taxes on the sale of gasoline, diesel fuel, and other motor fuels and State and local taxes on the registration or licensing of highway motor vehicles and on licenses for the operation of highway motor vehicles. As a result of your committee's amendment, any State and local taxes within the scope of the amendment which are now deductible under section 164 remain so; any such taxes which are not presently deductible are not made deductible by such amendment.

Section 164(b) as amended

Your committee has added a new paragraph (5) to section 164(b) of the code, as amended by the bill as passed by the House, to provide a special rule in the case of separately stated general sales taxes and any tax on the sale of gasoline, diesel fuel, or other motor fuel. This provision corresponds to section 164(b)(2)(E) as passed by the House except that its scope has been broadened to apply to taxes on the sale of gasoline, diesel fuel, and other motor fuel. If a tax to which this special rule has application is imposed on the seller, but the amount of such tax is separately stated, then (as under existing law), to the extent that the amount so stated is paid by the consumer (otherwise than in connection with the consumer's trade or business) to his seller, such amount is treated as a tax imposed on, and paid by, such consumer.

Subsection (c) of section 207

Under the bill as passed by the House, paragraph (1) of section 164(c) of the code denied a deduction for taxes assessed against local benefits of a kind tending to increase the value of the property assessed, except for the portion of such taxes properly allocable to interest or maintenance charges. Such paragraph (1) retained the rules of present law now contained in paragraph (5) of section 164(b) of the code but did not retain the exception to those rules now contained in section 164(b)(5)(B) which allow the deduction of local benefit taxes levied by a special taxing district if the taxes meet the tests specified therein.

Your committee has made no change in the language of paragraph (1) of section 164(c) of the code as contained in the House bill. However, your committee has added a new paragraph (2) to section 207(c) of the bill which provides that section 164(c)(1), as amended, shall not prevent the deduction under section 164, of taxes levied by a special taxing district—

(1) which is described in section 164(b)(5) of the code (as in effect for a taxable year ending on Dec. 31, 1963), and

(2) which was in existence on December 31, 1963,

but only in the case of taxes levied for the purpose of retiring indebtedness which existed on December 31, 1963.

SECTION 208. PERSONAL CASUALTY AND THEFT LOSSES

This section has been approved by your committee without change. For the technical explanation of this section of the bill, see page A-45 of the report of the Committee on Ways and Means on the bill.

SECTION 209. CHARITABLE, ETC., CONTRIBUTIONS AND GIFTS

(*a*) *Certain organizations added to additional 10-percent charitable limitation.*—Subsection (a) of section 209 of the bill as passed by the House has been approved by your committee without change. For the technical explanation of this subsection of the bill, see page A–47 of the report of the Committee on Ways and Means on the bill.

(*b*) *Limitation of unlimited charitable contribution deduction.*—Your committee has added a new subsection (b) to section 209 of the bill to provide a limitation on the existing unlimited charitable contribution deduction.

Existing law

An individual taxpayer is presently allowed an unlimited charitable contribution deduction if in the taxable year, and in 8 of the 10 preceding taxable years, the charitable contributions and income taxes paid by the taxpayer during such year exceed 90 percent of his taxable income computed without deduction for charitable contributions, personal exemptions, and net operating loss carrybacks. Under existing law, the charitable contributions which may be used to satisfy the 90-percent requirement include contributions to both publicly and privately supported organizations.

Changes made by your committee

Subsection (b) of section 209 of the bill, as reported, amends section 170(b)(1) of the code by redesignating subparagraph (D) as (E) and by inserting a new subparagraph (D). The new subparagraph provides that only contributions described in subparagraph (A) of section 170(b)(1) (i.e., contributions to those organizations to which the additional 10-percent limitation is applicable) will qualify as charitable contributions for purposes of the unlimited charitable contribution deduction provisions. In general, these organizations include churches, certain educational organizations, certain hospitals and medical research organizations, certain organizations affiliated with State colleges and universities, certain governmental units, and certain other publicly supported organizations. Thus, for taxable years begining after December 31, 1963, only contributions to such organizations shall be taken into account in determining whether the taxpayer has satisfied the 90-percent requirement of section 170(b)(1)(C) for the current taxable year and for those taxable years preceding the current taxable year which begin after December 31, 1963. Contributions not described in section 170(b)(1)(A), such as contributions to private foundations, will not qualify as charitable contributions for purposes of the unlimited charitable contribution deduction provisions.

The new section 170(b)(1)(D) also provides that for purposes of section 170(b)(1)(C), the amount of charitable contributions shall be determined without regard to new paragraph (5) of section 170(b) of the code (added by sec. 209(c) of the bill, as reported). Therefore, in determining whether a taxpayer has satisfied the 90-percent requirement of subparagraph (C) for a current taxable year which begins after December 31, 1963, and for those taxable years preceding the current taxable year which begin after December 31, 1963, contributions made in prior years, but which under the provisions of

new paragraph (5) are treated as having been paid in subsequent years, shall not be taken into account.

The new section 170(b)(1)(D) provides that section 170(b)(1)(C) shall apply only if the taxpayer so elects. Such election can only be made by those taxpayers who satisfy the requirements of section 170(b)(1)(C), as modified by new section 170(b)(1)(D). The time and manner of such election shall be prescribed under regulations promulgated by the Secretary of the Treasury or his delegate. If a taxpayer makes such election, subsection (a) of section 170 shall apply only with respect to contributions described in subparagraph (A) of section 170(b)(1). Thus, a taxpayer who elects to apply section 170(b)(1)(C) and thus to deduct contributions to a publicly supported charitable organization in excess of the generally applicable 30-percent limitation may not also deduct contributions which he makes to private foundations. In addition, the new section 170(b)(1)(D) provides that if a taxpayer elects to apply section 170(b)(1)(C), contributions made in the current taxable year, or in any prior taxable year, may not be treated under new paragraph (5) of section 170(b) of the code as having been made in the current taxable year or in any succeeding taxable year.

Effective date

New section 170(b)(1)(D) shall apply with respect to contributions which are paid in taxable years beginning after December 31, 1963.

(*c*) *Five-year carryover of certain charitable contributions made by individuals.*—Subsection (c) of section 209 of the bill, as reported, adds a new paragraph (5) to section 170(b) of the code (relating to limitations on charitable contribution deduction) to provide a carryover of certain excess contributions made by individuals.

Subparagraph (A) of new section 170(b)(5) provides, in general, that in the case of an individual, if the amount of charitable contributions described in paragraph (1)(A) of section 170(b) (relating to contributions to churches, certain educational organizations, certain hospitals and medical research organizations, certain organizations affiliated with State colleges or universities, certain governmental units, and certain other publicly supported organizations), payment of which is made within a taxable year, exceeds 30 percent of the taxpayer's adjusted gross income for such year (computed without regard to any net operating loss carryback to such year under section 172), such excess shall be treated as a charitable contribution described in paragraph (1)(A) paid in each of the 5 succeeding taxable years in order of time. However, with respect to any such succeeding taxable year, the amount which is to be treated as paid in such succeeding taxable year is limited to the extent of the lesser of two amounts: (*i*) the amount by which 30 percent of the taxpayer's adjusted gross income for such succeeding taxable year (computed without regard to any net operating loss carryback to such succeeding taxable year under section 172) exceeds the sum of the charitable contributions described in paragraph (1)(A) payment of which is made by the taxpayer within such succeeding taxable year (determined without regard to new paragraph (5)) and the charitable contributions described in paragraph (1)(A) payment of which was made in taxable years before the contribution year which are treated under this new rule as having been paid in such succeeding taxable year; or (*ii*) in the case of the first succeeding taxable year, the amount of such excess contribution, and in the

case of the second, third, fourth, or fifth succeeding taxable year, the portion of such excess not treated under new paragraph (5) as a charitable contribution described in paragraph (1)(A) paid in any taxable year intervening between the contribution year and such succeeding taxable year.

Under the provisions of new paragraph (5), no excess contribution carryover will be allowed with respect to contributions to organizations not described in subparagraph (A) of section 170(b)(1), such as private foundations.

The new paragraph (5) of section 170(b) does not apply with respect to estates or trusts.

The application of new paragraph (5) is illustrated by the following examples:

Example 1.—Taxpayer A has adjusted gross income for 1964 of $50,000. In 1964 A contributes $16,500 to a church and $1,000 to a private foundation. Under existing law, A could claim a charitable contribution deduction of $15,000 (30 percent of $50,000). Under the bill, as approved by your committee, A could claim a charitable contribution deduction of $15,000 in 1964 and would have a charitable contribution carryover of $1,500 (excess of $16,500 contribution to the church over 30 percent of adjusted gross income of $50,000) to succeeding taxable years. No carryover would be allowed with respect to the $1,000 contribution to the private foundation.

Example 2.—Assume the same facts as in example 1. Assume further that for 1965 A has adjusted gross income of $40,000, and in 1965 contributes $11,000 to a church and $400 to a private foundation. Under existing law, A could claim a charitable contribution deduction of $11,400. Under the bill, as approved, by your committee, $1,000 ($40,000×30 percent=$12,000−$11,000 contribution paid to church in 1965) of the $1,500 excess contribution to the church which was paid in 1964 would be treated as paid in 1965 and therefore A could claim a total charitable contribution deduction of $12,000 for 1965. The remaining $500 of the excess contribution paid to the church in 1964 would be available for purposes of computing the carryover from 1964 to 1966, 1967, 1968, and 1969. No carryover would be allowed with respect to the $400 contribution to the private foundation.

Subparagraph (B) of new section 170(b)(5) provides that in the application of subparagraph (A), the excess determined under such subparagraph for the contribution year shall be reduced to the extent that such excess reduces taxable income as computed for purposes of the second sentence of section 172(b)(2) (relating to amount of net operating loss carrybacks and carryovers) and increases the net operating loss deduction for a taxable year succeeding the contribution year. To prevent a double deduction which might arise from the interrelationship of the charitable contribution carryover and the net operating loss carryover, subparagraph (B) of new section 170(b)(5) provides, in effect, that an excess charitable contribution shall reduce taxable income only once.

Paragraph (2) of section 209(c) of the bill contains technical amendments. Section 545(b)(2) (relating to deductions for charitable contributions by personal holding companies) and section 556(b)(2) (relating to deductions for charitable contributions by foreign personal holding companies) are each amended, in effect, to provide that new

paragraph (5) of section 170(b) shall not apply for purposes of computing the deduction for charitable contributions provided under section 170 with respect to these organizations.

Effective date

New paragraph (5) of section 170(b) shall apply with respect to charitable contributions which are paid in taxable years beginning after December 31, 1963.

(*d*) *Five-year carryover of certain charitable contributions made by corporations.*—Subsection (b) of section 209 of the bill as passed by the House has been redesignated as subsection (d) and, with the exception of a change made in the effective date of this subsection, has been approved by your committee without change.

Under the bill as passed by the House, the 5-year corporate carryover applied only with respect to contributions which are paid (or treated as paid under sec. 170(a)(2) of the Internal Revenue Code of 1954) in taxable years beginning after December 31, 1963. Under the bill, as approved by your committee, the 5-year corporate carryover shall apply to taxable years beginning after December 31, 1963, with respect to contributions which are paid (or treated as paid under sec. 170(a)(2) of the Internal Revenue Code of 1954) in taxable years beginning after December 31, 1961.

For the technical explanation of this subsection of the bill, see page A–48 of the report of the Committee on Ways and Means on the bill.

(*e*) *Future interests in tangible personal property.*—Subsection (c) of section 209 of the bill as passed by the House has been redesignated as subsection (e) and has been approved by your committee with an amendment.

As passed by the House, a new subsection (f) was added to section 170 of the code. Section 170(a) of the code provides that a charitable contribution is allowable as a deduction for the taxable year during which payment thereof is made. The new section 170(f) adds a special rule to determine when a charitable contribution consisting of a future interest in tangible personal property is considered to be paid. Under the bill as reported, the new section 170(f) provides, in effect, that the gift of such an interest will be considered to be incomplete for so long as the contributor (or a person standing in a relationship to the contributor described in sec. 267(b) of the code (relating to losses, expenses, and interest with respect to transactions between related taxpayers)) retains an intervening interest or right to the actual possession or enjoyment of the property. Under this special rule, a charitable contribution of a future interest in tangible personal property is deemed paid only when (1) all intervening interests in, and rights to the actual possession or enjoyment of, the property have expired, or (2) all intervening interests in, and rights to the actual possession or enjoyment of, the property are held by a person or persons other than the contributor or related parties.

The bill as passed by the House also contains an exception which was stated in the last two sentences of new subsection (f). Such exception provided that the special rule of section 170(f) does not apply to a contribution in which the sole intervening interest or right is a nontransferable interest reserved by the donor which expires upon the donor's death, or, in the case of a joint gift by husband and wife, the sole intervening interest or right is a nontransferable interest reserved by the donors which expires upon the death of whichever of such donors

dies later. However, the right to transfer the reserved life interest to the donee of the future interest (i.e., the charity which receives the future interest contributed) was not treated as making a life estate transferable.

New subsection (f), as approved by your committee, eliminates this exception.

The application of new subsection (f), as approved by your committee, may be illustrated by the following example. If a taxpayer contributes a remainder interest in a painting which he owns to a charity, reserving to himself the right to possession of the painting during his lifetime, the retention of the right to possession is treated as a postponement in the payment of such contribution until his right to possession terminates. Thus, if the taxpayer subsequently transfers his intervening right to possession to the charity, or to an unrelated person (a person who does not stand in a relationship to the donor which is set forth in sec. 267(b)), payment of the remainder interest is thereupon deemed to have been completed and the value of such interest (computed as of the date the contribution is deemed to have been completed) is allowed as a deduction, subject to the limitations imposed by subsection (b) of section 170, in the year the donor's intervening right to possession is transferred. On the other hand, if the taxpayer retains any right to possession of the painting until his death, he is not entitled to an income tax deduction with respect to the remainder interest transferred on any return during his lifetime or on his final return. However, the retention of the right to possession until death would result in the inclusion of the painting in the taxpayer's gross estate and a deduction for the included value would be allowed to his estate, as a charitable transfer, for estate tax purposes.

Effective date

The amendments made by subsection (e) of the bill shall apply to transfers of future interests made after December 31, 1963, in taxable years ending after such date.

SECTION 210. LOSSES ARISING FROM EXPROPRIATION OF PROPERTY BY GOVERNMENTS OF FOREIGN COUNTRIES

Section 210 of the bill, which is a new section added to the bill as passed by the House, amends section 172 of the code to provide a 10-year carryover of certain expropriation losses.

(*a*) *Net operating loss carryover.*—Under the existing section 172(b)(1) of the code, relating to years to which a net operating loss may be carried, generally a net operating loss for any taxable year is a net operating loss carryback to each of the 3 taxable years preceding the taxable year of such loss and is a net operating loss carryover to each of the 5 taxable years following the taxable year of such loss.

Paragraph (1) of section 210(a) of the bill, as added by your committee, amends subparagraph (A)(i) of section 172(b)(1) of the code, relating to years to which a net operating loss may be carried, to provide that the 3-year carryback rule does not apply to the portion of a net operating loss for a taxable year attributable to a foreign expropriation loss.

Paragraph (2) of section 210(a) of the bill, as added by your committee, amends subparagraph (B) of section 172(b)(1) of the code

to provide that the 5-year carryover rule does not apply to the portion of a net operating loss for a taxable year attributable to a foreign expropriation loss.

Paragraph (3) of section 210(a) of the bill, as added by your committee, amends section 172(b)(1), relating to years to which a net operating loss may be carried, by adding to such section a new subparagraph (D). The new subparagraph (D) of section 172(b)(1) of the code provides that in the case of a taxpayer which has a foreign expropriation loss for any taxable year ending after December 31, 1958, the portion of the net operating loss for such year attributable to such foreign expropriation loss shall not be a net operating loss carryback to any taxable year preceding the taxable year of such loss and shall be a net operating loss carryover to each of the 10 taxable years following the taxable year of such loss. The term "foreign expropriation loss" is defined in a new subsection (k) added to section 172 of the code by paragraph (5) of section 210(a) of the bill, as added by your committee.

Paragraph (4) of section 210(a) of the bill, as added by your committee, amends section 172(b)(3), relating to special rules for net operating loss carrybacks and carryovers, by adding to such section new subparagraphs (C) and (D). Clause (i) of the new subparagraph (C) provides that the new subparagraph (D) of section 172(b)(1) of the code which allows the portion of a net operating loss for a taxable year attributable to a foreign expropriation loss to be carried forward for 10 years shall apply only if the foreign expropriation loss for the taxable year equals or exceeds 50 percent of the net operating loss for the taxable year.

Clause (ii) of the new subparagraph (C) provides that, in the case of a foreign expropriation loss for a taxable year ending after December 31, 1963, the new 10-year carryover provision shall apply only if the taxpayer elects (at such time and in such manner as the Secretary of the Treasury or his delegate by regulations prescribes) to have such new subparagraph (D) of section 172(b)(1) of the code apply.

Clause (iii) of the new subparagraph (C) provides that, in the case of a foreign expropriation loss for a taxable year ending after December 31, 1958, and before January 1, 1964, the new 10-year carryover provision shall apply only if the taxpayer elects (in such manner as may be prescribed by the Secretary of the Treasury or his delegate) on or before December 31, 1965, to have such new subparagraph (D) of section 172(b)(1) of the code apply.

The new subparagraph (D) of section 172(b)(3) of the code provides that if a taxpayer makes an election under such subparagraph (C)(iii), then (notwithstanding any law or rule of law), with respect to any taxable year ending before January 1, 1964, affected by such election (1) the time for making or changing any choice or election under subpart A of part III of subchapter N (relating to foreign tax credit) shall not expire before January 1, 1966, (2) any deficiency attributable to the election under subparagraph (C)(iii) of section 172(b)(3) of the code or the application of clause (i) of section 172(b)(3)(D) of the code may be assessed at any time before January 1, 1969, and (3) refund or credit of any overpayment attributable to the election under subparagraph (C)(iii) of section 172(b)(3) of the code or the

application of clause (i) of section 172(b)(3)(D) of the code may be made or allowed if claim therefor is filed before January 1, 1969. In the event that the period within which a deficiency may be assessed or a claim for refund filed would expire at a date subsequent to January 1, 1969, under section 6501 or 6511 of the code, then such later date shall apply.

Paragraph (5) of section 210(a) of the bill, as added by your committee, amends section 172, relating to net operating loss deduction, by redesignating the existing subsection (k) as subsection (l) and by adding to such section a new subsection (k). The new subsection (k) provides that (1) the term "foreign expropriation loss" means, for any taxable year, the sum of the losses sustained with respect to property by reason of the expropriation, intervention, seizure, or similar taking of such property by the government of any foreign country, any political subdivision thereof, or any agency or instrumentality of the foregoing, and (2) the portion of the net operating loss for such year attributable to a foreign expropriation loss is the amount of the foreign expropriation loss for such year (but not in excess of the net operating loss for such year). The amount of any loss sustained is determined under section 165 of the code.

(*b*) *Technical amendments.*—Paragraph (1) of section 210(b) of the bill, as added by your committee, amends subparagraph (B) of section 172(b)(2) of the code, relating to amount of carrybacks and carryovers, by placing the existing provisions of such subparagraph (B) in a new subparagraph (B)(i) and by adding to such section a new subparagraph (B)(ii). Under existing section 172(b)(2) of the code the portion of a net operating loss which shall be carried to each of the taxable years other than the earliest taxable year to which such loss may be carried shall be the excess, if any, of the amount of such loss over the sum of the taxable income for each of the prior taxable years to which such loss may be carried. The new subparagraph (B)(ii) provides that, in computing taxable income for any such prior taxable year, the amount of the net operating loss deduction shall be determined without regard to that portion, if any, of a net operating loss for a taxable year attributable to a foreign expropriation loss, if such portion may not, under paragraph (1)(D) of section 172(b) of the code, be carried back to such prior taxable year.

Paragraph (2) of section 210(b) of the bill, as added by your committee, amends section 172(b)(2), relating to amount of carrybacks and carryovers, by adding at the end of such section a new sentence. The new sentence provides, in effect, that the portion of a net operating loss for a loss year attributable to a foreign expropriation loss shall be considered to be a separate net operating loss for such loss year. Such portion attributable to a foreign expropriation loss is to be applied after the other portion of such net operating loss for such loss year, but prior to any net operating losses for subsequent taxable years.

(*c*) *Effective date.*—Subsection (c) of section 210 of the bill, as added by your committee, provides that the amendments made by such section 210 shall apply in respect of foreign expropriation losses sustained in taxable years ending after December 31, 1958.

SECTION 211. ONE-PERCENT LIMITATION ON MEDICINE AND DRUGS

Section 211 of the bill (sec. 210 of the bill as passed by the House) has been approved by your committee without change. For the technical explanation of this section of the bill, see page A–51 of the report of the Committee on Ways and Means on the bill.

SECTION 212. CARE OF DEPENDENTS

Section 212 of the bill (sec. 211 of the bill as passed by the House) amends section 214 of the code (relating to expenses for care of certain dependents). Subsections (a), (c), and (d) of section 214 of the code as amended by the bill as passed by the House and the effective date provision for this section of the bill have been approved by your committee without change. For the technical explanation of this section of the bill (other than the amendments made by your committee), see page A–52 of the report of the Committee on Ways and Means on the bill.

Subsection (b) of section 214, as amended by the bill as passed by the House, prescribed certain limitations on the allowability of the deduction otherwise authorized by subsection (a) of such section. The changes made by your committee in respect of these limitations are discussed below.

Dollar amount

Under the bill as passed by the House, subsection (b) of section 214 limited the deduction under section 214(a) to $600 for any taxable year except that such limit would be increased (to an amount not above $900) by the amount of expenses incurred by a taxpayer for any period during which the taxpayer had two or more dependents (within the meaning of amended sec. 214(d)(1) of the code). However, in the case of a woman who is married, the $600 limit would be increased only in respect of expenses incurred during a period while her husband was incapable of self-support because mentally or physically defective.

As amended by your committee, subsection (b) of section 214 limits the deduction under section 214(a) to $600 for any taxable year, except that such $600 limit—

(1) shall be increased (to an amount not above $900) by the amount of expenses incurred by the taxpayer for any period during which the taxpayer had two dependents (within the meaning of amended sec. 214(d)(1) of the code), and

(2) shall be increased (to an amount not above $1,000) by the amount of expenses incurred by the taxpayer for any period during which the taxpayer had three or more dependents (within the meaning of amended sec. 214(d)(1) of the code).

The provision of the bill as passed by the House dealing with the increase in the $600 limit in the case of a married woman (see the last sentence of the preceding paragraph) has been deleted.

Working wives and husbands with incapacitated wives

Under the bill as passed by the House, subsection (b) of section 214 further provided, in the case of a woman who is married and a husband whose wife is incapacitated, that the deduction otherwise allowable under section 214(a)—

(1) would not be allowed unless the couple files a joint return; and

(2) would be reduced dollar for dollar to the extent that the couple's combined adjusted gross income exceeds $4,500.

These conditions, however, were made inapplicable in certain specified situations.

The foregoing provisions of the bill as passed by the House have been approved by your committee and have been combined into one paragraph with an amendment providing that the deduction otherwise allowable under section 214(a) is to be reduced dollar for dollar to the extent that the couple's combined adjusted gross income exceeds $7,000 (rather than $4,500 as provided in the bill as passed by the House).

SECTION 213. MOVING EXPENSES

Section 213 of the bill (sec. 212 of the bill as passed by the House) has been approved by your committee except for a change in the effective date provision in subsection (d). The amendment made by subsection (c) of section 213 (relating to the definition of "wages" for withholding purposes) applied, under the bill as passed by the House, with respect to remuneration paid after December 31, 1963. As amended by your committee, such provision applies with respect to remuneration paid after the seventh day following the date of enactment of the bill.

For the technical explanation of this section of the bill, see page A–57 of the report of the Committee on Ways and Means on the bill.

SECTION 214. DEDUCTION FOR POLITICAL CONTRIBUTIONS

Section 214 of the bill, which is a new section added to the bill as passed by the House, relates to a deduction for certain political contributions in computing taxable income.

(*a*) *Allowance of deduction.*—Subsection (a) of section 214 of the bill amends part VII of subchapter B of chapter 1 (relating to additional itemized deductions for individuals) of the Internal Revenue Code of 1954 by inserting after section 217 (as added by sec. 213(a)(1) of the bill) a new section 218.

SECTION 218. CONTRIBUTIONS TO POLITICAL CANDIDATES AND POLITICAL COMMITTEES

Subsection (a) of section 218 allows an individual a deduction for any political contribution (as defined in subsec. (c)), payment of which is made during the taxable year. The deduction will be allowable only for the taxable year in which the contribution is paid. The method of accounting employed by the taxpayer and the time when the contribution is pledged are immaterial.

Subsection (b)(1) of section 218 limits the deduction under subsection (a) to an aggregate of $50 for any taxable year except that in the case of husband and wife filing a joint return, the deduction for any year is limited to $100. The amount of the deduction in the case of a joint return will not be affected even though the contributions are made by only one spouse.

Subsection (b)(2) of section 218 provides that the deduction under subsection (a) shall be allowed only if the political contribution is verified in accordance with regulations prescribed by the Secretary of the Treasury or his delegate.

The term "political contribution" is defined in subsection (c) of section 218 as a contribution or gift to a political candidate or a political committee for the purpose of furthering the candidacy of one or more individuals in a general, special, or primary election or in a convention of a political party. A contribution to an organization which engages in activities in addition to influencing the election of political candidates, such as general political education, could qualify if such contribution is made to further the candidacy of one or more individuals in a general, special, or primary election or in a convention of a political party and if the funds received from such contributions are segregated from funds for such other activities. The principles applicable under section 170 of the code (relating to charitable contributions) will be followed in determining what constitutes a contribution or gift and the amount thereof. Thus, only that portion of the cost of tickets to fund-raising dinners which represents the excess of the price of the ticket over the amount which would ordinarily be paid for the dinner will qualify as a contribution. In addition, the value of services rendered to a candidate or committee will not qualify as a contribution.

(*b*) *Technical amendment.*—Subsection (b) of section 214 of the bill amends section 642 of the code (relating to special rules for credits and deductions of estates and trusts) by redesignating subsection (i) as subsection (j) and inserting a new subsection (i) which provides that an estate or trust is not allowed the deduction for political contributions provided under section 218.

(*c*) *Effective date.*—Under subsection (c) of section 214 of the bill, only contributions or gifts payment of which is made on or after the date of the enactment of the bill in taxable years ending after such date will be allowable as a deduction under new section 218 of the code.

SECTION 215. 100 PERCENT DIVIDENDS RECEIVED DEDUCTION FOR MEMBERS OF ELECTING AFFILIATED GROUPS

Section 215 of the bill, which is a new section added to the bill as passed by the House, amends section 243 of the code (relating to the deduction for certain dividends received by corporations), and makes conforming technical amendments.

(*a*) *100 percent dividends received deduction.*—Subsection (a) of section 243, as amended, in substance incorporates the provisions of subsections (a) and (b) of existing section 243. Paragraph (1) of subsection (a) corresponds to subsection (a) of existing section 243 and paragraph (2) of subsection (a) corresponds to subsection (b) of existing section 243. Paragraph (3) of subsection (a), which has no counterpart in existing law, provides for a 100 percent deduction in the case of "qualifying dividends."

Qualifying dividends

Subsection (b)(1) of section 243, as amended, defines the term "qualifying dividends" to mean dividends received by a corporation which, at the close of the day the dividends are received, is a member of the same affiliated group of corporations (as defined in par (5)

of sec. 243(b)) as the corporation distributing the dividends, provided that the conditions prescribed in subparagraphs (A) and (B) of section 243(b)(1) are met.

Subparagraph (A) of section 243(b)(1) provides that such affiliated group which includes the distributing and recipient corporations must have made an election (under par. (2) of sec. 243(b)) which is effective for the taxable years of its member corporations which include the day of receipt.

Subparagraph (B) of section 243(b)(1) provides that such dividends must have been distributed out of earnings and profits of a taxable year which ends after December 31, 1963, and with respect to which two requirements are satisfied. First, under clause (i) of subparagraph (B), on each day of such taxable year the distributing corporation and the recipient corporation must have been members of such affiliated group. Second, under clause (ii) of subparagraph (B), an election under section 1562 (relating to election of multiple surtax exemptions) must not be effective for such taxable year.

The application of the provisions of section 243(b)(1) may be illustrated by the following examples:

Example (1).—On March 1, 1964, corporation P, a publicly owned corporation, acquires all the stock of corporations S and S–1 and continues to hold such stock throughout the remainder of 1964 and all of 1965. Corporations P, S, and S–1 are domestic corporations which file separate returns on the basis of a calendar year. An election under section 1562 was not effective for their taxable years ending December 31, 1964, and December 31, 1965. Corporation S makes a $5,000 distribution with respect to its stock on February 1, 1965, which is received by corporation P on the same date. Before taking into account this distribution, corporation S had earnings and profits for its taxable years ending December 31, 1964, and December 31, 1965, of $7,000 and $4,000, respectively. An election under section 243(b)(2) is effective for the taxable years of corporations P, S, and S–1 which include February 1, 1965. Accordingly, corporation P will be entitled to a 100 percent dividends received deduction under section 243(a)(3) with respect to $4,000 of the $5,000 distribution received from corporation S on February 1, 1965. Since $1,000 of the $5,000 distribution was made out of earnings and profits of corporation S for its taxable year ending December 31, 1964, and since corporations P and S were not members of the same affiliated group of corporations on each day of such year, $1,000 of the February 1, 1965, distribution would not constitute a qualifying dividend as defined in section 243(b)(1) (but would constitute a dividend entitled to an 85 percent dividends received deduction under sec. 243(a)(1)).

Example (2).—Assume the same facts as in example (1), except that corporation P held all the stock of corporations S and S–1 on each day of 1964 and sold the stock of S on November 1, 1965. Since an election under section 243(b)(2) is effective for the taxable years of corporations P, S, and S–1 which include February 1, 1965, corporation P will be entitled to a 100 percent dividend received deduction under section 243(a)(3) with respect to $1,000 of the $5,000 distribution received from corporation S on February 1, 1965. The $1,000 amount represents the portion of the February 1, 1965, distribution which was made out of the earnings and profits of corporation S for its taxable year ending December 31, 1964, a year for which the

requirements of section 243(b)(1) are met. Since $4,000 of the $5,000 distribution was made out of the earnings and profits of corporation S for its taxable year ending December 31, 1965, and since corporations P and S were not members of the same affiliated group of corporations on each day of such year, $4,000 of the February 1, 1965, distribution would not constitute a qualifying dividend as defined in section 243(b)(1) (but would constitute a dividend entitled to an 85 percent dividends received deduction under sec. 243(a)(1)).

Election

Paragraph (2) of section 243(b), as amended, provides that an election (referred to in subpar. (A) of sec. 243(b)(1)) is to be made by the common parent corporation for the affiliated group of corporations. The election is to be made with respect to a particular taxable year of the common parent corporation and is to be made at such time and in such manner as the Secretary of the Treasury or his delegate by regulations prescribes. An election may not be made for an affiliated group for any taxable year of the common parent corporation for which an election under section 1562 (relating to election of multiple surtax exemptions) is effective. A consent is required from each corporation which is a member of the affiliated group at any time during its taxable year which includes the last day of the particular taxable year of the common parent corporation with respect to which the election is made. The consent is to be made at such time and in such manner as the Secretary of the Treasury or his delegate by regulations prescribes.

Under subparagraph (A) of paragraph (2), an election will be effective for the taxable year of each member of the affiliated group which includes the last day of the taxable year of the common parent corporation with respect to which the election is made. However, in the case of a taxable year of a member beginning in 1963 and ending in 1964, if an election is made with respect to a taxable year of the common parent corporation which includes the last day of such taxable year of such member, then the election will be effective with respect to such taxable year of such member if it consents to such election with respect to such taxable year. Under subparagraph (B) of paragraph (2), an election will also be effective (unless terminated under par. (4) of subsec. (b)) for the taxable year of each member which ends after the last day of the taxable year of the common parent corporation with respect to which the election is made but which does not include such last day.

The application of the provisions of section 243(b)(2) may be illustrated by the following example:

Example.—Corporation P is a common parent corporation of an affiliated group of corporations consisting of corporations P and S. Corporation P files its income tax return on the basis of a fiscal year ending June 30 and corporation S uses a calendar year as the basis for its tax return. Corporation P makes an election under section 243(b)(2) with respect to its taxable year ending June 30, 1965. If the election is properly consented to by P and S, the election will be effective with respect to the fiscal year of corporation P ending June 30, 1965, and with respect to the calendar year of corporation S ending December 31, 1965 (the year including June 30, 1965, the last day of the common parent corporation's taxable year with respect to

which the election was made). Further, if corporation Y, which has a fiscal year ending September 30, becomes a member of such affiliated group on June 15, 1966, the election will be effective with respect to corporation Y's taxable year ending September 30, 1966, as well as P's taxable year ending June 30, 1966, and S's calendar year ending December 31, 1966, unless the election is terminated under paragraph (4) of section 243(b).

Effect of election

Paragraph (3) of section 243(b), as amended, provides that if an election, made for an affiliated group of corporations under paragraph (2) of section 243(b), is effective with respect to any taxable year of the common parent corporation, then under regulations prescribed by the Secretary of the Treasury or his delegate—

(1) no member of such affiliated group may consent to an election under section 1562 for such taxable year;

(2) the members of such group will be treated as one taxpayer for purposes of making the elections under section 901(a) (relating to allowance of foreign tax credit) and section 904(b)(1) (relating to election of overall limitation); and

(3) the members of such affiliated group will be limited to (i) one $100,000 mimimum accumulated earnings credit under section 535(c) (2) or (3); (ii) one $100,000 limitation for exploration expenditures under section 615 (a) and (b); (iii) one $400,000 limitation for exploration expenditures under section 615(c)(1); (iv) one $25,000 limitation on small business deductions of life insurance companies under sections 804(a)(4) and 809(d)(10); and (v) one $100,000 exemption for purposes of estimated tax filing requirements under section 6016 and the addition to tax under section 6655 for failure to pay estimated tax.

Termination

Paragraph (4) of section 243(b), as amended, provides for the termination of an election under paragraph (2). Such termination, if made, is effective with respect to a taxable year of the common parent corporation and with respect to the taxable years of the members of the affiliated group which includes the last day of such taxable year of the common parent corporation. Under subparagraph (A) of paragraph (4), an election will be terminated if the affiliated group files, with respect to a particular taxable year of the common parent corporation, a termination of such election (at such time and in such manner as the Secretary of the Treasury or his delegate by regulations prescribes). Each corporation which is a member of the affiliated group at any time during its taxable year which includes the last day of such taxable year of the common parent corporation must consent to the termination of the election.

Under subparagraph (B) of paragraph (4), an election will be terminated with respect to a taxable year of the common parent corporation if with respect to such year the affiliated group includes a member which was not a member of such group during such common parent corporation's immediately preceding taxable year, and if such member files a statement that it does not consent to the election at such time and in such manner as the Secretary of the Treasury or his delegate by regulations prescribes.

Definition of affiliated group

Paragraph (5) of section 243(b), as amended, defines the term "affiliated group" for purposes of subsection (b) of section 243. The term is to have the same meaning assigned to it by section 1504(a) except that section 1504(b)(2) and section 1504(c) will not apply. Thus, for purposes of section 243(b), an affiliated group includes those domestic corporations (including a corporation which is treated as a domestic corporation under sec. 1504(d)) which meet the stock-ownership test contained in section 1504(a), and which are "includible corporations" within the meaning of section 1504(b); however, any domestic insurance company subject to taxation under section 802 or 821 will be treated for this purpose as an includible corporation.

Special rules for insurance companies

Paragraph (6) of section 243(b), as amended, provides special rules for certain insurance companies. Subparagraph (A) of paragraph (6) provides that if an election under subsection (b) of section 243 is effective for the taxable year of an insurance company subject to taxation under section 802 or 821 of the code, then part II of subchapter B of chapter 6 of the code (relating to certain controlled corporations) will be applied without regard to section 1563(a)(4) (relating to certain insurance companies) and section 1563(b)(2)(D) (relating to certain excluded members) with respect to such company and the other corporations which are members of the controlled group of corporations (as determined under sec. 1563 without regard to subsecs. (a)(4) and (b)(2)(D)) of which such company is a member. Subparagraph (B) of paragraph (6) provides that if an insurance company subject to taxation under section 802 or 821 distributes a dividend out of earnings and profits of a taxable year with respect to which the company would have been a component member of a controlled group of corporations within the meaning of section 1563 except for subsection (b)(2)(D) thereof, such dividend will not be treated as a qualifying dividend unless an election under subsection (b) of section 243 is effective for such taxable year.

The application of the provisions of paragraph (6) of section 243(b) may be illustrated by the following example:

Example.—Throughout 1965 corporation M owns all the stock of corporations L, X, and Y. Corporation M is a domestic mutual insurance company subject to tax under section 821 of the code, corporation L is a domestic life insurance company subject to tax under section 802 of the code, and corporations X and Y are subject to tax under section 11 of the code. Each corporation uses the calendar year for its taxable year. Corporation L pays a dividend to corporation M in 1965 which is out of the earnings and profits of L's taxable year ending on December 31, 1965. Corporation M makes an election under section 243(b)(2) for 1965 for the affiliated group consisting of corporations M, L, X, and Y which is properly consented to by such corporations. The application of paragraph (6) of section 243(b) results in the following tax consequences:

(1) As a result of applying part II of subchapter B of chapter 6 in the manner described in subparagraph (A) of section 243(b)(6), corporations M, L, X, and Y will be limited to a single $25,000 surtax exemption for their taxable years ending December 31, 1965 (to be apportioned among such corporations in accordance with sec. 1561).

Although M and L are excluded members of the controlled group of corporations consisting of corporations M, L, X, and Y, by reason of the application of the excluded member rule contained in subparagraph (D) of section 1563(b)(2), subparagraph (A) of section 243(b)(6) requires that part II of subchapter B of chapter 6 of the code be applied with respect to M and L and the other members of the controlled group without regard to such rule.

(2) The distribution by corporation L to corporation M is a qualifying dividend within the meaning of paragraph (1) of section 243(b). Since the distribution is out of the earnings and profits of L for its taxable year ending December 31, 1965 (a year in which L would have been a component member of a controlled group of corporations within the meaning of sec. 1563 except for the excluded member rule contained in subsec. (b)(2)(D)), and an election under paragraph (2) of section 243(b) is in effect for such taxable year, the dividend is not disqualified by operation of subparagraph (B) of section 243(b)(6).

Subsection (c) of section 243, as amended, includes a new paragraph (4). New paragraph (4) provides that any dividend received which is described in section 244 (relating to dividends received on preferred stock of a public utility), as amended by subsection (b)(1) of this section of the bill, shall not be treated as a dividend for purposes of section 243, as amended. The corresponding provisions of existing law appear as parenthetical phrases in existing subsections (a) and (b) of section 243.

Subsection (d) of section 243, as amended, is the same as existing section 243(d) except for a conforming change.

(*b*) *Technical amendments.*—Subsection (b) of section 215 of the bill makes technical amendments to several sections of the code to conform them to the amendments made by subsection (a) of this section of the bill.

(*c*) *Effective date.*—Subsection (c) of section 215 of the bill provides that the amendments made by subsections (a) and (b) of such section shall apply with respect to dividends received in taxable years ending after December 31, 1963.

SECTION 216. INTEREST ON LOANS INCURRED TO PURCHASE CERTAIN INSURANCE AND ANNUITY CONTRACTS

Section 216 of the bill (section 213 of the bill as passed by the House) amends section 264 of the code to provide that, under certain circumstances, no deduction is allowed for interest on loans incurred or continued to purchase or carry certain life insurance, endowment, or annuity contracts. For a technical explanation of this section of the bill (other than the amendment made by your committee), see page A–60 of the report of the Committee on Ways and Means on the bill.

Subsection (a)(2) of this section of the bill as passed by the House provided that new paragraph (3) of section 264(a) of the code (added by subsec. (a)(1) of sec. 216 of the bill) would apply only in respect of contracts purchased after August 6, 1963. Under your committee's amendment, new paragraph (3) of section 264(a) of the code applies only in respect of contracts purchased after December 31, 1963.

SECTION 217. INTEREST ON INDEBTEDNESS INCURRED OR CONTINUED TO PURCHASE OR CARRY TAX-EXEMPT BONDS

Section 217 of the bill, which is a new section added to the bill as passed by the House, amends section 265(2) of the code by adding a new sentence at the end thereof.

Section 265(2) presently provides that no deduction shall be allowed for interest on indebtedness incurred or continued to purchase or carry obligations (other than certain obligations of the United States) the interest from which is wholly exempt from the taxes imposed by subtitle A of the code (relating to income taxes).

(*a*) *Application with respect to certain financial institutions.*—Section 217(a) limits the application of section 265(2) in the case of interest expense in respect of face-amount certificates issued by a financial institution (other than a bank) which is subject to the banking laws of the State in which such institution is incorporated. The amendment does not affect the application of section 265(2) in the case of banks.

Under section 265(2), as amended, interest expense incurred by such an institution—

> (1) on face-amount certificates (as defined in sec. 2(a)(15) of the Investment Company Act of 1940 (15 U.S.C. 80a–2)) issued by the institution, and
>
> (2) on amounts received by such institution to be applied toward the purchase of such face-amount certificates to be issued by the institution

is not to be considered as interest on indebtedness incurred or continued to purchase or carry obligations the interest on which is wholly exempt from the taxes imposed by subtitle A of the code to the extent that the average amount of such obligations held by such institution during the taxable year does not exceed 25 percent of the average of the total assets of the institution during the taxable year.

The Secretary of the Treasury or his delegate is required to prescribe by regulations the manner of computing the average amount of tax-exempt obligations held by such institution during the taxable year, and the manner of determining the average amount of the total assets held by such institution during the taxable year.

The computation of the average amount of tax-exempt obligations and the average amount of total assets is to be made not more frequently than weekly. Thus, if the Secretary or his delegate prescribes that such averages are to be computed as of the end of each week of the institution's taxable year, the percentage which the average amount of tax-exempt obligations is of the average amount of total assets of the institution for any taxable year shall be computed by dividing—

> (1) the sum of the investments of the institution, as of the end of each week of its taxable year, in obligations the interest on which is wholly tax-exempt, by
>
> (2) the sum of the total assets of the institution as of the end of each week of its taxable year.

If this computation results in a percentage figure in excess of 25 percent, there is interest on indebtedness which is subject to the first sentence of section 265(2). The amount thereof is obtained by multi-

plying the total interest expense for the taxable year on face-amount certificates and on amounts received for the purchase of such certificates by the percentage equal to the excess of such percentage figure over 25 percent.

In addition, any other interest expense of such institution is subject to the first sentence of section 265(2).

(*b*) *Effective date.*—Section 217(b) provides that the amendment made by section 217(a) shall apply with respect to taxable years ending after the date of enactment of the bill.

SECTION 218. REPEAL OF REQUIREMENT OF ALLOCATION OF CERTAIN TRAVELING EXPENSES

(*a*) *Repeal of section 274(c).*—Subsection (a) of section 218 of the bill, which is a new section added to the bill as passed by the House, amends section 274 of the code by repealing subsection (c) thereof. Section 274(c) provides that in the case of any individual who is traveling away from home in pursuit of a trade or business or in pursuit of an activity described in section 212, no deduction shall be allowed under section 162 or section 212 for that portion of the expenses of such travel otherwise allowable under such section which, under regulations prescribed by the Secretary of the Treasury or his delegate, is not allocable to such trade or business or to such activity. Such provision, however, does not apply to the expenses of any travel away from home which does not exceed 1 week or where the portion of the time away from home which is not attributable to the pursuit of the taxpayer's trade or business or to an activity specified in section 212 is less than 25 percent of the total time away from home on such travel.

(*b*) *Effective date.*—Subsection (b) of section 218 of the bill provides that the repeal made by this section shall apply with respect to taxable years ending after December 31, 1962, but only in respect of periods after such date.

SECTION 219. ACQUISITION OF STOCK IN EXCHANGE FOR STOCK OF CORPORATION WHICH IS IN CONTROL OF ACQUIRING CORPORATION

(*a*) *Definition of reorganization.*—Subsection (a) of section 219 of the bill, which is a new section added by your committee to the bill as passed by the House, amends subparagraph (B) of section 368(a)(1) of the code, relating to definition of a stock-for-stock reorganization. Under the existing section 368(a)(1)(B), the acquisition by one corporation, in exchange solely for all or a part of its voting stock, of stock of another corporation qualifies as a "reorganization" if, immediately after the acquisition, the acquiring corporation has control of such other corporation (whether or not such acquiring corporation had control immediately before the acquisition).

Subparagraph (B) of section 368(a)(1) of the code, as amended by this section of the bill, allows an acquiring corporation to exchange either its voting stock or the voting stock of a corporation which is in control of the acquiring corporation for the stock of another corporation.

(*b*) *Technical amendments.*—Paragraph (1) of section 219(b) of the bill, as added by your committee, amends subparagraph (C) of section 368(a)(2) of the code, relating to special rules. Under the existing section 368(a)(2)(C), a transaction otherwise qualifying as a "reorganization" under subparagraph (A) or (C) of section 368(a)(1), which relate respectively to statutory mergers or consolidations and stock-for-property reorganizations, is not disqualified by reason of the fact that part or all of the assets which were acquired in the transaction are transferred to a corporation controlled by the corporation acquiring such assets.

Subparagraph (C) of section 368(a)(2) of the code, as amended by this section of the bill, allows a corporation acquiring stock in a transaction otherwise qualifying as a "reorganization" under section 368(a)(1)(B), as amended by this section of the bill, to transfer part or all of such stock to a corporation controlled by the corporation acquiring such stock.

Paragraph (2) of section 219(b) of the bill, as added by your committee, amends the last two sentences of subsection (b) of section 368, relating to definition of a party to a reorganization.

The next to last sentence of section 368(b) of the code, as amended by this section of the bill, provides that in the case of a reorganization qualifying under subparagraph (B) or (C) of section 368(a)(1), if the stock exchanged for the stock or properties is stock of a corporation which is in control of the acquiring corporation, the term "a party to a reorganization" includes the corporation so controlling the acquiring corporation. The last sentence of the amended section 368(b) of the code provides that in the case of a reorganization qualifying under subparagraph (A), (B), or (C) of section 368(a)(1) by reason of subparagraph (C) of section 368(a)(2), the term "a party to a reorganization" includes the corporation controlling the corporation to which the acquired assets or stock are transferred.

(*c*) *Effective date.*—Subsection (c) of section 219 of the bill, as added by your committee, provides that the amendments made by such section shall apply with respect to transactions after December 31, 1963, in taxable years ending after such date.

SECTION 220. RETROACTIVE QUALIFICATION OF CERTAIN UNION-NEGOTIATED MULTIEMPLOYER PENSION PLANS

(*a*) *Beginning of period as qualified trust.*—Subsection (a) of section 220 of the bill, which is a new section added by your committee to the bill as passed by the House, amends section 401 of the code by redesignating subsection (i) as (j), and by inserting a new subsection (i). Section 401 relates to qualified pension, profit-sharing, and stock bonus plans.

In general, under existing law, employer contributions to a pension trust are deductible only under the provisions of section 404 of the code. Deductibility under that section in effect requires, if the employees do not have a nonforfeitable right to the contributions at the time they are made, that the trust be part of a pension plan of an employer which qualifies under section 401(a) of the code. One of the requirements for qualification included in the Treasury Department's regulations under that section is that the plan be in

the form of "a definite written program and arrangement which is communicated to the employees." However, under a multiemployer collective bargaining agreement, employer contributions are often made to or for a pension trust before a complete schedule of benefits has been adopted, so that such contributions are not made to a qualified trust and, if not vested, are not deductible.

The new subsection (i) applies to a trust forming part of a pension plan which has been determined by the Secretary of the Treasury or his delegate to constitute a qualified trust under section 401(a), and to be exempt from taxation under section 501(a), for a period beginning after contributions were first made to or for such trust. The new subsection (i) provides that where such a trust meets certain conditions, then it shall be considered as having constituted a qualified trust under section 401(a), and as having been exempt from taxation under section 501(a), for the period beginning on the date on which contributions were first made to or for such trust and ending on the date such trust first constituted (without regard to the new subsection) a qualified trust.

The conditions referred to in the preceding paragraph require that it be shown to the satisfaction of the Secretary of the Treasury or his delegate that: (1) such trust was created pursuant to a collective bargaining agreement between employee representatives and two or more employers who are not related (determined under regulations prescribed by the Secretary of the Treasury or his delegate); (2) any disbursements made prior to the period for which the trust was determined to be qualified (without regard to the new subsection) substantially comply with the terms of the trust (and plan) as so qualified; and (3) prior to the period for which the trust was determined to be qualified (without regard to the new subsection) contributions were not used in a manner which jeopardized the interests of the beneficiaries.

In some cases, employer contributions are held in escrow until such time as a trust is created. For purposes of applying the new subsection (i), such employer contributions which are held in escrow and later transferred to a qualified trust are "contributions made to or for such trust."

(*b*) *Effective date.*—Subsection (b) of section 220 of the bill provides that the amendments made by subsection (a) shall apply with respect to taxable years beginning after December 31, 1953, and ending after August 16, 1954, but only with respect to contributions made after December 31, 1954. However, no provision of this section extends the period of limitations within which a claim for credit or refund may be filed for any taxable year.

SECTION 221. QUALIFIED PENSION, ETC., PLAN COVERAGE FOR EMPLOYEES OF CERTAIN SUBSIDIARY EMPLOYERS

Section 221 of the bill, which is a new section added to the bill as passed by the House, relates to the provision of qualified pension, profit-sharing, etc., plan coverage for certain employees of subsidairy corporations.

(*a*) *Employees of foreign subsidiaries covered by social security agreements.*—Subsection (a) of section 221 of the bill adds a new section 406 to part I of subchapter D of chapter 1 of the Internal Revenue

Code of 1954 (relating to pension, profit-sharing, stock bonus plans, etc.). The new section 406 relates to qualified pension, profit-sharing, etc., plan coverage for certain employees of foreign subsidiaries.

SECTION 406. QUALIFIED PENSION, PROFIT SHARING, ETC., PLAN COVERAGE FOR CERTAIN EMPLOYEES OF FOREIGN SUBSIDIARIES

(*a*) *Treatment as employees of domestic corporation.*—The new section 406(a) sets forth the rules relating to the treatment of certain employees of foreign subsidiaries who are covered under a social security agreement described in section 3121(l) of the code, entered into at the request of the domestic corporation, as employees of such domestic corporation. The new section 406(a) only applies in the case of a plan established and maintained by a domestic corporation which is a pension, profit-sharing, or stock bonus plan described in section 401(a) of the code, an annuity plan described in section 403(a) of the code, or a bond purchase plan described in section 405(a) of the code. The new section 406(a) provides that in the case of such a plan an individual who is a citizen of the United States and who is also an employee of a foreign subsidiary (as defined in section 3121(l)(8) of the code) of the domestic corporation shall be treated as an employee of such domestic corporation if certain requirements are satisfied. Under the new section 406(a), the deemed employer-employee relationship can only exist if the plan of the domestic employer is qualified. However, if the plan of the domestic employer is qualified, then the fact that the trust which forms a part of such plan is not exempt from tax under section 501(a) of the code does not affect such employer-employee relationship.

The first of the requirements of the new section 406(a) is that the domestic corporation has entered into an agreement described in section 3121(l) of the code, relating to agreements entered into by domestic corporations with respect to foreign subsidiaries, and such agreement covers the foreign subsidiary of the domestic corporation in which the individual is employed. Therefore, there is brought into play, as a condition precedent to obtaining the benefits of section 406, the rules set forth in section 3121(l) which relate to the circumstances under which a domestic corporation may enter into an agreement for the purpose of extending the benefits provided by title II of the Social Security Act to certain services performed outside the United States, and to the obligations of the domestic corporation which enters into such an agreement.

The second requirement is that the qualified plan of the domestic employer must expressly provide coverage for the U.S. citizen employees of all foreign subsidiaries which are covered under the agreement described in section 3121(l) of the code which has been entered into by the domestic corporation. However, such requirement does not modify the requirements for qualification set forth in section 401(a) of the code which are applicable to such plan. Thus, such plan must satisfy the requirements of section 401(a) after such plan is amended to cover individuals who are employees within the meaning of section 406(a). The plan need not provide actual benefits for all citizen employees of all such foreign subsidiaries; for example, some such employees may not receive benefits if they are excluded by reason of a nondiscriminatory classification or other provision of the plan.

The third requirement for qualification of an individual as an employee is that contributions under a funded plan of deferred compensation are not provided by any other person with respect to the remuneration paid to such individual by the foreign subsidiary. Contributions are provided under a funded plan of deferred compensation; for example, if contributions are provided for such individual under a plan described in section 401(a) of the code, section 403(a) of the code, or section 405(a) of the code. If any portion of such remuneration is covered under another plan by a person other than the domestic parent, such employee cannot be treated as the employee of the domestic corporation.

(*b*) *Special rules for application of section 401*(*a*).—The new section 406(b) provides certain special rules for the application of section 401(a) of the code in the case of a plan which covers an individual who is treated as an employee of a domestic corporation under the new section 406(a).

Paragraph (1) of such section 406(b) provides certain rules regarding the application of section 401(a) (3)(B) and (4) of the code in the case of a plan which covers such an individual. Paragraph (1)(A) of section 406(b) provides that if such an individual is an officer, shareholder, or person whose principal duties consist in supervising the work of other employees of a foreign subsidiary of such domestic corporation, he shall be treated as having such capacity with respect to the domestic corporation. Thus, for example, if an individual who is an employee within the meaning of section 406(a) is an officer of a foreign subsidiary, he is considered to be an officer of the domestic corporation treated as his employer for the purpose of determining whether the plan of such domestic employer satisfies the nondiscrimination requirements of section 401(a) (3)(B) and (4).

Paragraph (1)(B) of section 406(b) provides that the determination of whether an individual who is treated as an employee under the new section 406(a) is a highly compensated employee for purposes of section 401(a) (3)(B) and (4) of the code is made by treating such individual's total compensation (as computed in accordance with the provisions of par. (2) of sec. 406(b)) as compensation paid by the domestic corporation and by determining such individual's status as a highly compensated employee with regard to such domestic corporation.

Paragraph (2) of the new section 406(b) sets forth the rules regarding determination of the compensation of an individual who is treated as an employee of a domestic corporation under section 406(a) of the code. Such rules are applicable whenever the compensation of such an individual is to be determined for the purpose of determining whether the plan satisfies the requirements for qualification set forth in section 401(a). Paragraph (2)(A) of section 406(b) provides that, for the purpose of applying section 401(a)(5) with respect to such an individual, his total compensation is the remuneration paid to him by the foreign subsidiary which would constitute his total compensation if his services had been performed for the domestic corporation treated as his employer. In addition, such paragraph (2)(A) provides that the portion of the individual's total compensation which constitutes his basic or regular rate of compensation shall be determined under regulations prescribed by the Secretary of the Treasury or his delegate.

Paragraph (2)(B) of section 406(b) provides that an individual who is treated as an employee under section 406(a) shall be treated as having paid the amount paid by such domestic corporation which is equivalent to the tax imposed by section 3101 of the code (relating to the tax imposed on employees) with respect to such individual. Thus, the administrative rules relating to the determination of the contributions or benefits provided by the employer under the Social Security Act apply for purposes of determining whether the plan meets the requirements of section 401.

(*c*) *Termination of status as deemed employee not to be treated as separation from service for purposes of capital gains provisions.*—The new section 406(c) provides that the termination of status as an employee within the meaning of section 406(a) shall not be treated as separation from service for purposes of sections 402(a)(2) and 403(a)(2) of the code which provide capital gains treatment for certain distributions which take place after an employee's separation from the service. Section 406(c) provides that for purposes of applying section 402(a)(2) and section 403(a)(2) with respect to the distribution of the total amounts payable to an individual who is treated as an employee of a domestic corporation under section 406(a), such individual is not treated as separated from the service of the domestic corporation solely by reason of the occurrence of certain events.

The provisions of section 406(c) are in addition to the rules of existing law regarding the determination as to whether an employee is separated from service. In general, these provisions take into account the deemed employer-employee relationship which is established under the new section 406 of the code and provide that the termination of such deemed relationship does not result in a separation from service.

Section 406(c) provides that for purposes of applying section 402(a)(2) and section 403(a)(2) of the code with respect to an individual who is treated as an employee of a domestic corporation under section 406(a), such individual shall not be treated as separated from the service solely by reason of the fact that—

(1) The agreement entered into by such domestic corporation under section 3121(l) which covers the employment of such individual is terminated under the provisions of such section;

(2) Such individual becomes an employee of a foreign subsidiary (as defined in sec. 3121(l)(8)) with respect to which an agreement described in section 3121(l) does not apply;

(3) Such individual ceases to be an employee within the meaning of section 406(a) and becomes an employee of another corporation controlled by the domestic corporation; or

(4) The provision of the plan described in section 406(a)(2) is terminated.

For purposes of paragraph (3), above, a corporation is considered to be controlled by a domestic corporation if such domestic corporation owns directly or indirectly more than 50 percent of the voting stock of the corporation.

(*d*) *Deductibility of contributions.*—The new section 406(d) relates to the deductibility of contributions made on behalf of an individual who

is treated as an employee of a domestic corporation by reason of the provisions of section 406(a). The new section 406(d) provides that for purposes of applying sections 404 and 405(c) with respect to contributions made to a qualified plan on behalf of an individual who is treated as an employee of a domestic corporation under section 406(a), no domestic corporation is allowed a deduction. The amount which would be deductible under section 404 or 405(c) by the domestic corporation if the individual who is an employee within the meaning of section 406(a) were its own employee is allowed as a deduction to the foreign subsidiary. Thus, the foreign subsidiary is allowed the deduction under section 404(a) or 405(c), but such deduction is available to the foreign corporation only to the extent otherwise allowed under chapter 1 (see, for example, sec. 863 of the code).

Whether contributions on behalf of an individual who is treated as an employee under section 406(a), or forfeitures with regard to such employee, will result in an inclusion in the income of the domestic corporation, or an adjustment in the basis of such corporation's stock in the foreign corporation, will depend upon the rules of existing law. For example, an unreimbursed contribution by the domestic parent corporation to a plan under which each employee's rights to the contributions are nonforfeitable, will be treated as a contribution of capital to the foreign subsidiary to the extent that such contributions are made on behalf of such subsidiary's employees.

Paragraph (3) of the new section 406(d) provides that for the purpose of computing the amount deductible under section 404 or 405(c) any reference to compensation shall be considered to be a reference to the total compensation of such individual determined with the application of the rules set forth in the new section 406(b)(2).

The new section 406(d) also provides that any amount deductible by a foreign subsidiary under this section shall be deductible for its taxable year with or within which the taxable year of the domestic corporation ends.

(e) *Treatment as employee under related provisions.*—The new section 406(e) provides that, for purposes of applying certain related provisions of the code, an individual who is treated as an employee of a domestic corporation under the new section 406(a) is also to be treated as an employee of the domestic corporation with respect to certain related provisions dealing with the tax treatment of qualified plans. This section permits employees of subsidiaries covered under the qualified plan of the domestic corporation and their beneficiaries to receive the same tax treatment afforded other employees of such corporation and their beneficiaries with respect to the taxation of annuities, the death benefit exclusion, the exemption from gross estate of annuities under certain trusts and plans, and the exclusion from gift tax in the case of certain annuities under qualified plans. The provisions specifically designed under subsection (e) are: (1) Section 72(d), relating to employees' annuities; (2) section 72(f), relating to special rules for computing employees' contributions; (3) section 101(b), relating to employees' benefits; (4) section 2039, relating to annuities; and (5) section 2517, relating to certain annuities under qualified plans.

SECTION 221. QUALIFIED PENSION, ETC., PLAN COVERAGE FOR EMPLOYEES OF CERTAIN SUBSIDIARY EMPLOYERS—Continued

(*b*) *Employees of domestic subsidiaries engaged in business outside the United States.*—Subsection (b) of section 221 of the bill amends part I of subchapter D of chapter 1 of the code (relating to pension, profit-sharing, stock bonus plans, etc.) by adding after section 406 of the code a new section 407. The new section 407 relates to certain employees of domestic subsidaries engaged in business outside the United States.

SECTION 407. CERTAIN EMPLOYEES OF DOMESTIC SUBSIDIARIES ENGAGED IN BUSINESS OUTSIDE THE UNITED STATES

(*a*) *Treatment as employees of domestic parent corporation.*—The new section 407(a) sets forth the requirements which must be satisfied for a U.S. citizen who is employed by a domestic subsidiary engaged in business outside the United States to be treated as an employee of the domestic parent corporation. Paragraph (1) of section 407(a) provides that for purposes of applying this part, with respect to a qualified plan described in either section 401(a), 403(a), or 405(a), of a domestic parent corporation, an individual who is a citizen of the United States and an employee of a domestic subsidiary (as defined in paragraph (2) of section 407(a)) of a domestic parent corporation shall be treated as an employee of the domestic parent corporation if two requirements are satisfied.

The first of these requirements is that the plan of the domestic parent corporation must expressly provide coverage for U.S. citizen employees of every domestic subsidiary (as defined in paragraph (2) of section 407(a)). The second requirement is that contributions must not be provided for the employee by any other person under a funded plan of deferred compensation (whether or not such plan is a qualified plan). Contributions are not provided under a funded plan, for example, merely because the domestic subsidiary employer pays the tax imposed by section 3111 with respect to an employee.

Paragraph (2) of the new section 407(a) provides certain definitions for purposes of section 407. Paragraph (2)(A) of section 407(a) defines the term "domestic subsidiary" for purposes of section 407. Such paragraph (2)(A) sets forth three requirements which must be satisfied in order for a domestic corporation to be classified as a "domestic subsidiary." First, the domestic parent corporation must own 80 percent or more of the outstanding voting stock of the subsidiary corporation. Second, 95 percent or more of the subsidiary corporation's gross income for the 3 taxable years of such subsidiary immediately preceding the close of the taxable year of the domestic parent corporation (or for such part of such period during which the corporation was in existence) must be derived from sources without the United States. The third requirement is that 90 percent or more of the subsidiary corporation's gross income for such period (or such part) must be derived from the active conduct of a trade or business.

Paragraph (2)(B) of section 407(a) defines the term "domestic parent corporation" for purposes of section 407. A domestic parent

corporation for purposes of such section is the domestic corporation which owns 80 percent or more of the outstanding voting stock of a domestic subsidiary (as defined in paragraph (2)(A)).

(*b*) *Special rules for application of section 401(a).*—The new section 407(b) provides special rules for the application of section 401(a). The rules are substantially the same as those prescribed in the new section 406(b) (1) and (2)(A), except that the provisions of section 407(b) relate to individuals who are employees within the meaning of section 407(a), and the technical explanation of the provisions of section 406(b) (1) and (2)(A) is applicable to the provisions of section 407(b).

(*c*) *Termination of status as deemed employee not to be treated as separation from service for purposes of capital gains provisions.*—The new section 407(c) relates to certain occasions when the termination of the status as an employee within the meaning of section 407 shall not be treated as separation from service for purposes of sections 402(a)(2) and 403(a)(2) of the code. The new section 407(c) provides that an individual who is an employee of a domestic subsidiary but who is treated as an employee of a domestic parent corporation under the new section 407(a) shall not be considered as separated from the service of the domestic parent corporation solely by reason of the fact that the domestic subsidiary ceases, for any taxable year, to be a subsidiary within the meaning of section 407(a)(2)(A). Thus, for example, even though an individual who is an employee of a domestic subsidiary could not be covered under the plan of the domestic parent corporation for any taxable year in which the domestic parent corporation owned only 72 percent of the utstanding voting stock of such domestic subsidiary, such individual would not be treated as separated from service of the domestic corporation for purposes of sections 402(a)(2) and 403(a)(2) of the code.

Section 407(c) also provides that an individual shall not be treated as separated from the service by reason of the fact that—

(1) such individual ceases to be an employee of a domestic subsidiary corporation and becomes an employee of another corporation controlled by the domestic parent corporation; or

(2) the plan no longer contains the provision described in section 407(a)(1)(A).

For purposes of paragraph (1), above, a corporation is considered to be controlled by a domestic parent corporation if such domestic parent corporation owns directly or indirectly more than 50 percent of the voting stock of the corporation.

(*d*) *Deductibility of contributions.*—The new section 407(d) provides rules relating to the deductibility of contributions made on behalf of an individual who is an employee within the meaning of section 407(a). These rules are substantially the same as the rules in the new section 406(d), except that the provisions of section 407 relate to contributions on behalf of employees of domestic subsidiaries.

(*e*) *Treatment as employee under related provisions.*—The substantive provisions of the new section 407(e) are the same as the new section 406(e), except that the provisions of section 407 relate to the tax treatment of employees of domestic subsidiaries.

SECTION 221. QUALIFIED PENSION, ETC., PLAN COVERAGE FOR EMPLOYEES OF CERTAIN SUBSIDIARY EMPLOYERS—Continued

(*c*) *Technical amendments.*—Subsection (c) of section 221 of the bill sets forth certain technical amendments. Paragraph (1) of section 221(c) amends the table of sections for part I of subchapter D of chapter 1 of the Internal Revenue Code of 1954 to reflect the addition of new sections 406 and 407 of the code. Paragraph (2) of section 221(c) amends section 3121(a)(5) of the code, relating to definition of wages, to conform such definition to the provisions relating to the qualification of plans of deferred compensation which are contained in part I of subchapter D of chapter 1. Paragraph (3) of section 221(c) amends section 209(e) of the Social Security Act, relating to the definition of wages, in order to conform the provisions of this section to the provisions of section 3121(a)(5) of the code, as amended by paragraph (2) of section 221(c) of the bill.

(*d*) *Effective date.*—Subsection (d) of section 221 of the bill provides that the amendments made by subsections (a), (b), and (c)(1) of section 221 will be applicable to taxable years ending after December 31, 1963, and that the amendments made by subsections (c) (2) and (3) of section 221 shall apply to remuneration paid after December 31, 1962.

SECTION 222. EMPLOYEE STOCK OPTIONS AND PURCHASE PLANS

Section 222 of the bill (sec. 214 of the bill as passed by the House) has been approved by your committee with the amendments explained hereinafter. For the technical explanation of this section of the bill (other than the amendments made by your committee), see page A–63 of the report of the Committee on Ways and Means on the bill.

(*a*) *In general.*—Subsection (a) of this section of the bill as passed by the House has been amended by your committee as follows:

SECTION 422. QUALIFIED STOCK OPTIONS

(*a*) *Qualified stock option.*—Under the bill as passed by the House, section 422(b) of the code defined the term "qualified stock option" as an option granted to an individual after June 11, 1963 (other than a restricted stock option granted pursuant to a contract described in sec. 424(c)(4)(A) (sec. 424(c)(3)(A) of the code under the bill as amended by your committee)), for any reason connected with his employment by the corporation, if granted by the employer corporation or its parent or subsidiary corporation, to purchase stock of any of such corporations, but only if the requirements of paragraphs (1) through (7) of section 422(b) are met.

Your committee has amended this provision by changing the date contained therein from June 11, 1963, to December 31, 1963.

(*b*) *Special rules.*—

Certain options treated as outstanding

Under the bill as passed by the House, section 422(c)(2) of the code provided that, for purposes of section 422(b)(5) (relating to prior outstanding options)—

(A) any restricted stock option which is not terminated before January 1, 1965, and

(B) any qualified stock option granted after June 11, 1963,

shall be treated as outstanding until such option is exercised in full or expires by reason of the lapse of time. The bill as passed by the House further provided that for purposes of the preceding sentence, a restricted stock option granted before June 12, 1963, shall not be treated as outstanding for any period before the first day on which (under the terms of the option) it may be exercised.

Your committee has amended this provision by changing the dates June 11, 1963, and June 12, 1963, contained therein to December 31, 1963, and January 1, 1964, respectively.

Certain disqualifying dispositions where amount realized is less than value at exercise

Under the bill as passed by the House, section 422(c)(4) of the code provided that if an individual who has acquired a share of stock by the exercise of a qualified stock option disposes of such share within 3 years of the transfer of such share to him and if such disposition is a sale or exchange with respect to which a loss (if sustained) would be recognized to the individual, then the amount includible in the gross income of such individual, and deductible from the income of his employer corporation, as compensation attributable to the exercise of such option cannot exceed the excess, if any, of the amount realized on such sale or exchange over the amount paid for such share.

Your committee has amended this provision in order to provide that the amount of compensation recognized to the individual, or deductible from the income of his employer corporation, is to be limited to the excess, if any, of the amount realized on such sale or exchange over the adjusted basis of such share. Thus, your committee's amendment changes the effect of this provision as passed by the House only if the adjusted basis of the share differs from the amount paid for the share, as might result in the case of the exercise of an option to which section 422(c)(1) (relating to exercise of option when price is less than value of stock) applies.

Exception to application of subsection (b)(5)

Under the bill as passed by the House, paragraphs (1) through (5) of section 422(c) of the code contained five special rules relating to qualified stock options. Your committee has amended section 422(c) by adding a new paragraph (6) at the end thereof. The new section 422(c)(6) (relating to exception to application of subsec. (b)(5)) provides, in effect, that a new qualified stock option being granted to an individual need not contain the limitation on exercise otherwise required by section 422(b)(5), if the new option and all the outstanding qualified (or restricted) stock options previously granted to the individual, are options to purchase stock of the same class in the same corporation, and if the price payable under each such outstanding option (determined as of the date of grant of the new qualified stock option being granted to the individual) is not more than the option price of the option being granted.

The operation of the new paragraph (6) of section 422(c) is illustrated by the following examples:

Example (1).—Assume that on January 2, 1964, A, an employee of M corporation, is granted a qualified stock option entitling him to

purchase 100 shares of M stock at a price of $5 per share (the fair market value of M stock on such date). On June 2, 1964, M grants A another qualified stock option with respect to the same class of stock as the January option, entitling him to buy 100 shares of such stock at a price of $6 per share (the fair market value of such stock on such date).

Under the bill as passed by the House, the option granted A in June must contain a provision that such option is not exercisable until the option granted in January has either been exercised in full, or has lapsed. Under the bill as amended by your committee, the June option may be exercisable before the January option since both options are to purchase the same class of stock in the same corporation and the option price of the January option ($5) is not greater than the option price of the June option ($6).

Example (2).—The facts are the same as in example (1) except that the option price of the June option is $4, the fair market value of the stock on June 2, 1964. The new rule of section 422(c)(6) (relating to exception to the application of sec. 422(b)(5)) is not applicable in this case since the price payable for the stock under the January option ($5) is greater than the option price of the June option ($4). Similarly, the exception to the application of section 422(b)(5) provided by the new section 422(c)(6) would not be applicable if the June option were granted with respect to a different class of M stock, or with respect to the stock of a parent or subsidiary of M corporation. In such a situation, the provisions of section 422(b)(5) remain applicable and the outstanding option must either be exercised in full or lapse before the more recently granted option may become exercisable.

SECTION 423. EMPLOYEE STOCK PURCHASE PLANS

(*a*) *General rule.*—Under the bill as passed by the House, section 423(a) of the code provided that the special tax treatment of the new section 421(a) shall apply to a transfer of a share of stock to an individual pursuant to his exercise of an option, if the option is granted after June 11, 1963 (other than a restricted stock option granted pursuant to a plan described in sec. 424(c)(4)(B) (sec. 424(c)(3)(B) of the code under the bill as amended by your committee)), under an employee stock purchase plan (as defined in sec. 423(b)), and if the holding period and employment requirements set forth in paragraphs (1) and (2) of section 423(a) are met.

Your committee has amended this provision by changing the date contained therein from June 11, 1963, to December 31, 1963.

SECTION 424. RESTRICTED STOCK OPTIONS

(*a*) *Restricted stock option.*—Under the bill as passed by the House, section 424(b) of the code continued the definition of the term "restricted stock option" presently contained in section 421(d)(1) for options granted before June 12, 1963 (or after June 11, 1963, if granted in accordance with sec. 424(c)(4) (sec. 424(c)(3) of the code under the bill as amended by your committee)).

Your committee has amended this provision by changing the dates contained therein from June 12, 1963, to January 1, 1964, and from June 11, 1963, to December 31, 1963.

(*b*) *Special rules.*—Under the bill as passed by the House, section 424(c) of the code provided three special rules relating to restricted stock options, all of which are identical to provisions of existing section 421, and a fourth special rule relating to certain options granted after June 11, 1963. Your committee has amended these special rules in the following respects:

Stockholder approval

Under the bill as passed by the House, the applicability of section 424(c)(2) of the code (relating to stockholder approval) was limited to restricted stock options. Your committee has extended the rule contained in section 424(c)(2) to qualified stock options and options granted under employee stock purchase plans by striking paragraph (2) of section 424(c), and by inserting a comparable provision as subsection (i) under section 425 (relating to definitions and special rules). A technical explanation of the new section 425(i) may be found, in place, below.

Certain options granted after December 31, 1963

Under the bill as passed by the House, paragraph (4) of section 424(c) of the code (sec. 424(c)(3) of the code under the bill as amended by your committee) provided the additional requirements that must be met by options granted after June 11, 1963, in order for such options to be treated as restricted stock options. In general, under the bill as passed by the House, an option granted after June 11, 1963, that otherwise meets the requirements of the new section 424(b) of the code is treated as a restricted stock option for purposes of the revised part II of subchapter D if it was granted pursuant to—

(A) a binding written contract entered into before June 12, 1963, or

(B) a written plan adopted and approved before June 12, 1963, which (as of June 12, 1963, and as of the date of the granting of the option) either met the requirements of paragraphs (4) and (5) of section 423(b) or was being administered in a way that did not discriminate in favor of officers, persons whose principal duties consist of supervising the work of other employees, or highly compensated employees.

Your committee has amended this provision by changing the dates contained therein from June 11, 1963, to December 31, 1963, and from June 12, 1963, to January 1, 1964. In determining whether an option is granted pursuant to a plan described in subparagraph (B) of the provision, the terms of any written offering that was made on or before January 1, 1964, will be treated as a part of the plan.

SECTION 425. DEFINITIONS AND SPECIAL RULES

(*a*) *Modification, extension, or renewal of option.*—

Special rules for sections 423 and 424 options

Under the bill as passed by the House, subparagraph (B) of section 425(h)(2) of the code continues the rule of the existing section 421(e)(1) that provides an exception to the rule of section 425(h)(2)(A) if the average fair market value of the stock for the 12 months prior to the modification, extension, or renewal is less than 80 percent of the fair market value at the date of the original granting or any intervening

modification, extension, or renewal, whichever is higher. Under the bill as passed by the House, this exception only applies to modifications, extensions, or renewals of restricted stock options made before June 12, 1963 (or made pursuant to a binding written contract entered into before June 12, 1963).

Your committee has amended this provision by changing the date contained therein from June 12, 1963, to January 1, 1964.

Definition of modification

Under the bill as passed by the House, paragraph (3) of section 425(h) of the code defined the term "modification" in the same manner as existing section 421(e). Thus, under the bill as passed by the House, the term "modification" was defined as any change in the terms of the option which gives the employee additional benefits; but such term does not include a change in the terms of the option which is attributable to the issuance or assumption of an option under section 425(a), or to permit the option to qualify under section 422(b)(6), 423(b)(9), or 424(b)(2) if, in the case of a restricted stock option, the period during which the option may be exercised is restricted to 10 years from the date of the grant of the option.

Your committee has amended this provision by adding a new subparagraph (C) to section 425(h)(3) as set forth in the bill as passed by the House. The new subparagraph (C) added by your committee provides an additional exception to the definition of the term "modification." This new exception provides that a change in the terms of an option which is not immediately exercisable in full to accelerate the time at which the option may be exercised is not a modification for purposes of section 425(h). Thus, your committee's amendment allows an option which is exercisable only in installments, or after the expiration of a fixed period of time, or on the happening of an event, to be amended to permit acceleration of the time for exercising any (or all) of the installments, or to permit an acceleration in the time for exercising all or any portion of the option, without treating such amendment as a modification of the option.

(*b*) *Stockholder approval.*—Under the bill as passed by the House, paragraph (2) of section 424(c) of the code provided that for purposes of section 424 (relating to restricted stock options), if the grant of an option is subject to approval by stockholders, the date of grant of the option shall be determined as if the option had not been subject to such approval. Thus, under the bill as passed by the House, the applicability of section 424(c)(2) was limited to restricted stock options.

Your committee has extended the rule of section 424(c)(2) to qualified stock options and options granted under employee stock purchase plans by striking paragraph (2) of section 424(c) as set forth in the bill as passed by the House, by redesignating section 425(i) (relating to cross references) as section 425(j) and by inserting a new section 425(i). The new section 425(i) provides that for purposes of part II of subchapter D of chapter 1 of the code (relating to certain stock options), if the grant of an option is subject to approval by stockholders, the date of grant of the option shall be determined as if the option had not been subject to such approval.

SECTION 222. EMPLOYEE STOCK OPTIONS AND PURCHASE PLANS—Continued

(*b*) *Administrative provisions.*—Subsection (b) of this section of the bill as passed by the House has been amended by your committee as follows:

Penalties for failure to file information returns

Subsection (b)(2) of this section of the bill as passed by the House amends section 6652(a) of the code (relating to failure to file certain information returns) to provide a penalty for the failure to file the return required by section 6039(a). Your committee has revised section 6652 as amended by the bill as passed by the House in order to make clear that the penalty provided under section 6652(a) is imposed for each failure to file the statement referred to in section 6652(a)(1), and for each failure to file a return with respect to a transfer referred to in section 6652(a)(2). Thus a penalty is incurred under section 6652(a)(2) with respect to each transfer described in the new section 6039 which the taxpayer fails to report on the return required by such section. The penalty is $10 for each such failure, not to exceed $25,000 for all failures described in section 6652(a) in any one calendar year.

Your committee has also amended section 6652(a) of the code to provide that the penalty provided by such section shall be imposed in the case of each failure to make a return required by section 6052(a) (relating to reporting payment of wages in the form of group-term life insurance) with respect to group-term life insurance on the life of an employee. (The new sec. 6052 is added to the code by sec. 204 of the bill as reported by your committee.)

(*c*) *Effective date.*—Subsection (e) of this section of the bill as passed by the House provided that the amendments made by this section apply to taxable years ending after June 11, 1963; except that the new section 6039 of the code added by subsection (b) of this section (relating to administrative provisions), and paragraph (2) of section 6652(a) of the code as amended by such subsection, apply only to stock transferred pursuant to options exercised on or after January 1, 1964.

Your committee has amended subsection (e) of this section of the bill as passed by the House by changing the general effective date of the provisions relating to employee stock options and purchase plans as passed by the House from June 11, 1963, to December 31, 1963, and by adding a special rule for certain options granted after December 31, 1963, and before January 1, 1965. The special rule is contained in a new paragraph (3) added to subsection (e) of this section of the bill as passed by the House. The new paragraph provides that paragraphs (1) and (2) of section 422(b) of the code shall not apply to an option granted after December 31, 1963, and before January 1, 1965, and that paragraph (1) of section 425(h) shall not apply to any change in the terms of such an option made before January 1, 1965, to permit the option to qualify under paragraphs (3), (4), and (5) of section 422(b).

Subparagraph (A) of the new paragraph (3) permits the transfer of a share of stock pursuant to an individual's exercise of a stock option granted after December 31, 1963, and before January 1, 1965, to

69-108 O—66—pt. 3——18

qualify for the special tax treatment provided by the revised section 421 of the code without regard to whether the option is granted pursuant to a plan, as required by section 422(b)(1), or whether the plan was approved by the shareholders. In addition, since the option need not be granted pursuant to a plan at all, the option need not be granted within 10 years from the date such plan is adopted or approved, whichever is earlier, as provided under section 422(b)(2).

Subparagraph (B) of paragraph (3) allows options granted after December 31, 1963, and before January 1, 1965, to be amended at any time before January 1, 1965, to meet the requirements of paragraphs (3), (4), and (5) of section 422(b), without such amendments being treated as a modification under section 425(h). Amendments to options under subparagraph (B) of paragraph (3) are to be retroactive to the date of grant of the option.

SECTION 223. INSTALLMENT SALES BY DEALERS IN PERSONAL PROPERTY

Section 223 of the bill, which was added by your committee to the bill as passed by the House, amends section 453(a) of the code (relating to the reporting of income by dealers in personal property from sales on the installment plan).

(*a*) *Installment plans.*—Subsection (a) of section 223 amends section 453(a) of the code by placing the existing provisions thereof in a new paragraph (1) of such subsection and by adding new paragraphs (2) and (3). The new paragraph (2) provides that for purposes of determining whether a dealer in personal property is selling such property on the installment plan so that he may return on the installment method (as described in par. (1)) the income from such sales, the term "installment plan" includes any plan which provides that the purchaser is to pay for such sales in a series of periodic installments of the debt due such dealer.

Paragraph (3) of revised section 453(a) provides that for purposes of computing the income from sales of personal property to be reported on the installment method by a dealer in personal property under paragraph (1), the term "total contract price" includes all charges relative to such sales including the time price differential which represents the amount paid or payable by the purchaser for the privilege of paying for such property in installments. Charges relative to the sale of personal property do not include charges for service contracts or warranties, or other charges for services unless such services are incidental to and rendered contemporaneously with the sale of the personal property.

(*b*) *Effective date.*—Subsection (b) of section 223 provides that the amendment made by subsection (a) of such section shall apply to taxable years beginning after December 31, 1963.

SECTION 224. TIMING OF DEDUCTIONS AND CREDITS IN CERTAIN CASES WHERE ASSERTED LIABILITIES ARE CONTESTED

Section 224 of the bill, which was added by your committee to the bill as passed by the House, amends section 461 of the 1954 Code (relating to general rule for taxable year of deduction) and section 43

of the 1939 Code (relating to period for which deductions and credits taken), and provides certain transitional rules. No provision of this section of the bill extends the period of limitations within which a claim for credit or refund may be filed for any taxable year.

(*a*) *Taxable year of deduction or credit.*—Paragraph (1) of section 224(a) of the bill, which was added by your committee to the bill as passed by the House, amends section 461 of the 1954 Code, relating to general rule for taxable year of deduction, by adding to such section a new subsection (f). In G.C.M. 25298, 1947–2 C.B. 39, the Internal Revenue Service took the position that a taxpayer may deduct the amount of taxes paid to local authorities not later than for the year of payment even though he contests liability for such taxes. In 1961, the U.S. Supreme Court held that, where an accrual basis taxpayer contested taxes paid to local authorities, the contested amount was deductible for the taxable year in which the contest was settled rather than for the taxable year in which such amount was paid (*U.S.* v. *Consolidated Edison Co.* (1961) 366 U.S. 380). The new subsection (f), in the case of contested taxes, provides that the contested amount is deductible for the year of payment.

The new subsection (f) provides in effect that if (1) a taxpayer contests an asserted liability (such as a tax assessment); (2) such taxpayer transfers money or other property to provide for the satisfaction of the asserted liability; (3) the contest with respect to the asserted liability exists after the time of the transfer; and (4) but for the fact that the asserted liability is contested, a deduction or credit would be allowed for the taxable year of the transfer (or, in the case of an accrual method taxpayer, for an earlier taxable year for which such amount would be accruable), then the deduction or credit shall be allowed for the taxable year of the transfer.

The new subsection (f) is not limited to an asserted liability for taxes, but applies to any asserted liability where the requirements of the new subsection (f) are met. A taxpayer may provide for the satisfaction of an asserted liability by transferring money or other property to the person who is asserting the liability, or by a transfer to an escrow agent provided that the money or other property is beyond the control of the taxpayer. However, purchasing a bond to guarantee payment of the asserted liability, an entry on the taxpayer's books of account, or a transfer to an account which is within the control of the taxpayer is not a transfer to provide for the satisfaction of an asserted liability.

The new subsection (f) applies only if the contest with respect to the asserted liability exists after the time of payment. Thus, the new subsection (f) does not apply to Z corporation in the following example:

Example.—Z corporation uses the accrual method of accounting. In 1964 a $100 liability is asserted against Z. Z contests the asserted liability. In 1967 the contested liability is settled as being $80 which Z accrues and deducts for such year. In 1968 Z pays the $80.

If any portion of the contested amount, which is deducted in the year of payment, is refunded when the contest is settled, such portion is includible in gross income except as provided in section 111 of the 1954 Code, relating to recovery of bad debts, prior taxes, and delinquency amounts.

The new subsection (f) may be illustrated by the following examples:

Example (1).—X corporation, which uses the cash method of accounting, in 1964 contests $20 of a $100 asserted real property tax liability but pays the entire $100 to the taxing authority. In 1968, the contest is settled and X receives a refund of $5. Under the new subsection (f) of section 461 of the 1954 Code, for the taxable year 1964 X deducts $100 and for the taxable year 1968 X includes $5 in gross income (assuming sec. 111 of the 1954 Code does not apply to such amount).

Example (2).—Y corporation, which uses the accrual method of accounting, in 1964 contests $20 of a $100 asserted real property tax liability but pays the entire $100 to the taxing authority. In 1968, the contest is settled and Y receives a refund of $5. Under the new subsection (f) of section 461 of the 1954 Code, for the taxable year 1964 Y deducts $100 and for the taxable year 1968 Y includes $5 in gross income (assuming sec. 111 of the 1954 Code does not apply to such amount).

Paragraph (2) of section 224(a) of the bill, as added by your committee, amends section 43 of the 1939 Code, relating to period for which deductions and credits taken, by adding at the end of such section a new sentence. The new sentence is the same as the new subsection (f) added to section 461 of the 1954 Code by paragraph (1) of section 224(a) of the bill.

(*b*) *Effective dates.*—Subsection (b) of section 224 of the bill, as added by your committee, provides that except as provided in subsections (c) and (d) of section 224 of the bill—

> (1) the new subsection (f) of section 461 of the 1954 Code, as added by paragraph (1) of section 224(a) of the bill, shall apply to transfers of money or other property in taxable years beginning after December 31, 1953, and ending after August 16, 1954, and
>
> (2) the new sentence added to section 43 of the 1939 Code by paragraph (2) of section 224(a) of the bill shall apply to transfers of money or other property in taxable years to which the Internal Revenue Code of 1939 applies.

(*c*) *Election as to transfers in taxable years beginning before January 1, 1964.*—Paragraph (1) of section 224(c) of the bill, as added by your committee, provides that the amendments made to section 461 of the 1954 Code and section 43 of the 1939 Code by paragraphs (1) and (2), respectively, of section 224(a) of the bill shall not apply to any transfer of money or other property described in such section 224(a) made in a taxable year beginning before January 1, 1964, if the taxpayer elects, in the manner provided by regulations prescribed by the Secretary of the Treasury or his delegate, to have such paragraph (1) apply. Such an election (1) must be made within 1 year after the date of enactment of the bill, (2) may not be revoked after the expiration of such 1-year period, and (3) shall apply to all transfers of money or other property described in section 224(a) of the bill made in a taxable year beginning before January 1, 1964 (other than transfers described in par. (2) of sec. 224(c) of the bill). In the case of any transfer to which paragraph (1) of section 224(c) of the bill applies, the deduction or credit shall be allowed only for the taxable year in which the contest with respect to such transfer is settled.

Paragraph (2) of section 224(c) of the bill, as added by your committee, provides that paragraph (1) of such section 224(c) shall not

apply to any transfer if the assessment of any deficiency which would result from the application of the election in respect of such transfer is, on the date of the election under such paragraph (1), prevented by the operation of any law or rule of law.

Paragraph (3) of section 224(c) of the bill, as added by your committee, provides that if the taxpayer makes an election under paragraph (1) of section 224(c) of the bill, and if, on the date of such election, the assessment of any deficiency which results from the application of the election in respect of any transfer is not prevented by the operation of any law or rule of law, the period within which assessment of such deficiency may be made shall not expire earlier than 2 years after the date of enactment of this bill.

(*d*) *Certain other transfers in taxable years beginning before January 1, 1964.*—Subsection (d) of section 224 of the bill, as added by your committee, provides that the amendments made to section 461 of the 1954 Code and section 43 of the 1939 Code by paragraphs (1) and (2), respectively, of section 224(a) of the bill shall not apply to any transfer of money or other property described in such section 224(a) made in a taxable year beginning before January 1, 1964, if (1) no deduction or credit has been allowed in respect of such transfer for any taxable year before the taxable year in which the contest with respect to such transfer is settled, and (2) refund or credit of any overpayment which would result from the application of such amendments to such transfer is prevented by the operation of any law or rule of law. In the case of any transfer to which subsection (d) of section 224 of the bill applies, the deduction or credit shall be allowed only for the taxable year in which the contest with respect to such transfer is settled. Thus, if, at any time when a refund or credit of any overpayment, which would result from the application of the new subsection (f) of section 461 of the 1954 Code to a transfer of money or other property described in such new subsection (f) made in a taxable year beginning before January 1, 1964, is prevented by the operation of any law or rule of law, no deduction has been allowed in respect of such transfer for any taxable year before the taxable year in which the contest with respect to such transfer is settled, then a deduction shall be allowed to the taxpayer for the taxable year in which such contest is settled.

SECTION 225. INTEREST ON CERTAIN DEFERRED PAYMENTS

Section 225 of the bill (sec. 215 of the bill as passed by the House) has been approved by your committee with two modifications. For the technical explanation of this section of the bill (other than the amendments made by your committee), see the report of the Committee on Ways and Means starting at page A–84.

Your committee has deleted subsection (c) of this section of the bill as passed by the House, which related to deduction as interest of certain carrying charges on certain sales of services.

Under subsection (c) of this section (subsec. (d) of the bill as passed by the House) relating to effective dates, the amendments made by subsections (a) and (b) of section 225 apply to payments made after December 31, 1963, on account of sales or exchanges of property occurring after June 30, 1963. Your committee's amendment provides that the amendments made by subsections (a) and (b) will not

be applicable to payments made on account of a sale or exchange made pursuant to a binding written contract (including an irrevocable written option) entered into before July 1, 1963. Thus, if before such date a taxpayer has committed himself to a sale or exchange of property either by entering into a binding written sales contract or by granting an irrevocable written option entitling another person to purchase the property, any sale or exchange made pursuant to such contract or option will not be affected by the rules of new section 483.

SECTION 226. PERSONAL HOLDING COMPANIES

Section 226 of the bill (sec. 216 of the bill as passed by the House) deals with the treatment of personal holding companies and shareholders of such companies. This section of the bill as passed by the House consisted of 12 subsections, designated (a) through (l). Your committee has adopted the following subsections of this section without change: (a) relating to the personal holding company tax rate, (b) relating to the definition of a personal holding company, (e) relating to foreign personal holding company income and stock ownership, (f) relating to the dividends-paid deduction, and (h) relating to an exception for certain liquidated corporations. Your committee has rejected in its entirety subsection (j), relating to an increase in basis with respect to certain foreign personal holding company holdings, of the bill as passed by the House, has redesignated subsections (k) and (l), respectively, as subsection (j) relating to technical amendments, and subsection (k) relating to effective dates, and has made some technical amendments in redesignated subsection (k) to reflect this elimination.

The changes made by your committee in remaining subsections (c), (d), (g), and (i) of this section are discussed below. For the technical explanation of this section (other than the amendments made by your committee), see page A–88 of the report on the bill by the Committee on Ways and Means.

Section 226(c), relating to excluded corporations

Subsection (c) of section 226 of the bill has been approved by your committee with four modifications. For the technical explanation of subsection (c) of the bill (except for the amendments explained below), see page A–89 of the report on the bill by the Committee on Ways and Means.

Under the bill as passed by the House, a lending or finance company is excluded from the definition of a personal holding company if it meets four requirements: (1) At least 60 percent of its ordinary gross income must be derived directly from the active and regular conduct of a lending or finance business; (2) its personal holding company income (computed (a) without regard to income qualifying under the 60-percent test, (b) by including as personal holding company income the entire amount of the gross income from rents, royalties, produced film rents, and compensation for the use of corporate property by shareholders, and (c) without regard to certain income from domestic subsidiaries described in sec. 542(d)(3) of the code), plus the interest described in section 543(b)(2)(C) of the code, must not exceed 20 percent of ordinary gross income; (3) business deductions directly allocable to the active and regular conduct of its lending or finance business must equal or exceed the sum of (i) 15

percent of its ordinary gross income up to $500,000, plus (ii) 5 percent of its ordinary gross income between $500,000 and $1,000,000; and (4) loans to substantial shareholders must not exceed $5,000 in principal amount.

In applying the 20-percent-of-ordinary-gross-income test of section 542(c)(6)(B), your committee has deleted the provision that interest described in section 543(b)(2)(C) be included with the corporation's personal holding company income. This change conforms the treatment of such interest under section 542(c)(6)(B) to the treatment thereof for all other personal holding company tax purposes.

Under the bill as passed by the House, section 542(d)(3) of the code provides that the lawful income received by a lending company which is in the small loan business (consumer finance business) from domestic subsidiary corporations which are themselves excepted from the definition of a personal holding company under section 542(c)(6), is not included for purposes of the 20-percent-of-ordinary-gross-income test of section 542(c)(6)(B). Your committee has amended this provision in two respects. First, the corporation receiving such income may be any lending or finance company which meets the 60-percent requirement of section 542(c)(6)(A). It does not have to meet the more restrictive requirement of being in the small loan (consumer finance) business. Second, the payor corporation may be any member of the same affiliated group (as defined in sec. 1504) as the corporation receiving such income. Thus the corporation receiving such income is not required to be the parent corporation of the payor corporation. The payor corporation must still meet the requirements of section 542(c)(6).

Under the bill as passed by the House, section 542(d)(1)(A) of the code defines a lending or finance business, generally, as a business of making loans, or purchasing or discounting accounts receivable, notes, or installment obligations.

Your committee has amended the definition of a lending or finance business in section 542(d)(1) to include therein the business of rendering services or making facilities available to another member of the same affiliated group (as defined in sec. 1504) that is also in the lending or finance business.

Under the 60-percent-of-ordinary-gross-income test provided in section 542(c)(6)(A) of the code the corporation's income must be derived "directly" from the active and regular conduct of a lending or finance business. In addition, a reference to this provision is made in section 542(c)(6)(B). The use of the term "directly" is intended to emphasize that the 60-percent test is limited to income "derived from the active and regular conduct" of a lending or finance business, and excludes income that is unrelated to the conduct of the lending or finance business itself. Thus, for example, under section 542(c)(6)(A) as approved by your committee, interest income earned by the lending or finance company from loans to customers would qualify under the 60-percent test, but interest earned from the investment of its idle funds in short-term securities would not qualify under the 60-percent test.

The phrase "directly allocable to the active and regular conduct of its lending or finance business" is used in section 542(c)(6)(C) (business expense test) and, with a minor difference in language, in section 542(d)(2)(B) (relating to deductions for depreciation and real property

taxes). As used in these provisions, the term "directly" is intended to exclude expenses unrelated to the conduct of the finance or lending business. It is not intended to exclude completely deductions allocable only in part to such business. Thus, for example, to the extent that general overhead expenses of a corporation are properly allocable to the lending and finance business, they qualify as business deductions under section 542(d)(2).

Section 226(d), relating to personal holding company income

Subsection (d) of section 226 of the bill amends section 543(a) of the code (relating to personal holding company income). It also amends section 543(b) to provide definitions of the new terms "ordinary gross income," "adjusted ordinary gross income," "adjusted income from rents," and "adjusted income from mineral, oil, and gas royalties."

The amended section 543(a) provides that for purposes of subtitle A, the term "personal holding company income" means the portion of the adjusted ordinary gross income (as defined in sec. 543(b)(2)) which consists of the items described in paragraphs (1) through (8) of such section.

Your committee has approved subsection (d) of section 226 of the bill except for changes in paragraph (2) of section 543(a) as amended (relating to rents), in subparagraph (A) of section 543(b)(2) as amended (relating to required adjustments in the amount of gross income from rents includible in adjusted ordinary gross income), and in paragraph (4) of section 543(b) as amended (defining "adjusted income from mineral, oil, and gas royalties").

Rents

Section 543(a)(7) of existing law provides that rents are personal holding company income unless such rents constitute 50 percent or more of gross income.

The bill as passed by the House provides in paragraph (2) of section 543(a) as amended, which corresponds to the existing section 543(a)(7), that only so much of the gross income from rents as is equal to the adjusted income from rents (as defined in sec. 543(b)(3)) is personal holding company income and that the adjusted income from rents shall not be treated as personal holding company income if (A) it constitutes 50 percent or more of the corporation's adjusted ordinary gross income (as defined in sec. 543(b)(2)), and (B) the corporation's personal holding company income for the taxable year, computed without regard to such rents and compensation for the use of the corporation's property by its shareholders, and computed by treating copyright royalties and adjusted income from mineral, oil, and gas royalties as personal holding company income, is not more than 10 percent of the ordinary gross income as defined in section 543(b)(1). Thus, under the bill as passed by the House, even though adjusted income from rents constitutes more than 50 percent of a corporation's adjusted ordinary gross income, this income will still be treated as personal holding company income if the corporation's other income which is classified as personal holding company income exceeds 10 percent of its total ordinary gross income. For examples and the technical explanation of these tests in the bill (except for the amendment made by your committee), see page A–93 of the report on the bill by the Committee on Ways and Means.

Your committee has modified the 10-percent test in subparagraph (B) of section 543(a)(2) in the bill passed by the House to provide that adjusted income from rents which meets the 50-percent requirement of subparagraph (A) thereof shall not be treated as personal holding company income if the sum of the consent dividends (determinded under sec. 565) and the dividends paid or considered as paid (determined under secs. 562 and 563) during the taxable year by the corporation to its shareholders equals or exceeds the amount, if any, by which the corporation's personal holding company income for the taxable year, computed without regard to such rents and compensation for the use of the corporation's property by its shareholders, and computed by treating copyright royalties and adjusted income from mineral, oil, and gas royalties as personal holding company income, exceeds 10 percent of the ordinary gross income as defined in section 543(b)(1).

The effect of this modification in the 10-percent test applicable to rents is that this test shall be deemed to be met if the corporation pays dividends to its shareholders in an amount which is at least equal to its other personal holding company income which is in excess of 10 percent of total ordinary gross income. The difference in this test in the bill as passed by the House and as modified by your committee may be illustrated by the following example:

Example.—Corporation F receives $40 in dividends and $150 of gross income from rents. Corporation F also realizes $10 in capital gain on the sale of securities. Corporation F's deductions for depreciation, interest, and real property taxes allocable to the rents equal $100. Under existing law the rents are not personal holding company income and corporation F is not a personal holding company, since its gross income from rents ($150) constitutes 50 percent or more of its gross income ($200). Under the 50-percent requirement of the new provisions, the adjusted income from rents, $50 ($150 less $100), is 55.5 percent of adjusted ordinary gross income of $90 ($200 less the sum of $100 of adjustments and $10 of capital gains). Accordingly the adjusted income from rents meets the new 50-percent requirement. However, other personal holding company income (the dividend income of $40) is $21 in excess of the allowable 10 percent of ordinary gross income ($190: $200 less $10). Under the bill as passed by the House, the adjusted income from rents is personal holding company income and, therefore, all of corporation F's adjusted ordinary gross income is personal holding company income. However, with the modification in the 10-percent test made by your committee, the adjusted income from rents would not be treated as personal holding company income if corporation F pays a dividend of $21 to its shareholders during the taxable year. On the other hand, if the amount of the dividend paid by corporation F is less than $21, the adjusted income from rents would be personal holding company income as under the bill as passed by the House.

Adjustments to rents included in adjusted ordinary gross income

The bill as passed by the House defines in paragraph (2) of section 543(b) of the code, as amended, the term "adjusted ordinary gross income" as the ordinary gross income adjusted as provided in subparagraphs (A), (B), and (C) of such paragraph. Adjusted ordinary gross income as so defined replaces the concept of gross income of

existing law as the denominator in the fraction used in computing certain percentages involved in determining a corporation's status as a personal holding company. With one exception relating to the adjustments required for gross income from rents, your committee has approved proposed section 543(b)(2). For the technical explanation of these provisions of the bill (except the amendment explained below), see page A-100 of the report on the bill by the Committee on Ways and Means.

Subparagraph (A) of section 543(b)(2) provides that from the gross income from rents (as defined in the second sentence of sec. 543(b)(3)) there is to be subtracted the amounts allowable as deductions for exhaustion, wear and tear, obsolescence, and amortization as well as deductions for property taxes, interest, and rent to the extent that such deductions are allocable, under regulations prescribed by the Secretary of the Treasury or his delegate, to the gross income from rents. In no case may the amounts subtracted under subparagraph (A) exceed the gross income from rents.

Your committee has amended subparagraph (A)(i) of section 543(b)(2) to provide that the gross income from rents derived from leases of tangible personal property which is not customarily retained by any one lessee for a period of more than 3 years shall not be reduced by allowable deductions for exhaustion, wear and tear, obsolescence, and amortization of such property. It is the period of customary retention or use by lessees, rather than the term of the lease of the property in any one case, which is determinative of whether the adjustment shall be required.

Adjusted income from mineral, oil, and gas royalties

The bill as passed by the House provides in paragraph (3) of section 543(a) of the code as amended, which corresponds to section 543(a)(8) of existing law, tests for determining whether the "adjusted income from mineral, oil, and gas royalties", as defined in paragraph (4) of section 543(b), is personal holding company income. For the technical explanation of these provisions (except the amendment explained below), see page A-95 of the report on the bill by the Committee on Ways and Means. These provisions have been approved by your committee but an amendment has been added to section 543(b)(4) to specifically include production payments and overriding royalties as mineral, oil, and gas royalties for purposes of classification as personal holding company income under section 543(a).

The Treasury regulations interpreting section 543(a)(8) of existing law currently define the term "mineral, oil, or gas royalties" as including production payments and overriding royalties. (See Reg. § 1.543-1(b)(11)(ii).) However, it has been brought to the attention of your committee that this interpretation of existing section 543(a)(8) is disputed by some taxpayers. Your committee's amendment would make it clear that production payments and overriding royalties are to be treated as mineral, oil, and gas royalties under proposed section 543(b)(4). This amendment is not intended to affect any case involving interpretations of section 543(a)(8) of existing law.

Section 226(g), relating to 1-month liquidations

Subsection (g) of section 226 of the bill adds a new subsection (g) to section 333 of the code. The existing section 333 provides that in certain corporate liquidations gain is recognized to qualified electing

shareholders only to the extent of earnings and profits accumulated by the corporation after February 28, 1913, and cash, stock, and securities acquired by the corporation after December 31, 1953, and, with respect to accumulated earnings and profits, is taxable as a dividend to noncorporate shareholders.

Subsection 333(g) as added by the bill as passed by the House consists of three paragraphs. Paragraph (1) provides that if a corporation which is referred to in paragraph (3) of the new subsection is liquidated before January 1, 1966, no gain will be recognized to a qualifying electing shareholder with respect to the distribution of stock and securities acquired by the liquidating corporation before January 1, 1963, and gain realized by a noncorporate shareholder with respect to the corporation's accumulated earnings and profits generally is to be treated as "class B capital gain" rather than as a dividend. Paragraph (2) of subsection (g) provides special rules for liquidations after December 31, 1965, of corporations referred to in paragraph (3) of the new subsection which owe qualified indebtedness (as defined in sec. 545(c)(3)) on August 1, 1963. Paragraph (3) of subsection (g) describes the corporations to which paragraphs (1) and (2) of section 333(g) may apply. Such a corporation in the bill as passed by the House is one which was not a personal holding company under section 542 of existing law for at least one of its two most recent taxable years ending before the date of enactment of section 333(g), but which would have been a personal holding company under section 542 for such taxable year if the law applicable for the first taxable year beginning after December 31, 1963, had been applicable to such preceding taxable year.

Your nmittee has approved in substance the provisions of paragraphs (1), (2), and (3) of section 333(g) as added by the bill as passed by the House but has modified some of the applicable dates therein and has added a new paragraph (4) to new section 333(g) of the code. These modifications and new paragraph (4) of section 333(g) are discussed below. For the technical explanation of section 226(g) of the bill (except for the amendments made by your committee), see page A-107 of the report on the bill by the Committee on Ways and Means.

Your committee has amended paragraph (1) of section 333(g) to provide that it shall be applicable to corporate liquidations occurring before January 1, 1967 (instead of January 1, 1966) and has amended paragraph (2) of section 333(g) to provide that it shall be applicable to liquidations occurring after December 31, 1966 (instead of Dec. 31, 1965) of corporations which owe qualified indebtedness (as defined in sec. 545(c)) on January 1, 1964 (instead of Aug. 1, 1963). Your committee has made conforming amendments in these two paragraphs of section 333(g) to reflect these changes and also changes made in other parts of the bill as approved by your committee.

Your committee has amended paragraph (3) of section 333(g), which describes the corporations to which paragraphs (1) and (2) of the new subsection may apply, to provide that such a corporation is one which was not a personal holding company under section 542 of existing law for at least one of its two most recent taxable years ending before December 31, 1963 (instead of the date of enactment of new subsec. (g)) but which would have been a personal holding company under section 542 for such taxable year if the law applicable for the first

taxable year beginning after December 31, 1963, had been applicable to such preceding taxable year.

Your committee has added a new paragraph (4) to subsection (g) of section 333 which provides that if an election is made under such section by a qualified electing shareholder (as defined in sec. 333(c)) of a corporation and the shareholder states in such election that it is made on the assumption that the corporation is a corporation referred to in paragraph (3) of subsection (g), the election under section 333 shall have no force or effect if it is determined that the corporation is not a corporation referred to in section 333(g)(3). A qualified electing shareholder who does not include such a statement in an election made and filed under section 333 will be considered to have made an election under the general rule of subsection (a) of such section with respect to recognition of gain on the shares owned by him in the liquidating corporation in the event that the special rule of subsection (g) is inapplicable because the corporation is not a corporation referred to in paragraph (3) thereof.

Section 226(i), relating to deduction for amortization of indebtedness

Subsection (i) of section 226 of the bill adds a new subsection (c) to section 545 of the code which provides a new deduction from taxable income for purposes of determining undistributed personal holding company income (as defined in sec. 545(a)).

Section 545(c) of the code as added by subsection (i) consists of six paragraphs. Paragraph (1) of the new section 545(c) provides the general rule that, except as otherwise provided in such section, there shall be allowed as a deduction (in computing undistributed personal holding company income) amounts used, or amounts irrevocably set aside (to the extent reasonable with reference to the size and terms of the indebtedness), to pay or retire qualified indebtedness (as defined in sec. 545(c)(3)). Paragraph (2) describes the corporations which may qualify for the deduction provided in paragraph (1) of section 545(c). Paragraph (3) defines the term "qualified indebtedness," subject to certain exceptions, as the outstanding indebtedness incurred by the taxpayer after December 31, 1933, and before August 1, 1963, and the outstanding indebtedness (if not otherwise deducted) incurred after July 31, 1963, for the purpose of making a payment or set-aside referred to in section 545(c)(1) in the same taxable year. Paragraph (4) provides that a corporation may elect to treat as nondeductible an amount otherwise deductible under paragraph (1) of section 545(c). Paragraph (5) provides certain limitations on the amount of the deduction otherwise allowed by section 545(c)(1). Paragraph (6) provides that the total amounts of the taxpayer's qualified indebtedness (as defined in sec. 545(c)(3)(A)) are reduced if property (of a character which is subject to the allowance for exhaustion, wear and tear, obsolescence, or amortization) is disposed of after July 31, 1963.

Your committee has approved in substance the provisions of subsection (i) of the bill as passed by the House. For the technical explanation of subsection (i) of the bill, other than the amendments explained below, see page A–113 of the report on the bill by the Committee on Ways and Means. However, your committee has amended paragraph (3) of proposed section 545(c) to provide that the term "qualified indebtedness" shall include the outstanding indebtedness incurred by the taxpayer before January 1, 1964, and has made conforming amendments in the other paragraphs of section 545(c).

Your committee has also amended paragraphs (5) and (6) of section 545(c) to provide that allowable deductions for depletion shall be taken into account to reduce the deduction allowed by section 545(c) and qualified indebtedness under certain circumstances. Your committee has also amended paragraph (2)(A) of section 545(c), which describes a category of corporations to which paragraph (1) of the new subsection may apply, to provide that such a corporation is one which was not a personal holding company under section 542 of existing law for at least one of its two most recent taxable years ending before December 31, 1963 (instead of the date of enactment of this subsection) but which would have been a personal holding company under section 542 for such taxable year if the law applicable for the first taxable year beginning after December 31, 1963, had been applicable to such preceding taxable year.

SECTION 227. TREATMENT OF PROPERTY IN CASE OF OIL AND GAS WELLS

Section 227 of the bill (sec. 217 of the bill as passed by the House) has been approved by your committee without change. For the technical explanation of this section of the bill, see page A–122 of the report of the Committee on Ways and Means on the bill.

SECTION 228. TREATMENT OF CERTAIN IRON ORE ROYALTIES

(*a*) *In general.*—Subsection (a) of section 228 of the bill (sec. 218 of the bill as passed by the House) has been approved by your committee except that your committee has (1) restricted its application to iron ore mined in the United States, and (2) provided that the treatment provided by the bill shall not apply to any disposal of iron ore to certain related persons. For the technical explanation of section 228(a) of the bill (other than the amendments made by your committee), see page A133 of the report of the Committee on Ways and Means on the bill.

Under your committee's amendments two types of dispositions of iron ore to related persons will not qualify for treatment under section 631(c) of the code. The first type of such disposition occurs in any disposal to a person whose relationship to the party disposing of such iron ore is such that a loss would be disallowed under section 267 (relating to losses, etc., with respect to transactions between related taxpayers) or section 707(b) (relating to certain sales or exchanges of property with respect to controlled partnerships). Thus, iron ore royalty payments made under a lease between a father and his son would not qualify for treatment under section 631(c). The second type of such disposition occurs in any disposal to a person owned or controlled directly or indirectly by the same interests which own or control the person disposing of such iron ore. The test for determining the presence or absence of control is the same test as is presently applied in section 482 of the code (relating to the allocation of income and deductions between taxpayers).

(*b*) *Clerical amendments.*—Subsection (b) of section 228 of the bill contains the various clerical and conforming amendments to the code and to the Social Security Act which are required as a result of the amendments made by subsection (a) of such section.

(*c*) *Effective date.*—Subsection (c) of this section as passed by the House provided that the amendments made by such section shall apply to iron ore mined in taxable years beginning after December 31, 1963. Your committee has amended this subsection to provide that such amendments shall apply to amounts received or accrued in taxable years beginning after December 31, 1963, attributable to iron ore mined in such taxable years.

SECTION 229. INSURANCE COMPANIES

Section 229 of the bill, which is a new section added to the bill as passed by the House, contains amendments to subchapter L of chapter 1 of the code (relating to insurance companies).

(*a*) *Certain mutualization distributions made in 1962.*—Subsection (a) of section 229 of the bill relates to stock life insurance companies which adopted a plan of mutualization before January 1, 1958.

Allowance of deduction

Paragraph (1) of section 229(a) of the bill amends section 809(d)(11) of the code (relating to certain mutualization distributions) to allow as a deduction in the computation of gain from operations, distributions made in 1962 to shareholders, in acquisition of stock, pursuant to a plan of mutualizaton adopted by the company before January 1, 1958.

Thus, your committee's amendment allows life insurance companies which adopted a plan of mutualization before January 1, 1958, an additional year (1962) to complete their plan of mutualization by acquiring their stock out of annual earnings, and to receive a deduction for amounts paid for that purpose. The amount deductible is limited to amounts actually paid to shareholders in 1962, and does not include accruals paid in subsequent years. In addition, the deduction allowed by the revised section 809(d)(11) is subject to the limitations of section 809(g) of the code (relating to limitations on deductions for certain mutualization distributions).

Application of section 815

Paragraph (2) of section 229(a) of the bill amends section 809(g)(3) of the code (relating to application of sec. 815) to extend the special rules of section 815(e) to include mutualization distributions deductible under the revised section 809(d)(11).

(*b*) *Accrual of bond discount.*—Subsection (b) of section 229 of the bill relates to the accrual of bond discount by insurance companies subject to tax under parts I and II of subchapter L of chapter 1 of the code (relating to life insurance companies, and mutual insurace companies (other than life, marine, and certain fire or flood insurance companies) etc., respectively).

Life insurance companies

Paragraph (1) of section 229(b) of the bill amends section 818(b) of the code (relating to amortization of premium and accrual of discount) by adding a new paragraph (3) at the end thereof. The new section 818(b)(3) provides that for taxable years beginning after December 31, 1962, no accrual of discount shall be required under section 818(b)(1) on any bond (as defined in section 171(d)) except as otherwise provided under subparagraphs (A) and (B) of section 818(b)(3).

Subparagraph (A) of the new section 818(b)(3) relates solely to discount on tax-exempt obligations and provides that discount which is interest described in section 103 (relating to interest on certain governmental obligations) must still be accrued. Thus, your committee's amendment makes no change in existing law with respect to issue discount (the difference between issue price and the stated redemption price at maturity) on tax-exempt obligations. Such discount must still be accrued under section 818(b)(1) of the code. On the other hand, your committee's amendment changes existing law with respect to discount on tax-exempt obligations which is not "issue discount." The accrual of such discount will no longer be required.

Subparagraph (B) of the new section 818(b)(3) relates solely to bonds which are not tax-exempt obligations within the meaning of section 103, and provides that orginal issue discount (as defined in sec. 1232(b)) must be accrued under section 818(b)(1).

Under existing law, section 818(b)(1) requires life insurance companies to accrue all discount, regardless of whether it is "issue discount," original issue discount, or "market discount." The new paragraph (3) of section 818(b) of the code changes existing law only with respect to "market discount." Such discount is no longer required to be accrued. Thus, the recognition of gain attributable to market discount is postponed until the disposition of the bond. Upon the disposition of the bond, gain attributable to market discount will ordinarily be taxable as capital gain. The adjustment to basis for the accrual of market discount will no longer be allowed to the extent such discount is not accrued by reason of the new section 818(b)(3).

The new section 818(b)(3) also provides that for purposes of section 805(b)(3)(A), the current earnings rate for any taxable year beginning before January 1, 1963, shall be determined as if the first sentence of the new section 818(b)(3) applied to such taxable year.

Mutual insurance companies

Paragraph (2) of section 229(b) of the bill amends section 822(d)(2) of the code (relating to amortization of premium and accrual of discount) by adding a new sentence at the end thereof. This sentence provides that for taxable years beginning after December 31, 1962, no accrual of discount shall be required under section 822(d)(2) of the code on any bond (as defined in sec. 171(d)). Under the new sentence neither "issue discount," original issue discount, nor "market discount," is required to be accrued under section 822(d)(2). This provision has the effect of postponing until disposition of the bond any recognition of income attributable to bond discount, at which time the provisions of section 1232 may be applicable. No adjustment in the basis of any bond attributable to discount shall be permitted for taxable years beginning after December 31, 1962, to the extent such discount is not accrued by reason of the amended section 822(d)(2).

For taxable years beginning after December 31, 1962, no discount shall be required to be accrued pursuant to section 282(d)(2) regardless of when the bond to which the discount is attributable was acquired.

(*c*) *Contributions to qualified, etc., plans.*—Subsection (c) of section 229 of the bill amends section 832(c)(10) of the code (relating to deductions allowed in computing taxable income of insurance com-

panies (other than life or mutual), mutual marine insurance companies, and certain mutual fire or flood insurance companies) by adding a new phrase at the end thereof. The new phrase provides that, in computing the taxable income of insurance companies subject to the tax imposed by section 831, there shall be allowed the deduction provided in part I of subchapter D of chapter 1 of the code (sec. 401 and following, relating to pension, profit-sharing, stock bonus plans, etc.). In allowing these companies to deduct their contributions to an employees' trust or annuity plan and compensation under a deferred-payment plan under section 404 of the code, subsection (c) of section 229 of the bill is in accord with existing administrative practice.

(*d*) *Effective dates.*—Subsection (d) of section 229 of the bill provides that the amendment made by subsection (a) of the bill (relating to certain mutualization distributions made in 1962) shall apply to taxable years beginning after December 31, 1961, and that the amendment made by subsection (c) of the bill (relating to contributions to qualified, etc., plans) shall apply to taxable years beginning after December 31, 1953, and ending after August 16, 1954. No provision of this section extends the period of limitations within which a claim for credit or refund may be filed for any taxable year.

SECTION 230. REGULATED INVESTMENT COMPANIES

Section 230 of the bill, which is a new section added to the bill as passed by the House, relates to regulated investment companies.

(*a*) *Time for mailing certain notices to shareholders.*—Subsection (a) of section 230 of the bill amends several provisions of part I, subchapter M, chapter 1 of the code (relating to regulated investment companies) by increasing from 30 days to 45 days after the close of a taxable year the time within which a regulated investment company must give certain notices to its shareholders.

Under section 852(b)(3)(C) of existing law, a capital gain dividend is defined, in general, as any dividend, or part thereof, which is designated by the company as a capital gain dividend in a written notice mailed to its shareholders not later than 30 days after the close of its taxable year. Under the bill, a 45-day period is substituted for the 30-day period.

Under section 852(b)(3)(D)(i) of existing law, a shareholder of a regulated investment company, in computing his long-term capital gains for his taxable year in which the last day of the regulated investment company's taxable year falls, must include such amount as the company designates as his share of undistributed capital gains in a written notice mailed to its shareholders at any time prior to the expiration of 30 days after the close of the regulated investment company's taxable year. Under the bill, the 30-day period is changed to a 45-day period.

Section 853 of existing law provides that, if certain conditions are met, a regulated investment company may elect to treat as having been distributed to its shareholders any income, war profits, and excess profits taxes paid by it to any foreign country or to any possession of the United States. The shareholders of the company must include the amount of such taxes in gross income and must treat such amount as paid by them for purposes of the deduction under section

164(a) and the foreign tax credit under section 901. Under section 853(c), the amounts to be so treated by the shareholders may not exceed the amounts so designated by the company in a written notice mailed to its shareholders not later than 30 days after the close of its taxable year. The bill changes the 30-day period to a 45-day period.

Section 854(b)(1) of existing law provides limitations to be applied in determining the extent to which any dividend (other than a capital gain dividend) may be taken into account by a shareholder of a regulated investment company for purposes of the credit under section 34, the exclusion under section 116, and the deduction under section 243. Section 854(b)(2) provides that the amount of any distribution which may be taken into account as a dividend for such purposes may not exceed the amount so designated by the regulated investment company in a written notice to its shareholders mailed not later than 30 days after the close of its taxable year. The bill changes the 30-day period to a 45-day period.

Section 855 provides that, if certain conditions are met, a dividend which is paid by a regulated investment company, after the close of a taxable year, may be considered by the company as having been paid during such taxable year. Section 855(c) provides that any notice to shareholders required under part I of subchapter M with respect to such a dividend must be mailed not later than 30 days after the close of the taxable year in which the distribution of such dividend is made. The bill changes the 30-day period to a 45-day period.

(*b*) *Certain redemptions by unit investment trusts.*—Subsection (b) of section 230 of the bill amends section 852 of the code (relating to taxation of regulated investment companies and their shareholders) by adding a new subsection (d) at the end thereof.

Under section 852(b) of existing law, a regulated investment company is allowed a deduction for dividends paid (as defined in sec. 561), other than capital gains dividends, in determining its investment company taxable income, and is allowed a deduction for dividends paid (as defined in sec. 561), determined with reference to capital gains dividends only, in computing that part of the excess of its net long-term capital gain over net short-term capital loss on which it must pay a capital gains tax. Section 561(b) provides that in determining the deduction for dividends paid, the rules provided in section 562 are applicable. Section 562(c) (relating to preferential dividends) provides that the amount of any distribution shall not be considered as a dividend unless such distribution is pro rata, with no preference to any share of stock as compared with other shares of the same class, and with no preference to one class of stock as compared with another class except to the extent that the former is entitled to such preference.

New subsection (d) of section 852 provides that in the case of a unit investment trust—

(1) which is registered under the Investment Company Act of 1940 and issues periodic payment plan certificates (as defined in such act), and

(2) substantially all of the assets of which consist of securities issued by a management company (as defined in such act)—

section 562(c) shall not apply to a distribution by such trust to a holder of an interest in such trust in redemption of part or all of such interest, with respect to the net capital gain of the trust attributable to such redemption. Thus, assume that a holder of an interest in

69-108 O—66—pt. 3——19

such a trust requests that part or all of such interest be redeemed. In order to obtain the amount of cash required to redeem such interest, the trust liquidates part of its portfolio, represented by shares in a management company, and realizes a long-term capital gain on such liquidation. That amount of the cash distributed to the redeeming interest holder which represents a distribution of such realized long-term capital gain is considered to be a distribution by the trust which qualifies for the deduction for dividends paid with reference to capital gains dividends under section 852(b)(3)(A).

(*c*) *Effective dates.*—Subsection (c) of section 230 of the bill provides that the amendments made by subsection (a) shall apply to taxable years of regulated investment companies ending on or after the date of the enactment of the bill, and that the amendment made by subsection (b) shall apply to taxable years of regulated investment companies ending after December 31, 1963.

SECTION 231. FOREIGN TAX CREDIT WITH RESPECT TO CERTAIN FOREIGN MINERAL INCOME

Section 231 of the bill, which is a new section added to the bill as passed by the House, amends section 901 (relating to credit for foreign taxes) by redesignating subsection (d) as subsection (e) and by inserting after subsection (c) a new subsection (d) relating to foreign taxes on mineral income.

(*a*) *Foreign taxes on mineral income.*—Paragraph (1) of new subsection (d) provides that in certain cases the amount of foreign taxes described in section 901(b) (relating to amount of foreign tax allowed as a credit) which are paid or accrued during the taxable year with respect to mineral income to any foreign country (if the per-country limitation applies), or to all foreign countries (if the overall limitation applies), is to be reduced for purposes of computing the foreign tax credit. The reduction, if any, is equal to the amount by which the U.S. tax computed under chapter 1 of the code with respect to the same mineral income and computed before the allowance of any tax credit (such tax hereinafter referred to as the "U.S. tax") is exceeded by the lesser of the following two amounts: (1) The amount of such foreign taxes paid or accrued with respect to such income, or (2) the U.S. tax with respect to such income computed without the deduction for percentage depletion under section 613 but with the deduction for cost depletion determined with reference to the basis for cost depletion under section 612. The computation described in item (2) is made only to determine the amount of foreign taxes to be taken into account in computing the foreign tax credit and does not affect the manner in which a taxpayer actually computes the allowance for depletion under chapter 1 in determining the U.S. tax. In no case will the foreign tax on mineral income under new subsection (d) be reduced to an amount which is less than the U.S. tax on such mineral income. The credit for taxes paid or accrued to possessions of the United States is not affected by this provision.

Paragraph (2) of the new subsection (d) defines the term "mineral income" for purposes of subsection (d). The term means income derived from sources without the United States from mineral activities including dividends received from corporations in which 5 percent or more of the voting stock is owned directly or indirectly by the tax-

payer, to the extent such dividends are attributable to mineral activities, and that portion of the taxpayer's distributive share of partnership income attributable to mineral activities. For such purpose the term "mineral activities" includes the extraction of minerals from mines, wells, or other natural deposits, the processing of such minerals into their primary products, and the transportation, distribution, or sale of such minerals or primary products. For example, in the case of oil, mineral activities of a taxpayer would include the extraction of the crude oil from the ground, transportation of the crude oil by pipeline or ship to a refinery, refining of the crude oil to obtain gasoline and other products resulting from such refining, and the sale of such products. However, the manufacture of chemical products from oil would not be considered the processing of oil into its primary products, and thus would not be considered a mineral activity. Similarly, the transportation, distribution, or sale of the chemical products would not be considered a mineral activity. If primary products of oil, such as gasoline, are sold through outlets of the taxpayer which also sell other products, only the sale of the primary products would be a mineral activity.

(*b*) *Effective date.*—The amendments made by section 231 of the bill are applicable to taxable years beginning after December 31, 1963.

SECTION 232. AMOUNTS RECEIVED FROM EMPLOYER ON SALE OF RESIDENCE OF EMPLOYEE IN CONNECTION WITH TRANSFER TO NEW PLACE OF WORK

(*a*) *Treatment of certain amounts received from employer on sale of residence of employee in connection with transfer to new place of work.*—Subsection (a)(1) of section 232 of the bill, which is a new section added to the bill as passed by the House, adds a new section 1003 to part I of subchapter O of chapter 1 of the code (relating to determination of amount of and recognition of gain or loss).

It has been held that an amount received by an employee from his employer, in respect of the sale of the employee's residence in connection with his transfer to a new place of work, is taxable as compensation. (*Harris W. Bradley*, 39 T.C. 652 (1963), aff'd 324 F. 2d 610 (4th Cir. 1963); *Arthur J. Kobacker*, 37 T.C. 882 (1962).)

SECTION 1003. AMOUNTS RECEIVED FROM EMPLOYER ON SALE OF RESIDENCE OF EMPLOYEE IN CONNECTION WITH TRANSFER TO NEW PLACE OF WORK

(a) *General rule.*—Subsection (a) of new section 1003 provides the general rule that if, in connection with the transfer of the taxpayer as as an employee to a new place of work, the taxpayer or his spouse sells property used as his principal residence "old residence" pursuant to a sales contract entered into within the forced sale period, and within 1 year after the date of such contract his employer pays part or all of the "sale differential," then the amount so paid shall be treated by the taxpayer or his spouse as an additional amount realized on the sale of the old residence to the extent that it does not exceed the lesser of (A) the "sale differential," or (B) 15 percent of the gross sales price of the old residence.

Section 1003 is applicable only with respect to the sale of a taxpayer's principal residence. Whether or not property is used by the taxpayer as his residence, and whether or not property is used by the taxpayer as his principal residence (in the case of a taxpayer using more than one property as a residence), depends upon all the facts and circumstances in each individual case. Property which qualifies as a principal residence for purposes of section 1034 will be considered a principal residence for purposes of section 1003.

Where property is used by the taxpayer partially as his principa residence and partially for business purposes or in the production of income (as in the case where a part of the building in which the taxpayer resides is used as an office or is rented), then only that portion of the reimbursement, appraised value, gross sales price, and selling expenses attributable to that part of the property used as the taxpayer's principal residence shall be considered for purposes of section 1003.

The gross sales price of the old residence is the total consideration received upon the sale by the taxpayer, and includes the amount of any mortgage, trust deed, or other indebtedness to which the property is subject in the hands of the purchaser whether or not the purchaser assumes such indebtedness. It also includes the face amount of any liabilities of the purchaser which are part of the consideration for the sale. Commissions, and other selling or fixing up expenses paid or incurred by the taxpayer in connection with the sale of the old residence, are not to be deducted or taken into account in determining the gross sales price of the old residence.

(b) *Limitations.*—Subsection (b) of new section 1003 provides certain limitations on the applicability of section 1003.

Period of employment

Paragraph (1) of subsection (b) limits the application of section 1003 to those cases where the taxpayer was employed for the 6-month period ending on the day on which he commences work at the new principal place of work by the employer who makes the reimbursement.

Location of new place of work

Paragraph (2) of subsection (b) provides that section 1003 shall not apply unless the distance between the taxpayer's new principal place of work and his old residence exceeds by at least 20 miles the distance between the taxpayer's former principal place of work and his old residence. If the taxpayer, prior to his transfer, had no principal place of work, section 1003 shall not apply unless the distance between his new principal place of work and his old residence is at least 20 miles. For purposes of measuring distances under section 1003(b)(2), all computations are to be made on the basis of a straight-line measurement.

(c) *Definitions; special rules.*—Subsection (c) of new section 1003 provides definitions and special rules for the application of section 1003.

Forced sale period

The term "forced sale period," as defined in paragraph (1) of subsection (c), is the period which begins 90 days before, and ends 180 days after, the date on which the taxpayer commences work as an employee at the new principal place of work. The term has reference

only to a period of time, and not to the nature of, or reason for, the sale.

Sale differential

The term "sale differential" is defined in paragraph (2) of subsection (c) as the amount by which (A) the appraised value of the old residence exceeds (B) the gross sales price of the old residence reduced by the selling commissions, legal fees, and other expenses incident to the transfer of ownership of the old residence. Expenses incident to the transfer of ownership refer to direct transfer costs borne by the employee. For example, such expenses do not include fixing-up expenses or traveling expenses of the employee or members of his family from or to the location of the old residence for purposes of its sale. In order for section 1003 to apply, the payment must be made by the employer to the employee as a sale differential. Thus, if an employer pays an employee a lump sum for miscellaneous costs relating to a transfer to a new place of work, only so much of such sum as is related to the sale of the old residence qualifies for treatment under section 1003.

Appraised value

The term "appraised value of the old residence", as defined in paragraph (3) of subsection (c), is the average of two or more appraisals of fair market value made, on or after the valuation date and on or before the date on which the sales contract is entered into, by independent real estate appraisers selected by the employer. Such paragraph (3) provides that the appraised value shall not exceed the fair market value of the old residence. The appraisals shall be made as of the valuation date.

Valuation date

The term "valuation date" is defined in paragraph (4) of subsection (c) as the date selected by the employer for purposes of determining the amount to be paid with respect to the sale differential. The date selected by the employer shall be a date which occurs (1) on or before the date the sales contract is entered into and (2) within the forced sale period.

Employer

The term "employer," as defined in paragraph (5) of subsection (c), means the person who employs the taxpayer as an employee at the new principal place of work. The term also includes any predecessor or successor corporation and any parent or subsidiary corporation. The determination of whether a corporation is a parent corporation or a subsidiary corporation shall be made under subsections (e) and (f) of section 425 of the code (added by sec. 222(a) of the bill) but by reference to the date on which the taxpayer commences work as an employee at the new principal place of work rather than as of the time of the granting of the option to which such section 425 relates. Thus, where a 50-percent voting stock relationship exists between the corporation for which the employee worked prior to his transfer and the corporation for which he works after his transfer, he is considered as having been employed by the same employer.

Exchanges

Paragraph (6) of subsection (c) provides that an exchange by the taxpayer or his spouse of an old residence for other property shall be treated as a sale.

Tenant-stockholder in a cooperative housing corporation

Paragraph (7) of subsection (c) provides that "property used by the taxpayer as his principal residence" includes stock held by a tenant-stockholder in a cooperative housing corporation, as those terms are defined in section 216 of the code, but only if the house or apartment which the taxpayer was entitled to occupy by reason of such stockownership was used by the taxpayer as his principal residence.

(d) *Regulations.*—Subsection (d) of new section 1003 provides that the Secretary or his delegate shall prescribe such regulations as may be necessary to carry out the purposes of section 1003.

SECTION 232. AMOUNTS RECEIVED FROM EMPLOYER ON SALE OF RESIDENCE OF EMPLOYEE IN CONNECTION WITH TRANSFER TO NEW PLACE OF WORK—Con.

Subsection (a)(2) of section 232 of the bill amends the table of sections of part I of subchapter O of chapter 1 of the code to reflect the addition of section 1003 added by the bill.

(b) *Effective date.*—Subsection (b) of section 232 of the bill provides that the amendments made by subsection (a) shall apply to amounts paid with respect to sales contracts entered into after December 31, 1963, in taxable years ending after such date.

SECTION 233. GAIN FROM DISPOSITIONS OF CERTAIN DEPRECIABLE REALTY

Section 233 of the bill (sec. 220 of the bill as passed by the House) was approved by your committee without change. For the technical explanation of this section of the bill, see page A–148 of the report of the Committee on Ways and Means on the bill.

SECTION 234. AVERAGING

Section 234 of the bill (sec. 221 of the bill as passed by the House) has been approved by your committee with three exceptions. For the technical explanation of this section of the bill (other than the amendments made by your committee), see page A–168 of the report of the Committee on Ways and Means on the bill.

First, your committee has made technical changes in the definition of the term "capital gain net income" and in the provisions relating to the computation of the alternative tax to reflect the elimination of section 219 (relating to capital gains and losses) of the bill as passed by the House.

Second, your committee has added a provision to the bill as passed by the House to allow an individual whose adjusted gross income for the computation year is under $5,000 and who chooses the benefits of income averaging to elect the standard deduction under section 144 of the code.

Third, your committee has added a provision to the bill as passed by the House restricting, in certain cases, the application of section 170(b)(5) of the code as added by section 209(c) of the bill (relating to 5-year carryover of certain excess charitable contributions by individuals).

Capital gain net income

Paragraph (1) of section 1302(d) of the code, as amended by your committee, provides that the term "capital gain net income" means the amount which is equal to 50 percent of the excess of the net long-term capital gain over the net short-term capital loss. An individual's capital gain net income for any taxable year cannot be less than zero.

Computation of alternative tax

Paragraph (2) of section 1304(e) deals with the method by which an individual computes his alternative tax under section 1201 of the code for any computation year. Paragraph (2), as amended by your committee, provides that if an individual has capital gain net income for the computation year, then section 1201(b) of the code is treated as imposing a tax on the individual's income which is equal to the tax imposed by section 1 of the code, reduced by the amount (if any) by which the amount of the tax imposed by section 1 of the code which is attributable to an individual's capital gain net income for such year (as determined under paragraph (1) of section 1304(e)) exceeds the amount equal to 25 percent of the excess of the net long-term capital gain over the net short-term capital loss.

Amendment of section 144.—Subsection (c) of section 234 of the bill, as approved by your committee, amends section 144 of the code (relating to election of standard deduction) by adding after section 144(c) (as added by sec. 112(c)(2) of the bill) a new subsection (d).

Individuals electing income averaging

Subsection (d) of section 144 provides that if a taxpayer chooses to have the benefits of part I of subchapter Q (relating to income averaging) for a taxable year, section 144(a) of the code (relating to method and effect of election of standard deduction) shall not apply for such taxable year and the standard deduction under section 141 of the code shall be allowed if the taxpayer so elects in his return for such taxable year. The Secretary of the Treasury or his delegate shall prescribe by regulations the manner of signifying such election in the return. If the taxpayer on making his return fails to signify, in the manner prescribed by regulations, his election to take the standard deduction, such failure shall be considered his election not to take the standard deduction.

Effective date.—Subsection (g)(2) of section 234 of the bill, as approved by your committee, provides, in effect, that, in a taxable year beginning after December 31, 1963, if a taxpayer elects to apply both sections 1301 and 1307(e) of the code, as such sections were in effect immediately before the enactment of the bill, then section 170(b)(5) of the code as added by section 209(c) of the bill shall not apply to charitable contributions paid in such taxable year.

SECTION 235. SMALL BUSINESS CORPORATIONS

Section 235 of the bill, which is a new section added to the bill as passed by the House, relates to small business corporations.

(*a*) *Ownership of certain stock disregarded.*—Subsection (a) of section 235 of the bill amends section 1371 of the code (relating to the definition of a small business corporation) by adding a new subsection (d) to permit a corporation to be a small business corporation while owning the stock of certain inactive subsidiary corporations.

Under section 1371(a) of existing law, a small business corporation is not permitted to be a member of an affiliated group. New subsection (d) provides that, for purposes of section 1371(a), a corporation shall not be considered to be a member of an affiliated group at any time during any taxable year by reason of the ownership of stock in another corporation if such other corporation meets the requirements provided in new paragraphs (1) and (2) of section 1371(d).

Paragraph (1) provides that the subsidiary corporation must not have begun business at any time on or after the date of its incorporation and before the close of the parent corporation's taxable year with respect to which status as a small business corporation is being sought. An example of a corporation which "has not begun business" is a corporation which is incorporated for the sole purpose of reserving a corporate name in a State or States in which the parent corporation is not doing business.

Paragraph (2) of section 1371(d) provides, in effect, that the subsidiary corporation must not have taxable income for the portions of any of its taxable years which are included within the taxable year of the parent corporation with respect to which status as a small business corporation is being sought.

Thus, for example, assume that corporation P wishes to elect to be treated under the provisions of sections 1371 through 1377 of the code for its calendar year 1964 and subsequent years. Corporation P owns all of the stock of corporation S, which is on a June 30 taxable year. Corporation P would not be precluded from making an election under section 1372 if corporation S had not begun business before January 1, 1965, and had no taxable income for either the period January 1, 1964, through June 30, 1964, or the period July 1, 1964, through December 31, 1964. Assuming that corporation P so elected with respect to its calendar year 1964, it would cease to be a small business corporation for any subsequent taxable year if corporation S either begins business before the close of such subsequent year, or has taxable income for any period included within such subsequent year.

The enactment of section 1371(d) does not relax or otherwise change the requirements of any of the provisions of subchapter S other than with respect to the requirement that a small business corporation may not be a member of an affiliated group. Thus, in the above example, the election made by corporation P under section 1372 must have been made either during the month of December 1963 or January 1964.

(*b*) *Certain distributions of money after close of taxable year.*—Subsection (b) of section 235 of the bill amends section 1375 of the code (relating to special rules applicable to distributions of electing small business corporations) by adding a new subsection (e).

Paragraph (1) of new section 1375(e) provides that, for purposes of chapter 1 of the code, a corporation which sold capital assets or property described in section 1231(b) of the code during a taxable year with respect to which it was an electing small business corporation may elect to treat as a distribution of money made on the last day of such taxable year, a distribution of money representing all or part of the proceeds of such sales of assets or property which such corporation makes to its shareholders on or before the 15th day of the third month following the close of such year, if such distribution is made pursuant to a resolution of its board of directors adopted before the close of such taxable year. Thus, if a corporation makes such an election, such distribution will be treated as actually distributed and received on the last day of such taxable year and will be taken into account in computing undistributed taxable income (as defined in sec. 1373(c)) for such taxable year to the extent that such distribution is a distribution out of earnings and profits of such taxable year as specified in section 316(a)(2).

Paragraph (2) of new section 1375(e) provides, in effect, that in order for a corporation to make an election under paragraph (1) of new section 1375(e) with respect to any distribution, each person who is a shareholder on the day the distribution is received must own as of the close of such day the same proportion of stock of such corporation as he owned as of the close of the last day of the taxable year of such corporation preceding the taxable year of the distribution, and each such shareholder must consent to such election at such time and in such manner as the Secretary of the Treasury or his delegate shall prescribe by regulations.

Paragraph (3) of new section 1375(e) provides that the election under paragraph (1) of new section 1375(e) shall be made in such manner as the Secretary of the Treasury or his delegate shall prescribe by regulations. Such election shall be made not later than the time prescribed by law for filing the return for the taxable year during which the sale was made (including extensions thereof), except that, with respect to any taxable year ending on or before the date of enactment of the bill, such election shall be made within 120 days after such date.

(*c*) *Effective dates.*—Subsection (c) of section 235 of the bill provides that the amendment made by subsection (a) of such section shall apply with respect to taxable years of corporations beginning after December 31, 1962, and that the amendment made by subsection (b) of such section shall apply with respect to taxable years of corporations beginning after December 31, 1957. No provision of this section of the bill extends the period of limitations within which a claim for credit or refund may be filed for any taxable year.

SECTION 236. REPEAL OF ADDITIONAL 2-PERCENT TAX FOR CORPORATIONS FILING CONSOLIDATED RETURNS

Section 236 of the bill (sec. 222 of the bill as passed by the House) was approved by your committee without change. For the technical explanation of this section of the bill, see page A–186 of the report of the Committee on Ways and Means on the bill.

SECTION 237. REDUCTION OF SURTAX EXEMPTION IN CASE OF CERTAIN CONTROLLED CORPORATIONS, ETC.

Section 237 of the bill (sec. 223 of the bill as passed by the House) was approved by your committee with minor technical changes. For the technical explanation of this section (except for the amendments made by your committee), see page A–187 of the report of the Committee on Ways and Means on the bill.

(*a*) *In general.*—Subsection (a) of section 237 adds a new part II (relating to certain controlled corporations) to subchapter B of chapter 6 of the code.

SECTION 1562. PRIVILEGE OF GROUPS TO ELECT MULTIPLE SURTAX EXEMPTIONS

Additional tax imposed

The bill as passed by the House provides certain exceptions to the general rule that a corporation which is a component member of a controlled group of corporations which has made an election under new section 1562(a) of the code is subject to the additional tax imposed by section 1562(b):

1. New section 1562(b)(1) provided that the additional tax is not to apply to the taxable year of the corporation if such corporation is the only member of the controlled group which has taxable income for the taxable year.
2. Subsection (c) of section 1551 of the code (relating to disallowance of surtax exemption and accumulated earnings credit), as amended by the bill as passed by the House, provided that if the surtax exemption is disallowed to a transferee corporation under section 1551(a) for any taxable year the additional tax is not to apply with respect to such transferee for such taxable year.
3. The bill as passed by the House added a new subsection (d) to section 269 of the code (relating to acquisitions made to evade or avoid income tax) to provide that if the surtax exemption is disallowed under section 269(a) to an acquired corporation for any taxable year the additional tax is not to apply with respect to such acquired corporation for such taxable year.

Your committee has stricken out the provisions referred to in paragraphs (2) and (3), and has added to the provision referred to in paragraph (1) a general rule that the additional tax is not to apply to the taxable year of a corporation if its surtax exemption is disallowed under any provision of subtitle A of the code for such taxable year.

Tolling of statute of limitations

Your committee has made a change in subsection (g) of new section 1562 in order to make it clear that neither the Secretary of the Treasury nor his delegate nor the taxpayer may invoke such subsection for the purpose of overturning closing or compromise agreements. Thus, paragraph (2) of new section 1562(g) relating to the tolling of the statute of limitations for allowing or making claim for credit or refund of any overpayment of tax has been changed by your committee to conform to the provisions of paragraph (1) of such section, relating to the tolling of the statute of limitations for assessment of deficiencies.

SECTION 1563. DEFINITIONS AND SPECIAL RULES

Special rules

Your committee has adopted a new special rule by adding a new subparagraph (C) to new section 1563(f)(3). By reason of this addition, your committee has deleted as unnecessary a provision contained in the first parenthetical expression of section 1563(c)(2)(A)(ii). The new subparagraph (C) of section 1563(f)(3) provides that if stock is owned by a person within the meaning of section 1563(d) and such ownership results in the corporation being a component member of a controlled group, such stock shall not be treated as excluded stock under section 1563(c)(2) if by reason of treating such stock as excluded stock the result is that such corporation is not a component member of a controlled group. Thus, for example, assume corporation P owns directly 50 of the 100 shares of the only class of stock of corporation S. Also assume that O, an officer of corporation P, owns directly 30 shares of such stock and corporation P owns an option to acquire such 30 shares from O. The remaining shares of corporation S (20) are owned by unrelated persons. In the absence of the new special rule adopted by your committee, one possible construction of the applicable provisions of the House bill is that the 30 shares of stock of corporation S owned by O would be treated as excluded stock under section 1563(c)(2)(A)(ii), and corporation P would be treated as owning only 71 percent (50 divided by 70) of the stock of corporation S. Thus, corporation S would not be a component member of a controlled group of corporations within the meaning of section 1563(b). The special rule added by your committee insures, however, that the stock ownership rules contained in section 1563(d) take precedence over the excluded stock rules contained in section 1563(c)(2) when the result is to include a corporation as a component member of a controlled group of corporations which, in the absence of the new special rule, would not be the case. Thus, in the preceding example, O's stock would not be treated as excluded stock with the result that P is treated as owning 80 percent of the stock of corporation S (50 percent directly, and 30 percent constructively under sec. 1563(e)(1)) and corporation S would be a component member of a controlled group of corporations consisting of corporations P and S.

Your committee has also made minor conforming and clarifying changes in new section 1563.

(*b*) *Disallowance of surtax exemption and accumulated earnings credit.*—Subsection (b) of the bill contains amendments to section 1551 of existing law. Subsection (b)(2) of section 1551 as amended by the bill, defines the term "control" in the case of a transferee corporation described in subsection (a)(3) of such section. Subparagraph (B) of section 1551(b)(2) provides, in part, that with respect to voting stock, five or fewer individuals must own stock possessing *more than* 50 percent of the total combined voting power of all classes of stock entitled to vote. However, a slightly different test is provided with respect to the ownership requirements relating to the value of the outstanding stock. The test is that the five or fewer individuals must own stock possessing *at least* 50 percent of the total value of shares of all classes of stock. Your committee has made the voting stock and the value stock tests identical by requiring that in each case the individuals must own more than 50 percent of the particular stock in question.

(c) *Technical amendments.*—Subsection (c) of the bill as reported is the same as subsection (c) of the bill as passed by the House except for a conforming change.

(d) *Effective date.*—Subsection (d) of the bill as reported is the same as subsection (d) of the bill as passed by the House.

SECTION 238. VALIDITY OF TAX LIENS AGAINST MORTGAGEES, PLEDGEES, AND PURCHASERS OF MOTOR VEHICLES

Section 238 of the bill, which is a new section added to the bill as passed by the House, relates to the validity of tax liens on certain motor vehicles.

(a) *Mortgagees, pledgees, and purchasers without actual notice or knowledge of lein.*—Subsection (a) of section 238 of the bill amends section 6323(c) of the code (relating to exception in case of securities) to grant, in the case of the mortgage, pledge, or purchase of a motor vehicle, the same treatment which is now available in the case of the mortgage, pledge, or purchase of a security after notice of a tax lien has been filed. Thus, even though notice of a tax lien imposed by section 6321 has been filed, such lien will not be valid with respect to any mortgagee, pledgee, or purchaser of a motor vehicle, for an adequate and full consideration in money or money's worth, if at the time of such mortgage, pledge, or purchase such mortgagee, pledgee, or purchaser was without notice or knowledge of the existence of such lien.

Paragraph (1) of section 238(a) of the bill amends the heading of section 6323(c) of the code to reflect the extension of the exception contained in such subsection to cover motor vehicles.

Paragraphs (2) and (3) of section 238(a) of the bill amend paragraph (1) of section 6323(c) of the code to extend the exception contained in paragraph (1) to any mortgagee, pledgee, or purchaser of a motor vehicle without notice or knowledge of the existence of a tax lien.

Paragraph (4) of section 238(a) of the bill adds a new paragraph (3) to section 6323(c) of the code. Paragraph (3) defines the term "motor vehicle", as used in section 6323(c), as a vehicle (other than a house trailer) which is registered for highway use under the laws of any State or foreign country.

(b) *Liens for estate and gift taxes.*—Subsection (b) of section 238 of the bill amends section 6324 of the code (relating to special liens for estate and gift taxes) to grant, in the case of the mortgage, pledge, or purchase of a motor vehicle, the same treatment which is now available in the case of the mortgage, pledge, or purchase of a security after a lien for estate or gift tax has arisen. Thus, even though a special lien for estate or gift tax has arisen, such lien will not be valid with respect to any mortgagee, pledgee, or purchaser of a motor vehicle, for an adequate and full consideration in money or money's worth, if at the time of such mortgage, pledge, or purchase such mortgagee, pledgee, or purchaser was without notice or knowledge of the existence of such lien.

Paragraph (1) of section 238(b) of the bill amends section 6324(a) of the code (relating to liens for estate tax) and section 6324(b) of the code (relating to lien for gift tax) to extend the exception for securities now contained in those subsections to motor vehicles.

Paragraph (2) of section 238(b) of the bill amends section 6324(c) of the code (relating to exception in case of securities) by revising such subsection to cover both securities and motor vehicles.

(c) *Effective date.*—Subsection (c) of section 238 of the bill provides that the amendments made by this section apply only with respect to mortgages, pledges, and purchases made after the date of the enactment of the bill.

TITLE III—OPTIONAL TAX ON INDIVIDUALS; COLLECTION OF INCOME TAX AT SOURCE ON WAGES

SECTION 301. OPTIONAL TAX IF ADJUSTED GROSS INCOME IS LESS THAN $5,000

This section has been approved by your committee without change. For the technical explanation of this section of the bill see page A–214 of the report of the Committee on Ways and Means on the bill.

SECTION 302. INCOME TAX COLLECTED AT SOURCE

Section 302 of the bill amends section 3402 of the code (relating to income tax collected at source) and section 1441 of the code (relating to withholding of tax on nonresident aliens).

(*a*) *Percentage method of withholding.*—Subsection (a) of section 302 of the bill amends section 3402(a) of the code (relating to income tax collected at source). Under the bill as passed by the House, section 3402(a) of the code provided for a 15-percent withholding rate in the case of wages paid during the calendar year 1964 and a 14-percent withholding rate in the case of wages paid after December 31, 1964. Your committee has amended section 3042(a) to provide for a 14-percent withholding rate in the case of wages paid after the seventh day following the date of the enactment of the bill.

(*b*) *Wage bracket withholding.*—Subsection (b) of section 302 of the bill amends section 3402(c)(1) of the code (relating to wage bracket withholding). Under the bill as passed by the House, section 3402(c)(1) of the code provided new withholding tables for wages paid during the calendar year 1964, and new tables for wages paid after December 31, 1964. Your committee has amended section 3402(c)(1) to provide that the new withholding tables which would have become effective for wages paid after December 31, 1964, under the bill as passed by the House will become effective for wages paid after the seventh day following the date of the enactment of the bill.

(*c*) *Withholding of tax on certain nonresident aliens.*—Subsection (c) of section 302 of the bill amends sections 1441 (a) and (b) of the code (relating to withholding of tax on nonresident aliens). Under the bill as passed by the House, section 1441(a) of the code provided a 15-percent withholding rate in the case of certain payments made during the calendar year 1964 and a 14-percent withholding rate in the case of certain payments made after December 31, 1964. Your committee has amended section 1441(a) to provide a 14-percent withhold-

ing rate in the case of these payments made after the seventh day following the date of the enactment of the bill.

Under the bill as passed by the House, section 1441(b) of the code referred to the rates of 15 percent or 14 percent provided by the amended section 1441(a). Your committee has amended section 1441(b) to refer to the new 14-percent rate which is provided by amended section 1441(a).

(*d*) *Effective dates.*—Subsection (d) of section 302 of the bill as passed by the House provided that the amendments made by subsections (a) and (b) of such section apply with respect to remuneration paid after December 31, 1963, and that the amendment made by subsection (c) applies with respect to payments made after December 31, 1963. Your committee's amendment provides that the amendments made by subsections (a) and (b) of such section apply with respect to remuneration paid after the seventh day following the date of the enactment of the bill, and that the amendment made by subsection (c) of such section applies with respect to payments made after the seventh day following the date of the enactment of the bill.

SECTION 17

BRIEF SUMMARY OF THE PROVISIONS OF H.R. 8363 AS REPORTED BY THE SENATE COMMITTEE ON FINANCE

BRIEF SUMMARY OF THE PROVISIONS OF H.R. 8363, "THE REVENUE ACT OF 1964"

AS REPORTED BY

THE COMMITTEE ON FINANCE

UNITED STATES SENATE

EIGHTY-EIGHTH CONGRESS

SECOND SESSION

ELIZABETH B. SPRINGER, *Chief Clerk*

BRIEF SUMMARY OF REVENUE ACT OF 1964 AS AMENDED BY THE SENATE COMMITTEE ON FINANCE (H.R. 8363)

(1) *Section 1: Title.*—The title of the bill is the Revenue Act of 1964.

(2) *Section 111: Individual rates.*—This reduces the rates of tax for individuals from a range of 20 to 91 percent to a range of 16 to 77 percent for 1964 and to a range of 14 to 70 percent for 1965 and subsequent years. This splits the first bracket into four segments of $500 each, taxed at 14, 15, 16, and 17 percent, respectively.

(3) *Section 112: Minimum standard deduction.*—This provides that, if higher than the 10-percent standard deduction, the "minimum standard deduction" is to be $200 plus $100 for each exemption. Thus, the exemption and minimum standard deduction for a single person will be $900; for a married couple, $1,600; and, for a married couple with two children, $3,000.

(4) *Section 113: Related amendments.*—This conforms the tax rate applicable to the retirement income credit with the new rate schedules. Thus, it makes the rate applicable to the retirement income 15 percent instead of 20 percent. This also conforms the floor on the tax on nonresident aliens with the new rate schedule by raising from $15,400 to $19,000 in 1964 and $21,200 in 1965 and subsequent years the income level to which the regular, rather than the flat 30-percent rate, may be applicable.

(5) *Section 114.*—This is a cross-reference.

(6) *Section 121: Corporate rates.*—This reduces the overall corporate tax rate from the present 52 percent to 50 percent in 1964 and 48 percent in subsequent years. It also reduces the rate applicable to the first $25,000 of corporate income, from the present 30 percent, to 22 percent for 1964 and subsequent years.

(7) *Section 122: Acceleration of corporate tax.*—This section provides for a speedup in the payment of corporate taxes. It applies only to tax liability in excess of $100,000. At present, 50 percent of tax liability over $100,000 is payable in two installments in September and December (for a calendar year corporation) in the current year of liability. This accelerates the other two payments now made after the end of the year with respect to this liability over $100,000 so that by 1970 these two 25-percent payments also will be made in the current year of liability in April and June (for a calendar year corporation). This speedup is provided on a gradual basis. Thus, 1 percent of this liability in April and June will be reported for 1964, 4 percent for 1965, 9 percent for 1966, 14 percent for 1967, 19 percent for 1968, 22 percent for 1969, and the full 25 percent for 1970.

(8) *Section 123: Related amendments.*—This conforms other provisions in the Internal Revenue Code to the changes made with respect to corporate rates in section 121. The conforming amendments relate to the tax on mutual insurance companies (other than life) and receipts

of minimum distributions for domestic corporations from their foreign subsidiaries.

(9) *Section 131: Effective date.*—This provides that the corporate and individual rate changes are to be effective generally for taxable years beginning after December 31, 1963.

(10) *Section 132: Fiscal year taxpayers.*—This provides that the individual and corporate rate changes for fiscal year taxpayers are to apply to that portion of their years ending after December 31, 1963.

(11) *Section 201: Dividend credit and exclusion.*—The 4-percent dividends received credit available to individuals is reduced to 2 percent for 1964 and repealed for subsequent years. The $50 dividend exclusion is increased to $100 for 1964 and subsequent years. In practical effect, this increase is from $100 to $200 for married couples.

(12) *Section 202: Retirement income credit.*—The maximum limitation on the retirement income credit is raised up to $762, or from $1,524 to $2,286 for a married couple, where both are over 65 and one spouse is not eligible for the retirement credit, or can take only a small credit. (This is a committee amendment.)

(13) *Section 203: Investment credit.*—In the case of the investment credit, the provision requiring a downward adjustment in the basis of property eligible for depreciation, to the extent of the 7-percent investment credit, is repealed. Also Federal regulatory commissions are prohibited from requiring the "flowthrough" of any of the benefits of the investment credit to the customers of the regulated industries in the case of property eligible for the full 7-percent credit (mainly the transportation industries such as railroads, airlines, and pipelines). In the case of public utilities eligible only for the 3-percent credit (principally telephone and electric companies), the regulatory commissions are not to require the "flowthrough" of the benefits of the investment credit in any period of time shorter than the useful life of the asset involved. Other changes make the investment credit available in the case of elevators and escalators and increase the base on which the credit of the lessee is to be computed where dealers lease property eligible for the credit.

(14) *Section 204: Group-term insurance.*—The employee exclusion for premiums on group term insurance furnished through the employer is limited to premiums paid on the first $70,000 of coverage. (The committee amendments increased this level from $30,000 to $70,000.)

(15) *Section 205: Sick pay exclusion.*—The sick pay exclusion of up to $100 a week is made available only to those absent from work for more than 30 days and available to them only for the period after that time.

(16) *Section 206: Sale of residence.*—An exclusion from taxable income is provided for any capital gain attributable to the first $20,000 of the sale price of a personal residence in the case of an individual age 65 or over.

(17) *Section 207: State and local taxes.*—A deduction is denied in computing income subject to Federal tax for State and local taxes other than property taxes, income taxes, general sales taxes, gasoline

taxes, and automotive license taxes. The principal taxes for which this denies a deduction are alcoholic beverage taxes, cigarette taxes, and selective excise taxes. (Under the House bill, no deductions were allowed for gasoline and automotive licenses.)

(18) *Section 208: Casualty losses.*—The deduction for personal casualty and theft losses is limited to the amount in excess of $100 per loss, in a manner somewhat similar to the treatment of "$100 deductible" insurance.

(19) *Section 209: Charitable contributions.*—The following changes are made in the charitable contribution deduction:

(*a*) The additional 10-percent maximum deduction (above the 20-percent generally available) is made available generally for contributions to publicly supported organizations other than private foundations (presently it is available chiefly for churches, schools, and hospitals);

(*b*) The unlimited charitable contribution deduction is restricted to contributions to publicly supported organizations (this is a committee amendment);

(*c*) A 5-year carryover of charitable contributions (in excess of the amount currently deductible) is provided for individuals with respect to contributions to publicly supported organizations (this is a committee amendment);

(*d*) The 2-year carryover of charitable contribution deductions for corporations is extended to 5 years (the committee made this available for contributions made in 1962 and 1963 as well as subsequent years);

(*e*) Charitable contribution deductions for gifts of future interest in tangible personal property are denied until the gifts are completed (the House bill would have applied this rule only where the life interest was retained in other than the donor).

(20) *Section 210: Expropriation losses.*—Businesses which have sustained substantial "foreign expropriation losses" after 1958 are permitted to carry such losses forward and apply them against income for a 10-year period. This is in place of the regular 3-year carryback and 5-year carryforward for net operating losses. (This is a committee amendment.)

(21) *Section 211: Medicines and drugs.*—The 1-percent limitation, or floor, on medicines and drugs, which must be taken into account in determining deductible medical expenses, is made inapplicable where the taxpayer or his wife is over 65 and also with respect to expenses for dependent parents over 65. This conforms the treatment with respect to the 1-percent limitation with that provided in the case of the 3-percent limitation for medical expenses generally.

(22) *Section 212: Child care.*—The child care deduction is revised—

(*a*) to make it available in the case of a husband whose wife is incapacitated or institutionalized;

(*b*) to make it available with respect to care for children up to age 13 (instead of 12);

(*c*) the maximum deduction allowable where there are two or more children is increased from $600 to $900 and where there are three or more children, to $1,000 (the $1,000 maximum is added by the committee); and

(*d*) the present limitation on family income in the case of a working wife eligible for this deduction is raised from $4,000 to $7,000 (this is a committee amendment).

(23) *Section 213: Moving expenses.*—A deduction is allowed for certain moving expenses—transportation of household goods, transportation of the persons involved, and meals and lodging of the persons while in transit—for employees who are not reimbursed for these expenses and also for new employees. An exclusion for these items is already available in the case of old employees who are reimbursed.

(24) *Section 214: Political contributions.*—Individuals are allowed a deduction of up to $50 a year ($100 in the case of a joint return) for contributions to a political candidate or political committee to further the candidacy of individuals in primaries, conventions, general elections, and special elections. This applies to elections at all levels of government. (This is a committee amendment.)

(25) *Section 215: 100-percent dividend deduction.*—Affiliated groups of corporations, where there is an 80-percent common ownership, which are eligible to file a consolidated return but do not do so, are permitted to take a 100-percent deduction for intercorporate dividends received from other members of the group if the group agrees to be treated as a single entity for certain purposes, such as the $25,000 surtax exemption. (This is a committee amendment.)

(26) *Section 216: Bank loan insurance.*—An interest deduction is denied for amounts borrowed under a systematic plan to pay premiums on life insurance. The deduction is denied only if four of the first seven annual premiums are borrowed, the interest exceeds $100 a year, the amounts borrowed were not for unforeseen emergencies, or the amounts borrowed were not incurred in connection with a business.

(27) *Section 217: Face-amount certificate companies.*—Financial institutions subject to State banking laws and issuing face-amount certificates are not to be denied a deduction for interest paid on these certificates under section 265(2) of the code (relating to interest indebtedness to carry tax-exempt obligations) to the extent the tax-exempt obligations do not constitute more than 25 percent of the average of the institutions total assets. (This is a committee amendment.)

(28) *Section 218: Travel expenses.*—The rule adopted in 1962 which disallows a portion of travel expenses for certain business trips combined with a vacation is repealed. (This is a committee amendment.)

(29) *Section 219: Reorganizations.*—Tax-free status is provided for a stock-for-stock reorganization where the corporation acquiring the stock exchanges the voting stock of its parent corporation for the stock of the corporation being acquired. (This is a committee amendment.)

(30) *Section 220: Multiemployer pension plans.*—Provision is made for the retroactive qualification of a pension plan under a multiemployer agreement with unions where the pension plan subsequently becomes qualified. (This is a committee amendment.)

(31) *Section 221: Pension coverage of employees abroad.*—U.S. corporations are to be permitted to extend coverage under their qualified pension, profit-sharing, et cetera, plans to U.S. citizens employed by foreign subsidiaries or by domestic subsidiaries operating outside the United States. Generally, this treatment will not be available unless these employees are also covered for social security purposes. (This is a committee amendment.)

(32) *Section 222: Stock options.*—The present tax treatment of employee stock options is further restricted, the principal additional restrictions being—

(*a*) the stock when acquired must be held for 3 years or more;

(*b*) the options must not be for a period of more than 5 years;

(*c*) the option price must at least equal the market price of the stock when the option is granted;

(*d*) stockholders' approval of the options must be obtained; and

(*e*) the extent to which new options may be exercised when the old options are outstanding is restricted (the committee modified this latter point slightly).

Separate tax treatment is provided for employee stock purchase plans which are available to all employees on a nondiscriminatory basis under rules which are substantially the same as under present law.

(33) *Section 223: Revolving credit.*—Installment sales treatment, under which the income is reported as the installment is received, is fully extended to revolving credit sales and also to time payment charges associated with revolving credit sales. (This is a committee amendment.)

(34) *Section 224: Contested items.*—Where a taxpayer contests a tax or other liability, he is, nevertheless, to be permitted a deduction for the item in the year in which he makes the payment if this is earlier than the year in which the contest is settled. (This is a committee amendment.)

(35) *Section 225: Unstated interest.*—Where property is sold on an installment basis and either no, or very little, interest is charged on the installments, an appropriate amount of each installment is to be treated as if it were an interest payment.

(36) *Section 226: Personal holding companies.*—The percentage of passive income which may result in a company being classified as a personal holding company is reduced from 80 percent to 60 percent and amendments are made so that the personal holding company tax cannot be avoided by using rental income or oil or gas or mineral royalties (or working interests) to shelter substantial amounts of investment income, such as dividends and interest, from the personal holding company tax. (The committee modified somewhat the rules

applying to rental income.) Other restrictive amendments are also made. In addition, relief is provided for those companies which are not now personal holding companies, but would be under the new definitions. They are permitted favorable liquidation treatment in certain cases and also permitted a deduction in computing the personal holding company income for paying off existing debts. (Committee amendments allow 1 additional year to qualify for this treatment; a House amendment relating to foreign personal holding companies was deleted by the committee.)

(37) *Section 227: Aggregations of property.*—For the future, oil and gas leases and acquisitions are no longer to be aggregated in determining what constitutes a property for purposes of computing the 50-percent net income limitation in the case of the percentage depletion deduction.

(38) *Section 228: Iron ore royalties.*—Capital gains treatment is extended to iron ore royalties where the iron ore is mined in the United States and the persons acquiring the ore are not related to the persons owning the property.

(39) *Section 229: Insurance companies.*—Three changes are made with respect to the income tax of insurance companies:

(*a*) The present rule providing for the deduction of certain distributions in 1958 through 1961 to shareholders pursuant to "mutualizations" of stock life insurance companies are extended to cover distributions in 1962;

(*b*) The requirement of present law that life insurance companies, and small mutual casualty insurance companies taxed on investment income only, are to ratably accrue market discount on purchased bonds as ordinary income is removed with the result that this will be treated as capital gains; and

(*c*) A change is made to assure the deductibility of qualified pension plan contributions of mutual casualty insurance companies.

(All three of these changes are committee amendments.)

(40) *Section 230: Mutual funds.*—Regulated investment companies (i.e., mutual funds meeting certain requirements) are to be given 45 days after the close of their taxable year rather than 30 days to give notices to their shareholders as to the treatment by the shareholders of income received from the companies. (This is a committee amendment.) In addition, a provision is added to the effect that distributions by a unit investment trust liquidating an individual's interests in the trust are not to be considered as giving rise to capital gains tax with respect to interests of other investors still in the trust. (This is a committee amendment.)

(41) *Section 231: Foreign tax credit.*—Any excess foreign tax credit which arises from mineral extraction, because of the percentage depletion allowance under U.S. law, may not be used to offset U.S. tax on other foreign income not related to mineral extraction, processing, transportation, marketing, or similarly related activity. (This is a committee amendment.)

(42) *Section 232: Houses sold by employees.*—Where old employees are moved by an employer from one location to another, to the extent the employer reimburses them for selling expenses and the receipt of less than the fair price of the house because the sale had to occur in a short period of time, such amounts are to be treated as proceeds from the sale of the house rather than as compensation to the employee. As a result, to the extent they result in tax, these amounts will be treated as capital gain rather than as ordinary income. (This is a committee amendment.)

(43) *Section 233: Gains on real estate.*—In the case of real estate sold in the future, any depreciation deduction, to the extent the deductions exceed the depreciation which would have been allowable under the straight line method (but only to the extent of any gain), are to be treated as giving rise to ordinary income. However, in the case of property held more than 20 months, the amount treated as ordinary income is to be reduced by 1 percent for each month of holding over 20, with the result that these amounts are taxed as capital gains, rather than as ordinary income, in the case of real property held more than 10 years.

(44) *Section 234: Averaging.*—In place of the various specialized averaging provisions available under present law, what in effect amounts to averaging of income over a 5-year period is to be available for the income in the current year which exceeds the average of the income of the 4 prior years by more than one-third but only if the excess over this 1⅓ amounts to more than $3,000.

(44) *Section 235: Subchapter S corporations.*—In the case of subchapter S corporations, the income of which is treated essentially like partnership income, it is provided that certain distributions of money after the close of a taxable year may be treated as made during the year, in order to prevent the double inclusion of this income in the tax base of a shareholder (this is a committee amendment); and that a corporate member of an affiliated group may elect subchapter S treatment if the only other members of the group are inactive subsidiary corporations (this is a committee amendment).

(45) *Section 236: Consolidated returns.*—The 2-percent penalty tax which presently must be paid by corporations for the privilege of filing consolidated returns is repealed.

(46) *Section 237: Multiple surtax exemptions.*—For corporations where there is common control to the extent of 80 percent or more, the corporations involved may, as under present law, file a consolidated return, or may claim one $25,000 surtax exemption for the group, or alternatively may continue to each claim their own surtax exemption if a special tax of 6 percent is paid upon the first $25,000 of the income of each of these corporations. In addition, under present law, corporations may not transfer directly all or part of their property (other than money) to another corporation if the other corporation was created for the purpose of acquiring the property and was not actively engaged in business at the time of the acquisition and still have each of these corporations eligible for its own surtax exemption.

This treatment is extended to cover cases where the same result is obtained indirectly as well as directly and also where the result is obtained where five or fewer individuals who control a corporation transfer property directly or indirectly to a transferee corporation.

(47) *Section 238: Tax liens.*—A purchaser, a mortgagee, or pledgee of a motor vehicle will not be subject to a Federal tax lien against the motor vehicle, notice of which has been publicly filed unless the purchaser, mortgagee, or pledgee has actual knowledge of the existence of the lien. (This is a committee amendment.)

(48) *Section 301: Optional tax tables.*—Optional tax tables are provided for those with adjusted gross income of less than $5,000 for the year 1964 and for 1965 and for subsequent years. These tables reflect the rate reductions for individuals referred to in section 111 above.

(49) *Section 302: Withholding.*—Provision is made for a withholding rate of 14 percent in lieu of the 18 percent applicable under present law. This is to apply to payments made after the seventh day following the date of enactment of this bill. (Under the House bill, the withholding rate for 1964 would have been 15 percent and for 1965 and subsequent years, 14 percent.) Withholding rate tables to reflect this 14-percent withholding rate are also provided.

House Provisions Deleted by Committee Action

(1) *Sickness and accident policies.*—The committee deleted a provision which would provide that where an individual is covered by more than one sickness or accident policy and receives payments under two or more such policies with respect to the same accident or illness, the excess of any amount received over the cost of these expenses would have been treated as taxable income.

(2) *Carrying charges.*—The committee deleted a provision providing that an interest deduction is to be available for so much of separately stated "carrying charges" as do not exceed a 6-percent interest charge on the declining balance for payments with respect to services, in the same manner as present law provides in the case of purchases of tangible personal property.

(3) *Foreign personal holding companies.*—The committee deleted a House provision which would provide an increase in basis for a shareholder of a foreign personal holding company upon his death equal to the estate taxes he pays with respect to the appreciation in value on his stock in the foreign personal holding company. In addition, under the deleted provision the liquidation of foreign personal holding companies for a limited period of time would be permitted under section 333 which provides for the taxation of accumulated earnings and profits to the shareholder as dividends but provides no tax to him with respect to the appreciation in value of property before December 31, 1953.

(4) *Capital gains and losses.*—The committee deleted a House provision which would subdivide long-term capital gains into two categories: (A) Those held for more than 2 years; and (B) those held for between 6 months and 2 years. Only 40 percent of the gains

attributable to assets held more than 2 years would be includible in the tax base, and these gains would be subject to a maximum rate of 21 percent. For the other assets, present law would continue with the present 50-percent inclusion factor and the 25-percent maximum rate. Certain assets not considered "true" capital assets would receive this treatment without regard to how long they were held. In addition, the committee deleted a House provision which would have provided an indefinite loss carryover for capital losses in the case of individuals in lieu of the 5-year carryover under present law.

SECTION 18

SENATE FLOOR DEBATE

(From the Daily Congressional Record)

[*January 31, 1964*]

[*P. 1409*]

REVENUE ACT OF 1964

Mr. SMATHERS. Mr. President, I ask that the unfinished business be laid before the Senate.

The PRESIDENT pro tempore. The Chair lays before the Senate the unfinished business.

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

The PRESIDENT pro tempore. Under the rule, the 3-hour period for germaneness of debate is now in effect.

Mr. SMATHERS. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. DOUGLAS. Mr. President, a parliamentary inquiry.

The PRESIDENT pro tempore. The Senator from Illinois will state it.

Mr. DOUGLAS. I should like to inquire of the Senator in charge of the bill, the distinguished junior Senator from Louisiana [Mr. LONG], whether any motion or request has been made to accept the committee amendments en bloc as a basis for discussion and action.

Mr. LONG of Louisiana. The request has not been made because it would not be agreed to. I expect to make such a unanimous-consent request later today, or perhaps on Monday. I have discussed this subject with a number of Senators. There would be objection if the request were made at the present moment. That being the case, I see no reason to make a futile request.

Mr. DOUGLAS. Speaking for myself, the Senator from Tennessee [Mr. GORE], the Senator from Wisconsin [Mr. PROXMIRE], and I believe the Senator from Connecticut [Mr. RIBICOFF], we are ready to accept the committee amendments as text, with one exception—namely, the provision with respect to capital gains. We wish that provision to be put to a vote, in order to support the committee's position. I suggest that the Senate get on with the business of voting on the bill.

Mr. LONG of Louisiana. As far as I am concerned, I am perfectly content to do that, but a number of Senators are not.

Mr. DOUGLAS. Who is holding up the bill?

Mr. LONG of Louisiana. I am not holding up the bill, but there are others——

Mr. DOUGLAS. We is holding it up?

Mr. LONG of Louisiana. I do not know, but various Senators are out of the city.

Mr. DOUGLAS. Let us test it by moving to adopt the committee's amendments as original text with the exception of the capital gains provision and if no objection is heard, let that amendment be brought up.

Mr. LONG of Louisiana. I do not wish to vote until they can return to Washington. As far as I am concerned, I am willing to accommodate them. I have no choice.

Mr. DOUGLAS. The Senator states he does not know who the Senators are, but he is ready to accommodate them. Who are these mysterious strangers who are holding up action on the bill?

Mr. LONG of Louisiana. I have no choice. As far as I am concerned, the pending business would be to vote on striking the preamble; and on that issue I am ready to vote now. I hope it may be done by unanimous consent.

Mr. DOUGLAS. Why not try a unanimous-consent request that the committee amendments be agreed to en bloc, and that the bill, as amended, be treated as original text for purposes of amendment? Ask unanimous consent.

Mr. DIRKSEN. Mr. President, I would object to the request.

Mr. RIBICOFF. Mr. President, I have received expressions of cooperation and courtesy from the Senator in charge of the bill, the Senator from Louisiana [Mr. LONG], and also the minority leader. Without question, one of the major amendments to the bill will be my proposed tax credit for education expenses of youngsters in college.

I was interested in the considerable amount of attention paid to the so-called Ribicoff amendment at the start of the debate on the tax bill yesterday. I am honored by my distinguished colleagues' interest in my proposal to give a break to those who foot the bill for the education of our Nation's college youngsters.

But I was surprised at the amount of misinformation that crept into the discussion. In the public interest, I feel it is necessary to correct this misinformation. Therefore, I will discuss the amendment on the floor of the Senate in detail on Monday, if I can get the floor.

Meanwhile I will simply state a few facts. The senior Senator from Oregon,

my eminent colleague and good friend, Senator MORSE, called my amendment a "rich man's amendment."

It is anything but this.

Fact No. 1: My amendment provides not one dollar of benefit to the millionaire.

Fact No. 2: Families with incomes between $3,000 and $10,000 are 62 percent of our population.

Fact No. 3: Families with incomes between $3,000 and $10,000 get 62 percent of the dollar benefit under my amendment.

My amendment is an average man's amendment. It benefits the average American family. It helps them at a time when they need help.

By benefiting education, it would benefit America.

People—average people—seem to sense this. Everywhere I go nowadays, they stop to tell me they are rooting for my proposal. At home in Connecticut, here in Washington, and in other parts of the country where I have had speaking engagements, men, women—and youngsters too—speak to me about it.

College costs hit a family in just a few short years—and they hit with an impact that hurts. A $3,000 college expense is a staggering burden for a man earning $8,000, or $12,000, or $15,000. That is why when I was riding the elevator with the distinguished minority leader the other day, the elevator operator said, "Gee, Mr. RIBICOFF, you really are doing a job for all of us who are trying to get a college education. I hope your amendment passes."

[*P. 1410*]

The distinguished chairman of the Foreign Relations Committee, Senator FULBRIGHT, inserted editorials from the Washington newspapers about my amendment. Mr. President, I ask unanimous consent to insert in the RECORD at this point the letters I wrote in response to two of these editorials.

And, Mr. President, I also ask unanimous consent to insert in the RECORD at this point, editorials from across the land—where people live—supporting this measure. They show why it would further the cause of education in our land by helping to make college education realistically available to all boys and girls with a capacity for it.

There being no objection, the letters and editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Post, Dec. 19, 1963]

TAX CREDIT FOR EDUCATION?

The Washington Post's opposition to my amendment giving tax credits for college costs deserves further discussion. Let me deal with your three objections in order.

"First," you write, "it discriminates against those families who cannot in any case help their children through college." If this is a criticism, it applies with equal force to every deduction and credit now allowed by the Internal Revenue Code, for it simply means that those who pay no expenses and have nothing to deduct, get no deduction. Surely, that is not discrimination.

The man too poor to pay his hospital bill gets no benefit from the medical deduction available to his neighbor who does pay his bill. That proves we need to help those who cannot pay their hospital bills; it does not prove that we should deny tax relief to those who pay these costs.

"Unlike direct Federal grants," you continue, "tax credits would provide no assistance to talented young people of limited means who must work their way through college." Not true. My amendment provides a credit for any person who pays for a student's tuition, including the student himself. A student working full-time in summers and part time during the school year will pay, even under the new lower rates, $225 in taxes on $2,400 income. If his tuition and books are $500 or more, my credit proposal would wipe out that tax.

"Worse still," you conclude, "the granting of tax credits would encourage private and public institutions to raise tuition and other fees." First, colleges have been raising their tuitions anyway. A recent study showed that in just 4 years a group of private colleges raised student costs 29 percent and the increase for a group of public colleges was 21 percent.

Furthermore, you assume that colleges set their costs by what the traffic will bear. I do not. I believe their student charges reflect the increased costs they face, not the increased ability of parents to pay. But if you are right, then tuition costs are going up anyway, because every college will know that the basic rate reductions in the pending bill give parents funds, which can be absorbed through increased tuitions.

I think it unlikely that colleges would raise tuitions to cover the entire tax relief given to parents by the pending bill, with or without my amendment. Conceivably, there would be possibility of a slight increase due to tax relief, if the tuition increase were fully or even substantially deductible.

But under my amendment, the major share of the credit is based on the first $500 of tuition and books. The credit is 10 percent on the next $1,000. So every $100 increase in tuition above $500 gives the taxpayer only a $10 credit. There is no more reason to oppose this 10 percent credit because of tuition increase than there was to oppose last year's 7 percent investment credit on the ground that equipment manufacturers would raise their prices.

In sum, I believe those who pay the high costs of a college education are as entitled to some tax relief as those who receive a deduction for medical expenses or casualty losses. There is no doubt that we also need aid to the colleges, as provided in the bill signed by the President this week. And we also need scholarship aid. But it is time to

extend some relief to the middle income person who pays in a short span of years a high cost that benefits the entire Nation.

The middle income families are generally not eligible for financial aid. They are the ones my amendment benefits: 51 percent of the dollar benefit goes to families with incomes between $5,000 and $10,000, and 91 percent goes to families with incomes below $20,000.

ABRAHAM RIBICOFF.

[From the Evening Star, Jan. 24, 1964]

COLLEGE TAX RELIEF

I am very pleased the Star agrees that college costs, like medical expenses, are entitled to tax relief. And if, as your editorial said, some changes should be made in the amendment 16 Senators and I have proposed, we would be glad to have suggestions for improving it.

The college tax credit amendment I proposed has already benefited from the suggestions that have been made to improve the various proposals that have been introduced in prior years. For example, earlier proposals had been criticized for giving a preference to private colleges as against public colleges. We therefore adopted the idea of a sliding scale credit so that proportionately greater tax relief is given for the low tuition costs generally found at public colleges.

Even where the public college charges no tuition, the fees, books, and supplies generally add up to $200. My amendment would provide a credit of $150. That's 75 percent. Compare that to the $275 credit that would be available at a private college where tuition is $1,000; this comes to only 27 percent. Costs at low tuition colleges would get the greatest share of the benefit under my amendment.

Another criticism concerned the very wealthy person who benefited under prior proposals. My amendment reduces the credit in upper income groups and excludes the high income groups completely; 91 percent of the dollar benefit would go to families with incomes below $20,000. The millionaire would get no benefit at all.

Even with these points already written into the amendment, there may well be other suggestions worth adding. I would certainly give them careful consideration. In any event, I am glad you recognize that a basic problem exists and view with approval the general approach I have taken. You may be sure that every Senator will have a chance to vote on this proposal when I call it up on the Senate floor as an amendment to the tax bill.

ABRAHAM RIBICOFF.

[From the New York Daily News, Jan. 23, 1964]

HOPE RIBICOFF KEEPS FIGHTING

As a rule, we think pretty well of the Senate Finance Committee. We think anything but well of its vote Tuesday to leave out of the tax cut bill a provision for special income tax credits on college students' expenses.

This carefully thought out plan was offered by Senator ABRAHAM RIBICOFF, Democrat, of Connecticut. It blueprints only a modest amount of tax-deduction aid to college students and their parents.

We know of no fairer deductions—and we hope Senator RIBICOFF will take this fight to the Senate floor.

[From the Baltimore Sun, Jan. 23, 1964]

COLLEGE TAX CREDIT

It used to be that a family's biggest expense in the lifetime of its chief wage earner was the cost of buying a home—something that is entered into with many safeguards and paid off slowly over many years. Now the biggest expense may be the cost of sending three or four children to college, something that must be paid off more quickly and hits—as a rule—within a short period of time. Even at a State or other public college, the cost of 4 years of education can run as high as $6,600; an education at a good private college can cost double that sum.

Hence, millions of parents will watch anxiously the fate of Senator RIBICOFF's proposal to allow families special income tax credits (to a maximum of $325 a year) for each student in college. The administration is opposed to this amendment to its tax bill, but Mr. RIBICOFF, a former Secretary of Health, Education, and Welfare, feels that there is enough support for his plan to override an unfavorable vote by the Senate Finance Committee. The committee majority opposes the Ribicoff proposal following the administration's contention that education can be financed more efficiently through grants and loans.

But can it? The administrative costs involved in any Federal (or, for that matter, State) scholarship plan, the general tendency of scholarships to be restricted to levels below the middle-income group and the inevitable selectivity of Federal support for college scholarship systems provide less help for the average student, and at higher cost, than would a straightforward modest tax reduction. Mr. RIBICOFF's proposal, which would help a great number of families in the most direct way, is likely to be approved if it gets to the floor.

[From the Hartford (Conn.) Courant, Oct. 8, 1963]

WHY NOT TAX RELIEF FOR COLLEGE EXPENSES?

Senator RIBICOFF will find warm supporters among parents of children who are now in college, or who plan to go soon. Mr. RIBICOFF is hoping to introduce an amendment to the tax cut bill that will give some relief to those who are sending their children through college, and are footing the bills. He hopes to introduce a measure that would give these parents full tax relief for all expenditures up to $1,500. It is estimated that this relief would cost the Treasury around $750 million a year at this point, and that in a few years the figure will climb to $1 billion.

Even so, there are all kinds of relief measures built into the tax law that permit allowances for depreciation and depletion. For years some businessmen have had all kinds of extravagances deductible from their tax bills. Of all the citizens the one group that has never been recognized for tax relief

is that great middle class that politicians like to call the backbone of their country. And these are the ones who pay their way, and try to give their children a decent education.

The Government itself has recognized the need for superior education, and stimulates higher education by a wide variety of grants and subsidies. But the one area where there is no relief is that where it pinches most. The man of moderate means whose children have not earned scholarships is doomed to at least 4 years of deprivation as he sends his boy or girl through college. And the parent of modest means who has two or more can look forward to a long period of shabby clothing and beat-up cars. It is not a nice feeling for these people to survey the tender, loving care that owners of oil wells, gold

[*P. 1411*]

mines, or big industries get in contrast to their own shabby lot.

A part of this neglect stems from a now outmoded bit of folklore that only the rich send their children to college. The corollary is that a college education is a luxury. That is untrue now on both counts. A college education is as necessary now in earning a livelihood as high school education used to be 50 years ago. And today the colleges are filled with earnest and intelligent children from moderate income homes—or sometimes indeed from the homes of immigrants. Quality is the watchword, and our colleges were never so filled with intelligence as they are today. Only the most illiterate person would say that a college education is a luxury.

Still, the Ribicoff proposal may not have easy going. For one thing, the parents of these children who would profit are not organized the way the oil industry is. And many Congressmen still are moved by ignorant prejudices. Despite these bad omens, let us hope for the best.

[From the White Plains Reporter Dispatch, Dec. 26, 1963]

TAX CREDIT FOR TUITION

Gathering momentum in Washington is the proposal for a tax credit for college tuition. It is being offered as an amendment to the pending tax-cut bill.

The proposal isn't new. What makes it impressive at the moment is that 14 Senators who had introduced their own bills have now consolidated forces by cosponsoring the measure being pushed by Senator ABRAHAM RIBICOFF, Democrat, of Connecticut. Senatorial support is broad, including even such unlikely bedmates as HUBERT HUMPHREY and BARRY GOLDWATER.

The scale of tax credits that would be granted to parents of college students ranges from $150 for the first $200 at tuition up to a maximum of $325 for tuition of $1,500. That would apply to parental income up to $25,000.

The scale for parents with larger incomes slides the other way, until income exceeding $57,500 would exclude any credit.

Senator RIBICOFF contends this works out equitably, with 51 percent of the credit helping families in the $5,000 to $10,000 bracket, and 91 percent going to families with incomes under $20,000.

One big obstacle is that this arrangement would cost the Treasury more than $1 billion a year. Besides the revenue loss, there is the argument that it creates a new loophole at a time when Congress is being urged to close loopholes.

Ordinary mortals may, however, find it hard to get excited about the loophole of a tuition tax credit when Congress shows no discernible interest in doing a thing about truck-size loopholes that enable some of the highest income people to avoid paying a cent in taxes.

That, of course, doesn't make further loopholes any more desirable, per se. But is it fair to term a tuition tax credit a loophole? Is it any more of a loophole than certain dependency, age or illness exemptions with which there is no moral or practical argument?

We'd say the answer is no—particularly when the tuition tax credit is considered as an alternative to proposed multibillion dollar Federal programs designed to help pay faculty salaries and operating costs—in other words, via a roundabout tuition subsidy.

The difference is that the tax credit would be granted directly and without administrative expense. As we well know, the dollar that goes to Washington suffers shrinkage from the standard bureaucratic "handling charge" before it returns as Federal aid.

If the Government proposes to help parents meet the high cost of today's college education, why not do it the most efficient and inexpensive way? At that, $325 won't go far—but it'll go a lot farther if deducted at the source.

[From the Newark News, Jan. 23, 1964]

HELP TO PARENTS

Senator RIBICOFF's efforts to amend the tax-cut bill to permit deductions for college costs have suffered a setback in the Senate Finance Committee. Undaunted, Mr. RIBICOFF plans to carry the amendment to the Senate floor, where he views its chance as "excellent."

The Connecticut Democrat's optimism stems from the 10-to-7 vote, which found all 6 Republicans on the committee joining him in favor of the amendment. The deserting Democrats reflect the administration's feeling that Federal aid to education is best provided through grants and loans, rather than tax relief. But Senator RIBICOFF thinks he can convince his party colleagues to the contrary.

Mr. RIBICOFF argues that the Federal assistance programs benefit only the low-income family. His plan is designed to help parents who are neither wealthy enough to absorb the high cost of college education without hardship, nor poor enough to qualify for financial aid under existing scholarship programs. It would allow maximum credit of $325 for each student, with a descending scale for taxpayers in higher brackets.

Considering Congress' liberal policy toward business expense deductions, parents would seem entitled to some relief from the financial burden of sending their children to college. But they have no lobby in Washington and, along with Senator RIBICOFF, can only hope the Senate will view their plight with more sympathy than either the administra-

tion or the Finance Committee majority has shown.

[From the Denver Post, Oct. 8, 1963]

COULD HELP THE KIDS, COLLEGES AND PARENTS

A tax idea that strikes us as quite worth while is gaining support on Capitol Hill in Washington. It should appeal to every parent burdened with the expense of putting a child through college.

The idea is simply that parents would be allowed to add to their itemized Federal income tax deductions the cost of their children's college tuition, books and fees, up to a maximum of $1,500 a year.

This is the way a bill sponsored by Senator ABE RIBICOFF, Democrat, of Connecticut, reads, and RIBICOFF, as a member of the tax-writing Senate Finance Committee, is in a potent position to do something about it. The extent of support for the idea is shown by the fact that more than 120 bills of this general type have been introduced in Congress this session, and their sponsors range from liberals such as RIBICOFF to conservatives such as BARRY GOLDWATER.

RIBICOFF said this week that when the House-passed $11 billion tax cut bill comes up in the Finance Committee, he will try to get the college expenses tax deduction plan written into it.

The idea has been around for some years now, and was opposed by both the Eisenhower and Kennedy administrations on grounds that (1) direct student aid is better, and (2) tax deductions are no help to low-income families who pay no income tax.

Both administrations seem to have preferred direct support—loans or grants—presumably because these could be restricted to worthy students, whereas tax deductions might go to parents of children loafing their way through college for social status.

This was a more valid argument 5 or 6 years ago—before the sputnik era—than it is now. The better colleges are weeding out goof-offs more ruthlessly every year.

The other argument—that tax relief is no help to low-income families—doesn't impress us much. The Federal tax bite starts at $3,000 for a couple with one child, $4,000 for the parents of two children. Hence there aren't going to be many parents, who are interested in having a child go to college, who wouldn't get tax relief under this proposal. And for those in this bracket who are interested, such a tax deduction might well make the difference as to whether they could afford it or not.

Certainly, for the vast middle class, from which most collegians come, a college expenses tax deduction would be a real boon.

We checked with one father of a full-scholarship winner, who nevertheless has to foot a $750-per-year bill for books and other expenses for his son. His reaction was blunt:

"If wealthy people can get a tax break for their contributions to college endowment funds, why shouldn't I get one for my sizable—to me—contributions toward meeting college expenses?"

Why not indeed? Any proposal that has the backing of people as politically different as ABE RIBICOFF and BARRY GOLDWATER must have nonpolitical merit. We hope the Senate Finance Committee gives it an A-plus.

[From the Herald-Advertiser, Nov. 17, 1963]

AID FOR PARENTS

Parents with college-age children may be divided into three groups: Those who can afford, without question, to send their children to college; those who, without question, cannot afford to do so; and those who cannot afford to but who manage, somehow, to do it.

Interested lawmakers who sympathize with the last group and would like to make their sacrifices a little less painful, have sought for years to get these parents a better break with the tax collector.

West Virginia's Senator JENNINGS RANDOLPH is one Member of the Congress who repeatedly offered bills that would give parents with children in college larger deductions or tax credit to offset the high costs of higher education. Others have been equally solicitous and equally unsuccessful.

Senator ABRAHAM RIBICOFF, Democrat, of Connecticut, tried to interest the administration in some kind of tax relief for the parents of college students when he was Secretary of Health, Education, and Welfare. Now that he is in the Senate, he is reported to be trying to coordinate the efforts of individual Senators in a concerted move to get a tax-relief bill through Congress.

According to a copyrighted article in the Washington Star by Charles Bartlett, the bipartisan bill will have good support in Congress, but will be opposed by the administration, the Treasury Department, and even some education groups. Their opposition is explained as follows:

It would cost the Treasury about half a billion tax bollars on top of the anticipated $11 billion deficit involved in a general tax reduction:

Tax "purists" dislike the idea because it moves in the opposite direction of their drive to remove the "gimmicks" from the tax laws.

The education groups are afraid that enactment of such a bill will reduce chances of getting a Federal program of undergraduate scholarships to match the present program of Federal loans. They say scholarships would go only to deserving students, whereas tax relief would benefit both the deserving and the undeserving.

The Ribicoff compromise bill would offer a graduated scale of benefits to parents based on their incomes. The maximum tax credit, $325, would be available to parents with incomes up to $20,000. Then it would taper off, ending entirely if parental income was $60,000 or more.

[*P. 1412*]

As Mr. RIBICOFF is discovering, it is not an easy bill to write or to defend against charges that it favors the middle-income and high-income groups. But the fact that there is general recognition of the painful sacrifices which middle-class parents must make—and do make—in order to send their children to college, gives hope that a satisfactory solution to this urgent problem will be found.

[From the Montgomery (Ala.) Advertising Journal]

FEDERAL AID THAT'S SOUND

Why not give special tax consideration to parents who are trying to put children through college? A Democratic Senator sponsored this plan and a Democratic administration is opposing it, but it makes more sense than most other education measures that originate in Washington.

Senator RIBICOFF's is simplicity itself. For each child in college, a parent would be allowed a tax credit of 75 percent of the first $200 in tuition, books, fees, and supplies, 25 percent of the second $300 and 10 percent of the next $1,000—a total of $325 for each student. This amount would be directly subtracted from the amount of taxes due, except that parents in higher income tax brackets would be entitled to a smaller deduction or, above $60,000 a year income, none at all.

The Senate Finance Committee turned down RIBICOFF's proposal by a vote of 10 to 7. RIBICOFF's opposition included the Treasury Department, which estimated that the tax-credit scheme would cost the Government $750 million the first year and more than $1 billion by the third year.

So it might, but that's no greater than the 3-year $1 billion college aid bill approved by Congress last month and is considerably less than some other aid-to-education bills that have been proposed.

Better yet, it's a step toward making it easier for the States to sustain their educational systems without Federal help—by leaving more money at home.

If the Federal Government weren't sitting astride most of the productive tax sources, there would be no reason for the tax dollar to make that wearing, eroding trip to Washington and back, and the States could solve their own problems more easily.

Mr. RIBICOFF. Now, Mr. President, I have talked with the distinguished Senator in charge of the bill about the prospect of considering my college credit amendment on Monday. My hope that the Senate will enter into a unanimous-consent agreement to call up the amendment at about 4 o'clock on Monday afternoon and vote on the amendment some time late on Tuesday. I have discussed the subject with the distinguished minority leader. He said he would be more than willing to agree to that arrangement and he has indicated a desire to expedite the major amendments.

Mr. LONG of Louisiana. Mr. President, I am perfectly willing to make the request that the Senator from Connecticut be recognized as soon as the Senate has concluded its consideration of whatever amendment is pending at 4 o'clock on Monday.

I am not prepared to enter into a unanimous consent request that the vote be taken at that time, because the amendment is a very important amendment and is one which should be discussed long enough so that Senators on both sides will feel that their arguments have been fully heard and that their answers to the opposing arguments have been heard. I assume that the Senate could vote on the question some time on Tuesday; but not knowing how the debate would go, I would not wish to ask unanimous consent that the Senate vote at any particular time.

I ask unanimous consent that the Senator from Connecticut [Mr. RIBICOFF] be recognized immediately after the disposition of whatever amendment is pending on Monday at 4 o'clock for the purpose of offering his amendment related to tax credit for education expenses.

Mr. SMATHERS. Mr. President, reluctantly I am obliged to object to the unanimous consent request at this time. I make the objection not because I believe that the Senate cannot get to the Ribicoff amendment, and not because I do not believe it should get to it. We have made great progress. We have proceeded with the bill within the committee in a fashion and at a rate that was much greater than any of us originally thought possible.

We discovered that rather than try to force any hard rules on the Senate, the best thing to do was to let the matter take its course. We would not try to set up any hard, fast, and rigid rules, but let the committee work its will.

The bill was reported from the committee considerably sooner than we expected. Every Senator knows that. The bill is now before the Senate. We desire to dispose of it as quickly as we can. At the moment the majority leader is in his own State, I believe, on necessary business. Other Senators who are interested in the bill are not present at this particular moment. There has been no disposition on the part of the Senator from Florida, the Senator from Louisiana [Mr. LONG], the Senator from Connecticut [Mr. RIBICOFF], the Senator from Wisconsin [Mr. PROXMIRE], or the Senator from Tennessee [Mr. GORE] to delay the bill. The Senator from Tennessee, who opposes the bill, has been the very soul of courtesy and cooperation on the whole question, even while he expressed his views. Nor has the bill been delayed by the Senator from Illinois [Mr. DOUGLAS] or any other Senator. I do not believe it would be. A number of Senators are deeply concerned about the question. It would be a mistake at this particular time for the Senate to enter into any unanimous-consent agreement as to the time that the Senate would vote on the amendment.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. SMATHERS. I yield.

Mr. LONG of Louisiana. I am not in the least perturbed because the unanimous-consent request was objected to. Since the Senate proceeded to the consideration of the bill we have not been able to get 100 Senators to agree on anything. That is not unusual in this body. When we reach the point at which the Senate will be ready to vote, it will vote. That is the way we proceed on major proposed legislation. A number of Senators wish to make speeches for or against the bill, or desire to explain their positions against various amendments. Those speeches could be made today.

Mr. RIBICOFF. Mr. President, will the Senator yield?

Mr. SMATHERS. I yield.

Mr. RIBICOFF. It is interesting to me that the Senator from Illinois [Mr. DOUGLAS], the Senator from Tennessee [Mr. GORE], and myself, who are unhappy with many parts of the bill and intend to offer amendments, are anxious to expedite the procedure. Yet Senators who are in charge of the bill and those who are supposed to be anxious to expedite it do not seem to be disposed to expedite the measure. At best that situation seems to be ironical.

Mr. SMATHERS. It seems that way to the Senator. It merely seems that way. The fact is that, through hard experience, we have learned that matters are expedited a little better when the leadership, in addition to the Senator in charge of the bill, gets the troops who have some interest in it in the Senate Chamber so that there can be some general accommodation. We know where we stand on the bill. There is no doubt in the mind of any Senator present. There are certain provisions in the bill of which I am not totally in favor. But I believe the bill is a good one. I voted for it, and I expect to vote for it again. I expect to continue to support it, although it is not exactly what I would like.

I believe that consideration of the bill will have been finished by the end of next week. I believe there is little doubt about that. I certainly hope so. But I do not believe that in order to succeed in that endeavor we need to enter into a unanimous-consent agreement in the absence of so many Senators who have a great interest in it, without at least checking with some of those Senators. Having told a number of Senators that they could be about other affairs and other business matters in connection with their duties in the Senate, I have some responsibility at least to discuss that particular point with them.

Mr. RIBICOFF and Mr. DOUGLAS addressed the Chair.

The PRESIDING OFFICER (Mr. JORDAN of Idaho in the chair). To whom does the Senator yield?

Mr. SMATHERS. I yield to the Senator from Connecticut.

Mr. RIBICOFF. I do not see how any commitment the Senator might have made to any Senators for today, Friday, would interfere with the endeavor to bring before the Senate late on Monday the amendment to which I have referred, and then continue the discussion on the amendment into Tuesday and Wednesday, if necessary.

I talked with the Senator in charge of the bill about that point. Then I went to the distinguished minority leader to clear it with him. There was willingness on the part of both the minority leader and the Senator in charge of the bill to expedite its consideration. It was apparent from the statement yesterday of the Senator in charge of the bill that this amendment is worthy of discussion, and that it will require considerable time. I certainly do not wish to be accused of delaying the bill. I am ready to proceed to consider the major amendments as early as possible. I had cleared the question with the distinguished minority leader, who said that the procedure was

[P. 1413]

satisfactory with him, and with the Senator in charge of the bill, who said that it was satisfactory with him. Obviously, a few major amendments will be offered, and if we get those major amendments out of the way, we shall be in a position to expedite consideration of minor amendments to make sure that the bill is cleared before the Lincoln Day recess.

Mr. SMATHERS. I thank the Senator. Everything he has said is crystal clear. It is exactly correct. He is ready to proceed. So is the Senator from Illinois [Mr. DOUGLAS], the Senator from Tennessee [Mr. GORE], and, in some respects, as an individual, the Senator from Florida. But our problem is that other Senators in this body of 100 Senators have necessary business elsewhere at this particular time.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. SMATHERS. I should like to finish my statement first. Those Senators have necessary business elsewhere. They are greatly interested in the amendment. Some are for and some are opposed to the amendment that will be offered.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. SMATHERS. I will yield in a moment. Certain Senators are interested in the Ribicoff amendment. We have made some commitments to them.

Therefore I am in no position at this time to agree to any unanimous-consent request without at least checking with some of them. Perhaps later in the day we could enter into a unanimous-consent agreement, but we would have to get on the telephone and talk with some of them. It may be that they would favor the request. In the absence of those Senators or checking with them, I would have to object to the unanimous-consent request, as much as I dislike doing so.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. SMATHERS. I yield.

Mr. DOUGLAS. Abundant notice has been given to every Senator that the debate and action on the bill was to be started today, Friday, the 31st of January. The initial statement on the schedule was that the Senate would meet on Saturday and work through the evenings, if necessary, in order to complete consideration of the bill by nightfall on February 8, so that Republican Senators could then go out over the country and praise the memory of Abraham Lincoln.

I had hoped action could begin today. In order to facilitate action, in the previous days and weeks I have put several speeches in the RECORD at the conclusion of the day's business lest they take time on the floor during the discusison of the bill. In spite of that fact, a leading Member of this body from across the aisle declared a few days ago on a national television program, that Senator DOUGLAS and GORE intended to filibuster the bill. That is not our intention at all. We are anxious for action on the bill. I believe there should be a showdown as to who is delaying action on the bill. I want to see the Senate move into a discussion of it and take action upon it as rapidly as possible. I suggest, therefore, that the leadership propose the capital gains amendment. I can assure the Senate that the Senator from Tennessee [Mr. GORE], the Senator from Wisconsin [Mr. PROXMIRE], and I will support the leadership vigorously, and we can then get the bill off to a good start.

I would be willing to make the motion, myself, but I would perhaps be thought to be brash if I did, because it would be usurping the function of the leadership.

Mr. LONG of Louisiana. I have no objection to the Senator's doing so.

Mr. DOUGLAS. I think before discussion or action on the amendment, there should be a quorum call, which I think should be a "live" quorum call. Then we can see where Senators stand. And who are here and who have been encouraged to absent themselves from the city.

Mr. SMATHERS. Mr. President, if the Senator wants to look for someone to blame for delaying the bill, the Senator from Florida is willing to assume that responsibility.

Mr. DIRKSEN. Mr. President, let me share that responsibility.

Mr. SMATHERS. That is what we are doing, if the Senator wants to call it delay. The fact is that we are not delaying action. Actually, we are trying to facilitate action on the bill. But we are human. We are different from those who have all the answers to all the questions all the time.

In any event, we think that is what will happen. We can make mistakes. But the idea at the moment is that this is a better way to do it. We may be entirely wrong. For the time being I suppose we are responsible for a slowdown, if the Senator wants to call it such, for a couple of hours. I want to make a speech about the tax bill. I am sure some questions will be asked me, which will take a little time. In any event, we think that, overall, action on the bill will proceed with greater rapidity if we consult with some of the other Members of this 100-membered body who have some interest in the bill.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. SMATHERS. I yield.

Mr. DIRKSEN. First of all, I am glad to share with my friend from Florida the responsibility for what is happening. There were a good many discussions yesterday with respect to consideration of the amendments en bloc. All that will be taken care of in good time.

Open confession is good for the soul, and we may as well spread the facts on the RECORD. Twenty-nine Members of the Senate are out of the city or elsewhere. Six or seven of those are from my side of the aisle. Frankly, after this discussion, I intend to protect them by every rule in the book that I can use. I may have to sharpen my knowledge of the rulebook in order to do it, although I have a decent familiarity with the book. But Senators were given assurance that there would be no yea and nay votes today, and I propose, by calling for live quorums and otherwise, and by any other dilatory method that I can use, to see that it is not done. So I rest my statement. I fully share responsibility with the Senator from Florida. My shoulders are broad enough.

Mr. SMATHERS. I thank the Senator from Illinois. I appreciate his statement. The Senator stated, frankly, that a number of Senators are absent. We did not think we would reach a vote on the so-called major amendments. As the Senator from Louisiana [Mr. LONG] knows, we had discussed the matter of

trying to have the committee amendments accepted en bloc, and members of the committee said they would not agree to that on Friday, but that it might be done on Monday. So, if we can have 150 amendments agreed to en bloc by delaying action on them until Monday, we are going to make better time than if it is necessary to discuss 100 or 150 amendments now, some of which are very technical.

We are trying to accomplish a speedup of the bill. Some persons might say that it seems peculiar to say we are speeding up by slowing down, but this is the way the Senate works its will. Certain Senators are not present. They are Senators in their own right, and they want to be here when action is taken. It is only fair, after giving them the assurance we did, that we protect them.

I thank the Senator from Illinois for sharing this responsibility with me. I appreciate it because he is a man of good character.

[P. 1414]

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

Mr. SMATHERS. Mr. President, prompt enactment of the pending tax bill is, in my opinion, vitally essential to provide a dynamic and vibrant economy, to strengthen the national security and economic well-being of this Nation.

The measure will provide an $11.6 billion tax reduction over a 2-year period for individuals and corporations.

When fully effective in 1965, it will reduce tax liabilities of individuals by $9.2 billion and corporations by $2.4 billion. Individual rates are reduced from the present range of 20 to 91 percent to a new range of 16 to 77 percent in 1964 and 14 to 70 percent in 1965.

Corporate rates will be reduced from 52 to 50 percent in 1964, and from 50 to 48 percent in 1965.

The withholding tax rate will be reduced from 18 to 14 percent effective 1 week after enactment. This action will give an immediate effect to the greater portion of the tax relief provided for in the bill.

The new budget recently submitted to this Congress gives clear testimony that the administration is determined to hold Government spending to the minimum necessary for essential needs.

The pending measure emphasizes that henceforth it shall be private spending—rather than Government spending—that serves as the larger and expanding force in stimulating the economic life of this Nation.

Together the new budget and the tax program make up a carefully considered and closely knit fiscal policy.

This policy is based on the assumption that in the long run Government should not usurp the prerogatives nor the responsibilities of the private sector of the economy.

As Secretary of Treasury Douglas Dillon put it recently:

> The tax bill represents a firm decision to rely upon greater private spending rather than upon greater Government spending as the prime factor in our economic growth.

By April 1 the present recovery will be 37 months old. That will make it the longest peacetime recovery since the turn of the century with the sole exception of the 1933–37 recovery from the great depression. Every succeeding hour thereafter is an hour of borrowed time—an hour in which the likelihood of continued recovery becomes less likely—if we do not have a tax bill on the books.

Another recession even of the fairly mild character of the last two downturns, could easily cost between $5 and $10 billion in lost tax revenue alone. Much worse, it would bring with it skyrocketing unemployment which in turn would inevitably lead to greater Government spending.

The result would be a deficit that could range as high as $15 to $20 billion.

The more we delay on the tax cut, the less time there is to choose. The choice before us today is whether to pass the tax bill now and promptly expand the role of the private sector in achieving economic growth and meeting national needs, or to delay and seriously impair the opportunity of choosing for ourselves which road to take. Let us make no mistake of the fact that another recession will require heavy Federal spending.

President Johnson's budget is almost $1 billion below the budget of the previous year. It cuts the Federal deficit more than in half. Yet—because of the tax bill—it provides for a fiscal stimulus greater by more than $3 billion than that of any other peacetime year in the history of the United States.

Despite the sharp spending cuts, the combination of tax reduction and prudent Federal expenditures will provide a stimulus to the economy this year, three times as great as any in the last 3 years.

There is no doubt in anyone's mind,

I believe, that the performance of our economy since 1957, despite some rather optimistic statistics with respect to corporate profits and personal income, has been, on the whole, unsatisfactory, for our unemployment rate has averaged roughly 6 percent, about half again as high as the average for the first 10 years, after World War II. Our growth rate in that time has also been overall un-

[P. 1415]

satisfactory, dropping well below 4 percent a year, for several years; and while in the last 2 years investment in new capital equipment has improved considerably, yet overall the best thinking of our most respected economists is that the levels of capital investment should be improved.

The Government has been well aware of the problem of lagging investment. That was the basis for the 7-percent investment credit which formed the principal provision of the Revenue Act of 1962. That was also why the Government hastened to complete in that same year its sweeping revision of the rules and guidelines governing the tax treatment of depreciable assets.

These two measures alone reduced business taxes by some $2½ billion a year, and significantly improved the investment outlook. They will prove more effective in the future. But with an ever-increasing population and an ever-increasing labor supply, more jobs for our people must be created. The late beloved President Kennedy recognized this fact a year ago when he sent his tax message to the Congress recommending a substantial reduction in the corporate and individual tax rates designed to spur investment and create consumer demand.

Unless we can increase the level of private investment in plant and equipment, it will be extremely difficult to produce more jobs, or achieve a lasting improvement in our national economic performance.

The investment level has shown a disappointing decline in recent years. It has dropped from 11 percent of gross national product in 1956 and 1957 to about 9 percent. The rate of increase in our stock of business plant and equipment has risen since 1957 by less than 2 percent a year. That is only half the rate of increase during the first postwar decade. Naturally, in this situation the proportion of our machinery and equipment over 10 years has risen significantly.

In that connection, sometimes we hear people talk about the fact that in our society today there is a great deal of idle plant capacity. Economists state that there is a 14-percent idle plant capacity. Approximately half of that results from the fact that much of our machinery and equipment is obsolete. Because there has been so little modernization until recent years in our industrial capacity we find it extremely difficult to compete with more modern machinery, which has been produced, with our financial help, in countries like Japan, West Germany, Italy, and other areas of the world.

Recently, the Finance Committee was told by the Business Committee for Tax Reduction, a group of 2,800 business leaders, that over a period of years corporate profits after taxes have come down. This was true whether measured as a percentage of investment capital, of sales, or of the corporate portion of gross national product.

The business group presented to the Finance Committee figures on the three major sources of economic growth—Government spending, consumer demand, and private investment.

These figures clearly show that, since 1957, the investment lag has played a major role in the failure of our economy to move closer to full employment.

The figures indicated that, from 1957 to 1962, Federal purchases of goods and services rose more than 13 percent, the gross national product went up more than 16 percent, consumer expenditures went up more than 17 percent, State and local government purchases went up 28 percent, but plant and equipment spending declined by more than 1 percent of the gross national product. The business group also made the following point:

> As a percent of stockholders' equity, profits of manufacturing corporations are far below the levels of 1955–57 and earlier postwar periods of prosperity. In fact, after-tax profit as a percent of stockholders' equity for the period since 1957 is below the recession level of 1953–54.

One of the most important aspects of creating a sustained economic expansion is the need to utilize the fruits of new technology in the form of new products or the adaptation of existing products to new markets.

Increasing the profitability of new investment is the most effective way to make more attractive the investment decisions which are not being taken today. It is the most effective way to make today's marginal project the acceptable venture of tomorrow. It is the most effective way to maximize the benefits of the tremendous technological, educational, and human resources of the United States.

As new techniques and new products

are developed and as new markets are opened up, new demand will be created, new investment will be fostered, and most important of all, new jobs will be available that would never have been available otherwise.

Parenthetically, approximately 1 million young people are entering the labor force at the present time. It is estimated that that number will increase to 1,500,000 within the next 4 years. Some persons have estimated that the need for jobs will be even greater than that because of the increasing number of young people who will be entering the labor market for the first time.

In short, unless we get a substantial increase in investment, we are not going to create the jobs that are needed to reduce unemployment, the jobs that are needed to withstand automation or the jobs that are needed to provide productive work for the huge number of young people who are already beginning to enter the labor force.

Mr. LONG of Louisiana. Mr. President, will the Senator from Florida yield?

Mr. SMATHERS. I am happy to yield to the distinguished Senator from Louisiana.

Mr. LONG of Louisiana. As the Senator well knows, the traditional Democratic argument for stimulating the economy, an argument which is usually supported by organized labor, takes the approach that generally if consumer spending power is stimulated by directing cash into the hands of the workingman, that will put people to work.

The argument that businessmen usually make, and which perhaps has more appeal to the Republican side of the aisle, is that the way to put more people to work is to provide some incentive to encourage persons to invest money to build or expand industry; that this will assist business to make money; and that by doing so, generally, society will be benefited by the creation of jobs and the improvement of industry and commerce.

Does not the tax bill now before the Senate really support both arguments?

Mr. SMATHERS. The Senator is correct. The bill supports both arguments. Of the $11,600 million which will be left, so to speak, in the private sector of the economy, to stimulate the economy and to provide jobs, $9,200 million will go to individuals in order to stimulate consumer demand.

The remaining $2.4 billion will go into the business and industrial community, so that it may invest money in modernization of plant and equipment or in the erection of new plants and the purchase of new equipment, which in itself will provide more jobs.

Mr. LONG of Louisiana. So, in effect, the bill answers the arguments of the person who says that the way to provide more jobs and get full production is to place more money in the pockets of the workingman. The bill, in effect, provides that $9.2 billion will go into the pockets of the workingman, to enable him to spend his tax reduction in whatever way he thinks is necessary, whether it be to educate his child or to buy something that his family needs, and which they have been denied for some time.

For persons who say that the way to get the economy rolling is to give business some tax adavntage, if it is willing to risk its capital and build new plants or modernize old ones or expand existing ones, the bill provides that that argument will be accepted, too. The bill will provide advantages and benefits which the business community says will be good for the country, and that we agree will be good for the country.

Mr. SMATHERS. The Senator from Louisiana is correct. That has been established by the consensus of a large number of economists, who say that a dollar spent in the private sector of the economy will have a greater multiplier effect than a dollar spent by the Government. In other words, rather than to collect a tax dollar from the citizen and bring it to Washington and have it administered, washed up, and sent out to a WPA project, or even to a big dam or a flood control project, perhaps in my State of Florida—and Florida would like to have more of them—that Federal tax dollar will not do as much good in stimulating the economy as a dollar left in the hands of private or corporate business, on the one hand, or a private individual, on the other hand.

If the dollar is left in the taxpayer's pocket rather than taken from him in taxes, it will have a greater multiplier effect and will do the economy more good. The great weight of economic

[P.1416]

opinion agrees with that view. That is the theory of the bill before the Senate. It is believed that if $1,600 million is left in the private sector, it will do more good than if it were administered by the Federal Government. We are always talking about free enterprise and saying that we believe in it. Why not give free enterprise an opportunity to work?

In 1954, after the tax reduction bill had been passed, the budget was balanced and revenue was increased within the two succeeding years. I do not say this to start an argument or to compare what happened 8 years ago with what is happening today, but there

were a number of deficits, but one of the few times the budget was balanced in the Eisenhower administration was 2 years following the tax reduction of 1954.

The Senator from Louisiana is absolutely correct.

Mr. GORE. Mr. President, will the Senator from Florida yield?

Mr. SMATHERS. I yield to the Senator from Tennessee.

Mr. GORE. If the way to balance the budget is to reduce taxes, we should have made a substantial reduction in the national debt by now, because the tax cut in 1954 was approximately the same percentage of gross national product as the tax cut in the bill today. But, instead of that reduction resulting in a balanced budget and a reduction in the national debt, as the Senator from Virginia [Mr. BYRD] pointed out yesterday, since that time the national debt has been increased by more than $40 billion. So the nostrum of which the distinguished Senator from Florida seems to be enamored has not worked very well.

Since he is now advocating a tax reduction of $11,700 million as a means of balancing the budget, I wonder if he does not think that if a tax cut of $11,700 million would balance the budget in the near but as yet indefinite future, the addition of the excise tax reduction to the bill would accomplish this great feat a little more readily and a little sooner. If this magic formula works, why stop at an $11 billion or $12 billion tax cut? Why not make the reduction $22 billion and make a substantial reduction in the national debt?

Mr. SMATHERS. I have deep affection and respect for the distinguished Senator from Tennessee. I am sure he recognizes that when a patient is sick, a blood transfusion of a pint or a quart can sometimes be beneficial. But if the patient were given a transfusion of a gallon of blood, the effect might be severely in the reverse. It is often possible to carry a good thing too far. It is possible to destroy one's health even with steak. Steak is good for us. But it is possible to overextend anything to the point of diminishing return. We believe that in this bill we have struck a fairly good balance.

The Senator from Tennessee used the term "nostrum." I agree with him that actually we do not know precisely how much benefit will be derived from it. However, we are taking the best advice we can obtain from most of the economists, and also from the A.F. of L. and the CIO. They approve of this bill, although they would like to have a little more emphasis placed on consumption—a course which the Senator from Tennessee also favors. We are also taking the best advice of the business community and of everyone else who could possibly be affected. We have tried to arrive at a consensus. It is their consensus that the pending bill is the best way to proceed.

Three different courses are advocated to improve economic conditions. The able Senator from Virginia [Mr. BYRD] has consistently advocated the course in which he believes; and no one is more consistent than he. He wants the budget to be balanced; and he is convinced that so long as the budget is not balanced, Government expenditures should not be increased, nor should Congress pass a bill which would cause a decrease in the Treasury's revenues. The Senator from Virginia wants the budget to be balanced; and he believes that the best way to balance the budget is to have Congress refuse to pass a tax reduction bill of this sort, and also to reduce Government spending.

I know the Senator from Tennessee does not agree with the Senator from Virginia, even though from time to time the Senator from Tennessee quotes the Senator from Virginia. However, I know the Senator from Tennessee does not agree with the conviction of the Senator from Virginia in regard to the best means of dealing with the fact that in 24 of the last 30 years our Government has had deficits.

Both the Senator from Virginia and the Senator from Tennessee ask how we are to put an end to chronic deficits—which is what we seek to do by means of this bill. I do not subscribe to the view of the Senator from Virginia as to the best course for us to follow.

The second theory is the one subscribed to by Leon Keyserling; it is the so-called Keyserling theory. I do not subscribe to his view, although I know the Senator from Tennessee does. Mr. Keyserling believes that the best way is, not to decrease taxes, but to have high taxes, and use them for WPA projects, and so forth—in other words, to have the Government, not the private sector of the economy, spend that money.

The third course is the one the Senator from Tennessee calls a nostrum. However, we hope it is not; and it is the judgment of most people—including President Johnson and, I believe, two former Presidents, many Senators, and many other persons in the United States—that it is not a nostrum. This course is the one which accomplishes this result through private enterprise, which believes that we can end the chronic deficits by doing two things: First, by reducing the amount of the

Government's expenditures, and—as the President advocates—by making the best possible use of every dollar of revenue. In this manner the estimated deficit has been reduced by 50 percent. Second, by releasing into the private sector of the economy approximately $11,600 million as a result of the tax reductions to be made by this bill. Of course, the exact amount of the tax reductions will be determined only after the conference report on the bill is written and is agreed to by both Houses. In that way, we release the private sector of the economy to give it a chance to achieve the result which all of us want achieved. We favor this course and most of the economists to whom I have listened, or whose works I have read, agree—although, as I have previously stated, not all of them do. The dollars spent by private business or by private individuals have a multiplying effect, and thus are definitely more effective than Government expenditures of the same amount.

Mr. GORE. Mr. President, will the Senator from Florida yield?

Mr. SMATHERS. I am happy to yield to the Senator from Tennessee.

Mr. GORE. Mr. President, the distinguished junior Senator from Florida has made some very astute observations. He has said it is possible to eat too much steak—however good the steak may be. I agree. But I suggest to the able Senator from Florida that unless one examines the substance with some care, it is also possible to mistake leather for steak, and then very little nourishment will be had.

The Senator from Florida says he wants us to try this nostrum, in order to attempt to achieve a balanced budget. But I can suggest a much easier way. I am not sure it would be easier for him, but certainly it is a much quicker and a much more certain way to balance the budget; namely, to defeat this bill.

This is a budget-busting bill. The President's budget calls for a deficit, next year, of $4.9 billion, including the amount by which that deficit would be increased as a result of the enactment of this $11.7 billion tax-reduction bill. So if the distinguished Senator from Florida wants to balance the budget, and wants to balance it quickly, we should reject this bill. That would balance the budget next year.

If the Senator from Florida will let me go one step further, I point out that he has said he took the advice of certain economists and experts, and that this bill is the result of their recommendations.

This nostrum was recommended by the same men—Dr. Heller and Secretary Dillon—who forecast a recession in 1964. Indeed, this bill was urged as insurance against recession in 1964.

This bill is not particularly new; the same thing that Secretary Dillon says now, can be found almost verbatim in the book of the former Secretary of the Treasury, Andrew Mellon, in the late 1920's. That course was tried then, but with sad and disastrous results. So this bill is not based on a new notion; instead, it is based on one which has been advocated many times.

The same thing was said in 1954. We had a big tax cut then; we also had a big tax cut the year before last, with the passage of the investment credit and adoption of liberalized depreciation procedures.

These three actions, when taken together, add up to tax reduction of $5 billion annually, and largely for the

[*P. 1417*]

benefit of the same segment of our society which would be the principal beneficiary of the pending bill.

But have those actions resulted in balanced budgets and a solution of the unemployment problem? Indeed, no. As the Senator from Virginia cited yesterday, the national debt has gone up more than $40 billion in that length of time. What has happened to the unemployment? True, we have seen much improvement in plants and facilities, and our factories are turning out many new products and much more production. But despite the fact that the production of our factories has greatly increased, today almost 1 million fewer men and women are working at production jobs in factories, as compared to the number who were working there 7 years ago.

So it does not automatically follow that the provision of Treasury funds for the purchase of labor-saving devices will create more jobs. I would not stop progress or automation, but I certainly will resist any phony argument to the effect that speeding up automation by taking funds out of the Treasury is the way to create more jobs. The result may well be fewer jobs.

I thank the distinguished Senator from Florida [Mr. SMATHERS] for yielding so generously of his time.

Mr. SMATHERS. I thank the Senator from Tennessee. I shall respond briefly to his remarks, and then shall yield to the Senator from Louisiana.

As to the predictions of Dr. Heller and Secretary of the Treasury Dillon, I do not believe they said that. What they said was that we might run into a recession in 1964, and that since World War II we have had an average period of 34 or 35 months during which the economy has risen.

If we can get safely through the next few months, the period will be the longest period during which the economy has been steady since the end of World War II. It has gone up slightly in the past 2 years, by virtue of investment credit and by virtue of the depreciation changes with respect to machinery and depreciable property. It has improved to the extent that the deficit has been cut in half this year, compared with what it was last year.

So there is evidence that the so-called "nostrums" are already working. The belief that we will pass this well-balanced tax bill has already lead to an improvement. The tax cut we had in 1954 was only helpful temporarily, because it was not the right kind. The report of the Ways and Means Committee of the House states, on page 7:

> In 1954 Congress allowed the individual income tax increases imposed during the Korean war to expire, made certain excise tax reductions, allowed the excess profits tax to expire and made certain other tax reductions as well. The total of these reductions amounted to about $7.4 billion. Yet, only 2 years later, in 1956, receipts were $3.2 billion above the level existing before the reductions were made.

That proves that some stimulus was gained from that reduction. The report continues:

> However, these reductions did not get to the root of the matter, the high World War II rates, with the result that the poor economic performance of the economy since 1956 has left a heavy mark on the Federal debt.

I agree with the Senator from Tennessee that we do have unemployment, which he has talked about, and we do have automation, which he has also talked about. This bill is advocated in an endeavor to increase employment. Even though we build more machines—machines which will throw workers out of jobs—we must employ them in the increased activity resulting both from increased investment and from increased consumption.

The theory of the bill is that we hope to be able to stimulate the economy in a way to make possible greater capital investment to create more jobs. The $9.2 billion reduction provided in this bill to the consumer also will stimulate demand. Because of the increased consumer demand and investment stimulants, there will be additional plant expansion and modernization, and that will create more jobs. That is what we are working for.

Mr. LONG of Louisiana. Mr. President, will the Senator from Florida yield?

Mr. SMATHERS. I yield.

Mr. LONG of Louisiana. The Senator will be interested to know that more than 400 leading academic economists in 43 major universities and colleges of America agree with his argument.

Mr. SMATHERS. How many?

Mr. LONG of Louisiana. More than 400 leading academic economists in 43 major universities and colleges agree with with the arguments of the Senator from Florida.

Mr. SMATHERS. Is it not a fact, when one looks at the various elements in our economic, political, and working life, that ranging from the labor movement at one end of the spectrum to business councils on the other, they all approve of this approach?

Mr. LONG of Louisiana. Labor agrees that this is a good bill. The AFL and the CIO came before our committee to testify in its support. The bankers agree that it is a good bill. The chamber of commerce agrees that it is a good bill. The National Association of Manufacturers agrees that it is a good bill. The insurance interests agree that it is a good bill. Any time a crowd of that size gets together under one tent, there is a real combination working to agree that this is a good idea. That does not mean, of course, that we can get everyone to agree.

The overwhelming majority of people who think about these questions, and are paid to think about them, agree that this is a good bill.

Mr. SMATHERS. As I recall, Lou Harris, who I understand is one of the most respected pollsters in the United States, conducted a poll which showed that the people of America favor the bill by well over 2 to 1. Yet certain highly respected Senators, some of whom serve on the Finance Committee with the Senator from Louisiana, who still continue to wish to save the people in the fashion in which those Senators wish to save them, even if the people do not wish to be saved in that fashion. That is how it goes. That is what makes debate. But in response to the Senator from Tennessee [Mr. GORE], I believe that the approach we have taken in the bill, which puts the emphasis upon private enterprise and the private sector of the economy, will be much more effective than anything we have tried thus far. In the final analysis, it will prove to be the remedy which this country needs so badly, in order to reduce the number of unemployed and at the same time increase business activity so that the country will be strong, with plenty of jobs for everyone.

Mr. President, let me state what the bill is expected to do for corporate investment. It is expected, as the President indicated in his Budget Message,

to increase corporate profits to about $56 billion—more than $12 billion above the level for 1961.

That figure, of course, does not reflect the $2½ billion a year in tax benefits from the investment credit and depreciation reform. Neither does it reflect the $1½ billion which the tax cut will provide in after-tax business profits this year, or the $2⅓ billion it will provide next year.

UNANIMOUS-CONSENT REQUEST

Mr. LONG of Louisiana. Mr. President, will the Senator from Florida yield for a unanimous-consent request?

Mr. SMATHERS. I am glad to yield.

Mr. LONG of Louisiana. I have discussed the proposed unanimous-consent request with all Senators on both sides of the aisle who to my knowledge are interested in it. Therefore, as far as I know, it should be agreeable.

On the pending measure, H.R. 8363, I ask unanimous consent that the committee amendments, with the exception of those relating to capital gains taxes beginning on page 233 of the bill, be agreed to en bloc, and that the bill as amended be considered as original text for the purpose of amendment.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The amendments agreed to en bloc are as follows:

On page 1, after the enacting clause, to strike out:

"SECTION 1. DECLARATION BY CONGRESS.

"It is the sense of Congress that the tax reduction provided by this Act through stimulation of the economy, will, after a brief transitional period, raise (rather than lower) revenues and that such revenue increases should first be used to eliminate the deficits in the administrative budgets and then to reduce the public debt. To further the objective of obtaining balanced budgets in the near future, Congress by this action, recognizes the importance of taking all reasonable means to restrain Government spending and urges the President to declare his accord with this objective."

On page 2, at the beginning of line 6, to strike out "SEC. 2." and insert "SECTION 1.".

On page 2, line 8, after the word "of", to strike out "1963" and insert "1964".

On page 13, at the beginning of line 21, to strike out "or the amount determined under section 1561 (relating to surtax exemptions in case of certain controlled corporations)" and insert a comma and "except that, with respect to a corporation to which section 1561 (relating to surtax exemptions

[*P. 1418*]

in case of certain controlled corporations) applies for the taxable year, the surtax exemption for the taxable year is the amount determined under such section."

On page 26, line 13, after the word "of", to strike out "1963" and insert "1964".

On page 26, line 22, after the word "of", to strike out "1963" and insert "1964".

On page 32, after line 2, to insert a new section, as follows:

"SEC 202. LIMITATION ON RETIREMENT INCOME.

(a) INCREASE IN LIMITATION IN CASE OF CERTAIN MARRIED COUPLES.—Section 37 (relating to retirement income) is amended by redesignating subsection (i) as subsection (j) and inserting after subsection (h) the following new subsection:

"'(i) EXCEPTIONS TO LIMITATION ON AMOUNT OF RETIREMENT INCOME IN CASE OF CERTAIN JOINT RETURNS.—In the case of a joint return of a husband and wife both of whom have attained the age of 65 before the close of the taxable year—

"'(1) BOTH SPOUSES HAVE RECEIVED EARNED INCOME.—If both spouses are individuals who have received earned income before the beginning of the taxable year (within the meaning of subsection (b)) and if the sum of the retirement income and the amounts described in paragraphs (1) and (2) of subsection (d) received by either spouse during the taxable year is less than $762, the $1,524 amount referred to in subsection (d) shall, with respect to the other spouse, be increased by an amount equal to the amount by which such sum is less than $762.

"'(2) ONE SPOUSE HAS NOT RECEIVED EARNED INCOME.—If either spouse is an individual who has not received earned income before the beginning of the taxable year (within the meaning of subsection (b)), the $1,524 amount referred to in subsection (d) shall, with respect to the other spouse, be increased by $762, minus the sum of the amounts described in paragraphs (1) and (2) of subsection (d) received by his spouse.'"

"(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply to taxable years beginning after December 31, 1963."

On page 33, at the beginning of line 10, to change the section number from "202" to "203".

On page 33, line 21, after the word "before", to strike out "July 1, 1963" and insert "January 1, 1964".

On page 33, line 24, after the word "before", to strike out "July 1, 1963" and insert "January 1, 1964".

On page 34, line 13, to strike out "July 1, 1963" and insert "January 1, 1964".

On page 35, line 1, after the word "after", to strike out "June 30, 1963" and insert "December 31, 1963".

On page 35, line 11, after the word "section", to strike out "202" and insert "203", and in the same line, after the word "of", where it appears the second time, to strike out "1963" and insert "1964".

On page 35, line 20, after the word "after", to strike out "June 30, 1963" and insert "December 31, 1963".

On page 35, line 23, after the word "before", to strike out "July 1, 1963" and insert "January 1, 1964", and on page 36, line 1, after the word "after", to strike out "June 30, 1963" and insert "December 31, 1963".

On page 40, line 1, to change the section number from "203" to "204".

On page 40, after line 16, to strike out:

"(1) the cost of so much of such insurance as does not exceed $30,000 of protection, and".

And, in lieu thereof, to insert:

"(1) the cost of $70,000 of such insurance, and".

On page 41, after line 19, to strike out:

"(c) DETERMINATION OF COST OF INSURANCE.—

"(1) UNIFORM PREMIUM TABLE METHOD.—For purposes of this section and chapter 24, the cost of group-term life insurance on the life of an employee provided during any period shall be determined on the basis of uniform premiums (computed on the basis of 5-year age brackets) prescribed by regulations by the Secretary or his delegate.

"(2) POLICY COST METHOD.—If the employer so elects (at such time and in such manner as the Secretary or his delegate prescribes) with respect to any employee for any period, the cost of group-term life insurance on the life of such employee shall (in lieu of being determined under paragraph (1)) be determined on the basis of the average premium cost under the policy for the ages included within the age bracket which would be applicable to such employee under paragraph (1). The preceding sentence shall not apply for purposes of determining the cost of insurance provided under a policy if the premium on such policy is not computed on the basis of the cost of such insurance at the ages (or at the age brackets applicable under paragraph (1)) of the individuals comprising the group.

"(3 EMPLOYED INDIVIDUALS OVER AGE 64.—In the case of an employee who has attained age 64, the cost determined under paragraph (1) or (2), as the case may be, shall not exceed the cost which would be determined under such paragraph with respect to such individual if he were age 63."

And, in lieu thereof, to insert:

"(c) DETERMINATION OF COST OF INSURANCE.—For purposes of this section and section 6052, the cost of group-term insurance on the life of an employee provided during any period shall be determined on the basis of uniform premiums (computed on the basis of 5-year age brackets) prescribed by regulations by the Secretary or his delegate. In the case of an employee who has attained age 64, the cost prescribed shall not exceed the cost with respect to such individual if he were age 63."

On page 43, at the beginning of line 17, to strike out "sections 79 and 218" and insert "section 79".

On page 43, after line 19, to strike out:

"(b) CERTAIN CONTRIBUTIONS BY EMPLOYEES FOR GROUP TERM LIFE INSURANCE.—Part VII of subchapter B of chapter 1 (relating to additional itemized deductions for individuals) is amended by inserting after section 217 the following new section:

"SEC. 218. CERTAIN CONTRIBUTIONS BY EMPLOYEES FOR GROUP-TERM LIFE INSURANCE

" 'In the case of an employee on whose life group term life insurance in excess of $30,000 is provided for part or all of the taxable year under a policy (or policies) carried directly or indirectly by his employer (or employers), there shall be allowed as a deduction for such taxable year an amount equal to the excess (if any) of—

" '(1) the amount paid by the employee toward the purchase of such insurance in excess of $30,000, over

" '(2) the cost (determined in the manner provided by paragraph (1) of section 79(c), without regard to paragraph (3) thereof) of such insurance in excess of $30,000.

For purposes of this seciton, there shall not be taken into account any insurance the cost of which is excepted from the application of subsection (a) of section 79 by subsection (b) thereof.' "

On page 44, at the beginning of line 24, to strike out "(c)" and insert "(b)".

On page 45, line 5, after the word "employee", to strike out the comma and "but only to the extent the cost of such insurance is not includible in the employee's gross income under section 79(a). For purposes of this paragraph, the extent to which the cost of group-term life insurance is includible in the employee's gross income under section 79(a) shall be determined as if the employer were the only employer paying such employee remuneration in the form of such insurance" and insert a semicolon.

On page 45, after line 13, to insert:

"(c) INFORMATION REPORTING.—

"(1) REQUIREMENT.—Subpart C of part III of subchapter A of chapter 61 (relating to information and returns) is amended by adding at the end thereof the following new section:

" 'SEC. 6052. RETURNS REGARDING PAYMENT OF WAGES IN THE FORM OF GROUP-TERM LIFE INSURANCE.

" '(a) REQUIREMENT OF REPORTING.—Every employer who during any calendar year provides group-term life insurance on the life of an employee during part or all of such calendar year under a policy (or policies) carried directly or indirectly by such employer shall make a return according to the forms or regulations prescribed by the Secretary or his delegate, setting forth the cost of such insurance and the name and address of the employee on whose life such insurance is provided, but only to the extent that the cost of such insurance is includible in the employee's gross income under section 79(a). For purposes of this section, the extent to which the cost of group-term life insurance is includible in the employee's gross income under section 79(a) shall be determined as if the employer were the only employer paying such employee remuneration in the form of such insurance.

" '(b) STATEMENTS TO BE FURNISHED TO EMPLOYEES WITH RESPECT TO WHOM INFORMATION IS FURNISHED.—Every employer making a return under subsection (a) shall furnish to each employee whose name is set forth in such return a written statement showing the cost of the group-term life insurance shown on such return. The written statement required under the preceding sentence shall be furnished to the employee on or before January 31 of the year following the calendar year for which the return under subsection (a) was made.'

"(2) PENALTIES FOR FAILURE TO FURNISH STATEMENTS TO PERSONS WITH RESPECT TO WHOM RETURNS ARE FILED.—Section 6678 (relating to failure to furnish certain statements) is amended—

"(A) by striking out 'or 6049(c)' and inserting in lieu thereof '6049(c), or 6052(b)'; and

"(B) by striking out 'or 6049(a)(1),' and inserting in lieu thereof '6049(a)(1), or 6052(a),'.

"(3) CLERICAL AMENDMENT.—The table of sections for subpart C of part III of subchapter A of chapter 61 is amended by adding at the end thereof the following:

"'SEC. 6052. Returns regarding payment of wages in the form of group-term life insurance.'

"(4) CROSS REFERENCE.—

"For penalty for failure to file information returns required by section 602(a) of the Internal Revenue Code of 1954 (added by paragraph (1) of this subsection), see section 6652(a)(3) of such Code (as amended by section 222(b)(2) of this Act)."

On page 47, line 11, after the word "and", to strike out "(b)" and insert "(c), and paragraph (3) of section 6652(a) of the Internal Revenue Code of 1954 (as amended by section 222(b)(2) of this Act)", and in line 16, after the word "subsection", to strike out "(c)" and insert "(b)".

At the top of page 48, to strike out:

"SEC. 204. INCLUSION IN GROSS INCOME OF REIMBURSED MEDICAL EXPENSES TO THE EXTENT THAT THE REIMBURSEMENT EXCEEDS THE EXPENSES.

"(a) GENERAL RULE.—Part II of subchapter B of chapter 1 (relating to items specifically included in gross income) is amended by adding at the end thereof the following new section:

[*P. 1419*]

"'SEC. 80. REIMBURSEMENT OF MEDICAL EXPENSES IN EXCESS OF SUCH EXPENSES.

"'Notwithstanding any other provision of this subchapter, amounts received through accident or health insurance for medical expenses shall be included in gross income to the extent the aggregate of such amounts received for any personal injury or sickness exceeds the aggregate amount of the medical expenses incurred by the taxpayer for such personal injury or sickness. For purposes of this section, the term "medical expenses" means expenses for medical care as defined in section 213(e), except that it does not include amounts paid for accident or health insurance.'

"(b) CLERICAL AMENDMENT.—The table of sections for such part II is amended by adding at the end thereof the following:

"SEC. 80. Reimbursement of medical expenses in excess of such expenses'.

"(c) TECHNICAL AMENDMENT.—Subsection (c) of section 105 (relating to the definition of accident and health plans) is amended by striking out 'this section' and inserting in lieu thereof 'this section, section 80,'.

"(d) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 1963."

On page 55, after line 21, to insert:

"(5) State and local taxes on the sale of gasoline, diesel fuel, and other motor fuels."

On page 55, after line 23, to insert:

"(6) State and local taxes on the registration or licensing of highway motor vehicles and on licenses for the operation of highway motor vehicles."

On page 57, after line 23, to strike out:

"(E) SEPARATELY STATED GENERAL SALES TAXES.—If the amount of any general sales tax is separately stated, then, to the extent that the amount so stated is paid by the consumer (otherwise than in connection with the consumer's trade or business) to his seller, such amount shall be treated as a tax imposed on, and paid by, such consumer."

On page 58, after line 12, to insert:

"(5) SEPARATELY STATED GENERAL SALES TAXES AND GASOLINE TAXES.—If the amount of any general sales tax or of any tax on the sale of gasoline, diesel fuel, or other motor fuel is separately stated, then, to the extent that the amount so stated is paid by the consumer (otherwise than in connection with the consumer's trade or business) to his seller, such amount shall be treated as a tax imposed on, and paid by, such consumer."

On page 62, after line 5, to strike out:

"(c) EFFECTIVE DATE. The amendments made by this section shall apply to taxable years beginning after December 31, 1963."

And, in lieu thereof, to insert:

"(c) EFFECTIVE DATE.—

"(1) GENERAL RULE.—Except as provided in paragraph (2), the amendments made by this section shall apply to taxable years beginning after December 31, 1963.

"(2) SPECIAL TAXING DISTRICTS.—Section 164(c)(1) of the Internal Revenue Code of 1954 (as amended by subsection (a)) shall not prevent the deduction under section 164 of such Code (as so amended) of taxes levied by a special taxing district which is described in section 164(b)(5) of such Code (as in effect for a taxable year ending on December 31, 1963) and which was in existence on December 31, 1963, for the purpose of retiring indebtedness existing on such date."

On page 64, after line 19, to insert:

"(b) LIMITATION OF UNLIMITED CHARITABLE CONTRIBUTION DEDUCTION.—Section 170(b)(1) (relating to limitations on amount of deduction for charitable contributions by individuals) is amended by redesignating subparagraph (D) as subparagraph (E) and by inserting after subparagraph (C) the following new subparagraph:

"'(D) APPLICATION OF SUBPARAGRAPH (C) FOR TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1963.—If the taxable year begins after December 31, 1963—

"'(i) subparagraph (C) shall apply only if the taxpayer so elects (at such time and in such manner as the Secretary or his delegate by regulations prescribes), and

"'(ii) for purposes of subparagraph (C), the amount of the charitable contributions for the taxable year (and for all prior tax-

able years beginning after December 31, 1963) shall be determined without the application of paragraph (5) and solely by reference to charitable contributions described in subparagraph (A).

If the taxpayer elects to have subparagraph (C) apply for the taxable year, then for such taxable year subsection (a) shall apply only with respect to charitable contributions described in subparagraph (A), and no amount of charitable contributions made in the taxable year or any prior taxable year may be treated under paragraph (5) as having been made in the taxable year or in any succeeding taxable year.'

"(c) 5-YEAR CARRYOVER OF CERTAIN CHARITABLE CONTRIBUTIONS MADE BY INDIVIDUALS.—

"(1) IN GENERAL.—Section 170(b) (relating to limitations on amount of deduction for charitable contribution) is amended by adding at the end thereof the following new paragraph:

"'(5) CARRYOVER OF CERTAIN EXCESS CONTRIBUTIONS BY INDIVIDUALS.—

"'(A) In the case of an individual, if the amount of charitable contributions described in paragraph (1)(A) payment of which is made within a taxable year (hereinafter in this paragraph referred to as the "contribution year") beginning after December 31, 1963, exceeds 30 percent of the taxpayer's adjusted gross income for such year (computed without regard to any net operating loss carryback to such year under section 172), such excess shall be treated as a charitable contribution described in paragraph (1)(A) paid in each of the 5 succeeding taxable years in order of time, but, with respect to any such succeeding taxable year, only to the extent of the lesser of the two following amounts:

"'(i) the amount by which 30 percent of the taxpayer's adjusted gross income for such succeeding taxable year (computed without regard to any net operating loss carryback to such succeeding taxable year under section 172) exceeds the sum of the charitable contributions described in paragraph (1)(A) payment of which is made by the taxpayer within such succeeding taxable year (determined without regard to this subparagraph) and the charitable contributions described in paragraph (1)(A) payment of which was made in taxable years (beginning after December 31, 1963) before the contribution year which are treated under this subparagraph as having been paid in such succeeding taxable year; or

"'(ii) in the case of the first succeeding taxable year, the amount of such excess, and in the case of the second, third, fourth, or fifth succeeding taxable year, the portion of such excess not treated under this subparagraph as a charitable contribution described in paragraph (1)(A) paid in any intervening year between the contribution year and such succeeding taxable year.

"'(B) In applying subparagraph (A), the excess determined under subparargraph (A) for the contribution year shall be reduced to the extent that such excess reduces taxable income (as computed for purposes of the second sentence of section 172(b)(2)) and increases the net operating loss deduction for a taxable year succeeding the contribution year.'

"(2) TECHNICAL AMENDMENTS.—Section 545(b)(2) (relating to deductions for charitable contributions by personal holding companies) and 556(b)(2) (relating to deductions for charitable contributions by foreign personal holding companies) are each amended by striking out 'section 170(b)(2)' and inserting in lieu thereof 'section 170(b)(2) and (5)'.

On page 68, at the beginning of line 11, to strike out "(b)" and insert "(d)".

On page 70, at the beginning of line 7, to strike out "(c)" and insert "(e)".

On page 70, line 23, after the word "property.", to strike out "This subsection shall not apply to any charitable contribution where—

"'(1) the sole intervening interest or right is a non-transferable life interest reserved by the donor, or

"'(2) in the case of a joint gift by husband and wife, the sole intervening interest or right is a nontransferable life interest reserved by the donors which expires not later than the death of whichever of such donors dies later.

For purposes of the preceding sentence, a right to make an earlier transfer of the reserved life interest to the donee of the future interest shall not be treated as making a life interest transferable.'

"(d) EFFECTIVE DATES.—The amendments made by subsections (a) and (b) shall apply with respect to contributions which are paid (or treated as paid under section 170(a)(2) of the Internal Revenue Code of 1954) in taxable years beginning after December 31, 1963. The amendments made by subsection (c) shall apply to transfers of future interests made after December 31, 1963, in taxable years ending after such date."

On page 71, after line 19, to insert:

"(f) EFFECTIVE DATES.—

"(1) The amendments made by subsections (a), (b), and (c), shall apply with respect to contributions which are paid in taxable years beginning after December 31, 1963.

"(2) The amendments made by subsection (d) shall apply to taxable years beginning after December 31, 1963, with respect to contributions which are paid (or treated as paid under section 170(a)(2) of the Internal Revenue Code of 1954) in taxable years beginning after December 31, 1961.

"(3) The amendments made by subsection (e) shall apply to transfers of future interests made after December 31, 1963, in taxable years ending after such date."

On page 72, after line 9, to insert:

"SEC. 210. LOSSES ARISING FROM EXPROPRIATION OF PROPERTY BY GOVERNMENTS OF FOREIGN COUNTRIES.

"(a) NET OPERATING LOSS CARRYOVER.—Section 172 (relating to net operating loss deduction) is amended—

"(1) by striking out 'Except as provided in clause (ii)' in subsection (b)(1)(A)(i) and inserting in lieu thereof 'Except as provided in clause (ii) and in subparagraph (D)';

"(2) by striking out 'Except as provided in subparagraph (C)' in subsection (b)(1)(B) and inserting in lieu thereof 'Except as provided in subparagraphs (C) and (D)';

"(3) by adding at the end of subsection (b)(1) the following new subparagraphs:

"'(D) In the case of a taxpayer which has a foreign expropriation loss (as defined in subsection (k)) for any taxable year ending after December 31, 1958, the portion of the net operating loss for such year attributable to such foreign expropriation loss shall not be a net operating loss carryback to any taxable year preceding the taxable year of such loss and shall be a net operating loss carryover to each of the 10 taxable years following the taxable year of such loss.';

"(4) by adding at the end of subsection (b)(3) the following new subparagraphs:

"'(C) Paragraph (1)(D) shall apply only if—

"'(i) the foreign expropriation loss (as defined in subsection (k)) for the taxable

[*P. 1420*]

year equals or exceeds 50 percent of the net operating loss for the taxable year,

"'(ii) in the case of a foreign expropriation loss for a taxable year ending after December 31, 1963, the taxpayer elects (at such time and in such manner as the Secretary or his delegate by regulations prescribes) to have paragraph (1)(D) apply, and

"'(iii) in the case of a foreign expropriation loss for a taxable year ending after December 31, 1958, and before January 1, 1964, the taxpayer elects (in such manner as may be prescribed by the Secretary or his delegate) on or before December 31, 1965, to have paragraph (1)(D) apply.

"'(D) If a taxpayer makes an election under subparagraph (C)(iii), then (notwithstanding any law or rule of law), with respect to any taxable year ending before January 1, 1964, affected by the election—

"'(i) the time for making or changing any choice or election under subpart A of part III of subchapter N (relating to foreign tax credit) shall not expire before January 1, 1966,

"'(ii) any deficiency attributable to the election under subparagraph (C)(iii) or to the application of clause (i) of this subparagraph may be assessed at any time before January 1, 1969, and

"'(iii) refund or credit of any overpayment attributable to the election under subparagraph (C)(iii) or to the application of clause (i) of this subparagraph may be made or allowed if claim therefore is filed before January 1, 1969.';

"(5) by redesignating subsection (k) as (l), and by inserting after subsection (j) the following new subsection:

"'(k) FOREIGN EXPROPRIATION LOSS DEFINED.—For purposes of subsection (b)—

'"(1) The term "foreign expropriation loss" means, for any taxable year, the sum of the losses sustained with respect to property by reason of the expropriation, intervention, seizure, or similar taking of such property by the government of any foreign country, any political subdivision thereof, or any agency or instrumentality of the foregoing.

"'(2) The portion of the net operating loss for such year attributable to a foreign expropriation loss is the amount of the foreign expropriation loss for such year (but not in excess of the net operating loss for such year).'

"(b) TECHNICAL AMENDMENTS.—Section 172(b)(2) is amended—

"(1) by striking out subparagraph (B) and inserting in lieu thereof the following:

"'(B) by determining the amount of the net operating loss deduction—

"'(i) without regard to the net operating loss for the loss year or for any taxable year thereafter, and

"'(ii) without regard to that portion, if any, of a net operating loss for a taxable year attributable to a foreign expropriation loss, if such portion may not, under paragraph (1)(D), be carried back to such prior taxable year.'; and

"(2) by adding at the end thereof the following new sentence: 'For purposes of this paragraph, if a portion of the net operating loss for the loss year is attributable to a foreign expropriation to which paragraph (1)(D) applies, such portion shall be considered to be a separate net operating loss for such year to be applied after the other portion of such net operating loss.'

"(c) EFFECTIVE DATE.—The amendments made by this section shall apply in respect of foreign expropriation losses (as defined in section 172(k) of the Internal Revenue Code of 1954, as amended by subsection (a)(5) of this section), sustained in taxable years ending after December 31, 1958.

On page 76, at the beginning of line 22, to change the section number from "210" to "211".

On page 77, at the beginning of line 12, to change the section number from "211" to "212".

On page 78, after line 5, to strike out:

"(B) The $600 limit of subparagraph (A) shall be increased (to an amount not above $900) by the amount of expenses incurred by the taxpayer for any period during which—

"(i) the taxpayer had 2 or more dependents, and

"(ii) paragraph (2) does not apply."

And, in lieu thereof, to insert:

"(B) The $600 limit of subparagraph (A)—

"(i) shall be increased (to an amount not above $900) by the amount of expenses incurred by the taxpayer for any period during which the taxpayer had 2 dependents, and

"(ii) shall be increased (to an amount not above $1,000) by the amount of expenses incurred by the taxpayer for any period during which the taxpayer had 3 or more dependents."

On page 78, after line 21, to strike out:

"(2) WORKING WIVES. In the case of a woman who is married, the deduction under subsection (a)—

"(A) shall not be allowed unless she files a joint return with her husband for the taxable year, and

"(B) shall be reduced by the amount (if any) by which the adjusted gross income of the taxpayer and her spouse exceeds $4,500.

This paragraph shall not apply to expenses incurred while the taxpayer's husband is incapable of self-support because mentally or physically defective.

"(3) HUSBANDS WITH INCAPACITATED WIVES.—In the case of a husband whose wife is incapacitated, the deduction under subsection (a)—

"(A) shall not be allowed unless he files a joint return with his wife for the taxable year, and

"(B) shall be reduced by the amount (if any) by which the adjusted gross income of the taxpayer and his spouse exceeds $4,500.

This paragraph shall not apply to expenses incurred while the taxpayer's wife is institutionalized if such institutionalization is for a period of at least 90 consecutive days (whether or not within one taxable year) or a shorter period if terminated by her death."

And, in lieu thereof, to insert:

"(2) WORKING WIVES AND HUSBANDS WITH INCAPACITATED WIVES.—In the case of a woman who is married and in the case of a husband whose wife is incapacitated, the deduction under subsection (a)—

"(A) shall not be allowed unless the taxpayer and his spouse file a joint return for the taxable year, and

"(B) shall be reduced by the amount (if any) by which the adjusted gross income of the taxpayer and his spouse exceeds $7,000.

This paragraph shall not apply, in the case of a woman who is married, to expenses incurred while her husband is incapable of self-support because mentally or physically defective, or, in the case of a husband whose wife is incapacitated, to expenses incurred while his wife is institutionalized if such institutionalization is for a perod of at least 90 consecutive days (whether or not within one taxable year) or a shorter period if terminated by her death."

On page 80, at the beginning of line 19, to strike out "(4)" and insert "(3)".

On page 83, at the beginning of line 1, to change the section number from "212" to "213".

On page 86, after line 5, to strike out:

"SEC. 218. Certain contributions by employees for group term life insurance."

And, in lieu thereof, to insert:

"SEC. 218. Contributions to political candidates and political committees."

On page 86, line 13, after the word "section", to strike out "203(c)" and insert "204(b)".

On page 87, line 2, after the word "after", to strike out "December 31, 1963" and insert "the seventh day following the date of enactment of this Act".

On page 87, after line 3, to insert a new section, as follows:

"SEC. 214. DEDUCTION FOR POLITICAL CONTRIBUTIONS.

"(a) ALLOWANCE OF DEDUCTIONS.—Part VII of subchapter B of chapter 1 (relating to additional itemized deductions for individuals) is amended by inserting after section 217 (as added by section 213(a)(1) of this Act) the following new section:

"SEC. 218. CONTRIBUTIONS TO POLITICAL CANDIDATES AND POLITICAL COMMITTEES.

"'(a) ALLOWANCE OF DEDUCTION.—In the case of an individual, there shall be allowed as a deduction any political contribution payment of which is made by the taxpayer within the taxable year.

"'(b) LIMITATIONS.—

"'(1) AMOUNT.—The deduction under subsection (a) shall not exceed $50 for any taxable year, except that, in the case of a joint return of a husband and wife under section 6013 for the taxable year, the deduction shall not exceed $100 for the taxable year.

"'(2) VERIFICATION.—The deduction under subsection (a) shall be allowed, with respect to any political contribution, only if such political contribution is verified in such manner as the Secretary or his delegate shall prescribe by regulations.

"'(c) POLITICAL CONTRIBUTION DEFINED.—For purposes of this section, the term 'political contribution' means a contribution or gift to—

"'(1) any political candidate, or

"'(2) any political committee,

but only if such contribution or gift is made to further the candidacy of one or more individuals in a general, special, or primary election or a convention of a political party.

"'(d) CROSS REFERENCE.—

"'For disallowance of deduction to estates and trusts, see section 642(i).'

"(b) TECHNICAL AMENDMENT.—Section 642 (relating to special rules for credits and deductions of estates and trusts) is amended by redesignating subsection (i) as subsection (j), and by inserting after subsection (h) the following new subsection:

"'(i) POLITICAL CONTRIBUTIONS.—An estate or trust shall not be allowed the deduction for political contributions provided by section 218.'

"(c) EFFECTIVE DATE.—The amendments made by this section shall apply only with respect to contributions or gifts made on or after the date of the enactment of this Act in taxable years ending after such date."

At the top of page 89, to insert a new section, as follows:

"SEC. 215. 100 PERCENT DIVIDENDS RECEIVED DEDUCTION FOR MEMBERS OF ELECTING AFFILIATED GROUPS.

"(a) 100 PERCENT DIVIDENDS RECEIVED DEDUCTION.—Section 243 (relating to dividends received by corporations) is amended to read as follows:

"'SEC. 243. DIVIDENDS RECEIVED BY CORPORATIONS.

"'(a) GENERAL RULE.—In the case of a corporation, there shall be allowed as a deduction an amount equal to the following percentages of the amount received as dividends from a domestic corporation which is subject to taxation under this chapter:

"'(1) 85 percent, in the case of dividends other than dividends described in paragraph (2) or (3);

"'(2) 100 percent, in the case of dividends received by a small business investment company operating under the Small Business Investment Act of 1958; and

"'(3) 100 percent, in the case of qualifying dividends (as defined in subsection (b)(1)).

[P. 1421]

"'(b) QUALIFYING DIVIDENDS.—

"'(1) DEFINITION.—For purposes of subsection (a)(3), the term "qualifying dividends" means dividends received by a cor-

poration which, at the close of the day the dividends are received, is a member of the same affiliated group of corporations (as defined in paragraph (5)) as the corporation distributing the dividends, if—

"'(A) such affiliated group has made an election under paragraph (2) which is effective for the taxable years of its members which include such day, and

"'(B) such dividends are distributed out of earnings and profits of a taxable year of the distributing corporation ending after December 31, 1963—

"'(i) on each day of which the distributing corporation and the corporation receiving the dividends were members of such affiliated group, and

"'(ii) for which an election under section 1562 (relating to election of multiple surtax exemptions) is not effective.

"'(2) ELECTION.—An election under this paragraph shall be made for an affiliated group by the common parent corporation, and shall be made for any taxable year of the common parent corporation at such time and in such manner as the Secretary or his delegate by regulations prescribes. Such election may not be made for an affiliated group for any taxable year of the common parent corporation for which an election under section 1562 is effective. Each corporation which is a member of such group at any time during its taxable year which includes the last day of such taxable year of the common parent corporation must consent to such election at such time and in such manner as the Secretary or his delegate by regulations prescribes. An election under this paragraph shall be effective—

"'(A) for the taxable year of each member of such affiliated group which includes the last day of the taxable year of the common parent corporation with respect to which the election is made (except that in the case of a taxable year of a member beginning in 1963 and ending in 1964, if the election is effective for the taxable year of the common parent corporation which includes the last day of such taxable year of such member, such election shall be effective for such taxable year of such member, if such member consents to such election with respect to such taxable year), and

"'(B) for the taxable year of each member of such affiliated group which ends after the last day of such taxable year of the common parent corporation but which does not include such date, unless the election is terminated under paragraph (4).

"'(3) EFFECT OF ELECTION.—If an election by an affiliated group is effective with respect to a taxable year of the common parent corporation, then under regulations prescribed by the Secretary or his delegate—

"'(A) no member of such affiliated group may consent to an election under section 1562 for such taxable year.

"'(B) the members of such affiliated group shall be treated as one taxpayer for purposes of making the elections under section 901(a) (relating to allowance of foreign tax credit) and section 904(b)(1) (relating to election of overall limitation), and

"'(C) the members of such affiliated group shall be limited to one—

"'(i) $100,000 minimum accumulated earnings credit under section 535(c)(2) or (3),

"'(ii) $100,000 limitation for exploration expenditures under section 615 (a) and (b),

"'(iii) $400,000 limitation for exploration expenditures under section 615(c)(1),

"'(iv) $25,000 limitation on small business deduction of life insurance companies under sections 804(a)(4) and 809(d)(10), and

"'(v) $100,000 exemption for purposes of estimated tax filing requirements under section 6016 and the addition to tax under section 6655 for failure to pay estimated tax.

"'(4) TERMINATION.—An election by an affiliated group under paragraph (2) shall terminate with respect to the taxable year of the common parent corporation and with respect to the taxable years of the members of such affiliated group which include the last day of such taxable year of the common parent corporation if—

"'(A) CONSENT OF MEMBERS.—Such affiliated group files a termination of such election (at such time and in such manner as the Secretary or his delegate by regulations prescribes) with repsect to such taxable year of the common parent corporation, and each corporation which is a member of such affiliated group at any time during its taxable year which includes the last day of such taxable year of the common parent corporation consents to such termination, or

"'(B) REFUSAL BY NEW MEMBER TO CONSENT.—During such taxable year of the common parent corporation such affiliated group includes a member which—

"'(i) was not a member of such group during such common parent corporation's immediately preceding taxable year, and

"'(ii) such member files a statement that it does not consent to the election at such time and in such manner as the Secretary or his delegate by regulations prescribes.

"'(5) DEFINITION OF AFFILIATED GROUP.—For purposes of this subsection, the term "affiliated group" has the meaning assigned to it by section 1504(a), except that for such purposes sections 1504(b)(2) and 1504(c) shall not apply.

"'(6) SPECIAL RULES FOR INSURANCE COMPANIES.—If an election under this subsection is effective for the taxable year of an insurance company subject to taxation under section 802 or 821—

"'(A) part II of subchapter B of chapter 6 (relating to certain controlled corporations) shall be applied without regard to section 1563(a)(4) (relating to certain insurance companies) and section 1563(b)(2)(D) (relating to certain excluded members) with respect to such company and the other corporations which are members of the controlled group of corporations (as determined under section 1563 without regard to subsections (a)(4) and (b)(2)(D)) of which such company is a member, and

"'(B) for purposes of paragraph (1), a distribution by such company out of earnings and profits of a taxable year for which an election under this subsection was not effective, and for which such company was not a component member of a controlled group of corporations within the meaning of section 1563 solely by reason of section 1563(b)(2)(D), shall not be a qualifying dividend.'

"(c) SPECIAL RULES FOR CERTAIN DISTRIBUTIONS.—For purposes of subsection (a)—

"'(1) Any amount allowed as a deduction under section 591 (relating to deduction for dividends paid by mutual savings banks, etc.) shall not be treated as a dividend.

"'(2) A dividend received from a regulated investment company shall be subject to the limitations prescribed in section 854.

"'(3) Any dividend received from a real estate investment trust which, for the taxable year of the trust in which the dividend is paid, qualifies under part II of subchapter M (section 856 and following) shall not be treated as a dividend.

"'(4) Any dividend received which is described in section 244 (relating to dividends received on preferred stock of a public utility) shall not be treated as a dividend.

"'(d) CERTAIN DIVIDENDS FROM FOREIGN CORPORATIONS.—For purposes of subsection (a) and for purposes of section 245, any dividend from a foreign corporation from earnings and profits accumulated by a domestic corporation during a period with respect to which such domestic corporation was subject to taxation under this chapter (or corresponding provisions of prior law) shall be treated as a dividend from a domestic corporation which is subject to taxation under this chapter.'

"(b) TECHNICAL AMENDMENTS.—

"(1) Section 244 (relating to dividends received on certain preferred stock) is amended by inserting '(a) GENERAL RULE.—' before 'in case of a corporation,' and by adding at the end thereof the following new subsection:

"'(b) EXCEPTION.—If the dividends described in subsection (a)(1) are qualifying dividends (as defined in section 243(b)(1), but determined without regard to section 243(c)(4))—

"'(2) for purposes of subsection (a)(3), the percentage applicable to such qualifying dividends shall be 100 percent in lieu of 85 percent.'

"(2) Section 246(b) (relating to limitation on aggregate amount of deductions for dividends received) is amended by striking out '243(a), 244,' each place it appears therein and inserting in lieu thereof '243(a)(1), 244(a),'.

"(3) Section 804(a)(5) (relating to the application of section 246(b) to taxable investment income of life insurance companies) is amended by striking out '243(a), 244,' and inserting in lieu thereof '243(a)(1), 244(a),'.

"(4) Section 809(d)(8)(B) (relating to the application of section 246(b) to the life insurance company's share of certain dividends) is amended by striking out '243(a), 244,' each place it appears therein and inserting in lieu thereof '243(a)(1), 244(a),'.

"(c) EFFECTIVE DATE.—The amendments made by subsections (a) and (b) shall apply with respect to dividends received in taxable years ending after December 31, 1963."

On page 98, at the beginning of line 1, to change the section number from "213" to "216".

On page 98, line 20, after the word "after", to strike out "August 6, 1963" and insert "December 31, 1963".

On page 100, after line 2, to insert a new section, as follows:

"SEC. 217. INTEREST ON INDEBTEDNESS INCURRED OR CONTINUED TO PURCHASE OR CARRY TAX-EXEMPT BONDS.

"(a) APPLICATION WITH RESPECT TO CERTAIN FINANCIAL INSTITUTIONS.—Section 265 (relating to expenses and interest relating to tax-exempt income) is amended by adding at the end of paragraph (2) the following new sentence: 'In applying the preceding sentence to a financial institution (other than a bank) which is subject to the banking laws of the State in which such institution is incorporated, interest on face-amount certificates (as defined in section 2(a)(15) of the Investment Company Act of 1940 (15 U.S.C. 80a-2) issued by such institution, and interest on amounts received for the purchase of such certificates to be issued by such institution, shall not be considered as interest on indebtedness incurred or continued to purchase or carry obligations the interest on which is wholly exempt from the taxes imposed by this subtitle, to the extent that the average amount of such obligations held by such institution during the taxable year (as determined under regulations prescribed by the Secretary or his delegate) does not exceed 25 percent of the average of the total assets held by such institution during the taxable year (as so determined).'

"(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply with respect to taxable years ending after the date of the enactment of this Act."

On page 101, after line 5, to insert a new section, as follows:

[*P. 1422*]

"SEC. 218. REPEAL OF REQUIREMENT OF ALLOCATION OF CERTAIN TRAVELING EXPENSES

"(a) REPEAL OF SECTION 274(c).—Section 274 (relating to disallowance of certain entertainment, etc., expenses) is amended by striking out subsection (c) (relating to traveling).

"(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply with respect to taxable years ending after December 31, 1962, but only in respect of periods after such date."

On page 101, after line 15, to insert a new section, as follows:

"SEC. 219. ACQUISITION OF STOCK IN EXCHANGE FOR STOCK OF CORPORATION WHICH IS IN CONTROL OF ACQUIRING CORPORATION.

"(a) DEFINITION OF REORGANIZATION.—Section 368(a)(1) (relating to definition of reorganization) is amended by inserting after 'voting stock' in subparagraph (B) '(or in exchange solely for all or a part of the voting stock of a corporation which is in control of the acquiring corporation)'.

"(b) TECHNICAL AMENDMENTS.—

"(1) Section 368(a)(2)(C) (relating to special rules) is amended to read as follows:

"'(C) TRANSFERS OF ASSETS OR STOCK TO SUBSIDIARIES IN CERTAIN PARAGRAPH (1)(A), (1)(B,) AND (1)(C) CASES.—A transaction otherwise qualifying under paragraph (1)(A), (1)(B), or (1)(C) shall not be disqualified by reason of the fact that part or all of the assets or stock which were acquired in the transaction are transferred to a corporation

controlled by the corporation acquiring such assets or stock.'

"(2) Section 368(b) (relating to definition of party to a reorganization) is amended by striking out the last two sentences and inserting in lieu thereof the following: 'In the case of a reorganization qualifying under paragraph (1)(B) or (1)(C) of subsection (a), if the stock exchanged for the stock or properties is stock of a corporation which is in control of the acquiring corporation, the term "a party to a reorganization" includes the corporation so controlling the acquiring corporation. In the case of a reorganization qualifying under paragraph (1)(A), (1)(B), or (1)(C) of subsection (a) by reason of paragraph (2)(C) of subsection (a), the term 'a party to a reorganization' includes the corporation controlling the corporation to which the acquired assets or stock are transferred.'"

"(c) EFFECTIVE DATE.—The amendments made by this section shall apply with respect to transactions after December 31, 1963, in taxable years ending after such date."

On page 103, after line 7, to insert a new section, as follows:

"SEC. 220. RETROACTIVE QUALIFICATION OF CERTAIN UNION-NEGOTIATED MULTIEMPLOYER PENSION PLANS.

"(a) BEGINNING OF PERIOD AS QUALIFIED TRUST.—Section 401 (relating to qualified pension, profit-sharing, and stock bonus plans) is amended by redesignating subsection (i) as subsection (j), and by inserting after subsection (h) the following new subsection:

"'(i) CERTAIN UNION-NEGOTIATED MULTIEMPLOYER PENSION PLANS.—In the case of a trust forming part of a pension plan which has been determined by the Secretary or his delegate to constitute a qualified trust under subsection (a) and to be exempt from taxation under section 501(a) for a period beginning after contributions were first made to or for such trust, if it is shown to the satisfaction of the Secretary or his delegate that—

"'(1) such trust was created pursuant to a collective bargaining agreement between employee representatives and two or more employers who are not related (determined under regulations prescribed by the Secretary or his delegate),

"'(2) any disbursements of contributions, made to or for such trust before the time as of which the Secretary or his delegate determined that the trust constituted a qualified trust, substantially complied with the terms of the trust, and the plan of which the trust is a part, as subsequently qualified, and

"'(3) before the time as of which the Secretary or his delegate determined that the trust constitutes a qualified trust, the contributions to or for such trust were not used in a manner which would jeopardize the interests of its beneficiaries,

then such trust shall be considered as having constituted a qualified trust under subsection (a) and as having been exempt from taxation under section 501(a) for the period beginning on the date on which contributions were first made to or for such trust and ending on the date such trust first constituted (without regard to this subsection) a qualified trust under subsection (a).'

"(b) EFFECTIVE DATE.—The amendments made by subsection (a) shall apply with respect to taxable years beginning after December 31, 1953, and ending after August 16, 1954, but only with respect to contributions made after December 31, 1954."

At the top of page 105, to insert a new section, as follows:

"SEC. 221. QUALIFIED PENSION, ETC., PLAN COVERAGE FOR EMPLOYEES OF CERTAIN SUBSIDIARY EMPLOYERS.

"(a) EMPLOYEES OF FOREIGN SUBSIDIARIES COVERED BY SOCIAL SECURITY AGREEMENTS.—Part I of subchapter D of chapter 1 (relating to pension, profit-sharing, stock bonus plans, etc.) is amended by adding at the end thereof the following new section:

"'SEC. 406. CERTAIN EMPLOYEES OF FOREIGN SUBSIDIARIES.

"'(a) TREATMENT AS EMPLOYEES OF DOMESTIC CORPORATION.—For purposes of applying this part with respect to a pension, profit-sharing, or stock bonus plan described in section 401(a), an annuity plan described in section 403(a), or a bond purchase plan described in section 405(a), of a domestic corporation, an individual who is a citizen of the United States and who is an employee of a foreign subsidiary (as defined in section 3121(l)(8)) of such domestic corporation shall be treated as an employee of such domestic corporation, if—

"'(1) such domestic corporation has entered into an agreement under section 3121(l) which applies to the foreign subsidiary of which such individual is an employee;

"'(2) the plan of such domestic corporation expressly provides for contributions or benefits for individuals who are citizens of the United States and who are employees of its foreign subsidiaries to which an agreement entered into by such domestic corporation under section 3121(l) applies; and

"'(3) contributions under a funded plan of deferred compensation (whether or not a plan described in section 401(a), 403(a), or 405(a)) are not provided by any other person with respect to the remuneration paid to such individual by the foreign subsidiary.

"'(b) SPECIAL RULES FOR APPLICATION OF SECTION 401(a).—

"'(1) NONDISCRIMINATION REQUIREMENTS.—For purposes of applying paragraphs (3)(B) and (4) of section 401(a) with respect to an individual who is treated as an employee of a domestic corporation under subsection (a)—

"'(A) if such individual is an officer, shareholder, or person whose principal duties consist in supervising the work of other employees of a foreign subsidiary of such domestic corporation, he shall be treated as having such capacity with respect to such domestic corporation; and

"'(B) the determination of whether such individual is a highly compensated employee shall be made by treating such individual's total compensation (determined with the application of paragraph (2) of this subsection) as compensation paid by such domestic corporation and by determining such indi-

vidual's status with regard to such domestic corporation.

"'(2) DETERMINATION OF COMPENSATION.—For purposes of applying paragraph (5) of section 401(a) with respect to an individual who is treated as an employee of a domestic corporation under subsection (a)—

"'(A) the total compensation of such individual shall be the remuneration paid to such individual by the foreign subsidiary which would constitute his total compensation if his services had been performed for such domestic corporation, and the basic or regular rate of compensation of such individual shall be determined under regulations prescribed by the Secretary or his delegate; and

"'(B) such individual shall be treated as having paid the amount paid by such domestic corporation which is equivalent to the tax imposed by section 3101.

"'(c) TERMINATION OF STATUS AS DEEMED EMPLOYEE NOT TO BE TREATED AS SEPARATION FROM SERVICE FOR PURPOSES OF CAPITAL GAIN PROVISIONS.—For purposes of applying section 402(a)(2) and section 403(a)(2) with respect to an individual who is treated as an employee of a domestic corporation under subsection (a), such individual shall not be considered as separated from the service of such domestic corporation solely by reason of the fact that—

"'(1) the agreement entered into by such domestic corporation under section 3121(l) which covers the employment of such individual is terminated under the provisions of such section,

"'(2) such individual becomes an employee of a foreign subsidiary with respect to which such agreement does not apply,

"'(3) such individual ceases to be an employee of the foreign subsidiary by reason of which he is treated as an employee of such domestic corporation, if he becomes an employee of another corporation controlled by such domestic corporation, or

"'(4) the provision of the plan described in subsection (a)(2) is terminated.

"'(d) DEDUCTIBILITY OF CONTRIBUTIONS.—For purposes of applying sections 404 and 405(c) with respect to contributions made to or under a pension, profit-sharing, stock bonus, annuity, or bond purchase plan by a domestic corporation, or by another corporation which is entitled to deduct its contributions under section 404(a)(3)(B), on behalf of an individual who is treated as an employee of such domestic corporation under subsection (a)—

"'(1) except as provided in paragraph (2), no deduction shall be allowed to such domestic corporation or to any other corporation which is entitled to deduct its contributions under such sections,

"'(2) there shall be allowed as a deduction to the foreign subsidiary of which such individual is an employee an amount equal to the amount which (but for paragraph (1)) would be deductible under section 404 (or section 405(c)) by the domestic corporation if he were an employee of the domestic corporation, and

"'(3) any reference to compensation shall be considered to be a reference to the total compensation of such individual (determined with the application of subsection (b)(2)). Any amount deductible by a foreign subsidiary under this subsection shall be deductible for its taxable year with or within which the taxable year of such domestic corporation ends.

"'(e) TREATMENT AS EMPLOYEE UNDER RELATED PROVISIONSI—An individual who is treated as an employee of a domestic corporation under subsection (a) shall also be treated as an employee of such domestic cor-

[P. 1423]

poration for purposes of applying the following provisions of this title:

"'(1) Section 72(d) (relating to employees' annuities).

"'(2) Section 72(f) (relating to special rules for computing employees' contributions).

"'(3) Section 101(b) (relating to employees' death benefits).

"'(4) Section 2039 (relating to annuities).

"'(5) Section 2517 (relating to certain annuities under qualified plan).'

"(b) EMPLOYEES OF DOMESTIC SUBSIDIARIES ENGAGED IN BUSINESS OUTSIDE THE UNITED STATES.—Part I of subchapter D of chapter 1 (relating to pension, profit-sharing, stock bonus plans, etc.) is amended by adding after section 406 (as added by subsection (a)) the following new section:

"'SEC. 407. CERTAIN EMPLOYEES OF DOMESTIC SUBSIDIARIES ENGAGED IN BUSINESS OUTSIDE THE UNITED STATES

"'(a) TREATMENT AS EMPLOYEES OF DOMESTIC PARENT CORPORATION.—

"'(1) IN GENERAL.—For purposes of applying this part with respect to a pension, profit-sharing, or stock bonus plan described in section 401(a), an annuity plan described in section 403(a), or a bond purchase plan described in section 405(a), of a domestic parent corporation, an individual who is a citizen of the United States and who is an employee of a domestic subsidiary (within the meaning of paragraph (2)) of such domestic parent corporation shall be treated as an employee of such domestic parent corporation, if—

"'(A) the plan of such domestic parent corporation expressly provides for contributions or benefits for individuals who are citizens of the United States and who are employees of its domestic subsidiaries; and

"'(B) contributions under a funded plan of deferred compensation (whether or not a plan described in section 401(a), 403(a), or 405(a)) are not provided by any other person with respect to the remuneration paid to such individual by the domestic subsidiary.

"'(2) DEFINITIONS.—For purposes of this section—

"'(A) DOMESTIC SUBSIDIARY.—A corporation shall be treated as a domestic subsidiary for any taxable year only if—

"'(i) such corporation is a domestic corporation 80 percent or more of the outstanding voting stock of which is owned by another domestic corporation;

"'(ii) 95 percent or more of its gross income for the three-year period immediately preceding the close of its taxable year which

ends on or before the close of the taxable year of such other domestic corporation (or for such part of such period during which the corporation was in existence) was derived from sources without the United States; and

"'(iii) 90 percent or more of its gross income for such period (or such part) was derived from the active conduct of a trade or business.

"'(B) DOMESTIC PARENT CORPORATION.—The domestic parent corporation of any domestic subsidiary is the domestic corporation which owns 80 percent or more of the outstanding voting stock of such domestic subsidiary.

"'(b) SPECIAL RULES FOR APPLICATION OF SECTION 401(a).—

"'(1) NONDISCRIMINATION REQUIREMENTS.—For purposes of applying paragraphs (3)(B) and (4) of section 401(a) with respect to an individual who is treated as an employee of a domestic parent corporation under subsection (a)—

"'(A) if such individual is an officer, shareholder, or person whose principal duties consist in supervising the work of other employees of a domestic subsidiary, he shall be treated as having such capacity with respect to such domestic corporation; and

"'(B) the determination of whether such individual is a highly compensated employee shall be made by treating such individual's total compensation (determined with the application of paragraph (2) of this subsection) as compensation paid by such domestic parent corporation and by determining such individual's status with regard to such domestic parent corporation.

"'(2) DETERMINATION OF COMPENSATION.—For purposes of applying paragraph (5) of section 401(a) with respect to an individual who is treated as an employee of a domestic parent corporation under subsection (a), the total compensation of such individual shall be the remuneration paid to such individual by the domestic subsidiary which would constitute his total compensation if his services had been performed for such domestic parent corporation, and the basic or regular rate of compensation of such individual shall be determined under regulations prescibed by the Secretary or his delegate.

"'(c) TERMINATION OF STATUS AS DEEMED EMPLOYEE NOT TO BE TREATED AS SEPARATION FROM SERVICE FOR PURPOSES OF CAPITAL GAIN PROVISIONS.—For purposes of applying section 402(a)(2) and section 403(a)(2) with respect to an individual who is treated as an employee of a domestic parent corporation under subsection (a), such individual shall not be considered as separated from the service of such domestic parent corporation solely by reason of the fact that—

"'(1) the corporation of which such individual is an employee ceases, for any taxable year, to be a domestic subsidiary within the meaning of subsection (a)(2)(A),

"'(2) such individual ceases to be an employee of a domestic subsidiary of such domestic parent corporation, if he becomes an employee of another corporation controlled by such domestic parent corporation, or

"'(3) the provision of the plan described in subsection (a)(1)(A) is terminated.

"'(d) DEDUCTIBILITY OF CONTRIBUTIONS.—For purposes of applying sections 404 and 405(c) with respect to contributions made to or under a pension, profit-sharing, stock bonus, annuity, or bond purchase plan by a domestic parent corporation, or by another corporation which is entitled to deduct its contributions under section 404(a)(3)(B), on behalf of an individual who is treated as an employee of such domestic corporation under subsection (a)—

"'(1) except as provided in paragraph (2), no deduction shall be allowed to such domestic parent corporation or to any other corporation which is entitled to deduct its contributions under such sections,

"'(2) there shall be allowed as a deduction to the domestic subsidiary of which such individual is an employee an amount equal to the amount which (but for paragraph (1)) would be deductible under section 404 (or section 405(c)) by the domestic parent corporation if he were an employee of the domestic parent corporation, and

"'(3) any reference to compensation shall be considered to be a reference to the total compensation of such individual (determined with the application of subsection (b)(2)).

"'Any amount deductible by a domestic subsidiary under this subsection shall be deductible for its taxable year with or within which the taxable year of such domestic parent corporation ends.

"'(e) TREATMENT AS EMPLOYEE UNDER RELATED PROVISIONS.—An individual who is treated as an employee of a domestic parent corporation under subsection (a) shall also be treated as an employee of such domestic parent corporation for purposes of applying the following provisions of this title:

"'(1) Section 72(d) (relating to employees' annuities).

"'(2) Section 72(f) (relating to special rules for computing employees' contributions).

"'(3) Section 101(b) (relating to employees' death benefits).

"'(4) Section 2039 (relating to annuities).

"'(5) Section 2517 (relating to certain annuities under qualified plan).'

"(c) TECHNICAL AMENDMENTS.—

"(1) The table of sections for part I of subchapter D of chapter 1 is amended by adding at the end thereof the following:

"'SEC. 224. CERTAIN EMPLOYEES OF FOREIGN SUBSIDIARIES.

"'SEC. 407. CERTAIN EMPLOYEES OF DOMESTIC SUBSIDIARIES ENGAGED IN BUSINESS OUTSIDE THE UNITED STATES.'

"(2) Section 3121(a)(5) (relating to definition of wages) is amended by striking out 'or' at the end of subparagraph (A) and by striking out subparagraph (B) and inserting in lieu thereof the following new subparagraphs:

"'(B) under or to an annuity plan which, at the time of such payment, is a plan described in section 403(a), or

"'(C) under or to a bond purchase plan which, at the time of such payment, is a qualified bond purchase plan described in section 405(a);'.

"(3) Section 209(e) of the Social Security Act (relating to the definition of wages) is amended to read as follows:

"'(e) Any payment made to, or on behalf of, an employee or his beneficiary (1) from or to a trust exempt from tax under section 165(a) of the Internal Revenue Code of 1939 at the time of such payment or, in the case of a payment after 1954, under sections 401 and 501(a) of the Internal Revenue Code of 1954, unless such payment is made to an employee of the trust as remuneration for services rendered as such employee and not as a beneficiary of the trust, or (2) under or to an annuity plan which, at the time of such payment, meets the requirements of section 165(a) (3), (4), (5), and (6) of the Internal Revenue Code of 1939 or, in the case of a payment after 1954 and prior to 1963, the requirements of section 401(a) (3), (4), (5), and (6) of the Internal Revenue Code of 1954, or (3) under or to an annuity plan which, at the time of any such payment after 1962, is a plan described in section 403(a) of the Internal Revenue Code of 1954, or (4) under or to a bond purchase plan which, at the time of any such payment after 1962, is a qualified bond purchase plan described in section 405(a) of the Internal Revenue Code of 1954;'.

"(d) Effective Date.—The amendments made by subsections (a), (b), and (c)(1) shall apply to taxable years ending after December 31, 1963. The amendments made by subsections (c) (2) and (3) shall apply to remuneration paid after December 31, 1962."

On page 118, at the beginning of line 8, to change the section number from "214" to "222".

On page 121, line 10, after the word "the", where it appears the second time, to strike out "amount," and insert "amount".

On page 122, line 17, after the word "after", to strike out "June 11, 1963" and insert "December 31, 1963", and in line 19, after "section 424(c)", to strike out "(4)" and insert "(3)".

On page 125, line 20, to strike out "June 11, 1963" and insert "December 31, 1963", and in line 24, after the word "before", to strike out "June 12, 1963" and insert "January 1, 1964".

On page 126, at the beginning of line 18, to strike out "or" and insert "and".

On page 128, line 1, after the word "the", to strike out "amount paid for" and insert "adjusted basis of".

On page 128, after line 12, to insert:

"(6) Exception to application of subsection (b)(5).—Paragraph (5) of subsection (b) shall not apply if—

[*P. 1424*]

"(A) the option being granted and all outstanding qualified (or restricted) stock options referred to in subsection (b)(5) are to purchase stock of the same class in the same corporation, and

"(B) the price payable under each such outstanding option (as of the date of grant of the option being granted) is not more than the option price of the option being granted."

On page 129, line 4, after the word "after", to strike out "June 11, 1963" and insert "December 31, 1963", and in line 7, after "section 424(c)", to strike out "(4)" and insert "(3)".

On page 130, line 6, after the word "such", to strike out "corporations" and insert "corporation".

On page 135, line 22, after the word "before", to strike out "June 12, 1963" and insert "January 1, 1964"; in line 24, after "subsection (c)", to strike out "(4)" and insert "(3)", and in the same line, after the word "after", to strike out "June 11, 1963" and insert "December 31, 1963".

On page 136, line 24, after the word "is", to strike out "granted," and insert "granted".

On page 139, after line 3, to strike out:

"(2) Stockholder approval.—For purposes of this section, if the grant of an option is subject to approval by stockholders, the date of grant of the option shall be determined as if the option had not been subject to such approval."

On page 139, at the beginning of line 9, to strike out "(3)" and insert "(2)".

On page 139, at the beginning of line 23, to strike out "(4)" and insert "(3)"; in the same line, after the word "after", to strike out "June 11, 1963" and insert "December 31, 1963"; in line 25, after the word "after", to strike out "June 11, 1963" and insert "December 31, 1963"; on page 140, line 4, after the word "before", to strike out "June 12, 1963" and insert "January 1, 1964"; in line 6, after the word "before", to strike out "June 12, 1963" and insert "January 1, 1964", and in line 7, after the word "of", where it appears the first time, to strike out "June 12, 1963" and insert "January 1, 1964".

On page 145, line 12, after the word "before", to strike out "June 12, 1963" and insert "January 1, 1964"; in line 13, after the word "after", to strike out "June 11, 1963" and insert "December 31, 1963", and in line 15, after the word "before", to strike out "June 12, 1963" and insert "January 1, 1964".

On page 146, line 7, after "(a)", to strike out "or".

On page 146, line 9, after "424(b)", to strike out "(2)." and insert

"(2); or

"(C) in the case of an option not immediately exercisable in full, to accelerate the time at which the option may be exercised."

On page 146, after line 18, to insert:

"(i) Stockholder Approval.—For purposes of this part, if the grant of an option is subject to approval by stockholders, the date of grant of the option shall be determined as if the option had not been subject to such approval."

On page 146, at the beginning of line 23, to strike out "(i)" and insert "(j)".

On page 149, after line 7, to strike out:

"(a) Returns Relating to Payments of Dividends, Etc., and Certain Transfers of Stock. In the case of each failure to file a statement of—

"(1) the aggregate amount of payments to another person required by section 6042(a)(1) (relating to payments of dividends aggregating $10 or more), section 6044(a)(1) (relating to payments of patronage dividends aggregating $10 or more), or section 6049(a)(1) (relating to payments of interest aggregating $10 or more), or

"(2) the transfer of stock or the transfer legal title of stock required by section

6039 (relating to information in connection with certain options),

on the date prescribed therefor (determined with regard to any extension of time for filing), unless it is shown that such failure is due to reasonable cause and not to willful neglect, there shall be paid (upon notice and demand by the Secretary or his delegate and in the same manner as tax), by the person failing to so file the statement, $10 for each such statement not so filed, but the total amount imposed on the delinquent person for all such failures during any calendar year shall not exceed $25,000."

And, in lieu thereof, to insert:

"(a) RETURNS RELATING TO PAYMENTS OF DIVIDENDS, ETC., AND CERTAIN TRANSFERS OF STOCK.—In the case of each failure—

"(1) to file a statement of the aggregate amount of payments to another person required by section 6042(a)(1) (relating to payments of dividends aggregating $10 or more), section 6044(a)(1) (relating to payments of patronage dividends aggregating $10 or more), or section 6049(a)(1) (relating to payments of interest aggregating $10 or more),

"(2) to make a return required by section 6039(a) (relating to reporting information in connection with certain options) with respect to a transfer of stock or a transfer of legal title to stock, or

"(3) to make a return required by section 6052(a) (relating to reporting payment of wages in the form of group-term life insurance) with respect to group-term life insurance on the life of an employee,

on the date prescribed therefor (determined with regard to any extension of time for filing), unless it is shown that such failure is due to reasonable cause and not to willful neglect, there shall be paid (upon notice and demand by the Secretary or his delegate and in the same manner as tax), by the person failing to file a statement referred to in paragraph (1) or failing to make a return referred to in paragraph (2) or (3), $10 for each such failure, but the total amount imposed on the delinquent person for all such failures during any calendar year shall not exceed $25,000."

At the top of page 153, to strike out:

"(e) EFFECTIVE DATE.—

"(1) Except as provided in paragraph (2), the amendments made by this section shall apply to taxable years ending after June 11, 1963.

"(2) The amendments made by subsection (b) shall apply to stock transferred pursuant to options exercised on or after January 1, 1964."

And, in lieu thereof, to insert:

"(e) EFFECTIVE DATES AND TRANSITION RULES.—

"(1) Except as provided in paragraphs (2) and (3), the amendments made by this section shall apply to taxable years ending after December 31, 1963.

"(2) The amendments made by paragraphs (1) and (3) of subsection (b), and paragraph (2) of section 6652(a) of the Internal Revenue Code of 1954 (as amended by paragraph (2) of subsection (b)), shall apply to stock transferred pursuant to options exercised on or after January 1, 1964.

"(3) In the case of an option granted after December 31, 1963, and before January 1, 1965—

(A) paragraphs (1) and (2) of section 422 (b) of the Internal Revenue Code of 1954 (as added by subsection (a)) shall not apply, and

"(B) paragraph (1) of section 425(h) of such Code (as added by subsection (a)) shall not apply to any change in the terms of such option made before January 1, 1965, to permit such option to qualify under paragraphs (3), (4), and (5) of such section 422(b)."

On page 154, after line 2, to insert a new section, as follows:

"SEC. 223. INSTALLMENT SALES BY DEALERS IN PERSONAL PROPERTY.

"(a) INSTALLMENT PLANS.—Section 453(a) (relating to reporting of income by dealers in personal property from sales on the installment plan) is amended to read as follows:

" '(a) DEALERS IN PERSONAL PROPERTY.—

" '(1) GENERAL RULE.—Under regulations prescribed by the Secretary or his delegate, a person who regularly sells or otherwise disposes of personal property on the installment plan may return as income therefrom in any taxable year that proportion of the installment payments actually received in that year which the gross profit, realized or to be realized when payment is completed, bears to the total contract price.

" '(2) INSTALLMENT PLAN.—For purposes of paragraph (1), the term "installment plan" includes any plan which provides for the payment by the purchaser for the personal property sold to him in a series of periodic installments of an agreed part or installment of the debt due the seller.

" '(3) TOTAL CONTRACT PRICE.—For purposes of paragraph (1), the term "total contract price" includes all charges relative to the sale of the personal property, including the time price differential which represents the amount paid or payable for the privilege of purchasing the personal property to be paid for by the purchaser in installments over a period of time.'

"(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply to taxable years beginning after December 31, 1963."

On page 155, after line 7, to insert a new section, as follows:

"SEC. 224. TIMING OF DEDUCTIONS AND CREDITS IN CERTAIN CASES WHERE ASSERTED LIABILITIES ARE CONTESTED.

"(a) TAXABLE YEAR OF DEDUCTION OR CREDIT.—

"(1) Section 461 (relating to general rule for taxable year of deduction) is amended by adding at the end thereof the following new subsection:

" '(f) CONTESTED LIABILITIES.—If—

" '(1) the taxpayer contests an asserted liability,

" '(2) the taxpayer transfers money or other property to provide for the satisfaction of the asserted liability,

" '(3) the contest with respect to the asserted liability exists after the time of the transfer, and

"'(4) but for the fact that the asserted liability is contested, a deduction or credit would be allowed for the taxable year of the transfer (or for an earlier taxable year),

then the deduction or credit shall be allowed for the taxable year of the transfer.'

"(2) Section 43 of the Internal Revenue Code of 1939 (relating to period for which deductions and credits taken) is amended by adding at the end thereof the following new sentence: "If—

"'(1) the taxpayer contests an asserted liability,

"'(2) the taxpayer transfers money or other property to provide for the satisfaction of the asserted liability,

"'(3) the contest with respect to the asserted liability exists after the time of the transfer, and

"'(4) but for the fact that the asserted liability is contested, a deduction or credit would be allowed for the taxable year of the transfer (or for an earlier taxable year),

then the deduction or credit shall be allowed for the taxable year of the transfer.'

"(b) EFFECTIVE DATES.—Except as provided in subsections (c) and (d)—

"(1) the amendment made by subsection (a)(1) shall apply to taxable years beginning after December 31, 1953, and ending after August 16, 1954, and

[*P. 1425*]

"(2) the amendment made by subsection (a)(2) shall apply to taxable years to which the Internal Revenue Code of 1939 applies.

"(c) ELECTION AS TO TRANSFERS IN TAXABLE YEARS BEGINNING BEFORE JANUARY 1, 1964.—

"(1) The amendments made by subsection (a) shall not apply to any transfer of money or other property described in subsection (a) made in a taxable year beginning before January 1, 1964, if the taxpayer elects, in the manner provided by regulations prescribed by the Secretary of the Treasury or his delegate, to have this paragraph apply. Such an election—

"(A) must be made within one year after the date of the enactment of this Act,

"(B) may not be revoked after the expiration of such one-year period, and

"(C) shall apply to all transfers described in the first sentence of this paragraph (other than transfers described in paragraph (2)).

In the case of any transfer to which this paragraph applies, the deduction or credit shall be allowed only for the taxable year in which the contest with respect to such transfer is settled.

"(2) Paragraph (1) shall not apply to any transfer if the assessment of any deficiency which would result from the application of the election in respect of such transfer is, on the date of the election under paragraph (1), prevented by the operation of any law or rule of law.

"(3) If the taxpayer makes an election under paragraph (1), and if, on the date of such election, the assessment of any deficiency which results from the application of the election in respect of any transfer is not prevented by the operation of any law or rule of law, the period within which assessment of such deficiency may be made shall not expire earlier than 2 years after the date of the enactment of this Act.

"(d) CERTAIN OTHER TRANSFERS IN TAXABLE YEARS BEGINNING BEFORE JANUARY 1, 1964.—The amendments made by subsection (a) shall not apply to any transfer of money or other property described in subsection (a) made in a taxable year beginning before January 1, 1964, if—

"(1) no deduction or credit has been allowed in respect of such transfer for any taxable year before the taxable year in which the contest with respect to such transfer is settled, and

"(2) refund or credit of any overpayment which would result from the application of such amendments to such transfer is prevented by the operation of any law or rule of law.

In the case of any transfer to which this subsection applies, the deduction or credit shall be allowed for the taxable year in which the contest with respect to such transfer is settled."

On page 159, at the beginning of line 3, to change the section number from "215" to "225".

On page 163, after line 10, to strike out:

"(c) CERTAIN CARRYING CHARGES.—The first sentence of section 163(b)(1) (relating to installment purchases where interest charge is not separately stated) is amended by striking out 'personal property is purchased' and inserting in lieu thereof 'personal property or services are purchased'."

One page 163, after line 16, to strike out:

"(d) EFFECTIVE DATES.—The amendments made by subsections (a) and (b) shall apply to payments made after December 31, 1963, on account of sales or exchanges of property occurring after June 30, 1963. The amendment made by subsection (c) shall apply to payments made during taxable years beginning after December 31, 1963."

And, in lieu thereof, to insert:

"(c) EFFECTIVE DATE.—The amendments made by subsections (a) and (b) shall apply to payments made after December 31, 1963, on account of sales or exchanges of property occurring after June 30, 1963, other than any sale or exchange made pursuant to a binding written contract (including an irrevocable written option) entered into before July 1, 1963."

On page 164, at the beginning of line 7, to change the section number from "216" to "226".

On page 166, line 1, after the word "shareholders", to strike out the comma and "plus the interest described in section 543(b)(2)(C),".

On page 167, line 8, after the word "loans", to strike out "or".

On page 167, line 10, after the word "installment", to strike out "obligations." and insert "obligations, or (iii) rendering services or making facilities available to another corporation which is engaged in the lending or finance business (within the meaning of this subparagraph), but only if such other corporation and the corporation rendering services or making facilities available are members of the same affiliated group (as defined in section 1504)."

On page 169, after line 3, to strike out:

"(3) INCOME RECEIVED FROM CERTAIN DOMESTIC SUBSIDIARIES.—For purposes of subsection (c)(6)(B), in the case of a lending company which is authorized to engage in and is actively and regularly engaged in the small loan business (consumer finance business) under one or more State statutes providing for the direct regulation of such business, and which meets the requirements of subsection (c)(6)(A), there shall not be treated as personal holding company income the lawful income received from domestic subsidiary corporations (of which stock possessing at least 80 percent of the voting power of all classes of stock and of which at least 80 percent of each class of nonvoting stock is owned directly by such lending company) which are themselves excepted under subsection (c)(6)."

And, in lieu thereof, to insert:

"(3) INCOME RECEIVED FROM CERTAIN AFFILIATED CORPORATIONS.—For purposes of subsection (c)(6)(B), in the case of a lending or finance company which meets the requirements of subsection (c)(6)(A), there shall not be treated as personal holding company income the lawful income received from a corporation which meets the requirements of subsection (c)(6) and which is a member of the same affiliated group (as defined in section 1504) of which such company is a member."

On page 171, after line 8, to strike out:

"(B) the personal holding company income for the taxable year (computed without regard to this paragraph and paragraph (6), and computed by including as personal holding company income copyright royalties and the adjusted income from mineral, oil, and gas royalties) is not more than 10 percent of the ordinary gross income."

"(B) the sum of—

"(i) the dividends paid during the taxable year (determined under section 562),

"(ii) the dividends considered as paid on the last day of the taxable year under section 563(c) (as limited by the second sentence of section 563(b)), and

"(iii) the consent dividends for the taxable year (determined under section 565),

equals or exceeds the amount, if any, by which the personal holding company income for the taxable year (computed without regard to this paragraph and paragraph (6), and computed by including as personal holding company income copyright royalties and the adjusted income from mineral, oil, and gas royalties) exceeds 10 percent of the ordinary gross income."

On page 178, line 14, after the word "and", to strike out "amortization," and insert "amortization of property other than tangible personal property which is not customarily retained by any one lessee for more than three years,".

On page 179, line 3, after the word "in", to strike out "subsection (a)(3)" and insert "paragraph (4)".

On page 180, line 24, after the word "from", to strike out "such royalties" and insert "mineral, oil, and gas royalties (including production payments and overriding royalties)".

On page 190, line 9, after the word "section", to strike out "552," and insert "552—".

On page 192, line 4, after "January 1,", to strike out "1966" and insert "1967"; in line 6, after "January 1,", to strike out "1966" and insert "1967"; in line 14, after the word "were", to strike out "class B" and insert "long-term"; in line 16, after the word "after", to strike out "August 1" and insert "December 31"; and at the beginning of line 20, to strike out "August 1" and insert "December 31".

On page 193, line 2, to strike out "1965" and insert "1966".

On page 193, line 4, after "December 31,", to strike out "1965" and insert "1966".

On page 193, line 13, after "January 1,", to strike out "1966" and insert "1967", and at the beginning of line 16, to strike out "class B" and insert "long-term".

On page 193, at the beginning of line 21, to strike out "August 1" and insert "December 31", and in line 24, after the word "on", to strike out "August 1" and insert "December 31".

On page 194, line 9, after the word "on", to strike out "August 1, 1963" and insert "January 1, 1964".

On page 194, line 12, after "January 1,", to strike out "1967" and insert "1968".

On page 195, line 5, after the word "on", to strike out "August 1, 1963" and insert "January 1, 1964".

On page 195, line 16, after the word "obsolescence", to strike out "or", and in line 17, after the word "amortization", to insert a comma and "or depletion".

On page 195, line 21, after the word "before", to strike out "the date of the enactment of this subsection" and insert "December 31, 1963", and on page 196, line 3, after the word "taxable", to strike out "year."" and insert "year.".

On page 196, after line 3, to insert:

"(4) MISTAKE AS TO APPLICABILITY OF SUBSECTION.—An election made under this section by a qualified electing shareholder of a corporation in which such shareholder states that such election is made on the assumption that such corporation is a corporation referred to in paragraph (3) shall have no force or effect if it is determined that the corporation is not a corporation referred to in paragraph (3)."

On page 198, line 2, after the word "before", to strike out "the date of the enactment of this subsection" and insert "December 31. 1963".

On page 198, line 19, after the word "before", to strike out "August 1, 1963," and insert "January 1, 1964,"; in line 21, after the word "after", to strike out "July 31, 1963," and insert "December 31, 1963,", and in line 24, after the word "but", to strike out the comma and "in the case of such a payment or set aside which is made on or after the first day of the first taxable year beginning after December 31, 1963,".

On page 199, line 9, after the word "after", to strike out "July 31," and insert "December 31,".

On page 200, line 16, after the word "obsolescence", to strike out "or amortization" and insert "amortization, or depletion".

On page 201, line 12, after the word "to", to strike out "the" and insert "an"; in line

69-108 O—66—pt. 3——23

13, after the word "obsolescence", to strike out "or amortization" and insert "amortization, or depletion", and in line 14, after the word "after", to strike out "July 31," and insert "December 31,".

[*P. 1426*]

On page 202, after line 9, to strike out:

"(j) INCREASE IN BASIS WITH RESPECT TO CERTAIN FOREIGN PERSONAL HOLDING COMPANY HOLDINGS.—

"(1) IN GENERAL. Part II of subchapter O of chapter 1 (relating to basis rules of general application) is amended by redesignating section 1022 as section 1023 and by inserting after section 1021 the following new section:

" 'SEC. 1022. INCREASE IN BASIS WITH RESPECT TO CERTAIN FOREIGN PERSONAL HOLDING COMPANY HOLDINGS.

" '(a) GENERAL RULE.—The basis (determined under section 1014(b) (5), relating to basis of stock or securities in a foreign personal holding company) of a share of stock or a security, acquired from a decedent dying after August 15, 1963, of a corporation which was a foreign personal holding company for its most recent taxable year ending before the date of the enactment of this section shall be increased by its proportionate share of any Federal estate tax attributable to the net appreciation in value of all of such shares and securities determined as provided in this section.

" '(b) PROPORTIONATE SHARE.—For purposes of subsection (a), the proportionate share of a share of stock or of a security is that amount which bears the same ratio to the aggregate increase determined under subsection (c)(2) as the appreciation in value of such share or security bears to the aggregate appreciation in value of all such shares and securities having appreciation in value.

" '(c) SPECIAL RULES AND DEFINITIONS.—For purposes of this section—

" '(1) FEDERAL ESTATE TAX.—The term 'Federal estate tax' means only the tax imposed by section 2001 or 2101, reduced by any credit allowable with respect to a tax on prior transfers by section 2013 or 2102.

" '(2) FEDERAL ESTATE TAX ATTRIBUTABLE TO NET APPRECIATION IN VALUE.—The Federal estate tax attributable to the net appreciation in value of all shares of stock and securities to which subsection (a) applies is that amount which bears the same ratio to the Federal estate tax as the net appreciation in value of all of such shares and securities bears to the value of the gross estate as determined under chapter 11 (including section 2032, relating to alternative valuation).

" '(3) NET APPRECIATION.—The net appreciation in value of all shares and securities to which subsection (a) applies is the amount by which the fair market value of all such shares and securities exceeds the basis of such property in the hands of the decedent.

" '(4) FAIR MARKET VALUE.—For purposes of this section, the term 'fair market value' means fair market value determined under chapter 11 (including section 2032, relating to alternate valuation).

" '(d) LIMITATIONS.—This section shall not apply to any foreign personal holding company referred to in section 342(a)(2).'

"(2) AMENDMENT OF SECTION 1016(a).—Section 1016(a) (relating to adjustments to basis) is amended by striking out the period at the end thereof and by inserting in lieu thereof a semicolon and by adding at the end thereof the following new paragraph:

" '(21) to the extent provided in section 1022, relating to increase in basis for certain foreign personal holding company holdings, or in section 216(j)(4) of the Revenue Act of 1963.'

"(3) CLERICAL AMENDMENTS.

"(A) The table of sections for part II of subchapter O of chapter 1 is amended by striking out

" 'Sec. 1022. Cross references."

and inserting in lieu thereof the following:

" 'Sec. 1022. Increase in basis with respect to certain foreign personal holding company holdings.

" 'Sec. 1023. Cross references'."

"(4) ONE MONTH LIQUIDATIONS. If—

"(A) a corporation was a foreign personal holding company for its most recent taxable year ending before the date of the enactment of this Act,

"(B) all of the stock of such corporation is owned on August 15, 1963, and at the time of liquidation, by individuals and estates, and

"(C) the transfer of all the property under the liquidation occurs within one of the first 4 calendar months ending after such date of enactment,

then such corporation shall be treated as a domestic corporation for purposes of section 333 of the Internal Revenue Code of 1954 (relating to 1 month liquidations), and shall be treated as a foreign corporation for purposes of section 367 of such Code (relating to foreign corporations). In applying such section 367 for purposes of this paragraph, references in the first sentence of such section 367 to other sections of such Code shall be treated as including a reference to such section 333.

"(5) BASIS OF CERTAIN PROPERTY ACQUIRED FROM A DECEDENT.

"(A) In the case of property described in subparagraph (B) acquired from a decedent or passing from a decedent (within the meaning of section 1014(b) of the Internal Revenue Code of 1954), the basis shall (in lieu of being the basis provided by section 1014 of such Code) be the basis immediately before the death of the decedent, increased by the amount of any Federal estate tax attributable to the net appreciation in value of such property (determined in accordance with section 1022 of such Code as if such property were stock and securities referred to in such section).

"(B) Subparagraph (A) shall apply to—

"(i) property which the decedent received as a qualified electing shareholder, and

"(ii) property the basis of which (without the application of this paragraph) is a substituted basis (as defined in section 1016 (b) of the Internal Revenue Code of 1954) determined by reference to the basis of such property or other property received by any individual or estate as a qualified electing shareholder.

For purposes of this subparagraph, property shall be treated as property received as a qualified electing shareholder if, with respect to such property, the recipient was a qualified electing shareholder (within the meaning of section 333(c) of such Code) in a corporate liquidation to which section 333 of such Code applied by reason of paragraph (4) of this subsection.

"(C) In the case of property acquired from the decedent by gift, the increase in basis under this paragraph shall not exceed the amount by which the increase under this paragraph is greater than the increase allowable under section 1015(d) of the Internal Revenue Code of 1954.

"(6) LIMITATIONS.—The provisions of paragraphs (4) and (5) of this subsection shall not apply to any foreign corporation referred to in section 342(a)(2) of the Internal Revenue Code of 1954.

"(7) MEANING OF TERMS.—Terms used in paragraphs (4) through (6) of this subsection shall have the same meaning as when used in chapter 1 of the Internal Revenue Code of 1954."

On page 208, at the beginning of line 1, to strike out "(k)" and insert "(j)".

On page 210, at the beginning of line 14, to strike out "(1)" and insert "(k)".

On page 210, line 16, after "(f)", to strike out "(g), and (j)" and insert "and (g))".

At the top of page 211, to strike out:

"(4) The amendments made by paragraphs (1), (2), and (3) of subsection (j) shall apply in respect of decedents dying after August 15, 1963."

On page 211, at the beginning of line 4, to strike out "(5)" and insert "(4)".

On page 211, at the beginning of line 6, to change the section number from "217" to "227".

On page 215, line 10, after the word "of", to strike out "1963" and insert "1964".

On page 219, at the beginning of line 1, to change the section number from "218" to "228".

On page 219, line 9, after the word "or" to insert "Domestic"; after line 10, to strike out:

"(B) by inserting 'or iron ore' after 'coal (including lignite)'; and".

And in lieu thereof to insert:

"(B) by inserting 'or iron ore mined in the United States,' after 'coal (including lignite),';".

In line 16, after "section 631" to strike out "(c)." and insert "(c); and".

"(D) by adding at the end thereof the following new sentence:

"'This subsection shall not apply to any disposal of iron ore—

"'(1) to a person whose relationship to the person disposing of such iron ore would result in the disallowance of losses under section 267 or 707(b), or

"'(2) to a person owned or controlled directly or indirectly by the same interests which own or control the person disposing of such iron ore.'"

On page 220, line 13, after the word "Or", to insert "Domestic".

On page 221, line 2, after the word "Or" to insert "Domestic"; after line 5, in "Sec. 631", after the word "or", where it occurs the second time, to insert "domestic"; in line 8, after the word "Or", to insert "Domestic"; after line 11, in "Sec. 272", after the word "or", to insert "domestic", and in line 13, after the word "or", to insert "domestic".

At the top of page 222, to insert:

"(7) Section 211(a)(3) of the Social Security Act is amended by striking out clause (B) and inserting in lieu thereof '(B) from the cutting of timber, or the disposal of timber, coal, or iron ore, if section 631 of the Internal Revenue Code of 1954 applies to such gain or loss,'."

On page 222, after line 6, to strike out:

"(c) EFFECTIVE DATE.—The amendments made by this section shall apply to iron ore mined in taxable years beginning after December 31, 1963."

And in lieu thereof, to insert:

"(c) EFFECTIVE DATE.—The amendments made by this section shall apply with respect to amounts received or accrued in taxable years beginning after December 31, 1963, attributable to iron ore mined in such taxable years."

On page 222, after line 13, to insert a new section, as follows:

"SEC. 229. INSURANCE COMPANIES.

"(a) CERTAIN MUTUALIZATION DISTRIBUTIONS MADE IN 1962.—

"(1) DEDUCTION FOR CERTAIN MUTUALIZATION DISTRIBUTIONS.—Section 809(d)(11) (relating to deductions in computing gain from operations in the case of certain mutualization distributions) is amended by striking out 'and 1961' and inserting in lieu thereof '1961, and 1962'.

"(2) APPLICATION OF SECTION 815.—Section 809(g)(3) (relating to application of section 815 to certain mutualization distributions)

[P. 1427]

is amended by striking out 'or 1961' and inserting in lieu thereof '1961, or 1962'.

"(b) ACCRUAL OF BOND DISCOUNT.—

"(1) LIFE INSURANCE COMPANIES.—Section 818(b) (relating to amortization of premium and accrual of discount) is amended by adding at the end thereof the following new paragraph:

"'(3) EXCEPTION.—For taxable years beginning after December 31, 1962, no accrual of discount shall be required under paragraph (1) on any bond (as defined in section 171(d)), except in the case of discount which is—

"'(A) interest to which section 103 applies, or

"'(B) original issue discount (as defined in section 1232(b)).

For purposes of section 805(b)(3)(A), the current earnings rate for any taxable year beginning before January 1, 1963, shall be determined as if the preceding sentence applied to such taxable year.'

"(2) MUTUAL INSURANCE COMPANIES.—Section 822(d)(2) (relating to amortization of premium and accrual of discount) is amended by adding at the end thereof the following new sentence: 'For taxable years beginning after December 31, 1962, no accrual of discount shall be required under this paragraph on any bond (as defined in section 171(d)).'

"(c) CONTRIBUTIONS TO QUALIFIED, ETC.,

PLANS.—Section 832(c)(10) (relating to deductions allowed in computing taxable income of certain insurance companies) is amended by inserting before the semicolon at the end thereof 'and in part I of subchapter D (sec. 401 and following, relating to pension, profit-sharing, stock bonus plans, etc.)'.

"(d) EFFECTIVE DATES.—The amendment made by subsection (a) shall apply to taxable years beginning after December 31, 1961. The amendment made by subsection (c) shall apply to taxable years beginning after December 31, 1953, and ending after August 16, 1954."

On page 224, after line 13, to insert a new section, as follows:

SEC. 230. REGULATED INVESTMENT COMPANIES.

"(a) TIME FOR MAILING CERTAIN NOTICES TO SHAREHOLDERS.—The following provisions (relating to notices to shareholders by regulated investment companies) are amended by striking out '30 days', wherever appearing therein, and inserting in lieu thereof '45 days':

"(1) Section 852(b)(3)(C),

"(2) Section 852(b)(3)(D)(i),

"(3) Section 853(c),

"(4) Section 854(b)(2), and

"(5) Section 855(c).

"(b) CERTAIN REDEMPTIONS BY UNIT INVESTMENT TRUSTS.—Section 852 (relating to taxation of regulated investment companies and their shareholders) is amended by adding at the end thereof the following new subsection:

"'(d) DISTRIBUTIONS IN REDEMPTION OF INTERESTS IN UNIT INVESTMENT TRUSTS.—In the case of a unit investment trust—

"'(1) which is registered under the Investment Company Act of 1940 and issues periodic payment plan certificates (as defined in such Act), and

"'(2) substantially all of the assets of which consist of securities issued by a management company (as defined in such Act),

section 562(c) (relating to preferential dividends) shall not apply to a distribution by such trust to a holder of an interest in such trust in redemption of part or all of such interest, with respect to the net capital gain of such trust attributable to such redemption.'

"(c) EFFECTIVE DATES.—The amendments made by subsection (a) shall apply to taxable years of regulated investment companies ending on or after the date of the enactment of this Act. The amendment made by subsection (b) shall apply to taxable years of regulated investment companies ending after December 31, 1963."

At the top of page 226, to insert a new section, as follows:

"SEC. 231. FOREIGN TAX CREDIT WITH RESPECT TO CERTAIN FOREIGN MINERAL INCOME.

"(a) LIMITATION ON AMOUNT OF FOREIGN TAXES TO BE TAKEN INTO ACCOUNT.—Section 901 (relating to taxes of foreign countries and possessions of the United States) is amended—

"(1) by redesignating subsection (d) as (e); and

"(2) by inserting after subsection (c) the following new subsection:

"'(d) FOREIGN TAXES OF MINERAL INCOME.—

"'(1) REDUCTION OF AMOUNTS TO BE TAKEN INTO ACCOUNT.—

"'(A) PER-COUNTRY LIMITATION TAXPAYERS.—In the case of a taxpayer to whom the limitation provided by section 904(a)(1) applies for the taxable year, the amount of taxes paid or accrued during the taxable year to any foreign country with respect to mineral income which would (but for this paragraph) be taken into account for purposes of this subpart shall be reduced by the amount (if any) by which—

"'(i) the amount of such taxes (or, if smaller, the amount of the tax which would be computed under this chapter with respect to such income determined without the deduction allowed under section 613), exceeds

"'(ii) the amount of the tax computed under this chapter with respect to such income.

"'(B) OVERALL LIMITATION TAXPAYERS.—In the case of a taxpayer to whom the limitation provided by section 904(a)(2) applies for the taxable year, the amount of taxes paid or accrued during the taxable year to all foreign countries with respect to mineral income which would (but for this paragraph) be taken into account for purposes of this subpart shall be reduced by the amount (if any) by which—

"'(i) the amount of such taxes (or, if smaller, the amount of the tax which would be computed under this chapter with respect to such income determined without the deduction allowed under section 613), exceeds

"'(ii) the amount of tax computed under this chapter with respect to such income.

"'(2) MINERAL INCOME.—

"'(A) IN GENERAL.—For purposes of this subsection, the term "mineral income" means income derived from sources without the United States from mineral activities, including, but not limited to—

"'(i) dividends received from corporations in which 5 percent or more of the voting stock is owned directly or indirectly by the taxpayer, to the extent such dividends are attributable to mineral activities, and

"'(ii) that portion of the taxpayer's distributive share of income of partnerships attributable to mineral activities.

"'(B) MINERAL ACTIVITIES.—For purposes of subparagraph (A), the term "mineral activities" includes the extraction of minerals from mines, wells, or other natural deposits, the processing of such minerals into their primary products, and the transportation, distribution, or sale of such minerals or primary products.'

"(b) EFFECTIVE DATE.—The amendments made by subsection (a) shall apply with respect to taxable years beginning after December 31, 1963."

At the top of page 229, to insert a new section, as follows:

"SEC. 232. AMOUNTS RECEIVED FROM EMPLOYER ON SALE OF RESIDENCE OF EMPLOYEE IN CONNECTION WITH TRANSFER TO NEW PLACE OF WORK.

"(a) TREATMENT OF CERTAIN AMOUNTS RECEIVED FROM EMPLOYER ON SALE OF RESIDENCE

of Employee in Connection With Transfer to New Place of Work.—

"(1) Part I of subchapter O of chapter 1 (relating to determination of amount of and recognition of gain or loss) is amended by adding at the end thereof the following new section:

"'Sec 1003. Amounts Received From Employer on Sale of Residence of Employee in Connection With Transfer to New Place of Work.

"'(a) General Rule.—If—

"'(1) property (in this section called "old residence") used by the taxpayer as his principal residence is sold by the taxpayer or his spouse pursuant to a sales contract entered into within the forced sale period for the old residence, and

"'(2) the taxpayer's employer, not later than one year after the date such sales contract was entered into, pays part or all of the sale differential on the old residence,

then, for purposes of this chapter, the amount so paid shall be treated by the taxpayer or his spouse (as the case may be) as an additional amount realized on the sale of the old residence to the extent that it does not exceed the lesser of (A) the sale differential, or (B) 15 percent of the gross sales price of the old residence.

"'(b) Limitations.—

"'(1) Period of employment.—This section shall not apply unless, for the six-month period ending on the day on which the taxpayer commences work at the new principal place of work, he was an employee of the employer.

"'(2) Location of new place of work.—This section shall not apply unless the taxpayer's new principal place of work—

"'(A) is least 20 miles farther from the old residence than was his former principal place of work, or

"'(B) if he had no former principal place of work, is at least 20 miles from the old residence.

"'(c) Definitions; special rules.—For purposes of this section—

"'(1) Forced sale period.—The term "forced sale period" means the period beginning 90 days before, and ending 180 after, the date on which the taxpayer commences work as an employee at the new principal place of work.

"'(2) Sale differential.—The term "sale differential" means the amount by which—

"'(A) the appraised value of the old residence, exceeds

"'(B) the gross sales price of the old residence reduced by the selling commissions, legal fees, and other expenses incident to the transfer of ownership of the old residence.

"'(3) Appraised value.—The appraised value of the old residence is the average of two or more appraisals of fair market value made, on or after the valuation date and on or before the date on which the sales contract is entered into, by independent real estate appraisers selected by the employer, but shall not exceed the fair market value. Determination of appraised value shall be made as of the valuation date.

"'(4) Valuation date.—The term "valuation date" means the date selected by the employer for purposes of determining the amount to be paid with respect to the sale differential. Such date shall be on or before the date the sales contract is entered into and within the forced sale period.

"'(5) Employer.—The term "employer" means the person who employs the taxpayer as an employee at the new principal place of work. Such term includes any predecessor or successor corporation and any parent corporation or subsidiary corporation. For purposes of the preceding sentence, the determination of whether a corporation is a parent corporation or a subsidiary corporation shall be made under subsections (e) and (f) of section 425 but by reference to the

[*P. 1428*]

date on which the taxpayer commences work as an employee at the new principal place of work (in lieu of as of the time of the granting of the option).

"'(6) Exchanges.—An exchange by the taxpayer or his spouse of an old residence for other property shall be treated as a sale.

"'(7) Tenant-stockholder in a cooperative housing corporation.—References to property used by the taxpayer as his principal residence includes stock held by a tenant-stockholder (as defined in section 216) in a cooperative housing corporation (as defined in such section) if the house or apartment which the taxpayer was entitled to occupy as such stockholder was used by him as his principal residence.

"'(d) Regulations.—The Secretary or his delegate shall prescribe such regulations as may be necessary to carry out the purposes of this section.'

"(2) The table of sections for part I of subchapter O of chapter 1 is amended by adding at the end thereof the following:

"'Sec. 1003. Amounts received from employer on sale of residence of employee in connection with transfer to new place of work.'

"(b) Effective Date.—The amendments made by subsection (a) shall apply to amounts paid with respect to sales contracts entered into after December 31, 1963, in taxable years ending after such date."

At the top of page 272, to change the section number from "220" to "233".

On page 287, line 6, to change the section number from "221" to "234".

On page 292, line 2, after the word "income", to strike out: "'means, for any taxable year beginning after December 31, 1963, the amount (if any) by which—

"'(A) the sum of the adjusted class A capital gain and the adjusted class B capital gain, exceeds

"'(B) the deduction allowable under section 1202(a).

The term "capital gain net income" means, for any taxable year beginning before January 1, 1964,'"

And insert "means".

On page 300, after line 4, to strike out:

"(B) the sum of—

"(i) 21 percent of the adjusted class A capital gain, and

"(ii) 25 percent of the adjusted class B capital gain."

And in lieu thereof, to insert:

"(B) an amount equal to 25 percent of the excess of the net long-term capital gain over the net short-term capital loss."

On page 301, after line 21, to insert:

"(c) AMENDMENT OF SECTION 144.—Section 144 (relating to election of standard deduction) is amended by adding after subsection (c) (as added by 112(c) (2) of this Act) the following new subsection:

"'(d) INDIVIDUALS ELECTING INCOME AVERAGING.—In the case of a taxpayer who chooses to have the benefits of part I of subchapter Q (relating to income averaging) for the taxable year—

"'(1) subsection (a) shall not apply for such taxable year, and

"'(2) the standard deduction shall be allowed if the taxpayer so elects in his return for such taxable year.

The Secretary or his delegate shall by regulations prescribe the manner of signifying such election in the return. If the taxpayer on making his return fails to signify, in the manner so prescribed, his election to take the standard deduction, such failure shall be considered his election not to take the standard deduction.'"

On page 302, at the beginning of line 17, to strike out "(c)" and insert "(d)".

On page 304, at the beginning of line 5, to strike out "(d)" and insert "(e)".

On page 304, at the beginning of line 24, to strike out "(e)" and insert "(f)".

On page 305, at the beginning of line 10, to strike out "(f)" and insert "(g)".

On page 306, line 17, after the word "Act", to insert "and if he elects to have subsection (e) of such section 1307 apply) section 170 (b) (5) of such Code as amended by this Act shall not apply to charitable contributions paid in such taxable year."

On page 306, after line 20, to insert a new section, as follows:

SEC. 235. SMALL BUSINESS CORPORATIONS.

"(a) OWNERSHIP OF CERTAIN STOCK DISREGARDED.—Section 1371 (relating to definition of small business corporation) is amended by adding at the end thereof the following new subsection:

"'(d) OWNERSHIP OF CERTAIN STOCK.—For purposes of subsection (a), a corporation shall not be considered a member of an affiliated group at any time during any taxable year by reason of the ownership of stock in another corporation if such other corporation—

"'(1) has not begun business at any time on or after the date of its incorporation and before the close of such taxable year, and

"'(2) does not have taxable income for the period included within such taxable year.'

"(b) CERTAIN DISTRIBUTIONS OF MONEY AFTER CLOSE OF TAXABLE YEAR.—Section 1375 (relating to special rules applicable to distributions of electing small business corporation) is amended by adding at the end thereof the following new subsection:

"'(e) CERTAIN DISTRIBUTIONS AFTER CLOSE OF TAXABLE YEAR.—

"'(1) IN GENERAL.—For purposes of this chapter, if—

"'(A) a corporation makes a distribution of money to its shareholders on or before the 15th day of the third month following the close of a taxable year with respect to which it was an electing small business corporation, and

"'(B) such distribution is made pursuant to a resolution of the board of directors of the corporation, adopted before the close of such taxable year, to distribute to its shareholders all or a part of the proceeds of one or more sales of capital assets, or of property described in section 1231(b), made during such taxable year,

such distribution shall, at the election of the corporation, be treated as a distribution of money made on the last day of such taxable year.

"'(2) SHAREHOLDERS.—An election under paragraph (1) with respect to any distribution may be made by a corporation only if each person who is a shareholder on the day the distribution is received—

"'(A) owns the same proportion of the stock of the corporation on such day as he owned on the last day of the taxable year of the corporation preceding the distribution, and

"'(B) consents to such election of such time and in such manner as the Secretary or his delegate shall prescribe by regulations.

"'(3) MANNER AND TIME OF ELECTION.—An election under paragraph (1) shall be made in such manner as the Secretary or his delegate shall prescribe by regulations. Such election shall be made not later than the time prescribed by law for filing the return for the taxable year during which the sale was made (including extensions thereof) except that, with respect to any taxable year ending on or before the date of the enactment of the Revenue Act of 1964, such election shall be made within 120 days after such date.'

"(c) EFFECTIVE DATES.—The amendment made by subsection (a) shall apply with respect to taxable years of corporations beginning after December 31, 1962. The amendment made by subsection (b) shall apply with respect to taxable years of corporations beginning after December 31, 1957."

On page 309, line 12, to change the section number from "222" to "236".

On page 318, line 1, to change the section number from "223" to "237".

On page 32, after line 11, to strike out: "This paragraph shall not apply to the taxable year of a corporation if no other corporation which is a component member of such controlled group on the December 31 included in such corporation's taxable year has taxable income for its taxable year including such December 31." and in lieu thereof, to insert "This paragraph shall not apply to the taxable year of a corporation if—

"(A) such corporation is the only component member of such controlled group on the December 31 included in such corporation's taxable year which has taxable income for a taxable year including such December 31, or

"(B) such corporation's surtax exemption is disallowed for such taxable year under any provision of this subtitle."

On page 325, line 23, after the word "December", to strike out "31," and insert "31".

On page 327, after line 17, to strike out:

"(g) TOLLING OF STATUTE OF LIMITATIONS.—In any case in which a controlled group of corporations makes an election or termination under this section—

"(1) the statutory period for assessment of any deficiency against a corporation which is a component member of such group for any taxable year, to the extent such deficiency is attributable to the application of this part, shall not expire before the expiration of one year after the date such election or termination is made; and

"(2) if credit or refund of any overpayment of tax by a corporation which is a component member of such group for any taxable year is prevented, at any time on or before the expiration of one year after the date such election or termination is made, by the operation of any law or rule of law, credit or refund of such overpayment may, nevertheless, be allowed or made, to the extent such overpayment is attributable to the application of this part, if claim therefor is filed on or before the expiration of such one-year period."

And in lieu thereof, to insert:

"(g) TOLLING OF STATUTE OF LIMITATIONS.—In any case in which a controlled group of corporations makes an election or termination under this section, the statutory period—

"(1) for assessment of any deficiency against a corporation which is a component member of such group for any taxable year, to the extent such deficiency is attributable to the application of this part, shall not expire before the expiration of one year after the date such election or termination is made; and

"(2) for allowing or making credit or refund of any overpayment of tax by a corporation which is a component member of such group for any taxable year, to the extent such credit or refund is attributable to the application of this part, shall not expire before the expiration of one year after the date such election or termination is made."

On page 334, line 15, after "(2)", to strike out the comma and "but not including stock owned by the parent corporation which is constructively owned by such individual", and on page 335, line 2, after the word "such", to strike out "corporation;" and insert "corporation,".

On page 340, line 5, after "(D)", to strike out "The" and insert "Such".

[*P. 1429*]

On page 342, after line 21, to insert:

"(e) shall not be treated as owned by him for purposes of again applying such paragraphs in order to make another the constructive owner of such stock.

treated as excluded stock under subsection (c)(2), if by reason of treating such stock as excluded stock the result is that such corporation is not a component member of a controlled group of corporations."

On page 343, line 8, after the word "of", to insert "a corporation which is a member of", and in line 11, after the word "of", to strike out "a" and insert "such".

On page 347, line 3, after the word "or", to strike out "at least" and insert "more than".

On page 347, after line 9, to strike out:

"(c) CORPORATIONS ELECTING MULTIPLE SURTAX EXEMPTIONS.—If the surtax exemption is disallowed to a transferee corporation for any taxable year, section 1562(b) shall not apply with respect to such transferee corporation for such taxable year."

On page 347, at the beginning line 15, to strike out "(d)" and insert "(c)".

On page 348, after line 5, to strike out: "income tax) is amended—

"(A) by striking out 'then such deduction, credit, or other allowance shall not be allowed' at the end of the first sentence and inserting in lieu thereof 'then the Secretary or his delegate may disallow such deduction, credit, or other allowance'; and

"(B) by adding at the end thereof the following new subsection:

"'(d) CORPORATIONS ELECTING MULTIPLE SURTAX EXEMPTIONS.—If the surtax exemption is disallowed to an acquired corporation under subsection (a) for any taxable year, section 1562(b) shall not apply with respect to such acquired corporation for such taxable year.'"

And in lieu thereof to insert: "income tax) is amended by striking out 'then such deduction, credit, or other allowance shall not be allowed' at the end of the first sentence and inserting in lieu thereof 'then the Secretary or his delegate may disallow such deduction, credit, or other allowance'."

On page 350, after line 3, to insert a new section, as follows:

"SEC. 238. VALIDITY OF TAX LIENS AGAINST MORTGATEES, PLEDGEES, AND PURCHASERS OF MOTOR VEHICLES.

"(a) MORTGAGEES, PLEDGEES, AND PURCHASERS WITHOUT ACTUAL NOTICE OR KNOWLEDGE OF LIEN.—Section 6323(c) (relating to exception in case of securities) is amended—

"(1) by striking out the heading and inserting in lieu thereof 'EXCEPTION IN CASE OF SECURITIES AND MOTOR VEHICLES.—';

"(2) by striking out 'a security, as defined in paragraph (2) of this subsection,' in paragraph (1) and inserting in lieu thereof 'a security (as defined in paragraph (2) or a motor vehicle (as defined in paragraph (3))';

"(3) by inserting after 'such security' in paragraph (1) 'or such motor vehicle'; and

"(4) by adding at the end thereof the following new paragraph:

"'(3) DEFINITION OF MOTOR VEHICLE.—As used in this subsection, the term "motor vehicle" means a vehicle (other than a house trailer) which is registered for highway use under the laws of any State or foreign country.'

"(b) LIENS FOR ESTATE AND GIFT TAXES.—Section 6324 (relating to special liens for estate and gift taxes) is amended—

"(1) by striking out '(relating to transfers of securities)' in subsections (a) and (b) and inserting in lieu thereof '(relating to securities and motor vehicles)'; and

"(2) by striking out subsection (c) and inserting in lieu thereof the following:

"'(c) EXCEPTION IN CASE OF SECURITIES AND MOTOR VEHICLES.—The lien imposed by subsection (a) or (b) shall not be valid with respect to a security (as defined in section

6323(c)(2)) or a motor vehicle (as defined in section 6323(c)(3)) as against any mortgagee, pledgee, or purchaser of any such security or motor vehicle, for an adequate and full consideration in money or money's worth, if at the time of such mortgage, pledge, or purchase such mortgagee, pledgee, or purchaser is without notice or knowledge of the existence of such lien.'

"(c) EFFECTIVE DATE.—The amendments made by this section shall apply only with respect to mortgages, pledges, and purchases made after the date of the enactment of this Act.

On page 365, after line 13, to strike out:

"(a) PERCENTAGE METHOD OF WITHHOLDING. Subsection (a) of section 3402 (relating to requirement of withholding) is amended to read as follows:

"'(a) REQUIREMENT OF WITHHOLDING. Every employer making payment of wages shall deduct and withhold upon such wages (except as provided in subsection (j)) a tax equal to the following percentage of the amount by which the wages exceed the number of withholding exemptions claimed multiplied by the amount of one such exemption as shown in subsection (b)(1):

"'(1) 15 percent in the case of wages paid during the calendar year 1964, and

"'(2) 14 percent in the case of wages paid after December 31, 1964.'"

And in lieu thereof to insert:

"(a) PERCENTAGE METHOD OF WITHHOLDING.—Subsection (a) of section 3402 (relating to requirement of withholding) is amended by striking out '18 percent' and inserting in lieu thereof '14 percent'."

On page 366, after line 10, to strike out:

"(b) WAGE BRACKET WITHHOLDING.—Paragraph (1) of section 3402(c) (relating to wage bracket withholding) is amended to read as follows:

"'(1)(A) WAGES PAID DURING CALENDAR YEAR 1964.—At the election of the employer with respect to any employee, the employer shall deduct and withhold upon the wages paid to such employee during the calendar year 1964 a tax determined in accordance with the following tables, which shall be in lieu of the tax required to be deducted and withheld under subsection (a):

"*If the payroll period with respect to an employee is weekly*

And the wages are—		And the number of withholding exemptions claimed is—

At the top of page 372, to strike out:

"(B) WAGES PAID AFTER DECEMBER 31, 1964.—At the election of the employer with respect to any employee, the employer shall deduct and withhold upon the wages paid to such employee after December 31, 1964, a tax determined in accordance with the following tables, which shall be in lieu of the tax required to be deducted and withheld under subsection (a):".

And in lieu thereof, to insert:

"(b) WAGE BRACKET WITHHOLDING.—Paragraph (1) of section 3402(c) (relating to wage bracket withholding) is amended to read as follows:

"'(1) At the election of the employer with respect to any employee, the employer shall deduct and withhold upon the wages paid to such employee a tax determined in accordance with the following tables, which shall be in lieu of the tax required to be deducted and withheld under subsection (a):'".

At the top of page 378, to strike out.

"(c) WITHHOLDING OF TAX ON CERTAIN NONRESIDENT ALIENS.

"(1) Section 1441(a) (relating to general rule) is amended by striking out 'the tax shall be equal to 18 percent of such item.' and inserting in lieu thereof: 'the tax shall be equal to—

"'(1) 15 percent in the case of payments made during the calendar year 1964, and

"'(2) 14 percent in the case of payments made after December 31, 1964.'

"(2) Section 1441(b) (relating to income items) is amended by striking out '18 percent' and by inserting in lieu thereof '15 percent or 14 percent (as the case may be)'.

And in lieu thereof, to insert:

"(c) WITHHOLDING OF TAX ON CERTAIN NONRESIDENT ALIENS.—Subsections (a) and (b) of section 1441 (relating to withholding of tax on nonresident aliens) are amended by striking out '18 percent' and inserting in lieu thereof '14 percent.'"

On page 379, line 1, after the word "after", to strike out "December 31, 1963", and insert "the seventh day following the date of the enactment of this Act", and in line 4, after the word "after", to strike out "December 31, 1963" and insert "the seventh day following the date of the enactment of this Act.".

Mr. LONG of Louisiana. Mr. President, I am happy to announce to the Senate that we have just agreed to 152 amendments to the bill.

Mr. SMATHERS. The Senator from Louisiana is absolutely right. I interrupt myself to say this, because it is just the point I was trying to make this morning when I was under rather heavy castigation from some Senators, that sometimes we can make more progress even if it does seem as though the Senate is going slow. After one has been in the Senate for a short while, we come to realize that every Senator considers himself an expert on every problem which comes before the Senate, and he wants to be consulted about it. I do not believe we are all experts but we all seem to feel that way.

Mr. GORE. Mr. President, will the Senator from Florida yield?

Mr. SMATHERS. I am happy to yield.

Mr. GORE. I listened with amusement to the colloquy earlier in the day. I believe the distinguished junior Senator from Florida mistook it if he considers it castigation. I thought it was a clever job of defense.

Mr. SMATHERS. If one is on the giving end, it is needling. If one is on the receiving end, it is castigation. In any event, I think it demonstrates that the leadership always has some problems on these questions, why Senators cannot take over and say that they are ready, and therefore everyone else should be ready. It does not always follow that that is the best way to proceed.

I am delighted that the Senate has now adopted 152 amendments. That is great progress. I am sure that the President of the United States will be delighted to receive that information. Perhaps the telephones will not be in such constant use.

I am delighted that the Senator from Illinois is now present.

Mr. DIRKSEN. Which Senator from Illinois?

Mr. SMATHERS. The junior Senator from Illinois, the minority leader. The Senate has now adopted by unanimous consent 152 committee amendments. The junior Senator from Illinois and I were receiving some castigation this morning. By holding the line in the face

[*P. 1435*]

of that castigation and touching the bases that we must touch in this body of 100 men, where every Senator feels that he as an individual Senator has a right to be consulted on his views, and we must at least talk with him about the question, sometimes we make greater progress when we seem to be going slow, as we were this morning, and now we have proved our point.

Mr. DIRKSEN. Yes.

Mr. SMATHERS. We are making a great deal of progress.

Mr. President, there are so few things to boast about these days that I could not help boasting a little about that.

These profit figures are vitally important not only to American business but to all Americans, because investment is vital to all Americans. It is obvious under our system that business will not invest unless it can see a profit.

No head of a corporation is going to risk his stockholders' money on a venture that does not offer an adequate return.

No jobs are going to be provided and no incomes or tax revenues are going to

be raised by investments that are not made.

Obviously if jobs are going to be provided, it is the private sector of our economy, through capital investment, that is going to provide them.

We can, of course, create new jobs by continually increasing Government spending, and letting out bigger and bigger defense contracts that will mean more jobs, more income, more tax revenue, but of course more Government spending. In other words the Government is principal spender, architect of, and controller of the American economy under that particular weapon. That is the second theory about which I talked a moment ago in my colloquy with the able Senator from Tennessee. The Government would do it all. I have the feeling that certain Senators believe that that is the better way to proceed. However, fortunately, I think the majority of Senators on this side and on the other side of the aisle do not agree that that is the better way to proceed—to turn all the spending and the operation of the economy over to the Government.

I think the better way by far is to stimulate the private sector of the economy, to step up private consumer demand and at the same time give private business the additional investment incentives to modernize and build so as to make the most of that consumer demand.

I do not think there is any widespread opposition to the belief that the administration program of holding down on Federal expenditures and at the same time cutting taxes will prove effective in moving our economy ahead.

As the President indicated in his budget message, the estimated gross national product for 1964 would be $623 billion—an increase of more than 20 percent in 3 years. In dollar terms, this means that it would equal the largest year-to-year increase in total national output in the peacetime history of the United States.

We are all aware that with every passing month as the withholding rate stays at 18 percent, as under present law, instead of 14 percent as provided in this proposal, our economy is deprived of $800 million in additional spending power which it sorely needs.

I think that many of us have a tendency to overlook the importance of capital investment, to forget that ours is a market economy, and to ignore the responsibilities of the free enterprise system. Most people and most economists agree we need more demand. I agree. But I also think it is equally important if our system is to expand to maximum efficiency that we also have more investment. It is important not only for our domestic economy, but for international reasons as well.

Only by making the United States more attractive both for foreign and domestic investment capital, and by expanding our export trade, can we hope to maintain the significant improvement we have seen in our balance-of-payments picture in the last 6 months.

Only by increasing investment will our economy develop the dynamic expansionary momentum we need to keep domestic funds at home and attract foreign investment in greater quantity from abroad.

Only by increasing capital investment can we raise domestic productive efficiency to the point where our producers can overcome the increasing challenge from foreign producers in competitive markets at home and around the globe.

It is interesting to observe at that point that there have been unfavorable balances of payments for a number of years, but since we adopted the investment credit and since we changed the depreciation guidelines, we have found that by modernizing and improving our own industrial capacity, we have been better able to compete in the foreign markets. We have been better able to resist competition from foreign markets, with the result that while we have not finally solved the balance-of-payments deficit problem, nonetheless it has been reduced substantially, and since last June we seem to be on our way to the solution of the balance-of-payments problem. Certainly we hope so.

Only by increasing capital investment can we step up our rate of economic growth and move toward the time when we can plan and accomplish a balanced budget without skimping on national needs.

Investment alone, of course, is not enough, for our economy depends on both supply and demand, on both investment incentives and consumer demand. The pending measure is a balanced bill with direct and indirect incentives to both greater investment and greater consumption.

Through its net reduction in individual rates, the bill involves an initial increase of more than $8 billion in consumer spending, and then it goes up to $9.4 billion in the second year.

In this reliance on both consumer demand and investment incentive to achieve economic growth lies the economic balance of this bill.

The sizable share of tax reduction devoted to consumer demand is a tangible recognition that, if we are to lift actual output, our most pressing and immediate need is an increase in consumer demand.

The bill, in short, recognizes that the forces of consumer demand and investment stimulus are mutually reinforcing and that their interaction will provide our economy with a strength that neither would offer alone.

This is also a fair bill in terms of the distribution of individual tax reductions among the various income groups.

Eighty-five percent of American taxpayers earn $10,000 or less. These people, who now carry 50 percent of the tax load, will receive 60 percent of the benefits under the bill.

Taxpayers in the bottom income group—earning $3,000 or less—will get three times the percentage tax reduction of those in the top of the income group—earning $50,000 up.

We have heard previously, and will hear again in the course of this debate, that the person who makes $100,000 actually will have a larger increase in take-home pay under this bill than the man who makes $3,000 or $4,000 a year, and therefore the bill is not fair. The man who makes $100,000 and who may be in the 78- or 80-percent bracket, pays a large amount of money in taxes. Although his percentage of reduction will not be as great as that of most men in the low-income groups, he will actually receive more tax dollars back, because he has been paying more into the Treasury in the past. Even though the percentage of reduction for him is lower than it is for most men in the lower-income groups, he will receive more money as a result of the bill than the man who has been paying a very small tax.

It seems to me that the argument is unfair, is fallacious, because if we believe in a graduated tax—which we do—in the case of a tax increase, the income after tax for the man in the higher brackets must decrease more than for the man in the lower brackets. Conversely, when there is a decrease in taxes the income after taxes of the man in the upper brackets must increase more. It is obvious that the man who has given the most will get back more when there is a reduction than the man who has been paying considerably less.

The benefits of this tax cut will not be limited to the direct and immediate dollar benefits that will go to taxpayers as a result of the cut itself. As consumer purchasing power is increased, it will provide a vital and immediate stimulus to our economy.

A higher level of economic activity will benefit those who are working, by increasing the opportunities for advancement. Even more important, it will benefit those 4 million Americans who are now jobless—because only with a higher level of production and demand can we expect our economy to generate the millions of additional jobs that those who now cannot find jobs need, as well as those that will be needed each year in the years ahead, as our labor force grows in numbers each year.

The major goal of the entire tax program is to provide more jobs. At present, an estimated million jobs a year are lost

[*P. 1436*]

to automation. A million more will be required each year to meet the needs of new people entering the labor force.

It is impossible to predict with accuracy exactly how many jobs will be produced as a result of the tax cut, but it has been estimated that when fully effective, it will produce between 2 and 3 million additional new jobs each year. These are jobs that are vital to our Nation's youth, to our Nation's older people, and to our Nation's workers, consumers, and families.

The tax program will help in the war on poverty. It will help partly because, as more jobs are provided, there will be a greater chance that those new jobless can find work.

In short, this is a tax program which will benefit people, as anyone can see by considering what it does for taxpayers in various income brackets.

Again I want to emphasize that, in the final analysis, it is calculated to help people. In the final analysis, that is what we are concerned with doing. In the final analysis, they are the ones we should help.

Let me cite a few illustrations:

A married couple, with no dependents, with an income of $3,000, filing a joint return, taking the standard deduction, now pays $300 in taxes. Under the bill, the couple would pay $200, a reduction of $100, or 33 percent.

A married couple, with two dependents, with an income of $3,000, filing a joint return, taking a standard deduction, now pays $60 in taxes. Under this bill, the couple would pay no taxes.

On the average, those with incomes in the $3,000 to $5,000 range would have their taxes cut by over 27 percent.

A married couple with no dependents, and with a $5,000 income, filing a joint return, taking a standard deduction, now pays $660 in taxes. Under the bill, the couple would pay $501, a reduction of $159, or 24 percent.

A married couple, with no dependents, with a $5,000 income, filing a joint return, typical average itemized deductions, now pays $540 in taxes. Under the bill, the couple would pay $405, a reduction of $135, or 25 percent.

A married couple with two dependents,

and with an income of $5,000, filing a joint return, taking the standard deduction, now pays $420 in taxes. Under the bill, the couple would pay $290, a reduction of $130, or 31 percent.

A married couple with two dependents, with a $5,000 income, filing a joint return, taking the typical average itemized deductions, now pays $300 in taxes. Under the bill, the couple would pay only $218, a reduction of $82, or 27 percent.

On the average, those with incomes in the $5,000 to $10,000 range would have their taxes cut by nearly 21 percent.

A married couple, with no dependents, and a $10,000 income, filing a joint return, with standard reduction, now pays $1,636 in taxes. Under the new bill, the couple would pay only $1,342, a reduction of $294, or 18 percent.

A married couple, with no dependents, and a $10,000 income, filing a joint return, typical itemized average deductions, now pays $1,460 in taxes. Under this bill, the couple would pay only $1,201, a reduction of $259, or 18 percent.

It is interesting to observe, as we move from the $3,000 bracket up to the $10,000 bracket, that the percentage of reduction drops off as we move higher.

A married couple, with two dependents, and $10,000 income, filing a joint return, taking the standard deduction, now pays $1,372 in taxes. Under the bill, the couple would pay only $1,114, a reduction of $258 or 19 percent.

A married couple, with two dependents, a $10,000 income, filing a joint return, with typical itemized average deductions, now pays $1,196 in taxes. Under the new bill, the couple would pay only $973, a reduction of $223, or 19 percent.

On the average, those with incomes of more than $10,000, would have their taxes reduced by more than 15 percent.

In this bill we have tried to make special provision for elderly taxpayers.

There is great concern in the Nation over the fact that our elderly citizens have great difficulty surviving, economically speaking, because it is difficult for them to get jobs. They find that, every time the cost of living goes up, they are caught in the squeeze, because they live on fixed incomes. There is great concern in the Senate and the House, and throughout the Nation, about doing something for our elderly citizens.

I was happy to be one of those who joined with the able Senator from Connecticut, who now so regally presides over this body, in the amendment which made it possible for the elderly citizen with a wife to obtain a larger retirement income credit. That particular legislation, of which he is the author—and I wish I could have thought of it first and in connection with which I was happy to join the Senator from Connecticut—will be very much appreciated in the State of Florida.

Elderly taxpayers will also benefit substantially from the tax bill.

For example:

A single taxpayer over 65, with an income of $2,000 taking a standard deduction, now pays $120 in taxes. Under the bill, he would pay only $56, a reduction of $64 or 53 percent.

A single taxpayer over 65, with an income of $4,000, taking the standard deduction, now pays $488 in taxes. Under this bill, he would pay only $386, a reduction of $102 or 21 percent.

A married couple, both over 65, with an income of $3,000, filing a joint return, taking the standard deduction, now pays $60 in taxes. Under the bill, the couple would pay no tax.

A married couple, both over 65, with an income of $5,000, filing a joint return, taking the standard deduction, now pays $420 in taxes. Under the bill, the couple would pay only $290, a reduction of $130 or 31 percent.

The experience of the $6 billion tax reduction program carried out in 1954, is solid evidence of what can be achieved by adopting the course of the proposal before us. Two years after the enactment of the 1954 tax reduction program, our gross national product jumped from $363 billion in 1954 to $419 billion in 1956. Even at lower rates our tax revenues increased as a result. In 1954 our Federal tax revenues totaled $63.8 billion. In 1955 these tax revenues jumped well above their pre-tax-cut levels to a total of $72.8 billion.

Mr. LONG of Louisiana. Mr. President, will the Senator from Florida yield?

Mr. SMATHERS. I am happy to yield to the distinguished Senator from Louisiana.

UNANIMOUS-CONSENT AGREEMENT

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that at 4 o'clock on Monday, amendment No. 329, to be offered by the Senator from Connecticut [Mr. RIBICOFF], be the pending amendment, and that the time for debate on that amendment be equally divided between the author of the amendment and the Senator in charge of the bill, the Senator from Louisiana [Mr. LONG]; that when the Senate meets on Tuesday debate on the amendment be limited to 1 hour, to be equally divided, as I previously described; and that the Senate vote at the conclusion of that 1 hour of debate.

The PRESIDING OFFICER (Mr.

RIBICOFF in the chair). Is there objection?

Mr. DIRKSEN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. DIRKSEN. That will include amendment No. 329 submitted by the occupant of the chair, the Senator from Connecticut [Mr. RIBICOFF], and all amendments thereto. Is that correct?

Mr. LONG of Louisiana. Yes.

Mr. DIRKSEN. That the debate begin at 4 o'clock and that it run, equally divided, until the Senate adjourns on Monday; and then the debate will be resumed after the morning hour on Tuesday.

Mr. LONG of Louisiana. It would be well to specify also that the time on amendments to the Ribicoff amendment will be divided equally between the author of the amendment and the Senator from Connecticut, unless the Senator from Connecticut agrees with the amendment, in which event the time in opposition to the amendment be controlled by the Senator in charge of the bill, the Senator from Louisiana [Mr. LONG].

Mr. SMATHERS. Mr. President, reserving the right to object—and I shall not object—in order to get this matter more clearly in my mind, is my understanding correct, that at 4 o'clock on Monday the Senate will take up for consideration amendment No. 329, the so-called Ribicoff education amendment, and that that amendment will be debated without limitation as to time, however late the Senate sits on Monday?

Mr. DIRKSEN. Yes. It may be late.

Mr. LONG of Louisiana. And Senators will continue to debate amendments to that amendment.

Mr. SMATHERS. How shall we know how to divide the time?

Mr. LONG of Louisiana. When one side has spoken for a half hour, the other side is entitled to speak for one-half hour. The time will be equally divided.

[*P. 1437*]

Mr. SMATHERS. May I make a suggestion? Would it not be agreeable to have a specified time—for example, to take it up at 4 o'clock and proceed to debate it that evening for no longer than 4 hours, which would make it 8 o'clock at night, and that the time be equally divided? Then we would know what to divide.

Mr. DIRKSEN. The Senate may sit until 10 o'clock on Monday night. In that event there will be ample time for consideration of amendments to the Ribicoff amendment.

Mr. SMATHERS. I hope I am not inadvertently complicating the situation. However, it seems to me that once the Ribicoff amendment is taken up, the debate on it, until the time of the vote, will be pretty well germane to the Ribicoff amendment. If some specified time could be set that could be divided, it would help.

Mr. LONG of Louisiana. How about 5 hours?

Mr. DIRKSEN. With the time for debate limited to 4 hours, equally divided, and 1 hour on each amendment thereto, equally divided.

Mr. SMATHERS. That would be much more desirable, it seems to me.

Mr. DIRKSEN. And that all amendments be germane.

Mr. SMATHERS. Yes.

(At this point Mr. BENNETT took the chair as Presiding Officer.)

Mr. RIBICOFF. First I thank the distinguished Senator from Utah for his courtesy.

I wish to say to the minority leader that my understanding is that, beginning at 4 o'clock on Monday the order of business will be the so-called Ribicoff amendment, No. 329; that the Senate will proceed to debate that amendment for 4 hours, the time to be equally divided between the proponents; that in accordance with the suggestion of the minority leader, 1 hour be allowed on each amendment to the Ribicoff amendment, the time to be equally divided.

Mr. DIRKSEN. Yes; and that on Tuesday morning the time be equally divided and limited to the Ribicoff amendment.

Mr. RIBICOFF. That means that on Tuesday for 1 hour the time of debate will be equally divided between the proponents and the opponents, and that the Senate will proceed to vote 1 hour after the morning hour is concluded on Tuesday.

Mr. LONG of Louisiana. Yes.

Mr. SMATHERS. I wish to emphasize, after what happened earlier, when we were being castigated——

Mr. LONG of Louisiana. I hope the Senator will not object. We would like to have the unanimous-consent agreement agreed to.

Mr. SMATHERS. I will not object, but I wish to make these remarks.

Sometimes we must emphasize the fact that the leadership, even if one is as far down on the scale as I am, has certain responsibilities, among which is the responsibility of touching all bases. Sometimes greater speed can be made than may seem to be possible on the surface, by proceeding in that way.

So we took it hot and heavy from the Senator from Tennessee [Mr. GORE] and

the Senator from Illinois [Mr. DOUGLAS] today. The minority leader and I were accused of not wanting to get a quick vote; we were the ones who were delaying the bill. But since that particular colloquy occurred, 152 amendments have been agreed to.

The Senate has now agreed to a limitation of debate on a major amendment, and it is evident that we shall be finished with that particular amendment, if the Senate will convene at 10 o'clock on Tuesday morning, by 1 o'clock on Tuesday afternoon. By that time the amendment should be voted on one way or the other. So we are really making much progress. I find no fault with the position which the minority leader took earlier today. He had a responsibility to fulfill, and he did so with great courage.

The PRESIDING OFFICER (Mr. BENNETT in the chair). Is there objection to the unanimous-consent request? The Chair hears none, and it is so ordered.

The unanimous-consent agreement subsequently reduced to writing is as follows:

UNANIMOUS-CONSENT AGREEMENT

Ordered, That on Monday, February 3, 1964, at the hour of 4 o'clock, p.m., the Senate proceed to consider the amendment (No. 329) intended to be proposed by the Senator from Connecticut, Mr. RIBICOFF, to the pending bill H.R. 8363, the tax bill; that debate on said amendment continue for 4 hours, the time to be equally divided between the proponents and the opponents and controlled in the manner provided by the usual form; that after the hour of 8 o'clock, p.m., the Senate proceed to the consideration of any amendment that may be proposed to the so-called Ribicoff amendment, the time on any amendment thereto to be limited to 1 hour and equally divided between the mover of the amendment and Mr. RIBICOFF, provided he is opposed to any such amendment: *Provided,* That no amendment that is not germane to the provisions of said amendment No. 329 shall be received.

Ordered further, That on Tuesday, February 4, 1964, after the conclusion of the morning business, the Senate resume the consideration of the said amendment No. 329, and that debate on it continue for 1 hour, the time to be equally divided between the proponents and the opponents, and that at the expiration of said hour, the Senate proceed to vote on the question of agreeing to the amendment.

5211

Mr. RIBICOFF. Mr. President, now that the request has been agreed to, I believe there is no question that the distinguished Senator from Illinois [Mr. DIRKSEN] and the distinguished Senator from Tennessee [Mr. GORE] were "needling" in their earlier remarks this morning.

Mr. DIRKSEN. What were they doing?

Mr. RIBICOFF. Needling. But as a freshman Senator, I should like to say on the floor of the Senate, as I have said publicly around the country, that in a long experience in politicial life, in every branch of the government, I have never met or dealt with leadership on both the Republican and Democratic sides that has been so courteous and cooperative as are the distinguished men who lead the Senate on the Republican and Democratic sides of the aisle. They are thoughtful and courteous toward all 100 Senators. They are dedicated men, who seek the best for the country. We are fortunate in having the distinguished Senator from Montana [Mr. MANSFIELD] as the majority leader and the distinguished Senator from Illinois [Mr. DIRKSEN] as the minority leader. They always proceed, in the final analysis, to act for what they believe are the best interests of the Nation, taking into account the great winds of controversy and the diverse ideas that exist in the Nation at large. We represent 50 States, and the people of 50 States think differently, no matter how one or another would try to force their thinking into one groove.

Again, I express my thanks for the leadership on both sides of the aisle.

Mr. DIRKSEN. I thank the Senator from Connecticut.

5212

Mr. SMATHERS. I, too, thank the Senator from Connecticut.

Mr. LONG of Louisiana. Mr. President, will the Senator from Florida yield?

Mr. SMATHERS. I yield.

Mr. LONG of Louisiana. The Senator from Connecticut has described himself as a freshman Senator. The record should show that he is not a neophyte at the business of legislating. He is a former Governor of his State, a former Member of the House of Representatives, and a former member of the President's Cabinet. He is an able advocate or an able adversary depending on whichever side he decides to take on a particular issue. We all respect him for that.

Mr. RIBICOFF. I think the Senator from Louisiana.

Mr. SMATHERS. Any time I can have the able Senator from Connecticut on my side, I feel much more strengthened, and confidence pours out of each and every pore of my body.

Mr. LONG of Louisiana. Mr. President, will the Senator from Florida yield?

The PRESIDING OFFICER (Mr. RIBICOFF in the chair). Does the Senator from Florida yield to the Senator from Louisiana?

Mr. SMATHERS. I am happy to yield to the Senator from Louisiana, who is in charge of the bill.

Mr. LONG of Louisiana. We were

speaking of the progress that has been made. We have agreed tentatively to 152 amendments. We have agreed to vote not later than 1 hour after the Senate concludes its morning business on next Tuesday, on one of the most important, significant, and controversial amendments that will be offered to the bill.

I predict that with any sort of luck at all, the Senate will have voted by that time on another of the most important issues that will come before the Senate, namely, the capital gains proposal. So while we shall not have voted today on controversial amendments, we shall have set the stage so that, I believe, we can anticipate the passage of the bill some time next week.

Mr. SMATHERS. I completely agree with the able Senator from Louisiana, who is in charge of the bill. The agreements that we have been able to reach under his leadership today have been most useful. Frankly, I believe the bill will be passed or defeated—one way or

[*P. 1438*]

the other—certainly by Thursday or Friday of next week, which is what we have hoped for from the beginning of the debate.

Mr. LONG of Louisiana. As the Senator in charge of the bill, I express my gratitude both to the Democratic and Republicans Senators who had doubts about the progress of the bill. They have been considerate and cooperative in helping to make progress in the consideration of this important measure.

Mr. SMATHERS. I am sure the able Senator from Louisiana, in pursuing the goal of expediting the bill—which he has been doing so well—will continue to consult with the leadership on Tuesday. Possibly we may then be able to enter into a unanimous-consent agreement as to when the Senate might vote on the excise-tax amendment, the so-called Dirksen amendment. I would encourage him to do so. Since we are now in a happy situation, we might be able to continue the progress which we are making.

Mr. LONG of Louisiana. At the moment, we have made good progress from a procedural point of view. I wish we could make as good progress with substantive amendments. But we will worry about that later.

Mr. SMATHERS. Mr. President, England put into effect a program not basically different from the one we are now considering and is already reaping abundant economic benefits as a result.

The pending bill will breathe new life into our private economy.

It is a bill that will give our economy new weapons and new responsibilities to help it move with maximum momentum far closer to its enormous gross national product potential.

It is a bill that will contribute far more to the solution of our most pressing economic problems—unemployment, persistent deficits in our budget, and our international accounts—than any other proposal we have thus far had under discussion.

Mr. LONG of Louisiana. Mr. President, will the Senator from Florida yield?

Mr. SMATHERS. I yield.

Mr. LONG of Louisiana. I believe the Senator from Florida well recognizes that a large number of our business economists advise that the prosperity the country is now enjoying, or the recovery from the last depression or recession, is the longest continued period of recovery in the history of the country, except one. That was the recovery that started from the very depths of the depression in the 1930's, when the country's economy had fallen so far down that the recovery had to be a long, gradual one, and continued until the eruption of World War II.

In peacetime, minus war and minus a major depression, there has never been a period of recovery as long as the present one. Many persons feel that the reason the present recovery has continued for so long is that business has already been discounting the tax cut.

Mr. SMATHERS. What the Senator means by "discounting" is that business has been anticipating the eventual approval of a tax reduction bill.

Mr. LONG of Louisiana. Yes. In any event, money is being spent to improve equipment and to do other things necessary to produce additional commodities, to provide new jobs, and to sell products for which the demand will be created by the proposed tax cut.

If the tax cut should not now be approved, a large number of people, including myself, greatly fear for the consequences of the national economy.

With regard to a balanced budget, many persons share the view that if a tax cut is not passed, there will be a tremendous deficit at existing tax rates, because there will be a deep recession. If that should occur, the Government would have to increase spending to try to get the country out of the recession or depression, as the case may be, and the deficit thus incurred would be far greater than it would be if the tax bill were passed and a recession avoided.

Mr. SMATHERS. I thank the able Senator from Louisiana for his statement. One reason for the almost unan-

imous support for a tax cut is that businessmen have been encouraged to believe that the bill will be passed and that it will enable them to spend additional money for improving and modernizing their plants. That in itself will mean more jobs. They have already begun to procure the material that will be needed, and that is one of the factors which account for the economy doing as well as it has.

As the able Senator points out, we have had downturns regularly—at least every 33 or 34 months since the end of World War II, I believe; although we have had none recently, as the Senator said, because the business community has either "discounted" this bill or, to state it another way, has counted on its being passed. As a result, the improvement in our economic position has continued. However, the fact remains that it has not improved rapidly enough.

Sufficient jobs are not available. We must do something more. We cannot leave the situation in its present condition, and just say, "It is going along great now; and if we do nothing, it will continue to do very well."

Mr. LONG of Louisiana. Is the Senator from Florida aware of the fact that Raymond J. Saulnier, who formerly was Chairman of the Council of Economic Advisers, under President Eisenhower—serving during a Republican administration—made the statement: "As things stand now, the prospect of tax reduction has been so thoroughly built into tax expectations and plans, and also to some extent into the financial commitments of individuals, that it would be seriously deflationary to call it off."

This man, who was President Eisenhower's adviser under a Republican administration, said he believed this would be a very serious matter; and he said that to call off this tax cut, after business had begun to rely on it, feeling that it was a certainty to become law, could have a dangerous impact upon our economy. That is precisely what President Johnson's economic advisers tell us, and it is also what President Kennedy's economic advisers were telling him. So while some may not agree with them, the storm warning is out; and, in the main, the ablest economists in the United States agree with the Senator's argument that enactment of this tax reduction bill is a "must," and that every day of delay in its enactment is a real danger to the national economy.

Mr. SMATHERS. I totally agree with the able Senator from Louisiana; and I must say that is one of the reasons why I decry—and I know the Senator from Louisiana does, too—changing the emphasis of the bill. The business community is discounting it, as the Senator from Louisiana says—and as I say—in the high expectation that shortly there will be this tax reduction. The corporations are expecting a reduction of $2.4 billion and individuals expect to receive a $9.2 billion reduction. If we begin to reduce excise taxes—thus changing the emphasis of the bill—and if, as a result, it is necessary to increase the individual tax rate schedules, I am afraid the national economy will be greatly harmed, rather than helped.

From the time when the bill was reported by the House Ways and Means Committee and then was passed by the House—on September 30 of last year—these men have anticipated that the Senate would finally pass a somewhat similar bill, based on a similar reduction. If we tinker very much with this bill, then—instead of accomplishing some great good—we might suddenly—although inadvertently—frighten and astound the business leaders of the Nation by our inconsistency. In that case, I am afraid they might withdraw or renege on their plans to expand their businesses; and the result might be a sudden and very serious depression.

Mr. LONG of Louisiana. Mr. President, will the Senator from Florida yield further?

Mr. SMATHERS. I am happy to yield.

Mr. LONG of Louisiana. Those of us who support this bill subscribe to the theory that if the bill is enacted, we shall have a balanced budget, and even a budget surplus by 1967 or 1968; but that if the bill is not enacted, not only will there not be a balanced budget, but—even worse—there will be a recession, because a failure to reduce taxes would result in a definite decrease in business activity. And, of course, decreased business activity would mean greatly reduced revenues, which in turn would mean an end to our hopes to balance the budget. In addition, the millions of jobs which the bill would make available would not become available, and therefore the anticipated increase in the gross national production—and an increase to the extent of billions of dollars is anticipated—would not occur. Of course, expanded gross national production benefits, directly or indirectly, all 190 million of the people of the United States. Does the Senator from Florida agree?

Mr. SMATHERS. I agree entirely. If the bill is not enacted, then I believe—and many others agree with me—that at no time in the future can we expect to have a balanced budget. I concur in the statement made recently by Mr. Stewart Saunders, formerly president of the Norfolk & Western Railroad, and now

chairman of the board of the Pennsylvania Railroad Co., who—although he had been only a country boy—has worked his way to the top of perhaps the largest railroad in the United States.

Mr. Saunders said—as I recall—to the chairman of our committee, Senator BYRD of Virginia, whom I admire and love very much:

Mr. Chairman, we must change our method, if we are ever to get rid of these deficits. We have had them in 24 of the last 30 years, and we are in a chronic deficit position. I am afraid we shall stay there unless we free the private segment of the economy, by removing the deterrent of the $11.6 billions which is presently paid in taxes, and in that way stimulate business activity, and thereby increase the Government's revenues, and, as a result, bring about a balanced budget.

Mr. Saunders is not even a member of the party to which the Senator from Louisiana [Mr. LONG] and I belong; he is a well-known member of the other party, and is a conservative by every standard. Nevertheless, he told our committee that this is the only way to achieve the result all of us desire, and that we must proceed in this way if we are to avoid a series of chronic deficits similar to those we have been having.

Mr. LONG of Louisiana. I am sure the Senator from Florida realizes that nothing could have as great a stifling effect on initiative and business growth as a 91-percent tax rate on individual incomes. Consider the effect on the captains of American industry when they find themselves in such a tax bracket. As a result, they have very little incentive to expand or accelerate their business' activities. That is inevitably the result when they find they can retain only 9 cents of every dollar they earn. Although it is true that some of them find ways to manipulate their positions so as to keep their taxes low, in many respects some of the things they have to do to arrive at that result are frequently not in the national interest.

Mr. SMATHERS. I totally agree with the able Senator from Louisiana that, as reasonable and sensible members of the committee—I hope we are reasonable and sensible; certainly we try to be—we must reach the conclusion, on the basis of the best information we can obtain about every segment of our economic life, our social life, and our political life, and the best advice we can receive from all sources, that only by means of the enactment of this bill will it be possible for the Nation to put an end to the cycle of chronic and serious deficits.

American business supports the tax cut. The American people are overwhelmingly in support of a tax cut immediately. A recent Louis Harris survey indicated that the public favors an immediate tax reduction by an overwhelming majority—better than 2 to 1.

If our free enterprise system is to maintain this country as the first among nations both militarily and economically, let us get on with the job of assuring that our economy will make a maximum contribution to that system.

Since the pending bill is in the national interest, it merits the overwhelming support of the Congress.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that the order for the quorum call may be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LONG of Louisiana. Mr. President, I should like to say a few words about the problems involved in the controversial section 203(e) sent to us by the House of Representatives, and with which the majority of the Committee on Finance finds itself in agreement. Some large figures have been used in the discussion of the impact this would have on consumers and various and sundry other groups. It is the view of the majority of the committee that the transportation industry is a competitive industry, and that this industry should be permitted the same tax incentives in terms of a tax credit that is available to manufacturing industries.

According to some economists, transportation is a part of manufacture. In view of the fact that pipelines compete with other pipelines, and pipelines compete with the huge tanker fleets that sail the seas, one transporting one commodity and another transporting a competing commodity such as residual fuel oil, which in many instances can be provided on a B.t.u. basis at various points cheaper than gas, and in view of the fact that both those industries compete with the railroads, which haul coal in hopper cars and oil in tank cars, those industries should be encouraged to modernize, improve, and expand. That is the view which the Interstate Commerce Commission takes of the subject. The ICC has the responsibility of regulating the rates of the railroads, the barge lines, the trucking lines, and the bus lines. That Commission takes the view

that Congress intended that the transportation industry should have the tax credit as an incentive to modernize and improve that industry.

While it may have the power to do so, the Civil Aeronautics Board does not regulate the rates of the airlines. The airlines enjoy the full benefit of the 7-percent tax credit.

The tax credit has undoubtedly helped the airlines to buy new equipment and provide better and faster service, in many instances at lower cost than existed previously. The tax credit has already played a part in helping to modernize the railroads and provide new equipment, and to bring about better transportation service, in many instances at a lesser cost to the American people.

The Federal Power Commission takes a different view. The Federal Power Commission is of the view that the tax credit was not intended to benefit the pipelines themselves. They were to be required to pass the credit through to their users. The FPC seeks to do just that. Of course, if that is to be the result, from the point of view of the pipelines and the power companies, there would be no point in providing a tax credit.

None of the argument which I have heard against section 203(e) has been directed against section 203(e)(1). Section 203(e)(1) provides what the electric power companies and the telephone companies think would be fair in regulating them.

In other words, the proposal provides that they would pass through to the users the benefit of the tax credit, but only over the life of the product or the object that they buy. For example, if they should buy a large boiler and the boiler cost $1 million, or if they should install additional lines that would cost $1 million, they would have a tax credit of $70,000, and they would pass that amount through to their users over the life of the boiler or over the life of that line—perhaps 20 or 30 years. So the companies would pass a little through each year. Presumably they would have the benefit of the interest on the money during the period that the amount would be passed through. That is all they ask.

There is no logic in treating those utilities differently from the pipelines because a person has to have electricity in his home, whether one is heating his home with electricity or using it to operate a deep freeze or some major appliance. The fact nevertheless remains that that company is entitled to make a fair return on its investment, even if it has to make such return by charging a very high rate for the electricity that a consumer burns in a light bulb.

But there is a different problem with regard to the railroads and the pipelines. The Interstate Commerce Commission, with regard to both the pipelines and the railroads, has made it a point not to try to bring their rates down. The Commission is trying to keep them from bringing their rates down. The usual problem in the regulation of rail rates is that the railroad desires to cut its rates to a point at which it would be losing money in carrying traffic which would otherwise go to another carrier. The principal problem before the Interstate Commerce Commission has usually been to find some way to adjust the various differences so that neither a barge line nor a rail line will cut a rate so low that it would lose money and hurt the other carrier at the same time.

I have heard no objection to that part of section 203. No Senator has argued about that. Apparently the fire is directed to section 203(a)(2), which would accord to the pipelines the same treatment that is presently being enjoyed by the railroads, the barge lines, the shipping lines, the truck lines, and others. So the proposal would treat that competitor the same as the other transportation competitors are being treated by the commissions that regulate them, including the airlines.

The figure has been used on the floor of the Senate rather loosely that that could mean $600 million a year in additional charges to the consumer. That did not make any sense to the junior Senator from Louisiana when it was uttered and it does not make any sense to him now.

[*P. 1440*]

Another figure was used that the proposal could make a difference of $300 million per year in consumer rates. That did not make any sense to the Senator from Louisiana when it was uttered. It does not make any sense to him now.

So I undertook to find out exactly how much we are talking about when we say that the pipelines are entitled to the same treatment that is presently being accorded to railroads. The best I could make of it is that the figures would work out approximately as follows: There are presently before the Federal Power Commission applications to construct approximately $1 billion of facilities in the nature of pipelines. Not all of the applications will be granted.

In some instances three or four companies make application to construct a pipeline to the same point. The Com-

mission would be very much in error if it were to grant four or five carriers permits to build pipelines to one point. The only efficient way to operate would be to limit the utility to one pipeline. So in all probability about 50 percent of the applications would be rejected. It is likely that approximately two-thirds of them would be rejected. Then perhaps $300 million of pipelines would be constructed in a year. That is assuming that the $1 billion of applications could be processed in 1 year and that the pipelines could all be constructed in 1 year. That is entirely unlikely. It would be unlikely that more than half of the applications would be approved and contracted in 1 year. But assuming that they could be all processed and constructed in 1 year, the figure representing the amount of applications granted by the Commission would be $300 million, and 7 percent of that amount would be $21 million.

As the Senator from Louisiana understands, the tax incentive that Senators are looking at would be about $21 million. The Senator from Illinois [Mr. DOUGLAS] is not present, but he can refute what I am about to say in the RECORD if he cares to do so. When he uses the figure of $600 million, he is dreaming up hobgoblins. He is talking about a figure that is 20 times as large as the actual incentive figure about which we are talking, and even that figure may be high.

It is true that in the event the tax credit were denied to the pipelines and the case were pursued to the court of last resort, and that court decided against the pipelines, then the stage would be set to put pressure upon the Interstate Commerce Commission to proceed in a similar fashion against the railroads.

The Federal Power Commission generally spends its time trying to make the power companies bring their rates down; but the Senate, and the public, should realize that there is not going to be the efficient service there should be from any industry if that industry is not permitted to make a profit that is competitive with other industries. They all have to seek equity capital. They all have to borrow money, perhaps from New York banks or elsewhere, to finance their operations. If heavy taxes are placed on pipelines that are not placed on railroads, for example, if heavy taxes are placed on pipelines that are not placed on shipping companies or other competitors of the pipelines, pipeline services is restricted artificially, rather than letting competition decide what is the best service that can be provided users.

Many of the statements made on the Senate floor have left some people under the impression that the tax credit provision has something to do with rates consumers will pay for gas in New York, Philadelphia, Washington, and elsewhere. It does not. Those lines are already established. They would not be eligible for tax credit. The provision relates to new pipelines to be constructed to serve people who do not have such service now.

I wish to make the point that these pipelines will be constructed in places where people will be getting better fuel for lower prices than the consumers are receiving now. If a pipeline could not find enough customers to justify building it, the company would not build it, because it would lose money.

So, in order to justify the construction of the pipeline, someone has to see the prospect of making a profit commensurate with the risk of investing his money. Someone has to see the prospect of obtaining a sufficient profit to justify a loan and the venturing his own money in the pipeline.

When the product reaches the consumer, it will not be sold unless it is sold at a lower price than that which the consumer is now paying for a similar product, or will be sold at the same price for providing a better product.

Reference was made to the fact that consumers in Washington consume gas; and if this proposal had been the law, perhaps the consumers would be paying a little more than they are now. They might be paying exactly the same. The only difference would be that when the company built the pipeline, it would have had a little better tax situation than it has at the present time.

What did natural gas do for Washington, D.C.? Previously Washington homes had been heated by artificial gas manufactured from coal or oil. If one lived in a home or apartment heated with such gas, the person living there would have had to wash the walls down frequently to get rid of the residue from the inferior product of manufactured gas produced from coal or oil. The manufactured gas tended to accumulate a residue and tended to leave soot throughout the city. The atmosphere of Washington, D.C., is much cleaner today because this service was provided. We hope the same advantages will accrue to other communities that will use natural gas. The State of Louisiana has a very large amount of gas it would like to sell.

I point out that a good percentage of the gas belongs to the Federal Government, because it is beyond the 3-mile limit in the Gulf of Mexico. But it is

not going to do anybody any good unless someone constructs a pipeline to the gas, brings it to shore, and brings it to another pipeline, so it can be sold to consumers. What would happen? The Federal Government would make a vast amount of money, the companies would make a profit, and the consumers would have a better product at a much cheaper price.

One reason why the atmosphere over Washington is much cleaner than that over New York City, for example, is that most apartment houses in New York City are heated by residual fuel oil. In this city natural gas is used, which is a much cleaner product. It is a competitive product, and competitors should be treated alike.

I have been dismayed at efforts to eliminate section 203(e), which provides simply for justice and equity. I have said to those who oppose it that if they are to deny this relief to pipelines—and some of them come from States that do not have a significant amount of pipelines, but have railroads—the railroads should then be treated the same way. So should the shipping companies, and the trucklines. What was their answer? They do not want to go into that. They know the case is just and that the pipelines should receive this investment credit.

To some of those gentlemen the word "discrimination" is not a pleasant word, but they would discriminate as between legitimate businesses which are seeking to serve the public and make a profit.

I wished to make this statement to clarify the misunderstanding as to the figures and to show that the amount of money involved has been grossly exaggerated. Simple justice and equity demand that these transportation companies be treated the same.

[*February 3, 1964*]

[*P. 1644*]

ABSENTEES AND PROGRESS ON THE TAX BILL

Mr. MANSFIELD. Mr. President, it is my understanding that on Friday last, there were in the neighborhood of 30 absentees in the Senate. I am frank to say that the majority leader was necessarily among them. But I am also frank to say that I did not ask for any special consideration because I was unable to be on the floor that day. I did not ask that any vote or votes be put off because of my absence. I sought no understanding to that effect with any other Member, and I had no such understanding.

The fact is that I was unable to be present on Thursday, as well as on Friday; and on Thursday, there were votes which I missed. But thanks to the graciousness and consideration of the Senator from Virginia [Mr. ROBERTSON], for which I am most grateful, a live pair that had the effect of neutralizing my absence was arranged.

I fully expected that on Friday there would be additional votes for which I could not be present. It is entirely true, as was stated, that, along with others, the Senator from Illinois [Mr. DOUGLAS] and the Senator from Tennessee [Mr. GORE] were here, prepared to do the business of the Senate, despite their known opposition to substantial portions of the pending tax bill. They were prepared to help move the measure forward without delay. Indeed, may I say that there has not been any disposition on the part of Senators who do oppose this measure in whole or part to delay. They have acted most responsibly, expeditiously, and cooperatively in this matter from the outset; and I regret most sincerely that the large number of absences on Friday may have inconvenienced them in any way. Nevertheless, an excellent beginning was made on the tax bill on Friday, thanks in great part to their cooperation and to the efforts of the acting majority leader, the Senator from Florida [Mr. SMATHERS], the distinguished floor manager of the bill [Mr. LONG], and the distinguished minority leader, the Senator from Illinois [Mr. DIRKSEN]. I do hope that with most of the committee amendments now disposed of en bloc we shall move steadily and promptly toward the final disposition of this measure.

I want to say again that while it is invariably necessary for Senators to be absent on occasion, I would hope that no Member would expect the work of the entire Senate to be held up for that reason. I would hope that when these occasions do arise, Senators would be prepared to take their chances, insofar as votes are concerned. The majority leader has proceeded on that basis, as he did last Thursday and Friday, and it would be my hope that other Members would be similarly disposed.

Mr. LONG of Louisiana. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. LONG of Louisiana. I was compelled, for various and sundry reasons—partially the political situation in my State—to be absent a considerable portion of last year; but I tried to accommodate myself to the situation of other Senators and to the situation in the Senate; and I tried to agree that, so far as

I was concerned, the Senate would proceed to vote and, if possible, to accord me a pair on votes I had to miss.

Generally, it makes very little difference whether one Senator is absent, because most issues are not decided by a single vote; also, in most instances a Senator is able to arrange a pair, so that the result is the same as it would have been if he had been present and voting, insofar as voting on amendments is concerned.

On the other hand, it is a great inconvenience to the Senate if a Senator sends word that he does not want any action taken until he returns. Furthermore, if one Senator begins to do that, others will feel similarly privileged; and soon the Senate will be unable to take any action, because of the fact that many Senators will be absent and will not want any action taken until they return. In such a situation, it is as if 99 or even 100 Senators were absent.

Mr. MANSFIELD. The Senator from Louisiana is correct, and that has been done time and time again. I hope that from now on, no Senator will make such a request.

I repeat that, so far as I am concerned, I am willing to take my chances, and I hope other Senators will take the same position.

Furthermore, the use of the live pair should be given serious consideration by Senators on both sides, so that in the future it can receive the recognition and meaning that it used to receive in years past.

Mr. DOUGLAS. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. DOUGLAS. I thank the Senator from Montana for his characteristically generous statement, which I deeply appreciate.

I had hoped the Senate would take some definite votes on Friday, and thus would be able to move the bill further along. However, that situation is now a bygone; and I am ready to forget all about it. I appreciate very much the statement the Senator from Montana has made.

So far as I am concerned—and I believe I also speak for the Senator from Tennessee [Mr. GORE], the Senator from Wisconsin [Mr. PROXMIRE], and other Senators who propose to offer amendments, and who are critical of at least some portions of the bill—we shall not resort to delaying tactics. We shall offer

[*P. 1645*]

the amendments, and make our statements in regard to them. I hope there will be a full attendance of Senators, so that the amendments can be promptly considered and voted on.

I believe it would be unfortunate if amendments were to be offered when there was a very small attendance in the Senate, with the result that when the remaining Senators came to the Chamber, to participate in the vote, they would not be precisely certain as to what they would vote on, and would follow what they believed to be directives coming from the outside.

Again I thank the Senator from Montana.

I also thank the secretary for the majority, Mr. Valeo, who, I believe, behaved with complete rectitude in connection with this matter; and if any information to the effect that Senators on our side of the aisle would be able to absent themselves without incurring any risk was given, I am sure such information did not come from him. I have found Mr. Valeo to be completely honorable and completely reliable, and I regard him as a distinctly valuable addition to the Senate staff.

Mr. MANSFIELD. I thank the Senator from Illinois for his statement. He is always courteous, gracious, and understanding. I also thank him for his kind words about the secretary for the majority, Mr. Valeo, who is absolutely trustworthy and will give to all Senators the same information at all times.

[*P. 1669*]

REVENUE ACT OF 1964

Mr. TALMADGE obtained the floor.

Mr. LONG of Louisiana. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. TALMADGE. I am delighted to yield to my friend from Louisiana.

Mr. LONG of Louisiana. I believe that the Senator intends to address himself to the tax bill. Automatically the bill would come before the Senate at 2 o'clock. Since the Senator intends to address himself to that bill, I ask unanimous consent that the tax bill now be laid before the Senate.

[*P. 1670*]

There being no objection, the Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

Mr. TALMADGE. Mr. President, 1 year ago, when tax reduction legislation was proposed to this Congress, I shared with many here in this Chamber—and with many thoughtful citizens through-

out our land—the gravest doubts about its wisdom.

I did not doubt that tax reduction was desirable, for I was convinced that the removal of restrictive tax rates, which have so long helped dampen the historic American reliance upon private initiative and incentives, was long overdue.

But I was gravely concerned that the fiscal posture of this Nation was too warped, and too weakened with deficits and debt, to bear the burden of so large a tax reduction.

I will never cease to be concerned about the fiscal posture of this Nation as long as we have deficits—as long as we are adding to our debt instead of reducing it.

But I am encouraged by indications that the budgetary reins of this Nation are being pulled in, and that we seem to be taking positive steps toward fiscal soundness and solvency.

I am convinced that we can now vote for this tax bill in good conscience—and according to the severe dictates of prudence and frugality.

The new budget calls for estimated expenditures in fiscal 1965 of $97.9 billion, more than half a billion dollars below the level of the current fiscal year. It calls for new obligational authority of $103.8 billion—more than $4 billion under last year's request of $107.9 billion. It forecasts a deficit of $4.9 billion—less than half the deficit for the current year and less than half the widely anticipated deficit for next year. It proposes a reduction in civilian employment in the executive branch—not a reduction to be publicized now and by the end of the year to exist only on paper, but a reduction we can expect to actually occur by the steps the President has already taken to make certain that it will.

Mr. President, I cannot say that these reductions are all I would like to see. But they are more—far more—than I could see on any realistic horizon when the proposals for tax reduction were first presented.

I am also aware that budgetary reductions—and budgetary figures—are no always what they seem. But I have examined this budget with great care and with considered skepticism, and I am satisfied that this budget is relatively lean and hard. I am satisfied that its reductions in expenditures and in new obligational authority will be reflected in real savings this year, and for several years to come.

I do not pretend to endorse each item in this budget—but this is not the time, nor have we now the time or the need, to go into that kind of detail. We will have ample opportunity to deal with appropriations as the session goes on. Meanwhile, the need for this tax bill is urgent, and the important facts about our new budgetary and expenditure posture are simple and clear. I would like, briefly, to highlight these facts as I see them.

First, I recall how last year the figure of $98 billion had a habit of appearing and reappearing as the unalterable ceiling beyond which 1965 expenditures could not pass if the tax cut were at all to be justified.

That was the limit that the minority party in the House of Representatives proposed to set upon the expenditure estimate for 1965—or else foreclose upon the tax cut.

That was the limit upon expenditures that General Eisenhower said we should commit ourselves to until the budget was balanced—or else forgo the tax cut.

And that is the limit beyond which the new budget does not pass—the ceiling which the new budget, in fact, observes.

I realize that, from time to time, other assorted ceilings were suggested which the new estimates for the current and the coming year do not observe. But while ceilings can remain immutable and unmoved by either argument or event, men cannot. And I say that the new budget does generally meet reasonable conditions for frugality and prudence.

The fact that the reduction in expenditures was accomplished in the face of the so-called built-in increases of $3½ billion not only highlights that accomplishment—but far more importantly, it underscores the significance of the more than $4 billion drop in requests for new obligational authority.

Every Member of this Congress knows that while it is not beyond the pale of possibility for an administration to cut current spending, it is beyond the pale of probability. For current spending is born of past appropriations—of past proposals and approvals of new obligational authority. At any given time, a good half of current spending goes to pay old bills.

The way to cut spending is not to refuse to pay those bills—the way to cut spending is to cut down on new bills. And the way to cut down on new bills is to cut down on requests for new obligational authority—and on approvals for new obligational authority.

Last year, this Congress appropriated $6.5 billion less than it was asked to appropriate. This year, the President has met us at least half way by asking less. I will not say that I would not have preferred the President to have met us all the way by presenting a balanced budget—or that I would not have preferred greater savings in appropriations last year.

But I am impressed with the hard evidence—with the promise, not of word alone, but of deed as well—that this Congress is making an effort to prune spending, and that the administration is joining us in that effort.

In short, Mr. President, there are, I am convinced, solid grounds for hope that the day when once again the fiscal affairs of this country will be set aright, when once again we can conduct the business of government within the security of a balanced budget—that that day is now nearer at hand than it has been for years. And there are, I am convinced, equally solid grounds to expect that the tax bill will bring that day nearer yet.

For as the Congress and the administration unite in holding Federal expenditures down, there is every evidence that the tax cut will bring Federal revenues up by generating greater economic activity. This is no new and untried theory—it is a historical fact. I am sure that every Member of this Congress remembers how we cut taxes in 1954, and how within 2 years' time revenues exceeded pretax cut levels by 7 percent. Not only was that no isolated instance, but it reflected the consistent experience this country has had with major tax cuts throughout this century.

One of the most incisive and persuasive analyses of this question appeared just a year ago in Fortune magazine in an article authored by one of its editors, Max Ways.

Mr. Ways points out what we too often forget in our discussions of this tax bill—that:

> Our tax structure, even when its rates are left unchanged, tightens its restrictive grip on the economy in every year that the economy grows at all.

He shows for example that, as fast as our economy grows, the individual income tax grows even faster. In 1929, the individual income tax was only 1.1 percent of the gross national product; in 1952 it was 8 percent of the gross national product; and in 1962—despite the modest tax cut of 1954—it was 8.3 percent of the gross national product.

Mr. President, I say we can no longer afford the luxury of a tax system that bites the very hand that feeds it—that ultimately defeats its own purpose of raising adequate revenues by encroaching upon its very source of revenue.

I say that we must once again allow our private economy the freedom it needs to draw upon its own inherent resources for growth—that we must once again restore individual initiative and incentive and effort to the proud and prominent place in our economic life that they must have if our system is to grow and thrive.

This tax bill, I am convinced, is a program to promote economic growth by promoting economic freedom. It is a program that—vigorously accompanied by the expenditure control already in evidence—will restore balance to the fiscal affairs of this Nation by removing the imbalance that now exists between the public and private sectors of our economy.

Mr. President, let no one mistake the choice that now confronts us. No one could put it better than did the distinguished chairman of the House Ways and Means Committee, Mr. WILBUR MILLS, when he opened the House debate on the tax bill. He said:

> I am convinced that there are two roads the Government can follow. * * * I believe we are at the fork of those two roads today. One of these is the tax reduction road. The other is the road of Government expenditure increases.

[*P. 1671*]

I think that, with the new budget and with the record of this Congress last year on appropriations, we have already taken the better of those choices—that we are at last moving down the road toward fiscal soundness and solvency.

The passage of this tax bill will put us a lot further down that road—and make it a lot harder to turn back.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. TALMADGE. I am delighted to yield to my friend the distinguished Senator from Louisiana.

Mr. LONG of Louisiana. I congratulate the junior Senator from Georgia on the outstanding statement he has made on the subject of the tax bill. I should like to ask him if I correctly understand the point he has made; namely, that those who contend they want a balanced budget should realize that some of us feel that the problem is one for consideration by the Appropriations Committee, not by the Committee on Finance.

Mr. TALMADGE. The Senator from Louisiana is entirely correct. As I pointed out—and I thank my friend from Louisiana for his kind personal references to me—the way to control expenditures is by doing two things: first, to deny new obligational authority, and, second, to reduce appropriations. Of course, as the Senator so well knows, the Finance Committee has the obligation of raising the necessary revenue with which to pay appropriations, not to appropriate money or to approve obligational authority.

Mr. LONG of Louisina. Therefore, if the budget expenditures could be reduced and if Senators who are on the Appro-

priations Committee would vote to do that, it would be agreeable to many of us on the Finance Committee. We would be happy to see the foreign aid appropriations reduced, for example, and also to see certain other unnecessary expenditures reduced.

Mr. TALMADGE. The Senator from Georgia has so voted on many occasions. I point out that the Congress rendered an outstanding service last year in reducing requests of the budget by $6½ billion. If something like that could be done this year the budget might well be balanced next year.

Mr. LONG of Louisiana. I thank the Senator from Georgia.

I now ask that the Senate proceed to the consideration of the remaining committee amendment.

The PRESIDING OFFICER. The amendment will be stated.

The next committee amendment was on page 233, after line 10, to strike out:

SEC. 219. CAPITOL GAINS AND LOSSES

(a) ALTERNATIVE TAX, ETC.

(1) IN GENERAL.—

(A) ALTERNATIVE TAX.—Subsection (b) of section 1201 (relating to alternative tax on taxpayers other than corporations) is amended to read as follows:

"(b) OTHER TAXPAYERS.—If, for any taxable year, a taxpayer (other than a corporation) is allowed a deduction under section 1202, then, in lieu of the tax imposed by sections 1 and 511(b), there is hereby imposed a tax (if such a tax is less than the tax imposed by such sections) which shall consist of the sum of—

"(1) a partial tax computed on the taxable income reduced by an amount equal to the sum of—

"(A) 40 percent of the adjusted class A capital gain, and

"(B) 50 percent of the adjusted class B capital gain,

plus

"(2) an amount equal to the sum of—

"(A) 21 percent of the adjusted class A capital gain, and

"(B) 25 percent of the adjusted class B capital gain."

(B) DEDUCTION FOR CAPITAL GAINS.—Section 1202 (relating to deduction for capital gains) is amended to read as follows:

"SEC. 1202. Deduction for Capital Gains.

"(a) GENERAL RULE.—In the case of a taxpayer other than a corporation, a deduction from gross income shall be allowed equal to the sum of—

"(1) 60 percent of the adjusted class A capital gain, and

"(2) 50 percent of the adjusted class B capital gain.

"(b) SPECIAL RULE.—In the case of an estate or trust, the deduction allowable under subsection (a) shall be computed by excluding the portion (if any), of the gains for the taxable year from sales or exchanges of capital assets, which, under sections 652 and 662 (relating to inclusions of amounts in gross income of beneficiaries of trusts), is includible by the income beneficiaries as gain derived from the sale or exchange of capital assets."

(C) DEFINITIONS.—Section 1222 (relating to other terms relating to capital gains and losses) is amended to read as follows:

"SEC. 1222. OTHER TERMS RELATING TO CAPITAL GAINS AND LOSSES.

"(a) TERMS APPLICABLE TO ALL TAXPAYERS—For purposes of this subtitle—

"(1) SHORT-TERM CAPITAL GAIN.—The term 'short-term capital gain' means gain from the sale or exchange of a capital asset held for not more than 6 months, if and to the extent such gain is taken into account in computing gross income.

"(2) SHORT-TERM CAPITAL LOSS.—The term 'short-term capital loss' means loss from the sale or exchange of a capital asset held for not more than 6 months, if and to the extent that such loss is taken into account in computing taxable income.

"(3) NET SHORT-TERM CAPITAL GAIN.—The term 'net short-term capital gain' means the excess of short-term capital gains for the taxable year over the short-term capital losses for such year.

"(4) NET SHORT-TERM CAPITAL LOSS.—The term 'net short-term capital loss' means the excess of short-term capital losses for the taxable year over the short-term capital gains for such year.

"(b) TERMS APPLICABLE TO CORPORATIONS.—For purposes of this subtitle, in the case of a corporation—

"(1) LONG-TERM CAPITAL GAIN.—The term 'long-term capital gain' means gain from the sale or exchange of a capital asset held for more than 6 months, if and to the extent such gain is taken into account in computing gross income.

"(2) LONG-TERM CAPITAL LOSS.—The term 'long-term capital loss' means loss from the sale or exchange of a capital asset held for more than 6 months, if and to the extent that such loss is taken into account in computing taxable income.

"(3) NET LONG-TERM CAPITAL GAIN.—The term 'net long-term capital gain' means the excess of long-term capital gains for the taxable year over the long-term capital losses for such year.

"(4) NET LONG-TERM CAPITAL LOSS.—The term 'net long-term capital loss' means the excess of long-term capital losses for the taxable year over the long-term capital gains for such year.

"(5) NET CAPITAL GAIN.—The term 'net capital gain' means the excess of the gains from sales or exchanges of capital assets over the losses from such sales or exchanges.

"(6) NET CAPITAL LOSS.—The term 'net capital loss' means the excess of the losses from sales or exchanges of capital assets over the sum allowed under section 1211(a). For purposes of determining losses under this paragraph, amounts which are short-term capital losses under section 1212 shall be excluded.

"(c) TERMS APPLICABLE TO TAXPAYERS OTHER THAN CORPORATIONS.—For purposes of this subtitle, in the case of a taxpayer other than a corporation—

"(1) CLASS B CAPITAL GAIN.—The term 'class B capital gain' means gain from the sale or

exchange of a capital asset held for more than 6 months but not more than 2 years, if and to the extent such gain is taken into account in computing gross income.

"(2) CLASS B CAPITAL LOSS.—The term 'class B capital loss' means loss from the sale or exchange of a capital asset held for more than 6 months but not more than 2 years, if and to the extent that such loss is taken into account in computing taxable income.

"(3) CLASS A CAPITAL GAIN.—The term 'class A capital gain' means gain from the sale or exchange of a capital asset held for more than 2 years, if and to the extent such gain is taken into account in computing gross income.

"(4) CLASS A CAPITAL LOSS.—The term 'class A capital loss' means loss from the sale or exchange of a capital asset held for more than 2 years, if and to the extent that such loss is taken into account in computing taxable income.

"(5) NET CLASS B CAPITAL GAIN.—The term 'net class B capital gain' means the excess of class B capital gains for the taxable year over the class B capital losses for such year

"(6) NET CLASS B CAPITAL LOSS.—The term 'net class B capital loss' means the excess of class B capital losses for the taxable year over the class B capital gains for such year.

"(7) NET CLASS A CAPITAL GAIN.—The term 'net class A capital gain' means the excess of class A capital gains for the taxable year over the class A capital losses for such year.

"(8) NET CLASS A CAPITAL LOSS.—The term 'net class A capital loss' means the excess of class A capital losses for the taxable year over the class A capital gains for such year.

"(9) ADJUSTED CLASS B CAPITAL GAIN.—The term 'adjusted class B capital gain' means the net class B capital gain for the taxable year reduced by losses which reduce such net gain as provided in subsection (d).

"(10) ADJUSTED CLASS A CAPITAL GAIN.—The term 'adjusted class A capital gain' means the net class A capital gain for the taxable year reduced by losses which reduce such net gain as provided in subsection (d).

"(d) RULES FOR REDUCING NET CAPITAL GAINS BY CAPITAL LOSSES.—For purposes of paragraphs (9) and (10) of subsection (c) and for purposes of reducing any net short-term capital gain, if for a taxable year a taxpayer (other than a corporation) has a net short-term, net class B, or net class A capital loss, such loss shall reduce any net short-term, net class B, or net Class A capital gain for such year by applying paragraph (1), then paragraph (2), and then paragraph (3):

"(1) A net class A capital loss shall reduce first any net class B capital gain and then any net short-term capital gain.

"(2) A net class B capital loss shall reduce first any net class A capital gain and then any net short-term capital gain.

"(3) A net short-term capital loss shall reduce first any net class B capital gain and then any net class A capital gain."

(2) PROPERTY USED IN THE TRADE OR BUSINESS AND INVOLUNTARY CONVERSIONS—

[*P. 1672*]

(A) Subsection (a) of section 1231 (relating to property used in a trade or business) is amended to read as follows:

"(a) GENERAL RULE.—If, during the taxable year—

"(1) the recognized gains from sales or exchanges of property used in the trade or business, plus

"(2) the recognized gains from the compulsory or involuntary conversion (as a result of destruction, in whole or in part, theft or seizure, or an exercise of the power of requisition or condemnation or the threat or imminence thereof) of property used in the trade or business and of capital assets held for more than 6 months into other property or money,

exceed the recognized losses from such sales, exchanges, and conversions, each such gain or loss shall be considered as gain or loss from the sale or exchange of a capital asset. If such gains do not exceed such losses, such gains and losses shall not be considered as gains and losses from sales or exchanges of capital assets."

(B) Section 1231 is amended by adding at the end thereof the following new subsection:

"(c) SPECIAL RULES.—

"(1) GAINS AND LOSSES TAKEN INTO ACCOUNT.—For purposes of subsection (a)—

"(A) Any gain described in subsection (a) shall be included—

"(i) only if and to the extent taken into account in computing gross income, and

"(ii) only to the extent not required (by any provision of this subtitle other than this section) to be treated as gain from the sale or exchange of property which is neither a capital asset nor property described in this section.

"(B) Losses described in subsection (a) shall be included only if and to the extent taken into account in computing taxable income, except that section 1211 shall not apply.

"(C) Losses upon the destruction, in whole or in part, theft or seizure, or requisition or condemnation of property used in the trade or business and held for more than 6 months, or of a capital asset held for more than 6 months, shall be considered losses from a compulsory or involuntary conversion.

"(2) CERTAIN LOSSES FROM CASUALTY OR THEFT.—In the case of any property used in the trade or business, and in the case of any capital asset held for more than 6 months and held for the production of income, subsection (a) shall not apply to any loss, in respect of which the taxpayer is not compensated for by insurance in any amount, arising from fire, storm, shipwreck, or other casualty or from theft.

"(3) GAINS AND LOSSES TREATED AS CLASS B GAINS AND LOSSES.—In the case of a taxpayer other than a corporation, gain or loss—

"(A) from a sale, exchange, or conversion of property to which subsection (b) (2), (3), or (4) applies, and

"(B) which by reason of subsection (a) is considered as gain or loss from the sale or exchange of a capital asset,

shall be considered as class B capital gain or loss whether or not such property was held for more than 2 years."

(3) CERTAIN DITRIBUTIONS UNDER EMPLOYEES TRUSTS AND ANNUITY PLANS.—

(A) DISTRIBUTION UNDER EMPLOYEES' TRUSTS.—Section 402(a) (relating to taxabil-

ity of beneficiary of exempt trust) is amended—

(i) by adding at the end of paragraph (1) the following new sentence: "Any gain on the subsequent sale or other disposition of any such security by the distributee (or by any other person in whose hands the basis of such security is determined by reference to the basis of the security in the hands of the distributee) shall, to the extent of the amount of such net unrealized appreciation attributable to such security, be considered a gain from the sale or exchange of a capital asset held for more than 6 months but not more than 2 years.";

(ii) by adding immediately before the period at the end of the first sentence of paragraph (2) the words "but not more than 2 years"; and

(iii) by adding immediately before the last sentence of paragraph (2) the following new sentence: "Any gain on the subsequent sale or other disposition of any such security by the distributee (or by any other person in whose hands the basis of such security is determined by reference to the basis of the security in the hands of the distributee) shall, to the extent of the amount of such net unrealized appreciation attributable to such security, be considered a gain from the sale or exchange of a capital asset held for more than 6 months but not more than 2 years."

(B) DISTRIBUTIONS UNDER EMPLOYEE ANNUITIES.—Section 403(a)(2)(A) relating to capital gains treatment for certain distributions) is amended by adding immediately before the period at the end of the first sentence the words "but not more than 2 years".

(C) EFFECTIVE DATE.—

(i) The amendments made by subparagraphs (A)(ii) and (B) shall apply with respect to distributions or amounts paid in taxable years of the distributees beginning after December 31, 1963.

(ii) The amendments made by subparagraphs (A) (i) and (iii) shall apply with respect to securities which are sold or otherwise disposed of in taxable years beginning after December 31, 1963.

(4) SALE OR EXCHANGE OF PATENTS.—Subsection (a) of section 1235 (relating to the sale or exchange of patents) is amended by adding at the end thereof the following new sentences:

"In the case of a holder described in subsection (b)(1), any gain or loss on such a transfer shall be treated as class B capital gain or loss. In the case of a holder described in subsection (b)(2), any gain or loss on such a transfer shall be treated as class A, or class B, capital gain or loss depending on the period for which the property was held (or deemed held)."

(5) EMPLOYEE TERMINATION PAYMENTS.—Section 1240 (relating to taxability to employee of termination payments) is amended by striking out "6 months" and inserting in lieu thereof "6 months but not more than 2 years".

(b) UNLIMITED CAPITAL LOSS CARRYOVER.—Section 1212 (relating to capital loss carryover) is amended—

(1) by striking out "If for any taxable year the taxpayer" and inserting in lieu thereof:

"(a) CORPORATIONS.—If for any taxable year a corporation"; and

(2) by adding the following new subsection:

"(b) OTHER TAXPAYERS.—

"(1) To the extent, for any taxable year, a taxpayer, other than a corporation, has a net short-term net class B, or net class A, capital loss which does not reduce capital gains under the rules provided in section 1222(d), such loss, reduced as provided in paragraph (2), shall be carried forward and treated in the succeeding taxable year as a short term class B, or class A, capital loss, as the case may be, sustained in such succeeding year.

"(2) An amount equal to the excess of the sum allowable under section 1211(b) over the gains from sales or exchanges of capital assets for the taxable year shall reduce, in order, any net short-term class B, or class A, capital loss for the taxable year which does not reduce capital gains for such year under the rules provided in section 1222(d).

"(3) For purposes of this subsection, a net capital loss for a taxable year beginning before January 1, 1964, shall be determined under the applicable law relating to the computation of capital gains and losses in effect before such date, and the amount of any such capital loss so determined which such applicable law allows to be carried over to the first taxable year of the taxpayer beginning after December 31, 1963, shall be treated as a short-term capital loss occurring in such taxable year."

(c) TECHNICAL AMENDMENTS.

(1) Section 172(d)(2)(B) (relating to net operating loss deduction) is amended by striking out "long-term".

(2) Section 333(e)(2) (relating to noncorporate shareholders of certain liquidating corporations) is amended by striking out "short-term or long-term capital gain," and inserting in lieu thereof "short-term, class A, or class B capital gain,".

(3) Section 341(a) (relating to collapsible corporations) is amended by striking out "6 months" and inserting in lieu thereof "6 months but not more than 2 years or held for more than 2 years, as the case may be,".

(4) Section 584(c)(1) (relating to common trust funds) is amended—

(A) by striking out in subparagraph (B) wherever it appears "6 months" and inserting in lieu thereof "6 months but not more than 2 years", and

(B) by redesignating subparagraph (C) as subparagraph (D) and by inserting after subparagraph (B) the following new subparagraph:

"(C) as part of its gains and losses from sales or exchanges of capital assets held for more than 2 years, its proportionate share of the gains and losses of the common trust fund from sales or exchanges of capital assets held for more than 2 years;".

(5) Section 642(c) (relating to special rules for credits and deductions) is amended by striking out "6 months," and inserting in lieu thereof "6 months but not more than 2 years or held for more than 2 years, as the case may be,".

(6) Section 702(a)(2) (relating to income and credits of partners) is amended by striking out "6 months," and inserting in lieu thereof "6 months but not more than 2 years

or held for more than 2 years, as the case may be,".

(7) (A) Section 852 (relating to taxation of regulated investment companies and their shareholders) is amended by striking out subparagraphs (B) and (C) of subsection (b) (3) and inserting in lieu thereof the following:

"(B) TREATMENT OF CAPITAL GAIN DIVIDENDS BY SHAREHOLDERS.—A capital gain dividend shall be treated by shareholders, other than corporations, as a class A or class B capital gain to the extent so designated by the company. Shareholders which are corporations shall treat a capital gain dividend as a long-term capital gain.

"(C) DEFINITION OF CAPITAL GAIN DIVIDENDS.—For purposes of this part, a capital gain dividend is any dividend, or part thereof, which is designated by the company in a written notice mailed to its shareholders not later than 30 days after the close of its taxable year, as a distribution of class A or class B capital gain. In the case of a shareholder which is a corporation, if the aggregate amount designated as a capital gain dividend with respect to a taxable year of the company (including capital gains dividends paid after the close of the taxable year described in section 855) is greater than the excess of the net long-term capital gain over the net short-term capital loss of the taxable year, the portion of each distribution which shall be a capital gain dividend shall be only that proportion of the amount so designated which such excess of the net long-term capital gain over the net short-term capital loss bears to the aggregate amount so designated. In the case of a shareholder other than a corporation, if the aggregate amount designated as class A

[*P. 1673*]

capital gain, or as class B capital gain with respect to a taxable year of the company (including capital gains dividends paid after the close of the taxable year described in section 855) is greater than the adjusted class A, or adjusted class B capital gain, respectively—

"(i) the portion of each distribution which shall be treated as a class A capital gain shall be only that proportion of the amount so designated as class A capital gain which the adjusted class A capital gain bears to the aggregate amount so designated, and

"(ii) the portion of each distribution which shall be treated as a class B capital gain shall be only that proportion of the amount so designated as class B capital gain which the adjusted class B capital gain bears to the aggregate amount so designated.

For purposes of the preceding sentence, the adjusted class A or adjusted class B capital gain shall be computed as though the company were a taxpayer other than a corporation except that section 1212(a) shall apply in lieu of section 1212(b)."

(B) Section 852(b) (3) (D) is amended by striking out clauses (i), (ii), and (iii) and inserting in lieu thereof the following:

"(i) Every shareholder of a regulated investment company at the close of the company's taxable year shall, in the case of a corporation, in computing its long-term capital gains, and, in the case of a shareholder other than a corporation, in computing his class A and class B capital gains, include in his return for his taxable year in which the last day of the company's taxable year falls, such amounts as the company shall designate in respect of such shares in a written notice mailed to its shareholders at any time prior to the expiration of 30 days after the close of its taxable year, but the amount so includible by any shareholder shall not exceed that part of the amount subjected to tax in subparagraph (A) which he would have received if all of such amount had been distributed as capital gain dividends by the company to the holders of such shares at the close of its taxable year.

"(ii) For purposes of this title, every such shareholder shall be deemed to have paid, for his taxable year under clause (i), the tax of 25 percent imposed by subparagraph (A) on the amounts required by this subparagraph to be included in respect of such shares, in the case of a corporation, in computing its long-term capital gains, and, in the case of a shareholder other than a corporation, in computing his class A and class B capital gains, for that year; and such shareholder shall be allowed credit or refund, as the case may be, for the tax so deemed to have been paid by him.

"(iii) The adjusted basis of such shares in the hands of the shareholder shall be increased by 75 percent of the amount required by this subparagraph to be included in computing his capital gains."

(C) Section 852(b) (4) is amended to read as follows:

"(4) LOSS ON SALE OR EXCHANGE OF STOCK HELD LESS THAN 31 DAYS. If, under subparagraph (B) or (D) of paragraph (3) a shareholder of a regulated investment company is required, with respect to any share, to treat any amount as long term, class A, or class B capital gain, and such share is held by the taxpayer for less than 31 days, then any loss on the sale or exchange of such share shall—

"(A) in the case of a corporation, to the extent of such long-term capital gain, be treated as loss from the sale or exchange of a capital asset held for more than 6 months, or

"(B) in the case of a shareholder other than a corporation—

"(i) to the extent of such class A capital gain, be treated as loss from the sale or exchange of a capital asset held for more than 2 years, and

"(ii) to the extent of such class B capital gain, be treated as loss from the sale or exchange of a capital asset held for more than 6 months but not more than 2 years.

If there is a loss on the sale or exchange of such share which is less than the sum of such class A and class B capital gains, then a portion of such loss equal to the proportion which such class A capital gain bears to the sum of such class A and class B capital gains shall be a class A capital loss; and the remainder of such loss shall be a class B capital loss.

For purposes of this paragraph, the rules of section 246(c) (3) shall apply in determining whether any share of stock has been held for less than 31 days; except that '30 days'

shall be substituted for '15 days' in subparagraph (B) of section 246(c)(3)."

(8)(A) Section 857 (relating to the taxation of real estate investment trusts and their beneficiaries) is amended by striking out subparagraphs (B) and (C) of subsection (b)(3) and inserting in lieu thereof the following:

"(B) TREATMENT OF CAPITAL GAIN DIVIDENDS BY SHAREHOLDERS. A capital gain dividend shall be treated by the shareholders or holders of beneficial interests, other than corporations, as a class A or class B capital gain to the extent so designated by the real estate investment trust. Shareholders or holders of beneficial interests which are corporations shall treat a capital gain dividend as a long-term capital gain.

"(C) DEFINITION OF CAPITAL GAIN DIVIDEND. For purposes of this part, a capital gain dividend is any dividend, or part thereof, which is designated by the real estate investment trust in a written notice mailed to its shareholders or holders of beneficial interests at any time before the expiration of 30 days after the close of its taxable year as a distribution of class A or class B capital gain. In the case of a shareholder or holder of beneficial interest which is a corporation, if the aggregate amount designated as a capital gain dividend with respect to a taxable year of the trust (including capital gain dividends paid after the close of the taxable year described in section 858) is greater than the excess of the net long-term capital gain over the net short-term capital loss of the taxable year, the portion of each distribution which shall be a capital gain dividend shall be only that proportion of the amount so designated which such excess of the net long-term capital gain over the net short-term capital loss bears to the aggregate amount so designated. In the case of a shareholder or holder of a beneficial interest other than a corporation, if the aggregate amount designated as class A or as class B capital gain with respect to a taxable year of the trust (including capital gains dividends paid after the close of the taxable year described in section 858) is greater than the adjusted class A or adjusted class B capital gain, respectively—

"(i) the portion of each distribution which shall be treated as a class A capital gain shall be only that proportion of the amount so designated as class A capital gain which the adjusted class A capital gain bears to the aggregate amount so designated, and

"(ii) the portion of each distribution which shall be treated as a class B capital gain shall be only that proportion of the amount so designated as class B capital gain which the adjusted class B capital gain bears to the aggregate amount so designated.

For purposes of the preceding sentence, the adjusted class A or class B capital gain shall be computed as though the trust were a taxpayer other than a corporation except that section 1212(a) shall apply in lieu of section 1212(b)."

(B) Section 857 is amended by striking out paragraph (4) of subsection (b) and inserting in lieu thereof the following:

"(4) LOSS ON SALE OR EXCHANGE OF STOCK HELD LESS THAN 31 DAYS.—If, under subparagraph (B) of paragraph (3) a shareholder of, or a holder of a beneficial interest in, a real estate investment trust is required, with respect to any share or beneficial interest, to treat any amount as a long term, class A, or class B capital gain, and such share or interest is held by the taxpayer for less than 31 days, then any loss on the sale or exchange of such share or interest shall—

"(A) in the case of a corporation, to the extent of such long-term capital gain, be treated as loss from the sale or exchange of a capital asset held for more than 6 months, or

"(B) in the case of a shareholder other than a corporation—

"(i) to the extent of such class A capital gain, be treated as loss from the sale or exchange of a capital asset held for more than 2 years, and

"(ii) to the extent of such class B capital gain, be treated as loss from the sale or exchange of a capital asset held for more than 6 months but not more than 2 years.

If there is a loss on the sale or exchange of such share or interest which is less than the sum of such class A and class B capital gains, then a portion of such loss equal to the proportion which such class A capital gain bears to the sum of such class A and class B capital gains shall be a class A capital loss; and the remainder of such loss shall be a class B capital loss.

For purposes of this paragraph, the rules of section 246(c)(3) shall apply in determining whether any share of stock or beneficial interest has been held for less than 31 days; except that '30 days' shall be substituted for '15 days' in subparagraph (B) of section 246(c)(3)."

(9) The last sentence of section 1232(a)(2)(A) (relating to bonds and other evidences of indebtedness) is amended to read as follows: "Gain in excess of such amount shall, in the case of a corporation, be considered gain from the sale or exchange of a capital asset held more than 6 months or in the case of a taxpayer other than a corporation, be considered gain from the sale or exchange of a capital asset held for more than 6 months but not more than 2 years or held for more than 2 years, as the case may be."

(10)(A) Subsection (b) of section 1233 (relating to gains and losses from short sales) is amended to read as follows:

"(b) SHORT TERM AND CLASS B GAINS AND HOLDING PERIOD.—If gain or loss from a short sale is considered as gain or loss from the sale or exchange of a capital asset under subsection (a) and if on the date of such short sale substantially identical property has been held by the taxpayer—

"(1) for not more than 6 months (determined without regard to the effect, under the second sentence of this subsection, of such short sale on the holding period), or if substantially identical property is acquired by the taxpayer after such short sale and on or before the date of the closing thereof, any gain on the closing of such short sale shall be considered as a gain on the sale or exchange of a capital asset held for not more than 6 months (notwithstanding the period of time any property used to close such short sale has been held); or

"(2) in the case of a taxpayer other than a corporation, for more than 6 months but not more than 2 years (determined without regard to the effect, under the second sentence of this subsection, of such short sale on the holding period), any gain on the closing of such short sale shall be considered as a gain on the sale or exchange of a capital asset held for more than 6 months but not more than 2 years (notwithstanding the pe-

[P. 1674]

riod of time any property used to close such short sale has been held).

The holding period of such substantially identical property shall be considered to begin (notwithstanding section 1223, relating to the holding period of property) on the date of the closing of the short sale, or on the date of a sale, gift, or other disposition of such property, whichever date occurs first. The preceding sentence shall apply to such substantially identical property in the order of the dates of the acquisition of such property, but only to so much of such property as does not exceed the quantity sold short. For purposes of this subsection, the acquisition of an option to sell property at a fixed price shall be considered as a short sale, and the exercise or failure to exercise such option shall be considered as a closing of such short sale."

(B) Subsection (d) of section 1233 is amended to read as follows:

"(d) LONG TERM, CLASS A, AND CLASS B LOSSES.—If on the date of such short sale substantially identical property has been held by the taxpayer—

"(1) In the case of a corporation, for more than 6 months, any loss on the closing of such short sale shall be considered as a loss on the sale or exchange of a capital asset held for more than 6 months (notwithstanding the period of time any property used to close such short sale has been held, and notwithstanding section 1234).

"(2) In the case of a taxpayer other than a corporation—

"(A) for more than 2 years, any loss on the closing of such short sale shall be considered as a loss on the sale or exchange of a capital asset held for more than 2 years (notwithstanding the period of time any property used to close such short sale has been held, and notwithstanding section 1234), or

"(B) for more than 6 months but not more than 2 years, any loss on the closing of such short sale shall be considered as a loss on the sale or exchange of a capital asset held for more than 6 months but not more than 2 years (notwithstanding the period of time any property used to close such short sale has been held, and notwithstanding section 1234)."

(C) Paragraph (1) of section 1233(e) is amended to read as follows:

"(1) Subsection (b) or (d) shall not apply to the gain or loss, respectively, on any quantity of property used to close such short sale which is in excess of the quantity of the substantially identical property referred to in the applicable subsection. In the case of a taxpayer other than a corporation—

"(A) subsection (b)(1) or (d)(2)(A) shall not apply to the gain or loss, respectively, on any quantity of property used to close such short sale which is in excess of the quantity of the substantially identical property to which either subsection (b)(1) or (d)(2)(A) applies (determined without regard to this subparagraph), and

"(B) subsection (b)(2) or (d)(2)(B) shall apply only to the gain or loss, respectively, on the excess described in subparagraph (A), but only to the extent of the quantity of the substantially identical property to which either subsection (b)(2) or (d)(2)(B) applies (determined without regard to this subparagraph)."

(D) Section 1233(e)(4)(A) is amended by striking out "for not more than 6 months," in clause (i) and inserting in lieu thereof "in the case of a corporation, for not more than 6 months, or in the case of a taxpayer other than a corporation, for not more than 2 years," and by striking out "subsection (b)(2)" in the language following clause (ii) and inserting in lieu thereof "the second and third sentences of subsection (b)".

(E) Section 1233(f) is amended by striking out "subsection (b)(2)" each place it appears and inserting in lieu thereof "the second and third sentences of subsection (b)".

(11)(A) Section 1247 (relating to election by foreign investment companies to distribute income currently) is amended by striking out subparagraph (B) of subsection (a)(1) and inserting in lieu thereof the following:

"(B) designate in a written notice mailed to its shareholders at any time before the expiration of 45 days after the close of its taxable year the pro rata amount for the taxable year of the adjusted class A and adjusted class B capital gain (determined as though such corporation were a taxpayer other than a corporation except that section 1212(a) shall apply in lieu of section 1212(b)); and the portions thereof which are being distributed; and"

(B) Clause (i) of section 1247(a)(2)(A) is amended to read as follows:

"(i) the adjusted class A and adjusted class B capital gain referred to in paragraph (1)(B),"

(C) Subparagraph (C) of section 1247(a)(2) is amended to read as follows:

"(C) CARRYOVER OF CAPITAL LOSSES FROM NONELECTION YEARS DENIED.—In compueting the adjusted class A and adjusted class B capital gains referred to in paragraph (1)(B), section 1212 shall not apply to losses incurred in or with respect to taxable years before the first taxable year to which the election applies."

(D) Section 1247(c)(2) is amended by striking out "his long-term capital gains" and inserting in lieu thereof "in the case of a shareholder which is a corporation, its long-term capital gains, and in the case of a shareholder other than a corporation, his class A and class B capital gains";

(E) Subsection (d) of section 1247 is amended to read as follows:

(d) TREATMENT OF DISTRIBUTED AND UNDISTRIBUTED CAPITAL GAINS BY A QUALIFIED SHAREHOLDER.—Every qualified shareholder of a foreign investment company for any taxable year of such company with respect to which an election pursuant to subsection (a) is in effect shall—

"(1) if such shareholder is a taxpayer other than a corporation—

"(A) include in computing his class A or class B capital gain for his taxable year in which received, his pro rata share of the distributed portion of the adjusted class A or adjusted class B capital gain, respectively, and

"(B) include in computing his class A or class B capital gain for his taxable year in which or with which the taxable year of such company ends, his pro rata share of the undistributed portion of the adjusted class A or adjusted class B capital gain, respectively, or

"(2) if such shareholder is a corporation, include in computing its long-term capital gains—

"(A) for its taxable year in which received, its pro rata share of the distributed portion of the sum of the adjusted class A and adjusted class B capital gains, and

"(B) for its taxable year in which or with which the taxable year of such company ends, its pro rata share of the undistributed portion of the sum of the adjusted class A and adjusted class B capital gains.

For purposes of this subsection the adjusted class A and adjusted class B capital gains shall be determined as provided in subsection (a) (1) (B)."

(F) Subsection (i) of section 1247 is amended to read as follows:

"(i) Loss on Sale or Exchange of Certain Stock.

"(1) Shareholders other than corporations. If, under this section, any qualified shareholder other than a corporation treats any amount designated under subsection (a) (1) (B) with respect to a share of stock as—

"(A) class B capital gain and such share is held by the taxpayer for 6 months or less, then any loss on the sale or exchange of such share shall, to the extent of the amount treated as class B capital gain, be treated as a loss from the sales or exchange of a capital asset held for more than 6 months but not more than 2 years,

"(B) class A capital gain and such share is held by the taxpayer for 2 years or less, then any loss on the sale or exchange of such share shall, to the extent of the amount treated as class A capital gain, be treated as a loss from the sale or exchange of a capital asset held for more than 2 years, or

"(C) both class A and class B capital gains and such share is held by the taxpayer for 6 months or less and there is a loss on the sale or exchange of such stock which is less than the sum of the amount so designated, then an amount of such loss shall be treated as a loss from the sale or exchange of a capital asset held for more than 6 months but not more than 2 years which bears the same relation to such loss as the class B capital gain so designated bears to the sum of such class B and the class A capital gains so designated; and the remainder of such loss shall be treated as a loss from the sale or exchange of a capital asset held for more than 2 years.

"(2) Corporate shareholders. If, under this section, any qualified shareholder which is a corporation treats any amount designated under subsection (a) (1) (B) with respect to a share of stock as long-term capital gain and such share is held by the taxpayer for 6 months or less, then any loss on the sale or exchange of such share shall, to the extent of the amount treated as long-term capital gain, be treated as a loss from the sale or exchange of a capital asset held for more than 6 months."

(12) Section 1248(b) (relating to gain from certain sales or exchanges of stock in certain foreign corporations) is amended by striking out "6 months," each place it appears and inserting in lieu thereof "6 months but not more than 2 years or held for more than 2 years, as the case may be,".

(13) Section 1375(a) (relating to special rules applicable to capital gains of electing small business corporations) is amended to read as follows:

"(a) Capital Gains.—

"(1) Treatment in hands of shareholders.—The amount includible in the gross income of a shareholder as dividends (including amounts treated as dividends under section 1373(b)) from an electing small business corporation during any taxable year of the corporation, to the extent such amount is a distribution of property out of earnings and profits of the taxable year as specified in section 316(a)(2), shall be treated (i) as class A capital gain to the extent of the shareholder's pro rata share of the adjusted class A capital gain (computed by the corporation as though it were a taxpayer other than a corporation except that section 1212 (b)(2) shall not apply) for such taxable year, and (ii) as class B capital gain to the extent of the shareholder's pro rata share of the adjusted class B capital gain (computed by the corporation as though it were a taxpayer other than a corporation except that section 1212(b)(2) shall not apply) for such taxable year. For purposes of this paragraph, the adjusted class A capital gain or the adjusted class B capital gain shall be deemed not to exceed an amount equal to that portion of the corporation's taxable income (computed as provided in section 1373 (d)) for the taxable year which bears the same ratio to such taxable income as such adjusted class A capital gain or such adjusted class B capital gain (determined without regard to the provisions of this sentence) bears to the sum of such adjusted class A and adjusted class B capital gains.

"(2) Determination of shareholder's pro rata share.—A shareholder's pro rata share

[P. 1675]

of the adjusted class A or adjusted class B capital gain (computed as provided in paragraph (1)) for any taxable year shall be an amount which bears the same ratio to such adjusted class A capital gain or such adjusted class B capital gain as the amount of dividends described in paragraph (1) includible in the shareholder's gross income bears to the entire amount of dividends described in paragraph (1) includible in the gross income of all shareholders."

(d) Effective Date.—

(1) General rule.—Except as otherwise specifically provided, and except as provided by paragraph (2), the amendments made by this section shall apply to taxable years beginning after December 31, 1963.

(2) TRANSITION RULES.—

(A) DISTRIBUTIONS OF CAPITAL GAINS.—

(i) If a taxpayer, other than a corporation, is required to include as capital gain in his gross income for a taxable year beginning after December 31, 1963, an amount attributable to sales or exchanges of capital assets held for more than 6 months and such gain was realized in a taxable year beginning before January 1, 1964, by a person described in clause (iii), such amount shall be treated by such taxpayer as class B capital gain.

(ii) If a taxpayer, other than a corporation, is required to include as capital gain in his gross income for a taxable year beginning before January 1, 1964, an amount attributable to sales or exchanges of capital assets held for more than 6 months and such gain was realized in a taxable year beginning after December 31, 1963, by a person described in clause (iii), such amount shall be treated by such taxpayer as long-term capital gain.

(iii) This subparagraph applies in respect of a regulated investment company or a real estate investment trust to which subchapter M of chapter 1 of the Internal Revenue Code of 1954 applies, a foreign investment company to which section 1247 of such Code applies, an electing small business corporation to which subchapter S of chapter 1 of such Code applies, a common trust fund to which section 584 applies, a partnership, an estate, and a trust,

(B) LOSS ON SALE OR EXCHANGE OF CERTAIN STOCK. If a shareholder (or a holder of a beneficial interest), other than a corporation, in a regulated investment company, real estate investment trust, or foreign investment company is required for a taxable year beginning before January 1, 1964, under section 852(b)(3) (B) or (D), section 857(b)(3)(B), or section 1247(d), to treat an amount with respect to a share (or beneficial interest), as a long-term capital gain, and such share (or beneficial interest) is held by the taxpayer for less than 31 days (6 months or less in case of a shareholder of a foreign investment company), then a loss on the sale or exchange of such share in taxable year of such shareholder beginning after December 31, 1963, shall to the extent of such long-term capital gain, be treated as loss from the sale or exchange or a capital asset held for more than 6 months but not more than 2 years.

(C) REGULATORY AUTHORITY. The Secretary or his delegate shall prescribe such regulations as may be necessary to carry out the purposes of this subsection.

(D) MEANING OF TERMS. Terms used in this subsection shall have the same meaning as when used in chapter 1 of the Internal Revenue Code of 1954.

Mr. LONG of Louisiana. I believe that the case has been made, both in the committee report and in the Senate discussion, that the House amendment on capital gains should not be agreed to. There are a number of reasons for that. In the first place, notwithstanding the high rate of progression in the tax on the upper bracket income taxpayers, many of the people in the upper brackets find ways to avoid paying large amounts of taxes which the steep graduated rates would seem to demand of them. The most effective way to reduce tax liability seems to be by means of capital gains income and by taking advantage of the provision in the law relating to charitable contributions.

A Treasury study of the subject of capital gains indicates that persons with relatively high percentages of capital gains pay relatively low effective rates, considering their income.

For example, if persons making $2 million or more, have a high ratio of capital gains income, they pay an effective rate of about 20.9 percent under present law, or roughly 21 percent.

Persons having a low ratio of capital gains income, the same Treasury study shows, have an effective rate of tax of 56.7 percent.

I ask unanimous consent that the Treasury study be included in the RECORD at this point in connection with my remarks.

The PRESIDING OFFICER (Mr. WALTERS in the chair). Is there objection?

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Changes in effective tax rates from present law, under House bill, and under Finance Committee bill which returns present capital gain provisions, for high-income taxpayers with low, medium, and high proportions of capital gains

Adjusted gross income	Tax under present law	Tax under House bill [1]	Tax under Finance Committee bill	Tax reduction as percent of present law tax	
	Percent of realized income			House bill [1]	Finance Committee bill
	High proportion of capital gains				
$120,000	27.6	24.2	25.9	12.2	6.3
$170,000	25.4	22.4	24.5	11.9	3.6
$300,000	22.4	19.6	22.3	12.5	.4
$700,000	20.1	18.1	21.1	10.4	−4.5
$2,000,000	20.9	18.5	21.3	12.6	−1.9

Changes in effective tax rates from present law, under House bill, and under Finance Committee bill which returns present capital gain provisions, for high-income taxpayers with low, medium, and high proportions of capital gains

Adjusted gross income	Tax under present law	Tax under House bill [1]	Tax under Finance Committee bill	Tax reduction as percent of present law tax	
	Percent of realized income			House bill [1]	Finance Committee bill
	Medium proportion of capital gains				
$120,000	32.0	28.1	29.1	12.1	8.9
$170,000	31.6	27.8	29.2	11.8	7.5
$300,000	30.5	27.1	28.9	11.2	5.4
$700,000	26.3	23.1	25.4	12.3	3.5
$2,000,000	30.2	25.7	28.0	14.9	7.3
	Low proportion of capital gains				
$120,000	39.6	34.8	34.9	12.2	12.1
$170,000	42.2	37.0	37.2	12.4	11.9
$300,000	48.2	41.3	41.6	14.0	13.5
$700,000	47.6	39.9	40.6	16.3	14.8
$2,000,000	56.7	46.0	46.4	19.0	18.2

[1] Assumes that the 40-percent inclusion factor would be applicable to 90 percent of net capital gains.

NOTE.—Realized income is the adjusted gross income increased by the 50 percent of capital gains excluded in computing adjusted gross income. Realized income does not include tax-exempt interest and the deduction of depletion from gross income.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. MILLER. Does the Treasury study give any indication of how the capital gains impact works with respect to assets held within the periods envisioned by the House amendment? I mean as between class A and class B?

Mr. LONG of Louisiana. No; it does not.

Mr. MILLER. Would the Senator estimate that the bulk of the capital gain arises in the transfer of assets which have been held for less than 2 years?

Mr. LONG of Louisiana. No; the bulk of the gains involved would be with respect to assets which had been held for more than 2 years. As the Senator well knows, there is no tax on capital gains unless and until a person disposes of an asset, no matter how long he may have held it.

The appreciation in the value of assets, whether they be stocks or bonds or anything else, is, in effect, income to a person which is not taxable until he decides to sell the stock or bond.

If, under the various exemptions in the tax law, a person gives appreciated property either to a foundation or to some charitable or educational institution, the income never becomes taxable, either in his lifetime or after his lifetime.

Mr. MILLER. I am familiar with that point. As I understand the House-passed bill, the only change that would be made would be that if an asset were held for more than 2 years, the maximum capital gains rates would drop from 25 to 21 percent, and the amount to be reported on the income tax return would drop from half of the gain to 40 percent of the gain.

I thought it would be helpful if we had an idea of how much of the total

[*P. 1676*]

capital gains taxation is derived from assets which had been held for more than 2 years, because it is that area which is receiving the benefit under the House provision.

Mr. LONG of Louisiana. I should say that, overall, it is perhaps more than 50 percent of all capital gains income on assets held more than 2 years. If the Senator will turn to page 162 of the committee report, he will notice the great difference that is made so far as high bracket income-taxpayers are concerned. For example, if one reads table 11 in connection with table 12, on page 162 of the report, it will be seen that taxpayers having an adjusted income of more than $200,000 represent only about one one-hundredth of 1 percent of all taxpayers.

However, note that these taxpayers receive 16 percent of all capital gains income.

Taxpayers having incomes of more than $100,000 represent four one-hundredths of 1 percent of taxpayers, and they receive 24 percent of all capital gains income. That is a small percentage of all taxpayers; but, as the Senator can see, they would receive a large percentage of all capital gains income.

I ask unanimous consent that the two tables shown on page 162 of the committee report be printed at this point in the RECORD.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

TABLE 11.—*Capital gains, by income levels*

Returns with adjusted gross income of—	Comprise this percentage of all taxpayers—	But receive this percentage of all capital gains
$200,000 and over	0.0096 of 1 percent	16
$100,000 and over	0.04 of 1 percent	24
$50,000 and over	0.2 of 1 percent	35
$10,000 and over	8.7 percent	69
Less than $5,000	57.8 percent	17

Source: Treasury Department.

TABLE 12.—*Overall distributional effects of the House bill (including capital gains changes) and the Finance Committee bill (which retains present law capital gains treatment)*

Adjusted gross income class (in thousands of dollars)	Total tax reduction as percentage of present tax		Capital gains tax reduction in House bill as percentage of total present tax
	House bill	Finance Committee bill	
0 to 3	38.6	38.6	0.3
3 to 5	26.5	27.3	.3
5 to 10	20.1	20.9	.2
10 to 20	16.9	17.3	.4
20 to 50	16.0	15.8	1.0
50 to 100	13.5	12.3	2.0
100 to 200	12.2	9.7	3.4
200 to 500	12.4	8.1	5.0
500 to 1,000	12.1	5.7	7.2
1,000 and over	12.0	5.6	7.4
Total	18.9	19.1	.7

Source: Treasury Department.

Mr. MILLER. Mr. President, I am not certain that I understand the last column. If we add the figures shown in the last column, the total is more than 100 percent.

Mr. LONG of Louisiana. That column presents a cumulative total down to adjusted gross income levels of $10,000.

Mr. MILLER. Then the point the Senator from Louisiana is making is that people enjoying incomes of $100,000 or over would receive 40 percent of the total of capital gains, according to the last column.

Mr. LONG of Louisiana. It would be 24 percent. I was not totaling the figures. Those having incomes of more than $100,000 represent four one-hundredths of 1 percent of all taxpayers, and they receive at present 24 percent of all capital gains income. That is the adjusted gross income; it is after one deducts business expenses and after he deducts one-half of his capital gains. Those with adjusted gross income of $50,000 and over represent two-tenths of 1 percent of all taxpayers. They are getting 35 percent of all capital gains income.

Taxpayers having incomes of over $10,000 represent 8.7 percent of all taxpayers, and they receive 69 percent of all capital gains income.

By contrast, let us drop to a lower income level and see what the distribution of capital gains is to taxpayers having less than $5,000 income. Those taxpayers represent 57.8 percent—almost 60 percent—of all taxpayers, but they receive only 17 percent of all capital gains.

The point has repeatedly been made on the floor of the Senate by a number of Senators—especially the Senator from Tennessee [Mr. GORE] and the Senator from Illinois [Mr. DOUGLAS] that taxpayers having large incomes frequently do not pay a large percentage of their incomes in taxes. I placed in the RECORD a table to illustrate that point. The fact agreed that only one-half of capital gains are taxable is the principal reason for those low effective rates.

Mr. MILLER. I appreciate having the Senator from Louisiana point this information out, but I am still confused about the last column, which indicates that taxpayers having less than $5,000 income receive 17 percent of all capital gains. Is that correct?

Mr. LONG of Louisiana. Yes.

Mr. MILLER. The next group, moving up the column, consists of taxpayers having incomes of $10,000 and over, and they receive 69 percent of all capital gains.

Mr. LONG of Louisiana. I regret to say that this table may be somewhat confusing. If the Senator will proceed down the column, starting with taxpayers having $200,000 adjusted gross income and over, he will note that these taxpayers receive 16 percent of all captal gains.

The next group are those having incomes of $100,000 and over, and that $100,000 includes those making over $200,000.

Mr. MILLER. I understand. That is 24 percent. Then the groups proceed to

35 percent, to 69 percent, and 17 percent. Why it does not go to 100 percent, I cannot understand.

Mr. LONG of Louisiana. The last figure is cumulative in the other direction. It proceeds upward from those who have zero percentage of taxable income to $5,000.

Mr. MILLER. Surely it must proceed from those who make less than $5,000 to bring the figure up to 100 percent.

Mr. LONG of Louisiana. The missing figure would be for those having adjusted gross incomes between $5,000 and $10,000. They receive 14 percent of the capital gains.

Mr. MILLER. That clears up the problem. I suggest that the Senator from Louisiana modify the table he has placed in the RECORD so as to show that information, because as it is now constituted, I believe the table is confusing. Would the Senator be willing to do that? It would require the addition of one more line in the table.

Mr. LONG of Louisiana. I will undertake to see that the RECORD is not confused.

Mr. MILLER. Perhaps an explanatory note would suffice.

Mr. LONG of Louisiana. Yes.

Mr. MILLER. On the same point we are talking about, the Senator from Louisiana has shown where the great impact of capital gains benefits is, but I am sure he recognizes that one of the purposes of the House amendment, or the House provision, if not the only purpose, is to encourage the holding of capital assets for a longer period, rather than to make quick in-and-out profits. Does not the Senator from Louisiana believe that it might be beneficial to encourage the holding of capital assets for longer than 6-month periods by providing some preferential treatment in rates? For example, if a person makes an investment for 2, 3, or 4 years, why should not his capital gains benefit be a little better than that of someone who is in and out in a matter of 6 months?

Mr. LONG of Louisiana. By holding on to his asset longer, a person obtains a rate of return on his capital gains not reduced for taxes, for that much longer. The full asset is available to him, when otherwise a portion of it would be paid in taxes. He can earn a rate of return on this portion as long as he does not have to pay tax on it.

Mr. MILLER. There is no incentive for him to hold his assets for more than 6 months.

Mr. LONG of Louisiana. The very best that can be said in this regard is that a person who had $1 million of capital-gains income—which was all appreciation—and who proceeded to realize that income would have to pay part of it in taxes. However, he would certainly realize that the longer he kept that asset and did not sell it, the longer he could defer that tax liability and could earn income on that amount in the meanwhile. If when he passed away he had not sold that asset, the potential capital-gains tax liability would never accrue. So there is an incentive to keep such an asset.

The longer he was in possession of that valuable asset, which would include the 25 percent which otherwise would have gone into taxes, the longer he could make additional income on it.

Mr. MILLER. But in the case the Senator has mentioned, the tax would be the same regardless of whether the person realized a capital-gains profit in 6

[*P. 1677*]

months or whether he retained the asset for 5 years.

Mr. LONG of Louisiana. But there would be a substantial incentive to postpone a tax liability of one-quarter of a million dollars. He still would have the one-quarter of a million dollars; and he could use it in various and sundry ways to his advantage, so long as he postponed entering into a transaction which would make the tax due. So he would have the advantage of having $250,000 of assets which otherwise would have been taken from him in taxes if he had made a transaction in which he had realized a gain which was taxable.

Mr. MILLER. I realize that, and I appreciate the helpfulness of the Senator from Louisiana in pointing it out.

Is it is the conclusion of the Senator from Louisiana that it is not desirable for us to try to scale down the capital-gains tax rates according to whether a person holds his property for 6 months or whether he holds it for 1 year or 2 years or 5 years? Is that the policy the Senator from Louisiana favors?

Mr. LONG of Louisiana. Not precisely. I support the Treasury's view that this field needs reform, but that it should not be reformed in the wrong direction. In other words, the Treasury's recommendation was that this whole subject should be reformed, both by making the capital-gains treatment more favorable, and by making these gains subject to tax at death.

As for the argument in favor of the position taken by the House, I point out that the House version would make a very great reduction for those who profit from capital gains, because it would cut the tax both from the top and from the

bottom. In other words, at present only 50 percent is taxable, whereas under the House provision only 40 percent would be taxable, where the asset was held 2 years or more. That in itself would reduce by 20 percent the tax on capital gains.

In addition, a person who is paying in the 50-percent bracket would be benefited by the overall limitation of a 25-percent tax on capital gains. The House bill would have provided a reduction from 25 to 21 percent in this case where the asset is held over 2 years. In this case he receives an additional 14-percent reduction. This would appear to be the most favored group of taxpayers in the entire country, and they would receive a tax reduction on that portion of their income from capital gains over and above the reduction generally available.

If the Senator will examine the table which I placed in the RECORD earlier today, he will find that the classes of taxpayers in the brackets of $2 million and over who realize a high percentage of their income by means of capital gains are now paying at an effective rate of only 21 percent; whereas, those who have the same amount of income, but with only a small percentage of it coming from capital gains, are presently paying at an effective rate of 56.7 percent. So they are paying at more than twice the others' rate.

With regard to what the pending bill will do, the Senator from Iowa will note that the House version would have the effect of conferring a much higher percentage of tax reduction on those who realize a higher percentage of their income as capital gains, as compared to what the Senate committee version would do.

Actually, under the Senate committee version, those who received more than $2 million a year, with most of it in capital gains, would be paying a little more tax than is presently required, because of the loophole-tightening provisions elsewhere in the bill. In other words, those who have been the subject of the illustration used by the Senator from Tennessee—persons who have millions of dollars of income, but pay little tax—would pay more under the Senate Finance Committee version; but taxpayers with incomes of similar amount and who pay more than half of it in taxes would be substantially benefited by this version.

Mr. GORE. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. GORE. In this particular instance, I wish to compliment and congratulate the Senate Finance Committee upon its action. As the distinguished junior Senator from Louisiana knows, I have disagreed many times with the majority of the Senate Finance Committee. However, I am pleased to state that in this instance I voted with the majority, and I was highly pleased by the action of the Senate Finance Committee, which by a small majority voted to strike this provision out of the House version.

As the Senator from Louisiana has pointed out, under existing law this is an area of very preferential treatment, not only with respect to the inclusion of only 50 percent of gain in adjusted gross income, but also with respect to the maximum rate of 25 percent. In addition, many gains which are not in fact capital gains are so treated by the law. So even under present law, capital gains income is given very preferential treatment. However, the House version of the bill—as the able Senator has so well pointed out—would make the existing situation much worse in two respects, if I may repeat: first, by reducing the amount which must be included as income from 50 percent to only 40 percent; second, by reducing the maximum rate from 25 percent to 21 percent.

If the Senator from Louisiana will yield further, at this point I should like to call the attention of the Senate to what I believe to be a fact—and the junior Senator from Louisiana has just now indicated that it is also his belief—namely, that the preferential treatment of capital gains profits or income is one reason why persons with very large incomes pay a relatively low effective tax rate. Capital gains is by no means the only vehicle used to reduce effective rates; there are many other exclusions and deductions.

I wish to call attention to the chart which is displayed on the easel in the rear of the Chamber. It is constructed from statistics which have been supplied by the Treasury Department. Those statistics can be found on page 181 of the committee report. Contrary to the impression which many persons have gained—that all persons in the very high income groups pay the so-called confiscatory taxes about which we hear—this table shows that the highest rate among "typical" taxpayers is reached at an income of $100,000, and that under the House version of the bill the "typical" taxpayer in the $100,000 bracket—one with adjusted gross income of $100,000 a year—would pay, not the maximum 70 percent rate, but an effective rate of only 26.2 percent of his realized income, in taxes.

From there on, startling as it may appear, as the income goes up the tax rate goes down until we reach the "typi-

cal" taxpayer with a realized income of $1,500,000 a year, where the effective tax rate is reduced to less than 16 percent.

This has proved shocking to many people, but it is in accordance with the statistics of the Treasury. I did not select the term "typical." It was explained later that "typical" meant more or less the average.

Mr. LAUSCHE. Mr. President, will the Senator from Tennessee yield?

The PRESIDING OFFICER (Mr. NELSON in the chair). Does the Senator from Tennessee yield to the Senator from Ohio?

Mr. GORE. I yield.

Mr. LAUSCHE. Will the Senator from Tennessee inform me how that result is achieved, in the face of what was supposed to be a higher figure for those who pay only 16 percent? How does it come about?

Mr. GORE. The Senator has asked a key question: How do people with large annual incomes avoid paying much tax?

To begin with, there are loopholes in the law. One can take advantage of many of these loopholes, however, only if he has large financial resources. One man may be able to buy a painting for $50,000 and contribute it to an institution and have it valued at a quarter of a million dollars, but he must have the $50,000 and be able to invest in a painting in the first place.

What I am trying to say is that there are many loopholes in the law of which one can only take full advantage if he has large amounts of money.

Mr. DOUGLAS. Mr. President, will the Senator from Tennessee yield?

Mr. GORE. I shall be glad to yield when I have finished one more point on this chart.

We were told in executive session—and I am not violating any confidence; I am sure the Treasury Department would be glad to furnish the statistics in open session—that of the assets contributed to so-called charities, including private foundations, for which the taxpayer gets a deduction of the current value——

Mr. LONG of Louisiana. The fair market value.

Mr. GORE. The current fair market value, which is often arrived at by estimates—the average markup from cost, or basis in the hands of the donor, is 45 to 1.

Mr. LONG of Louisiana. Appreciation in value.

[*P. 1678*]

Mr. GORE. In other words, the average taxpayer who contributes assets to a foundation, school, museum, or something that is deemed to be organized for a charitable purpose——

Mr. LONG of Louisiana. Even to his own private foundation.

Mr. GORE. Even to his own private foundation, which may be a far cry from charity—he gets a tax deduction on the average of 45 times the cost of the assets. This is one way in which this low rate is accomplished, but only one of the many ways.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that the Senator from Tennessee may yield to the Senator from Illinois, with the understanding that I do not lose my right to the floor.

Mr. DOUGLAS. In addition to what the Senator from Louisiana and the Senator from Tennessee have been discussing, there is our old friend the depletion allowance, which greatly reduces the rate of taxation.

Mr. GORE. That is true, although this income is not reflected in adjusted gross income.

Mr. LONG of Louisiana. Since the Senator from Illinois has brought up the subject of depletion allowance, and he will be offering his depletion allowance amendment after a while, let me say that studies I have made indicate that insofar as the Senator wishes to contend that more income taxes should be levied against the oil companies and people who receive an income from oil, most of what he is talking about is at the corporate level. I believe the overwhelming bulk, about 80 percent, of what he is talking about with regard to depletion allowances, is at the corporate level, not at the personal level.

In addition, when the time comes to debate this question, I shall present some charts showing the amount of taxes that the oil companies actually are paying.

It will astound the Senator from Illinois, because while he looks upon the depletion allowance as an advantage that a manufacturing industry does not get, because it does not have the same problem, if we consider all the taxes the oil industry pays and take into account excise taxes, for example, those companies pay a high amount of taxes. It is doubtful whether one could justify increasing them. We shall reach that subject at the appropriate time, but I should like to say one additional thing——

Mr. GORE. Let me refer to my chart at that point.

Mr. LONG of Louisiana. Certainly.

Mr. GORE. No income from tax-exempt securities, no income that is tax exempt because of the depletion allowance and intangible drilling costs, is in-

volved in this chart. If Senators will refer to the table——

Mr. LONG of Louisiana. The Senator has all the capital gains included in his chart, I believe?

Mr. GORE. The Senator is correct.

Mr. LONG of Louisiana. And I would assume the chart of the Senator from Tennessee treats charitable contributions as though they had actually been a product of personal income realized in the first instance, which in my judgment they were. The taxpayer made the money, but we make the allowance. But one reason the effective rate comes down is that those people make large contributions to charities and, to be fair about it, they are legitimate and proper contributions. The Senator knows charitable contributions generally are limited. There is the 20-percent limitation, and the 30-percent limitation based on income; and in addition, there is the so-called limited charitable contribution which is available where the person has given 90 percent of his income in charity or taxes during 8 out of the past 10 years.

That latter provision was subject to severe question by the Senator from Tennessee, and certainly by the Senator from Illinois. If I remember correctly, I believe it became law as a result of a legitimate situation involving a Catholic nun who did not have a tax avoidance purpose as her intention, of course; but subsequently certain schemes have been developed which make the 100-percent charitable contribution deduction one of the finest tax-avoidance schemes in the entire Internal Revenue Code.

But, if one looks to the legislative intent that was involved at that point, he will see that it involved a legitimate intent at the time it was voted.

Mr. GORE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. GORE. I wish to emphasize a phrase which the Senator used. He said, "if the tax and the so-called charitable contribution together total 90 percent of income." For example, suppose a person is in the 70-percent bracket.

Mr. LONG of Louisiana. If the Senator will make it 87 percent, then he will be talking about the kind of people who would employ that practice.

Mr. GORE. I should like to use the 70-percent figure. Then all that person would be required to do to achieve a preferred status would be to contribute some paintings on which he had obtained a very hansome evaluation, or some old building that he needs to get rid of anyway, and on which he has a high estimated value, for the remaining 20 percent. Under present law he can donate the painting and get a reduction for it, even though he keeps it on his own wall as long as he lives. Another provision in the Senate bill, that is an improvement, would change that. I wish to be fair about this bill. There are a few items in the bill that are good.

Mr. LONG of Louisiana. The Senator is not getting at one of the principal loopholes that the Committee on Finance and also the Committee on Ways and Means seek to close. Suppose a taxpayer were to go to a professional tax consultant. I mean a good one. I do not mean one of the "fly-by-nights" who hang shingles in various places. I mean a person who has three or four college degrees and who makes a good income showing taxpayers how to keep their tax liabilities low. Suppose that taxpayer made $1,500,000 last year and paid out most of it in taxes, and that he expected to do the same thing again. As the law has stood up until now, one of the first things the professional tax consultant would do would be to explore the possibilities of establishing for that taxpayer personal holding companies. He would then find ways to contribute money to those personal holding companies, and the income on this money would be retained in those holding companies and the taxpayer would pay a very small amount of tax. He could perhaps reduce the amount of tax he would pay by 90 percent through holding the money in the holding companies rather than receiving it directly himself. The Senator is familiar with that practice.

The Senator knows that we have proposed a very effective set of amendments to the bill to prevent that result from occurring. I believe one reason that we are doing a good job is that the Treasury expert who helped to draft the proposals is one who, as a private practitioner of law, used to advise people how to set up devices of that sort. So I believe the Senator will find that there is another way in which we have undertaken to strike out what we believe to be loopholes that should be closed.

Incidentally, I have received enough protests to know that we must be squeezing someone with our proposal. There are a great many people who feel that we are going far beyond what they believe our legitimate intent might be.

In connection with what we have been discussing, I point out that there appeared in yesterday's issue of the New York Times, a most unfair editorial entitled "Recklessness on Taxes." That editorial seemed to assume that the Congress—and it used the term "Congress"—had done certain things merely because some Senator proposed that they

be done. It seems to be most unfair in the first place for the editors of that great newspaper to seek to blame the House of Representatives for something that the Senate is merely thinking about doing. The Senate has not agreed to do it. If I understand what was stated in the editorial to which I have referred, that newspaper seems to assume that the Congress has done something merely because a minority of Senators on the committee seem to think that that result should obtain.

It seems most unfair to me that writers of editorials should say that we are creating vast additional loopholes when, as a practical matter, we have proposed to strike out the $250 million item which, if I were a millionaire, would be the first thing I would be looking for to arrange things so that whatever small percentage of taxes I had failed to avoid, I could proceed to avoid in the future to a considerable degree. It seems to me that that is unfair when one considers the very large extent to which we are actually closing tax loopholes with the bill.

The chart submitted by the Senator fails to illustrate something which I believe would make his point even better. He has a line which would seek to arrive at a so-called average or typical taxpayer. The fact is that that line is arrived at by averaging two taxpayers together. At the $1,500,000 level, Senators will find one taxpayer who is paying 87 percent of his income in taxes.

[*P. 1679*]

There are very few. Then Senators will find another taxpayer who is paying from 1 to 5 percent of his income in taxes.

The Senator has arrived at that 17-percent point for a taxpayer whose income is $1,500,000 by averaging the income of those two taxpayers together—the one who is paying altogether too much in that prohibitive tax bracket, and the other who is paying not nearly enough.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. DOUGLAS. The Senator has made a very significant point. In fact, tables which I introduced some weeks ago indicate that in 1959, 20 Americans with incomes over $500,000 did not pay a single cent in taxes. I believe 15 of those had incomes over $1 million. They did not pay a single cent. Some of those men have not paid a single cent for 4 years in succession. We believe that there was one man who, from 1948 to 1960, received an income every year of over $1 million, and yet he never paid a cent in taxes.

Mr. LONG of Louisiana. The Senator has examined the tables. He did not analyze all of them. He analyzed the one which the Senator described on a television program. He thought that that one was misleading. That table involved a taxpayer who was alleged to have made $26 million and had paid no taxes in that year. The Senator corrected the RECORD after he put in that table, and I looked at it. I noted that it happened to involve an installment sale, in which only $10 million of the $26 million was collected, and therefore taxable in the year to which the Senator referred. So he was not talking about a $26 million sale, insofar as the installment sale was concerned. He was talking about a $10 million sale. Under the capital gains provision only one-half of that amount would have been taxable. The part that was taxable would have amounted to about $5 million. That individual had a loss carryforward of $3,900,000 from the previous year.

If I recall correctly, the man had spent an amount that considerably exceeded the $1,100,000, which was then taxable, in his attempt to find additional oil in that year. He was selling his oil properties. I assume that he was selling the entire field. But in doing so he was trying to find more oil and drilling more wells in trying to achieve that result.

I do not know whether the Senator has ever discussed the oil problem and intangible drilling costs with those in the business. The large independents tend to think in terms of trying to take what they get from their intangible drilling costs and what they are allowed by their percentage depletion for the entire operation, and putting that back into drilling more wells in the same year, on the theory that in the business one either grows or contracts, and if a drilling program were not continued, eventually one would be out of business.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. DOUGLAS. We shall come to the question of depletion allowances later. On that point the Senator from Louisiana and I shall differ. What I am trying to do at the moment is to reenforce the position of the Senator from Louisiana, who is trying to reduce some of the damage created by the House bill. The Senator from Tennessee has pointed out that the average is only about 16 percent.

Mr. GORE. A little less than 16 percent.

Mr. DOUGLAS. 15.9 percent. Not

only were there 20 men in the year 1959 with incomes of over $500,000 who paid no taxes, but 17 of those 20 had incomes of over $1 million. Five of them had incomes of over $5 million. Out of a total of 1,002 Americans who had incomes of over $500,000, there were only 8—less than 1 percent—who paid from 80 to 85 percent; only 54 from 70 percent to 80 percent, which would be 5 percent; and only 89 from 60 percent to 70 percent.

The point is that there are great loopholes, of which the capital gains loophole is, I think, the greatest; and the House bill made it worse. The Senate committee at least prevented it from becoming worse. I congratulate the Senator from Louisiana for defending the committee's position. I hope the Senate will support it, and that we shall be able to hold the line in conference, where we may be in real trouble.

Mr. LONG of Louisiana. The Senator from Illinois and I agree on the capital gains provision, and we agreed in committee.

For the benefit of Senators who might be interested in the capital gains provision and the way in which it may be used to avoid paying taxes. I placed in the RECORD the complicated procedure which can be used to pay little or no tax through using the capital gains provision with other provisions in the tax laws.

Suppose my credit were good enough for me to borrow $17 million at the bank. The interest on that amount, at 6 percent, would be $1 million. Suppose I bought stocks with that amount assuming I knew enough about what I was buying to protect myself. But let us assume that I realized $2 million on those stocks. The money need not have been made on those stocks. I could have had other property. On that realization of a $2 million capital gain, only half of it would be taxable, namely $1 million. Since I paid $1 million in interest on the amount I borrowed, that interest can be deducted against the $1 million which remains taxable. So, although I would have realized a net gain of $1 million I owe no income tax. That is legally within my right.

When we obtain from the Treasury Department the list of taxpayers who made large incomes but who paid no taxes, most likely it contains a list of those who realized capital gains but who had large interest payments to make.

Mr. GORE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. GORE. The Senator from Louisiana is very fair, and he is being very fair in the presentation of this amendment and this issue. The example he has just given illustrates the accuracy of my reply to the Senator from Ohio a few moments earlier when I said there are many loopholes in the tax law, of which only those with very large financial resources can take advantage.

If the Senator will be good enough to allow me to take a moment to refer to another amendment, and I hope he will not think me immodest if I refer to it as my amendment, I shall be very grateful. I think it is a very important one. The amendment would eliminate the eligibility of a contribution to a private foundation for the so-called unlimited charitable contribution deduction.

The Senator from Louisiana supported that amendment in Committee. I hope this amendment can be held in conference. After it was fully discussed in committee, as I recall, the amendment was unanimously adopted.

May I ask the Senator from Florida [Mr. SMATHERS] if that is correct?

Mr. SMATHERS. That is my recollection. It was unanimously adopted.

Mr. GORE. The Senator from Louisiana is more familiar with foundations than is the Senator from Tennessee.

Mr. LONG of Louisiana. I would not say the Senator from Louisiana is——

Mr. GORE. At least, he knows that many foundations which have been eligible for the unlimited charitable contribution are not charitable at all, but many of them remain in the control of taxpayers and are used as financial resources for just such other operations as the Senator from Louisiana alluded to.

Mr. LONG of Louisiana. I would not like to specify any names, but I think there have been cases in which individuals have used charitable foundations——

Mr. GORE. So-called charitable.

Mr. LONG of Louisiana. In certain cases it seems to me that tax avoidance might have had more to do with the creation of the foundation than the desire to benefit charity. In most States such foundations are not strictly regulated.

Mr. GORE. Or there is no regulation.

Mr. LONG of Louisiana. In most States there is no limitation on how such funds can be used.

I believe I am correct in saying that some of the foundations are permitted to lend money back to relatives of the same persons who put the money into them. So taxes can be avoided by putting money into the foundations and lending it to relatives to buy, for example, a hotel in Miami, or an office building, or a shopping center. If the project

69-108 O—66—pt. 3——26

succeeds, the children who may own the equity in it can pay the foundation interest; and if the project fails, of course, the foundation has lost the money. There are a number of ways in which foundations can be used almost as a second form of title ownership on behalf of the so-called trustees of the foundation.

Mr. GORE. It is also encouraging, I believe, to know that the Senate Finance Committee, after a discussion of the entire problem of foundations,

[*P. 1680*]

agreed to undertake, and requested the Treasury immediately to begin, a thorough investigation of the operations of foundations and the tax avoidance schemes and devices employed in connection with foundations. I believe this is to the credit of the Finance Committee.

Mr. LONG of Louisiana. There are some restrictions in the code to the extent to which taxpayers may use the foundation for their own benefit, but my understanding is that they are not too strict.

In order to be fair, let me state that many of those who are affected by this provision—perhaps even a majority—set up foundations in complete good faith and undertake to operate in that manner. The only complaint I have heard from those who would be affected is that they should have 3 years to pay out the money that has been put into the foundations. They would like to have that much time to have those managing the foundations decide how the money should be used and where it should go, whether to colleges or charities, for example.

Mr. GORE. I join the Senator from Louisiana in the statement that many persons have set up foundations for such a purpose. Unquestionably some of them have the very best of motives. But some have not. Some have had tax avoidance as the motive.

Mr. LONG of Louisiana. When one really analyzes the question, insofar as Congress is concerned, Congress should stop the use of foundations for tax avoidance, when they are not used for benefiting education or charity. In other words, while we are trying to give favorable tax treatment to people who seek to contribute generously to education and charity, Congress certainly does not have the intention—and not having intended it, should not permit it to happen—of permitting some individuals to avoid the payment of millions of dollars in taxation through the device of offering assets to charity.

This illustrates why I think the overweaning need in tax legislation is tax reform.

There is a modicum of tax reform in the bill. The pending amendment on capital gains, which the committee has reported, is not tax reform. We are trying to hold the line against a worsening of an already very bad, inequitable situation. I will support the committee. I hope the conferees will never consider, even for a moment, bringing back to the Senate a reduction in the capital gains inclusion factor or a maximum rate.

This chart illustrates a danger to our tax system. The average citizen who takes his lunch pail to work and whose tax bite is taken out of his weekly check does not realize, and perhaps he never will, in the mass, that the very rich people in this country pay a very low tax rate.

This is wrong. It endangers our system of income taxation, which depends largely upon voluntary compliance. If the mass of our people should come to realize what this chart reveals, we might be in danger of a taxpaying strike. Consider the unfairness of the system. Consider how steeply the rates are graduated on the lower incomes. The chart shows almost a straight line, almost a perpendicular rise. Then, when we get above $15,000, it becomes a curve. Then when we pass $50,000, it begins to curve some more. The highest point of effective taxation is reached at an adjusted gross income of $100,000 a year. The rate is only 26 percent under the pending bill. Under present law, the highest effective rate is reached at an income of $100,000 a year, and that is an even 30-percent rate.

From there on, both under present law and under the pending bill, as the realized income goes up, the effective tax rate goes down. The people of the country do not realize this to be the case.

I believe the Senator should keep in mind that in the chart the Senator uses only 1 inch on the lower horizontal line for 98-plus percent of the taxpayers who pay less than $50,000. Then he proceeds to use about 4 feet on the chart for the other 2 percent of the taxpayers on his chart. If he had made a chart graduated from zero tax income up to $50,000, the rate would gradually increase. Then there would be a decline from the $100,000 point.

Mr. DOUGLAS. If I may interrupt, that would have required a chart 40 feet long.

Mr. LONG of Louisiana. The Senator could have used semilog paper. So there are ways to show such a situation. If a

taxpayer were making about $3,000, he would be paying in tax only a very small percentage of his income. Then we would gradually reach the point where a taxpayer would be paying 20 percent; and so on up. It would illustrate the point that in the area between $50,000 and $100,000, a hiatus seems to occur. People in that bracket actually pay at a higher rate than those who have a great deal more income. The reason is that when they find themselves paying at the tax rate applicable to those brackets they go to see a tax lawyer to see what they can do about their income tax rates—in line with what others are doing.

Mr. GORE. If the Senator will refer to the table on page 181 of the committee report, he will find that the rates increase sharply on the lower incomes. For instance, the rate jumps from 2½ percent on $4,000 of adjusted gross income to 9½ percent on $10,000 of income.

Then it goes from 9.5 to 13.6 percent at $20,000 of adjusted gross income per year. If we look over to the right, we find the incongruous situation that from the high point of 26.2 percent at $100,000 the rate is reduced to 22.9 percent at $200,000; to 19.2 percent at $500,000; and at $1 million of adjusted gross income the rate comes down to 15.9 percent.

So to put the chart in perspective, it had to be overcrowded on the low end of the scale. There is an almost perpendicular rise in the lower brackets.

Mr. LONG of Louisiana. The Senator from Tennessee and I both reach the same result, but perhaps by a slight difference of reasoning. Nevertheless, we both reach the same result. The footnote to the chart to which the Senator refers states that this figure exceeds the adjusted gross income largely because adjusted gross income includes only 40 percent of capital gains, under H.R. 8363.

Mr. GORE. That is correct.

Mr. LONG of Louisiana. That is how the House provided for this situation, but it is not what the Senate committee voted.

Mr. GORE. I agree. If we adopt the committee amendment, we come nearer to 30 percent instead of 26 percent, and we arrive at somewhere between 16 and 17 percent at the figure of $1,500,000 of realized income.

Mr. LONG of Louisiana. Yes. I regret very much that the Treasury study, which I placed in the RECORD earlier is not available to you to make this clear.

But this is the difference in the way the situation would stand. When a person making $2 million, who has a high proportion of capital gains, pays taxes, according to the Treasury study, his effective rate is 21.3 percent. That is his effective rate, if we consider capital gains as being a part of income.

That figure is somewhat at variance with what the Senator from Tennessee has shown, but it illustrates the same point. Keep in mind that this is a different study, using a different set of tax returns. It supports the Senator's conclusion but does not arrive at the same point, because the Treasury has used a different set of returns to make its study.

This is the average for taxpayers having incomes of $2 million with a lower percentage on capital gains. These taxpayers are paying 56 percent of their income in taxes. They are paying an effective rate twice as high as that paid by those who have a higher percentage of capital gains.

The House bill would make a 12.6-percent tax reduction available to those who are already paying far too little, and it would make a 19-percent reduction available to those who are paying far too much at present. But if we consider the overall effect of the $2 billion, when we include the provisions to tighten the loopholes, passed by the House, and to some degree strengthened in the Senate by the Committee on Finance, the bill would provide, with regard to the group of taxpayers who are paying far too little under the bill, that they would pay more taxes. Those having an income of $2 million under the Finance amendments would pay at an increased rate of 1.9 percent. This is the group with the high ratio of capital gains income. Those having an income of $700,000 would pay at an increased rate of 4.5 percent. This also is the group with a high ratio of capital gains.

On the other hand, those who have $2 million or more of income but a low ratio of capital gains would receive, under the Finance Committee version of the bill, a reduction of 18.2 percent, which is only slightly less than the House would have provided. At the same time, it would do justice and equity, when one recognizes that it affects the people who are really paying the high tax rates on most of this money.

[P. 1681]

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. DOUGLAS. The Senator has made an interesting statement. I wonder if he has an estimate of the amount of money that would be lost if the House version were to become law.

Mr. LONG of Louisiana. With the law in full operation, the loss would be $260 million a year. The House defense of this provision makes much of the fact that in the first taxable year, the gain to the Government would actually amount to about $100 million. That estimate is based on the assumption that people would be encouraged to sell many of their assets which at present they do not find it advantageous to sell.

Mr. DOUGLAS. But ultimately the loss of revenue would be $200 million a year, would it not?

Mr. LONG of Louisiana. $260 million.

Mr. DOUGLAS. That amount would relate almost entirely to those having incomes of $50,000 or $100,000 a year, would it not?

Mr. LONG of Louisiana. In large part, it would. The overwhelming bulk of it would perhaps affect 3 percent of all taxpayers.

Mr. DOUGLAS. Therefore, to this degree, the Senate amendment plugs one of the big loopholes in the House bill.

Mr. LONG of Louisiana. That is shown in table 12 of the Senate report. If the bill should become law, and if it should be subject to the charge that it is unduly partial to the wealthy, it would be because the House provision with respect to capital gains had prevailed.

Mr. GORE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. GORE. The Senator has cited another table supplied by the Treasury, and which he has just read, showing that a taxpayer having a realized income of $2 million pays at the 20-percent tax rate. The table which the Treasury supplied in response to my request——

Mr. LONG of Louisiana. Keep in mind that those are individuals who have a high proportion of income as capital gains.

Mr. GORE. Yes; I understand. The high proportion of capital gains, as the Senator said earlier, is confined to less than one-tenth of 1 percent of the taxpayers.

The Senator may recall that the table from which this chart was made was presented in answer to the charge I had made that, under the bill, the average worker would receive an increase in take-home pay of only 4, 5, or 6 percent, while persons having large taxable incomes would receive more than 100-percent increase in take-home pay. In other words, the after-taxes income for the average worker in the United States would be increased by a small percentage amount. But for people having large taxable incomes, incomes of $200,000, $400,000, or $500,000, the bill would provide a very high percentage of increase in after-tax income. Secretary Dillon cited one instance of an actual taxpayer who would receive an increase in after-tax income of 84 percent. Mind you, this is 84 percent of a large amount. It is the reverse of tax reform which favors equity.

To answer my charge that this bill would give a very high percentage increase in take-home pay, or after-taxes income, to the persons in the high brackets, the Treasury prepared this table, which shows that the average or "typical" taxpayer with a large income does not get a big benefit, because he does not pay very much taxes anyway. This small chart, to which I now call attention, a sort of homemade one, prepared by my own staff, shows the percentage increase in take-home pay under the bill. It is based on taxable income. Notice how steeply the line on the graph rises. At a $500,000 taxable income, there is a 100-percent increase in after-taxes income, under the House bill.

I shall not mention any names; but if the pending bill is enacted, certain persons will have twice as much money left after they pay their taxes under the bill as they now have after paying taxes under the present law; and the present law is bad enough.

Mr. DOUGLAS. Mr. President, will the Senator from Tennessee yield?

Mr. GORE. I yield.

Mr. DOUGLAS. Should not we at least give the Finance Committee credit for the good things it has done in trying to prevent the present law from becoming worse?

Mr. GORE. I am willing to do that; and if the Senator from Illinois will examine the Senate committee's version of the bill, he will find that I placed in it about as many amendments as any other member of the committee did; and all five or six of those amendments are designed to curb the excesses contained in the House version.

Mr. DOUGLAS. That is correct.

Mr. GORE. Even so, despite the improvements we have made, it still is a very bad bill, making a very bad and very inequitable situation much worse.

Mr. LONG of Louisiana. Mr. President, I have been yielding to the Senator from Tennessee, and I do not mind having him debate in my time, because I do not care to insist upon a great amount of formality; but I wish the Senator would leave his chart here long enough to enable me to comment on it. Unless I miss my guess, he will find that his so-called homemade chart is based on the assumption that those whom he has demonstrated in the first instance

not to have a high percentage of tax actually have been paying the confiscatory rates. In other words, if we assume that they were paying 87 percent of their income in taxes, this measure would increase their take-home pay; but if we assume that they were paying at a rate of approximately 20 percent, this bill would not increase their take-home pay as much.

Mr. GORE. Mr. President, will the Senator from Louisiana yield further?

Mr. LONG of Louisiana. I yield.

Mr. GORE. I acknowledge the accuracy of the Senator's statement; and I have tried to state clearly that this homemade chart on take-home pay is based on taxable income. I confined it to that.

If a corporation executive has a $200,000 salary, that income is taxable at ordinary rates. If he receives his income from restricted stock options, it is not. That income does not show on this chart. This chart is based on taxable income which is taxed at ordinary rates. This is the kind of income the mass of our people have. The persons who "get it in the neck" on taxes are those whose income is composed of wages or salaries or fees subject to the ordinary income tax rates.

Mr. LONG of Louisiana. Then the Senator's chart presents an even more misleading picture because a working man who has a wife and three children, let us say, and is earning $3,500 a year has no taxable income; all of his income is tax exempt. On the other hand, if he is paying an income tax of only $20, based on only $100 of taxable income, if we reduce his tax liability to zero, we still have not greatly increased his take-home pay.

Mr. GORE. But I fear that the Senator from Louisiana misunderstands the term. Taxable income is arrived at after taking the exemptions and deductions to which a taxpayer is entitled. Therefore, a man who has a wife and two children, and receives annual wages of $5,000, would by no means have a taxable income of $5,000 a year. He might well have a taxable income of $2,000 a year. This table shows, as I have said, that after taking the personal exemptions and after making the normal deductions, the amount which is taxable is arrived at. But under the pending bill, the percentage increase in take-home pay rises very rapidly, and thus we have the incongruous result that the average citizen would receive a small percentage increase in his small take-home pay, whereas those with very large incomes would receive a very large percentage increase in their already very large take-home pay.

How a Democratic Congress would ever enact a measure of that sort is a mystery which I am unable to solve.

Mr. LONG of Louisiana. Mr. President, inasmuch as the Senator from Tennessee is now presenting his views, perhaps I should now yield the floor, so that from now on he will speak in his time, not in mine.

Mr. GORE. I apologize, Mr. President.

Mr. LONG of Louisiana. It is not necessary for the Senator to apologize; I am perfectly willing to yield to him. I question the propriety of my holding the floor, because the Senator from Tennessee has some very fine points to make, and I am perfectly willing to yield.

The first time I heard the argument that the tax cut on the take-home pay should be considered was prior to the time when I became a Member of Congress, prior to the 80th Congress. At that time, the AFL and CIO made much of the fact that the bill had, according to them, greatly increased the take-home pay of the wealthy, but that there had

[*P. 1682*]

been only a small increase in the take-home pay of the poor. I am happy to say that the AFL–CIO, which made that argument, and made it effectively in the campaign that followed, is strongly in support of the pending bill. Those groups have a strong responsibility to their union members, and they are very much pleased with this bill.

A number of provisions greatly favor the persons in those income tax brackets. In terms of take-home pay—and I do not understand that any comments about tax reduction or tax rate reduction have practical meaning unless they are related to take-home pay—let us consider the situation of a single man who earns $900 a year. He is paying a tax of approximately $46 a year, give or take a dollar. Under the present bill, he will pay no tax; so he will have a 100-percent reduction in his tax, but his take-home pay will be increased by only about 5 percent. Of course we cannot cut his taxes more than 100 percent. One can argue, and I believe the Senator from Tennessee so argues, that we should do something else—perhaps put him on relief and give him welfare checks, or do something along those lines. However, when we increase his take-home pay by 5 percent, that is all we can do in terms of tax relief, because that will mean a 100-percent cut in his taxes.

In the case of a person making $1,000, he is paying a tax of approximately $62. The pending bill would give him a tax cut of 75 percent; and some contend—

and with good logic—that his tax ought to be cut to zero.

Such a reduction would cause a considerable revenue loss. If that reduction were made, in the future we could not make a further tax reduction for him, because then he would not be paying any income tax. However, if it were still argued that he should receive more of a tax cut than a 100-percent tax cut, what could we give him? The only way to help him would be to raise the minimum wage—for which I have voted on a number of occasions, and for which I will vote in the future—or to give him welfare checks.

But so far as increasing the take-home pay, we did all we could when we took him completely off the roll as an income-tax payer.

As I stated those who have the responsibility of looking after the interests of wage earners feel that this is a good bill. They feel that some matters in which they have a great deal of interest are a part of the bill. I know that the Senator from Tennessee will remain of the same opinion, that this should provide a bigger cut for the man at the bottom, but those who have a direct responsibility to that man at the bottom feel that it is a good bill for him.

Mr. GORE. The Senator from Louisiana has just demonstrated that tax reduction does not, in fact, do much for people of ordinary income and does not, in fact, do anything for the unemployed. Indeed, it seems to me he has demonstrated that the bill will play no part in the war on poverty. There is one way we can help the taxpayers who need help most, and that is by raising the personal exemption instead of enacting this kind of rate decrease contortion. We can thereby give the largest tax reduction to those who need it most, to the parents of the largest number of children.

I thank the able Senator from Louisiana. I shall not ask him to yield further. He has been most generous. I wish to close, however, by joining him 100 percent in the committee amendment to strike out the capital gains provision in the House bill. I was among those who insisted that this committee amendment be reserved for a separate vote, and rollcall vote, in order that the conferees may know that the Senate strongly resists the provision which would make more inequitable an already highly inequitable provision of present law.

Mr. MILLER. Mr. President, will the Senator from Louisiana yield?

The PRESIDING OFFICER (Mr. McIntyre in the chair). Does the Senator from Liousiana yield to the Senator from Iowa?

Mr. LONG of Louisiana. I yield.

Mr. MILLER. I thank the Senator from Louisiana. I invite the attention of the Senator from Tennessee to two or three comments just made which I believe should be clarified. One is with respect to the so-called homemade chart. I find it difficult to reconcile the chart which is explained on page 181 of the report under the separate comments of the Senator from Tennessee with the homemade chart.

It appears to me that in the chart which the Senator inserted in the report under his separate comments, the percentage increase in after-tax income of the typical taxpayer is rather uniform all the way down the scale, all the way from the low bracket to the high bracket. I cannot reconcile that chart with the homemade chart.

Mr. GORE. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. GORE. If the distinguished Senator from Iowa will turn to page 190 of the committee report, he will see the chart on after-tax income. Column 8 on page 190, which incidentally is explained on page 191, shows the percentage increase in after-tax income.

Mr. MILLER. On page 191, the chart refers to the percentage increase in after-tax income, and it ranges mostly from 1 to 5 percent. I should like to know, how the Senator puts the two tables together.

Mr. GORE. The chart which the Library of Congress prepared was prepared on the basis of effective tax rates on realized income.

Mr. MILLER. Is the Senator from Tennessee referring to the chart on page 181?

Mr. GORE. That is correct. The chart which my own staff made conforms to the table on page 190, which was prepared by Mr. Colin Stam and his staff of the Joint Committee on Internal Revenue Taxation. Column 8 of the table on page 190 shows the percentage of increase in take-home pay, running from a low of 4.7 percent on taxable income of $4,000 to 134-percent increase on a taxable income of $1 million.

Mr. LONG of Louisiana. Mr. President, I now ask for the yeas and nays on the committee amendment relating to capital gains, on page 233 of the bill, after line 10, striking out certain language.

The yeas and nays were ordered.

Mr. SMATHERS. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I hope that the cloakroom attachés will inform all

Senators that a yea-and-nay vote is expected in about 10 minutes on the committee amendment with respect to capital gains, so that Senators may be alerted and so that the time for a quorum call may perhaps be saved.

Mr. MILLER. I thank the Senator from Tennessee for the explanation, but I do believe that if one considers the chart which he inserted on page 181, it is a little more realistic approach. Of course, we can always make charts using almost any combination of figures, but I do believe that the chart which he himself inserted on page 181 of the Finance Committee report is more realistic.

Mr. GORE. I thank the Senator from Iowa.

Mr. MILLER. Although the Senator from Tennessee and I may not use the same reasoning, I believe that his point concerning the beneficial impact of the bill is well taken. The idea of raising the individual exemptions might work in the opposite direction from the direction in which he is thriving, because the Senator from Tennessee well knows that if a person in a high income bracket were to receive a higher personal exemption, the tax savings to him would be much greater than to the individual in the lower income bracket. So I believe that his proposal to increase the $600 exemption would actually work to increase the inequity to which he has been referring in this colloquy.

I should now like to add one further point, on which I may have more to say later. The Senator from Louisiana talks about certain wage groups being interested in and favoring the bill. I should like to suggest that those in the wage brackets of $4,000 and under, are probably cold to the tax bill; and that gets over into the war on poverty sector about which we are supposed to be deeply concerned.

Mr. LONG of Louisiana. If the Senator will permit me to speak for one moment, I know that what he is looking at might convey that impression. I should like to direct his attention to something else in the bill.

Mr. MILLER. I am looking at the table on page 181 of the report which shows the $3,000 adjusted gross income for a married couple with two dependents as now taxed, and after the bill. Also in the $4,000 bracket, the tax now is $143 and the tax after the bill would be only $40 less, almost an insignificant amount.

Mr. LONG of Louisiana. A 30-percent reduction, however.

Mr. MILLER. Percentages mean little when one is in that kind of bracket. The point that can be made is that a

[*P. 1683*]

married couple with two children would receive a $40 tax cut on a $4,000 income, yet the Senator knows that the way the value of the dollar is going down—and will continue to go down as long as we continue to have billion-dollar deficits—they will probably have twice that much inflation tax to pay.

The poor devils in the $3,000 tax bracket would have no tax benefit at all, but they would be stuck with inflation. That is the poverty sector about which we are supposed to be worried.

The argument of the Senator from Tennesese as to the tax bill's having a bad impact on the poverty sector is very well taken, but I do not share with him his approach in trying to cure it. I cannot understand how any group of wage earners in the $4,000-and-under bracket could possibly be favoring the bill.

Mr. LONG of Louisiana. We have heard reference to the fact that a taxpayer who is presently paying $140 in taxes would save only $40 of his taxes. I should like to point out that if we provided a 100-percent tax saving for him, he would be saved only $140. That is all we are talking about.

If we should explore into the question of who would receive the benefit of the bill, we would find that about 50 percent of the Government's income is derived from approximately 17 percent of the taxpayers. The taxpayers who are paying 50 percent of the cost of the Government would receive about 40 percent of the contemplated tax relief. Those who pay the other 50 percent, receive the other 60 percent of the proposed tax relief.

Dollarwise they would receive the bulk of the tax relief.

The bill is worked out on a percentage basis. The wealthier the taxpayer, the smaller the percentage of tax cut he would receive. The poorer the taxpayer, the higher percentage of tax cut he would receive. I must confess that we would not find it within our power to save the person who is not paying a tax anything in taxes. If some Senator would wish to introduce a minimum wage bill, I would vote for such a bill. If a Senator would introduce a bill to provide welfare for such a person, and if he could make a good case for the bill, I would vote to give that man a welfare check. But it is beyond our power to give that man a tax cut if he is not paying any taxes.

Mr. MILLER. For that reason a large group of people—apparently 20 percent of the families in the poverty sectors—would receive absolutely no benefit from the tax bill, and yet they are the ones

who would bear a good chunk of the inflation tax that would ride along with the $5 to $7 billion deficit that we are anticipating.

Testimony was received by the Joint Economic Committee that in the next year we can expect $5 to $7 billion in inflation. That amounts, roughly, to a 2- to 4-percent hidden sales tax on the backs of the people throughout the country.

Those are the people who would get it in the neck without any tax benefit whatsoever under the bill, or with very little benefit.

Mr. LONG of Louisiana. Mr. President, those of us who support the bill, and certainly those of us who took the position of the two Presidents who recommended it, do not believe that the bill would have an inflationary effect. Therefore we do not believe that the result to which the Senator has referred will come about.

If an individual is paying taxes, many provisions in the bill would help him. Many people would pay no taxes. Suppose a person is earning $900 a year and we cut his taxes $46. That is all he has been paying on his income of $900. Would that not mean much to the man who is making the $900? If he is getting by on $80 a month and we give him a $46 tax cut, he would be tickled pink with it.

I should like to do more for him. But the bill is not the whole war on poverty. It is but one aspect of it. What we hope to do for that taxpayer more than anything else is to get him out of the $900 a year income bracket and get him into the $3,000 a year income bracket by creating more jobs. That is how we hope to make the war on poverty effective for him.

Mr. MORTON. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield to the Senator from Kentucky.

Mr. MORTON. Would it be in order to suggest a unanimous-consent request that the Senate vote on the committee amendment relating to the capital gains section of the bill at 1 o'clock?

Mr. LONG of Louisiana. Mr. President, if no other Senators desire to discuss the amendment, I am ready to vote now.

Mr. MORTON. I should like to make a brief statement.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that the vote on the committee amendment commence at 12:45 p.m. If Senators desire, there can be a quorum call between now and 12:45.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. MORTON. Mr. President, without going into the merits or demerits of the overall bill, which the debate has been encompassing in the past half hour or so, I should like to address myself briefly to the particular amendment that is before the Senate. My statement is in the nature of opposing the committee amendment which would strike the so-called capital gains section from the House bill. The amendment came before the committee. At that time a debate developed in the committee as to certain features of the capital gains tax which deal particularly with purebred livestock and certain other agricultural provisions in the bill. I happen to favor the present law in connection with the application of capital gains to our agricultural economy, in the case of purebred livestock and otherwise. I was afraid that amendments might be offered and adopted which would impair the present law as it applies to purebred livestock. I therefore voted in the committee to strike the section, knowing that those who wanted to amend it then would have nothing to amend. Now that the bill has reached the floor of the Senate, I am sure there is sufficient representation from States that are affected by the present provisions as they pertain to the agricultural economy to sustain the present law. I did not mean to imply by my vote that I thought there was anything wrong with the House language insofar as the new rates would apply to capital gains in connection with stocks, real estate, and so forth.

The Treasury itself has said that it will get more money—at least for the first couple of years—under the House language than under the Senate language. I am inclined to think that that situation would prevail for many years. I believe that one thing that we are up against now is that too many funds are locked in. If we were to unlock those funds by enabling people to sell a piece of real estate and develop another one and to sell out one company and build up another one, we would provide more employment and do more to stimulate the economy than would be the case under existing law. Adoption of the committee amendment would continue existing law.

For that reason I expect to vote "nay" on the committee amendment. This would have the effect of maintaining and supporting the House language in regard to capital gains.

As I understand the philosophy behind this measure, it is to stimulate the economy; and we need investment in order to stimulate the economy. I believe the purpose of the bill would be better served by adopting the House language in this regard.

I am not optimistic about the number of jobs that the tax bill, when enacted into law, will create. I am not too optimistic about how much it, in itself, will stimulate an economy that is already operating at a high rate. But some of these tax rates are not justified, and I think a tax cut proposal has had, and will continue to have, a disciplinary effect on spending.

Already we have seen some evidence of it. Congress cut, by $6 billion-plus, the request for the obligational authority in the current fiscal year. I believe one reason Congress did it was that the tax cut bill was so much in the forefront, and because we have been hearing from our constituents, "Let us have a tax cut, but let us exercise some discipline in spending."

The budget recently submitted for the coming fiscal year may have been affected and influenced by the knowledge that the tax bill was before the Senate for consideration.

Finally, and specifically about this section, the Treasury will certainly get more money in the next 2 or 3 years if the House language is retained, and I am not so sure it will not get more money for all time, for there will be a release of money that has been "locked in." Today, for a man to sell property in which he has a profit and get another piece of property, he has to be 25 percent smarter than the market. It is, of course, a great restraint on development of capital and assets which lead to job opportunities.

[P. 1684]

So I trust the Senate will support the House language in this respect.

Mr. JAVITS. Mr. President, after the vote is taken, I hope to address myself to the general policies of the bill and what it will and will not do economically—a matter to which I have given great consideration. I should like to take a moment on this amendment.

I shall vote "yea" on the committee amendment, because we are at the crossroads with respect to the tax bill. I agree with much of what my friend the Senator from Kentucky has said. As we look at the area of experience, reducing the capital gains rate might conceivably result in loosening up a great many sales which have not been made, and stimulate the loosening of profits which are now unrealized, and perhaps there would be a greater tax net. It is significant that in the United Kingdom there is no capital gains tax.

For those reasons, I think we are at the crossroads on the bill, when we are to take one road or the other. Either we are going to provide for revenue loss and speculate that people will pay back far more than what it costs us in revenue, in the development of the economy; or we must use the bill as the tool with which to change the tax law in ways which are socially and economically more desirable.

I am sure we shall not change the rate structure and that the tax loss of roughly $11½ billion will stand. I find it very difficult to vote for further erosions of revenue. There may be items hidden here and there which represent serious problems of a rather individual nature which ought to receive consideration in connection with a tax bill. I shall make such a proposal in trying to do away with the 10 percent tax on theater tickets, for reasons different than the question of revenue, which amounts to only $5 million.

There is some desire to take off the tax on handbags, which is the only item of women's apparel on which an excise tax is imposed. It is a tax on an item of necessity. I shall vote affirmatively on some of these matters. But when we reach the question of big reductions in revenues, we must take our choice between the plan as it has been laid out, and whittling away further, in a major way, very large amounts of revenues which under this bill will be invested in terms of economic recovery.

Therefore, while I feel it desirable to reform the capital gains provision, if we did it now we would be running a risk that was unjustified unless at the same time we felt free to revise the rate reductions which are made for individuals and corporations in the bill. I do not want to do that. I want to support the bill as an economically constructive move forward.

It is for that reason that I shall vote for the amendment, rather than for the reason that I am satisfied with the capital gains provision. I am dissatisfied with it. I think it is exactly the kind of thing that should be reformed. But then we would start further major erosions of revenues, rather than provide relief; and there is not room for scaling down further the revenues as provided by the bill.

Mr. SMATHERS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The hour of 12:45 p.m. having arrived, the question is on agreeing to the committee amendment on page 233, after line 10. On this question, the yeas and nays have been ordered.

Mr. MORTON. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. MORTON. As I understand, a "nay" vote is a vote to retain the House language; a "yea" vote is to retain the present law. Is that correct?

The PRESIDING OFFICER. A "nay" vote is a vote to retain the House language; a "yea" vote will strike the House language.

Mr. SMATHERS. And adopt the Finance Committee view?

The PRESIDING OFFICER. And adopt the Finance Committee's amendment.

The yeas and nays having been ordered, the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from Alaska [Mr. BARTLETT], the Senator from North Dakota [Mr. BURDICK], the Senator from West Virginia [Mr. BYRD], the Senator from Nevada [Mr. CANNON], the Senator from Pennsylvania [Mr. CLARK], the Senator from Connecticut [Mr. DODD], the Senator from Arizona [Mr. HAYDEN], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Wyoming [Mr. McGEE], the Senator from Michigan [Mr. McNAMARA], the Senator from Maine [Mr. MUSKIE], the Senator from Oregon [Mrs. NEUBERGER], the Senator from Rhode Island [Mr. PASTORE], the Senator from Texas [Mr. YARBOROUGH], and the Senator from Ohio [Mr. YOUNG] are absent on official business.

I further announce that the Senator from California [Mr. ENGLE] is absent because of illness.

I further announce that, if present and voting, the Senator from Alaska [Mr. BARTLETT], the Senator from North Dakota [Mr. BURDICK], the Senator from West Virginia [Mr. BYRD], the Senator from Nevada [Mr. CANNON], the Senator from Pennsylvania [Mr. CLARK], the Senator from Connecticut [Mr. DODD], the Senator from California [Mr. ENGLE], the Senator from Arizona [Mr. HAYDEN], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Wyoming [Mr. McGEE], the Senator from Michigan [Mr. McNAMARA], the Senator from Oregon [Mrs. NEUBERGER], and the Sentor from Rhode Island [Mr. PASTORE] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from New Hampshire [Mr. COTTON], the Senator from Illinois [Mr. DIRKSEN] and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent.

If present and voting, the Senator from Illinois [Mr. DIRKSEN] and the Senator from Arizona [Mr. GOLDWATER] would each vote "nay."

The result was announced—yeas 56, nays 25, as follows:

[No. 12 Leg.]

YEAS—56

Aiken	Hill	Monroney
Anderson	Holland	Morse

Cotton	McGee	
Dirksen	McNamara	

So the committee amendment, to strike out the language beginning on page 233, after line 10, down to and including line 24 on page 271, was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. GORE. Mr. President, I offer the amendment which I send to the desk.

The PRESIDING OFFICER. The amendment of the Senator from Tennessee will be stated.

The LEGISLATIVE CLERK. On page 40, in line 19. after the words "cost of," it is

proposed to strike out "$70,000" and to insert in lieu thereof "$30,000."

Mr. GORE. Mr. President, on the question of agreeing to this amendment, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. GORE. Mr. President, if Senators will give me their attention, I promise not to use more than 10 minutes on this amendment.

A new form of compensation is recognized by a provision now in the bill. It is compensation for corporate employees, in the form of tax-free group term life insurance. Under present law, there is no limit to the size of a policy of which a corporate employee or official may be the beneficiary, and the premium is not included in the employee's taxable compensation. But the cost is deductible for the corporation.

I repeat that under present law there is no limit. The Treasury recommended that a limit be placed at $5,000. The

[*P. 1685*]

House version of the bill provided for a limit of six times that amount, or $30,000. The Senate Finance Committee voted to increase the $30,000 figure to $70,000. My amendment would strike out the $70,000, and would return it to the House figure. I think the Treasury's recommendation of $5,000 is preferable; but as between $30,000 and $70,000, it seems to me the $30,000 limit is preferable.

The Secretary of the Treasury testified on this subject, and if other Senators would like to refer to his testimony in this regard, they will find it in part I of the hearings, on pages 306 and 307. What is the situation now? First, I repeat that there is now no limit whatever; but the Secretary of the Treasury told us of instances in which corporate officials were the beneficiaries of insurance policies running as high as $900,000, payable to their estates. They pay no income taxes on the compensation represented by the premium paid for them, but the premiums are deductible by the corporation.

Secretary Dillon told us of one company which paid premiums on a policy for four company executives, with coverage running from $300,000 to $400,000 for each. Mr. President, so long as we tax the wages of every man who has a meager income and take that tax out of his paycheck, I do not know how in good conscience we can permit tax-free insurance of $70,000 to be made available to corporation executives.

I wish to read a part of a letter into the RECORD; and I shall ask unanimous consent that the entire letter be printed in the RECORD. I have just received the letter from Mr. Carlyle M. Dunaway, general counsel of the National Association of Life Underwriters. He endorses the position I take, and says a failure to take such action would be unfair to other forms of insurance.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE NATIONAL ASSOCIATION OF LIFE UNDERWRITERS,
Washington, D.C., January 31, 1964.

Hon. ALBERT GORE,
Senate Office Building,
Washington, D.C.

Re: Section 203, H.R. 8363.

DEAR SENATOR GORE: At the direction of my association's board of trustees, I am writing this letter to you relative to the actions taken by the Senate Finance Committee, and by you in particular, on section 203 of tax bill H.R. 8363. This is the section that would require employees to include in gross income the cost of a portion of any group term life insurance coverage paid for by their employers.

When the Senate Finance Committee initially voted to delete section 203 from the tax bill, we were both amazed and disappointed. We therefore were extremely gratified when the committee subsequently reversed its earlier action by adopting your motion to restore section 203 in the bill. You may be interested to know that at its meeting here last week, our board of trustees unanimously voted that you be commended for this sound and forthright action on your part.

We note that on page 46 of its report accompanying H.R. 8363, the Senate Finance Committee expresses agreement with the House Ways and Means Committee that the present "tax-free status for employer-financed group term life insurance is inconsistent with the tax treatment of other types of life insurance protection furnished employees by their employers." To illustrate the existence of the inconsistency referred to, I can cite the situation that prevails in the case of the employees of my own association.

For example, we have a pension plan for our headquarters employees which is funded in part by individual ordinary life insurance contracts purchased and owned by the trustee of the plan on the lives of the participating employees. The plan is financed entirely by the association, as the employer. Under long-standing law, every participating employee is required to include in gross income each year that portion of the insurance premium that is attributable to the term cost of the pure insurance protection provided by the contract or contracts on his life—i.e., the difference between the face amount of the contract or contracts and the accumulated cash value thereof.

Our pension plan also requires that employees must, among other things, be in the association's employ for 5 years before becoming eligible to participate in the plan. Pending the completion of this 5-year waiting period by certain employees, the plan trustee purchases and owns on the life of each such employee an individual 5-year

convertible term insurance contract in a face amount equal to the face amount of the ordinary life insurance contract which would be required if the employee were then eligible to be a participant in the pension plan. Every covered employee must, in turn, include the entire premium for this term insurance in his gross income each year.

In summary, the above examples (which are quite commonplace) clearly demonstrate that the tax-free status of employer-financed group term life insurance is indeed completely inconsistent with the tax treatment of other types of life insurance protection furnished by employers to their employees. The examples also demonstrate that, as concluded by both the House Ways and Means Committee and the Senate Finance Committee, continuation of the complete exclusion of the cost of employer-financed group term life insurance from the income of covered employees is inequitable.

In connection with this last point, you will recall that the Treasury Department originally recommended to the Ways and Means Committee last year that the cost of all employer-financed group term life insurance in excess of $5,000 be includible by a covered employee in gross income. During the hearings held by the Ways and Means Committee on the tax bill, my association objected to the proposed $5,000 limit as being unreasonably low and recommended that it be increased to $40,000. We recommended the $40,000 figure largely because this figure has long been recognized in a number of State laws as being an acceptable maximum limit for employee group term life insurance, at least from the standpoint of sound underwriting.

As you know, the Ways and Means Committee ultimately wrote a $30,000 limit into section 203, and this was approved by the House of Representatives. Then, in acting on your motion to restore section 203 in the tax bill, the Senate Finance Committee first increased the dollar limit to $50,000 and, finally, to $70,000. In our opinion, even a $50,000 limit would seem to be unduly liberal, and a $70,000 limit very definitely excessive. We trust that when H.R. 8363 goes to conference, the limit will be fixed at the $40,000 figure that we originally recommended.

Apropos of the foregoing, insurance industry statistics set forth in the table below clearly indicate that enactment of section 203 would result in the discontinuance of the complete tax-free status of group term life insurance for only a relatively insignificant number of the estimated 38 million or so employees who have such insurance, even if (1) the limit were set at $30,000 and (2) it could be assumed that all plans providing coverage in excess of this amount are entirely employer-financed.

Amount of insurance	Percentage of employees insured for more than this amount	Number of employees insured for more than this amount
$30,000	0.9	300,000
$40,000	.3	110,000
$50,000	.15	55,000
$60,000	.08	30,000
$70,000	.06	20,000

Sincerely yours,

CARLYLE M. DUNAWAY,
General Counsel.

Mr. GORE. Mr. President, I repeat my previous statement: By means of this bill, we shall be recognizing a new form of compensation of both employees, and officers of corporations.

My amendment would permit either all employees or one employee of a corporation to receive, tax free, a group term insurance policy in an amount up to $30,000. The House of Representatives thought that was sufficient. I believe it is more than sufficient. It seems to me that $5,000—as the Treasury recommended—would be better; but $70,000 seems to me to be unconscionable.

So, Mr. President, without further debate—for this is a very simple issue—I yield the floor.

Mr. BENNETT. Mr. President, as one of the members of the committee who voted for the $70,000 limit, rather than the $30,000, I wish to comment on this particular feature of the bill.

In the beginning, the Treasury recommended a limit of $5,000, to be calculated in every case on the wages of the employee to whom it was to be applied. But the Treasury officials have admitted that the cost of calculating how much each employee would be allowed at the $5,000 limit would be so great that the $5,000 limit would be completely unrealistic; and I believe that by now they have changed their support for their original position.

It is true that under present law, group term life insurance, with no limit, can be provided by the employer. The committee decided that that should be changed—although at one point in its deliberations, the committee voted to reject the language which had been voted of the House of Representatives, and to permit the present law to continue to apply.

So now we are dealing with a "numbers game." The House of Representatives has voted for a $30,000 limit. The Senate Finance Committee has voted for a $70,000 limit. If the language voted by the Senate committee is voted by the Senate, this issue will be decided in conference.

Suppose an employee dies, leaving his widow only the group term life insurance policy that the company has provided.

If the widow were 65 and if she bought an annuity worth $30,000, the maximum amount she would receive from the

[P. 1686]

policy would be less than $150 a month. The $70,000 limit would provide her with approximately $300 a month, if that were the basis of her income. I believe that if we leave the $70,000 figure in the bill, we can go to conference and probably come out with around $50,000, which would provide approximately $300 a month to a widow, if that were her only source of income. Since the present abuse, which rests entirely on the limit, has been corrected by both committees, I hope the Senate will approve the decision of the Senate Finance Committee and leave it something to debate on with the House in conference, with the general feeling that we hope to come out with somewhere between $40,000 and $50,000. If we acept the House language, there will be no oportunity to review the question in conference.

Mr. RIBICOFF. Mr. President, will the Senator from Utah yield?

Mr. BENNETT. I yield.

Mr. RIBICOFF. Is it not true that the various States have different limits of how much we can write the insurance for? In other words, States have different figures, and this has become a confusing situation.

Mr. BENNETT. It is true in some States. As I remember, 22 or 23 States have a limit of $30,000. Perhaps that is why the House used that figure. But the rest of the States have a limit higher than that, or no limit at all.

Mr. RIBICOFF. Is it not further true that what we have is not the question of whether an individual has a $70,000 income, but whether his employer has provided group term life insurance that covers him up to that limit?

Mr. BENNETT. We have an opportunity for an employer to buy group term life insurance for an employee that—at the death of the employee, provided he dies while still covered—will pay $70,000 to his widow. That is not a $70,000 income. That is a flat sum. When translated into income, as I suggested a minute ago, it probably will mean a $300 or $400 a month income for the widow.

Mr. RIBICOFF. Is it not further true that as we analyze many of these plans, many employers have pointed out that the administrative difficulties would be so great that they would be discouraged from undertaking these broad-based plans? I believe we wish to encourage employers to take out group term life insurance on their employees, because many employees are in the lower and middle income brackets, and when they die the only asset their families have would be the group insurance.

Mr. BENNETT. The Senator is correct, that many millions of employees in the United States have no private life insurance coverage, or insufficient life insurance coverage, or insufficient coverage, and if the employer is willing to make this arrangement for his employees I believe we have set a fair limit at $70,000.

Mr. LONG of Louisiana. The main concern of the Treasury Department on this question is not the revenue aspect of it; instead the Treasury does not wish, as I understand, to allow group-term life insurance to become a major tax avoidance device. That being the case, the Treasury Department wished to place a limit on how much insurance could be taken out for the benefit of corporate executives of the company on other group life insurance plans in which individuals contributed to them, but paid the average rate.

The $70,000 figure is an appropriate figure to establish some limit on this operation. The original Senate committee judgment was to strike the matter and let it go to conference and see what agreement we could reach with the House, which apparently felt more strongly about it than the Senate. But the compromise was to adopt the figure of $70,000 to assure the limit of an amount of group life insurance on executives who could benefit from it, and leave it between the Senate and House in conference to arrive at what they might feel to be a fair figure, which would presumably be somewhere between $70,000 and $30,000 after studying the further economic aspects.

Mr. BENNETT. I should like to make one additional point. If we had struck this provision from the bill, we would have lost the opportunity to make technical changes in the House language which the Treasury Department had agreed were necessary. Otherwise, the Treasury could not have operated under the terms of the bill.

Mr. ANDERSON. Mr. President, will the Senator from Utah yield?

Mr. BENNETT. I yield.

Mr. ANDERSON. I should like to supplement what the Senator from Utah has just said. Certain technical changes should be made. The Senate committee did not strike this item from the bill. Had it struck the item from the bill, it would not have gone to conference and we would not be able to meet on it at all. We need this language in conference. That is why this language should not be stricken out.

A great many States have already dealt with this problem. For example, the States of Arizona, Arkansas, Illinois,

Indiana, Iowa, Kansas, Louisiana, Maine, Maryland, Montana, Nebraska, Nevada, New Jersey, Ohio, Oklahoma, Pennsylvania, South Carolina, Texas, Vermont, Washington, West Virginia, and Wisconsin already have dealt with this problem, and have the situation under control. There are many areas where it was not under control, and the Treasury Department has suggested that it should be placed under some control. The House has put a control on it, as the Senator from Utah has said, and the Senate committee had decided, as the Senator from Louisiana has just said, to put a control on it also.

It so happens that I voted against the $70,000 figure. I thought $60,000 was enough. But I pointed out that if this provision goes to conference we might do some trading. I am not disturbed by the $70,000 figure. We should keep the figure in the bill. We should make sure a reasonable conclusion comes from it.

States like Colorado, Connecticut, Florida, Iowa, Kentucky, New Hampshire, North Carolina, and Tennessee have a somewhat higher figure than the first group of States which I read. The problem the Finance Commitee faces is, What is a reasonable figure? We must base that decision on discussion with the House. I believe that question will arise. It does not concern many States. It does not concern the State I represent, or North Dakota, Hawaii, and States of that nature because they have no limit on it. Theoretically, anyone could have a million-dollar policy in my State, but there is no demand for it. We do not have the type of executive that could command that figure. The average policy is based on $10,000 or $15,000, but there are $20,000 plans, and they go as high as $25,000. This amount is reduced after the age of 65. In my own case, because of the business I was in, I had a $25,000 coverage until I became 65. Now it is under $10,000, and if I should live for a few more years it would disappear entirely.

These are my reactions to the figures. They should remain in. This was based on a wise decision. We should not strike the entire section, but it should go to conference with a reasonable figure, and I hope that will be the result.

Mr. JAVITS. Mr. President, as we debate the bill, certain fundamental principles are emerging. The amendment of the Senator from Tennessee further illustrates the fact that if we wish to cut reductions based upon a rate cut, we run into a situation in which we cannot have it both ways.

This illustrates another principle which is important, and that is the principle of management. It is easy to assume that we need not worry about anyone earning substantial sums of money because they are looking after themselves very well, but in the entire industrial complex the country depends as much upon management as it does upon labor.

I yield to no other Senator in my work over the years in fighting for and protecting the interests of labor, even when my position was unpopular with some rather rich constituents of mine.

Management is equally important. I have in mind that during the campaign of 1962 I visited a great many industrial plants. I went to one plant outside Schenectady, which had been largely unionized by the United Steel Workers Union, which was supporting me in the campaign in New York. This was a large metal-working plant employing some 1,500 workers.

I went around with the president of the company. It was extraordinary to me to see the way in which the workers spoke to him. They treated him not with deference or any such attitude as patronizing, but with the feeling that he was the most valuable asset in the plant walking around. They did not wish him to get hurt, get scratched, catch a cold, or anything else.

I asked the union delegates about that. I said, "What is this all about?"

They replied, "This plant has been a losing plant. It was laying off workers every week. Everyone in Schenectady thought that it would shut down until this fellow came along. He has a real formula for selling the stuff and making the right things. This plant is going great guns. We are working overtime. We think it is great. The one thing in

[*P. 1687*]

the world we want to see is that management stay in authority and not do anything to jeopardize it."

That situation is as true in a Communist society as in a capitalist society. The Communists reward their management in a sense far more than we do, because they understand the quotient which is critically important in management in any enterprise.

We plan to cut the top-bracket tax rate from 91 to 70 percent. That is still a pretty large bite. I do not think we could do any better. I do not think we should do any better under present circumstances. But let us understand that it is still a very large proportion of income. Therefore, we should not rule out the need for other inducements which represent incentives to management in order to make it feel that it really has a big stake in the success of an enterprise.

That goes for stock options of a reasonable character. It goes for group life insurance of a reasonable character. I cannot say whether $40,000, $50,000, $60,000, or $70,000 is the correct figure but the principle is right, and so I shall stay with the committee recommendation.

One final point about the principle which underlies from the present amendment and will underlie other amendments which will be directed to the bill, is exactly what we will or will not accomplish if we pass the tax-cut bill. The most difficult problem in respect to the bill—and I support the bill—is to understand clearly what it will and what it will not do.

If we fail to define this precisely, there is grave danger that we will be under delusions, or will be complacent and will fail to take other measures which can really deal with the dangerous problems that are not susceptible of solution by the tax cut. The danger is of an economic downturn notwithstanding a tax cut, if we do not take these other measures in time. This tax cut will not guarantee us against a recession or even a depression.

The tax cut will stimulate our economy and give us a good chance to stretch out the expansion of our economy beyond the present 35 months—which already is the longest continuous period of expansion in the last hundred years excluding expansions in times of war. It will also have benefits for U.S. sellers in competition with other sellers on the world market and for bringing about a greater modernization of the U.S. production machine, which, in some areas, is getting dangerously obsolescent.

The tax cut will not deal effectively with endemic unemployment that has kept our percentage of unemployed around the 6 percent mark, notwithstanding the extended recovery from the 1961 recession. This type of unemployment promises to continue. This unemployment rate alone can cause a sharp economic downturn, even with the tax cut, if it continues to frustrate us for too long.

Nor will the tax cut win the "war on poverty" declared by the Johnson administration. Indeed, since this war of poverty lumps together the unemployed and the endemic poor, and is a way of politically begging the question of the inability of the Kennedy and now the Johnson administration to make a material dent in endemic unemployment, it could confuse the issue further and could itself be the basis for a marked economic downturn. It is, therefore, essential that we keep our lines of governmental action clear as to the objectives of the tax cut, and that we take in time the really meaningful additional measures to deal with endemic unemployment and poverty.

The causes of poverty are many and complex. Merely labeling existing education, training, and health programs put into effect by President Kennedy and his predecessors, as a "war on poverty," and adding the $250 million newly budgeted for fiscal year 1965 by the Johnson administration, cannot make a real dent in the twin problems of reducing the substandard living conditions of 30 million Americans with incomes less than $3,000.

I am all for raising the living standards for our people, a process which has been going on in this country for decades with considerable success. And I am all for a concentrated attack on continuing poverty by our affluent society. But we must not let both the unemployed and the poor suffer because we try to "sweep the unemployed under the welfare rug" or pretend that it is Government alone which can eradicate poverty. The fact is that as the American economy expanded over the years, the percentage of Americans in the low-income brackets has declined steadily, until in 1962, only 20 percent of American families had less than $3,000 of income per year. Fifteen years before that, for example, 32 percent of American families were in this category.

Much of this success should be attributed to the steadily advancing private economy and our mass production and distribution system. I fully recognize that government has a major responsibility to stimulate the economy to its maximum potential and that it has a great role in welfare and training. But it is the private sector which can attack the causes of unemployment and poverty in America with the most lasting effect.

It is also undeniable that there is need for Federal expenditures to build roads and hospitals, to aid education, and to modernize our Defense Establishment. But, it would be folly to maintain that government alone must or can carry the burden to attack the root causes of poverty. The most effective and realistic approach would be in the form of cooperative undertakings between private enterprise and government.

This concept could be applied in the field of medical care for our elder citizens, as a joint enterprise of government and private insurance companies, according to a bill which a number of Senators and I have recently introduced, and the same principle can obtain in other areas.

In the area of labor-management relations there is much room for cooperation between labor, management and government to resolve differences over wages, the impact of rapid technological change, and other problems which involve the public interest. The Manpower Development and Training Act of 1962 contains section 205(b), an amendment which I proposed, calling for the establishment of such tripartite groups on a local, regional and industry basis. Forty-seven State and 740 local groups have been formed across the country under this provision of the act. This movement needs to be pressed, since there were 5,000 such committees in the United States during World War II.

There is also a need for cooperation between philanthropic organizations and foundations, corporate giving, and local, State, and Federal governments in the area of social welfare at the local level. There is a great need in this area for a new organizational concept to focus at the very heart of real poverty in America—the family and its immediate environment.

I could cite numerous other examples. The point I wish to make here is that it would be cruel to create the belief in the minds of the American people that the proposal offered thus far by the Johnson administration under the slogan of "War on Poverty" already has the resources, the programs, or even the conceptual formula to lift the economic burden of social and economic disadvantage from the shoulders of the 30 million Americans in our lifetime.

A successful effort in this area must come from a partnership between the proven ingenuity of American enterprise—management and labor—and local, State, and Federal government. To leave this "war on poverty" largely to the Federal Government would be a mockery of the American people's confidence in the ability of our economic system to meet the challenges of our time.

Nonetheless, in addition to a tax cut, the Federal Government can, and must, take measures to help in those areas where only it can help.

I therefore recommend, as we debate the tax cut bill, the following measures:

We must radically increase our manpower training program to enable at least 50 percent of our trainable unemployed, or roughly 450,000 individuals, to learn the skills which can make them, once again, productive members of society. As against that figure, it is estimated that now only 135,000 workers are scheduled for retraining in fiscal year 1964. That is only 15 percent of the number actually needed.

We must establish and adopt a Fair Employment Practices Commission to deal with discrimination in employment which deprives our country of $15 billion a year in productive power. That is the estimate of the Council of Economic Advisers, not mine.

We must accelerate, extend, and expand Federal assistance to vocational and technical education programs.

We must provide still further additional incentives for plant modernization.

We must provide a tax incentive for exports.

[*P. 1688*]

We must bring the U.S. private enterprise system effectively into foreign aid. A top committee to do this is called for by the Foreign Assistance Act of 1963—an amendment of mine which is now in the law—but has not yet been named.

We must establish a commission on automation to make urgent recommendations in this critical area and to provide for the transition of workers and businesses to automation. That proposal is now pending before the Committee on Labor and Public Welfare.

We must modernize the antitrust laws—one of the crying needs of our country.

We must enact permanent improved Federal standards of unemployment compensation, which today is bedeviled by varying standards, and in many of the States is completely unfair and impractical to the unemployed.

Finally, as already suggested, we must accelerate the use of labor-management-public committees provided under section 205(b) of the Manpower Development and Training Act of 1962.

This is a program really opposite to our situation, and is urgently needed.

My purpose in speaking today is merely to make clear with all the conviction of which I am capable that the tax cut alone will not do it, desirable as it is and desirable as are a number of reforms which are made in the bill, for example, relating to charitable contributions made by individuals, charitable contributions made by corporations, political contributions, which is an excellent provision, averaging of income for artists and writers and others whose incomes fluctuate widely, some help to small business in the basic tax on corporations, and problems involving tax liens and personal holding companies.

All of these are important but they do not deal with the fundamental problems of meeting the vast needs of a modern, complex economy required to cope with the challenges imposed by en-

demic unemployment, obsolescence, discrimination, the expansion of our foreign trade, rapid technological change, and the poverty of one-fifth of our people.

As we complete action on the tax bill, I hope we shall bear these principles in mind. Once having cut the rates, we cannot cut everything else.

This is by no means the end of the road. The tax bill is going to help, but not cure the situation. If we really want to deal with the fundamental problems which assail our economy and lead us to a new economic plateau in which we do not have to fear another cyclical recession, which it is said we must expect, it is necessary to adopt many of the measures which are now being considered.

Mr. LONG of Louisiana. Mr. President, in order that Senators may know when the Senate will vote on the amendment, I ask unanimous consent that the vote on the Gore amendment come at no later than 1:45 p.m., which is 10 minutes from now.

The PRESIDING OFFICER. Without objection, it is so ordered.

What is the will of the Senate?

The question is on agreeing to the amendment of the Senator from Tennessee [Mr. GORE]. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from Alaska [Mr. BARTLETT], the Senator from West Virginia [Mr. BYRD], the Senator from Nevada [Mr. CANNON], the Senator from Connecticut [Mr. DODD], the Senator from Arizona [Mr. HAYDEN], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Michigan [Mr. MCNAMARA] the Senator from Maine [Mr. MUSKIE], the Senator from Oregon [Mrs. NEUBERGER], the Senator from Rhode Island [Mr. PASTORE], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

I also announce that the Senator from California [Mr. ENGLE] is absent because of illness.

On this vote, the Senator from Alaska [Mr. BARTLETT] is paired with the Senator from Nevada [Mr. CANNON].

If present and voting, the Senator from Alaska would vote "yea," and the Senator from Nevada would vote "nay."

I further announce that, if present and voting, the Senator from Connecticut [Mr. DODD], the Senator from California [Mr. ENGLE], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Michigan [Mr. MCNAMARA], the Senator from Oregon [Mrs. NEUBERGER], and the Senator from Rhode Island [Mr. PASTORE] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from New Hampshire [Mr. COTTON], the Senator from Illinois [Mr. DIRKSEN], and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent.

If present and voting, the Senator from Illinois [Mr. DIRKSEN] and the Senator from Arizona [Mr. GOLDWATER] would each vote "nay."

The result was announced—yeas 16, nays 69, as follows:

[No. 13 Leg.]

YEAS—16

Burdick	Humphrey	Mundt
Church	McCarthy	Nelson
Clark	McGovern	Proxmire
Douglas	Metcalf	Young, Ohio
Gore	Monroney	
Gruening	Moss	

NAYS—69

Hartke	Morse	Young, N. Dak.

NOT VOTING—15

Bartlett	Dodd	McNamara
Byrd, W. Va.	Engle	Muskie
Cannon	Goldwater	Neuberger
Cotton	Hayden	Pastore
Dirksen	Kennedy	Yarborough

So Mr. GORE's amendment was rejected.

Mr. GORE. Mr. President, I offer an amendment and ask that it be stated.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. At the proper place in the bill it is proposed to add the following new section:

SEC. —. EARNED INCOME OF CITIZENS OF THE UNITED STATES FROM SOURCES WITHOUT THE UNITED STATES

(a) REDUCTION OF CEILING ON EXEMPTION.—Section 911(c)(1) (relating to earned income from sources without the United States) is amended—

(1) by striking out, in subparagraph (A) thereof, "$20,000" and inserting in lieu thereof "$4,000"; and

(2) by striking out, in subparagraph (B) thereof, "$35,000" and inserting in lieu thereof "$6,000".

(b) EFFECTIVE DATE.—The amendments made by subsection (a) shall be applicable only with respect to taxable years beginning after December 31, 1963.

69-108 O—66—pt. 3——27

Mr. GORE. Mr. President, on this amendment, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. GORE. Mr. President, this is the first of a series of amendments I shall offer dealing with tax exemptions. The pending amendment proposes to reduce from $35,000 to $6,000 the exemption provided in the law for an American citizen living abroad for 3 years or more and having a permanent residence abroad, and to reduce the exemption for an American citizen temporarily living abroad from $20,000 to $4,000.

The late President Kennedy, in a message to Congress, recommended that the exemption for income earned abroad "be completely terminated for those residing in economically advanced countries," and that the exemption be limited for those living in underdeveloped countries.

For American citizens living at home, working at home, rearing and educating their children at home, the law provides an inadequate personal exemption of only $600 for each taxpayer and each of his dependents; but for the citizen who lives in Nassau, across a relatively narrow stretch of water from Miami, the exemption is $35,000 before the U.S. Government levies a tax upon his income. That citizen may commute to Miami to look after his business, but have his cottage on the seashore in Nassau; or he may live in Tijuana; indeed, he may live just outside the Canal Zone, at Panama; and still be exempt for $35,000. Meanwhile, he owes the same responsibility to contribute to the defense and welfare of his country as do any of us. He is a U.S. citizen, enjoying all the privileges of his country and the protection of his interests, but the tax law gives him a highly preferred status. If he has permanent residence outside the United States, he receives an exemption of $35,000; if he has temporary residence outside the United States, he has an exemption of $20,000.

What Senator will return to his State and say that he voted against increasing an exemption for the people of his State who labor and toil and have taxes deducted from their paychecks every Friday night? What Senator will say that

[*P. 1689*]

he voted against raising the exemption for such a taxpayer and his children above $600, but then voted against reducing the exemption of $35,000 for those who have established a residence in Italy, Switzerland, Monaco, Mexico City, Bermuda, Jamaica, or Panama? There are many tax havens in the world to which the very rich repair for tax purposes.

When this amendment has been voted upon, and provided I receive recognition by the Chair—and I ask that I be recognized following the vote on this amendment—I shall then offer an amendment to increase the personal exemption for persons who live and work at home.

Mr. LAUSCHE. Mr. President, will the Senator yield for a question?

Mr. GORE. I yield.

Mr. LAUSCHE. What is the advantage of granting a $35,000 exemption to American citizens permanently residing abroad, and only a $6,000 exemption to those who reside in this country? Is there any particular theory in support of such a distinction?

Mr. GORE. First, let me state that I do not think any exemption should be granted; I wish that clearly understood before I reply. The late President Kennedy asked that it be eliminated entirely in the case of Americans living in developed countries, which is where most Americans who reside abroad live.

In answer to the question asked by the Senator from Ohio, I reply that those who advocate this exemption say it will be easier for American companies who want to send employees abroad to persuade them to go there, if by so doing they can receive this big tax bonanza.

I would say it would be much easier. In fact, some of the companies have more or less of a practice of passing this favor around, and letting first one group and then another group serve abroad, and thus receive these large tax benefits.

In order to be as explicit as possible, I shall read from Secretary Dillon's testimony on this point:

> There are about 50,000 U.S. citizens living abroad who claim an aggregate exemption of more than $500 million under these 2 provisions. The President recommended elimination of the exemption privilege for American citizens living in economically developed countries, since neither living conditions in such countries nor national policy requires special tax benefits in these cases. Because it is in our national interest, however, that Americans skilled in industry, education, medicine, and other professions be encouraged to go to less developed countries and contribute to their economic growth, the President also recommended continuing the exemption for our citizens who qualify as foreign residents of these less developed countries or who are present there for 17 out of 18 consecutive months, but only to the extent of $20,000 a year.

Only last week, the Senate passed a bill giving a cost of living allowance to employees of the U.S. Government who live abroad. I voted for the bill, and the Senate passed it. Under it the highest amound paid is $4,440. That is for service in a place such as Brazzaville; for those who live in other countries, the allowance is not as large.

The amendment I have offered would not go as far as the late President Kennedy recommended, for he recommended that the allowance be eliminated entirely, so far as Americans employed in developed countries are concerned. My amendment would reduce the exemption for the American citizen who has established a permanent resident for that purpose from $35,000 to $6,000, which would be exactly 10 times the exemption for a citizen who lives and works at home. Furthermore, such an American citizen would not have to live very far from the United States in order to be entitled to receive the $6,000 exemption which my amendment would permit. I think it is only a 30-minute flight from Miami to Nassau.

The amendment I have offered would also reduce the exemption for such an American citizen who has a temporary residence abroad from $20,000 to $4,000, which is far in excess of the exemption provided for a citizen who lives in the United States.

Mr. BENNETT. Mr. President, will the Senator from Tennessee yield?

Mr. GORE. I yield.

Mr. BENNETT. Is it true that a U.S. citizen can live in Nassau and can commute to Florida and can still retain his status as a bona fide U.S. citizen residing abroad? Will not he lose that exemption the minute he establishes a pattern of returning to the United States? It is my understanding that if he returns at all within 3 years, he loses his exemption.

Mr. GORE. He could only suffer a reduction from $35,000 to $20,000. Moreover, I think the telephone charge from Nassau to Miami—although I do not wish to rely on my memory—is not over $2.50.

Mr. BENNETT. But one cannot always do business on the telephone. I am told that if such a U.S. citizen returns for 1 month out of 18, he loses his exemption; he must be abroad 17 out of the 18 months or else he will lose the entire exemption.

Mr. GORE. That rule does not apply, as I understand, to a U.S. citizen who has established what has been held to be a bona fide residence abroad. The "17 out of 18 months" rule, to which the Senator from Utah has referred, applies to one who is temporarily abroad—such as a movie star who goes abroad to make several movies, and stays there for 17 out of 18 months, and thus has an exemption of $20,000 a year.

Mr. BENNETT. Does not the Senator from Tennessee believe that if the Internal Revenue Service found that a man who had once established a legal bona fide residence abroad had subsequently changed that pattern, and came back to the United States frequently, the Service would reject his claim as being a bona fide resident abroad?

Mr. GORE. I doubt it very much. If the Senator from Utah were to go to Nassau and see the prices of seashore real estate, the number of cottages being built there, and the number of American institutions that are establishing so-called subsidiaries there, I think he would come to the same conclusion that I have.

I wish to read briefly from an article published in the New York Times on November 21 of last year:

> One of every 30 American taxpayers lives in some other country.

Does that come as a surprise to the Senator from Utah?

Mr. BENNETT. How many taxpayers are there in the United States?

Mr. GORE. Permit me to read just a little further, and I believe we shall find the answer:

> Ten years ago, there were 500,000 of them outside the United States. Today there are 2 million.

Last year, the Secretary of the Treasury advised us that they claim total exemptions of $500 million.

I wish to read further:

> No one knows for certain whether they are as law abiding overseas as they are at home, or whether they slip into some of the lax ways of the natives among whom they are living. In either event the Internal Revenue Service thinks they deserve more attention.

I certainly agree with that statement.

Mr. President, I ask unanimous consent that the article be printed in full in the RECORD.

The PRESIDING OFFICER (Mr. WALTERS in the chair). Is there objection?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Nov. 23, 1963]

TAX CHIEF CHECKS ON PAYERS ABROAD—TOURS EUROPE ON INSPECTION AND VISITS TO OFFICIALS

(By Richard E. Mooney)

PARIS, November 21.—One of every 30 American taxpayers lives in some other country.

Ten years ago there were 500,000 of them outside the United States. Today there are 2 million.

No one knows for certain whether they are as law abiding overseas as they are at home, or whether they slip into some of the lax ways of the natives among whom they are living. In either event the Internal Revenue Service thinks they deserve more attention.

Mortimer Caplin, the U.S. Tax Commissioner, has completed an inspection trip through six countries of Europe—the first

foreign field trip that any Commissioner has ever taken. He will leave London tomorrow for his return to Washington.

To skeptical Americans he has been saying that their friendly tax collector wants to help them. With American officials stationed here he has been discussing where to open new offices.

TALKS WITH EUROPEANS

To less successful European tax collectors he has been explaining how it is done back home. And with these same European officials he has been discussing a special kind of foreign aid—how he and they can help each other catch their respective evaders.

Mr. Caplin pointed out in an interview that his increased foreign problems have three dimensions.

First, there is the oversea American population explosion. Second, the oversea stake of American business capital has reached $37 billion. And finally, there is last year's new law that makes both the people and the businesses more taxable.

[*P. 1690*]

The new law, effective for income earned this year and henceforth, ends the total U.S. tax exemption that oversea residents used to enjoy. Now, they are subject to U.S. tax on any income over the specified tax-free minimums—$20,000 a year at first, including housing subsidies and other extras; $35,000 after the person has been away 3 years.

For businesses, most foreign profits are henceforth taxable in the year they are earned. In the past, the U.S. tax did not apply until the foreign branch or subsidiary sent the money home.

Mr. Caplin has oversea branches himself, in London and Paris, covering Europe and the areas surrounding, and in Ottawa, Manila, Mexico City, and São Paulo, Brazil.

On his trip he has covered Paris and London, The Hague, Rome, Bonn, and Frankfurt, and three cities in Switzerland. With its relatively low taxes, Switzerland has been a particularly popular spot for setting up American oversea business headquarters.

On his way, Mr. Caplin noticed a new type of boom in American oversea business—new branches of New York law firms, particularly in Paris.

Mr. Caplin's wife, Ruth, has accompanied him on his European rounds. Is she a deductible business expense?

"Oh, no," the Commissioner replied.

Mr. GORE. I shall not burden Senators by reading the entire article to them; but it indicates that it is very difficult for the Internal Revenue Service to obtain accurate information about the incomes and the activities of U.S. citizens who are living abroad.

I believe this situation is an injustice which should be corrected. It seems to me it does not require lengthy debate. I have stated the issue, and I am ready for the vote to be taken.

Mr. LONG of Louisiana. I am a member of the Finance Committee. The majority of the members agree with my position on the committee amendments. I believe about six committee amendments were offered and four others were subsequently offered. I would hope that members of the committee would not come before the Senate and ask it to agree to amendments that were not offered in committee and were not therefore given an opportunity to be voted on in committee.

The proposal of the Senator from Tennessee is one which I believe was discussed about 2 years ago. The late President Kennedy recommended that there be some tightening up in this field. We recommended a law to tighten up on income made by foreign residents abroad. The original proposal that was made covered only developed countries. After we had had an opportunity to study the law, we drafted legislation which we believed would catch up with the tax haven situation, and which would not unduly penalize legitimate American business interests doing business abroad, where their activities were in many instances parallel to the interests of this Government.

With regard to individuals living abroad, we amended the law so that it now provides: If a person lives abroad 17 out of 18 months—keep in mind that under this system he is being taxed by a foreign government because he is earning his income over there—that person would be entitled to have his income taxed by that government and excluded from what he made in the United States.

The Senator from Tennessee said something about employees of the American Government. This exclusion does not apply to them. There are a great number of such employees abroad, working in various phases of the American Government's programs but they pay their taxes to this Government. The purpose was to help those companies obtain personnel to manage their operations, such as operating a pipeline in the Near East, or a business of that kind in areas where the climate is bad and Americans would be reluctant to go. Such personnel would be taxed by the laws of that country, provided they were gone from this country 17 out of 18 months, and that they would not be taxed by the laws of this country if they were overseas for at least 17 out of 18 months.

If those people happen to be in the developed countries, such as western Europe for the most part, which have high taxes on income just as we do in the United States, there is little advantage to them in the exclusion provision, if they are living in a country like England or France, because they are being taxed on their income in those countries at rates about the same as ours. The tax

credit for foreign taxes paid on income earned in those countries would, for the most part, wipe out the tax they would owe in this country.

With regard to those people working in an unfavorable climate or in a backward area, at present they have an exemption of $20,000, subject to the taxes charged them in the foreign country. This amendment would reduce the exemption to $4,000.

If they were in a country as long as 3 years, and were bona fide residents of a foreign country for those 3 years, they would enjoy the present $20,000 exemption during those years. This amendment would reduce that amount to $4,000.

If they lived for more than 3 years as bona fide residents of a foreign country, the exemption would be $35,000, which would be reduced to $6,000 by this amendment. This was not requested by the Treasury in connection with the bill.

In 1962, a recommendation along this line was made. Congress studied it. Congress acted on it. Congress gave us the present law. This particular proposal has nothing more in the record than a simple question and answer by a Senator to the Secretary of the Treasury about the matter.

The President did not in 1963 recommend this provision. It is not being asked for in this year's recommendations. This is an old recommendation. It was made in the 1962 program. It was acted then. Congress then tightened up on the law, in the way that Congress believed it should be tightened up and considered. The Senate committee did not even have an opportunity to vote on it because of the fact that the Senator now offering the amendment did not suggest it to the Finance Committee of which he is a member during the many long sessions of consideration of the bill.

Mr. LAUSCHE. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. LAUSCHE. Is there any flexibility in the rule with respect to countries that impose a tax on the American national as distinguished from countries that do not; or is the rule uniform, that the exemption is $35,000 or $20,000?

Mr. LONG of Louisiana. The foreign tax credit exists in any case. Assume that a taxpayer owed a $10,000 tax to this country. If he paid $10,000 to a country where he made it, the tax credit would mean that he would owe no tax to this country.

Mr. LAUSCHE. I understand.

Mr. LONG of Louisiana. That is a uniform rule with regard to all countries.

Mr. LAUSCHE. Does that mean that the tax phase has no applicability to the reasons supporting the rule?

Mr. LONG of Louisiana. In the great majority of developed countries for the most part, in the major developed countries like England, France, Italy, and Germany, the levy is based on a high income tax rate. A tax credit in those countries would take care of the problem so far as all taxpayers are concerned.

The areas where the tax situation is favorable usually are the so-called less developed countries—although there are perhaps a few isolated situations, such as Monaco, where it might be advantageous to a movie star or someone of that sort to live there. However, we enacted a law in 1962 and in earlier years to deal with situations in which someone might want to live there for the purpose of benefiting from a large tax exemption. Motion picture stars have been cited as an example. That is why existing law provides only the first $20,000, of income will be excluded if a person has lived in a foreign country for 17 out of 18 months. If he returns here for 40 days of the 18 months, he does not come under that provision. Such taxpayers have the privilege of complying with the provision applicable to those who are bona fide residents of any foreign country. For the first 3 years they would be allowed a $20,000 exemption, and thereafter they would be allowed a $35,000 exemption. In other words, the law had been drafted to deal with situations in which wealthy persons would go to another country to avoid paying taxes to this Government.

Mr. LAUSCHE. I do not wish to challenge the Senator from Louisiana, but I have the distinct impression that all of the Western European countries and Japan have a far smaller income tax than the United States and that they rely primarily for their revenue upon excise and indirect taxes.

England is the only country that has a higher income tax than the United States. I am quite sure that I am correct in my assertion. As I have said, I do not desire to challenge the Senator's statement, but I believe that an examination of records will show that all the nations of Western Europe, excluding England, collect their taxes primarily through excise, sales, and indirect taxes, while the United States collects practically 89 percent of its taxes through the income tax.

Mr. LONG of Louisiana. My impression is that the income tax rates in most

[P. 1691]

Western European countries tend to approach those in the United States.

Mr. LAUSCHE. I have a tabulation on the subject and I shall discuss it on the floor of the Senate.

Mr. LONG of Louisiana. I regret to say that I cannot give the Senator as much information as I should like.

Mr. LAUSCHE. I am pleased to observe the broad knowledge which the Senator from Louisiana has on the whole subject. It is excellent to listen to him discuss it.

Mr. LONG of Louisiana. I should like to provide the Senator with more information. But the Senator who offered the amendment is a member of the Committee on Finance. Apparently he did not think the committee would agree to his amendment and did not offer it in the committee.

The general problem is one which the Finance Committee studied 2 years ago. I believe that it was also studied by the Committee on Ways and Means. I believe that 2 years ago we voted on the same general principle. At that time I believe the Senator offered a somewhat similar amendment, and it was rejected in favor of the present law. So while it is true that we have not had an opportunity to study it this time, we did have an opportunity to study it 2 years ago and the committee then voted to have the law as it is today.

Mr. GORE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. GORE. Two or three times the Senator has stated that the amendment was not offered in the committee. I beg to correct the distinguished Senator. I am not sure that he was present at that time. As the Senator knows, the committee was in session many days. But the amendment was offered in the committee. It has been studied. The late President Kennedy made a recommendation to the Congress with respect to it.

Mr. LONG of Louisiana. I do not challenge the Senator's statement that the amendment was offered. I am sure the Senator will not challenge my recollection that I do not recall it. The distinguished chairman of the committee, the Senator from Virginia [Mr. BYRD], is in the Chamber. Perhaps he will recall it.

Examining the notes, I now find that apparently the amendment was offered on January 23. I venture the assertion that there was not much consideration given to it at that time because the Senator from Louisiana did not hear much about it until the Senator offered it in the Senate. Perhaps the Senator can recall what the vote was on the amendment.

Mr. GORE. I shall make further remarks on the subject later.

Mr. BENNETT. Mr. President, will the Senator yield so that I may ask a question of the Senator from Tennessee?

Mr. LONG of Louisiana. I yield to the Senator so that he may state his question.

Mr. BENNETT. May I have the attention of the Senator from Tennessee?

Mr. GORE. Yes.

Mr. BENNETT. A little earlier the Senator from Tennessee offered an article from the New York Times stating that 2 million American taxpayers were living abroad. Does the Senator wish the Senate to believe that those were all bona fide residents who could take advantage of the exclusion, or did the 2 million figure include all the members of the Armed Services, who are also taxpayers, all the Federal employees, who do not get the advantage of the exclusion, and the members of the Diplomatic Corps, who do not have diplomatic immunity? Can the Senator answer the question?

Mr. GORE. Mr. President, will the Senator from Louisiana yield for that purpose?

Mr. LONG of Louisiana. I yield.

Mr. GORE. I read to the Senate an article appearing in the New York Times. I read it verbatim. I did not place the interpretation upon it which the the distinguished Senator from Utah has now placed upon it.

As I understand the article, it states that 2 million taxpayers live abroad. I did not say that all of them had permanent residence. Some of them do. Some questions could be raised about what is and what is not a permanent residence. But the record shows that more and more Americans are establishing residence abroad, and are doing so in some cases for purposes of tax avoidance. The Treasury Department estimated what those numbers are.

If the Senator will yield further, my staff has given me some exact statistics. As long ago as 1960, more than 41,000 Americans claimed exemption by reason of living abroad. I have no way of knowing how many did not show up on returns. I have no way of knowing the number, or to what extent the practice has grown. Perhaps the Treasury Department could give us an estimate. Two years, ago the Treasury estimated that if the Congress would enact the law which the late President Kennedy recommended in that regard, $25 million would

be recovered. How many million it would be now I do not know.

However Senators may struggle with the issue, the question is one of fairness. We have ambassadors living abroad with responsibility for representing the U.S. Government and for the implementation and the execution of its policies.

The highest allowance provided by the bill we passed only last week was $4,440, and that in only a very few countries—the class 10 countries, so-called, where the hardships are severe. The Government employee living abroad does not get the benefit of the exemption we are discussing. This is a special arrangement. I ask Senators to examine their conscience. With many thousands of individuals establishing residences in tax havens, it is unfair to give them a tax exemption of $35,000, particularly when the law allows only $600 for the rearing and the education of a child here at home. The Senate will vote on that question next.

Mr. BENNETT. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I have the floor. I wish to make the following statement:

Even President Kennedy, when he made the recommendation, did not recommend that this exclusion be eliminated, even in the case of countries where low taxes existed. This question was considered and acted on. Congress endeavored to act on the tax loopholes where it felt it should act. That did not satisfy the Senator from Tennessee. At that time we were tightening the loopholes. The House made its suggestions in this field. It acted to tighten up on the abuses in that respect.

The chairman of the House Ways and Means Committee called on the Treasury to make a recommendation with respect to the areas in which tax reforms were needed, where there might be loopholes and tax avoidance. The Treasury made a study of this subject, and made recommendations, many of which are included in the bill. This is not an area in which it recommended such a provision. There was a list of questions and answers as to whether or not the law should be changed, which was gone into fully.

Before the Senate acted on such a proposal, I hoped it might have the benefit of more information and study to see to what extent the law which was enacted 2 years ago may have failed to tighten up adequately on those who might be enjoying some sort of tax advantage.

I submit the $20,000 limitation for those who have been enjoying much better treatment represents a tightening up for those who may have been avoiding liability to this Government.

Mr. BENNETT. Mr. President, I appreciate the opportunity to listen to the explanation of the Senator from Tennessee. What he said brings out the fact that we are now discussing not taxes from 2 million people abroad, but additional taxes, if the amendment is adopted, that would be collected from 40,000 to 50,000 Americans living abroad. The Treasury has said that would mean $25 million in additional taxes. If that amount were to be collected from 2 million taxpayers living abroad, it would mean $2.50 from each one, and would not be worth the effort of going through this procedure. We are talking about approximately 41,000 legitimate or established residents living abroad. We are not talking about nearly 2 million Americans who live abroad. This brings the problem into focus.

Like the Senator from Louisiana, I hope the Senate will stand with the committee in its determination not to change this particular provision of the law.

Mr. LONG of Louisiana. It seems to me that if we are to place an additional tax burden on Americans who may be working in very unpleasant tropical climates, or various and sundry places where their companies tried to get them to go to by offering them some incentive, the matter should at least be studied by the Treasury, as a starting point, to see if there is tax avoidance. The Treasury studied the whole gamut of the tax law. It was well aware of the recom-

[P. 1692]

mendations that were made 2 years ago. What Congress thought should be done, was done, about tax havens in foreign countries 2 years ago. The Treasury did not make further recommendations along this line.

If something is to be done, it seems to me the Treasury should study the question and tell Congress what it knows about it, and Congress should study the question and ascertain how well the law it enacted 2 years ago has worked to avoid abuses in this regard.

Mr. BYRD of Virginia. Mr. President, the question has been raised as to whether this amendment was offered in committee. The record of the committee shows that on January 23, in the morning session, an amendment relating to the exclusion of income earned abroad was offered in the committee. The committee considered and rejected an amendment which would have reduced the present $35,000 or $20,000 exclusion

of income earned abroad by those who are bona fide residents or who live in foreign countries 17 or 18 months to $6,000. So the amendment was offered.

Mr. LONG of Louisiana. One similar to this was offered. This in part calls for a $4,000 exclusion.

Mr. BYRD of Virginia. It involves the same general principle.

Mr. GORE. Mr. President, I thank the distinguished chairman of the committee. I knew I had offered the amendment. The pending amendment, contrary to the statement just made by the distinguished junior Senator from Louisiana, is not a $4,000 exemption amendment. It is $4,000 in one respect, and $6,000 in another respect. Let me restate the amendment.

It would provide a $6,000 personal exemption for American citizens who have established a so-called bona fide residence abroad, if they have lived there for 3 years, and so forth. Some question can be raised with respect to what constitutes a permanent residence, but I shall not go into that question. I think those living abroad have as much responsibility for the defense and welfare of their country as do any other American citizens. The exemption which my amendment would afford them is 10 times that which the law provides for a citizen who lives and works at home.

I should state what the present law is. The present law provides them an exemption of $35,000. They also have the benefit of the foreign tax credit.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. GORE. Let me state my amendment, and then I shall yield.

The second part of the amendment would reduce from $20,000—which is the present law—to $4,000, the exemption for a person with a temporary residence abroad, or if he is a bona fide resident abroad, but has not lived there for as long as 3 years.

Now I yield to the Senator from Vermont.

Mr. AIKEN. Could this question be reduced to specific cases, which perhaps would be more understandable? If American citizens live and work in the Panama Canal Zone, are they entitled to any exemption at the present time?

Mr. GORE. I do not think so.

Mr. AIKEN. But if an American citizen works in the Panama Canal Zone and lives in the Republic of Panama, is he entitled to an exemption at this time?

Mr. GORE. Not if he is a Government employee; but if he lives in Panama and works for a private company, yes.

Mr. AIKEN. But if he works for the United States, he is not entitled to an exemption?

Mr. GORE. That is correct, but then he gets an allowance for living abroad. That allowance is not very generous, but the Senate reconsidered the matter last week and passed a bill in that connection.

Mr. AIKEN. But if he lived in Panama and worked for the United Fruit Co., which is one of the big private companies, or an airline, or a shipping line, he would be entitled to an exemption?

Mr. GORE. He would be. Furthermore, if he lived there and worked for a foreign tax haven subsidiary, he would receive it. There are many such companies. In Nassau, on the windows of office buildings there is not enough room for all the names of the tax haven subsidiaries who go there. They have employees who go there, and who do not live very far from home.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. CLARK. Take the example of the American who has established a permanent residence in Paris, France, and who has a gross annual income from American investments of $100,000. What has concerned me is how much of that $100,000 income would be taken by the French authorities, how much would be taken by the American Government under the Senator's amendment, and how much would be left for the man to live on? Is there any basis for saying that the credit for permanent residence abroad is allowed because of the heavy taxation such taxpayers have to pay to the country where they have chosen to reside?

Mr. GORE. My amendment would not affect the foreign tax credit.

I do not know precisely the tax rates in France, but for whatever tax he paid to France or to any other country he would be given the foreign tax credit against his tax liability to the United States.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. CLARK. Then what possible justification is there in the minds of the committee for giving this additional tax break, which, as the Senator points out, is many times higher than what he would get if he lived in his own country?

Mr. GORE. I know of no justification. I could not see any. That is why I made the fight 2 years ago. That is why I made the fight in committee this year. That is why I am making the fight now on the floor of the Senate. I see no justification.

Mr. CLARK. Perhaps the Senator in charge of the bill could enlighten me.

Mr. GORE. Of course this exemption applies only to earned income.

Mr. BENNETT. I would make the same point. The question raised by the distinguished Senator from Pennsylvania was with reference to an expatriate who lives abroad on dividends earned in the United States. He gets no benefits from that income. This discussion refers only to bona fide income earned abroad.

Mr. GORE. I thought I stated the situation correctly. I thank the Senator for placing the proper emphasis on it.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. AIKEN. Suppose an American citizen lives abroad and works for an American or foreign corporation abroad, and pays taxes to the country where he is living. Does he now get a credit for the taxes which he pays to the country where he is living? Are those taxes deductible? Does he pay a tax to the United States on the balance, or must he pay the United States on the entire income, disregarding the obligation which he may have to pay to the country of which he is a resident?

Mr. GORE. He is given a credit against his tax liability to the United States for the taxes he pays abroad.

Mr. AIKEN. Just as though he were living in Tennessee and were given a credit for the taxes he paid to Tennessee.

Mr. GORE. This is more generous than would be the case if he paid his taxes to the State of Tennessee or the State of Vermont. In the case of a State income tax, there is a deduction. In the case of payment of a foreign tax, there is a credit against U.S. taxes. Even if my amendment were adopted, this man living abroad would still be put in a preferred position. He gets a tax credit instead of a tax deduction. If he is a so-called permanent resident, we give him 10 times the exemption he has if he lives at home. We give him $4,000 instead of the $600 if he is temporarily abroad.

The senior Senator from Pennsylvania asked me what justification there was for this. I do not see any justification for not adopting the amendment. President Kennedy recommended that all preferential treatment be removed, and that such a person be granted the same exemption, if he lived abroad in a developed country, as he would receive if he lived in Tennessee or in any other State of the Union.

Mr. AIKEN. Suppose an American citizen lives in a foreign country and earns $40,000 and pays $5,000 in taxes to the country where he resides. What would his tax liability to the United States be?

Mr. GORE. Nothing.

Mr. AIKEN. He is exempt for the other $35,000?

Mr. GORE. He is completely exempt.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. CLARK. During the colloquy which has just ensued, a very knowlable attaché in the rear of the Chamber told me that the Senator's amendment applies only to income earned abroad, and not to interest or dividends received by a person abroad from an American investment.

[*P. 1693*]

Mr. GORE. That is correct.

Mr. CLARK. No credit would be given to the American citizen by reason of the present law or the Senator's amendment.

Mr. GORE. A credit would apply to whatever tax liability he had, but my amendment would be inoperative unless he had earned income.

Mr. CLARK. But if the taxpayer in question had income only from interest and dividends on securities of U.S. companies which he owns, the Senator's amendment would not apply, and the man would pay the same tax as if he lived anywhere else?

Mr. GORE. He would get a credit, of course, for his foreign tax, which might or not might not be a great advantage. In any event, the amendment I propose would not affect him.

Mr. CLARK. I thank the Senator.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. GRUENING. The Senator from Tennessee, in answer to a question from the Senator from Pennsylvania, stated that he saw no justification for this gross discrimination, by which a man employed abroad, and resident abroad, gets a $35,000 exemption. I wonder whether some Senator who is in favor of the amendment would give us an explanation or a justification for the existence of such discrimination.

Mr. GORE. I am perfectly willing to have the distinguished junior Senator from Louisiana make whatever statement he desires. There is now under consideration in the Senate a bill which deals with taxation of American citizens. It is the largest tax reduction bill in the history of the country. A part of that bill deals with income after personal exemptions. Therefore I resist the suggestion that in some way my amendment is improper because it deals with exemptions of American citizens who happen to live abroad.

The distinguished Senator from Utah indicated that I was talking about 40,000 people. I do not know how many. We were told in 1962 that this involved $500 million of claimed exemptions. I do not know what it is in 1964. However, it is a part of the income of American citizens and taxpayers. The matter is properly before the Senate. There is before the Senate a bill of more than 300 pages. The whole Internal Revenue Code is before the Senate. There is involved a provision of favoritism with which I propose to deal in an amendment, though inadequately.

I do not believe the exemption should be as much as $6,000. I have chosen that amount. It is 10 times what is allowed to a person at home. Perhaps my proposal is not low enough. I certainly thing it is high enough. I resist the suggestion that it is not proper to consider this amendment. We are dealing with taxes on American citizens. I am talking about American citizens. I am talking about American citizens who establish a bona fide residence abroad or who temporarily live abroad. Many of them both live temporarily abroad and establish a bona fide residence abroad merely to claim this unjustified exemption.

Mr. JORDAN of North Carolina. Mr. President, I should like to clarify something in my own mind. Will the Senator yield?

Mr. GORE. I yield.

Mr. JORDAN of North Carolina. A person living abroad could not claim this exemption unless he earned some money abroad. Is that correct?

Mr. GORE. If it is earned abroad.

Mr. JORDAN of North Carolina. Abroad.

Mr. GORE. Yes.

Mr. JORDAN of North Carolina. I do not see how we have any right to tax the income of anyone who earns income abroad if he pays a tax on the money he earns in the United States. On whatever he earns in the United States, he pays a tax in the United States, does he not?

Mr. GORE. Yes.

Mr. JORDAN of North Carolina. He pays an income tax, the same as anyone else.

Mr. GORE. Yes.

Mr. JORDAN of North Carolina. We are talking about money that he earns abroad. It has nothing to do with earnings in the United States.

Mr. GORE. That is correct.

Mr. JORDAN of North Carolina. I am not at all certain that we have a right to tax him at all. He is not even living in this country. He makes his money abroad and pays an income tax abroad. Why should he not be allowed to keep what he earns while he is living abroad? If he wishes to, he can give up his citizenship, but he does not want to do that. He wants to keep his citizenship, without paying any income tax to the United States on what he earns abroad. But he would not want to do that. He would not want to give up his citizenship. He is willing to pay some taxes.

Mr. GORE. We hardly leave taxation to the willingness of people to pay taxes. The Government assesses liability under appropriate circumstances.

Mr. JORDAN of North Carolina. Yes, but it is the right thing to do.

Mr. GORE. The Senator has raised an interesting point, but one which I respectfully suggest is entirely without merit. I shall give my reasons for so thinking.

Mr. JORDAN of North Carolina. I should like to have them.

Mr. GORE. I know the Senator will accord me the privilege of thinking that his suggestion is without merit.

To begin with, I think an American citizen owes as much allegiance to his flag, whether he lives in Nassau or Miami, whether he lives in Zurich or in Florida or in North Carolina. He has the protection of his Government. His children, his relatives, his interests are protected by the U.S. Government.

Moreover, he may be an employee of a tax haven established abroad by American capital, and the real money may be earned in the United States but, by bookkeeping devices, transferred to the tax haven. So the standard which the distinguished junior Senator from North Carolina raises is not a standard of equity as between taxpyers. It is not a measure of fidelity and obligation to one's country. It seems to me it is utterly unrealistic. If there is any standard that has been established over many years of taxation, it is that the U.S. Government has the right to levy taxes upon the income of American citizens, American taxpayers, whether corporate or individual, wherever that income is. Even without my amendment, the principle which the Senator from North Carolina advocates is violated, because taxes already apply on income above $35,000.

Mr. JORDAN of North Carolina. I know that.

Mr. GORE. This is not a new question. Some citizens living abroad have undertaken court action to avoid tax liability to this country. But the question has been tried and adjudicated. In Cook against Tate, the Supreme Court decided the question quite conclusively.

So I respectfully suggest that, in the view of the Senator from Tennessee, the Senator from North Carolina does not make a valid argument.

Mr. JORDAN of North Carolina. Mr. President, will the Senator further yield?

Mr. GORE. I yield.

Mr. JORDAN of North Carolina. Suppose, for example, a British citizen establishes temporary residence in the United States and lives here 1, 2, or 3 years. Suppose he pays the U.S. income tax, whatever it might be, and that the British Government taxes him on the remainder of his income here. That is the same situation in reverse, is it not?

Mr. GORE. I am not questioning the right of the taxpayer to such a credit. But to answer the Senator's question, I am not well versed in British tax law. Generally, I understand that the taxpayer would receive credit for the taxes he paid to the United States.

Mr. JORDAN of North Carolina. I am sure of that.

Mr. GORE. In any event, an American citizen living in England and paying the British tax would receive credit for the taxes he paid there against his tax liability here.

Mr. JORDAN of North Carolina. I understand; but to return to my question, would not the reverse also be true?

If an Englishman paid his tax on what he earned here, would not the British Government then tax his income on top of that at any figure, and would not that be the reverse of what we are now doing?

Mr. GORE. Please do not hold me to an exact understanding of British tax law. As I understand whatever he remits to his country is subject to tax by the Crown.

Mr. JORDAN of North Carolina. But does he have to remit to his country a tax on what he earns in this country?

Mr. GORE. If he lives here, he pays taxes to the U.S. Government. If he becomes a citizen of the United States——

Mr. JORDAN of North Carolina. I am not suggesting that he might become a citizen of the United States; I am supposing him to be a temporary resi-

[*P. 1694*]

dent of this country. The Senator is talking about Americans having temporary residence abroad.

Mr. GORE. I do not understand the Senator's point. Is he suggesting that we should follow British tax law?

Mr. JORDAN of North Carolina. No. Are we doing something that other nations are not doing, so far as U.S. citizens who are temporary residents abroad are concerned?

Mr. GORE. I am not sure about what all countries do. I certainly do not wish to speak as an authority on that subject. I am undertaking to measure American citizens with a yardstick of reasonable equity.

Mr. JORDAN of North Carolina. Those are all the questions I wished to ask.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. GRUENING. I would appreciate having information from a member of the committee who favors the $35,000 exemption as to the justification for it. The senior Senator from Tennessee, who is trying to change the law by amendment, seems to me, on the face of the situation, to be fully justified. He says he has no explanation to justify the law as it now is. Could the distinguished Senator from Louisiana [Mr. LONG], the Senator in charge of the bill, explain the justification for this large exemption? Why does a citizen living abroad receive a $35,000 exemption when a citizen living at home receives an exemption of only $600?

Mr. LAUSCHE. Mr. President, who has the floor?

The PRESIDING OFFICER. The Senator from Tennessee has the floor.

Mr. GORE. I should like to yield the floor.

Mr. GRUENING. Then I have the floor, and I am directing a question to the Senator from Louisiana.

Mr. LONG of Louisiana. I thought the Senator from Alaska asked me a question. I should like to respond to it when I obtain the floor.

Mr. GRUENING. I would appreciate having a response.

Mr. LONG of Louisiana. I would prefer to respond in my own time. I will wait until other Senators who wish to speak have spoken. When I receive recognition, I will speak; until then, I shall wait.

Mr. GRUENING. With the understanding that the Senator from Louisiana will answer my question, an answer which is necessary for some of us who would like to vote intelligently on the amendment proposed by the Senator from Tennessee, I will yield the floor. However, the question is a vital one, one which I find it difficult to understand.

Mr. LAUSCHE. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Ohio will state it.

Mr. LAUSCHE. Who has the floor? The Senator from Tennessee has yielded, and I thought the Chair recognized the Senator from Ohio.

Mr. LONG of Louisiana. Mr. President, I thought the Chair recognized the Senator from Louisiana.

The PRESIDING OFFICER. The Senator from Louisiana is recognized.

Mr. LONG of Louisiana. Now that I am recognized, I shall answer the question.

Mr. GRUENING. I thank the Senator.

Mr. LONG of Louisiana. This particular provision of the law goes back a few years to the days when the United States undertook to treat its citizens abroad in the same way that most countries treat theirs here, as I understand. That is, for an American living in a foreign country, the United States does not provide any defense of his person. He is not provided with sanitation facilities. He could contract any disease, from malaria to bubonic plague, and the United States would not protect him. It does not provide the highways on which he rides. It does not provide him with facilities for the education of his children. He obtains them as best he can in the foreign land where he lives.

Great Britain and other countries have in the past become rich by accepting the theory that if an individual is able to earn something, he brings it back to his country, and it is then added to the total wealth of the land. They encourage their citizens to go abroad, invest their money, make something on it, and bring it back to "Merrie Old England," if they succeed in business.

Some years ago, it was felt that this arrangement offered advantages to wealthy persons—moving-picture stars and others—who might want to use it as a tax avoidance scheme. So we said we would limit the exemption to $20,000, unless the person had lived in the foreign land for more than 3 years, in which event the exemption would be $35,000.

So on income earned abroad, from foreign sources, he could make $20,000; or if he had lived abroad for more than 3 years, $35,000; and he would not be taxed in the United States.

I know that a case can be made that even though a U.S. citizen has been living in a foreign country and has not returned to his homeland for 10 years, and still retains his citizenship, he should be taxed in the same way as those living at home, even though this country has provided him with no services.

Some contend that such an American living in a foreign land would have the benefit of having Uncle Sam protect his rights and protect his property in the event the foreign country sought to confiscate it, take all of it away, or do violence to his person. However, the protection the American citizens have had in that connection has diminished in recent years. When an American is living in a foreign country, and is relying on that country for defense against the enemy, defense against invasion or defense against violations of the law, police protection, sanitation protection, and the education of his children, and is paying taxes in that country for those purposes while he is a resident there, it is difficult to see why we should tax him.

Not only do we forego tax because such a country is providing those services to a U.S. citizen who is living there, but also we wish such Americans to be able to compete on terms of equality with the Germans, the Chinese, or the Japanese who may be living in that country. We do not tax income such U.S. citizens earn abroad, because they are competing with foreigners engaged in the same enterprise. It was felt that this justified an exclusion from U.S. taxation up to $20,000; or, if they have been there for more than 3 years, up to $35,000 in some cases. That is what the committee felt.

Much has been said about what President Kennedy recommended. Two years ago President Kennedy recommended that the income of Americans in developed countries be fully taxed. But the amendment of the Senator from Tennessee [Mr. GORE] seeks to go beyond that, and to tax such income of our citizens who are in undeveloped countries as well. In that respect, his proposal goes much further than anything the late President Kennedy recommended.

Our committee considered this matter 2 years ago, and brought out the provisions which are presently in the law, which amount to a very substantial tightening of the law. We adopted what I thought both desirable and very generous in 1962.

Whether we went far enough and made the law sufficiently severe could be questioned; but the Treasury Department has not seen fit to recommend a change in this field. Furthermore, President Kennedy did not recommend a further change. Moreover, President Johnson certainly has not recommended a change in the law, and the Treasury is not asking for the provision the Senator from Tennessee has now proposed.

If we should ask the Treasury what it believes we should do with this amendment, it would reply, "We recommend no change on this, this year." That is about the situation we face.

Mr. CURTIS. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. CURTIS. Is it not true that we are here confronted with a basic problem of jurisdiction? If a citizen of State A earns income in State B, and he is not living in his home State, to what extent can one jurisdiction tax income earned in another? That is also true among nations.

So here we have a question about income not earned in the United States, and oftentimes not brought to the United States. That is the basic problem.

Then there arose a necessity for some limitation on that, because a loophole developed from the fact that the entire activities or business transactions of certain persons or firms were moved outside the United States—whether those involved the making of a movie film or something else. The purpose was to avoid U.S. taxation on a sizable amount of income that went beyond what could be regarded as remuneration for personal services. For that reason, there was some limitation.

But does this question go back in the Senator's opinion, to the basic problem of jurisdiction over taxable income earned in a foreign country? Is it any more likely that such countries would permit United States taxes on income

[*P. 1695*]

earned by United States citizens there, than that the United States would permit those countries to tax income earned in this country by their nationals?

Mr. LONG of Louisiana. The United States claims the right to tax the earnings of every U.S. citizen, wherever he may be—even if he is on the moon, if he can get there. On the other hand, such a foreign country has the right to tax the amounts he earns in that country.

Mr. CURTIS. Is it not true that, historically, income earned by U.S. citizens while living outside the United States, regardless of their particular situations, is subject to U.S. taxation?

Mr. LONG of Louisiana. At one time there was no exclusion. Then in the 1920's we provided an exclusion. Then in the 1950's the United States reasserted its right to tax the income of U.S. citizens who were living in other countries above $20,000 in some cases.

We believe that if there should be any further tightening of the act, it should await some further study. We believe we have tightened enough to prevent abuses, and that further tightening should await the making of further studies to determine where the law should be changed.

Most of the countries where this would have its greatest application are not developed countries; but the amendment of the Senator from Tennessee would apply both to our citizens in the developed and our citizens in the undeveloped countries. However, neither President Kennedy nor any other U.S. official has recommended that we do what the Senator from Tennessee wants done, so far as those countries are concerned.

Mr. GRUENING. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. GRUENING. Is it not true that when a U.S. citizens chooses to establish his residence abroad, and makes his choice freely, thereafter—while he is abroad—he does not drive his automobile over our roads or send his children to our schools, although he could do so. So I fail to understand why he should get a special exemption. If he is taxed by the country in which he works and makes a profit, that is his business. I find it difficult to understand why the U.S. Treasury should be the victim of an act which he performed of his own free choice. Under these circumstances, I intend to support the amendment of the Senator from Tennessee.

Mr. CLARK. Mr. President, before the vote on the amendments is taken, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. CLARK. A few moments ago the Senator for Tennessee stated that the substance of his amendment had been recommended by both President Kennedy and Secretary of the Treasury Dillon; the Senator from Tennessee made that categorical statement.

Mr. LONG of Louisiana. This amendment was not recommended by either President Kennedy or the Secretary of the Treasury.

Mr. CLARK. But it was recommended at the time when the initial recommendation for tax reform came to Congress, was it not? Is not that what the distinguished Senator from Tennessee said?

Mr. LONG of Louisiana. No. This amendment had not been recommended by anyone at the administration level. In other words 2 years ago, under the Kennedy administration, a recommendation was made that the exclusion should be eliminated, insofar as U.S. citizens in developed countries were concerned.

The great majority of countries are not regarded as developed countries, and therefore there was not recommendation of a change insofar as the less developed countries were concerned.

Mr. CLARK. Is it not true, however, that the vast majority of the money involved comes from our citizens who live in developed countries, and that the President recommended elimination of the entire credit, not just a reduction to

$6,000, as the Senator from Tennessee has recommended?

Mr. DOUGLAS. That is correct.

Mr. CLARK. I ask for a factual answer.

Mr. LONG of Louisiana. Well, let me say that although this amendment was voted on by the committee, it was considered there only briefly—which accounts for the fact, so I am advised by one of our ablest staff members, that to the best of his recollection the amendment was not considered at length in the committee.

In my judgment, if the committee had studied the provision more it would have been still stronger in opposition to the amendment. In any event, the possibilities are that the bulk of what we would have talked about in terms of revenue is in the less developed countries, because the tax rates in the so-called developed countries, the advanced countries, are more nearly in line with ours. Insofar as persons making a substantial income in those countries are concerned, they are already paying a substantial income tax on the income derived in those nations, and they would have the benefit of the foreign tax credit with regard to income earned there.

Mr. CLARK. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. CLARK. The Senator from Louisiana agrees, does he not, with the Senator from Tennessee, that a more rigorous amendment than the one proposed by the Senator from Tennessee was proposed both by President Kennedy and by Secretary Dillon 2 years ago?

Mr. LONG of Louisiana. More rigorous in one respect and less rigorous in another respect.

Mr. HOLLAND. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. HOLLAND. I believe most Senators have traveled in Central America and Latin America. I have noticed that in those countries there are large investments of American money, in connection with the operation of all types of business, and that most of those investors prefer to have American executives at the head of their businesses and also in all other high-level echelons.

I inquire of the Senator from Louisiana whether it would be reasonable to expect trained executives of such a type to go into those countries without having some assurance of the type that is offered by existing law—namely—that they would not have full accountability to the countries where they were residing and working for the moment for the payment of income taxes, and at the same time have accountability to their home nation for payment of the full amount of the ordinary income. Would it be reasonable to encourage them or to expect them to accept assignments to those positions if they had to pay taxes in both directions?

Mr. LONG of Louisiana. I agree with the Senator from Florida. I do not believe it would be reasonable to expect that. I also remind the Senator so long as Americans with large investments overseas are competing with foreigners who are becoming more efficient from day to day, we must recognize the growing ability of these foreigners to compete with Americans. If we were to undertake to discriminate by taxing our people at a far heavier rate than that applied to others in those lands, it would seem to me that over a period of time we would tend to make Americans less competitive with the citizens of advanced nations who are competing with our citizens in countries where the resources need to be developed.

Mr. HOLLAND. Mr. President, will the Senator from Louisiana yield further?

Mr. LONG of Louisiana. I yield.

Mr. HOLLAND. In conjunction with other members of the Appropriations Committee, I heard the distinguished Secretary of the Treasury, Mr. Dillon, report on the original conferences in Uruguay which preceded the Alliance for Progress. One of the things on which he insisted most fully was that the contributions to be made by our country over this period of years be very heavily divided between public contributions and private investments, and that it was a part of the program to encourage both large companies and small companies of our country to transact business in the countries covered by the Alliance for Progress.

So I repeat the question: With the emphasis being laid in every way by our country upon increased investments and increased operations by American capital and American business in these countries, would it have been reasonable or feasible to adopt a tax program which would have discouraged our own people who were qualified to be executives of those businesses from going there with our capital, to manage them in the American way?

Mr. LONG of Louisiana. It would not have been reasonable. That is why the Kennedy administration recommended some action in this field and recommended that we not change the exclusion at all in the less-developed countries. The administration was not particularly concerned about retarding the efforts of Americans in connection with

developed enterprises in the developed countries, but it wished to retain the incentive and encouragement that existed then, and presently exists, for

[P. 1696]

Americans to go into the less-developed countries, to help them get on with the job of the Alliance for Progress and with the advancement of their economic interests. So even the present law is more restrictive in that type of situation than the President Kennedy administration was disposed to recommend.

Mr. LAUSCHE. Mr. President——

The PRESIDING OFFICER (Mr. EDMONDSON in the chair). The Senator from Ohio is recognized.

Mr. LAUSCHE. Mr. President, there has been some discussion about the relative income tax burdens imposed by the Government of the United States and Western European countries. The point I wish to make is that the U.S. Government imposes the highest income tax of any of the Western European countries, or even those in the Western Hemisphere. The statistical yearbook issued by the United Nations in 1961 is a narration of the percentage of taxes from major sources collected by certain central governments. The tabulation is most interesting because it shows that the nations of Western Europe rely primarily upon excise and indirect taxes.

The report shows that the United States collects 79 percent of its revenues through income taxes; Australia, 51 percent; Canada, 52 percent; Austria, 30 percent; Belgium, 37 percent; France, 28 percent; Germany, 38 percent; Italy, 21 percent; the Netherlands, 55 percent; and the United Kingdom, 38 percent.

Arguments have been made—and it was so testified by Secretary Dillon—that the European nations have reduced their income taxes and have found that that action has stimulated business. The parallel is drawn that if the stimulation arose there it will likewise come in the United States. But the whole story was not told, because Europe relies primarily upon excise, sales, and other indirect taxes to provide its revenues.

Now I go to another tabulation. This is one issued by the First National City Bank of New York in 1962. This one shows that the United States collects 83 percent of its revenues by income tax; Canada, 65 percent; Japan, 64 percent; the Netherlands, 64 percent; Germany, 60 percent; Australia, 58 percent; Great Britain, 55 percent; France, 51 percent; Belgium, 51 percent; Sweden, 50 percent; Italy, 49 percent, a disparity between this one and the last one I read; Denmark, 40 percent; and Norway, 37 percent.

I am not arguing in favor of collecting revenues through excise, sales, and indirect taxes. The point I wish to make is that most Socialist countries in Western Europe are collecting their revenues primarily through excise taxes.

That brings me to the following point: We contemplate losing revenues in the approximate amount of $11 billion in 2 years. We speak only of a 2-year period. The proposed action would mean a loss of revenues forever unless the tax laws were changed again. It is one thing to argue for the reduction of income taxes and to substitute for the loss the imposition of an indirect or an excise tax; but it is another thing to argue merely to reduce the tax and then depend upon the possibilities that with reduction greater revenues will flow to the state. I do not believe that will happen.

Mr. President, I contend that the tabulations which I have discussed are exceedingly important. Secretary Dillion, in answering the questions asked by the Senator from Virginia [Mr. BYRD], used Europe as an example of why we should do what is proposed in the United States. Therefore I ask unanimous consent that those tabulations be printed at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

[In cents]

	Out of every $1 of tax revenue of central governments—		
	Taxes on income produce—	Taxes on capital produce—	Taxes on sales produce—
United States	83.4	1.8	14.8
Canada	65.0	1.6	33.4
Japan	64.9	.6	34.5
Netherlands	64.6	3.4	32.1
Germany	60.2	1.6	38.2
Australia	58.1	1.3	40.6
Britain	55.3	3.7	41.0
France	51.7	1.9	46.4
Belgium	51.4	1.5	47.1
Sweden	50.6	1.5	47.8
Italy	49.7	1.7	48.6
Denmark	40.0	5.3	54.7
Norway	37.5	2.2	60.3

NOTE.—Taxes on income include payroll taxes. Those on capital include estate, inheritance, gift and property taxes. Taxes on sales include exises, other consumption taxes. Figures are for fiscal years ended in 1960, except for Scandinavian countries, where years ended in 1959 are the latest available.

The Statistical Yearbook issued by the United Nations in 1961 gives an information narration of the percentage of taxes from major sources collected by certain central governments; the tabulation is as follows:

Percentage of taxes from major sources central governments, selected countries, 1960

	Personal income	Corporate income	Import duties	Excise duties	Turnover tax	Others	Total income tax
United States	51.9	27.4	1.4	11.6	----------	7.6	79.3
Australia [1]	51.0		6.5	19.2	[2] 12.5	10.8	51.0
Canada	30.6	22.3	10.3	----------	----------	36.8	52.9
Austria [1]	30.9		7.3	----------	21.3	40.5	30.9
Belgium [1]	37.6		5.4	14.6	----------	42.4	37.6
France	16.0	12.6	2.2	9.5	35.2	24.5	28.6
Germany (Federal Republic)	28.8	10.1	4.8	14.5	28.5	13.0	38.9
Italy [1]	21.3		[3] 22.3		19.4	36.9	21.3
Netherlands	40.3	15.0	10.0	8.5	18.7	7.4	55.3
United Kingdom [1]	38.2		[3] 33.4		----------	28.4	38.2

[1] A breakdown between personal and corporate income taxes is not provided.
[2] The Australian tax is classed as a sales tax.
[3] Import and excise duties are stated as 1 figure for Italy and the United Kingdom.

NOTE.—The turnover tax is a multiple-stage sales tax which is applied at all stages in the production and distribution channels. There are varied and modified forms of it in the countries where it is used.
Percentages may not total 100 due to rounding.

Mr. LONG of Louisiana. Mr. President, in order that Senators may know when the vote will come on the Gore amendment, I ask unanimous consent that the Senate vote on the Gore amendment in 10 minutes, which would be at 35 minutes after 3 p.m.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that immediately following the vote on the Gore amentment the Senator from Indiana [Mr. HARTKE] be recognized.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. LONG of Louisiana. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LONG of Louisiana. I ask unanimous consent that the Senate now proceed to vote on the Gore amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Tennessee. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from Alaska [Mr. BARTLETT], the Senator from West Virginia [Mr. BYRD], the Senator from Nevada [Mr. CANNON], the Senator from Connecticut [Mr. DODD], the Senator from Arizona [Mr. HAYDEN], the Senator from Oregon

[*P. 1697*]

[Mrs. NEUBERGER], the Senator from Rhode Island [Mr. PASTORE], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

I also announce that the Senator from California [Mr. ENGLE] is absent because of illness.

I further announce that, if present and voting, the Senator from Alaska [Mr. BARTLETT], the Senator from Connecticut [Mr. DODD], and the Senator from Nevada [Mr. CANNON] would each vote "yea."

On this vote the Senator from Arizona [Mr. HAYDEN] is paired with the Senator from Rhode Island [Mr. PASTORE]. If present and voting the Senator from Arizona would vote "nay," and the Senator from Rhode Island would vote "yea."

Mr. KUCHEL. I announce that the Senator from New Hampshire [Mr. COTTON], the Senator from Illinois [Mr. DIRKSEN], and the Senator from Arizona [Mr. GOLDWATER] are necessarily absent.

The result was announced—yeas 47, nays 41, as follows:

[No. 14 Leg.]

NOT VOTING—12

Bartlett	Dirksen	Hayden
Byrd, W. Va.	Dodd	Neuberger
Cannon	Engle	Pastore
Cotton	Goldwater	Yarborough

So Mr. GORE's amendment was agreed to.

Mr. GORE. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. DOUGLAS. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HARTKE. Mr. President, shortly this body will take up consideration of an amendment by the junior Senator from Connecticut, my distinguished and learned friend [Mr. RIBICOFF]. This amendment deals with tax credits for those who are supporting children attending colleges and universities.

Mr. SMATHERS. Mr. President, will the Senator yield?

Mr. HARTKE. I am happy to yield to the Senator from Florida.

Mr. SMATHERS. Is the Senator discussing an amendment or proposal which has something to do with the so-called Ribicoff amendment?

Mr. HARTKE. My intention is to discuss at this time a proposal which would be an alternative to and a substantial improvement over the proposal of the distinguished Senator from Connecticut. I hope that Members of the Senate who are interested in the vote on the so-called Ribicoff amendment will give this matter their utmost consideration, because I believe they will be interested in learning how this approach will go to the heart of the problem. This may end what I consider to be some confusion, and may at the same time eliminate the illusion which I believe has been created. The proposal which I intend to offer looks to the future rather than to the immediate past or to the present in the field of education.

Both the subject matter—that of assistance to youngsters in college and their families—and the specific proposal of the junior Senator from Connecticut are familiar to me. I have had to come to grips personally with the problem of helping children in college all too soon after my own labors at trying to earn a degree and money at the same time. Moreover, I have offered as bills several proposed solutions to this problem. I have considered carefully, long ago, the idea of tax credits, of writeoffs for college expenses, of double exemptions for college students and of a guaranteed loan program organized along the lines of FHA. My point is, Mr. President, that I am no Johnny-come-lately to this problem. Nor am I a Johnny-come-lately to seeking a solution.

Along with many others in the Senate, I have come to the conclusion that a solution cannot rest with one facet of this problem. It is not primarily a problem of taxation and the solution cannot be provided exclusively with taxation, if at all. Certainly, any measure which porports to be a solution to the problem of helping students and their parents afford college should offer sufficient relief and help so that we may reach a goal of a college education for every American youngster who wants to go and who has the capacity to do the work.

I do not believe that the junior Senator from Connecticut's amendment would do this job. I think it would add to the confusion and in fact be an illusion. I believe we need a broader, more comprehensive program to do this job.

Last Thursday, the distinguished senior Senator from Michigan stated here:

> When we seek to aid education, we should do so in an education bill and not in a bill relating to finance.

I believe this was one great factor which caused the Finance Committee to reject the proposal of the junior Senator from Connecticut.

When it fell to my lot to face a committee vote on this matter, I took up the whole idea of aid for students in colleges and universities with the highest echelons of Treasury and the Department of Health, Education, and Welfare. I discussed with them my own ideas and the need for something to be done to help solve this problem of trying to put higher education within the reach of every qualified youngster. I have come up with a comprehensive solution which has met with considerable approval at Treasury and HEW and which I believe will be approved parents, students, education, and lawmakers. My proposal looks forward rather than backward.

But first, Mr. President, I wish to discuss for a moment my objections to the

69–108 O—66—pt. 3——28

Ribicoff amendment of the junior Senator from Connecticut.

The graduated tax credit proposed by the junior Senator from Connecticut is extremely costly. Estimates of Treasury are that it will cost $750 million the first year and that, by 1970, the cost will be $1.3 billion for that year. Should costs of tuition and other items of obtaining a college education rise in the period, the loss would, of course, be even greater.

To obtain relief under the proposal of the junior Senator from Connecticut, a man would have to be paying income taxes. There can be no tax relief to the student from a family whose income is too low to be paying taxes. Moreover, it can be assumed that those who would get relief would be sending their children to college anyway. Laudable as this may be, it does not solve the problem of putting college within the reach of every qualified student.

As the 1960 census shows clearly, so far as the present income groups are concerned, if we divide them into upper income, middle income, and lower income groups, we find that two-thirds of those who are in the upper income groups are sending their children to college; one-half of the middle income, and one-fifth of those who are in the lower income groups. Those are the people who are providing an opportunity for a college education.

Colleges and universities would be aided by the amendment of the junior Senator from Connecticut only in that they could raise tuition and other costs. Any tax credit to an individual might then be virtually wiped out by increased costs. In other words, a father might well be out of pocket just as much after getting tax relief because of also getting a bigger bill from the school. The net result could well be aggravation of the disease rather than a cure. There might be little gain—if any—for those who benefit and a loss to those not benefiting. The greatest loss of potential—that is, the lower income group—would be aided least. In fact, the needy will be worse off.

Major benefit to individuals from the plan would go to those who send youngsters to expensive, private institutions. Students in public institutions generally would get shortchanged and States with highly-developed public education into the college level would be discriminated against.

[*P. 1698*]

In evaluating the tax credit as a means for encouraging higher education, through helping institutions and families of students, we should consider whether spending this kind of money can accomplish more some other way.

In following this approach, Mr. President, I have come up with a solution which I believe does just this. That is, the spending proposed is not as great or no greater than the loss of revenue anticipated by passage of the amendment. Yet, I believe, the benefits are greater to those whom we wish to help. I believe that the Labor and Public Welfare Committee should consider my suggested solution, that of our distinguished colleague from Connecticut and, perhaps, others.

I believe, as does the Senator from Louisiana [Mr. LONG], when he said Thursday, in the initial discussion about this matter, that if we could make available the same sum of money that the Ribicoff amendment would cost the Treasury for direct use in assistance to students for higher education, it would be far more effective. I am today introducing a comprehensive bill to achieve those purposes, a bill which bears the short title, "Higher Education Student Assistance Act of 1965."

In my opinion, it would do more to achieve the same ends than would the so-called Ribicoff amendment, because it would reach the needier students from families which cannot benefit from the tax credit, because they would have no taxes, or insufficient taxes, from which to deduct a credit. It would do more because, first, it would create a scholarship program for talented and needy young people. It would do more because it would expand the loan opportunities available under the National Defense Education Act. It would do more because it would make more easily available to students and their families loans through commercial channels, and perhaps from funds of the institutions not now available for loan, by providing for Government guarantee of such loans. It would do more because it would provide a work-study program under which qualified students will be able to do useful course-related work on the campus for pay, giving them aid while at the same time helping the institution by their work, and incidentally removing many students from filling stations, taxi driving, and other part-time work which would thus help make jobs for some unemployed.

Mr. President, there is need for a broader consideration of the needs of higher education in the area of student assistance than can be given hastily on the floor of this body. This has previously been pointed out by others among my colleagues, including the junior Senator from Louisiana and the senior Sen-

ator from Michigan, as well as the senior Senator from Oregon, who is chairman of the Education Subcommittee of the Labor and Public Welfare Committee. It is for that reason that I present the comprehensive student assistance bill at this time, in order that it may be considered as a far better alternative than that which the junior Senator from Connecticut is offering. The total sums involved are less than those which that amendment anticipates, according to Treasury figures, and its full consideration by the subcommittee of the senior Senator from Oregon will give us a basis for consideration which adoption now of the so-called Ribicoff proposal will not do.

The bill I am about to introduce is one which the administration will find it is possible to support. Three of its four methods of approach have been proposed in previous drafts of legislation, and one of these, the student loan guarantee proposal, is before a committee separately in a bill introduced by me, S. 1115, and was once proposed in a bill introduced by the distinguished President of the United States when he was a Member of this body.

But the fourth, the work-study program, is a new and most promising additional approach.

Under my bill, the cost would be $353,500,000, compared with $750 million under the so-called Ribicoff amendment, for the first year, fiscal 1965, rising in 1968 to a maximum of $650 million, compared with the $1.3 billion under the Ribicoff amendment. Thus, the cost of my program would be about half of that involved in the Ribicoff amendment. I have seen no estimate of the number of students who would be aided by the Ribicoff amendment. The number of students who would be aided by my bill would be 905,000 in the first year and 1,240,000 by 1968.

Moreover, these will be students who have proved in the competition for scholarships, in the restrictive provisions requiring a combination of ability and need, and in the measures providing for judicious administration of the assistance to those most deserving, that the aid they receive will be contributing most efficiently to our future citizenry.

My bill has four parts. First, the undergraduate scholarship program would provide aid in the first year for 50,000 students, and for 200,000 by 1968. This would be direct scholarship assistance on a State-administered basis, based on merit. Here we would reach students who have real need but who in many cases, although even brilliantly qualified for college, are unable because of the family economic situation, to attend without scholarship help. This is the group untouched by the Ribicoff proposal.

Second, the National Defense Education Act would be expanded in its aid, with the loan limit lifted from $1,000 to $1,500 for undergraduates and from $2,000 to $2,500 for graduate students. It would further expand the application of the National Defense Education Act to technical institutions of less than 4-year degree-granting status, which are not now eligible. The number of students aided by this expansion would be 470,000 in 1965 and 600,000 in subsequent years.

Third, the student loan insurance program would be accomplished by a very nominal expenditure of $1 million for a revolving fund which would become self-sustaining. One could draw a parallel to the Federal Deposit Insurance Corporation and its operations. It might open up the possibility, with Federal loan guarantees, for the loaning out of restricted funds now being held by many of the institutions themselves, giving them a return on their funds as great as they are now receiving but putting the funds to work directly in support of the educational programs at the heart of their concern. The estimate is that this program, which would include a limitation on the amount of interest chargeable under an insured loan to 6 percent, would help 55,000 students in its first year and 110,000 each year thereafter.

Finally, the work-study program would make available $250 million annually to the cooperating institutions, which would parcel it out in pay to students for work of benefit both to them in relation to their college work and of significant benefit to the institution. For example, it would allow the use of more student assistants to professors. It might encourage teachers by making some payment for their practice teaching, or for field work by students in social work areas, and in other ways. In addition, it would have the "fallout effect" of removing many students from part-time work which could be done as well by nonstudents. This most important new proposal would aid 330,000 students annually.

But although I am speaking of this subject in the context of the amendment to the tax bill before us, I am introducing it as a bill which deserves its own consideration as a preferable attack upon the problem of aid to students. I believe that we must vote against the Ribicoff amendment or at least to refer it to committee, where it can be examined minutely in comparison with my own

proposal in the bill I am introducing today.

Mr. President, I introduce the bill at this time and ask that it be appropriately referred for full consideration by a committee.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2490) to provide assistance for students in higher education by increasing the amount authorized for loans under the National Defense Education Act of 1958 and by establishing programs for scholarships, loan insurance, and work-study, introduced by Mr. HARTKE, was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

Mr. SMATHERS. Mr. President, will the Senator from Indiana yield?

Mr. HARTKE. I yield.

Mr. SMATHERS. I congratulate the able Senator on the concept of his bill. I should like to ask the Senator several questions that arose in my mind as I listened to him speak.

First, does his proposal envision taking care of and providing education for a young man who might be orphaned, who has no family to provide for him? Would the Senator's concept provide education for that type of person, who otherwise would not be eligible?

[*P. 1699*]

Mr. HARTKE. Most especially that is true. There would be assistance to the student who needs this assistance in order to be able to go to college. In other words, his tax would be cut.

Mr. SMATHERS. Does that differ from the Ribicoff proposal, in that the Ribicoff proposal does not provide at all for the boy who might be in need, but rather, envisions taking care of the parents? Is that correct?

Mr. HARTKE. Yes. There is no doubt about it. The Senator from Florida is exactly correct. In the case of the orphan, the parents are no longer living. So, under the Ribicoff amendment, the child could not receive the tax credit; and the parents would no longer be in need of it, for their assistance.

Mr. SMATHERS. As I understand the Ribicoff amendment, if a man has a large number of children, but has no way to send them to school, would this amendment provide a way to send them to school?

Mr. HARTKE. No, it would not, for under the Ribicoff amendment he would not be eligible to receive such a tax credit. No tax credit can be given to a man who does not have any money with which to pay taxes and does not pay them.

The PRESIDING OFFICER. Under the unanimous-consent agreement entered into on January 31, the time available for debate on the Ribicoff amendment is now under control.

The amendment of the Senator from Connecticut will now be stated.

AMENDMENT NO. 329

The LEGISLATIVE CLERK. At the proper place in title II of the bill, it is proposed to insert the following new section:

SEC. . TAX CREDIT FOR EXPENSES OF HIGHER EDUCATION.

(a) ALLOWANCE OF CREDIT.—Subpart A of part IV of subchapter A of chapter 1 (relating to credits allowable) is amended by renumbering section 39 as 40, and by inserting after section 38 the following new section:

"SEC. 39. EXPENSES OF HIGHER EDUCATION.

"(a) GENERAL RULE.—There shall be allowed to an individual, as a credit against the tax imposed by this chapter for the taxable year, an amount, determined under subsection (b), of the expenses of higher education paid by him during the taxable year to one or more institutions of higher education in providing an education above the twelfth grade for himself or for any other individual.

"(b) LIMITATIONS.—

"(1) AMOUNT PER INDIVIDUAL.—The credit under subsection (a) for expenses of higher education of any individual paid during the taxable year shall be an amount equal to the sum of—

"(A) 75 percent of so much of such expenses as does not exceed $200,

"(B) 25 percent of so much of such expenses as exceeds $200 but does not exceed $500, and

"(C) 10 percent of so much of such expenses as exceeds $500 but does not exceed $1,500.

"(2) PRORATION OF CREDIT WHERE MORE THAN ONE TAXPAYER PAYS EXPENSES.—If expenses of higher education of an individual are paid by more than one taxpayer during the taxable year, the credit allowable to each such taxpayer under subsection (a) shall be the same portion of the credit determined under paragraph (1) which the amount of expenses of higher education of such individual paid by the taxpayer during the taxable year is of the total amount of expenses of higher education of such individual paid by all taxpayers during the taxable year.

"(3) REDUCTION OF CREDIT.—The credit under subsection (a) for expenses of higher education of any individual paid during the taxable year, as determined under paragraphs (1) and (2) of this subsection, shall be reduced by an amount equal to 1 percent of the amount by which the adjusted gross income of the taxpayer for the taxable year exceeds $25,000.

"(c) DEFINITIONS.—For purposes of this section—

"(1) EXPENSES OF HIGHER EDUCATION.—The term 'expenses of higher education' means—

"(A) tuition and fees required for the enrollment or attendance of a student at a level above the twelfth grade at an institution of higher education, and

"(B) fees, books, supplies, and equipment required for courses of instruction above the twelfth grade at an institution of higher education.

Such term does not include any amount paid, directly or indirectly, for meals, lodging, or similar personal, living, or family expenses. In the event an amount paid for tuition or fees includes an amount for meals, lodging, or similar expenses which is not separately stated, the portion of such amount which is attributable to meals, lodging, or similar expenses shall be determined under regulations prescribed by the Secretary or his delegate.

"(2) INSTITUTION OF HIGHER EDUCATION.—The term 'institution of higher education' means an educational institution (as defined in section 151(e)(4))—

"(A) which regularly offers education at a level above the twelfth grade, and

"(B) contributions to or for the use of which constitute charitable contributions within the meaning of section 170(c).

"(d) SPECIAL RULES.—

"(1) ADJUSTMENT FOR CERTAIN SCHOLARSHIPS AND VETERANS' BENEFITS.—The amounts otherwise taken into account under subsection (a) as expenses of higher education of any individual during any period shall be reduced (before the application of subsection (b)) by any amounts received by such individual during such period as—

"(A) a scholarship or fellowship grant (within the meaning of section 117(a)(1)) which under section 117 is not includible in gross income, and

"(B) education and training allowance under chapter 33 of title 38 of the United States Code or educational assistance allowance under chapter 35 of such title.

"(2) NONCREDIT AND RECREATIONAL, ETC., COURSES.—Amounts paid for expenses of higher education of any individual shall be taken into account under subsection (a)—

"(A) in the case of an individual who is a candidate for a baccalaureate or higher degree, only to the extent such expenses are attributable to courses of instruction for which credit is allowed toward a baccalaureate or higher degree, and

"(B) in the case of an individual who is not a candidate for a baccalaureate or higher degree, only to the extent such expenses are attributable to courses of instruction necessary to fulfill requirements for the attainment of a predetermined and identified educational, professional, or vocational objective.

"(3) APPLICATION WITH OTHER CREDITS.—The credit allowed by subsection (a) to the taxpayer shall not exceed the amount of the tax imposed on the taxpayer for the taxable year by this chapter, reduced by the sum of the credits allowable under this subpart (other than under this section and section 31).

"(e) DISALLOWANCE OF EXPENSES AS DEDUCTION.—No deduction shall be allowed under section 162 (relating to trade or business expenses) for any expense of higher education which (after the application of subsection (b)) is taken into account in determining the amount of any credit allowed under subsection (a). The preceding sentence shall not apply to the expenses of higher education of any taxpayer who, under regulations prescribed by the Secretary or his delegate, elects not to apply the provisions of this section with respect to such expenses for the taxable year.

"(f) REGULATIONS.—The Secretary or his delegate shall prescribe such regulations as may be necessary to carry out the provisions of this section."

(b) CLERICAL AMENDMENT.—The table of sections for such subpart A is amended by striking out the last item and inserting in lieu thereof the following:

"Sec. 39. Expenses of higher education.
"Sec. 40. Overpayments of tax."

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 1963.

Mr. ANDERSON. Mr. President, I yield 3 minutes to the Senator from Montana [Mr. MANSFIELD].

The PRESIDING OFFICER. The Senator from Montana is recognized for 3 minutes.

Mr. MANSFIELD. Mr. President, I have discussed with the distinguished Senator from Connecticut [Mr. RIBICOFF], the mover of the amendment; with the Senator in charge of the bill [Mr. LONG of Louisiana]; with the disguished senior Senator from New Mexico [Mr. ANDERSON]; with the ranking minority member of the committee on the bill, the senior Senator from Delaware [Mr. WILLIAMS]; and with the distinguished junior Senator from Kentucky [Mr. MORTON] the possibility of changing the unanimous-consent agreement to a more understandable basis.

The unanimous-consent agreement now reads in part as follows:

> That debate on said amendment continue for 4 hours, the time to be equally divided between the proponents and the opponents and controlled in the manner provided by the usual form.

I ask unanimous consent that the words "that after the hour of 8 o'clock p.m." be stricken out.

The PRESIDING OFFICER (Mr. BREWSTER in the chair). Is there objection?

Mr. PROUTY. Mr. President, reserving the right to object, would that mean that the vote on the Ribicoff amendment would be taken tonight?

Mr. MANSFIELD. No. The vote on the Ribicoff amendment would still be taken tomorrow, as now provided for; but the votes on amendments to the Ribicoff amendment would be taken tonight, and there would be debate for 4

hours or less. In other words, if that debate ended before the 4 hours elapsed, the debate tonight could then turn to other amendments.

Mr. PROUTY. Can the Senator from Montana give us assurance that a motion to lay the Ribicoff amendment on the table will not be made by him, and that the Senate will have an opportunity to vote the Ribicoff amendment either up or down?

[*P. 1700*]

Mr. MANSFIELD. No, I cannot now give such assurance, because at this time I do not know what I am going to do.

Mr. PROUTY. Then, Mr. President, under the circumstances, I am constrained to object; and I do object.

The PRESIDING OFFICER. Objection is heard.

Mr. RIBICOFF. Mr. President, on the question of agreeing to my amendment, I ask that when the vote is taken tomorrow, it be taken by the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

The yeas and nays were ordered.

Mr. RIBICOFF. Mr. President——

The PRESIDING OFFICER. How much time does the Senator from Connecticut yield to himself?

Mr. RIBICOFF. As much of the available time as I may need.

The PRESIDING OFFICER. The Senator from Connecticut is recognized.

COLLEGE TAX CREDIT AMENDMENT

Mr. RIBICOFF. Mr. President, this is a significant moment in the long fight that was begun many years ago to provide tax relief for the costs of a college education. The debate we now begin will end tomorrow with a vote—a rollcall vote—on this issue. As far as I know, this is the first time the issue has come to the floor of the Senate for serious debate and tomorrow will be the first time the issue has been voted on.

I believe this is significant for two reasons. First of all, it has been my view while serving both in the executive branch and in the legislative branch, that the legislative branch too rarely initiates its own legislative proposals. Most of the bills that move through Congress begin their journey in the executive branch. There is a reluctance here to break new legislative ground. The system whereby the executive proposes and the Legislature disposes has come to dominate not just consideration of Presidential requests, but the entire legislative process. Too often Congress accepts the passive role of disposing, and fails to assume its proper responsibility for doing some proposing of its own.

Second, the reluctance of Congress to initiate legislation becomes almost absolute when a proposal is actively opposed by the executive branch.

So it has been in the past with the proposal for tax relief for college costs. Each year Senators and Congressmen introduce bills on this subject. There have been 450 bills in the last 10 years. In this Congress more than 100 Congressmen and 19 Senators have introduced such bills. After the bills have been introduced, little or nothing happens. The bills are not pressed in the face of administration disapproval, they are not debated, and they are not brought to a vote.

This year is different. This year those of us who had introduced bills on this subject resolved to press the issue and have it decided. Senators from both parties, representing different parts of the country and different points of view, worked together to fashion a proposal that contained the best features of the bills each of us had prepared. From that effort came the amendment that is now before the Senate. This is the amendment we will debate and this is the amendment we will vote on tomorrow.

The executive branch has been opposed to this amendment and is still opposed. But nevertheless we are going forward. This is the way I believe the legislative process should work.

Let me now explain exactly what this amendment is and how it works.

The amendment provides an income tax credit for college costs. The credit is based on the first $1,500 of tuition, fees, books and supplies per student at an institution of higher education. The amount of the credit is 75 percent of the first $200, 25 percent of the next $300, and 10 percent of the next $1,000. The maximum credit is $325.

The credit is available to anyone who pays the qualifying costs—parents, students, or any other person who wants to help a deserving boy or girl obtain a college education.

The amount of the credit is reduced by 1 percent of the amount by which the taxpayer's adjusted gross income exceeds $25,000. In other words, for each $5,000 of adjusted gross income above $25,000, the credit is reduced $50. For taxpayers with adjusted gross incomes above $57,500, the amount of the credit is 0.

This credit for college costs, like all credits, is a subtraction from the amount of taxes the individual would otherwise pay. Each $1 of credit reduces a per-

son's tax by $1. Because the amendment uses a credit instead of a deduction or an exemption, the tax relief is provided uniformly without regard to the taxpayer's tax bracket. A deduction or an exemption saves a $15,000 man more tax dollars than a $5,000 man. But a credit saves both the exact same amount.

I ask unanimous consent to insert in the RECORD at this point tables 1 and 2 showing the amount of the credit at various levels of tuition and at various levels of income.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

TABLE 1.—*Dollar benefit under Ribicoff amendment providing tax credit on 1st $1,500 of tuition, fees, books, and supplies at an institution of higher education*

	Adjusted gross income up to—							
	$25,000	$30,000	$35,000	$40,000	$45,000	$50,000	$55,000	$60,000
Tuition per student:								
$100	$75	$25	0	0	0	0	0	0
$200	150	100	$50	0	0	0	0	0
$300	175	125	75	$25	0	0	0	0
$400	200	150	100	50	0	0	0	0
$500	225	175	125	75	$25	0	0	0
$600	235	185	135	85	35	0	0	0
$700	245	195	145	95	45	0	0	0

$1,100	285	25.9
$1,200	295	24.6
$1,300	305	23.5
$1,400	315	22.5
$1,500	325	21.7

Mr. RIBICOFF. The primary purpose of this amendment is to ease the heavy financial burden of college costs and thus to help reach the goal of enabling every deserving young man and woman in this country to obtain a college education.

The financial burdens of high college costs are just as entitled to be eased through tax relief as medical expenses and casualty losses. These college costs hit middle income and lower middle income families with an impact that hurts. The man earning $8,000, $10,000 or $15,000 faces a heavy burden in paying $2,000, $1,000 or even $500 for college costs. And this man is generally not eligible for scholarship or loan funds to aid his son or daughter. For example, under the National Defense Education Act loan program, 71 percent of the families receiving loan funds have incomes below $6,000.

This is an amendment for the average family in America. Their income is made up almost entirely of salary. They have no capital gains, no tax-exempt interest, no depreciable property, no stock options, no oil depletion allowances, and no investment credits.

These people are the backbone of America. They work hard. They earn their salaries. Every cent of it is taxable. They have the price, the desire, and the hope to educate their children in the best American tradition.

If they pay a $1,000 medical bill, they get some tax relief. If a tornado or a

[*P. 1701*]

flood causes them $1,000 of damage, they get some tax relief. But when they pay $1,000 a year for 4 years to send their sons and daughters to college, they bear that burden without help from our tax laws.

I believe the time has come to recognize that these average Americans are entitled to a break. When they pay large sums to provide their children or themselves with a college education, they are spending money in the national in-

terest, and it is entirely appropriate for the Nation to ease their burden through the tax laws.

Who are these average Americans, and what benefit would they get from this amendment? Families with incomes between $3,000 and $10,000 are 62 percent of our population. These are the families who will receive 62 percent of the dollar benefit under my amendment. In other words, 62 percent of American families are between the $3,000 and the $10,000 class. It is exactly this group of Americans who earn between $3,000 and $10,000 per year that will receive 62 percent of all the benefits under the Ribicoff amendment.

One of the premises of the bill is that incentives should be given to capital investment. Yet there is no better form of capital investment we can make than investment in the education of our children. The investment credit in the 1962 bill and the revised depreciation guidelines provide over $2 billion in tax relief for investment in machinery. The pending bill provides hundreds of millions of dollars more for this purpose. I believe we should invest in the education of our youth. In the last analysis, trained minds, not just new machines, will insure the success of this Nation.

Mr. President, I await with great eagerness debating this very point with the proponents of the bill, and with the opponents of this amendment who are willing to come to the floor of the Senate and advocate additional revenue losses of millions of dollars for doubling the investment credit for machinery and equipment, but who will oppose a credit for investment in the education of the youngsters of America.

This amendment is not offered as a subsitute for any other form of aid to higher education. We need funds for buildings, for scholarships, for loans, for teacher training institutes, for graduate fellowships, and for research. All will help higher education, and I support these programs—as the distinguished Senator from Oregon [Mr. MORSE] knows, and I shall continue to support such higher education programs as he may advocate. But the need for these programs in the field of higher education does not in any way lessen the need to ease the financial burden of high college costs.

This amendment has been criticized on a number of counts, often by critics who did not know what the amendment provides. Let me deal with these objections one by one.

First. It is claimed the amendment helps the wealthy. The fact is, the $5,000 man gets more benefit than the $30,000 man and the $60,000 man gets no benefit at all.

Let me repeat: 62 percent of the dollar benefit goes to families with incomes between $3,000 and $10,000. Ninety-one percent of the benefit goes to families below $20,000 of income.

This is not a millionaire's amendment for one simple reason: the millionaire gets no benefit whatsoever under the Ribicoff amendment.

Second. It is claimed the amendment discriminates against the poor. The fact is, the credit operates exactly like all other tax relief provisions of the Internal Revenue Code: it is available only to those who pay a tax. The medical deduction is not used by nontaxpayers, yet who would oppose it on that ground? And who would argue that it discriminates against the very poor? All credits and deductions provide no relief to those who pay no tax. Why then should this one credit be attacked for such a reason?

Those in the very low income groups who pay no taxes need a sound program of student aid including scholarships. I am for such a program. It is needed in addition to tax relief for middle-income families. These are not alternatives. They are both necessities.

Third. It is claimed the amendment favors the high tuition colleges, most of which are private colleges. The fact is the amendment favors the low tuition colleges, most of which are public colleges.

The credit on a $200 expense is $150. That is 75 percent. The credit on a $1,000 expense is $275. That is only 27 percent. Even where a college charges no tuition, the expense of fees, books, and supplies invariably totals $200 or more.

This proportionately greater benefit for the low tuition results from the sliding scale formula in this amendment. Let me tell you why that sliding scale was used. During preliminary work on this amendment, we asked all Senators who were interested in the program to meet in my office, and during the conference the Senators from the Western States pointed out that they have a special problem because of State universities where the tuitions are low, and therefore they wanted a program that would give proportionately more assistance to the students who go to the community and State colleges where tuitions are usually low than to the great universities and the private colleges.

The sliding scale benefits came as a result of suggestions from the Senators from Western States, especially the junior Senator from Colorado [Mr.

Dominick]. He is aware of the basic problems of the Rocky Mountain States, and he made the suggestion; and I was quick to adopt the suggestion, and so were the other Senators there, because we realized it was important. This is how the sliding scale came about.

Those who claim the amendment favors high tuition colleges are looking just at the dollar amounts of the credit. It is true that the credit of $1,000 of tuition is more dollars than the credit on $200 of tuition. But that cannot possibly be the test of discrimination or else every credit and deduction in the Internal Revenue Code would be similarly attacked. The investment credit gives for more dollar benefit to the man who buys a $100,000 machine that to the man who buys a $10,000 machine, but who would call that a discrimination?

Most credits in the Internal Revenue Code work on a flat percentage basis. Thus the dividend credit is 4 percent whether the dividends are $100 or a $1,000, and the investment credit is 7 percent whether the investment is $100 or a $1,000.

It would have been possible to use a flat percentage rate in computing this college credit. Indeed the American Council on Education for years advocated a flat 30-percent college credit.

But we felt that the credit should be weighted in favor of the low tuition colleges. So we adopted the sliding scale formula, whereby the greatest percentage of credit is computed on the lowest amount of tuition.

The only sensible way to measure the fairness of a tax relief measure is to see what share of the burden is eased. This credit saves 75 percent of the $200 burden and only 27 percent of the $1,000 burden. So the man with a $200 expense has $50 left to pay, and the man with a $1,000 expense has $725 left to pay. How that result can be said to work against the $200 man is more than I can understand.

This argument about the low tuition colleges has been put forth most vigorously on behalf of the land-grant colleges and the State universities. I strongly suspect that many presidents of these colleges who have attacked the amendment do not realize that the amendment actually favors the low tuition colleges. And I am sure that many other critics of the amendment have no idea what the costs really are of attending these colleges.

For example, in the debate last week, the Senator from Louisiana said the credit would amount to only $37.50 for a student at Louisiana State University. I checked the tuition and fees at LSU and found that they are $170 for State residents. If you add $90 for books and supplies, the average figure used by the Office of Education, you find that allowable expenses total $260. On this sum the credit would be not $37.50 but $165. I wonder how many parents paying the costs of sending a son or daughter to LSU think that this $165 credit is unfair to them.

I have prepared a table showing what the dollar benefit of the credit would be on tuition, fees, books and supplies at most of the State universities and land-grant colleges of America. The tuition and fee figures were supplied by the Office of Education. To these has been added the Office's $90 estimate for books and supplies. I ask unanimous consent to insert this table in the Record at this point.

There being no objection, the table was ordered to be printed in the Record, as follows:

Mr. RIBICOFF. Mr. President, fourth, it is claimed the tax credit will produce tuition increases. The fact is that tuitions go up whether tax relief is granted or not. Colleges set their charges by the expenses they face, not by what the traffic will bear. But if there are colleges that raise their tuition whenever they find that parents have some extra money, then they will do so whether or not this amendment is included in the bill. For these colleges will know that parents have extra money because of the rate reductions in the bill. Finally, the amendment provides only a 10-percent credit on expenses over $500, so every added $100 of tuition over $500 results in only a $10 saving to the parent—scarcely an incentive to the college.

Fifth. A final objection has been the revenue loss of $750 million in the first year. This is a lot of money. But I must point out that there are ample opportunities in this bill to make up the revenue loss of this amendment. Rather than seriously pursue these loopholes, the Treasury attacks the college credit amendment and at the same time fights to double the investment credit—at a revenue loss in 10 years of $740 million.

So this revenue argument is not a real obstacle. We can overcome it if we really want to. I am sure that if this amendment is adopted, the conferees on this bill will be able to weigh the revenu loss of this amendment against all the other provisions of this bill that either give away revenue or fail to make it up. Then they can make the necessary changes in the bill to keep the total revenue loss approximately the same as the bill now stands.

These are the principal objections to this amendment, and these are my answers.

This amendment has not been hastily conceived or drafted. The proposal in one form or another has been before Congress for years. A score of Senators have introduced their own bills on this subject; some of them have done so for several years.

I am sorry the distinguished Senator from Indiana [Mr. HARTKE] and the distinguished Senator from Florida are not in the Chamber. I was very much interested in their earlier colloquy that we should defer this type of tax relief amendment and, instead, should make further studies on further proposals. I wonder whether those distinguished Senators held those views when they, themselves, over the past number of years introduced measures such as this

Let me ask the distinguished Senator from Indiana whether he was serious when he introduced S. 602 in the 87th Congress—a bill providing tax relief for college costs; and let me ask the distinguished Senator from Florida whether he was serious when he introduced S. 58, in the 87th Congress—a bill providing similar relief.

Mr. President, many Senators have been introducing proposals such as this one, but those proposals have died; they have never seen the light of day. To my knowledge, this is the first time there has been serious debate on a proposal for tax credits for college costs.

Tomorrow, we shall have an opportunity to vote on this issue. Tomorrow, the issue will not be whether we shall introduce a bill or make a speech about a bill; the issue then will be whether we shall vote for a bill. That is why we are here.

I believe this amendment should be adopted; but whatever the outcome, I believe we are making the legislative process work as it should work, by developing such a proposal here in the legislative branch of the Government, by pressing forward with it, despite the opposition of the executive branch, and by bringing it to a forthright "yea" or "nay" decision by each Member of the Senate.

Mr. President, in conclusion, I state that it would be very disappointing if a motion to lay this amendment on the table were made. Frankly, such a motion would come to me as a great surprise. Not the majority leader, but other members of the leadership have told me that this amendment would

[P. 1703]

come to a yea-and-nay vote. I have been told that there would be no diverting tactics, and I thought I had the assurance that Senators would thereby have a right to stand up and have their votes counted.

Mr. President, throughout the United States there is deep interest in this amendment. Many people are aware of it. At luncheon today the distinguished Senator from Wisconsin said to me: "On Saturday, ABE, I was walking along the street in Oshkosh, and people stopped me and asked, 'What are you going to do about the Ribicoff amendment.' "

Every place I go in the United States, people are aware of this issue; and I think we shall be doing the people of this country and ourselves a great disservice if we do not give the Senate an opportunity to vote on this amendment, thus giving Senators an opportunity to stand up and have their votes counted.

I believe the Senate should be willing

to face up to an issue like this, and not run away from it.

Mr. RANDOLPH. Mr. President, will the Senator from Connecticut yield?

Mr. RIBICOFF. I yield.

Mr. RANDOLPH. Mr. President, I am a cosponsor of the college tax credit amendment proposed by the capable and resourceful junior Senator from Connecticut [Mr. RIBICOFF]. I commend him for his leadership on this issue and for bringing the matter to a vote in the Senate after so many years in which similar measures have been introduced but have failed to reach the action stage in this forum.

I have consistently advocated such tax relief as that proposed in the pending amendment for those parents who bear the inordinate costs of sending their children through college. During my campaign for reelection in 1960, after consultations with many educators and discussions with citizens throughout the State of West Virginia, I spoke in some detail on the subject at Beckley on October 12 of that year.

I stated then that the years during which parents have children in college are years of heavy impact on the family budget and that it is incumbent on the Government to recognize this burden, especially for those persons in the middle-income group whose children do not qualify for scholarship assistance on grounds of financial need.

Following my reelection in 1960, I introduced early in the 87th Congress for myself and my colleague [Mr. BYRD of West Virginia] a bill to amend the Internal Revenue Code to allow a deduction for certain amounts paid by a taxpayer in providing higher education for himself, his spouse, and his dependents. Later in the 87th Congress, I supported a similar amendment to the tax legislation of 1962 proposed, but subsequently withdrawn by the diligent and dedicated junior Senator from Nevada [Mr. CANNON].

The pending amendment is the most recent in a series of efforts to provide what many of us consider an equitable and necessary form of tax relief for heavily burdened parents in the middle income group. And like similar measures in previous years, it has been attacked as a rich man's measure and a bonus for the more expensive private colleges. It is neither of these, Mr. President, for as the Senator from Connecticut [Mr. RIBICOFF] has demonstrated, the great bulk of the benefits will go to those in an income range from $3,000 to $10,000 per year, and there will be only a 10-percent tax credit on tuition and fee costs between $500 and $1,500 and none above $1,500.

Mr. President, part of the opposition to the pending proposal rests on the fictious premise that our pubic universities are practically free, and that parents of students attending such institutions are not in need of relief. This is a highly misleading view of the problem. At West Virginia University, for example, which is near the middle of the spectrum of costs for State universities and land-grant colleges, the average expenditure for tuition, fees, and books is $320 for a State resident and $850 for a nonresident. The tax credit under the proposed amendment for the parent of a student attending West Virginia University would thus be $180 for a State resident and $260 for a nonresident. These are significant amounts if one is attempting to send two or three children through college on a family income of $7,000 or $8,000 per year.

As of last fall there were 35,644 students in the colleges and universities of West Virginia.

In 1962 there were 4,207,000 undergraduates enrolled in American colleges and universities; Office of Education estimates project an increase to 5,220,000 in 1965 and 6,959,000 in 1970. The parents of most of these students will carry the financial burden of their education without scholarship assistance, despite the fact that they are directly contributing not only to the enhancement of their children's lives but also to the community welfare and the development of our national manpower resources. The overwhelming majority of these parents are in the middle-income group which is in many ways the most neglected segment of our population in terms of the regard it receives in Federal legislation.

The pending amendment, Mr. President, does not compete with other measures which I favor now in being or under consideration which would provide greater assistance for the very needy in assuring the opportunity for higher education. It would supplement these programs and provide equitable relief for the much-harassed middle-income earner.

For these reasons, I support the amendment.

Mr. RIBICOFF. I thank the distinguished Senator from West Virginia for his most thoughtful and persuasive remarks. The Senator from West Virginia has worked closely with me in the preparation of this amendment, and I have valued his cooperation and his wisdom. Serving as he does as a member of the Advisory Council for the Advancement

of Small Colleges, the Senator speaks with special competence in this field.

Mr. RANDOLPH. Mr. President, will the Senator from Connecticut yield for an inquiry?

Mr. RIBICOFF. I yield.

Mr. RANDOLPH. As stated, I support the amendment. Meanwhile, I inquire if it is true, that the private institutions operating without State aid—especially the small colleges having 1,000 to 1,200 enrollment—in West Virginia and other States are in need of funds? Is not it factual that they are having difficulty facing up to their financial responsibilities and goals in operating as high-quality institutions? It is my understanding that very few of the small and the relatively small non-tax-supported colleges are free of the limitations imposed by tight income conditions.

Mr. RIBICOFF. The Senator is absolutely correct. We have in this Nation about 2,100 colleges. Sixty percent of them are private institutions. These colleges educate 40 percent of the boys and girls of the United States of America.

Education in America would wither and die if we did not have the benefit of the private institutions such as the distinguished Senator from West Virginia talks about. Education is an entire process which we must recognize. There is a role for the private colleges to play. Should private colleges go under or shut down? We do not have enough public institutions to take the millions of boys and girls that private colleges now enroll. As the Senator realizes, to the extent that a young man or woman goes to a private institution, in the State of West Virginia, in Connecticut, Maryland, or Colorado, it takes the burden off State taxes and makes more room for other young men and women who would like to go to the State university. One of the greatest traditions of America is the private college. There could be no greater tragedy than that of closing our small colleges. I should like to see our small colleges grow. I should like to see more of them. Measures such as the one proposed would be of great help to our smaller colleges. For that reason the overwhelming number of small colleges all over the United States are overwhelmingly in support of the amendment.

Mr. RANDOLPH. Mr. President, will the Senator yield further?

Mr. RIBICOFF. I am pleased to yield.

Mr. RANDOLPH. It is my privilege and responsibility to serve on the boards of trustees of two colleges in the category of those now being discussed. They are Salem College at Salem, W. Va., the institution from which I was graduated, and Davis and Elkins College at Elkins, W. Va., the institution on the faculty of which I had the very gratifying experience of serving. I mention those institutions by name because they are typical of others in our State. They are colleges which are, in very considerable degree, giving sound education to youth within the State of West Virginia, many of whom are unable to go into other States to be enrolled and to be graduated from private or church related colleges, or from the public colleges and universities of other States.

[*P. 1704*]

Mr. RIBICOFF. I thank the distinguished Senator for his contribution.

Mr. President, I ask unanimous consent to have printed in the RECORD the latest figures showing a total of 2,043 colleges and universities in the country, attended by 4,800,332 students. The private colleges, totaling 1,314, outnumber the public institutions, which number 729, about 2 to 1.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

State	Public enrollment	Private enrollment
Alabama	34, 556	13, 098
Alaska	3, 549	339
Arizona	43, 000	741
Arkansas	22, 753	8, 125

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. RIBICOFF. I am pleased to yield to the distinguished Senator from Missouri.

Mr. SYMINGTON. I am much impressed with the facts being presented by the distinguished Senator from Connecticut. He has placed on the desks of all Senators a list of benefits available for State universities and land-grant colleges. But, as I understand, students at all colleges and higher education institutions would receive the proposed tax benefits, would they not?

The tax benefits would not be confined merely to State universities and land-grant colleges—an inference which someone might get by reading the analysis of the distinguished Senator.

Mr. RIBICOFF. I thank the distinguished Senator for calling that point to my attention. The credit would go to the student, his parents, or any other person paying the expenses of a student attending any college. The reason for the table is that the point has been made that we would discriminate against land-grant colleges. The land-grant college presidents have gotten together and said that they were against the proposal. Many Senators are under the impression that there are no fees, tuition, or costs at the State universities. I am using the present means to call to the attention of each and every Senator the cost of fees, tuition, supplies, and books at their State universities and land-grant colleges, and indicating in the table the benefits that would be available to every boy and girl attending the State university or college in a Senator's State.

So as far as I am concerned, it should be kept in mind that while State college presidents may be opposed to the amendment, I have the feeling that nearly every boy and girl and their parents who must pay the expense of sending a boy or girl to a State university may be in disagreement with the president of the State university. Perhaps the president of the State university is not interested in whether Papa or Mama Jones receives an income tax credit. But I am sure that with hundreds of thousands of boys and girls attending the State universities, in spite of what the president of their State university may believe, their fathers and mothers are eager to have the benefit of the income tax credit. The purpose of the table is to indicate to Senators how the proposal would benefit students who attend the State universities and their parents.

Mr. HART. Mr. President, will the Senator yield?

Mr. RIBICOFF. I am pleased to yield to the distinguished Senator from Michigan.

Mr. HART. Before leaving that point, would the Senator say that, although the language is perhaps more harsh than he would use, the table is in response to those who have lobbied us on the following basis: "Vote for the Ribicoff amendment, and when you get back home you will find that you are described as one who fronted for the Ivy League only"?

Mr. RIBICOFF. The Senator is correct. The reference to the Ivy League is very interesting. If we consider the Ivy League to include Yale, Harvard, Columbia, and Princeton, my understanding is that these institutions happen to be against the proposal. That is the argument which is being used by some to defeat the proposal. It is exactly for that reason that we are meeting the argument by indicating that the largest proportion of the benefits would go to the parents of students who attend our public universities. What we are fighting for is a proposal which would aid youngsters who go to all State universities and their parents. Let us not rule the amendment "off the face of the map" with a sneer that the proposal is for the Ivy League because the fact is it is specifically designed—and I believe later the distinguished Senator from Colorado will have much to say on the point—to give the largest share of benefit to young men and women who go to the State colleges.

I was Governor of a State. There is a great State university in the State of Connecticut. There is an impression in the State of Connecticut that no tuition is charged at the State university. As Governor I always fought the board of trustees of the State university who wanted to make a tuition charge for attendance at the State University of Connecticut. I felt that every boy and girl should have an opportunity to attend college with as little expense as possible. But as Governor I realized that there were certain fees and expenses. Although there was no tuition, expenses for room, board, and other costs at the university amounted to several hundred dollars.

I know people who are in the $5,000-, $8,000-, and $9,000-a-year class who deprive themselves and their families of basic needs because their greatest ambition is to improve the lot of their sons and daughters by sending them to college. To parents who send their boys and girls to college, that $200 or $300 saving on the tax bill is an extremely important saving when they are trying to make ends meet.

The distinguished Senator from Michigan is absolutely correct. I believe that no greater favor could be done for the many thousands of boys and girls in the State of Michigan who go to one of the greatest State universities in the entire United States—the University of Michigan—than to provide this credit, and I have the feeling that the young men and women who go to the University of Michigan would find it very advantageous to have the benefit of that saving.

As I look at the table, I notice that the cost for the fees, tuition, and books at the University of Michigan amounts to $370. Therefore, for parents who had a child at the University of Michigan, the credit would be $193. My feeling is that $193 is a great amount of money for the parents who sent one of their boys or girls to the University of Michigan.

Mr. HART. Mr. President, will the Senator yield further?

Mr. RIBICOFF. I am glad to yield.

Mr. HART. I appreciate very much the Senator's responding to the question I raised. First of all, I was offended by the approach of those who were lobbying against the Ribicoff amendment. I think the factual reply the Senator from Connecticut has given will be more persuasive than the emotional one I delivered to the lobby.

Secondly, I shall await with interest the discussion of the Ivy League delegate from Colorado. But the truth is that we are talking about the parents and children of America, and the proposal is aimed at them, at whatever university or college they seek to find their opportunity.

I think it is a great mistake to suggest to any of us that we should oppose the amendment because when we get home we will be described as having fronted for private education, for having served the cause of discrimination in higher education, for having fronted for private church-related schools. There are other arguments that could be made.

Admittedly, in a problem which is so complex, one should have some reluctance in expressing the idea that he has the ultimate answer. But we should

[*P. 1705*]

concentrate our attention on how many parents there are in this country who seek desperately to provide their children with educational opportunities. Then we should determine how many of those parents would be assisted by the Ribicoff amendment. The number would be substantial. Then let us not be deterred from voting for the Ribicoff amendment because we have not gone to the heart of the matter, namely, taking care of those whose parents are not taxpayers. That problem has been before us ever since I came to the Senate, and we have not done anything about it. Let us take care of the problems we can take care of, and take care of the basic problem tomorrow.

Mr. RIBICOFF. I thank the Senator for his wise, brilliant, and trenchant remarks. I think the opponents of the amendment who have used the argument referred to by the Senator from Michigan have done the country a great service by setting class against class, by trying to divide men and women on the basis of whether students go to private colleges or State universities. Each and every student makes a valuable contribution to American society. I agree with the Senator from Michigan. I am for a scholarship program, the type of scholarship program I offered in 1961, as Secretary of Health, Education, and Welfare, which received very short shrift from the Congress of the United States. It was a scholarship program offered to boys and girls from families most of whom have so little income that they do not pay taxes.

We should try to solve the entire education problem. We should use every facet of an education program—grants and loans to build facilities, scholarships for the nontaxpayers, and tax credit for those who are trying to make ends meet and are paying some taxes. This is all a part of the program.

I commend the distinguished Senator from Michigan for calling the Senate's attention to the arguments being used by opponents of this amendment and for refuting those arguments.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. RIBICOFF. I yield.

Mr. SYMINGTON. There is reference in the Senator's table to Lincoln University at our capital city of Jefferson City, Mo. This is an interesting university. At one time, technically speaking, it could have been considered segregated, because only Negroes went to the University; but for many years the num-

ber of white students who have gone, and are going, to Lincoln University has increased steadily, to the point where there has been complete integration without any trouble of any kind. One might say it has been integration in reverse.

As a result of the Ribicoff proposal, I note that $156 might be saved, in the way of a tax credit, for the average student going to Lincoln University.

The distinguished Senator from Connecticut is an authority in this field. As he has mentioned, he has been the Governor of a State. He has also been Secretary of Health, Education, and Welfare. In my many years of experience with him, I know of his deep interest in developing the greatest natural resource we have; namely, our youth.

Does not the Senator agree that this $156 saving would be important to many people? It might not be to somebody who wanted to go to an Ivy League college or university. Nevertheless, that $156 might represent the difference between whether or not a family could afford to send a son or daughter to Lincoln University.

Mr. RIBICOFF. Not only that; that $156 going to the parents who sacrificed their last dime, proudly, to send the boy or girl to Lincoln University, might make the difference between whether they could pay some medical bills for the mother or father, or whether they could buy shoes or clothing for a younger boy or girl.

Many people do not realize the sacrifices made by families in sending boys or girls to college. I have seen family after family getting together in a family discussion and saying, "We have three or four boys or girls. We have only enough money to send one to college." There can be no more heartbreaking decision than that of deciding that Johnny will go to college and Jimmy or Tommy will have to go to work. To a family like that, $156 is a great deal of money.

We are fighting for people like that. There are many places in this bill where money can be saved. We should not save money at the expense of education.

Mr. SYMINGTON. Mr. President, will the Senator yield for one more question?

Mr. RIBICOFF. I am pleased to yield.

Mr. SYMINGTON. Is it not true, also, that many families now financially unable to send one or more children to college, might be able to do so because of the passage of this amendment; and is it not also true that the welfare or security of the United States at some future date might be materially affected as a result of the broader education which had been given to that child?

Mr. RIBICOFF. The Senator is correct. The distinguished Senator from Missouri has had experience as Secretary of the Air Force, and he has served on the Aeronautical and Space Sciences Committee, the Armed Services Committee, the Foreign Relations Committee. He knows that education is power. What is the competition in which we are engaged with the Soviet Union?

When we boast that we place a vehicle into space that outdistances what the Soviet Union has done, is it done by uneducated people? No; it is done by educated people. The Soviet Union is producing engineers at a rate three times that in the United States. We are living on a reservoir of talent that is not being sufficiently replenished. We are living with the fact that the competition for the future of the world will be decided by educated people. Education is power. Education is freedom. Education is happiness. Education is not merely a problem of individual profit or individual advancement, but education is necessary to build up our reservoir of talent in the national interest. What we are doing here is encouraging education. That is why an amendment like this is so needed.

Mr. SYMINGTON. I thank the Senator.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. RIBICOFF. I yield.

Mr. CARLSON. I commend the distinguished Senator from Connecticut not only for offering the amendment, but for making a fight for it. If there is any question about the interest of the people in the amendment, I point out that I spoke last Friday at a meeting held in Wichita of 1,200 school superintendents and supervisors. They were overwhelmingly in favor of this amendment.

It is essential that we do something for the education of our youth. This is an opportunity for us to do so. Most of us have assisted boys or girls in attending college. I have had that peronsal experience. One can contribute $500 to a college or school and make it a deductible tax item, but if he pays $500 for a student attending school, he cannot deduct any of it. It seems to me that is one of the points we should stress, in order to help those who make a contribution or a gift to help a boy or girl go to school. I am sure everyone in the Senate has done that.

It seems to me that there is a real opportunity to help parents who not only take care of their own children but who want to help other children to go to col-

lege. I sincerely hope that the amendment will be approved by the Senate.

Mr. RIBICOFF. I thank the Senator from Kansas. The suggestion that the credit be available to those other than parents who help pay for the education of boys and girls came to me from the distinguished Senator from Kansas and the distinguished Senator from Nebraska [Mr. CURTIS]. The Senator is absolutely correct. Men and women who have educated their own families and who would like to help other boys and girls to be educated should be encouraged encouraged to do so.

We should encourage as much use of private resources for education as we possibly can. There is a big role for Government, local, State and Federal, to play. However, to the extent that private resources can take care of education, to that extent we need not use public resources to do so.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. RIBICOFF. I yield.

Mr. MILLER. I wonder if the Senator will be good enough to tell the Senate, if he has not already done so, what the estimated cost will be.

Mr. RIBICOFF. The estimated cost for this year is $750 million. It is estimated that in 1970 the estimated cost will be $1,300 million.

Mr. MILLER. Seven hundred and fifty million dollars for the fiscal year 1965?

Mr. RIBICOFF. For the calendar year 1964.

[*P. 1706*]

Mr. MILLER. What would be the estimated cost for fiscal year 1966?

Mr. RIBICOFF. I do not have the figure, but it will go up in increasing steps, gradually as enrollment rises, to about $1,300 million for 1970.

Mr. MILLER. Is it the Senator's judgment that the cost will be somewhere near $800 million or $900 million for fiscal year 1966?

Mr. RIBICOFF. It is, generally, but I do not know exactly.

Mr. MILLER. Will the Senator be good enough to place in the RECORD the basic estimates on the basis of which these computations were furnished? I have heard that the cost would be considerably in excess of $750 million during the first year.

Mr. RIBICOFF. I believe the cost figures were estimated and agreed to by both the Treasury Department and the staff of the Joint Committee on Internal Revenue Taxation. That is where the figures came from.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. RIBICOFF. I am pleased to yield to the Senator from New Mexico.

Mr. ANDERSON. Would it not be correct to say that the Treasury estimated the cost during the first calendar year at $750 million, rather than during the first fiscal year?

Mr. RIBICOFF. Yes.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. RIBICOFF. I am pleased to yield to the Senator from Colorado.

Mr. DOMINICK. I should like to suggest that we put this subject in terms not of cost, but of savings to the taxpayers. What we are doing is to say that the taxpayer can use this amount of money in order to pay for his own education. It may be that it is revenue which is not coming in to the Federal Government. However, it is taxpayer money which the taxpayers are saving for their own educational purposes.

While on this same subject, I should like to say that when I had an estimate furnished on my own bill, which provided for a maximum of a $600 credit, as opposed to the $325 maximum in the pending amendment, the Treasury stated to me that it was estimated, on a very careful analysis, that the cost would be in the neighborhood of $400 million, not even near the amount that the distinguished Senator from Connecticut has referred to.

I agree that this is what the Treasury and the staff have determined. However, I suggest that there is no knowing whether it will be that much until we know how many people can or will take advantage of it.

Mr. RIBICOFF. While often the figures given by the Treasury Department, whenever they are opposed to a proposal, are high, I am willing to accept the suggestion in the estimates of the Treasury, that in the first calendar year the cost would be what I have said.

Mr. ANDERSON. Mr. President, will the Senator yield?

Mr. RIBICOFF. I yield.

Mr. ANDERSON. I wondered if the figures stated by the Senator from Colorado applied to the same bill. It was my understanding that he did not have in mind a wide-open provision, but confined it to the members of a family.

Mr. DOMINICK. No: it was a wide-open bill.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. RIBICOFF. I yield.

Mr. MILLER. I wish the Senator from Connecticut to know—and I am sure he knows already—that I share the

69–108 O—66—pt. 3——29

concern he was expressed over difficulties in paying the cost of higher education, which confront many of our children and parents. That is one reason why the Senator from Iowa has wholeheartedly supported the increased loan and scholarship provisions which Congress has legislated over the last 3 years.

However, I differ with him in the thought that has been expressed, that the amounts of savings to the individual students or their parents are going to be decisive, or as decisive as the Senator would suggest.

I have talked with a good many educators, and I never talked with one who has told me that the difference of $200 woud determine whether a boy or girl would go to college or would not go to college. That is particularly true nowadays, when there are available any increasing number of scholarships loans, not only through the Federal Government's programs, but through State programs and, indeed, through private lending institutions. There are at present advantages and opportunities which were not present 10 or 15 or 20 years ago. I find it difficult to believe that the money savings set forth would make the difference between a boy or girl going to college and not going to college. I can understand how a scholarship or a loan situation, which we have made possible through legislation in Congress, could represent the difference, but not with respect to the amount of $200.

Mr. RIBICOFF. The records and the statistics under the National Defense Education Act show that 71 percent of the loan money goes to families with incomes below $6,000 a year.

Mr. MILLER. I would have to defer to the Senator from Connecticut on that point, because I am sure he is much more familiar with that statistic than I am, and I would therefore be willing to accept it for the sake of argument. However, I say to the Senator from Connecticut that if we take a family in the $8,000 income area, and it is suggested to me that $200 is going to make the difference between sending or not sending a boy or girl to college, I cannot accept that argument.

Mr. RIBICOFF. Perhaps the distinguished Senator does not realize what $200 may mean to a family in the $8,000 class.

Mr. MILLER. I understand very well the value of money, and perhaps a little better than some of our colleagues in Congress.

Mr. RIBICOFF. By the time a family with 3 or 4 children, trying to make ends meet, even with the overall cost of education at the University of Iowa or the University of Connecticut, gets through paying for room and board and all fees, it will find it very hard to make ends meet. To an $8,000 a year family in Iowa or Connecticut $200 is a great deal of money. Two hundred dollars can buy many things and pay for many necessities of life. Two hundred dollars to such a family is important. To me, the irony of the opposition to my amendment by the Treasury Department is its approval or acquiescence in what I consider to be raid after raid upon the Federal Treasury. The distinguished Senator from Tennessee [Mr. GORE] and the distinguished Senator from Illinois [Mr. DOUGLAS] will be bringing up some of those items as the debate on the bill progresses. When I consider the loopholes that could be closed more than enough to pay for this expensive proposal—and I admit that it is expensive—I think the Senate has a question of priorities to discuss.

If it is important to give investment credits of more than $2 billion and in 10 years, by the repeal of the long amendment, of $740 million for machines, it is equally important to make certain that we are willing to invest $740 million in the education of our children. We can provide for all the machines in the world, but if we do not have educated people to operate them, the machines will be useless.

What I am fighting for, as are the other proponents of the amendment, is to try to do something for the total education picture of the United States.

I have said, and I say again to the distinguished Senator from Iowa, that I do not say my amendment is the answer to the entire educational program, but it is a piece of the answer. One of the extremely frustrating problems in trying to solve the question of what shall be done for education, is to have every little group seek to have its particular piece of education legislation adopted, and fight to the death only for its proposal. I say the time has come to consider the entire education proposal, instead of having one proposal offered by one group of proponents fought to the death, and other proposals offered by other groups, all of them going down to defeat in mutual frustration.

The time has come for those interested in education to try to propose comprehensive ways in which to solve the problems of education. Such a method will not be cheap. Education in America is not cheap. It will cost money. Let us face that fact. If it is necessary to have priorities, let us find other places, not so important, in which to reduce expenditures.

Mr. MILLER. I could not more thoroughly agree with what the Senator from Connecticut is saying, especially when he puts his finger on that nice little word "priorities." I have been a Member of the Senate almost 4 years. One of the great frustrations or disappointments that I have found is the failure to place priorities on some of the programs. The net result is billions of dollars of deficit spending and billions of dollars of inflation.

We talk about $100 or $200 meaning something to a family having an income of $8,000 a year. I point out that a family having an income half that much has been paying, indirectly, a hidden

[*P. 1707*]

inflation tax as a result of the billions of dollars of deficit spending programs.

If the tax bill were in such a position that the Ribicoff amendment were the heart of it and the tax rate revisions were greatly curtailed or eliminated, we would have a real priority from which to work. I agree with the Senator that if we are to assign priorities, the first should be national defense. The second, almost a national defense item in itself, should be education. I have been saying this for many years. But we are not getting the priorities, and it is not my fault or the fault of the Senator from Connecticut. That is something over which we have no control. We are getting priorities for spending revenues in the example the Senator from Connecticut cited and in many other ways, as well. We are providing reductions in tax rates which will greatly benefit some persons, but are providing no relief for persons in the $3,000 bracket, because they do not pay any income tax.

Mr. RIBICOFF. The Senator said the lack of priorities is not our fault. I respectfully disagree.

It is our fault because Congress refuses to set priorities.

It is our fault because Congress will swallow or veto what the executive branch sends to us.

It is our fault because we will not press ahead with thoughts and ideas of our own.

It is our fault because by a majority vote we can determine what measures we favor and what measures we oppose.

It is our fault because the tax bill is loaded with loopholes costing billions of dollars.

It is our fault because we have an opportunity by our votes in the Senate to be either for education or for oil depletion allowances.

It is our fault because in the Senate we can favor education or increased investment in machinery.

It is our fault because we have an opportunity to be for education or for giveaways to a few department stores in the United States.

It is our fault because if we are worried about the $3,000 or $4,000 class, we can do something for those people. The distinguished Senator from Tennessee [Mr. GORE] will provide us an opportunity later during the consideration of the bill to show whether we are concerned with the $3,000 or $4,000 class.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. RIBICOFF. In a moment.

I am talking about the problem of whose fault it is if no priorities are voted upon in the Senate. I say to the distinguished Senator from Iowa, based upon my experience in the executive department, as a Member of the other body, and as the Governor of a State, that it is our fault if we stand silently by, completely acquiescent, when the proposals of the executive branch are accepted, if we limit ourselves to accepting or rejecting those proposals, and if we are unwilling to plow new ground and propose new ideas of our own.

The fight we are making today is not only a fight for tax credits; it is a fight to determine whether Congress can take the initiative over the opposition of the Treasury Department. I, for one, believe that Congress should not hesitate to take the initiative whenever it is important in the national interest, whether the executive branch agrees or disagrees.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. RIBICOFF. I am pleased to yield.

Mr. MILLER. The Senator speaks about the situation being our fault. I am sure he is not speaking of the fault as being his or that of the Senator from Iowa, because the RECORD will show clearly, when it comes to the question of priorities, that we have been talking about priorities and have been advocating them. Certainly, the Senator from Iowa has been criticizing the Senate in general for its failure to set priorities during the past 3 years.

The point is that a majority of the Members of Congress are responsible for the failure to establish priorities.

To make the record clear with respect to the proposal of the Senator from Tennessee, to which the Senator from Connecticut alluded, that proposal will be to raise the individual exemption from $600 to a higher figure, as I understand. The Senator from Iowa is not about to support that proposal, because it would give undue advantage to those in the high tax brackets as compared with those in the low tax brackets.

The area which concerns me is the one in which no income tax is paid now, or in which the tax paid is very small. Those taxpayers will not receive any benefit under the bill.

I wish it were possible for the Senator from Connecticut to arrange with the leadership to have his amendment laid aside until after the Senate has had an opportunity to vote up or down some of the other provisions in the tax bill, so that we might see what the priorities will be. If they are to be such that education will be placed first, and some of the other items placed second, the Senator from Connecticut will have my support. But in the present state of affairs, I am afraid we do not have that picture before us.

The Senator from Connecticut has made an excellent effort, and should be commended for bringing his idea before the Senate, particularly in terms of priorities. But we cannot talk about priorities without doing something about them; and we shall not be doing anything about priorities if the bill proceeds in the way it is proceeding now.

Mr. RIBICOFF. In reply to the distinguished Senator, I point out that what the Senator proposes is exactly what I do not intend to do. I do not intend that other amendments be adopted first, with the result that then Senators would ask us, "How can you vote for this proposal, after we have already voted to spend so much money?" I sought early consideration of this amendment for just that reason.

Since the Senator agrees with me that education comes next to national security in importance, if the Senate adopts this amendment, it will have voted a priority for education. Since the Senator agrees that this measure does not affect defense, and since education is a priority, let the argument about revenue be used against other proposals. Let it then be said, for example, that we have already spent $750 million for the benefit of education.

I considered myself fortunate, I state frankly, to be able to get this educational amendment taken up early, because I believe this is the best way to show that we believe in setting our own priorities.

Mr. ANDERSON. Mr. President, will the Senator from Connecticut yield?

Mr. RIBICOFF. I yield.

Mr. ANDERSON. I merely want to ask the Senator a series of questions.

This measure does not in any way require that the one who takes the credit must be either a parent or even a relative of the child, does it?

Mr. RIBICOFF. That is correct.

Mr. ANDERSON. Some have said only the parents could take it. I was sure the Senator would state what he has, because he made it very clear to the committee. I thank him for doing so.

Mr. RIBICOFF. That is absolutely correct.

Mr. ANDERSON. There would be no limit on the number of credits one might take, would there?

Mr. RIBICOFF. That is correct.

Mr. ANDERSON. I so understood, but I thought it best to ask that question while the Senator still had the floor.

Mr GORE. Mr. President, will the Senator from Connecticut yield?

Mr. RIBICOFF. I yield.

Mr. GORE. I have listened to the very able, constructive and engaging remarks of the distinguished junior Senator from Connecticut. It has not been a surprise to me that he has comported himself in so laudable a manner as a Senator, because several years ago it was my privilege and honor to serve in the House of Representatives with him. Therefore, before he came to the Senate, I was well acquainted with his abilities and his character—and likewise during his distinguished tenure as Governor, during which time it was the pleasure of Mrs. Gore and me and our daughter to visit in his home—and also when he was a member of the executive branch. But even with that knowledge of his work and his capacity, I am constrained to rise at this time and commend him. I think that the clarity with which he has presented his views, the forcefulness of his arguments, the courtesy of his presentation, and the power of his reasoning make him a Member of this body to whom all can point with pride. Indeed, he graces the U.S. Senate.

Mr. RIBICOFF. Mr. President, I am overwhelmed by the gracious words and the compliment paid me be the distinguished Senator from Tennessee. I cannot imagine a higher compliment than those words from one of the Senate's most able and respected Members; and I am very grateful to him.

Mr. President, I yield the floor.

TAX RELIEF FOR PARENTS AND STUDENTS—AN INVESTMENT IN AMERICA'S FUTURE

Mr. PROUTY. Mr. President, at this hour we meet to decide whether the cost

[*P. 1708*]

of providing a college education places too heavy a burden on the average American family and, if so, whether we intend to do anything about it.

Elmer Roper, in a study for the Ford Foundation, discovered that 69 percent of the parents interviewed expect to send their children to college, but 40 percent of these families feel they cannot afford to do so.

The same study disclosed that 60 percent of American parents have no savings and the other 40 percent have only an average of $150 put away for college costs.

Let us not kid ourselves. Let us face the facts—and the facts show that the mothers and fathers of this country are staggering under the heavy expense involved in giving their youngsters a higher education.

When you ask them whether Congress should do something about this tremendous burden, they are of one voice and that voice is a cry for help.

On October 14, 1963, I sent out over 60,000 questionnaires which posed questions on aid to education. Vermonters replied with characteristic frankness. While opposing increase in Federal spending, almost to a man they put aside their qualms about the budget in the field of education.

About 82 percent of all replies favored loans to needy students; 92 percent of all replies favored a bill I introduced earlier in the year which would give tax allowances to students supporting their own education, and 78 percent of all replies favored tax allowances for parents who are trying to finance the education of their children.

I cannot recall any other occasion when I have witnessed such grass-roots support for a change in tax laws.

Tax relief for students or their parents has something more than grass-roots support. It has the support of educators, a host of the members of the House and Senate and numerous student organizations.

Literally hundreds of proposals have been introduced in Congress over a number of years to provide tax relief for students or their parents for tuition costs. The bills have been of three general types: tax credit, tax exemption, or tax reduction. The amendment I rise to support had its origin in the Ribicoff tax credit bill. As a cosponsor of both the bill and the amendment, I see in its objectives some welcome relief that will be meaningful to many, perhaps most, American families.

When I was a boy, only one out of seven youngsters attended college. Today, almost half of our young men and women are in college, and the percentage will continue to grow.

During the last 30 years, college tuition costs have risen nearly 500 percent and the American Council on Education sees no relief in sight. The council estimates that tuition will rise by another 50 percent in both private and public institutions over the next decade.

I have shown that 60 percent of American parents have no savings and that the other 40 percent have an average of only $150 put away for college costs. If they are having a hard time now, think of what the burden will be as tuition costs rise another 50 percent.

Mr. President, it is all too clear that the cost of giving a son or daughter a higher education places too heavy a load on the mothers and fathers of this country.

The question which remains is: What do we intend to do about it?

Make no mistake. The people are watching. They want and expect action. They want and they expect to see adoption of the Ribicoff amendment.

While the Senator from Connecticut has done a masterly job of outlining all the potentialities of this legislation, I should like to add my own personal reasons for supporting it.

First of all, the amendment provides assistance for the bulk of the expenses of a person's education. The amendment gives an income tax credit to any individual who pays college expenses, such as tuition, fees, books, and supplies.

There are no limitations imposed upon the type of education to be supported thereby, except that the tuition must be paid to an institution of higher learning for credit courses leading to a baccalaureate degree, or for courses of instruction necessary to "fulfill requirements for the attainment of a predetermined and identified educational, professional, or vocational objective."

In a word, Mr. President, we who support the Ribicoff amendment wish to give some relief to the youngsters and parents who frantically try to scrape together money for college costs.

We wish to do away with the discrimination which exists in present law and which works hardship on those least able to bear it.

When I say discrimination, I do not exaggerate. At the present time, persons may deduct contributions to colleges for educating other peoples' children, but not their own. In addition, corporations may spend money toward the education of young men and women, and toward the training of executives, and deduct every dollar spent.

Why, in Heaven's name, should we deny similar help to those who do without the necessities of life in order that they, or their children, may have a college education?

Those who oppose the Ribicoff amendment had better be ready to answer this question.

Some who are not really interested in education have attempted to justify their opposition to the Ribicoff proposal on the ground that tax laws should not

be used to accomplish social goals. They cleverly overlook the fact that tax statutes already afford special treatment for the blind, the aged, the disabled, and place in a special category gifts to charitable, religious and, of course, educational institutions.

I ask unanimous consent that a statement of how present tax laws relate to education be printed in the RECORD following my remarks.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Vermont? The Chair hears none, and it is so ordered.

(See exhibit 1.)

Mr. PROUTY. Mr. President, it is true that there will be a short run revenue loss if we enact the Ribicoff amendment, but ultimately it will bring about a tremendous increase in Federal revenues.

The amendment allows a maximum tax credit of $325 per student per year. During the 4 years it takes to get a college education, credits given would total not more than $1,300 per student. This, then, is the maximum short-term tax loss.

Let us take a look at the other side of the picture. Surveys show that the college-trained boy will earn at least $150,000 more than the noncollege boy in an average working life. This would mean a long-term gain in Federal revenue of at least $30,000 for each college-trained boy. Or, to put it another way, the Federal Government would get back $30,000 for each $1,300 it loses in giving out a tax credit to the student or his parent.

I think a 2,300-percent return on investment is ample evidence of the financial soundness of the Ribicoff amendment.

The junior Senator from Connecticut has designed his amendment to take into account not only the needs of parents and their college-bound youngsters, but also the problem of all colleges, both public and private.

It will be noted that his tax credit is based on a sliding scale and gives a proportionately greater credit to the students attending institutions with low tuitions.

Indeed, a student who enrolls in a tuition-free institution will benefit from the Ribicoff amendment because under its terms he can get a tax credit for the expense of books and supplies.

Private colleges have been faced with real problems because of the decreased value of endowment income and because of rising costs. State institutions have been injured because of the Federal-State tax structure which takes more and more money from the people for operation of the Central Government and leaves less and less for State, county, and individual activities.

The Ribicoff amendment will take some of the pressure off our private and public colleges because it will enable more parents to play a greater role in financing the education of their children.

Many fathers in the $9,000 to $10,000, and even $13,000 a year brackets now have children seeking scholarship funds. With a tax break, they will be able to do more for their youngsters, and thus more scholarship money can be made available to boys and girls coming from lower income families.

Mr. President, a vote for the Ribicoff amendment is a vote to aid all families that have children in college—especially the 40 percent that have only an average of $150 put away for college costs. A vote for the Ribicoff amendment is a vote in accord with the overwhelming grassroots demand for tax relief for those who must pay the college bills.

A vote for the Ribicoff amendment is a vote to end the discrimination in ex-

[*P. 1709*]

isting law which permits persons to deduct contributions to colleges for educating other people's children, but not their own.

A vote for the Ribicoff amendment is a vote for an investment in the future of this country and its children which will ultimately bring back a 2,300-percent return on investment in terms of dollars and unparalleled advancements in terms of social progress.

A vote for the Ribicoff amendment is a vote to free more scholarship funds for use by those in the lowest income brackets, and a vote which will enable millions of parents and children to finance more easily the cost of a college education.

After years of waiting, the Senate has an unprecedented opportunity to redress a longstanding need. I am confident that we will not, for we must not, lose that opportunity.

The distinguished Senator from Connecticut was a cosponsor with me of an amendment which would alter the bill related to higher education that was reported by the committee. We failed in that objective, but I am happy to say that in conference many of the provisions that were suggested in our amendment were approved, and were subsequently approved by the Senate and the House of Representatives.

I am delighted to be a cosponsor of the amendment and to support the junior Senator from Connecticut most enthusiastically. I congratulate and

commend him for an outstanding job for the benefit of the youngsters of our country. I am grateful to the Senator for yielding to me.

Mr. RIBICOFF. Mr. President, I thank the distinguished Senator for his remarks. The constructive suggestions of the Senator from Vermont were most valuable in support of the amendment. The proposal is not my handiwork. It is the handiwork of all the cosponsors, who worked together. I happened to be a member of the Committee on Finance. Therefore the amendment bears my name. But the distinguished Senator from Vermont [Mr. PROUTY] the distinguished Senator from Colorado [Mr. DOMINICK], and other Senators joined me and helped to make the amendment a joint amendment. The Senator from Vermont made a great contribution toward the proposal.

Mr. PROUTY. I am grateful to the Senator. I also associate myself with the feeling that he expressed sometime earlier when he urged that the Senate vote the amendment up or down rather than resorting to a parliamentary stratagem to lay it on the table. I concur wholeheartedly with the Senator.

EXHIBIT 1

HOW PRESENT TAX LAWS RELATE TO EDUCATION

1. Title 26, United States Code, section 151: A parent with a child who makes more than $600 per year does not lose him as an exemption if he is a student.

2. Title 26, United States Code, section 117: Income from scholarships and fellowships is not includable in gross income; likewise, amounts received for travel, research, clerical help or equipment which are incident to scholarship or fellowship income are to be excluded from gross income.

3. Title 26, United States Code, section 170(b)(I)(A): Educational contributions are deductible and taxpayers are given an incentive toward educational contributions by being permitted to raise the allowable amount of contributions deductible if 10 percent of adjusted gross income is contributed to educational institutions.

4. Title 26, United States Code, section 170(d): Up to $50 per month paid to maintain a student as a member of the taxpayer's household is deductible as a charitable deduction under certain circumstances.

5. Title 26, United States Code, section 3121(b)(10)(B): Remuneration for services performed by a student regularly enrolled in an institution of higher education when employed by that institution are exempt from the old-age, survivor, and disability insurance tax; included in this exemption is domestic service performed by a student in a local college club or local chapter of a college fraternity or sorority (26 U.S.C. 3121(b)(2)) and studies-related income of certain nonresident alien students (26 U.S.C. 3121(b)(19)).

6. Title 26, United States Code, section 3306(c)(10)(B): Employment of enrolled students by their school, college, or university if the student is regularly attending classes is exempt from unemployment insurance.

[*P. 1712*]

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

Mr. RIBICOFF. I yield 10 minutes to the Senator from Colorado.

The PRESIDING OFFICER. The Senator from Colorado is recognized for 10 minutes.

Mr. DOMINICK. Mr. President, I rise to support the amendment offered by the distinguished Senator from Connecticut [Mr. RIBICOFF]. With the consent of the distinguished Senator from Connecticut I have been writing some letters to my constituents referring to the amendment as the Ribicoff-Dominick amendment. I hope that other Senators have been doing the same thing. I have done this because of my interest in this form of tax relief, for these expenses connected with higher education, particularly for those who bear the expense of higher education.

My interest in tax relief for those who bear the expense of higher education dates back to my first days in public office.

I first introduced legislation on this subject while a member of the State Legislature in Colorado. In my campaign for the House of Representatives and in my campaign for the Senate this proposal was a part and parcel of my platform. When I came to the U.S. House of Representatives in 1961, I introduced a bill which would allow a tax credit of 30 percent, not to exceed a total of $600, for expenditures for tuition, fees, book, and supplies in seeking higher education.

A poll of my constituents on my bill showed more than 80 percent in favor of the principle of the bill. I again introduced such a bill, S. 98, when I came to the U.S. Senate, in 1963. I have heard the arguments against the proposal for 12 years. I do not believe they stand up any better than when I first heard them.

I believe the very capable and highly polished remarks of the junior Senator from Vermont [Mr. PROUTY] are extremely important with regard to the merits of the pending amendment. I know that there is widespread interest in such a tax relief proposal throughout the country and in Congress. My good friend from Connecticut [Mr. RIBICOFF]

has already inserted in the RECORD of Friday, January 31, articles and editorials from many areas of the country expressing support for such a proposal. In addition, more than 100 Members of the House of Representatives and more than 20 Members of the Senate have already introduced similarly designed legislation during the 88th Congress.

Among the editorials that have been introduced in the RECORD there is an excellent editorial published in the distinguished newspaper, the Denver Post, of Denver, Colo. The Rocky Mountain News, another distinguished newspaper of Colorado, has also come out in favor of it.

Various approaches to the problem have been tried. Personally, I believe that the tax credit approach is preferable, although plans advanced by other Members of the Senate and the other body, giving tax relief for such expenses by allowing some type of deduction or additional exemption, also have merit. In an effort to pull together and get behind a bipartisan compromise solution, I am pleased to join with the distinguished Senator from Connecticut [Mr. RIBICOFF] and my other colleagues in the Senate in urging the adoption of the amendment now before the Senate.

I worked with the distinguished Senator from Connecticut, as he so graciously said, to design a scale of credits, so that the attacks on previous amendments which had some credence, would not apply. To say that the tax credit amendment will help only those having high expenses, does not, in fact, have even a modicum of truth.

The Senator from Connecticut [Mr. RIBICOFF], as a former Member of the House, former Governor of the great State of Connecticut, and former Secretary of Health, Education, and Welfare, lends great weight and persuasion to such a proposal. I am pleased to join with him in advocating the adoption of the amendment.

In view of the seriousness and importance of the amendment, several things about it ought to be made eminently clear.

First, it does not, and indeed no tax proposal can, provide relief to low-income families who pay no income tax. Those families and their children can continue to take advantage of scholarship, loan, and grant programs, specifically designed for them, and dealt with, in many cases, both by State legislatures and by Congress. Most colleges and universities also give students from low-income families first priority on student employment programs. So there is no point in saying that low-income families do not receive any relief under this amendment.

Second. It does benefit the low-income families who do pay tax, and the middle-income families. It has already been pointed out that families with incomes between $3,000 and $10,000 comprise 62 percent of our population, and thus the greatest benefit will be within this income group. Let us remember, too, that the tax credit inures to any taxpayer who pays for the expenses of higher education. Thus, the single person who must pay tax while working himself through college will benefit as well as employed married couples where one spouse works while the other attends school.

Third. It is not a "rich man's" amendment, and anyone who so contends simply does not understand the sliding scale provisions of the amendment. Over 90 percent of the tax benefit will go to families with incomes of less than $20,000 per year.

Fourth. The tax credit approach avoids many of the serious problems involved with Federal aid to education. The religious controversy and its constitutional difficulties is completely avoided. No additional Federal bureaucracy is required since we utilize the existing machinery of the Internal Revenue Service. No Federal control is encountered.

In effect, the amendment, if adopted, would permit those desiring a college education, so important to the growing stature of this country, to use pretax earnings for this purpose.

There is every indication that the costs of obtaining a higher education will continue to increase, as they have done over the years. In my own State of Colorado proposals are now pending before the legislature to raise tuition costs and fees. Many families in my State are having great difficulty in meeting the expenses of educational requirements even now. In all probability, the adoption of the amendment will not curb these costs. However, its adoption would give much needed tax relief to families and individuals whose financial burden is particularly great. It would also have the effect of feeding back much needed revenues into the private sector of our economy.

Some have speculated that the adoption of this amendment would directly cause public and private educational institutions to raise their tuition and fee schedules. Ths is pure speculation. I think history has shown us that these costs have been rising steadily anyway. It seems to me that it is equally logical to assume that the people who will realize tax savings from this amendment

might be inclined to plow these savings back into public and private educational institutions. These savings would also give the States a greater source of tax revenue to tap in order to sustain their own educational systems. Finally, it would allow the recipients of these tax benefits to contribute toward the education of more of their children beyond high school and may well form the incentive for some to pay part of the ex penses for children of neighbors or friends.

The amendment has been specifically designed to be of assistance to the lower cost public universities. One of the major attacks on the amendment has been that it is designed to be of assistance to Ivy League colleges or higher cost private institutions. This argument has some validity, enough to make it a rallying call for those who are opposed to the principle. So we have designed a sliding scale to answer this argument, one which will give maximum credit benefit to institutions which charge the least tuitions but which still have expenses involved in education fees and books, and some tuition. This scale is designed to assist many public institutions of the West and Southwest, some of which do not charge any tuition fees, as has been stated, but which do have education fees and charges.

A brief examination of the excellent dollar-benefit schedule, which was placed on the desk of every Senator today by the Senator from Connecticut [Mr. RIBICOFF], will show clearly that the

[*P. 1713*]

maximum benefits go to the lower cost institutions. I refer, for example, to Colorado State University, the only land-grant college in my State. I understand that the president of that college has been opposed to the amendment; but I do not believe he has really studied it, because it provides that someone paying $330 for tuition and books would be granted a $183 credit compared to a $193 credit for $370 of such fees at the University of Colorado.

So the proposal is to try to take care of universities which are supplying a maximum need for people having the lowest incomes.

The same thing can easily be seen, on pages 1, 2, and 3, with respect to universities in States adjoining Colorado.

The PRESIDING OFFICER. The time of the Senator from Colorado has expired.

Mr. RIBICOFF. I yield the Senator from Colorado 2 additional minutes.

Mr. DOMINICK. The Universities of Arizona, New Mexico, and Utah are on the same schedule.

The amendment will provide tax benefits to those low and middle-income families who desperately need it, and to those who would receive the very least benefits under the pending tax bill. The pending tax bill provides maximum benefits for the low-income families and for those whose incomes are quite high. But the majority of the people of the country, who are in the middle-income group, would not be substantially assisted by the tax bill unless the tax credit for education were adopted.

Mr. President, the amendment will not solve all of our educational problems, but it will be a significant step toward helping those who do need the assistance in bearing the costs of higher education. It will fill in part of the gap which we now have in our efforts to assist all Americans to have the opportunity for receiving higher education. We have given grants and loans to the universities and graduate schools for buildings and equipment, we have made progress toward helping teachers, we have advocated special programs to stimulate interest in secondary education. Will we now recognize the problem of those who struggle to give their children the chance to improve and better their lot through higher education or simply write them off as expendables? Mr. President, the country needs this amendment and it needs it now.

Mr. HART. Mr. President, will the Senator from Connecticut yield briefly to me?

Mr. RIBICOFF. Mr. President, I yield 2 minutes to the Senator from Michigan.

Mr. HART. Mr. President, tomorrow we shall vote on the amendment offered by the Senator from Connecticut [Mr. RIBICOFF] to provide a sliding-scale tax credit to parents who seek to provide college education for their sons and daughters. This proposal has been discussed rather fully, with a sharp division of opinion developing. As I stated in a colloquy, with the Senator from Connecticut, as he opened the debate, I shall vote for the amendment.

I ask unanimous consent to have printed in the RECORD an editorial from the Detroit News of January 27, 1964, which presents a balanced analysis of the reasons for support of this amendment.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COLLEGE TAX CREDIT

The income tax bill now being written in Congress ought not to be cluttered with controversial sections, but if the result is not to

be a simple tax reduction bill then a tax credit for college expenses is worth further consideration.

Senator ABRAHAM A. RIBICOFF, Connecticut Democrat, proposed that parents be allowed to subtract a maximum of $325—reached on a sliding scale—from their income tax bills. The Senator is an expert in the field and wrote his proposal so that the richer the taxpayer the less the credit that could be taken. A taxpayer earning $30,000 a year had his credit reduced by $50 to $275 and an income of $60,000 bars any credit at all.

Ten Democrats on the Senate Finance Committee listened to administration objections as to the cost of the proposal to the Treasury and voted it down. RIBICOFF and six Republican committeemen voted for it.

RIBICOFF said that he had tremendous public support for his idea and said that he would bring it to a rollcall vote on the floor. where it might very well pass.

Anyone with a child in college these days is acutely aware of the costs and those costs are expected to rise sharply for many years to come. A credit against tax of $325 will by no means solve the problem, but it will slightly ease it. It may very well make the difference between going and not going to college for children of parents in the middle income bracket.

Mr. HART. Those of us who support this amendment, should acknowledge, I believe, that it falls far short of reaching an area of very great need in higher education. Students assistance and scholarships for students with demonstrated desire and capacity to benefit from higher education should be available. We need such programs from Federal funds. Only then shall we have responded to the need of children whose families are in the lowest income groups, and who will benefit little, if at all, from the Ribicoff amendment. While I recognize the sincerity and conviction of those who urge defeat of the Ribicoff amendment because it attacks only a part of the problem, I intend to support the amendment, for the reason that it does respond to at least a part of the problem. I suggest that there is a heavy obligation on those of us who do support the Ribicoff amendment to see enacted a student assistance and scholarship program, because I think it quite true that the availability of tax credit can increase tuition costs, and consequently can make even more difficult the plight of the child of a parent who will not benefit from the tax credit.

Before this session of the Congress ends, I hope this tax credit and substantial scholarship assistance will be enacted.

A sense of values and an order of priority are essential in meeting every one of our public responsibilities. It is not inappropriate to note that the $750 million which is represented by the first year of the college tax credit is about the same as the amount Congress is urged to appropriate to develop a supersonic jet transport. In terms of contributing to national strength, I hope there is general agreement that increasing opportunities for higher education will in the long term be the more significant.

Mr. McINTYRE. Mr. President, will the Senator from Connecticut yield a few minutes to me?

Mr. RIBICOFF. I yield 8 minutes to the Senator from New Hampshire.

The PRESIDING OFFICER. The Senator from New Hampshire is recognized for 8 minutes.

A TAX CREDIT FOR EDUCATION

Mr. McINTYRE. Mr. President, I am indeed happy to join in supporting the amendment submitted by my fellow New Englander, the Senator from Connecticut [Mr. RIBICOFF], whose distinguished experience—before coming to this body—as Secretary of the Department of Health, Education, and Welfare is well known to all in New England.

Mr. President, it is altogether fitting and appropriate to provide a tax credit for higher education expenses. This amendment would provide a 75-cent tax credit for each dollar up to $200 spent by a parent or student on books, fees, and tuition, a 25-cent tax credit for each dollar of the next $300, and a 10-cent tax credit for each dollar of the next $1,000. The maximum credit would be $325 on up to $1,500 in books, fees, and tutition. If the taxpayer's income exceeded $25,000 the amount of the credit would be reduced gradually, disappearing above income levels of $60,000.

RECOGNITION FOR PUBLIC BENEFITS

We talk about education and its contribution to economic growth, about education helping to meet national manpower needs, and about the way education strengthens our society. These are public benefits which the tax laws should recognize and encourage.

Parents sacrifice much in order to educate their children. The expenses of a college education are heavy and are felt in the short space of the years when each child is actually attending college. Like the expenses of illness, which are deductible under certain conditions, education expenses often take almost all of a family's spare income. This amendment will ease the impact of this heavy burden for many families.

ASSISTANCE FOR FAMILIES OF MODEST INCOME

The tax credit will be available, Mr. President, whether the parent's expenditure is from income or a loan obtained at the local bank. Passage of the amendment will make it possible for

many families of modest income to borrow, even if only the limited amounts for which the credit is most generously provided.

"CLASS" LABEL DISPUTED

The argument has been made, Mr. President, that this is class legislation. While it is true that only taxpayers receive its benefits, I would like to draw attention to the fact that its principal benefits would be realized on the first $200 spent for higher education. Moreover, the glaring loopholes in our present tax laws are of primary benefit to the

[*P. 1714*]

very rich. If the adoption of this amendment were to create pressures for tax reform, it could hardly be called class legislation. It was my intention in sponsoring this amendment to support revenue-raising reforms to at least the amount this amendment is estimated to cost.

THE AMENDMENT WILL AID THE CAUSE OF TAX REFORM

It is not beyond the power of the Senate to correct or offset any revenue losses that might arise from the adoption of this amendment. In fact, maybe that is the real issue before us. If the tax rates which prevail in theory were applied in practice, by some estimates the Federal Government would realize an extra $40 billion every year. It is against that $40 billion, not against the projected budget deficit for fiscal year 1965, that the revenue-losing effect of the Ribicoff amendment must be judged. We have permitted special deductions and exemptions and privileges to grow up.

Whenever we move toward closing those loopholes, we find each one inhabited by a swarm of angry bees, easily disturbed by any threat to their private honeycomb. The education tax credit may help to change all this. It has a broad public appeal and will reach into millions of homes. And if we vote it down, the public will become aware of special advantages which we cannot bring ourselves to change. The choice may be as simple as "education" on the one hand, or "tax writeoffs for stock options and depletion allowances" on the other; "books, tuition, and fees" on the one hand, and "foreign tax havens" on the other.

The defeat of this amendment will bring home to every town and city of this country the price the ordinary citizen must pay to maintain a tax system riddled with special privileges. There are far more parents skimping to put their children through college than there are wealthy taxpayers obtaining advantages from loopholes in our laws. Perhaps the only way to close loopholes and bring a greater measure of economic justice to our tax laws is to invoke the great principle of popular sovereignty.

If the people had a chance to decide between education for their children and the ridiculous structure of special tax benefits now in force, there could be no doubt as to their decision. And yet it is seriously argued that we cannot replace a slight fraction of the special benefits now in force. The Ribicoff amendment would be progressive legislation in the best practical sense of creating immense public support for revenue-raising reforms in our entire system of tax laws.

THE AMENDMENT WILL HELP EDUCATION

Let us not forget, Mr. President, that it is education we seek to assist. At a time when public investment in education threatens to assume a dominant role, the benefits of increasing private investment should be obvious. Whether the passage of this amendment leads to higher tuition rates or increased family outlays for education, it will increase private investment and help to maintain the freedom, integrity, and independence of our institutions of higher education. For these are the qualities we associate—and rightly so—with private financing in education.

A second problem affecting our institutions of higher education, Mr. President, has been that public funds are not generally available to private schools. And yet we believe it desirable to maintain a system of diversified schools. If we are sincere in stating this ideal, we should proceed to adopt an amendment whose benefits would be available equally, to private and public schools alike, to parochial schools, military colleges, other sectarian institutions, at a constitutional disadvantage in this respect, and to all the other great private institutions of the land.

Mr. President, the passage of this amendment would help to maintain a proper balance between public and private sources of funds for education. It will increase the overall amount available for investment in education. To some extent this will increase enrollment capacity and college attendance. In other respects, that are almost as important, it will permit colleges to raise tuition charges in order to improve the quality of research and instruction. Last year, I spoke in support of a National Science Foundation program requested by President Kennedy to create new centers of excellence. The passage of this amendment should have a similar effect and will give many colleges the resources they need in order to compete

more successfully for Federal research funds and institutional support.

By a favorable vote on this amendment, the Senate will provide urgently needed and effective support for higher education in America. Families will be helped. Students working their way through college will be helped. The amendment would be in the public interest, as it is undoubtedly what the public desires. I hope the Senate will adopt it.

Mr. MANSFIELD. Mr. President, will the Senator from Connecticut yield briefly to me?

Mr. RIBICOFF. I yield.

Mr. MANSFIELD. Mr. President, I propound a revision to the unanimous-consent agreement no in effect; this provision has been cleared, I believe, all around. It is quite similar to the one I proposed earlier this afternoon.

I propose the following changes in the unanimous-consent agreement now in effect: In the unanimous-consent agreement as printed on the first page of today's Legislative Calendar, in line 4, strike out the word "for", and insert in lieu thereof the words "not to exceed"; and in lines 5 and 6, after the word "that", strike out the words "after the hour of 8 o'clock p.m."; and in line 6, after the word "Senate", insert the word "then"; so that the agreement, as thus amended, will read as follows:

UNANIMOUS-CONSENT AGREEMENT

Ordered, That on Monday, February 3, 1964, at the hour of 4 o'clock, p.m., the Senate proceed to consider the amendment (No. 329) intended to be proposed by the Senator from Connecticut, Mr. RIBICOFF, to the pending bill, H.R. 8363, the tax bill; that debate on said amendment continue not to exceed 4 hours, the time to be equally divided between the proponents and the opponents and controlled in the manner provided by the usual form; that the Senate then proceed to the consideration of any amendment that may be proposed to the so-called Ribicoff amendment, the time on any amendment thereto to be limited to 1 hour and equally divided between the mover of the amendment and Mr. RIBICOFF, provided he is opposed to any such amendment: *Provided,* That no amendment that is not germane to the provisions of said amendment No. 329 shall be received.

Ordered further, That on Tuesday, February 4, 1964, after the conclusion of the morning business, the Senate resume the consideration of the said amendment No. 329, and that debate on it continue for 1 hour, the time to be equally divided between the proponents and the opponents, and that at the expiration of said hour, the Senate proceed to vote on the question of agreeing to the amendment.

Mr. President, I ask unanimous consent that these changes in the unanimous-consent agreement now in force be made.

The PRESIDING OFFICER. Is there objection?

Mr. TOWER. Mr. President, reserving the right to object—although I have no intention of objecting—let me ask whether the agreement as thus revised will mean that after it is found that no other Senator wishes to address the Senate this evening, the Senate can then adjourn until tomorrow, at which time it will continue the debate on the Ribicoff amendment.

Mr. MANSFIELD. Yes, with the proviso that any amendments to be submitted to the Ribicoff amendment must be submitted before conclusion of the debate tonight, and will be voted on tonight; and that one hour after the Senate convenes on tomorrow, the vote will be taken on the Ribicoff amendment as it then stands—either with or without amendments to it.

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

Mr. MANSFIELD. Mr. President, now that the order for the Senate to convene at 10 a.m. tomorrow has been entered, I wish to state that, under the provisions of the unanimous-consent agreement now in effect, the vote on the Ribicoff amendment will be taken at 11 a.m.; or, if by that time the Ribicoff amendment has been amended, the vote will then be taken on the Ribicoff amendment, as amended.

[*P. 1715*]

Mr. TOWER. I thank the Senator from Montana.

The PRESIDING OFFICER. Is there objection to the proposed revision of the unanimous-consent agreement now in effect? Without objection, it is so ordered.

Mr. BEALL. Mr. President, I support the amendment of the distinguished Senator from Connecticut, providing for an income tax credit for college costs.

College costs hit that segment of our population which provides the bulk of our tax revenue. This financial burden falls heaviest on those of our citizens who are buying homes and raising families, as well as carrying the heaviest part of the burden of Government. Yes, the people who are carrying the load are the people faced with the heavy cost of sending their sons and daughters to college.

In today's economy, education represents one of the major family investments.

I feel that those who must bear the financial burden of high college costs are just as entitled to tax relief as are those with medical and casualty losses, which are already given consideration in the tax setup.

One of the premises of the new tax bill is that incentives should be given to capital investment. In my opinion, there is no better form of capital investment than in education for our children. Trained minds will insure the continued success of this Nation.

In the tax reform bill before us, we have an unparalleled opportunity to prove the sincerity of our interest in higher education. Without resorting to the establishment of another bureau or office or even another Government project or program, we can advance the cause of education, and, at the same time, give a much deserved break to the man who very rarely is the beneficiary of the Government programs which to a great extent he finances.

The 1964 tax bill is not a simple, across-the-board tax reduction. The bill is a complicated measure containing more than 300 pages of detailed provisions effecting changes in 37 separate areas of the Internal Revenue Code. The sacrifice in revenue caused by the Ribicoff amendment can be offset by needed reforms in other areas. The new tax bill is far from perfect, but this amendment will make it greatly better.

As the Senator from Connecticut has explained, 63 percent of the families which would be benefited by this amendment have incomes of below $10,000.

As the amendment provides for a 75-percent credit on the first $200 spent for college costs, this means a credit of $150; on the next $300, the credit is 25 percent, or $75; on the next $1,000, the credit is 10 percent, or $100. Thus, by accepting this amendment, we would be providing a credit of $325 on the first $1,500 spent on tuition, fees, books, and supplies at colleges—and this credit would be available to anyone who pays these costs.

Taxes are too high. They are a burden on our people and a drag on our economy. They must be cut—not with reckless bludgeon blows, but with skillful, selective pruning. Such pruning is perfectly illustrated in the Ribicoff amendment.

Let us give our substantial family heads a long overdue break by approving the Ribicoff amendment for tax credit for college costs, an amendment which meets a pressing need.

Mr. President, I yield back the remainder of my time.

Mr. RIBICOFF. Mr. President, I yield to the Senator from Texas [Mr. TOWER].

Mr. TOWER. I thank the Senator from Connecticut. I do not plan to call up my amendment No. 393, which bears upon the same question, except that other Senators join with me in supporting the amendment of the Senator from Connecticut.

Mr. President, at this point I ask unanimous consent to have printed in the RECORD the remarks I have prepared in support of that amendment.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR TOWER

I have introduced several amendments to the pending tax bill. These amendments would grant a tax credit for certain education expenses and contributions on both the college and the elementary-secondary levels.

As a former teacher myself, I am fully aware of the worries of many American families about the adequacy of schools and of curriculums. I am fully ware of the equal worries of many families that the costs of college education for their children are far beyond them.

I find this to be a pressing problem. And I find that the best solution to it lies in the tax credit field.

During hearings, the Labor and Public Welfare Committee received testimony from witnesses representing the presidents of 20 independent colleges and universities in support of aid to higher education through tax credits. The principle also applies to tax relief in the field of elementary-secondary education.

The advantages of this approach are as follows:

1. It would release increased funds which could be used for those purposes most directly related to the real needs of each institution, public or private. In most cases, the most urgent financial needs have to do with the paying of salaries and other operating costs.

2. It would help to preserve the diversity and flexibility of the whole American educational system which, we believe, is important in maintaining the freedoms and pluralism in our national life.

3. It would offer a solution to the grave constitutional question which casts a dark shadow over the whole issue of aid to private, independent, and church-related colleges. Such tax credits would offer an acceptable means of channeling greatly enlarged new funds into education, tax-supported or privately supported, State-controlled or independent, secular or religious—and within the framework of a policy long established by the Congress of giving incentive to taxpayers to make voluntary contributions for the support of educational services of all types of organization, philosophy, and control.

4. The independence of action of each institution would be strengthened, and enhanced.

My first amendment would provide a tax credit to homeowners for that portion of their real property tax which is used for the maintenance, operation and construction of public elementary and secondary schools. **This tax credit would be the amount paid by the taxpayer in support of local education—or $100, whichever is less.**

My second amendment would provide tax credit relief for taxpayers who are themselves students or whose spouses or children are attending college. College expenses covered by the amendment would include tuition and fees; books, supplies and equipment; and room and board. Total expenses would be limited to $2,000 for each student attending college, and the cost of room and board would be limited to no more than $90 a month. A progressive limitation feature would curtail the amount of credit granted to taxpayers in higher income brackets.

My third amendment is a more limited version of the second amendment's provisions. It would provide a tax credit to parents for tuition and fees incurred by their dependents attending college. In this alternate approach, the maximum credit allowance would be $420, with credit for tuition and fees allowed on the following schedule: (a) 100 percent of the first $100; (b) 30 percent of the next $400; (c) 20 percent of the next $1,000.

My fourth amendment, and one that I regard as highly important, would grant a tax credit to individuals and corporations for gifts and contributions made to nonprofit institutions of higher education. This contribution credit could not exceed $100 for an individual, or $1,000 for a corporation.

A summary of the provisions of my amendments, is as follows:

AMENDMENT 1

Tax credit to homeowners for that portion of their real property tax which is used for the maintenance, operation, and construction of public elementary and secondary schools.

(a) The taxpayer would continue to deduct the amount of his real property tax from his gross taxable income; after he determines what his tax will be, he then credits against his final tax that amount of his real property tax which is used for the maintenance, operation, and construction of public elementary and secondary schools.

(b). Tax credit would be the amount actually paid by the taxpayer or $100 whichever is less. To illustrate, a taxpayer pays a real property tax of $600, of which $350 is used for public school purposes. As he does at present, the taxpayer would be able to deduct from his taxable income $600, and assuming that he is in the 20-percent bracket, this would result in a tax saving to him of $120 (20 percent of $600). After determining his final tax, for example, $500, the taxpayer in addition would be able to take a credit of $100 against his net tax, thus, instead of paying a tax of $500, he would pay only $400.

(c). The taxpayer who takes a standard deduction would also benefit since the credit granted is taken against the final tax after all exemptions and deductions have been made.

(d) The deduction together with the tax credit cannot result in a saving to the taxpayer of more than the actual amount of that portion of the real property tax devoted to public school needs. For example, the taxpayer pays a real property tax of $100, of which $60 is used for public school purposes. Assuming the taxpayer is in the 20-percent bracket, he would be able to reduce his tax by $20 (20 percent of $100), $12 of which is attributable to the tax for school purposes. Giving such a taxpayer a $60 credit—the actual amount paid for school purposes—would return a saving to the taxpayer of $72 or $12 more than the tax he paid for support of the public schools. Thus, the tax credit in this case would be limited to $48.

AMENDMENT 2

Tax relief for families with children attending college.

(a) The taxpayer is granted an additional deduction from his taxable income for the expenses incurred by him, his spouse, or his dependent or dependents, while attending college.

[P. 1716]

(b) Expenses shall include tuition and fees charged by the college for a course of instruction and attendance at such college; books, supplies, and equipment; room and board, whether the student is living on or off the campus. The amount the taxpayer may deduct shall be the actual amount of expenses paid but not to exceed $2,000 for each child attending college. Of this amount, the cost of room and board may not exceed $90 a month while the student is in attendance at college ($45 in the case of a student living at home).

(c) In addition to his child or children, the taxpayer may also deduct such expenses which he incurs as a student as well as those of his wife and anyone else whom the taxpayer can lawfully claim as a dependent.

(d) The deduction is available to a taxpayer whose dependent is attending a college, university, or other institution of higher learning, such as medical school, dental school, law school, or other graduate school. This deduction is not available to a taxpayer whose dependent is attending a trade or vocational school or any other school which does not award a baccalaureate or higher degree.

(e) The amount of expenses which the taxpayer may deduct from his taxable income shall be reduced by the amount by which the taxable income of the taxpayer exceeds $10,000 if the taxpayer is unmarried or if married, files a separate return or, $20,000 if the taxpayer is married and files a joint return or is a head of a household or a surviving spouse. Thus, if a taxpayer has $2,000 in educational expenses and a taxable income of $20,800, he would be entitled to a deduction of $1,200 ($2,000 less $800, the amount in excess of $20,000). The taxpayer thereby reduces his taxable income from $20,800 to $19,600. If the taxpayer is in the 50 percent bracket, he would thereby reduce his tax by **$600 (50 percent of $1,200).**

AMENDMENT 3—TUITION AND FEES PAID TO INSTITUTIONS OF HIGHER EDUCATION

(a) Taxpayer is allowed to take as credit against his final tax the amount of tuition and fees paid by him during the taxable year to one or more college or institution of higher education for himself or for any other individual for whom he can claim an exemption.

(b)(1) Credit for tuition and fees shall be allowed on the following schedule: (a) 100 percent of the first $100; (b) 30 percent of the next $400; (c) 20 percent of the next $1,000.

For example, a parent pays $1,350 in tuition and fees to a college on behalf of his son. Thus the parent would be entitled to a credit of $390 as follows:

(a) 100 percent of first $100	$100
(b) 30 percent of next $400	120
(c) 20 percent of next $850	170
Total	390

The maximum credit allowance under this provision would be $420.

(b)(2) Where more than one taxpayer pays the tuition and fees the credit allowance shall be prorated among the taxpayers. For example, a parent pays $500 and his son pays $1,000 in tuition and fees to a college. The credit allowance would be $420, of which the parent would be entitled to one-third or $140, and the son would be entitled to two-thirds or $280. (NOTE.—The application of this subsection would be very limited inasmuch as each taxpayer must be able to claim an exemption for the individual for whom tuition and fees are paid. In the case cited above, the parent could continue to claim his son as an exemption even though the son is himself a taxpayer provided that the parent contributes more than one-half of his son's support while the son is a student.)

(c)(1) Defines "tuition" and "fees" as those required for enrollment or attendance or required for courses of instruction at an institution of higher education. It excludes amounts paid for meals, lodgings, and other personal living or family expenses. If the tuition and fees include an amount for meals, lodgings, etc., not separately stated, the portion of the amount attributable to meals, lodgings, etc., shall be determined by the Secretary of the Treasury.

(c)(2) Defines "institution of higher education" as one which: (1) normally maintains a regular faculty and curriculum; (2) normally has a regularly organized student body in attendance where the educational activities are carried on (thereby excluding correspondence schools); (3) offer education at a level above 12th grade; and, (4) gifts made to it constitute charitable contributions within the meaning of the code.

(d)(1) If an individual receives a scholarship or fellowship grant (which are not included in gross income) or receives an education and training allowance under the Korean GI bill or War Orphans' Educational Assistance Act, the amount of such grant or allowance is deducted from the amount paid for tuition and fees in determining the credit allowance. Thus, if the amount paid for tuition and fees is $1,500 and the individual receives a grant or allowance of $800, then the credit allowance is based on $700, and not $1,500.

(d)(2) In the case of an individual who is a candidate for a college degree, credit allowance will be given only for tuition and fees paid for courses for which credit is allowed for a college degree. In the case of an individual not a candidate for a degree, credit allowance will be given for tuition and fees paid for courses required for that attainment of an educational, professional, or vocational objective. For example, a Foreign Service officer, transferred to a new post, may take a limited course of instruction in the language, culture, and history of the country to which he has been assigned, or a lawyer may wish to enroll in several graduate law courses to upgrade and enlarge his legal skills. Under both examples, it is intended that credit for tuition and fees paid would be allowed. On the other hand, a certified public accountant who enrolls in a course on Shakespeare merely for his own enlightenment and entertainment would not be entitled to a credit for tuition and fees paid, since the course in Shakespeare would not be part of an educational, professional, or vocational objective.

(d)(3) Provides that the credit allowance cannot exceed the amount of tax owed by the taxpayer. If the credit allowance is $420 and the amount the taxpayer owes is $400, then the credit allowance is reduced to $400. Simply a technical amendment to prevent a claim by the taxpayer that the Government owes him $20 or the amount in excess of his tax.

(e) If a taxpayer is entitled to a deduction under section 162 (relating to trade or business expenses) for tuition and fees paid, he may continue to claim the deduction and the credit allowance as well. However, the deduction and the credit together cannot exceed the amount actually paid for tuition and fees. For example, a taxpayer in the 30-percent bracket pays $150 in tuition and fees. He reduces his tax by $45 (30 percent of $150) by way of the deduction and is entitled to $115 as a credit. Since the total amount of the credit and the deduction is $160, the credit is thereby reduced to $105.

(f) Secretary of the Treasury is given authority to prescribe regulations to carry out this provision.

AMENDMENT 4—CONTRIBUTIONS TO INSTITUTIONS OF HIGHER EDUCATION

(a) Provides a credit against his final tax for an individual for the amount of his contributions to one or more institutions of higher education during the taxable year.

(b) The credit cannot exceed $100 in the case of an individual or $10,000 in the case of a corporation.

(c) Such credit will apply only if the contribution to or for the use of an institution of higher education is deductible as a charitable contribution. Where the contribution is made not to a college or university but to an agency, foundation or institution, such contribution may be only used by the agency for the same purposes that a college or university may use its funds.

(d) Definition of "institution of higher education" same as section 39(c)(2).

(e) Same as section 39(d)(3).

(f) Permits taxpayer to continue to take a deduction for charitable contributions as well as the credit provided by this section. In no event shall the deduction and the credit together exceed the actual amount of the contribution. Similar to the example set forth in section 39(e)(2).

(g) Secretary of the Treasury authorized to issue regulations to carry out provisions of this bill.

(h) Technical amendment-renumbering of code sections.

Section 2: Provisions shall apply to taxable years ending after the enactment of this act. If this bill becomes law in September 1963, a taxpayer may take advantage of the credits provided herein in filing his income tax return for the taxable year 1963.

Mr. TOWER. Mr. President, I commend the Senator from Connecticut for offering his amendment, which is similar to the legislative proposals that have been introduced in the past by the Senator from Arizona [Mr. GOLDWATER] and myself.

I should like to commend the Senator from Connecticut for attracting such bipartisan support to his amendment; and I also commend the junior Senator from Colorado [Mr. DOMINICK] for the active work that he has done in behalf of the amendment.

I am vitally interested in the amendment because although the State I represent is the sixth State in terms of size of population, it ranks fourth in terms of college enrollment.

This tax-credit proposal has been widely discussed and is well understood by Members of the Senate. And, I feel it is unnecessary for me to recount here the needs and requirements of American education in this space age. Indeed, these needs have been discussed and dealt with by this body so that many refer to our last session as "the Education Congress."

I remain unconvinced that the massive grant and loan program of aid to education represents the most satisfactory method of dealing with the needs of education. I regard the tax-credit approach as a better approach. And, I also know that many Senators believe that the tax-credit plan is at least necessary as a supplement to grants and loans.

As a college teacher in our State, I was closely exposed to the worries of many families about the expenses of higher education. I certainly can say that this is a No. 1 problem right now of parents with youngsters in high school.

It is by no means certain that all of our talented high school students will get into college, for the costs of college

[*P. 1717*]

can range up to $3,000 a year these days. My amendment and the similar amendment of the Senator from Connecticut are designed to alleviate part of the costs of college education borne by American parents.

If this amendment is incorporated in the new tax law, Americans will be able to figure up their income taxes, and then subtract from the tax due their costs for college tuition and fees—up to the sliding limits provided.

Under a tax credit, such as I am proposing and supporting, a taxpayer's money payments for education expenses never would leave his control. His money never would be sent to Washington and then partially sent back to his schools, with lots of Federal strings attached.

Under a tax credit plan his education payments would stay in his pocketbook until applied directly by him in support of higher education.

Mr. President, in the last Congress there were more than 100 bills introduced providing certain tax concessions for education expenses. In the 88th Congress there are more than 120 bills proposing such tax credits.

I am not aware of any other subject upon which there are as many legislative proposals pending as there are for tax credits for education expenses. It would appear that there is substantial support for the idea on both sides of the aisle and in both bodies.

Perhaps the most attractive advantage of the tax credit approach is that it would completely eliminate the church and state issue because there would be no connection between the Government and the educational institution. The relationship would only be between the Internal Revenue Service and the individual taxpayer.

The tax-credit plan also would eliminate the objections about Federal control of education, because tax credits would leave completely undisturbed the existing relationships in higher education.

Many variations of this plan have been discussed in past years and weeks. If we had a low percentage credit, as, for instance, 20 or 30 percent, with a high limit of, say, $2,000, then we would benefit institutions with high fees, or private institutions, and those taxpayers in the higher income brackets. If we had close to 100-percent credit with a low limit, we would benefit more directly public institutions and lower income families.

It has appeared obvious that a compromise percentage-rate system is neces-

sary between those two extremes. Such a rate system would amount to an average annual tax saving of some $750 million a year, of which educational institutions would recover a major portion through increases in tuition and fees. We must remember that the goal of this plan is not only to grant tax relief, but also to provide a method by which educational institutions may obtain additional revenue.

As an example, if the institutions recovered, say, $500 million a year, they could use the money to cover finance charges on bond issues of perhaps $5 billion and still have cash left over with which to augment scholarship and grant funds to needy students.

I have heard it said that some public institutions would not fully benefit, since some are not allowed to charge tuition. I suspect that it would be possible for those schools to increase individual course fees so as to benefit. Also, if this program were in operation, States might well revise their laws to allow tuition charges. At any rate, most private and public colleges already charge both tuition and fees.

One continuing objection has been raised against this plan; namely, that it would be of no benefit to families who pay no Federal income tax. It seems to me that there is no validity to that objection.

At the present time virtually all families, in their productive years, pay Federal income tax. Six out of seven fathers of children reaching college age are between the ages of 38 and 58, which are the top earning years. I estimate that at least 90 percent of the families of students in college today do pay Federal income tax, and it might easily be as high as 95 percent. So this plan would benefit directly almost all college students; and—important but often ignored—it would open the way to increased benefits for students in families that do not pay Federal tax.

If a benefit of this type were provided, many of the students of middle-income families, who at the present enjoy scholarships, could then forego a scholarship, and those scholarships could be concentrated on families who have lower incomes and pay no Federal tax.

Thus, Mr. President, it is obvious that the tax credit for education expenses as provided in the amendment of the Senator from Connecticut would operate to the benefit of every American who is concerned about the costs of higher education. And the tax-credit plan would administer those widespread benefits without the dangers of bureaucratic control of education and absolutely outside of the issue of separation of church and state.

Mr. President, seldom does the Senate have an opportunity to pass upon a program with such massive benefits and at a time when the granting of such benefits would be of such great assistance to our Nation.

I hope, as a former college educator and for the sake of improved college education in America, that the Senate will accept this tax-credit amendment.

I yield back the remainder of my time, and thank the Senator from Connecticut.

Mr. RIBICOFF. Mr. President, I yield 5 minutes to the distinguished Senator from Maryland [Mr. BREWSTER].

Mr. BREWSTER. Mr. President, since its original proposal by President Kennedy, I have strongly advocated an overall reduction in taxes as the best means to stimulate investment expansion, industrial development, and overall economic growth.

While I continue to consider this tax legislation to be of top priority, I have become increasingly concerned with its failure to recognize, its failure to stimulate, investment in our Nation's No. 1 resource, the minds of our young people.

Our progress as a nation is dependent on our progress in the education of our citizens. The complexities of diplomatic negotiation, of space exploration, of modern weaponry, of atomic research, of agricultural surplus, medicine, civil rights, automation, and unemployment can only be met by an enlightened citizenry. The probems of domestic and international society yield to no simple solutions. Education is the single most important factor in our successful handling of these problems. For this reason, I have long been convinced of the importance of efforts at all levels of government to stimulate investment in our human resources. I believe that this kind of investment will pay the richest dividend in the years ahead, in enlightened citizens, in economic strength, and in national excellence.

Assistance of local, State, and Federal Governments in the education of our future citizens is long established. We are continually pressed for the extension of governmental participation in positive new programs to meet the dual challenge of an explosion in population and in knowledge.

The amendment proposed by my distinguished colleague from Connecticut to the tax bill now under consideration represents a new proposal—a kind of do-it-yourself education measure—one designed to encourage each American citizen to invest his own financial resources in his own education or in that of his

69-108 O—66—pt. 3——30

sons or daughters. This eminent proposal is intended to stimulate investment in the education of our young people—an investment of equal significance to those which may be made in new plants and equipment as a result of other provisions of the tax legislation we are considering.

I am proud to be a cosponsor of this proposal, and to urge its acceptance by the Senate.

Proposals for tax relief for the cost of higher education have been made many times before in the Senate and in the House of Representatives. At no previous time has there been a greater need for such relief. At a time when the need for education is growing by geometric progression, the cost of education is advancing by the same measure.

What has this meant to the individual? After the cost of buying a home, it has meant that the largest single expense sustained by a family unit is likely to be the cost of sending their three or four children to college. It has meant that at a State or other public college the cost of 4 years of education can run as high as $6,600. It has meant that education at many private colleges can cost double that sum. In my own State of Maryland, there are 75,556 students enrolled in college as of the fall of 1963. For residents of the State, the cost of tuition at the University of Maryland is $396. For an out-of-State resident, the cost is $746.

This is not the whole story. Unlike many of the other serious expenses that a family must bear, the cost of college education hits a family in a short span

[*P. 1718*]

of years with staggering impact, and with no relief similar to that available under present tax laws for medical expenses or casualty losses.

Again, using my own State of Maryland as an example, the resident enrolled at the University of Maryland paying $396 annually for tuition, fees, and books would receive under the Ribicoff amendment $199, a little over 50 percent in tax credit. The nonresident, paying $746, would receive a tax credit of $250, or slightly over 25 percent.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. BREWSTER. Mr. President, will the Senator yield me an additional minute?

Mr. RIBICOFF. Mr. President, will the Chair inform me as to how much time I have remaining?

The PRESIDING OFFICER. The Senator has 1 minute remaining.

Mr. RIBICOFF. I understood that the present occupant of the chair [Mr. EDMONDSON] would like to have that minute. However, I believe that the distinguished Senator who now occupies the chair would yield that time to the Senator from Maryland.

I yield 1 additional minute to the distinguished Senator from Maryland.

Mr. BREWSTER. At no previous time has such an excellent proposal as the one made by the distinguished Senator from Connecticut been before this body for consideration. This proposal has been carefully framed to meet all previous objections. This proposal provides a tax credit which will be available to each and every person subject to the Federal income tax who is paying tuition or fees or costs associated with education at an institution of higher learning. It provides a sliding scale formula to equalize the benefits of the credit with respect to students at public and private colleges. Finally, it limits the credit so as to provide greater dollar benefits for lower and middle income families.

Since this proposal of income tax credit for college expense came to national attention, I have received a large volume of mail, favorable without exception. I am informed that no less than 19 Senators and 101 Members of the House of Representatives have introduced similar legislation. This represents eloquent testimony to the broad range of support for this proposal.

Mr. President, I believe now is the time for the Congress to adopt the provisions of this amendment, and to include them in our action on the most important tax legislation in many years.

Mr. RIBICOFF. Mr. President, I reserve the remainder of my time.

Mr. LONG of Louisiana. Mr. President, I yield 45 minutes to the Senator from Oregon.

Mr. MORSE. Mr. President, I rise to oppose the Ribicoff amendment. It grieves me very much to find myself in disagreement with the Senator from Connecticut [Mr. RIBICOFF] on any subject pertaining to education. He and I have worked shoulder to shoulder on education problems when he was Secretary of Health, Education, and Welfare. He and I worked since then, shoulder to shoulder, in the Senate on proposed legislation falling within the jurisdiction of the Senate Committee on Labor and Public Welfare. There is no one for whom I have more respect as to his sincerity of purpose in wanting to do whatever can be done, according to his sights, for the best interests of American education.

But honest and sincere men can differ, and in the present instance I find myself diametrically opposed to the position of

the Senator from Connecticut. In the next few minutes I shall set forth my major objections to his amendment.

I have listened to much, if not most, of the discussion this afternoon. I have been asked by my leadership to put into the RECORD tonight the main reasons for my opposition to the bill. I shall do so in continuity. When I finish presenting my argument against the Ribicoff amendment I shall be glad to respond to any question that the proponents of the amendment wish to ask me.

MAJOR OBJECTIONS

My objections to the Ribicoff amendment are very much the same as those expressed by the Senator from Louisiana [Mr. LONG] in his Senate speech of January 30. I am opposed to it as a special tax privilege to one class of taxpayers; and I am also opposed to it for its impact on our educational system.

It is not entirely clear whether its supporters intend it to be the first or second—a financial break for parents who send their children to college or a means of channeling money into institutions of higher learning, especially private institutions. Obviously, this tax credit cannot be both. If the colleges are to gain anything at all from it, they must raise their tuitions so as to absorb the $700 million to $1.3 billion loss to the Government. If the taxpayers are to enjoy any of it, the colleges and universities must not raise their tuitions.

Some college presidents have been very frank about this. They say exactly what I have said. Of course, it is the intention of these college presidents to raise their tuitions. They have pointed out in their statements that the amendment will not be of any particular help to the institutions unless the tuitions are raised.

What we really are considering in this amendment is a bill which, in essence, is an aid-to-higher-education bill. The decision we must make is what form that aid should take. We must decide whether, if the aid should take the form of a tax credit or if it should come from appropriated funds. The first course will permit the parent or the child to decide, at the expense of all the taxpayers of the United States, what institution will be assisted. The second course will permit the Congress on the basis of sound public policy through a general law to determine what the aid to public and private institutions of learning in this country shall be.

AMENDMENT AIDS COLLEGES, NOT PARENTS

I would never have Senators forget that point throughout the debate. This is a Federal-aid-to-education bill under the guise of a tax credit. It is a proposal whereby the Treasury of the United States says to the parent of the child, "Here is the money." It could even be more valuable to the parent of that child than a tax deduction. This is a handout to the parent of the child after all tax deductions under existing law are considered, and it comes down then to what is left. That is the amount of money he would otherwise have to pay in taxes. It is proposed to say to him, "We give you a credit of so many hundred dollars from money you otherwise would pay into the Treasury of the United States."

CHURCH-STATE ISSUE

I have battled on the floor of the Senate—and against some pretty long odds at times—for what I consider to be a fair deal within the Constitution of the United States for the church-related and the private colleges of America.

I know that there are those who do not like to have the church-state issue discussed in connection with the Ribicoff amendment; but it is imbedded in it. We cannot escape the fact that the Ribicoff amendment raises head on the state-church issue in this Republic. I prefer to meet that issue by amended legislation, not by tax indirection.

There is no doubt that a great many of the religious college administrators in this country are fully in support of the amendment. They see an opportunity to obtain substantial financial aid through this amendment that they could not get any other way.

I shall fight to obtain for the religious affiliated colleges in this country the aid to which I think they are entitled under the Constitution of the United States, but no more.

Consider the total amount of money which is going to pour into the bank accounts of the church-related colleges of this country and into Yale in Connecticut, Princeton in New Jersey, and Harvard in Massachusetts through the operation of this amendment, if it ever is entered on the statute books. I cannot escape the fact that every dollar of that money is the taxpayers' dollar. I do not think it is right for us to do this until the state-church issue is settled by a U.S. Supreme Court decision.

JUDICIAL REVIEW

There is pending before the Senate now a bill, of which I am the author, and on which there are a goodly number of cosponsors, which seeks to establish a procedure for judicial review in connection with the question of the extent to which the taxpayers' dollars can be used to help finance religious affiliated colleges and schools.

The senior Senator from Oregon pro-

posed and fought for, and the Senate passed as the higher education facilities bill, which provided categorical-use grants to religious affiliated as well as public colleges. I think that approach is constitutional. I think it is the kind of approach we should make to the church-state issue.

TAX CREDIT NO SOLUTION TO CHURCH-STATE PROBLEM

If one thinks that, by way of a tax credit "gimmick," there is going to be eliminated the church-state issue of aid

[*P. 1719*]

to church-related schools, he could not be more badly mistaken.

The adoption of the amendment—and I sincerely hope it will not be adopted—will raise that issue in an inflamed form. Already telephone calls, letters, and other communications make it clear to me that across the country great dissension is being raised over the Ribicoff amendment on the ground that it is an attempted circumvention of the church-state separation principle.

It is a great mistake, in my judgment, to approach the issue that way. We are making progress in resolving constitutionally the state-church issue. It is my view that we should give the maximum support to all of the colleges of the country, private and public, including the church-related college, that can be given under a general aid bill within the limitations of the Constitution. That is why I am working so hard to try to obtain consideration for the judicial review bill I have authored, not only in connection with higher education, but also secondary and elementary schools, because there is a great problem in that connection, too.

One of the controversies which I fear will be stirred up over the Ribicoff amendment, if it ever becomes law, is the whole question of the aid and the form of aid which can be given, with propriety under the Constitution, to parochial secondary and elementary schools.

I have not made these comments because I am happy to make them. I would prefer not to have to discuss the subject. But in my capacity as chairman of the Subcommittee on Education of the Committee on Labor and Public Welfare, I would be derelict in my duty if I did not point out that, in my judgment, the Ribicoff amendment does raise the church-state issue and will arouse great controversy.

Mr. RIBICOFF. Mr. President, will the Senator yield?

Mr. MORSE. Because of the nature of the point I make, I think it is only fair to yield to the able Senator from Connecticut, but I shall not yield when I reach the other points.

Mr. RIBICOFF. How does this amendment raise the church-state issue?

Mr. MORSE. It raises the church-state issue because the Senator proposes to give a tax credit, which benefits the parent who finances the education of his child in a Catholic, a Presbyterian, a Lutheran, a Jewish or a Baptist or any other denominational college or university. I note that there will be no check over the programs of the church-related schools which ultimately get the money under the tax credit proposal.

Mr. RIBICOFF. The Senator knows that the private colleges will not get this money under the tax credit. It will go to the parents.

Mr. MORSE. The Senator can console himself by such a statement, but if the tax credit is given to the parents, it will be given to the Catholic schools or the Presbyterian schools or the Baptist schools. Whose money is it? It is the public money which would be given to the parent under the amendment. The Senator should not try to kid me by such fantastic logic.

Mr. RIBICOFF. Mr. President, I am not kidding myself. Neither do I expect the Senator from Oregon to kid the Senate on this issue.

Mr. MORSE. I will not run away from the mathematical facts, as the Senator is apparently doing.

Mr. RIBICOFF. I am not running away from anything.

Mr. MORSE. How does the Senator think these schools will get the money? How will the Catholic schools and the Presbyterian schools get the money? Where do they get the tax credit dollars? They get them from the student who takes them to the Catholic school or the Presbyterian school or the Baptist school. That is where they get the dollars. Those dollars are not the student's dollars. They are public dollars. We are indirectly giving those dollars to the schools from the Treasury of the United States.

Mr. RIBICOFF. The overwhelming amount of the money goes to families whose children attend public and private colleges which are nonreligious.

Mr. MORSE. But we do not know that until the amendment starts to work.

Mr. RIBICOFF. When it starts to work, the money goes to the parents, basically.

Mr. MORSE. And they decide where the child shall go to school.

Mr. RIBICOFF. As they decide at the

present time. It makes no difference where they decide to send the child.

Mr. MORSE. There is no restriction with respect to a Catholic or Presbyterian or Baptist college, as there is under Public Law 88-204, which restricts the money to a categorical use.

Mr. RIBICOFF. When a charitable contribution is made to a private college, whether it be Catholic or Baptist or Presbyterian, the same situation exists.

Mr. MORSE. It is an old legal maxim that when one pierces the veil, one reveals the subterfuge which is attempted. I have pierced the veil, and the Senator from Connecticut does not like it. The American people understand it. He will know that they understand it before we are through with this issue.

Mr. RIBICOFF. I understand the issue very well. It is an issue that we should debate here and now. This issue involves a tax credit. It is not going to the school, whether it be a State school or a private school or a church school. It goes to the parent.

Tuition fees have gone up 25 percent during the last 5 years.

If the Senator talks about schools raising the tuition, I point out that the schools have already raised their tuition. When they find that the parents have extra money in their pockets, they may again raise the tuition fees. Therefore, if we follow the Senator's logic, we could say that the basic tax reduction bill being proposed by the administration aids religious institutions, because colleges, knowing that the parents will have extra dollars in their pockets, will be able to raise their tuition fees. That argument is just as logical as the one the Senator uses by saying that, because there is a tax credit for education, the money will go to religious institutions.

I respect the Senator from Oregon. He knows that privately and publicly and from platforms I have given him great credit for his fight and leadership in this field. I have never doubted the sincerity of the Senator from Oregon. I have always defended his sincerity and have always contended that he was sincere.

It is rather strange that at this stage in the debate the distinguished Senator from Oregon should appear to question my sincerity, because my respect for him is very high indeed.

I wish to argue this issue on its merits. To say that I am using this issue as a subterfuge for benefiting religious schools is unworthy of the great Senator from Oregon, for whom I have such high respect.

Mr. MORSE. If the Senator's sincerity is being questioned, he is questioning it himself. I assure the Senator I am not attacking it.

His judgment can be defended on this issue.

However, when he tries to make the fallacious argument that Catholic and Presbyterian and Baptist colleges are not going to get the money out of the U.S. Treasury in the long run by way of the tax credit which he proposes, by handing it to the parent, I do not go along with him. His amendment would take money from the Treasury thus permitting the parents to spend it for tuition wherever they want to spend it, in a Catholic or a Presbyterian or any other private denominational institution, with no restraint whatever put upon their decision at all. That is what would happen.

We had a great fight on the higher education facilities bill, in seeing to it that money for categorical uses only was made available to Catholic, Presbyterian, Baptist and other institutions of higher education. I was in favor of it. I voted for it. In fact, I proposed it. As we battled for it, we put restraints on it. We made it clear that not a dollar of that money could be used except for categorical use purposes. There is no restriction in the pending amendment upon the use of the money that is proposed to be given to these beneficiaries. It is possible that it will be held legal to proceed in this manner. The courts will have to decide that question.

The Senator from Connecticut obviously disagrees with my argument. He is entitled to do so. However, I do not intend for a moment to let him think that he is going to persuade me into believing that there is no church-state issue in his amendment, just because he proposes to give the money to the parents in the first instance.

We must take a look at the effect of the use of the money. The presidents of church-related institutions of higher education are in a terrific drive to have this amendment adopted. They know the effect of it. They know that they

[P. 1720]

will get in this amendment what they could not possibly get through a general Federal aid bill. That is the difference between us.

Mr. RIBICOFF. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. RIBICOFF. If we should follow the logic of the distinguished Senator from Oregon, the Senator would be against allowing deductions for charita-

ble contributions to religious education or to religious colleges, be they Catholic or Protestant or Jewish.

Mr. MORSE. No. We have an overall, general public policy, which has prevailed in this country, that deducations for humanitarian purposes are considered to be in accordance with the Constitution. In the pending amendment, I believe we have a "gimmick" which is designed to get around the first amendment to the Constitution. That is what is in this amendment.

Mr. RIBICOFF. How can the Senator say this is a "gimmick," when the money is going to the parents, not to the college? I point out that, according to statistics, there are only 353,167 students in Catholic colleges, and 2,700,000 students in public colleges.

Mr. MORSE. If I have ever heard a non sequitur, that is one. We must wait to see how many will be affected and who will go to these schools after the adoption of the amendment.

Mr. RIBICOFF. The amendment has nothing to do with that. The amendment is specifically designed to help parents to decide to what college their children shall go, in exactly the same way as we give a deduction for charitable contributions, irrespective of the type of college to which a parent will make his contribution.

Mr. MORSE. I have no quarrel there.

Mr. RIBICOFF. If this amendment is to be opposed on this ground, then to follow the logic of the Senator, and not to indulge in a non sequitur, another amendment would have to be proposed to deprive every church-related college of tax-exempt status and every taxpayer of the right of deduction for a charitable contribution to such a college.

I believe that is the problem we face if we adopt the logic of the Senator from Oregon.

It is surprising indeed, that this argument is projected at this time in the debate. It is very interesting, because this is the first time it has been done, and it indicates how frightened the opponents of this amendment are, when at this late time in the debate the accusation is made that it raises the church-state issue.

Mr. MORSE. I am sorry if the Senator from Connecticut has not heard of it earlier because for weeks, while this proposal has been under discussion, there has been great activity by private schools and private school administrators. They have been urging the adoption of this amendment, because they feel it is the best way in which they can get the money that they could not get before.

Mr. RIBICOFF. Mr. President, will the Senator yield?

Mr. MORSE. I will first complete my argument. If I have time remaining, I will yield to him. But I wish to complete my main speech.

EFFECT OF RIBICOFF AMENDMENT

I realize what chasms apart we are. I repeat my argument that when we take tax dollars—I do not care what the vehicle is; I do not care what the medium is for transferring them—we can apply the doctrine of law that the veil can be pierced to follow through to see what the effect is. In this instance, the effect will be that we will make available through this device, without any restrictions as to how a religious school may spend accumulated funds in the Treasury, with no such categorical use restrictions as are in the aid-to-higher-education bill which was passed a few weeks ago, huge sums of money without specific constitutional protection to the taxpayers.

SPECIAL PRIVILEGE

If we are to consider it as a tax break to parents of college students, I think we have riddled our tax system far too much already with special privileges. I am astonished to see so many Members of Congress who ordinarily oppose special privilege taxation supporting this amendment. And I am disappointed that a move that had gained some strength not long ago to wipe out special tax features and then reduce rates substantially all across the board has fallen victim to the pressure of one special interest after another.

Let us bear in mind that this is not basically an education measure. If it were, it would be before the Subcommittee on Education of the Committee on Labor and Public Welfare. I once said that I thought it would be good to have hearings on educational proposals considered by the Subcommittee on Education. But I agree that the bill is basically a tax measure. It is not a measure to help the young people or to ease a financial strain on their parents. The question is whether a financial strain should be eased for one class of taxpayers when it will not help many other parents who also would like to provide their children with a college education. It is a question of whether sending a child to college is the kind of expense that justifies shifting a substantial tax burden onto taxpayers whose incomes are not large enough to take advantage of the credit, or who have no college-age children.

EDUCATION CONSIDERED AS AN INVESTMENT

Basically, I see no difference between the Ribicoff amendment, and the oil depletion allowance or any other of the special privileges in our tax code. It is simply a good investment to send a

youngster on to college. It is profitable for the child and profitable for the Nation. A college-educated man or woman stands to make an income several times that of the man or woman who lacks a higher degree.

Figures brought out in the Education Subcommittee show that in the year 1961, men 25 years of age and over had the following incomes, according to their years of schooling:

Less than 8 years	$2,998
Grammar school (at least 8 years)	4,206
1 to 3 years of high school	5,161
4 years of high school	5,946
College (1 to 3 years)	7,348
College (4 years or more)	9,817

Over their economic lifetime, meaning from age 18 to death, these men will realize the following total incomes according to their educational levels:

Less than 8 years	$151,348
Grammar school (at least 8 years)	204,530
1 to 3 years of high school	234,960
4 years of high school	272,629
College (1 to 3 years)	333,581
College (4 years or more)	452,518

Certainly a college education is good for the child and good for the Nation as a whole. But does that mean that on top of the financial advantage of the education itself we should allow a tax rebate for the investment? My answer is no. We might with equal justification allow a tax rebate for any other sound financial investment.

BENEFITS NOT ACCORDED LOW-INCOME FAMILIES

Senators know that parents with an adjusted gross income of $5,000 or less will have no taxable income against which this credit can be applied. They will gain nothing from it. Like so many other tax features, you have to have considerable income to begin with before you get preferred treatment. The Bible refers to this system as one of: "To them that hath, it shall be given," which in American parlance is called: "Them as has, gits."

Under the Ribicoff amendment, if you have at least a middle bracket income or more, you will get a tax break when you send your children to college. If you are in the lower brackets, you will get no tax break from sending your children to college.

This is the kind of inequity that we should be eliminating from the revenue code instead of adding.

If I were asked what kind of taxpayer would benefit most from this amendment I would say the taxpayer with no more than four children who has an income of at least $10,000 and who plans to send his children to college in any event. Taxpayers with many children, or with low incomes who send their children to public school, will benefit much less, if at all.

College-educated American families are going to send their children to college in any case, tax credit or no tax credit. We know that to be true. That is the pattern of American family life and education. Higher education tends to beget higher education within a family. Our social mores and economic desires perpetuate a need for higher education once it is established in a family.

These parents do the right thing by themselves, by their children, and by their Nation. They do not need a tax credit to induce them to do it, however much they might like to have one. We would all like to have a tax credit for our sound investments in our own and in the Nation's future. Education is not the only such investment; why should it receive this special reward?

[*P. 1721*]

BAD PRECEDENT

This amendment makes no sense unless we plan to continue down this road and give tax credits for all kinds of investments and for all expenditures on self-improvement. I am against them in principle, and therefore I am opposed to the Ribicoff amendment as a tax privilege.

So am I also opposed to it for its effect upon our educational system. From all the data and figures I have accumulated on the amendment, I am convinced that it will make more difficult the overcoming of our Nation's greatest economic problem—the education, retraining, and absorption into useful employment of young people who lack the family finances and family motivation to educate themselves.

AMENDMENT WILL NOT SOLVE POVERTY PROBLEM

Let Senators not be deluded. This is our great problem of education. It is also our problem of economics; our problem of poverty. It is the problem of bringing into the mainstream of American life the boys and girls whose families before them were outside it. It takes shape in the form of generations who continue on public welfare because their parents were on public welfare and their parents before them, and whose own children will be on welfare, too, unless something is done to break this vicious circle.

In terms of higher education, it takes the form of dropouts from high school, or brilliant high school graduates who do not go on to college because their par-

ents have no interest in encouraging them, and whose cultural background does not prepare them nor inspire them nor encourage them nor require them to obtain education at the college level.

This is a terrible loss both for the young people and for the Nation. I have already alluded to the reduced incomes they will earn because of their educational deficiency. These same figures are a measure of the financial loss to the Nation, both from the output that will not be realized and the revenues that will not be collected.

PROJECT TALENT FINDINGS

How serious this problem is was brought out recently by the Commissioner of Education before the Education Subcommittee. His testimony about "Project Talent" shows a distressingly high proportion of young people with remarkable talent and ability who do not enter college upon the completion of high school.

Based on the 1961 survey, there were some 11,400 young boys and girls who were in the top 10 percent of their high school graduating classes who did not go on to college. They came from families where the family income was less than $6,000 a year—the very families who will get little or nothing from this amendment. This is the group that our national efforts must be directed to if the recurring cycle of educational deficiency, underemployment of talent, and unemployment itself is ever to be attacked successfully.

I say to Senators: We are not attacking the major education problem of this country if we do nothing for this group of young people, and we will do nothing for them with the Ribicoff amendment.

Moreover, 24,800 more young people were in the next to the top 10 percent of their classes and still in the upper fifth who did not go on to college whose family incomes were less than $6,000. We will be doing little or nothing for this group, either, under the Ribicoff amendment.

It is the approximately 46,000 boys and girls in the top 10 percent of the 1961 high school classes whose family incomes were over $6,000 and who did go on to college who will benefit from this amendment. In my opinion, that is bad tax legislation as well as bad education legislation.

Next, it is my opinion that if this amendment is ever adopted, it will enlarge and extend the imbalance, to which I have referred. The testimony has been that colleges and universities, especially private ones, will promptly increase their tuition costs in order to gain a windfall from the tax credit. Many of their administrators have said so. That is what the presidents of Catholic, Presbyterian, Baptist, Lutheran, and other church colleges and of private colleges say they will have to do, to receive any benefit. They will have to raise their tuition fees in order to receive the benefit of a tax credit. The testimony has been that colleges and universities, especially the private ones, will promptly increase their tuition, in order to gain a windfall through the tax credit.

That is a major source of support for this amendment. The private schools are not interested in the tax break for parents; they are interested in absorbing as much of it as they can, as soon as they can, and they have said so in public many times. They will increase their tuition; they will add to the rising cost of education to the rising number of college age children by raising the tuition; and the pressure will be on. The boards of regents and the boards of education of State institution after State institution will also raise the tuition. That will happen in all public colleges, State universities, land-grant colleges, and all the rest; they will not be able to withstand the temptation when they are under that pressure.

Mr. RIBICOFF. Will the Senator from Oregon yield?

Mr. MORSE. Not until I conclude my argument. I know the answer the Senator from Connecticut will make, for I have heard him state it all afternoon; and I disagree with him.

The boards of regents and the boards of education will meet the rising costs of education and the rising numbers of college-age children by raising the tuition. That is one avenue open to them. They plan to take advantage of it, and indeed many schools which do not favor having the problem met by increased tax revenues are backing the Ribicoff amendment as the alternative.

But that is not going to solve the problem of the loss of topflight students who cannot afford college. It will increase that problem. Higher tuition charges will exacerbate what is already a bad situation. By adopting this amendment, the Senate will merely act to raise the family income level below which the children cannot expect to attend college, and will merely act to increase the numbers of otherwise qualified high school graduates who will not get a college education because the Senate will price many more of them out of the market.

Too many are already priced out of the market. I have already referred to those in the top 10 percent of their high school classes who do not go on to college. All told, over 100,000 boys and girls who graduate from high school each

year with the qualifications for college do not go to college. Enactment of this amendment will drive this figure much higher in the years to come.

A recent study, Mr. President, indicates that it is 2½ times as likely that a child will go to college if his parents' income is in excess of $9,000 than if it is less than $5,000; and that a child in the lower academic half of his high school class is more likely to attend college if his parents' income exceeds $9,000 than is even a child in the upper quarter of his class, if his parents' income is less than $5,000. An estimated one-third of our brightest high school graduates are unable to attend college, primarily for financial reasons.

Mr. President, I am greatly concerned about another problem that will arise if, by mistake, Congress were to adopt the Ribicoff amendment. We know how the legislative process works. Toward the end of last session, the Senate passed the higher education facility bill, and also passed the "omnibus" vocational education bill. We still have before us the fundamental problem of providing aid to elementary school and secondary school education.

I have already outlined to the Senate the problem we face concerning the talented young men and young women who could go to college if means to enable them to do so were provided. What will happen to those from the low-income family group?

If anyone thinks we can just keep on passing education legislation, session after session, he is merely ignoring the facts in regard to how the legislative process works. Mr. President, cannot you hear Senators who then would be trying to find reasons for not voting for another aid to education bill of vital importance, say, "But consider what we have done for education in the last 2 or 3 years. We should wait a while, to see how those bills work."

Mr. President, it will then be easy for the opponents of this bill to join with the opponents of other education bills and to say: "Of course we need educational fellowship and scholarship legislation. Of course we need Federal aid to education legislation." But, Mr. President, in Congress there is always a tendency to slow down, once a bill or two of major importance in a given field are put on the books; and I believe one of the

[*P. 1722*]

effects of the Ribicoff amendment would be to slow down the legislative process in coming to grips with the problem of the students who need the aid most.

I believe it would then be found that a very large percentage of the students most in need of aid would not receive it under this amendment, and I am also afraid that at that time they would find objection in Congress to the passage of further legislation in their behalf, because certainly they come from families who will see that they get into colleges, somehow, in some way, in almost any way, as the figures I have already pointed out show. Those figures have been put in the RECORD, and others will continue to be recorded.

As Senators know, I believe in Federal assistance to our colleges and universities. Few have devoted more time and effort to this subject than I have in the past 3 years. In fact, I cosponsored my first education bill in 1947, and since then I have either authored or cosponsored every major piece of legislation for Federal aid to education.

I do not doubt that after a few years, a very large sum—close to $1 billion a year—would under the Ribicoff amendment, go to enlarge the resources of institutions of higher learning.

But that $1 billion could be used with infinitely more efficiency and effectiveness to promote education. Just think, Mr. President, of the administrative bureaucracy which it would be necessary to add to the Office of the Secretary, merely in order to administer this program, unless its administration was to be shockingly wasteful, or unless the money was to be shockingly misused. Just consider the administrative setup which would be required under the Secretary—the bill says the Secretary or the delegate—to carry out the administrative rules and regulations as would have to be prepared in order to make sure the money was spent in accordance with the purposes of the bill. What a waste that would be. I do not believe we need to set up an administrative system of that type, Mr. President. I believe it is much better to hold fast to the overall program we have been following—namely a program of passing education legislation within the framework of Federal aid to education, to meet the various categories of need.

Mr. President, in that way, we shall succeed in having the academic facilities enlarged, without having the tuition charges increased, if we follow the program we have been following under the College Construction Act of 1963.

However, the Ribicoff amendment envisions raising more money for schools by having the tuition raised—charges which then would be met by tax exemptions. But, Mr. President, that is not the sort of aid our educational structure needs.

I suppose that in view of the current competition among prospective students to gain admission to institutions of higher education, there is not much danger that those institutions will price themselves out of students. There is danger, however, that they will price themselves out of quality, by increasing the correlation between education and the ability to pay, rather than between education and the ability to learn. There is a great difference, Mr. President; and I think we ought to be directing our attention to the large group of potential American students who have the ability to learn, although we have not yet passed a Federal aid to education bill which provides for enough scholarships and fellowships and loan provisions to make it possible to assure such students that they will be able to go to college. That is the kind of legislation we ought to be fighting for, Mr. President—not for the tax-credit handout legislation.

Mr. President, it must be remembered that the intellect of our youth is a vital human resource that must be developed, not only for the sake of the individual, but also for the sake of our national economic growth, our cultural advancement, and our international understanding. Aid to higher education must enhance the maximum development of able students, regardless of whether they can pay for it. To slant our aid to institutions by favoring those most able to pay would not only be undemocratic; it would also be a waste of our human resources.

American higher education needs expanded facilities that will be available at least to the same percentage of young people graduating from high school, and preferably to an increasing percentage of those youths. Legislation which did not accomplish this purpose would not deal with the education problems that face the American people.

Mr. President, I think it would be a great mistake for the Senate to pass proposed legislation which would discriminate against taxpayers who did not have children who were ready to go to college, because let us not forget that someone has to pay for the cost of operating this Government.

CLASS LEGISLATION

When we give a tax credit to the parent of a potential college student who can qualify under the Ribicoff amendment, we merely pass the tax burden on to those who do not qualify for this handout. I always thought we considered discriminatory legislation or class legislation in the field of taxation to be bad, and not sound policy. It is no answer to me to say, "Ah, but we have other such legislation honeycombed elsewhere in this bill and in the tax laws." If so, Mr. President, we should get them out. That should be the answer. Let us eliminate the tax loopholes, not add to them, for class legislation in the field of taxes is unjust to the great body of U.S. taxpayers who are not the beneficiaries under the discriminatory favoritism that such legislation makes available to them.

This amendment is not a step backward; it is a march backward, leagues in length, away from the field of fair taxation. This proposal would impose a greater burden upon those who do not qualify under the terms of the amendment.

TESTIMONY OF THE COMMISSIONER OF EDUCATION

Mr. President, I have here a statement by the Commissioner of Education, which was given this morning before a House committee. I wish to read it. This is a statement by a great educator, for Commissioner Keppel was one of the great deans of education in the country before his appointment as Commissioner of Education. He is recognized as one of the Nation's outstanding educational authorities.

Commissioner Keppel testified:

> It has been and continues to be my view that the Federal resources should be utilized to assist increasing numbers of able but needy students to continue with their education. Tax credit proposals, in my judgment, contribute very little toward achieving this goal. Since actual college costs are now considerably more than tuition, it is reasonable to assume that a tax credit amendment would encourage institutions to raise tuition and thus make it even more difficult for students from low-income families to get a college education. It is my feeling that the limited Federal resources should be pinpointed to the need.
>
> I would urge that rather than the indirect and possibly regressive approach of a tax credit proposal, that favorable consideration should be given to the forms of direct aid contained in the administration's proposals in S. 580. These proposals include insurance of commercial loans to college students, a work study program providing up to one-half the pay of students employed by colleges, increasing the number of National Defense Education Act fellowships, and extensive enlargement of the National Defense Education Act student loan program.
>
> Furthermore, if funds of the magnitude suggested in this tax credit proposal are to be made available for extending higher educational opportunity, I feel that they could be used to much greater advantage by establishing a scholarship program along the lines of the program recommended by the President to the 87th Congress.

Mr. President, that is the opinion of the U.S. Commissioner of Education. I have also talked with him in the past

several weeks in connection with my work in the Senate Subcommittee on Education.

The PRESIDING OFFICER (Mr. McNAMARA in the chair). The time of the Senator from Oregon has expired.

Mr. MORSE. Mr. President, I ask unanimous consent that I may proceed for 5 additional minutes; and if I have not finished by that time to have the rest of my remarks printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered; and the Senator from Oregon is recognized for 5 additional minutes.

Mr. MORSE. The U.S. Commissioner of Education has made it clear to me time and time again that he believes that legislation of the Ribicoff amendment type not only would be regressive in its implications so far as taxation is concerned, but it would also be regressive from the standpoint of advancing a sound educational program for the young men and women of this country who need it most.

TESTIMONY TAKEN BY EDUCATION SUBCOMMITTEE

My attention was first called to this proposal last May, when individuals representing 20 colleges asked permission to testify before the Education Subcommittee which I head in behalf of a proposal

[*P. 1723*]

to aid colleges and universities through tax credits. The presidents of Rockford College, Earlham College, and Stetson University appeared before the committee as representatives of the group of 20 college presidents to recommend, and I quote, "that the Federal Government seek a wholly new approach to providing financial assistance to higher education." The proposal involved tax credits against tuition and fees in higher education, and tax credits for gifts to institutions of higher education. Tax credits, of course, involved a deduction from the amount of net income taxes owed after all deductions, and therefore are in their total amount funds which otherwise would go to the Treasury for general governmental purposes. These gentlemen were explicit in describing their proposal as Federal aid to higher education, but were advised that because amendments to the tax laws were involved, the Senate Finance Committee had jurisdiction.

I was particularly interested in their proposal, however, because a year earlier 13 of the 20 college presidents supporting this proposal for Federal aid, including the 3 who attended the hearing, had been among a group of 29 college presidents who expressed undying opposition to Federal aid to higher education in a statement widely disseminated to the press and appearing in the CONGRESSIONAL RECORD.

ROGER FREEMAN TESTIMONY

A witness before the Education Subcommittee of the Senate Labor and Public Welfare Committee was Dr. Roger A. Freeman, staff member of the Hoover Institute for War, Revolution, and Peace, Stanford University, who opposed the pending legislation and advocated tax-credits as a more effective method of aiding higher education than grants and loans. Dr. Freeman, in an extended statement before the Senate Finance Committee, devoted a major section to the argument for tax credits. After describing the difficulties surrounding legislation for construction grants, and noting that these are not available for salaries and operations, Dr. Freeman observed that:

> It is for this among other reasons that numerous proposals have been introduced to achieve by indirect means what apparently cannot be accomplished directly.

Dr. Freeman advocated both tax-credits for educational expenses and for gifts to higher education, but devoted most of his attention to the former. That he viewed tax-credits for educational expenses as a means of revenue for colleges and universities is clear from his testimony. Discussing a table of tax-credits which he had devised, Dr. Freeman said:

> The tax-saving, or revenue loss, under my schedule, may be estimated at $700 million per annum or more. Institutions may be expected to recoup as much as three-fourths of that amount through increased tuitions. They could apply the added funds to salaries or earmark part for the service of bonds issued to finance the construction of academic facilities. Congress could determine how much it desires to aid institutions of higher learning and revise the credit schedule accordingly as time goes on.

Applying Dr. Freeman's estimates that colleges and universities would recapture three-fourths of the amount of the tax-credit allowed by raising fees, to the Treasury estimates of revenue loss, we find that under his proposal some $528 million of the first year's revenue loss of $750 million would flow to colleges through tuition increases, and by 1970 the figure on tax funds going to colleges and universities under this plan would be $975 millions, out of $1.3 billions. Mr. President this is Federal aid to higher education on a scale far beyond that ever considered by the education committee and it could, of course, be used for any purpose, including sectarian instruction.

A press release issued by Stanford University in connection with Dr. Freeman's testimony further bears out this interpretation. However, may I say emphatically in this connection that Dr. Freeman in advocating this approach does not represent the views of Stanford University, whose president, Dr. Wallace Sterling, has stated his strong opposition to this form of Federal aid. Dr. Freeman appeared as an individual, under the fine tradition of academic freedom that prevails at Stanford, to express his own views.

OTHER VIEWS

Mr. President, I dwell on these points because the tax-credit proposal as applied to tuition and fees has been characterized by its sponsors in this body as aid to hard-pressed parents, and not as intended to provide aid to colleges. I do not doubt for a minute the sincerity of their views, but I believe the record should also make clear the fact that many of the chief supporters of this legislation outside the Congress regard it quite differently.

For example, the Chicago Tribune, in endorsing this proposal in an editorial appearing on December 1, 1963, said, and I quote:

> This would be new educational money, shifted in effect from Federal to collegiate treasury with a minimum of fuss.

It is interesting to note that in a signed article in the publication Human Events for November 23, 1963, President John Howard of Rockford College said:

> Project the Federal aid programs ahead, not too many years the way things are going, to the time when all colleges and universities will receive the largest part of their budgets from the U.S. Treasury. It is likely that all faculty members in that day will feel some obligation to vote for whichever party promises the largest amount of additional educational subsidies, regardless of other partisan differences.

Mr. President, if Dr. Howard's views are correct, and I do not share them, what will be the effect of making the colleges dependent by 1970 on receipt of nearly a billion dollars of Federal funds for general operational purposes? Does anyone believe that the tax laws, like other laws, are not subject to change or amendment, or that colleges will be less dependent on the Federal Treasury and tax structure because of a device calculated to do indirectly what Dr. Freeman says cannot be done directly?

As further evidence I quote from a statement by President George C. S. Benson, of Claremont Men's College, California, when the tax-credit proposal was being discussed in 1958. In reply to the question of whether or not colleges would increase tuition to recapture the tax credit from the parents he wrote under date of May 5, 1963:

> I can assure you that they would. I have seen them increase tuition substantially without the tuition deduction and I feel sure they would do so more certainly if there were a tuition deduction.

Dr. Benson was one of the 20 sponsors of the statement in favor of the tax-credit approach to which I referred earlier, and one of the 29 who in 1962 opposed all Federal aid.

Writing in the December 1963 issue of the Journal of Higher Education in support of the tax-credit approach, Dr. Virgil Blum, chairman of the department of political science at Marquette University, used as an illustration that a university with 5,000 full-time tuition paying students could, by increasing its tuition fees by the amount of the tax credit proposed—in this instance $465—get an increase of $2,250,000 in income from tuition charges.

In recent weeks, Mr. President, an organization called the Citizens National Committee for Higher Education, Inc., has appeared on the scene. Headed by Dr. O. C. Carmichael, Jr., former president of Converse College in South Carolina and now chairman of the board of the Associates Investment Co., of South Bend, Ind., and other financial institutions, this group has headquarters in South Bend, and its chief objective since formation has been advocacy of the tax credit plan, although it has other more general stated objectives. Vice president of this committee is President Edmunds of Stetson University, to whom I have referred earlier.

In conclusion, Mr. President, I should like to quote from a leaflet issued by the student council of a college which I will not name, urging all students to write their Representatives and Senators in support of tax credit legislation.

Under the heading: "Why Action Now?" the leaflet says:

> Congress is now in the process of revising the tax code. It's much easier for Congress to adopt the tax credit plan as a part of a tax revision bill, than to enact it as a separate program.

This is an interesting observation, Mr. President. This proposal was not, so far as I am aware, considered by the House Ways and Means Committee. It is not in the tax bill as passed by the House. It was rejected by the Senate Finance Committee. If it is a worthy proposal I see no reason why it cannot be made the subject of full hearings in both Houses and enacted as a separate proposal. It involves three-quarter billion in revenue immediately and $1.3

billions by 1970. If it is adopted, tax rates will have to be higher than otherwise to make up the revenue loss, or other educational programs of a much less controversial nature must suffer.

Mr. President, at this point, I also ask unanimous consent to have printed in the RECORD a synopsis of the objections to tax credit or tax deduction legislation

[P. 1724]

from the Treasury Department; a summary of my arguments in opposition to the Ribicoff amendment, a letter to the chairman of the House Ways and Means Committee dated December 12, 1963, from the Department of Health, Education, and Welfare in opposition to sundry educational tax credit and tax deduction bills. A telegram addressed to me on January 22 from President James H. Janson of Oregon State University at Corvallis, Oreg., in opposition to the amendment; a statement on tax credits for educational purposes adopted January 31, 1964, by the Executive Committee of the Association of State Universities and Land Grant Colleges, an excerpt from the Report of the Commission on Legislation of the Association of American Colleges, and a press release dated January 31, 1964, issued by the Association of State Universities and Land Grant Colleges in opposition to the proposed amendment.

There being no objection, the materials were ordered to be printed in the RECORD, as follows:

PROPOSALS FOR AID TO HIGHER EDUCATION THROUGH TAX DEDUCTIONS OR CREDITS FOR COLLEGE EXPENSES

Numerous bills now pending in the Congress propose aid to higher education through income tax deductions or credits for college expenses or additional exemptions for college students.

The tax credit proposals are generally limited to expenses for college tuition, fees, and books. Some provide for a flat percentage of these expenses (generally 30 percent) to be allowed as a credit against tax liability; others a graduated percentage (declining as the expenses increase) which is intended to reduce the amount of the credit for persons attending private institutions with higher tuition charges.

These tax allowances would be costly to the Federal Government in terms of loss of revenue and would be an inefficient and inequitable means of achieving the objectives of sponsors of this legislation.

The graduated credit proposals (such as the Ribicoff amendment), although limited to tuition, fees, and books, would cost from $725 million to $800 million annually at present levels and $1.3 billion to $1.5 billion within the next few years.

Sponsors of tax allowances place emphasis on different objectives: (1) to assist persons in financing a college education, (2) to give tax relief to middle-income families with children in college, (3) to give indirect assistance to institutions of higher education by making possible tuition increases (thereby providing either an alternative to direct grants to such institutions or a supplement to direct aid).

A deduction or credit, regardless of its form, will not give relief where it is most needed. Large families with low incomes would receive little or no benefit while families of fairly substantial means who would send their children to college in any event would get the most relief.

The tax saving from a deduction or credit in many cases would be of negligible value to millions of low-income families who pay little or no taxes. In 1962, 40 percent of the 47 million families had incomes of less than $5,000. Income tax data for 1960 show that of the 15.4 million joint returns with adjusted gross income of $5,000 or less, 6.6 million, or 43 percent, were nontaxable. Many others who may have sufficient taxable income to take advantage of a deduction or credit would be unable to supply the remaining costs, such as room and board, which can be more substantial than tuition costs.

The dual objectives of encouraging college attendance and indirectly assisting institutions of higher education are inconsistent because to the extent that tuition increases result from the tax allowance the problem of financing a college education becomes more difficult, particularly for students from low income families who may benefit least from the tax allowance.

Some sponsors of tax allowances suggest that students from low income families should be taken care of through scholarships. They suggest that most scholarship assistance now goes to students from low income families. The College Scholarship Service, however, reports that the median income of families of students receiving scholarships from colleges and universities is $8,500 (which means that families of half of the recipients have income above $8,500).

Tax deductions or credits based on college tuition discriminate against students in public institutions. A large proportion of students needing financial assistance attend public institutions where tuition is lower. Office of Education data indicate that the median charge for tuition and fees in all public institutions of higher education in 1962–63 was $170 as compared with $690 in all private institutions. The credit under the Ribicoff amendment on this median charge would be $165 for public institutions and $253 for private institutions. Any deduction or credit based on tuition, regardless of its form, will give more benefit to students in the higher priced institutions.

Federal aid to higher education by means of a tax allowance would give little or no assistance in meeting college expenses to students in those States with a strong tradition of providing higher education at low or no student tuition cost. Institutions in such States could benefit only if they impose tuition or increased tuition charges, as the case might be.

A deduction or credit for college expenses will set a precedent for allowing similar allowances at the elementary and secondary levels. Bills providing such allowances are pending in Congress.

With respect to the indirect assistance provided to the institutions themselves, the share of aid each would get would depend on its tuition level, and the higher the tuition the more benefit it would receive. It is doubtful that this distribution would give Federal assistance where it is needed most or would correspond to the way in which direct aid would be distributed by the Congress.

Nontax legislation now pending in the Congress will give considerable aid to college students and institutions of higher education. H.R. 4955 will aid students through expansion of the present National Defense Education Act loan program. H.R. 6143 will give direct aid to institutions for construction of facilities.

The American Council on Education has recommended that first priority in the thinking of the Congress and the Executive be given to the construction of academic facilities and the preparation of qualified teachers and a second priority to student financial assistance.

The need for tax allowances of the type proposed will be greatly reduced by the rate reductions which all income classes will enjoy under the tax bill before the Congress. The Ribicoff amendment for the families benefited would in most cases more than double their tax cut under the bill, thereby giving these families a disproportionate share of the tax reduction.

PROPOSALS FOR AID TO HIGHER EDUCATION THROUGH TAX DEDUCTIONS OR CREDITS FOR COLLEGE EXPENSES

Numerous bills now pending in the Congress propose income tax deductions or credits for college expenses or additional exemptions for college students.

I. TYPES OF PROPOSALS

The deduction proposals in some cases are limited to expenses for tuition, fees, and books, but frequently extend to all types of college expenses, including meals and lodging and travel expenses up to a specified dollar limit.

The tax credit proposals are usually limited to college tuition and fees (plus expenses for books, supplies, and equipment in some cases). Earlier credit proposals provided for a flat percentage of tuition (generally 30 percent) to be allowed as a credit against tax liability. More recent credit proposals allow a graduated percentage of tuition which declines as tuition increases. The various types of graduation are indicated in table 1. One graduated credit has an additional feature under which the credit, determined on the basis of the graduated percentage, is reduced for taxpayers with adjusted gross income in excess of $25,000 and is completely disallowed at $57,500 of adjusted gross income.

II. REVENUE LOSS

All of these tax allowances for college expenses would be costly to the Federal Government in terms of loss of revenue. The graduated credit proposals, although limited to tuition and fees and books, would cost from $725 million to $800 million annually at present levels, depending upon the nature of the graduation.[1] If the present trend in tuition costs and number of students continues, the annual loss from these credits would be $1.3 billion to $1.5 billion within the next few years.

A deduction for tuition, fees, and books would cost $375 million annually at current levels; at projected levels the cost would be $700 million in a few years. A broader deduction covering in addition to tuition, fees and books expenses of a student for room and board while away from home and travel would cost $900 million at current levels and $1.7 billion at projected levels in a few years.

If, as is generally assumed, colleges and universities increase their tuition charges as a result of the tax allowance more than they would otherwise have done, the revenue loss will be still greater in all cases.

An additional exemption for a college student would cost about $400 million at current levels and $600 million in a few years.

The revenue cost of other proposals with various types of limitations, at 1964–65 levels, is shown in table 1 below. The extent to which these revenue costs may be expected to increase within the next 5 years is indicated by the projected increases in college enrollments shown in table 2 below. By 1970 the estimated 4.8 million enrollment in 1964 is expected to reach 7 million (an increase of 46 percent.

III. OBJECTIVES OF PROPOSALS

1. Assistance to students

Sponsors of tax deductions or credits for college tuition have stated their objectives in different ways. Sponsors of earlier legislative proposals expressed concern about the economic barriers which prevent capable students from obtaining a higher education and offered tax allowances as a means of overcoming these barriers and encouraging college attendance.

In connection with the introduction of recent bills, however, sponsors of such legislation have recognized that tax allowances for college expenses would not necessarily give relief where it is most needed, that families of fairly substantial means who would send their families to college in any event would get the most relief, and that the tax saving

[*P. 1725*]

from a deduction or credit, in most cases would not be sufficient to be a deciding factor in determining whether a child can go to college.

It has also been recognized that the full benefits of a deduction or credit for college tuition would not necessarily accrue to taxpayers since colleges could be expected to increase their tuition charges.

2. Assistance to students and aid to institutions of higher education

The sponsor of one bill has stated that the

[1] The various types of graduated credits are shown in table 1 below.

various proposals for deductions or credits for college expenses have dual objectives: First, to assist persons in financing a college education, and second, to provide indirect assistance to institutions of higher education. The assistance to institutions would come through the expected tuition increases. This indirect method of aiding higher education is offered by some as an alternative to direct grants to institutions of higher education, and by others as a supplement to direct aid.

3. Tax relief for middle-income families

One sponsor of a recent legislative proposal has shifted the emphasis more completely from encouraging college attendance to the giving of relief to middle-income families with children in college. He states, "But I frankly recognize that the amount of the credit will not make the decisive difference for a majority of taxpayers as to whether or not they can afford the costs of a college education. It will be helpful to all taxpayers, but probably not decisive for many of them."[2] He refers particularly to the need for relieving the burden of college expenses on middle-income families. College expenses are compared with medical expenses and casualty losses and it is suggested that college expenses are just as entitled to tax relief as these other types of expenses.

IV. EFFECT OF TAX DEDUCTION OR CREDIT

1. Fails to give benefit where most needed

Insofar as the objective of the proposed tax allowances is to encourage college attendance by helping to overcome economic obstacles, it is highly doubtful that they would be effective. A deduction or credit would be of negligible value to millions of low income families who pay little or no taxes. In 1962, 40 percent of the 47 million families had incomes of less than $5,000. One family in five had an income of less than $3,000, and another one in five received income between $3,000 and $5,000. A large proportion of families with incomes of $5,000 or less would have no tax liability against which the tax credit could be offset. Statistics of income data for 1960 indicate that of the 7.1 million joint returns with adjusted gross income of $3,000 or less, 5.1 million, or 70 percent, were nontaxable. Of the 15.4 million joint returns with adjusted gross income of $5,000 or less, 6.6 million, or 43 percent, were nontaxable. In addition, many others would not have sufficient taxable income to take full advantage of a deduction or credit. Furthermore, many families in these groups, even if they had sufficient taxable income to take advantage of the tax allowance, would be unable to supply the remaining costs of college, such as room and board, which can be more substantial than tuition costs.

While recognizing that low income families will receive little benefit from such allowances, some sponsors of tax allowances contend that this is no reason for denying tax relief for middle income families and point to scholarship aid as a means of assisting students from low income families. They suggest that most scholarship assistance now goes to students from low income families.

A recent study of the American Council on Education on "Financial Aid to the Undergraduate," however, states: "Evidence also suggests that scholarship funds are going to children of families with incomes substantially above that of the average for families in the United States. This may be due to the fact that high-income families are more ap to seek education and to seek higher-priced education, which usually is found in institutions with large scholarship funds. Whatever the reason, lower economic classes are not favored by scholarship funds proportional to their numbers, abilities, or economic status."

The College Scholarship Service reports that the median income of families of students receiving scholarships from colleges and universities is $8,500 (which means that families of half of the recipients have income above $8,500). Office of Education data show that a small percentage of colleges and universities controls a substantial proportion of scholarship funds and a few States (with large total population) provide most of the scholarships supported by State funds. This concentration of scholarship funds means that scholarships presently available do not take care of low income families.

2. Difficulty of achieving through tax allowances dual objectives of aid to students and aid to institutions

The dual objectives of encouraging college attendance and indirectly assisting institutions of higher education, are inconsistent because to the extent that tuition increases result from tax allowances the problem of financing a college education becomes more difficult, particularly for students from low income families who may benefit least from a tax allowance.

3. Discrimination against students in public institutions

Sponsors of a graduated tuition credit have indicated that the purpose of the graduated credit (declining as tuition increases), as opposed to a flat percentage credit, is intended to avoid giving greater assistance to persons attending private institutions with higher tuition charges.[3] As they point out, traditionally a large majority of students needing financial assistance attend public institutions where tuition is low. Despite the graduation feature, however, the operation of the proposed credit would discriminate against those attending public institutions who generally come from modest income families.

Tuition charges at public institutions are generally lower than at private institutions and this would place a maximum limitation on the allowable credit which would be much lower than that applicable at private institutions. Private institutions have higher tuition charges. Consequently the benefit derived from the proposed credit would tend to be greater. Moreover, students at private institutions tend to come from higher income families.

The discrimination of a tax credit based on tuition in favor of those who attend private institutions is best illustrated by typical tuition fees at private and public institutions. Office of Education data indicate that the median charge for tuition and fees

[2] Senator RIBICOFF's statement in connection with the introduction of his proposed graduated tax credit (CONGRESSIONAL RECORD, Nov. 21, 1963, p. 21491).

[3] See table 1 for the various types of graduation proposed.

in all public institutions of higher education in 1962–63 was $170 as compared with $690 in all private institutions.[4]

The credit provided under the Ribicoff amendment on this median charge for tuition and fees (plus an allowance of $90 for books) would be $165 for public institutions and $253 for private institutions. Although the graduation provided by the Ribicoff credit gives most relief (75 percent) on the first $200 of expenses and the percentage allowed on expenses above $500 drops to 10 percent, the assistance given to students in public institutions is severely limited by the automatic ceiling placed on the credit by the lower tuition charges of these institutions. The maximum creidt ($325 on expenses of $1,500) will generally not be available to students attending public institutions. On the other hand, for many students attending private universities a credit will be available on amounts above $1,000. At least 50 percent of the private universities and 10 percent of the private liberal arts colleges had charges of over $1,000 at the undergraduate level in 1962–63.[5]

A credit based on tuition would also be discriminatory as between various regions of the country because of the wide variation in tuition charges. Little or no assistance in meeting college expenses would be given to students in those States with a strong tradition of providing higher education at low or no student tuition. Institutions in these States will derive no assistance from tax allowances unless they impose larger tuition.

4. Proposed credit for college tuition is not analogous to deductions for medical expenses

The analogy drawn between the medical expense deduction allowed under present law and the proposed tax credit for college tuition may be questioned. The medical expense deduction relates only to "extraordinary" expenses (under present law those in excess of 3 percent of adjusted gross income). It rests on the assumption that most taxpayers have "ordinary" medical expenses and a deduction is allowed only when expenses exceed this "ordinary" level. The tuition credit would be allowed with respect to the first dollar of tuition paid.

The medical expense deduction is available only to those who itemize their deductions.[6] Taxpayers using the 10 percent standard deduction derive no additional benefit from the medical expense deduction. The proposed tax credit for college expenses would be available to taxpayers in addition to the standard deduction.

College expenses are of an optional nature as contrasted with medical expenses which cannot be avoided. Also, in the case of college expenses the taxpayer has some control over the amount of expenditures since in the selection of a college he generally has the choice of a low cost public institution or an expensive private institution.

Finally, the medical expense deduction was enacted during World War II when heavy wartime tax rates were being imposed. The credit for college expenses is being offered as an amendment to a tax reduction bill which provides $8.9 billion reduction in individual income taxes with relief to all income classes.

[*P. 1726*]

5. Effect of Ribicoff tax credit on tax reduction under H.R. 8363

The table below shows the tax reduction provided by the tax bill, H.R. 8363 (as passed by the House), for a married couple with two dependents as compared with the Ribicoff tax credit on (1) median tuition and fees plus books, and (2) the maximum allowable credit.

Income	Present tax	Tax Cut under H.R. 8363	Ribicoff tax credit [1]: On median tuition and fees plus $90 for books [2] — Public	Ribicoff tax credit [1]: On median tuition and fees plus $90 for books [2] — Private	Ribicoff tax credit [1]: On maximum allowable expenses ($1,500)
$5,000	$300	$77	$165	$253	$325
$6,000	456	113	165	253	325
$7,500	720	144	165	253	325
$10,000	1,196	202	165	253	325
$12,500	1,664	264	165	253	325
$15,000	2,213	348	165	253	325
$25,000 [1]	4,821	758	165	253	325

[1] Senator Ribicoff's amendment to H.R. 8363 proposes a graduated tax credit for college tuition, fees, and books as follows: 75 percent of the first $200, 25 percent of next $300, and 10 percent of next $1,000 (with a maximum credit of $325). The credit is reduced by $1 for each $100 of income in excess of $25,000 so that no credit is allowed to taxpayers with incomes in excess of $57,500.

[2] Median tuition and fees in all institutions of higher education for 1962–63 were, for public institutions, $170; for private institutions, $690. The cost of books and supplies is estimated at $90 per student (Office of Education, Department of Health, Education, and Welfare).

[4] "All institutions of higher education" include in addition to universities and liberal arts colleges, teachers, technological, other professional, and junior colleges. The median charge in universities is $268 for public and $1,038 for private universities; in liberal arts colleges is $168 for public colleges and $751 for private colleges.

[5] Louis A. D'Amico and W. Robert Bokelman, "Tuition and Fees Charged by Universities and Liberal Arts Colleges: 1962–63," Higher Education, Office of Education, Department of Health, Education, and Welfare.

[6] In 1960, more than 14 million of the total of 24 million returns with itemized deductions took a medical expense deduction. It is estimated that about 4 million returns would have some credit under the Ribicoff credit.

V. TYPES OF EDUCATION COVERED

Many proponents of a tax allowance for tuition have talked in terms of providing relief to parents who are sending their children to college. The recent tax credit proposals, however, are not limited to expenses of full-time students who are candidates for a baccalaureate or higher degree, but would apply to all education above the 12th grade in institutions of higher education. This means that expenses for all types of advanced education, professional and technical would qualify for the credit. Since educational expenses which qualify as business expenses are already deductible under present law, it would be necessary to integrate the proposed credit with this deduction to avoid a double allowance. The question has been raised by technical, trade, and business schools whether the tax allowance would apply to their tuitions. As most of the bills are drafted, the tax allowance is restricted to institutions of higher education and to education above the 12th grade and would not be applicable to trade and vocational schools.

Provision of a deduction or credit for college tuition would also raise the question of a similar allowance for tuition in elementary and secondary schools. In fact, several bills now pending in Congress propose such a deduction.

VI. TAX ALLOWANCES VERSUS DIRECT AID

In evaluating the proposed tax credit as a means of encouraging college attendance and aiding institutions of higher education, it is necessary to consider the cost to the Government and whether, if this amount of Federal funds can be devoted to this purpose, a tax allowance is preferable to a program of direct aid to higher education. An advantage of direct aid in general, as compared with a tax allowance, is that the Congress retains control of the amount of aid through the appropriation process and can distribute the aid where needed most. Tax allowances have been termed a kind of "backdoor" appropriation which is not subject to regular review by the Congress.

Legislation now pending in Congress (H.R. 6143) which has been agreed upon in conference between the two houses and passed by the House would give direct aid to colleges and universities through loans and grants for construction of facilities. Another bill (H.R. 4955) which is now in conference would aid students through expansion of the present National Defense Education Act loan program.

In addition to these forms of assistance, the administration has recommended a new program of Federal insurance of commercial loans by banks and other institutions which is designed to help students who cannot meet the needs test under the National Defense Education Act loan program. The Federal guarantee would encourage banks and other credit institutions to lend for educational purposes on interest and repayment terms suited to the special needs of college students and their parents. The insured loans would be available to all self-reliant students in good standing willing to invest in their own future.

In recognition of the fact that many students rely on employment, the administration has also recommended a new work-study program under which the Government would provide up to half the pay for students employed by the colleges in work of an educational nature as, for example, laboratory, library, or research assistants.

It is noteworthy that the American Council on Education, which several years ago sponsored a 30-percent tax credit for tuition, no longer includes a proposal for a tax credit in its program of Federal action for higher education. In their proposed program of Federal action, adopted this year, the council stated "the construction of academic facilities and the recruitment and preparation of qualified college teachers must have first priority for the academic community and should have first priority in the thinking of the Congress and the executive. The need for more student financial assistance holds a second priority."

TABLE 1.—*Revenue cost of various proposals for tax deductions or credits for college expenses*

Deductible item	Limitation	Incurred for—	Revenue loss, calendar year: 1964	Revenue loss, calendar year: 1970
			Million [a]	*Billion*
Tax credits:				
1. 30 percent of tuition, fees and books	No limit	Taxpayer, spouse, or dependent	$525	$1.0
2. 20 percent of tuition, fees and books	do	do	350	.7
3. Graduated tax credit for tuition, fees and books:				
(a) Ribicoff amendment to H.R. 8363:				
75 percent of 1st $200				
25 percent of next $300	$325 [1]	Taxpayer and any other individual	750	1.3
10 percent of next $1,000				
(b) Goldwater-Curtis bills (S. 2269 and H.R. 8981): [2]				
100 percent of 1st $100				
30 percent of next $400	$420	Taxpayer, spouse, or dependent	725	1.4
20 percent of next $1,000				
(c) Humphrey bill (S. 1677):				
75 percent of 1st $100				
40 percent of next $400	$485	do	800	1.5
30 percent of next $500				
20 percent of next $500				
4. $100 credit for each full-time student; credit prorated for part-time students.	$100 per student	do	375	.5
Additional exemption:				
1. $600 extra exemption for each full-time college student	$600 per student	do	400	.6
Itemized deductions:				
1. Tuition, fees, and books	No limit	do	375	.8
2. Tuition, fees, and books	$300	do	250	.4
3. All costs, including tuition, room, board, and travel, etc.	No limit	do	900	1.7
4. Tuition, fees, books; living expenses in excess of home living expenses	do	do	550	1.0
5. Tuition, books, and living expenses, less $600 personal exemption	do	Dependent	425	.9
6. Graduated deduction of tuition, books, and fees, by adjusted gross income classes:				
Adjusted gross income class: — *Percent deductible*				
0 to $5,000 — 100				
$5,000 to $7,500 — 75				
$7,500 to $10,000 — 50	do	Taxpayer, spouse, or dependent	150	.3
$10,000 to $12,500 — 25				
$12,500 or more — 0				
7. Deduction of tuition and fees in excess of 5 percent of taxpayer's adjusted gross income (Keating amendment to H.R. 8363).	do	do	70	.13

[1] The credit is reduced by 1 percent of the amount by which the taxpayer's adjusted gross income exceeds $25,000 and is completely disallowed at $57,500 of adjusted gross income.

[2] Limited to tuition and fees.

SUMMARY OF ARGUMENTS AGAINST TAX CREDIT FOR COLLEGE EXPENSES

A. Such a credit will cost $750 million currently and $1.3 billion in 1970.

B. The credit will not expand educational opportunities because it does not give relief where relief is most needed.

1. The most serious problem in education is that able students from low-income families are not able to afford a college education. The credit is of no value to a family whose income does not require a payment of tax. The credit will probably not enable any additional families to educate their children.

2. It will principally provide relief to middle-income families who already send their children to college. There is no justification for using Federal funds to relieve the burden on this group before assuring that children from low-income families receive a college education.

C. The credit will encourage tuition increases which will make it even harder for low-income families to afford college educations. Colleges will inevitably raise tuition costs as a result of the credit. For example, a college with tuition of $200 could increase the tuition to $350 without any additional cost to a parent with sufficient income to take full advantage of the credit.

D. Since the total amount of the credit increases as the tuition increases, the credit discriminates in favor of private universities which normally charge much higher tuition than State universities. This will tend to give greater benefits under the provision to persons living in those areas where children normally attend private universities.

E. No intelligent judgment can be made on this proposal without considering it in connection with other proposed methods for providing assistance for higher education.

The Education Subcommittee is considering work-study proposals of title I of S. 580, and the student loan insurance proposals of S. 580. A Federal scholarship program would cost far less and do more good for those who have both talent and need. Our legislative road is made more difficult by tax proposals such as this.

DECEMBER 12, 1963.

Hon. WILBUR MILLS,
Chairman, Committee on Ways and Means, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: This is in response to your requests for reports on H.R. 22, H.R. 49, H.R. 134, H.R. 383, H.R. 595, H.R. 794, H.R. 852, H.R. 1809, H.R 2121, H.R. 2386, H.R. 2831, H.R. 3393, H.R. 3430, H.R. 3540, H.R. 3778, H.R. 4539, and H.R. 4775.

Generally speaking, these bills would allow a deduction, a tax credit, or an additional or expanded personal exemption, frequently within limitations, for tuition, fees, and, in some bills, a variety of other expenses relating to the education of the taxpayer, his spouse, or his dependents at an institution of higher education. The bills are similar to many of those discussed in this Department's adverse report of September 14, 1961, on H.R. 233 and related bills.

In his message to the 88th Congress proposing a program for education, the President has expressed the Nation's concern over the distressing fact that "only 8 percent of our adults have completed college; and only 16 percent of our young people are presently completing college. * * * one of our most serious manpower shortages is the lack of Ph. D.'s in engineering, science, and mathematics; only about one-half of 1 percent of our school age generation is achieving Ph. D. degree in all fields." To remedy this, the President has urged "special attention to increasing the opportunities and incentives for all Americans to develop their talents to the utmost—to complete their education and to continue their self-development throughout life."

In prior reports to the Congress on bills similar to those that are the subject of this letter, the Department has repeatedly stressed that many of the Nation's most able young people do not continue their studies beyond high school because of the substantial economic burden that their further education would thrust upon them and their families.

Title I of the proposed National Education Improvement Act of 1963, introduced as H.R. 3000, is in large measure a response to this problem.

A major objective of its four parts is to encourage able students to undertake and continue their higher education by offering them various means of meeting the financial obligations that this would entail.

The deficiency of the instant bills, in our view, is that despite their cost (probably between $120 and $450 million annually) they would contribute very little toward the goal of enlarging the opportunity of the Nation's youth to obtain a college education or to engage in graduate work.

Realistically speaking, the higher education of children from families that enjoy a relatively large increase would be unaffected, in the main, by the tax incentives proposed. These families will, in most cases, provide their children with a higher education in any event. On the other hand, low-income families would derive little or no benefit from the proposals because they pay little or no tax. Yet it is the low-income family that is most in need of assistance and encouragement in seeking to obtain a higher education for its children.

In general, the bills would provide assistance in inverse proportion to the taxpayer's need for such assistance.

In this regard, the proposals to allow a tax credit equal to a fixed percentage of tuition

and fees are less defective than those to allow a deduction for this purpose because, to the extent that the taxpayer has taxable income, the credit would give a benefit without regard to the size of such income. Nevertheless, high-income families would enjoy the greatest benefit from a tax credit because their children are, in the main, educated at the more expensive schools. Conversely, lower-income families, with little or no tax to pay, or with much smaller educational expenses, would derive correspondingly less benefit. As was pointed out in a recent note in the Harvard Law Review (76 Harvard Law Review, 369, 384) on "Federal Tax Incentives for Higher Education," in regard to bills which would allow a 30-percent tax credit for tuition: "Students in reduced circumstances, if they did attend college, probably would attend a public institution with low tuition, probably $400 or less. To such families the 50 percent credit would be worth about $120, and correspondingly less if the tax otherwise due were less than that amount. It seems doubtful that many students would be able to attend because of such a saving, when they faced room and board expenses of $500 or more."

H.R. 22 would take a somewhat novel approach. It proposes a tax credit of up to $50 per year per child during the child's precollege years, obtainable by the taxpayer's purchase of "educational investment certificates" of equivalent amount from designated financial institutions, which certificates would eventually be available for defraying the child's higher educational expenses (including room and board). The bill would also allow a tax credit of up to $100 for each dependent of the taxpayer for current higher educational expenses (not including room and board). These proposals would not favor students attending the more expensive schools, and by in effect allowing the accumulation of credits during the years before the child is old enough to go to college could provide even the relatively low-income taxpayer with several hundred dollars per child for the education of his children. However, many taxpayers would still not earn enough to enable them to obtain the full benefit of the credits, and the more children the taxpayer has the more income will be necessary to enable him to do so. In any case, the accumulated credits would be far from sufficient to meet the costs of a college education.

Moreover, in view of the fact that tuition now averages $700 to $800 below the cost of the education furnished, the enactment of legislation affording credits for educational expenses might well result is no benefit to the student whatsoever, because of the substantial possibility that it would be the occasion for increases in tuition. Indeed, the tax credit proposals might well worsen the financial position of the student with the least means, because not only would he be unable to avail himself of their benefits, but he would be required to meet the increased tuition charges that the enactment of the proposals would be likely to stimulate.

It has been argued that deductions or credits for educational expenses would release college and university scholarship funds to assist the neediest students, but the difficulty with the argument is that scholarship funds are now generally allocated to assist students from the neediest families, who would benefit little, if at all, from such deductions or credits. The problem is not in the allocation of institutional scholarships, but in their limited availability.

In our view, aid to the educational structure should be pinpointed to the need, as the President's proposal attempts, and should be in a form amenable to adjustment to the changing needs of education.

For these reasons we recommend against the enactment of the instant bills.

We are advised by the Bureau of the Budget that there is no objection to the presentation of this report from the standpoint of the administration's program.

Sincerely,

WILBUR J. COHEN,
Assistant Secretary.

DISCRIMINATION OF A TAX CREDIT BASED ON COLLEGE TUITION AGAINST STUDENTS IN PUBLIC INSTITUTIONS AND AGAINST TAXPAYERS IN STATES WITH HIGHLY DEVELOPED PUBLIC EDUCATION SYSTEMS

A tax credit based on college tuition would discriminate against students in public institutions and against taxpayers in States with highly developed public education systems reaching through the college level.

The tax benefit from a tax credit based on college tuition generally would be extremely limited for students attending public institutions of higher education because of the low level of tuition at such institutions. Traditionally a large majority of students needing financial assistance attend public institutions there tuition is low. A tax credit based on tuition would thus discriminate against those attending public institutions who generally come from modest income families. This discrimination is best illustrated by typical tuition fees at private and public institutions. Office of Education data indicate that the median charge for tuition and fees

[*P. 1728*]

in all public institutions of higher education in 1962–63 was $170 as compared with $690 in all private institutions.[1]

The credit provided under the Ribicoff amendment, for example, on this median charge for tuition and fees (plus an allowance of $90 for books) would be $165 for public institutions and $253 for private institutions.[2] Although the graduation provided by the Ribicoff credit gives most relief (75 percent) on the first $200 of expenses

---

[1] "All institutions of higher education" include in addition to universities and liberal arts colleges, teachers, technological, other professional and junior colleges. The median charge in universities is $268 for public and $1,038 for private universities; in liberal arts colleges is $168 for public colleges and $751 for private colleges.

[2] The Ribicoff amendment provides the following credit: 75 percent on the first $200, 25 percent on the next $300, and 10 percent on the next $1,000, with a maximum credit of $325. The tax savings from the Ribicoff

and the percentage allowed on expenses above $500 drops to 10 percent, the assistance given to students in public institutions is severely limited by the automatic ceiling placed on the credit by the lower tuition charges of these institutions. The maximum credit ($325 on expenses of $1,500) will generally not be available to students attending public institutions. Tuition and fees in 1962–63 in 25 percent of all public institutions were less than $100 and in 10 percent were less than $20.[3] On the other hand, for many students attending private universities a credit will be available on amounts above $1,000. At least 50 percent of the private universities and 10 percent of the private liberal arts colleges had charges of over $1,000 at the undergraduate level in 1962–63.

Because of the great regional diversity in the American higher education system some regions of the country would benefit significantly from a tuition tax credit while others would receive little benefit. In the East high tuition private institutions predominate. In the West universities and colleges supported by public funds become increasingly important. These public institutions of higher learning have been developed and operated at great cost to the taxpayers in the States which have them. The main philosophy behind the creation of these institutions was to provide higher education opportunities at low cost to all capable students. It is a worthy objective which, in fact, is attained. But it should be emphasized that it has been achieved by the taxpayers of States which voluntarily have taken on a substantial financial burden.

In view of the regional differences in the structure of higher education as between States, a credit for tuition must redound more to the benefit of residents of States which have limited public institutions of higher education, since private schools are characterized by higher tuition charges than public ones. Conversely, residents of States with extensive public institutions would not only bear the cost of supporting their State and community colleges through their existing tax systems, but also they would bear a higher proportion of Federal income taxes since they would not share as extensively in any Federal tax credit scheme. No existing exemption or credit in the Federal income tax has such diverse regional implications as would one for higher education.

The following table shows the number of public and private institutions and their distribution by major regions:

Number of institutions by region and type of institution, fall 1962 [1]

	Total	Public	Private	Percent of total	
				Public	Private
North Atlantic	571	128	443	22.4	77.6
Great Lakes and Plains	594	193	401	32.5	67.5
Southeast	434	161	273	37.1	62 9
West and Southwest	429	236	193	55.0	45.0
Total United States	2,028	718	1,310	34.5	64.6

[1] The States included in each of the major regions are shown in App. A.

Source: U.S. Department of Health Education and Welfare, Office of Education.

It is significant that in the West and Southwest region 55 percent of the colleges and universities are public as compared with only 22 percent in the North Atlantic region.

More significant is the number and distribution of students by type of institution and region as shown in the following table:

Enrollment in institutions of higher education, by type of institution and region, fall, 1962

Region	Total	Public	Private	Percent of total	
				Public	Private
North Atlantic	1,112,843	363,720	749,123	32.7	67.3
Great Lakes and Plains	1,194,374	764,652	429,722	64.0	36.0
Southeast	677,795	460,801	216,994	68.0	32.0

Source: U.S. Department of Health, Education, and Welfare, Office of Education.

Of the more than 4.2 million students enrolled in the 2,028 institutions of higher learning throughout the United States in the fall of 1962, 61 percent were in public institutions, and 39 percent were in private institutions. The regional distribution, however, is more important (State-by-State detail is shown in app. A). In the North Atlantic region, 67 percent of the students attend private institutions, while only 33 percent attend public institutions. This is almost the reverse of the nationwide distribution. In some of the North Atlantic States the percentage of students attending private institutions reaches 80 and 85 percent (Massachusetts and Pennsylvania, respectively). In sharp contrast is the situation in the West and Southwest region where 80 percent of the students attend public institutions, and only 20 percent attend private institutions. In New Mexico 94 percent of

---

tax credit on the median charge for tuition and fees (plus $90 for books) in public and private institutions in the various regions of the country are as follows:

	Institution median tuition plus books		Institution tax credit	
	Public	Private	Public	Private
All institution	$260	$780	$165.00	$253.00
North Atlantic	334	945	183.50	269.50
Great Lakes and Plains	275	763	168.75	251.30
Southeast	262	598	165.50	234.80
West and Southwest	193	731	144.75	248.10

[3] The low 10 percent includes the large number of free junior colleges.

students are in public institutions, in Arizona 98 percent, and in California 85 percent. Of the 551,000 students enrolled in all California institutions, 50 percent are in publicly supported junior colleges supported by local school districts which have free or very low tuition.

As is indicated in the following table, 46 percent of the total number of students attending private institutions in the United States in the fall of 1962 were enrolled in private institutions in the North Atlantic region:

Percentage distribution of enrollment by type of institution and by region, fall, 1962

	Total	Public	Private
North Atlantic	26.8	14.3	46.2
Great Lakes and Plains	28.7	30.1	26.5
Southeast	16.3	18.2	13.3
West and Southwest	28.2	37.4	13.9
Total	100.0	100.0	100.0

Four States alone—New York, Pennsylvania, Massachusetts, and Maryland—account for 36 percent of all students enrolled in private colleges and universities. The North Atlantic and Great Lakes and Plains regions together account for nearly three-fourths of all students enrolled in private institutions.

On the other hand, the West and Southwest region has 37 percent of the total number of students attending public institutions; and four States—California, Oklahoma, Texas, and Washington—have 29 percent of all students enrolled in public colleges and universities.

CORVALLIS, OREG.,
January 21, 1964.

Senator WAYNE MORSE,
Senate Building,
Washington, D.C.:

Essential to register strongly our views on income tax credit proposal coming to Senate soon.

From my understanding, this bill highly discriminates against public institutions and low income students and families. Has effect of negating basic principles of income tax philosophy. Public higher education needs help and not additional handicaps in maintaining comparable quality of education. The public institutions will continue to serve the large numbers of students; we need to do our work as well as possible for all students.

Best personal wishes to you.

JAMES H. JENSEN,
President of OSU.

STATEMENT ON TAX CREDITS FOR EDUCATIONAL EXPENSES BY EXECUTIVE COMMITTEE OF THE ASSOCIATION OF STATE UNIVERSITIES & LAND-GRANT COLLEGES, FRIDAY, JANUARY 31, 1964, WASHINGTON, D.C.

Proposals for a direct deduction from income taxes owed the Federal Government because of tuition and required fees paid colleges and universities have attracted substantial popular support because of two widespread and contradictory assumptions: (a) That they will provide relief to hard-pressed parents, and (b) that they provide a way around the problems related to direct Federal aid to nonpublic institutions. We believe the tax-credit proposals to be unsound from the standpoint of fiscal policy, educational policy, and national policy in general. The Treasury Department has stated the objections from the standpoint of national fiscal policy. The cost is estimated at $750 million the first year and to reach $1.3 billion annually in 3 years. This loss to the Treasury would have to be made up through increased tax rates.

Some proponents of this legislation have made it clear that its essential purpose is to give tax support to educational institutions proportional, to some extent at least, to the fees charged students. Since the fees would have to be raised to provide the additional income desired, the benefit would flow to the college, not the taxpayer. To the extent that fees were raised, students from low-income families would find their educational costs increased rather than decreased. Institutions with low tuition charges would be placed under pressure to increase them in order to collect Federal aid by this route. Institutions which wish to engage in discriminatory practices and still enjoy Federal support would be encouraged to do so.

This association takes the position that, to the extent that Congress finds it in the national interest to provide either general or specific purpose support from public funds for institutions of higher education, ways can and should be found for doing this which retain the principles of public accountability for the expenditure of public funds, which are fiscally and educationally sound, and which do not in their operation discriminate against large groups of students and institutions. The tax-credit approach does not meet these standards.

EXCERPT FROM THE REPORT OF THE COMMISSION ON LEGISLATION OF THE ASSOCIATION OF AMERICAN COLLEGES

"From the beginning there seems to have been confusion about the aims of the proposal (tax credit plan). The original promoters claimed that their plan would help both colleges and parents, and the validity of the claim has been generally accepted ever since. Still, the proposals continue to force the counterargument that it is hard to see how both the college and the parents can benefit at the same time. In order to gain any financial advantage the college would presumably have to increase its charges to students, but if charges were raised they would tend to nullify any advantage derived by parents from tax remission. The poorest parents, who would get little or no relief from tax credits, would be even worse off than they are now. The force of this argument is such that we believe that, before giving further support to this proposal, the association should make a truly serious study of the results that might realistically be expected of it."

MEMBERS OF THE COMMISSION

Calvert N. Ellis, president, Juniata College, Huntingdon, Pa. (chairman); Sister Maryann Ida, president, Mundelein College, Chicago, Ill.; A. Blair Knapp, president, Denison University, Granville, Ohio; John D. Moseley, president, Austin College, Sherman, Tex.; Glenn S. Dumke, chancellor, California State College System, Inglewood, Calif.; Paul S. Havens, president, Wilson College, Chambersburg, Pa.; Otto F. Kraushaar, president, Goucher College, Towson, Baltimore, Md.: John R. Howard, Lewis & Clark College, Portland, Oreg.; Rev. Paul C. Reinert, president, St. Louis University, St. Louis, Mo.

STATEMENT OF ASSOCIATION OF STATE UNIVERSITIES & LAND-GRANT COLLEGES, WASHINGTON, D.C.

WASHINGTON, D.C.—Tax credits for college expenses will force tuition costs up and provide little relief to hard-pressed parents, a group of State university presidents said here today.

The Interim Executive Committee of the Association of State Universities & Land-Grant Colleges meeting in Washington January 30 and 31 expressed opposition to efforts to add a tax credit amendment to the tax reduction bill now pending before the Senate.

President Novice Fawcett, of Ohio State University, chairman of the executive committee, said his association's position coincides with that of the legislative commission of the Association of American Colleges. The commission which includes presidents of eight private colleges and one State college system, recently reported that "it is hard to see how both the colleges and parents can benefit (by the tax credit proposal) at the same time. In order to gain any financial advantage the college would presumably have to increase its charges to students, but if charges were raised they would tend to nullify any advantage derived by parents from tax remission. The poorest parents, who would get little or no relief from tax credits, would be even worse off than they are now."

President Fred H. Harrington of the University of Wisconsin, chairman of the Legislative Committee of the Association of State Universities & Land-Grant Colleges, noted that Dr. Roger Freeman of the Hoover Institution at Stanford University testified before the Senate Finance Committee that colleges

would recapture 75 percent of the tax credit by tuition increases.

The Senate Finance Committee recently rejected a tax credit amendment to the tax bill by a 10 to 7 vote, but sponsors announced they would ask for a vote on the amendment on the floor of the Senate.

President Harrington called attention to the high cost of the amendment and said it would necessitate higher tax rates than the scheduled reductions in the administration bill. The Treasury Department estimates the tax credit amendment would cost $750 million the first year and increase to about $1.3 billion annually within 3 years.

(Members of the association's interim executive committee participating in the press conference were President Elmer Ellis, of the University of Missouri, who is also president of the association; President Novice Fawcett, of Ohio State University, who is chairman of the executive committee; President Fred Harvey Harrington, of the University of Wisconsin, who is chairman of the association's legislative committee; President Richard Harvill, of the University of Arizona; President James Jensen, of Oregon State University; President William Morgan, of Colorado State University; and President Wayne Reitz, of the University of Florida; also, Russell I. Thackrey, executive secretary of the association.)

Mr. MORSE. Mr. President, I close by saying to the Senator from Connecticut that he and I are poles apart in regard to this matter. I have expressed my sincere conviction that the church-state issue is written all over the Ribicoff amendment. I feel we cannot escape the church-state issue in the application and the implementation of the Ribicoff amendment.

Adoption of the amendment would give to parents the choice of deciding how they would spend hundreds of dollars of the taxpayers' money which wiuld be given to them as a free gift under the Ribicoff amendment. In many instances the public money would be spent in aiding Catholic, Presbyterian, Baptist, Episcopalian, and Lutheran or other denominational or church-related institutions of higher education over which there is no restraint or check in regard to the expenditure of the public money.

The cost of this amendment, which would have to be made up from a bigger tax bite elsewhere is estimated to rise from $750 million to a high of $1.3 billion.

As I say, I pierce the veil and look at the effect. I do not accept the argument made by the Senator from Connecticut that the church-state issue is not in-

[P. 1730]

volved merely because the Senator from Connecticut tells us that it is not involved.

It is involved. It is involved because we have to look where the money will be spent.

Find for me, please, half a dozen presidents of Catholic, Lutheran, or Baptist schools in this country who do not want the amendment. They know on which side their bread is buttered. They know the effect and the value of the Ribicoff amendment as a device to circumvent the first amendment to the Constitution. By it they hope to obtain millions of dollars which Congress could not directly appropriate in aid of church-related or religious schools.

Mr. RIBICOFF. Mr. President, will the Senator from Oregon yield?

Mr. MORSE. The Senator from Connecticut should obtain his time from the Senator from Louisiana, but I would be glad to answer any question I can, once the Senator obtains his time.

Mr. LONG of Louisiana. Mr. President, has the time of the Senator from Oregon expired?

The PRESIDING OFFICER (Mr. RANDOLPH in the chair). The time of the Senator from Oregon has not expired. He has about 2 minutes remaining. He said he would answer any question that the Senator from Connecticut might wish to ask.

Mr. MORSE. Yes; I will be glad to do so.

Mr. RIBICOFF. The Senator from Oregon contends that because I say something is not so, that does not mean it is not so. I can return the compliment by saying the fact that the Senator from Oregon says something is so does not mean that it is necessarily so.

Mr. MORSE. On that point we agree.

Mr. RIBICOFF. We agree. Furthermore, the Senator from Oregon talks about $750 million to be made available for parents to spend as they wish, to pay tuitions at any private college, be it Catholic, Presbyterian, Jewish, or Baptist. By the same argument, any part of the $11.6 billion provided as savings to taxpayers in the bill could likewise be allocated to pay these fees or contributions——

Mr. MORSE. But the total tax saving is not earmarked for a specific educational purpose to aid Catholic, Presbyterian, and other colleges.

Mr. RIBICOFF. No, it is not earmarked. It is earmarked to go into the pockets of parents to be spent as they see fit for clothing, to paint their house, or, with the money they have left, to pay their medical expenses.

I point out, too, that if the Senator from Oregon were to follow his argument to its logical conclusion, it would be incumbent upon him, and his duty, to

strike out from the Internal Revenue Code the deductibility of charitable contributions to church-related colleges and universities.

The PRESIDING OFFICER. The time of the Senator from Oregon has expired.

Mr. MORSE. The Senator knows that I have already answered that point. There is a public policy which has been considered as consistent with the Constitution, that for charitable and humanitarian uses certain deductions are available to all. Such is the policy. What the Senator and I disagree upon is that the tax credit money is, without a word, earmarked for the benefit of religious colleges and universities.

Mr. RIBICOFF. The Senator from Oregon, who is an alert scholar, says that such deductions are historical. But they go back only 50 years or less. The Internal Revenue Code provides for deductibility of charitable contributions, and the 16th amendment authorizing the code goes back only to 1913.

Mr. MORSE. A half century makes a great deal of history.

Mr. RIBICOFF. When we examine the record back to 1913 and observe what changes have since been made in the Internal Revenue Code, we can understand that there is no reason why we cannot give a deduction or a tax credit to parents for educational expenses just as we give them a deduction for charitable contributions.

Mr. MORSE. I say again that a half century makes a great deal of history.

Mr. RIBICOFF. Let us then start on another half century.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. LONG of Louisiana. I yield 3 minutes to the Senator from Oklahoma.

Mr. EDMONDSON. Mr. President, I thank the Senator from Louisiana for yielding to me this brief opportunity to speak on behalf of the Ribicoff amendment. Earlier today it was stated that a $200 tax credit would be a small percentage of the cost of higher education and would be no incentive to encourage people to send their children to an institution of higher learning.

As was stated at the time, although the question is debatable, it is worthy of note for the RECORD that when the amount involved is computed in relation to one State—as I did roughly for the State of Oklahoma—we are enabled to make some observations. I found that the dollar relief for the State was approximately $9 million. Although it might appear that the average of $200 per student would be a small amount, when the total amount involved is computed, we see that it amounts to $9 million.

It is easy to see the substance of the proposal and its materiality when we consider that last year there was a lengthy debate on the question of relief for higher education. The Congress passed a bill which would provide substantial sums of money for facilities construction at our institutions of higher learning. That authorization was computed for my State to amount to approximately $4 million.

So when we turn the picture around and look at all the lengthy debate over that facility construction authorized in the higher education bill that was passed, and observe, in the very short time we are given the opportunity to consider the Ribicoff amendment, that the relief in the instance of that one State is twice as much directly to the taxpayer who is providing that higher education, I find it to be substantial relief to the taxpayer, and for that reason worthy of adoption. I shall support the amendment.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield 2 minutes to the Senator from Ohio.

Mr. LAUSCHE. I look sympathetically upon the proposal of the Senator from Connecticut. But according to the statements made, it would add to the expected deficit resulting from the passage of the bill an additional deficit of $650 million for the first year.

Why did not the Senator from Connecticut attempt to provide new revenues that would replace the losses in revenue which would result from the adoption of his amendment?

The Senator from Connecticut knows that I offered an amendment today which would recapture about $850 million in order to finance the program envisioned in the amendment of the Senator from Connecticut. My amendment is not germane, and therefore will not come before the Senate. Why does not the Senator from Connecticut, on his own volition, modify his own amendment so as to recapture moneys which would be adequate to finance his program?

Mr. RIBICOFF. If the distinguished Senator from Ohio will look at the votes on the amendments in the Finance Committee, he will see that I voted against loopholes that are in the tax bill which exceed the sum of $750 million.

The amendment offered by the Senator from Ohio does not involve a question of germaneness. It is subject to a point of order in relation to my amendment. But in the event the Ribicoff amendment is rejected tomorrow, an amendment subsequently offered by the

distinguished Senator from Ohio that would recapture some oil depletion money would then not be subject to a point of order. If my amendment is rejected, I shall join the Senator from Ohio as a cosponsor of his amendment, and fight shoulder to shoulder with him.

But the argument I made in the absence of the Senator is that the Senate has a duty of seeking priorities. The Senate has the duty to cast its votes in respect to the many amendments proposed to the bill. The Senator will have an opportunity to vote for the Ribicoff amendment.

The distinguished Senator from Delaware [Mr. WILLIAMS], the distinguished Senator from Tennessee [Mr. GORE] and the distinguished Senator from Illinois [Mr. DOUGLAS], will offer a series of amendments which, if adopted by the Senate, would provide revenues in excess of $750 million.

An opportunity will be afforded to the Senate to be affirmative and to take positive action on the priorities, and determine whether it believes, on the basis of priority, that education is important.

Let the Senate adopt the Ribicoff amendment, which would provide the priority that we believe is necessary for the future of our country. Then let us get together in respect to the loopholes and the giveaways that exist throughout the bill. Let us vote out those provisions; that action would result in revenues

[*P. 1731*]

which would more than make up the $750 million.

Mr. LAUSCHE. What will the Senator from Connecticut do in the event his amendment——

The PRESIDING OFFICER (Mr. EDMONDSON in the chair). The time of the Senator has expired.

Mr. LONG of Louisiana. Mr. President, I will yield one more minute, but I hope that Senators will conclude their colloquy soon in order that those of us who wish to speak against the amendment will have an opportunity to be heard.

Mr. LAUSCHE. What will the Senator from Connecticut do in the event his amendment is adopted? Will he then join the Senator from Ohio in trying to find revenues that will finance his program?

Mr. RIBICOFF. The Senator has my assurance that I shall join with him and other Senators in seeking to find revenues that would far exceed the $750 million. I think we can find a series of amendments which would accomplish that objective.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. LONG of Louisiana. I yield 1 additional minute.

Mr. LAUSCHE. Will the Senator from Connecticut join the Senator from Ohio in exacting from the oil and gas producers a greater share of their income, and also reducing the concessions that have been made to corporations by 1 percent to provide the money needed to finance the program?

Mr. RIBICOFF. Yes; I will join the Senator. I point out that in the Committee on Finance I joined the Senator from Delaware [Mr. WILLIAMS]. My vote was one of four votes in support of the proposals of the Senator from Delaware [Mr. WILLIAMS] on oil depletion allowances. Under those circumstances I certainly will again support the proposals of the Senator from Delaware when they come to the floor of the Senate. Not only that, but I shall be glad to sit down and show the distinguished Senator savings of hundreds of millions more that could be made in the bill.

Mr. LAUSCHE. Mr. President, will the Senator yield me 1 more minute?

Mr. LONG of Louisiana. I yield 1 additional minute.

Mr. LAUSCHE. Mr. President, I ask that my amendment No. 329 to the Ribicoff amendment be brought before the Senate for consideration. It is my understanding that challenges have been made as to its germaneness. I wish that issue decided at the present time.

Mr. LONG of Louisiana. Mr. President, I ask the Chair to rule on whether or not the Lausche amendment is germane to the Ribicoff amendment.

The PRESIDING OFFICER. The amendment has not been offered up to this time.

Mr. LAUSCHE. Mr. President, I ask unanimous consent that I may offer the amendment at this time, even though under the agreement amendments are not in order until 8 o'clock.

The PRESIDING OFFICER. Does the Senator from Louisiana yield for that purpose?

Mr. LONG of Louisiana. I yield for that purpose.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will read the amendment offered by the Senator from Ohio to the amendment offered by the Senator from Connecticut [Mr. RIBICOFF].

The legislative clerk read the amendment (No. 405), as follows:

On page 7, after line 3, insert the following new sections:

"SEC. 2. AMENDMENT OF PROPOSED CORPORATION INCOME TAX RATES."

On page 13—

(a) strike out "28 percent," in line 14, and insert "29 percent," and

(b) strike out "26 percent," on line 17, and insert "27 percent,".

"SEC. 3. PERCENTAGE DEPLETION FOR OIL AND GAS WELLS."

At the end of the bill, add the following new section:

"SEC. —. PERCENTAGE DEPLETION FOR OIL AND GAS WELLS.

"(a) GRADUATED RATES.—Section 613 (relating to percentage depletion) is amended—

"(1) by striking out in subsection (a), 'specified in subsection (b)' and inserting in lieu thereof 'specified in subsections (b) and (d)';

"(2) by striking out paragraph (1) of subsection (b) and inserting in lieu thereof the following:

" '(1) OIL AND GAS WELLS.—The percentage applicable under subsection (d)(1).'; and

"(3) by redesignating subsection (d) as (e), and by inserting after subsection (c) the following new subsection:

" '(d) OIL AND GAS WELLS.—

" '(1) PERCENTAGE DEPLETION RATES.—In the case of oil and gas wells, the percentage referred to in subsection (a) is as follows:

" '(A) 27½ percent—to the extent that, for the taxable year, the taxpayer's gross income from the oil and gas well, when added to (i) the taxpayer's gross income from all other oil and gas wells, and (ii) the gross income from oil and gas wells of any taxpayer which controls the taxpayer and of all taxpayers controlled by or under common control with the taxpayer, does not exceed $1,000,000;

" '(B) 21 percent—to the extent that, for the taxable year, the taxpayer's gross income from the oil and gas well, when added to (i) the taxpayer's gross income from all other oil and gas wells, and (ii) the gross income from oil and gas wells of any taxpayer which controls the taxpayer and of all taxpayers controlled by or under common control with the taxpayer, exceeds $1,000,000 but does not exceed $5,000,000; and

" '(C) 15 percent—to the extent that, for the taxable year, the taxpayer's gross income from the oil and gas well, when added to (i) the taxpayer's gross income from all other oil and gas wells, and (ii) the gross income from oil and gas wells of any taxpayer which controls the taxpayer and of all taxpayers controlled by or under common control with the taxpayer, exceeds $5,000,000.

" '(2) CONTROL DEFINED.—For purposes of paragraph (1), the term "control" means—

" '(A) with respect to any corporation, the ownership, directly or indirectly, of stock possessing more than 50 percent of the total combined voting power of all classes of stock entitled to vote, or the power (from whatever source derived and by whatever means exercised) to elect a majority of the board of directors, and

" '(B) with respect to any taxpayer, the power (from whatever source derived and by whatever means exercised) to select the management or determine the business policies of the taxpayer.

" '(3) CONSTRUCTIVE OWNERSHIP OF STOCK.—The provisions of section 318(a) (relating to constructive ownership of stock) shall apply in determining the ownership of stock for purposes of paragraph (2).

" '(4) APPLICATION UNDER REGULATIONS.—This subsection shall be applied under regulations prescribed by the Secretary or his delegate.'

"(b) EFFECTIVE DATE.—The amendments made by subsection (a) shall apply only with respect to taxable years beginning after the date of the enactment of this Act."

Mr. LAUSCHE. Mr. President, the amendment offered is not germane because it contemplates an increase of revenues, while the amendment of the Senator from Connecticut contemplates providing relief for parents to send their children to institutions of higher learning for education. Is that correct?

The PRESIDING OFFICER. The amendment is not germane and is subject to a point of order.

Mr. LONG of Louisiana. I make the point of order. In any event, the position of the Senator from Louisiana, as spokesman for the committee, would be to block any amendment which has as its purpose the suspending of taxes with one hand and the imposition of taxes with the other hand. If a Senator wishes to offer an amendment which provides that some companies should pay more taxes, I think the amendment should be offered on its own merits and the Senate should vote on it.

The Senator from Louisiana will insist on a division when amendments are offered that have double-barreled purposes—to give relief with one hand at the expense of someone else. If someone is entitled to relief, an amendment for that purpose should be offered and the Senate should act on it. If someone else should be taxed additionally, an amendment should be offered for that purpose, to stand or be rejected on its own merits.

Mr. DOMINICK. Mr. President, will the Senator yield for a parliamentary inquiry?

Mr. LONG of Louisiana. I yield.

Mr. DOMINICK. I should like to inquire whether the point of order was sustained.

The PRESIDING OFFICER. The Chair was waiting for the Senator from Louisiana to conclude before he ruled.

Mr. MANSFIELD. Mr. President, I ask for a ruling on that point.

The PRESIDING OFFICER. The point of order is sustained.

Mr. LONG of Louisiana. Mr. President, the amendment of the Senator from Connecticut [Mr. RIBICOFF] would provide a graduated tax credit for expenses of tuition, fees, books, supplies, and equipment paid to an institution of higher learning. I consider the Ribicoff amendment to be outside the scope of the bill, and believe it should be deferred until it can be given further study. The amendment also is undesirable for the reasons I shall now state.

First, the revenue loss would be very substantial. It would result in a revenue loss of $750 million at current levels and of $1.3 billion in 1970. This cost can best be evaluated by comparing these amounts with those contained in the recent legislation providing aid to higher education. It is six times the cost of the National Defense Education Act student loan program. The expansion of the Na-

[*P. 1732*]

tional Defense Education Act student loan program involves an increase in the authorizations from $90 million to $125 million for 1964 and $135 million for 1965. The total loans and grants for higher education facilities authorized for the 3 years 1964–66 amount to $1.2 billion.

Second, the amendment would not provide relief where it is most needed, and therefore would not expand educational opportunity. The tax credit would be of negligible value to millions of low income families who pay little or no taxes.

A large proportion of families with incomes of $5,000 or less would have no tax liability against which the tax credit could be applied. Of the 15.4 million joint returns with adjusted gross income of $5,000 or less in 1960, 6.6 million, or 43 percent were nontaxable.

The Senator from Connecticut [Mr. RIBICOFF] makes no claim that his proposed credit will help lower income families or expand educational opportunity. On the contrary, he has stated:

> But I frankly recognize that the amount of the credit will not make the decisive difference for a majority of taxpayers as to whether or not they can afford the costs of a college education. It will be helpful to all taxpayers, but probably not decisive for many of them. (CONGRESSIONAL RECORD, Nov. 21, 1963, p. 21,491.)

He presents his proposal as a means of providing tax relief to middle income families. It is difficult to justify the use of Federal resources of so substantial an amount for relief of families who are sending their children to college while many qualified students are unable to go to college because of lack of financial means. The Office of Education estimates that each year some 120,000 to 200,000 qualified high school graduates fail to go to college because of financial inability to do so.

Third, the dual objectives of aid to students and aid to institutions are inconsistent.

Sponsors of a tax credit for tuition have stated different objectives. Senator RIBICOFF has asked that the credit be viewed primarily as a tax measure for providing relief to middle-income families and only secondarily as an educational measure. On the other hand, the credit has been offered by representatives of institutions of higher education, particularly private institutions, as a means of giving institutions additional funds through increased tuition charges.

As the Commission on Legislation of the Association of American Colleges pointed out recently:

> It is hard to see how both the college and the parent can benefit at the same time. In order to gain any financial advantage the college would presumably have to increase its charges to its students, but if charges were raised they would tend to nullify any advantage derived by parents from the tax remission.

Tuition increases will be a new hardship on low-income families. The nontaxable person and the taxpayer who has insufficient tax liability to take full advantage of the tax credit would obtain little or no benefit from the credit, but might be subject to increased tuition charges. These persons would be less able to afford college educational expenses than before the credit.

An important limiting factor on the amount of the credit is the tax liability of the taxpayer. Senator RIBICOFF states that the credit benefits the $30,000 man less than the $5,000 man. He refers to the fact that the credit is reduced for taxpayers with income above $25,000 and the maximum credit for the $30,000 man would be reduced by $50 to $275. Under the tax bill a married couple with $5,000 adjusted gross income with two dependents and average itemized deductions has a tax liability of $218 and can use only this amount of credit regardless of the tuition paid. If the $30,000 taxpayer has two children in college he could have a tax credit of as much as $550.

Senator RIBICOFF contends that since his amendment allows only a 10-percent credit on expenses over $500, and every added $100 over $500 results in only a $10 saving, the credit would not give an incentive to the colleges to raise tuition. The important point, however, is the amount of the total credit. For example, a college which now charges $200 can increase tuition to $350 without additional cost to the parents receiving the credit; one now charging $500 can raise tuition to $725; one now charging $1,500 can raise tuition to $1,825. Senator RIBICOFF contends that tuition costs will go up whether tax relief is granted or not. The point, however, is the tax credit would obviously remove restraints on tuition increases.

Mr. RIBICOFF. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. RIBICOFF. Did the manufacturers of machinery raise their prices to their customers when the customers received the investment tax credit which was given to them in 1962?

Mr. LONG of Louisiana. I believe the intent was to encourage people to buy more machinery. I believe they did buy more machinery.

Mr. RIBICOFF. Did the manufacturers raise the prices to their customers?

Mr. LONG of Louisiana. Not so far as I know; but I believe that the competitive effect on many manufacturers probably had as much to do with the fact that prices of machinery were not raised as anything else.

Mr. RIBICOFF. Why would the distinguished Senator feel that the colleges would automatically raise their tuition to the recipients of the proposed tax credit?

Mr. LONG of Louisiana. I doubt that colleges can be expected to compete with each other for more students in today's market where more and more students will be seeking a college education. There are some indications already—and I believe there will be more—that schools would find this credit an appropriate handle to say to parents, "Since you are going to get a tax credit of $325, you can afford to pay us $325 more in tuition."

Mr. RIBICOFF. Let me inquire further on this point. Since the Senator advocates the passage of the pending bill—and I will join him in voting for it—and because that bill involves an overall tax savings of $11.6 million, if the Senator believes that colleges will raise their tuition fees because there are extra funds in the possession of the taxpayers, why would not this bill be a grabbag for colleges to dip their hands in to get this money, if there is such a question concerning the integrity and good faith of American colleges?

Mr. LONG of Louisiana. I believe the argument is clear to many of us who oppose the amendment that this credit would be an incentive, and would offer considerable encouragement, to colleges who may be short of funds to raise their fees in order to obtain more revenue for schools, and that that would be the likely result of the adoption of the amendment.

The amendment does not foreclose anything of this nature from taking place.

I should like to yield further, but now our time is running out. I am sure the Senator will concede that those of us who are opposing the amendment have yielded time both to the proponents and the opponents, and we have even yielded some time to Senators who wished to talk about Bobby Baker.

Mr. RIBICOFF. I thank the Senator for his courtesy throughout the entire debate.

Mr. LONG of Louisiana. I thank the Senator.

Fourth, students of low-income families are not taken care of by scholarships. Some advocates of the tax credit, the Senator from Connecticut said it this afternoon, contend that the fact that the credit will not help low-income families is no reason for opposing it and point to scholarships as the answer for low-income families. They suggest that most scholarship assistance now goes to students from low-income families.

The fact is that scholarships presently available do not take care of low-income families.

Various recent studies state that scholarship funds are going to children of families with incomes substantially above the average for families in the United States. This is due to the fact that high-income families are more apt to seek education and to seek higher-priced education which usually is found in institutions with large scholarship funds. Elmer West of the American Council on Education states:

> Whatever the reason, lower economic classes are not favored by scholarship funds proportional to their numbers, abilities, or economic status.

A small percentage of colleges and universities control a substantial proportion of scholarship funds and a few States—with large total population—provide most of the scholarships supported by State funds. This concentration of scholarship funds means that scholarships presently available do not take care of low-income families.

Some have reasoned that rising college tuition will permit institutions to

[*P. 1733*]

set aside an increasing share of income to their scholarship funds. Experience in this regard reveals that prevailing competitive pressures for increased faculty salaries, for expanded research budgets, and for college facilities to house mounting student enrollments more often mean that student financial aid funds are diverted rather than increased.

Fifth. The amendment gives double tax relief to a special group of taxpayers. The effect of the Ribicoff tax credit would be to grant one class of taxpayers a grossly disproportionate share of the total tax reduction. Families who would benefit from the Ribicoff credit would receive double relief under the tax bill. Under the Ribicoff amend-

ment, the tax credit on the median cost of tuition—plus $90 for books—at a public institution would be $165 and at a private institution, $253. The maximum credit would be $325. Tax reductions of this magnitude are greater than those which most taxpayers would enjoy under the tax bill. Thus, a married couple with two dependents and average deductions would receive under the tax bill—before the Ribicoff amendment—the following reductions:

Adjusted gross income:	*Tax cut*
$5,000	$82
$6,000	118
$7,500	159
$10,000	223
$125,000	287

Thus a taxpayer with $10,000 of adjusted gross income who paid median tuition at a private institution would receive more than twice as much tax reduction under the Ribicoff amendment as under the present tax bill.

Senator RIBICOFF's credit has a limitation based on income, but the limitations begin at such a high level as to be ineffective. A taxpayer can have a full credit until his income reaches $25,000 and some credit, although reduced, is allowed until income reaches $57,500. In 1961 only 1.3 percent of taxable returns had adjusted gross income of more than $25,000.

Sixth. The amendment discriminates against students in public institutions and against taxpayers in States with highly developed public education systems. The benefit from a tax credit based on tuition would be extremely limited for students attending public institutions. Under the Ribicoff amendment the tax credit on the median cost of tuition—plus $90 for books—would be $165 at a public institution and $253 at a private institution. Tuition and fees in 1962–63 in 25 percent of all public institutions were less than $100—on which the credit would be $75. On the other hand, for many private institutions a credit will be available on $1,000—amounting to $275.

The sponsor of the amendment contends that the credit favors low tuition colleges because the credit allowed on $1,000 tuition—$275—is only 27 percent of the tuition while the credit on $200—$150—is 75 percent of the tuition. The fact remains, however, that the total amount of the credit is $275 in the high tuition college while it is only $75 in the low tuition college in this example. Despite the graduation of the credit, the fact that public institutions have low tuition charges places a ceiling on the total benefit which can be received for a student in a public institution.

The relative importance of public and private institutions of higher education varies greatly as between regions and States in this country. A credit for tuition would be of most benefit to residents of States which have limited public institutions of higher education since private schools are characterized by higher tuition charges than public ones. In the West and Southwest 55 percent of the colleges and universities are public as compared with only 22 percent in the North Atlantic region. Also, in the North Atlantic region, 67 percent of the students attend private institutions while only 33 percent attend public institutions. This is almost the reverse of the nationwide distribution.

Per capita expenditures of State and local governments for higher education in California were $45.14 in 1962 as compared with $6.47 in Massachusetts. Heavy State and local expenditures for institutions of higher education make possible low or free tuition. Consequently, the tuition tax credit would be of little benefit in such States.

Seventh. The tax credit amendment should be considered along with other methods of granting assistance to those seeking higher education. To date there have been no full public hearings held by any committee, including the Labor and Public Welfare Committee, concerning the use of tax credits to assist those seeking higher education in comparison with other methods of granting assistance. These proposals involve a fundamental change in the traditional methods of providing such assistance, as well as a significant change in the tax laws. Full public hearings should be held on these proposals, so that all interested parties, such as the educational institutions involved, may be afforded an opportunity to be heard. For example, the Association of State Universities and Land-Grant Colleges is strenuously opposed to the use of tax credits or deductions to assist higher education. The American Council on Education is not sponsoring a tax credit.

Neither has there been full consideration by Congress of competing methods to assist those seeking higher education which do not involve the use of the tax system. For example, a broad federally guaranteed student loan program has been part of the administration's program—see S. 580—and bills have been introduced by Senators HUMPHREY and HARTKE—S. 390 and S. 1115—along similar lines. President—then Senator—Johnson sponsored a bill in the 86th Congress—S. 2710—which provided Federal guarantees of loans to both students and institutions of higher education. Thirty-

two other Senators cosponsored this bill. The administration's guaranteed loan program would encourage banks and other credit institutions to lend for educational purposes on interest and repayment terms suited to the special needs of college students and their parents. There is no means test involved in the administration's program, so that it would be available to middle and upper income families as well as low income families. This program would provide a significant encouragement for college attendance, and would involve far less revenue cost than the use of tax credits or deductions. To date, no full public hearings have been held on federally guaranteed student loan proposals. Again it would be desirable to have the benefit of full public hearings on the full range of and competing priorities involved in such proposals before considering the use of tax credits or deductions.

Mr. President, I ask unanimous consent to have printed at the conclusion of my remarks the estimated revenue loss from this proposal, together with a table showing the percentage of the proposal that would fall in various income brackets. I believe the revenue loss alone indicates that a large percentage of the tax advantages of this proposal would go to those who are well able to provide for the cost of educating their own children, while altogether too little—in fact, pitifully little—of the estimated benefit of the amendment would go where it is badly needed—to aid those having incomes of $3,000 or less, and who have a desire and a genuine need for some sort of assistance to help their children obtain higher education.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

REVENUE EFFECT

It is estimated that, if individual income taxpayers were granted the tax credit for higher education expenses provided for in proposed amendment 329 to H.R. 8363, the revenue loss would be $740 million. This estimate assumes levels of college attendance, tuition, and scholarship grants estimated for calendar year 1964 and the individual income tax provisions of H.R. 8363 as passed by the House of Representatives.

The table below, which gives the distribution of the revenue loss by adjusted gross income class, indicates that 79 percent of the tax savings would go to taxpayers with adjusted gross income of $5,000 to $20,000.

Estimated revenue loss which would result from granting individual income tax credit for expenses of higher education as proposed in amendment 329 to H.R. 8363

Adjusted gross income class (thousands)	Revenue loss	
	Amount (millions)	Distribution (percent)
0 to $3	$10	1
$3 to $5	85	11
$5 to $10	375	51
$10 to $20	205	28
$20 to $50	65	9
$50 and over	(1)	(2)
Total	740	100

[1] Less than $2,500,000.
[2] Less than 0.5 percent.

Source: Staff of the Joint Committee on Internal Revenue Taxation, Dec. 12, 1963.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. DOMINICK. During the process of the Senator's able discussion of reasons why he is opposed to the amendment, he cited some figures to show that tuition and fees of public institutions

[*P. 1734*]

would be about $170, and of private institutions, about $250.

Mr. LONG of Louisiana. Those are the median figures.

Mr. DOMINICK. The Senator indicated that by virtue of this cost there would be a higher credit for the $250. The Senator was really favoring the higher or independent institutions. I think that what the Senator has forgotten in the process is that this amount includes also the fees for books and supplies.

Mr. LONG of Louisiana. Those figures take $90 into account for books.

Mr. DOMINICK. The figures which the Senator from Connecticut [Mr. RIBICOFF] has placed on our desks would indicate that the expenses in a majority of the universities—and I am speaking of State universities throughout the country—range from $250 to $390. One of the reasons, on account of this estimate, why we have definitely applied the first 75 percent of the credit to the first $200 of expenses is to make certain that the maximum credit would be received for the lower cost institutions. I wished to make that fact clear.

Mr. LONG of Louisiana. In the figures to which the Senator has referred,

it would be my impression that the second column—in other words, the dollar benefit of tax credit—would be the important figures to consider. Those figures seem to be very much in line with the representations I made for the RECORD.

Mr. DOMINICK. Then I misunderstood the Senator's presentation.

Mr. LONG of Louisiana. The Senator will notice that those figures are all considerably below the $325 maximum to which I made reference.

Mr. ANDERSON. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. ANDERSON. The reason they are low is that that money does not go to private schools. If it went to private schools, it would be found to be very definitely demonstrated.

Mr. LONG of Louisiana. When it goes to private schools, the maximum is reached in a great number of cases.

Mr. President, I desire to yield to the Senator from New Mexico, who has been waiting for some time to address the Senate. How much time remains?

The PRESIDING OFFICER. Four minutes.

Mr. LONG of Louisiana. I apologize to the Senator and yield to him. I had hoped it would be possible to reserve more of my time.

Mr. ANDERSON. First, Mr. President, I wish to call attention to what I think are two important editorials, the first published in the Washington Post of Friday, July 6, 1962, the other published in the Washington Post of Monday, December 16, 1963. Both editorials deals with the question of what sort of amendment this is and what it means to us. I call attention to a statement made in the first editorial, which is entitled "Schools and Taxes." The editorial refers to Secretary Ribicoff, because at that time the present junior Senator from Connecticut held the position of Secretary of Health, Education, and Welfare. The editorial states, in part:

> The Secretary's proposal seems to us to raise some extremely troublesome questions. If a Federal income tax credit is justified in the amount of the Federal Government's contribution to public education, is there not, then, equal justification for State and local tax credits in proportion to State and local contributions to the public schools? And if such credits should be granted, what would happen to public school financing?

We should remember that when the proposal was made to strike down the Federal tax on communications, Governor Rockefeller, of New York, was at once ready to claim that tax for his State. In other words, once the Federal Government eliminated that excise tax, Governor Rockefeller was ready to take it up at once.

The same thing will happen in this instance. If this proposal is proper and Congress can provide for the payment of tuition costs in private institutions of higher learning, there is no reason why it should not be asked to take care of such costs in private grade and elementary schools.

The Washington Post points this out by asking:

> If a tax credit is justified as a means of recognizing that private school parents lift a burden from the shoulders of the community, is it not equally justified in the case of taxpayers who lift a burden from the community by, say, building and maintaining their own tennis courts, swimming pools and other conveniences which keep them from crowding public facilities of the same sort?

Then the editorial contains an interesting paragraph, because I understand that if things go well in the House, the Senate may soon be entering upon a discussion of civil rights. The Post editorial stated:

> If the suggested tax credit should be granted as part of a Federal aid-to-education measure, would tax credits be available to parents in Southern States who removed their children from integrated public schools in order to put them into segregated private schools?

We had better be prepared to answer that question. It will be before us. We cannot avoid it.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the two editorials published by the Post, the one entitled "Schools and Taxes," the other entitled "Tax Credits for Education?"

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Post, July 6, 1962]

SCHOOLS AND TAXES

Secretary Ribicoff, on the eve of his departure from the Department of Health, Education and Welfare, has come forward with a proposal that a Federal tax credit be granted to parents who send their children to private schools. His reasoning, as stated yesterday to a reporter, is as follows:

"Tax credits or deductions would give recognition to at least a part of the burden which private school parents are lifting from the shoulders of all the taxpayers of their communities. A credit might work this way. If a public aid bill were to be figured on a per pupil payment to the States of $20, then a tax credit of $20 for parents of private school pupils would seem entirely reasonable."

The Secretary's proposal seems to us to raise some extremely troublesome questions. If a Federal income tax credit is justified in the amount of the Federal Government's contribution to public education, is there not, then, equal justification for State and local tax credits in proportion to State and local contributions to the public schools? And if such credits should be granted, what would happen to public school financing?

If a tax credit is justified as a means of recognizing that private school parents lift a burden from the shoulders of the community, is it not equally justified in the case of taxpayers who lift a burden from the community by, say, building and maintaining their own tennis courts, swimming pools and other conveniences which keep them from crowding public facilities of the same sort? Would not the whole theory of progressive income taxation break down if Mr. Ribicoff's formula were generally applied?

If the suggested tax credit should be granted as part of a Federal aid-to-education measure, would tax credits be available to parents in southern States who removed their children from integrated public schools in order to put them into segregated private schools? And in this event, would the Federal Government not be in the business of subsidizing a circumvention of the U.S. Constitution?

There would, of course, be an effective rebuttal to these questions if the tax credit were made available to further a settled public policy—if, in this instance, it were public policy to foster the development of private schools throughout the Nation. While American policy has always been hospitable to private schools, however, and has recognized them as an important and useful alternative to the public schools for those who prefer them, the main thrust of American policy in respect to elementary and high school education has long been to foster a system of free public schools available to every American child regardless of race or creed.

The public school system has been one of the most unifying influences in American life. Few institutions have contributed so much to American growth and to the development of an American ethos. Mr. Ribicoff's proposal would, we fear, take a dangerous step toward abandonment of that long settled, wise and salutary public policy.

[From the Washington (D.C.) Post, Dec. 16, 1963]

TAX CREDITS FOR EDUCATION?

The proposal to grant tax credits in order to lighten the burden of parents who are sending their children through college has an instant but superficial appeal. It is frequently defended by invoking an analogy: If the Federal Government can subsidize homeownership by making the interest on mortgages tax deductible, why shouldn't the same principle be applied to expenditures for higher education? The answer is that the analogy is not very close, and even if it were, there are other considerations which make such tax credits thoroughly undesirable.

Senator ABRAHAM A. RIBICOFF and a number of his colleagues are sponsoring an amendment to the administration's tax bill which would provide for educational tax credits on a graduated basis. Taxpayers with income of less than $25,000 would receive a credit of $325 on the first $1,500 of tuition paid, a person with a $35,000 income would get a credit of only $225—and so on up the income scale where a taxpayer in the $60,000 bracket would get no credit at all. The cost of this proposal in terms of revenue losses would run to more than $700 million in the

[P. 1735]

first year, and with added deductions for gifts to institutions of higher learning it would soon cost the Treasury more than a billion dollars annually.

Some of the objections to the Ribicoff proposal are immediately apparent; others are not. First, it discriminates against those families who cannot in any case help their children through college. And unlike direct Federal grants, tax credits would provide no assistance to talented young people of limited means who must work their way through college. Worse still, the granting of tax credits would encourage private and public institutions to raise tuition and other fees.

The prospect that the granting of tax credits will touch off another round of tuition increases, thus making it even more difficult for persons of limited means to obtain a higher education, was anticipated by Dr. Roger A. Freeman in his testimony before the Senate Finance Committee. According to Dr. Freeman:

"If you grant a tax credit * * * you give the institutions an opportunity to increase their tuitions without putting a corresponding burden upon the families and the students. The main purpose * * * is to increase the funds of the institutions."

The great State universities of this country, which are the beneficiaries of Federal land grants, have been guided by the principle that opportunities in higher education would be available to all talented young people, irrespective of financial resources. An adherence to that philosophy over the past century contributed rapid economic growth and greater social mobility. Granting tax credits in place of Federal grants will provide some relief for middle- and upper-income families. But by encouraging tuition increases which would tend to close the college doors to the children of the poor, the discriminatory tax credit plan would only set the clock back.

Mr. ANDERSON. I should like to make it clear, in delineating the question of spending money in this way, that such a proposal might be all right if tax credits were made available to further a national policy, if this were a public policy to foster the development of private schools throughout the Nation. While American policy has always been hostile to private schools, it has recognized them as useful for those who prefer them. Nevertheless, the main thrust of American policy in respect to elementary and high school education has long been to foster a system of free pub-

69-108 O—66—pt. 3——32

lic schools for every American, regardless of race or creed.

This situation has been called to the attention of many people, and the Joint Office of Institutional Research has published some material on it. That was interesting, because they pointed out that some questions was raised as to whether interest rates would be raised.

Mr. President, this situation has been called to the attention of many persons and many organizations.

An analysis of the tax credit plans for educational expenses has been published by the Joint Office of Institutional Research, and I thought it interesting to note what is set forth in that analysis on the question of whether the tuition rates should be raised. I cannot state whether they will be raised or will not be raised; but Dr. Roger A. Freeman, of the Hoover Institution on War, Revolution, and Peace, of Stanford University, is another very vigorous proponent of the tax credit plan, and he is generally recognized as the originator of the sliding-scale proposal incorporated in legislative proposals which apparently are presently enjoying very wide support. I quote from his statement:

> The tax saving, or revenue loss, under my schedule may be estimated at $700 million per annum, or more. Institutions may be expected to recoup as much as three-fourths of that amount through increased tuitions.

I do not know whether Dr. Freeman is right or is wrong, but certainly he is generally recognized as the originator of the sliding-scale proposal, and he has been a very vigorous proponent of it.

The PRESIDING OFFICER. All time on the Ribicoff amendment has expired.

Mr. SMATHERS. Mr. President, are any amendments to the Ribicoff amendment now pending or at the desk?

The PRESIDING OFFICER. No.

Mr. SMATHERS. If not, Mr. President, I ask unanimous consent that the Ribicoff amendment be laid aside until tomorrow morning.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. SMATHERS. Mr. President, at this time I yield to the Senator from New Mexico.

Mr. ANDERSON. I thank the Senator from Florida.

Mr. President, a moment ago I quoted the statement made by Dr. Roger A. Freeman, who, as I stated, is generally recognized as the originator of the sliding-scale proposal incorporated in legislative proposals which apparently enjoy very wide support.

I am not an expert on this matter; but Dr. Freeman professes to be, and he has been an advocate of every bit of this proposal, and he states that these institutions will obtain this money through increased tuition. Perhaps he is correctly informed as to that, or perhaps he is not; but he seems to be in a very good position to be informed and to be able to prove the accuracy of the statement he has made, if anyone can prove it.

The analysis published by the Joint Office of Institutional Research also includes a statement by Dr. Virgil Blum, chairman of the Department of Political Science at Marquette University. In an article which he wrote, which was published in the December 1963, issue of the Journal of Higher Education, at page 479 and following, he stressed the flow of Federal funds to colleges and universities. He has had a great deal to say about this educational plan; and then the article to which I have referred he discussed a bill which had been introduced by the Senator from Minnesota [Mr. HUMPHREY]. In the article, Dr. Blum wrote:

> In view of the critical financial condition in which so many colleges and universities find themselves, Senator HUMPHREY's tax-credit plan merits consideration.

Also in the same article, Dr. Blum discussed aid to students, in the following terms:

> A university which charges $950 in tuition fees, but actually spends $1,800 a year to educate a student, gives each student a subsidy of $850. Under the Humphrey plan, such a university could raise its tuition by $450 to $1,400, the student thereafter receiving these aids: from his father, in tuition payments, $935; from the Federal Government, in tax credits, $465; and from the university, $400. Under such conditions, a university of 5,000 full-term tuition-paying students would get an increase of $2,250,000 in income from tuition charges.

Mr. President, the Citizens National Committee for Higher Education, an organization formed to support the tax-credit plan both for educational expenses and for gifts to education, stated, in setting forth the advantages of the plan:

> It would effect a significant tax reduction for several million individual taxpayers, many of whom are hard-pressed by the extraordinary costs of college education for their children.

At a later point, the same Committee stated, however, that the legislation would—

> permit the entire amount of each allowable credit to go directly to an institution of higher learning.

The leaflet or booklet containing those statements was published by the com-

mittee, at South Bend, Ind.; and that group had also been supporting this proposal.

The analysis states:

> Again it is difficult to comprehend how the same funds could both relieve individuals and provide increased income for colleges and universities. It might do one or the other, but not both.

Therefore, Mr. President, I think this matter could well have been considered by the Education Subcommittee and could well have been passed upon by it.

Finally, Mr. President, I point out that the analysis to which I have been referring states:

> U.S. Government figures also show that 43 percent of all U.S. families with incomes under $5,000 pay no Federal income tax. This is a total of about 8 million families, or slightly more than one-sixth. None of these who have children in college would benefit from the tax-credit plan; all would be adversely affected by a rise in tuition charges.
>
> Also adversely affected would be students who are attempting to work their way through college and are essentially self-supporting. A study at one major public university showed that one-half of the male students, and one-third of the women, were completely "on their own," without family help.
>
> Under the tax-credit plan, both children of families which pay no Federal income taxes and students who are self-supporting would face substantial increasse in the costs of attending college, with no compensating tax relief.

In short, Mr. President, not one of those families would have in college one child who could benefit by 1 penny by means of this proposal.

When we begin to consider such proposals, I believe we should carefully consider who would be benefited—whether the institutions or the pupils or the parents. When we give careful consideration to that aspect of the proposal, I believe we then reach the conclusion that this proposal would not result in a very wise use of public funds.

[*February 4, 1964*]

[*P. 1747*]

REVENUE ACT OF 1964

The Senate resumed the consideration of the bill (H.R. 8363) to amend the Internal Revenue Code of 1954 to reduce individual and corporate income taxes, to make certain structural changes with respect to the income tax, and for other purposes.

Mr. MANSFIELD. Mr. President, I move that the unfinished business be laid down and be made the pending business.

The ACTING PRESIDENT pro tempore. Under the unanimous-consent agreement, the unfinished business is now before the Senate.

The question is on agreeing to the amendment proposed by the Senator from Connecticut [Mr. RIBICOFF], on behalf of himself and certain other Senators, inserting a provision dealing with tax credits for certain educational expenses.

Upon said amendment there is a unanimous-consent agreement limiting to 1 hour the debate thereon.

Mr. MANSFIELD. Mr. President, if the Senator from Louisiana [Mr. LONG] will yield 1 minute to me, I should like to ask unanimous consent that there be a pro forma quorum call, so that Members will be alerted; and in that connection, I ask unanimous consent that 1 minute be devoted to the quorum call, with one-half of that time to be charged to each side under the unanimous-consent agreement.

Mr. LONG of Louisiana. Mr. President, I yield for that purpose.

The ACTING PRESIDENT pro tempore. Is there objection? Without objection, it is so ordered; and the clerk will proceed to call the roll.

The Chief Clerk proceeded to call the roll.

The ACTING PRESIDENT pro tempore. In accordance with the order, inasmuch as 1 minute has now expired, let the Chair ask whether there is objection to rescinding at this time the order for the quorum call? Without objection, the order for the call of the roll is rescinded.

Mr. COOPER. Mr. President, will the Senator from Connecticut yield briefly to me?

Mr. RIBICOFF. Mr. President, I yield 4 minutes to the distinguished Senator from Kentucky.

The ACTING PRESIDENT pro tempore. The Senator from Kentucky is recognized for 4 minutes.

Mr. COOPER. Mr. President, I intend to vote for the amendment offered by the Senator from Connecticut [Mr. RIBICOFF], on behalf of himself and other Senators.

This has been a difficult decision for me to reach. My first inclination was to vote against the amendment. However, after studying the report, listening to the debate and considering the arguments of the Senator from Connecticut [Mr. RIBICOFF], Senator DOMINICK, Senator PROUTY, and other Senators, I have reached the conclusion that I shall vote for the amendment.

Let me say, with all deference to the authors of the amendment, that I do not think it is perfect. I hope very much that if the amendment is agreed to by the Senate the upper limits of those who would receive tax credits will be reduced, because the amendment would accord too much aid to those in the upper income brackets. I would suggest an upper level on $10,000 to $15,000 in income, for those who are able to pay for the education of their children should do so.

I also note that the amendment would not reach those in the lowest income brackets who pay little or no taxes, and does not provide aid and incentive in sending their children to college. Nevertheless, they can be reached through other legislation providing loans and scholarships; and I do not think the fact that they are not reached by this amendment constitutes an argument sufficiently strong to warrant denying assistance to taxpayers in low and middle income brackets, who need help in sending their children to college. The amendment would provide aid to the parents of hundreds of thousands of children in college and over 60 percent of its relief would accrue to taxpayers with incomes between $3,000 and $10,000.

We cannot always wait until we develop a perfect bill. I believe that the fundamental bill which should be enacted is one which would give aid to the primary schools, the elementary schools, our high schools. However, it is evident that the questions of integration, of religion, and even of cost, and other objection, raised by those who do not think education is important, would, in my judgment, make it very difficult to enact such a measure. Nevertheless as one who has supported and cosponsored such measure since I joined Senator Taft in 1947 in his bills which would have aided such schools. I believe they will eventually be enacted. But we cannot wait for perfection. This amendment gives aid and encouragement to the education of thousands of young men and women at the college level. That is the reason

I have determined to vote for it. I believe that education is, after our national security, the first imperative of our land. In this age, it is the base of our military strength and our economic strength. We cannot move forward without it. Of course, our age-old interest in the fullest development of every individual is a primary consideration.

[*P. 1748*]

The amendment has defects, but there are good reasons for its adoption. Its defects can be corrected in conference. The problem of cost must be weighed, but there are other programs supported by our government which are not as important as education. After studying the matter and listening to the able arguments of my colleague Senator RIBICOFF and others, I support the amendment which will give assistance in the field of education, basic to the growth and security of our country, and the development of our people.

Mr. CLARK. Mr. President, in the absence of the Senator in charge of the bill, I should like to ask the majority leader if he would yield me 3 minutes in opposition to the amendment.

Mr. MANSFIELD. I am glad to yield 3 minutes to the Senator from Pennsylvania.

The ACTING PRESIDENT pro tempore. The Senator from Pennsylvania is recognized for 3 minutes.

Mr. CLARK. As a member of the Education Subcommittee of the Committee on Labor and Public Welfare, I shall reluctantly vote against the Ribicoff amendment. Educational proposals of the Kennedy and the Johnson administrations, with respect to scholarships and loans to students who could not without assistance afford to go to college, are now pending before the Education Subcommittee of which the distinguished Senator from Oregon [Mr. MORSE] is chairman.

This approach was contained in Senate bill 580, the omnibus education bill of the administration which is, in my opinion, a sounder method of dealing with the need to get more talented young men and women into college than the pending amendment, for the following reasons:

First, because the credit under the Ribicoff amendment would cost $750 million currently, and $1,300 million by 1970.

Second, the credit would not expand educational opportunities because it does not give relief where relief is most badly needed.

The most serious problem in education is that able students from low-income families are not able to afford a college education. This credit will be of no value to such a family. On the other hand, it would provide relief to middle-income families who already send their children to college.

The credit would encourage tuition increases. Since the total amount of the credit increases as the tuition increases, the credit discriminates in favor of private universities which normally charge much higher tuition than State universities. This would tend to give greater benefits under the provision to persons living in areas where children normally attend private universities.

No intelligent judgment can be made on this proposal without considering it in connection with other proposed methods for providing assistance to higher education. Under the Senate rules, that obligation is lodged with the Committee on Labor and Public Welfare, and its Subcommittee on Education.

I urge Senators not to legislate on some important and educational matter on the basis of a report of an amendment to a bill coming from the Finance Committee. The Committee on Labor and Public Welfare should be given an opportunity to deal with this question.

Mr. President, I yield back the remainder of my time.

Mr. RIBICOFF. Mr. President, I yield 3 minutes to the senior Senator from Connecticut, my good friend and colleague [Mr. DODD].

The ACTING PRESIDENT pro tempore. The Senator from Connecticut is recognized for 3 minutes.

Mr. DODD. Mr. President, I thank my colleague. I wish to commend him and explain to him and to other Senators that I was not able to be present tin the Chamber yesterday because of pressing personal commitments in Connecticut. However, I did read the CONGRESSIONAL RECORD this morning, and I believe the argument made by my colleague, the Senator from Connecticut, is unanswerable. I believe he deserves great credit for the manner in which he has presented his case.

Mr. President, the Senate is now considering one of the most far-reaching and important amendments that will be offered to the tax bill.

I support the proposal to allow a modest tax credit to those who are paying the expenses of higher education for themselves or their children. This amendment is not only proper and sensible as a matter of justice, it is also, I believe, essential to our national effort to aid education.

Two of our greatest objectives in the 88th Congress are to pass a substantial tax cut and to do something for education.

In the amendment sponsored by my colleague, the Senator from Connecticut, myself, and 12 other Senators, these 2 objectives join forces.

One reliable study cited earlier in this debate shows that in the past 4 years costs at a typical group of private colleages have gone up 29 percent while costs at a comparable group of public colleges have risen 21 percent.

There is no letup in sight in the rising costs of obtaining a higher education, and the time is long overdue for the Federal Government, through the tax laws, to do something to help lessen the heavy burdens that so many parents and students are carrying.

The ACTING PRESIDENT pro tempore. The time of the Senator from Connecticut has expired.

Mr. RIBICOFF. Mr. President, I yield 1 more minute to my colleague, the Senator from Connecticut.

Mr. DODD. I thank my colleague.

For 10 years I have been trying to call attention to the great need for fairer tax treatment in this area.

I have supported and introduced bills, both in the House and as a Member of the Senate, to provide this kind of tax relief. And, many colleagues in both bodies have pressed for this kind of legislation.

But every administration as far back as I can remember has been strongly opposed, and our efforts have been unsuccessful.

I am hopeful that this year, however, the time has come when Congress will no longer ignore this issue, and will not bow down to the opposition of the Treasury Department.

Under the leadership of my able colleague from Connecticut, Senator RIBICOFF, who is a member of the Finance Committee, 14 of us who have proposed various ways to allow tax relief for educational purposes have agreed upon a common approach which is contained in the amendment we will vote upon shortly.

This amendment has been carefully drawn by my colleague to meet the various arguments that have been raised against it.

To meet the objection, that it inordinately benefits those in the higher income brackets, there is a sliding scale of tax credits which seeks to equalize benefits for all economic levels.

Similarly, it takes into account the fact that expenses of publicly supported institutions are less than those of private colleges and universities.

There are some who oppose it on the ground that it would be of no help to those who pay no income tax at all, and would be of no help to those who do not pay the cost of higher education and, therefore, is discriminatory. This is a specious argument and were it applied to all of the tax deductions and credits, they would all have to be eliminated. Medical deductions are of no use to people who are not sick. Dependency deductions are of no use to those who have no dependents, and, of course, no deductions apply to those who pay no taxes. But that does not make these deductions discriminatory.

So long as we are to have a very complicated system of tax deductions and credits, there is no more worthy cause than credits for money spent for higher education.

For most people, the years when children are away at school are years of crushing financial burdens, years during which they must deprive themselves and frequently go heavily into debt as well.

The tax credit would lessen this burden to a substantial degree and would also provide needed tax relief for students who are working their way through school and who need every dollar they can get for educational purposes.

It is time we recognized the fact that the financing of educational costs is more than a personal problem faced annually by millions of people.

It is a vital national problem and should be recognized as such in our tax laws.

This is no tax loophole that we are trying to open up. These parents and students are making a tangible contribution to the future of our country, and they need and deserve the limited assistance provided in this amendment.

This week is the best opportunity we will have for a long time to make an educational tax credit a part of our tax laws.

We should not give in to the complaint of the Treasury Department that this

[P. 1749]

credit will cost the Federal Government too much revenue.

For 3 years the Treasury Department has been contending that a multibillion-dollar tax cut was fiscally sound and essential to the economy of the country. In this background we should not take very seriously the contention that a $750 million loss in revenue for so worthy a cause woulld harm the Nation's fiscal posture.

And we should not give in to the argument that further hearings should be held by the tax and the education committees in both Houses, before this bill is voted on in the Senate.

I have heard these arguments before.

They sound reasonable and have a certain appeal. But this issue has been studied and debated for many years, and we have no assurance that further study will lead to any progress.

I believe we have waited long enough to take this important step and I urge my colleagues who have not yet made up their minds to join with us in voting for this educational tax credit amendment.

Mr. AIKEN. Mr. President, I am in favor of every young person in the United States who has the ability and the willingness to learn to get a college education with public support or at public expense if necessary.

Congress has made great strides in that direction during the past year, under the leadership of the chairman of the Subcommittee on Education of the Committee on Labor and Public Welfare, the senior Senator from Oregon [Mr. MORSE] and my colleague Senator PROUTY, of Vermont.

I am opposed to awarding assistance for higher education on the basis of wealth, or for the purpose of acquiring a college degree for use as a status symbol. Assistance should be given on the basis of ability and willingness to learn, and thus to make a later contribution to the United States.

I do not believe the amendment offered by the Senator from Connecticut [Mr. RIBICOFF] is a start in the right direction. I believe that it leads in the opposite direction.

Some of the greatest men in our society, scientists, lawyers, doctors, and men in public office, have come from the lower economic levels of life and I believe that if they had the willingness and the ability to learn, so have other young people in the lower economic levels of today. They should be given equal opportunity with those young people whose parents are able to send them to the more expensive colleges.

Mr. LONG of Louisiana. Mr. President, I yield myself 3 minutes.

The ACTING PRESIDENT pro tempore. The Senator from Louisiana is recognized for 3 minutes.

Mr. LONG of Louisiana. I went to college at the Louisiana State University under what was the forerunner of the NYA program to help young men and women work their way through college.

I helped a number of young boys who were classmates of mine, and others, to obtain entry into the university and also to find work so that they could earn their way through school. Most of those young men were sons of large families or were themselves orphaned, or were the sons of foreign families who would have received no benefit whatever from this proposal had it been law.

For a fraction of the cost of adoption of this amendment, we could have a loan program, not merely a $100 handout or a $200 handout. The amendment is so framed that the more expensive the school attended the larger the handout would be.

For a fraction of the cost of the program embodied in the amendment our Government could have a sound loan program which would assure every young man and young woman an opportunity to provide himself or herself with a college education.

What do the sponsors of the amendment say about that proposal?

The amendment would not help those who are most needful. The young man or woman who had to work his or her way through college would receive relatively little of the benefits which would result from the $1,300 million program.

What do the sponsors say about that? They say we should do whatever is necessary to help the young people who work their way through school, but we should do, also, what is proposed in the amendment.

Mr. President, the question is one of priority. Should we start giving $1.3 billion of tax money from the Federal Treasury to people who do not need it, do not require it, do not expect it, and who are well able to educate their own children, or should we start by giving the first $1.3 billion to people who do need it?

The proposal is very similar to the case of a Senator who might come here and say, "Let us not provide aid to the aged at the Federal level. Let us give a tax credit of $100 to every man or woman who must look after an aged father or aged mother." How would such a program work?

Usually if a man is poor and aged, his son is likely to be in about the same condition as his old dad. He is a poor man, too. He is not paying much in the way of taxes and could not take advantage of such a tax credit. People of wealth would have the benefit of the $100 tax credit to enable them to give their fathers and mothers that extra assistance without any need requirement.

The amendment has in it practically no need requirement. Those who are already wealthy would be in a position to dip into Uncle Sam's Treasury to help their own folks who do not need it. Those who are hungry and have little ability to provide for the needs of their own families, much less their grandfathers, and grandmothers, would receive no benefit because they would have no income on which to take the credit in the beginning.

The ACTING PRESIDENT pro tem-

pore. The time of the Senator has expired.

Mr. LONG of Louisiana. I yield myself 1 additional minute.

If we want to do first things first, if we want to help young people who desire to go to school, I suggest that the proposed credit would not even begin to meet their expenses. What they need is about a $2,000 a year, which they can either borrow or earn. Not enough would be provided to help them.

If we wish to help students we should start with the kind of bill which the Senator from Oregon is studying and recommending to this body. If all we wish to do is to make a great, generous display of the gratuities of the Federal Government by passing out tax advantages to people who have no real need for them and people who would put their children through school anyway, I suggest to Senators that they vote for the amendment, because that is what it would do. Those who can afford to put their children into expensive eastern colleges where the cost is $2,500 or $3,000 a year in tuition would receive more benefit than those who cannot afford to put their children in expensive eastern colleges.

Mr. DOMINICK. Mr. President, will the Senator yield for a question?

The ACTING PRESIDENT pro tempore. The Senator's time has expired.

Mr. LONG of Louisiana. Mr. President, I yield myself 1 additional minute. I yield to the Senator from Colorado.

Mr. DOMINICK. Is the Senator aware that every person who puts himself through college must pay taxes on the income he receives with which he pays the cost? Every elevator boy in the Capitol and every employee here who is attending school is pleading for us to adopt the amendment in order to help him along.

Mr. LONG of Louisiana. The credit would be limited to whatever the tax would be. If a person pays little tax, he would have nothing against which to take the credit. If the Senator will look at page 1733 of the testimony, he will see who would receive the distribution of the benefits. They are those who have adjusted gross incomes of $3,000 or less. What would they get? One percent. That is where the need is. The other 99 percent of benefits would go to those who are in a position to provide adequately for the education of their children.

The ACTING PRESIDENT pro tempore. The time of the Senator has expired.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. Mr. President, I yield myself 3 additional minutes, and yield to the Senator from Oregon.

Mr. MORSE. Does the Senator from Louisiana agree with the Senator from Oregon that the elevator boys and employees who are appointed and are beneficiaries of that employment are fortunate to have jobs that enable them to pay their way through college, and that they ought to be happy that they have jobs so that they can pay the small amount of taxes that is collected from their income?

Mr. President, the question is basic. What are we trying to do? We are trying to breed a younger generation in

[P. 1750]

this country into believing that they ought to get everything that they can get for nothing.

It is about time that we adopt a program which would put a stop to handouts such as those which would be provided under the Ribicoff amendment.

Mr. LONG of Louisiana. Mr. President, how much additional time have I under the time I have allotted to myself?

The ACTING PRESIDENT pro tempore. The Senator has an additional minute.

Mr. LONG of Louisiana. Mr. President, the Senator from Oregon has exactly stated the point. An elevator boy who is being paid $400 to $500 a month would be benefited by the proposal. How about the boy who does not have a job and who would receive no benefit? That is what is wrong with the proposal. We would provide Federal money to the tune of $1,300 million for the benefit of those who do not need it, those who would go to college anyway, and those who are already in college. We would deny help to those who really need it. We would deny assistance to the man who has a wife and 10 children, and does not pay taxes and should not pay any taxes. He may be making $5,000 or $6,000 a year. He must feed his family on red beans and rice.

Let us try to find the money necessary to put those children through school. Suppose we help them. With a $100 or so as a credit we would help a limited number of people, but continue to deny help to those who are most in need.

Mr. RIBICOFF. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield on the time available to the Senator from Connecticut.

The ACTING PRESIDENT pro tempore. The time of the Senator from Louisiana has expired.

Mr. RIBICOFF. Mr. President, I yield myself 2 minutes.

I have listened to the argument of the distinguished Senator. I have heard of his deep concern about the youngsters who work and might get a tax credit. How concerned is the distinguished Senator about the $2 billion under the investment credit and the additional hundreds of millions under the new investment credit amendments in this bill which would go to General Motors and other corporations whose earnings are the highest ever?

Mr. LONG of Louisiana. That is an entirely different subject. To begin with, I have had some doubts about the investment credit proposal. One doubt I had about it concerned the fact that once we open the Treasury to some groups, we invite others to get their fists in too.

It is like proposing that Uncle Sam write checks for that amount of money. We would be opening Pandora's box. That is one aspect of the proposal which raises doubt as to the investment credit.

Perhaps if the amendment of the Senator from Connecticut is agreed to, we shall have to proceed to strike the proposed section 203, thus repealing the Long amendment, which would cut by 40 percent the credit benefit provided for General Motors and others.

If we wish to provide the proposed program for education, in my judgment, we ought to start at the bottom, with those having the lowest incomes, and work up—we should start with youngsters who otherwise would not be able to attend college, rather than to start at the top with those who are already in school and whose families are able to send them to school to begin with.

Mr. RIBICOFF. How about the $140 million provided in the tax bill for the benefit of a few department stores, none of which need the money—although they think they need the money—rather than the elevator boy who is operating an elevator in the Capitol for a wage of $400 a month? How about the $140 million which would benefit the department stores? Let us begin to look at the loopholes in the bill.

Mr. LONG of Louisiana. We are talking on the Senator's time.

Mr. RIBICOFF. Yes.

Mr. LONG of Louisiana. What we are talking about is the method of taxing revolving credit. That is a provision which, if the committee amendment is retained would largely be a one-time revenue loss. The provision is concerned with the procedure of applying taxes on the revolving credit balance. Those involved would not escape taxes. It would be a question whether the taxpayer would pay tax, in the year the sale is made or in the year the credit balance is paid. It is a one-time loss.

The ACTING PRESIDENT pro tempore. The time of the Senator from Connecticut has expired.

Mr. RIBICOFF. Mr. President, I yield to the distinguished Senator from New York 3 minutes.

Mr. KEATING. Mr. President, I ask the Senator from Connecticut if I may have 5 minutes.

Mr. RIBICOFF. Mr. President, how much time have I remaining?

The ACTING PRESIDENT pro tempore. The Senator from Connecticut has 22 minutes remaining.

Mr. RIBICOFF. I yield 5 minutes to the distinguished Senator from New York.

Mr. KEATING. Mr. President, the able and distinguished junior Senator from Connecticut [Mr. RIBICOFF] and a number of my other distinguished colleagues and cosponsors of this amendment have, in the last 2 days, set forth with clarity and persuasion, the objectives and the details of this amendment. By now, everyone has had a chance to familiarize himself with the technicalities of our plan—the sliding scale tax credit, the ceiling to prevent windfalls to wealthier taxpayers, the inclusion of fees, books and supplies as well as tuition, and the availability of this credit to anyone who actually pays the bills—so I will not take valuable time to repeat the details. It is sufficient to state that those of us who have, for years, supported some kind of tax relief for those making this kind of investment in America's future, have agreed that this measure should be enacted now.

In the few minutes remaining before we vote, therefore, I would like to answer what seem to be the two major objections to this amendment; namely, first, that it is not the best means of aiding higher education, and, second, that it costs too much.

The first charge, the primary argument of the Department of Health, Education, and Welfare, is made by those who wish to retain the image of "progressive and liberal friend of education" while voting against the amendment.

Their argument implies that the sponsors of this proposal have offered it as a panacea for all the financial problems of American higher education and as an alternative to all other forms of more direct aid. This is simply not so. We have not abandoned construction grants to universities, scholarship aid to needy students, research stipends, insured loans or student work programs. I, for one, hope I am given the oppor-

tunity to vote on a score of new and imaginative proposals to aid education in the next few years.

But 18 years in the Congress has taught me a certain amount of pragmatism. I know better than to advise a hungry man to pass up a piece of bread because a whipped-cream cake is on the way. Let's hope we get both, but let's not bet on "double or nothing."

The cost argument is less subtle. It is made by those who acquiesce in oil-depletion allowances, investment credits, dividend received credits, foreign tax credits, entertainment deductions, and a score of other tax gimmicks, but who, in admirable candor, declare that tax relief for investors in America's future is too costly. Well, Mr. President, it is very possible that if this amendment is not adopted, the American taxpayer will have to assume the considerably greater cost of an expanding public university system. Let me elaborate briefly, and prove my point with a few interesting figures.

There are 1,357 independent colleges and universities in this country. I make no judgment on whether these colleges are better than the large State universities but do state that they provide the diversity in higher education which Americans generally agree is desirable, and should be fostered. Since they are privately endowed, they also save the taxpayer a considerable amount of money.

In 1949, 50.4 percent of all college students attended private institutions; by 1962, the percentage had dropped sharply to 38.3 percent. The reason: a "tuition gap." The Office of Education has estimated that the average tuition and fee charge to a student in a State university is $185. This is one-eighth of the cost of educating him, and the taxpayer, of course, makes up the difference, to the tune of over $2 billion a year. This figure does not include capital outlay, but merely operating costs.

The private institution, which does not have the benefit of this taxpayer subsidy, has been forced to increase tuition charges 100 percent or more during the last 10 years. The resulting "tuition gap" has caused a shift in student population from the private to the public colleges at an average rate of 1.4 percent a year. Dr. Carroll V. Newson, former president of New York University, has

[*P. 1751*]

estimated that "by 1975, perhaps not more than 4 percent of the post-secondary students of the country will be attending private institutions." Even if the rate of shift remains constant, at 1.4 percent a year—which is doubtful—and 80 percent of the students are in public colleges by 1975, the taxpayer will have to shell out $8½ billion in capital outlay and $6 billion a year in operating costs to accommodate the increase. If we can preclude the shift by tax relief and keep the ratio of public to private college students substantially the same as it is today, the taxpayer would save $3.6 billion in construction costs and $1½ billion a year in operating costs. The Treasury has estimated that this plan will cost $750 million a year in reduced revenue. In view of the figures I have just cited, it is worth every penny it costs.

The ACTING PRESIDENT pro tempore. The time of the Senator has expired.

Mr. KEATING. I shall not take more time in view of the time situation.

I hope the amendment will be adopted.

The ACTING PRESIDENT pro tempore. Does the Senator from Louisiana desire to yield any time?

Mr. RIBICOFF. Mr. President, I yield 2 minutes to the Senator from Delaware [Mr. WILLIAMS].

The ACTING PRESIDENT pro tempore. The Senator from Delaware is recognized for 2 minutes.

Mr. WILLIAMS of Delaware. Mr. President, the purpose of the amendment of the Senator from Connecticut is to allow those parents who wish to educate their children to pay the tuition and then get a deduction when they file their tax returns. I see nothing wrong with the proposal.

The argument made by the Senator from Louisiana that this is a gift from the Treasury has developed from the theory that all that a man earns belongs to the U.S. Government and that when the Government reduces his taxes it is giving him something. That is a new philosophy and one to which I do not subscribe.

I always felt that what a man earned was his own. Sure he must pay taxes, but it is the taxpayers who gives to the Government.

The Senator from Louisiana says that a poor man does not get anything from this measure. No tax cut will help the unemployed. A tax cut will not help those whose income is so low that they pay no taxes. That is understood. But this proposal is for the benefit of those in the low-income groups who do pay taxes and who do have to pay tuition costs to educate their children.

It is far better to let people select their own colleges and make their own payment. The American people can better prepare themselves to educate their own children if we give them a deduction or a credit, rather than to make them send

all their money to the Federal Treasury and then have the Federal Treasury set up a bureaucracy to distribute a part of it back to him. That is not the way to have people educate their children. This amendment offers a much better approach. I have greater confidence in the ability of the American people to select their own colleges than in anyone in the Federal Government.

Mr. RIBICOFF. Mr. President, I yield 2 minutes to the Senator from Kentucky [Mr. MORTON].

The ACTING PRESIDENT pro tempore. The Senator from Kentucky is recognized for 2 minutes.

Mr. MORTON. Mr. President, I shall support the amendment offered by the Senator from Connecticut. I do not think I have to answer the argument made by the Senator from Louisiana as to the rich benefiting from the proposal. I think it was eloquently set forth in the presentation made yesterday by the Senator from Connecticut [Mr. RIBICOFF].

I notice that the presidents of some of our American universities have come out in opposition to the amendment, saying that the only thing that will happen is that college tuition will go up $200 a year if this amendment is adopted. I have greater confidence in the present trustees and in the presidents of the colleges and universities of this country than that. I do not believe that they would be so irresponsible as to follow such an obviously selfish plan.

I could hardly believe it when I read that their opposition was based on the ground that this amendment would increase the cost of college education. We all know that in the next few years more and more people are going to college. We all know that, unfortunately, we are in a situation in which the costs of education are going up. But when the presidents of great colleges and universities in this country say the costs are going up because we are giving a tax break to those who would prefer to educate their own children rather than to have them educated under some kind of scholarship fund administered by the Government, I must decry such statements.

The ACTING PRESIDENT pro tempore. The time of the Senator has expired.

Mr. RIBICOFF. Mr. President, I yield 2 minutes to the Senator from Nebraska [Mr. CURTIS].

The ACTING PRESIDENT pro tempore. The Senator from Nebraska is recognized for 2 minutes.

Mr. CURTIS. Mr. President, this is a poor boy's amendment. It provides that if anyone pays tuition and fees to send a neighbor boy to college, he receives a tax benefit. This is one incentive for the citizens of the United States to assist worthy young people to go to college. It channels the tax benefit in such a way that there is no Federal control. No ruling of the Supreme Court or any other conflict will determine what may be taught in that school. If a parent wants his child or his neighbor or a poor boy who is a member of the Boy Scout troop to have an opportunity to go to college where there is compulsory religious instruction, he may do so. It avoids a huge bureaucracy. It avoids a situation in which, if one institution receives a grant, all the rest will demand it.

I hold in my hand a book of 358 pages, each page containing three columns of fine print, containing names of institutions a contribution to which is allowed as a tax deduction.

The ACTING PRESIDENT pro tempore. The time of the Senator from Nebraska has expired.

Mr. CURTIS. Many of them are not as worthy of a deduction as would be a contribution for a college education.

Mr. RIBICOFF. Mr. President, I yield 1 minute to the Senator from New Hampshire.

The ACTING PRESIDENT pro tempore. The Senator from New Hampshire is recognized for 1 minute.

Mr. COTTON. Mr. President, there are observations I would like to make on this bill, but I was unavoidably absent yesterday, and I have but 1 minute today.

All these forensics to which we have been listening leave me unimpressed. It is the old lullaby we are given, that if we refuse to do something for somebody today, sometime next month or next year we shall be given an opportunity to do something more magnificent and bounteous for him.

I listened to that lullaby when I was trying to get doctors for rural communities. I listened to that lullaby when we were trying to abolish some of the pocket-picking war excise taxes. I have listened to the lullaby many times on the floor of the Senate.

I consider this to be a fair amendment, which sends money back where it is needed, without the administrative cost or the setting up of a new bureaucracy. I do not intend to wait for some future opportunity. This is a chance to do something for people who are straining their resources to educate their children, and do it now. I shall vote for it.

Mr. LONG of Louisiana. I yield 4 minutes to the Senator from Maine.

The ACTING PRESIDENT pro tempore. The Senator from Maine is recognized for 4 minutes.

Mr. MUSKIE. Mr. President, democracy is an exacting form of government and requires an educated and informed citizenry. In recent years, the cold war has become in large part a battle for men's minds, and it is no exaggeration to say that our educational system is one of freedom's first lines of defense.

If we are to survive, if we are to prosper, if we are to achieve for every American that opportunity for spiritual and material fulfillment to which each is entitled, we must insure that our educational system effectively serves our needs. Above all, we must see to it that its opportunities are fully available for the development of our young people whatever the limitations of their own financial resources.

The Senator from Connecticut has performed a great service. Although he describes his amendment as a tax measure, rather than an education measure, it is clearly designed to advance the cause of education.

But worthy as is that cause, agree though I may with its objective, I do not believe that this is the time or the place for enactment of this measure.

Whatever it may be called, this amendment is an education measure. The pending business is a tax bill. The two should not be confused. An overwhelm-

[*P. 1752*]

ing and most unusual national consensus has coalesced in support of this tax bill, as an economic measure. Adoption of this amendment would throw the proposed rate structure into confusion and may seriously delay—or even jeopardize—passage of this most important bill.

For the proposed amendment will, in fact, be the most expensive education bill for individuals ever enacted—with the sole exception of the GI bill. Its cost alone—$750 million the first year, $1.3 billion by 1970—requires that it be considered in conjunction with our overall education policy. Federal aid to education on such a massive scale deserves the deliberate, careful scrutiny of Congress within the framework of our national policy in this important area.

It should not be in the form of an amendment to an economic measure.

It should not be considered without the benefit of wide-ranging and detailed hearings. Our educational needs are many; our resources, great as they are, are limited. Is every Member of this body firmly convinced that the priorities established by this amendment are warranted in an investment of such magnitude? Is it not possible that a more searching investigation will reveal that a different order of priorities is called for?

Mr. President, the objections I have raised have not been directed to the merits of the amendment. They have been concerned with the wisdom of approving it at this particular time.

In addition, there are, it seems to me, some valid questions with respect to the amendment itself which require consideration.

As proposed, the amendment would be of little or no help to those countless thousands of young Americans who cannot now afford to go to college. It will do nothing at all for the millions of Americans in the lower income brackets. It will simply make it a little easier for those who can already afford to send their children to college. Certainly, this is a laudable objective. But should not a program of this magnitude provide some assistance to those who cannot now even begin college?

Second, there seems to be little doubt that many colleges will increase their tuition rates. Thus, it may well be that the taxpayer entitled to the credit will obtain no real benefit, while the problem of getting a college education will become even greater for those now unable to do so.

Third, the fact that the amount of the credit depends upon the tuition rate means that the amendment provides the greatest measure of relief where it is generally needed least: To taxpayers paying tuition for students at high-tuition colleges. Those students attending low-tuition institutions will, in most cases, be unable to qualify for the maximum credit.

Finally, Mr. President, I should note that, as a father of five whose college careers will begin in 4 years, I find the benefits under the Ribicoff amendment very tempting. But, I would like to point out that this would be in addition to benefits already afforded me under the bill. The relief would be most helpful to me, but it would be of little value to families in Maine with income of $5,000 and less.

The Ribicoff amendment would provide, in effect, double relief for a small portion of the middle income group—relief which would not be available to our lower income families. The tax bill, as reported to us by the Finance Committee, is designed to provide equitable relief to a wide spectrum of taxpayers. The Ribicoff amendment would distort that effect.

Here are some examples, using the average family, with two children at $10,000. Such a family would receive a $223, or 19-percent cut under the tax bill. The Ribicoff amendment would add

a $325 cut, or an additional 26 percent, for a total net reduction of 45 percent. At $15,000, such a family would receive a $369, or 17-percent, cut under the tax bill. The Ribicoff amendment would add a $325 cut, or an additional 15 percent, for a total net reduction of 32 percent. At $20,000, such a family would receive a $560, or 16-percent cut under the tax bill. The Ribicoff amendment would add a $325 cut, or an additional 10 percent, for a total net reduction of 26 percent.

Mr. President, I hope that the interest in meeting our educational need which has been kindled by this amendment will continue long after this tax bill is passed. I hope that this Congress, which wrote a remarkable legislative record in the field of education last year, will not rest upon its past achievements, for much remains to be done. And although I will vote against this amendment, I wish to make it unmistakably clear to the Senator from Connecticut and to the rest of my colleagues that this is not a vote against the objective of the amendment. It is rather an expression of my belief that the objective can be better served, the priorities more precisely established, and the resources more equitably distributed.

Mr. President, I ask unanimous consent that several telegrams from both supporters and opponents of the proposed amendment, in Maine, be inserted in the RECORD at this point.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

AUGUSTA, MAINE, *February 3, 1964.*

Senator EDMUND S. MUSKIE,
Senate Office Building,
Washington, D.C.:

I respectfully urge you to oppose the Ribicoff amendment 329. Scholarships and loans make it possible for many students to go to college who couldn't otherwise go. Tax credits rarely make that much difference. Maine teachers have expressed repeatedly their support of a scholarship and loan program. They have never shown any enthusiasm for tax credits which would reduce taxes to the benefit of many who are able to finance the education of their own children.

CLYDE RUSSELL,
Executive Secretary, Maine Teachers Association.

ORONO, MAINE, *February 3, 1964.*

Senator EDMUND S. MUSKIE,
Washington, D.C.:

Affirmly believe the Ribicoff-Keating tuition tax credit plan derimental to broadening of opportunity in higher education. Respectfully request your opposition.

LLOYD H. ELLIOTT,
President, University of Maine.

PORTLAND, MAINE, *February 3, 1964.*

Senator EDMUND MUSKIE,
Senate Office Building,
Washington, D.C.:

Diocesan school department approves Ribicoff tax credit bill. Would appreciate your support.

Msgr. ARMAND E. CYR,
Superintendent.

PORTLAND, MAINE, *February 3, 1964.*

Senator EDMUND MUSKIE,
Senate Office Building,
Washington, D.C.:

We favor the Ribicoff tax credit bill.

ST. DOMINICS MOTHERS CLUB.

Mr. LONG of Louisiana. Mr. President, I yield 2 minutes to the Senator from Florida.

Mr. SMATHERS. Mr. President, I believe we all agree that all of us are in favor of education for all of our students. The question is how to proceed to carry out that wish in the best possible way. For my own part, and in the opinion of most people who are really concerned about this problem, the best way to proceed is through the Committee on Labor and Public Welfare, with a total program which correlates the National Defense Education Act to the student loan program and all the other programs. If we have money to give away, let us give it to the students who need it the most.

My objection to the amendment—and I do not like to call it the rich man's amendment—is that it helps parents who do not need any particular help.

If we take the figures given by the author of the amendment, we see that that means persons who make $35,000 a year. Such a person, under the amendment, would get a tax cut of $675. That is a straight credit. Such a person would send his children to Princeton or Harvard, no matter what. Therefore, what we do is give the money to people who do not need it.

As had been pointed out, what would happen with respect to private schools would be that private schools would raise their tuition, so that everyone who sent his children to private schools would have to pay an additional $350. The poor boy who does not have a family, who does not have a father, would not be able to go to school. We thus will make the problem more insurmountable for him so far as obtaining an education is concerned.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. SMATHERS. I yield.

Mr. PASTORE. I should like to have it made clear to me just what is the

basis for the argument that if we give parents some kind of consideration in helping them send their children to college that——

Mr. SMATHERS. I would like to have the Senator ask me a question, but I would appreciate it if he would take the time from the side controlled by the author of the amendment.

Mr. RIBICOFF. I am pleased to yield a minute to the Senator for that purpose.

Mr. PASTORE. Where do we get the notion that the university will raise its tuition merely because, for meritorious reasons, we give some credit to parents of the middle class who want the pride

[*P. 1753*]

and respect of paying their own children's tuition. This amendment would give them a little help in bearing the terrific expense involved. Does that mean that the university will raise its tuition as a device to nullify the relief? Where do we get that notion?

Mr. SMATHERS. I am glad the Senator asked that question. I will read him what the originator of the sliding scale proposal which is apparently incorporated in the amendment, said. He is Dr. Roger A. Freeman of the Hoover Institution on War, Revolution, and Peace, of Stanford University.

Mr. RIBICOFF. Mr. President——

Mr. PASTORE. Let the Senator from Florida finish.

Mr. SMATHERS. Let me answer the Senator's question. He asked me a question, and he is entitled to have an answer. This is what he says——

The ACTING PRESIDENT pro tempore. The time of the Senator has expired.

Mr. LONG of Louisiana. I yield 1 more minute to the Senator from Florida.

Mr. SMATHERS. Dr. Freeman said:

> The tax saving, or revenue loss, under my schedule may be estimated at $700 million per annum, or more. Institutions may be expected to recoup as much as three-fourths of that amount through increased tuitions.

Mr. PASTORE. The schools must adjust their charges as their costs mount. They will do it whether we adopt this amendment or not.

Mr. SMATHERS. This is what the original author of this idea says about it.

Mr. PASTORE. The schools will raise or lower their tuition whether we do this or not. Charges will change with the times—as costs are greater or less.

Mr. SMATHERS. No; they say they will do it if such an amendment is adopted.

Mr. PASTORE. That is nonsense to me.

Mr. RANDOLPH. Mr. President, will the Senator yield?

Mr. SMATHERS. I am happy to yield, if I have some time remaining.

Mr. RANDOLPH. The Senator's argument is very persuasive. However, is it not a fact that educational costs are going up year by year?

And they have been rising year by year, irrespective of what the Congress does on tax legislation. This measure does not purport to solve all the problems of financing higher education. Last year the Congress enacted the Higher Education Facilities Act, the National Defense Education Act Extension and Amendments, the Vocational Education Act of 1963, and amendments to the Manpower Development and Training Act. The senior Senator from West Virginia supported all of these measures, and I shall support any measure to advance the educational opportunities of our youth, especially for those from the lower income groups. But the fact that the proposed amendment does not do all things for higher education is not, in my opinion, a valid argument for opposing it.

Mr. SMATHERS. The Senator does not want to help education any more than does the Senator from Oregon or the Senator from Florida. We all want to help. The question is how do we do it best? The amendment would cost $1,300 million. Is that the way to do it? What about the poor boy in West Virginia who has no father or mother but who wants to go to school ? Where would he get the money? He would not get it by reason of this amendment.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. SMATHERS. He would not get it by reason of the amendment. It does not offer him anything.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. SMATHERS. If the time comes out of the time controled by the Senator from Connecticut.

Mr. RIBICOFF. I am pleased to have such an effective ally as the Senator from Rhode Island. I yield 1 more minute to the distinguished Senator from Rhode Island.

Mr. PASTORE. I have 1 minute, 60 seconds. Has the Senator ever examined a scholarship application?

Mr. SMATHERS. Yes; I have.

Mr. PASTORE. Where it is necessary to swear away half of one's life in order to qualify for a scholarship on the basis of need?

Mr. SMATHERS. I have seen such an application. I have a brother who is supporting four children and——

Mr. PASTORE. Are we on my time?

Mr. SMATHERS. Yes. That does not mean that we ought to adopt such an amendment.

Mr. PASTORE. I say to the Senator from Florida that, insofar as the low-income groups are concerned, there is no problem.

For the low-income group—and properly so—there is every encouragement of scholarships and loans so that the capable and ambitious may develop their talents. There is no discredit to this. It is fitting that our Nation should provide every facility of scholarship.

Any man in the low-income group who wants to send his child to college will find that it will be made possible for that child to go to college, because somewhere or other the facilities exist and some arrangements will be made to that end.

Mr. SMATHERS. Now——

Mr. PASTORE. Now we are on my minute. Anyone who is in the low-income group—and the very wealthy parent has no problem at all. The problem lies in the great $10,000 to $15,000 a year class, in which a man wants the pride of saying, "I want my child to go to the college of our choice. I feel that his education will benefit not only him but his country. I want to pay for his tuition, but I need the consideration of my country in meeting this cost."

That is the kind of people we are worrying about.

The ACTING PRESIDENT pro tempore. The time of the Senator has expired.

Mr. SMATHERS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield a minute to the Senator from Florida.

Mr. SMATHERS. The statistics were placed in the RECORD for the edification of all of us. I would appreciate it if the Senator from Rhode Island would read them. They give the percentage of the pupils from families of certain income groups who go to school, and they list the number of students in the schools. Percentagewise, one-fifth come from the lowest income group.

Mr. PASTORE. That is correct.

Mr. SMATHERS. So most of the youngsters who go to college come from the middle income groups.

Mr. PASTORE. This amendment would not hurt them.

Mr. SMATHERS. It distributes the credit, as the Senator says.

Mr. PASTORE. It certainly does.

Mr. SMATHERS. The amendment would do nothing for the poor boy who wants to get an education.

Mr. LONG of Louisiana. Mr. President, let us see how this proposal would work. It is simple enough. What would happen if the amendment were adopted? We would reach into Uncle Sam's Treasury for $1,300 million a year. Every child——

Mr. RIBICOFF. Mr. President, will the Senator yield on my time?

Mr. LONG of Louisiana. I am speaking on my time.

Mr. RIBICOFF. Will the Senator yield on my time?

Mr. LONG of Louisiana. Let me make my statement, first; then I shall be glad to yield.

It is proposed to reach into Uncle Sam's Treasury for a tax credit, which is like drafting a check on the Treasury for $1,300 million a year. If one's child is in Princeton, he will get $325 from the Treasury. If he has a child in one of the expensive Eastern girls' schools, where the tuition is $1,500, he will get a credit of $325. If one is worried about the expense of such an education, he should not have sent his child to such a school, to begin with. Let him send his child to the State university, where the tuition is only half or one-fourth as much. Then he would receive a benefit of $100.

In any event, it is proposed to give families whose children are in college a share of $1.3 billion. What kind of sense does that make? What about the poor devil who could not put his child through college? The under $3,000 income class, he needs helps. What would he get? Look at page 1733. What does that class of family get? The ones who really need help, the kind of people who deserve help, who do not have meat on the table because they are trying to send a child through college, get plus 1 percent of $1.3 billion.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. The table appears on page 1733.

Mr. RIBICOFF. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield first to the author of the amendment, on his time.

Mr. RIBICOFF. On my time. I am sure the distinguished Senator from Louisiana, the Senator in charge of the

[*P. 1754*]

bill, has no intention of misleading the Senate. When he talks about $1.3 billion, is he talking about $1.3 billion this year or in 1970?

Mr. LONG of Louisiana. I am talking about $750 million this year, and $1.3

billion as soon as the program goes into full operation. That is the estimate.

Mr. RIBICOFF. It is $1.3 billion in 1970, not now.

Mr. LONG of Louisiana. That is not my estimate. So far as I know, that is the only responsible estimate. Who will get the credit? The families with adjusted gross incomes below $3,000 will get 1 percent.

Mr. RIBICOFF. Is the Senator speaking on his time?

Mr. LONG of Louisiana. I am speaking on my time. I yield myself 2 additional minutes.

Consider the families that do not need this assistance. Let us consider families having incomes of $10,000 to $20,000.

They do not need it. They get 51 percent of the tax reduction. Their incomes range from $10,000 to $20,000.

Mr. RIBICOFF. Mr. President, will the Senator yield for a correction of facts?

Mr. LONG of Louisiana. It is proposed to spend the taxpayers money to the tune of $1.3 billion a year, 51 percent of which goes to families who are already getting big tax reductions in the bill as it stands, families who already have children in college, children who will be well educated whether the families get a share of $1.3 billion or not, while no benefits are provided for that pitiful class that needs help. What about the poor West Virginia coal miners?

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. They cannot afford to send their children through college. What about families whose children are working their way through college, working half the night to stay in schools? What would the amendment do for them? It would not do a blessed thing. But it would take care of families who are already able to put their children through school.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. RIBICOFF. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I am sorry; I should make a correction. Twenty-eight percent of the tax reduction goes to families earning between $10,000 and $20,000; 51 percent of the reduction goes to families having incomes between $5,000 and $10,000. They are not the families that need the proposed assistance.

Mr. RIBICOFF. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. RIBICOFF. I am sure it is not the intention of the distinguished Senator from Louisiana——

Mr. SMATHERS. Mr. President, on whose time is the Senator from Connecticut speaking?

The PRESIDING OFFICER. The time of the Senator from Louisiana.

Mr. LONG of Louisiana. I yield to the Senator from Connecticut on his time.

Mr. RIBICOFF. On my time.

Mr. LONG of Louisiana. I will yield the Senator 1 minute of my time.

Mr. RIBICOFF. The amendment provides that 62 percent of the benefits would go to those with incomes between $3,000 and $10,000. That is where most of the benefits would go; 91 percent of the benefits would go to families having incomes under $20,000. It is very interesting to observe the deep concern of the distinguished Senator from Louisiana for the lower income groups. If there is any group in American society that will get nothing out of the bill, it is the lower income group, about whom the Senator is so worried.

If the Senator is worried about the low income group, he will have an opportunity to assist them by supporting an amendment to be offered by the distinguished Senator from Tennessee [Mr. GORE]. I shall observe with interest the concern of the Senator from Louisiana for the lower income groups as against the upper income groups. If there is one group in American society that is being protected by the bill, it is the wealthy oil interests of the State of Louisiana. There is a group that will receive benefits.

The bill contains numerous loopholes and truckholes. The bill takes care of the upper income levels but does the least for the middle income groups of America.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. LONG of Louisiana. I hope that in due course the Senator will get around to the amendment to increase the tax on oil income. When he does, I shall be prepared to prove that the oil industry is one of the most heavily taxed industries in the United States. I shall bring forth the figures.

Mr. RIBICOFF. The distinguished Senator from Delaware [Mr. WILLIAMS] will offer that amendment.

Mr. LONG of Louisiana. I am speaking on my time. I yielded the Senator from Connecticut a minute of my time after he had used his. I wish he would let me use my time.

The Senator from Connecticut stated that the bulk of the credit under his

amendment would go to families having incomes between $3,000 and $10,000. But he did not say that the great bulk would go to those having incomes of $5,000 to $10,000, not to those having incomes under $3,000. Only 1 percent would go to families in the under $3,000 bracket, while 88 percent would go to families making more than $5,000, and practically all of them now have children in school.

Mr. President, I yield 3 minutes to the distinguished majority leader.

Mr. MANSFIELD. Mr. President, I must admit that I see no connection between the amendment intended to be offered by the distinguished Senator from Delaware [Mr. WILLIAMS] and his cosponsors and the amendment now under discussion. I hope we can stick to the facts, and not discuss possibilities. There are some facts which should be reiterated over and over.

The Ribicoff amendment, although limited to tuition, fees, and books, would cost from $725 to $750 million in the first year, and by 1970 would cost between $1,300 and $1,500 million. So if it is desired to have a very expensive education bill or amendment, rather than to help those who need help, Senators should vote for the Ribicoff amendment. The cost under the amendment would be some six times as great as the National Defense Education Act student loan program and three times the maximum cost of the original grant portions of the higher Higher Education Facilities Act of 1963; but it would distribute most of the money where it was least needed.

Millions of large families having low incomes, and who pay little or no taxes, would receive little or no benefits, while families having fairly substantial means, and who would send their children to college or universities in any event, would get the most relief. The Ribicoff amendment, for the families benefited, would in most cases more than double their tax cut under the bill, thereby giving such families a disproportionate share of the tax reduction.

To the extent that tuition increases would result from such a tax allowance, the problem of financing a college education would become more difficult, particularly for students from low-income families who might benefit the least from the tax allowance.

Any deduction or credit based on tuition, regardless of its form, would give more benefit to students in the higher priced institutions—and this discriminates against those students—including a large proportion of those students needing financial assistance—who attend public institutions where tuition is generally lower. It would also discriminate against those States with a strong tradition of providing higher education at low cost or no student tuition cost. The share of aid each institution would get would depend on its tuition level—the higher the tuition, the more benefit it would receive. It is doubtful that this distribution would give Federal assistance where it is needed most.

Mr. President, let me point out to the Senate that there is already before Congress proposed legislation, originally introduced in 1960 by the then Senator Lyndon B. Johnson, calling for a guaranteed loan program for needy college students. President Kennedy proposed a similar program in his educational message of last year. Instead of now tying up the tax bill with the additional and costly weight of the Ribicoff education amendment, Congress should separately consider the guaranteed loan program and other positive aids for higher education as a direct, nondiscriminatory route to the same end.

In conclusion, Mr. President, let me state that I have been assured by the distinguished senior Senator from Ore-

[P. 1755]

gon [Mr. MORSE] that it is his intention to have his Subcommittee on Education hold hearings on the guaranteed loan program.

The ACTING PRESIDENT pro tempore. The time yielded to the Senator from Montana has expired.

Mr. PASTORE. Mr. President, will the Senator from Connecticut yield briefly to me?

Mr. RIBICOFF. I yield 2 minutes to the Senator from Rhode Island.

The ACTING PRESIDENT pro tempore. The Senator from Rhode Island is recognized for 2 minutes.

Mr. PASTORE. Mr. President, this amendment is not new; this subject has been debated on the floor of the Senate several years in succession.

I support the amendment, but I have no illusions as to its fate. Even if the Senate adopts the amendment, I fear it will be killed in conference.

Nevertheless, Mr. President, if we are to pass such an amendment, I say that it should be a good one. I favor aiding the poor; no one favors aiding them more than I do. However, although I do not know what the personal situation of any other Senator is, I point out that we have engaged in much debate about persons who have incomes of between $10,000 and $15,000 a year. Such persons pay out of their net incomes after taxes the college tuition of their sons

69-108 O—66—pt. 3——33

and daughters. If their sons and daughters go to colleges of their family tradition, the annual tuition cost is probably between $2,500 and $3,500 a year.

So, Mr. President, suppose the head of a family has an income of $10,000 a year. If he does not want to take a pauper's oath, to secure for his son or daughter a free scholarship based on need—that father must—after he has paid his taxes pay the college his son and his daughter attend a total bill of approximately $6,000 a year; and he makes that payment from his income after taxes. How does he do it? Senators have argued, "Well, he is doing it, anyway." That, of course, is no answer. Mr. President, I will tell you how he is doing it. And I will tell you how it is done by many taxpayers who were not fortunate enough to attend college themselves and have not reached a high plateau of prosperity and do not have sufficient income to be able to pay such college tuition bills. In that case, what do they do? They mortgage their homes. They do the same thing that many other middle class, respectable families in the Nation which experience costly chronic illnesses do. What do they do?

The ACTING PRESIDENT pro tempore. The time yielded to the Senator from Rhode Island has expired.

Mr. PASTORE. Mr. President, may I have 2 additional minutes?

Mr. RIBICOFF. I yield 2 additional minutes, Mr. President, to the Senator from Rhode Island.

The ACTING PRESIDENT pro tempore. The Senator from Rhode Island is recognized for 2 more minutes.

Mr. PASTORE. In short, Mr. President, such persons mortgage themselves up to their ears, in order to be able to live in respectability. In that way they pay their bills, including heavy medical expenses and including the tuition charges when their sons and their daughters attend college. The same is true of all other families in the United States as good citizens they pay their bills—as good parents they mortgage their homes, in order to pay the college tuition for their sons and daughters.

It is argued that those families are doing that, anyway. Yes, Mr. President; they are—but at what a sacrifice.

It is a sacrifice that this amendment would soften. Parents deserve a little consideration, too.

Mr. President, the loopholes which already exist in the Internal Revenue law are so great that a Mack truck could be driven through them. However, we are doing little or nothing about putting an end to them. For instance, there is the oil depletion allowance of 27½ percent, but Congress is doing nothing about it.

Today we are debating the situation of the head of a family who we say has an income of $10,000 a year, that parent wishes to be able to send his children to college. What does the Senator from Louisiana say that person should do? He says the children of that family should be sent to a State university. But, Mr. President, suppose it is the wish and judgment of the parent and the son that the son should attend Princeton or Yale—or Notre Dame? Does he not have that right of choice?

Mr. President, I support this amendment.

The ACTING PRESIDENT pro tempore. The time yielded to the Senator from Rhode Island has expired.

Mr. MORSE. Mr. President, will the Senator from Louisiana yield briefly to me?

Mr. LONG of Louisiana. I yield 1 minute to the Senator from Oregon.

The ACTING PRESIDENT pro tempore. The Senator from Oregon is recognized for 1 minute.

Mr. MORSE. Mr. President, my answer to the argument submitted by the Senator from Rhode Island, who has asked what we should do about the situation he has discussed, is that Congress should enact a loan bill which would provide benefits which would be available to all American families; and then let them borrow the money needed in order to enable their children to attend college, and pay it back out of the increased earnings which our educational system makes available to them. That is what Congress should do—namely, enact a democratic bill, without having it provide for the sort of discrimination which favors the giving of aid to those who can take a tax-credit deduction.

This amendment calls for an out-and-out gift to those who have sufficient earnings to be able to pay the college tuition of their children from their income after taxes.

Mr. President, what we should have is a democratic loan bill which will make such funds available to those who attend college; and later they will be able to pay it back, under the terms of the bill.

Mr. FULBRIGHT. Mr. President, I should like to have approximately 30 seconds in which to speak.

Mr. RIBICOFF. Mr. President, how much time remains?

The ACTING PRESIDENT pro tempore. The Senator from Connecticut has 3 minutes remaining. The Senator from Louisiana has 1 minute remaining.

Does the Senator from Connecticut desire to yield time at this point?

Mr. SCOTT. Mr. President, at this time will the Senator from Connecticut yield briefly to me?

Mr. RIBICOFF. I yield 1 minute to the Senator from Pennsylvania.

The ACTING PRESIDENT pro tempore. The Senator from Pennsylvania is recognized for 1 minute.

Mr. SCOTT. Mr. President, I rise in support of the Ribicoff amendment to H.R. 8363, the tax reduction bill.

I am proud to say that I have introduced legislation similar in purpose to that embodied in the pending amendment in several Congresses dating back to my service in the House of Representatives. My most recent bill, for example, is S. 259, which I introduced on January 16, 1963, and which is pending in the Committee on Finance. Under my bill, a taxpayer would be permitted to deduct up to $600 from his taxes in a given taxable year for tuition and fees in providing a higher education for himself, his spouse, and his dependents.

My bill recognizes the heavy burden borne by parents who are sending their children through college or by college students who themselves are working and paying their way through school. Tax relief for education is deserved, it seems to me, by those who are trying to prepare themselves or their children to be of more useful service to our society. Not only would such tax relief benefit those seeking a college education, it would in turn benefit our society as a whole by enabling more young people to pay for their college education. It is, I believe, the best form of Federal aid to higher education, and it has the additional merit of providing this aid without accompanying it with the undesirable features of Federal control.

Although the Ribicoff amendment differs substantively from my proposal, it would accomplish the same objective. Under the Ribicoff proposal, a taxpayer paying for his own, his child's, or another individual's college education would receive a tax credit on expenses for tuition, fees, books, and supplies. Under the sliding scale outlined in the amendment, such annual educational expenses totaling $1,500 would result in a tax credit of $325—a substantial relief to the overburdened taxpayers concerned.

I am conscious of the fact that several objections have been voiced by opponents of the Ribicoff amendment. It is not necessary for me to answer these arguments here, for I feel that the able junior Senator from Connecticut [Mr. RIBICOFF] has already rebutted them satisfactorily, and I would point out that the amendment's author was for some time, not so long ago, Secretary of Health, Education, and Welfare. As such, he was in a position properly to appraise the requirements of the insti-

[*P. 1756*]

tutions of higher education and the needs of the students attending them.

And so, Mr. President, I am happy not only to express my support of this amendment at this time, but to be one of its cosponsors as well. And I respectfully urge my colleagues in the Senate to adopt it.

Mr. RIBICOFF. Mr. President, I yield myself the remaining time under my control.

The ACTING PRESIDENT pro tempore. The Senator from Connecticut is recognized for 2 minutes.

Mr. RIBICOFF. First, Mr. President, I wish to take this opportunity to thank the distinguished Senator from Louisiana [Mr. LONG], the Senator in charge of the bill, for his courtesies throughout the heated debate we have had. I also wish to take this opportunity to thank the cosponsors of my amendment, without whose aid this measure could not have been drawn, and without whose help we would not have advanced it as far as we have. These cosponsors are the following: The Senator from Maryland [Mr. BREWSTER], the Senator from West Virginia [Mr. BYRD], the Senator from Nevada [Mr. CANNON], the Senator from Connecticut [Mr. DODD], the Senator from Colorado [Mr. DOMINICK], the Senator from Alaska [Mr. GRUENING], the Senator from Minnesota [Mr. HUMPHREY], the Senator from New York [Mr. KEATING], the Senator from Missouri [Mr. LONG], the Senator from Utah [Mr. MOSS], the Senator from Vermont [Mr. PROUTY], the Senator from West Virginia [Mr. RANDOLPH], the Senator from Pennsylvania [Mr. SCOTT], the Senator from Maryland [Mr. BEALL], the Senator from Idaho [Mr. JORDAN], and the Senator from Oklahoma [Mr. EDMONDSON].

To put this issue in perspective, I close by simply pointing out the analogy between what we are trying to do in the field of higher education and what we now do in the field of health.

First. Millions of dollars have been voted by Congress to build hospitals. Millions of dollars were voted by Congress last year to build college classrooms and libraries.

Second. The Federal Government also contributes money to provide some help to low-income families who face high medical costs. The Federal Government

should contribute some money to a sound student aid program, including scholarships, to help low-income families who face high college costs.

Third. Finally, our tax laws now provide tax relief to those who pay the high costs of medical care. By the same taken I believe our tax laws should provide tax relief to those who pay for the high costs of a college education.

All of these programs are accepted in the field of health. All of these programs are just as needed in the field of higher education.

I believe the amendment should be adopted.

The ACTING PRESIDENT pro tempore. The time of the Senator from Connecticut [Mr. RIBICOFF] has expired. The Senator from Louisiana [Mr. LONG] has 1 minute remaining.

Mr. LONG of Louisiana. I yield that time to the Senator from Minnesota.

The ACTING PRESIDENT pro tempore. The Senator from Minnesota is recognized for 1 minute.

Mr. McCARTHY. Mr. President, I oppose adoption of the amendment to H.R. 8363 which has been offered by the Senator from Connecticut [Mr. RIBICOFF].

I do so even though I have consistently supported aid to higher education and even though I am very sympathetic to proposals to meet the educational problem to which his amendment relates. I have, in fact, introduced similar legislation in the past. In 1959, in 1961, and again early in 1963 at the opening of the 88th Congress I introduced bills in the Senate which take the same general approach as provided in the pending amendment—that is, a tax credit for tuition for higher education. My bill, S. 800, would provide a 30-percent tax credit to individuals for tuition and fees up to a maximum of $450.

I introduced and supported the tax credit bill at previous sessions because it provided an appropriate means of moving toward two important objectives:

First, a measure of tax reduction, which has been long overdue; and

Second, some limited assistance in meeting the needs of higher education. The bill would provide benefits to students and their parents and somewhat enlarge the opportunity for more young people to go to college. Indirectly, it would benefit the colleges, at least to the extent of reducing the need for scholarships to qualified students of limited means.

In my judgment both of these were proper objectives. Considered separately and apart from other recent action of the Congress the Ribicoff amendment or the bill which I introduced or similar measures would be deserving of consideration at this time. However, there are now significant differences which have changed the situation, Congress has moved in both the area of tax reduction and of assistance to higher education in a substantial manner.

We are completing work on the largest tax reduction in history. The present bill, when it becomes fully effective in 1965, will reduce the tax liabilities of individuals by about 20 percent, or $9.2 billion. The reduction of taxes to corporations over the same period will amount to $2.4 billion. This means a total reduction of $11.6 billion scheduled over the 2-year period. Over half of the cut in individual taxes will go to those with adjusted gross incomes of $10,000 a year or less, the group who file nearly 85 percent of the tax returns. Many of these families will benefit from the general tax reduction as much as they would if the bill provided only tax credits for higher education expenses.

This is a major reduction, and it is questionable whether we ought to adopt an amendment which will add another $750 million reduction. Even if there were agreement that we could safely provide an additional $750 million cut—and the Treasury estimates are that the loss of revenue would increase annually to an amount of $1.3 billion in 1970, if the amendment is adopted—there would still be a question of whether this is the most effective place to make the additional cut, keeping in mind the purposes of this bill.

The second fact which we must take into account is that we have already approved a major measure to assist higher educational institutions in the 88th Congress.

The Higher Education Facilities Act enacted last December authorizes $230 million annually for matching grants for construction and improvement of undergraduate facilities, and it provides $120 million annually for loans for construction and rehabilitation. In addition it authorizes $25 million in 1964 and $60 million for 1965 and 1966 for construction grants for graduate schools. This means a total for grants and loans of $1.2 billion over a 3-year period.

The Higher Education Facilities Act does not meet all the problems, but it does substantially assist higher education institutions and reduce to this extent the need of the institutions to raise tuition or otherwise to secure resources for necessary facilities. In this respect it benefits both students and institutions. In addition, the Congress has extended and increased the authorization of the student loan program under the National Defense Education Act and raised the institutional ceiling in the student loan

program, and made other improvements and additions.

The Higher Education Facilities Act was considered carefully over a long period of time. Extensive hearings were held. The question of benefits to public and to private institutions was gone into in great detail and a compromise reached which was acceptable to the majority.

Formulas were devised to make allotments to the States for grants for construction which would assure an equitable amount to the institutions of each State. Limits to the amount to be loaned to institutions in any one State were provided.

Funds were designated to give proportionate assistance to undergraduate institutions, to community colleges and to graduate schools.

The types of facilities which could be built were specified and other types were excluded from eligibility.

The funds authorized were divided between those to be used for matching grants and those available for loans.

The Congress found it necessary to take all these steps for a higher education measure which provides $375 million for 1964 and $410 million annually for the next 2 years.

The Ribicoff amendment, on the basis of estimates supplied by the Treasury, will result in a revenue loss of $750 million in 1964 and increase to an estimated loss of $1.3 billion for the year 1970.

The pending amendment, which relates entirely to expenses for higher education, will thus result in a revenue loss of twice the amount so carefully worked out for the Higher Education Facilities Act of this year.

Yet, there have been no full hearings held by any committee on this amend-

[*P. 1757*]

ment. Neither the Committee on Finance nor the Committee on Labor and Public Welfare have given it adequate attention. There has been no comparable investigation of its effects on higher education, although estimates have been made that only 20 to 25 percent of the tax credits under the amendment would eventually be reflected in improved or extended education. There is disagreement about whether the amendment has built-in discriminatory features between private and public institutions as well as between institutions in different States and sections of the country where there are wide differences in the public contribution to higher education.

Questions have been raised as to whether the effect of the amendment would be to give preferential treatment to middle income families at the expense of lower income families who have the greater need.

Finally, there has been no thorough study of whether such an amendment would provide as much assistance to students and their parents as the same or a lesser amount made available in scholarship or insured loan programs.

For these reasons I believe the Ribicoff amendment should be rejected. I believe the debate on the amendment has been useful insofar as it has called attention to a continuing need for legislation to assist the higher educational effort and also insofar as it highlights the special problems of families to provide opportunities for higher education for their children. College education does place an extraordinary burden on parents during a limited time.

Because this is a most serious problem we should give it careful study and look for the formula which will both best assist parents and advance higher education. Study may show that a combination of tax credits and of insured loans will do the best job, or that other formulas will provide a more equitable and adequate program. This kind of study has not been made, and for this reason this is neither the time nor the bill for so important and far-reaching program as provided by the pending amendment. I urge that it not be adopted.

The ACTING PRESIDENT pro tempore. All time has now expired.

Mr. FULBRIGHT. Mr. President, I ask unanimous consent that I may proceed for 30 seconds. I understood that I had 30 seconds remaining of my time.

Mr. LONG of Louisiana. Mr. President, I yield 30 seconds to the Senator from Arkansas.

The ACTING PRESIDENT pro tempore. The Senator from Arkansas is recognized for 30 seconds.

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the RECORD a statement on this subject.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR FULBRIGHT

As a former educator and one who has a deep interest in all efforts to improve our educational system, I am concerned about the lack of discussion of some of the fundamental aspects of the Ribicoff amendment. On the surface the proposal appears quite meritorious and I know from reading my mail that many parents look forward to having the burden of putting a son or daughter through college eased by a cut in their tax bill. However, I think that we must

remember that we are in reality debating a basic question of public policy toward Federal support and encouragement of higher education.

The Congress last year enacted the Higher Education Act which established the policy that the Federal Government will help improve higher educational facilities to accommodate the increasing student loans. Aid to needy, qualified students through a loan program was accepted as sound public policy a number of years ago and was reaffirmed by Congress last year. In 1962, the Senate voted more direct student assistance by approving a scholarship program which, unfortunately, was rejected by the conference committee.

The point is that the Congress has thus far concentrated its efforts on the primary goals of aiding students and the educational system directly. This amendment represents a new and costly departure from that policy. What is proposed by this amendment boils down to a very substantial subsidy from the general public to parents of college students. I have always supported direct Federal aid as the most effective way to improve our educational system and to enable needy students to develop their full potential. In my opinion, tax benefits and other indirect relief devices should not be enacted until after the primary objectives have been attained. Much remains to be done before this is accomplished.

The scholarship program approved by the Senate in 1962—a very modest plan—has not been enacted. The administration's proposal for establishing an insurance program for private loans to students remains on the congressional agenda. Our student loan and fellowship programs could be made more effective. These and other proposals for direct aid to students should receive priority action over special tax benefits for parents.

There is no doubt that this proposal would help many middle-income families who are having a difficult time financing their children's college education. I sympathize with their situation. But at least they have managed to send their children to school, which is better than many poor families are able to do. Passage of this amendment will not make it easier for parents to send their children to college who cannot afford to do so now. As a matter of fact, it can be argued that the colleges will raise tuition if the tax credit is enacted, which will worsen the financial problems of many parents and working students. Perhaps the most telling criticism of the proposal is that it will not help students from low-income families—those who most need help. And once tax credits are available for parents there will be little hope of generating sufficient grassroots support to secure passage of a scholarship program to aid the most needy young people.

A look at income statistics should be fairly convincing proof that this amendment will be of little benefit to most families in low-income States, such as Arkansas. Per capita income in Arkansas in 1962 was $1,504 compared with the national average of $2,366 and the average in the State of Connecticut of $3,089—more than twice the Arkansas average. In 1959, the latest year for which Federal statistics were available, median family income in Arkansas was $3,184 compared with $6,887 for Connecticut. Few Arkansas families earning $3,184 and less need worry about paying Federal income tax. But most of these families would like to see their children go to college. They won't be helped by the amendment of the Senator from Connecticut. Over 70 percent of all Arkansas families in 1959 had incomes of less than $5,000. Only about one-fourth of the Connecticut families were in this range. Tax credits are of little benefit if you do not have enough income to have to pay taxes.

Unfortunately, this proposal has developed into a public versus private schools controversy, to some extent. The question should not be considered solely in that light, but the issue should not be overlooked entirely. In Arkansas, nearly 75 percent of the college students attend publicly supported schools. The national average is somewhere around 60 percent, I believe. According to the Office of Education, the median charge for tuition and fees in public colleges and universities last year was $170 compared with $690 in private institutions. On this basis, the credit will be $165 for those in public schools and $253 for those in private institutions. This clearly indicates which segment of our educational system will receive the greatest benefits from the proposed credit.

Adoption of this amendment will cost the general public or the Treasury, if you like, $750 million in the first year, and it is estimated that the cost will mount as much as $1.3 billion by 1970. In contrast, the authorization for the grant provisions of the higher education bill passed recently amount to $290 million a year. The total for the 3-year program is only $120 million more than the cost in lost revenue for 1 year of the college credit proposal. The cost of the scholarship program enacted by the Senate in 1962 totaled $148 million for a 5-year period. The loan guarantee program proposed by President Kennedy last year and supported by President Johnson is budgeted for a grand total of $500,000 reserves for the next fiscal year. When the tax credit proposal is judged alongside other educational proposals and existing programs, it does not appear to be much of a bargain for the taxpayer.

I am not opposed to tax relief for parents of college students. In fact, I have introduced educational tax deduction proposals in the past. I still believe there is a need for such relief, but we are faced with the question of priorities and tax relief for parents should come only after we have enacted programs that will give every qualified, needy youngster a chance to go to college. I favor investing an additional $750 million for education this year, preferably by transferring this amount from the space budget. But I am unwilling for Congress to chalk up $750 million as aid to education when it is really aid to parents. Genuine aid to education—and students—should come before special aid to parents, especially in view of the fact that they will share in the general tax relief under this bill.

I hope that the Senate will defeat the amendment.

I attach hereto a letter I have received from A. W. Ford, commissioner of edu-

cation of Arkansas, and a telegram from Dr. David Mullins, president of the University of Arkansas.

STATE OF ARKANSAS,
DEPARTMENT OF EDUCATION,
Little Rock, Ark., January 24, 1964.
Hon. J. W. FULBRIGHT,
U.S. Senate,
Washington, D.C.

DEAR SENATOR FULBRIGHT: This correspondence is for the purpose of expressing opposition to the Ribicoff tax credit amendment which was defeated by a 10-to-7 vote in the Senate Finance Committee. I understand that Senator RIBICOFF will bring this up for a vote on the floor.

[*P. 1758*]

This proposed amendment would damage the chances of going to college for students with slim financial resources because the institutions will raise tuitions. High cost private colleges and universities would benefit most; poor parents do not pay enough taxes to be helped substantially.

Sincerely,

A. W. FORD.

FAYETTEVILLE, ARK.,
December 10, 1963.
Senator J. W. FULBRIGHT,
Senate Building,
Washington, D.C.:

I understand the Senate Finance Committee may vote this week on amendment 329 to the tax bill. A careful analysis of this amendment convinces us that it is not in the best interests of higher education. It fails to provide substantial and essential support for higher education. It fails to provide meaningful assistance to families of students both in need of such assistance. Moreover the principle involved is unsound as a procedure for giving aid to higher education. We earnestly urge your opposition to this amendment.

DAVID W. MULLINS,
President, University of Arkansas.

Mr. FULBRIGHT. Mr. President, I merely wish to announce that the committee considered this question at great length.

I am opposed to the Ribicoff amendment. I believe it deserves serious consideration, but not in this bill, and I hope that the Senate will not agree to the amendment today.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that the Senator from Minnesota [Mr. HUMPHREY] be allowed 1 minute.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. HUMPHREY. Mr. President, I profoundly regret that under the present circumstances I will find it necessary to vote against the Ribicoff amendment. As many Senators know, I have sponsored similar legislation for many years and I have been deeply concerned with the plight of parents seeking to provide their children with the advantages of a college education. I still express this concern and will continue to seek Federal assistance in their behalf.

There have, however, been several significant developments which must be taken into account since the introduction of my tax credit bill (S. 1677) in June 1963. We have enacted an expanded program of National Defense Education Act loans. We have approved the largest construction program for higher education in history. We are, moreover, debating the largest tax cut in this Nation's history and this reduction will become law in the near future. The adoption of this amendment, however meritorious, under these circumstances would wreak havoc with the Federal budget. These factors must be faced realistically and honestly.

The Senator from Oregon [Mr. MORSE] has promised to hold full scale hearings on various proposals to provide scholarship and loan insurance for higher education. Earlier this year I introduced two bills (S. 389 and S. 390) to provide precisely such assistance for millions of college students and their parents. The Senator from Minnesota will spare no effort to advance this legislation and to initiate hearings before the Morse subcommittee on tax credit proposals as well. We must meet this challenge of expanding the financial resources of this country available for higher education. Let the RECORD be perfectly clear on this point.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the amendment of the Senator from Connecticut [Mr. RIBICOFF]. On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. YOUNG of North Dakota (after having voted in the negative). Mr. President, on this vote I have a pair with the distinguished Senator from Illinois [Mr. DIRKSEN]. If he were present and voting, he would vote "yea"; if I were at liberty to vote, I would vote "nay." Therefore, I withdraw my vote.

The rollcall was concluded.

Mr. HUMPHREY. I announce that the Senator from Nevada [Mr. CANNON], the Senator from Arizona [Mr. HAYDEN], the Senator from Arkansas [Mr. McCLELLAN], and the Senator from Oregon [Mrs. NEUBERGER] are absent on business.

I also anounce that the Senator from California [Mr. ENGLE] is absent because of illness. I further announce that, if

present and voting, the Senator from Oregon [Mrs. NEUBERGER] would vote "nay." On this vote, the Senator from Nevada [Mr. CANNON], is paired with the Senator from Arizona [Mr. HAYDEN]. If present and voting, the Senator from Nevada would vote "yea," and the Senator from Arizona would vote "nay."

Mr. KUCHEL. I announce that the Senator from Illinois [Mr. DIRKSEN] is necessarily absent and his pair has been previously announced.

The result was announced—yeas 45, nays 48, as follows:

[No. 15 Leg.]

YEAS—45

Engle		

So Mr. RIBICOFF's amendment was rejected.

Mr. LONG of Louisiana. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. SMATHERS. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. PROUTY. Mr. President, before calling up my amendment No. 401, I wish to point out that I shall be very brief. I hope to have a yea-and-nay vote on the amendment; so I think Senators would save a great deal of time by remaining in the Chamber, if it is convenient to do so.

Mr. President, I call up my amendment No. 401 and ask that it be stated.

The ACTING PRESIDENT pro tempore. The amendment of the Senator from Vermont will be stated.

The Chief Clerk read as follows:

At the proper place in title II insert the following new section:

"SEC. . CERTAIN EXPENSES FOR COLLEGE EDUCATION.

"(a) ALLOWANCE OF DEDUCTION.—In the case of an individual who during the taxable year is a student at an institution of higher education, there shall be allowed as a deduction amounts paid by him during the taxable year for—

"(1) tuition and fees required for his enrollment or matriculation at such institution, and

"(2) fees, books, supplies, and equipment required for courses of instruction in which he is enrolled at such institution.

"(b) LIMITATIONS AND SPECIAL RULES.—

"(1) AMOUNTS DEDUCTIBLE.—

"(A) IN GENERAL.—The deduction under subsection (a) for any taxable year shall not exceed—

"(i) $133 times the number of months during the taxable year during which the taxpayer is a student and is not the holder of a bachelor's degree, plus

"(ii) $166 times the number of months during the taxable year during which the taxpayer is a student and is the holder of a bachelor's degree.

For purposes of clauses (i) and (ii), a month during which the taxpayer is a student for less than 15 days shall be disregarded.

"(B) MAXIMUM AMOUNTS DEDUCTIBLE.—The deduction under subsection (a) for any taxable year shall not exceed—

"(i) $1,200, in the case of a student who is not the holder of a bachelor's degree at the close of the taxable year, or who has been the holder of a bachelor's degree for less than 3 months at the close of the taxable year, and

"(ii) $1,500, in the case of a student who has been the holder of a bachelor's degree for 3 months or more at the close of the taxable year.

"(2) MEALS AND LODGING.—No deduction shall be allowed under subsection (a) for any amount paid, directly or indirectly, for meals or lodging. In the event an amount paid for tuition or fees includes an amount for meals or lodging which is not separately stated, the portion of such amount paid which is attributable to meals or lodging shall be determined under regulations prescribed by the Secretary or his delegate.

"(3) CERTAIN NONCREDIT COURSES.—

"(A) IN GENERAL.—For purposes of subsection (a) the amounts paid for tuition and fees required for the taxpayer's enrollment or matriculation at an institution of higher

[*P. 1759*]

education shall be reduced by the portion of such amounts which is attributable to any course which is not a course of instruction within the meaning of subsection (d)(1). The portion of such tuition and fees which is

attributable to any course shall be determined under regulations prescribed by the Secretary or his delegate.

"(B) EXCEPTION.—Subparagraph (A) shall not apply to any course which the taxpayer is required to take by the institution of higher education.

"(4) FEES, ETC.—The determination of what fees, books, supplies, and equipment are reqiured for any course of instruction shall be made under regulations prescribed by the Secretary or his delegate.

"(c) REDUCTION FOR CERTAIN SCHOLARSHIPS AND VETERANS' BENEFITS.—The amount otherwise allowable as a deduction under subsection (a) (after the application of subsection (b)) shall be reduced by any amounts received by the taxpayer during the taxable year as—

"(1) a scholarship or fellowship grant (within the meaning of section 117(a)(1)) which under section 117 is not includible in gross income, and

"(2) education and training allowance under chapter 33 of title 38 of the United States Code or educational assistance allowance under chapter 35 of such title.

"(d) DEFINITIONS.—For purposes of this subsection—

"(1) COURSE OF INSTRUCTION.—The term 'course of instruction' means only a course for the successful completion of which credit is allowed toward a baccalaureate or higher degree by an institution of higher education authorized to confer such degree.

"(2) INSTITUTION OF HIGHER EDUCATION.—The term 'institution of higher education' means an educational institution (as defined in sec. 151(e)(4))—

"(A) which is accredited by a recognized national or regional accrediting agency or, if not so accredited, is an institution whose credits are accepted, on transfer, by not less than three institutions which are so accredited, for credit on the same basis if transferred from an institution so accredited, and

"(B) (i) which is authorized to confer any baccalaureate or higher degree, or (ii) the curriculum of which consists of courses at least two-thirds of which are courses of instruction within the meaning of paragraph (1).

"(3) STUDENT.—The term 'student' means an individual who is regularly enrolled in one or more courses of instruction at an institution of higher education.

"(e) EXCEPTION.—Subsection (a) shall not apply to any amount paid which is allowable as a deduction under section 162 (relating to trade or business expenses)."

(b) The table of sections for such part VII is amended by striking out the last item therein and inserting the following:

"Sec. 217. Certain expenses for college education.
"Sec. 218. Cross references."

SEC. 2. The amendments made by this Act shall apply to taxable years beginning after December 31, 1963.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the amendment of the Senator from Vermont.

Mr. PROUTY. Mr. President, I ask for the yeas and nays.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. PROUTY. I yield.

Mr. LONG of Louisiana. I urge the Senator to withhold his request for the yeas and nays until Senators have had an opportunity to understand the amendment. I have not had an opportunity to study it and find out what it would do. If the Senator wishes to insist on his request at a later time, I shall have no objection to the yeas and nays on the amendment, but I should first like to know what the amendment embodies before undertaking to decide what to do with it. I would appreciate it if the Senator would withhold his request until we hear the merits of the amendment before the yeas and nays are ordered.

Mr. PROUTY. I believe the Senator from Louisiana has a general idea as to what the amendment would do. I now ask for the yeas and nays.

The yeas and nays were ordered.

Mr. PROUTY. Mr. President, yesterday I sent to the desk a proposal to grant tax relief to students. At that time I reasserted my hope that the Ribicoff tax credit proposal would be adopted. My amendment was to be called up only in the event the Senate rejected the amendment offered by the Senator from Connecticut [Mr. RIBICOFF]. That unhappy time has arrived, so I call up my amendment. It is cosponsored by the Senator from New York [Mr. KEATING], the Senator from Massachusetts [Mr. SALTONSTALL], the Senator from Pennsylvania [Mr. SCOTT], the Senator from Colorado [Mr. ALLOTT], the Senator from California [Mr. KUCHEL], and the Senator from Colorado [Mr. DOMINICK]. Through some error, the name of the senior Senator from Hawaii [Mr. FONG] was omitted; he is a cosponsor. I ask unanimous consent that his name be listed as a cosponsor of the amendment at its next printing.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. PROUTY. Mr. President, I also ask unanimous consent that the name of the senior Senator from Maryland [Mr. BEALL] be listed as a cosponsor at the next printing.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. PROUTY. And the name of the senior Senator from Nebraska [Mr. HRUSKA].

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. PROUTY. And the name of the junior Senator from Texas [Mr. TOWER].

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. RIBICOFF. Mr. President, will the Senator yield?

Mr. PROUTY. I yield.

Mr. RIBICOFF. I would be pleased to join as a cosponsor of the amendment of the Senator from Vermont.

Mr. PROUTY. I am delighted to have my friend from Connecticut join as a cosponsor.

Mr. President, I ask unanimous consent that the name of the junior Senator from Connecticut [Mr. RIBICOFF] be indicated as a cosponsor.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. PROUTY. If there are no more Senators who desire to be cosponsors, I shall proceed to explain the amendment.

At the outset, let me say that my proposal, which provides deductions from adjusted gross income for certain educational expenses, entails a revenue loss of only $55 million, as compared with the $750 million loss associated with the tax credit proposal.

The $55 million figure is somewhat overstated because it was based on current tax rates rather than those in the proposed tax bill. The actual revenue loss may be less than $55 million.

The revenue saving device is essentially this. The party to receive the tax benefit is the working student. Deductions are only available to those duly enrolled in an institution of higher education.

The deduction is calculated on the basis of $133 times the number of months in any tax year an undergraduate student is enrolled; for a graduate student the rate is $166 times the number of months he is enrolled. Each of these amounts is subject to a maximum annual limitation of $1,200 for an undergraduate and $1,500 for a graduate student.

In the case of a typical working student, single, and earning in the area of $5,000 a year, a tax savings of $250 might result.

The deduction is available for expenses incurred in paying tuition and buying books, equipment, and supplies. Such expenses must have been incurred for courses for credit in institutions accredited by a regional or national accrediting agency or if not accredited, in institutions whose credits will be accepted for transfer by three or more accredited schools.

Mr. SALTONSTALL. Mr. President, will the Senator yield for a question?

Mr. PROUTY. I yield.

Mr. SALTONSTALL. As I understand the Senator's amendment, in which I have joined as a cosponsor, it provides a tax deduction, for certain purposes and certain payments, to a boy or girl who is working his way through college.

Mr. PROUTY. That is correct.

Mr. SALTONSTALL. And it involves a maximum loss to the Treasury of $135 million.

Mr. PROUTY. About $55 million based on existing rates. Actually, the loss will be less if the proposed rates are adopted.

Mr. SALTONSTALL. In other words, if a boy or girl were working his or her way through college, unless he earned an amount which would make him subject to a tax in any event, he would not receive any benefit from this measure; but if he made enough to come within the tax bracket, then certain expenses he had would be deducted. Is that correct?

Mr. PROUTY. That is correct.

Mr. SALTONSTALL. I thank the Senator.

Mr. PROUTY. A recent National Science Foundation study reveals that "among the upper 30 percent of 17 year olds, the largest single reason for failure to enter college appears to be inadequate financing resources."

[*P. 1760*]

The study went on to say that lack of money caused up to 50 percent of male dropouts and 33 percent of female dropouts.

My proposal does not put money in the hands of every needy person across this Nation. It does, however, mean that if a person scrimps and saves in order to go to college, he will not be penalized for that valiant effort.

What is to become of those millions of students who yearly are confronted with financial adversities? The tax bill, H.R. 8363, recognizes their plight. The focus of proposed rate revisions is to provide greatest relief for those in the first tax bracket.

The Finance Committee reports that over half of our taxpayers have taxable income of $2,000 or less. How is the girl or boy with that kind of income to pay the thousands of dollars a modern education costs?

In the next 20 years our national population will have jumped approximately 60 percent from its 1960 level; we will be a nation of 285 million people. By 1985, there will be 32 million college-age boys and girls as compared to the 16 million of 1960. Fall college enrollments in colleges and universities will jump from a 1962 level of 4 million-plus to 12.8

million. A recent study indicates that an overwhelming number of these new students will of necessity gravitate to the public institutions, forced there by the cost of a private education. If something is not done to ease the burden of a self-financed education what will become of that American ambition—education for all our youth?

Congress has recognized the ever-mounting problems a student faces. Appropriations for grants, fellowships, and research projects have been provided for by the National Science Foundation Act of 1950, the National Defense Education Act of 1958, the various National Institutes of Health Acts, and the Atomic Energy Commission Act. Recent legislation has provided loans to colleges and universities for housing facilities. In recent years, the Federal budget has contained expanded programs for scholarships and development of academic facilities. The march is on, but the programs are not meeting the student's basic needs.

Mr. President, we have our obligations to our young people. Much has been said in favor of the Ribicoff amendment. I want to incorporate those statements on behalf of my own amendment.

Senator RIBICOFF and I have the same objectives: to promote through a passive Federal program the best interests of our future generations.

A tax credit plan or a tax deduction plan aids the student by not taking from his pocket as taxes sums he needs for school. This is aid to education which invokes no bureaucracy. There are no administrators, no commissioners, no advisory committees, no staff, no publications, no office buildings. How rarely we get such an opportunity to enact a program so broad in scope without at the same time creating machinery to hang about its neck.

I am sorry the Ribicoff proposal did not succeed. It would have worked wonders. I ask my colleagues to consider my meager proposal and vote it up or down.

A vote in favor of the amendment is a vote for the working student. A vote against it is a vote which will come back to haunt this body. If this amendment does not succeed, we will have to ask ourselves on the next occasion when federally sponsored and administered scholarship and fellowship plans are proposed, whether such action might not have been avoided by a positive vote for the Prouty amendment.

Mr. JAVITS. Mr. President, will the Senator yield for a question?

Mr. PROUTY. I yield.

Mr. JAVITS. There are a few questions that interest me. In the first place, I approach the amendment with an open mind, though I voted "nay" on the Ribicoff amendment.

I wish to ask the Senator whether the phrase "the number of months" that the taxpayer is a student means the number of months he attends classes or the number of months he is enrolled as a student, which would be 12 months.

Mr. PROUTY. The amendment assumes a 9-month school year and the deductions are based on the time the student is actually in school and attending classes.

Mr. JAVITS. To emphasize a point which I believe to be a good point in the Senator's amendment, the Senator provides for a deduction from adjusted gross income. Therefore, if a student works and he has dividend income or interest income, the deduction would be a deduction against the totality of his income. Is that correct? That is the meaning of the phrase "gross income"; namely, from all sources.

Mr. PROUTY. Yes.

Mr. JAVITS. He does not qualify for a deduction unless he works. Is that correct?

Mr. PROUTY. Yes.

Mr. JAVITS. Does the Senator have any schedule worked out? Suppose the student is working as a waiter in a college dormitory. Let us take that as an example. Suppose he receives $20 or $25 a week. Let us assume further that this student also has a considerable income. He may be a very wealthy young man, with a trust income. Does not the Senator feel that such a student should safeguard that income and make the credit applicable only against the income actually earned while working as a waiter?

Mr. PROUTY. I have considered the question the Senator raises. The number of students with incomes in the brackets to which the Senator has referred would be so minimal as to be almost meaningless. We could set a definite limit, but it did not seem that important to me, because of the small number of students involved.

Mr. JAVITS. I can understand the Senator's point. However, would he object, if the amendment did succeed, if in conference an effort were made to fix a minimal amount of earnings that such a student should have in order to qualify? If we did not do that, this would present a very easy way for a student to get a $1,500 deduction, by getting a job for an hour or two a week in order, technically, to qualify under the amendment.

Mr. PROUTY. There would be a few in that category. However, I thought the number would be so small as to be hardly worth considering in connection

with the amendment. If the conferees decided to place a limitation on it, I would have no objection.

Mr. JAVITS. The Senator relies on the famous doctrine of de minimis. I am inclined to agree. However, I thought this point should be discussed.

Mr. PROUTY. I appreciate the Senator's comments.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. PROUTY. I yield.

Mr. DOMINICK. I am not quite sure that I understood the last colloquy. It is my understanding that this deals with any student who is a taxpayer, regardless of whether he is working.

Mr. PROUTY. The Senator is correct.

Mr. DOMINICK. If he had an income from other sources, which required him to pay a tax, he would get the exemption.

Mr. PROUTY. That is correct.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. PROUTY. I yield.

Mr. COOPER. When we think of tax credits or deductions for students, we are inclined to think of young students who have left high school or preparatory school and have entered college. I am thinking of another group of students, namely, teachers. Under the laws of most States, teachers must keep up their studies. They must take courses to receive credits, in order to enable them to meet certain qualifications as teachers. Many of them have great difficulty in that connection. They have families, and earn low salaries, and find it difficult to do additional college work. The Senator's amendment, of course, embraces them. Is that correct?

Mr. PROUTY. Yes.

Mr. COOPER. I knew that; but I thought it would be helpful to point it out.

Mr. PROUTY. The amendment includes those who are training to qualify as teachers. They would be included as long as they were actually in school and studying.

Mr. COOPER. Many school systems, especially in States with lesser income, are faced with the problem of teachers in elementary schools and high schools, who have temporary qualifications but who cannot fully qualify because they cannot attend institutions of higher learning. Does the Senator consider that his amendmcent would be an incentive to such teachers?

Mr. PROUTY. I am sure it would be.

Mr. COOPER. To help them qualify as teachers?

Mr. PROUTY. It would render a tremendous service to both the teachers and our educational system. I am completely in accord with the Senator's feeling.

Mr. TOWER. Mr. President, will the Senator yield?

Mr. PROUTY. I yield.

Mr. TOWER. I believe too many people, in connection with assistance to education, think in terms of it being beneficial to students who attend private

[P. 1761]

or church-sponsored institutions of higher education. There is also involved the matter of books and supplies and equipment that a student needs. That would be of benefit to students attending State schools. Is that not correct?

Mr. PROUTY. Yes.

Mr. TOWER. It would be a further advantage and incentive to students doing graduate work. Equipment costs and books are far more expensive for graduate students than they are for undergraduate students. We have a crying need for people to go into graduate studies. As a former professor, I thank the Senator from Vermont for offering his amendment. I have been a graduate student myself, and I know what a financial struggle it is to meet the needs. The Senator's amendment would provide an incentive to graduate students.

Mr. PROUTY. I agree with the Senator. Many graduate students are married and have families. They have real problems in furthering their education. I am very happy to have the comments of the Senator from Texas; he is familiar with the situation.

Mr. President, I have about concluded my remarks. Today's students are tomorrow's leaders. I believe they are waiting and watching to see if we have faith in their future.

I mentioned, yesterday, a poll on educational questions which I conducted in my own State. Perhaps it would be well to mention it again. Eighty-two percent of Vermonters who responded to an extensive questionnaire favored loans to needy students. Ninety-two percent of all the replies favored the amendment which I am offering at this time. Seventy-eight percent of all the replies favored a tax allowance for parents who are trying to finance the education of their children. That amendment was just rejected.

I believe my approach is reasonable and sound. It would be of inestimable value and benefits to many of our young people who are working hard to get an education.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. PROUTY. I am glad to yield to my senior colleague.

Mr. AIKEN. I commend my colleague for offering his amendment. I could not vote for the Ribicoff amendment, because I felt it led in the wrong direction. However, I believe that the amendment of the Senator from Vermont, puts the emphasis on assistance for education where it properly belongs, on the student himself. I feel that his amendment should be adopted. If it is adopted and remains in the bill after conference, it will be a great aid in helping those who are helping themselves to get an education.

Mr. PROUTY. I thank my senior colleague. As usual, what he says makes a great deal of sense.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. PROUTY. I am glad to yield to the Senator from Pennsylvania.

Mr. SCOTT. I am glad to be one of the cosponsors of the Senator's proposal. It seems to me most desirable, as the senior Senator from Vermont has observed a moment ago. It puts the emphasis on the working student, directly on the aspect of need, and encourages ambition and enterprise, virtues which are not quite as paramount in some Government programs as one would like.

Although the senior Senator from Vermont said he was opposed to the Ribicoff amendment, while I was in favor of the Ribicoff amendment, I believe it is interesting to note that although one is in favor and the other opposed to the previous amendment, both of us find it possible to support the distinguished Senator from Vermont in what he is trying to do.

The amount involved in the amendment bears no more than a minimal relationship to the enormous cost of the project of sending a man to the moon. It costs far less to provide working American students with some aid to enable them at least to keep the money they earn long enough to pass it on to the college or institution which they attend, because soon enough in the life of everyone will the man with the whiskers come around and seize from him as much of his earnings as the legislators have dared to impose.

At least, money that is hard earned, gathered in for the sole purpose of enabling one to better his own economic future, and thereby to pay Uncle Sam more if one can get his education than if he cannot, should not, it seems to me, be subject to the whiplash of the income tax, which in many cases would diminish one's earnings to a point where he might not be able to continue to study.

On the floor of this Chamber are Senators who would cry their very hearts out for every one of the 115 or 117 countries in the world. There are Senators who would pay the debts of Russia and any number of other countries at the United Nations. There are Senators who would support the sale or permit the transportation of food, gifts, and other goodies to our enemies. There are Senators who would do almost anything in the world except to help the people who need help the worst, the great masses of citizens whom everyone pretends to want to help through the various alleged wars on poverty. They comprise the untold number of people who are promised or told things which they will not receive, when they merely desire the ordinary typical New England remedy of helping people to help themselves to get an education, so that they can increase their earning capacity and their enjoyment in the course of their lives, by asking Uncle Sam to stay his ready and grasping fingers long enough to help the person to earn enough to give Uncle Sam more in the long run than he would get by taking it at the root before the plant had had an opportunity to reach fruition.

The proposal of the junior Senator from Vermont is so reasonable and simple, and so based on commonsense and founded on New England thrift, that it may not be adopted by this body. But if Senators will bring themselves back from sweet-scented Zanzibar, from their desire to hurl our money headlong at the moon for indefinite periods and for unknown and remote purposes, perhaps we can get back to the schoolhouse idea and find support for the very worthwhile amendment offered by the junior Senator from Vermont.

So my appeal is an appeal to reason. Because it is an appeal to reason, it may be rejected. Let us hope that even in the U.S. Senate, on some rare occasion, reason may prevail.

Mr. PROUTY. I am most grateful to the distinguished Senator from Pennsylvania for his forceful argument in support of the amendment.

As I said yesterday, it is estimated that a college-trained person will earn $150,000 more during his life than one who has not had that advantage. This would mean a long-term gain in Federal revenue of at least $30,000 for each college-trained person, a return on our investment of 2,300 percent. How sound an investment. I wish we could do much more; this is a step in the right direction. I sincerely hope that Senators will find it possible to support it.

Mr. LONG of Louisiana. Mr. President, I have had very little opportunity to study this proposal. So far as I re-

call, it was not presented to the committee. If it was offered before the committee, I hope the Senator from Vermont will correct me, because I do not recall that it was.

As I understand existing law, a parent may deduct $600 if he contributes as much as 50 percent to the support of his son or daughter who is attending college. In addition, under H.R. 8363, the young man or woman attending college may claim a combined $900 exemption and deduction against his own income. In other words, the student would receive a $600 personal exemption and, in addition, a $300 standard deduction as provided by the amendment.

Mr. ANDERSON. The Senator from Louisiana should make it clear that the $600 deduction is allowed under present law.

Mr. PROUTY. Certainly the child may receive a $600 exemption, but his parents will not unless they are contributing at least 50 percent of his living expenses. This proposal is primarily directed to children who are paying their educational expenses in full.

Mr. LONG of Louisiana. I do not quarrel with the Senator over the fact that if a parent is not supporting the child, the parent does not receive the deduction. But I believe that in most situations the young person who is attending college is being supported, at least to the extent of half his support, by his parents. So the parents get a deduction of $600, because they supply or provide as much as half the support of the child.

In addition, if the child were receiving income he would receive a $600 exemption.

H.R. 8363 provides a minimum standard deduction of $300, which would give the income-earning college student a combined $900 exemption and deduction.

When we add the exemption the parent gets to the exemption and deduction the student gets, the total allowance would be $1,500 attributed to that one individual.

[*P. 1762*]

As I understand it the amendment would provide an additional deduction of up to $1,200 in the event the young undergraduate college student were earning income. If the young person were engaged in advanced studies or postgraduate work, the amendment would provide deduction of up to $1,500. In the latter case the young person and his parent would have the benefit of $3,000 of income without paying any taxes on it.

This amendment raises the same sort of questions which were raised in connection with the Ribicoff amendment, and also some additional ones. For instance, do we really want to have the equivalent of a $3,000 deduction allowed to a young person with income who attends college and his parent—inasmuch as a young man or young woman who is unable to attend college receives only a $900 deduction? In other words, do we really want to give a young person who is able to attend college three times the deduction to be received by one who is unable to go to college? That question in itself suggests that this amendment constitutes class legislation, and also raises various other problems which arise in connection with an aid-to-education bill. In other words, the cost of the amendment would be approximately $55 million. This proposal has not been studied, and it represents only one of a very large number of possible ways in which the Federal Government might be helpful to education—all of which should be considered by the appropriate committee, which then would have an opportunity to consider the entire field.

Earlier—in connection with the Ribicoff amendment—it was proposed that the Federal Government devote $1.3 billion for this purpose. The pending amendment involves a cost of approximately $55 million. If we wish to provide aid to education, what is the best way to do so?

Mr. President, I regret to say that the Senate Finance Committee is not the one which has special knowledge in this field; but there is a Senate committee which does have special knowledge in this field, and has done a large amount of work in it; and I wish it to have an opportunity to report a bill dealing with this subject. I refer to the Education Subcommittee, headed by the Senator from Oregon [Mr. MORSE], of the Committee on Labor and Public Welfare.

Mr. MORSE. Mr. President, will the Senator from Louisiana yield?

The PRESIDING OFFICER (Mr. McGOVERN in the chair). Does the Senator from Louisiana yield to the Senator from Oregon?

Mr. LONG of Louisiana. I yield.

Mr. MORSE. I wish to state that the Senator from Vermont [Mr. PROUTY] is one of the most valuable Members of the Subcommittee on Education, and I cannot pay too high a compliment to him for his most valuable work on the subcommittee. In fact, as he knows, at the last session I stated on the floor of the Senate that, in my judgment, the higher education bill would not have been brought out of conference except for the fine and very valuable work done by the

Senator from Vermont [Mr. PROUTY] and the Senator from New York [Mr. JAVITS]. Time and time again they made it possible to bring that measure out of conference. Because of the warmth of my feeling for the Senator from Vermont and my debt to him in connection with Federal aid-to-education legislation, I regret that I find myself in disagreement with him on this amendment to the tax bill.

I do not think this amendment is the way to handle this matter. The Senator from Vermont knows that time and time again in the committee I expressed my feeling about this matter.

Within the hour, I have given to the counsel of the Senate Committee on Labor and Public Welfare instructions to schedule, at the earliest possible date, hearings on the entire student loan program, so that we can study all of the various proposals for legislation for a student loan program that will be completely nondiscriminatory and will give every student—without regard to the financial means of his parents—an equal chance to take advantage of a college education. I believe we should make that approach first.

Furthermore, as Senators know, during the previous session I stated over and over again to the Senate, when it was considering education legislation, that I would pledge to the Senate that it would get a chance to vote on every section of President Kennedy's original omnibus bill. The Senate will have an opportunity to vote on it. We are moving as fast as we can in connection with all sections of that bill; and it includes proposals in regard to elementary school and secondary school education. But because of the great concern in regard to helping students attend college, this morning I scheduled the hearings on loan legislation ahead of the hearings on other sections of the omnibus bill; and I felt perfectly justified in doing so.

All I can do is plead with the Senate to continue to give us a chance to report an educational program bill. It should not be mixed up at all with the tax bill. However, the pending amendment would mix them, with the result that we would be bound to run into many instances of unfair discrimination based on means. Many, many students or potential students would be unable to obtain the advantages of the tax deductions we have in mind. We think that most of the objections to the Ribicoff amendment apply equally to the Prouty amendment.

So, Mr. President, I do not think this is the time to handle this matter by way of the Prouty amendment to the tax bill. Before this session of the Congress is over, we shall have time to decide what we want to do about education legislation. Who can say what the decision then will be? However, if we assume, hypothetically, that the Senate decides, after the committee hears the testimony of witnesses, and after the record of their testimony on Senators' desks, that it does not favor such proposed legislation, but that it prefers legislation of some other type, that will be the time for the decision to be made.

But, Mr. President, in my judgment, if that decision were made before the holding of the hearings and without a record of the testimony of the educators as to how best we can proceed to achieve the desired result, we would be prejudging the proposals for aid to education; and I do not believe that would be a wise thing to do.

Furthermore, as I stated last night, during my speech on the Ribicoff amendment, we realize that Congress can be taken "up to the line" only so many times in a certain period of time, on the question of passing proposed legislation in a particular field. If we persist in bringing forward one proposal of this sort after another—again and again—there will be a tendency to ask, "How many more times must we vote on an aid-to-education program? Let us wait until we see how we have already done works out."

Mr. President, we do have a great problem in connection with our desire to help students who wish to attend college. It is my view that those who are most in financial need should receive the most help.

I was surprised, this morning, to hear some Senators say that such students can go to college if they really want to. Mr. President, tens of thousands of them cannot go to college, because they do not have sufficient means. So it is a serious mistake to assume that the children of low-income families can go to college if they want to. It is a great mistake to assume that all who wish to attend college are able to do so; such an unwarranted assumption amounts to whistling in the dark while going by an educational graveyard. It is not true that all who wish to attend college can do so.

I can give my pledge to the Senate that before this session is over, it will get a chance to consider proposed legislation, reported from our committee, providing a uniform loan program with respect to education, so as to enable all students to borrow the necessary funds on a reasonable repayment basis, and then attend college, and subsequently

repay to the U.S. Treasury the loans they received.

Next, Mr. President, I wish to state that the Senator from Louisiana believes, as I do, that the figures he has cited are the correct ones. A few minutes ago, he and I worked over them with the assistance of the able counsel of the Senate committee. Already, parents who are providing aid to their children who are attending college are allowed a $600 deduction for that purpose; and if the student earns up to $900, he, too, can obtain a $600 exemption on his earnings, plus an additional exemption of $300. Of course, the total of those amounts will not cover the cost of his education; but it is worthwhile to point to the fact that his earnings of up to $900 will not in any way prevent the parent from obtaining the $600 deduction, if the parent is paying more than one-half of the cost of the keep of the student.

Last of all, let me say that when the committee obtains all the evidence, we should consider whether we should do

[*P. 1763*]

something about the dependency allowance. Perhaps it should not be $600; perhaps it should be $900 or $1,000 or some other amount. But we should arrive at our determination of the correct amount on the basis of the making of a record which we do not have at this time.

The danger with the sort of approach proposed to be made by means of the pending amendment is that it has a plausible label, and it excites our sympathy, for all of us desire to give a helping hand. But, Mr. President, first, we should know whether the proposed method would be fair.

I believe there are so many weaknesses in the approach now proposed that I close my statement by pleading with the Senate to give me a chance to finish the subcommittee's hearings and to report to the Senate on education bill—as the Senator from Pennsylvania [Mr. CLARK] urged earlier today, in the course of his remarks; and then, if the Senate does not like that measure, it can decide whether it wishes to make a tax-bill approach.

Mr. LONG of Louisiana. The amendment leaves one big question unanswered, which to me is the very question to ask: Why not make a distinction between earned income and unearned income? The amendment would benefit the child of parents who left a trust fund in stocks and bonds so that money for the child could be offset against this special deduction which might amount to $2,100 or $2,400. The parent would be able to set that much money aside for the child in a trust, or by other arrangement.

The amendment does little to help the person who really needs help. Most college students do not pay much in taxes to the Federal Government and they do not have that much income, when one looks at the fact that their parents are entitled to a $600 exemption, and they are entitled to $900 which they apply against their earnings, a total of $1500 for parent and child before tax is paid. This is under present law alone.

This amendment would provide, I am informed by the Treasury Department, provide substantial advantage to those who are well provided for, those lucky students who have parents who can leave them a trust fund, or an estate with dividend income, or interest income from trusts, in order to finance their education.

It seems to me that instead of devoting Federal revenue to that type of purpose, we should once again consider the type of student who is a deserving student, the kind we wish to put through school, and proceed on that basis. That is the way in which I recommend that the approach should be made, that we start with the subcommittee headed by the distinguished Senator from Oregon [Mr. MORSE] and look into the various ideas. We should ascertain what would be the most efficient and the most fair way to use this money for the benefit of students.

Mr. PROUTY. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. PROUTY. If the Senator would prefer a limitation on earned income, I would have no objection to that. I believe we might well reach an agreement in conference, assuming that the amendment is approved.

Or we can continue to talk about what we are going to do. We have been talking for 10 or 12 years. We now have an opportunity to act. Most people will agree that this amendment would have some real advantage for our young people.

Mr. LONG of Louisiana. The distinguished Senator from Vermont is a member of the very subcommittee which has the responsibility to report to the Senate what we should do about this question. The Senator from Oregon [Mr. MORSE] announced only an hour ago that he has instructed his committee to undertake the necessary preparations for hearings to bring up an aid-to-education bill. The distinguished Senator from Vermont is on that committee, and I am confident between the two of them,

they will bring up something that will provide an appropriate answer to this problem.

But they come to us, a tax-writing committee, and suggest to us that we should solve all their education problems as a tax-writing committee. This leaves us in the position of having to resist things which we believe would not have the most desirable effect on the tax laws. I hope the Senator will bring a recommendation from the committee, of which he is a member, after hearings have been conducted, and tell us what they think would be the best way to meet this educational problem.

Mr. PROUTY. Mr. President, will the Senator from Louisiana yield further?

Mr. LONG of Louisiana. I yield.

Mr. PROUTY. I should like to emphasize what the distinguished Senator from Oregon said a few minutes ago. I do not mean to compliment myself, but we have worked closely on all education measures, and I believe we have seen eye to eye on many of them. If we have not, we have been able to reconcile our differences.

He has proposed a far-reaching student loan program instead of my amendment. I cannot assume that the other body will give great consideration to the loan program he proposes. To put my amendment aside on such an assumption would be an unreasonable failure to seize a great opportunity. My amendment is a start. We can always perfect it in conference. If the Subcommittee on Education determines that there is a better approach, we can always amend the tax laws and come forth with something new.

Mr. ANDERSON. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. ANDERSON. Does the Senator realize that the maximum a young married couple just having left college can claim is a $1,600 deduction? Is that not correct?

Mr. LONG of Louisiana. That is correct.

Mr. ANDERSON. Yet a young man who inherits a fortune from his family can have $2,400 of income and not pay a penny in tax.

Mr. LONG of Louisiana. I believe it is $3,000, taking into account the deduction his parents may receive.

Mr. ANDERSON. That is for a student doing postgraduate work.

Mr. LONG of Louisiana. Yes.

Mr. PROUTY. Mr. President, will the Senator from Louisiana yield further?

Mr. LONG of Louisiana. I yield.

Mr. PROUTY. If there are many in that category, and I am sure there are, we can always take care of the situation by imposing a limitation on earned income.

Mr. ANDERSON. That is the danger. Senators try to write such provisions in the Chamber. The Finance Committee should have an opportunity to consider the subject.

Mr. PROUTY. The bill has been before the Finance Committee for several months.

Mr. ANDERSON. I agree with everything the Senator from Oregon said about the Senator from Vermont [Mr. PROUTY]. I know he is a fine, conscientious, hardworking Senator. But I point out to him that when one of such amendments is offered, and the proponents say, "This is wrong, but the conferees can redefine it." In my opinion, it should be redefined in advance.

I do not believe the Finance Committee should be spending 1 minute discussing this sort of proposal, because it is wrong, it seems to me, to say to a young married couple that they can be allowed only a $1,600 deduction, but a young man living by himself at the university who happens to inherit some money from his parents can have a $2,400 income and not pay a penny in tax. That is the wrong way to approach this question.

A better approach to Federal aid to education is to consider all students in need, and not those in fine shape. Children of parents who contribute one-half the expenses can get $2,700 under this procedure, and those doing postgraduate work can get $3,000. It makes no sense to say a young married couple starting out in life that they can have $1,600 but someone going to school by himself, because his parents are able to help him along, can have $2,700 or $3,000 of income.

I hope this amendment will not be adopted.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. MORSE. I should like to ask the Senator from New Mexico a question. Earlier we discussed these figures. By the way, I pledge to the Senator from New Mexico that there will be early hearings. I wish the Senator from New York [Mr. JAVITS] to know this also, because I had a personal conversation with him, as I did with the Senator from New Mexico, and I have asked counsel for the Education Subcommittee to endeavor to arrange hearings before the subcommittee next week, to show how fast I intend to proceed with hearings on these bills.

The question I should like to ask my "teacher," the Senator from New Mex-

69-108 O—66—pt. 3——34

ico, is with regard to the loophole which the Senator and I have been discussing which I believe is a very real loophole. A parent who had a business could put

[*P. 1764*]

his student son or daughter on the payroll. He would then go on to college. The parent would get considerable benefit on his tax return because he would be taking into consideration counting the pay he would be giving the child, is not that true?

Mr. ANDERSON. That is true. Not only that, but the parent could give his child stocks which he had not planned to give him, because it would be an ideal way to give them to him tax free. Ordinary bonds are not tax free, but they can be given to his child. Inasmuch as the child would be allowed a $2,400 deduction, and the parent would be entitled to more, a substantial number of government bonds that are not tax-free could be given to the child, which would make them immediately tax free.

These are things that cause trouble. Someone will say, "Do not do this and do not do that; these things cause loopholes." This amendment would open the door, rather wide, and I would be happy to see the legislative committee take a look at this question because the legislative committee, I believe, would come forth with a wise decision.

Mr. MORSE. We intend to take evidence concerning such loopholes.

Mr. ANDERSON. We may have to refer the question back to the Finance Committee, but the able chairman, the Senator from Virginia [Mr. BYRD] would know that he had a recommendation from the proper authorized legislative committee. I hope this amendment will not be adopted. When we discuss depreciation allowances, it is said, "You did all this for one group." We must admit that we did create a special situation, in which a man can have millions of dollars of income and pay no tax whatever.

I believe it is a bad procedure. I am glad that the Senator in charge of the bill is opposed to the amendment.

Mr. LONG of Louisiana. Mr. President, I ask Senators to keep in mind that the committee has had no opportunity to study the amendment. It is true that the measure was introduced by the Senator as a separate bill. It was not offered as an amendment to the bill (H.R. 8363), which is before the Senate. No request was made that the proposal be considered in connection with the bill.

The Finance Committee does not have the necessary expertise, experience, or responsibility in that field. If Senators will look at their rule book, they will see stated the responsibility of the committee starting with revenue measures generally. If Senators will read down through the 13 responsibilities assigned to the Finance Committee, they will see that it is a big order, but there is no responsibility assigned to that committee relating to education.

I ask Senators then to refer in the rules book to the responsibilities assigned to the Committee on Labor and Public Welfare. The Senator from Vermont [Mr. PROUTY] is a member of that committee. He is on that committee with the Senator from Oregon [Mr. MORSE].

Both Senators are members of the Subcommitee on Education, which is headed by the Senator from Oregon. I ask Senators to examine the responsibilities assigned to that committee. The first item is "measures relating to education."

The measure before the Senate was not recommended by the executive department. The executive department has not had an opportunity to study and examine it. It was not recommended by those who have the responsibility for revenue measures at the administrative level. It was not recommended by the committee. It was not recommended by the chairman of the committee that would have the responsibility in relation to the subject.

Mr. President, we have talked about loopholes. Has it ever occurred to Senators that the proposal could be used as a means of employing trust income, dividend income, and various other types of income which ordinarily should be taxable? Did it ever occur to Senators that the proposal could develop into a large loophole, and that those who might receive a benefit from such a proposal would attempt to make the loophole bigger?

The question is often asked, "How did such a loophole come about?" Many times loopholes have come about as the result of Congress adopting a proposal without intending that certain uses should be made of the proposal; yet we wind up with a big tax loophole which costs a great deal of money.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. CLARK. I should like to indicate my strong support for the position taken by the Senator from Louisiana. As a member of the Subcommittee on Education, I support my chairman, the Senator from Oregon. I ask Senators to afford an opportunity to deal with the problem within the committee which has been given jurisdiction under the Senate

rules—the Subcommittee on Education of the Commitee on Labor and Public Welfare—and not legislate on an important question relating to education on a bill which comes from the Finance Committee and has had no real hearings in connection with its educational overtones.

Mr. LONG of Louisiana. I thank the Senator. He has indicated what I would like to know on the question of education. What does the committee which has been assigned the responsibility recommend? The committee of which the Senator from Pennsylvania is a member has been assigned that responsibility, and it has the responsibility to tell us what it suggests. What does the committee feel would be the best way to handle the problem?

How can a Senator who is arguing on taxes generally be an expert on the subject of education? Those questions should await the recommendations of those who have responsibility in that field.

Mr. McCARTHY. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield to the Senator from Minnesota.

Mr. McCARTHY. I commend the Senator from Louisiana for fighting against these amendments, many of which sound very good. Handling a tax bill on the floor of the Senate is a difficult task—much more difficult than it is for the Committee on Ways and Means of the House of Representatives to handle bills in that body, because in the House, bills come before that body under a closed rule. Problems are worked out in committee, and generally they are worked out very well.

But in the Senate, the Senator in charge of the bill and those who support him are expected to answer every charge that may come from any direction.

Mr. President, it would be fine if we could take care of every worthy cause through the Internal Revenue Code. I sometimes think that we should not expose Senators to the full potential of the Internal Revenue Code all at once in this way. The light is almost too bright for ordinary eyes. We ought to look at it through a shaded glass for awhile and then begin to work on it. We could tax away all the income earned in our country, if we followed the thesis of some Senators, and then give it back to worthy people and worthy causes. That is one way in which we could handle the tax problem.

What we primarily undertook to do with the tax bill was to significantly improve the economy of the United States. I believe that we have worked out a balanced program of relief for business. We made a great improvement in the rate scale as it applies to individuals. The income which would be made available under the bill would have a significant effect in stimulating the economy in the capital sector and would have a significant effect in encouraging consumer spending. We will have made approximately $9.5 billion available to individuals in America. The educational need is great, I believe that the people of the country are responsible enough to respond and to meet the educational needs of their children. If they cannot do so we must as we have done consider additional aid to education.

I must say, Mr. President, that I am a little disappointed in some of the college presidents and education officials in the country. This Congress has acted responsibly to aid higher education.

I suppose the Land-Grant Act of 1962 would be considered more comprehensive, although no one knew what it was to become. Of course, the GI bill was a great educational program. But in terms of education bills directed at particular needs, the program that was approved by this Congress was a significant one, and a right beginning on a great problem. College officials ought to allow that program to operate and gain some experience with it. They may come in and ask us for more money, as I think they will and should. The solution to this problem is not by way of special tax consideration and special tax reductions.

The Senator is correct in what he has said about the beginning of loopholes. When a first opening like this is made—and this has happened before—the next move is for someone to say, "There is an

[*P. 1765*]

inequity in the program. Let us extend the inequity to other people."

Eventually we reach the point at which someone will say, "Let us make the inequity universal, and thus establish justice." That is not the way we should proceed.

The Senator from Louisiana is to be commended for his fight for the bill and his defense of its integrity.

Mr. JAVITS. Mr. President, I offer an amendment to the pending amendment, which I send to the desk and ask to have stated.

The PRESIDING OFFICER. The amendment of the Senator from New York to the amendment will be stated.

The LEGISLATIVE CLERK. On page 1, line 7, it is proposed to insert the following:

"From earned income as defined in para-

graph 911(b) of the Internal Revenue Code," after the word "deduction."

Mr. PROUTY. Mr. President, I ask unanimous consent that I may be permitted to accept the amendment to my amendment which has just been offered by the distinguished senior Senator from New York.

The PRESIDING OFFICER. Is there objection?

Mr. LONG of Louisiana. Mr. President, reserving the right to object, I would prefer that the amendment be debated before it is accepted by unanimous consent. Unanimous consent is required. I do not know whether we would wish to agree to the request or not.

I point out that that is the kind of problem that arises when the yeas and nays are ordered. The Senator insisted on his request for the yeas and nays. I should like to know what the revenue impact would be before I would be ready to agree to the unanimous-consent request.

Mr. JAVITS. Mr. President, I had hoped that the Senator would permit the amendment of the Senator from Vermont to be amended so that the question could be dealt with on its merits. I believe my qualifications to make that request are pretty good, since I voted "nay" on the Ribicoff amendment. My best conscience dictated my vote on that amendment.

My amendment to the Prouty amendment may not be technically perfect. I tried to frame it in the best language possible. But its intent is to make the deduction applicable only to earned income, so that if there were no earned income, no deduction would be available. If there were earned income, the deduction would obtain only to the extent of the earned income.

We all understand that if the amendment is agreed to and it should prevail in conference, the conferees will work it out in accordance with that intent. Perhaps the language is inartistic, though I tried to write the best language I could on the spur of the moment.

The intention is that it should be only a deduction applicable to earnings of students, and only to the extent of such earnings.

Mr. LONG of Louisiana. Let us assume a boy is working for his father. Daddy gives him a job. He has little work to do but gets good pay. Would that qualify as earned income?

Mr. JAVITS. I will not say "Yes" or "No." I would be perfectly happy, once the intent of the Senate was manifested, to leave those refinements within the fundamental proposal to the conferees. All I am trying to establish is the basic intent of the Senate.

Mr. LONG of Louisiana. If the Senator wants to offer an amendment, he should have more than a vague notion as to what he wants to do. If he wants to amend the proposal to limit it to earned income, it is fair to ask whether the intention also is to cover income received from a father, when a rich man puts his son on the payroll and the son does little or nothing for his pay. That is the type of loophole that I am sure the Senator would not want to provide.

Mr. JAVITS. For myself, let me say that if such a person paid a salary as earned income when it was not earned, it would come under the Internal Revenue Code, and he could go to jail for it——

Mr. LONG of Louisiana. No. We are talking about a situation in which a son does some work, but it is very clear on the face of the situation that he does not do the amount of work that he would have to do if he were working for someone else.

Mr. JAVITS. Then I think the authorities would know that it was unearned income.

Mr. WILLIAMS of Delaware. Mr. President, the law already provides that the Treasury Department can disallow payments made by parents to children which cannot be justified on the basis of comparable earnings paid other employees. A parent cannot, under the law, split his income with his children and get away with it, either with or without the amendment of the Senator from New York.

Mr. LONG of Louisiana. Mr. President, if the Senator will yield, I shall not object to the unanimous-consent request. I wanted to demonstrate the difficulty of legislating on the floor and also the problem involved when a Senator asks for the yeas and nays before Senators know what the amendment is. If it is desired to modify the amendment, it requires unanimous consent after the yeas and nays have been ordered.

Mr. JAVITS. I thank the Senator.

Mr. President, I ask unanimous consent that the Prouty amendment may be modified accordingly, with the consent of the Senator from Vermont.

The PRESIDING OFFICER (Mr. INOUYE in the chair). Without objection, the modification is agreed to.

Mr. JAVITS. Mr. President, it is necessary for me to explain why I voted against the Ribicoff amendment, in order to demonstrate my interest in this amendment.

I believe the basic purpose of the tax bill, its fundamental thrust—whether we

achieve it or not—is to retain the economy at a high enough level to do something about the problem of endemic employment and about the dangers of a recession if the economy is not sustained in a vigorous way.

Therefore, when we talked about adding to a $11.5 billion tax reduction an additional reduction which would involve immediately three-quarters of a billion dollars and more later, it seemed we were starting a process to destroy the basic purpose of the tax bill. For that reason alone I felt, in good conscience, that I had to vote against the Ribicoff amendment. With that amendment we would have both the tax cut bill, and the same people who were getting the cuts in that bill would have received in addition the credits against tax the Senator from Connecticut [Mr. RIBICOFF] contended they should receive. That would have defeated the purpose of trying to keep the bill within reasonable limits and at the same time do a broad-scale job of economic stimulation.

But that argument does not apply to peripheral matters that will not materially change the thrust of the bill because they do not involve great sums of money.

That is evident from the bill itself. What has the size of the medicine and drug expense deduction to do with the major economic thrust of a tax reduction bill designed more importantly to sustain the economy? Yet $10 million is the revenue loss because of a provision of that character in the bill.

What does the part of the bill having to do with a change in the exclusion from income of gain on the sale of a residence of a taxpayer over 65 have to do with the basic economic power of the bill in connection with unemployment, and so forth? The answer is "Nothing." Yet it involves a revenue loss of $10 million.

When we dig into the corporate phase of the bill, what has amending the existing investment credit to do directly with economic stimulation as a result of a tax cut? We are anxious to arrive at the maximum point of efficiency of American business, so we include it in the bill, and it involves a revenue loss of $170 million.

In short, we are not purists. We cannot be, considering the terms of the bill. But we are considering the bill in the best way we can, and I think we have done a good job of giving to the bill the most thrust on the economic side.

I think the members of the Finance Committee themselves would not want to plead omniscience, with respect to putting everything in the bill that could conveniently and appropriately go into the bill. Perhaps they will consider that the Senator from Vermont [Mr. PROUTY] has thought of one thing which is a small effort to help in a critical area, that of encouraging young people to work for a living and thereby earn their way through college.

Therefore, not departing from basic devotion to the fundamental purpose of the bill, I showed my good faith by casting a difficult vote of "nay," which was also difficult for many other Senators, on the Ribicoff amendment. With the present amendment I do not think we distort the fundamental purpose of the bill, because we have already accepted other provisions in the bill, which are

[*P. 1766*]

not particularly necessary for the economic thrust of stimulating the economy, but which relate to tax injustices or some other matter which can be dealt with conveniently in the bill.

So I feel that as the revenue loss in the Prouty amendment now must be less than $50 million—his own figure—under this version of the amendment, I do not think it represents a material distortion of the purpose of the bill.

Second, I am delighted by the announcement of the Senator from Oregon, with whom I think I have loyally cooperated in the fundamental need of developing the proper kind of aid for higher and all levels of education, that there will be hearings on that subject, which is precisely the right thing to do. I do not think the Ribicoff amendment would have had the desired effect, which is the encouragement to people of modest means to earn their own way through college, which is a delightful American custom, a custom which I am proud to say I practiced in all the years I went to law school; and it was a good one.

Finally, one of the great arguments with respect to the Ribicoff amendment was its ambit. What would be reached? It appears that in 1960 total income tax receipts from individuals amounted to $39.5 billion. Although this figure is for a previous year, it gives us an order of magnitude. That amount was paid by 48 million taxpayers who filed taxable returns. In other words, an average of $800 was received from the individual taxpayer who filed a taxable return. Another 13 million people owed no taxes at all, although they filed returns. But 48 million taxpayers each paid an average of $800 in tax.

Under the Ribicoff amendment, that was a pretty big piece of additional revenue loss to add to a tax bill under which there will be a substantial reduction in revenues.

I do not believe the same argument can be directed against the Prouty

amendment. The point is that it goes to encourage something that is really socially useful. I do not see that whatever is done in connection with Federal aid to higher education, to which I am thoroughly devoted, would in any way conflict with this kind of encouragement. It comes within the same order of magnitude as some of the other things which are done in the bill, both in money and intent, as we are satisfied with the urgency of the need. I am inclined to feel that it represents a fair proposal, fair even in the opinion of those like myself who do not in any way wish to complicate, jeopardize, reduce, or distort the fundamental thrust of the bill. Therefore, I shall support the amendment.

Mr. President, there is one other thing that is very important to me, considering my own position in connection with this whole subject. While I go along with the administration, even casting the hard votes on capital gains—and we must remember that I come from New York, where capital gainers, so-called, are very important, in terms of the stock exchange and the security business—in order to sustain the position that the tax cut will do the things the administration thinks it can do for the economy, I have no illusions about it. I believe the tax cut would help, but I do not believe it would cure. I would be fooling myself and the people of the State of New York if I thought otherwise. The tax cut will be helpful. It should be voted. Its essential thrust will not be jeopardized by the amendment of the Senator from Vermont.

Mr. President, the tax cut will not cure endemic unemployment. It will not win the war on poverty. It will not insure us against a recession or a depression. It will help.

I deprecate the fact that the administration, every time we ask, "What are you going to do about unemployment? What are you going to do about poverty? What are you going to do about trying to lengthen out the present 35-month-old economic expansion?" says, "We are proposing a tax cut."

This seems to be the only thinking in the administration upon the American economy.

I know that the tax cut alone is inadequate. I know I must vote for it. It will help. It is the only thing, apparently, upon which the administration is willing to give us support. So, let us do it. It will not cure the defects in the economy with which we contend.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. MORSE. I could not sit here in silence, since these votes have started, and see the Senator from New York cast courageous vote after courageous vote as he did, on the capital gains issue and on the Ribicoff amendment, without congratulating him. I wish to associate myself with the observation he made on the effect the tax bill will have on the economy of the country as a whole and on the economic problems which are impinging upon the welfare of the American people.

I agree that it will help. It will not be of major help in solving these problems. I shall be standing shoulder to shoulder with the Senator in urging direct attacks on the unemployment problem, direct attacks on the problem of poverty, direct attacks on the great problem that confronts us with respect to the water problems in this country. I do not believe the American people realize what is happening to the water of this country. If they do not get busy and do something about it, our civilization will decline with our water table and with our polluted water supplies, as well as with the problem of the health of this Nation. All these problems will call for a direct, frontal attack, issue by issue. The tax bill will not solve them or help very much in solving the problem.

I wish to associate myself with the Senator from New York. Again I compliment him on the courage of his convictions.

I only regret I cannot join him on the Prouty amendment. I believe he is greatly mistaken. As a member of our subcommittee, I feel somewhat like a father who has a couple of wayward boys. Nevertheless, I am still hoping, before the final vote is had, that he will agree to give us time to hold hearings on this whole problem. If, after the hearings, we find that we should come back to the Prouty amendment, there will be ample time for us to do so. I believe he will find that this proposed procedure is not the best way in which to handle the problem. We can advance the cause of education much better in the way I have suggested.

Mr. JAVITS. I am grateful to my chairman of the subcommittee. I do not believe that this will bring about a parting of the ways between the father and his two children.

Mr. PROUTY. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. PROUTY. I also wish to congratulate the Senator from New York and to express to him my deep appreciation for the amendment which he has proposed to my amendment. It seems to me that it has eliminated most of the

objections which were registered earlier today. I am very grateful to him.

I ask unanimous consent that the senior Senator from West Virginia [Mr. RANDOLPH] be listed as a cosponsor of my amendment, at the next printing.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JAVITS. I wish to finish my remarks upon the bill and bear upon the colloquy with the distinguished Senator from Oregon [Mr. MORSE] on the subject of what the tax cut will or will not accomplish. I never like to leave a thought unfinished, if I can avoid doing so.

Some of the things that are needed in respect to the fundamental problems of our economy, quite apart from and in addition to a tax cut—I cannot hope to name all of them, but I can cite some—are: First, we are losing an estimated 40,000-plus jobs a week because of automation. That is, the jobs need to be changed, and people need to be retrained and moved or removed to other sections of the country. It may be necessary to await a point of training in the use of new machines and the servicing of them. The fact that workers will go into service businesses more than they do in production lines, as automation takes over, may have an effect. This may require a period of transition of 1, 2, 3, or perhaps as much as 5 years. The transition may have to be helped with financing by the Government. That would be a very direct and immediate way in which to deal with a large volume of unemployment.

The maximum number of personnel scheduled for retraining under the manpower retraining programs will be 135,000 in fiscal year 1964. That compares with estimates of up to 1 million persons a year who will need retraining. That is one thing that should be done.

Another thing that needs to be done is to stimulate exports. It is true that we now have an export surplus of about $5 billion; yet we are running a very serious imbalance in our international payments. Notwithstanding some shakeout of foreign financing in this country by the threatened interest equalization tax bill that is now pending in the other

[P. 1767]

body, there is still an imbalance in the area of about $3 billion a year. Exports can deal with that. In addition, exports could do much more for the American economic system and employment. Other countries encourage exports of their products by providing special tax treatment for additional exports. We ought to do the same thing.

The investment of American capital abroad by American firms is also inhibited by the antitrust laws. Mr. President, I seem to be about the only one here who appears to be very much concerned about this; but I think it is a material inhibition of the operation of the private enterprise system, both in this country and abroad. As we encounter competition from the European Common Market—which has a very different concept from that of our antitrust laws—we shall find that that competition will hurt us very materially.

Mr. President, the fourth thing that must be done is the elementary step of introducing the private enterprise system into the foreign aid program. In view of our economic resources, we have not begun to do what should be done in connection with the development of the underdeveloped countries of the world. The reason for that situation is that we are trying to do that job solely—almost solely—through Government. There are vast opportunities in this area.

If I were summing up, Mr. President, I would now mention many other measures which I think need to be taken—including measures to give the workers profit sharing and stockownership in the United States businesses—a development which I believe will be the wave of the future, insofar as American workmen are concerned. Yet in practical terms, we have scarcely begun to do that.

Mr. President, the American people still — strangely, interestingly, and charmingly—lack a consciousness of the power of their production. The power of production, valued at $600 billion a year, is really beyond belief, especially when it is unleashed for purposes of development and construction both in the United States and in all other countries which wish to be free or to remain free.

We have not begun to learn how to use that power, in terms of credit, in terms of production and distribution, and in terms of making use of both men and machines now unused. Until we learn how to do that—and Congress should act to enable the United States to teach, to guide, and to facilitate it—we shall have a very rough time in attempting to deal with endemic unemployment, endemic poverty, and the other problems which give us great pause and concern when we wonder whether, with the pending tax cut bill, we shall be able to do that job.

I favor the proposed tax cut, Mr. President; but I do so without having any illusions about its value and also without having any illusions that we shall be able to keep it absolutely clear of any other tax change, because provisions of that sort are already included in it.

I hope very much that the Prouty amendment will be agreed to.

Mr. MILLER. Mr. President, will the Senator yield?

Mr. JAVITS. I yield.

Mr. MILLER. I should like to ask a question of either the Senator from New York or the Senator from Vermont. What concerns me about the amendment is that it does not seem to be harmonized with section 151(e) of the code. Senators will recall that a few years ago Congress provided for a special exemption in the case of a student who was earning enough money so that he ordinarily would have lost his dependents on a parent. If he is a student working his way, partly, or wholly, through college, for the purpose of supporting himself, or at least furnishing more than half of his own support, his father still gets a $600 exemption.

If the Senator's amendment should prevail, we would create an inequitable situation if we left the present code section to which I have referred on the books. We would create an inequity between a student who has a parent and a student who does not have a parent, or at least a parent who is not making enough in income to get the benefit of the $600 exemption.

I am wondering if it would not be practical and fair and equitable for the amendment of the Senator from Vermont to be modified by providing for the repeal of that portion of section 151(e) of the code which sets up this extra exemption for the parent.

Mr. JAVITS. I yield to the Senator from Vermont.

Mr. PROUTY. I should like to point out that we did not make any change in section 151(e) because the parent, in most cases, still will have to provide for the student's food and lodging. My amendment does not allow a student to deduct such sums.

Mr. MILLER. The Senator's amendment provides for a deduction of $1,200, in the case of an undergraduate, and the $1,200 is equivalent to two $600 exemptions. Without the Senator's amendment there is now a $1,200 exemption, total, for this situation. There is a $600 exemption for the parent and there is a $600 exemption for the student also.

Now the Senator's amendment comes along. It will add another $600 exemption to that total. So I shall cite an example. Let us assume that the Senator from Vermont has a son who is working, and that the son earns $1,800 during a year. The Senator from Vermont could claim a $600 exemption for the boy, even though the boy might have supported himself all the way through the year. Certainly if he provided more than half of the board, he could claim a $600 exemption for the boy on his income tax return. The boy himself as a taxpayer would have a $600 exemption. Under the Senator's amendment, he would have a $1,200 deduction. That would make a total of $2,400 in exemptions or deductions, however the Senator might wish to apply them.

I suggest to the Senator from Vermont that that would do inequity to another lad who did not have a parent or whose parent did not have enough income to receive any benefit from the $600 exemption.

So to put the two situations on an equal basis, it seems to me that what ought to be done is to couple with the amendment of the Senator from Vermont the repeal of section 151(e) of the code.

Mr. PROUTY. The present $600 is an exemption. What the amendment seeks to do is to provide a deduction. That is the difference between the two items.

Mr. MILLER. From a practical standpoint, it does not make any difference whether it is called a $600 exemption or a $600 deduction; the amount still would come off the income before determining the amount of taxable income. In the example I cited, the Senator's family entity would have a $2,400 reduction from taxable income—$600 for the parent and $1,800 for the son, under the Senator's amendment.

Mr. PROUTY. The $600 exemption taken by the parent is for the child's support as a dependent, regardless of whether he is a student.

Mr. MILLER. Whether is was called an exemption or not, it would still come off the income to arrive at the taxable income.

Consider the example of another boy; one who does not have a parent, but who earns $1,800. In that instance, there would be only an $1,800 reduction in income; there would not be the other $600. That situation would remain on the books unless it were repealed by a modification of the Senator's amendment.

Mr. PROUTY. Is the Senator from Iowa under the impression that the parent could take the proposed deduction?

Mr. MILLER. Under section 151(e), it is specifically provided that the taxpayer may claim a $600 exemption for a child who is a student.

Mr. PROUTY. Provided the parent pays more than 50 percent of the expenses.

Mr. MILLER. No; regardless of that.

Mr. PROUTY. I had not been told of a provision so holding; I am not familiar with any such proposition.

Mr. MILLER. I am glad the Senator

has raised that question, because I wish to make the point very clear. Congress changed the law. Prior to the time when section 151(e) was placed in the code, if a student furnished more than half his own support by working, the parent lost the exemption altogether. In order to encourage students to work, Congress said, in effect, "It is all right even if the student furnishes all his support or more than half of it. It will make no difference. The parent may claim the $600 exemption anyway."

I think Congress made that change in the code having the same motivation that the Senator from Vermont has with respect to his amendment; that is, to encourage students to help themselves in obtaining their education.

But I suggest that if we did not repeal section 151(e) concurrently with the adoption of the Senator's amendment, an inequitable situation would arise. An inequitable situation would exist as between students who were working and trying to earn their way through college, and whose parents were living and had

[*P. 1768*]

income against which the $600 exemption under section 151(e) would be helpful, and students who did not have parents living.

Mr. PROUTY. Does the Senator believe that this deduction could be taken by a parent?

Mr. MILLER. Which deduction?

Mr. PROUTY. The $1,200 deduction.

Mr. MILLER. Not under the Senator's amendment.

Mr. PROUTY. It could be taken only by the student who files a tax return?

Mr. MILLER. That is correct; there is no argument about that.

Mr. PROUTY. The parent might well have to spend quite a substantial sum to send a child through college; most parents provide for the cost of room, board, and items of that nature.

Mr. MILLER. He might; but suppose one student did not have a parent, while another one did.

Mr. PROUTY. I do not think we can draft legislation which will be equitable to everyone under all circumstances. My amendment is an approach which will benefit the working students who are trying to obtain an education, and that is what I am interested in.

The Senator from Iowa is a tax lawyer, and a very able one. I cannot argue the intricacies of the code with him. But I believe the purpose of the amendment is plain. So far as I am concerned, it will help a great many thousands of boys and girls who are trying to obtain a college education. That is my chief interest.

Mr. MILLER. The Senator from Iowa is trying to be helpful to the Senator from Vermont, because the Senator from Iowa can support the amendment if it is modified so as to eliminate section 151(a). I recognize that tax legislation that will be equitable all the way along the line cannot be drafted; but we are in a position now to make the amendment of the Senator from Vermont equitable by coupling it with the repeal of section 151(e). I do not disagree with the motive of the Senator from Vermont at all. I am intrigued by his proposal. But I do not believe it harmonizes with the Internal Revenue Code as it now exists. All that would be required to harmonize it would be to repeal section 151(a). I do not think anybody would be hurt by doing so. I think it would prevent an inequitable situation from arising as between children whose parents will receive a $600 exemption if the section is not repealed and children who do not have parents. After all, the student is the one we are thinking of.

Mr. PROUTY. If my amendment is approved, a detail of that nature might be adjusted in conference, where experts are available to assist the conferees. I cannot at this time discuss this proposal in detail with the Senator because I am not sufficiently familar with the language of the code. I am not a tax lawyer. I do not find it possible to accept the Senator's proposal to modify the amendment.

I am ready to vote at any time. I think that everything that needs to be said has already been said.

Mr. MILLER. The Senator from Iowa is merely trying to be helpful. I do not wish to make this a technical, complicated matter, although I do not believe it is technical. The law was passed by the Congress of which the Senator from Vermont was a Member, and of which the Senator from New York [Mr. JAVITS] also was a Member.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that the vote be taken on the Prouty amendment, as modified, be taken at 1:30 p.m., and that the time betwen 1:20 and 1:30 p.m. be equally divided between the sponsor of the amendment, the Senator from Vermont [Mr. PROUTY] and the Senator in charge of the bill.

Mr. JAVITS. Let me ask whether the Senator from Vermont agreed to that.

Mr. LONG of Louisiana. As a practical matter, I believe that all Senators who wish to speak on the amendment have done so.

The PRESIDING OFFICER. Is there

objection to the proposed unanimous-consent agreement?

Mr. JAVITS. Mr. President, reserving the right to object——

Mr. LONG of Louisiana. Mr. President, I withdraw the request.

SUBSTANTIAL IMPROVEMENTS IN PENDING TAX BILL ARE NEEDED

Mr. GRUENING. Mr. President, at last we are debating an epochal law, the Revenue Act of 1964. This legislation, which will affect the course of our history in ways yet to be revealed, is a measure for which our late, great President Kennedy and, now, his able and dynamic successor, President Johnson, have expressed great hopes of its efficacy in relieving the all too serious distress which we find in certain aspects of our domestic economy today. At a time when our unemployment rate remains stubbornly high—at more than 5 percent of our work force, and more than 4 million of our employable citizens cannot find work—it is clearly desirable that we act to bring relief to such economic malaise as besets us. Is this the proper approach?

I confess, at the outset, my own serious doubts that the pending legislation for the reduction of taxes, especially a reduction weighted on the side of decreases at the top levels of income, will prove as beneficial to our economy as its sponsors assert. It is my analysis, supported by the opinion of highly respected economists, that a better way of stimulating our economy and insuring jobs for those who need them is by direct participation of the Federal Government in providing jobs. I am fully aware of the theory that the release of funds otherwise taxed for the use of corporations and of individuals in the high income brackets will result in increased expansion of productivity and thus, increased employment. I doubt, however, whether we can expect private enterprise, which naturally is concerned with operating profitably for its private ownership to undertake a purely altruistic course of action directed solely to improvement of the Nations' economy. While it is undoubtedly true that this tax reduction will increase profits of private enterprise and in that respect. improve the economy, there is no provision in this bill or any other law that requires and will insure that benefits flowing to private business will be translated into general public benefit. Indeed, no one would suggest that the private sector of the economy be coerced into expenditure of its profits for purposes other than those it chooses.

As President Johnson has so clearly recognized in his statements on the necessity of Government action to obliterate the existence of poverty in the United States, it is only the Federal Government, moving with all its resource of funds, of manpower, and of action directed specifically in the public interest that can bring about significant improvements in the economy. Thus, it is with great interest we await further revelation of the administration's plans for the commendable war on poverty newly launched.

It is my hope that the President's program will include greatly increased sums for the accelerated public works program, and that there will be no stinting on imaginative and constructive projects for the development of our natural resources. These, indeed, are sound investments. Many of these programs only the Federal Government can finance, and, I believe, are of overwhelming importance in providing the steady employment which is of first importance in eradicating poverty.

Nearly a year ago, on March 19, 1963, I introduced a bill, S. 1121, to increase the amounts authorized for the accelerated public works program. It was found then, and remains the case, that there is no dearth of projects in towns and cities and counties across the Nation that are needed and which would provide jobs for people who need them. Many of these projects have been approved and await only the appropriation of funds. The original authorization of $900 million provided for this program was entirely inadequate and must be increased. I regret this has not been accomplished long before this time, and I shall continue to work for an increase in funds for this important purpose.

It is my fervent hope the choice of tax reduction as the means to improve our economy will prove to be a remedy that will work—though I doubt it. As it has come to be the judgment of those who have studied the matter over slow and painful weeks and months of deliberation that the reduction of taxes is the way to prosperity for our people, and as those promoting this approach will prevail, then we must enact the best tax reduction bill we possibly can.

In commenting on the bill now before us, I wish, first, to congratulate the Finance Committee for the herculean job it has done in studying, and bringing to the floor of the Senate a measure that has been heralded as of enormous importance to all. The hundreds of hours of consideration, of hearings, and of careful deliberation have engaged members of the committee in a difficult and complicated task requiring diligent and patient effort.

[*P. 1769*]

I believe the bill that has emerged from the Senate committee maybe slightly better than it was at it came to us from the other body, although there is room for doubt even so to that. However, I am compelled to state that I wish it were a far better bill than it is, and that the opportunity might have been taken to recast our income tax structure to distribute more equitably the burden of taxation than will be accomplished by H.R. 8363.

Mr. LONG of Louisiana. I say to the Senator from Alaska that I believe if he will study the measure on the basis of the areas where some of these loopholes exist, he will find that there is no loophole in the bill. The administration made recommendations in all fields where the Treasury Department felt structural reform was necessary. In other words in areas where the Treasury Department felt someone was escaping his fair share of taxes, a great portion of those recommendations are contained in the bill.

For example, if someone wished to escape liability for taxes due, his tax lawyer might advise him to organize a personal holding company, thereby reducing income by having it go through the holding company and saving much of the taxes he might owe. The bill would tighten up on that loophole, although not as much as I should like to see it. Also under the bill we put a 6-percent penalty on the use of multiple surtax exemptions.

Senators have heard some criticism of charitable contributions. Charitable contributions are second only to capital gains in accounting for the chart which the Senator from Tennessee [Mr. GORE] placed at the back of the Chamber, indicating that persons with high amounts of income pay relatively low rates on the average against realized income. The deduction allowed for charitable contributions and the fact that only half of capital gains are taxed account in the main for that situation.

Senators will find that we have tightened the law on charitable contributions in substantial degree. Group term life insurance is another factor. The committee has moved to prevent its abuse in the future. So I believe the Senator will find, if he will look at the changes which are being made in the law, that there is a great amount of tightening up on various and sundry groups of taxpayers in the bill to make them pay more taxes where it can be properly contended that more taxes are owed.

Some people wish to tax the oil industry more. This bill taxes the oil industry more by about $40 million as reported by the House and Senate committees.

I should like to debate the advisability of pressing more taxes upon the oil industry, to show how much that industry is paying now—which some people do not realize. There is a great deal of tax reform in the bill. At the same time, it proposes to give tax reductions to those whose merit appears to be greatest.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. GRUENING. The Senator from Louisiana has always been conspicuous, throughout his long and distinguished public service, as a devotee of the public interest. I am confident that his efforts in the long hearings of the Finance Committee on the pending tax bill have been directed to that purpose.

I am happy to have his view that there has been a substantial closing of loopholes. My criticisms, however, were directed to the fact that more might have been done, but I realize that we cannot all have our own way, that the Senate represents a body of 100 individualists, and that in the House of Representatives there are 435 more individualists. We must arrive at a consensus of opinion.

I am hopeful that by the time the bill emerges from the Senate with some of the amendments which have been already adopted, and some which may be, the bill will be further improved.

Mr. LONG of Louisiana. The area in which I believe action should be taken to tighten up the so-called loopholes, involves making those who are not paying their proportionate, fair share of taxes, pay more. Insofar as that problem exists, the bill taxes those people about $800 million extra, by reason of structural reform. Of course, in some respects that same group will enjoy some benefit from the general tax reduction; but in line with what the Senator has said on the subject, if he will look at the table in the back of the committee report, he will notice that certain people who have been paying a very low rate of income tax, although they have been making a large amount of money, will be paying more taxes—after the tax-cut bill passes—than they did before. The bill is so tailored that those who have so far succeeded in avoiding taxes, as a class, will actually be paying more taxes; while those who have been paying a fair share of their income without enjoying the benefits of various tax avoidance schemes will wind up with a fair and well justified tax return.

Mr. GRUENING. I hope that the tax bill will improve the economy as is pre-

dicted by the bill's sponsors. I hope that it will result in increasing employment. That is one of the questions which only the future can answer. I have serious doubts on the subject, because, for one thing, I feel that as a result of this substantial reduction in revenue we shall be asked to curtail the adoption of other measures, such as accelerated public works, which I deem essential to increasing employment. I hope that will not be the case. I hope that the $11 billion reduction in income to the Treasury as a result of this legislation will not result in the elimination of other measures which we can count on specifically to increase employment. That is a matter which we shall have to take up after the bill has been enacted.

I thank the Senator from Louisiana for his helpful contribution.

Mr. President, as I suggested in remarks to the Senate on December 18 of last year, it was and remains my view the tax law should be revised to allow greater relief to those in the middle income levels—wage earners in the $5,000 to the $20,000 a year brackets, at the expense of the very large reductions H.R. 8363 would provide in the higher income brackets. I believe it is not fair that individuals earning $500,000 and more in income will find their taxes reduced by more than 23 percent of present levels, while the individual earning $10,000 will have a reduction of little over 15 percent.

I had hoped the Finance Committee would accept the proposal of the distinguished Senator from Tennessee [Mr. GORE] and more in the direction of greater tax relief for middle and low income earners by an increase in personal exemptions. It is my hope this body will give greater consideration to this proposal which, admittedly, represents a sharply different approach to tax reduction than that adopted by the committee. The proposal for a greater proportionate tax cut for low- and middle-income groups was strongly endorsed by the distinguished economist, Mr. Leon Keyserling, in his testimony before the Finance Committee, and I would urge Members of the Senate to review Mr. Keyserling's testimony, as printed in the hearings on H.R. 8363, with a view to considering, even at this late date, a change in direction of tax reduction.

In reviewing the voluminous hearings and commentary on the tax reduction legislation now before us, it is with regret that we find an opportunity has been lost for a truly imaginative revision of our basic revenue and tax philosophy, which the legislation reflects.

About to be published is a significant book on the subject of tax policy in the United States entitled, "The Great Treasury Raid," written by Philip M. Stern, who is also the author of the Harper's magazine article entitled, "The Slow, Quiet Murder of Tax Reform," which I inserted in the CONGRESSIONAL RECORD on November 27, 1963. I commended Mr. Stern's vigorous efforts at reformation of the tax structure and urge Members of this body to give his publications serious attention. Other important commentary in recent months has appeared in such disparate publications as the New Republic and the Saturday Evening Post, calling our attention to indefensible shams and inequities in the existing Federal tax structure. When the average taxpayer sees that many who earn income amounting to hundreds of thousands and millions of dollars a year escape without paying a tax, while the ordinary wage earner must, and considers it his duty, to pay taxes as levied, it would not be surprising if one day the mass of our taxpaying public, 87½ percent of whom earn less than $10,000 a year, began to question the validity of the whole system and, by force of political persuasion, manage to bring about the tax reforms many of us believe are needed now.

It is not too much to expect that a continuation of the present situation in which many millionaires pay, proportionately, less tax than the head of a family earning $8,000 a year may some day lead to forcible change of the laws—perhaps under conditions of duress and

[*P. 1770*]

in a less peaceful state of public opinion than we have now.

The spectacle of a revenue system deliberately constructed to afford special advantages and unjustifiable benefits for the very few taxpayers who are most blessed with financial rewards raises, I believe, not only economic and political questions as to its wisdom, but leads to consideration of its basic morality. Perhaps we should look closely to see whether our system of taxation, which there is still time to change, may not be a mirror giving an ugly reflection of a society dedicated to getting away with it and based on a philosophy of taking something for nothing. It is uncomfortable to dwell, further, on the concept that perhaps we are letting the heaviest burden of supporting the Government rest on those least able to afford it.

The bill now before us makes important changes in our revenue system. It does not, however, result in the basic changes in philosophy and economics

I believe should have been made. We are preserving a statutory rate structure that will change to lower percentages of income tax than now are in the law but will be as deceptive as the one it replaces as a realistic measure of the true magnitude of taxes levied.

It has long been clear that the statutory tax rate is meaningless, because the internal revenue code is so honeycombed with special rates, deductions, credits, allowances and other loopholes almost exclusively applicable to very high income earnings that the presumed rate of taxation reflects nothing but a starting point for determining the actual amount of tax an individual in the high income brackets will pay.

Lacking a bill with the basic reforms that should be made in our system of taxation, I believe it is our duty to make the one before us as equitable as possible. It can be improved, I am convinced, in a number of ways I wish to discuss.

First, an improvement, which has, indeed, been made by the Finance Committee, but which we must hold when the bill goes to conference is the rejection of the House passed reductions in capital gains tax rates. The principle of a preferential tax rate on income earned from the sale of property has been extended so far now to so many transactions having very little relationship to the original theory that here, alone, is an aspect of the tax law deserving careful reform. If we are not, at this time, to reform the basic system, then, at least, let us not compound the inequities here by decreasing the rate at which capital gains are taxed. I join with my other colleagues in urging that the Senate amendment be retained in H.R. 8363 throughout its legislative course.

The investment credit provision of the Revenue Act of 1962 was enacted for the purpose of stimulating business investment in new plant and equipment; hence stimulating the growth and prosperity of the economy. There were then and remain now, in view of our difficulty in reducing unemployment rates, serious doubts as to the efficacy of this provision in any way other than as yet another tax benefit which is proportionately more beneficial to large and prosperous enterprises than to small and less profitable endeavors. Now, whatever the merits of the investment credit provisions as they now stand we must not allow this provision of the law to be enlarged into an even more inequitable tax break for wealthy corporations than it is now.

I refer, of course, to the repeal by H.R. 8363, as it now stands, of the amendment to the 1962 act sponsored by the distinguished Senator from Louisiana [Mr. LONG], who is the Senator in charge of the bill. The Senator's amendment precluded corporations taking advantage of the investment credit provision from also including as a basis of property for purposes of depreciation or for gain or loss on sale the same portion of the property for which investment credit is allowed. This amendment to the 1962 legislation was eminently proper and in accord with logic and equity. I see no reason for now allowing the investment credit provision to be used to benefit the investor doubly. No doubt two windfalls are better than one to the taxpayer, but for those who have none there is no apparent justice in allowing the double advantage to another.

Further, I am wholly in agreement with my colleagues who have expressed their dismay at the unconscionable proposal now in the bill that would prohibit the regulatory agencies from passing on to consumers the benefits of the investment credits taken by industries subject to their jurisdiction. It is shocking to me that such a proposal could have gotten this far. I can think of no justification whatever for refusing to allow the consumer to gain the benefit that might accrue from lower rates attributable to investment credits to the public utilities, common carriers and other industries regulated in the consumer interest.

The distinguished senior Senator from Illinois [Mr. DOUGLAS], who is an eminent economist, has thoroughly documented the meaning of section 203(e) to the consumers of America. This iniquitous provision could, during this year, cost individuals of the United States more than $600 million. By 1972 the cumulative effects of the provision would result in a windfall to the beneficiaries, and a loss to the consumers of more than a billion dollars.

While the loss to the consuming public and the unfair gain to the purveyors of services on which we are dependent is enough reason to reject section 203(e) the inclusion in a tax bill of provisions affecting regulatory policy is indefensible. I have, in the past, made many suggestions as to changes in legislation and policy affecting the actions of regulatory agencies and I shall have more to say on the subject in the future. However, I believe whatever changes we think should be made in regulatory actions of the agencies having jurisdiction over telephones, electric power facilities, railroads, radio communications, airlines, shipping companies and other public services should be dealt with in legislation germane to the issue of regulation, and with reference to the particular facts

of individual regulatory cases—certainly not disposed of broadside in the tax bill.

While the House and the Senate Finance Committee have been more generous than need be in their treatment of industries benefited by the investment credit provisions of the present law, there has been a curious discrimination against another part of our industrial community which is as deserving, I believe, as any other of Federal aid.

It is the mining industry of the country of which I speak. As chairman of the Minerals, Materials and Fuels Subcommittee of the Senate Committee on Interior and Insular Affairs and as a Senator from a State in which gold mining was once a very important industry as indeed it was in a number of other States, employing many people now out of work, I am in a favorable position to observe and become dismayed by the lack of concern for the welfare of the miners by the executive agencies of the Government, particularly the Treasury and Interior Departments. The mining industry is an orphan of our commercial society. There seems to be no interest in placing this important industry in a more favorable position in the Federal offices having a role to play in promoting its welfare. Indeed, the opposite is the case.

Repeatedly, in the case of the gold miners, legislation has been introduced over the past years to revive the now moribund gold mining industry by aid from the Federal Government. Just as repeatedly it has been impossible to enact any legislation at all because it has been strenuously opposed by the Treasury Department on the mystic theory that any aid to gold miners will, somehow, create an international financial crisis. The result has been that the gold mining industry has practically disappeared from the United States while elsewhere, in other countries, where there is gold, it is cherished. Limited to a price of $35 per ounce set by Government fiat 30 years ago and virtually destroyed by an order of the War Production Board during the Second World War, our gold miners are unable to reopen mines closed during the war and cannot produce at a profit at those remaining open.

Frustration in attempts at aid to the mining industry by actions of the Treasury Department are not limited to measures designed to help gold miners. The Treasury Department seems to place no value on the importance of the entire mining industry and its clear needs.

This was demonstrated again in the course of deliberations on H.R. 8363. After the Revenue Act of 1964 had been passed by the House, I introduced an amendment to it—No. 204—designed to eliminate a peculiarly discriminatory provision now in the internal revenue law that operates to the disadvantage of the mining industry. There is, now, in the law, a limitation of $400,000 on the total amount that can be deducted by a mining enterprise for exploration expenditures, and further a limit on such deductions to a maximum amount of $100,000 annually. It is the position of the mining industry, with which I agree, that ex-

[*P. 1771*]

ploration activities of miners are the same as research expenditures of other industries, which expenditures are fully deductible. There seems to me and to many others to be no justification whatever for limiting deductions on exploration of mining industries while similar expenditures of other business undertakings are fully deductible.
